RULES REGARDING ATKT, CONTINUOUS ASSESSMENT AND AWARD OF CLASS

A. T. K. T.

A candidate who is granted term for B.Tech. Semester-I will be allowed to keep term for his/her B.Tech. Semester-II examination even if he/she appears and fails or does not appear at B.Tech. Semester-I examination.

A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B.Tech. Semester-IV examination even if he/she appears and fails or does not appear at B.Tech. Semester-III examination.

A candidate who is granted term for B.Tech. Semester-V will be allowed to keep term for his/her B.Tech. Semester-VI examination if he/she appear and fails or does not appear at B.Tech. Semester-V examination.

A candidate who is granted term for B.Tech. Semester-VII will be allowed to keep term for his/her B.Tech. Semester-VIII examination if he/she appears and fails or does not appear at B.Tech. Semester-VII examination.

A student shall be allowed to keep term for the B.Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B.Tch. Semester-I & II taken together.

A student shall be allowed to keep term for the B.Tech. Semester-V of respective course if he/she has no backlog of B.Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.

A student shall be allowed to keep term for the B.Tech. Semester-VII course if he/she has no backlog of B.Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

In respect of Term work at B.Tech. Semester-I & II, B.Tech. Semester-III & IV and B.Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.

For B.Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or marks but less than 66%	First Class
C	Aggregate 55% or more marks but less than 60%	Higher Second Class
D	Aggregate 50% or more marks but less than 55%	Second Class
E	Aggregate 40% or more marks but less than 50%	Pass Class

BHARATI VIDYAPEETH UNIVERSITY, PUNE

B. Tech. (E & TC) (Sem. III & IV)

HIGHLIGHTS

Bharati Vidyapeeth University College of Engineering (BVUCOE) is the largest Engineering College in Maharashtra with an intake of 700 students in each academic year. Imparting quality technical education from Under Graduate to Doctorate Level, BVUCOE is probably the only Engineering College in India with an accreditation from both NAAC as well as NBA. The faculty at BVUCOE boasts of highly qualified academicians, a quality that is further emphasized by the fact that 15 of them are presently pursuing their Ph.D. degree.

BVUCOE has been ranked 29th amongst the Top 50 Technical Schools of India in survey conducted by DATAQUEST-IDC. We have enjoyed a ranking in this list for the last 4 years. Research is of utmost importance in all our programs. A total of 113 research papers were published in the academic year 2007-2008.

Currently we have 12 ongoing research projects. The infrastructure of BVUCOE is state-of-the-art with 62 classrooms, 59 laboratories and a well-stocked library that currently holds 27,130 titles. The college has an international presence with MoUs signed with the North Carolina A&T State University (Greensboro, USA), University of Venice (Italy), Actel Corporation (USA). Corporate interaction is also inculcated in our programs through our association with Oracle India Ltd., Infosys Ltd. and Tata Consultancy Services.

SALIENT FEATURES

The world of today is ever dependent on a rapidly versatile and rapidly growing communications infrastructure. Convergence is the need of the hour where voice, data and video over single networks are likely to be offered with a very high quality of service. The consumer market for broadband services, VOIP and Internet TV is increasing at a fast pace.

The near future will see IP Multimedia sub systems (IMS) as a bedrock of the Next Generation Networks (NGNs).

To cope with this highly specialised sphere of technology, the course has been designed with all key relevant inputs being provided. Our aim is to develop innovative engineering skills which are essential in meeting the critical demands of the fast and furiously advancing electronics and telecommunications industry.

MAJOR EQUIPMENT

Mixed Signal Oscilloscope, Vector Voltmeter, Digital Storage Oscilloscope, Wobbuloscope, Powerscope, Allen-Bradley PLC with RSLogix500 software, Ratio Control Unit Trainer, ICAP 4, DSP Processor Training Boards

SOFTWARE

ORCAD, XLINX 3.1, Altera, MATLAB, LabView, ALDEC, Code Composer Studio, Libero

LABORATORIES

ACTEL-VLSI Lab, Microelectronics Laboratory, Digital Electronics Laboratory, Network and Lines Laboratory, Electric Circuit Design and Project Laboratory, Communication Laboratory, Microprocessor and Microcontroller Laboratory, Computer Networking Laboratory, DSP and Image Processing Laboratory, Electronic Instrumentation and

Measurements, Power Electronics Laboratory, Instrumentation and Control Laboratory, Biomedical Laboratory, Computer Lab

RULES FOR CONDUCTING TESTS

Mode of the test

In each semester for each subject three tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.

Each test shall carry 20 marks.

University examination pattern has given weightage of 20 marks for the tests.

To calculate these marks following procedure is followed:

- i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
- ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
- iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
- iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
- v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; These marks will be final marks obtained by the student. No scaling up is permitted.
- vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.

Paper Pattern for Tests

- i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

- ii) There will not be any sub-questions.

For granting the term it is mandatory to appear for all the three tests conducted in each semester.

Roll numbers allotted to the students shall be the examination numbers for the tests.

SEMESTER - III

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Semiconductor Materials & Passive Components:

Classification of materials on the basis of electrical conductivity, Intrinsic and extrinsic semiconductors, Conduction mechanism in extrinsic semiconductors, Carrier concentrations, Drift and diffusion mechanism, Drift and diffusion current densities, Semiconductor materials used in Optoelectronic devices, modern semiconductor devices and Integrated circuits- GaAs, SiGe, GaAsP. Study of resistor, inductor, capacitor, relay, switches, LED, photo-electric devices.

Unit-II

(09 Hours)

Semiconductor Diodes and Applications:

A brief overview of following types of diodes, their peculiarities and applications Rectifier, Switching, Power, Tunnel, Shockley, Gunn, PIN.

Semiconductor P-N junction diode –Open circuited step graded junction, Metallurgical junction and ohmic contacts, Depletion region, Barrier potential, Forward and reverse biased diode operation. V-I characteristics equation of diode (no operation). Volt equivalent of temperature. Temperature dependence of V-I characteristics, DC load line, Forward and reverse dynamic resistance, Small signal and large signal diode models. Diode data sheet specifications- PIV, etc. switching diodes – Diode switching times, junction capacitance, (No derivation).

Voltage multiplier circuits: Working and comparison of voltage doubler, tripler and voltage quadrupler configurations. Limitations of voltage multiplier circuits. Clipping and clamping circuits: Series and parallel forms of clipping circuits, Biased clipper, their operation and transfer characteristics. Clamping circuits.

(09 Hours)

Unit-III

BJT Biasing and Basic Amplifier Configurations:

An overview of different types of BJTs – Small signal and large signal low frequency types, switching/RF, Hetero-junction types. Peculiarities of these types and their application areas.

Need for biasing BJT, DC analysis of BJT circuits, typical junction voltages for cutoff, active and saturation regions. Voltage divider bias and its analysis for stability factors, Small signal- low frequency h-parameter model, Variation of h-parameters with operating point, Derivations for CE configuration for A , R_{in} , R_o , in terms of h-parameters, Comparison of performance parameters with CB and CC configurations in tabular form. Need for multistage amplifiers and suitability of CE, CC and CB configurations in multistage amplifiers. Small signal and DC data sheet specifications for BJT.

(08 Hours)

Unit-IV

Field Effect Transistors:

An overview of different types of FETs viz. JFET, MOSFET, MESFET. Peculiarities of these types and their application areas.

JFET: JFET construction, symbol, basic operation, V-I characteristics, transfer characteristics (Shockley's equation), cut-off & pinch-off voltages, Trans-conductance, Input resistance & Capacitance. Drain to source resistance. Universal JFET bias curve. Biasing arrangements for JFET – Biasing against device variation, biasing for zero current drift. J F E T as voltage controlled current source. JFET data sheet specification – I_{DSS} , V_p , g_m , r_d , R_{DS} .

JFET Amplifiers: CS, CD, CG amplifiers. Analysis using small signal J F E T model.

(08 Hours)

Unit-V

MOSFETs:

An overview of following MOSFET types –D- MOSFET, E-MOSFET, Power MOSFET. n-MOS, p-MOS and CMOS devices. Handling precautions for CMOS devices. D and E-MOSFET characteristics & parameters, non ideal voltage current characteristics viz. finite output resistance, body effect, sub threshold conduction, breakdown effects and

temperature effects. MOSFET Biasing, Introduction to MOFET as VLSI device.

Unit-VI

(07 Hours)

Performance of BJT & FET Amplifiers & PCB Design:

Concept of frequency response, Human ear response to audio frequencies, significance of Octaves and Decades. The decibel unit. Square wave testing of amplifiers. Miller's theorem. Effect of coupling, bypass, junction and stray capacitances on frequency response for BJT and FET amplifiers.

Types of PCB, PCB design rules, Layout design, Artwork design, Fabrication process of single sided PCB. Different copper clad laminates, composition of solder metal.

List of Practicals

Study of Components (Resistor, Inductor, Capacitor, Relay, Switches, Transfer)

Study of CRO and Different modes of operation.

Study of simulation software for circuits.

Study of diode characteristics.

Study of BJT and FET characteristics.

Study of biasing BJT CE amplifier.

Study of biasing of FET CS and CD amplifier.

Frequency response of single stage BJT amplifier.

Square wave testing of BJT amplifier.

Design, build and Test small electronic circuit on PCB

Syllabus for Unit Test:

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

**TEACHING SCHEME**

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(09 Hours)

Simplification & Analysis Techniques(AC & DC circuits):

Sinusoidal steady state, Phases & phasor diagram. Energy Sources. Mesh and nodal analysis. Source transformation of impedance. N network theorems.

- i) Superposition theorem
- ii) Thevenin Theorem
- iii) Norton Theorem
- iv) Maximum power transfer theorem

Unit-II

(07 Hours)

Resonance & its Applications:

Definition of figure of merits', Series resonance: current Bandwidth, impedance & Selectivity in series resonance. Parallel (anti) resonance: Application of resonance circuits including impedance transformation.

Unit-III

(07 Hours)

Transient Response:

Initial Conditions in elements. A procedure for evaluating initial conditions. Solution of RC, RL, RLC step response using classical method. Solution of RC, RL and RLC step response using Laplace transform.

Unit-IV

(09 Hours)

Four Terminal Networks:

Classification of four terminal networks (Symmetrical, Asymmetrical, Balanced & Unbalanced), Characteristic Impedance & propagation constant for symmetrical networks. Image & Iterative impedance for symmetrical networks.

Filter Fundamentals: Constant K type Low pass filter. Constant K type high pass filter. Constant K type Pass filter. Constant K type band pass filter. Constant K type band stop filter. M-derived T and n sections of low pass filter. Composite Low pass filter.

Attenuators: Introduction. Nippers & decibels. Symmetrical T & n type attenuators.

Unit-V

(08 Hours)

Network Functions:

Terminal pairs and ports. Network functions for one and two port networks. Poles & zeroes of network function. Time domain behaviour from pole zero plot.

Unit-VI

(08 Hours)

Two port network parameters:

Introduction. Open circuit Impedance parameters. Short circuit . Admittance parameters. Hybrid parameters. Transmission parameters. Interrelation between different parameters. Inter connection of two port networks.

List of Practicals

To verify Thevenin's Theorem.

To verify Maximum power transfer Theorem. (ac and dc)

To plot frequency response of frequency selective network (Twin T or Wein Bridge).

To build & test series and parallel Resonance circuits (Fr, BW, Q calculations).

To design constant k BPF and LPF circuits , to plot frequency response & to find cut-off frequency.

To design constant BPF and BSF circuits, to plot frequency response & to find cut-off frequency.

Select any two port network & find Z-Y parameters.

To plot Poles & zeroes for one port driving poles function.

Measurement of Zo and gamma for T and pi network.

Design , build & test symmetrical T & pi attenuators (plot of attenuation versus load

resistance)

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

123

K50223: FUNDAMENTALS OF INSTRUMENTATION & CONTROL

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(09 Hours)

Linear & Non-Linear Control System:

Introduction to linear & nonlinear control system , Elements of control systems, Open loop & closed loop , feedback & feed forward control systems. (Each control systems will be highlighted with real time applications).

Transfer function using block diagram reduction technique & signal flow graph using Mason's gain formula.

Unit-II

(07 Hours)

Transient Response:

Time domain Analysis of linear control systems. First order & second order system. Error constant, steady state error, transient response specification.

Stability of control system , Routh - Hurwitz criterion and Root locus technique.

Unit-III

(08 Hours)

Frequency Domain Analysis:

Frequency domain analysis ,frequency domain specification,Bode Plot-Gain margin and Phase margin, Mapping theorem and Nyquist Plot.

Unit-IV

(09 Hours)

Transducers:

Characteristics , types of transducers for temperature (RTD, Thermocouple, Thermistor), Capacitance type level transducer , electromagnetic type flowmeter, pressure transducer, LVDT, Strain gauge, Piezoelectric type accelerometer, photoelectric tachometer (Pick up)

Unit-V

(08 Hours)

Signal Conditioning:

Signal conditioning circuits, for above transducers, study of synchros.

Unit-VI

(07 Hours)

Instrumentation Control Devices:

Control actions: On/Off, P , PI , PD, PID,PLC: Architecture, comparison with relay logic.

Ladder Diagrams for simple applications.

List of Practicals

Study of Temperature Transducers.

Study of LVDT for displacement measurement.

Flow control using PID action.

Verification of ladder diagram using PLC.

Unit step and ramp response of the transfer function system using MATLAB.

To draw Root locus and Bode Plot using MATLAB.

Phasor plot of synchro system (Transmitter-Receiver).

Magnitude and phasor plot of lead network.

Magnitude and phasor plot of lag network.

Transient response of second order system.

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04Hrs/week

Practical : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Review of 'C':

Array, Pointer, array and pointer,

Function: Parameter passing, Call by value by reference, scope rules, concept of recursion and recursive functions, functions and pointer,

Structure and Union: Passing and returning structure and union as parameter of function structure/union and pointer.

Input/output files: Concept, files operations

Types: sequential & random access files.

Unit-II

(09 Hours)

Introduction to Data Structures:

Overview-algorithm, data structure, how to create a program, how to analyze the program. Abstract Data Type. Concept of sequential organization, concept of linear and non linear data structure, arrays ADT, storage representations (row major and column major) Concept of ordered list & polynomial representation using array. Searching and sorting technique: Searching: Basic search technique, sequential searching, binary search, indexed sequential search. Analysis of these algorithms.

Unit-III

(07 Hours)

Linear Data Structure using Linked Organization:

Concept of link organization. Singly linked list, doubly linked list, Circular linked list. Insertion, deletion & traversal on above data structures, Representation & manipulation of polynomial using linked list.

Generalized lists: Representation of polynomial using generalized list.

Unit-IV

(09 Hours)

Stacks & Queues:

Stack: definition & examples, representing stack in C, implementing stack using linked list.

Example: infix, postfix and prefix(basic definition and examples, evaluating postfix expression, converting infix to postfix expression, program to convert infix to postfix).

Queues: The queue and its sequential representation, linked implementation of queues, circular queue, concept of priority queue.

Unit-V

(08 Hours)

Trees:

Basic terminology, binary trees, binary tree representation, binary tree traversal, primitive operation on binary tree, Binary search trees-primitive operation binary search trees, Threaded binary trees, Traversal of threaded binary tree.

Unit-VI

(07 Hours)

Graphs:

Concepts and terminology, Representation of graphs using adjacency matrix, adjacency matrix, adjacency list. Traversal; Depth first search, breadth first search. Algorithms for minimal spanning tree and shortest path.

List of Practical

- (a) program to create & manipulate database using structure.
- (b) program to add two polynomial using array of structure.

Program to implement primitive operation on Sequential file.

- (a) Program to search for record from a given list of records stored in array using
 - i) Linear search
 - ii) Binary search
- (b) Program to create Hash table & handle collision using linear probing without replacement.

Program to sort an array of names using

- i) Bubble sort

- ii) Insertion sort
- iii) Quick sort

(a) Program to implement following operation on singly linked list:

- i) Create
- ii) Delete
- iii) Insert
- iv) Display
- v) Search

(b) Program to add two polynomials using linked list.

(a) program to implement stack using:

- i) Array
- ii) Linked list

(b) Program to convert an infix expression to postfix expression & evaluate the resultant expression.

Program to Implement Queue using: (i) Array (ii) linked list

Program to create a Binary search tree & Perform following primitive operation on it:

- i) Search
- ii) Delete
- iii) Traversals(inorder, pre-order, post-order -recursive)
- iv) Non-recursive in order traversal

Program to create a graph using adjacency list & traverse it using BFS & DFS methods

Duration : 03 Hours
Unit Test : 20 Marks

Unit-I

(09 Hours)

Differential Equations:

Solution of linear differential equation of nth order with constant coefficients, Methods of variation of parameters, Cauchy's and legendry linear equation , Simultaneous linear differential equation, Total differential equations , Symmetrical simultaneous differential equations, Application to electrical circuits.

Unit-II

(08 Hours)

Complex variables:

Functions of complex variables , Analytic function, Cauchy - Riemann equations, Conformal mapping, Bilinear transformation, Residue theorem, Cauchy's integral theorem and formulae.

Unit-III

(09 Hours)

Transforms:

Fourier transform: Fourier integral theorem, Fourier sine and cosine integral, Fourier transform , Fourier sine and cosine transform, Inverse fourier transform, Discret fourier transform and its application.

Z-Transform: Defination, Properties, Inverse Z-Transform, Application to difference equatin, Realtionship between Z-Transform and Fourier transform.

Unit-IV

(09 Hours)

Laplace transform:

Definition, Properties and theorem, Inverse laplace transform, method of finding inverse laplace transform, Laplace transform of unit step function, Dirac-delta functions, Periodic functions, Ramp functions, Error functions, First order bessel's function, $S_i(t)$, $C_i(t)$, $E_i(t)$. Applications to solution of linear differential equations.

Unit-V

(09 Hours)

Vector Differentiation:

Vector Differentiation, Gradient, Divergence and curl, Directional derivative, Vector identities, Irrotational and solenoidal vectors fields.

Unit-VI

(08 Hours)

Vector integration:

Line integral, Surface integral and volume integral, Work done, Gauss- divergence theorem, Stoke's theorem and Green's lemma, Application to electro magnetic field.

MOSFET Applications:

MOSFET: V-I characteristic equation in terms of W/L ratio, MOSFET scaling and small geometry effect, MOSFET capacitances. Modeling MOS transistor using SPICE. CMOS inverter, Static characteristic -Noise margin, threshold voltage, Layout and latch-up prevention, other logic gates-NAND and NOR gates.

POWER MOSFET: Construction-Lateral double diffused MOSFET, VMOSFET. Drive requirements, Comparison with power BJT. One example of drive for circuit for POWER MOSFET.

POWER BJT: Power BJT construction, Data sheet specifications, Thermal resistance, Second Breakdown, Safe operating area (SOA), Thermal runaway, BJT as a switch in display and relay drive applications, Drive considerations, Anti saturation circuits, Comparison with Power MOSFET.

Unit-II

(07 Hours)

Large Signal AF BJT Amplifiers:

Block schematic of AF amplifiers. Classes of power amplifier - Class A , Class B , Class AB. An overview and applications of Class C and Class D amplifiers. Class A with resistive load. Transformer coupled class A amplifier, Class B Push - pull, Class AB, Complementary symmetry and Quasi - complementary. Efficiency analysis for Class A transformer coupled amplifier, Class B push - pull amplifier. Comparison of efficiencies of other configurations. Distortion in amplifiers, concept of Total Harmonic Distortion (THD).

Unit-III

(08 Hours)

High Frequency, Small Signal BJT Amplifiers:

Behavior of transistor at high frequencies. Modified T equivalent circuit. High frequency hybrid π CE amplifier model. CE short circuit current gain β_{sc} for T and hybrid π models. Definitions and derivations for f_{β} , f_{β} and f_{β} . Amplifier bandwidth taking into account source and load resistances. Techniques to improve bandwidth. Single tuned, Double tuned and stagger tuned amplifiers. Unloaded and loaded Q. Effect of staggering on bandwidth (no derivations).

Unit-IV

(08 Hours)

Feedback Amplifiers And Oscillators:

Concept of feedback. Negative and positive feedback. Classifications of amplifier based on feedback topology. (Voltage, Current, Transconductance and Transresistance amplifiers). Transfer gain with feedback. Advantages and disadvantage of negative feedback. Effect of feedback on input and output impedances and bandwidth of amplifier. Analysis of one circuit for each feedback topology.

Unit-V

(07 Hours)

Oscillators :

Oscillator start mechanism, need of amplitude limiting. Study of following oscillator circuits(using BJT & FET) - (Derivations not expected) RC oscillators, phase shift and Wien bridge oscillator LC oscillator - General form of LC Oscillators. Hartley oscillator, Colpitts oscillator, Clapp oscillator, Crystal oscillator.

Unit-VI

(09 Hours)

Linear Voltage Regulators And Voltage References:

Block schematic of linear regulators, Emitter follower regulator, Transistor series regulator and its analysis for performance parameters. 3 terminal floating, dual and adjustable regulator. Method of boosting output current using external series pass transistor. Performance parameters - Load and Line regulations, Ripple rejection, Output resistance and efficiency. Protection circuits - Reverse polarity protection,

over circuit, fold back current limiting, over voltage protection. Important data sheet specifications of linear regulators. Voltage references, their peculiarities and applications.

List of Practicals

Centre tapped bridge rectifier
Study of multistage amplifier
RC Oscillators (phase shift and Wien bridge)
Class A transformer coupled, Class B push – pull amplifier – Efficiency calculations
Transistor inverter in relay and LED driving application
Tuned amplifiers – single and double tuned amplifiers
Voltage series, current series feedback amplifier
Voltage shunt and current shunt feedback amplifiers
Simulation of LC oscillators
Linear voltage regulators – Floating, Adjustable three terminal regulators, current boosting, CV and CC modes of operation

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04Hrs/week

Practical : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Introduction To Communication:

Block Schematic of communication system, Base Band Signals and their bandwidth requirement, RF Bands, Types of communication channels(Transmission Lines, Parallel wires, co-axial Cables, Waveguides and Optical Fiber).Necessity of Modulation.

Unit-II

(08 Hours)

Amplitude Modulation:

Mathematical treatment and expression for AM, Frequency Spectrum, Modulation Index, Power Relation as applied to Sinusoidal Signal, Representation of AM wave, Mathematical treatment as applied to general signals in communication, Generation of AM using non-linear property.

Type of AM Transmitters: DSB-FC, DSB-SC, SSB, ISB & VSB, their Generation methods and Comparison in terms of bandwidth and Transmission Power requirement & Complexity(Block diagram treatment only)

Unit-III

(09 Hours)

Angle Modulation:

Mathematical analysis of FM and AM using Sinusoidal Signals, Frequency Spectrum, Mathematical treatment as applied to general Non-sinusoidal Signals, Modulation Index, Bandwidth requirement(all three relation), Narrowband and Wideband FM, Comparison of PM & FM, Direct and indirect methods of FM generation, Need for Preemphasis, Comparison of AM and FM, Block diagram of PAM, PWM, PPM. Multiplexing technique-TDM, FDM

Unit-IV

(07 Hours)

Noise:

Sources of Noise, Types of Noise, SNR, Noise Figure, Noise Temperature, Friss formula for Noise Figure, Noise Bandwidth, Performance of AM(DSB, SSB & VSB) And FM in presence of Noise: Mathematical treatment.

Unit-V

(09 Hours)

AM & FM Receiver:

Block diagram of AM and FM Receiver, Super heterodyne Receiver, Performance characteristic: Sensitivity, selectivity, Fidelity, Image Frequency Rejection, IFRR. Tracking, De-emphasis, Mixers.

AM Detection: Envelope detection, Synchronous detection, Practical diode detection, AGC, SSB and DSB detection methods.

FM Detection: Phase discriminator and Ratio Detector, Mathematical analysis of FM Detection.

Unit-VI

(07 Hours)

Radiation and Propagation:

Concept of Radiation, Basic Antenna System(Dipole), Antenna parameters, Yagi-Antenna, Mechanism of Propagation: Ground Wave, Sky Wave, Space Wave, Duct, Tropospheric Scatter and Extraterrestrial Propagation, Concept of Fading and diversity reception.

List of Practicals

Study of AM Generation(DSB-FC)

Study of AM transmitter using Spectrum Analyzer.

Study of Envelope Detector-Practical diode detector.

Study of FM Generation.

Study of transmitter using Spectrum analyzer.

Study of FM detection- Ratio detector.

Measurement of Receiver characteristics: Sensitivity, Selectivity, Fidelity

Study of DSB-SC & SSB Generator using Spectrum Analyser.

Study of DSB-SC & SSB Detector

Measurement of antenna radiation pattern for different antenna

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

**TEACHING SCHEME**

Lectures : 04 Hrs/Week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Logic Families:

Parameter definitions -noise margin, power dissipation, voltage and current parameters, propagation delay. Typical values for TTL ,CMOS & ECL. Input / output profile for TTL & CMOS. TTL logic families-standard, Totem – pole, open collector, tri-state (concept & application). Significance of TTL sub families (L, H, LS, S) & MOS family-importance of (C,HC), PMOS, NMOS (inverter only) ,CMOS (inverter, AND & NOR). TTL-CMOS/CMOS-TTL interfacing, comparison of TTL & CMOS. TTL compatible high speed CMOS series.

Unit-II

(08 Hours)

Binary Number Systems & Coding:

Binary number system: Signed number representation (1's, 2's complement & sign magnitude representation). Codes- BCD, GRAY, Seven Segment, ASCII code.

Principles of combinational logic: Canonicals forms don't care conditions, minimization techniques (K-maps up to 4 variables only). Quine-McCluskey method (4 variables). Design examples- code converters (binary to gray and gray to binary, BCD to 7 segment, IC 7447,7448).

Unit-III

(09 Hours)

Combinational Logic Circuits:

Digital comparators (2 - bit, 4- bit using IC 7485), parity generation and checking (1 C 741'80). Design methodology using MSI IC's. Multiplexer, Demultiplexer (Trees), multi variable function implementation using MUX & decoder. Parallel adder (1C 7483). Look ahead carry generator, arithmetic logic unit (IC 74181).

Programmable Logic Devices: Detail architecture, study of PROM, P AL,

PLA, designing combinational circuits using PLDs.(Code conversion)

Unit-IV

(09 Hours)

Sequential Logic Circuit:

Study of flip-flops, flip-flop truth table, 1 bit latch, SR flip-flop, Clocked SR flip-flop, JK flip-flop, Race around condition, Master-Slave JK flip-flop, D flip-flop, T flip-flop. Design of ripple counter using flip-flop (1 C 7490,93) 4 bit up/ down (positive / negative edge triggered).

Shift register (modes of operation), 4 bit bi-directional using D/ J-K universal shift registers, application of shift registers (Ring counter, Sequence generator, Johnson's counter) IC 7495/74195.

Unit-V

(07 Hours)

Synchronous Sequential Machines:

Design of Synchronous counter using IC 74191 ,4 bit up/down mod-n counters. Moore/Mealy M/C's, representation techniques, state diagrams, state tables, state reduction, state assignment, implementation using flip-flops. Applications like sequence generator and detection.

AID and D/A converters: Digital to Analog converters, example of D/ A converter 1 C, Analog to Digital converters, example of AID converter.

Unit-VI

(07 Hours)

Semiconductor Memories:

Memory organization and operation, expanding memory size, classification and characteristics of memory, RAM, ROM, EPROM, EEPROM, NVRAM, SRAM, DRAM.

List of Practical

Verification of parameters & transfer characteristics of 74LS and 74HC family.

I Verification of TTL - CMOS/CMOS- TTL interfacing.

Code conversion using logic gates: BCD to Binary, BCD to Gray, Gray to BCD 4.

Design and implementation of 2 bit digital comparator using logic gates and

Functional verification of 4 bit digital comparator IC 7485.

Design & implementation of 1 digit BCD adder using IC 7483. 6. A) Verification of functionality of multiplexer and demultiplexer

a) Verification of functionality of multiplexer and demultiplexer Ics

- b) Design and implement combinational function using multiplexer and demultiplexer
- a) Design & implementation of 3 bit bi directional shift register using D flip flop
- b) Design and implementation of Johnson counter using above shift register
- a) Functional verification of universal shift registers IC 7495/194
- b) Design and implementation of pulse train generator using above 1 C
- Design and implementation of 3 bit up down ripple counter using flip-flop
- Functional verification of ripple counter IC 7490 & synchronous counter IC 74191(mod n operation)
- Verification of DAC using R/2R method

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K50230: COMPUTER ORGANISATION AND OPERATING SYSTEMS

TEACHING SCHEME

Lectures : 04Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(07 Hours)

Structure Of A Computer System:

Brief History of computers, Von Neumann Architecture, Functional Units, Bus structures and Interconnection networks, Performance.

Control Unit Design: Machine Instructions and addressing modes, Single Bus CPU, Control Unit Operation: Instruction Sequencing, Micro-operations, (Register Transfer). Hardwired Control: Design methods, Design Examples: Multiplier CD. Micro-programmed Control: Basic concepts, Microinstruction-sequencing and execution, Micro-program control, Applications of microprogramming, Emulator.

Unit-II

(09 Hours)

Central Processing Unit:

CPU Architecture, Intel IA-32 Family Architecture as an example, Register Organization, Addressing modes, Instruction types, instruction formats (Intel, Motorola processors), Instruction cycles, Instruction pipelining, Types of operands, Addressing Modes.

Memory Organization: Internal Memory, Characteristics of memory systems and Hierarchy, Chip Packaging, Main Memory, ROM, EPROM, RAM: SRAM, SDRAM, DRAM, RDRAM.

High-Speed Memories: Cache Memory, organization and Mapping, Replacement Algorithms, Cache Coherence, MESI protocol. Interleaved and Associative Memories, Virtual Memory: Main Memory allocation, Segmentation, paging.

Secondary Storage: Magnetic Disk, Tape, DA T, RAID, Optical memory, CDROM, DVD

Unit-III

(08 Hours)

I/O Organization:

Input/Output Systems, Programmed I/O, Interrupt driven I/O, Traps, Faults, Exceptions, Pentium Interrupt Structure, I/O channels, Direct Memory Access, Standard Buses, Synchronous, Asynchronous, Parallel, Serial, PCI, SCSI, USB Ports.

Peripherals: Keyboard, Mouse, Scanners, Video Displays, Dot-Matrix, Desk-jet, Laser Printers.

Multiprocessor Configurations: Closely coupled and loosely coupled multiprocessor architectures, Problems of bus contentions, Interprocess Communications, Coprocessor and I/O Processor, Bus controller, Bus Arbitration, System Bus-Uni-Bus, Multibus.

Unit-IV

(08 Hours)

Introduction to Operating System:

Architecture, Goals & Structures of O. S, Basic functions, Interaction of O. S. & hardware architecture, System calls & O. S. services. Batch, multiprogramming. Multitasking, time sharing, parallel, distributed & real-time O. S. examples of O. S.: Linux and variants, MS-Windows, Handheld O. S.

Unit-V

(09 Hours)

Process Management:

Process description & control: Process Concept, Process states, Process description, Process control, Threads

Concurrency: Principles of Concurrency, Mutual Exclusion: SIW approaches, HA V Support, Semaphores, Message Passing, Monitors.

Deadlock: Principles of deadlock, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, An Integrated Deadlock Strategies.

Scheduling: Uniprocessor Scheduling: Types of scheduling: Preemptive, No preemptive, Scheduling.

Multiprocessor Scheduling: Granularity, Design Issues, Process Scheduling, Thread Scheduling, Real Time Scheduling: Characteristics, Real Time Scheduling

Unit-VI

(07 Hours)

Memory Management Software:

Memory Management requirements, Memory partitioning: Fixed and Variable Partitioning, Fragmentation, Swapping, Paging.

Virtual Memory: Concepts, Segmentation, Paging, Address Translation, Demand paging, I/O

Devices & Files: I/O management &

Disk scheduling: I/O Devices, Organization of I/O functions, Operating System Design issues, I/O Buffering.

File Management: Concepts, File Organization, File Directories, File Sharing, Record Blocking, Free Space management, Security Issues
Secondary Storage Management .

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

**TEACHING SCHEME**

Lectures : 04Hrs/week

Practical : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(07 Hours)

Introduction To Signals:

Signals: Definition of signal, Classification of signals, Continuous and Discrete time, Analog & Digital, Periodic & Non-periodic, Deterministic and non-deterministic, Energy & power. Basic signals & Operations on signals, Sine, Cosine, Exponential and unit step, Unit Impulse. Even, Odd. Time shifting, time scaling, Differentiation and integration of signals.

Unit -II

(09 Hours)

Classification of Discrete Time System:

Definition, Classification, Linear Nonlinear, Time variant and time invariant, Casual & Non-causal, Static & dynamic, Stability.

LTI system Analysis: Introduction to LTI systems. Block Diagram 7 System Terminologies. Convolution Integral. Impulse response. Convolution & Methods of Convolution. Properties of convolution, System interconnections, stability & impulse response of systems to standard signals.

Unit-III

(08 Hours)

Continuous Time Analysis:

Response of LTI Systems to exponential signals, periodic signals. Fourier series, Fourier Transforms, properties, application of Fourier series & Fourier transforms to the system analysis.

Laplace Transforms: Definition and its properties, methods of inversion, application to LTI system analysis.

Unit-IV

(09 Hours)

Correlation, Energy Spectral Density and Power Spectral Density:

Introduction, Correlation & Correlogram, The correlation function:

Conceptual basis, Energy signals, power signals, Auto- correlation: Relation to signal energy and signal power, properties of Auto-correlation.

Cross-correlation: Properties of cross-correlation,

Energy Spectral Density: Definition & Derivation of PSD, Effects of system on ESD, The PSD concept, Relation of ESD to auto-correlation,

Power Spectral Density: Definition & derivation of PSD, Sampling Theorem and its roof, effects of under- sampling, sampling of band pass signals.

Unit-V

(08 Hours)

Probability:

Sample space, Event, probability, Conditional Probability and statistical independence. Random Variables, Discrete Random variable, Cumulative Distributive Function, Continuous Random Variable, Probability Density Function, Properties of CDF and PDF.

Unit-VI

(07 Hours)

Random Variables and Random Processes:

Transformation of random variables, Statistical averages, Mean, Moments and expectations. Probability models, Binomial, Poisson's Gaussian, Rayleigh.

Random Process: Ensemble averages ad correlation functions, Ergodic and stationary Process. Gaussian process. Random Signals, power spectral density, auto-correlation, Superposition and Modulation.

List of Practicals

- Generation of Signals
- Signal Convolution
- Correlation- Auto & Cross
- Laplace Transform
- Inverse laplace Transform
- Fourier Transform
- Inverse Fourier Transform

PDF, CDF

Mean, Standard Deviation, Variance & Moments

Note: All the Practical's to be conducted using MATLAB

Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

RULES REGARDING ATKT, CONTINUOUS ASSESSMENT AND AWARD OF CLASS

A. T. K. T.

A candidate who is granted term for B.Tech. Semester-I will be allowed to keep term for his/her B.Tech. Semester-II examination even if he/she appears and fails or does not appear at B.Tech. Semester-I examination.

A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B.Tech. Semester-IV examination even if he/she appears and fails or does not appear at B.Tech. Semester-III examination.

A candidate who is granted term for B.Tech. Semester-V will be allowed to keep term for his/her B.Tech. Semester-VI examination if he/she appear and fails or does not appear at B.Tech. Semester-V examination.

A candidate who is granted term for B.Tech. Semester-VII will be allowed to keep term for his/her B.Tech. Semester-VIII examination if he/she appears and fails or does not appear at B.Tech. Semester-VII examination.

A student shall be allowed to keep term for the B.Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B.Tch. Semester-I & II taken together.

A student shall be allowed to keep term for the B.Tech. Semester-V of respective course if he/she has no backlog of B.Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.

A student shall be allowed to keep term for the B.Tech. Semester-VII course if he/she has no backlog of B.Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

In respect of Term work at B.Tech. Semester-I & II, B.Tech. Semester-III & IV and B.Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.

For B.Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or marks but less than 66%	First Class
C	Aggregate 55% or more marks but less than 60%	Higher Second Class
D	Aggregate 50% or more marks but less than 55%	Second Class
E	Aggregate 40% or more marks but less than 50%	Pass Class

HIGHLIGHTS

Bharati Vidyapeeth University College of Engineering (BVUCOE) is the largest Engineering College in Maharashtra with an intake of 700 students in each academic year. Imparting quality technical education from Under Graduate to Doctorate Level, BVUCOE is probably the only Engineering College in India with an accreditation from both NAAC as well as NBA. The faculty at BVUCOE boasts of highly qualified academicians, a quality that is further emphasized by the fact that 15 of them are presently pursuing their Ph.D. degree.

BVUCOE has been ranked 29th amongst the Top 50 Technical Schools of India in survey conducted by DATAQUEST-IDC. We have enjoyed a ranking in this list for the last 4 years. Research is of utmost importance in all our programs. A total of 113 research papers were published in the academic year 2007-2008.

Currently we have 12 ongoing research projects. The infrastructure of BVUCOE is state-of-the-art with 62 classrooms, 59 laboratories and a well-stocked library that currently holds 27,130 titles. The college has an international presence with MoUs signed with the North Carolina A&T State University (Greensboro, USA), University of Venice (Italy), Actel Corporation (USA). Corporate interaction is also inculcated in our programs through our association with Oracle India Ltd., Infosys Ltd. and Tata Consultancy Services.

SALIENT FEATURES

Information Technology deals in study, design, development, implementation, support and management of software. The department runs an under-graduate programme viz. B.Tech. (IT) and one post-graduate programme viz. M.Tech. (IT). The department has incorporated all the latest facilities for the benefit of the students. The department has well-equipped laboratories. The latest software and hardware equipments are provided to the students. The department has specialized laboratories in Software Engineering, Linux Operating System, Multimedia.

The Association of Computer & Information Technology Engineering Students (ACIES) organizes various events and expert lectures on different technologies. The syllabi of the department are revised regularly so as to match the needs of the industry. Apart from giving thorough technical knowledge using the state-of-art technology, the students are taught communication skills and are given experience in working in groups on live projects.

MAJOR GROUPS/AREAS

Operating Systems, Multimedia, Image Processing, Computer Networks, Software Engineering, System Programming

EXPERTISE IN RESEARCH AND CONSULTANCY

The department of Information Technology has received fund from UGC for Modernization of Research Laboratory "Object Oriented Modeling and Design".

ON GOING RESEARCH PROJECTS

High Non Stationary EEG Analysis, Brain-Computer Interface, Hidden Relation Finder, Video Steganography

COMPLETED PROJECTS

Visual Modeling of Real Time System, NeTailor- A Network Patch Management Solution, Voice Message Transform, Artillery Command Post Execution Software, MAFCOG 1.0 Mathematical Formula Analysis and Generator, Object Oriented Learning Environment Using ASP, Real Time Complex System, Implementation of Sniffers, EEG Analysis using Time Domain, Steganographic System.

MAJOR EQUIPMENTS

Pentium - IV 2.46 GHz - 100, Microprocessor Kits, Microcontroller Kits

SOFTWARES

- Operating Systems** : MS-DOS, Windows 95, Windows 98, SCO Xenix 2.1, Linux 7.0, Microsoft OS/2 Sdk Ver 1.02, Sun Solaris 7.1
- RDBMS** : Oracle 8, Oracle 8i, Oracle 9i, SQL Ver 7.0 & 8.0
- Developing Softwares** : Visual Studio 6.0, Microsoft Office-2000, Turbo C ++ For Dos 4.5, Microsoft C 6.0, Microsoft Fortran, Turbo Pascal, Microsoft COBOL, Turbo C, Visual Studio MS.Net, Developer 2000, MS Project 2003
- Web Designing Softwares** : Adobe Photoshop, PageMaker, Corel Draw
- Customized Softwares** : Payroll, Stores/Purchase, Library/Libsys, Student, Exam Section, Admission

LABORATORIES

- IT Lab I - Software Engineering Laboratory & Project Laboratory
- IT Lab II - Programming Laboratory
- IT Lab III - Linux Laboratory
- Microprocessor Laboratory

RULES FOR CONDUCTING TESTS

Mode of the test

In each semester for each subject three tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.

Each test shall carry 20 marks.

University examination pattern has given weightage of 20 marks for the tests.

To calculate these marks following procedure is followed:

- i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
- ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
- iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
- iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
- v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; These marks will be final marks obtained by the student. No scaling up is permitted.
- vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.

Paper Pattern for Tests

- i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

- ii) There will not be any sub-questions.

For granting the term it is mandatory to appear for all the three tests conducted in each semester.

Roll numbers allotted to the students shall be the examination numbers for the tests.

SEMESTER - III

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(09 Hours)

Differential Equations:

Solution Of Linear Differential Equation Of Nth Order With Constant Coefficients, Method Of Variation Of Parameters, Cauchy's and Legendre's Linear Equation, Simultaneous Linear Differential Equations, Total Differential Equations, Symmetrical Simultaneous Differential Equations. Applications to Electrical Circuits.

Unit-II

(08 Hours)

Complex Variables:

Function Of Complex Variables, Analytic Function, Cauchy-Riemann Equations. Conformal Mapping, Bilinear Transformation, Residue theorem, Cauchy's Integral Theorem and Cauchy's Integral Formula.

Unit-III

(09 Hours)

Transforms:

Fourier transforms: Fourier Integral Theorem, Fourier Sine And Cosine Integrals. Fourier Transform, Fourier Sine And Cosine Transforms, Inverse Fourier Transforms, Discrete Fourier Transform And Its Applications.

Z - Transform: Definition, Properties, Inverse Z- Transform. Applications to difference equation, Relationship between Z- Transform and Fourier Transform.

Unit-IV

(09 Hours)

Laplace Transform:

Definition, Properties and Theorems, Inverse Laplace Transform, Methods of Finding Inverse Laplace Transforms, Laplace Transform of Unit-step Function. Dirac-Delta Functions, Periodic Functions, Ramp Functions, Error Function, First order Bessel's function, $Si(t)$, $Ci(t)$, $Ei(t)$.

Applications to Solution of Linear Differential Equations.

Unit-V

(09 Hours)

Vector Differentiation:

Vector Differentiation, Gradient, Divergence and Curl, Directional Derivative, Vector Identities, Irrotational and Solenoidal Vector Fields.

Unit-VI

(09 Hours)

Vector Integration:

Line Integral, Surface Integral and Volume integral, Workdone, Gauss-Divergence Theorem, Stoke's theorem and Green's Lemma, Applications to Electromagnetic fields.

Syllabus for Unit Test

Unit Test 1	Units I & II
Unit Test 2	Units III & IV
Unit Test 3	Units V & VI

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(09 Hours)

Management and Organization:

Conceptual difference between terms Management, Administration and Organization, Evolution of Management Science up to Modern times, contributions of Taylor, Fayol, Gilbreth, Management as an Art, Science, Profession, Functions and Principles of Management, Levels of Management. Factors deciding selection of type of business organization, sole proprietorship, partnership, joint stock company, cooperative enterprise, public sector undertakings (PSU's). Organization structures - Line, functional, line and staff, committee, matrix, project.

Unit-II

(09 Hours)

Plant Location and Economics:

Factors governing plant location, process of plant locations, plant layouts - Types, principals of good plant layout, cellular. Basic economic concepts- Human wants, economic goods, utility, Value, price, cost, profit revenue. Laws of demand and supply, exceptions to these laws, concept of elasticity of demand, Scales of production, National and International Trade.

Unit-III

(08 Hours)

Personnel Management:

Evolution, definitions, functions (Scope). Manpower Planning - definition, procedure, advantages, factors affecting MPP. Recruitment - Definition, Sources of recruitment, Factors deciding sources selection. Selection - Definition, procedure, methods of selection. Training - Definition, benefits, methods and types of training. Job Evolution - Administration - Methods of wage payments (Time Rate, Piece Rate, Industrial Bonus. Group Incentive Schemes), Employee Motivators.

Unit-IV

(09 Hours)

Financial Management:

Definition, Scope and Objective of financial management. Capital, Types of capital, Sources of industrial finance, Elements of cost, Types of overheads. Financial Accounting - definitions, Scope, Objectives. Breakeven analysis, Capital Budgeting Methods (Pay Back, Accounting rate of return (NPV). Types of budget, Financial statements, purpose, Interpretation. Credit Rating of software projects.

Unit-V

(09 Hours)

Marketing Management:

Evolution, Marketing and selling concepts, Definitions, Concept of Marketing Mix, Market Segmentation - Objectives, Bases, Benefits, Distribution channels, Advertising, Sales promotion, Sales forecasting. Marketing research, Service sector - growth, types of services, service tax, Service mix. Recent Trends in Retailing, Emerging changes in global marketing.

Unit-VI

(08 Hours)

Entrepreneurship Development and Environment Management:

Entrepreneurship-concept, characteristics of successful entrepreneurship, functions of entrepreneur, Institutions supporting small business enterprise, project report contents. Pollutions and (EMS), EMS Standards, ISO 14000, E-Commerce, E-Governance, E-Business, Patents, Copyright, Trade Marks.

Syllabus for Unit Test

Unit Test 1	Units I & II
Unit Test 2	Units III & IV
Unit Test 3	Units V & VI

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or : 50 Marks

Unit-I

(08 Hours)

Fundamental structures and Basic Logic:

Sets, Venn diagram, Completeness, Cartesian Product, Power Sets, Pigeonhole Principle, Cardinality and Count-ability. Propositional Logic, Logical Connectives, Truth Tables, Normal Forms, Validity, Predicate Logic, Limitations of Predicate Logic, Universal and Existential Quantification, Modus Ponens and Modus Tollens.

Unit-II

(08 Hours)

Functions and Relations:

Subjective, Injective, Bijective and Inverse Functions, Composition of Function. Reflexivity, Symmetry, Transitivity, and Equivalence Relations, Poset & Recurrence Relation.

Unit-III

(08 Hours)

Proof Techniques:

Notions of Implication, Converse, Inverse, Contra-positive, Negation and Contradiction, Structure of Formal Proofs, Directs Proofs, Proof by Counter Example, Proof by Contradiction, Mathematical Induction, Strong Induction, Recursive Mathematical Definitions, Well Orderings

Unit-IV

(09 Hours)

Graph Theory:

Basic Terminology, Multi Graphs and Weighted Graphs, Paths and Circuits, Shortest Path Problems, Euler and Hamiltonian paths, Representation of Graph, Factors of Graph, Isomorphic Graphs, Planar Graphs, Directed graphs.

Unit-V

(04 Hours)

Trees:

Trees, Rooted Trees, Path Length in Rooted Tree, Binary Search Trees, Spanning Trees And Cut set, Minimal Spanning Trees, Kruskal's and Prim's Algorithms for Minimal Spanning Tree.

Unit-VI

(11 Hours)

Algebraic Systems:

Algebraic Systems, Groups, Semi Group, Monoid, Subgroup, Isomorphism and Homomorphism, Rings and Fields, Lattices, Boolean lattices and Boolean Algebra, Group Codes.

Practical Assignments Scheme

Concerned staff member is directed to frame Two to Three Assignments on each Unit.

Text Books/References

Syllabus for Unit Test

Unit Test 1	Units I & II
Unit Test 2	Units III & IV
Unit Test 3	Units V & VI

TEACHING SCHEME

Lectures : 04Hrs/week

Practical : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Introduction And Algorithm Analysis:

Introduction to C, Pointers, Pointer to Structure: Concept of data, Data Types, Data Objects, Data Structure, Abstract Data Types (ADT) Using C and C++, Implementation of Data Structure (Static and Dynamic Implementation). Algorithm Analysis: Definition and Characteristics of Algorithm, Analyzing Programs, Time and Space Complexity, Big 'O' Notation, Graphical Representation of Time Complexity, best, Average and Worst Case of Complexity.

Unit-II

(10 Hours)

Linear Data Structure Using Sequential Organization And Stacks And Queues:

Sequential Organization: Concept of Sequential organization, Concept of linear and non linear data structure, array as ADT, Storage representation, Concept of ordered list and polynomial representation using array, representation of Sparse matrix using array, algorithm and, Time and Space complexity for Sparse matrix.

Stacks and Queues: Fundamental of stack and queue, Data structure and basic operations for stack and queue, concept as ADT, disadvantages and application. Circular queue using sequential organization, Multi-stack and queue, Priority queue.

Application of Stack: Polish notation (infix, prefix, postfix expressions), Evaluation of prefix and postfix expressions, conversion of infix, prefix and post fix by using user definer functions and recursive functions.

Unit-III

(06 Hours)

Linear Data Structure Using Linked Organization:

Link List: Concept of linked organization, Basic operation of single linked list, Double linked list, Circular linked list (Insertion, Deletion, Creation, Traversal), Representation and Manipulation using linked list,

Generalized Linked list, Polynomial representation, dynamic memory Allocation, Garbage Collection.

Unit-IV

(08 Hours)

Non-Linear Data Structure:

Trees and Binary Trees: Basic terminology, Data structure and representation of binary tree, Binary tree traversal (recursive and non recursive method for traversal) and algorithm, Basic operation of Binary tree, threaded Binary tree (1 way and 2 way), Insertion and Deletion of nodes in Inorder threaded Binary tree, Inorder, Preorder, Postorder Traversal for Threaded Binary Tree, Concepts of Binary Search Tree (Weighted BST), Traversal BST, AVL Tree, CONCEPT of B tree.

Unit-V

(10 Hours)

Graphs, Searching And Sorting:

Searching: Implementation of Searching, Sequential, Binary and Fibonacci Search (Algorithm and Complexity for all Searches).

Sorting: Algorithm, Time and Space Complexity for Bubble Sort, Selection sort, Insertion Sort, Quick Sort, Merge Sort, heap Sort, Radix Sort (Best, average and Worst Complexity for All). Graphs: Concept. Representation and Terminology for Graph using adjacency Matrix, List and Multilist, graph Traversal (DFS AND BFS), Spanning tree. Minimum weight Spanning tree, Kruskal's and Prim's Algorithm for MST, Dijkstra's algorithm for shortest Path.

Unit-VI

(06 Hours)

File Organization And Hashing Techniques:

File Organization: Sequential and Index files Organization. Hashing

Techniques: Hashing functions, Hash tables, Overflow Handling, Collision, Methods for Overflow Handling and Collisions, Linear Hashing Probing techniques.

Practical Assignment Scheme

Concerned Staff member is directed to frame Minimum two Assignments per Unit.

Text Books/References

Syllabus for Unit Test

Unit Test 1	Units I & II
Unit Test 2	Units III & IV
Unit Test 3	Units V & VI

K30205: OBJECT ORIENTED PROGRAMMING

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(10 Hours)

Introduction To Object Oriented Programming:

Limitations of procedural oriented language, general object oriented philosophy, difference between procedural & OOP language advantages of object oriented programming, basic concepts in OOP, software usability, code sharing, rapid prototyping, information hiding.

Unit-II

(06 Hours)

Classes And Objects:

Classes, attributes and method, message passing between objects, constructor and destructor – theme behind this, types of constructors.

Unit-III

(06 Hours)

Functions:

Prototype, parameter passing, overloading, inline, static function, concept of friend, operators and operator overloading.

Unit-IV

(08 Hours)

Inheritance:

Concept and need, base class, friend class, static class, class scope, types of inheritance. Abstract class, virtual function, virtual base class, polymorphism, static and dynamic binding.

Unit-V

(08 Hours)

Input/Output And file Management:

Formatting and manipulating I/O, overloading I/O, file operations, file pointer and manipulation. Exception handling and templates: Concept and method.

Unit-VI

(10 Hours)

Object Oriented Design:

Class identification, defining inheritance, visibility and dependency coupling, object oriented notations and graphs, steps in designing object oriented system.

List of Practical Assignments

Write a class complex as follows: data members of the class complex are real, imaginary numbers and member functions are read, print, add, subtract, multiply, and divide.

Write a class string to handle character array. The data member is array of characters and the member functions are read, print, contact, substring, less, greater, equal. Also use constructors so that one can define like - string s1, s2 ("abcd"), etc, use destructor also.

Write a class matrix to handle two dimensional array of numbers. The data member is dynamically growing two dimensional array and member functions are-Transpose of matrix, inverse of matrix, multiplication of matrices & checking of whether a matrix is symmetric, magic square or skew.

Modify the complex class in assignment number 1 to tackle operator overloading.

Modify the string class in assignment number 2 tackle operator overloading and write a main program to sort array of strings.

Write a class date with members as dd, mm, yy, and the member functions as read the date, write the date.

Write a class person as a Container class which contains class date. Data members of person are name of person and date of birth. Member functions are reading information about person and writing information about person.

Write a class employee who is in turn a person. Data members and member functions are derived from class person. Addition to which is has, data members company name, designation, department & salary. Member functions - read information of employee and print information of employee. Write a class student who is a person. Data members and member functions are derived from class person. Addition to which it has, data members - branch of student, percentage marks and members functions - read information about student, print information about student.

Balaguruswamy, Object Oriented Programming, McGraw Hill

Bjarne Stroustrup, C++ Programming Language, Addison Wesley

Syllabus for Unit Test

Unit Test 1	Units I & II
Unit Test 2	Units III & IV
Unit Test 3	Units V & VI

TEACHING SCHEME

Lectures : 02 Hrs/week
Practical : 02 Hrs/week
Tutorials : 02 Hrs/week

EXAMINATION SCHEME

Duration : 03 Hrs (Pr/Or)
T. W. & Or. : 50 Marks
T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

An Introduction to Java:

History, Features of Java language, Object oriented features of Java, Benefits of using OOP, Applications of OOP, Virtual Machine and Java Programming Environment, Fundamental Programming Structures in Java. Java and Internet, Hardware and Software requirement, JDK, JVM, JRE.

Unit-II

(06 Hours)

Constant, Variables, Data types:

Declaration of variable, Scope of variable, Symbolic constant, Type Casting Operators and Expressions: Arithmetic, Relational, Logical, Assignment, Increment, Decrement, Conditional, Bitwise, Special operator, Dot operator.

Expressions: Arithmetic, Evaluation of expressions, Type conversion in expressions.

Unit-III

(06 Hours)

Decision making, branching, looping:

Branching: Introduction, If statement, If...Else statement, Nesting of If...Else statement, The Else If ladder, The Switch statement, The?: Operator.

Looping: The while statement, The do statement, The for statement, Jumps in Loop, Labeled Loop.

Unit-IV

(06 Hours)

Classes, Objects and Methods:

Introduction, Defining a Class, Methods, Objects, Accessing class members, Constructors, Methods overloading, Static members, Nesting of methods, Inheritance: Extending a class, Defining a subclass,

Multilevel and hierarchical Inheritance. Overriding methods, Final variables, methods, Final Classes, Abstract methods and classes. Visibility and control.

Unit-V

(06 Hours)

Arrays, Strings and Vectors:

One dimensional arrays, Two-dimensional arrays, Strings: Strings arrays, String methods. Vectors, Wrapper classes.

Unit-VI

(06 Hours)

Interfaces:

Introduction, Defining interfaces, Extending Interfaces, Implementing Interfaces, Accessing interface available.

Practical Assignment Schemes

Concerned Staff is directed to frame 2-3 Assignments on each Unit.

Text Books/References

Herbert Schildt, Java 2 Complete Reference - 5th Edition, Tata MGr Hill

Dietel & Dietel, Java How to Program

SEMESTER - IV

K30207: THEORY OF AUTOMATA & FORMAL LANGUAGES

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(10 Hours)

Introduction Mathematical Preliminaries & Notation:

Sets, functions and relations Basic Machine Concepts- Symbols, alphabets, string/word. Language, Abstract Machine, Acceptance of language by machine. Finite Automata (FA)- Definition, Types of FA- NFA and DFA, Language accepted by NFA and DFA, Making of finite state machines. Equivalence between DFA and NFA, Conversion of NFA to DFA, Minimization of FSM, Machines with Output- Moore and Melay machines, Designing, Intercor version of Moore and Melay, Application. Two way Finite Automata- Definition, Language acceptance, Uses.

Unit-II

(06 Hours)

Regular Expression:

Definition, Regular sets- properties and closure properties, Uses of Regular Expression, NFA with Epsilon moves- Definition, Uses, NFA without Epsilon moves. Pumping Lemma for Regular Sets- Statement, Application

Unit-III

(08 Hours)

Grammars:

Definition, Production rules, Derivation trees, Ambiguous Grammar, Removal of Ambiguity, Regular Grammar, Interconversion of RE to Grammar, Reduced form grammar- Removal of unit production, Removal of useless symbols, Removal of epsilon symbol.

Linear grammar left & right linear grammar Chomsky Hierarchy of Languages, Context Free Grammar- Definition, Context free language (CFL) - definition, Inherently ambiguous CFL. Normal Forms- Chomsky Normal Form(CNF), Griebach Normal Form(GNF)

Unit-IV

(06 Hours)

Push Down Automata (PDA):

Definition, Uses, Designing of PDA, Deterministic Push Down Automata and Non-Deterministic Push Down Automata- Definition, Language accepted by PDA, Equivalence of CFL and PDA, Properties of CFL, Pumping Lemma for CFL. Limitations of PDA, Application of PDA.

Unit-V

(08 Hours)

Turing Machine(TM):

Definition, Model, Comparison of TM, FSM, PDA, Design of TM, Examples of TM- Combinational TM, Iterative TM, Recursive TM, Universal TM, TM as a language acceptor, Some Problems that can not be solved by Turning Machines, Language accepted by TM, Recursive sets, partially Recursive functions, recursively enumerable sets. Church's Turing hypothesis, multitask TM, TM limitations, halting problem. Incompleteness and Undesirability.

Unit-VI

(10 Hours)

Applications of RE- Lexical Analyzer:

Text editor and searching using RE. Application of PDA- Expression conversion, Application of CFG - syntax analysis, language definition. Power OS: TM, PDA, FA, FSM, NFA, DFA, FA, TM.

Syllabus for Unit Test

Unit Test 1	Units I & II
Unit Test 2	Units III & IV
Unit Test 3	Units V & VI

K30208: COMPUTER COMMUNICATIONS AND NETWORKS

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(08 Hours)

Digital Transmission Fundamentals:

Digital signals, Analog versus digital, Limits of achievable data rate in digital communication, Transmission impairment, Attenuation and attenuation distortion, delay distortion, Thermal noise, Inter modulation noise, Impulse Noise, Cross talk, Channel capacity, Point to Point, Multidrop Configuration, Simplex, Half Duplex, Duplex transmission.

Unit-II

(10 Hours)

Modulation Techniques:

Amplitude Modulation: Amplitude Modulation Principles, Modulation Index and Percentage of Modulation, Sidebands and Frequency Domain, Amplitude Modulation Power Distribution, Single Sideband Communications. Frequency Modulation Principles, Phase Modulation, Sideband and Modulation Index, AM Vs FM, FM with Binary Signals.

Digital Modulation: Modems, Digital continuous wave modulation techniques for Modem e.g. ASK, FSK, PSK, Baud rate, QAM, Modern constellation patterns, Interface control for typical modem, EIA 232/V.24 interface.

Unit-III

(08 Hours)

Multiplexing:

Introduction, Frequency Division Multiplexing, Time Division Multiplexing, Wave division multiplexing, Pulse Code Modulation. Multiplexing Applications: The Telephone System. Error Detection and Correction: LRC, VRC, CRC, Checksum, Hamming code.

Unit-IV

(10 Hours)

Transmission Media:

Guided Transmission Media (Physical description, Application,

Transmission Characteristics) Twisted pair (Unshielded and shielded twisted pair), Category 3, Category 5 UTP, Coaxial cable. Wireless transmission unguided media (Terrestrial microwave, Satellite microwave) Fiber optic Communication: Principle of light transmission, types and modes of fiber, Losses and dispersion in fiber, sources (light) and detectors. Satellite communication: Kepler's laws, Orbital aspects, Geostationary satellite and frequency plans, Frequency plans and polarization, transponders, Multiple access methods.

(06 Hours)

Unit-V

Network Fundamentals:

Need of networks/advantages of network, Structure of communication network (DTE, DCE, Application Process, Logical and Physical Connection), Network architectures(OSI model), TCP-IP protocol stack overview, Network interface hardware and network hardware components-connectors, transceivers and media converters, NICs , RS-232 and RS-449, PCI, USB Protocols

(06 Hours)

Unit-VI

Network Types:

Local Area Network: LAN applications, LAN architecture, LAN topologies [Bus, Star, Ring, And Tree], Medium access control [RR, Reservation, And Contention], MAC frame format. Devices used for extending LANs - Repeaters, Bridges, Routers, Gateway, Switches, MAN. Wide Area Networks: Different switching techniques, Circuit switching and telephone networks, Packet switching networks.

Frenzel, Communication Electronics Principles and Applications, Third Edition, Tata McGraw Hill Publication.

Kennedy, Principles of Communication Systems, McGraw Hill

Syllabus for Unit Test

Unit Test 1	Units I & II
Unit Test 2	Units III & IV
Unit Test 3	Units V & VI

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Introduction to DBMS:

Basic concepts, Advantages of a DBMS over file-processing Systems, Data abstraction, Data Models and Data Independence, Components of a DBMS and overall structure of a DBMS, Life Cycle of a DBMS application. Database terminology, Role of database administrator.

Data Modeling: Basic Concepts, Types of data models, E-R data model and Object- Oriented data model. Relational, Network and Hierarchical data models and their comparison. Entity, attributes, relationships, constraints, keys, E-R and EER diagrams: Components of E-R Model, conventions, converting E-R diagram into tables, EER Model components, converting EER diagram into tables, normalization.

Unit-II

(06 Hours)

Relational Model:

Basic concepts. Attributes and domains. Intention and extensions of a relation, concept of integrity and referential constraints. Relational Query Languages (Relational algebra and relational calculus). Concepts of View and triggers. Updation using views, indexes, nulls.

Relational Database Design: Purpose of Normalization, Data Redundancy and Update Anomalies, Functional Dependencies, The Process of Normalization: 1NF, 2NF, 3NF, BCNF, 4NF, 5NF.

Unit-III

(08 Hours)

SQL:

Structure of a SQL query, DDL and DML, SQL queries. Set Operations, predicates and Joins, Set Membership, Tuple variables. Set comparison. Ordering of tuples, aggregate functions, and nested queries. Database modification using SQL, Dynamic and Embedded SQL and concept of

stored procedures and Triggers. Characteristics and advantages, SQL Data Types and Literals, DDL, DML, SQL Operators, Tables: Creating, Modifying, Deleting, Views: Creating, Dropping, Updation using Views, Indexes, Nulls, JDBC, ODBC, Cursors Database Analysis and Design Techniques: Information Systems Lifecycle, Application Lifecycle, Planning, System Definition, Requirement Analysis, Design, DBMS Selection, Application Design: Transaction and User-Interface Design, Prototyping, Implementation, Data Conversion and Loading, Testing, Data and Database Administration, Fact-Finding Techniques

Unit-IV

(08 Hours)

Storage and File Systems:

Secondary Storage, RAID, File Organization, Indices, Static and Dynamic Hashing, B-trees and B+ Trees.

Database Administration Issues: Overview, Measures of query cost, Selection and join operations, Evaluation of Expressions, Introduction to Query Optimization, Estimation, Transformation of Relational Expressions, DBA role, indexes, data dictionary, Security, Backups, replication, SQL support for DBA. Commercial RDBMS selection.

Unit-V

(10 Hours)

Transaction Management:

Basic concept of a Transaction, Properties of Transactions, Database Architecture, Concept of Schedule, Serial Schedule, Serializability: Conflict and View, Cascaded Aborts, Recoverable and Non-recoverable Schedules, Concurrency Control: Need, Locking Methods, Deadlocks, Time stamping Methods, Optimistic Techniques, Multi-Version Concurrency Control, Different Crash Recovery methods such as Shadow-Paging and Log-Based Recovery: Deferred and Immediate, Checkpoints.

Object-Oriented Databases: Need of OODBMS, Storing Objects in Relational Database, Introduction to OO Data Models, Persistent Programming Languages, Pointer Swizzling Techniques, Persistence, Object Management Group, Object Database Standard ODMG, differences between relational & object oriented database, inheritance.

Unit-VI**Database Architectures:**

Centralized and Client-Server Architectures, Introduction to Distributed Database systems.

New Applications: Need for data analysis. Decision support systems, Data Warehouse, On-line Analytical Processing (OLAP), Data mining concepts, Spatial and Geographic databases, Multimedia databases, Data mart.

List of Practical Assignments

Creating a sample Database application using conventional file processing mechanisms and C language. The program should provide facilities for retrieving, adding, deleting and modifying records.

Prepare an E-R diagram for the given problem definition. Prepare and verify a relational database design using concepts of normalization techniques in appropriate normal form.

Creating a sample database files and indexes (for the design made in experiment no. 2) using any client server RDBMS (Oracle/Sybase) package using SQL DDL queries. This will include constraints (key referential etc) to be used while creating tables.

SQL DML queries: Use of SQL DML queries to retrieve, insert, delete and update the database created in experiment no. 3. The queries should include all SQL features such as aggregate functions, group by, having, order by, subqueries and various SQL operators.

Screen design and Report Generation: Sample forms and report should be generated using their Developer 2000 (in case of Oracle) or through Power-Builder or Visual Basic front end roots or any prototyping software engineering tool.

Case study of a MIS.

Unit Test 2	Units III & IV
Unit Test 3	Units V & VI

K30210: MICROPROCESSOR ARCHITECTURE AND PROGRAMMING

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Introduction To Microprocessor:

8 bit processor architecture, 8085 microprocessor Architecture, Memory Interfacing, Memory Map and Address Decoding Logic. Introduction to 16 bit processor- 8086/8088 architecture, minimum and maximum mode Configurations, Supporting Chips 8284, 8286, 8288.

Unit-II

(08 Hours)

8086 Interrupt Structure:

Interrupt Service Routine, Interrupt Vector Table (IVT) - location of IVT in the memory, contents of IVT, Hardware interrupts and Software interrupts - INTR, NMI and INT N. Interrupt response, Execution of an ISR, priority of 8086 interrupts. 8259A priority interrupt controller.

Unit-III

(08 Hours)

I/O Interface:

Serial Communication Interface Asynchronous & Synchronous Communication, Physical Communication Standards, 8251A PCI, Parallel Communication, 8255A PPI, Interfacing and Programming, 4x4 Key Matrix Interfacing, Seven Segment Display Interfacing. 8257/8237 DMA Controller. 8253/8254 Programmable Timer.

Unit-IV

(08 Hours)

Multiprocessor Configurations:

Queue status & LOCK facilities, 8086/8088 based multiprocessing systems, Co-processor configurations, closely & loosely coupled configuration, Microcomputer networks, 8087 NDP coprocessor, Processor Architecture, 8089 I/O processor, IOP architecture, Communication between IOP & CPU.

Unit-V

(08 Hours)

8086 Programming :

Instruction set , Assembler directives, Assembling, Linking & Relocation, Stacks, Procedures, Interrupts & Interrupt routines, Macros, String Manipulation.

Unit-VI

(08 Hours)

DOS:

Internals of DOS, DOS loading, DOS Memory map, Internal & external commands, command interpreter POST Sequence, PSP Structure, Exe & Com file Structures and Conversion, Use of BIOS and DOS calls. INT 10H calls, DOS Calls, INT 21H Calls.

Difference Between DOS & BIOS, TSRs: Types , Structures, Details of TSR Types, Structures, Writing TSRs in Assembly language.

List of Practical Assignments

Write 8086 Assembly language program (ALP) to add array of N numbers stored in the memory

Write 8086 ALP to perform non-overlapped and overlapped block transfer

Write 8086 ALP to find and count negative numbers from the array of signed numbers stored in memory

Program to check the entered password is correct or not

Write 8086 ALP for the following operations on the string entered by the user

Calculate Length of the string

Reverse the string

Check whether the string is palindrome or not.

Write 8086 ALP to perform string manipulation. The strings to be accepted from the user is to be stored in code segment Module_1 and write FAR PROCEDURES in code segment Module_2 for following operations on the string:

Concatenation of two strings

Compare two strings

Number of occurrences of a sub-string in the given string

Find number of words, characters, number of lines and number of capital letters from the given text in the data segment

Note: Use PUBLIC and EXTERN directive. Create .OBJ files of both the modules and link them to create an EXE file.

Program for 32 bit hex multiplication

Write a program to arrange given set of numbers in Ascending/Descending order

Write assembly language program for BCD to Hex conversion

Write assembly language program for computing factorial of a numbers from 0 to 9

(06 Hours)

Introduction:

Signals, systems, classification of signals, elementary signals, analog and discrete signals, basic operation of signals.

Unit-II

(10 Hours)

Time Domain Representation for linear time invariant systems (Analog):

Convolution, series and parallel connection of systems, casual, non-casual, memory less, with memory, stable invertible systems, deconvolution, impulse, step and differential equation representation for continuous time linear time invariant.(CT LTI) systems.

Unit-III

(08 Hours)

Time Domain Representation for linear time invariant systems (Discrete):

Convolution, series and parallel connection of systems, casual, non-casual, memory less, with memory, stable invertible systems, deconvolution, impulse, step and differential equation representation for discrete time linear time invariant.(DT LTI) systems.

Unit-IV

(08 Hours)

Fourier Representation for Continuous time signals:

Representation of signals in terms of orthogonal functions, orthonormal signals, Fourier series, discrete time Fourier series, Fourier transform, discrete time Fourier transform, their properties, Fourier transform representation of periodic signals, inverse fourier transform for cts.

Unit-V

(06 Hours)

Laplace Transform:

Introduction to Laplace Transform and its properties, LT of elementary signals, unilateral LT, inversion of LT, using LT with or without initial

conditions, transfer function of systems, state variable descriptions, advantages & uses of LT.

Unit-VI

(06 Hours)

Z-Transform:

Introduction, Z-Transform of elementary signals, region of convergence (ROC), properties of Z-Transform, inversion of z-transform, system function solution of difference equation unilateral Z-Transform, advantages & uses of Z transform.

Note: Minimum two case studies of biomedical signals (ECG, EMG, EEG) using Above mathematical tools.

Practical Assignment Scheme

Concerned staff member is directed to frame two assignments on each Unit.

Text Books/References

John G. Proakis, Digital signal processing, PHI

Rodger E. Ziemer, William H. Tranter, Signals and Systems, Continuous and discrete, MGH

Syllabus for Test

Unit Test 1	Units I & II
Unit Test 2	Units III & IV
Unit Test 3	Units III & IV

TEACHING SCHEME

Lectures : 02 Hrs/week
Practical : 02 Hrs/week
Tutorials : 02 Hrs/week

EXAMINATION SCHEME

Duration : 03 Hrs (Pr/Or)
T. W. & Or. : 50 Marks
T. W. & Pr. : 50 Marks

Unit-I

(06 Hours)

Introduction:

Visual studio Visual Basic-Flavors, Installation Issues, Event Driven Programming, VB Design Environment: Integrated Design Environment, MDI vs. SDI, Getting Started: Introductions, Adding a Project Standard Controls & Common Properties: Property, Standard Properties, Standard Controls, Placing Controls on a Form

Unit-II

(10 Hours)

Controls:

Text Box Control: Text Box Properties, Text Box Events, Methods, Creating Text Boxes
Additional Controls: List Box and Combo Box, Frames and Option Buttons Check Boxes, Scroll Bars, Timer, Common Dialog
Graphics Controls & Techniques: Picture Control,
Image Control: Shape Control, Creating Graphics
Variables and Constants: Basics, Types of Variables, Variable Names Variable Creation, Constants, Creating user defined data types with Type

Unit-III

(08 Hours)

Message boxes and input boxes:

Use of msg box & Input Box for input & output Returning values, Formatting the boxes,
Conditional statements: If-Then-Else, Case Statement, Creating condition
Loops: Types of loops, Do...loop, For...Next
Arrays: Declaration of arrays, Types of arrays

Unit-IV

(08 Hours)

String Manipulation:

Types of string Manipulation, Implementation

Procedure and function: Creating Procedures, Sub Routines, Creating Function, Built in functions (Numeric, string, Date-time, data conversion, formatting)

Variable & Procedure Scope: Declaring a Variable, Procedure & function Scopes.

Unit-V

(08 Hours)

Debugging:

Debugging techniques, Setting breakpoints, Immediate window.

Using Menus and Toolbars: Menu Editor, From Pop-up Menu, Adding Menus, Adding a Pop-up Menu, Creating a toolbars, Using toolbars

ActiveX & OLE: Building ActiveX documents, Building OLE.

Unit-VI

(06 Hours)

File I/O:

Working with Files, Retrieving Data, Free file Function, Open Statement/Input Statement, Print Statement,

Database Access: Data Controls, Bound Controls Additional Data Control Properties , Data Reports ,Creating a Database Access Application.

List of Practical Assignments

Use of dynamic arrays and multidimensional arrays (Matrix operations)

Program to print student merit list

Develop a scientific calculator using control array

Application to change color, type, style, size of font using list box and combo box.

Use of scroll bars to change the RGB colors and size of shape object

Develop a screen saver using timer control

Develop an application which create mark sheet using standard module

Develop a paint brush application

Develop a notepad application

Create a menu on MDI form and call different forms

Create a database application using ADO and generate data reports

Develop an application for file handling

RULES REGARDING ATKT, CONTINUOUS ASSESSMENT AND AWARD OF CLASS

A. T. K. T.

A candidate who is granted term for B.Tech. Semester-I will be allowed to keep term for his/her B.Tech. Semester-II examination even if he/she appears and fails or does not appear at B.Tech. Semester-I examination.

A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B.Tech. Semester-IV examination even if he/she appears and fails or does not appear at B.Tech. Semester-III examination.

A candidate who is granted term for B.Tech. Semester-V will be allowed to keep term for his/her B.Tech. Semester-VI examination if he/she appear and fails or does not appear at B.Tech. Semester-V examination.

A candidate who is granted term for B.Tech. Semester-VII will be allowed to keep term for his/her B.Tech. Semester-VIII examination if he/she appears and fails or does not appear at B.Tech. Semester-VII examination.

A student shall be allowed to keep term for the B.Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B.Tch. Semester-I & II taken together.

A student shall be allowed to keep term for the B.Tech. Semester-V of respective course if he/she has no backlog of B.Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.

A student shall be allowed to keep term for the B.Tech. Semester-VII course if he/she has no backlog of B.Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

In respect of Term work at B.Tech. Semester-I & II, B.Tech. Semester- III & IV and B.Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.

For B.Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or marks but less than 66%	First Class
C	Aggregate 55% or more marks but less than 60%	Higher Second Class
D	Aggregate 50% or more marks but less than 55%	Second Class
E	Aggregate 40% or more marks but less than 50%	Pass Class

BHARATI VIDYAPEETH UNIVERSITY, Pune.

COURSE STRUCTURE & SYLLABUS

BHARATI VIDYAPEETH UNIVERSITY, PUNE

B. Tech. (PRODUCTION) (Sem. III & IV)

HIGHLIGHTS

Bharati Vidyapeeth University College of Engineering (BVUCOE) is the largest Engineering College in Maharashtra with an intake of 700 students in each academic year. Imparting quality technical education from Under Graduate to Doctorate Level, BVUCOE is probably the only Engineering College in India with an accreditation from both NAAC as well as NBA. The faculty at BVUCOE boasts of highly qualified academicians, a quality that is further emphasized by the fact that 15 of them are presently pursuing their Ph.D. degree.

BVUCOE has been ranked 29th amongst the Top 50 Technical Schools of India in survey conducted by DATAQUEST-IDC. We have enjoyed a ranking in this list for the last 4 years. Research is of utmost importance in all our programs. A total of 113 research papers were published in the academic year 2007-2008.

Currently we have 12 ongoing research projects. The infrastructure of BVUCOE is state-of-the-art with 62 classrooms, 59 laboratories and a well-stocked library that currently holds 27,130 titles. The college has an international presence with MoUs signed with the North Carolina A&T State University (Greensboro, USA), University of Venice (Italy), Actel Corporation (USA). Corporate interaction is also inculcated in our programs through our association with Oracle India Ltd., Infosys Ltd. and Tata Consultancy Services.

SALIENT FEATURES

Production Engineering Department was established in the year 1983. This is one of few departments to be established in the University of Pune, to which this college was affiliated from 1983 to 2000.

The department is trying to give best of academic & practical knowledge to students right from the inception. The departmental goals are:

Provide Students with a balance of intellectual and practical experiences that enable them to address society needs.

Quality improvement of staff and students for value added education.

Identifying emerging technologies and Design innovate methods for teaching and learning.

Project topics to focus on industrial needs and contribute to economic and social development.

Ensure the highest quality of teaching and learning, led by active research.

Promote Industry-Institute Interaction.

The workshop is the part of Production Engineering Department and it is having 2134 sq.mts area with different facilities spread over three floor.

Basement: Machine Shop, Moulding Shop and Black Smithy.

Ground Floor: Production Shop, Turning Shop, Welding Shop, Advanced Manufacturing Shop.

First Floor: Pattern Making Shop, Carpentry Shop, Tin Smithy Shop, Plumbing Shop, Fitting Shop, Plastic Moulding Shop. The department spreads over a built up area of 3068 sq.mts.

MAJOR GROUPS/AREAS

Manufacturing Processes, Advance Productivity Techniques, Industrial Engineering, Metallurgy, Manufacturing Automation, CAD/CAM, Product Design, Inspection and Testing.

EXPERTISE IN RESEARCH AND CONSULTANCY

Production Engineering Department has received grant of Rs. Five Lakhs from All India Council for Technical Education (AICTE), New Delhi for development of Non-Traditional Machining Processes Laboratory under MODROBS Scheme. Also a DST Project of 18 Lakhs has been received for further research in Non-Traditional Machining processes laboratory.

One of the faculty member has completed Ph.D programme at Indian - Institute of Technology, Kanpur under Quality - Improvement programme (QIP) and one staff member is pursuing Ph.D programme in U.S.A. Two staff members are pursuing Ph.D programme in Bharati Vidyapeeth University.

Our metallurgy lab has all the facilities required for inspection and testing of materials.

MAJOR EQUIPMENTS

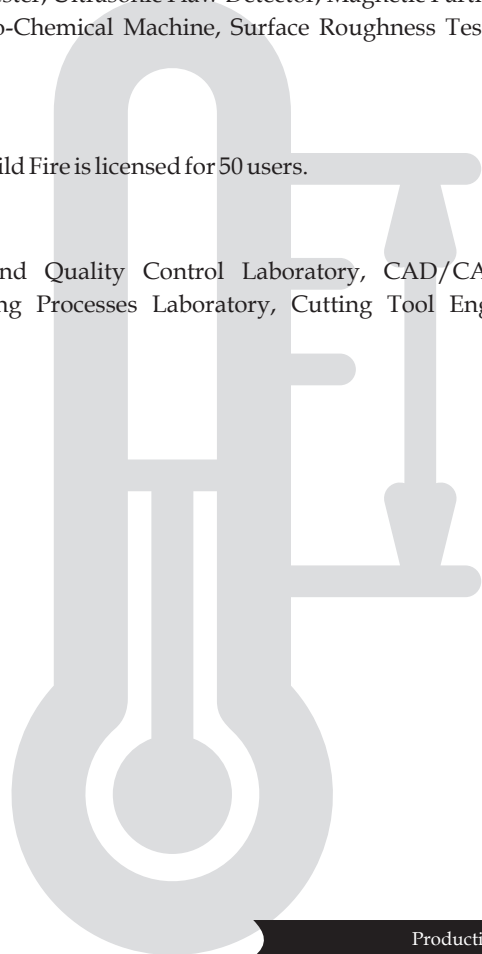

CNC Lathe, CNC lathe trainer, Spark erosion machine, Optical micrometer with CCTV, Vickers cum Brinell Hardness Tester, Ultrasonic Flaw Detector, Magnetic Particle Tester, Spark Erosion Machine, Electro-Chemical Machine, Surface Roughness Tester (Mitutoyo Make).

SOFTWARES

Ideas 10 NX and CATIA V-5 R-II. Proe Wild Fire is licensed for 50 users.

LABORATORIES

Metallurgy Laboratory, Metrology and Quality Control Laboratory, CAD/CAM Laboratory, Non-Traditional Machining Processes Laboratory, Cutting Tool Engg. Laboratory.

STRUCTURE & EXAMINATION PATTERN

B. Tech. - Production Engineering

Semester III								Total Duration : 34Hrs/Week
								Total Marks : 750
Subject Code	Subject	Teaching Scheme			Examination Scheme			Total
		L	P	D	Theory	Unit Test	TW & Or

RULES FOR CONDUCTING TESTS

Mode of the test

In each semester for each subject three tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.

Each test shall carry 20 marks.

University examination pattern has given weightage of 20 marks for the tests.

To calculate these marks following procedure is followed:

- i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
- ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
- iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
- iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
- v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; These marks will be final marks obtained by the student. No scaling up is permitted.
- vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.

Paper Pattern for Tests

- i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

- ii) There will not be any sub-questions.

For granting the term it is mandatory to appear for all the three tests conducted in each semester.

Roll numbers allotted to the students shall be the examination numbers for the tests.

SEMESTER - III

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Simple Stresses & Strain in Machine Parts:

Concept of stress & strain, types of stresses, strains - linear, lateral, shear thermal, volumetric, hooks law, Poison's ratio, modulus of elasticity, modulus of rigidity, bulk modulus, stress-strain diagram for ductile & brittle material, yield strength, ultimate strength, buckling, impact loading, suddenly applied loading, Thermal stresses in machine elements

Unit-II

08 Hours)

Engineering Materials:

Mechanical properties of engineering materials, creep, stress concentration, selection of materials, cast iron, BIS system of designation of steel, plain carbon steel, overseas standards, cast steel, aluminum alloys, die casting alloys, weighted residual method.

Unit-III

(08 Hours)

Principle Stresses:

Normal & shear stresses & strain on any oblique plane, concept of principle planes, derivation of expression of principle stresses & maximum shear stresses, position of principle planes & planes of maximum shear, graphical solution using Mohr's circle, combined effect of axial force, bending & torsion.

Theories of Failure:

Maximum normal stress theory, Maximum shear stress theory, Maximum distortion energy theory, Maximum strain theory, Maximum strain energy theory, their application & limitation to engineering

material, composite member design.

Unit-IV

(08 Hours)

Shear force Diagram & Bending Moment Diagram of Shafts and Beams:

SFD & BMD of shaft with different end conditions, simply supported, cantilever, overhang, with all types loads, concentrated load conditions, torsional deflection of shaft, lateral deflection of shaft by Maculley's method, moment area method, Castigliano's theorem.

UNIT-V

(08 Hours)

Stress Analysis of Knuckle and Cotter Joint:

Bending of curved bars, stresses in ring, chain link, crane hook, eccentric loading, design of knuckle & cotter joint & chain link.

UNIT-VI

(08 Hours)

Threaded and Riveted Joints:

Basic types of screw fastenings, uniform strength bolts, ISO metric screw threads, Eccentrically loaded bolt joint load perpendicular to bolt axis, eccentric load on circular base, cylindrical bolts, turn buckle design.

Term work:

The Journal containing the record of following:

- i) Experiment on Tension test on M. S. bar.
- ii) Experiment on Compression test on M.S. bar.
- iii) Experiment on Shear test on M. S. bar.
- iv) Experiment on Torsion test on M. S. bar.
- v) Experiment on Impact test.

Drawing file containing two half imperial sheets:

- i) Drawing sheet of SFD – BMD of shafts using computer.
- ii) Drawing sheet of Mohr's circle.

Any two assignments based on above syllabus.

Oral

Based on above term work.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K60221: INDUSTRIAL ENGINEERING & MANAGEMENT

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(08 Hours)

Management-An Introduction:

Management- Meaning and Definitions, Management, Administration, and Organization concepts, Management as an Art and Science and profession, contribution of various thinkers to management thought, Types and Functions of Management.

Unit-II

(08 Hours)

Organization:

Different forms of business Organization -Individual proprietorship, Partnership, Joint stock company, Co-Operative enterprise, Public Sector, Undertakings, organizational structures in Industries, Line, Functional , Line and functional , Project, Matrix Organization and Committees

Unit-III

(08 Hours)

Financial, Marketing and Personnel Management:

Financial Management-Capital structure, Fixed capital, working capital, sources of finance, cost analysis, Break even analysis, Depreciation and Financial statement.

Marketing Management-Definitions, Marketing and Selling concept, market segmentation, distribution channels ,Market Research, Advertising and sales promotion and Sales forecasting.

Personnel Management-Definitions Recruitment, Selection and training of the employees, Job valuation and Merit rating ,wage administration-different methods of wage payments, incentives.

Unit-IV

(06 Hours)

Method Study:

Steps in method study, tools and techniques used, process chart symbols, flow diagrams, two handed chart, multiple activity chart, use of motion

pictures and its analysis. Simo charts, chorno & cycle graph, developing, presentation, installation and maintenance of improved methods.

Unit-V

(10Hours)

Work Measurement :

Time Study: Aim and objectives , terminology and tools, use of stop watch procedure in making a time study, elements, selection of operations time study forms, handling of foreign elements. Performance rating. Allowances: Personal, Fatigue and other allowances. Analysis and calculation of Standard Time. Determination of number of cycles time study for indirect functions such as Maintenance , Marketing etc., Most Technique.

Works Sampling: Definition, Objectives, theory of Work Sampling. Other applications of work sampling, errors in work sampling study.

Synthetic and Standard data Methods: Concepts, introduction to PMTS, MTM-1, WF, Basic motion time, MTM-2, and other second - generation methods timing of group operations.

Unit-VI

(08Hours)

Ergonomics and Industrial Safety:

Definitions, importance in industry, basic anatomy of human body, anthropometrics, measurement of physical work and its techniques, work and rest cycles, bio mechanical factors environment effects.

Importance of safety, planning, training, safety precautions, safety equipments, Government regulations on safety.

Introduction to Business Process Re-engineering (BPR), Concurrent Engineering, Reverse Engineering, JIT, KANBAN.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Second Law of Thermodynamics:

Limitations of first law, Heat engine, refrigerator & heat pump, Kelvin -Planks and Clausius statement, Equivalence of Kelvin - Planks and Clausius statement, Perpetual motion machine of second kind, Carnot cycle & Carnot heat engine, Entropy, Principle of increase of entropy. Steam Generators: Classification, Constructional details of Process & Power boilers, boilers mountings & accessories, equivalent evaporation, boiler efficiency, energy balance, boiler controls, boiler draught.

Unit-II

(08 Hours)

Refrigeration:

Systems of refrigeration, unit of refrigeration, reversed Carnot cycle, Bell Coleman cycle, Vapour compression cycle, Superheating and liquid sub cooling, C. O. P and Power requirements, TR Capacity, Use of p-h charts, Desirable properties of refrigerants, CFC & non-CFC & alternative refrigerants, Vapour absorption systems, Comparison of Vapour compression & Vapour absorption systems

Unit-III

(08 Hours)

Air conditioning:

Factors affecting human comfort, mixture of air & vapour, Dalton's law, psychrometry, definitions such as DBT, WBT, Specific humidity, relative humidity, degree of saturation, study of psychrometric chart, different psychrometric process such as sensible heating, cooling, humidification & dehumidification, combination of above process, evaporative cooling, Different Air conditioning systems such as winter, summer, year round, central and unitary, Applications of air conditioning.

Unit-IV

(08 Hours)

Reciprocating Air Compressors:

Introduction, Use of compressed air, construction & working of reciprocating air compressors, P-V diagrams of single stage air compressor, Effect of clearance on it, Volumetric efficiency, Power required to drive the compressor, Isothermal efficiency, Mechanical efficiency, Multi-staging of air compressor with ideal intermediate pressure and perfect inter cooling, Advantages of Multi-staging.

Unit-V

(08 Hours)

Internal Combustion Engine Systems:

Fuel Feeding Systems:

Introduction of carburetors in S.I. engines, Mixture requirements, Solex carburetor, M.P.F.I. system for modern automobile engines, Fuel injection systems in C.I. engines, Bosch fuel injection pump, fuel injectors, Type of nozzles.

Ignition Systems:

Battery ignition, magneto ignition, Electronic ignition systems.

Cooling and Lubrication Systems:

Necessity of cooling, Cooling systems, air cooling, indirect cooling, Thermo-siphon cooling, pressurized water cooling, evaporative cooling. Lubrication system for IC engines, Mist type, pressurized, Wet sump, Dry sump.

Unit-VI

(08 Hours)

Air Standard Cycles:

Introduction to Air Standard cycle, Air Standard otto cycle, Diesel cycle, Dual combustion cycle, comparison of above cycles, Actual cycle

Engine Testing & Performance:

Measurement of I.P, B.P, Rope brake dynamometer, Hydraulic dynamometer, Eddy current dynamometer, Measurement of F.P, Willian's line method, Morse Test, Measurement of fuel & air, Measurement of speed, Heat balance sheet.

Term Work :

Term work shall consists of record of minimum eight experiments of the following:

Study of package boiler/modern boiler.

Study of boilers mountings & accessories.

Study of solex carburetor.

Trail on Reciprocating Air Compressor, to determine Isothermal efficiency, Volumetric efficiency & FAD

Study of Fuel pump & Injector.

Study & Performance test on refrigeration test rig to determine actual, theoretical & relative COP, TR capacity of cooling coils.

Study and test on air conditioning test rig.

Trail on Diesel (computerized) engine to determine heat balance, BP, BSFC, Thermal efficiency, Mechanical efficiency.

Study of ignition system of IC engine.

Test on multicylinder Petrol engine to determine B.P, I.P, Brake thermal efficiency & mechanical efficiency.

Oral

Based on above term work.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/Week
Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks
Duration : 03 Hours
Unit Test : 20 Marks
T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Pattern And Mould Making:

Foundry Layout, Foundry departments and sections, Pattern and pattern making, Design and allowances for patterns, Colour codes for patterns, Storage of patterns, Types of moulding, Moulding and core making practice, Types of cores, Core print, Core boxes, Moulding sand and core sands, Ingredients of moulding sand, Sand testing methods and their importance in quality control, Gating risering and their design, Software available

Unit-II

(08 Hours)

Melting And Pouring Practice:

Melting furnaces and their selection, Cupola and its operation, Advantages and limitations, applications, Induction melting furnaces, Advantages, Limitations, applications, Pouring practice and equipments, Ladle technology, Solidification of castings, Strike out, Fettling, Cleaning and Surface preparation of castings, Inspection and testing of castings, Defects in castings.

Unit-III

(08 Hours)

Die Casting Process:

Pressure and gravity die casting, Shell mould casting, Investment casting, Continuous casting, Vacuum casting, centrifugal casting, Applications, Merits and limitations of all, Testing and inspection of die casting, Salvaging of casting, Machinability of castings, Foundry mechanization and automation, Use of robots in foundry, Quality control in foundry, Quality assurance and reliability, Dust problems and pollution control, Export potentials for cast products in Indian context.

Unit-IV

(08 Hours)

Introduction Of Welding Processes:

Classification of welding processes, Surface and edge preparation, Fundamentals including heat and fluid flow in fusion welding, Mass

transfer to base metal in gas, Metal arc welding.

Arc welding processes:

Carbon arc, Submerged arc, Tungsten inert gas (TIG), Metal inert gas (MIT), Electroslag, Plasma arc, Stud welding and related arc welding processes – Theory, Comparison on merits, limitation and applications, Fluxes used in arc welding.

Unit-V

(08 Hours)

Gas Welding And Electric Resistance Welding:

Gas welding – Processes and equipment used, Types of flames, Gas cutting– Merits, demerits and applications. Electric resistance welding – Process and equipment used, Spot, Seam, Projection, Butt, Percussion welding, Tube welding, Electric resistance welding process, its merits, demerits and application.

Unit-VI

(08 Hours)

Other Welding Processes:

Cold, Pressure, Diffusion, Ultrasonic, Explosive, Friction, Forge, Thermit, CO₂, Braze and braze welding, Soldering, Principle, Equipment used, Flux used, Merits demerits and application of the above process. Laser beam welding, Electron beam welding, Welding of dissimilar metals, Welding of polymers, Welding inspection, Welding defects and their Classification. Importance of ASME codes, ISO standards on joining processes.

Term Work

List of experiments (Any Five)

Mechanical test on weldment (weld)- Tension bend, drop weight, tear test.

Moulding and core sand testing (Clay content test, moisture content test etc).

Fluidity test using fluidity spiral pattern

Permeability test.

Green strength mould and Green strength core.

Mould and core hardness test.

List of Assignments (Any Five)

Macro examination of brazing and joint section inspection.

Plasma Arc welding.

TIG MIG or CO2 Welding to exhibit welding defects such as shrinkage, porosity, and burnout

Sieve analysis of sand

CO2 Moulding and shell moulding processes.

Oral/Practical

Term work and oral will be based on above syllabus

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K 50261 : INDUSTRIAL ELECTRONICS AND ELECTRICAL ENGINEERING

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

D.C. Machines:

Construction, generator action, e.m.f. equations, types, shunt, series, compound generators (elementary treatment). Motoring action, types - Shunt and series, significance of back e.m.f., torque - speed equations, torque - armature, current speed - armature current, torque - speed characteristics, different methods of speed control for shunt and series motor, starters of DC motors. Applications Of DC motors

Unit-II

(08 Hours)

Three Phase Induction Motors:

Concept of rotating magnetic field Principle of operation, slip, slip torque equation, torque slip characteristics, Methods of starting of I M , relation between slip, of mechanical power developed and copper loss, efficiency of motor, applications of 3-phase IM

Principle of working, construction and applications (descriptive treatment only) of

- i) Single phase induction motors: Resistance split phase, capacitor split phase and shaded pole motors.
- ii) Special purpose motors: Stepper motors, servomotors, A.C. series motors, Universal motors.

Unit-III

(08 Hours)

Synchronous Machines:

Alternators: Constructional features, salient pole and cylindrical type rotors, synchronous speed. Frequency of induced e.m.f., e.m.f. Equations, winding factors, regulation of an alternator.

(Synchronous impedance method only).

Synchronous motors: Principle of working phasor diagram, effect of variation of load and excitation, methods of starting, general applications,

application as synchronous condensers.

Unit-IV

(08 Hours)

Study of Power Control Devices:

Construction and working of SCR, Triac, Power MOSFET, IGBT, Characteristics and, Triggering circuits using Diac / UJT, simple applications like Controlled rectifiers light dimmers, fan regulators. .Study of UPS (Only block diagram)

Unit-V

(08 Hours)

Linear and Digital ICs:

Introduction to IC Op-Amp (like 741), ideal parameters, open loop and closed loop gain, Op-Amp with negative feedback as a small signal amplifier (e.g. Inverting and non-inverting configurations) Op-Amp as Instrumentation Amplifier, Audio Power Op-Amp. IC's like TBA 810, LM380, Op-Amp as comparator, Op-Amp as wave form generator (Square and ramp), case study of Waveform generator IC such as 8038 or XR 2206. Timing Circuits Using IC 555 as mono stable and astable multivibrator and its applications in Mechanical Engg., sequential timers. Binary and BCD adder, Subtractor, Study of flip-flops, shift registers, counters, applications of digital circuits such as staircase, traffic light, lift controller, sequential controllers, display devices like LED, LCD, opto-isolators and opto-couplers.

Unit-VI

(08 Hours)

Industrial Applications:

Advantage of electrical heating, various methods of heating

- i) Resistance heating: Requirements of heating element materials, various heating element materials, design of Heating elements.
- ii) Induction heating: Core type furnace, Ajax - Wyatt furnace, coreless induction type furnace, high frequency. Eddy current heating.

Dialectical heating: General principles Resistance welding and arc welding transformers, storage welding, RF heating, ultrasonic method of testing of materials, principles at LASER and applications, Use of CRO as display devices for industrial applications.

List of Practical

The Term-work shall consist of record of following experiments (Any Eight)
(4 from Electronics and 4 from Electrical)

Study of UPS Systems: Instruments : UPS Kit, CRO, Dmm

Or

Controlled rectifiers wing SCR with UJT triggering for a lamp load .Instruments :
Power – Scope, DMM

Applications of Op-Amp. Using 741 (Any Two)

i) Square wave generators / ramp. Generator

ii) Instrumentation Amplifier

iii) Op-Amp as comparator and Schmitt trigger

Instruments : Dual trace CRO, Dual power supply, Function
generator

Sequential timer using IC555 and square wave generator.

Instruments : Power supply, Dual trace CRO, stop-watch.

Application of logic gates (one bit comparator) and combinational circuits, e.g.
traffic lights

Combinational lock lift, control, code conversion

Shift register IC 7495 and its application as a sequence generator
OR

Programmable counter (frequency and time measurement).

Instruments for digital experiments, Power supply, dual trace CRO, pulse
generator, DMM

Experiment on CNC programming (to be conducted in workshop)

Speed control of D. C. shunt motor by armature voltage and flux control methods
and study Of D.C. shunt motor starters

Load test on D. C. shunt motor

Load test on D. C. series motors

Regulation of alternator by synchronous impedance method

Load test on three phase induction motor

Regulation of alternator by direct loading method

Study of various single-phase Induction motor

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K60261: MACHINE DRAWING AND COMPUTER AIDED DRAFTING

TEACHING SCHEME

Lectures : 02 Hrs/Week

Drawing : 02 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

T. W. & Or. : 50 Marks

Unit-I

(06 Hours)

Dimensioning Practices:

Terms and Notations, Leader, Extension Lines, Terminations and Origin indication, Functional dimension, Non-functional dimension, Datum dimension, Redundant and auxiliary dimension, Chain dimensioning, Running dimensioning, Co-ordinate dimensioning, Symmetrical or equidistant dimensioning, Methods of dimensioning
Common features: Diameters, Radii, Hole sizes, chamfers, Screw threads, Chords, Arcs, Angles, Spheres, Cylinders, Squares.

Conventional Representation of Machine Components As per SP-46 (1988)

ISO Systems of Tolerancing

Tolerance and Allowances, Unilateral and Bilateral limits, Maximum Material Condition (MMC), Methods of tolerance, Indications of deviations and limits of sizes, Tolerances for linear and Angular dimensions, Types of fits with symbols and applications.

Surface Roughness

Surface feature, Machining symbols, Roughness value (Ra) Roughness grade numbers, Conventional representation on part Drawing, Manufacturing process and Surface finish.

Unit-II

(05 Hours)

Types of joints:

Thread forms and their properties, Standard Tables of ISO Metric Threads, Threads designation, Single and multi start threads, Right and left hand threads, Types of screws, bolt and nuts, Types of nut locking Arrangements, Threaded hole and stud assembly, Set screws, Grubs screws, Screwed Joints Welded Joints, Types of pipes and pipe joints, Flange joint Spigot and socket joints, Cotter joint, Hydraulic pipe joints Screwed and flanged union, Expansion joints, Stuffing box and Gland, Piping Layouts, Conventional representation of pipe fittings.

Unit-III

(04 Hours)

Assembly and Part Drawing:

Production Drawing, Bill of Materials Assembly and Part Drawings, such as: Boiler mounting, Steam engines, Machine tools, Automobile Parts.

Unit-IV

(05 Hours)

Introduction to Computer Aided Drafting:

Working Interface of AutoCAD, Drawing Limits, Creating 2-D Drawing in AutoCAD, AutoCAD commands, Editing commands in AutoCAD, Dimensioning in AutoCAD, Creating text in AutoCAD, Changing object properties Scale, Object Snap Mode, Display control in AutoCAD, Layer.

Unit-V

(04 Hours)

3-D Drawing, Surface Modeling:

Introduction, WCS, View Point, UCS, Working with UCS, Orthographic Views Surface Modeling: Box, Wedge, Pyramid, Cone, Sphere, Dome, Dish

Unit-VI

(02 Hours)

Introduction to Solid Modeling:

Box, Wedge, Cylinder, Cone, Sphere, Extrude, Revolved, Slice section, Union, Subtract.

Term Work

First sheet based on dimensioning practice, conventional and symbols in machine drawing

Two Drawing Assignments based on Assembly and Details of Machine Parts, Automobile parts, Engine, Boiler parts etc. (One Drawing assignment preferably on AutoCAD)

Six AutoCAD drawing assignments

Oral

Termwork and oral will be based on above syllabus

SEMESTER - IV

TEACHING SCHEME

Lectures : 04 Hrs/Week
Tutorials : 01 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks
Duration : 03 Hours
Unit Test : 20 Marks

Unit-I

(08 Hours)

Differential equations:

Solution of Linear differential equation of n^{th} order with constant coefficients, Method of variation of parameters, Cauchy's (Homogeneous type) and Legendre's linear equations.

Simultaneous linear differential equations, Total differential equation, Symmetrical Simultaneous differential equations.

Unit-II

(08 Hours)

Applications of differential equations:

Application to mass spring systems with coupled masses, equivalent electrical circuits. Solution of multi degree of freedom systems (Vertical and Horizontal) by matrix method, Natural frequencies and normal modes of vibration.

Applications of Partial differential equations:

Solution of wave equation, one and two-dimensional heat flow equation by method of separating variables. Application to mechanical and allied engineering problems.

Unit-III

(08 Hours)

Transforms:

Fourier transforms: Fourier integral theorem, Fourier sine and cosine integrals, Fourier Transform, Fourier sine and cosine transforms, Inverse Fourier transforms, Solution of boundary value problems using Fourier transform (Diffusion equation only).

Laplace Transform: Definition, Properties and Theorems, Inverse Laplace transform, Methods of finding inverse Laplace transform, Application to solution of linear differential equations.

Unit-IV

(09 Hours)

Statistics and Probability:

Measures of central tendency, Standard deviation, Coefficient of variation, Moments, Skewness and Kurtosis, Correlation and Regression, Reliability of Regression Estimates.

Probability density function and probability mass function, Binomial, Poisson's, Normal and Hypergeometric distributions, Test of Hypothesis: Chi-Square test of goodness of fit and Independence of attributes, Introduction to Decision and Quality control.

Unit-V

(09 Hours)

Vector Differentiation:

Radial, Transverse, Tangential, Normal components of linear velocity and acceleration, Gradient, Divergence and Curl, Directional derivative, vector identities Irrotational and Solenoidal Vector fields.

Unit-VI

(08 Hours)

Vector Integration:

Line integral, Surface integral and Volume integral, Work done, Gauss-Divergence theorem, Stoke's theorem and Greens lemma.

Applications to fluid flow, Streamline's, Continuity equation, Motion equation and Bernoulli's equation.

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Lathe, capstan and turret lathe:

Introduction, function, types, specification of lathe machines, construction accessories, attachments, operations Tool Geometry. Difference between capstan and turret and engine lathe, turret indexing mechanism, Bar feeding mechanism, work holding devices, tool holding devices, turret tooling layout.

Unit-II

(08 Hours)

Drilling and milling machines:

Types, construction, spindle assembly operation & applications. Fundamentals of milling process, Specification of Drilling and Milling Machines, cutters-types and geometry, operations performed on milling & drilling machines. Dividing head, methods of indexing. Gear train calculations for helical and cam milling.

Unit-III

(08 Hours)

Abrasive machining processes and Surface Treatment Process:

Abrasive machining, abrasive-types, size and geometry. Specifications of Grinding, grinding wheels, wheel marking, wheel selection. Wheel mounting. Types of grinding machines, Grinding faults, Honing, lapping, super finishing, buffing, burnishing process. Electroplating, phosphating, metal spraying, anodizing, shot Peening. Effects of surface treatment processes.

Unit-IV

(08 Hours)

Gear Manufacturing & Thread Manufacturing:

Gear cutting processes, forming and generation, gear cutting on milling machine, gear hobbing, gear shaping, gear shaving, gear grinding. Specifications of gear and thread manufacturing machines.

Thread cutting, internal and external, chasers, dies, thread milling, thread

rolling, thread grinding, thread whirling.

Unit-V

(08 Hours)

Broaching & Numerical control and Machining Centers:

Types of broaching machines - Horizontal, vertical pull up, pull down broaching machines. Broaching machines parts and their function, components machined on broaching machines broach geometry. Introduction to NC. CNC, DNC machines, comparison between NC conventional machine tools, basic principles of NC machine, tolling requirements, Advantages of NC machines, Introduction to machining centers.

Unit-VI

(08 Hours)

Non Conventional Methods of Machining :

Difference between conventional and non conventional machining, Introduction to chemical machining, Electric discharge machining, Electron beam machining, Ion beam machining, plasma arc machining, Laser cutting and welding, Abrasive jet machining, Ultrasonic machining.

Term Work

Experiments and assignment:

- Study and demonstration of ECM and EDM machine.
- Study and demonstration of NC and CNC machine programme.
- Study of Gear generating process on milling machine.
- Study of dividing indexing mechanism.
- Study of Single point cutting tool, Twist drill, Milling cutter
- 6 Assignments based on above syllabus & Industrial visit

Oral

Termwork and oral will be based on above syllabus

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 04 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Basic Concept and Definition:

Link - Binary, ternary, quaternary, Structure, Machine, Mechanism, Kinematic pair - Classification, Kinematic Chain and Mechanism - Grubler's criteria for movability of chains and mechanism as locked constrained, Unconstrained based on grubler's criteria, Inversion of single slider and double slider crank chain. Inversion of four bar mechanism.

Unit-II

(08 Hours)

Mechanism with lower Pair:

Study of Pantograph, Study of exact straight line motion mechanism, Study of approximate straight line motion mechanism, Steering Gear Mechanism, Hook's or Universal joint, Ratchets and Escapement Mechanism, Swinging / Rocking Mechanism, Indexing Mechanism.

Unit-III

(08 Hours)

Velocity and Acceleration Analysis:

Instantaneous centre method to determine velocities, Methods of locating Instantaneous center, Kennedy's theorem of three centers, Body and space Centroides, Relative velocity and Relative acceleration Method, Coriolis component of acceleration, Klien's construction, Approximate analytical method for velocity and acceleration.

Unit-IV

(08 Hours)

Gear Manufacturing & Thread Manufacturing:

D'Alemberts Principle, Radius of gyration of rigid bodies, Theory of compound pendulum, Bifillar, Trifillar Suspension, Dynamically equivalent system, correction couple, Inertia in I.C. Engine Mechanism by analytical and graphical Method.

Type, Number and Dimensional Synthesis, Function Generation, Path Generation and Body Guidance, Two position synthesis of slider crank

mechanism, Two position synthesis of crank and rocker mechanism, Inertia of Geared system.

Unit-V

(08 Hours)

Balancing:

Balancing of rotating masses in one and several plane, Balancing of reciprocating masses in single and multi-cylinder engine, Inline, Radial and V-type Engines, Primary and Secondary Balancing Analysis, Concept of Direct and Reverse Crank, Static and Dynamic Balancing machine.

Unit-VI

(08 Hours)

Cam and Follower:

Cam Mechanism and its uses, Types of cam and follower, Main consideration affecting choice of cam profile, Determination of Cam profile for given follower motion, Analysis of cam with specified contours – Circular arm cam, tangent cam, cycloidal cam, Kinematic equivalent system.

Term Work

A journal consisting of –

Experimentation on

- i) Determination of Moment of inertia by Bifilar/Trifillar Suspension Method.
- ii) Compound Pendulum.
- iii) Experimental verification of displacement relation of different shaft angle for single Hooke's joint

Assignment

- i) Developing a computer program for velocity and acceleration analysis of slider crank mechanism / Four bar mechanism
- ii) Study of steering gear mechanism

Drawing sheets (Half imperial size)

1. Graphical solution of problem on Velocity and acceleration Mechanism by:
 - i) Velocity by Instantaneous centre method.
 - ii) Relative velocity and Relative acceleration method.
 - iii) Coriolis component of acceleration.
2. Straight line Mechanism.

3. Inertia force analysis using graphical method.
4. Draw cam profile for various types of follower motion.

Oral/Practical

Termwork and oral will be based on above syllabus

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K60225: MATERIAL SCIENCE AND COMPOSITE MATERIALS

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(06 Hours)

Crystal Structure of Metals and Plastic Deformation:

Study of crystal structure, Indexing of planes and directions, Imperfections in crystals, Mechanism of plastic deformation, Critical resolve shear stress, Deformation of single crystal and polycrystalline metals, Work Hardening , Cold and hot working, Annealing and recrystallization.

Unit-II

(08 Hours)

Mechanical Testing of Metals:

Study of destructive testing Tensile test , Engineering stress and true stress strain, evolution of properties, Numerical based Tensile test, Hardness testing such as Brinell, Rockwell, Vickers and Micro hardness test, Impact test, Fatigue test, Creep test, Cupping test, Non Destructive testing such as Liquid dye penetrate test, Magnaflux test, Eddy current test , Ultrasonic testing and Radiography testing.

Unit-III

(06 Hours)

Study of Equilibrium Diagrams:

Related terms and their definitions, Hume Ruther's rule of solid solubility, Allotropy and polymorphism, Solidification, Dendritic growth, Cooling curves, Plotting of Equilibrium diagrams, Lever rule, Coring, Isomorph system, Eutectic system, Partial eutectic and eutectoid system, Non Equilibrium cooling and it's effects.

Unit-IV

(10 Hours)

Powder Metallurgy:

Introduction, Advantages and limitations of powder metallurgy, Production of metals powder, Characteristics of powder, Powder conditioning, Powder Compacting, Sintering and sintering furnaces, Production of powder metallurgical parts such as self lubricating bearings,

ferrites, electric contact materials, Carbide cutting tools etc.

Unit-V

(10 Hours)

Study of Composite Materials and Ceramic :

Introduction, Classification of composites, Types of composite, Properties, Metal matrix composite, Ceramic matrix composite, Fiber Reinforced plastic, Manufacturing methods, Applications in Different field. Ceramic, Properties and applications of ceramics. Manufacturing of ceramics.

Unit-VI

(08 Hours)

Corrosion and Prevention:

Introduction, Types of corrosion, Oxide film growth laws, Action of hydrogen, Polarization, Stress corrosion, Season Cracking, Prevention of corrosion, Design of component, Modification of environment, Cathodic Protection, Deposition and coating, Ion Implantation, PVD, CVD, Powder coating etc.

Term Work:

List of practical: (Any Eight)

Tensile test to determine strength and other mechanical properties

Hardness test Brinell and Vickers

Rocwell and Poldi hardness test

Micro-Hardness test

Erichsen Cupping test

Magnetic Particle test

Liquid penetrate test

Ultrasonic Test

Visual inspection of casting and welded components.

Oral

Term work and oral will be based on above syllabus

Text Books/References

Calliste, Material Science and Engineering

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Design of levers, Shafts, keys, coupling:

Transmission shafts, shaft design on strength basis, shaft design on torsional rigidity basis, ASME code for shaft design. Design of shaft on basis of lateral rigidity, Introduction to castigliano's theorem.

Keys, saddle, sunk, feather and woodruff keys. Design of flat, square, kennedy keys and splines.

Couplings, Design of muff coupling, flange coupling, flexible bushed pin coupling

Unit-II

(08 Hours)

Springs:

Types, application and material, stress deflection equation for helical spring, styles of ends, design of helical compression spring, multileaf spring, springs in series and parallel.

Power screws :

Forms of threads, multiple threaded screws, torque analysis with square and trapezoidal threads, self locking screws, collar friction, torque, stresses in power screw, screw jacks and c-clamp design, construction and application of recirculating ball screw.

Unit-III

(10Hours)

Clutch:

Types classification and selection of friction clutches, torque transmitting capacities and design of single and multiplate clutch, cone, centrifugal clutches, Types of friction materials and their advantages, limitation.

Brakes:

Energy absorbed by brakes, design considerations block brakes, pivoted block brakes, internal expanding shoe brake, disk and band –brake.

Unit-IV

(06 Hours)

Rolling contact bearing:

Types, static and dynamic load carrying capacities, stibek's equation. Equivalent bearing load, load life relation ship, selection of bearing life, selection of rolling contact bearing from manufacture's catalogue.

Bearing with probability of survival other than 90%, lubrication and mounting of bearings, construction, selection and materials of oil seals, gaskets. Pre-loading of rolling contact bearing.

Sliding Contact Bearing:

Only introduction

Unit-V

(08Hours)

Belt, chain and rope drives:

Belt drives construction and material of belt, comparison between flat belts and V belts, law of belting and types of belt drives, power rating of belts, maximum power condition, selection of flat and V belts, belt tensioning methods, relative advantages and limitations of flat and V belts, construction and applications of timing belt

Construction and application of roller chains, length of chain and number of links, polygonal effect, power rating of chains, constructions of sprocket wheels, silent chains, relative advantages and limitation of chain drive.

Rope drives-construction of wire ropes, lay of wire ropes stresses in wire ropes, selection of wire ropes, rope drum construction and design.

Unit-VI

(08 Hours)

Fatigue design:

Design of components subjected to fatigue loading, reversed load and infinite life, reverse load and finite life, fluctuating load and infinite life, soderberg criterion, Goodman criterion, modified Goodman diagram, Grubler criterion, fluctuating load and finite life, fatigue design under combined stresses, fatigue design of bolted joints, fatigue design of helical springs, cumulative damage in fatigue.

Term Work

Six assignments on above topics.

A design project: consisting of two imperial size sheets - one involving assembly drawing and part list and overall dimension and other sheet involving drawing of individual components. Manufacturing tolerances, surfaces symbols and geometric

tolerances should be specified so as to make it working drawing. A design report making all necessary calculations of design of components and assembly should be submitted along with the above assignments.

Oral

Based on above term work.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Practical : 02 Hrs/Week

EXAMINATION SCHEME

T. W. & Pr. : 50 Marks

Term Work

Each candidate shall be required to complete and submit the following jobs:

1. Welding-TIG / MIG /Resistance (One Job)
2. Pattern making:
A split pattern consisting of wood turning or a core box. (One Job)
It should follow the colour code in pattern making..
3. Plain turning, step turning, taper turning, facing, knurling. (One Job)

Note

Practical examination of 3 hours duration based on above termwork will be conducted at the end of semester.

RULES REGARDING ATKT, CONTINUOUS ASSESSMENT AND AWARD OF CLASS

A. T. K. T.

A candidate who is granted term for B.Tech. Semester-I will be allowed to keep term for his/her B.Tech. Semester-II examination even if he/she appears and fails or does not appear at B.Tech. Semester-I examination.

A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B.Tech. Semester-IV examination even if he/she appears and fails or does not appear at B.Tech. Semester-III examination.

A candidate who is granted term for B.Tech. Semester-V will be allowed to keep term for his/her B.Tech. Semester-VI examination if he/she appear and fails or does not appear at B.Tech. Semester-V examination.

A candidate who is granted term for B.Tech. Semester-VII will be allowed to keep term for his/her B.Tech. Semester-VIII examination if he/she appears and fails or does not appear at B.Tech. Semester-VII examination.

A student shall be allowed to keep term for the B.Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B.Tch. Semester-I & II taken together.

A student shall be allowed to keep term for the B.Tech. Semester-V of respective course if he/she has no backlog of B.Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.

A student shall be allowed to keep term for the B.Tech. Semester-VII course if he/she has no backlog of B.Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

In respect of Term work at B.Tech. Semester-I & II, B.Tech. Semester- III & IV and B.Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.

For B.Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or marks but less than 66%	First Class
C	Aggregate 55% or more marks but less than 60%	Higher Second Class
D	Aggregate 50% or more marks but less than 55%	Second Class
E	Aggregate 40% or more marks but less than 50%	Pass Class

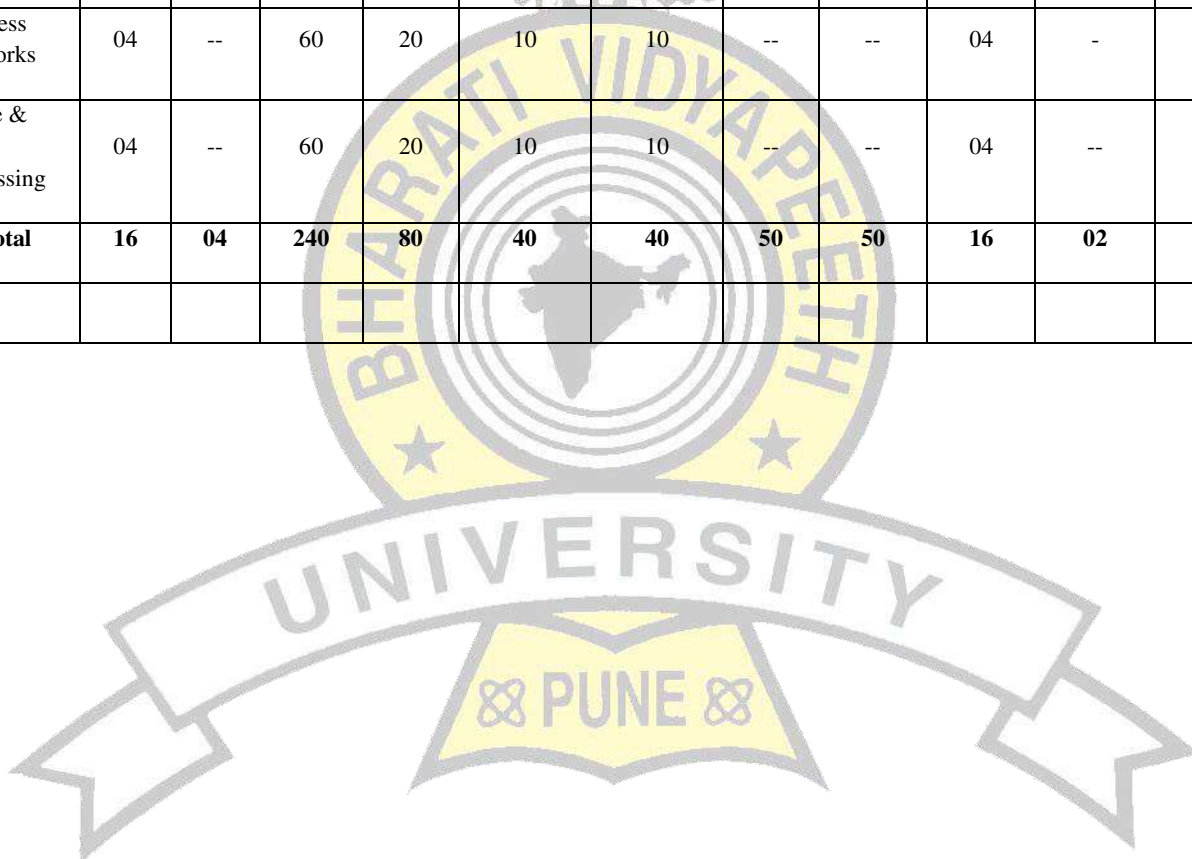

Structure of M.Tech Electronics Engineering (VLSI)

Based on Credit Pattern

ADVANCED DIGITAL COMMUNICATION SYSTEM

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course prerequisites:

Knowledge of random processes and linear system theory (Transforms, convolution, sampling)

Course objective:

To provide students with the knowledge & understanding of modern communication systems.

Course Outcomes: Upon Completion of the course, the students will be able to

1. To identify and describe different techniques in modern communication systems.
2. To understand the basic theory of modulation & demodulation techniques.
3. To possess knowledge of different codes.
4. To apply fundamentals of communication systems to solve the Engineering Problems.

Contents:

UNIT I

(08 Hours)

Basic digital pass band modulation

Introduction, Binary amplitude shift keying(BASK), Binary Phase shift keying(BPSK), Binary frequency shift keying(BFSK),Performance comparison of BASK, BFSK,BPSK, Digital modulation techniques for spectral efficiency, Quadrature Phase shift keying(QPSK),

Offset Quadrature Phase shift keying(OQPSK), Minimum shift keying(MSK), Comparison of M-ary signaling techniques.

UNIT II

(08 Hours)

Demodulation:

The matched filter, The correlator, envelop detector, output signal to noise ratio, Binary demodulation, coherent PSK,DPSK,FSK, non-coherent FSK,DPSK ,MSK .

UNIT III

(08 Hours)

Channel coding

Reed soloman codes, Interleaving & concatenated codes, coding and Interleaving applied to the compact disc digital audio system, Linear block codes, Cyclic Redundancy check (CRC), Turbo codes, Automatic repeat request (ARQ).

UNIT IV

(08 Hours)

Fading Channels

Multipath propagation, Flat & frequency selective fading, Fast and slow fading Random channel models, Signal design for radio channels, Diversity, Modulation, Coding.

UNIT-V

(08 Hours)

Advanced Modulation techniques

Trellis –coded modulation, Direct sequence modulation, IS-95 forward link, Code division multiple Access (CDMA), IS-95 reverse link, Frequency hop Spread Spectrum (FH-SS) ,CDMA, Pseudorandom sequences: generation & properties, Rake receiver

UNIT VI

(08 Hours)

OFDM

Introduction to OFDM, Low mobility, High mobility, Time diversity, Frequency diversity, Receiver antenna diversity (SIMO), Transmit antenna diversity (MISO), Transmit receive antenna diversity.

Text Books/ References:

1. Digital communications- Simon Haykin, John Wiley and sons, 1998
2. Digital Communications- Bernard Sklar, Second edition, Pearson Education, 2001.
3. Nguyen Ha, Shwedyk Ed, “ A First Course in Digital Communications, Cambridge University Press.
4. Digital communication, 4th ed. - J. G. Proakis, MGH International edition.
5. Principle of Communication Systems – Taub, Schilling, TMH
6. Communication Systems, 4th ed. – A. Bruce Carlson, Paul B. Crilly, Janet C. Rutledge, MGH International edition.
7. Advanced Digital Communication Sytems-NIIT,PHI learning.

DIGITAL VLSI DESIGN

TEACHING SCHEME

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40

Marks

TW&OR: 50 Marks

Total Credits: 05

Course Prerequisite:

Knowledge of Digital Electronics

Course Objective:

To understand theory and to learn design of digital system. The course will involve design and simulation of digital circuits using VHDL

Course Outcomes: On successful completion of this course, students will be able to

- Ability to apply various modeling styles for digital circuits.
 - Ability to design sequential and combinational circuits using VHDL.
 - Ability to conceptualize FSM.
 - Ability to simulate digital circuits.
 - Ability to apply concepts of PLD designs.
-

Contents:

UNIT I

(08 Hours)

VHDL Basics

Objectives of VHDL, Entity-Architecture Concepts, Introduction to various modeling styles of VHDL (Behavioral, Dataflow, Structural and Mixed), VHDL Basic Elements (Data types, Data objects and Operator), Configuration, Package declaration.

UNIT II
VHDL Modeling-1

(08 Hours)

Dataflow Modeling: Example based on dataflow modeling, When-Else and With Select Statement, Concept of Delta delay and multiple drivers, Generate and Block Statements
Structural modeling: Concept of Component

UNIT III

(08 Hours)

VHDL Modeling-2

Behavioral and mixed modeling for digital design, If-else, Loop, Case, Assert and Report statements, State Machine Design, Moore and Mealy FSM Design using VHDL

UNIT IV

(08 Hours)

EDA tools

Digital Design Flow, RTL Synthesis, Synthesis Flow, Functional and Timing simulation, Physical Verification, Floor planning, Place and route, IP Design

UNIT V

(08 Hours)

Programmable Logic Devices

Overview of PLDs, SPLD, CPLD, FPGA, Case study of Xilinx family XC 4000 and XC9500, Modes of configuration.

UNIT VI

(08 Hours)

Designing with PLDs

Designing with ROM, PLA, PAL, GAL, CPLD and FPGA, Implementing functions in PLDs.

Text Books/ References:

EMBEDDED SYSTEMS AND PROCESSORS

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

TW&OR:50 Marks

Total Credits: 04

Course Prerequisites:

Knowledge of microcontrollers like 8051, PIC and ARM

Course objective:

- To understand need and application of ARM Microprocessors in embedded system.
 - To understand architecture and features of typical PSoC.
 - To learn the importance of interprocess communication.
 - To learn Real time operating system and its application.
-

Course Outcomes: After successfully completing the course students will be able to

- Describe the PSoC architectures and its feature.
- Interface the advanced peripherals to ARM based microcontroller.
- Design embedded system with available resources.

Contents:

UNIT I (08hours)

ARM7 & ARM 9 Based Microcontroller

Review of ARM7, ARM9, &ARM11 processors .
Interfacing of ARM7 & ARM 9 processors with real world: LED, LCD, KEYPAD,SDI card,UART.

UNIT II (08hours)

Interprocess Communication

Multiple processes in an application, problem of shared data, interprocess communication, RTOS task scheduling, interrupt latency and response time, interrupt service mechanism
Context and context switching.

UNIT III (08hours)

Real Time systems

Kernel, Scheduler, Non-Preemptive Kernel , Preemptive Kernel, Reentrancy, Round robin scheduling, Task Priorities, Static & Dynamic Priority, Priority Inversion, Assigning task priorities, Mutual Exclusion, Deadlock, Clock Tick, Memory requirements, Advantages & disadvantages of real time kernels

UNIT IV (08hours)

Introduction to PSoC

PSoC technology, programmable routing and interconnect, configurable analog and digital blocks, cpu sub system, families of PSoC .

PSoC 3/5, architecture – block diagram, system wide resources, I/O interfaces, CPU sub system,
memory organization, digital sub systems, analog sub systems

UNIT V (08hours)

PSoC components:

Universal digital blocks (UDB), UDB arrays and counter and PWM, digital filter gain amplifiers, switched capacitor / continuous time, analog routing, flash temperature sensors,DTMF dialers, sleep timers, UART, I2 C, SPI,USB,CAN buses.

UNIT VI

(08hours)

μCOS II

Features of. Kernel structure. μCOS II RTOS services:Task management, Time management, Intertask Communication and Synchronization.

Text Books:

LINEAR ALGEBRA AND RANDOM PROCESS

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course prerequisites:

Knowledge of Group theory, ring theory, Field theory

Course objective:

- To develop the ability to use the concepts of linear algebra and special functions for solving problems to related networks
 - To formulate and construct a mathematical model for linear programming problem in real life situations
-

Course Outcomes: On successful completion of this course, students will be able to

- To achieve an understanding of the basic concepts of algebraic equations and methods of solving them
- To familiarize the students with special functions and solve problems associated with engineering applications

Contents:

UNIT I

(08 Hours)

LINEAR Algebra:

Vector spaces-norms-inner products-Eigen values using QR transformations-QR factorization-generalized eigenvectors-canonical forms-singular value decomposition and applications-pseudo inverse-least square approximation-Toeplitz matrices and some applications

UNIT II

(08 Hours)

LINEAR PROGRAMMING:

Formulation-graphical solution-simplex method-Two phase method-Transportation and assignment models , Efficient computational algorithms , Duality, Parametric Linear programming, integer Linear Programming.

UNIT III

(08 Hours)

ORDINARY DIFFERENTIAL EQUATIONS:

Runge-kutta methods for system of IVP's , numerical stability, Adams-Bashforth multistep method, solution of stiff ODE's shooting method, BVP: Finite difference method, orthogonal collocation method, orthogonal collocation with finite element method, Galerkin finite element method

UNIT IV

(08 Hours)

TWO DIMENSIONAL RANDOM VARIABLES:

Joint distributions- marginal and conditional distributions- functions of two dimensional random variables- regression curve- correlation.

UNIT V

(08 Hours)

QUEUEING MODELS:

Poisson's process- Markovian queues- single and multi server models- little's formula – machine interference model- steady state analysis- self service queue. Pure Birth and Death Models (Relationship between the Exponential And Poisson Distribution.)

UNIT VI

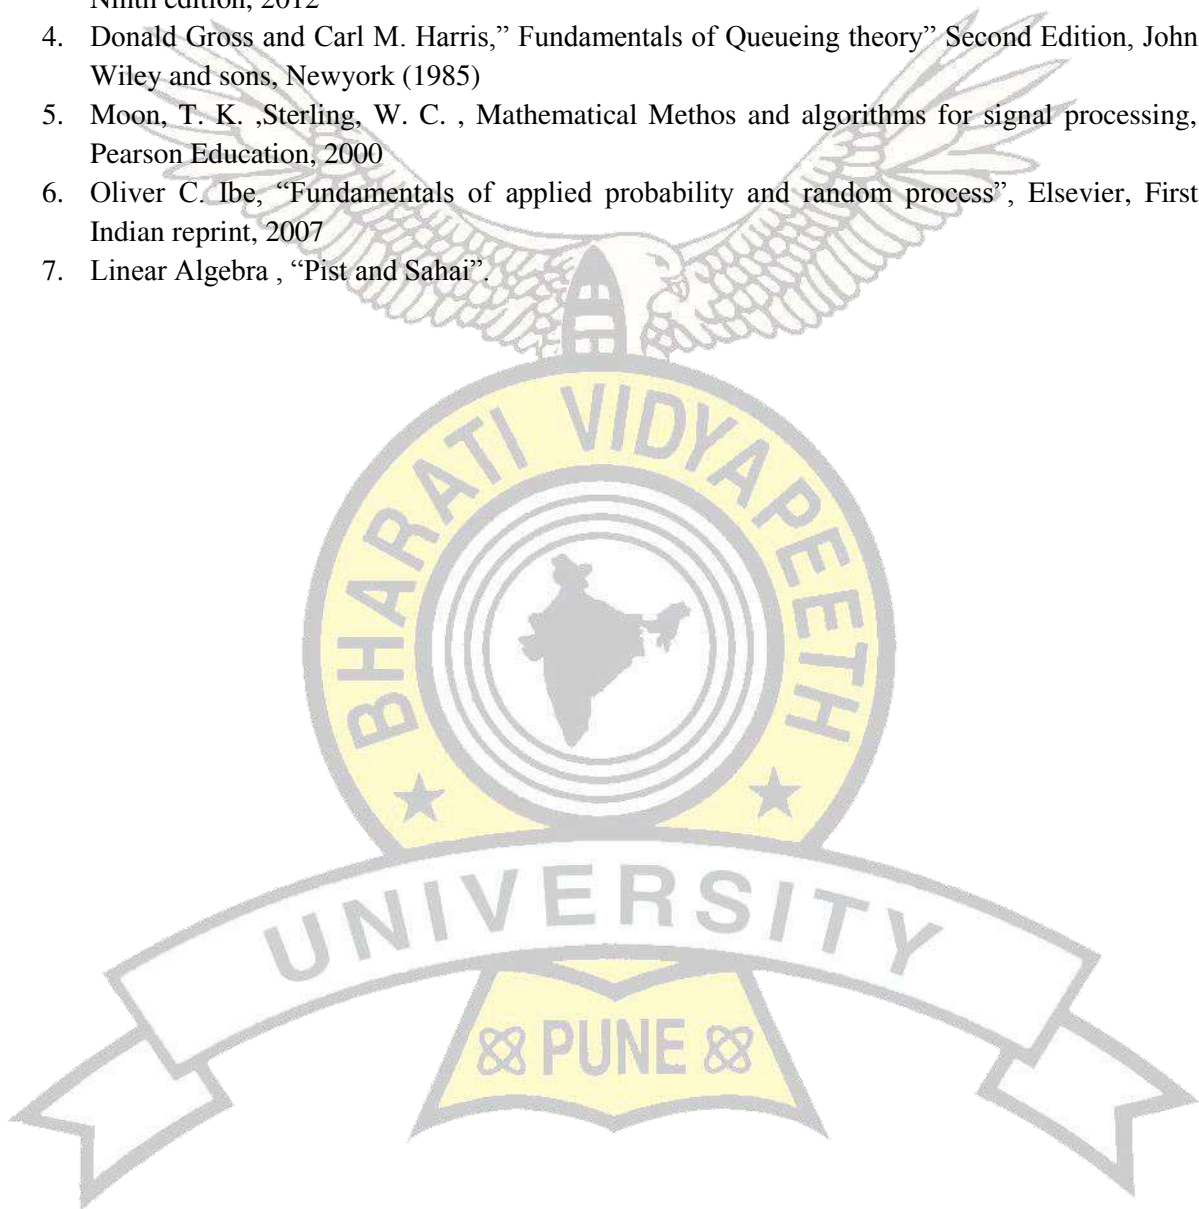

(08 Hours)

RANDOM PROCESS:

Averages of a random process, stationary random process, ergodic random process, random process-mean and covariance function, linear filtering of random process, power spectral density, spectral analysis of random process, Gaussian Poisson random process.

Text Books/ References:

ADVANCED DIGITAL SIGNAL PROCESSING

TEACHING SCHEME

Lectures: 04 Hrs/Week
Practicals: 2Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs
Theory: 60 Marks
Internal Assessment: 40 Marks
TW&OR: 50 Marks
Total Credits: 05

Course objective:

- This course covers the fundamental aspects of digital signal processing.
- To introduce the various techniques that is fundamental to a variety of application areas.

Course Outcomes: On successful completion of this course, students will be able to

1. To apply fundamental mathematical tools, in the analysis and design of signal processing systems.
2. To identify estimation problems and design, implement algorithms for solving them.
3. To understand the basic theory of wavelet transform and the concepts of using Simple wavelets for simple applications.

Contents:

UNIT I

(08 Hours)

Linear Prediction:

Forward and Backward Linear prediction, optimum reflection coefficient for lattice backward and forward prediction, solution of normal equations (Levinson-Durbin algorithm and Schur algorithm), properties of linear prediction filters.

UNIT II

(08 Hours)

Adaptive Filters:

Applications of adaptive filters: System identification, adaptive channel equalization echo cancellation in data transmission over telephone channels, linear predictive coding of speech signals, adaptive direct form filters-LMS algorithm, RLS algorithm.

UNIT III

(08 Hours)

Power Spectrum Estimation:

Estimation of power spectrum and correlation, Non-parametric and parametric methods, Minimum Variation Estimation methods, Eigen Analysis algorithm, Power Spectrum analysis using DFT.

UNIT IV

(08 Hours)

Programmable Digital Signal Processors:

Multiplier accumulator unit (MAC), modified bus structures, Multiple Access memory, VLIW architecture, pipelining, special addressing modes in P-DSP's.

UNIT V

(08 Hours)

An Overview of TMS320C6X DSPs:

Introduction, features of TMS320C6X processors, Internal Architecture, CPU & data paths, Addressing modes, memory architecture, pipeline, peripherals, program development.

UNIT VI

(08 Hours)

Wavelet Transforms:

Fourier Transform and its limitations, Short Time Fourier Transform, Continuous Wavelet Transform, Discretization of the Continuous wavelet Transform, Multiresolution Approximations; wavelet and Scaling Function Coefficients, Orthonormality of Compactly Supported Wavelets, Bi-orthogonal Decomposition, Harr wavelets, The Daubechies Wavelets Construction, Fast Wavelet Transform and Image Compression, Denoising using wavelets, Perfect Reconstruction Filter bank design using Wavelets.

Text Books/References:

1. Digital Signal Processing Using MATLAB by V.K.Ingle and J.G.Prokakis (Books/Colle,2000)
2. Digital Signal Processing:Principles,Algorithms and Applications by J.G.Prokakis and D.G.Manolakis

College of Engineering, Pune**

ANALOG VLSI DESIGN

TEACHING SCHEME

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

TW&OR:50 Marks

Total Credits: 05

Course prerequisites:

Basic Electronics and Physics

Course objective:

To understand theory and to learn design of analog systems at transistor level. The course will involve design, layout and simulation of analog VLSI circuits using various CAD tools.

Course Outcomes: On successful completion of this course, students will be able to

- Ability to apply modeling for MOS circuits.
- Ability to design Analog CMOS sub-circuits.
- Ability to conceptualize CMOS amplifiers.
- Ability to characterize CMOS Op-amps.
- Ability to apply concepts of Switched Capacitor Circuits.

Contents:

UNIT I

(08 Hours)

MOS Devices and Modeling

The MOS Transistor, CMOS Device Modeling -Simple MOS Large-Signal Model, Other Model Parameters, Small-Signal Model for the MOS Transistor, Sub-threshold MOS Model.

UNIT II (08 Hours)

Analog CMOS Sub-Circuits

MOS Switch, MOS Diode, MOS Active Resistor, Current Sinks and Sources, Current Mirrors, Current and Voltage References, Band gap Reference.

UNIT III (08 Hours)

CMOS Amplifiers

Inverters, Differential Amplifiers, Cascode Amplifiers

UNIT IV (08 Hours)

CMOS Operational Amplifiers

Design of CMOS Op Amps, Compensation of Op Amps, Design of Two-Stage Op Amps, Power-Supply Rejection Ratio of Two -Stage Op Amps, Cascode Op Amps, Measurement Techniques of OP Amp.

UNIT V (08 Hours)

High Performance CMOS OP AMP

High Speed/Frequency OP AMP, Micro Power OP AMP, Low Noise OP AMP, Low Voltage OP AMP.

UNIT VI (08 Hours)

Switched Capacitor Circuits

Switched Capacitor Circuits Switched Capacitor Amplifiers, Switched Capacitor Integrators.

Text Books/ References:

1. CMOS Analog Circuit Design -Philip E. Allen and Douglas R. Holberg, Oxford University Press, International Second Edition/Indian Edition, 2010.

College of Engineering, Pune

DIGITAL IMAGE AND VIDEO PROCESSING

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course objective:

- This course provides an introduction to basic concepts, algorithms of digital image and video processing.
- To provide different analytical tools and methods applied in Digital Image processing

Course Outcomes: On successful completion of this course, students will be able to

- To apply principles and techniques of digital image processing in applications related to digital imaging system.
- To use and implement basic algorithms for image & video compression

Contents:

UNIT I

(08 Hours)

Fundamentals of Image processing

Introduction to Digital Image Processing : Digital image fundamentals:, Applications of Image Processing, Simple image formation model, Image sampling and quantization - Basic relationships between pixels, connectivity, adjacency. Distance between the pixels . Elements of human visual perception, MTF, Image statistics.

UNIT II

(08 Hours)

Image Enhancement

Image Enhancement: Spatial domain methods: point processing - intensity transformations, histogram processing, image subtraction, image averaging; Image zooming, Spatial filtering - smoothing filter, sharpening filter. 2D-DFT, FFT, Frequency domain filtering: low pass filtering, high pass filtering, and Homomorphic filtering.

UNIT III (08 Hours)

Image Compression

Image Compression: Fundamentals, Lossless Compression schemes like Huffman, Arithmetic, LZW and lossless Prediction. 2D-DCT, KL, Hadamard Image compression using DCT, zig-zag scanning, still image compression standard - baseline JPEG. Vector Quantization

UNIT IV (08 Hours)

Image Segmentation

Image Segmentation: Fundamentals, point, line and edge and combined detection, Thresholding Edge linking Hough transform, Region oriented segmentation - basic formulation, region growing by pixel aggregation, region splitting and merging, Segmentation using watersheds

UNIT V (08 Hours)

Image Restoration

Morphological Operations: Erosion and Dilation, Opening and Closing, Hit and Miss transform, Boundary extraction, region filling, Extraction of connected components. Image Restoration: Image degradation/restoration model, Noise models, Linear Position invariant degradation, Estimation of degradation function, inverse filtering, Wiener filter.

UNIT VI (08 Hours)

An overview of Video processing

Analog Video, Digital Video, Motion estimation and detection, video enhancement, Video compression fundamentals.

Text Books/References:

1. Gonzalez and Woods, "Digital Image Processing", 3rd Edition, Pearson Education.
2. Pratt William K. "Digital Image Processing", John Wiley & sons .

WIRELESS NETWORKS

TEACHING SCHEME

Lectures: 04 Hrs/Week

Practical: --Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course objective:

- To introduce the concepts and techniques associated with Wireless Cellular Communication systems.
- To familiarize with state of art standards used in wireless cellular systems.

To understand the concept of new technologies in wireless systems

Course Outcomes: On successful completion of this course, students will be able to

1. Explain the Classification of mobile communication systems
2. Analyze the radio channel characteristics and the cellular principle
3. Ability to analyze improved data services in cellular communication

Contents:

UNIT I

(08 Hours)

Introduction

Systems and Design Fundamentals, Propagation Models Description of cellular system, Frequency Reuse, Co channel and Adjacent channel interference, Propagation Models for Wireless Networks, Multipath Effects in Mobile Communication, Models for Multipath Reception.

UNIT II (08 Hours)

Cellular Communications

Introduction to Cellular Communications, Frequency reuse, Multiple Access Technologies, Cellular Processes-Call Setup, Handover etc, Teletraffic Theory, Capacity Building, Blocking Probability

UNIT III (08 Hours)

CDMA

Introduction to CDMA, Walsh codes, Variable tree OVVSF, PN Sequences, Multipath diversity, RAKE Receiver, CDMA Receiver Synchronization

UNIT IV (08 Hours)

GSM

Architecture and Protocols - Air Interface, GSM Multiple Access Scheme, GSM Channel Organization, Traffic Channel multiframe, Control (Signaling) Channel Multiframe, Frames, Multi-frames, Super-frames and Hyper-frames, GSM Call Set up Procedure, GSM Protocols and Signaling, Location Update Procedure, Routing of a call to a Mobile Subscriber.

UNIT V (08 Hours)

MIMO

Introduction to MIMO, MIMO Channel Capacity, SVD and Eigen modes of the MIMO Channel, MIMO Spatial Multiplexing – BLAST, MIMO Diversity – Alamouti, MIMO Diversity-OSTBC, MIMO Beam Forming-MRT, MIMO - OFDM

UNIT VI (08 Hours)

3G and 4G Wireless Standards/UWB

GPRS, WCDMA, LTE, WiMAX, UWB Definition and Features, UWB Wireless Channels, Bit-Error Rate Performance of UWB

Text Books/ References:

1. Wireless Communications, Principles, Practice – Theodore, S. Rappaport, 2nd Ed.2002, PHI.
2. Wireless Communications-Andrea Goldsmith, 2005 Cambridge University Press.

3. Mobile Cellular Communication – Gottapu Sasibhushana Rao, Pearson Education, 2012.

Elective I- PROGRAMMABLE SYSTEM ON CHIP

TEACHING SCHEME

Lectures: 04 Hrs/Week
Practicals: 02 Hrs/week

EXAMINATION SCHEME

Duration: 03 Hrs
Theory : 60 Marks
Internal Assessment: 40 Marks
TW&OR: 50 Marks
Total Credits: 05

Course prerequisites:

Knowledge of microprocessors and microcontrollers

Course objective:

1. To introduce the students to the Cypress PSoC technology
 2. To study the architecture of PSoC
 3. To learn interfacing of real world with PSoC
-

Course Outcomes: Upon Completion of the course, the students will be able to

1. Describe and identify the features of PSoC
 2. Design the system for interfacing to the real world.
-

Contents:

UNIT I

(08 hours)

Introduction to PSoC

PSoC Technology, Programmable Routing and Interconnect Configurable Analog and Digital Blocks, CPU Sub System, Families of PSoC (PSoC1, PSoC2, PSoC3,) Difference between PSoC and Conventional MCU.

UNIT II (08 hours)

Introduction to PSoC 3/5

PSoC3/5 architecture-block diagram system wide resources, I/O interfaces, CPU Subsystem, memory organization digital subsystems, analog subsystems

UNIT III (08 hours)

PSoC Design Modules

Cypress PSoC Structure, PSoC Designer Suit, limitations of PSoC improvements of the PSoC, PSoC Subsystem design, PSoC memory management.

UNIT IV (08 hours)

Mixed –Signal Embedded design

Overview of mixed-signal embedded system designs, hardware and software subsystems of mixed-signal architectures, PSoC Hardware components, PSoC software components, PSoC interrupt subsystem, Introduction to PSoC Express, System design using PSoC express.(8hrs)

UNIT V (08 hours)

PSoC Components

Universal Digital Blocks (UDB), UDB arrays and digital System Interconnect (DSI),Timer, Counter and PWM,Digital Filter Blocks (DFB),ADC topologies and Circuits Programmable gain amplifiers, Switched capacitor / continuous time, analog routing, flash temperature sensors,DTMF Dialers, Sleep times,UART,12C,SPI,USB,CAN buses.

UNIT VI (08 hours)

System design using PSoC

Interfacing of temperature Sensors and Tachometers, SPI and UART based task communications, Lower Noise Continuous Time Signal Processing with PSoC Data Acquisition and Control System with PSoC, Ultra wide-band RADAR, Serial Bit Receiver with Hardware Manchester Decoder, DTMF Detector, and Ultrasonic Vehicle Parking Assistant, Universal wide-Range Signal Generator.

Elective I-NANO ELECTRONICS

TEACHING SCHEME

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

TW&OR: 50 Marks

Total Credits: 05

Course Prerequisite:

Physics, Basic electronics

Course Objective:

To learn and understand basic and advance concepts of nanoelectronics.

Course Outcomes: On successful completion of this course, students will be able to

1. Understand basic and advanced concepts of nanoelectronic devices
2. Gain knowledge about Nanostructure devices and logic devices.
3. Know the techniques of fabrication and measurement.

Contents:

UNIT I

Basics of nanoelectronics

Capabilities of nanoelectronics – physical fundamentals of nanoelectronics – basics of information theory – the tools for micro and nano fabrication – basics of lithographic techniques for Nanoelectronics

(08 hours)

UNIT II**(08 hours)****Quantum electron devices**

classical to quantum physics: upcoming electronic devices – electrons in mesoscopic structure – short channel MOS transistor – split gate transistor – electron wave transistor – electron spin transistor – quantum cellular automate – quantum dot array – Principles of Single Electron Transistor (SET) – SET circuit design – comparison between FET and SET circuit design

UNIT III**(08 hours)****Fabrication and Measurement Techniques**

Growth, fabrication, and measurement techniques for nanostructures- Bulk crystal and heterostructure growth- Nanolithography, etching, and other means for fabrication of nanostructures and nanodevices- Techniques for characterization of nanostructures- Spontaneous formation and ordering of nanostructures- Clusters and nanocrystals- Methods of nanotube growth- Chemical and biological methods for nanoscale fabrication- Fabrication of nano-electromechanical systems

UNIT IV**(08 hours)****Nanostructure Devices -I**

Electron transport in semiconductors and nanostructures- Time and length scales of the electrons in solids- Statistics of the electrons in solids and nanostructures- Density of states of electrons in nanostructures- Electron transport in nanostructures-Electrons in traditional low-dimensional structures- Electrons in quantum wells- Electrons in quantum wires- Electrons in quantum dots

UNIT V**(08 hours)****Nanostructure devices- II**

Resonant-tunneling diodes- Potential-effect transistors- Light-emitting diodes and lasers- Nano-electromechanical system devices- Molecular electronics – elementary circuits – flux quantum devices – application of superconducting devices –Strain –oxide nanowire, Nano designs and Nanocontacts – metallic nanostructures

UNIT VI**(08 hours)****Logic Devices and Applications**

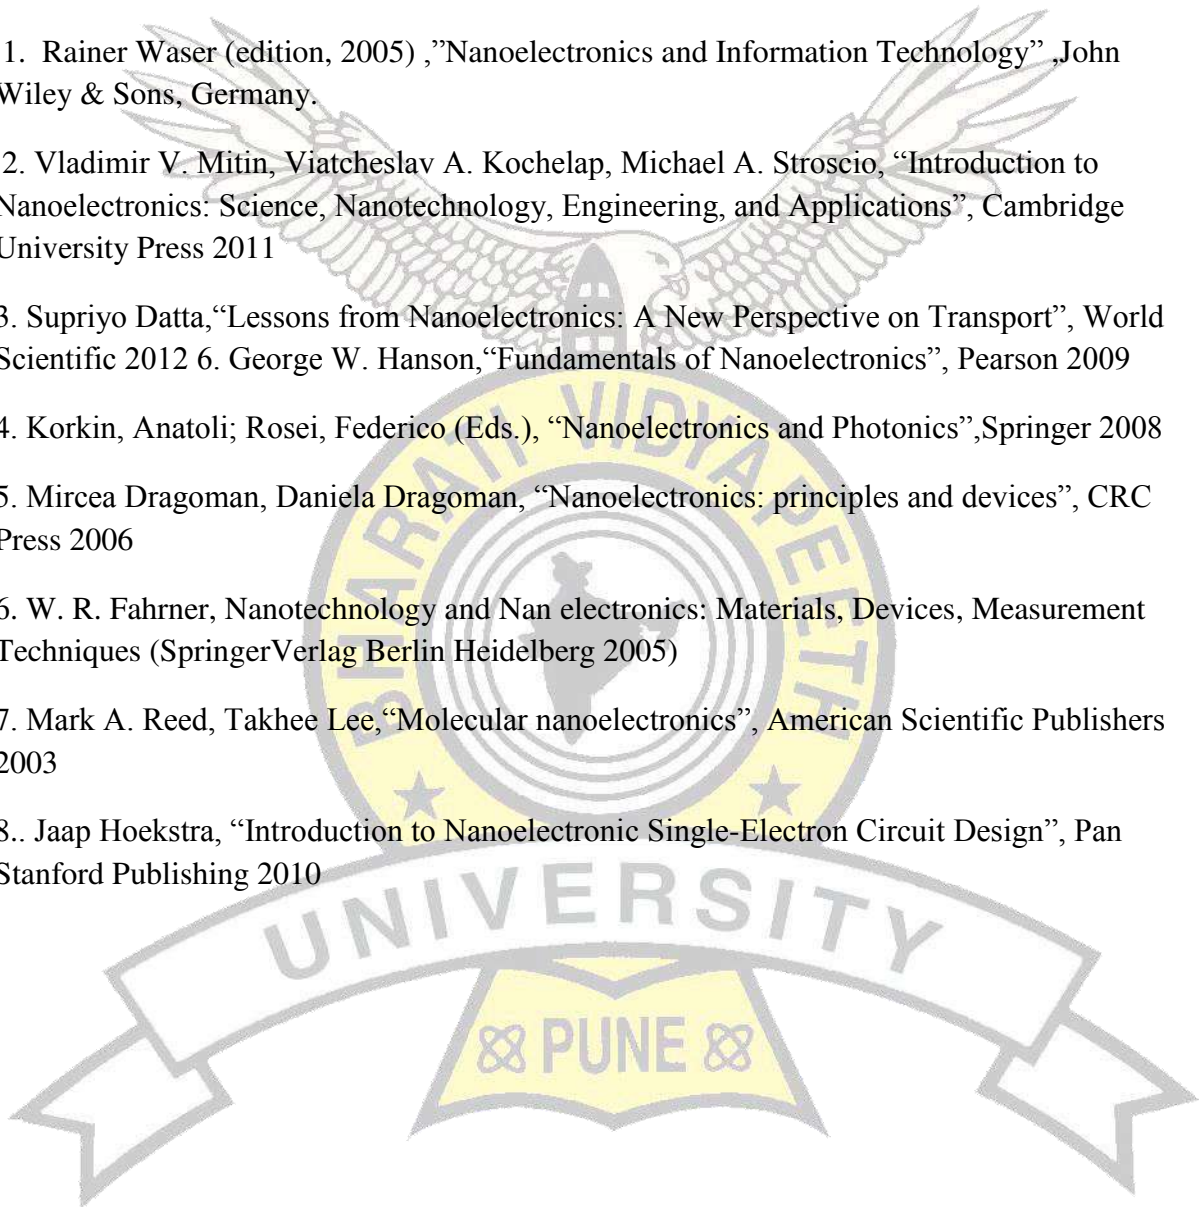

Logic Devices-Silicon MOSFETs-Ferroelectric Field Effect Transistors-Quantum Transport Devices Based on Resonant Tunneling-Single-Electron Devices for Logic Applications-Superconductor Digital Electronics-Quantum Computing Using Superconductors-Carbon Nanotubes for Data Processing- Molecular Electronics

Elective I-ALGORITHMS FOR VLSI DESIGN AUTOMATION

TEACHING SCHEME

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

TW&OR:50 Marks

Total Credits: 05

Course Prerequisites:

Analog and Digital VLSI Design, Engineering Mathematics

Course objective:

To introduce the student to the algorithms used for VLSI Design Automation

Course Outcomes: After successfully completing the course students will be able to

1. Apply various algorithms for VLSI design.
 2. Conceptualize placement, floorplanning and pin assignment.
 3. Plan global and detailed routing.
 4. Apply concepts of via minimization and compaction
-

Contents:

UNIT I

(08 Hours)

Basic Algorithms

Basic Terminology, Complexity issues, NP- hardness, Graph algorithms, Computational geometry algorithms.

UNIT II

(08 Hours)

Partitioning

Problem formulation, Classification of partitioning algorithms, Group migration algorithms, Simulated annealing & evolution, Other partitioning algorithms.

UNIT III

(08 Hours)

Placement, Floor Planning and Pin Assignment

Problem formulation, Classification of Placement algorithms, Overview of placement algorithms, Constrain based floor planning, Floor planning algorithms for mixed block and cell design, General and channel pin assignment.

UNIT IV

(08 Hours)

Global Routing

Problem formulation, classification of global routing algorithms, Maze routing algorithms, Line probe algorithm, Steiner tree based algorithms, ILP based approaches.

UNIT V

(08 Hours)

Detailed Routing

Problem formulation, classification of routing algorithms, single layer routing algorithms, Two layer channel routing algorithm, Three layer channel routing algorithm & switch box routing algorithms.

UNIT VI

(08 Hours)

Over The Cell Routing & Via Minimization:

Two layers over the cell routers, Constrained & unconstrained via minimization.

Compaction:

Problem formulation, one-dimensional compaction, Two dimension based compaction, hierarchical compaction.

Text Books/ References:

1. Naveed Shervani, "Algorithms for VLSI physical design Automation", Kluwer Academic Publisher, Third edition, 1999.
2. Christophn Meinel & Thorsten Theobold, "Algorithm and Data Structures for VLSI Design", Springer, 1998.

4. Trimburger, "Introduction to CAD for VLSI", Kluwer Academic publisher, 2002

Elective II -ASIC DESIGN

TEACHING SCHEME

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

Total Credits: 05

Course prerequisites:

Digital VLSI Design

Course objective:

The course focuses on the semi custom IC Design and introduces the principles of design logic cells, I/O cells and interconnects architecture, with equal importance given to FPGA and ASIC styles.

Course Outcomes: On successful completion of this course, students will be able to

1. Apply fundamentals of ASIC and its design methods
 2. Understand block level abstractions of FPGA and ASIC design
 3. Gain knowledge on programmable architectures for ASICs
 4. Conceptualize the physical design of ASIC.
-

Contents:

UNIT-I

(08 Hours)

Introduction to ASICS, CMOS Logic and ASIC Library Design

Types of ASICS, Design flow, Combinational Logic Cell, Sequential logic cell, Data path logic cell, Transistors as Resistors, Transistor Parasitic Capacitance, Logical effort.

UNIT-II

(08 Hours)

Programmable ASICS, Programmable ASICS Logic Cells and Programmable ASICS I/O Cells

Anti fuse, static RAM , EPROM and EEPROM technology, Actel ACT , Xilinx LCA, Altera FLEX , Altera MAX DC & AC inputs and outputs , Clock & Power inputs, Xilinx I/O blocks.

UNIT-III

(08 Hours)

Programmable ASIC Logic Cells

Actel ACT, Xilinx LCA , Xilinx EPLD, Altera MAX 50 00 and 7000 , Altera MAX 9000 , Altera FLEX, Design systems, Logic Synthesis , Half gate ASIC, Schematic entry, Low level design language.

UNIT-IV

(08 Hours)

Logic Synthesis, Simulation and Testing

VHDL and logic synthesis, Types of simulation, Boundary scan test, Fault simulation, Automatic test pattern generation.

UNIT-V

(08 Hours)

ASIC Floor Planning, Placement and Routing

System partition, FPGA partitioning, Partitioning methods, Floor planning, Placement, Physical design flow, Global routing, Detailed routing

UNIT-VI

(08 Hours)

Optimization Algorithms

Planar subset problem(PSP), single layer global routing single layer detailed routing wire length and bend minimization technique, over the cell(OTC) Routing, multichip modules(MCM), Programmable logic arrays, Transistor chaining, Weinberger Arrays, Gate Matrix Layout.

Elective II -TESTING AND VERIFICATION OF VLSI DESIGN

TEACHING SCHEME

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

TW&OR:50 Marks

Total Credits: 05

Course prerequisites:

Analog and Digital VLSI Design

Course objective:

To introduce the student to the mathematical and scientific principles based on which systematic test and validation can be carried out on multimillion transistor VLSI design.

Course Outcomes: On successful completion of this course, students will be able to

1. Apply various fault modeling for digital circuits.
 2. Test VLSI circuits.
 3. Conceptualize Verification process.
 4. Plan verification using verification tools.
 5. Apply concepts of DFT and BIST.
-

Contents:

UNIT I

(08 Hours)

Introduction to Verification

Importance of verification, Testbench, Human factor, What is being verified, Functional verification approaches, Testing v/s Verification, Verification and design reuse, Cost of verification.

UNIT II (08 Hours)

Verification Tools

Linting Tools, Simulators, Third party models, Waveform viewers, Code coverage.

UNIT III (08 Hours)

Verification Plan

Role of verification plan, Levels of verification, Verification strategies, From specification to features, From features to testcases, From testcases to testbenches.

UNIT IV (08 Hours)

Basics of Testing and Fault Modeling

Introduction to Testing, Faults in digital circuits, Modeling of faults, Logical Fault Models, Fault Detection, Fault dominance, Delay fault models.

UNIT V (08 Hours)

Test Generation for Combinational and Sequential Circuits

Test generation for combinational logic circuits, Testable combinational logic circuit design, Test generation for sequential circuits, Design of testable sequential circuits.

UNIT VI (08 Hours)

DFT and BIST

Design for Testability, Ad-hoc design, Scan based design, Built-In-Self-Test.

Text Books/ References:

1. Janick Bergeron ,”Writing Testbenches: Functional Verification of HDL Models”, Springer, Second Edition, 2003

Elective II-ARTIFICIAL NEURAL NETWORK

TEACHING SCHEME

Lectures: 04 Hrs/Week
Practicals: 02 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs
Theory : 60 Marks
Internal Assessment: 40 Marks
TW&OR:50 Marks
Total Credits: 05

Course prerequisites:

- Basic knowledge of human nervous systems.
- Basic knowledge of mathematical concepts like state-space, Matrix fundamentals.

Course objective:

This course provides in depth knowledge of Artificial Neural Network and role of ANN in different application areas.

Course Outcomes: On successful completion of this course, students will be able to

- 1 Identify potential use of learning approaches of ANN.
2. Analyze role of perceptron, Adaline & Madeline networks
3. Evaluate different application scenarios of ANN

Contents:

UNIT I

(08 Hours)

Introduction and ANN Structure.

Biological neurons and artificial neurons, Model of an ANN, ANN Terminologies, Activation functions used in ANNs, Typical classes of network architectures, Mc-Culloch-Pitts Neuron Model, Learning rules.

UNIT II

(08 Hours)

Mathematical Foundations and Learning mechanisms.

Re-visiting vector and matrix algebra, State-space concepts, Concepts of optimization, Error-correction learning, Memory-based learning, Hebbian learning, Competitive learning.

UNIT III

(08 Hours)

Single layer perceptrons. Adaline & Madeline Networks

Structure and learning of perceptrons, Pattern classifier - introduction and Bayes' Classifiers, Perceptron as a pattern classifier, Perceptron convergence, Limitations of a perceptrons, Adaline architecture, algorithm, MR-I, MR-II algorithms.

UNIT IV

(08 Hours)

Feedforward ANN.

Structures of Multi-layer feedforward networks, Back propagation algorithm, Back propagation - training and convergence, Functional approximation with back propagation, Practical and design issues of back propagation learning. Radial Basis Function Networks, Pattern separability and interpolation, Regularization Theory, Regularization and RBF networks, RBF network design and training, Approximation properties of RBF.

UNIT V

(08 Hours)

Competitive Learning and Self organizing ANN

General clustering procedures, Learning Vector Quantization (LVQ), Competitive learning algorithms and architectures, Self organizing feature map, Properties of feature maps, Mexican Net, Hamming Net.

UNIT VI

(08 Hours)

Special Networks & Applications of Neural Networks

Support Vector machines, Design of an SVM, Examples of SVM, Probabilistic Neural Network, Boltzmann Machine with learning, cognitron, simulated annealing, applications of Neural Networks in bioinformatics, forecasting, healthcare, robotics, pattern recognition.

Text Books/ References:

Self Study Paper I -LOW POWER VLSI DESIGN

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course prerequisites:

Analog and Digital VLSI Design

Course objective:

To introduce the student to the concept of low power VLSI design, power estimation and power optimization

Course Outcomes:

1. Ability to apply various low power techniques at device and circuit level.
1. Ability to design low power VLSI circuits.
2. Ability to conceptualize low power VLSI basics.
3. Ability to plan low power architectures.
4. Ability to apply concepts of low power design at system level.

Contents:

UNIT I

(08 Hours)

Low Power Basics

Need for low power VLSI chips, Sources of power dissipation on Digital Integrated circuits, Emerging Low power approaches, Physics of power dissipation in CMOS devices.

UNIT II

(08 Hours)

Impact of Device & Technology on Low Power

Dynamic dissipation in CMOS, Transistor sizing & gate oxide thickness, Impact of technology Scaling, Technology & Device innovation.

UNIT III

(08 Hours)

Low Power Design

Circuit level:

Power consumption in circuits, Flip Flops & Latches design, High capacitance nodes, Low power digital cells library

Logic level:

Gate Reorganization, Signal Gating, Logic Encoding, State Machine Encoding, Pre-Computation Logic

UNIT IV

(08 Hours)

Low power Architecture & Systems

Power & performance management, Switching activity reduction, Parallel and Pipeline architecture for low power memory design.

UNIT V

(08 Hours)

Low power Clock Distribution

Power dissipation in clock distribution, single driver Vs distributed buffers, Zero skew Vs tolerable skew, chip & package co-design of clock network

UNIT VI

(08 Hours)

Algorithm & architectural level methodologies

Introduction, design flow, Algorithmic level analysis & optimization, Architectural level estimation & synthesis.

Text Books/ References:

1. Gary K. Yeap ,”Practical Low Power Digital VLSI Design”, KAP, 2002
2. Rabaey, Pedram ,”Low power design methodologies”, Kluwer Academic, 1997

Self Study Paper I -IC FABRICATION TECHNOLOGY

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course prerequisites:

Physics, Chemistry

Course objective:

To understand theory and to learn IC Fabrication Technology..

Course Outcomes: On successful completion of this course, students will be able to

1. Conceptualize steps required for IC fabrication.
2. Apply concepts of Oxidation, Lithography , Chemical Vapour Deposition and Metal Film Deposition.

Contents:

UNIT-I (08 Hours)

Environment for VLSI Technology

Basic Fabrication Steps, Concepts of Clean room and safety requirements, Wafer cleaning processes and Wet chemical etching techniques.

UNIT-II (08 Hours)

Oxidation

Kinetics of Silicon dioxide growth for thick, thin and ultrathin films. Oxidation technologies in VLSI and ULSI, High k and Low k dielectrics

UNIT-III (08 Hours)

Lithography

Photolithography, E-beam lithography and newer lithography techniques for VLSI/ULSI.

UNIT-IV

(08 Hours)

Chemical Vapour Deposition Techniques

CVD techniques for deposition of polysilicon, silicon dioxide, silicon nitride and metal film

UNIT-V

(08 Hours)

Metal Film Deposition

Evaporation and sputtering techniques, Failure mechanisms in metal interconnects Multi-level metallization schemes

UNIT-VI

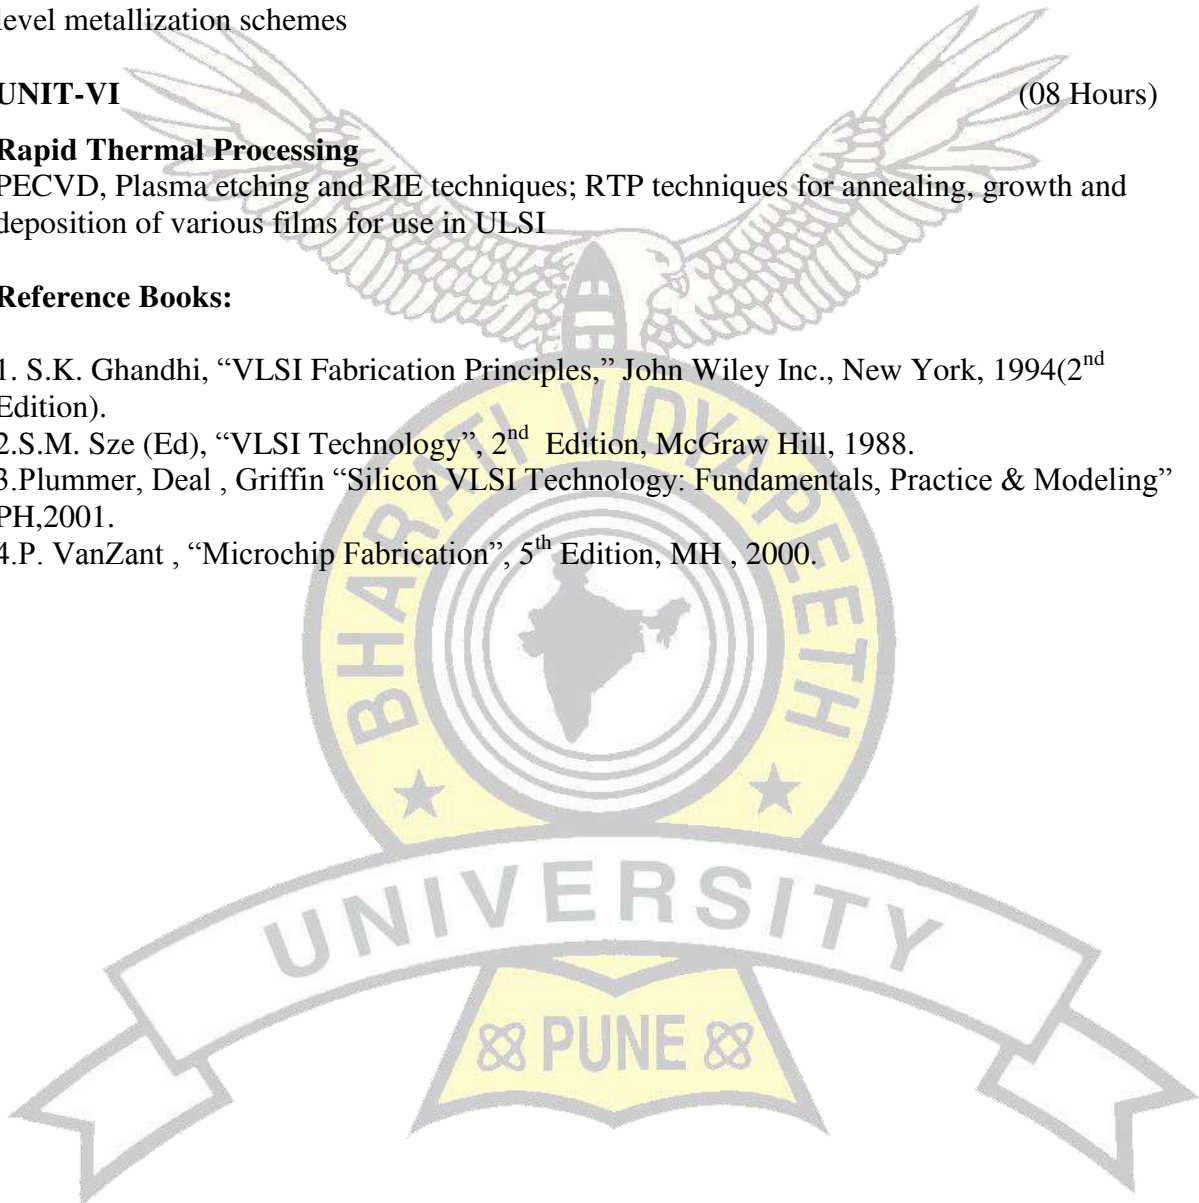

(08 Hours)

Rapid Thermal Processing

PECVD, Plasma etching and RIE techniques; RTP techniques for annealing, growth and deposition of various films for use in ULSI

Reference Books:

1. S.K. Gandhi, "VLSI Fabrication Principles," John Wiley Inc., New York, 1994(2nd Edition).

Self Study Paper I -IN-VEHICLE NETWORKING

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course prerequisites:

Knowledge of Basic Electronics and Physics

Course objective:

1. To Provide Students with a working of in-vehicle network systems and exposure to aspects of design, development, application issues associated with those systems.
2. To Provide Knowledge in concepts of capture of Sensor data, Storage and exchange of data to obtain remote services.

Course Outcomes: On successful completion of this course, students will be able to

1. Get knowledge in Information –intensive applications that are being enabled for vehicles by a combination of telecommunication computing technology.
2. Develop communications, and navigation/in automotive telemetries.

Contents:

UNIT I

Basics of In-vehicle Networking

(08 hours)

Over view of Data communication and networking –need for In-Vehicle networking-layers of OSI reference model –multiplexing and de-multiplexing concepts-vehicles

UNIT II

Networks and Protocols

(08 hours)

Over view of general purpose networks and protocols –Ethernet, TCP, UDP, IP, ICMP, ARM, RARP, Over view CAN-Fundamentals-selecting CAN controller-CAN development tools-CAN application areas.

CAN protocol: principles of Data exchange –real time transmission –message frame formats, bit encoding bit physical layer standards

UNIT III (08 hours)

CAN Higher Layer Protocol

Introduction to CAN open-Device net –TTCAN-SAE J1939-overview of CAN open and application in transportation electronics –CAN open standards

UNIT IV (08 hours)

LIN Protocol

LIN standard over view – applications- LIN communication concept message frame-development flow

UNIT V (08 hours)

MOST and Flex Ray

MOST over view –Data rates –data types-topology –application areas –Flex Ray Introduction-network topology –ECUs and bus interfaces –controller host interface and protocol operation controls-media Access Control and frame and Symbol processing – Coding/decoding unit-Flex Ray Scheduling –message processing –wakeup/Startup-applications

UNIT VI (08 hours)

Wireless Systems

Introduction to wireless system –GPS –Setting receivers-Positioning-activating the navigation function –Concept of latitude and grid System-mapping and location technologies-Application.

Reference Books:

1. B.Hoffman-Wellenhof,H.Lichtenegger and J.Collins,"GPS Theory and practice ".4th revised edition, Spriger, Wein New York,1997

Self Study Paper I -RESEARCH METHODOLOGY

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

TW & OR : 50 Marks

Total Credits: 04

Course prerequisites:

- Basic knowledge of modeling and simulation.
- Basic knowledge of probability and statistics

Course objective:

This course provides basic knowledge of Research Methodology in different areas.

Course Outcomes: On successful completion of this course, students will be able to

1. Learn research fundamentals like objectives, literature review process.
2. Apply the various methods of modeling and simulation.
3. Apply the probability statistics in the simulation.
4. Write the technical research paper with required presentation.
5. Know about of Information communication technology: e-research, indices, patents, virtual lab etc

Contents:

UNIT I

(08 Hours)

Research fundamentals

Definition, objectives, motivation, types of research and approaches, research- descriptive, conceptual, theoretical, applied and experimental

UNIT II

(08 Hours)

The initial research process

Literature review, research design, assortment of the problem, identification of problem, defining a problem, objective, sub objective and scope, assumptions, validation criteria, research proposal(synopsis)

UNIT III

(08 Hours)

Mathematical modeling and simulation

Mathematical modeling – need, techniques and classification, system models –types, static, dynamic, system simulation – why to simulate, technique of simulation, Monte Carlo simulation, types, continuous modeling, discrete model

UNIT IV

(08 Hours)

Probability and statistics in simulation

Role of probability and statistics in simulation, statistical distributions, inference about the difference in means, statistical output analysis

UNIT V

(08 Hours)

Design of experiment

Strategy of experimentation, types, basic principle, guidelines, need of precision, types of errors

UNIT VI

(08Hours)

Report writing and presentation of results

Need, report structure, formulation, sections, protocols, graphs, tables, IEEE format, evaluation of report, writing abstract, writing technical paper, Introduction of Information communication technology: e-research, indices, patents, virtual lab, digital lab, ethical issues in research

Self Study Paper I -INTELLECTUAL PROPERTY RIGHTS

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

TW & OR: 50 Marks

Total Credits: 04

Course objective:

- To introduce fundamental aspects of intellectual property rights to students.
- To provide case studies to demonstrate the application of legal concepts in engineering.

Course Outcomes: On successful completion of this course, students will be able to

- Understand the international intellectual property rights system.
- Use the necessary analytical tools to understand intellectual property in its broader environment

Contents:

UNIT I

(08 Hours)

Overview of Intellectual Property

Introduction and need for Intellectual Property Rights (IPR), Different categories of IP in instruments, Rational behind Intellectual Property, Rights of the owner of the IP. IPR in India-Genesis & development, International Background of Intellectual Property, some important examples of IPR.

UNIT II (08 Hours)

Patents

Introduction to patents, Concept: Novelty, Utility, Patent document, Granting of patent, Rights of a patent, Drafting of a patent, Filing of a patent, The Indian Patent law, Infringement

UNIT III (08 Hours)

Copyright

Introduction to Copyright, Originality, Works protected under Copyright Law, Authorship and Ownership

UNIT IV (08 Hours)

Trademarks

Introduction, Rights of trademark, Need for protection of trademarks, Types of trademarks, Registration of trademarks, Rights of Registered Trademark Owners, Infringement of trademarks

UNIT V (08 Hours)

Acquisition & maintenance of Intellectual Property Rights

Introduction to Acquisition & maintenance of Intellectual Property Rights, Intellectual property offices (IPOs), Costs-Patents, costs-Trademark, Costs-Copyright

UNIT VI (08 Hours)

Enforcement of Intellectual Property Rights

Introduction to Enforcement of Intellectual Property and Global economy. The knowledge of economy & IP, valuation & accounting of Intangible assets, Management of IP in knowledge economy.

Text books/Reference

M.Tech.(Electronics-VLSI) Sem-IV

Self Study Paper II- GENETIC ALGORITHMS FOR VLSI DESIGN

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

TW & OR: 50 Marks

Total Credits: 04

Course prerequisites:

Analog and Digital VLSI Design

Course objective:

To introduce the student to the concept of Genetic Algorithm for VLSI

Course Outcomes:

1. Ability to apply Genetic Algorithm for VLSI Design.
 2. Ability to optimize VLSI Design through algorithm.
 3. Ability to conceptualize VLSI design flow through Genetic Algorithm .
-

Contents:

UNIT I (8 hours)

VLSI Design

Design Methodology and Hardware Implementation Methodologies, Digital ASIC Implementation

UNIT II (8 hours)

Genetic Algorithms

Components of a GA Based Optimization Engine, Individual Encoding, Fitness of an Individual, Selection Mechanism Genetic Operators, Crossover Operators, Uniform Crossover, Elitism in Genetic Algorithms, Multi-Objective Genetic Algorithms

UNIT III

(8 hours)

Multi-Objective Genetic Floorplanning For Vlsi Asics

Multi-objective Optimization, Floor planning and Floor planning Using Sequence Pair Representation, Conversion from a Floor plan to a Sequence Pair, Conversion from a Sequence Pair to a Floor plan

UNIT IV

(8 hours)

FPGA Based Genetic Algorithm

Pseudo-Random Number Generation and GA Performance, Basics of Evolvable Hardware, FPGA Based Genetic Algorithm, Implementation and Interfacing, Design Considerations for ASIC Implementation, RT-Level Simulations, Runtime Comparison of Implemented design.

UNIT V

(8 hours)

Power Estimation

Application of GA-Standard cell placement-GA for ATG-problem encoding- fitness function-GA vs Conventional algorithm

UNIT VI

(8 hours)

Hybrid Genetic

Genetic encoding-local improvement-WDFR-Comparison of Cas-Standard cell placement-GASP algorithm-unified algorithm.

Self-Study Paper II: FUZZY LOGIC SYSTEMS

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course prerequisites:

- Basic knowledge of set & probability theory.
- Basic knowledge of propositional logic & control systems

Course objective:

This course provides in depth knowledge of Fuzzy Logic and role of Fuzzy Logic systems in different application areas.

Course Outcomes: On successful completion of this course, students will be able to

1. Analyze basic concepts of fuzzy sets, fuzzy relation and fuzzy arithmetic.
2. Identify potential use of fuzzy logic controller in different applications.
3. Evaluate fuzzy logic systems with fuzzy classification, fuzzy pattern recognition and hybrid systems.

Contents:

UNIT I

(08 Hours)

Classical Sets and Fuzzy Sets

Crisp Sets: An Overview, Fuzzy Sets: Basic Types, Fuzzy Sets: Basic Concepts, Characteristics and Significance of the Paradigm Shift, Additional Properties of alpha Cuts, representations of Fuzzy Sets, Extension Principle for Fuzzy Sets, Types of Operations, Fuzzy complements, Fuzzy Intersections: t-Norms, Fuzzy Unions: t-Conorms, Multivalued Logic, Fuzzy Propositions, Fuzzy Quantifiers.

UNIT II

(08 Hours)

Classical Relations and Fuzzy Relations

Cartesian Product, crisp relations, operations on crisp Relations, properties of crisp relations, composition, Fuzzy Relations, operations on fuzzy relations, properties of fuzzy relations, Fuzzy Tolerance and Equivalence Relations, Fuzzy Compatibility Relations, Fuzzy Ordering Relations.

UNIT III

(08 Hours)

Fuzzy Arithmetic, Fuzzification and Defuzzification

Fuzzy Numbers, Linguistic Variables, Arithmetic Operations on intervals, Arithmetic Operations on Fuzzy Numbers, Lattice of Fuzzy Numbers, Fuzzy Equations, Fuzzification, Defuzzification to Crisp Sets, λ -Cuts for Fuzzy Relations, Defuzzification to Scalars.

UNIT IV

(08 Hours)

Fuzzy Systems

Conventional Control Systems, Analysis, Design, PID Control, Fuzzy Logic Controller (FLC), Design, Defuzzification, Analysis, Simplified Examples of Applications- Washing machine, Vacuum cleaner. Fuzzy Control System Design, Aircraft Landing Control Problem, Fuzzy Engineering Process Control, Fuzzy Statistical Process Control. Fuzzy Neural Networks, Fuzzy Automata.

UNIT V

(08 Hours)

Fuzzy Classification & Fuzzy Pattern Recognition

Classification by Equivalence Relations, Cluster Analysis, Cluster Validity, c -Means Clustering, Hard c -Means (HCM), Fuzzy c -Means (FCM), Fuzzy c -Means Algorithm, Classification Metric, Hardening the Fuzzy c -Partition, Similarity Relations from Clustering, Feature Analysis, Partitions of the Feature Space, Single-Sample Identification, Multifeature Pattern Recognition.

UNIT VI

(08 Hours)

Hybrid Systems & Applications of Fuzzy Logic

Hybrid Systems, Fuzzy Neuron, Multilayer FNN Architectures, Fuzzy ART, Fuzzy ARTMAP Neural Fuzzy Systems, economics application, civil & industrial applications, Fuzzy Systems and Genetic Algorithms, Fuzzy Regression, Interpersonal Communication.

Text Books/ References:

1. Timothy Ross, "Fuzzy Logic with Engineering Applications", Third Edition, Wiley publication.
2. George J. Klir & Bo Yuan, "Fuzzy Sets & Fuzzy Logic Theory & Applications", Prentice Hall India, 2007.
3. Ahmad M. Ibrahim "Fuzzy Logic for Embedded Systems Applications" 2003, Elsevier Science.

Self-Study Paper II: BIOMEDICAL INSTRUMENTATION

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course prerequisites:

- Knowledge of basic cell structure, organs and systems in the human body

Course objective:

1. To make student understand different body systems.
2. To introduce amplifiers in order to design ECG Preamplifier system to pick up ECG waveform from the body.
3. To introduce various types of blood pressure monitoring and pulse oxymetry techniques.
4. To make student understand the importance of respiratory organs and parameters.
5. To make student understand various types of clinical lab equipments and its applications.
6. To introduce importance of electrosurgical equipment and electrodes used for electrosurgical

Course Outcomes: On successful completion of this course, students will be able to

1. Classify different body systems with their functions.
 2. Design ECG preamplifier system to pick up ECG waveform from the body.
 3. Categorize various pressure transducers as well as measurement techniques used for blood pressure monitoring.
 4. Describe respiratory system organs, parameters and respiratory transducers.
 5. Describe clinical equipments used in the pathology lab for blood test and analysis.
 6. Classify various electrodes and techniques used for surgery.
-

Contents

UNIT I (08 hours)

Human Body System

Human body as a uniquely adaptable organism , Overview of Different systems

UNIT II (08 hours)

Amplifier Systems for ECG

Introduction to amplifiers in biomedical electronics,ECG wave form,Standard lead system,ECG Preamplifier.

UNIT III (08 hours)

Blood Pressure and Blood Flow Measurements

Physiological pressures, Blood pressure measurements, Pressure transducers, pulse oximetry

UNIT IV (08 hours)

Respiratory System Measurements

Introduction to human respiratory system,organs of Respiration,Parameters of respiration,Respiratory transducers, plethysmography.

UNIT V (08 hours)

Clinical Laboratory Equipments

Blood components, overview of Laboratory measurements,Blood gas Analyzer,Blood cell counters,Spectrophotometer,Blood Tests and analyzers.

UNIT VI (08 hours)

Electrosurgical Equipments

Introduction to Electrosurgical Unit ,electro surgery circuits, Electro surgery safety, Patients safety

Text Books:

1. Joseph.J.Carr and John.M.Brown, "Introduction to Biomedical Equipment Technology", Pearson Education.

References:

1.Arthur C Guyton, "Medical Physiology", Prism Book.

2.Leslie Cromwell,Fred.J.Weibel,"Biomedical Instrumentation and Measurements", PHI.

Self-Study Paper II: COMPUTER AIDED VLSI DESIGN

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course prerequisites:

VLSI Design

Course objective:

The course will introduce CAD tools required for VLSI.

Course Outcomes:

On successful completion of this course, students will effectively utilize various CAD tools for VLSI design.

Contents

UNIT I

Digital Design and Design Environments: (08 hours)

Design, Hierarchy, Views, Connectivity, Spatial Dimensionality, Introduction of Design Environments, System Level, Algorithm Level, Component Level, Layout Level

UNIT II

Representation: (08 hours)

Introduction, General Issues of Representation, Hierarchy Representation, View Representation, Connectivity Representation, Geometry Representation.

UNIT III

Synthesis Tools: (08 hours)

Introduction, Cell Contents Generation and Manipulation, Generators of Layout outside the Cells, Cells and Their Environment, Silicon Compilers, Post layout Generators,

UNIT IV

Static Analysis Tools, Dynamic Analysis Tools:

(08 hours)

Node Extraction, Geometrical Rule Checker, Electrical Rule Checker, Verification, Circuit–Level Simulators, Logic-Level Simulators, Functional and Behavioral Simulation Issues, Event Driven and Hardware Simulation

UNIT V

Output of Design Aids and Programmability:

(08 hours)

Introduction, Circuit Boards, Integrated Circuits, Implementation Issues, Imperative Programming, Declarative Programming, Hierarchy.

UNIT VI

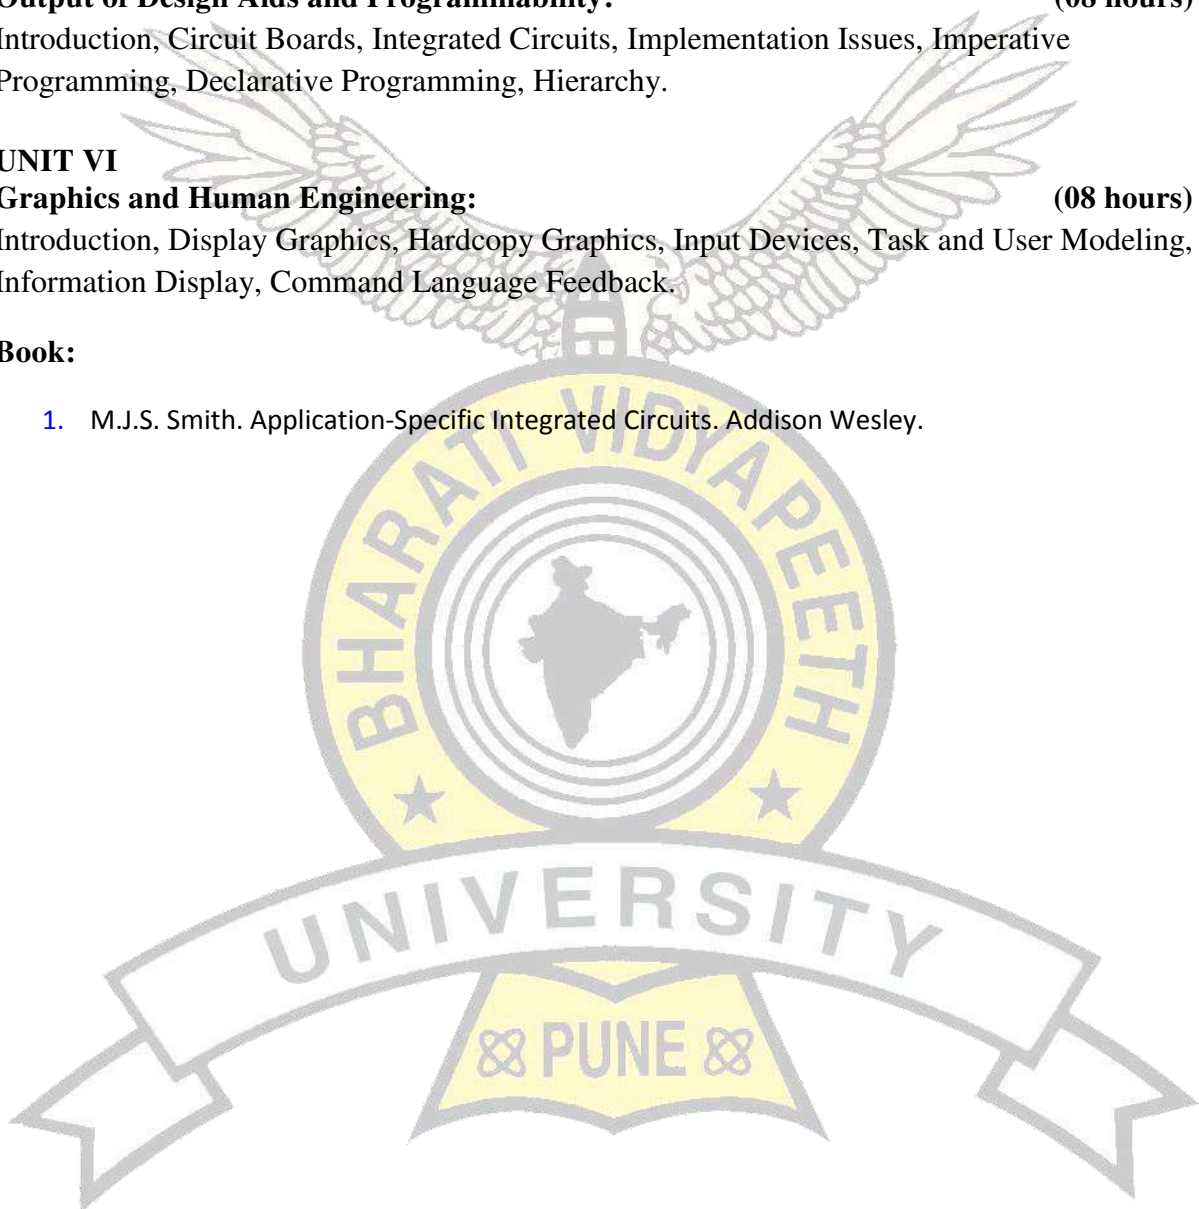

Graphics and Human Engineering:

(08 hours)

Introduction, Display Graphics, Hardcopy Graphics, Input Devices, Task and User Modeling, Information Display, Command Language Feedback.

Book:

1. M.J.S. Smith. Application-Specific Integrated Circuits. Addison Wesley.

Self-Study Paper II: HUMAN VALUES & PROFESSIONAL ETHICS

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

Course prerequisites:

- Listening skills for academic and professional purposes.
- Ability to speak effectively in English in real-life situations.

Course objective:

1. To create awareness on engineering ethics and human values
2. To understand social responsibility of an engineer
3. To appreciate ethical dilemma while discharging duties in professional life

Course Outcomes: On successful completion of this course, students will be able to

1. Familiar with the ethical issue and professional issue in the engineering profession.
2. Familiar with social impact of decision and the action of participants in the engineering profession

Contents

UNIT I

Human Values

(08 Hours)

Morals, Values and Ethics - Integrity, - Work Ethics - Service Learning - Civic Virtue - Respect for others - Living Peacefully - Caring - sharing - Honesty - Courage - Valuing Time- Cooperation - Commitment - Empathy – Self-Confidence - Character - spirituality

UNIT II

Engineering Ethics

(08 Hours)

Senses of engineering ethics - Variety of Moral Issues - Types of inquiry - Moral Dilemmas Moral Autonomy - Kohlberg's Theory - Gilligan's Theory - Consensus and Controversy -

Models of Professional Roles - Theories about Right Action - Self-Interest - Customs and Religion .

UNIT III

(08 Hours)

Safety, Responsibilities and Rights

Safety and Risk - Assessment of safety and Risk - Risk Benefit Analysis and Reducing Risk - The Three Mile Island. And Chernobyl Case Studies. Collegiality and Loyalty - Respect for Authority - Collective Bargaining - Confidentiality - Conflicts of Interest - Occupational Crime - Whistle Blowing - Professional Rights – Employee Rights - Intellectual Property Rights (IPR) – Discrimination

UNIT IV

(08 Hours)

Global Issues

Multinational Corporations - Environmental Ethics - Computer Ethics - Weapons Development - Engineers as Managers - Consulting Engineers - Engineers as Expert Witnesses and Advisors - Sample Code of Ethics of ASME, ASCE, IEEE, Institution of Engineers (India), etc.

UNIT V

(08 Hours)

Engineer's responsibility for safety

Collegiality and loyalty-respect of authority-collective bargaining-confidentiality-conflicts of interest-occupational crime- professional rights-employee rights-Intellectual property rights(IPR).

UNIT VI

(08 Hours)

Engineering as social Experimentation

Engineering as social experimentation-engineers as responsible experimenters-codes of ethics-a balanced outlook on law- the challenger case study

List of Self Study paper I & II

Self Study Paper I	Self Study Paper II
Condition Monitoring of Electrical Equipments	Electrical Power Capacitors
Energy Storage Devices	Nano technology & its applications in Electrical Engineering
Digital Measurement Techniques	High voltage insulation system & design
Energy Conservation & Audit	Use of synchronized measurement techniques in power system
Solar PV & Wind energy systems	Distributed Generation
Demand response & demand side management	Smart Grid - Automation System for State Transmission Utility
Digital Signal Processing Applications in Power Systems	Substation design

RESEARCH METHODOLOGY		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
UNIT - I	Fundamentals	(08 Hours)
	Definition, Research Characteristics, Research Need, Objectives and types of research, Motivation and objectives – Research methods vs Methodology, Types of research – Descriptive vs. Analytical, Applied vs. Fundamental, Quantitative vs. Qualitative, Conceptual vs. Empirical	
UNIT - II	Formulation of research problem	(08 Hours)
	Research Formulation – Defining and formulating the research problem - Selecting the problem - Necessity of defining the problem - Importance of literature review in defining a problem – Literature review – Primary and secondary sources – reviews, treatise, monographs-patents – web as a source – searching the web - Critical literature review – Identifying gap areas from literature review - Development of working hypothesis. Summarizing a Technical Paper -summary template , Online tools - Google, CiteSeer, ACM Digital Library, IEEE, The on-line Computer Science bibliography, Searching patents	
UNIT - III	Research design methods	(08Hours)
	Research design, sampling design and scaling techniques – Research design – Basic Principles- Need of research design — Features of good design – Important concepts relating to research design, basic principles of experimental designs, implications of sample design, steps in sample design, criteria of selecting sampling procedure, characteristics of good sampling design, different types of sample design. Scaling techniques: measurement scales, sources of error, technique of developing measurement tool, important scaling techniques, scale construction techniques.	
UNIT - IV	Statistical analysis	(08 Hours)
	Data Collection and analysis:- Observation and Collection of primary and secondary data - Methods of data collection, processing operations, types of analysis, statistics in research, measures of central tendency, measures of dispersion, measures of asymmetry, measures of relationships, simple regression analysis, multiple correlation and regression, partial correlation.	
UNIT - V	Research Paper & Thesis writing	(08 Hours)
	Reporting and thesis writing – Structure and components of scientific reports - Types of report – Technical reports and thesis – Significance – Different steps in the preparation – Layout, structure and Language of typical reports – Illustrations and tables - Bibliography, referencing and footnotes - Oral presentation – Planning – Preparation –Practice – Making presentation –	

	Use of visual aids - Importance of effective communication - Documentation and presentation tools: LATEX. Types of technical papers - Journal papers, Conference papers, Survey papers, Poster papers, Review papers Comparison, Structure of a survey, conference and journal paper, Organization and flow of thesis/ Project report, Research proposal: preparation, budgeting, presentation, funding agencies for engineering research,	
UNIT - VI	Research ethics, IPR and publishing	(08 Hours)
	Ethics: ethical issues. IPR: intellectual property rights and patent law, techniques of writing a Patent, filing procedure, technology transfer, copy right, royalty, trade related aspects of intellectual property rights Publishing: design of research paper, citation and acknowledgement, plagiarism tools, reproducibility and accountability.

Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

FACTS & HVDC

FACTS & HVDC		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
UNIT - I	FACTS:	(08 Hours)
	Conventional methods to increase transmission capacity, Series, Shunt reactors, Phase shifting transformers, Synchronous condensers, Flexible AC transmission controllers Basics, Challenges and needs, Static Power converter structures, AC controller based structures, DC link converter topologies, Converter output and harmonic control, Power converter control issues	
UNIT - II	Shunt and Series Compensation:	(08 Hours)
	Operation and control of thyristor controlled reactor, Thyristor switched Capacitor, SVC, STATCOM configuration and control, Applications of SVC, Power oscillation damping, Mitigation of sub-synchronous resonance, TCSC operation, Layout and protection, Applications of TCSC, Static Synchronous Series Compensator (SSSC)	
UNIT - III	Unified Power Flow Controller:	[08 Hrs]
	UPFC configuration, Independent real and reactive power flow control, Control scheme for UPFC, Basic control system for P and Q control, Dynamic performance, Operational constraints of UPFC, Power flow studies in UPFC embedded systems	
UNIT - IV	General Background of HVDC Transmission:	(08 Hours)
	EHV AC versus HVDC Transmission, Different configurations of HVDC link - Monopolar, Bipolar, Back to Back, Power flow through HVDC link, Equation for HVDC power flow, Connections of three phase six pulse and twelve pulse converter bridges, Voltage and current waveforms. Effect of delay angle, Extinction angle, Overlap angle, Control of DC voltage	
UNIT - V	Multi Terminal HVDC:	(08 Hours)
	Bipolar HVDC terminal, Converter transformer connections, Switching arrangements in DC yard for earth return to metallic return, HVDC switching system, Switching arrangements in a bipolar HVDC terminal, Sequence of switching operations, HVDC circuit breakers, DC current interruption, Commutation principle, Probable types and applications of HVDC circuit breakers, Multi-terminal HVDC systems, Parallel tapping, Reversal of power, Configurations and types of multi-terminal HVDC systems, Commercial multi terminal systems	
UNIT - VI	Protection and Control:	(08 Hours)
	Faults and abnormal condition in bipolar, Two terminal HVDC system, Pole-wise segregation, Protective zones, Clearing of DC line faults and reenergizing, Protection of converters, Transformer, Converter valves, DC yards, Integration of protection and controls, Hierarchical levels of control, Block diagram, Schematic diagram, Current control, Power	

	control, DC voltage control, Commutation channel, Master control, Station control, Lead station, Trail station, Pole control, Equidistant firing control, Synchronous HVDC link, Asynchronous HVDC Link

Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

Advance Micro controllers and applications

Advance Micro controllers and applications		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
	TW&OR : 50 Marks	01 Credits
UNIT - I	Introduction to PIC 16F8XX family and development tools. CPU architecture and instruction set. Harvard architecture and pipelining, program memory considerations, register file structure and addressing modes, CPU registers.	(08 Hours)
UNIT - II	PIC peripherals I/O ports, external interrupts and timers, timer operation, ADC, short overview of synchronous serial port, serial peripheral interface I2C bus.	(08 Hours)
UNIT - III	Learning MPLAB (V 5.0 or above) Integrated development environment from Microchip (Assembler and simulator), Study of applications like motor control, temperature control, lamp dimmer, 4X4 matrix keyboard and LCD interfacing etc.	(08 Hours)
UNIT - IV	ARM & AVR Processors : RISC, ARM design philosophy, ARM fundamentals, instruction set, thumb instruction set, exception & interrupt handling, efficient C programming, optimizing ARM assembly code, AVR architecture, instruction set, hardware interfacing, communication links and design issues.	(08 Hours)
UNIT - V	Interfacing considerations: Intel process communication, synchronization of processes, tasks, threads, devices & buses for networks, hardware-software co-design embedded programming in C/RT Linux	(08 Hours)
UNIT - VI	Real time operating systems: Survey of software architectures- round robin, with interrupts, function queue scheduling, RTOS architecture, selecting an architecture, task states, task and data semaphores and shared data, message queues, mailboxes ,pipes, timer functions, events, memory management, interrupt routines in an RTOS environment, basic design using RTOS, embedded software development tools, Micro C/OS- II, VX works.	(08 Hours)

Valvano, Brooks, Cole” Embedded Microcomputer systems-Real time interfacing” Thomson Learning 		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

Power System Modeling		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04Hours / Week	End Semester Examination: 60 Marks	04Credits
	Continuous Assessment: 40 Marks	
	PR & OR : 50 Marks	01 Credits
UNIT – I	Modeling of Non-Electrical Parameters:	(08 Hours)
	Different areas of power system analysis, Need for mathematical modeling of power system, Simplified models of non-electrical components such as boiler, steam & hydro turbine, governor system	
UNIT – II	Modeling of Transformers:	(08 Hours)
	Transformer modeling for two winding transformer, tap-changer, phase shifting transformer, three winding transformer and auto-transformer	
UNIT – III	Modeling of Transmission Line:	(08 Hours)
	Modeling of transmission network, Transformation to Alpha-Beta components using D-Q components, Steady state equations	
UNIT – IV	Synchronous Machine Modeling:	(08 Hours)
	Introduction, Park's Transformation, Flux Linkage Equation, Voltage Equations, Formulation of State-Space Equation, Current Formulation, Per Unit Conversion, Normalizing Voltage equations, Normalizing Torque Equations, Torque & Power Equivalent Circuit of Synchronous Machine	
UNIT – V	Excitation System Modeling :	
	Types of excitation systems, Control and protective systems, Modeling of excitation systems (excitation system components and entire excitation system, Voltage Response Ratio, Exciter voltage ratings	(08 Hours)
UNIT – VI	Load Modeling:	
	Basic Load Modeling concepts, Static load representation, Dynamic load representation, Induction motor (as load) modeling, synchronous motor (as load) modeling, acquisition of load model parameters	(08 Hours)
Text Books:		
1. K. R. Padiyar", Power System Dynamics", B.S. Publications		
2. John J. Granier & W.D. Stevenson Jr., "Power System Analysis ", 4 th Edition, McGraw Hill International Student Edition		
3. Olle Elegard, "Electrical Energy System Theory - An Introduction", TMH Publishing Company, 2 nd Edition		
4. Kundur, "Power System Dynamics & Control", IEEE Press, New York		
Reference Books:		
1. Anderson & Foud, "Power System Control & Stability", Vol-I, IEEE Press, New York		
2. P.S.R Murthy, " Power System Operation & Control"		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II	
Unit Test -2	UNIT – III, UNIT – IV	
Unit Test-3	UNIT –V, UNIT-VI	

Power System Dynamics		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
UNIT - I	Classical Methods of Power System Dynamic Studies	(08 Hours)
	Equality and inequality constraints in power system operation, state transition diagram, concept of system security and stability, classical model of system of one machine connected to infinite bus, Clark diagram for two machines series reactance system, extension of Clark diagram to cover any reactance network, elementary model of overall power system	
UNIT - II	Small Signal Stability:	(08 Hours)
	Small signal analysis, analysis of synchronizing & damping torque, state equation for small signal model, Simplified synchronous machine model, calculation of initial conditions, system simulation, improved model of synchronous machine, small signal stability of multi machine system	
UNIT - III	Large Signal Analysis:	(08 Hours)
	Elementary view of transient stability, Large signal analysis, Analysis using numerical integration methods (Modified Euler's, Runge-Kutta), Simulation of power system dynamic response, Analysis of unbalanced faults, Case study of a large system	
UNIT - IV	Power System Stabilizers:	(08 Hours)
	Basic concepts of control signals in power system stabilizers (PSS), Structure and tuning, Field implementation, PSS design and application, Future trends	
UNIT - V	Multi-machine system:	(08 Hours)
	Simplified model, Improved model of the system for linear load, Inclusion of load and SVC, Introduction to analysis of large power system	
UNIT - VI	Voltage stability:	(08 Hours)
	Definition, Factors affecting voltage stability & collapse, Analysis & comparison of angle & voltage stability and voltage instability & collapse, Control of voltage instability, islanding - necessity, methods, advantages and disadvantages, implication on power system dynamic performance	
Text Books:

Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

Digital Protection of Power System

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04Hours / Week		End Semester Examination: 60 Marks	04 Credits
		Continuous Assessment: 40 Marks	
		TW & OR : 50 Marks	01 Credit
UNIT – I	Introduction:		(08 Hours)
	Need for Power system protection, Digital Protection: State of Art, Merits of Microprocessor relaying scheme, Power System Components, Basic Philosophy of Protection Scheme, Section of Protection Scheme, Circuit Breakers and Relays, Types and Applications. Architecture of Modern Digital Relay		
UNIT - II	Static Relays:		(08 Hours)
	Introduction to Static Relay, Overcurrent Relay, Distance Relay, Protection Schemes of transmission lines, Switched distance relay, Poly-phase relay, Relay as Comparator - Dual input Comparator, Relay characteristics by comparison of constants, Multi-input comparator, Pilot Relaying Scheme		
UNIT - III	Elements of Digital Protection:		(08 Hours)
	Basic components of a digital relay, Signal conditioning subsystem: Transducers, Surge protection circuits, Analog filtering and analog multiplexers, Conversion subsystems, Sampling Theorem, Digital filter signal aliasing error, Sample and hold circuit, Digital multiplexing, Digital to analog conversion, Analog to digital conversion, Digital relay subsystem, Digital relay as unit		
UNIT – IV	Digital Protection of Transmission Line:		(08 Hours)
	Protection scheme of transmission line, Distance Relay, Travelling wave relays. Digital protection scheme based on fundamental signal: hardware design, software design, Digital protection of EHV/UHV transmission line based on travelling wave phenomena, New relaying scheme using amplitude comparison		
UNIT – V	Digital Protection of Transformer and Synchronous Generator:		(08 Hours)
	Faults in Transformer, Schemes used for Transformer Protection, Digital Protection of Transformer Faults in Synchronous generator, Protection schemes for Synchronous generator, Digital Protection of Synchronous Generator		
UNIT – VI	Artificial Intelligence in Power System Protection:		(08 Hours)
	Introduction, An Expert System (ES) for Protective Relay Settings: Introduction, Problem Description, ES Approach, Typical Application, Fuzzy Logic (FL) for Power system Protection: Introduction, Problem Description, FL Approach, Artificial Neural Network (ANN) in Phase Selection: Introduction, Problem Description, Measurement of fault generated in high frequency components, ANN Approach

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

PLC and SCADA

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
	Term Work: 50 Marks	01 Credits

UNIT – I	Introduction to PLC	(08 Hours)
	Definition & History of PLC, Overall PLC system, PLC Input and Output modules, CPU, Interfaces, Power supplies, PLC advantages and disadvantages, Selection criteria for PLC, Architecture of Industrial Automation Systems, Process Control, PID Control, Predictive Control, Introduction to Sequence Control, PLCs and Relay Ladder Logic, Hardware environment	
UNIT – II	PLC Programming	(08 Hours)
	Programming equipments, Construction of PLC ladder diagram, Basic components and symbols in ladder diagram, Ladder logic, Functional block, Structural text, Instruction, trouble shooting, features, programming ON/OFF Inputs to produce ON/OFF outputs, Networking of Sensors, Actuators and Controllers: The Fieldbus, The Fieldbus Communication Protocol	
UNIT – III	PLC Applications	(08 Hours)
	Analog PLC operation, PID control of continuous processes, simple closed loop systems, closed loop system using Proportional, Integral & Derivative (PID), PLC interface, Motors Controls: AC Motor starter, AC motor overload protection, DC motor controller, Variable speed (Variable Frequency) AC motor Drive	
UNIT – IV	SCADA	(08 Hours)
	Need of SCADA system, Features, SCADA architecture – First generation, Second generation, Third generation, HMI, MTU, RTU, IED's, 7 Layers of OSI, Communication requirements for SCADA (communication protocols – DNP, IEC, Ethernet, TCP/IP, Modbus, UDP), Client – Server based communication concept, SCADA Benefits	
UNIT – V	SCADA in Power System	(08 Hours)
	Operation and control of interconnected power system, Automatic substation control, SCADA configuration, Energy Management System (EMS), system security, State estimation, SCADA system security issues overview	
UNIT – VI	Supervisory Management	(08 Hours)
	Networked SCADA environment with implementation examples, Substation Automation and Equipment condition monitoring using SCADA, Distribution system design mapping, trouble call management, Customer level intelligent automation system, computer level monitoring and control of equipments	

Text Books:

1. Terson, "Power System Control Technology", Prentice Hall
2. Green, J. N, Wilson, R, "Control and Automation of Electric Power Distribution Systems", Taylor and Francis, 2007
3. Turner, W. C, " Energy Management Handbook", 5th Edition, 2004
4. Gary Dunning, "Introduction to Programmable Logic Controllers", Thomson, 2nd Edition
5. John W. Webb, Ronald A. Reis, "Programmable Logic Controllers: Principles and Application", 5th Edition
6. Stuart A Boyer, "SCADA supervisory control and data acquisition"

Reference Books:

1. Handschin, E. "Energy Management Systems", Springer Verlag, 1990
2. Gordan Clark, Deem Reynders, "Practical Modem SCADA Protocols"

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

(Elective – I) Power Sector Restructuring & Deregulation		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
UNIT - I	Power Sector in India Introduction to various institutions in an Indian Power sector such as CEA, Planning Commissions, PGCIL, PFC, Ministry of Power, State and Central governments, REC, Load Dispatch Centers, Utilities and their roles. Critical issues / challenges before the Indian power sector, Electricity act 2003-Provision in the Generation, Transmission & Distribution Sector, Various national policies and guidelines under this act.	(08 Hours)
UNIT - II	Fundamentals of Economics & Power Sector Regulation Fundamentals of economics applicable to Power Sector, Consumer behavior, Supplier behavior, Market Equilibrium, Short-run & Long-run costs, Various costs of production- Total cost (TC), Average fixed cost (AFC), Average variable cost (AVC), Average cost (AC) and Marginal cost (MC), Relationship between short-run and long-run average costs, Perfectly competitive market, Concept of life cycle cost, Annual rate of return, methods of calculations of Internal Rate of Return (IRR) and Net Present Value (NPV) of project, Role of regulation and evolution of regulatory commission in India, Types and methods of economic regulation, Regulatory process in India.	(08 Hours)
UNIT - III	Power Tariff Different tariff principles (marginal cost, cost to serve, average cost), Consumer tariff structures and considerations, different consumer categories, telescopic tariff, fixed and variable charges, time of day, interruptible tariff, and different tariff based penalties and incentives etc., Subsidy and cross subsidy, life line tariff, Comparison of different tariff structures for different load patterns. Government policies in force from time to time. Effect of renewable energy and captive power generation on tariff, Availability based tariff, Latest reforms and amendments	(08 Hours)
UNIT - IV	Power sector restructuring and market reform Introduction to power sector restructuring, Reasons for restructuring / deregulation of power industry, Understanding the restructuring process-Entities involved, The levels of competition, The market place mechanisms and Sector-wise major changes required, Different industry structures and ownership models, Market models based on contractual arrangements-Monopoly Model, Single buyer Model, Wholesale competition model and Retail competition model, Market architecture, Timeline for various energy markets, Bilateral / forward contracts, The spot market, Models for trading arrangements, ISO or TSO model, Reasons and objectives of deregulation of various power systems across the world-The US, The UK, The Nordic Pool and The developing countries. Congestion Management, Ancillary Services	(08 Hours)
UNIT - V	Electricity Markets Pricing and Non-price issues Electricity price basics, Market Clearing price (MCP), Zonal and locational MCPs, Dynamic, spot pricing and real time pricing, Dispatch based pricing, Power flows and prices. Optimal power flow Spot prices for real and reactive power. Unconstrained real spot prices, constraints and real spot prices. Non price issues in electricity restructuring (quality of supply and service, environmental and social considerations), Global experience with	(08 Hours)

	electricity reforms in different countries.	
UNIT - VI	Transmission Planning and Pricing Transmission planning & operation in open access power systems, Introduction & Principles of transmission pricing, Different transmission pricing methods, Transmission cost allocation methods, Marginal & Composite pricing Paradigms & their comparison, Introduction to transmission loss allocation & various methods of loss allocation, Debated issues in transmission pricing, Congestion issues and management, Ancillary Service Management, Forward ancillary service auction. Power purchase agreements.	(08 Hours)

Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

(Elective – I) POWER SYSTEM PLANNING AND RELIABILITY		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
UNIT - I	Unit 1: Load Forecasting :	(06 Hours)
	Introduction, Factors affecting Load Forecasting, Load Research, Load Growth Characteristics, Classification of Load and Its Characteristics, Load Forecasting Methods - (i) Extrapolation (ii) Co-Relation Techniques, Energy Forecasting, Peak Load Forecasting, Reactive Load Forecasting, Non-Weather sensitive load Forecasting, Weather sensitive load Forecasting, Annual Forecasting, Monthly Forecasting, Total Forecasting, Objectives & Factors affecting to System Planning , Short Term Planning, Medium Term Planning, Long Term Planning. [10 hrs]	
UNIT - II	Unit 2: Probability theory	(06 Hours)
	Introduction to probability, Probability distributions : Random variables, density and distribution functions. Mathematical expectation. Binominal distribution, Poisson distribution, normal distribution, exponential distribution, Weibull distribution. Normal Gaussian, Gamma and Beta distribution. Correlation and regression	
UNIT - III	Unit 3: Reliability	(06 Hours)
	Reliability, Failure, Concepts of Probability, Evaluation Techniques (i) Markov Process (ii) Recursive Technique, Stochastic Prediction of Frequency and Duration of Long & Short Interruption, Adequacy of Reliability, Reliability Cost.	
UNIT - IV	Unit 4: Generation Planning and Reliability :	
	Objectives & Factors affecting Generation Planning, Generation Sources, Integrated Resource Planning, Generation System Model, Loss of Load (Calculation and Approaches), Outage Rate, Capacity Expansion, Scheduled Outage, Loss of Energy, Evaluation Methods. Interconnected System, Factors affecting interconnection under Emergency Assistance.	
UNIT - V	Unit 5: Transmission Planning and Reliability	(06 Hours)
	Transmission Planning and Reliability: Introduction, Objectives of Transmission Planning, Network Reconfiguration, System and Load Point Indices, Data required for Composite System Reliability.	
UNIT - VI	Unit 6: Distribution Planning and Reliability	(06 Hours)
	Radial Networks – Introduction, Network Reconfiguration, Evaluation Techniques, Interruption Indices, Effects of Lateral Distribution Protection, Effects of Disconnects, Effects of Protection Failure, Effects of Transferring Loads, Distribution Reliability Indices. Parallel & Meshed Networks -Introduction, Basic Evaluation Techniques, Bus Bar Failure, Scheduled Maintenance, Temporary and Transient Failure, Weather Effects, Breaker Failure.	

Text Books:

2. R.L. Sullivan Power System Planning -, Tata McGraw Hill Publishing Company Ltd.	
3. Miler & Freund's, Probability and Statistic for Engineers, Pearson Education, Richard Johnson.	
Reference Books:	
1. X. Wang & J.R. McDonald, Modern Power System Planning -, McGraw Hill Book Company	
2. T. Gönen, Electrical Power Distribution Engineering - McGraw Hill Book Company	
3. B.R. Gupta Generation of Electrical Energy -, S. Chand Publications	
4. A.S. Pabla, Electrical Power Distribution Tata McGraw Hill Publishing Company Ltd.	
5. T.W. Berrie, Electricity Economics & Planning -, Peter Peregrinus Ltd., London	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Power Quality Issues

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
		Continuous Assessment: 40 Marks			
UNIT - I	Voltage sag; swells and interruptions Introduction; importance of power quality; terms and definitions of power quality as per IEEE std. 1159. Sources & Effects of Power Quality Problems; Sources of sag; swell and interruptions; Estimation of voltage sag performance; Fundamental principles of protection; solutions at end user level; utility systems and fault clearing issues; motor starting sags; evaluation of the economics of different alternatives.				[8Hrs]
UNIT - II	Transient Over- Voltages Sources of transient over voltages; capacitor switching; lightening; Ferro resonances and other switching transients; Principles of over voltage protections; devices of over voltage protections; Utility capacitor switching transients; Utility system lightening protection; managing Ferro resonance; switching transients problems with loads; computer tools for transient analysis.				[8Hrs]
UNIT - III	Fundamentals of Harmonics and its Analysis Introduction; the Mechanism of Harmonic Generation; Definitions and Standards: Factors Influencing the Development of Standards, Existing Harmonic Standards, General Harmonic Indices. Introduction to Harmonic Analysis; Fourier Series and Coefficients; Simplifications Resulting from Waveform Symmetry; Complex Form of the Fourier Series; Convolution of Harmonic Phasors; The Fourier Transform; Sampled Time Functions; Discrete Fourier Transform (DFT); The Nyquist Frequency and Aliasing; Fast Fourier Transform (FFT); Window Functions; Efficiency of FFT Algorithms; Alternative Transforms.				[8Hrs]
UNIT - IV	Harmonic Sources and Distortions Harmonic Sources : Introduction; Transformer Magnetization Nonlinearities; Rotating Machine Harmonics; Distortion Caused by Arcing Devices; Single-Phase Rectification; Three-Phase Current-Source Conversion; Three-Phase Voltage-Source Conversion; Thyristors-Controlled Reactors. Harmonic Distortion : Introduction; Resonances; Effects of Harmonics on Rotating Machines; Effect of Harmonics on Static Power Plant; Harmonic Interference with Power System Protection; Effect of Harmonics on Consumer Equipment; Interference with Communications.				[8Hrs]
UNIT - V	Computation, Assessment and Harmonic Elimination Harmonic Computation : Introduction; Direct Harmonic Analysis; Derivation of Network Harmonic Impedances from Field Tests; Transmission Line Models; Underground and Submarine Cables; Load Models; Computer Implementation; Examples of Application of the Models; Harmonic Elimination : Introduction; Filter Design Criteria; Network Impedance for Performance Calculations; Tuned Filters; Damped Filters; Conventional Filter				[8Hrs]

	Configurations; Band-Pass Filtering for Twelve-Pulse Converters; Distribution System Filter Planning; Filter Component Properties; D.C. Side Filters; Active Filter	
UNIT - VI	<p>Power quality monitoring; Assessment & Mitigation</p> <p>Need and approaches followed in power quality monitoring; objectives and requirements; Initial site survey; Power quality Instrumentation; Selection of power quality monitors; monitoring location and period; Selection of transducers; Harmonic monitoring; Transient monitoring; event recording and flicker monitoring.</p> <p>Power Quality assessment; Power quality indices and standards for assessment; waveform distortion; voltage and current unbalances; Power assessment under waveform distortion conditions. Power quality state estimation; State variable model; observability analysis; capabilities of harmonic state estimation; Test systems; Mitigation techniques at different environments.</p>	[8Hrs]

Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

(Elective – II) Advanced Control System

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
	Continuous Assessment: 40 Marks	
UNIT - I	PID Control:	(08 Hours)
	Review of classical and modern control concepts: PID control and tuning approaches, Selection of Variables for Control, PID Controller Tuning for Dynamic Performance - Determining Tuning Constants for Good Control Performance, Ziegler-Nichols method, Correlations for Tuning Constants, Fine-Tuning the Controller Tuning Constants, Controller tuning based on stability – Dead beat and self tuning, Rate feedback	
UNIT - II	State Variable Analysis:	(08 Hours)
	Control System Analysis Using State Variable Methods, Conversion of transfer function to phase variable and canonical variable model, Eigen value and eigen vector, Kalman's test and Gilbert's Test for controllability and observability analysis and design of control system in state space, Pole placement, State observer, Design of control system with Luenberger observer	
UNIT - III	Nonlinear and Robust Control:	(08 Hours)
	Nonlinear Systems and Equilibrium Points, Concepts of Stability, Describing function analysis, Phase plane analysis, Linearization, Feedback Linearization, Input-output linearization, Input-State Linearization Concept of robust control, Description and categorization of system uncertainties, System and signal norms, Small gain theorem, Robust stability, Design of robust control, Introduction to H-∞ control.	
UNIT - IV	Digital Control:	(08 Hours)
	Structure of the Digital Control System, ADC, DAC, Effects of Sampling of continuous time signals, Quantization, Sample and hold, Reconstruction of signal, Sampling Theorem, Aliasing, Elementary discrete-time signals, Impulse response, Linear convolution and its properties, Z transform: Basics, Properties, Inverse Z transform using power series and partial fraction difference equation, Stability analysis in z- plane with Jury's stability criteria	
UNIT - V	Frequency Analysis:	(08 Hours)

	<p>Frequency response of first order and second order systems, Polar plot, Bode plot, Bode plot from Sweep Frequency Response Analysis (SFRA) of transformer and its conclusion, Phase and group delays, Ideal filters and their pole zero locations, Zero phase and linear phase transfer functions</p> <p>Exponential representation of Fourier series and Fourier transform of continuous time signals, The Fourier series for discrete-Time periodic signals (only concept), The Fourier transform of discrete-time a periodic signals (only concept), Discrete Fourier Transform, Properties: Periodicity, Linearity, Symmetry properties, Circular convolution, Linear convolution using circular convolution, Fast Fourier Transform: Radix 2 DIT and DIF algorithms</p>	
UNIT - VI	Optimal Control:	(08 hours)
	<p>Parameter optimization and optimal control problems, Hamiltonian formulation of optimal control problem, Hamilton-Jacoby equation, Linear regulator problem, Quadratic performance criterion, Numerical solution of Matrix Riccati equation, Pontryagin's minimum principle, Application to optimal control of discrete and continuous systems (quadratic performance index, analysis and design of finite and infinite time), Linear Quadratic Regulators, Introduction to Linear Quadratic Gaussian approach</p>	
Text Books:		
1. 'Modern Control Engineering' - Katsuhiko Ogata, Prentice Hall India, 5th edition 2010.		
2. 'Non-linear Systems', by Hassan Khalil, Prentice Hall.		
3. Digital Control – Ogata , Prentice Hall India		
Reference Books:		
1. Digital Control- B.C.Kuo		
2. 'Digital Control and State Variable Methods' by M. Gopal, Tata-McGraw-Hill Publishing Company Limited		
3. Optimal Control: Linear Quadratic Methods' Brian D. O. Anderson, John Barratt Moore, Dover Publications, 2007		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

(Elective – II) ADVANCED POWER ELECTRONICS AND DRIVES

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 25 Marks		01 Credit	
UNIT - I	Converters:				(08 Hours)
	Voltage Source Converters Review of 3-ph-full wave bridge converter, operation and harmonics, 3 level voltage source converters. PWM converter. Generalized technique of harmonic elimination and voltage control. Advanced modulation techniques (space vector modulation, 3 rd harmonic PWM) Comparison of PWM techniques. Converter rating Current source converters (i) Matrix Converter: 3×3 matrix converter, principle of working, mathematical treatment, comparison of matrix converter with multipulse converter (ii) Self and Line commutated current source converter: Basic concepts of CSC, converters with self commutating devices				
UNIT - II	Multilevel Inverters:				(08 Hours)
	Multilevel concept, Types of multilevel Inverters, diode clamped multilevel inverter, flying-capacitors multilevel inverters, cascaded multilevel inverter, switching device currents, D.C. link capacitor voltage balancing, features of multilevel inverters, comparison of multilevel inverters. Applications of multilevel Inverter: Reactive power compensation Back to back intertie system				
UNIT - III	DC Drives:				(08 Hours)
	Single phase and 3 phase converter drives. Four quadrant Chopper drives, closed loop control of DC motor, Permanent magnet DC motor drives, DC Servo drives, applications				
UNIT - IV	Induction Motor Drives:				(08 Hours)
	3 phase induction motor control, stator voltage control/rotor voltage control, voltage and frequency control, current control, closed loop control of 3-phase induction motor. Soft starters, comparison of variable frequency drives, Speed control by static slip power recovery, induction motor servo drives, applications.				
UNIT - V	Synchronous Motor Drives:				(08 Hours)
	Voltage and frequency control, closed loop control of synchronous motors. Synchronous motor servo drive with sinusoidal waveform, synchronous motor servodrive with trapezoidal waveform. Load commutated inverter drives, speed control of synchronous motors by cyclo-convertors, applications				
UNIT - VI	Akagi's p-q theory				(08 Hours)
	Conventional concepts of active and reactive power in single phase and three phase circuits-Equation of power with sinusoidal voltage source and non-linear loads - $\alpha\beta$ transformation of three phase four wire system-Akagi's instantaneous power (pq) theory-relationship between Akagi's components and conventional active and reactive power application of pq theory to reactive and harmonic power compensation in simple circuits.				

Text Books:

Total	12	12	180	60	30	30	50	25	12	22	34

Elective I

1. Advanced Stress analysis
2. Manufacturing Information Systems
3. Computational Fluid Dynamics
4. Micro-electro Mechanical Systems

Elective II

1. Composite Materials
2. Analysis and Synthesis of Mechanisms
3. Artificial Intelligence
4. Design of Experiment

Self-Study Paper I

1. Advanced Manufacturing Processes
2. Machine Condition Monitoring and Diagnostics
3. Product Lifecycle Management
4. Robust Design of Product & Process
5. Computer Aided Process Planning
6. Flexible Manufacturing System
7. Product Design & Process Planning
8. Experimental Technique and Data analysis
9. Tribology in Design
10. Manufacturing System and Simulation

Semester IV									Total Duration: 14 Hrs/Week Total Marks: 325 Total Credits:36		
Subjects	Teaching Scheme (Hrs) Hrs/Week		Examination Scheme (Marks)						Examination Scheme (Credits)		Total Credits
	L	P	Theory	Unit Test	Attendance	Tutorial /Assignments	TW	Pract/Orals	TH	TH/PR/OR

Total	4	10	60	20	10	10	150	75	4	32	36

Self-Study Paper II

1. CAD/CAM Practices in Metal Forming
2. Optimization Techniques
3. Robotics and Sensors
4. Rapid Prototyping
5. Design for Manufacture
6. Theory of Elasticity & Plasticity
7. Design of Dies
8. Integrated Product Design & Development
9. Design for Manufacturing & Assembly
10. Concurrent Engineering

Computer Aided Design

TEACHING SCHEME

Lectures : 04 Hrs/week
Practicals : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Pract/Oral : 50 Marks
Total Credits : 06

Unit I

(08 Hours)

CAD TOOLS

Definition of CAD Tools, Types of system, CAD/CAM system evaluation Criteria, Graphics standards, functional areas of CAD, Modeling and viewing, software documentation, efficient use of CAD software.

Wire frame modeling -Types of mathematical representation of curves, wire frame models, wire frame entities, parametric representation of synthetic curves - Hermite cubic splines, Bezier curves, B-Splines, rational curves - NURBS.

Unit II

(08 Hours)

SURFACE MODELING

Mathematical representation of surfaces, Surface model, Surface entities, surface representation, Parametric representation of surfaces, plane surface, ruled surface, surface of revolution, Tabulated surface.

Unit III

(08 Hours)

SURFACE MODELING

Hermite Bicubic surface, Bezier surface, B-Spline surface, COONs surface, Blending surface, Sculptured surface, Surface manipulation - Displaying, Segmentation, Trimming, Intersection, Transformations - 2D and 3D, Orthogonal and Perspective transformations.

Unit IV

(08 Hours)

SOLID MODELLING

Solid Representation - Boundary Representation (B-rep), Constructive Solid Geometry (CSG) and other methods, Design Applications: Mechanical tolerances, Mass property calculations, CAD database structure.

CAD/CAM Data Exchange: Evaluation of data- exchange formats, IGES data representations and structure, STEP Architecture, implementation, ACIS & DXF.

Unit V

(08 Hours)

ADVANCED MODELING CONCEPTS:

Feature Based Modeling, Assembly Modeling, Behavioral Modeling, Conceptual Design & Top-down Design. Techniques for visual realism - hidden line - Surface removal - Algorithms for shading and Rendering. Parametric and variational modeling, Feature recognition, Design by features, Assembly and Tolerance Modeling, Tolerance representation - specification, analysis and synthesis, AI in Design.

Unit VI

(08 Hours)

COLLABORATIVE ENGINEERING:

Collaborative Design, Principles, Approaches, Tools, Design Systems. Product Data Management (PDM).

Text Books/ References

Termwork

Eight Assignments using either of UG, SolidWorks, CATIA, ProE, Hyperwork

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Modeling and Simulation

TEACHING SCHEME

Lectures : 04 Hrs/week
Practicals : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Pract/Oral : 50 Marks
Total Credits : 06

Unit I

(08 Hours)

System Concept and Modeling

Physical model, Mathematical model, Types of mathematical model, Dynamic Versus Static Models, Continuous-Time Versus Discrete-Time, Dynamic Models, Quantitative Versus Qualitative Models, Mechanical system modeling examples.

Simulation Basics, When Simulation Is the Appropriate Tool, when Simulation Is Not Appropriate, Advantages and Disadvantages of Simulation, Areas of Application, Steps in a Simulation Study

Unit II

(08 Hours)

Simulation Concepts

Simulation Basics, When Simulation Is the Appropriate Tool, when Simulation Is Not Appropriate, Advantages and Disadvantages of Simulation, Areas of Application, Steps in a Simulation Study

Simulation and analytical methods, Basic nature of simulation, The simulation process, Types of system simulation, Generation of random numbers .Monte Carlo Simulation.

Unit III

(08 Hours)

Probability as Used in Simulation

Basic Probability Concepts, Discrete Random Variable, Expected Value and Variance of a Discrete Random Variable, Measure of Probability Function, Continuous Random Variable, Exponential Distribution, Mean and Variance of Continuous Distribution, Normal Distribution.

Unit IV

(08 Hours)

System Simulation

Introduction, Simulation of Pure pursuit problem, exponential growth model, simulation of water reservoir system, Trajectory simulation, suspension system, simulation of pendulum.

Unit V

(08 Hours)

Simulation Models

Discrete Simulation, Continuous System Simulation. Simulation of Queuing Systems, Inventory Control Models

Unit VI

(08 Hours)

Design and Evaluation of Simulation Experiments.

Introduction, development of simulation experiments, principles of verification, validation and accreditation, Simulation experimentation, classical experimental design, validation of simulation experiments, evaluation of simulation experiments.

Simulation Languages

Text Books/ References

Term Work

1. Simulation of water reservoir system.
2. Trajectory simulation.
3. Suspension system.
4. Simulation of pendulum.
5. Discrete Simulation,
6. Continuous System Simulation.
7. Simulation of Queuing Systems,
8. Inventory Control Models

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Computer Integrated Manufacturing

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks

Total Credits : 04

Unit I

(08 Hours)

CONCEPT OF CIM

Introduction to CIM, Types of Manufacturing, CIM hardware and software, Elements of CIM, Product development through CIM Design Activities in a networked environment, networking in a manufacturing company, hardware elements of networking.

Unit II

(08 Hours)

CIM DATABASE

Introduction, Database requirements of CIM, Database, Database management, Database Models, EDM, Product Data Management (PDM), Advantage of PDM., Collaboration Engineering.

Unit III

(08 Hours)

WORK CELL & FLEXIBLE MANUFACTURING SYSTEM

Manufacturing cell, Group Technology, Cellular Manufacturing. DNC system and transfer of program from PC to machine. Introduction to FMS, Manufacturing integration model, flexible manufacturing strategy, Components of Flexible Manufacturing- Pallets and fixtures, machining centers, inspection equipment, material handling stations, storage system, In-process storage, manually operated stations, allied operation centers

Unit IV

(08 Hours)

INTEGRATIVE MANUFACTURING PLANNING AND CONTROL

Role of integrative manufacturing in CAD/CAM integration, Over view of production control - Forecasting, Master production schedule, Capacity planning, M.R.P., Order release, Shop-floor control, Quality assurance, Planning and control systems, Cellular manufacturing, JIT manufacturing philosophy.

Unit V

(08 Hours)

WEB BASED MANUFACTURING

Integrating process with web, Process management and control through web, Applications of web based manufacturing, casting, machining, forming & forging.

Unit VI

(08 Hours)

FUTURE TRENDS IN MANUFACTURING SYSTEMS

Lean Manufacturing: Definition, Principles of Lean Manufacturing, Characteristics of Lean Manufacturing, Value of Product, Continuous Improvement, Focus on Waste, Relationship of Waste to Profit, Four Functions of Lean Production, Performance Measures, The Supply Chain, Benefits of Lean Manufacturing. Introduction to Agile and Web Based Manufacturing systems.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Product Design And Development			
<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
<u>Unit I</u>			(08 Hours)
Introduction			
	<p>Characteristics of successful product development, Design and development of products, duration and cost of product development, the challenges of product development.</p> <p>Development Processes and Organizations: A generic development process, concept development: the front-end process, adopting the generic product development process, the AMF development process, product development organizations, the AMF organization.</p>		
<u>Unit II</u>			(08 Hours)
Product Planning			
	<p>The product planning process, identify opportunities. Evaluate and prioritize projects, allocate resources and plan timing, complete pre project planning, reflect all the results and the process. Identifying Customer Needs: Gather raw data from customers, interpret raw data in terms of customer needs, organize the needs into a hierarchy, establish the relative importance of the needs and reflect on the results and the process.</p> <p>Product Specifications: What are specifications, when are specifications established, establishing target specifications, setting the final specifications.</p>		
<u>Unit III</u>			(08 Hours)
Concept Generation			
	<p>The activity of concept generation clarify the problem, search externally, search internally, explore systematically, reflect on the results and the process.</p> <p>Concept Selection: Overview of methodology, concept screening, and concept scoring, Concept Testing: Define the purpose of concept test, choose a survey population, choose a survey format, communicate the concept, measure customer response, interpret the result, reflect on the results and the process.</p>		
<u>Unit IV</u>			(08 Hours)
Product Architecture			
	<p>What is product architecture, implications of the architecture, establishing the architecture, variety and supply chain considerations, platform planning, related system level design issues.</p>		
<u>Unit V</u>			(08 Hours)
Industrial Design			
	<p>Assessing the need for industrial design, the impact of industrial design, industrial design process, managing the industrial design process, assessing the quality of</p>		

	<p>industrial design. Design for Manufacturing: Definition, estimation of manufacturing cost, reducing the cost of components, assembly, supporting production, impact of DFM on other factors. Prototyping: Prototyping basics, principles of prototyping, technologies, planning for prototypes.</p>		
Unit VI	(08 Hours)		
Product Development Economics			
	<p>Elements of economic analysis, base case financial mode,. Sensitive analysis, project trade-offs, influence of qualitative factors on project success, qualitative analysis. Managing Projects: Understanding and representing task, baseline project planning, accelerating projects, project execution, postmortem project evaluation.</p>		
Text Books/ References

Syllabus for Unit Test			
	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

Semester II

K60504: ADVANCE FINITE ELEMENT METHOD

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
Practicals	: 02 Hrs/week	Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Term Work	: 25 Marks
		Pract/Oral	: 25 Marks
		Total Credits	: 05
Unit I			(08 Hours)
	Basic concepts of FEM, Weak formulation, Variational methods of approximation-Rayleigh Ritz Method, Stress strain relations, shape functions- linear and quadratic. Approximation errors in FEM, Accuracy of solution, p & h refinement		
Unit II			(08 Hours)
	One dimensional problems – Finite element modeling, Basic boundary condition, Multipoint constraints, Convergence of results , Potential energy approach, Global stiffness matrix, properties of stiffness matrix, load vector, Penalty approach, Elimination approach, Methods of Weighted Residuals-Least Square Method, Subdomain Method, Collocation Method, Garlekin's method.		
Unit III			(08 Hours)
	Finite Element Analysis of 2-D problems. Basic boundary value problems in 2-D, Triangular, Quadrilateral, Higher order elements. Constant strain triangle. Introduction to plate bending problems. Kirchhoff's theory, Mindlin plate element.		
Unit IV			(08 Hours)
	Isoparametric formulation – Natural Co-ordinate system, Lagrangian interpolation polynomials, Isoperimetric element, Numerical Integration Newton Cotes formula, Guass Quadrature formula in two and three dimensions, triangular elements, rectangular elements.		
Unit V			(08 Hours)
	Dynamic Analysis, Formulation of Dynamic problems, Consistent and Lumped Mass Matrices. Solution of Eigen Value Problems. Transformation Method, Jacobi Method, Vector Iteration Method, Subspace Iteration Method. Forced Vibration- Steady State and Transient vibration analysis, Analysis of damping, Mode of Super position Scheme, Direct Integration Method, Implicit and Explicit numerical methods.		
Unit VI			(08 Hours)
	Special Topics: - Linear Buckling Analysis, Adaptive Finite Element Technique .Sub modeling and substructuring.		

Term Work	
	Term work shall consists of three assignment based on above syllabus. Four computer program assignments to be developed for FEA. Using programming language. Two assignment of structural Analysis using FEA Software
Oral/Practical	
	Term work and Oral will be based on above syllabus.
Text Books/ References	
	<ol style="list-style-type: none"> 1. K. J. Bathe, "Finite Element Procedures", PHI 2. R. D. Cook, D. S. Malus, M. E. Syllabus for Unit Test	
Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Control Systems

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
Practicals	: 04 Hrs/week	Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Pract/Oral	: 50 Marks
		Total Credits	: 06
Unit I			(08 Hours)
Introduction to Control System			
	Introduction to control systems. Classification of control system, basic characteristic of feedback control systems. Mathematical modeling of control systems, concept of transfer function. Basic control actions:-On-Off Control, Proportional, Integral, Derivative and PID, Feedback and feed forward control system and their applications.		
Unit II			(08 Hours)
Time Response Analysis of Control System			
	Time response analysis: Time response of control system, standard test signal, Time Response Analysis of First and Second order system, Time Domain specifications. Step response of second order system. Steady-state errors, static error constants, steady state, analysis of different type of Systems using step. Ramp and parabolic inputs.		
Unit III			(08 Hours)
Control System Stability Analysis			
	Classification of control systems according to types of systems, Stability Analysis: Introduction to concepts of stability. The Routh-Hurwitz's Stability criteria. Stability in the sense of Lyapunov and absolute stability, autonomous systems, the invariance principle, linear systems and linearization, non autonomous systems, linear time varying systems and linearization.		
Unit IV			(08 Hours)
Root Locus and Frequency Response Methods			
	Frequency Response Analysis, Frequency domain specifications Correlation between time and frequency response. Polar Plots. Bode Plots, Nyquist Plots stability in frequency domain, frequency domain methods of design, compensation and their realization in time and frequency domain, improving system performance.		
Unit V			(08 Hours)
State Space Modeling			
	Concept of state, state variable, state model State space method. State space representation using physical and phase variables, decomposition of transfer function, diagonalisation. solutions of homogeneous and non homogenous equations, zero and pole placement using state space techniques. Transfer function from state model. Controllability and observability of linear system. State transition matrix, state controllability matrix, state observability matrix.		
Unit VI			(08 Hours)
Non-Linear Control Systems			
	Discrete time systems and Z-Transformation methods, State space analysis, Optimal and adaptive control systems, Non-Linear Systems Phase plane analysis: Phase portraits, Singular points characterization. Compensation (Introduction only): Types of compensator, selection of Compensator, Lead, Lag and Lag-Lead compensation. Control system Components : servomotor, stepper motors, Synchronos, Potentiometer, amplifiers

Term Work			
Two Experiments on PID controller Four computer based assignments using MATLAB			
Syllabus for Unit Test			
Unit Test I	Unit I,II,III		
Unit Test II	Unit IV,V,VI		

Precession Engineering

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
Unit I		(08 Hours)	
Concepts Of Accuracy			
	Introduction - concept of accuracy of machine tools - spindle and displacement accuracies - Accuracy of numerical control systems - Errors due to numerical interpolation - Displacement measurement system and velocity lags.		
Unit II		(08 Hours)	
Geometric Dimensioning And Tolerancing			
	Interpretation, measurement and application of form tolerances - datum system and targets – tolerance of position Tolerance zone conversions - Surfaces, features, features of size, datum features-Datum, oddly configured and curved surfaces as datum features, equalizing datum.		
Unit III		(08 Hours)	
Surface and form metrology			
	Flatness, roughness, waviness cylindricity etc. Methods of improving accuracy & surface finish, Influence of forced vibration on accuracy, Dimensional wear of cutting tools and its influences on accuracy		
Unit IV		(08 Hours)	
Precision Measuring Systems			
	Units of length - legal basis for length measurement – Traceability - Processing system of nanometer accuracies - LASER light source - LASER interferometer - LASER alignment telescope - LASER micrometer-on-line and in-process measurements of diameter and surface roughness using LASER - Micro holes and topography measurements -.- In processing or in-situ measurement of position of processing point-Post process and on-machine measurement of dimensional features and surface-mechanical and optical measuring systems. Straightness and flatness measurement – Optoelectronic Measurement Systems in Metrology, Opto electronic devices contact and non contact types Applications - Tool wear measurement - 3D Surface roughness - Pattern generation studies.		
Unit V		(08 Hours)	
Nano-Positioning Systems Of Nano Accuracy & Repeatability			
	Guide systems for moving elements - Servo control systems for tool positioning - Computer Aided digital and ultra precision position control.		
Unit VI		(08 Hours)	
Computer Integrated Quality Assurance			
	Concept of Total quality control & quality assurance - Zero defects-POKA-YOKE Statistical evaluation of data using computer- CNC CMM applications - Computer Aided measurement, data integration of 3D-CMM

Syllabus for Unit Test			
	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

Optimization for Engineering Design

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	:04
Unit I			(08 Hours)
Introduction			
	Optimal problem formulation-Design variables, constraints, objective function, variable bound. Engineering optimization problems, Optimization algorithms		
Unit II			(08 Hours)
Single Variable Optimization			
	Optimality criteria, Bracketing methods, region elimination method, point estimate method, gradient based method, root finding using optimization techniques.		
Unit III			(08 Hours)
Multivariable Optimization			
	Optimality criteria, unidirectional search, direct search method- evolutionary optimization, simplex search, Hooke-Jeeves pattern search method, gradient based methods,-steepest descent method, Newton's method, Marquardt's method.		
Unit IV			(08 Hours)
Constrained Optimization			
	Kuhn-Tucker conditions, transformation methods, sensitivity analysis, direct search for constrained minimization, linearized search techniques, feasible direction method.		
Unit V			(08 Hours)
Specialized Algorithms			
	Integer programming, penalty function, branch-and-bound method Geometric programming		
Unit VI			(08 Hours)
Nontraditional Optimization			
	Genetic algorithm, simulated annealing, global optimization using steepest descent, genetic algorithm and simulated annealing.		
Text Books/ References

Syllabus for Unit Test			
	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

Semester III

Elective I : Advanced Stress analysis

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
Unit I			(08 Hours)
Theory of Elasticity			
	Elasticity problems in two dimensions - stress strain relationship for brittle materials, ductile materials. Compatibility equations in two and three dimensions, free body diagram of complicated structures and stress calculations, stress functions in rectangular and cylindrical coordinate systems, evaluation of stresses in flat rectangular plates with different clamp and load conditions evaluation of the stresses in the flat and circular plate with center hole/holes using stress function		
Unit II			(08 Hours)
Theory of Plasticity			
	Different criteria for three dimensional stress analysis using plasticity, evaluation of stress concentration factors in different geometries using plasticity theorem, practical problems on stress analysis for plasticity-stress in the sharp groove of the shaft, stress in the L shaped bracket under cantilever load, strain rate effects on highly deformable materials and stress calculations.		
Unit III			(08 Hours)
Stress Analysis of Engineering Plastics and Composites			
	Types of engineering plastics (Nylon, ABS, PP) failure modes, failure phenomenon in two and three dimensional stress analysis, wear and tear of plastics, impact properties of plastics, types of composites (fiber reinforced plastics), evaluation of elastic properties of composites, stress analysis of composite circular tubes (internal and external pressure), flat plate fixed at the edges and concentrated load, uniformly distributed load		
Unit IV			(08 Hours)
Plate bending			
	Bending of plate to cylindrical surface, bending of a long uniformly loaded rectangular plate, pure bending in two perpendicular directions, bending of circular plates loaded symmetrically w.r.t. center, bending of circular plates of variable thickness, circular plate with circular hole at center symmetrically loaded and load distributed along inner and outer edges		
Unit V			(08 Hours)
Contact stresses			
	Geometry of contact surfaces, method of computing contact stresses and deflection of bodies in point contact, stress for two bodies in line contact with load normal to contact area and load normal and tangent to contact area, gear contacts, contacts between cam and follower, ball bearing contacts		
Unit VI			(08 Hours)
Experimental stress analysis			
	Dimensional analysis, analysis techniques, strain gauges, types of strain gauges, materials, configuration, instrumentation, characteristics of strain gauge measurement, theory of photoelasticity, elements of polariscope, simple and circular polariscope, fringes in dark and white field, isoclinic and isochromatic fringe patterns, evaluation of stresses from these fringe patterns

Syllabus for Unit Test

	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

Elective I: Management Information Systems

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I (08 Hours)

Knowledge based system, Introduction, Development of data base and knowledge bases, knowledge representing paradigms – rule based, object oriented, semantic nets and frames, uncertainty, fuzzy logic, neural nets.

Unit II (08 Hours)

Interference mechanism, goals, control strategies forward and backward chaining, conflict resolution, explanation, blackboard model.

Unit III (08 Hours)

Implementation issues: knowledge acquisition, coding, expert system shells, PROLOG, and LISP

Unit IV (08 Hours)

Selected applications in manufacturing: product design, process planning and scheduling, robot movement, factory layout, defect analysis, diagnostic maintenance, quality control.

Unit V (08 Hours)

Knowledge based approaches for engineering design, blackboard architecture, other knowledge based approaches.

Unit VI (08 Hours)

Artificial intelligence.

Term Work

Three case studies from the following

- ÿ Information and knowledge requirement in Manufacturing Function
- ÿ Inventory control systems
- ÿ Production Planning and Control System – Scheduling and capacity requirement calculation.
- ÿ Design information systems.

Oral/Practical

Based on above termwork.

Text Books/ References

1. Kerr R., "Knowledge Based Manufacturing Management", Addison Wiley, 1991
2. Addis T. R., "Designing Knowledge Based System", Prentice Hall, 1985

5. Maus R. and Keyes J., "Hand Book of Expert Systems in Manufacturing", McGraw Hill Publications, 1991
6. C. S. Krishnamurthy, S. Rajeev, "Computer Aided Design" Narosa Pub. House

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Elective I: Computational Fluid Dynamics

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Introduction to Fluid Dynamics, Concepts of Fluid Flow, Pressure distribution in fluids, Reynolds transport theorem, Integral form of conservation equations, Differential form of conservation equations, Different Types of Flows, Euler and Navier Stokes equations, Properties of supersonic and subsonic flows, Flow characteristics over various bodies.

Unit II

(08 Hours)

Geometric Modeling and CAD Repairing Geometric transformations, Parametric representation of curves and surfaces, Concept of topology, Surface modeling, Faceted models, Solid modeling. Creation of water tight geometry, Faceted Boolean operations, Dependent and independent CAD errors.

Unit III

(08 Hours)

Introduction to CFD, Philosophy of CFD, Governing equations of fluid dynamics and there physical meaning, Mathematical behavior of governing equations and the impact on CFD , Simple CFD techniques and CFL condition.

Unit IV

(08 Hours)

Numerical Methods in CFD, Finite Difference, Finite Volume, and Finite Element, Upwind and downwind schemes, Simple and Simpler schemes, Higher order methods, Implicit and explicit methods, Study and transient solutions

Unit V

(08 Hours)

Surface mesh generation, Surface mesh repair, Volume grid generation, Volume mesh improvement, mesh smoothing algorithms, grid clustering and quality checks for volume mesh. Adaptive, Moving and Hybrid Grids, Need for adaptive and, moving grids, Tet, pyramid, prism, and hex grids, using various elements in combination.

Unit VI

(08 Hours)

Introduction to Turbulence Modeling, Introduction and background, Algebraic models, One equation models, Two equation models, Near wall treatment, Reynolds stress models, Introduction to Multiphase Modeling Fundamentals of multiphase flows, Eulerian - Lagrangian (ELAG) approach, Eulerian- Eulerian (E2P) approach, Volume Of Fraction (VOF) approach.

Term Work

Minimum four assignments on above topic to study CFD analysis.

Use of Any CFD software like FLUENT – Basic issues, model development, and post process sing.

Oral/Practical

Based on Term work.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Elective I : Micro-electro Mechanical Systems

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
Unit I			(08 Hours)
Introduction			
	Micro-Electro-Mechanical Systems (MEMS), Microsystems and their products, miniaturization, applications, mechanical MEMS, thermal MEMS, micro-opto electromechanical systems, magnetic MEMS, radio frequency (RF) MEMS, micro fluidic systems, bio and chemo devices, Nanotechnology - definition, nanoscale, consequences of the nanoscale for technology and society, need and applications of nano electromechanical systems (NEMS)		
Unit II			(08 Hours)
Micro Fabrication Processes & Materials			
	Materials for MEMS - substrate and wafers, silicon as a substrate material, crystal structure, single crystal and polycrystalline, mechanical properties, silicon compounds, silicon piezo-resistors, gallium arsenide, quartz, piezo-electric crystals, polymers, packaging materials; Fabrication Processes - Bulk micro manufacturing, photolithography, photoresists, structural and sacrificial materials, X-ray and electron beam lithography, Thin film deposition - spin coating, thermal oxidation, chemical vapour deposition (CVD), electron beam evaporation, sputtering; Doping - diffusion, ionimplantation; Etching - wet etching, dry etching; Surface micromachining, bulk vs. surface micromachining; Wafer bonding - glass-frit, anodic and fusion bonding; LIGA process and applications.		
Unit III			(08 Hours)
Microsensors and actuators			
	Sensing and actuation, Chemical sensors, Optical sensors, Pressure sensors, Thermal sensors - thermopiles, thermistors, micromachined thermocouple probes, thermal flow sensors, MEMS magnetic sensor, Piezoelectric material as sensing and actuating elements - capacitance, piezomechanics, Piezoactuators as grippers, microgrippers, micromotors, microvalves, micropumps, microaccelerometers, microfluidics, shape memory alloy based optical switch, thermally activated MEMS relay, microspring thermal actuator, data storage cantilever.		
Unit IV			(08 Hours)
Microsystem Design			
	Design constraints and selection of materials, selection of manufacturing process, selection of signal transduction technique, electromechanical system and packaging.		
Unit V			(08 Hours)
Nanomaterials:			
	Molecular building blocks to nanostructures - fullerenes, nanoscaled biomolecules, chemical synthesis of artificial nanostructures, molecular switches and logic gates, nanocomposites; Carbon nanotubes -structure, single walled, multi walled, properties of carbon nanostructures and their synthesis, Potential applications of nano-structures.		
Unit VI			(08 Hours)
Nanofinishing Techniques			
	Abrasive flow machining, magnetic abrasive finishing, magnetorheological finishing, elastic emission machining, ion beam machining, chemical mechanical polishing, Nanomanipulation,		

	Nanolithography, Top-down versus bottom - up assembly, Visualisation, manipulation and characterization at the nanoscale; Applications - in Energy, Tribology, Informatics, MDSicine, etc.		
Text Books/ References

Syllabus for Unit Test			
	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

Elective II : Composite Materials

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
Unit I		(08 Hours)	
Basic concepts and characteristics			
	Definition and characteristics of composite materials, overview of advantages and limitations of composite materials, significance and objectives, sciences and technology, types and classification of typical composite materials, current status and future prospects.		
Unit II		(08 Hours)	
Macromechanical behaviours of lamina:			
	Stress-strain relations for anisotropic materials, engineering constants for orthotropic materials, stress-strain relations for a lamina of arbitrary orientation, biaxial strength theories.		
Unit III		(08 Hours)	
Micromechanical behaviour of a lamina			
	Mechanics of materials approach to stiffness, elasticity approach to stiffness, comparison of approaches to stiffness, mechanics of materials approach to strength.		
Unit IV		(08 Hours)	
Hygrothermal effects			
	Hygrothermal effects on mechanical behaviours, hygrothermal stress-strain relations, coefficients of thermal and moisture expansion of unidirectional lamina		
Unit V		(08 Hours)	
Macromechanical behaviours of a laminate			
	Classical lamination theory, lamina stress-strain behaviour, strain and stress variation in a laminate, laminate forces and moments, special cases of laminate, interlaminar stresses, design of laminates.		
Unit VI		(08 Hours)	
Manufacture and testing of composite materials			
	Manufacturing: Stamp moulding, diaphragm forming, thermoforming, filament winding, pultrusion, compression moulding, injection moulding. Testing: Determination of physical properties such as density, fibre volume ratio, void volume ratio, co-efficient of thermal expansion, determination of tensile, compressive and shear properties of unidirectional lamina, determination of interlaminar and intralaminar strength, biaxial testing, characterisation of composites with stress concentration.		
Text Books/ References			
	1. Mechanics of Composite Materials by R.M.Jones, McGrawhill-Kogakusha Ltd., Tokyo. 2. Engineering Mechanics of Composite Materials by Issac M.Daniel and Ori Ishai, Oxford University Press. 3. Analysis and Performance of Fiber Composites by B.D.Agarwal and L.J.Brotuman, John Wiley & Sons.		

Syllabus for Unit Test			
	Unit Test I		Unit Test I
	Unit Test II		Unit Test II

Elective II : Analysis and Synthesis of Mechanisms

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I (08 Hours)

Introduction:

Review of fundamentals of kinematics, D. O. F; Multi loop kinematics chains, Gross motion concepts; Position analysis -Vector loop equations for four bar slider crank.

Unit II (08 Hours)

Kinematic Analysis:

Inverted slider crank - Geared five bar and six bar linkages; Analytical method for velocity and acceleration analysis - Four bar linkage jerk analysis - Plane complex mechanism

Unit III (08 Hours)

Path Curvature Theory:

Fixed and Moving centroids, inflection points and inflection circle; Graphical constructions - Cubic of stationary curvature; Dimensional synthesis – Function generation; path generation, motion generation.

Unit IV (08 Hours)

Synthesis of Mechanisms

Graphical methods; Coupler; curve synthesis, design of six bar mechanisms. Algebraic methods. Application of instant centre in linkage design; Cam mechanism - Determination of optimum size of Cams.

Unit V (08 Hours)

Dynamic of Mechanisms

Static force analysis with friction - Inertia force analysis - combined static and inertia force analysis; shaking force, Kinetostatic analysis. Introduction to force and moment; balancing of linkages. The Matrix Method.

Unit VI (08 Hours)

Spatial Mechanism and Robotics:

Kinematic analysis of spatial RSSR mechanism; Denavit - Hartenberg parameters; Forward and inverse Kinematics of robotic manipulators.

Term Work

Practical in Use Of Mechanical Software Packages- Tutorials.

Oral/Practical

Based on Term work.

Text Books/ References

1. Ā Erdman A G & Sandor, G N, “Mechanism Design: Analysis and Synthesis”, prentice hall of India
2. Ā Mallik, A K, Ghosh A, and Gunter Dittrich, “Kinematic Analysis and Synthesis of Mechanisms”, CRC Press London
3. Ā Robert L Norton, “Design of Machinery” McGraw Hill Book Co.
4. Ā Robert HA, “Mechanical Design Systems Handbook”, McGraw Hill Book Co.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Elective II : Artificial Intelligence

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
Unit I		(08 Hours)	
Human and machine intelligence			
	Concepts of fifth generation computing, programming in AI environment, developing artificial intelligence system, natural language processing, neural networks.		
Unit II		(08 Hours)	
Introduction to fuzzy logic			
	Basic concepts in fuzzy set theory – operations of fuzzy sets – fuzzy relational equations – propositional, predicate logic – inference – fuzzy logic principles – fuzzy inference – fuzzy rule based systems – fuzzification and defuzzification – types.		
Unit III		(08 Hours)	
Fuzzy logic applications			
	Fuzzy logic controllers – principles – various industrial applications of fuzzy logic control – adaptive fuzzy systems – fuzzy decision making – fuzzy classification – fuzzy pattern recognition – image processing applications – fuzzy optimization.		
Unit IV		(08 Hours)	
Introduction to artificial neural networks			
	Fundamentals of neural networks – neural network architectures – learning methods – taxonomy of neural network architectures – standard back propagation algorithms – selection of various parameters – variations.		
Unit V		(08 Hours)	
Associative memory			
	Associative memory – exponential bidirectional associative memory – adaptive resonance theory – introduction – adaptive resonance theory 1 – adaptive resonance theory 2 – applications – Kohen self organizing maps – counter propagation networks – industrial applications. Expert system development: Definition, choice of domain, collection of knowledge base, selection of inference mechanism, case studies of expert system development in design and manufacturing.		
Unit VI		(08 Hours)	
Industrial application of AI and expert systems			
	Robotic vision systems, image processing techniques, application to object recognition and inspection, automatic speech recognition. Recent advances: Fundamentals of genetic algorithms – hybrid systems – meta heuristic techniques like simulated annealing, tabu search, ant colony optimization, perpetual self organizing, artificial immune systems – applications in design and manufacturing

Syllabus for Unit Test			
-------------------------------	--	--	--

	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

Elective II : Design of Experiment

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
Unit I			(08 Hours)
Introduction			
	Strategy of Experimentation, Some Typical Applications of Experimental Design, Basic Principles, Guidelines for Designing Experiments, A Brief History of Statistical Design, Summary: Using Statistical Techniques in Experimentation		
Unit II			(08 Hours)
Simple Comparative Experiments			
	Introduction, Basic Statistical Concepts, Sampling and Sampling Distributions, Inferences About the Differences in Means, Randomized Designs, Hypothesis Testing, Confidence Intervals, Choice of Sample Size, Comparing a Single Mean to a Specified Value		
Unit III			(08 Hours)
Experiments with a Single Factor:			
	The Analysis of Variance, Analysis of the Fixed Effects Model, Decomposition of the Total Sum of Squares, Statistical Analysis, Estimation of the Model Parameters ,Unbalanced Data, Model Adequacy Checking, The Normality Assumption,Plot of Residuals in Time Sequence, Plot of Residuals Versus Fitted Values, Plots of Residuals Versus Other Variables, Practical Interpretation of Results, A Regression Model, Comparisons Among Treatment Means ,Graphical Comparisons of Means		
Unit IV			(08 Hours)
Introduction to Factorial Designs			
	Basic Definitions and Principles, The Advantage of Factorials, The Two-Factor Factorial Design, Statistical Analysis of the Fixed Effects Model , Model Adequacy Checking , Estimating the Model Parameters , Choice of Sample Size ,The General Factorial Design, Fitting Response Curves and Surfaces , Blocking in a Factorial Design		
Unit V			(08 Hours)
The 2^k Factorial Design			
	Introduction, the 2 ² Design, the 2 ³ Design, the General 2 ^k Design, a Single Replicate of the 2 ^k Design, 2 ^k Designs are Optimal Designs, The Addition of Center Points to the 2 ^k Design		
Unit VI			(08 Hours)
Response Surface Methods and Designs			
	Introduction to Response Surface Methodology, The Method of Steepest Ascent, Analysis of a Second-Order Response Surface, Location of the Stationary Point, Characterizing the Response Surface, Ridge Systems, Multiple Responses, Experimental Designs for Fitting Response Surfaces, Designs for Fitting the First-Order Model, Designs for Fitting the Second-Order Model, Blocking in Response Surface Designs, Optimal Designs for Response Surfaces		
Text Books/ References			
	<ol style="list-style-type: none"> 1. Design and analysis of experiments, Douglas C. Montgomery, Wiley, 2008 2. Introduction to the Design And Analysis of Experiments, Geoffrey Mallin Clarke, R. E. Kempson, Arnold, 1994 		

	3. Experimental Design and Statistics, Stephen Henry Miller, Methuen, 1975		
Syllabus for Unit Test			
	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

Self Study Paper I : Advanced Manufacturing Processes

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

METAL CUTTING AND MECHANICS OF METAL CUTTING

Introduction to metal removal processes, Chip formation, forces acting on cutting tool and their measurement, Chip thickness, Theory of Ernest and Merchant, theory of Lee and Shafer, Tool wear and tool life, surface finish, thermal aspects, friction in metal cutting and testing of machine tools.

Unit II

(08 Hours)

ABRASIVE PROCESSES

Introduction, Grinding wheel-designation and selection, grinding process, grinding process parameters, creep feed grinding, honing, lapping and other finishing processes

(08 Hours)

Unit III

FORMING PROCESSES.

Sheet metal forming, punching, extrusion, coning. Plastic molding process, injection molding, blow molding, compression molding. Metal injection molding, powder injection molding, sintering process, and their applications

Unit IV

(08 Hours)

UNCONVENTIONAL MACHINING PROCESSES

Need for unconventional processes, Range of non conventional machining processes USM, WJM, AJM, chemical machining, Electrochemical machining, Electrolytic grinding, EDM, LBM, EBM, Plasma arc cutting.

Unit V

(08 Hours)

HIGH SPEED MACHINING

Introduction to high speed machining, economics of high speed machining, brief historical perspective, material properties at high strain rates, influence of increasing speed on chip formation, stainless steel, aerospace aluminum and titanium and recommendations.

(08 Hours)

Unit VI

GENERATIVE MANUFACTURING PROCESSES (GMP) FOR RAPID PROTOTYPING

General features and classification, Issues related to CAD and GMP software, Overviews of generative manufacturing processes, two dimensional layer-by-layer techniques and direct three-dimensional techniques for RP

Text Books/ References

2. E. M. Trent and P. K. Wright, Metal Cutting, Butterworth- Heinemann, Boston.
3. P. N. Rao, Manufacturing Technology, Tata Mc-Graw Hill.
4. D. A. Stephenson and J. S. Agapiou, Metal Cutting Theory and Practice, CRC Press
5. Amitabha Ghosh, Rapid Prototyping
6. Kalpak Jain S. and Schmid S. R., Manufacturing Processes for Engineering Materials, Addition Wesley,
7. Mikell P. Groover, Fundamentals of Modern Manufacturing: Materials, Processes, and Systems, John Wiley & Sons.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Elective II : Machine Condition Monitoring and Diagnostics

TEACHING SCHEME

Lectures : 04 Hrs/week
Practicals : 02 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Term Work : 25 Marks
Pract/Oral : 25 Marks
Total Credits : 05

Unit I (08 Hours)

Predictive Maintenance Techniques:

Predictive maintenance basics, Maintenance philosophies, Evolution of maintenance philosophies, Plant machinery classification and recommendations, Principles of predictive maintenance, Predictive maintenance techniques, Vibration analysis – a key predictive maintenance technique.

Unit II (08 Hours)

Fundamentals of Vibrations:

Vibration basics, Spring-mass system: mass, stiffness, damping, System response, What is vibration? The nature of vibration, Harmonics, Limits and standards of vibration.

Unit III (08 Hours)

Data Acquisition:

Introduction, Collection of vibration signal – vibration transducers, characteristics and mountings, Conversion of vibrations to electrical signal.

Unit IV (08 Hours)

Signal Processing, Applications and Representation:

The fast Fourier transform (FFT) analysis, Time waveform analysis, Phase signal analysis, Spectral signal processes.

Unit V (08 Hours)

Machinery Fault Diagnosis Using Vibration Analysis:

Commonly witnessed machinery faults diagnosed by vibration analysis, correcting faults that cause vibration; Balancing, Alignment, Resonance vibration control with dynamic absorbers.

Unit VI (08 Hours)

Oil and Particle Analysis Oil Fundamentals:

Condition-based maintenance and oil analysis, Setting up an oil analysis program, Oil analysis – sampling methods, Oil analysis – lubricant properties, Oil analysis – contaminants in lubricants, Particle analysis techniques, Alarm limits for various machines.

Term Work

Term work shall consist of
Data acquisition using a velocity pickup.
Data acquisition using an accelerometer.

Data acquisition of sound signals.
Spectral analysis of velocity, acceleration noise signals.
Experiment demonstrating balancing of rotating shaft shaft.
Three assignments based on above syllabus.

Oral/Practical

Based on Term work.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper I : Product Lifecycle Management

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Product Life Cycle Environment

Background, Overview, Need, Benefits, Concept of Product Life Cycle. Components / Elements of PLM, Emergence of PLM, Significance of PLM, Customer Involvement. Product Data and Product Workflow, Company's PLM vision, The PLM Strategy, Principles for PLM strategy, Preparing for the PLM strategy, Developing a PLM strategy, Strategy identification and selection, Change Management for PLM.

Unit II

(08 Hours)

Product Development Process

Integrated Product development process Conceive – Specification, Concept design, Design - Detailed design, Validation and analysis (simulation), Tool design, Realize - Plan manufacturing , Manufacture, Build/Assemble , Test (quality check) , Service - Sell and Deliver , Use , Maintain and Support, Dispose.

(08 Hours)

Unit III

Product Development Approaches

Bottom-up design, Top-down design, Front-loading design workflow, Design in context, Modular design. Concurrent engineering, partnership with supplier, collaborative and Internet based design, work structuring and team deployment, Product and process systemization, problem, identification and solving methodologies, improving product development solutions

Unit IV

(08 Hours)

Product Modelling

Product Modelling - Definition of concepts - Fundamental issues - Role of Process chains and product models -Types of product models – model standardization efforts-types of process chains - Industrial demands. Foundation technologies and standards (e.g. visualization, collaboration and enterprise application integration),

Unit V

(08 Hours)

Product Data Management (PDM) Technology

Product Data Management – An Introduction to Concepts, Benefits and

Terminology, PDM functions, definition and architectures of PDM systems, product data interchange, portal integration, PDM acquisition and implementation. Information authoring tools (e.g., MCAD, ECAD, and technical publishing), Core functions (e.g., data vaults, document and content management, workflow and program management), Functional applications (e.g., configuration Management)

(08 Hours)

Unit VI

Recent Advances

Intelligent Information Systems - Knowledge based product and process models - Applications of soft computing in product development process - Advanced database design for integrated manufacturing.

Text Books/ References

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper I : Robust Design of Product and Process

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Concepts of Quality Engineering

Taguchi's Approach to Quality, On-line and Off-line Quality Control, Difference from Classical Approach, Quality Loss Function, System Design, Parameter Design, Tolerance Design, Causes of Variation, Classification of Parameters, Parameter Design Strategy.

Unit II

(08 Hours)

Introduction to Robust Design

Robustness Strategy & its primary tools: P-Diagram, Quality Measurement, Quality Loss Function, Signal to Noise (S/N) Ratios, Orthogonal Arrays, Steps in Robust Parameter Design. Robust design and Six-Sigma for Lean Enterprises.

(08 Hours)

Unit III

Introduction to Taguchi's Experiment Design

Criteria for the Use of Experiment Design Methods, Applying Experiment Design Methods According To Situation; Problem Analysis and Empiric Parameter Reduction. Orthogonal Arrays, Graphical representation of factor combinations, linear graphs, Variance Analysis (ANOVA), Inner-Outer arrays Design.

Unit IV

(08 Hours)

Parameter Design according to Taguchi

Direct product design, indirect variance analysis, Product design with characteristic values, taking cost into account, Signal-to-noise ratio according to Taguchi.

Unit V

(08 Hours)

Data Analysis

Deterministic and random data, Uncertainty analysis, Tests for significance: Chi-square, Regression modeling, Direct and Interaction effects, ANOVA, F-test, Time Series analysis, Autocorrelation and Autoregressive modeling.

(08 Hours)

Unit VI

Response surface Methodology

Linear experiment designs, quadratic experiment designs.

Text Books/ References

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper I : Computer Aided Process Planning

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

INTRODUCTION

The Place of Process Planning in the Manufacturing cycle - Process Planning and Production Planning – Process Planning and Concurrent Engineering, CAPP, Group Technology.

Unit II

(08 Hours)

PART DESIGN REPRESENTATION

Design Drafting - Dimensioning - Conventional tolerancing - Geometric tolerancing - CAD - input / output devices - topology - Geometric transformation - Perspective transformation - Data structure – Geometric modelling for process planning - GT coding - The optiz system - The MICLASS system.

(08 Hours)

Unit III

PROCESS ENGINEERING AND PROCESS PLANNING

Experienced, based planning - Decision table and decision trees - Process capability analysis - Process Planning -Variant process planning - Generative approach - Forward and Backward planning, Input format.

Unit IV

(08 Hours)

COMPUTER AIDED PROCESS PLANNING SYSTEMS

Logical Design of a Process Planning - Implementation considerations -manufacturing system components,production Volume, No. of production families - CAM-I, CAPP, MIPLAN, APPAS, AUTOPLAN and PRO,CPPP.

Unit V

(08 Hours)

AN INTERGARTED PROCESS PLANNING SYSTEMS

Totally intergarded process planning systems - An Overview - Modulus structure -Data Structure, operation -Report Generation, Expert process planning.

(08 Hours)

Unit VI

Simulation

Major activities, purpose, simulation process, types methodology, simulation packages, process quality simulator, computer requirements trends, applications simulation of manufacturing systems.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper I : Flexible Manufacturing System

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Evolution of Manufacturing Systems

FMS definition and description, General FMS considerations, Manufacturing cells, Cellular versus Flexible Manufacturing. Systems Planning: Objective, introduction planning, preparation guidelines, the project team, supplier selection, system description and sizing, facility preparation planning, FMS layouts. Human resources: staff considerations, team work, communication and involvement, the supervisors role, personnel selection, job classifications, employee training.

Unit II

(08 Hours)

Manufacturing's Driving Force

Definition, description and characteristics. Just in-time manufacturing, definition and description, benefits and relationship to FMS, implementation cornerstones, quality and quantity application principles. Single manufacture Cell – design scheduling of jobs on single manufacturing cells. Group Technology: Concepts, classification and coding, benefits and relationship to FMS, design of group technology using rank order clustering technique.

(08 Hours)

Unit III

FMS Design

Using Bottleneck, Extended bottleneck models, Processing and Quality Assurance: Turning centres, Machining centre, construction and operations performed, axes, programming, and format information, work-holding and work-changing equipment, automated features and capabilities, cleaning and deburring – station types and operation description, importance to automated manufacturing, coordinate measuring machines, types, construction and general function, operation cycle description, importance to flexible cells and systems.

Unit IV

(08 Hours)

Automated movement and storage systems

AGVs, Robots, automated storage and retrieval systems, storage space design, queuing carousels and automatic work changers, coolant and chip Disposal and recovery systems, auxiliary support equipment, cutting tools and tool Management – introduction, getting control of cutting tools, Tool Management, tool strategies, data transfer, tool monitoring and fault detection, guidelines, work holding considerations, General fixturing, Modular fixturing. FMS and the relationship with workstations – Manual, automated and transfer lines design aspects.

Unit V

(08 Hours)

FMS Software

Communications networks and Nanotechnology – general functions, and manufacturing usages, hardware configuration, programmable logic controllers, cell controllers, communications networks. FMS implementation.

(08 Hours)

Unit VI

FMS and Simulation

System issues - Types of software - specification and selection - Trends -Application of simulation - software -Manufacturing data systems - data flow -CAD/CAM considerations - Planning FMS database.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper I : Product Design & Process Planning

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Product design and process design functions

Selection of a right product, essential factors of product design, Morphology of design, sources of new ideas for products, evaluation of new product ideas. Product innovation procedure-Flow chart. Qualifications of product design Engineer. Criteria for success/failure of a product. Value of appearance, colours and Laws of appearance.

Unit II

(08 Hours)

Product reliability

Mortality Curve, Reliability systems, Manufacturing reliability and quality control. Patents: Definitions, classes of patents, applying for patents. Trademarks and copyrights. Cost and quality sensitivity of products, Elements of cost of a product, costing methods, cost reduction and cost control activities. Economic analysis, Break even analysis Charts. Value engineering in product design, creativity aspects and techniques. Procedures of value analysis – cost reduction, material and process selection.

(08 Hours)

Unit III

Various manufacturing processes

Degree of accuracy and finish obtainable, process capability studies. Methods of improving tolerances. Basic product design rules for Casting, Forging, Machining, Sheet metal and Welding. Physical properties of engineering materials and their importance on products. Selection of plastics, rubber and ceramics for product design.

Unit IV

(08 Hours)

Industrial ergonomics

Man-machine considerations, ease of maintenance. Ergonomic considerations in product design- Anthropometry, Design of controls, man-machine information exchange. Process sheet detail and their importance, Advanced techniques for higher productivity. Just-in-time and Kanban System. Modern approaches to product design; quality function development, Rapid prototyping

Unit V

(08 Hours)

Role of computer in product design

Management of manufacturing, creation of manufacturing data base, Computer Integrated Manufacturing, communication network, production flow analysis, Group Technology, Computer Aided product design and process Planning. Integrating product design,

manufacture and production control.

(08 Hours)

Unit VI

Computer Aided Process Planning

Logical Design of a Process Planning - Implementation considerations -manufacturing system components,production Volume, No. of production families - CAM-I, CAPP, MIPLAN, APPAS, AUTOPLAN and PRO

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper I : Experimental Technique and Data analysis

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
<u>Unit I</u>			(08 Hours)
Research Modeling			
	(a) Mathematical – Classification of Models, Development of Models, Stages in Model building, Principles of Modelling, Use of Analogy, Models as Approximations, Data consideration and Testing of Models (b) Heuristics and Simulation – Definition, Applications and reasons for using Heuristics, Heuristic Methods and approaches, Meta-Heuristics; Simulation – Meaning, Applications and Classification of Simulation Models, Process of Simulation, Steps and Features of Simulation Experiments and their Validation.		
<u>Unit II</u>			(08 Hours)
Experimentation			
	Objective, Strategies, Factorial Experimental Design, Applications of Experimental Design, Basic Principles – Replication, Randomization and Blocking, Guidelines for designing experiments; Laboratory Experiments, Methods of manipulating Variables, Errors in Experiments, Steps in Design of Experiments.		
<u>Unit III</u>			(08 Hours)
Introduction to Data and Errors			
	Types Of Data counts, measurements. Types of error: inherent, instrument, operator. Statistical distributions: Uniform, Binomial, Poisson, Exponential, Normal Estimation of means, proportions, population sizes, variances		
<u>Unit IV</u>			(08 Hours)
Hypothesis testing			
	Procedures for hypothesis testing, means, proportions, variances, contingency, goodness of fit of data to a proposed model. Use of hypothesis tests to compare products or processes.		
<u>Unit V</u>			(08 Hours)
Design and analysis			
	Principles of experimental design: randomisation, replication, blocking. Analysis of variance: one-way and two-way analyses, with and without interaction. Cross-classified and nested forms. Fixed and random effect models. Factorial experiments versus one-at-a-time experiments.		
			(08 Hours)

<u>Unit VI</u>		
Regression analysis		
	Simple and multiple regression analysis. Use of transformation, analysis of residuals, variable selection procedures

	Unit Test II	Unit IV,V,VI

Self Study Paper I : TRIBOLOGY IN DESIGN

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Introduction to Tribology:

Introduction, Friction, Wear, Wear Characterization, Regimes of lubrication, Classification of contacts, lubrication theories. Newton's Law of viscous forces, Effect of pressure and temperature on viscosity.

Unit II

(08 Hours)

Hydrodynamic Lubrication:

Newton's Law of viscous forces, Flow through stationary parallel plates. Hagen's poiseuille's theory, viscometers. Concept of lightly loaded bearings, Petroff's equation, Hydrodynamic Bearings, Pressure development mechanism. Converging and diverging films and pressure induced flow. Reynolds's 2D equation with assumptions. Introduction to idealized slide bearing with fixed shoe and Pivoted shoes. Expression for load carrying capacity. Location of center of pressure.

Unit III

(08 Hours)

Hydrostatic Bearings:

Types of hydrostatic Lubrication systems Expression for discharge, load carrying capacity, Flow rate, Condition for minimum power loss. Torque calculations.

Unit IV

(08 Hours)

Elasto Hydrodynamic Lubrication:

Introduction to Elasto - hydrodynamic lubricated bearings. Introduction to 'EHL' constant. Grubin type solution, Different regimes in EHL contact

Unit V

(08 Hours)

Porous, Gas Bearings and Magnetic Bearings:

Introduction to porous bearings. Equations for porous bearings and working principal, Fretting phenomenon and it's stages. Introduction to gas bearing, Governing Equation, Infinitely long journal bearings, Externally pressurized gas bearing. Introduction to magnetic bearings, Active magnetic bearings. Different equations used in magnetic bearings and working principal. Advantages and disadvantages of magnetic bearings, Electrical analogy, Magneto-hydrodynamic bearings.

Unit VI

(08 Hours)

Tribo Measurement In Instrumentation:

Surface topography measurements - Electron microscope and friction and wear measurements - Laser method - Instrumentation - International standards - Bearings performance measurements - Bearing vibration measurement.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper I : Manufacturing System and Simulation

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Fundamentals System concept and design

Hierarchical structure, Decision making procedure, System types in manufacturing environments; Manufacturing Systems: Structural aspects, transformational aspects, procedural aspects, integrated manufacturing systems; Modes of Production-Jobbing/Intermittent/ Continuous; Mass Production-Economies of Scale, Optimum production scale, Mass Customization; Multi-Product Small Batch Production- Economies of Scope with Diversification; Logistic Systems- Material flow: conversion / transportation / storage

Unit II

(08 Hours)

Product / Process Planning and Design

Product Life Cycle, Planning of a new product, Product Design Aspects, Design cost considerations, Concurrent Engineering; Process and Operation Design-Computer Aided Process Planning, Optimum routing analysis using Dynamic Programming and Network Techniques, Criteria for line balancing.

(08 Hours)

Unit III

Manufacturing Optimization

Criteria for Evaluation, Optimization of single stage manufacturing- Unit production time and cost; Optimization of multistage manufacturing system-Scope, basic mathematical models; Cost Estimating- Classical metal cutting cost analysis, Industrial cost estimation practices, Estimating material, setup and cycle times.

Unit IV

(08 Hours)

Information Systems in Manufacturing

Database structures, hierarchical, network, Relational- concepts, keys, relational operations, query languages; Shop Floor Data Collection Systems-Types of data, on-line and off-line data collection, Automatic data collection systems

Unit V

(08 Hours)

Computer Simulation in Manufacturing System Analysis

Characteristics, Models, applications of probability and statistics; Design and evaluation methodology, General framework, Analysis of situation, Setting objectives, Conceptual modeling, Detailed design, Evaluation and Decision.

(08 Hours)

Unit VI

Modern approaches in Manufacturing

Cellular Manufacturing- Group Technology, Composite part, Rank Order Clustering Technique, Hollier method for GT cell layouts; Flexible Manufacturing- Concept, components, architecture; Lean Production concept, principles, Agile Manufacturing- concept, principles and considerations for achieving agility.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

DISSERTATION STAGE I

TEACHING SCHEME

Practicals : 07 Hrs/week

EXAMINATION SCHEME

Term Work : 25 Marks

Practical/Oral : 25 Marks

Total Credits : 15

Stage-I:

The aim of the dissertation work is to carry out research and development work. Every student will be required to choose the topic of dissertation in consultation with the faculty guide.

This stage will include a report consisting of synopsis, the plan for experimental/theoretical work and the summary of the literature survey carried out till this stage.

SEMINAR

TEACHING SCHEME

Practicals : 05 Hrs/week

EXAMINATION SCHEME

Term Work : 25 Marks

Total Credits : 07

The student will be required to choose the topic of seminar on advanced topics based on courses taught in first and second semester and present the work during the seminar.

SEMESTER – IV

Self Study Paper II : CAD/CAM Practices in Metal Forming

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Fundamentals of Material Forming:

Introduction of forming processes. Concept of Formability, formability limits and formability diagram. Wire and Tube Drawing: Introduction rod and wire drawing machines - construction and working. Preparation of stock for wire drawing. Wire drawing dies, material and design. Heat treatment, variables in wire drawing, Maximum reduction in wire in one pass, forces required in drawing. Multiple drawing, work hardening, lubrication in wire drawing. Tube drawing: Methods, force calculation, stock penetration. Lubrication in tube drawing.

Unit II

(08 Hours)

Forging:

Introduction, classification of forging processes. Forging equipment- Hammers, presses, furnaces etc. construction working capacities and selection of equipment. Basic forging operations such as drawing, fullering edging, blocking etc. Forgability tests, design of forging as a product, friction in forging. Forging defects and the remedies. New technologies: Liquid metal forging, Isothermal forging, No draft forging, P/M forging, Rotary swaging, Roll forging, lubrication in forging.

(08 Hours)

Unit III

Rolling of Metals:

Scope and importance of rolling. Types of Rolling Mills- construction and working. Roll bite, reduction, elongation and spread. Deformation in rolling and determination forces required. Process variables, redundant deformation. Roll flattening, Roll camber - its effect on rolling process, mill spring. Defects in rolling. Automatic gauge control- Roll pass classification & design. Lubrication in rolling.

Unit IV

(08 Hours)

Sheet Metal Working:

Sheet Metal properties, gauges and surface conditions. Study of presses and equipments used, various cutting and forming operations, types of dies used, force requirement, theory of shear, methods of force reduction, defects, lubricants used. Miscellaneous sheet metal working operations: Metal spinning, fine blanking, coining, embossing, rubber forming, stretch forming.

Design of Press Tools:

General classification and components of press tools, types of dies simple, compound, combination dies, various press working operations such as punching, blanking, deep drawing, bending, forming etc. Design and calculations for above press working

dies.

(08 Hours)

Unit V

Extrusion:

Types: Direct, reverse, impact, hydrostatic extrusion. Dies for extrusion, stock penetration. Extrusion ratio of force equipment (with and without friction), metal flow in extrusion, defects. Role of friction and lubricants. Manufacture of seam-less tubes. Advanced Metal Forming Processes:

High velocity forming- principles, comparison of high velocity and conventional forming processes. Explosive forming, Magnetic pulse forming, Electro hydraulic forming. Stretch forming, Coining Embossing, Curling, Spinning, Flow forming advantages, limitations and application of the process.

(08 Hours)

Unit VI

Finite-Element Method

Basics of Metal Forming and Finite-Element Method - Comparison of Finite-Difference and Finite Element Methods with Analytical Solutions - Spatial Discretization - Shape Functions - Assembly of the Stiffness Matrix. Finite Elements for Large Deformation - Solution of Linear Finite-Element Systems and Nonlinear Finite-Element Systems, Typical Finite Elements.

- 8.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper II : Optimization Techniques

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Introduction to Optimization

Statement of an Optimization Problem - Design Vector, Design Constraints, Constraint Surface, Objective Function, Objective Function Surfaces. Classification of Optimization Problems - Classification Based on the Existence of Constraints, Nature of the Design Variables, Physical Structure of the Problem, Nature of the Equations Involved, Permissible Values of the Design Variables, Deterministic Nature of the Variables, Separability of the Functions and Number of Objective Functions

Unit II

(08 Hours)

One-Dimensional Unconstrained Minimization

Introduction , Theory Related to Single Variable (Univariate) Minimization , Unimodality and Bracketing the Minimum, Fibonacci Method, Golden Section Method ,Polynomial-Based Methods. Programming using MATLAB

(08 Hours)

Unit III

Unconstrained Optimization

Introduction Necessary and Sufficient Conditions for Optimality Convexity Basic Concepts: Starting Design, Direction Vector, and Step Size. The Steepest Descent Method The Conjugate Gradient Method Newton's Method Quasi-Newton Methods Approximate Line Search Using MATLAB

Unit IV

(08 Hours)

Stochastic Programming

Introduction, Basic Concepts of Probability Theory, Stochastic Linear Programming, Stochastic Nonlinear Programming and Stochastic Geometric Programming

Unit V

(08 Hours)

Modern Methods of Optimization

Genetic Algorithms, Simulated Annealing, Particle Swarm Optimization, Neural-Network-Based Optimization and Ant Colony Optimization

(08 Hours)

Unit VI

Multiobjective Optimization

Introduction, Concept of Pareto Optimality, Generation of the Entire Pareto Curve. Methods to Identify a Single Best Compromise Solution .

Text Books/ References

1. Singeresu S. Rao, Engineering Optimization-Theory and Practice, New Age International Limited Publishers.
2. J. S. Arora, Introduction to Optimum Design, McGraw Hill, New York

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper II : Robotics and Sensors

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Introduction

Brief History, Basic concepts, Three laws of Robotics, Robot and Robotic mechanism, Automation and Robotics, Need for industrial Robots, Robot generations, Robot anatomy, Classification, Robot performance parameters, Socio-Economic aspects of Robotisation.

Unit II

(08 Hours)

Grippers

Introduction, types of end effectors, types of grippers, tools as end effectors, Guidelines for design of robotic gripper, force analysis of mechanical pneumatic and hydraulic grippers. Robot Drives Introduction, Classification of Drives, Characteristics of Drives, Types of Drives, Comparison of Drive system, Actuation Schemes, Reduction and Transmission Systems.

(08 Hours)

Unit III

Sensors and Controllers

Internal and external sensors, position, velocity and acceleration sensors, proximity sensors, force sensors, laser range finder. Robot vision: image processing fundamentals for robotic applications, image acquisition and pre-processing. Segmentation and region characterization object recognition by image matching and based on features.

Unit IV

(08 Hours)

Kinematics

Introduction, Rotation and Transformation, Denavit-Hartenberg Parameters, Mapping revisited, Forward kinematics, Inverse kinematics.

Unit V

(08 Hours)

Vision System for Robotics

Introduction, Need, Robot Vision System – Levels of processing, Functions of Machine Vision System, Image Acquisition, Sampling, Image Processing, Image Processing Technique, Edge detection, A typical vision system for robot, System hardware and function.

(08 Hours)

Unit VI

Robot Programming

Robot languages: AL, AML, RAIL, RPL, VAL, Demonstration of points in space :
Continuous path (CP), Via points (VP), Programmed points (PP).

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper II : Rapid Prototyping

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Introduction

Need - Development of RP systems – RP process chain - Impact of Rapid Prototyping on Product Development –Digital prototyping - Virtual prototyping-Rapid Tooling - Benefits-Applications, materials used in rapid prototyping

Unit II

(08 Hours)

Reverse Engineering and CAD Modeling

Basic concept- Digitization techniques – Model Reconstruction – Data Processing for Rapid Prototyping: CAD model preparation, Data Requirements – geometric modeling techniques: Wire frame, surface and solid modeling – data formats -Data interfacing, Part orientation and support generation, Support structure design.

(08 Hours)

Unit III

Liquid Based Rapid Prototyping

Stereolithography (SLA): Apparatus: Principle, per-build process, part-building, post-build processes, photo polymerization of SL resins, part quality and process planning, recoating issues, materials, advantages, limitations and applications.

Unit IV

(08 Hours)

Solid Based Rapid Prototyping System

Solid Ground Curing (SGC): working principle, process, strengths, weaknesses and applications. Fused deposition Modeling (FDM): Principle, details of processes, process variables, types, products, materials and applications

Unit V

(08 Hours)

Powder Based Rapid Prototyping Systems

Selective Laser Sintering(SLS): Principle, process, Indirect and direct SLS- powder structures, modeling of SLS, materials, post processing, post curing, surface deviation and accuracy, Applications. Laser Engineered Net Shaping(LENS): Processes, materials, products, advantages, limitations and applications– Case Studies.

(08 Hours)

Unit VI

Other Rapid Prototyping Technologies

Three dimensional Printing (3DP):Principle, basic process, Physics of 3DP, types of printing, process capabilities, material system. Solid based, Liquid based and powder based 3DP systems, strength and weakness, Applications and case studies. Examples and case studies

Text Books/ References

1. Rapid prototyping: Principles and applications, second edition, Chua C.K., Leong K.F and Lim C.S., World Scientific Publishers, 2003.

5. Rapid Tooling: Technologies and Industrial Applications, Peter D.Hilton,Hilton/Jacobs, Paul F.Jacobs, CRC press, 2000

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper II : Design for Manufacture

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Introduction

General design principles for manufacturability, strength and mechanical factors, mechanisms selection, evaluation method, geometrical tolerances, tolerance control and utilization. Economic Use of Raw Materials: Ferrous steel, hot rolled steel, cold finished steel, stainless steel, non ferrous materials aluminum, copper, brass, non metallic materials, plastics, rubber and composites

Unit II

(08 Hours)

Components Design I

Metal extrusion, metal stamping, fine blanking, four slide parts, spring and wire forms, spun metal parts, cold headed parts, extruded parts, tube and section bends, rolled formed parts, power metal parts, forging electro forming parts, specialized forming methods, turned parts, machined round holes, drilled parts, milled parts.

(08 Hours)

Unit III

Components Design II

Planned shaped and slotted parts, screw threaded contoured and internal ground parts, center less ground, electrical discharged, rolled furnished parts, electro chemical and advanced machine parts. Sand cast, die cast, investment cast and other cast products. Non Metallic Components Design Thermosetting plastic, injection moulded and rotational moulded parts, blow moulded, welded plastic articles, ceramics

Unit IV

(08 Hours)

Composite Materials

Introduction, Classification of composites, Types of composite, Properties, Metal matrix composite, Ceramic matrix composite, Fiber Reinforced plastic, Manufacturing methods, Applications in Different field. Ceramic, Properties and applications of ceramics. Manufacturing of ceramics.

Unit V

(08 Hours)

Assembled Parts Design I

Welded parts, arc, resistance, brazed and soldered parts, gear box assembly, bearing assembly.

(08 Hours)

Unit VI

Assembled Parts Design II

Retention, bolted connection, screwed connections, flanged connections, centred connections, press fitted connections, surface finishing, plated parts, heat treated parts, NC machining, group technology, low cost automation, computer aided manufacture, product design requirements.

Text Books/ References

2. K.G. Swift —Knowledge based design for Manufacture| Kogan page Limited, 1987.
3. S H Avner, Physical Metallurgy, McGraw Hill Publication

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper II : Theory of Elasticity & Plasticity

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Basic Concepts of Stress

Definition, State of Stress at a point, Stress tensor, invariants of stress tensor, principle stresses, stress ellipsoid, derivation for maximum shear stress and planes of maximum shear stress, octahedral shear stress, Deviatoric and Hydrostatic components of stress, Invariance of Deviatoric stress tensor, plane stress.

Unit II

(08 Hours)

Basic concepts of Strain

Deformation tensor, Strain tensor and rotation tensor; invariants of strain tensor, principle strains, derivation for maximum shear strain and planes of maximum shear strain, octahedral shear strain, Deviatoric and Hydrostatic components of strain tensor, Invariance of Deviatoric strain tensor, plane strain.

(08 Hours)

Unit III

Generalized Hooke's Law

Stress-strain relationships for an isotropic body for three dimensional stress space, for plane stress and plane strain conditions, differential equations of equilibrium, compatibility equations, Material (D) matrix for Orthotropic Materials.

Unit IV

(08 Hours)

True stress and true strain

Von-Mise's and Tresca yield criteria, Haigh–Westergard stress space representation of von - Mise's and Tresca yield criteria, effective stress and effective strain, St. Venants theory of plastic flow, Prandtl–Reuss and Levy–Mise's constitutive equations of plastic flow, Strain hardening and work hardening theories, work of plastic deformation.

Unit V

(08 Hours)

Analysis methods

Slab method, Slip line field method, uniform deformation energy method, upper and lower bound solutions. Application of Slab method to forging, wire drawing, extrusion and rolling processes.

(08 Hours)

Unit VI

Stresses in flat Plate

Stresses in circular and rectangular plates due to various types of loading and end conditions
buckling of plates

Text Books/ References

1. Timoshenko and Goodier, Theory of Elasticity, Mcgraw Hill Publications 3Rd Edition,
2. Madleson, Theory of Plasticity,
3. J. Chakrabarty, Theory of Plasticity, 2 nd edition, McGraw Hill Publications 1998
4. George E Dieter, Mechanical Metallurgy, McGraw Hill Publications 1988

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper II : Design of Dies

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Design principles

Design principles for dies of thermo-plastic and thermo-setting components. Impression core cavities, strength of cavities, guide pillars and bushes, ejection systems, cooling methods, bolster types. Split moulds, methods of actuating the splits, moulds of threaded components, internal & external under cuts, moulds with under – feed systems. Design principles and standards for Transfer and compression moulding dies. Design of Tools: Mould for a spindle component with sleeve, pin ejection. Mould with splits Multi-cavity mould with stripper plate, inserts, and ejectors.

Unit II

(08 Hours)

Specifications & Elements of Blow Moulding

Determination of number of cavities, types of cooling system, design of cooling channels, heat transfer considerations, types of ejectors, determination of mould opening force & ejection force, use of CAD for mould design, defects and remedies

(08 Hours)

Unit III

Design of Dies for metal mould Castings

Design of Dies for metal mould Castings, Die casting, Shell moulding. Design of casting cavity, sprue, slug, fixed and movable cores, finger cam, core, pin, draft, ejector pins, ejector plate, gate, goose-neck, nozzle, over-flow, platen plunger, runner, slot, slide, vent, water line. Design of hot chamber, cold chamber machines, vertical, horizontal,, die locking machines, toggle and hydraulic systems, injection systems, rack and pinion, knockout pins and plates, hydraulic ejection, Other parts of die casting machines

Unit IV

(08 Hours)

Design of various types of dies

Design of various types of dies – Single cavity, multi cavity, combination, unit dies. Alignment of dies with sprue. Design approach for die elements. Selection of materials and heat treatment for die casting dies and elements – die casting alloys – types of die casting alloys, Case studies on executed dies and design details. Finishing, Trimming, and inspection. Gravity die casting – Die design with cores and inserts – Bulk forming tools. Mould flow analysis. Softwares used for Die Design.

Unit V

(08 Hours)

Open die forging

Open die forging, Advantages of open die forging over closed die forging. Calculation of allowances and tolerances. Methods of open die forging. Design of dies. Closed die forging. Preparation of material for forging. Calculation of raw-stock, cutting off, heating in furnaces. Allowances and tolerances for closed die forging as per IS: 3469 1974.

(08 Hours)

Unit VI

Die blocks for forging operations

Die blocks for forging operations. Design of fuller impression, Roller impression, Bender impression, Blocker impression, Finisher impression. Swaging tools. Planning layout of multi impression dies. Flash and cutter calculations –additional operations on forging, piercing, and trimming dies, coining dies. Horizontal forging machines. Design of upsetting dies. Calculations on upsetting dies

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper II : Integrated Product Design & Development

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Introduction

Definition and morphology of product design (seven phases), standardization, simplification and specialization in product design, modern approaches-concurrent design and quality function deployment, product development, product development versus product design, types of design and redesign, modern product development process, product development team and product development planning with reference to ISO standard, difference between product verification and production validation.

Unit II

(08 Hours)

Product Development – Technical and Business Concerns

Technology Forecasting and Technology S-Curve (Technology Stage), Mission Statement and Technical Questioning, Economic Analysis of Product, Customer Needs and Satisfaction, Customer Population and Market Segmentation, Customer Needs-Types and Models, Gathering Customer Needs Information, Analysis of Gathered Information.

(08 Hours)

Unit III

Product Development from Concept to Product Function

Generating concepts, information gathering, and brainstorming, morphological analysis, concept selection-design evaluation, estimation of technical feasibility, concept selection process, Pugh's concept, selection charts, numerical concept scoring, process of concept embodiment, system modeling, FMEA, functional modeling and decomposition, fast method, subtract and operate procedure, establishing system functionality, augmentation and aggregation.

Unit IV

(08 Hours)

Product Development in the Context of Reverse Engineering

Product Teardown Process, Tear Down Methods - Force Flow Diagrams, Measurement and Experimentation, Applications of Product Teardown, Benchmarking Approach and Detailed Procedure, Tools Used In Benchmarking -Indented Assembly Cost Analysis, Function - Form Diagrams, Trend Analysis, Setting Product Specifications, Introduction to Product Portfolio and Architecture.

Unit V

(08 Hours)

Design for Manufacture, Assembly and Environment

Design guidelines, design for manufacture, design for assembly, design for piece part production,

manufacturing cost analysis, need and importance of design for environment, global, local and regional issues, basic DFE methods-guidelines and applications, life cycle assessment - basic method, weighed sum assessment method, life cycle assessment method, DFX, product testing, product validation, field trials, virtual trials, iterations.

(08 Hours)

Unit VI

Product development Methodology:

Integrated product development process invariant, Integrated product development process, steps in IPD methodology, Product requirement planning and management, problem identification and solving methodology

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper II : Design for Manufacturing & Assembly

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Introduction

Design philosophy – steps in Design process – General Design rules for manufacturability – basic principles of designing for economical production – creativity in design. Application of linear & non-linear optimization techniques. Materials: Selection of Materials for design – Developments in Material technology – criteria for material selection – Material selection interrelationship with process selection – process selection charts. Philosophy for design for X.

Unit II

(08 Hours)

Machining Process

Overview of various machining processes – general design rules for machining -Dimensional tolerance and surface roughness – Design for machining – Ease –Redesigning of components for machining ease with suitable examples. General design recommendations for machined parts.

(08 Hours)

Unit III

Metal Casting

Appraisal of various casting processes, selection of casting process, - general design considerations for casting – casting tolerances – use of solidification simulation in casting design – product design rules for sand casting.

Unit IV

(08 Hours)

Metal joining

Appraisal of various welding processes, Factors in design of weldments – general design guidelines – pre and post treatment of welds – effects of thermal stresses in weld joints – design of brazed joints. Forging – Design factors for forging – Closed die forging design – parting lines of dies drop forging die design – general design recommendations

Unit V

(08 Hours)

Extrusion and sheet Metal work

Design guidelines for extruded sections - design principles for Punching, Blanking, Bending, and Deep Drawing – Keeler Goodman Forming Line Diagram –Component Design for Blanking.

(08 Hours)

Unit VI

Plastics

Visco-elastic and creep behavior in plastics – Design guidelines for Plastic components – Design considerations for Injection Moulding – Design guidelines for machining and joining of plastics Assembly: Compliance analysis and interference analysis for the design of assembly Design and development of features for automatic assembly – liaison diagrams. Influence on the productivity and cost.

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

Self Study Paper II : Concurrent Engineering

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Total Credits : 04

Unit I

(08 Hours)

Introduction:

Background and challenges faced by modern production environment, sequential engineering process, Concurrent engineering definition and requirement, meaning of concurrent objectives of CE, benefits of CE. Sequential engineering.

Unit II

(08 Hours)

Product Life Cycle Management :

Life cycle design of products, life cycle costs. Support for CE: Classes of support for CE activity, CE organizational, structure CE, team composition and duties, Computer based Support, CE Implementation Process.

(08 Hours)

Unit III

Quality Function Deployment:

Industrial Design, Quality Function Deployment, house of quality, Translation process of quality function deployment (QFD). Modeling of Concurrent Engineering Design: Compatibility approach, Compatibility index, implementation of the Compatibility model, integrating the compatibility Concerns.

Unit IV

(08 Hours)

Design for Manufacture (DFM):

Introduction, role of DFM in CE, DFM methods, e.g. value engineering, DFM guidelines, design for assembly, creative design methods, product family themes, design axioms, Taguchi design methods, Computer based approach to DFM. Evaluation of manufacturability and assimilability

Unit V

(08 Hours)

Quality by Design:

Quality engineering & methodology for robust product design, parameter and Tolerance design, Quality loss function and signal to noise ratio for designing the quality, experimental approach.

(08 Hours)

Unit VI

Design for X-ability:

Design for reliability, life cycle serviceability design, design for maintainability, design for economics, decomposition in concurrent design, concurrent design case studies.

Text Books/ References

Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

DISSERTATION STAGE II

TEACHING SCHEME

Practicals : 10 Hrs/week

EXAMINATION SCHEME

Term Work : 150 Marks
Pract/Oral : 75 Marks
Total Credits : 32

Stage-II:

This stage will include comprehensive report on literature survey, design and fabrication of experimental set up and / or development of model, relevant computer program. The student is require to publish at least one national/international paper based on the dissertation work. The publication / accepted paper for publication shall be included in the report.

Student has to submit the authentic copy of dissertation Stage-I report.

List of Self Study Papers

Sr.No	SELF STUDY PAPER- I (SEM-III)	SELF STUDY PAPER- II (SEM-IV)
	1	Water Resources Planning and Management
2	Ground Water Hydrology	Urban Water Management
3	Instrumentation in Hydraulics	River Engineering
4	Disaster Management	Planning of Ports
5	Operation and Maintenance of Hydraulic Structures	Soil conservation and Watershed Management
6	Application of Remote Sensing To Water Resources	Reservoir Sedimentation
7	Floods and Flood management	Tides and Tidal Hydraulics
8	Environmental Impact assessment for Water Resources Projects	Dam break analysis

SEMESTER I

1: ADVANCED FLUID MECHANICS

TEACHING SCHEME

Lectures : 04 Hrs/Week
Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Term Work : 25 Marks
Oral. : 25 Marks
Credits : 5

Unit-I

(08 Hours)

Kinematics of Flow: Flow visualization, stream lines, streak lines, path lines, continuity equation in cartesian and cylindrical polar coordinates system, accelerations, rotation, vorticity.

Unit-II

(08 Hours)

Velocity potential and stream function, flow-net, Laplace equation and its solution by graphical and relaxation methods, simple flow patterns.

Unit-III

(08 Hours)

Dynamics of Flow: Integration of Euler's equation along streamline and in cartesian coordinate system. Bernoulli's equation, momentum equation, applications of energy and momentum equations to different problems.

Unit-IV

(08 Hours)

Navier-Stokes equations for incompressible fluids, Stokes law, creeping flow, Helle-shaw motion, flow between parallel plates, flow near suddenly accelerated plate, flow in a circular pipe. Review of dimensional analysis, drag on immersed bodies.

Unit-V

(08 Hours)

Boundary layer on flat plate, b. L. equations, Blasius solution, Karman's momentum and Integral equation, laminar and turbulent boundary layers, transition mechanisms, b.L.separation

Unit-VI

(08 Hours)

Turbulent Flow: Nature of turbulence, scales of turbulence, different averages, Reynolds rules of averaging, Reynolds equations, statistical approach, isotropic and homogeneous turbulence, spectrum of turbulence.

Syllabus for Unit Test

Unit Test 1
Unit Test 2

Units I , II & III
Units IV, V & VI

2: IRRIGATION WATER MANAGEMENT

TEACHING SCHEME

Lectures : 04 Hrs/Week
Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
T. W. : 25 Marks
Or. : 25 Marks
Credits : 5

Unit – I

(08 Hours)

Soil Plant water relationship-Water relation of soils, Soil moisture and plant growth, estimating water requirement of crops, evapotranspiration and consumptive use , soil water availability to plants..

Unit – II

(08 Hours)

Water Application methods- Surface and sub surface irrigation methods ,Border Irrigation, Check basin, Furrow, Sprinkler and drip irrigation.Prospective new methods of irrigation

Unit – III

(08 Hours)

Design of drip and sprinkler irrigation systems-Hydraulic design of various Components of Drip and sprinkler Irrigation

Unit – IV

(08 Hours)

Measurement of Irrigation Water-Various methods, Weirs, Parshall flumes, orifices, meter gates, tracer method. Irrigation efficiency, components of project irrigation efficiency, efficiency of irrigation practices, water use and operation of irrigation system..

Unit – V

(08 Hours)

Scheduling of irrigation , time of irrigation ,frequency and interval of irrigation ,Water conveyance and control-Surface water distribution system, under ground Pipe line Irrigation distribution system.

Unit VI

(08 Hours)

Study Salt problems in Irrigated Agriculture-Salt balance, Quality of irrigation water, Plant response to saline and alkali soils, Reclamation and management of salt affected soils, Case studies.

Text Books / References

Irrigation Theory and Practice –A.M.Michael, Vikas Publishing House.
Irrigation Engineering- G.L. Asawa, Wiley Eastern Ltd.
Irrigation water management- D.K.Majumdar. PHI Pvt. Ltd, 2013

Syllabus for Unit Test

Unit Test 1
Unit Test 2

Units I, II & III
Units IV, V & VI

3: COMPUTATIONAL METHODS IN HYDRAULIC ENGINEERING

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

Unit-I

(08 Hours)

Complex Variables: Function of complex variables, Analytic function, Cauchy-Riemann equations (Cartesian and polar form), Harmonic functions, Construction of Analytic function, Milne-Thompson method.

Unit-II

(08 Hours)

Complex Variables: Transformations or Mapping, Conformal mapping, Bilinear transformations, The Schwarz-Christoffel transformation, Complex Integration, Cauchy's Integral theorem, Cauchy's Integral formula, Residue theorem, Taylor's and Laurent's series. Applications to boundary value problems.

Unit-III

(08 Hours)

Numerical Solution of Partial Differential Equations: Classification of second order partial differential equations, Solution of Laplace's, Poisson's, heat and wave equations by finite difference methods, Use of method of characteristics for solution of initial and boundary value problems. System of Linear equations- Jacobi, Gauss Seidel, Relaxation methods.

Unit-IV

(08 Hours)

Numerical Methods: Curve fitting : Method of least squares, Straight line, Second degree parabola, Exponential curve. Numerical Integration-General Quadrature formula, Trapezoidal rule, Simpson's 1/3rd rule, Simpson's 3/8th rule, Weddle's rule, Newton-Cotes Integration formulae, Gauss-Quadrature two point and three points formulae.

Unit-V

(08 Hours)

Statistics: Measure of central tendency, measures of dispersion, Moments, Skewness and Kurtosis. Coefficient of Correlation and Regression, Multiple and Partial Correlation coefficient, Reliability of regression estimates (standard error of estimates).

Unit-VI

(08 Hours)

Probability : Classical definition of probability, Addition and multiplication theorem of probability, Conditional Probability, Random variable, discrete and continuous random variables, Binomial, Poisson, Normal, Geometric, Exponential Beta, Gamma Distributions, Sampling distributions, Testing of Hypothesis, Large sample tests for means and proportions, small sample tests based on Chi-square test of goodness of fit and independence of attributes.

Unit Test 1

Unit Test 2

Units I , II & III

Units IV, V & VI

4: HYDROLOGY

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

Unit-I (08 Hours)

Forms of precipitation, hydrologic cycle, climate and seasons in India. Water availability in India and world. Methods of measuring precipitation, location of rain gauge, rainfall mass curve and rainfall hyetograph, intensity-duration-frequency analysis, depth-area-duration analysis, PMP,

Unit-II

Evaporation , Evaporimeters, empirical evaporation equations, empirical method of evaporation estimation, Evapotranspiration , Measurement of evapotranspiration, evapotranspiration equations , Infiltration , Infiltration capacity, measurement of infiltration, modeling infiltration capacity , infiltration indices.

Unit-III (08 Hours)

Runoff: runoff components, factors affecting runoff, basin yield, runoff-rainfall relations.

Data Analysis: Correlation, regression analysis, transformations, stochastic process, and time series analysis ,auto correlation analysis and synthetic flow generation models using random variates.

Unit-IV (08 Hours)

Unit Hydro graph, S-curve and IUH, Cleark's method of IUH. Synthetic Unit-hydrograph. Floods: Frequency analysis, normal, log-normal and Gumbel's distributions, envelope curves, empirical formulae and regional flood frequency analysis.

Unit-V (08 Hours)

.Flood Routing- Introduction , basic equations, Hydrologic/ storage routing in reservoir and channels, Hydraulic methods of flood routing, Simple cases.

Unit-VI (08 Hours)

Ground Water Hydraulics: Types of aquifers, distribution of surface and sub surface water in global and Indian context, Darcy's law, Dupuits assumptions, application of Darcy's law to simple flow systems, differential equation for confined and unconfined aquifers, wells fully and partially penetrating, multiple wells, interference of wells, pumping test with steady and unsteady flow. Ground Water Development: Ground water exploration, types of wells, construction and design of wells, screens, pumping equipment, ground water quality, ground water pollution

Syllabus for Unit Test

Unit Test 1

Units I , II & III

Unit Test 2

Units IV, V & VI

SEMESTER II

5 : SEDIMENT TRANSPORT AND RIVER ENGINEERING

TEACHING SCHEME

Lectures : 04 Hrs/week
Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
T.W. : 25 Marks
Oral : 25 Marks
Credits : 5

Unit-I (08 Hours)

Introduction: Sediment problems, significant sediment properties, beginning of sediment movement – Shields analysis, critical tractive stress of non uniform materials.

Unit-II (08 Hours)

Bed Forms and Resistance: Description of bed forms, flow regimes, their significance, resistance analysis, different resistance laws.

Unit-III (08 Hours)

Modes of sediment transport, bed load transport, Dubuoy's equation. Einstein's approach, Meyer Peter and Muller's equation, suspended load transport, total load transport microscopic and macroscopic methods.

Unit-IV (08 Hours)

Design of stable channels: Regime method, Kennedy's method, Lacey's method, Blench and Simons-Albertson method and tractive force approach.

Unit-V (08 Hours)

Sediment Measurement: Bed load measurement, suspended load measurement, erosion from catchments, aggradation, degradation, silting of reservoirs, scour around bridge piers in uniform and non-uniform sediments.

Unit-VI (08 Hours)

Planforms and their prediction, river channel dimensions and their analysis, river training: objectives of river training, methods of river training by guide banks, spurs, levees, cut offs, pitched island and vanes, methods of bank protection.

Syllabus for Unit Test

Unit Test 1	Units I , II & III
Unit Test 2	Units IV, V & VI

6: HYDRAULIC STRUCTURES

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

Unit-I

(08 Hours)

Gravity Dams-Concrete, masonry , Forces acting on a gravity dam, earthquake force-pseudo static and dynamic response approach, load classification, stability analysis, distribution of shear and normal stresses, principal stresses .

Unit-II

(08 Hours)

Stress concentration around opening, foundation treatment, use of colgrout masonry in gravity dams, Roller Compacted Concrete Dams: Materials for R.C.C mixture, design concepts, construction methods, advantages.

Unit-III

(08 Hours)

Earth Dam: Cross section of earth dam, Seepage through dam and its foundation, stability analysis for sudden draw down condition and steady seepage condition, during construction stages.

Unit-IV

(08 Hours)

Seismic effects, pore pressure, protection of upstream and down stream slopes, design of filters. Rock fill Dams: Relevant rock fill characteristic, general design principles, method of construction and compaction.

Unit-V

(08 Hours)

Spill ways: Determination of capacity, types of spillways, ogee, siphon, chute, side, shaft, orifice spillway and stepped spillway, their hydraulic design, crest profile, energy dissipaters and divide walls.

Unit-VI

(08 Hours)

Spillway gates: Vibration, types of gates, radial, drum, vertical lift and automatic gates. Instrumentation in Dams: necessity, measurements and their purpose, planning of installation of instruments. Weirs and Barrages, water bridges and culverts ,design concepts .

Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & IV

7: OPEN CHANNEL FLOW

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

Unit-I (08Hours)
Basic Concepts of Fluid Flow: Classification of flow, differential form of continuity and momentum equations, energy equation, energy and momentum correction coefficients, pressure variation in vertical.

Unit-II (08 Hours)
Steady Uniform Flow in Rigid Boundary Channels: Shear stress on the boundary, velocity distribution in the vertical, resistance laws and their limitations, Stickler's equation, conveyance and section factor.

Unit-III (08 Hours)
Specific energy, specific force and critical depth, control section, applications of specific energy and critical depth concepts.

Unit-IV (08 Hours)
Gradually varied flow, governing equations, classification of surface curves, computation of gradually varied flow in prismatic and non-prismatic channels, graphical, direct and numerical integration methods

Unit-V (08 Hours)
Rapidly varied flow and application of momentum equation, hydraulic jump in horizontal and sloping rectangular channels, location and length of jump.

Unit-VI (08 Hours)
Unsteady flows : Waves and classification, celerity of waves, surges , equations of motion, and method of characteristics.

Unit Test 2

Units IV, V & VI

8: OPTIMIZATION IN HYDRAULICS

TEACHING SCHEME

Lectures : 04 Hrs/week
Practicals : 02 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Marks : 40 Marks
Term Work : 25 Marks
Oral. : 25 Marks

Unit-I (08 Hours)
Concept and need of Optimization; Linear Programming: Formulation of problem, graphical solutions, simplex method, Big M method, Two-phase method, duality.

Unit-II (08 Hours)
Transportation problems-BFS-Optimality test, maximization problems. Assignment Problems - minimization, maximization.

Unit-III (08 Hours)
Nonlinear Programming: Unconstrained one dimensional search methods - Dichotomous search, Fibonacci, golden section; Multivariable unconstrained methods-gradient techniques, steepest ascent, descent methods, Newton's method .

Unit-IV (08 Hours)
Nonlinear Programming :Constrained method : Lagrangian multiplier techniques, Khun- Tuckers conditions, Dynamic Programming: Principle of optimality, recursive equation.

Unit-V (08 Hours)
Introduction to genetic algorithms, simulated annealing, neural networks and fuzzy systems for solving optimization problems.

Unit-VI (08 Hours)
Model formulation and case studies : Conjunctive use of ground water and surface water, hydropower optimization, crop yield optimization, multi-basin and multi-reservoir systems.

Syllabus for Unit Test

Unit Test 1 Units I , II, III
Unit Test 2 Units IV, V, VI

SEMESTER III

9 : ELECTIVE I: COASTAL ENGINEERING

TEACHING SCHEME

Lectures : 04 Hrs/week
Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Termwork : 25 Marks
Oral : 25 Marks
Credits : 5

Unit-I

(08 Hours)

Basic understanding of wave mechanics including wave generation, propagation, form and assessment in the surf zone. Statistical and spectral analysis of recorded wave data and prediction in coastal zone.

Unit-II

(08 Hours)

Global tidal cycle, tidal analysis. Types of tides, effect of tides, significance in coastal engineering, Coastal process-erosion/accretion due to waves, estimation of littoral drift, Effect of construction of coastal structures on stability of shoreline / beaches, shoreline configuration

Unit-III

(08 Hours)

Introduction to Coastal structures:, Design criteria and functional aspects of coastal structures: sea wall, revetment, bulk-head, quay- wall, jetties, breakwater types : rubble-mound, composite, floating and pneumatic types, design of RBW , offshore structures: oil platform, design criteria for sub marine pipelines, cables, response of oil platform members , floating structure to wave load –vibration and spacing of piles, forces on piles.

Unit-IV

(08 Hours)

Dredging technology: types of dredgers, Radio active tracers studies for feasibility of dumping ground for dredged materials- environmental aspects of dredging etc.

Unit-V

(08 Hours)

Planning and management of port and Harbors, Modern trends and techniques in port engineering.- Roll on-Roll off/ Lift on –Lift off etc. Special purpose ports: Concepts of twin /mother port, SBM , outer to outer port etc. Significance of port cost analysis economics.

Unit-VI

(08 Hours)

Pollution in Coastal zone, disposal of waste/dredged spoils, design criteria of coastal outfall inlets and system. Oil spills and contaminants, coastal zone management: activities in coastal zone, CRZ, Issues related to Integrated coastal zone management. Coastal regulation zone.

Syllabus for Unit Test

Unit Test 1
Unit Test 2

Units I, II & III
Units IV, V & VI

9 : ELECTIVE I : HYDRAULIC MODELLING TECHNIQUES

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Term work : 25 Marks

Oral : 25 Marks

Credits : 5

Unit-I

Dimensional analysis: Units, dimensions of physical quantities, different methods of obtaining dimensionless parameters viz., Rayleigh's method, method of repeating variables, Buckingham π theorem, Reynolds number, Froude number, Mach number, Euler Number and Weber number.

Unit-II

(08 Hours)

Determination of scales for models, Necessity of distortion of scales, scale effects. Movable bed models. Construction and operation of hydraulic models. Wind tunnels, flumes-2D, comprehensive models-3D.

Unit-III (08 Hours)

Measuring Equipments: Flumes, Weirs, flow meters, pressure transducers, hot film anemometer, Current meter, Laser Doppler, pointer gauges.

Unit-IV

(08 Hours)

Application to coastal and tidal problems. Design of Regular & Random (3D and 2D) wave modelling techniques, stability of coastal structures, Simulation of littoral drift, Design of sand trap, Distorted scale tidal modelling technique (rigid/movable) for Estuarine Ports,

Unit-V

(08 Hours)

Rigid bed models and movable bed models, bank protection works, barrages and weirs, canal offtakes, power intakes, gates, bridges and intakes. Applications for structures in hilly regions – Dams, spillways and energy dissipaters, combination of rigid and movable bed models, sedimentation and flushing of reservoirs.

Unit-VI (08 Hours)

Introduction to basic mathematical modelling techniques for hydraulic phenomena & processes related to various hydraulic structures, Advantages & limitations for interpretation of the results, need of validation with field/prototype data- Typical case studies using software.

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Term work : 25 Marks
Oral : 25 Marks
Credits : 5

Unit -I (08 Hours)

Classification of Hydropower plants, low & high head plants. Run of river plants, High head diversion plants, pumped storage plants, Electrical load on turbines load factor, power factor, capacity factor, load duration curve, firm power, secondary power.

Unit -II (08 Hours)

Assessment of available power, Essential stream flow data for water power studies flow duration curves, Intakes structures, location and intake type, shape of inlet, aeration in inlets, design of intake, sediment exclusion arrangement.

Unit -III (08 Hours)

Penstocks and Accessories, classification of pen stocks, design criteria for penstocks, Economical diameter of penstocks, Anchor blocks, conduit valves, Bends & manifolds.

Unit -IV (08 Hours)

Water hammer and surges, channel surges, water hammer, resonance in penstocks. Function of surge tank, Types of surge tanks, Differential surge tanks.

Unit -V (08 Hours)

Turbines- Type of turbines, Hydraulic features, Turbine size, lay out arrangements, Hydraulics of turbines, draft turbines, cavitation in turbines, characteristics of turbines.

Unit -V (08 Hours)

Planning of power house – Power house structure, under ground power station, components of under ground power house, types of layouts, small scale Hydropower, Potential of small scale Hydropower.

Syllabus for Unit Test

Unit Test 1
Unit Test 2

Units I, II & III
Units IV, V & IV

10 : ELECTIVE II: NUMERICAL METHODS IN HYDRAULIC ENGINEERING

TEACHING SCHEME

Lectures : 04 Hrs/week
Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Term work : 25 Marks
Oral : 25 Marks
Credits : 5

Unit-1

(08 Hours)

Governing equations of 1-D and 2-D unsteady flow : St. Venant equations, Boussinesq equations, groundwater flow equations and boundary conditions.

Unit-2

(08 Hours)

Numerical method for one dimensional flow : Method of characteristics, characteristics, initial and boundary conditions, characteristic grid method, method of specified intervals, other numerical methods.

Unit-3

(08 Hours)

Numerical method for one dimensional flow : Finite difference method, explicit finite difference schemes, implicit finite difference schemes, stability.

Unit-4

(08 Hours)

Numerical method for two dimensional flow : Finite difference method, explicit finite difference schemes, implicit finite difference schemes, stability.

Unit-5

(08 Hours)

Numerical method for ground water flow : Explicit finite difference method, Implicit finite difference method, finite element method, application.

Unit-6

(08 Hours)

Applications of unsteady flows using commercial 1-D and 2-D software.

Syllabus for Unit Test

Unit Test 1
Unit Test 2

Units I, II & III
Units IV, V & VI

10 ELECTIVE II: ENVIRONMENTAL FLUID MECHANICS

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Term work : 25 Marks

Oral : 25 Marks

Credits : 5

Unit-I

(08 Hours)

Global wind currents, atmospheric boundary layer, simulation of boundary layer in wind tunnel and applications to forces on structures, use of wind tunnel for studying dispersion, diffusion. Cyclones, anti cyclones, and tornadoes, Tsunami.

Unit-II

(08 Hours)

Waves, deep and shallow water waves, braking of waves, littoral drift and sediment transport by waves, dispersion and diffusion in coastal waters, ocean out falls.

Unit-III

(08 Hours)

Vortex formation at intakes, similarity criteria, hydraulic design of sumps, design of water intakes.

Unit-IV

(08 Hours)

Heated water disposal in reservoirs and channels, mathematical considerations, solution techniques, physical modeling.

Unit-V

(08 Hours)

Thermal plumes, dispersion and diffusion in atmosphere.

Unit-VI

(08 Hours)

Problem and numerical solution.

Dam break

Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

11 SELF STUDY PAPER I

12 SEMINAR

TEACHING SCHEME

Practical : 01 Hrs/week

EXAMINATION SCHEME

Term work : 25 Marks:

Oral : 25 Marks

Credits : 5

Each student will select a topic in the area of Hydraulic Engineering keeping track of the recent technological trends and developments. Students will make a seminar presentation using audio visual aids and submit the seminar report in the form of bound journal.

13 DISSERTATION STAGE I

TEACHING SCHEME

Practical : 02 Hrs/week

EXAMINATION SCHEME

Term work : 25 Marks

Credits : 21

Dissertation stage-I will include identification of problem, preparation of synopsis literature survey and formulation of problem.

SEMESTER IV

14 : SELF STUDY PAPER II

15 : DISSERTATION STAGE II

TEACHING SCHEME

Practical : 04 Hrs/week

EXAMINATION SCHEME

Term work : 150 Marks

Oral : 75 Marks

Credits : 30

Dissertation stage-II will include experimentation, data analysis and submission of final report.

11 : SELF STUDY PAPER I: WATER RESOURCES PLANNING AND MANAGEMENT

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

Unit-I

(08 Hours)

Water Resources of India: Land resources of India, water sources per capita water availability, Irrigation potential, methods of assessment of water resources.

Unit-II

(08 Hours)

Water Resources Development: Objectives, planning for water resources development, water resources system design, economics of water resources development, micro and macro economics, discounting factors, discounting techniques – present worth, rate of return, benefit cost analysis, annual cost methods, profitability analysis.

Unit-III

(08 Hours)

Integrated and conjunctive use of water, allocating water for various uses. Irrigation water management, constraints in irrigation development. National water policy.

Unit-IV

(08 Hours)

Augmentation of water resources: Conservation of water, augmentation of water resources, method of artificial recharge.

Unit-V

(08 Hours)

Water quality: Quality of water for irrigation and municipal use, water pollution and its control. Development of water resources and environment. Environmental impacts of water storage reservoirs.

Unit-VI

(08 Hours)

Water logging and land reclamation: Causes of water logging, anti logging measures, factors responsible for formation of saline and alkali soils, ill effects of salinity and alkalinity, land reclamation methods.

Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

11 : SELF STUDY PAPER I: GROUND WATER HYDROLOGY

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

Unit – I (08 Hours)

Hydrological cycle, role of ground water in hydrological cycle, aquifers, classification and characteristics.

Unit – II (08 Hours)

Ground water hydraulics- Darcy's law and application, flow nets-application.

Unit – III (08 Hours)

Ground water hydraulics- mass conservation, aquifer flow equation, heterogeneity, anisotropy, unsaturated flow, recharge, stream-aquifer interaction, well hydraulics.

Unit – IV (08 Hours)

Application of ground water hydraulics for estimation of yield- case study.

Unit – V (08 Hours)

Model (Numerical) in ground water hydraulics

Unit – VI (08 Hours)

Working organization: Global and Indian data collection, water quality and control.

Text Books/References

Groundwater Hydrology, David Keith Todd and Larry W. Mays

Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

11: SELF STUDY PAPER I: INSTRUMENTATION IN HYDRAULICS

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Credits : 4

Unit – I (08 Hours)

Definition of instruments, purpose of instrumentation, system of application of instrumentation, different classifications of instruments, main hydraulic and other civil engineering parameters involved.

Unit – II (08 Hours)

Qualifications and characteristic of instruments, calibration and errors – definitions, utility and dependability, transducers - their purpose, characteristics and usage, decision on the requirements for selection of instruments, need of system analysis before the selection of instruments.

Unit – III (08 Hours)

Specific instruments : measurement of velocity and discharge, requirements for field and laboratory, methods of measurement and different structures used, supporting structure requirements, designs parameters.

Unit – IV (08 Hours)

Methodologies adopted for observations, requirements for good instruments and Instrumentation, application of above requirements to instrument systems.

Unit – V (08 Hours)

Specific instruments : measurement of pressure and strain, requirements for field and laboratory methods of measurement and different structures used, supporting structure requirements, designs parameters.

Unit – IV (08 Hours)

Modern electronic and high precision instruments. hot film anemometer, 3D observations for velocities, eddies, etc.

Syllabus for Unit Test

Unit Test 1
Unit Test 2

Units I, II & III
Units IV, V & IV

11 : SELF STUDY PAPER I : DISASTER MANGEMENT

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Credits : 4

Unit – I

(08 Hours)

Factors causing disaster & damage to properties & human lives- Natural man made, cause & short term / long term effects & needs to take measures.

Unit – II

(08 Hours)

Extreme value conditions- Waves, flooding, storm surge, earthquake & Tsunami etc.

Unit – III

(08 Hours)

Failure of hydraulic structures - dams, fires in plants, (Thermal, Nuclear etc.), oil tanker leakage, sinking etc.

Unit – IV

(08 Hours)

Measures to avoid disasters (manmade), measures for minimum damage natural Disasters.

Unit – V

(08 Hours)

Warnings systems pre disaster- remote sensing, satellite, media, (Radio, Tv), communication systems.

Unit – VI

(08 Hours)

Rescue operation, -Helicopter, Life saving systems, transportation, detection of areas of disaster, Global, National, Local management systems for all various activities.

Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & IV

11 : SELF STUDY PAPER I : OPERATION AND MAINTENANCE OF HYDRAULIC STRUCTURES

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Credits : 4

Unit – I

(08 Hours)

Introduction : Hydraulic structures, types, major hydraulic structures requiring operation and maintenance, dams, types.

Unit – II

(08 Hours)

Dam failures : historic dam failures, their causes, modes of failures of Embankment dams, external erosion, internal erosion, structural failure, safety requirements/measures, Modes of failures of concrete dams, external erosion, internal erosion, structural failure, safety requirements/measures

Unit – III

(08 Hours)

Guidelines for operations of dams, Operations of typical embankment dam and concrete dam

Unit – IV

(08 Hours)

Inspection guidelines of dams, inspection of embankment dam : the crest, the upstream slope, the downstream slope, the abutments, the downstream toe etc. inspection of concrete dam , inspection, of appurtenant works, spillway, outlets etc.

Unit – V

(08 Hours)

Monitoring and surveillance of embankment dams : Task and purpose of monitoring, Monitoring of pore pressure, seepage, monitoring of displacements, measurements of stresses, seismic measurements , general principles on the selection and positioning layout of measuring instruments, Monitoring and surveillance of concrete dams : On monitoring, surveillance and instrumentation of concrete dams in general, Monitoring by precise survey methods, surveillance with embedded instruments

Unit VI

(08 Hours)

Maintenance of embankment dam, maintenance of concrete dam, maintenance of appurtenant works, spillway, outlets etc.

Unit Test 1
Unit Test 2

Units I, II & III
Units IV, V & VI

11 : SELF STUDY PAPER I: APPLICATION OF REMOTE SENSING TO HYDRAULICS

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Credits : 4

Unit – I (08 Hours)

Principles of electromagnetic remote sensing, electromagnetic spectrum. aerial photography, satellite imagery.

Unit – II (08 Hours)

Infra red photography, temperature difference in water, aeromagnetic surveys at Low Altitude.

Unit – III (08 Hours)

Photographic techniques by aircrafts, satellites their principles & interpretation, aerial magnetic surveys a) subsurface rock structure b) flow of ground water.

Unit – IV (08 Hours)

Electrical conductance of rock, velocity of sound through different rocks , Electrical resistivity surveys.

Unit – V (08 Hours)

Preparation of maps on political land use, physiographic land gradient, methodology, geology of soil, hydrology and water shed , ground water potential, hydrogeology, agronomy, forestry, Civil engineering, A R. S. system classification a) Passive b) Active (A) Remote Sensing Characteristics i) Spatial resolution ii) Spectral resolution iii) Radiometric resolution iv) (B) Temporal resolution , 1D Extraction of information, fundamentals of Photogrammetric, Thermal infrared sensor (C) Side looking airborne radar (SLAR) (D) Land remote sensing satellite systems- satellites of different nations their sensors, No. of bands.

Unit – VI (08 Hours)

Fundamental concepts in computer aided image classification, data preprocessing : radiometric correction, geometric correction, large classifications : soft x hard classifiers, Contextual x Neural networks Classifiers, integration of Remote Sensing & GIS – Separate but equal, Seamless integration, Total integration.

Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

11 : SELF STUDY PAPER I : ENVIRONMENTAL IMPACT ASSESSMENT FOR WATER RESOURCES PROJECT

Unit – I

(08 Hours)

Environmental Aspects of Water Resources Development, Rehabilitation of people affected by the project, submergence of the forest area, water logging and salinity in command areas, adverse effects on wild life ,water borne diseases, siltation of manmade reservoirs.

Unit – II

(08 Hours)

Effect of dam construction on downstream river regime. Sediment transport, National water policy and recommendations for environmental monitoring of water resources projects.

Unit – III

(08 Hours)

Environmental Impact Assessment methodology. Description of site and its Development description of present and projected conditions, assessment of probable impacts, compliance with regulations , review of alternatives.

Unit – IV

(08 Hours)

Environmentally sound water resources management, Various Case studies, catchment area treatment, compensatory afforestation, command area treatment , status of environmental monitoring of water resources development projects.

Unit – V

(08 Hours)

Socio economic issues related to water resources project. Deforestation ,submergence of land, change in land use pattern, submergence of existing roads, construction of new approach roads, construction of new town ships and other infrastructure.

Unit – VI

(08 Hours)

Environmental legislation in India with respect to water resources projects. Water-prevention and control of pollution act, wild life protection act, forest conservation act, environmental protection act.

Text Books/References

Government of India National water policy
Central water commission Guide lines for sustainable water resources development and management, 1992.

Unit Test 2

Units I, II & III
Units IV, V & VI

11:SELF STUDY PAPER I– FLOODS AND FLOOD MANAGEMENT

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

Unit – I

(08 Hours)

Introduction, Necessity, General information on flood damages at global level and in India. Various methods of flood estimation and models.

Unit – II

(08 Hours)

Flood routing through channels , various method, with case studies.

Unit – III

(08 Hours)

Flood Mitigation, Identification of floods and flood zones.

Unit – IV

(08 Hours)

Flood control – Single & multipurpose reservoir , reservoir operation , rule curve, routing, zones of reservoir, structural and non structural measures.

Unit – V

(08 Hours)

Special floods- Estimation , dam break, PMF, Application for damage evolution.

Unit – VI

(08 Hours)

Aspects of flood management- identification of areas, extent & duration of flood, Environmental & Ecological aspects, economics of flood control project.

Text Books/References

“Flood & Flood control” Workshop proceedings at CWPRS Pune

“Flood forecasting & Warning” CWC guideline.

“Flood & Flood control” NIH Roorkey.

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & IV

14 : SELF STUDY PAPER II : OFFSHORE STRUCTURES

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

Unit – I (08 Hours)

Types of ocean Structures,- Onshore / Offshore, Requirement of structures, its types/ classification- depth, function, design aspect.

Unit -II (08 Hours)

History of development of offshore structures, installation of platforms, development in Indian continental shelf in future, need for crude oil and availability

Unit -III (08 Hours)

Basic design criteria for drag/ lift forces, design principles for structural members , spacing, wave data and vibration analysis.

Unit -IV (08 Hours)

Additional facilities/ functions related for oil transportations, storage, transport, pumping from oil well to the refinery .

Unit -V (08 Hours)

Safety of offshore structures natural/ manmade ,accidental- case studies , factors affecting stability, design of pipe lines.

Unit -VI (08 Hours)

Environmental aspects- oil leakages, pollution, fire protection, extreme wave conditions-storm, Tsunami etc. Economic aspects in design, Installation, maintenance, and operations related to offshore structures

Unit Test 2

Units IV, V & IV

14 : SELF STUDY PAPER II: URBAN WATER MANAGEMENT

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Credits : 4

Unit – I (08 Hours)

Drinking water qualities, potable limits, water softening processes, common impurities, alkalinity, acidity, Water purification, storage, treatment of waters, settling basins, slow sand filters, pressure and gravity filters

Unit – II (08 Hours)

Storage of water, service reservoirs, cisterns, elevated tanks, pressure equalizing Reservoirs, distribution of waters, demand of water for domestic and public purpose, wastage of water, prevention of leakages, different methods of distribution, design of distribution system, intermittent and constant system of supply

Unit – III (08 Hours)

Pipes of different metals, cement concrete pipes, Valves, meters taps

Unit – IV (08 Hours)

Pumping of water, suction and delivery pipes, water pumps, design of pumping stations

Unit – V (08 Hours)

Ground water and wells, water bearing strata, discharge from wells, tests of yields, depression head, cone of depression

Unit – IV (08 Hours)

Methods of boring, strainers, well lining

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & IV

14 : SELF STUDY PAPER II : RIVER ENGINEERING

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Credits : 4

Unit – I

(08 Hours)

Classification of Rivers: Based on different approach/criteria, River plan forms and their Characteristics, Development/variation of plan forms in meandering and migration, braiding, its characteristics and causes for their development.

Unit – II

(08 Hours)

Rivers in equilibrium: Channel stability, regime relations and applications, Natural constraints and their effects on the river regime, Hydraulic structures and their effects in the river regime.

Unit – III

(08 Hours)

Rivers in dynamics: Bed level changes, aggradation and degradation confluences and braiding, their causes and effects on river regime.

Unit – IV

(08 Hours)

River flow control structures: weirs, barrages, intakes, bridges and diversion structures, design and operational concepts, river improvement methods.

Unit – V

(08 Hours)

Rivers training works: Rivers training structures for weirs, barrages, intakes, bridges, diversion structures, hydraulic design and operational concepts, river improvement.

Unit – VI

(08 Hours)

Rivers navigation: Advantages and disadvantages, hydraulic structures for river navigation, river dredging, necessity and effects.

Text Books/References

Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

14 : SELF STUDY PAPER II : PLANNING OF PORTS

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Credits : 4

Unit – I

(08 Hours)

Port development requirement, world port development- Major, Minor Fisheries, Indian port service, General planning of port requirement, Roll of modeling in planning of port, present status of Indian port & future demands of next four decades

Unit -II

(08 Hours)

Modern port facilities, roll of road / rail link with planning of ports, Automation in port development

Unit- III

(08 Hours)

Analysis of case studies- evaluation , comments suggestions
Special purpose berths in ports- Container, oil, Car transport .

Unit -IV

(08 Hours)

Port cost analysis and economics', maintenance of port structures, Modern trends- Roll of management techniques , skill in operation for safety purpose ,concept of GDP/GNP.

Unit -V

(08 Hours)

Concept of mother port, outer to outer port, offshore port etc. SBM linked transport, efficacy of port-Transport ,cost per tonne, VLCC

Unit -VI

(08 Hours)

Limiting factors for planning of ports-facilities, pollution, draft requirement, maintenance of port, measures for various aspects, development, National policy

Units IV, V & VI

14 : SELF STUDY PAPER II : SOIL CONSERVATION AND WATERSHED MANAGEMENT

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

Unit – I

(08 Hours)

Watershed concept-Size , shape, physiographic , climate, drainage, land use, vegetation, geology and soils, hydrology , hydrogeology.

Unit – II

(08 Hours)

Water Erosion- Mechanics of water erosion, types of erosion, estimation of water erosion losses, measurement of water erosion.

Unit – III

(08 Hours)

Water erosion control- land classification for soil conservation, mechanical methods of water erosion control , biological methods of water erosion control.

Unit – IV

(08 Hours)

Soil conservation in special problem areas – hilly areas, control of gullies, ravine reclamation, waterlogged and wetlands.

Unit – V

(08 Hours)

Land use management practices in semiarid and arid zones –problems of soil and water Management in semi arid and arid zones of India, control measures.

Unit – VI

(08 Hours)

Watershed Management- Planning for watershed management, measures for watershed management , land use planning, water harvesting and recycling ,socio economic aspects, recent trends in watershed management.

Text Books/References

Unit Test 2

Units IV, V & VI

14 : SELF STUDY PAPER II : RESERVOIR SEDIMENTATION

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

(08 Hours)

Unit – I

Introduction : Scope and significance of reservoir sedimentation, properties of sediments. Basic concepts of sedimentation, bed load, suspended load sediment inflow, sediment out flow, trap efficiency, retention time.

Unit – II

(08 Hours)

Reservoir sedimentation process Settling of sediments, Density currents, pattern of reservoir sedimentation . Aggradation above dams, Degradation below dams, sources of sediments.

Unit – III

(08 Hours)

Reservoir sedimentation Prediction , Factors affecting sedimentation, various methods of predicting sedimentation Empirical studies, Mathematical modeling.

Unit – IV

(08 Hours)

Measurement of reservoir sedimentation , need for measurement , measurement of sediments in Rivers, streams etc. Measurements of suspended load, reservoir survey for sediments methods of measurements of sediments , sediments transport ,capacity survey, remote sensing techniques.

Unit – V

(08 Hours)

Sedimentation of reservoirs in India case studies, control of reservoir sedimentation, soil conservation measures, vegetation land treatment measures to check inflow of sediments in to reservoirs. Removal of sediments from reservoir.

Unit – VI

(08 Hours)

Estimate life of reservoir , different concepts and procedures practiced in USA, Japan, India.

Text Books/References

Reservoir sedimentation and control Central water Commission 1991, New Delhi.

Sedimentation of reservoirs-National Institute of Hydrology Dept. RN – 26-1985-86.

Life of reservoir – Technical report No.19. CBIP – New Delhi

Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

14 : SELF STUDY PAPER II: TIDES AND TIDAL HYDRAULICS

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Internal Assessment : 40 Marks
Credits : 4

Unit I

Definition of tide, Generation of tides, reasons for formation , Role of celestial bodies, Global tidal Phenomenon, Amphedormic point, Co-tidal lines, tidal constituents, coriolis force, Harmonic analysis, High water, low water, intertidal zones.

Unit II

Sidereal day ,Solar day, Lunar day, Declination of moon, Sidereal year, Lunar month, Apibelson, Peribelson , Apogee, Perigee, Force diagram for tide generation, if of lunar and earth axis

Unit III

Theories of tides, Tidal predictions, tidal inequality, types of tides, tidal duration, Amplitude, tidal variaties, spring tides, neap tides, Effects of tide, tidal scenario in India and world, Diurnal tides, mixed tides, semi-dia tides, shift of tides.

Unit IV

Different similitude's, similarities, Hydraulic models, tidal in Distortions in model, Reasons for distortions, Fixed bed and movable bed tidal models, Layout of tidal model, different instruments for tidal model studies, Automatic tide generator in model, inferances from tidal model studies.

Unit V

Definition of tidal inlet, different features, stability of tidal inlet, Hydraulic processes near tidal inlet, tidal prism, formulae for assessment of stability of tidal inlets, different types of tidal inlets, meaoewes for stabilization of inlet effect of littoral drift, jarretts clarification, kenlegen's k, importance of tides in port and harbor operations.

Unit VI

Global tide ranges, range variation along Indian coast, different forms of unconventional/renewable energy their cheeris sources, tidal power, economies of tidal power, potential locations of tidal power plants around world and in India, single basin/double basin-single cycle/double cycle model of power generation, case study of existing/operating tidal power plants.

14 : SELF STUDY PAPER II : DAM BREAK ANALYSIS

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

Unit – I (08 Hours)

Introduction: Review of dams in India, Necessity of Dam Break Analysis

Unit – II (08 Hours)

Design criteria of Dams: Earth, Gravity, Arc Dams with likelihood of Exceedence

Unit – III (08 Hours)

Types of Failures : Type of dam, Structural, Purpose, Parameters of Failure

Unit – IV (08 Hours)

Aspects in Dam Break Analysis : Economic, Managerial, Social, Environmental

Unit – V (08 Hours)

Hydraulics of Dam Break Analysis : St. Venant's equations - forms, methods of Solution Simulation Models – DAMBRK, FLDWAV, MIKE 11, HECRAS

Unit – VI (08 Hours)

Case Study, Review of Literature, Data Collection and Compilation.

Total	04	10	60	20	10	10	150	75	04	30	34	

List of Self Study paper I & II

Self Study Paper I	Self Study Paper II
Enterprise Resource Planning	Grid Computing
Bioinformatics	Research Methods in Computer Science
Information Retrieval and Web Search	Middle ware Technologies
Speech Processing	Agile Systems
Sensor Network and Embedded Systems	Soft Computing
Computer Graphics and Visualization	E-Commerce and Payment Systems
Cloud Computing	Knowledge Representation and Reasoning
Pervasive computing	Computational Intelligence
Data Warehousing and Data Mining	High Performance Information systems
Software Security	Advanced Web Technologies

Advanced Database Management System

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week		End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		TW&OR : 50 Marks	01 Credits
UNIT - I	Parallel and Distributed Databases :		(08 Hours)
	Architectures for parallel database, Parallel query Evaluation, Parallelizing individual operation, Parallel Query Optimization, Distributed DBMS Architecture, Storing data in distributed DBMS, Distributed Catalog Management, Distributed query processing, Updating distributed data, Distributed concurrence control, Distributed recovery.		
UNIT - II	Web databases :		(08 Hours)
	Web search engines, web search architecture, Inverted indexes the IR way, Inverted indexes for web search engines, web crawling, web search statistics.		
UNIT - III	Data Warehousing and Data Mining:		(08Hours)
	Data Warehousing: Introduction Data Warehousing OLAP, Implementation Techniques for OLAP, Views and decision support. Data Mining: Introduction, Counting Co-occurrences, Mining for rules, Tree structured rules, Clustering, Similarity search over sequences, Additional data mining tasks.		
UNIT - IV	Object Database Systems and XML:		(08 Hours)
	Object Database Systems: User defined abstract data types, Structured types, Objects, Objects Identity and Reference types, Inheritance, database design for an ORDBMS, Comparing RDBMS with OODBMS and ORDBMS. XML: Introduction, Structure of XML Data, XML Document Schema, Querying and Transformation, API to XML, Storage of XML Data, XML Applications.		
UNIT - V	Spatial Data Management:		(08 Hours)
	Types of Spatial Data and Queries Application involving Spatial data, Introduction to spatial Indexes, Indexing based on space filling Curves, Grid files, R trees, High command Indexing.		
UNIT - VI	Deductive Databases AND Advanced Transaction Processing:		(08 Hours)
	Deductive Databases: Recursive Queries, Theoretical foundation, Recursive Queries with Negation, Efficient evaluation of Recursive Queries, Additional Transaction Processing, Advance transaction processing Integrated access to Multiply data sources, Mobile database, multiplying database, Geographic Information systems, Temporal and Sequence database, Information Visualization. Advanced Transaction Processing: Transact ion-Processing Monitors, Transactional Workflows, Main- Memory Databases, Real-Time Transaction Systems, Long-Duration Transactions and Transaction Management in Multi-databases.		

Reference Books:

1.	Rob & Colonel, "Database System Design Implementation & Management", Thomson Learning
2.	Date, "An Introduction to database system", Addison Wesley Pub
3.	Desai "Principles of Repagination database", Galgotia Publications
4.	Mallach, "Decision Support and Data Warehouse Systems", TMH
5.	Raghu Ram Krishnan, "Database Management Systems", IInd edition
6.	Abraham Silberschatz, Henry F. Korth, S. Sudarshan, "Database System Concepts", 5th Edition , McGraw Hill International Edition.
7.	Jiawei Han, Micheline Kamber, "Data Mining: Concepts and Systems",Morgan Kaufmann publishers
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Advanced Software Engineering

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		TW&OR : 50 Marks		01 Credits	
UNIT - I					
Software Development Process:				(08 Hours)	
Software Processes, SDLC Models, Waterfall Model, The V Model, Prototyping Model, Iterative Model, Spiral Model. Agile Development, Agile Principles, XP, Scrum, AUP, Kanban, ASD, DSDM, FDD, Agile practices, Empirical Model in Software engineering					
UNIT - II					
Requirement Engineering and Black Box Testing:				(08 Hours)	
Requirement Engineering: Requirements phase and its importance, Requirement Elicitation and Analysis, Process models (DFD), Data models (ERD), Software, Requirement Specification Standard and Preparation, Characteristics of good SRS Documents, traceability matrix and its importance, CASE tool, and its basic features. Black box testing: Test case design and implementation, Automated testing and limitations, debugging methods, Black box testing methods.					
UNIT - III					
Process Improvement and Verification:				[08 Hrs]	
Process and product quality, Process classification, Process Measurement, Process Analysis and Modelling, Process change, The CMMI process improvement framework, Configuration Management Planning, Change management, Version and release management, System building, CASE tools for configuration management.					
UNIT - IV					
User interface Design, Maintenance and reengineering:				(08 Hours)	
User interface design issues: The UI design process, User analysis, User interface prototyping, Interface Evaluation. Software Maintenance: Reengineering, Business process reengineering, software reengineering, reverse engineering, restructuring, Forward engineering, The economics of reengineering.					
UNIT - V					
Software Reuse, CBSE:				(08 Hours)	
The reuse landscape, Design patterns, Frameworks, Generator based reuse, Application frameworks, Application system reuse, components and component models, The CBSE process, component composition, service oriented software engineering - services as reusable components, service engineering, software development with services.					
UNIT - VI					
Quality Management and SAQ:				(08 Hours)	
Quality Management - Quality Concepts, Software Quality, The review technique, cost impact of software defects, defect amplification and removal, Review metrics and their use, Reviews: A formal spectrum, Informal spectrum, Formal technical reviews, SQA: Background issues, Elements of SQA: SQA tasks, goals and metrics, Formal approaches to SQA: statistical SQA, Software reliability. The ISO 9126 quality factors, Mc Call's quality factors, The SQA plan

3. Shari Lawrence Pfleeger and Joanne M Atlee, "Software Engineering", 3rd Edition	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT – III
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI

Mobile Operating System

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
		Continuous Assessment: 40 Marks			
UNIT - I	Introduction to Mobile Operating Systems:				(08 Hours)
	Brief History of Mobile Operating Systems, OS-Interfaces, Multilevel Views of OS, Categories, Small and Specialized OS, 64-Bit OS, Processes and Threads, System Performance and Models: Performance of Computer Systems, Performance Metrics, Workload and System Parameters, Simulation Models: Types, Discrete-Event Model, Stochastic Model.				
UNIT - II	Multiprogramming:				(08 Hours)
	System with Multiprogramming, Processor Scheduling, Synchronization, Deadlocks, File Management, Memory Management: Process Address Space, Contiguous Memory Allocation, Non Contiguous Memory Allocation, Virtual Memory, Paging with Virtual Memory.				
UNIT - III	Security and Protection:				(08 Hours)
	Components for Security and Protection, Physical Security, User Authentication, Protection, Secure Communications, Digital Certificates, System Vulnerabilities, Invasive and Malicious Software, Defending the System and User, Intrusion Detection Management.				
UNIT - IV	Mobile Ecosystems:				(08 Hours)
	Application Framework, Developing a Mobile Strategy, Mobile Information Architecture, Mobile Design: Elements of Mobile Design, Ubiquity in the Mobile Web, Mobile Web Development				
UNIT - V	Introduction to Linux:				(08 Hours)
	Command Line Interface, Files and Directories, Shell Variables, Script Files, Connecting a Remote Linux Server. Java Modeling Framework, Java and Posix Threads.				
UNIT - VI	Case Study:				(08 Hours)
	Android SDK, iOS, Windows, Mobile Web Apps vs. Mobile Applications				
Reference Books:					
[1] Jose M Garrido, Richard Schlesinger, Kenneth Hoganson, Principles of Modern Operating Systems.					
[2] By Brian Fling, Mobile Design and Development: Practical concepts and techniques for Creating Mobile Sites and Web Apps, O'Reilly Publications					
[3] Brian Fling, Mobile Design and Development, O'Reilly Publications.					
Syllabus for Unit Test:					
Unit Test -1	UNIT – I, UNIT – II, UNIT – III				
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI				

Distributed Computing

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 04Hours / Week		End Semester Examination: 60 Marks		04 Credits	
		Continuous Assessment: 40 Marks			
UNIT – I	Distributed System Concepts:				(08 Hours)
	Distributed Computing Models, Software Concepts, Issues in Designing Distributed Systems Client-Server Model. Case Studies. Network Communication: LAN and WAN Technologies, Protocols for Network Systems, Asynchronous Transfer Mode, Protocols for Distributed Systems.				
UNIT – II	Interprocess Communication:				(08 Hours)
	Message Passing, Advantages and Features of Message Passing Systems, IPC Message Format, IPC Synchronization, Message Buffering Strategies, Multidatagram Messaging, Process Addressing Techniques, Failure Handling Mechanism. Case Study: IPC in Mach				
UNIT – III	Remote Communication:				(08 Hours)
	Introduction, Remote Procedural Call, RPC Implementation, RPC Implementation, Parameter Passing Semantics, Server Management, RPC Call Semantics, Communication Protocols, Client Server Binding, Exception Handling and Security, RPC in Heterogeneous Environment, Failure Handling, RPC Optimization, Case Study: Sun RPC, Java RMI.				
UNIT – IV	Synchronization:				(08 Hours)
	Clock Synchronization, Physical Clocks, Clock Synchronization Algorithms, Logical Clocks, Global State, Mutual Exclusion, Election Algorithms, Deadlocks: Prevention, Detection Recovery, Deadlocks in Message Communication.				
UNIT – V	Distributed System Management:				
	Resource Management, Task Assignment Approach, Load Balancing Approach, Load Sharing Approach, Process Management in Distributed Environment, Process Migration, Threads, Fault Tolerance, Component Faults, System Failures and Use of Redundancy				(08 Hours)
UNIT – VI	Distributed Shared Memory:				
	Architecture, Types of DSM, Hardware DSM, and Design Issues in DSM Systems. Distributed File Systems, Naming, Security in Distributed Systems, Real Time Distributed Operating System, Distributed Database Management System, Emerging Trends in Distributed Computing.				(08 Hours)
Reference Books:					
1. H. Attiya, J. Welch Distributed Computing - Fundamentals, Simulation and Advanced Topics, Wiley Publications.					
2. Vijay Garg, Elements of Distributed Computing, Wiley Publications.					
3. S. Mahajan, S. Shan, Distributed Computing, Oxford Publications.					
Syllabus for Unit Test:					
Unit Test -1	UNIT – I, UNIT – II				
Unit Test -2	UNIT – III, UNIT – IV				
Unit Test-3	UNIT –V, UNIT-VI				

High Performance Computing

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04Hours / Week		End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		PR & OR : 50 Marks	01 Credits
UNIT - I	Computer organization:		(08 Hours)
	Memory, Registers, Instruction set architecture, Instruction processing, Pipelined processors: Pipelining, Structural, data and control hazards, Impact on programming. Cache memory: Organization, impact on programming, virtual caches, Operating systems: Processes and system calls, Process management, Program profiling.		
UNIT - II	Modern Computer Architectures :		(08 Hours)
	Memory, Floating-Point Numbers, Programming and Tuning Software - What a Compiler Does, Timing and Profiling, Eliminating Clutter, Loop Optimizations, Program execution, Program, Compilation, Object files, Function call and return, Address space, Data and its representation. Parallel Processing Concepts - Levels of parallelism instruction, transaction, task, thread, memory, and function, Models SIMD, MIMD, SIMT, SPMD, Dataflow Models, and Demand-driven Computation etc. Case Study: Cluster Computing network.		
UNIT - III	Parallel Algorithms:		(08 Hours)
	Parallel models: ideal and real frameworks, Basic Techniques: Balanced Trees, Pointer Jumping, Divide and Conquer, Partitioning, Regular Algorithms: Matrix operations and Linear Algebra, Irregular Algorithms: Lists, Trees, Graphs, Randomization: Parallel Pseudo-Random Number Generators, Sorting, Monte Carlo techniques		
UNIT - IV	Parallel Programming:		(08 Hours)
	Revealing concurrency in applications, Task and Functional Parallelism, Task Scheduling, Synchronization Methods, Parallel Primitives (collective operations), SPMD Programming (threads, OpenMP, MPI), I/O and File Systems, Parallel Matlabs (Parallel Matlab, Star-P, Matlab MPI), Partitioning Global Address Space (PGAS) languages (UPC, Titanium, Global Arrays).		
UNIT - V	High-End Computer Systems:		(08 Hours)
	Memory Hierarchies, Multi-core Processors: Homogeneous and Heterogeneous, Shared-memory Symmetric Multiprocessors, Vector Computers, Distributed Memory Computers, Supercomputers and Petascale Systems, Application Accelerators / Reconfigurable Computing, Novel computers: Stream, multithreaded, and purpose-built, Architectures: N-wide superscalar architectures, multi-core, multi-threaded		
UNIT - VI	Achieving Performance:		(08 Hours)
	Performance metrics and measurements, Measuring performance, Identifying performance bottlenecks, Restructuring applications for deep memory hierarchies, Partitioning applications for heterogeneous resources, Using existing libraries, tools, and frameworks, CASE tools.

12. John Levesque (Author), Gene Wagenbreth (Author), High Performance Computing: Programming and Applications (Chapman & Hall/CRC Computational Science)	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT – III
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI

Advanced Computer Algorithms		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04Hours / Week	End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	TW & OR : 50 Marks	01 Credit
UNIT – I	Introduction:	(08 Hours)
	Asymptotic notation, Models of Computation, Algorithm & their complexity, Random Analysis machines, Computational complexity of RAM programs, A stored program model, Abstractions of the RAM, A primitive model of computation(Turing Machines),Relational between Turing machine & RAM model ,Pidgin ALGOL A high level lang.	
UNIT - II	Algorithm Analysis and Algorithm Design techniques:	(08 Hours)
	Algorithm Analysis: Analyzing Algorithm, Designing Algorithm, Time & Space Complexity, Average & Worst case analysis, Lower Bounds. Algorithm Design techniques: Divide & Conquer, Search Traversals, Dynamic Programming, Backtracking, Branch & Bound, Greedy Algorithm	
UNIT - III	Sorting and Searching Algorithm :	(08 Hours)
	The Sorting problem, Radix Sorting, Sorting by comparison, Heap sort-an $O(n \log n)$ comparison sort, Quick Sort-an $O(n \log n)$ expected time sort, Expected time for Order statistics, Binary Search, binary search trees, optimal binary search tree, B-Trees Algorithms on graph: Elementary graph Algorithm, Minimum spanning tree, Single Source shortest Path, All pairs shortest path	
UNIT – IV	String Processing Algorithm and Divide and conquer method and Greedy method:	(08 Hours)
	String Processing Algorithm: The naive string matching, The Robin-Karp algorithm, String matching with Finite Automata, Knuth Morris Pratt Algorithm Divide and conquer method: Binary search, Mergesort, Quick sort, Strassen's matrix multiplication. The Greedy method: Knapsack problem, job sequencing, optimal merge patterns, minimal spanning trees.	
UNIT – V	Dynamic Programming, Back Tracking, Branch & Bound:	(08 Hours)
	Dynamic Programming: Multistage graphs, OBST, 0/1 Knapsack, traveling sales man problem. Back Tracking: Eight Queens problem, graph coloring, Hamiltonian cycles, Knapsack problem, Maze problem. Branch & Bound: 0/1 Knapsack, Traveling salesman problem lower bound theory-comparisons trees for sorting/searching, lower bound on parallel computation.	
UNIT – VI	NP-hard and NP-complete problems:	(08 Hours)
	Algorithms, Complexity- intractability, Non-Deterministic Polynomial time (NP) Decision problems, Cooks Theorem, NP-Complete problems- satisfiability problem, vertex cover problem. NP-Hard problems-graph, scheduling, code generation problems, Simplified NP Hard Problems, Approximation Algorithm for NP Hard Problem.	
Reference Books:		
1. Bressard, "Fundamental of Algorithm"		
2. Horowitz, Sahani, "Fundamentals of Computer Algorithms", Galgotia		
3. Thomas H. Cormen and Charles E. L. Leiserson, "Introduction to Algorithm", PHI		
4. V. Aho and J. D. Ullman, "Design and Analysis of Algorithms", Addison Wesley		

5. E. V. Krishna Murthy, "Introduction to Theory of Computer"

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

Web Technologies

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	

UNIT – I	Web Environment:	(08 Hours)
	<p>WWW, HTTP, Web Server and its deployment, N-Tier Arch., Services of Web Server – Mail server, News server, Proxy server, Multimedia server.</p> <p>XML Primer :</p> <p>Mark-up languages, XML, Uses of XML. WELL-FORMED XML: Parsing XML, Tags, text, elements, attributes, comments and empty elements. XML Declaration, Processing, Instructions, Errors in XML</p> <p>XML NAMESPACES: Need for namespaces, How XML namespaces work, URIs, When to use, namespace. VALIDATION: Document type definitions (DTD), Sharing vocabularies, Anatomy of DTD, Developing DTDs, DTD Limitations.</p> <p>XML SCHEMAS: Benefit of XML schemas, Elements of XML Schema Definition, Creating a Schema from multiple documents. XPATH, XSLT, Xquery</p>	
UNIT – II	JSP :	(08 Hours)
	JSP overview, JSP language basics, JSP translation and compilation directives, Standard java objects from JSP, JSP configuration and deployment, actions and tags of JSP; Java servlets – Arch, servlet interface, applications of servlets.	
UNIT – III	ASP :	(08 Hours)
	Objects and Components, Handling databases, Data Retrieval from Databases, applications of ASP, session management, ASP with .NET	
UNIT – IV	Web Technologies :	(08 Hours)
	<p>Server side programs. CGI programs. Client side scripts. The Applet Concept.</p> <p>Search Engine Optimization: Strategies, Optimizing Search strategies, Robots, Spiders and Crawlers, Mobile Search Engine Optimization.</p>	
UNIT – V	The Web as an example of client server computing :	(08 Hours)
	<p>Characteristics of web servers: handling permissions. File Management Capabilities of common server architectures , Role of client Computer.</p> <p>Nature of Client server relationship. Web protocols Support tools for website creation and management. Developing Internet Information servers. Publishing information and application.</p>	

UNIT – VI	Building Web applications :	(08 Hours)
	Protocols at the application layer. Principles of Web engineering. Database driven websites. RPC. Lightweight distributed objects. The role of the middleware. Support tools. Security issues in Distributed object systems. Enterprise- wide web base.	
Reference Books:		
	1. Information Architecture for the World Wide Web, Peter Morville and Louis Rosenfied, O'REILLY, 2007	
	2. Internet and World Wide Web: How to Program, Deitel and Deitel, 4th Edition, Prentice Hall, 2009	
	3. Beginning XML, David Hunter et al, 4th Edition, Wrox/John Wiley, 2007	
	4. Herbert Schildt, "Complete Reference JAVA 2", TMH	
	5. Jerri L. Ledford, "Search Engine Optimization", 2 nd Edition, Wiley Publication	
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Wireless Communication And Security

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week		End Semester Examination: 60 Marks	04 Credits
		Continuous Assessment: 40 Marks	
UNIT - I	Introduction :		(08 Hours)
	A Short history of wireless communication. A market for mobile communication. Some research topics. A simplified reference model. Wireless Transmission. Frequencies for Radio Transmission: Signal antennas, signal propagation. Multiplicity, modulation, spread spectrum, cellular systems.		
UNIT - II	Medium Access Control:		(08 Hours)
	Motivation for a specialized MAC. SDMA, FDMA, TDMA, CDMA, Comparison of S/T/F/CDMA. Telecommunication Systems: GSM, DECT, TETRA, UMTS.		
UNIT - III	Satellite Systems :		(08 Hours)
	Basics, Routing, Localization, Handover. Broadcast Systems : Cyclic repetition of data, digital audio broadcasting, digital video broadcasting		
UNIT - IV	Wireless LAN: Infrared vs. radio transmission, Ad-Hoc networks, IEEE802.11, Bluetooth, Case Study on WLAN. Wireless ATM : Motivation for WATM, WATM services reference model, functions, radio access layer, handover, location management, addressing, mobile quality of service, access point control protocol, Case Study on WATM.		(08 Hours)
UNIT - V	Mobile Network Layer:		(08 Hours)
	Mobile IP, Dynamic host configuration protocol, Ad-hoc Networks. Mobile Transport Layer : Traditional TCP, Indirect TCP, Mobile TCP.		
UNIT - VI	Performance Issues :		(08 Hours)
	QOS issues, Security issues, Non line of sight issues, Power control issues. Security Encryption and Authentication, Key pre-distribution and management, Secure Ad-Hoc Networks, Denial-of-Service Attacks, Energy-aware Security Mechanisms

Syllabus for Unit Test:			
Unit Test -1	UNIT – I, UNIT – II, UNIT – III		
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI		

E-Commerce and ERP

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 50 Marks		01 Credit	
UNIT - I					
Ecommerce business models and concepts, EC infrastructure, Ecommerce:				(06 Hours)	
Ecommerce business models and concepts, EC infrastructure, Ecommerce -Frame work, anatomy of E-Commerce applications					
E-Commerce Consumer applications, E-Commerce organization. Applications. Consumer Oriented Electronic commerce - Mercantile Process models					
UNIT - II					
E-Security and payment systems, Electronic payment systems :				(06 Hours)	
Esecurity and payment systems, Electronic payment systems - Digital Token-Based, Smart Cards, Credit Cards, Risks in Electronic Payment systems. Inter Organizational Commerce - EDI, EDI Implementation, Value added networks.					
UNIT - III					
Concepts and communications, ethical, social and political EC issues, Intra Organizational Commerce:				(06 Hours)	
Concepts and communications, ethical, social and political EC issues, Intra Organizational Commerce - work Flow, Automation Customization and internal Commerce, Supply chain Management.					
Corporate Digital Library - Document Library, digital Document types, corporate Data Warehouses. Advertising and Marketing - Information based marketing, Advertising on Internet, on-line marketing process, market research. Marketing, online retailing, services, content and media, social networks.					
UNIT - IV					
Introduction To ERP:					
Introduction To ERP: Evolution of ERP, What is ERP? Reasons for the growth of ERP, Scenario and Justification of ERP in India, Evaluation of ERP, Various Modules of ERP, Advantage of ERP.					
UNIT - V					
Overview of Enterprise:					
An overview of Enterprise, Integrated Management Information, Business Modeling, ERP for Small Business, ERP for make to order companies, business Process Mapping for ERP Module Design, Customized ERP, Hardware Environment and its Selection for ERP Implementation.				(06 Hours)	
UNIT - VI					
ERP Market:				(06 Hours)	
ERP Market: Introduction, SAP AG, Baan Company, Oracle Corporation, People Soft, JD Edwards World Solutions Company, System Software Associates, Inc. (SSA) QAD, A Comparative Assessment and Selection of ERP Packages and Modules.ERP implementation lifecycle, issues in implementing Vendors, Consultants and users, In-House Implementation - pros and cons, vendors, consultants, end user.					
Reference Books:

2. William S. Davis, John Benamati, E-Commerce Basics: Technology Foundations and E-Business Applications, Prentice Hall.					
3. Enterprise Resource Planning – Alexis Leon					
4. ERP Ware: ERP Implementation Framework – V.K. Garg & N.K. Venkitakrishnan					

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Information Storage and Management

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 04Hours / Week		End Semester Examination: 60 Marks		04Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		PR & OR : 50 Marks		01 Credits	
UNIT - I	Introduction to Storage Technology:				[8Hrs]
	Data proliferation and the varying value of data with time & usage, Sources of data and states of data creation, Data center requirements and evolution to accommodate storage needs, Overview of basic storage management skills and activities, Traditional file storage and it's pitfalls. The five pillars of technology, Overview of 12 storage infrastructure components, Evolution of storage, Information Lifecycle Management concept, Data categorization within an enterprise, Storage and Regulations.				
UNIT - II	Storage Systems Architecture:				[8Hrs]
	Intelligent disk subsystems overview, Contrast of integrated vs. modular arrays, Component architecture of intelligent disk subsystems, Disk physical structure components, properties, performance, and specifications, Logical partitioning of disks, RAID & parity algorithms, hot sparing, Physical vs. logical disk organization, protection, and back end management, Array caching properties and algorithms, Front end connectivity and queuing properties, Front end to host storage provisioning, mapping, and operation, Interaction of file systems with storage, Storage system connectivity protocols.				
UNIT - III	Introduction to Networked Storage:				[8Hrs]
	JBOD, DAS, SAN, NAS, & CAS evolution, Direct Attached Storage (DAS) environments: elements, connectivity, & management, Storage Area Networks (SAN): elements & connectivity, Fibre Channel principles, standards, & network management principles, SAN management principles, Network Attached Storage (NAS): elements, connectivity options, connectivity protocols (NFS, CIFS, ftp), & management principles IP SAN elements, standards (SCSI, FCIP, FCP), connectivity principles, security, and management principles, Content Addressable Storage (CAS): elements, connectivity options, standards, and management principles, Hybrid Storage solutions overview including technologies like virtualization & appliances.				
UNIT - IV	Introduction to Information Availability:				[8Hrs]
	Business Continuity and Disaster Recovery Basics, Local business continuity techniques, Remote business continuity techniques, Disaster Recovery principles & techniques. Case study: Storage Network for Business Continuity.				
UNIT - V	Managing & Monitoring:				[8Hrs]
	Management philosophies (holistic vs. system & component), Industry management standards (SNMP, SMI-S, CIM), Standard framework applications, Key management metrics (thresholds, availability, capacity, security, performance), Metric analysis methodologies & trend analysis, Reactive and pro-active management best practices, Provisioning & configuration change , Problem reporting, prioritization, and handling techniques, Management tools overvie				
UNIT - VI	Information storage on cloud:				[8Hrs]
	Concept of Cloud, Cloud Computing, storage on Cloud, ClouVocabulary, Architectural Framework, Cloud benefits, Cloud computing Evolution, Applications & services on cloud, Cloud service providers and Models, Essential characteristics of cloud computing, Cloud Security and integration.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT – III
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI

Cyber Security

Cyber Security		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04Hours / Week	End Semester Examination: 60 Marks	04Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	PR & OR : 50 Marks	01 Credits
UNIT - I	Cyber Security Fundamentals:	(08 Hours)
	Network and Security Concepts, Authentication, Authorization, Non repudiation, Confidentiality, Integrity, Availability, Basic Cryptography, Symmetric Encryption, Public Key Encryption, The Domain Name System, Firewalls, Virtualization, Microsoft Windows Security Principles	
UNIT - II	Attacker's Techniques:	(08 Hours)
	Types of Proxies, Tunneling Techniques, Phishing, Smishing, Vishing, and Mobile Malicious Threat Infrastructure.	
UNIT - III	Exploitation:	(08 Hours)
	Shell code, Stack-Based Buffer Overflows, Format String Vulnerabilities, Malicious PDFs, Web Exploit Tools, Brute Force and Dictionary Attacks, Misdirection, Reconnaissance, and Cross-Site Scripting, DNS Amplification Attacks.	
UNIT - IV	Malicious Code:	(08 Hours)
	Self-Replicating Malicious Code, Virtual Machine Obfuscation, Persistent Software Techniques, Privileged User Accounts and Escalation of Privileges, Token Kidnapping, Man-in-the-Middle Attack.	
UNIT - V	Defense and Analysis Techniques:	(08 Hours)
	Memory Forensics, Capabilities of Memory Forensics, Memory Analysis Frameworks, In-Memory Forensics and Using Volatility, Honey pots, Malicious Code Naming, Automated Malicious Code Analysis Systems	
UNIT - VI	Cyber Security Real World Impact:	(08 hours)
	Cyber security and internal political security, International conflict in cyberspace, Nation-state cyber attack mitigation strategies, IP V6 address space, Improved security, privacy concerns, uneven world wide deployment. Case study	
Reference Books:		
1. Cyber security essentials by James Graham, Richard Howard, Ryan Olson		
2. Strategic Cyber Security by Kenneth Geers		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

Big Data Analytics

Big Data Analytics		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04Hours / Week	End Semester Examination: 60 Marks	04Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	PR & OR : 50 Marks	01 Credits
UNIT - I	Introduction:	(08 Hours)
	Introduction to Big data, Data Exposition, Types of data, Need for big data, Big data & its sources, Three Characteristics of big data, Challenges of Conventional Systems – Big data Problem, Traditional IT Analytics Approach, Big data use cases, Handling limitations of Big data, big data platform. Evolution of Analytic Scalability.	
UNIT - II	Big Data Storage and Computing Platforms:	(08 Hours)
	Big Data Storage and Computing Platforms: Traditional RDBMS, NoSQL, NewSQL, and Hadoop, Parallel computing systems, Programming models for batch, interactive, and streaming applications, Trade-offs between programming models, Survey of new emerging database and storage systems for Big Data, Tradeoffs between reduced consistency, performance, and availability, MangoDB: Introduction, overview, Design Goals for MangoDB, MangoDB shell, MangoDB applications, Multimedia database application.	
UNIT - III	Regression Modeling - Multivariate Analysis:	(08 Hours)
	Regression Modeling - Multivariate Analysis - Bayesian Modeling - Inference and Bayesian Networks - Support Vector and Kernel Methods - Analysis of Time Series: Linear Systems Analysis - Nonlinear Dynamics - Rule Induction - Neural Networks: Learning And Generalization - Competitive Learning - Principal Component Analysis and Neural Networks - Fuzzy Logic: Extracting Fuzzy Models from Data - Fuzzy Decision Trees - Stochastic Search Methods	
UNIT - IV	Introduction To Streams Concepts:	(08 Hours)
	Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform(RTAP) Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.	
UNIT - V	Mining Frequent Itemsets:	(08 Hours)
	Market Based Model – Apriori Algorithm – Handling Large Data Sets in Main Memory – Limited Pass Algorithm – Counting Frequent Itemsets in a Stream – Clustering Techniques – Hierarchical – K-Means – Clustering High Dimensional Data – CLIQUE And PROCLUS – Frequent Pattern based Clustering Methods – Clustering in Non-Euclidean Space – Clustering for Streams and Parallelism	
UNIT - VI	MapReduce:	(08 Hours)
	MapReduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases - S3 - Hadoop Distributed File Systems – Visualizations - Visual Data Analysis Techniques - Interaction Techniques; Systems and Analytics Applications - Analytics using Statistical packages-Approaches to modeling in Analytics – correlation, regression, decision trees, classification, association-Intelligence from unstructured information-Text analytics-Understanding of emerging trends and technologies-Industry challenges and application of Analytics.

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Cryptography and Network Security

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04Hours / Week		End Semester Examination: 60 Marks	04Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		PR & OR : 50 Marks	01 Credits
UNIT - I	Introduction:		(08 Hours)
	Services, Mechanisms and Attacks, The OSI Security Architecture, A Model for Network Security. Symmetric Ciphers: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, Steganography. Block Ciphers and the Data Encryption Standard: Simplified DES, Block Cipher Principles, The Data Encryption Standard, Differential and Linear Cryptanalysis, Block Cipher Design Principles, Block Cipher Modes of Operation.		
UNIT - II	Introduction to Finite Fields:		(08 Hours)
	Introduction to Finite Fields: Groups, Rings, Fields, Modular Arithmetic, Euclid's Algorithm, Finite Fields of the Form GF, Polynomial Arithmetic, Finite Fields of the Form GF. Advanced Encryption Standard: Evaluation Criteria for AES, The AES Cipher. Contemporary Symmetric Ciphers: Triple DES, Blowfish, RC5, Characteristics of Advanced Symmetric Block Ciphers, RC4 Stream Cipher. Confidentiality Using Symmetric Encryption: Placement of Encryption Function, Traffic Confidentiality, Key Distribution, Random Number Generation		
UNIT - III	Public-Key Encryption and Hash Functions:		(08 Hours)
	Prime Numbers, Fermat's and Euler's Theorems, Testing for Primality, The Chinese Remainder Theorem, Discrete Logarithms. Public-Key Cryptography and RSA, Principles, The RSA Algorithm, Key Management, Diffie Hellman Key Exchange, Elliptic Curve Arithmetic, Elliptic Curve Cryptography		
UNIT - IV	Message Authentication and Hash Functions:		(08 Hours)
	Authentication Requirements, Authentication Functions, Message Authentication Codes, Hash Functions, Security of Hash Functions. Hash Algorithms: MD5 Message Digest Algorithm, Secure Hash Algorithm, RIPEMD-160, HMAC, Digital Signatures, Authentication Protocols, Digital Signature Standard.		
UNIT - V	Authentication Applications:		(08 Hours)
	Kerbos, X.509 Authentication Service, E-mail Security, Pretty Good Privacy, S/MIME, IP Security, Architecture, Authentication Header, Encapsulation Security Payload, Combining Security Associations, Key Management Web Security: Secure Sockets Layer and Transport Layer Security, Secure Electronic Transaction.		
UNIT - VI	System Security:		(08 Hours)
	Intruders, Intrusion Detection, Password Management. Malicious Software, Firewalls: Firewall Design Principles, Trusted Systems.		
<ol style="list-style-type: none"> 1. William Stallings, "Cryptography and Network Security", Principles and Practices, Pearson Education, Sixth Edition. 2. Behrouz A. Forouzan, "Cryptography and Network Security", McGraw Hill Publication 3. Atul Kahate, "Cryptography and Network Security", McGraw Hill(India)Publication, Third Edition. 			
Syllabus for Unit Test:			

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Parallel Computing

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week		End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		Term Work: 50 Marks	01 Credit
UNIT - I	Introduction to Parallel Programming Paradigms:		(08 Hours)
	Types of Parallelism , Parallel Computation Models, Memory less Parallel Computers, Parallel Computers with Memory, Flynn's Taxonomy, The Data-Parallel Model, Networked Computers, The Performance of Parallel Algorithms, Amdahl's Law, Gustafson Barsis's Law, Karp-Flatt Metric, Multidimensional Meshes, Hypercube-Based Machines, Routing in Networks, The PRAM Model.		
UNIT - II	Convergence of Parallel Architecture:		(08 Hours)
	Communication Architecture, Shared Address Space, Message Passing, Convergence, Data parallel processing, Other Parallel Architectures, A Generic parallel architectures, shared memory systems and cache coherence, distributed-memory systems, interconnection networks and routing, Architectural Trends, Application Trends, Technology Trends, Supercomputers case study: Param.		
UNIT - III	Programming scalable systems:		(08 Hours)
	The message-passing model, the message-passing interface, MPI standard basic concepts of MPI: MPI_Init, MPI_Comm_size, MPI_Comm_rank, MPI_Send, MPI_Recv, MPI_Finalize, timing the MPI programs: MPI_Wtime, MPI_Wtick, collective communication: MPI_Reduce, MPI_Barrier, MPI_Bcast, MPI_Gather, MPI_Scatter, case studies: the sieve of Eratosthenes, Floyd's algorithm, Matrix-vector multiplication.		
UNIT - IV	Shared-Memory Programming:		(08 Hours)
	Shared-memory model, OpenMP standard, Parallel for loops, Parallel for pragma, private variables, critical sections, reductions, parallel loop optimizations, general data parallelism, functional parallelism, case studies: the sieve of Eratosthenes, Floyd's algorithm, matrixvector multiplication – distributed shared-memory programming, DSM primitives.		
UNIT - V	Implications for Programming Models and Case Study:		(08 Hours)
	Naming, Replication, Overhead and granularity of communication, Block Data transfer, Synchronization, Hardware Cost and Design Complexity, Case Study: Ocean, Ray trace, Data mining.		
UNIT - VI	Fundamental Design issues:		(08 Hours)
	Partitioning of data, Mapping of data onto the processors, Reproducibility of results, Synchronization, Scalability and Predictability of performance, Performance & Scalability, Performance Requirements, Types of performance requirements, Performance Metrics of Parallel Systems, Communication Abstraction, Programming model requirements, Communication and Replication, Starssen's Matrix multiplication to compute complexity less than $O(n^3)$.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Wireless Sensor Networks

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week		End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		Term Work: 50 Marks	01 Credit
UNIT - I	Introduction & Characteristics of Wireless Sensor Networks :		(08 Hours)
	Introduction, Brief Historical Survey of Sensor Networks. Characteristic requirements for WSN - Challenges for WSNs – WSN vs Adhoc Networks - Sensor node architecture – Commercially available sensor nodes –Mote, IRIS, Mica Mote, EYES nodes, BTnodes, TelosB, Sunspot -Physical layer and transceiver design considerations in WSNs, Energy usage profile, Choice of modulation scheme, Dynamic modulation scaling, Antenna considerations.		
UNIT - II	Medium Access Control Protocols:		(08 Hours)
	Schedule-based protocols - SMAC - BMAC - Traffic-adaptive medium access protocol (TRAMA) - The IEEE 802.15.4 MAC protocol, Case Study: IEEE 802.15.4 LR-WPANs Standard - Target detection and tracking - Contour/edge detection - Field sampling, ZigBee.		
UNIT - III	Routing And Data Gathering Protocols:		(08 Hours)
	Routing Challenges and Design Issues in Wireless Sensor Networks, Flooding and gossiping – Data centric Routing – SPIN – Point-to-Point VPN Tunneling Protocol and Challenges- Gradient-based routing - Rumor Routing – COUGAR – ACQUIRE – Hierarchical Routing - LEACH, PEGASIS – Location Based Routing – GAF, GPSR – Real Time routing Protocols – APTEEN, SPEED, RAP - Data aggregation - data aggregation operations - Aggregate Queries in Sensor Networks - Aggregation Techniques – TAG, Tiny DB,		
UNIT - IV	Embedded Operating Systems:		(08 Hours)
	Operating Systems for Wireless Sensor Networks – Introduction - Operating System Design Issues - Examples of Operating Systems – TinyOS – Mate – MagnetOS –OSPM - EYES OS. Introduction to Tiny OS – NesC – Interfaces and Modules- Configurations and Wiring - Generic Components -Programming in Tiny OS using NesC, Emulator TOSSIM.		
UNIT - V	Transport Control Protocols and Middlewares for Wireless Sensor Networks :		(08 Hours)
	Traditional Transport Control Protocols: TCP (RFC 793), UDP (RFC 768), MobileIP, Introduction, WSN Middleware Principles, Middleware Architecture: Existing Middleware: MiLAN (Middleware Linking Applications and Networks), IrisNet (Internet-Scale Resource-Intensive Sensor Networks Services)		
UNIT - VI	Applications of WSN:		(08 Hours)
	WSN Applications - Home Control - Building Automation - Industrial Automation - Medical Applications - Reconfigurable Sensor Networks - Highway Monitoring - Military Applications - Civil and Environmental Engineering Applications - Wildfire Instrumentation - Habitat Monitoring - Nanoscopic Sensor Applications.

Storage Area Network

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 50 Marks		01 Credit	
UNIT - I	Information Storage and Data Centre Environment:				(08 Hours)
	Information Storage, Evolution of Storage Architecture, Data Center Infrastructure, Virtualization and Cloud Computing, Application, Database Management System (DBMS), Host (Compute), Connectivity, Storage, Disk Drive Components, Disk Drive Performance, Disk I/O Controller Utilization, Host Access to Data, Direct-Attached Storage, Storage Design Based on Application Requirements and Disk Performance, Data Protection: RAID.				
UNIT - II	Data and Information in SAN:				(08 Hours)
	Data organization: File vs. Block, Object, Data store, Searchable models, File Systems, Volume Managers, Caches, Prefetching, Storage Networking Technologies, What Storage Networking Is, What to Expect from SANs, Leading up to SANs, Killer Apps for SANs				
UNIT - III	SAN Hardware Ecosystem:				(08 Hours)
	Components of an Intelligent Storage System, Front End, Cache, Back End, Physical Disk, Storage Provisioning, Virtual Storage Provisioning, Types of Intelligent Storage Systems – DAS, SAN, NAS, Comparing DAS, SAN & NAS, Host Bus Adapters, SFPs, FC Cables and Connectors, SCSI/SATA/SAS Cables and Connectors, JBODs, RAID Arrays, RAID Controllers, External Storage Boxes, Tape Drive, Tape Library, NAS Device, NAS Head, Fiber Channel Switches, Bridges, FC Appliances.				
UNIT - IV	Storage Virtualization:				(08 Hours)
	Storage Virtualization, Disk Virtualization, Block Virtualization, File Virtualization, File system Virtualization, Tape Virtualization, Tape Library Virtualization, Host Based Virtualization, Network Based Virtualization, Storage Device Virtualization.				
UNIT - V	Protocols in SAN:				(08 Hours)
	ATA and SATA, SPI – Parallel SCSI, SAS – Serial Attached SCSI, SAS Topology, SAS Devices, FC Topologies, FC Ports, FC Protocol Layers, FC WWNs, FC Addresses, FC Frame, FC Flow Control, Zoning, Lun Masking, iSCSI Topology, iSCSI Initiators and Targets, iSCSI Names and Addresses, Speeding Up iSCSI, iSCSI Advantages, iSCSI Limitation, Comparing Storage Protocols.				
UNIT - VI	SAN Managements and Storage Systems:				(08 Hours)
	Storage Management, Storage Vs. Data Classification, Information Lifecycle Management, Hierarchical Storage Management, RTO and RPO, Backup and Restore, Snapshot & CDP, De-duplication, Storage Provisioning, Storage Migration, SRM, Case study - Google FS/BigTable, Programming models: Hadoop, NAS.

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

**Proposed Structure of M.Tech Information Technology
CBCS Pattern (2015-16)**

STRUCTURE & EXAMINATION PATTERN

MTech Information Technology

Semester I		Total Duration : 20 Hrs/Week Total Marks : 500 Total Credits : 18										
Subjects	Teaching Scheme (Hrs)		Examination Scheme (Marks)							Examination Scheme (Credits)		Total Credits
	L	P	Theory	Unit Test	Attendance	Tutorial/Assignments	TW	Pract / Oral	TH	TW/PR/OR		
Software Architecture	04	02	60	20	10	10	25	25	04	01	05	
Machine Learning	04	02	60	20	10	10	25	25	04	01	05	
Mobile Networks & Communication	04	--	60	20	10	10	--	--	04	--	04	
Parallel Programming & Algorithms	04	--	60	20	10	10	--	--	04	--	04	
Total	16	04	240	80	40	40	50	50	16	02	18	

M.Tech (IT) Semester - I		Subject : SOFTWARE ARCHITECTURE
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory :04
Practical : 02 hrs/week	Continuous assessment : 40 Marks	Practical : 01
	Term Work:25 Marks	Total Credits : 05
	Prat/Oral : 25 Marks	
The aim of the course is to design a system to provide the solution to the existing system		
Course Objectives:		
1) Analyze the problem in existing system.		
2) Apply the efficient solution by wisely designing the architecture.		
Course Prerequisites:		
Students should have knowledge of		
1) Basic knowledge of java programming.		
...		
Course Outcome:		
Students will be able to:		
1) Understand problems in existing system		
2) Analyze feasibility of design proposed.		
3) Analyze the technology suitable to build the proposed system.		
4) Understand the use of design pattern to design the architecture		
5) Analyze the adherence of solution with the requirement		
6) Apply the efficient architecture to optimize the performance of the system		
...		
UNIT-I	INTRODUCTION TO SOFTWARE ARCHITECTURE	(Hours)
	Introduction to Software Architecture, Architecture of Business Cycle, software architecture requirements, Types of Architecture, Documenting software architectures, recent trends in software architectures.	06
UNIT-II	DESIGN CONCERNS	(Hours)
	Introduction to the issues in design, Considering important aspects during the design SRS, Cost, Security, Resources, Compatibility, Scalability, dependency. Selection of Technology according to the requirement.	06

UNIT-III	DESIGN PATTERNS	(Hours)
	Introduction to Design patterns, principles and expectations Types of design patterns Singleton, Factory, Adaptor, Facade, Proxy, Iterator, Observer, Mediator, composite. Rules and regulations to select design patterns.	06
UNIT-IV	TECHNOLOGIS USED IN MIDDLEWARE	(Hours)
	Types of Middleware, Application servers, Introduction to Java EE, Introduction to Java EE , JDBC, RPC, RMI, EJB Architecture, Entity, Session, Message beans, XML, XSLT. Specifications and characteristics of Middleware technologies. Recent advances in Middleware technologies.	06
UNIT-V	N TIER ARCHITECTURE	(Hours)
	Introduction to tiers in Architecture, Types of Tiers , XML, Client side technologies HTML, DHTML, Java Applets, ActiveX controls, DOM, AJAX. Client side technology in multi-tier architectures Examples of three tier and n-tier architectures, client side technologies.	06
UNIT-VI	SERVER SIDE TECHNOLOGY	(Hours)
	Multi-tier architectures, introduction to server side technologies: JSP, JSF, SOA, MVC. Java Servlets, introduction to framework struts, spring.	06

Assignment List:

- 1) **Design an architecture to solve collision problem in Traffic Signaling System**
- 2) **Design generalized and specialized approach to simulate traffic signaling system.**
- 3) **Implement all types of driver to connect front end with back end using modular approach.**
- 4) **Implement and maintain cookies in a structured relational database.**
- 5) **Implement data and page transfer using servlet.**
- 6) **Implement library management system using JSP.**
- 7) **Implement**
- 8) **Implement CRUD functionality using MVC architecture with struts framework.**

Text Books:

- 1) Software Architecture in Practice, Second Edition By Len Bass, Paul Clements, Rick Kazman
Publisher: Addison Wesley
- 2) Design Patterns: Elements of Reusable Object-Oriented Software, Erich Gamma, Pearson Publication
- 3) OCM Java EE 6 Enterprise Architect Exam Guide (Oracle Press) by Paul Allen , Joseph Bambara, Oracle Press.

Reference Books:	
1)	Software Architecture in Practice, Second Edition By Len Bass, Paul Clements, Rick Kazman Publisher: Addison Wesley
2)	Agile Software Development, Principles, Patterns, and Practices, Robert C. Martin, Pearson Education
3)	Enterprise Integration Patterns: Designing, Building, and Deploying Messaging Solutions Gregor Hohpe, Bobby Woolf, Publisher: Addison Wesley
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

M.Tech (IT) Semester - I Subject : Machine Learning		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory :04
Practical : 02 Hrs	Continuous assessment : 40 Marks	Practical : 01
	Term Work:25 Marks	
	Prat/Oral : 25 Marks	Total Credits : 05
Course Objectives:		
1) Introduces fundamental concepts and methods for machine learning		
2) Familiarize with basic learning algorithms and techniques and their applications		
Course Prerequisites:		
Students should be familiar with logic, elementary probability theory, elementary linear algebra, and multivariable calculus		
Course Outcome:		
..		
Students will be able to:		
1) Understand regression		
2) Understand basic probability theory		
3) Understand estimation and classification techniques		
4).Understand Bayesian and Monto Carlo methods		
5).Understand concepts of Lagrange multipliers and Clustering		
6) Understand Hidden Markov Models		
UNIT-I		(08 Hours)
	<p>Introduction to Machine Learning: Types of Machine Learning, A simple problem.</p> <p>Linear Regression: The ID case, Multidimensional inputs, Multidimensional outputs.</p> <p>Non Linear Regression: Basis function regression, Over fitting and Regularization,</p> <p>Artificial Neural Networks, K-Nearest Neighbors.</p>	

	Quadratics: Optimizing a quadratic.	
UNIT-II		(08 Hours)
	Basic Probability Theory: Classical logic, Basic definitions and rules, Discrete random Variables, Binomial and Multinomial distributions, Mathematical expectations. Probability Density Functions(PDFs): Mathematical expectation, mean, and variance, Uniform distributions, Gaussian distributions: Diagonalization, Conditional Gaussian Distribution.	
UNIT-III		(08 Hours)
	Estimation: Learning a binomial distribution, Bayes' Rule, parameter estimation: MAP, ML, and Bayes' Estimates, Learning Gaussians, MAP nonlinear regression. Classification: Class Conditionals, Logistic Regression, Artificial Neural Networks, K-Nearest Neighbor Classification, generative vs. Discriminative models, Classification by LS Regression, Naïve Baye's: Discrete Input Features, Learning, Gradient Decsnt: Finite differences.	
UNIT-IV		(08 Hours)
	Cross Validation, Bayesian methods: Bayesian Regression, Hyperparameters, Bayesian model Selection. Monte Carlo Methods: Sampling Faussions, Importance Sampling, Markov Chain Monte Carlo (MCMC). Principal Components Analysis: The model and learning, Reconstruction, Properties of PCA, Whitening, Modelling, Probabilistic PCA.	
UNIT-V		(08 Hours)
	Lagrange Multipliers: Examples, Least-Squares PCA in one-dimension, Multiple constraints, Inequality constraints. Clustering: K-means Clustering, K-medoids Clustering, Mixtures of Gaussians: Learning, Numerical issues, the Free Energy, proofs, Relation to K-means, Degeneracy. Determining the number of clusters.	
UNIT-VI		(08 Hours)
	Hidden Markov Models: Markov Models, Hidden Markov Models, Viterbi Algoriyhm, The Forward Algorithm,	
Assignment List:		
1)	To study and implement K-Nearest neighbor algoritm	
2)	Problems solving on Probability density functions and Gaussian distribution	
3)	Solving problems related to classification and estimation	
4)	Solving problems related to Bayesian method and Monte Carlo methods	
5)	To study and implement K-means clustering	

6)	Comparison of various Hidden Markov Models	
Text Books:		
1)	Y Kononenko, "Machine Learning And Data Mining: Introduction to Principles and Algorithms", Horwood Publishing	
2)	Kevin Patrick Murphy, "Machine Learning: a Probabilistic Perspective", MIT Press	
Reference Books:		
1)	Tom Mitchell, "Machine Learning", McGraw-Hill, 1997	
2)	Michael Berry & Gordon Linoff, "Mastering Data Mining", John Wiley & Sons	
3)	Cios, W. Pedrycz, R. Swiniarski, L. Kurgan, "Data Mining: A Knowledge DiscoveryK. Approach", Springer	
Syllabus for Unit Test:		
Unit Test -1	Unit I ,II and III	
Unit Test -2	Unit IV, V and VI	

M.Tech (IT) Semester - I Subject : MOBILE NETWORKS AND COMMUNICATION		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory :04
	Continuous assessment : 40 Marks	Total Credits : 04
Course Objectives:		
To gain an understanding of the principles behind the design of wireless communication systems and technologies.		
Course Prerequisites:		
Students should have knowledge of		
Computer Networking & communication system		
Course Outcome:		
Students will be able to:		
1) Understand mobile cellular architecture.		
2) Understand the multiple access schemes & IEEE802.11		
3) Analyze the technology channel interference in path propagation.		
4) Understand the technology switching and traffic system.		
5) Analyze the GSM System.		
6) Understand the technology HEPERLAN & Android system.		
UNIT-I	Introduction to Mobile Communication	(Hours)
	Cellular mobile architecture overview and cellular system design , Frequency management and channel assignment, Frequency reuse channels, concepts of cell splitting, handover in cellular system, handoff algorithms and dropped calls.	08
UNIT-II	Multiple Access Schemes	(Hours)
	SDMA, FDMA, TDMA, CDMA, comparison of S/T/F/CDMA based on terminals signal separation and advantages and disadvantages; IEEE 802.11 & 802.16 wireless standards, System architecture.	08
UNIT-III	Propagation Path Loss and Propagation Models	(Hours)
	Co-channel & Non-co-channel interference: Exploring co-channel interference areas in system, reduction of co channel interference, Different types of non-co channel interferences, different ways to reduce interference and in turn improve cell coverage.	08
UNIT-IV	Switching and traffic	(Hours)
	General description, Special features for handling traffic, Small switching systems, systems enhancement, resource allocation and	08

	mobility management.	
UNIT-V	Practical Cellular Mobile system-GSM	(Hours)
	Cellphone generations 1G, 2G, 3G, Standards for wireless communication system UMTS etc; GSM architecture and interfaces, GSM subsystems, mapping of GSM layers on to OSI layers. CDMA: Major attributes IS-95 system architecture, air interface, physical and logical channel and call processing.	08
UNIT-VI	Wireless Local Area Networks	(Hours)
	Introduction, Types of WLANs, Hidden station problem, HIPERLAN Type 1: HIPERLAN/1 MAC sublayer, HIPERLAN/1 CAC layer, HIPERLAN/1 physical layer. IEEE 802.11 WLAN standards: IEEE 802.11 physical layer, IEEE 802.11 MAC sublayer. IEEE 802.11 and HIPERLAN standards for 5 GHz band: HIPERLAN/2 physical layer, HIPERLAN /2 data link control layer. Bluetooth: Introduction, User Scenario, Architecture, protocol. Introduction to Android Layers, android components, mapping application to process. Android development basics. Hardware tools, Software tools, Android SDK features	08
Text Books:		
1)	William C.Y.Lee, “Mobile cellular Telecommunication” ,2nd Ed. McGraw-Hill Ā	
2)	Jochen Schiller, “Mobile Communication” Pearson Education Ā	
3)	V. K. Garg, J. E. Wilkes, “Principle and Application of GSM”, Pearson Education	
Reference Books:		
1)	V. K. Garg, “IS-95 CDMA &CDMA 2000”, Pearson Education	
2)	W. Frank Ableson,Robi sen, Chris King, “ Android IN ACTION “, Third Edition, Dreamtech Press	
3)	Mobile Computing By Rajkamal (Oxford).	
Syllabus for Unit Test:		
Unit Test - 1	Unit I ,II and III	
Unit Test - 2	Unit IV, V and VI

M.Tech IT Semester II		Subject: Research Foundation	
Teaching Scheme	Examination Scheme		Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks		Theory : 04
	Continuous assessment : 40 Marks		Total Credits : 04
Course Objectives:			
1) Assist students in planning and carrying out research projects, further research oriented studies or jobs			
2) The students are exposed to the principles, procedures and techniques of implementing a research finding.			
3) Students involve with finding out the literature using information technology / computer technology and with using the tools for data analysis in various sectors, and writing the reviews, papers, reports and thesis.			
Course Prerequisites:			
Students should have knowledge of			
1) Problem definition			
2) Project Preparation and publications			
3) Mathematical and Statistical Analysis			
Course Outcome:			
Students will be able to:			
1) Define and describe the research, research process and research methods.			
2) Understand and apply research methods including design, data analysis, and interpretation.			
3) Project Report, and Research Paper writing			
UNIT-I	Research Idea		(Hours)
	Introduction to research. Research: objectives, motivation, types, approaches, methods and methodology. Research and scientific method.		08
UNIT-II	Research Processes		(Hours)
	How research is done, research processes, research criteria, research problem definition, problem selection, need of defining the problem, techniques involved in defining a problem.		08
UNIT-III	Research Design		(Hours)
	Research design: idea, why research designs, characteristics of design, types of designs, experimental design.		08
UNIT-IV	Novelty		(Hours)
	Novelty and Originality in Research: Resources, skills, time management, role of supervisor and research scholar, interaction with subject experts.		06
UNIT-V	Paper, Thesis and Report Writing		(Hours)
	Thesis Writing: Title, Abstract, Introduction, Literature review / previous works, Methodology, Result / Data analysis, Comparisons		08

	with earlier works, Conclusion, Future Scopes and References (IEEE / Springer / ACM / Elsevier formats). Importance of literature review, source of literature: books, journals, proceedings, thesis and dissertations, unpublished documents. On-line Searching: Database, SciFinder, Scopus, Science Direct, Searching research articles, Citation Index, Impact Factor, H-index.	
UNIT-VI	Tools	(Hours)
	Analytical tools, Introduction to data analysis, linear data and non-linear data, exponential type data, logarithmic type data, power function data and polynomials of different orders. Plotting and fitting of linear, Non-linear, Gaussian, Polynomial, and Sigmoidal type data. Quantitative Techniques: Steps of quantitative analysis, reliability of the data, errors classification, accuracy, precision, statistical errors. LaTeX: Writing scientific report, research report, revision, writing project proposal, paper writing for international journals, conference presentation, Slides preparation, pictures, graphs and citation styles.	10
Assignment List:		
1)	Briefly describe the different steps involved in a research process. What do you mean by research? Explain its significance in modern times.	
2)	Write short notes on: Design of the research project; Ex post facto research; Motivation in research; Objectives of research; Criteria of good research; Research and scientific method.	
3)	Describe the different types of research, clearly pointing out the difference between an experiment and a survey.	
4)	What is the necessity of defining a research problem? Explain.	
5)	Explain the meaning of the following in context of Research design: (a) Extraneous variables; (b) Confounded relationship; (c) Research hypothesis; (d) Experimental and Control groups; (e) Treatments.	
6)	Distinguish between an experiment and survey. Explain fully the survey method of research.	
7)	Write short notes on the following: (a) Cross tabulation; (b) Discriminant analysis; (c) Coefficient of contingency; (d) Multicollinearity; (e) Partial association between two attributes.	
8)	5. Distinguish between the following:	

	<p>(a) Statistic and parameter; (b) Confidence level and significance level; (c) Random sampling and non-random sampling; (d) Sampling of attributes and sampling of variables; (e) Point estimate and interval estimation.</p> <p>7. 8. In a sample of 400 people, 172 were males. Estimate the population proportion at 95% confidence level.</p>
9)	<p>(a) 500 articles were selected at random out of a batch containing 10000 articles and 30 were found defective. How many defective articles would you reasonably expect to find in the whole batch? (b) In a sample of 400 people, 172 were males. Estimate the population proportion at 95% confidence level.</p>
10	<p>“We can teach methods of analysis, yet any extensive research... requires something equally important: an organisation or synthesis which provides the essential structure into which the pieces of analysis fit.” Examine this statement and show how a good research report may be prepared.</p>

Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

M.Tech IT Semester II		Subject : Information Retrieval		
Teaching Scheme		Examination Scheme		Credit Allotted
Theory : 04 hrs/week		End Semester Examination : 60 Marks		Theory :04
Practical :02		Continuous assessment : 40 Marks		Practical : 01
		Term Work:25 Marks		
		Prat/Oral : 25 Marks		Total Credits : 05
Course Objectives:				
1) To provide students with an overview of the main principles and methods underlying the domain of Information Retrieval.				
2) To address more recent developments in IR such as collaborative filtering and Latent Semantic Indexing.				
Course Prerequisites:				
Students should have knowledge of				
1) Basic basic information retrieval techniques.				
2) Data Structures and Algorithm Analysis				
Course Outcome:				
Students will be able to:				
1) Understand the impact on web of information retrieval.				
2) Understand basic information retrieval models.				
3) understand experimental evaluation of information retrieval				
4) understand information retrieval implementation in search engines				
5) understand language-model based retrieval				
6) understand Information Extraction and Integration				
UNIT-I	Introduction			(Hours)
	Goals and history of IR. IR Basics: inverted index, query and document representations, boolean retrieval, simple tf/idf and other ranking schemes.			08
	The impact of the web on IR. Information behavior, browsing vs seeking, types of search			
UNIT-II	Basic IR Models			(Hours)
	Boolean and vector-space retrieval models; ranked retrieval; text-similarity metrics; TF-IDF (term frequency/inverse document frequency) weighting; cosine similarity.			08
	Basic Tokenizing, Indexing, and Implementation of Vector-Space Retrieval:			
	Simple tokenizing, stop-word removal, and stemming; inverted indices; efficient processing with sparse vectors; Java implementation.			

UNIT-III	Experimental Evaluation of IR	(Hours)
	Performance metrics: recall, precision, and F-measure; Evaluations on benchmark text collections. Query Operations and Languages: Relevance feedback; Query expansion; Query languages. Text Representation: Word statistics; Zipf's law; Porter stemmer; morphology; index term selection; using thesauri. Metadata and markup languages (SGML, HTML, XML).	08
UNIT-IV	Web Search	(Hours)
	Search engines; spidering; metacrawlers; directed spidering; link analysis (e.g. hubs and authorities, Google PageRank); shopping agents. Text Categorization: Categorization algorithms: Rocchio, nearest neighbor, and naive Bayes. Applications to information filtering and organization.	08
UNIT-V	Language-Model Based Retrieval	(Hours)
	Using naive Bayes text classification for ad hoc retrieval. Improved smoothing for document retrieval. Text Clustering: Clustering algorithms: agglomerative clustering; k-means; expectation maximization (EM). Applications to web search and information organization.	08
UNIT-VI	Recommender Systems	(Hours)
	Collaborative filtering and content-based recommendation of documents and products. Information Extraction and Integration: Extracting data from text; semantic web; collecting and integrating specialized information on the web.	08
Assignment List:		
1)	Study impact of Information retrieval on web	
2)	Write a program to implement TF-IDF to rank data	
3)	Write a program to normalize the data	
4)	Write a program to analyze indexer	
5)	Write a program to analyze recall and F-measure top 3 popular search engines.	
6)	Analyze working of open source crawlers.	
7)	Implement naïve bayes algorithm to retrieve the data	
8)	Write a program to implement k-means algorithm.	
9)	Write a program to design dynamic forms for collaborative filtering	

10)	Write a program to to collect feedback using various recommendation techniques
Text Books:	
1)	Introduction to Information Retrieval, by C. Manning, P. Raghavan, and H. Schütze. Cambridge University Press, 2008
Reference Books:	
1)	Search Engines: Information Retrieval in Practice by W. Bruce Croft, Donald Metzler, and Trevor Strohman
2)	Introduction to Information Retrieval, Christopher D. Manning, Prabhakar Raghavan, and Hinrich Schutze, Cambridge University Press. 2008
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

M.Tech IT Semester II		Subject : Real Time Systems	
Teaching Scheme	Examination Scheme		Credit Allotted
Theory : 04 hrs/week	End Semester Examination	: 60 Marks	Theory :04
	Continuous assessment	: 40 Marks	
			Total Credits : 04

Course Objectives:		
1) The aim of the course is to introduce the student to the theory of formal verification methods and techniques used for real time systems.		
2) This course provides a comprehensive introduction to understand the underlying principles, techniques and approaches which constitute a coherent body of knowledge in Real Time System.		
Course Prerequisites:		
Students should have knowledge of		
1)Basic understanding of C.		
2) Basic understanding of Computer Architectures.		
3) Basic understanding of Operating Systems		
Course Outcome: Real time system is one of class of f complex systems whose performance must be analyzed at the earlier phases of development. The methods and techniques in this course are widely used now a day in industries for these verifications of Real Time System. The students would have then a strong background of modeling, simulation and verification..		
Students will be able to:		
1) Clearly differentiate the different issues that arise in soft and hard real-time systems. Explain the various concepts of time that arise in real-time systems.		
2) Understand basic multi -task scheduling algorithms and approaches for scheduling.		
3) Understand basic for periodic, aperiodic, and sporadic tasks as well as understand the impact of the latter two on scheduling.		
4)Able to understand the desired language characteristics of real time programming languages.		
5) Clearly differentiate the Real Time Vs Gerenal – Purpose Databases.		
6)Understand the real time communication.protocols.		
UNIT-I	Introduction	(08 Hours)
	Real time Applications,Hard Versus Soft Real Time Systems, A reference model of Real Time Systems ,Issues in Real-Time Computing, Structure of real time systems, Task Classes, characterizing Real -Time Systems: Performance Measures for Real Time Systems., Estimating Program Run Times	
UNIT-II	Real Time Scheduling	(08 Hours)
	Approaches to Real Time Scheduling : Clock Driven Approach, Weighted Round Robin Approach, Priority Driven Approach Scheduling : Introduction, Classical Uniprocessor Scheduling - Rate Monotonic scheduling Algorithm,Preemptive Earliest Deadline First(EDF) Algorithm Uniprocessor scheduling of IRIS tasks- Identical Linear Reward Functions,Nonidentical Reward Functions,0/1 Reward Functions,Identical	

	Concave Reward Function, Non identical Concave Reward Function,	
UNIT-III	Task Assignment	(08 Hours)
	Utilization Balancing Algorithm,A Next – Fit Algorithm for RM Scheduling,A Bin – Packing Assignment Algorithm for EDF,A Myopic Offline Scheduling (MOS) Algorithm,The Buddy Strategy,Assignment and Precedence Conditions.	
UNIT-IV	Programming Languages and Tools	(08 Hours)
	Introduction,Desired language characteristics,Data Typing,Control Structures,Facilitating Hierarchical Decomposition,Packages,Run Time Error Handling,Multitasking,Task Scheduling,Timing specifications,Experimental Languages:Flex,Euclid Run Time Support: Compiler,Linker,Debuuger,Kernel	
UNIT-V	Real Time Databases	(08 Hours)
	Introduction,Real Time Vs Gerenal – Purpose Databases,Main memory databases,Transaction Priorities,Transaction Aborts,Concurrency Control Issues,Disk Scheduling Algorithm,A Two-Phase Approach to improve predictability,Mainaining serilaliation Consistency,Databases for Hard real Time systems.	
UNIT-VI	Real Time Communication	(08 Hours)
	Introduction,Model Of Real Time Communication,Priority based Service Disciplines for switched network,Weighted Round Robin service disciplies,Medium Access control protocols of Broadcast networks,Real Time Protocols,Communication in multicomputer systems

Syllabus for Unit Test:

Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

M.Tech IT Semester II Subject :Information Security		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 Hrs/week	End Semester Examination : 60 Marks	Theory: 04
Practical :02 Hrs/week	Continuous assessment : 40 Marks	Practical : 01
	Term Work : 25 Marks	Total Credits:05
	Prat/Oral : 25 Marks	
Course Objectives:		
<ul style="list-style-type: none"> • Discuss various administrative, technical, governance, regularity and policy aspects of Information Security Management. 		

- Provide hands on approaches will be discussed to better understand and to devise strategies related to security policy.

Course Prerequisites:

Students should have knowledge of

1 Fundamentals of Telecommunication and computer networks.

Course Outcome:

Students will be able to:

- 1)** Understand mathematical formulation in security algorithms.
- 2)** Understand aspect of information security management including planning, process, policy, procedure and security model as well as hardware and software technologies to safeguard organizational assets.
- 3)** develop skills of security management progression within an organization.
- 4)** Perform email and graphic image recovery as well as investigations.
- 5)** Implement cryptography algorithms.
- 6)** Learn business continuity planning concepts.

UNIT-I	MATHEMATICAL FOUNDATIONS OF INFORMATION SECURITY :	(6 Hours)
	Topics in elementary number theory: O and Ω notations ,Euclidean algorithm ,Congruence's, Euler's phi function , Fermat's Little Theorem , Chinese Remainder Theorem , Applications to factoring ,finite fields , quadratic residues and reciprocity: Quadratic residues ,Legendre symbol , Jacobi symbol. Simple Cryptosystems: Enciphering Matrices, Encryption Schemes, Symmetric and, Asymmetric Cryptosystems, Cryptanalysis, Block ciphers, Use of Block Ciphers, Multiple Encryption, Stream Ciphers, Affine cipher, Vigenere, Hill, and Permutation Cipher, Secure Cryptosystem.	
UNIT-II	SECURITY ELEMENTS:	(6 Hours)
	Authorization and Authentication - types, policies and techniques - Security certification - Security monitoring and Auditing - Security Requirements Specifications - Security Polices and Procedures, Firewalls, IDS, Log Files, Honey Pots .Access control, Trusted Computing and multilevel security - Security models, Trusted Systems, Software security issues, Physical and infrastructure security, Human factors – Security awareness, training , Email and Internet use policies, Third Party Development - Intellectual Property Issues .	
UNIT-III	INFORMATION SECURITY POLICIES: INDUSTRIES PERSPECTIVE:	(6 Hours)
	Introduction to Information Security Policies, About Policies, why Policies are Important ,When policies should be developed , How Policy should be developed - Policy needs – Identify what and from	

	whom it is being protected , Data security consideration, Backups, Archival storage and disposal of data - Intellectual Property rights and Policies – Incident Response and Forensics - Management Responsibilities – Role of Information Security Department.	
UNIT-IV	SECURITY THREATS :	(6 Hours)
	Sources of security threats- Motives - Target Assets and vulnerabilities – Consequences of threats- E-mail threats - Web-threats - Intruders and Hackers, Insider threats, Cyber crime Security Threat Management: Risk Assessment - Forensic Analysis - Security threat correlation – Threat awareness - Vulnerability sources and assessment- Vulnerability assessment tools -Threat identification - Threat Analysis - Threat Modeling - Model for Information Security Planning.	
UNIT-V	PUBLIC KEY CRYPTOSYSTEMS:	(6 Hours)
	The idea of public key cryptography, RSA Cryptosystem , Bit security of RSA , ElGamal Encryption , Discrete Logarithm , Knapsack problem , Zero-Knowledge Protocols . Primality and Factoring: Pseudo primes , the rho (γ) method , Format factorization and factor bases ,the continued fraction method , the quadratic sieve method. Number Theory and Algebraic Geometry: Elliptic curves, basic facts , elliptic curve cryptosystems , elliptic curve primality test ,elliptic curve factorization.	
UNIT-VI	AUDITING AND BUSINESS CONTINUITY PLANNING	(6 Hours)
	: Introduction to information security audit and principles of audit. Business continuity planning and disaster recovery. Case study: 9/11 tragedy. Backup and recovery techniques for applications and storage. Computer forensics: techniques and tools. Forensic tools VMware,Security testing tool BackTrack, Audit Tools: NISSUS and NMAP. Information Security Standards and Compliance: Overview of ISO 17799 Standard. Legal and Ethical issues.	
Assignment List:		
1.	Assume a web-based system that has a state-less front-end web server (which just processes requests as it is with no state being tracked), an application engine (such as a Java servlet engine) that receives requests forwarded by the front-end, and a database that is used store/retrieve/manage data by the application engine. The application engine hosts application for a bank. The web-based system allows for a user to carry out online transactions, online viewing of accounts as well as other common tasks. (a) What types of logging mechanisms should be used for the front-end, the application engine, and for the database in order to audit the requests received, their processing, and the privilege modes/user ids in which requests are processed. (b) What auditing should such a system support?	

2.	Pretend you've just seen a new type of malware that places the malicious code in an audio file, by using different frequencies to correspond to different instructions. Existing vulnerabilities are used to get access to the system and install a small interpreter that reads the infected audio files and executes them. Assume that you are unable to detect/prevent the interpreter (and that it doesn't do anything harmful by itself anyway) - your job is to detect or prevent it from executing malicious audio files. (a) List one or more ways you could <i>detect</i> an infected audio file. Provide a brief (one paragraph) description of each approach.
3.	Write a program to perform substitution ciphers to encrypt the explain text to Caesar cipher and to decrypt it back to plain text.
4.	Write a program to generate Symmetric Keys for the following Cipher algorithms DES, AES, Blowfish, TripleDES.
5.	Write a program to encrypt input string by using SecretKey of the following algorithms, and then decrypt the encrypted string and compare the decrypted string with the input string. Use the following algorithms for encryption and decryption: a.RSA b.AES c.DSA
6.	Write a program to perform transposition ciphers to encrypt the plain text to cipher and to decrypt it back to plain text using Simple Columnar technique.
7.	Assignment based on the presentation on either of following topics: ISO 17799 Standard NESSUS and NMAP Audit Tools ElGamal Encryption Asymmetric Cryptosystems
8.	Case study on secure configuration of Email Server.

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory :04
Practical : 02 Hrs	Continuous assessment : 40 Marks	Practical : 01
	Term Work :25 Marks	
	Prat/Oral : 25 Marks	Total Credits : 05
Course Objectives:		
1. To understand natural language processing and to learn how to apply basic algorithms in this field.		
2. To conceive basics of knowledge representation, inference, and relations to the artificial intelligence.		
3. To get acquainted with the algorithmic description of the main language levels: morphology, syntax, semantics, and pragmatics, as well as the resources of natural language		
Course Prerequisites:		
Students should have knowledge of working of compiler phases		
Course Outcome:		
Students will be able to:		
1. Evaluate language technology components.		
2. Understand various parsing methodologies.		
3. Understand various language models and relate them in probability perspective.		
4. Map and solve the language parsing problem with dynamic programming.		
5. Understand machine learning techniques and can assess which ones are suitable for a given problem.		
UNIT-I	Introduction and Overview:	(08 Hours)
	Introduction, Overview and Linguistics, Grammars and Languages, Basic Parsing Techniques, Semantic analysis and Representation Structures, Natural Language Generation, Natural Language Systems, What is Natural Language Processing ?,Ambiguity and Uncertainty in language.	
UNIT-II	Parsing and CFG:	(08 Hours)
	<p>String Edit Distance and Alignment: Key algorithmic tool: dynamic programming, First a simple example, its use in optimal alignment of sequences. String edit operations, edit distance, examples of use in spelling correction, machine translation.</p> <p>Context Free Grammars: Constituency, CFG definition, use and limitations. Chomsky Normal Form. Top-down parsing; Bottom-Up Parsing, and the Problems with each. Non-probabilistic model.</p> <p>Parsing: Efficient CFG parsing with CYK, another dynamic programming algorithm. Designing a little grammar and parsing with it on some test data.</p>	

UNIT-III	Information Theory :	(08 Hours)
	What is information? Measuring it in bits. Entropy, cross-entropy, information gain. Its application to some language phenomena. Language modeling and Naive Bayes: Probabilistic Language modeling and its applications. Markov models. Estimating the Probability of a Word, and Smoothing. Generative models of language and their Application.	
UNIT-IV	Hidden Markov Models :	(08 Hours)
	Part of Speech Tagging and Hidden Markov Models : The concept of Parts-of-speech, Examples, usage. The Penn Treebank and Brown Corpus. Probabilistic (weighted) finite state automata. Hidden Markov models (HMMs), definition and use. Viterbi Algorithm for Finding Most Likely HMM Path : Dynamic programming with Hidden Markov Models, and its use for part-of-speech tagging, Chinese Word Segmentation, Prosody, information extraction, Weighted Context Free Grammars. Weighted CYK. Pruning and Beam Search.	
UNIT-V	Classifiers and Models:	(08 Hours)
	Maximum Entropy: The maximum entropy principle, and its relation to maximum likelihood. The need in NLP to integrate many pieces of weak evidence. Maximum entropy classifiers and their application to document classification, sentence segmentation, and other language tasks. Maximum Entropy Markov Models & Conditional Random Fields: Part-of-speech tagging, Noun-phrase segmentation and information extraction models that combine maximum entropy and finite-state machines. State-of-the-art models for NLP.	
UNIT-VI	Machine Translation:	(08 Hours)
	Probabilistic models for Translating any Language into English. Alignment, translation, Language generation.	
Text Books:		
1.	Jurafsky, Dan and Martin, James, Speech and Language Processing, Prentice Hall.	
Reference Books:		
1.	Allen, James, Natural Language Understanding, Second Edition, Benjamin/Cumming, 1995.	
2.	Charniack, Eugene, Statistical Language Learning, MIT Press, 1993.	
3.	Manning, Christopher and Heinrich, Schutze, Foundations of Statistical Natural Language Processing, MIT Press, 1999.	

4.	Radford, Andrew et. al., Linguistics, an Introduction, Cambridge University Press, 1999.
	Assignment list :
1.	Implement part of a noisy-channel model for spelling correction.
2.	Write regular expressions that extract phone numbers and regular expressions that extract email addresses.
3.	Using Naïve Bayes algorithm classify selected movie review as positive or negative
4.	Build a maximum entropy Markov model (MEMM) for identifying person names in newswire text.
5.	Implement two translation models, IBM model 1 and IBM model 2, and apply these models to predict English word alignments.
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

M.Tech IT Semester III Subject: Elective - I Advanced MIS		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory : 04
Practical : 02 Hrs	Continuous assessment : 40 Marks	Practical : 01
	Term Work : 25 Marks	
	Prat/Oral : 25 Marks	Total Credits : 05
Course Objectives:		
1) Explain the changing organizational environment and the use of information technology to manage contemporary organizations		
2) Identify the business impacts of business and social networking		
3) Explain the technological foundations of information systems, i.e., hardware, software and telecommunications		
Course Prerequisites:		
Students should have knowledge of		
1) Information System Management		
2) System Analysis and design		
3) Management information system		
Course Outcome:		
Students will be able to:		
1) Explain the organizational context of information systems, including decision making and information processing concepts		
2) Identify, conceptualize, and develop solutions to prepare conceptual design report		
3) Based on conceptual system design the student should able to prepare detailed system design alongwith technological foundations of information systems, i.e., hardware, software,informationprocessing.		
4).To understand implementation evaluation of system and pitfalls in MIS.		
5).Identify applications of MIS in manufacturing sector.		
6)Understand design of business systems using contemporary tools.		
UNIT-I	Introduction:	(08 Hours)
	<p>Foundation of Information System : Introduction to Information System and MIS, Decision support and decision making systems, systems approach, the systems view of business, MIS organization within company, Management information and the systems approach.</p> <p>Information Technology: A manager's overview, managerial overviews, computer hardware & software, DBMS, RDBMS and Telecommunication.</p>	
UNIT-II	Conceptual System Design:	(08 Hours)
	Define the problems, set systems objective, establish system constraints, determine information needs, determine information sources, develop alternative conceptual design and select one document ,the system concept, prepare	

	the conceptual design report.	
UNIT-III	Detailed System Design :	(08 Hours)
	Inform and involve the organization, aim of detailed design, project management of MIS detailed design , identify dominant and trade of criteria, define the sub systems, sketch the detailed operating sub systems and information flow, determine the degree of automation of each operation, inform and involve the organization again, inputs outputs and processing, early system testing, software, hardware and tools propose and organization to operate the system, document the detailed design, revisit the manager user.	
UNIT-IV	Implementation Evaluation and Maintenance of the MIS :	(08 Hours)
	Plan the implementation, acquire floor space and plan space layouts, organize for implementation, develop procedures for implementation, train the operating personnel, computer related acquisitions, develop forms for data collection and information dissemination, develop the files , test the system, cut-over, document the system, evaluate the MIS control and maintain the system. Pitfalls in MIS development.	
UNIT-V	Advanced Concepts in Information Systems :	(08 Hours)
	Enterprise Resources Management(ERP), Supply Chain Management, CRM, Procurement Management System. Applications of MIS in Manufacturing sector, Service sector	
UNIT-VI	Designing of business systems :	(08 Hours)
	Design of business systems using contemporary tools and methods such as SQL, CASE tools, OOD tools, etc. Advanced Case Studies in MIS.	
Text Books/Referemnce Books:		
1)	Kenneth C. Laudon , “Management Information Systems”, Eighth Edition, PHI	
2)	James O'Brien and George Marakas, “Management Information Systems	
3)	Effy Oz, “Management Information Systems”, Course TechEffy	
Assignment List :		
1)	Introduction to MIS	
2)	Generating conceptual system design report	
3)	Case study on detailed system design based on conceptual system	
4)	Implementation ,evaluation and maintainance of MIS.	

5)	Analysis of pitfalls in MIS development
6)	Case study of advanced concepts in information system.
7)	To study applications of MIS in service sector.
8)	Design of business system using contemporary tools and methods such as SQL.
9)	Study of CASE tools and OOD tools.
10	Case study of software used for building information system.
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

M.Tech IT Semester III Subject: Elective-I WIRELESS COMMUNICATION NETWORK

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week Practical : 02 hrs/week	End Semester Examination : 60 Marks	Theory :04
	Continuous assessment : 40 Marks	Practical :01
	Term Work :25 Marks	Total Credits : 05
	Prat/Oral : 25 Marks	

Course Objectives:

To gain an understanding of the principles behind the design of wireless communication systems and technologies.

Course Prerequisites:

Students should have knowledge of

...Computer Networking And Communication

Course Outcome:

Students will be able to:

- 1) Understand mobile cellular architecture.
- 2) Understand the multiple access schemes & Handover, Handoff system.
- 3) Analyze the technology digital cellulare system.
- 4) Understand the technology WLAN ,Bluetooth.
- 5) Understand the GPRS System.
- 6) Understand the technology ADHOC & 802.16 system.

...

UNIT-I	INTRODUCTION OF WIRELESS COMMUNICATION	(Hours)
	Challenges in wireless networking, Wireless communications standards Overview, evolution of cellular system, Cellular system architecture & operation, Performance criteria. Multiple access schemes for wireless communication -TDMA, FDMA, CDMA, SDMA	08
UNIT-II	WIRELESS NETWORK PLANNING AND OPERATION	(Hours)
	frequencies management, channel assignments, frequency reuse, System capacity& its improvement, Handoffs & its types, roaming, co channel & adjacent channel interference .	08
UNIT-III	DIGITAL CELLULAR NETWORKS	(Hours)
	GSM architecture& interfaces, signal processing in GSM, frame structure of GSM, Channels used in GSM, The European TDMA Digital cellular standard.	08
UNIT-IV	WIRELESS LAN TECHNOLOGY	(Hours)

	Overview, WLAN technologies, infrared LANs, Spread Spectrum LANs Narrowband Microwave LANs IEEE 802.11- Architecture, protocols, MAC layer .MAC frame, MAC management. BLUETOOTH Overview, Radio specification, Base band specification, Link manager specification, logical link control & adaptation protocol.	08
UNIT-V	MOBILE DATA NETWORKS	(Hours)
	Introduction, Data oriented CDPD networks, GPRS WIRELESS ACCESS PROTOCOL WAP architecture , Wireless Datagram ,Wireless Transport layer security, wireless transaction ,Wireless Session ,Wireless Application Environment ,WML	08
UNIT-VI	Emerging Wireless Network Technology	(Hours)
	IEEE 802.11 WLAN, ETSI HIPER LAN Technology, IEEE 802.15 WPAN Technology, IEEE 802.16 WMANTechnology, Mobile Adhoc Network, Mobile IP and Mobility Management, Mobile TCP, Wireless Sensor Networks, RFID Technology.	08
Text Books:		
1)	William C.Y.Lee, “Mobile cellular Telecommunication” ,2nd Ed. McGraw-Hill ĳ	
2)	Jochen Schiller, “Mobile Communication” Pearson Education ĳ	
3)	V. K. Garg, J. E. Wilkes, “Principle and Application of GSM”, Pearson Education	
Reference Books:		
1)	William Stalling,” Wireless Communication & Networking”	
2)	Rampantly,” Mobile communication”	
3)	Kamilo Feher,” Wireless digital communication”, PHI, 1999	
Syllabus for Unit Test:		
Unit Test -1	Unit I ,II and III	
Unit Test -2	Unit IV, V and VI	

M.Tech IT Semester III Subject: Elective –I DATA WAREHOUSING AND E-COMMERCE		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory :04
Practical : 02	Continuous assessment : 40 Marks	Term Work : 01
	Term Work : 25 Marks	Total Credits : 5
	Oral/Practical : 25 Marks	
Course Objectives:		
1) Techniques for Developing Proper Data Warehouses		
2) Analyze the E-Commerce Payment Mechanism and Risk		
3) Recognize the business impact and potential of e-Commerce		
Course Prerequisites:		
Students should have knowledge of		
1) Information Systems		
Course Outcome:		
Students will be able to:		
1) Understand the analysis Decision Support System, Types and architecture.		
2) Understand and analyze process for Development of DSS.		
3) To understand Data Warehouse Concept and database.		
4) To understand E-Commerce & Third Parties		
5) To understand Risk and E-Commerce Payment Mechanism		
6) To understand E-Commerce payment mechanism		
UNIT-I		(Hours)
	Types of Decision Support System: The DSS hierarchy, Generalising the categories, Matching the DSS to the Decision type, Individual and group DSS. Matching the DSS to the user Community, Matching DSS to the decision Maker's Psychological type, User modes institutional Vs ad-hoc DSS. DSS Architecture, Hardware and Operating Systems Platform: Defining the DSS Arch. The major options, the internet and client-server computing in DSS, DSS using shared data on separate system, DSS on stand alone system, Open system and DSS, DSS user interface. DSS Software Tools: DSS software categories, standard packages, Specialized tools and generators, programming languages for DSS, DSS user interfaces	08
UNIT-II		(Hours)
	Building & Implementing Decision Support System: The DSS development process, DSS development project particulars. The implementation stage, system conversion. Overcoming resistance to change, DSS implementation issues, using the list of issues, Ethical issues in DSS.	08

UNIT-III	Data Warehousing & Executive Information System Fundamentals: Definitions uses & necessity of a data warehousing, Data warehouse concepts, Executive information systems. The Data Warehouse Database: Contents of the data warehouse database, database structures, and Getting data into data warehouse, Media.	(Hours)
		08
UNIT-IV	E-Commerce & The Role of Independent Third Parties: Introduction, consulting parties & accountant's independence, CPA version project, New assurance project, New assurance services undefined by the AICTE the Elliot committee 7 the Cohen Committee, three views of E-Commerce. E-commerce integrity & security assurance, internal control framework, competition, risk assessment assurance, impact of e-commerce on the traditional assurance function, continuous auditing, third party assurance of web based e-commerce, security of data, business plitics, transactions processing integrity, privacy of data, web-site seal options, better business bearu. Trustee, veri-sign, ACSA, AICPA/CICA web trust, business practices, transaction integrity, information protection, report issuance, implication for the accounting, professional skill sets, expansion of assurance services, consulting and international services	(Hours)
		08
UNIT-V	E-Commerce & Internet: Introduction, traditional EDI system, the origin of EDI, non-EDI systems, value added network(VANS) and pre-established trading partners, partially integrated EDI systems, benefits of EDI systems, Data transfer and standards, Department of Defense transaction,. Examples, financial EDI, EDI systems and Internets, Security concerns, security of data during transmission, audit trials and acknowledgements, authentication, interact trading relationship; consumer to business, business to business, government to citizen benefits, EDI web browser transaction, software, insights EDI and internet systems. Real time EDI inventory links with suppliers, integrated delivery links with federal express, web based sales, Impact of EDI internet applications on the accounting profession, Increased complexity of auditing through the computer, integrity of reliance in the VANs, Extension of audit to trading partners systems, increased technological skill of smaller accounting firms.	(Hours)
		08
UNIT-VI	Risk of Insecure Systems: Introduction, Overview of risks associated with internet transactions, internet associated risks, risks of customers, false or malicious web sites, stealing visitor's hard id, & passwords, stealing visitor's credit card and information, spying on visitor's hard drive, theft of customer data from selling	(Hours)

	<p>agents and ISPs, Privacy and use of cookies, risk to selling agents, customer impersonation, denial of service attacks, data theft, internet associated risks, sabotage by former employees, sniffers, financial fraud, down loading of data, emails proofing, social engineering, risks associated with business transaction data transferred between trading partners, intranet extranet and internet relationship, data interception, message origin authentication, proof of delivery, message integrity & unauthorized viewing of messages, timely delivery of messages, risk associated with viruses and malicious code overflows, viruses, Trojan Horses, hoaxes, buffer overflows, implication for the accounting profession, intranet internet controls web site assurance.</p> <p>E-Commerce Payment Mechanism: Introduction, the SET protocol. SET v/s SSI, version 1.0, payment gateway, Certificate Insurance, Certificate trust chain, Cryptography methods, Dual signature, the set logo, Compliance testing, Status of software implementation, version 2.0, and intermediate releases, magnetic strip cards, smart cards, Electronic cheques, The FSTC's electrons cheques, the FSTC's BIPS specification, audit implications, Electronic bill presentation & payment system.</p>	
		08
Assignment List:		
1)	What is Decision Support System? Explain Types of Decision Support System.	
2)	Case Study: DSS Software Tools	
3)	Explain Building & Implementing Decision Support System	
4)	Case Study: Trustee, veri-sign, ACSA, AICPA/CICA web trust	
5)	Explain EDI, non-EDI systems, value added network (VANS) with example.	
6)	What are the types of digital wallets? Explain	
7)	Relationship-Based Smart Credit Cards	
Text Books and References::		
1)	Efrem G. Mallach, "Decision support & data warehouse system", MGH International	
2)	Green Stein, FeinMan , "Electronic Commerce", MGH International	
3)	W.S.Jawadekar, "Management Information System", MGH International	
4)	Daniel Minoli, "Web Commerce technology handbook", MGH International	
5)	Mathews Leon, "The E-biz Primer- Alexis Leon", MGH International	
Syllabus for Unit Test:		
Unit Test -1	Unit I ,II and III	
Unit Test -2	Unit IV, V and VI	

M.Tech IT Semester III Subject: Elective I: Computer Forensics and Cyber Laws		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory : 04
Practical : 02 hrs/week	Continuous assessment : 40 Marks	Term Work : 01
	Term Work : 25 Marks	Total Credits: 05
	Pract/Oral : 25 Marks	
Course Objectives:		
1) Computer Forensics is a rapidly changing field. Simple things, like stronger encryption introduced into operating systems, create new challenges for forensic examiners every day.		
Course Prerequisites:		
Students should have knowledge of		
1) Practical experience of Computer Network and Network Security		
Course Outcome:		
Students will be able to:		
1) Know the role of computer as forensic investigator		
2) Know techniques for recovering data, tools used for recovery		
3) setting up remote logging in Windows		
4) Apply data recovery mechanism with the help of tools.		
5) Analyze the security audit with the help of logs		
6) Apply copyright protection standard to the innovative network		
UNIT-I	Overview:	(08 Hours)
	Concept of Computer Forensic, Types of Forensic Science, Storage device, Storage device characteristics, types of storage device. Forensic Investigator: Role of Computer Forensic Investigator, line of investigation, investigation steps, responsibilities of Computer Forensic Investigator.	
UNIT-II	Evidence:	(08 Hours)
	Definition of evidence, life cycle of evidence, types of evidence, rules for evidence, evidence. Storage and its Security Incident Response: Introduction, Investigations, Pre-Incident Preparations, Formation of Incident Response Team, Role of Incident Response Team. Data Recovery: Definition of data recovery, data recovery mechanism, techniques for recovering data, tools used for recovery.	
UNIT-III	Investigating Logs:	(08 Hours)
	Audit logs and security, system log, remote logging, configuring Windows, logging, setting up remote logging in Windows, event	

	reporter and Application Logs.	
UNIT-IV	Forensic Tools:	(08 Hours)
	WinHex, X-Ways, Index.dat Analyzer, Data Doctor. Disaster Recovery: Preparing for disaster recovery, backing up data, scheduling backup jobs, restoring data, recovering from server failure, selecting disaster recovery methods.	
UNIT-V	Battling Cyber Squatters and Copyright Protection in the Cyber World :	(08 Hours)
	Concept of domain name and reply to cyber squatters, meta-tagging, legislative and other innovative moves against cyber squatting, freedom and control on the internet, works in which copyright subsists and meaning of copyright, copyright ownership and assignment, license of copyright, copyright term and respect for foreign works, copyright infringement, offences and remedies, copyright protection and content on the internet, copyright notice, disclaimer and acknowledgment, downloading for viewing contents, hyper-linking and framing, liability of ISPs for copyright, violation in the cyber world, legal developments in the US, Napster and its cousins, computer software piracy	
UNIT-VI	Digital Signature, Certifying Authorities and E-Governance :	(08 Hours)
	Digital signature, digital signature certificate, certifying authorities and liabilities, digital signature Governance in India.	

Assignment List:

1)	Analyze various types of storage structures
2)	Understand line of investigation in the form of steps
3)	Analyze life cycle of evidence for security
4)	Apply data recovery mechanism with the help of tools.
5)	Analyze the security audit with the help of logs
6)	Analyze WinHex in detail
7)	Apply disaster recovery techniques to preserve data
8)	Apply copyreight protection standard to the innovative network.

Text Books/References:

1)	Jay A. Siegel, "Forensic Science: The Basics "
2)	Joe Nickell and John F. Fischer, "Crime Science: Methods of Forensic Detection"
3)	Anthony J. Bertino, "Forensic Science: Fundamentals and Investigations"
4)	Stuart H. James and Ph. D., Jon J. Nordby, "Forensic Science: An Introduction to Scientific and Investigative Techniques", 2nd edition
5)	Colin Evans, "The Casebook of Forensic Detection: How Science Solved 100 of the

	World's Most Baffling Crimes”
6)	Edward Amoroso, “Cyber Security, Computer Network Security and Cyber Ethics”, 2nd edition by Joseph Migga Kizza
7)	Robert McCrie, “Security Operations Management”, Second Edition Andy Jones and Debi Ashenden, “Risk Management for Computer Security:
8)	Andy Jones and Debi Ashenden, “Risk Management for Computer Security
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

M.Tech IT Semester III Subject: Elective II: BIOINFORMATICS		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory :04
Practical : 02	Continuous assessment : 40 Marks	Term Work : 01
	Term Work : 25 Marks	
	Oral/Practical : 25 Marks	Total Credits : 05
Course Objectives:		
1. Receive an introduction and historical perspective to the field of bioinformatics		
2. Learn the key methods and tools used in bioinformatics		
3. Understand the theoretical basis behind bioinformatics		
4. Analyze protein sequences, identify proteins, and retrieve protein structures from databases. View and interpret these structures.		
...		
Course Prerequisites:		
Students should have knowledge of		
1) Advanced Molecular Biology (or equivalent)		
...		
Course Outcome:		
Students will be able to:		
1) Understand the Basic concepts of Bioinformatics		
2) Understand and analyze Sequence Alignment and Database Searching		
3) To understand Protein Structure		
4) To understand Protein-protein Interactions and Algorithms.		
5)To understand Protein function and Computer tools for phylogenetic analysis		
...		
UNIT-I	Bioinformatics Basics: Basic concepts, Protein and amino acid , DNA & RNA, Sequence, structure and function. Bioinformatics databases: Introduction, Motivation, Type of databases, Nucleotide sequence databases, Protein sequence databases, Sequence motif databases, Protein structure databases, Other relevant databases.	(08 Hours)
UNIT-II	Sequence Alignment and Database Searching: Single sequence alignments, Biological motivation, Pairwise alignments, Scoring matrix, Gap penalty, Dynamics programming, Needleman- Wunsch, Smith-Waterman, Heuristic methods, FASTA, BLAST, Statistics of sequence alignment score, E-Value, P-Value, Multiple sequence alignments, ClustalW, Profile, Profile-sequence	(08 Hours)

	<p>alignment, Profile-profile alignment, PSI-BLAST, Hidden Markov Models.</p> <p>Protein structure alignments : Structure superposition, structure alignment, Different structure alignment algorithms.</p>	
UNIT-III	<p>Protein Structure:</p> <p>Protein secondary structure predictions: Protein secondary structure, Hydrogen bond, secondary structure element, Methods for predicting secondary structure.</p> <p>Protein tertiary structure modeling: Basic concepts Protein folding and dynamic simulation, Comparative modeling, Threading, Ab initio modeling, Combined modeling approaches, CASP: A blind protein structure prediction competition. Experimental methods for protein structure determination: X-ray crystallography, Nuclear magnetic resonance (NMR).</p>	(08 Hours)
UNIT-IV	<p>Protein-protein Interactions: Experimental identification of protein-protein interactions, Yeast two- hybrid assay, High-throughput mass spectrometry, Interaction networks and system biology.</p> <p>Protein quaternary structure modeling: Basic concepts, Degrees of freedom, Presentation of protein conformations, Hydrophobicity factor, Shape complementary, Docking Scoring function, Protein-protein docking algorithms, Protein-ligand docking algorithms, Drug design, Multiple-threading algorithms, Homology modeling of protein-protein interactions, Protein and ligand binding, CAPRI.</p>	(08 Hours)
UNIT-V	<p>Biomolecular Simulations: Basic concepts, Units and derivatives , Force field and energy landscape, Truncation of nonbonded interactions.</p> <p>Conformational Sampling: Introduction, Minimization and algorithms, Molecular dynamics, Ensembles (statistical mechanics), Monte Carlo simulations.</p>	(08 Hours)

	Solvation: Introduction, Periodic boundary condition, Ewald summation, Implicit solvent model and continuum electro statics, Monte Carlo simulation on parallel computers. Advanced Techniques: Introduction, Replica-exchange simulations, Restraint potentials, Free energy calculations, Membrane simulations.	
UNIT-VI	<p>Biological Membranes: Introductions, Biological roles, Structural features, Membrane lipids, General structures, Aggregation states, Polymorphism, Thermal transitions, Electrostatic effects, Molecular dynamics, Membrane proteins, MD simulation of Membrane proteins.</p> <p>Protein function: Sequence to function, Structure to function, Protein function identification methods and databases. Phylogenetics, Sequence-based taxonomy, Models, assumptions, and interpretations, From multiple alignment to phylogeny, Computer tools for phylogenetic analysis.</p>	(08 Hours)
Assignment List:		
1)	Explain Bioinformatics Basics.	
2)	Explain concept of Sequence Alignment and Database Searching.	
3)	Explain Protein Structure and Protein quaternary structure modeling	
4)	Explain Bio-molecular Simulations.	
5)	Explain Conformational Sampling.	
6)	Explain in detail Biological Membranes.	
7)	Explain Protein function with examples.	
Text Books and References::		
1)	David Mount, "Bioinformatics", Cold Spring Harbor Press"	
2)	James Jisdall, "Beginning Perl for Bioinformatics"	
3)	David W. Mount, "Bioinformatics- Sequence & Genome Analysis"	
Syllabus for Unit Test:		
Unit Test -1	Unit I ,II and III	
Unit Test -2	Unit IV, V and VI	

M.Tech IT Semester III Subject: Elective – II Advanced Computing Architecture		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week Practical : 02 hrs/week	End Semester Examination : 60 Marks	Theory :04
	Continuous assessment : 40 Marks	Practical : 01
	Term Work : 25 Marks	Total Credits : 05
	Practical / Oral : 25 Marks	
The aim of the course is to design distributed computing architecture to improve the efficiency of system.		
Course Objectives:		
1) Analyze the structure of distributed computing		
2) Apply the efficient solution with respect to suitable distributed computing Architecture.		
Course Prerequisites:		
Students should have knowledge of		
2) Basic knowledge of distributed system		
Course Outcome:		
Students will be able to:		
1) Understand distributed environment.		
2) Analyze performance of distributed Architectures		
3) Analyze the computing parameters.		
4) Understand data and computing measures		
5) Analyze bottlenecks during the enhancement		
6) Apply the suitable architecture to enhance the performance.		
UNIT-I	Introduction to cloud computing	(Hours)
	Introduction to to various distributed computing architectures – Grid, cluster, cloud. Structure of cloud, computing parameters of cloud, boost in the performance due to cloud.	06
UNIT-II	Architecture of cloud computing	(Hours)
	Service Models – Infrastructure As a Service (IaaS) , Platform as a Service (PaaS), Software as a Service (SaaS) Deployment Models – Public cloud, private cloud, Hybrid cloud, community cloud	06
UNIT-III	Big Data	(Hours)
	Concept of Big Data, Challenges to deal with Big Data , solution with respect to big data, data Analytics.	06
UNIT-IV	Data Intensive Computing	(Hours)
	Introduction to hybrid data, concept of Hadoop Distributed	06

	File Structure (HDFS), data node, name node, job tracker, Task Tracker.	
UNIT-V	Architecture of Map Reduce Algorithm	(Hours)
	Concept of unstructured data, Introduction to Map Reduce Algorithm, Implementation with word count example.	06
UNIT-VI	Case Study of advanced computing Architecture	(Hours)
	Cloudstack, Eucalyptus, Azure, big data analytics, Hadoop, Implementation of MapReduce -II	06
Assignment List:		
1)	Design cluster using apache web server	
2)	Design cloud computing environment using public cloud	
3)	Design cloud computing environment using private cloud	
4)	Analyse the Complete data of BVUCOE using big data analytics	
5)	Use HDFS to deal with huge data.	
6)	Implement Map Reduce Algorithm to prove the rise in the efficiency	
7)	Implement Map Reduce II	
8)	Analyze various computing environments like cloudstack , openstack.	
Text Books:		
1)	Architecture the cloud, Michael J. Kevis, Wiley publication	
2)	Microsoft Big Data Solution, Adam Jorgensen, Wiley publication	
3)	Hadoop: The Definitive Guide, Tom White, O'REILLY' publication	
Reference Books:		
1)	Building the Infrastructure for cloud security, Raghu Yelori, Enrique castro-Leon	
2)	Hadoop Operations, Eric Sammer, O'REILLY' publication	
3)	MapReduce Design Patterns: Building Effective Algorithms and Analytics Donald Miner, O'REILLY' publication	
Syllabus for Unit Test:		
Unit Test -1	Unit I ,II and III	
Unit Test -2	Unit IV, V and VI	

M.Tech IT Semester III Subject: Elective II: Usability Engineering		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory : 04
Practical : 02 hrs/week	Continuous assessment : 40 Marks	Term Work : 01
	Term Work : 25 Marks	Total Credits: 05
	Pract/Oral : 25 Marks	
Course Objectives:		
1) To present the basic principles and practical knowledge regarding the design, development and evaluation of human-computer interfaces in the light of usability		
Course Prerequisites:		
Students should have knowledge of		
2) Practical experience of software system analysis and design		
Course Outcome:		
Students will be able to:		
2) Define and distinguish between the different types of user interface		
2) Develop a more usable interface		
3) To identify techniques and technologies that can satisfy usability and accessibility specifications		
4) To apply usability methods in developing interactive systems		
5) To identify and analyze the various components of the overall context of use of an interactive system		
6) To develop usability and accessibility specifications that can be used in evaluating and developing interactive systems-		
UNIT-I	Introduction	(08 Hours)
	Introduction, Importance, Human computer interface, Characteristics of GUI, Direct manipulation graphical system, Web user interface, Mobile UI, Popularity of graphics Generations of User Interfaces: Batch Systems, Line-Oriented Interfaces, Full-Screen Interfaces	
UNIT-II	Development Processes	(08 Hours)
	Managing Design Processes: Organizational Design to Support Usability, The three Pillars of Design, Development Methodologies, Ethnographic Observation, Participatory Design, Scenario Development, Social Impact Statement for Early Design Review, Legal issues Evaluating Interface Designs: Expert Reviews, Usability Testing and Laboratories, Survey Instruments, Acceptance Tests, Evaluation during Active Use, Controlled Psychologically Oriented Experiments	

UNIT-III	User Interface Software and Specifications	(08 Hours)
	Languages and tools for specifying and building interfaces, Dialogue independence, UIMS (user interface management system) approach, Languages and software abstractions for user, interfaces, Programming support tools	
UNIT-IV	Develop System Menus and Navigation Schemes	(08 Hours)
	Menus: Structures, Functions, Content, Formatting of Menus, Phrasing the Menu, Selecting Menu Choices, Navigating Menus, Kinds of Graphical Menus Windows: Window Characteristics, selection of window, Components of a Window, Window Presentation Styles, Types of Windows, Window Management, Organizing Window Functions, Window Operations, Web Systems	
UNIT-V	Interaction Styles, Devices and Techniques	(08 Hours)
	Interaction Styles: Question and answer, Form-based, Command language Menus, Natural language, direct manipulation Interaction Devices: Keyboard and function keys, pointing device, speech recognition digitization and generation, image and video displays, drivers New Interaction Techniques: New modes of human-computer communication, Voice, Gesture, Eye movement, Tangible, user interfaces, Brain-computer interfaces	
UNIT-VI	UI Feedback, Guidance and Assistance	(08 Hours)
	Providing the Proper Feedback: Response Time, Dealing with Time Delays, Blinking for Attention, Use of Sound UI Guidance and Assistance: Preventing Errors, Problem Management, Providing Guidance and Assistance, Instructions or Prompting, Help Facility	
Assignment List:		
1)	Introduction to fundamentals of Usability Engineering	
2)	Study on User Interface Software and Specifications	
3)	Design a sport watch interface	
4)	Design a web application interface for online grocery shopping	
5)	Design a touch screen interface for an Automatic Teller Machine (ATM) geared towards kids aged 10-15 whose parents have opened a savings account for them	
6)	Design an interface and list user experience for a universal remote to be used in home settings	
Text Books:		
1)	Shneiderman, C. Plaisant, M. Cohen, and S. Jacobs, <i>Designing the User Interface:</i>	

	<i>Strategies for Effective Human-Computer Interaction</i> , Addison-Wesley, Reading, Mass. (any recent edition)
2)	Y. Rogers, H. Sharp, and J. Preece, <i>Interaction Design: Beyond Human-Computer Interaction</i> , John Wiley & Sons. (any recent edition)
Reference Books:	
1)	Don Norman, <i>The Design of Everyday Things</i>
2)	Jakob Nielsen, <i>Usability Engineering</i>
3)	Jakob Nielsen and Raluca Budiu, <i>Mobile Usability</i>
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

M.Tech IT Semester III Subject: Elective II: Advanced Database Management System

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory : 04
Practical : 02 hrs/week	Continuous assessment : 40 Marks	Practical : 01
	Term Work : 25 Marks Prat/oral : 25 Marks	Total : 05

Course Objectives:

- 1) Introduce principles and foundations of distributed databases and parallel databases
- 2) Understand the operations in Transaction management

Course Prerequisites:

Students should have knowledge of

- 1) Basic database management system concepts and their operations.

Course Outcome:

Students will be able to:

- 1) Understand distributed database architecture and design
- 2) Understand the processing and optimization of distributed queries
- 3) Understand the performance issues in high performance databases
- 4) Understand the working of parallel database management system
- 5) Understand the transaction management process
- 6) Understand latest advancement in database management systems

UNIT-I	Distributed databases: Architecture and Design	(Hours)
	Distributed data processing, What is a DDBS; Advantages and disadvantages of DDBS, Problem areas Distributed DBMS Architecture: Transparencies in a distributed DBMS, Distributed DBMS architecture, Global directory issues, Distributed Database Design: Alternative design methodologies and strategies, Distributed design issues, Types and role of Fragmentation, Types and role of replication, Data allocation	08
UNIT-II	Distributed query processing and optimization	(Hours)
	Distributed Query processing: Problem of query processing, Distributed query, Query decomposition, Distributed Query Processing Methodology, translation global queries to fragment	08

	<p>queries</p> <p>Distributed Optimization: Objectives of query optimization, Factors governing query optimization, Ordering of fragment queries, optimization of join operation, Load balancing, Distributed query optimization algorithms</p>	
UNIT-III	Issues and Concerns in High Performance Databases	(Hours)
	<p>Database Tuning and Performance: benchmarking, TPC benchmarks, object oriented benchmarks, TP Monitors, TPC and Wisconsin benchmarks, performance measurement, and performance tuning.</p> <p>Semantic data Control : View management, Data security, Semantic Integrity Control</p> <p>Indexing structures: Btrees, hash files, multi-attribute indexing.</p>	08
UNIT-IV	Parallel Database Management System	(Hours)
	<p>Introduction: Types of parallelism in database systems, Parallel Query Processing, multiprocessor architectures, parallel relational operators, parallelism in main-memory DBMS, parallel handling of integrity constraints, Integrated I/O parallelism</p> <p>Parallel Query Processing and Optimization: Inter-query parallelism, intra-query parallelism, intra-operation parallelism, inter-operation parallelism, objectives of parallel query optimization, parallel query optimization, load balancing, parallelism in join queries, testing the quality of query optimization</p>	08
UNIT-V	Advanced concepts in Transaction Management	(Hours)
	<p>Transaction Management: ACID properties, pessimistic locking, optimistic locking, flat transactions, nested transactions, deadlock detection and management and their algorithms, Recovery Methods</p> <p>Concurrency control and Reliability in Distributed Databases: Concurrency control in centralized database systems vs Concurrency control in DDBSs, Distributed concurrency control algorithms, Deadlock management, Reliability issues in DDBSs; Types of failures, Reliability techniques, Commit protocols, Recovery protocols</p>	08
UNIT-VI	Emerging trends in databases	(Hours)
	<p>Mobile Databases, Distributed Object Management, Multi-databases, Semantic databases, Hadoop Distributed File Systems, MapReduce Overview, NoSQL Databases, Design and Comparison of NoSQL Databases, Active and Deductive databases</p>	08

Assignment List:	
1)	To study and implement different types of Views in SQL
2)	Study and implementation of all types of Joins using SQL
3)	Implementation of hash files
4)	Study of transaction and implementing transaction operations using SQL/PL-SQL
5)	Installation and study of Hadoop.
6)	Installation and study of any NoSQL database
7)	Comparison and Implementation of locking techniques
8)	Case study of the operations of any real time distributed DBMS and parallel DBMS
Text Books:	
1)	Stefano <i>Ceri</i> and Giuseppe <i>Pelagatti</i> , “Distributed databases principles and systems”, Tata Hill
2)	Raghu Ramkrishnan, "Database Management System", McGraw-Hill
3)	Silberschatz, Korth and Sudharshan, “Data base System Concepts”, Mc-GrawHill
Reference Books:	
1)	M. Tamer Özsu and Patrick Valduriez, “Principles of Distributed Database Systems”, Springer Science & Business Media, 2011, 3 rd edition
2)	Elmasri and Navathe, “Fundamentals of Database Systems”, Addison-Wesley, 2007
3)	Thomas Connolly, Carolyn Begg, “Database Systems: A Practical Approach to Design, Implementation and Management “, Pearson Education, LPE
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

M.Tech IT Semester III Subject: Elective-II- Advanced Operating Systems		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory : 04
Practical :02	Continuous assessment : 40 Marks	Practical : 01
	Term Work :25 Marks	
	Prat/Oral :25 Marks	Total Credits : 05
Course Objectives:		
1) To provide students with an overview of operating systems with change in technologies and use		
Course Prerequisites:		
Students should have knowledge of		
1) Basic concepts of operating systems.		
2) Basic algorithms in operating systems.		
Course Outcome:		
Students will be able to:		
1) Understand core structure of operating systems		
2) Understand distributed operating systems.		
3) Understand distributed resource management.		
4) Understand multiprocessor and database operating systems.		
5) Understand real time and mobile operating systems.		
UNIT-I		
INTRODUCTION		(Hours)
Overview – Functions of an Operating System – Design Approaches – Types of Advanced Operating System – Synchronization Mechanisms – Concept of a Process, Concurrent Processes – The Critical Section Problem, Other Synchronization Problems – Language Mechanisms for Synchronization – Axiomatic Verification of Parallel Programs – Process Deadlocks – Preliminaries – Models of Deadlocks, Resources, System State – Necessary and Sufficient conditions for a deadlock – Systems with Single-Unit Requests, Consumable Resources, Reusable Resources.		08
UNIT-II		
DISTRIBUTED OPERATING SYSTEMS		(Hours)
Introduction – Issues – Communication Primitives – Inherent Limitations - Lamport’s Logical Clock; Vector Clock; Casual Ordering Global State; Cuts; Termination Detection. Distributed Mutual Exclusion – Non Token Based Algorithms – Lamport’s Algorithm – Token-Based Algorithms – Suzuki-Kasami’s Broadcast Algorithm – Distributed Deadlock Detection – Issues – Centralized Deadlock Detection Algorithms – Distributed Deadlock-Detection Algorithms, Agreement Protocols – Classification – Solutions – Applications.		08

UNIT-III	DISTRIBUTED RESOURCE MANAGEMENT	(Hours)
	Distributed File Systems – Architecture – Mechanisms – Design Issues – Distributed Shared Memory – Architecture – Algorithm – Protocols – Design Issues, Distributed Scheduling – Issues – Components - Algorithms	08
UNIT-IV	FAULT RECOVERY AND FAULT TOLERANCE	(Hours)
	Basic Concepts – Classification of Failures- Basic Approaches to Recovery; Recovery in Concurrent Systems; Synchronous and Asynchronous Check pointing and Recovery; Check pointing in Distributed Database Systems; Fault Tolerance; Issues – Two phase and Non-blocking Commit Protocols; Voting Protocols; Dynamic Voting Protocols.	08
UNIT-V	MULTIPROCESSOR AND DATABASE OPERATING SYSTEMS	(Hours)
	Structures – Design Issues – Threads –Processing Synchronization – Process Scheduling – Memory Management – Reliability / Fault Tolerance; Database Operating Systems –Introduction – Concurrency Control – Distributed Database Systems – Concurrency Control Algorithms.	08
UNIT-VI	REAL TIME AND MOBILE OPERATING SYSTEMS	(Hours)
	Basic Model of Real Time Systems - Characteristics- Applications of Real Time Systems – Real Time Task Scheduling - Handling Resource Sharing - Mobile Operating Systems – Micro Kernel Design - Client Server Resource Access – Processes and Threads - Memory Management – File system.	08
Assignment List:		
1)Study of hardware and software requirements of different operating systems		
2) Implement CPU scheduling policies.		
3)Implement Lamport’s Algorithm – Token-Based Algorithm		
4) Implement Suzuki-Kasami’s Broadcast Algorithm		
5) Study of distributed file systems – architecture		
6)Study of fault recovery and fault tolerance		
7) Implement file storage allocation techniques.		
8) Study of Concurrency Control Algorithms.		

9) Case study of mobile operating systems	
10) Case study of real time operating systems	
Text Books:	
1)	Mukesh Singhal and Niranjan G. Shivaratri, “Advanced Concepts in Operating Systems – Distributed, Database, and Multiprocessor Operating Systems”, Tata McGraw-Hill, 2001.
2)	Rajib Mall, “Real-Time Systems: Theory and Practice”, Pearson Education India, 2006.
Reference Books:	
1)	Abraham Silberschatz; Peter Baer Galvin; Greg Gagne, “Operating System Concepts”, Seventh Edition, John Wiley & Sons, 2004.
2)	Daniel P Bovet and Marco Cesati, “Understanding the Linux kernel”, 3rd edition, O’Reilly, 2005.
3)	Neil Smyth, “iPhone iOS 4 Development Essentials – Xcode”, Fourth Edition, Payload media, 2011.
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

**Proposed Structure of M.Tech Information Technology

8	Fluid Particle Technology	Multiphase Reactor Engineering

SEMSETER-I

K10501 APPLIED MATHEMATICS FOR CHEMICAL ENGINEERING		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures : 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical : 2 Hour /Week	Unit Test: 20 Marks	Practical: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	
Topics covered		
UNIT-I	Introduction: Approximation and round-off errors, significant figures, accuracy and precision, error definitions, truncation errors. Taylor series, error propagation, total numerical error, formulation errors and data uncertainty. Tests of significance. Analysis of variance.	(08 Hours)
UNIT-II	Numerical solution of linear & nonlinear algebraic equations: Linear systems of equations, solutions by Creamer's Rule, Matrix methods, Gaussian, Gauss-Jordan, Jacobean, Gauss-Seidel and Relation methods. Non-linear equations: Bisection, Regula-falsi, Secant and Newton- Raphson methods.	(08 Hours)
UNIT-III	Curve fitting: Least square regression: Linear regression, polynomial regression. Interpolation: Newton's divided-difference interpolating polynomials, Lagrange interpolating polynomials, coefficient of an interpolating polynomial. Fourier approximation.	(08 Hours)
UNIT-IV	Numerical integration and differentiation: Newton-cotes integration of equations. Integration of equations: Romberg integration, Gauss Quadrature. Partial differential equations: Finite difference: Elliptic equations, parabolic equations, finite element method. Diffusion/convection form of partial differential equations in chemical engineering. Characteristics and partial differential equation types and their analytical solution.	(08 Hours)
UNIT-V	Numerical solution of ordinary differential equations: Formulation of linear and non-linear first and second order ordinary differential equations, higher order linear, differential equations for systems involving momentum, heat and mass transfer with and without chemical reactions and their analytical solutions. Ordinary differential equations: Runge-Kutta, Euler's and Milne's predictor corrector methods. Boundary-value and eigenvalue problems, general methods of boundary-value problems.	(08 Hours)
UNIT-VI	Mathematical analysis and engineering problem-solving: Design and analysis of experiments: data analysis, treatment, generalization and interpretation on engineering data. Formulation of physical problems: mathematical statement of the problem, representation of problems, problem solving with appropriate mathematical method, analysis of results with statical tests.	(08 Hours)

Term Work:	
Oral examination will consist of assessment of the termwork (duly certified by the teacher and HOD) and oral exam based on the term work/practical. The term work shall consist of the following: Minimum 8 practical based on solving numerical methods mentioned in the syllabus using C, C++ language, or TK solver software, or any chemical Engineering Software.	
Assignment: : Each student will submit assignments based on different topics in consultation with faculty, in the area of application of mathematics in chemical engineering, keeping track of the recent technological trends and developments..

K10502 ADVANCED MOMENTUM AND HEAT TRANSFER

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	

Topics covered

UNIT-I	<p>Shear stress in laminar flow: Newtonian and non Newtonian fluids; Rheological models; theories of transport properties of gases and liquids; effect of pressure and temperature.</p> <p>One dimensional momentum transport in laminar flow (shell balance): General method of shell balance approach to momentum transfer problems; momentum flux and velocity distribution for flow of Newtonian and non-Newtonian fluids in pipes, planes, slits and annulus; Fluid flow of two immiscible fluids.</p>	(08 Hours)
UNIT-II	<p>Differential equations of fluid flow: Control volume approach; Differential continuity equation; Navier-Stokes Equation and Bernoulli's equation; Applications of differential equations of fluid flow</p> <p>Effect of turbulence on momentum transfer: Description of turbulence; Turbulent shearing stresses; The mixing length hypothesis, velocity distribution from the mixing length theory; The universal velocity distribution; The turbulent boundary layer on a flat plate</p>	(08 Hours)
UNIT-III	<p>Fluid flow in closed Conduits: Friction factors for fully developed laminar, turbulent and transition flow in circular conduits; Friction factors for flow in the entrance to a circular conduit; Friction factors for packed columns.</p> <p>Macroscopic momentum balances: The macroscopic mass, momentum and mechanical energy balances; Use of macroscopic balances for steady-state problems; Use of macroscopic balances for unsteady-state problems.</p>	(08 Hours)
UNIT-IV	<p>Mechanism of energy transport: Fourier's law of heat conduction; Thermal conductivity of liquids and solids; Effective thermal conductivity of composite solids.</p> <p>Temperature distribution in solids and in laminar flow: Heat conduction through composite walls; Heat conduction in a cooling Fin; Forced convection; Free convection.</p>	(08 Hours)
UNIT-V	<p>The equation of change for non isothermal systems: The equation of energy; The equation of motion for forced and free convection; Use of equations of change to solve the steady-state problems</p> <p>Unsteady Heat Conduction in Solids: Heating of a semi-infinite slab; Heating of a finite slab; Unsteady heat conduction near the wall with sinusoidal heat flux</p> <p>Temperature distribution in turbulent flow: Time smoothed equation of change for incompressible non isothermal flow; Time smoothed temperature profile near a wall; Empirical expressions for the turbulent heat flux; Temperature distribution for turbulent flow in tubes</p>	(08 Hours)
UNIT-VI	<p>Interphase transport in non-isothermal systems: Heat transfer coefficients for forced convection in tubes and through packed beds; Heat transfer coefficients for free and mixed convection; Heat transfer coefficients for condensation of pure vapors</p>	(08 Hours)

	on solid surfaces. Analogies of momentum and heat transfer: Reynolds and Chilton Colburn analogy	
--	--	--

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of advanced momentum and heat transfer, keeping track of the recent technological trends and developments.

K10503 THERMODYNAMICS OF PHASE EQUILIBRIA

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	

Topics covered

UNIT-I	Thermodynamics of Multicomponent mixtures: Ideal mixtures and excess mixture properties, Fugacity of species in gaseous, liquid and solid mixtures, Criteria for phase equilibrium in multicomponent systems, Modified Rault's law and its significance, Gibbs Duhem equation, Hydrogen bonding and charge transfer complexing Equilibrium	(08 Hours)
UNIT-II	Vapor liquid Equilibrium of mixtures Vapor Liquid equilibrium (VLE) of ideal mixtures, Low pressure VLE in non-ideal mixtures, High pressure VLE using equation of states, Solubility of gas in liquid, Liquid-Liquid Equilibrium, Vapor Liquid-Liquid Equilibrium, Models for activity coefficient, UNIFAC method, UNIQUAC equation, Osmotic pressure, osmotic equilibrium	(08 Hours)
UNIT-III	Mixture phase equilibrium involving solids Solubility of solid in liquid and supercritical fluid, Solid Liquid Equilibrium, Partitioning of solid between two liquid phases, distribution coefficient, Freezing point depression of solvent due to presence of solute, freezing point of liquid mixtures in presence of solid.	(08 Hours)
UNIT-IV	Chemical Reaction Equilibria: Chemical equilibrium in single phase system, Heterogeneous chemical reactions, Chemical equilibrium when several reaction occurs in single phase, Combined chemical and phase equilibrium. Phase rule and Duhem's theorem for reacting systems, Degree of freedom analysis for non-reacting and reacting systems	(08 Hours)
UNIT-V	Surfaces, Interfaces and Adsorption Thermodynamics of interfaces, Gibbs surface model and surface tension, Surface energy of solids, Surface effects on heterogeneous phase equilibrium, effect of particle size on vapor pressure, effect of bubble size on the boiling temperature of pure substances, solubility and nucleation, effect of particle size on melting temperature, Gibbs adsorption equation	(08 Hours)
UNIT-VI	Thermodynamics of acid, alkali interaction, Energy analysis Acidity of solutions, ionization of chemicals, solubilities of weak acids, weak bases, pharmaceuticals as function of pH, Gibbs-Donnan equilibrium. Defining Energy, Control Volume Energy Rate Balance, Exergetic Efficiency, Introduction to Energy Costing .	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of thermodynamics of phase equilibria, keeping track of the recent technological trends and developments.

K10504 MULTIPHASE REACTORS

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	

Topics covered

UNIT-I	Introduction to Multiphase Reactor Engineering: Types, Classification, Application of Industrial Importance.	(08 Hours)
UNIT-II	Thermodynamics and kinetics: Notable industrial heterogeneous systems and thermodynamic role. Application of equilibrium criteria to chemical reactions. The Gibbs energy change and equilibrium constant. Estimation of equilibrium constant for heterogeneous system by defining standard state of the phases involved. Determination of rate controlling step: intrinsic kinetics for heterogeneous systems.	(08 Hours)
UNIT-III	Hydrodynamic Characteristics: Hydrodynamic characteristics of different multiphase reactors: Mechanically Agitated Contactors (MAC), Bubble Columns, Slurry Reactors, Fluidized Beds, Loop Reactors and Modified Versions.	(08 Hours)
UNIT-IV	Mixing Studies : Effect of geometrical, system, and operating parameters on phase mixing in multiphase reactors. Quantification of phase mixing. Development of a mathematical model.	(08 Hours)
UNIT-V	Heat Transfer and Mass Transfer Studies : Effect of geometrical, system, and operating parameters on heat transfer coefficient in multiphase reactors. Quantification of heat transfer coefficient. Application of correlations available to different multiphase reactors. Experimental techniques used for estimation of mass transfer coefficient and selection of suitable technique for a multiphase reactor. Effect of geometrical, system, and operating parameters on mass transfer coefficient in multiphase reactors. Quantification of mass transfer coefficient. Application of correlations available to different multiphase reactors.	(08 Hours)
UNIT-VI	Design Aspects of Multiphase Reactors: Pressure drop, Fractional phase hold-up, mass and heat transfer coefficient, extent of mixing, etc.	(08 Hours)

Term Work:

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of multiphase reactors, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SEMESTER-II

K10505 MODELLING AND SIMULATION OF CHEMICAL PROCESSES

TEACHING SCHEME:			EXAMINATION SCHEME:			CREDITS ALLOTTED:		
Lectures: 4 Hours/Week			End Semester Examination: 60 Marks			Theory : 04		
Practical: 2 Hours/Week			Unit Test: 20 Marks			TW/PR/OR: 01		
Total : 6 Hours/Week			Assignment: 10 Marks			Total credits: 05		
			Attendance: 10 Marks					
			TW : 25 Marks					
			Oral: 25 Marks					
			Total : 150 Marks					
Topics covered								
UNIT-I	Basics of phenomenological modelling Introduction to modeling, systematic approach to model building, fundamentals of mathematical modeling-principles of formulations, fundamental laws: continuity equations, energy equation, equation of motion, transport equations, equation of state, equilibrium, chemical kinetics, advantages and limitations of models and applications of process models of stand-alone unit operations and unit processes, classification of models-simple vs. rigorous, lumped parameter vs. distributed parameter, Steady state vs. dynamic, concept of degree of freedom for steady state and unsteady state systems.						(08 Hours)	
UNIT-II	Empirical modelling building and analysis Development of steady state and dynamic lumped and distributed parameter models based on first principles, analysis of ill-conditioned systems, development of grey box models, empirical model building, statistical model calibration and validation, population balance models; Examples: simple hydraulic tank, variable hydraulic tank, mixing Vessel, mixing with reaction, steam jacked vessel						(08 Hours)	
UNIT-III	Mathematical models of heat-transfer equipments: shell & tube heat exchangers, evaporators, partial condensers; Mathematical models of mass-transfer equipments: batch and continuous distillation columns, reactive distillation columns, packed absorption columns; Mathematical models of reactors: batch reactors, continuous-stirred tank reactors, plug-flow reactors, reactor with axial dispersion, etc.						(08 Hours)	
UNIT-IV	Basics of simulation Fundamentals of simulations – Ab-initio methods, basis sets, Hartree-Fock theory, density functional theory, geometry optimization, vibrational analysis; elementary, classical statistical mechanics, elementary concepts of temperature, ensembles and fluctuations, partition function, ensemble averaging, ergodicity; molecular dynamics methodology – force field, integrating algorithms, periodic box and minimum image convention, long range forces, non bonded interactions, temperature control, pressure control, estimation of pure component properties, radial distribution function; molecular dynamics packages.						(08 Hours)	
UNIT-V	Parameter estimation and sensitivity analysis Parameter estimation, parameter sensitivity analysis, statistical validity, discrimination between two models, solution strategies for lumped parameter models, stiff differential equations, solution methods for initial value and boundary value						(08 Hours)	

	problems, solving the problems using <i>MATLAB or other chemical engineering software</i> , solution strategies for distributed parameter models..	
UNIT-VI	Modern approaches Broad overview of tools, deterministic and stochastic approaches, statistical decision theory, Markov processes, queuing theory, renewal theory, reliability theory, Non-traditional techniques: Simulated annealing, ant colony method or ANN, particle swarm method, neural networks, genetic programming, genetic algorithm, fuzzy logic, Wavelet, principal component analysis, etc.	(08 Hours)

Term Work: Oral examination will consist of assessment of the termwork (duly certified by the teacher and HOD) and oral exam based on the term work/practical. The term work shall consist of the following:

Minimum 6 practical based on solving numerical methods mentioned in the syllabus using MATLAB/SCILAB, any language, or TK solver software, or any chemical Engineering Software.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of modeling and simulation of chemical processes, keeping track of the recent technological trends and developments.

Unit Test -II	UNIT – IV ,V,VI

K10506 CHEMICAL REACTOR ANALYSIS AND DESIGN

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	

Topics covered

UNIT-I	Chemical factor affecting the choice of the reactor, Model for batch reactor optimum operation policies and control strategies, optimal batch operation time, optimal temperature policies.	(08 Hours)
UNIT-II	Transient and steady state analysis, Optimal design of reactors, Multiphase reactors: fluidized, trickle bed, slurry etc	(08 Hours)
UNIT-III	Steady state non isothermal reactor design, the energy balance, adiabatic operation, tubular reactor with heat exchange, equilibrium conversion, CSTR with heat effects, multiple steady states.	(08 Hours)
UNIT-IV	Unsteady state non isothermal reactor design. Energy balance on batch reactor, Adiabatic operation of batch reactor, Batch reactor with interrupted isothermal operation, Semi batch reactors with a heat exchanger, Unsteady operation of CSTR, Unsteady operation of plug flow reactors	(08 Hours)
UNIT-V	Design of fixed bed catalytic reactors, isothermal ,adiabatic ,non isothermal	(08 Hours)
UNIT-VI	Non ideal flow in reactors, Estimation of dispersion/back mixing, design aspects of reactors with non ideal flow, micro and meso mixing in reactors.	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of chemical reactor analysis and design, keeping track of the recent technological trends and developments.

5.	Bruce Nauman, “ Chemical Reactor Design”, John Wiley & Sons.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

K10507 SYNTHESIS AND DESIGN OF CHEMICAL PROCESSES

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	

Topics covered

UNIT-I	Introduction to SDCP Significance of SDCP in chemical process industry, Hierarchy of chemical process design: Hierarchy, approach to process design, performance. Preliminary Process Synthesis, Synthesis of reaction: Function of process recycle, vapor cycles and purges, vapor versus liquid cycles, batch processes, process yield	(08 Hours)
UNIT-II	Choice of reactor: Reaction path, types of reaction systems, reactor Continuous or Batch Processing, Chemical state, Process Operations, Synthesis Steps, Synthesis Tree, Heuristics, Algorithmic Methods.	(08 Hours)
UNIT-III	Recycle structure, Recycle material balances, Reactor heat effects, Equilibrium limitations, Reactor design, Separation system, vapor recovery system, Liquid separation system, Distillation column sequencing, azeotropic systems, Residue Curves for Heterogeneous Systems.	(08 Hours)
UNIT-IV	Heat exchanger networks Pinch Methodology: Problem representation, temperature enthalpy diagram, simple match matrix. Heat content diagram, Temperature interval diagram. Pinch Design and Optimization: Networks for maximum energy recovery, Pinch design method, Flexibility criteria of the pinch, case studies	(08 Hours)
UNIT-V	Industrial Safety and risk management Hazards: Chemical hazards classification. site selection and plant layout. Industrial lighting and ventilation. Occupational diseases and prevention methods. Instrumentation and control for safe operation. Personal protective equipments. Management and Risk Analysis: Case studies pertaining to chemical industries. Legislations and economics: Factory Act. Environmental Act. Provisions under various acts.	(08 Hours)
UNIT-VI	Introduction to scale-up methods, pilot plants, models and principles of similarity. Industrial applications. Computer–Aided Design application in chemical process industries, complete plant simulation.	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of synthesis and design of chemical processes, keeping track of the recent technological trends and developments.

K10508 ADVANCED MASS TRANSFER

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures : 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical : 2 Hour /Week	Unit Test: 20 Marks	Practical: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	

Topics covered

UNIT-I	Diffusion: Steady State diffusion with heterogeneous chemical reaction, Steady state diffusion accompanied by homogeneous Chemical reaction. Unsteady state molecular diffusion in isotropic media, unsteady state diffusion for typical cases of mass transfer in infinite, semi-infinite and finite plane media and in spherical and cylindrical media.	(08 Hours)
UNIT-II	Ionic Separations : Controlling factors, applications, Theory mechanism and equipments for electrophoresis, dielectrophoresis and electro dialysis, commercial applications and design considerations.	(08 Hours)
UNIT-III	Adsorption Techniques : Mechanism, Thermal-Swing Adsorption, Pressure-Swing Adsorption, Continuous, Countercurrent Adsorption Systems, Slurry Adsorption , Fixed-Bed Adsorption (Percolation), Simulated-Moving-Bed Systems, affinity chromatography and immuno chromatography, types of equipment and commercial processes, recent advances and process economics.	(08 Hours)
UNIT-IV	Multicomponent Distillation: Tray by Tray calculation, feed plate location, operating reflux and plates, recent advances in column design and operation-Petlyuk, divided wall, kaibel, pre fractionators, post fractinator. Azeotropic distillation, Extractive distillation, Molecular distillation, Reactive distillation.	(08 Hours)
UNIT-V	Membrane Separations : Classification of membrane processes; Liquid permeation membrane processes or dialysis – Series resistance in membrane processes, Dialysis processes, Types of equipment for dialysis; Gas permeation membrane processes – Types of membranes and permeability for separation of gases, Types of equipment for gas permeation membrane processes (flat membranes, spiral-wound membranes, hollow-fibre membranes); Types of flow in gas permeation; Complete-mixing model, cross-flow model and countercurrent flow model for gas separation by membranes; Effect of processing variables on gas separation by membranes.	(08 Hours)
UNIT-VI	Novel Separation Techniques : Supercritical fluid extraction, Reactive extraction, Zone melting, separation based on thermal diffusion, separation based on surface science, adductive crystallization.	(08 Hours)

Term Work :

Oral examination will consist of assessment of the term work (duly certified by the teacher and HOD) and oral exam based on the term work/practical. The term work shall consist of the following.

Seminar presented and duly report prepared on any topic given from syllabus.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of advanced mass transfer, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SEM-III

K10601 ELECTIVE - I ADVANCED PROCESS CONTROL		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	
Topics covered		
UNIT-I	Response of Control Loop Components and Transfer Functions: Open loop response, most useful forcing functions, step function, sinusoidal function and the pulse function, respective responses of the forcing functions. Response of a more complex system to forcing functions.	(08 Hours)
UNIT-II	Types of Controls: Feed forward control: Advantages and drawbacks, typical examples. Feedback control: Advantages and drawbacks, typical examples.	(08 Hours)
UNIT-III	Adaptive and Inferential Control Systems: Adaptive - Feed forward, feedback Inferential - Need for a model Examples for illustration.	(08 Hours)
UNIT-IV	Response Analysis: Stability and Testing Step response analysis Frequency response analysis Bode criterion, Nyquist Diagram, Root-Locus, Routh-Hertzwitz criterion. Pulse function Laplace transforms, transfer function of various system.	(08 Hours)
UNIT-V	Dynamics of Various Systems: Dead time, distance-velocity lag, inverse response systems, dynamic analysis, Qualitative characteristics, Distributed parameter systems.	(08 Hours)
UNIT-VI	Control Strategies for various unit operations and processes: Distillation, Drying, Absorption column, Stirred tanks. Processes: Process Design, Product quality control. Computer control: Direct Digital Control (DDC), Supervisory Digital Control, Economic justification for supervisory digital control.	(08 Hours)
Term Work: based on the term work/practical. The term work shall consist of the following.		
<ul style="list-style-type: none"> • Ability of the student to explain the theory and related course material. • The process control modules are now extensively used in industry. The student should demonstrate their working principles and the utility citing at least 4 chemical industries. • The controllers used in chemical industry need careful monitoring. • Students should briefly describe the type of maintenance for controllers. 		
Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of advanced process control, keeping track of the recent technological trends and developments.		

Text Books/References:

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

K10601 ELECTIVE – I : NON CONVENTIONAL ENERGY SOURCES		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical:2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	
Topics covered		
UNIT-I	Renewable Sources of Energy: Solar energy: Thermodynamic and heat transfer aspects of solar collection; Energy storage; Solar distillation; Solar drying; Wind energy; Tidal, Wave and ocean thermal energy; Geothermal energy.	(08 Hours)
UNIT-II	Fuel Cells: Introduction, Principles; Types of fuel cells; phosphoric acid, molten salt, solid oxide and other types of fuel cells; Anodes and cathodes; Fuel cells as alternative energy source.	(08 Hours)
UNIT-III	Biomass and biofuels: Introduction, Biofuel classification; Biomass production for energy farming; Direct combustion for heat; Pyrolysis (destructive distillation); Thermochemical processes; Alcoholic fermentation; Anaerobic digestion for biogas; Vegetable oils and biodiesel; Economics of bio-mass energy systems.	(08 Hours)
UNIT-IV	Hydro-power: Introduction, Principles, Assessing the resource for small installations, An impulse turbine, Reaction turbines, Hydroelectric systems, The hydraulic ram pump, Social and environmental aspects	(08 Hours)
UNIT-V	Tidal power: Introduction, The cause of tides, Enhancement of tides, Tidal current/stream power, Tidal range power, World range power sites 447 Ocean thermal energy conversion (OTEC):	(08 Hours)

	Introduction, Principles, Heat exchangers, Pumping requirements, Practical considerations.	
UNIT-VI	Utilization of Wastes: Utilization of fly ash, blast furnace slag in cement and concrete, Wastes and residues	(08 Hours)

Term Work: The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of non conventional energy sources, keeping track of the recent technological trends and developments

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

K10601 ELECTIVE I:INDUSTRIAL WASTE WATER TREATMENT

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical:2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	

Topics covered

UNIT-I	Introduction, Source of Industrial waste water, Physical, Chemical & Biological characteristics Of Industrial Waste Water. Measurement of polluting strength of Ind.Waste water (physical, chemical & biological)	(08 Hours)
UNIT-II	Physical Unit operations: Sedimentation & Design of Settling Chambers. Filtration & Design of Filters. Coagulation, Flocculatores, Froth Flotation	(08 Hours)
UNIT-III	Conventional Waste Water Treatment: Primary Treatment (Physical).Design Principles of Grit chambers & screens. Principles of Aeration .Secondary treatments (Biological), Kinetics of Growth & Food utilization, Design Principles of A.S.P. Trickling Filters, oxidation ponds, stabilization ponds, Aerobic, anaerobic Lagoons	(08 Hours)
UNIT-IV	Sludge Treatment & Disposal: Anaerobic digestion, Aerobic Digestion, Sludge disposal, composting	(08 Hours)
UNIT-V	Advanced Waste Water Treatment:- Carbon adsorption, Ion exchange, membrane processes. Nitrogen removal, Phosphorous removal, Chemical oxidation, Recovery of materials from process effluents	(08 Hours)
UNIT-VI	Solid Waste Management: Characteristics, Solid waste collection & transport, Solid Waste Processing & recovery, Disposal of Solid waste. Hazardous waste management & Risk assessment. Types of hazardous waste, health Effects, Treatment methods & Final disposal	(08 Hours)

Term Work: The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of industrial waste water treatment, keeping track of the recent technological trends and developments

Unit Test -II	UNIT – IV,V,VI

K10601 ELECTIVE I: HETEROGENEOUS CATALYSIS

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	
Topics covered		
UNIT-I	Adsorption, Desorption: Definition, rates of adsorption and desorption, surface areas for physical adsorption. Experimental aspects of adsorption and allied phenomena on catalyst surfaces	(08 Hours)
UNIT-II	Significance of Pore Structure and Surface Area in Heterogeneous Catalysis: Importance of pore structure and surface area, experimental methods to determine surface area, methods of ascertaining pore volume and diameter .Kelvin equation, pore size distribution by gas adsorption, pressure porosimeter, density measurement. Pore structure of adsorbents and catalysts: Hysteresis and shape of capillaries, surface area from hysteresis loops, modes for characterizing pore structures. Reaction rates in pores catalysts: Mass transfer, concentration profiles, reaction rates, pressure and temperature gradients, catalyst deactivation	(08 Hours)

UNIT-III	Role of Lattice Imperfections in Heterogeneous Catalysis: Classification of lattice imperfections, role of point dislocations and point defects, lattice imperfections and polymerization catalysts, role of geometric and electronic factors in catalytic activity.	(08 Hours)
UNIT-IV	Dynamics of Selective and Poly-functional Catalysis: Catalyst selectivity, selective formation of intermediate products, effect of pore size on electivity, mass transport of intermediate product in non-trivial poly-step reactions, selectivity of poly-functional catalysts Zeolites in catalysis: Structural aspects and synthesis of zeolites, modification of zeolites, diffusion in zeolites, applications.	(08 Hours)
UNIT-V	Fischer-Tropsch synthesis: Synthesis and Decomposition of Ammonia Catalyst cracking: catalyst composition and chemical properties, mechanism of cracking reactions. Catalysis of electrode reactions. Kinetics of catalytic reactions: Rate of chemical reaction, overall reaction rate, mass transfer through gas phase, mass transfer in pores.	(08 Hours)
UNIT-VI	Mass and heat transfer in solid catalyst beds. Design calculations: Isothermal conditions, adiabatic conditions, non-adiabatic conditions. Thermal selectivity of packed bed reactors. Fluidized bed reactors. Optimum design: Continuous variation of parameter along the reaction path, temperature profiles for reversible and consecutive reactions, optimum catalyst concentration in bi-functional catalyst systems	(08 Hours)

Term Work: The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of heterogeneous catalysis, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV, V,VI

K10601 ELECTIVE I: CATALYST MATERIALS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	

Topics covered

UNIT-I	Bimetallic Catalysts: Introduction, nature, method of preparation and characterization, catalytic properties of bimetallic systems. Supported bimetallic catalyst, chemical nature, factors affecting efficiency and uniformity of co clustering, structure, surface composition, catalytic properties.	(08 Hours)
UNIT-II	Perovskite Related Oxides: Solid state properties, Zeolite, crystal structure, non-stoichiometry, magnetic and electrical properties, ferro electric and acoustic properties, applications. Crystal chemistry and catalytic properties of oxides with scheelite structure, crystal chemistry, olefin oxidation, and mechanism. Catalytic properties of synthetic layered silicates and alumino silicate, synthetic mica-montmorillonite and nickel reducibility, layered metalsilicate catalyst.	(08 Hours)
UNIT-III	Biological Catalyst: Enzymes, incentives for using enzymes, methodology, chemical and physical properties, activity, pH-activity behavior, stability, application.	(08 Hours)
UNIT-IV	Catalyst Design: Optimization of catalyst distribution in a single pellet, the case of single and multiple reaction, isothermal and non-isothermal conditions, complex reaction system, factors affecting catalytic dispersion, optimal distribution of catalytic loading.	(08 Hours)
UNIT-V	Optimization of Catalyst Distribution in a Reactor: Single reaction and multiple reaction, isothermal and non-isothermal conditions. Catalytic deactivation, non-selective and selective poisoning.	(08 Hours)
UNIT-VI	Membrane Reactor: Membrane reactor with non-uniform catalytic distribution, optimal catalyst distribution in pellets for an inert membrane reactor and catalytic membrane reactor, preparation of catalytic membrane.	(08 Hours)

Term Work: The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in

the area of catalyst materials, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

ELECTIVE II: MEMBRANE SEPERATION		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical:2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	
Topics covered		
UNIT-I	Introduction Separation Processes, Introduction to membrane processes, Definition of Membrane Merits of the Processes. Classification of the membrane separation process.	(08 Hours)
UNIT-II	Materials & Materials Properties Membrane Polymers, Molecular weight, Porous & Porous membrane, Thermal, Chemical & Mechanical Properties of Inorganic membranes, Biological membranes. Retention & rejection co-efficient. Factor affecting the	(08 Hours)

	separation processes. Effect of polymeric structure on Tg Glass transition temperature depression.	
UNIT-III	Preparation of Synthetic Membranes Phase inversion membranes, Preparation by evaporation, Precipitation from the vapour phase. Precipitation by controlled evaporation, Thermal & immersion precipitation. Flat membranes, Tubular membranes, Zeolite membranes, Dense membrane. Preparation Technique for Composite Membrane, Inorganic Membranes	(08 Hours)
UNIT-IV	Characteristics of porous membrane, Bubble Point Method, Mercury intrusion method, Permeability Method, Ultrafiltration, Gas-adsorption desorption, Characterisation of ionic membranes, characterisation of nonporous membrane.	(08 Hours)
UNIT-V	Transport in membrane, Knudsen flow, Friction Model, Transport through non-porous membrane. Determination of diffusion co-efficient & solubility co-efficient. Transport in ion exchange membranes.	(08 Hours)
UNIT-VI	Membrane Processes, M.F, U.F, R.O, Nano filtration Dialysis, Electrodialysis, Piezodialysis, Diffusion Dialysis, Membrane reactors & membrane bioreactors, Polarization & Fouling Phenomena in Membranes, C.P in electro dialysis, Temperature Polarization, Membrane Fouling, Method to reduce Fouling.	(08 Hours)

Term Work: The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of membrane separation, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

K10602 ELECTIVE II: BIOPROCESS ENGINEERING

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	

Topics covered

UNIT-I	Introduction, Biotechnology & Bioprocess Engineering types & structure of cells ,Growth kinetics, Growth cycle phase, effect of substrate concentration, cell concentration and death rate on growth of M.O.	(08 Hours)
UNIT-II	Simple Enzyme Kinetics, Michaelis-Menten Kinetics, evaluation of M.M equation parameters, line weaver, Burk plot, Eadie-Hofstee plot, factors influencing enzyme activity, immobilized enzyme technology ,immobilized kinetics	(08 Hours)
UNIT-III	Selection, Scale-up & Control of Bioreactors Ideal, on-ideal Bioreactors, Fed Batch reactor, sterilization reactor, Aeration & Agitation & mass transport in cellular system. Scale up difficulties, Bioreactor instrumentation & control.	(08 Hours)
UNIT-IV	Recovery & Purification of Product Separation of insoluble products. Cell disruption, separation of soluble products, finishing steps for purification, integration of reaction & separation	(08 Hours)
UNIT-V	Industrial Production of Chemicals Ethanol, Acetic acid, Citric acid, Gluconic acid. Solvents such as Glycerol, acetone, butanol. Anti-biotics such as penicilline, streptomycine, tetracycline. Production of High Fructose Corn Syrup (HFCS), production of Bakers Yeast Single Cell Protein	(08 Hours)
UNIT-VI	Medical & other applications of Bioprocess Engg. introduction, Tissue Engineering, Gene Therapy, Stem cell, Use of microbes in mineral beneficiation & oil recovery, Biofertilizers & Biopesticides, Biopolymer Biological treatment of Industrial Waste	(08 Hours)

Term Work: The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in

the area of bioprocess engineering, keeping track of the recent technological trends and developments.

Unit Test -II	UNIT – IV,V,VI

K10602 ELECTIVE II: MULTICOMPONENT SEPERATION

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	
Topics covered		
UNIT-I	Characteristics and selection of separation process: Importance and variety of separation, economic significance, characteristics, inherent separation factor, selection, factors influencing the choice of separation process, solvent selection, selection of equipment.	(08 Hours)
UNIT-II	Multicomponent separation: General short-cut equation, Edmister method, distillation, absorption, extraction, alternate short-cut method, Fenske and Underwood equation.	(08 Hours)
UNIT-III	Multicomponent separation: Distillation, Rigorous method, Lewis-Matheson method, Thiele-Geddes method, Amundson-Pontinen method.	(08 Hours)
UNIT-IV	Azeotropic and extractive distillation: Activity coefficient, equilibrium relationship, binary and ternary azeotropes, selection of solvent, calculations..	(08 Hours)
UNIT-V	Multicomponent separation: Extraction, Rigorous method, stripping factor equation, material balance, single and cross-current multiple contact, calculations.	(08 Hours)
UNIT-VI	Multicomponent separation: Absorption, Rigorous method for absorption, calculations.	(08 Hours)
Term Work: The term work shall consist of the following. Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the		

product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of multicomponent separation, keeping track of the recent technological trends and developments

K10602 ELECTIVE II: FOOD PROCESS ENGINEERING

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical:2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	

Topics covered

UNIT-I	Introduction: Characteristics and nutritional properties of food texture, taste, flavour and aroma. Geometric, physical and functional properties of food material. Preparation for food processing, energy conservation, material and energy balance	(08 Hours)
UNIT-II	Processing Methods: Heating : Balancing and pasteurization, freezing, dehydration, canning, additives. Fermentation: Extrusion cooking, hydrostatic pressure cooking. Dielectric heating microwave processing and asptic processing, infrared radiation processing, concept and equipment used	(08 Hours)

UNIT-III	Drying: Moisture content: Definition, method of determination, direct and indirect methods. Equilibrium moisture content: Hysteresis Effect. Psychometric of air water vapour mixture, Drying mechanism, constant rate period and falling rate period , Method and equipments used, factor affecting rate of drying	
UNIT-IV	Food conservation Operation: Sieve reduction, fibrous foods, dry foods and liquid foods. Theory and equipment, membrane	(08 Hours)
UNIT-V	Material handling: types of candling and conveying system food products, and their design, belt conveyors, screw conveyors, bucket elevator and pneumatic conveyor.	(08 Hours)
UNIT-VI	Preservation of food material: Preservation by drying, preservation by low temperature, chemical preservation .Thermal death time curve	(08 Hours)

Term Work: The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of food process engineering, keeping track of the recent technological trends and developments

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

K10602 ELECTIVE II: FLUIDIZATION ENGINEERING

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	

Topics covered

UNIT-I	Introduction and Application : Phenomenon of Fluidisation, Liquid like behavior of a fluidized bed, comparison with other methods , Advantages and Disadvantages, Types of Fluidisation. Gas behavior Of Fluidised bed : Fixed beds, minimum fluidisation velocity, Terminal velocity, and pressure drop, importance of distributor, voidage, TDH, viscosity and fluidity of fluidized beds.	(08 Hours)
UNIT-II	Bubbles and Emulsion phase in Dense bubbling beds: Single rising bubble, Stream of bubbles from single source, Ordinary Bubbling bed. Experimental findings. Bubbling bed model for Emulsion phase	(08 Hours)
UNIT-III	Flow pattern of gas through fluidized bed: Experimental findings , Bubbling bed model for gas interchange. Evaluation of inter change coefficient. Radial and Axial dispersion of gas. Mass and heat transfer b/w fluid and solid.	(08 Hours)
UNIT-IV	Conversion of gas in bubbling beds: Two region model, Model using distribution. Catalytic conversion, reaction rate, contacting efficiency, application to successive reactions, control of bubble size, baffling and scale-up.	(08 Hours)
UNIT-V	Entrainment and Elutriation : Entrainment at or above TDH, Entrainment below TDH. Model for entrainment from dense fluidized bed and its applications	(08 Hours)
UNIT-VI	Application in physical operations: Synthesis reactions, cracking and reforming of hydrocarbons, carbonization and gasification. Gas solid reactions	(08 Hours)

Term Work: The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of fluidization engineering, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

K 10604 DISSERTATION STAGE –I		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical:7 Hours/Week	TW :25 Marks	TW: 21
Total : 7Hours/Week	Total :25 Marks	Total credits: 21
<p>This stage will include comprehensive report on literature survey, design and fabrication of experimental set up and/or development of model, relevant computer programs and the plan for stage II.</p>		

K 10603 SEMINAR		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical:5 Hours/Week	TW :25 Marks	TW: 5
Total : 5Hours/Week	Oral:25Marks	Total credits: 5
	Total :50 Marks	
<p>The students will be required to select advanced research topics for the seminar and present the seminar during the semester. A detailed report should also be submitted and assessment will be based on the quality in terms of the research and development.</p>		

SELF STUDY PAPER-I

SELF STUDY PAPER -I : OPTIMIZATION TECHNIQUES IN PROCESS DESIGN		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total: 4 Hours/Week	Internal assessment: 40 Marks	Total credits:04
	Unit Test: 20 Marks	
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	
Topics covered		
UNIT-I	Introduction to optimization Scope and Hierarchy of optimization, Essential features of optimization Problems, General Procedure for solving optimization problems, obstacles to optimization, Developing Models for optimization, Classification of Models, How to build Model, Selecting functions to fit empirical data, degree of Freedom, Formulation of objective function .	(08 Hours)
UNIT-II	Classification of Optimization Techniques , Single variable, Multivariable optimization with no constraints ,equality constraints ,inequality constraints	(08 Hours)
UNIT-III	Linear Programming Simplex method, Geometry of LPP, solution to linear simultaneous equations, Pivotal reduction of a general system of equations, sensitivity Analysis	(08 Hours)
UNIT-IV	Non Linear Programming One dimensional minimization method, unimodal function, Dichotomous search, Fibonacci Method, Golden section Method, Interpolation Method, Scanning and bracketing Method	(08 Hours)
UNIT-V	Non linear Programming unconstrained optimization & constrained Optimization Direct Search Method, Random Search method, Descent Method, Conjugate Gradient Method , Introduction to NLP constrained optimization Direct and Indirect Methods .	(08 Hours)
UNIT-VI	Examples and case study for different engineering applications..	(08 Hours)
Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of optimization techniques in process design, keeping track of the recent technological trends and developments.		
Text Books/References:		
1.	Edgar T F , Himmelblau D N , “Optimization of Chemical Processes”, MC Graw Hill Publication .	
2.	S S Rao, Optimization theory and Application, Wiley Eastern Publication	

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER -I: NON CONVENTIONAL ENERGY SYSTEMS

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	

Topics covered

UNIT-I	Renewable Sources Of Energy Renewable sources of energy such as hydro, solar, wind, biomass, tidal and geothermal – their availability and limitation. Energy crisis and energy demand projection.	(08 Hours)
UNIT-II	Solar Energy Solar radiation, photovoltaic cell, pyranometer, solar thermal collectors, solar air heaters, solar constant, solar cell, applications of solar energy.	(08 Hours)
UNIT-III	Wind Energy Wind map of India, mean wind speed and wind density during different months in specific areas. Types of wind mills, their assembly and application as electric converters, pumping motors. Concept of wind farms, its applications.	(08 Hours)
UNIT-IV	Bio-Mass Energy Bio-mass as a source of energy, energy plantation, pyrolysis classification and anaerobic fermentation, types of biogas plant, their comparative status, design and application.	(08 Hours)
UNIT-V	Other Alternate Sources Of Energy Tidal power, sites for tidal power plants in India, micro-hydel power station, geothermal energy, limitations and applications of such power plants.	(08 Hours)
UNIT-VI	Energy Conversation And Auditing Conservation of energy in – domestic application and industries, use of fuel efficiently in vehicles, waste recycling fuel gas and heat recovery, energy demand management, energy accounting and auditing.	(08 Hours)

Text Books/References:

1.	John Twidell & Tony Weir, Renewable Energy Resources, Second edition, Taylor & Francis, 2006
2.	Douglas C., Energy Technology Handbook, Tata McGraw Hill Publishers

6.	G.D. Rai, Solar Energy Utilization, Khanna Publishers, Delhi
7.	A.W. Culp, Principles of energy conservation, Tata MGH

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of non conventional energy systems, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER -I: MECHANICAL ASPECTS IN CHEMICAL ENGINEERING

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test : 20 Marks	Total credits: 04
	Assignment : 10 Marks	
	Attendance :10 Marks	
	Total :100 Marks	

Topics covered

Topics covered		
UNIT-I	Mechanical aspects of piping design and layout, Pipe and its representation, pipe fittings, methods of pipe joining, piping insulation, Piping insulation, piping symbols, design of piping systems, piping isometrics, plot plan and Pipe racks.	(08 Hours)
UNIT-II	Chemical equipment design - mechanical aspects, Design of Support for process vessels, basic theory for vertical vessels, design of skirt support, Bracket or lug support, leg support, ring support, horizontal support, saddle support, leg support, Ring support, engineering materials, classification and commercial applications.	(08 Hours)
UNIT-III	Principles of mechanical engineering in chemical engineering, Power conversion devices such as steam turbines, IC engines, different types of pumps, Air conditioning and refrigeration, ON-OFF valves, Non return and other type of valves.	(08 Hours)
UNIT-IV	Energy conservation and heat pumps, Energy conservation in India and World, mechanical vapor compression , heat pumps, various thermodynamic cycles, actual vapor compression heat pumps with liquid sub cooling, various types of heat pumps.	(08 Hours)

UNIT-V	Mechanical aspects in chemical process engineering, Alternative routes in process engineering , general approach to plant design, process research and pilot studies, process design and development , preparation of operating manual instructions, cost cutting machines, trouble shooting , green engineering and process intensification.	(08 Hours)
UNIT-VI	Mechanical engineering aspects in chemical engineering and technology, Study of general purpose tools and special purposes tools and machines, lathes, milling, drilling and accessories. EDM , TWEDM, hobbling, electroplating, ,ECM, arc welding, gas welding, brazing, soldering, riveting, TIC, MIG welding processes, equipment used and applications, drop forging, press forging , role forging, and industrial applications.	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of mechanical aspects in chemical engineering, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER -I: GREEN CHEMISTRY AND TECHNOLOGY

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test : 20 Marks	Total credits: 04
	Assignment : 10 Marks	
	Attendance :10 Marks	
	Total:100 Marks	

Topics covered

UNIT-I	Introduction: Definition, the twelve basic principles of green chemistry. Use of Renewable Feedstock, Reduction of Derivatives, Catalysis, Design for Degradation, Real-time Analysis for Pollution Prevention, Inherently Safer Chemistry for Accident Prevention.	(08 Hours)
UNIT-II	Green synthetic methods: Microwave synthesis, electro-organic synthesis, Design and development of environmentally friendly chemical pathways: challenges and opportunities. Materials for green chemistry and technology: Catalysis, environmental friendly catalysts, Bio-catalysis, biodegradable polymers, alternative solvents.	(08 Hours)
UNIT-III	Biochemical conversion: anaerobic digestion, alcohol production from biomass; Chemical conversion process: hydrolysis and hydrogenation; Biophotolysis: Hydrogen generation from algae biological pathways; Storage and transportation; Applications.	(08 Hours)
UNIT-IV	Green innovation & sustainability: Criteria for choosing appropriate green energy technologies, life cycle cost; the emerging trends – process/product innovation-, Eco/green technologies for addressing the problems of Water, Energy, Health, Agriculture and Biodiversity- WEHAB (eco-restoration/ phyto-remediation, ecological sanitation, renewable energy technologies.	(08 Hours)
UNIT-V	Global warming; greenhouse gas emissions, impacts, mitigation and adaptation; future energy Systems- clean/green energy technologies; International agreements/conventions on energy and sustainability - United Nations Framework Convention on Climate Change (UNFCCC); sustainable development.	(08 Hours)
UNIT-VI	Environmental reporting and ISO 14001; climate change business and ISO 14064; green financing; financial initiative by United Nations Environment Programme (UNEP); green energy management; green product management , green tax incentives and rebates (to green projects and companies); green project management in action; business redesign; eco-commerce models.	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of green chemistry and technology, keeping track of the recent technological trends and developments.

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER I- CAVITATION TECHNIQUES

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4 Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance: 10 Marks	
	Total : 100 Marks	

Topics covered

UNIT-I	Introduction The physical phenomenon , Definition, Vapor pressure, The main forms of vapor cavities, Cavitation regimes, Typical situations favorable to cavitation , The main effects of cavitation in hydraulics , Specific features of cavitating flow, Pressure and pressure gradient, Liquid-vapor interfaces, Thermal effects, some typical orders of magnitude, Non-dimensional parameters: Cavitation number, Cavitation number at inception, Relative under pressure of a cavity.	(08 Hours)
UNIT-II	Acoustic Cavitation Cavitation Bubble Temperature, Classification of Acoustic Cavitation, Sonoluminescence, Sonochemistry, Experimental Factors that Control Sonochemistry, Sites where Sonochemical Reactions Occur, The Classification of Sonochemical Reactions.	(08 Hours)
UNIT-III	Synthesis of Inorganic Materials Ultrafine powders and nanostructured materials, metal oxides, metal powders, supported nano powders etc.	(08 Hours)

UNIT-IV	Synthesis of organic Materials Homogeneous reactions, heterogeneous sono chemistry, Synthesis using alkylation reactions, addition reactions, reduction and oxidation reactions etc.	(08 Hours)
UNIT-V	Environmental protection and remediation Degradation of organic pollutants, Water purification, application of cavitation alone, combined application of cavitation and ozone, combined application of cavitation and ultraviolet light, combined application of cavitation and advanced oxidation processes(AOPs)	(08 Hours)
UNIT-VI	Other applications of cavitation <u>Polymers:</u> Degradation of polymers, factors affecting polymer degradation, polymer synthesis, ultrasonic processing of polymers. <u>Sonoelectrochemistry:</u> Electroplating in presence of ultrasound, zinc, iron, copper, nickel etc. Sonoelectro - organic synthesis.	(08 Hours)
Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of Cavitation techniques, keeping track of the recent technological trends and developments.		
Text Books/References:

Syllabus for Unit Test:		
Unit Test -I	UNIT – I ,II,III	
Unit Test -II	UNIT – IV,V,VI	

SELF STUDY PAPER-I: SAFETY ENGINEERING IN INDUSTRIES

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

Topics covered

UNIT-I	Types of chemical Process Industries, various hazards in industries, handling of Hazardous chemicals, case study (one or two), chemical composition of hazards, case Study (one or two), first aid measures, fire fighting measures, accidental release Measures, personal protection and storage.	(08 Hours)
UNIT-II	Process Selection, plant operation, plant selection, construction, process system Engineering.	(08 Hours)
UNIT-III	Industrial pollution, pollution control aspects, pollution control acts, various Toxic materials, handling of toxic materials, and industrial gases.	(08 Hours)
UNIT-IV	Safety program, engineering ethics, accident and loss statistics, acceptable Risk, nature of accidental process, one or two case studies	(08 Hours)
UNIT-V	Government regulations, identification, MSD sheets, evaluation and control.	(08 Hours)
UNIT-VI	Relief concept, definitions, location of relief, relief types, relief scenario, Data for sizing relief, relief systems, design considerations and recommendations	(08 Hours)

Text Books/References:

1.	Environmental Engineering,Howard S Peavy, Donald R Rowe and George Tchobanogloglons, Mc Graw Hill Book company.

4.	Introduction to process Engineering and Design ,Thakore S.B and Bhatt B. I. Mc Graw Hill Publishing Company Ltd. New Delhi

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of safety engineering in industries, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER -I: PETROLEUM ENGINEERING

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

Topics covered

UNIT-I	Distribution of Reserves Worldwide distribution of oil and gas reserves, Subsurface data sampling and data interpretation, Measurement scaling	(08 Hours)
UNIT-II	Origin of Hydrocarbons , accumulation and migration of hydrocarbons, Reservoir traps.	(08 Hours)
UNIT-III	Properties of reservoir rocks and fluids, Rock – fluid interface, Reservoir description by direct and indirect methods, Oil and Gas in place. Chemical, physical and thermodynamic properties of petroleum and reservoir fluids	(08 Hours)
UNIT-IV	Drilling of oil and gas wells, Classification of wells, Drilling operating systems, Drilling fluids.New trends in drilling engineering.	(08 Hours)
UNIT-V	Hazard and safety measures in handling of natural gas, transportation and storage of oil and gas ,Storage of oil and gas , Types of storage tanks, underground storage of natural gas Catalytic cracking, Catalytic reforming, Hydrodesulfurization, Hydrocracking	(08 Hours)
UNIT-VI	Recent developments in Hydrocarbon production techniques, Hydrocarbon recovery mechanisms, Non-conventional hydrocarbon energy sources, International trading in oil and gas.	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of petroleum engineering, keeping track of the recent technological trends and developments.

4.	John, F., Cook, M., and Graham, M., “Hydrocarbon Exploration and Production”, Elsevier.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER- I: FLUID PARTICLE TECHNOLOGY

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

Topics covered

UNIT-I	Applications of fluidized beds Introduction. Industrial application of fluidized beds. Physical operations and reactions.	(08 Hours)
UNIT-II	Fluidization and analysis of phases Fluidization and analysis of phases for gas-solid, liquid-solid, and gas-liquid-solid fluidized beds. Hydrodynamic characteristics: pressure drop, velocity mapping, and fractional hold- up.	(08 Hours)
UNIT-III	Mixing studies in fluidized beds Effect of geometrical, system, and operating parameters on phase mixing in fluidized beds. Quantification of phase mixing. Development of a mathematical model.	(08 Hours)
UNIT-IV	Heat and mass transfer in fluidized beds Mass and heat transfer between fluid and particles. Effect of geometrical, system, and operating parameters on heat and mass transfer coefficients. Application of correlations available for estimating heat and mass transfer coefficients	(08 Hours)
UNIT-V	Circulating Fluidized Beds Fluid and particle distribution in a fluidized bed. Introduction to circulating fluidized bed and its application. Hydrodynamic aspects of circulating fluidized beds. Standardization of circulating fluidized beds.	(08 Hours)
UNIT-VI	Design of fluidization system for physical operations, catalytic and non-catalytic reactions, three phase fluidization and its standardization with regards to pressure drop, fractional phase hold- up, mass and heat transfer coefficient, extent of mixing, etc.	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of fluid particle technology, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SEM –IV

K 10605 DISSERTATION STAGE –II		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical: 10 Hours/Week	TW :150 Marks	TW & Oral:30
	Oral:75 Marks	
Total : 10Hours/Week	Total :225 Marks	Total credits: 30
<p>This is the final stage in the dissertation work. This stage will include comprehensive report on the work carried out at this stage and relevant portions from stage I, including experimental studies, analysis and/or verification of theoretical model, conclusions. The student is required to publish at least one national/international paper based on the dissertation work. The publication/ accepted paper for publication shall be included in the report</p>		

SELF STUDY PAPER-II

SELF STUDY PAPER-II-TECHNOLOGY TRANSFER PRACTICES –BRIDGE TO INDUSTRY		
TEACHING SCHEME:		
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total:100 Marks	
Topics covered		
UNIT-I	Innovation and the dynamics of technological change. The interactive and non-linear nature of Innovation, Defining the Innovation Need, Dynamics of Technological Change and Systems of Innovation	(08 Hours)
UNIT-II	Theory and practice of processes of technology transfer and diffusion: Commercialization of technology; intellectual property rights. Product innovation: impact of product innovation, Product Innovation within OEM (case studies)	(08 Hours)
UNIT-III	success factors for product innovation; developing a product innovation strategy: Interactive learning and networks of innovation: technology Platforms; firms taxonomy	(08 Hours)
UNIT-IV	Systems of Innovation and the corporate value chain: fostering clustering effects. Regional innovation strategies	(08 Hours)
UNIT-V	SWOT Analyses of company and product, Product Portfolio Analyses: Product Life Cycle (PLC) Product Innovation and Design consultancies (case studies), New Product-Service-System development	(08 Hours)
UNIT-VI	External trends (PESTED) and company core competences, Strategic Gap, Selection of ideas, Market implementation	(08 Hours)
<p>Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of technology transfer practices-bridge to industry, keeping track of the recent technological trends and developments.</p>

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER-II: -POLYMER ENGINEERING

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hrs/week	End Semester Examination: 60 Marks	Theory : 04
Total: 4 Hrs/week	Internal assessment: 40 Marks	Total Credits:04
	Total :100 Marks	

Topics covered

UNIT-I	Introduction to polymer technology Types of polymerization, effect of temperature and pressure on polymerization, degree of polymerization, molecular weight determination.	(08 Hours)
UNIT-II	Polymerization process Manufacturing process of phthalic anhydride, propylene, acrylonitrile, adipic acid, tetraphthalic acid, LDPE, HDPE, PVC, PP, PC, polystyrene, polyurethanes, PTFE, polyester via terephthalic acid, nylon-6.	(08 Hours)
UNIT-III	Polymerization reactors Batch, continuous, plugflow, CSTR, Design consideration of batch reactor, design consideration in high pressure LDPE reactors LLDPE & HDPE Fluid bed reactor. Types of agitators for polymerization reactors, polymer drying.	(08 Hours)
UNIT-IV	Polymer characterization & rheology. Mechanical properties of polymer, crystallinity, glass transition temperature (T _g), heat distribution temperature, mathematical models of viscoelastic behaviour of plastic, viscosity determination of polymer.	(08 Hours)
UNIT-V	Plastic processing – injection moulding , compression moulding , rotational moulding , transfer moulding , coating polymer blends , & composites – polymer alloys , reinforced plastics.	(08 Hours)
UNIT-VI	Polymer adhesives technology - Different types of adhesive , polyvinyl alcohol , rubber cement , polymer applications , identification and waste management.	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of polymer engineering, keeping track of the recent technological trends and developments.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER -II: FOOD TECHNOLOGY

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test : 20 Marks	Total credits: 04
	Assignment : 10 Marks	
	Attendance :10 Marks	

Topics covered

UNIT-I	Principle of food processing: Rheology of solid, semi-solid and liquid foods. Heat transfer and thermal death times, Schmidt plot procedure.	(08 Hours)
UNIT-II	Canning of food: Thermal processing, determining time of heat sterilization process. Conductive and convective foods.	(08 Hours)
UNIT-III	Balancing and freezing of foods: Balancing processes, freezing, Ultra-high temperature thermal processing, food sterilization, probability of non-sterile unit, Convective drying of food, rate of drying, time of drying.	(08 Hours)
UNIT-IV	Membrane processing of liquid foods: Principles, membrane configuration, types, evaporation concentration of liquid food, evaporator load calculation.	(08 Hours)
UNIT-V	Osmotic dehydration of food: Mechanism of osmotic dehydration, kinetics. Microwave heating of food, Frying of food, heat and mass transfer in frying.	(08 Hours)
UNIT-VI	Extrusion cooking of foods: extrusion process, role of moisture content. Packaging of foods, packaging materials, shelf life, water transmission rate, prediction of packaging	(08 Hours)

	time. Process control in food manufacturing.	
Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of food technology, keeping track of the recent technological trends and developments

Unit Test -II	UNIT – IV,V,VI	

SELF STUDY PAPER-II- MODELING AND SIMULATION OF PROCESSES		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4 Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	
Topics covered		
UNIT-I	Introduction: Models, Open loop systems, Feedback controls, cascade controls, System analysis from models, The control engineers role.	(08 Hours)
UNIT-II	Modeling of dynamic systems:	(08 Hours)

	Modeling principles, Modeling physical components, Obtaining a transfer function for Analysis or Simulation with SIMULINK. Modeling of various systems.	
UNIT-III	Frequency response analysis: Mathematical basis, Application of frequency response diagram, using MATLAB to obtain gain margin (GM) and phase margin (PM).using MATLAB to produce a Nichols Chart, comparison of various methods.	(08 Hours)
UNIT-IV	Process identification: Purpose, Direct methods, time domain fitting of step test data, direct sine wave testing, digital evaluation of Fourier transformation, auto tuning, approximate transfer functions.	(08 Hours)
UNIT-V	Building blocks of feed forward neural network: Building blocks of ANN, processing elements, connections, weights, activation and transfer functions, learning rules	(08 Hours)
UNIT-VI	Computer Simulation for various industrial applications.	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of modeling and simulation of processes, keeping track of the recent technological trends and developments

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER -II: NANOSCIENCE

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

Topics covered

UNIT-I	Introduction, Scientific Revolutions – Types of nanomachines and nanotechnology-periodic table-Atomic structure molecules and phase Energy - Molecular and Atomic size -surfaces and dimensional space -Top down and bottom up.	(08 Hours)
UNIT-II	Nano material synthesis methods, Introduction to Nano scale materials - Synthesis and processing, method of nano structured materials preparation – mechanical grinding, wet chemical synthesis – sol-gel processing, gas phase synthesis, gas condensation processing, chemical vapor condensation – nano composite synthesis – processing.	(08 Hours)
UNIT-III	Nanomaterials properties Opportunity at the nano scale - Length and time scale in structures -energy landscapes-Inter dynamic aspects of inter molecular forces	(08 Hours)
UNIT-IV	Quantum dots - Nano wires-Nano tubes; 2D and 3D films; Nano and mesopores, micelles, nano machines-biological membranes.	(08 Hours)
UNIT-V	Physical properties of nanostructured materials, Influence of Nano structuring on Mechanical - Optical, electronic, magnetic and chemical properties – gramsize effects on strength of metals optical properties of quantum dots and quantum wires carbon nano tubes -magnetic behavior	(08 Hours)
UNIT-VI	Nanostructures-surface chemistry of tailored monolayer -self assembling; Characterization Techniques: X-ray Diffraction, Scanning Electron Microscopy (SEM), Transmission Electron microscopy (TEM), Optical spectroscopy, Atomic Force Micrograph (AFM), Partical Size Analyzer.	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of Nanoscience, keeping track of the recent technological trends and developments

Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER -II: PETROCHEMICAL ENGINEERING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total:100 Marks	

Topics covered

UNIT-I	Existing Feedstock Scenario Fossil fuel feedstock, Coal, Natural Gas and Petroleum, Reserves, Present and Future ,Production Trends, Statics for India and World, Distribution and utilization pattern of existing fossil reserves, Demand supply scenario, Cycle of oil prices, Need for alternative feedstocks	(08 Hours)
UNIT-II	Non conventional Fossil Fuels ,Coal Bed Methane, Coal Gasification, Shale Oil, Hydrates, Reserves, Potential, and Technologies for exploitation of these resources, Cost factor	(08 Hours)
UNIT-III	Coal Gasification Chemistry and Technology for coal gasification and Syngas production, Fischer TropschSynthesis, Chemistry, Catalyst and Process Technology, Other outlets for Syngas	(08 Hours)
UNIT-IV	Alco Chemicals -Pathways and technologies for chemicals from ethanol, isopropyl alcohol, n-butanol,isobutanol, Lube oil additives, Octane boosters	(08 Hours)
UNIT-V	Fundamentals of natural gas engineering, chemical composition of natural gas, Processing of Petroleum and Hydrocarbons.	(08 Hours)
UNIT-VI	Industrial Applications in Petrochemical Industry	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of Petrochemical Engineering, keeping track of the recent technological trends and developments

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER -II: PHYSICAL CONCEPTS OF UNIT OPERATIONS

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

Topics covered

UNIT-I	Vapor-Liquid Equilibrium, relative volatility, boiling point diagram,Raolts law, Mc Cabe-Thiele method, Lewis-Sorel method, reflux ratio, partial condenser, H-X diagram,Azeotropes, steam distillation, different types of columns and analysis.	(08 Hours)
UNIT-II	Applications of liquid-liquid extraction, difference between distillation and extraction,Distribution coefficient,ternary systems, selection of solvent, different stages of operation,Various types of extraction equipments.	(08 Hours)
UNIT-III	Equilibrium data, solubility curves, crystallization theory, classification of crystallizationEquipments, types of crystallizers, mechanism of crystallisation.	(08 Hours)
UNIT-IV	Application of adsorption, nature of adsorption, types of adsorption, adsorption Isotherms, different stages of adsorption, breakthrough curves.	(08 Hours)
UNIT-V	Introduction to leaching operation, equilibrium diagram, various stages of operation, Countercurrent leaching operation, leaching of fine solids, dorr agitator.	(08 Hours)
UNIT-VI	General definitions of drying, equilibrium in drying, rate of drying curve, General classification and types of dryers.	(08 Hours)

Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of physical concepts of unit operations, keeping track of the recent technological trends and

developments	
Text Books/References:

Unit Test -II	UNIT – IV,V,VI

SELF STUDY PAPER- II: MULTIPHASE REACTOR ENGINEERING

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

Topics covered

UNIT-I	Introduction to Multiphase Reactor Engineering Types, Classification, Application of Industrial Importance	(08 Hours)
UNIT-II	Thermodynamics and kinetics Notable industrial heterogeneous systems and thermodynamic role. Application of equilibrium criteria to chemical reactions. The Gibbs energy change and equilibrium constant. Estimation of equilibrium constant for heterogeneous system by defining standard state of the phases involved. Determination of rate controlling step: intrinsic kinetics for heterogeneous systems.	(08 Hours)
UNIT-III	Hydrodynamic Characteristics Hydrodynamic characteristics of different multiphase reactors: Mechanically Agitated Contactors (MAC), Bubble Columns, Slurry Reactors, Fluidized Beds, Loop Reactors and Modified Versions	(08 Hours)
UNIT-IV	Mixing Studies Effect of geometrical, system, and operating parameters on phase mixing in multiphase reactors. Quantification of phase mixing. Development of a mathematical model.	(08 Hours)
UNIT-V	Heat Transfer and Mass Transfer Studies Effect of geometrical, system, and operating parameters on heat transfer coefficient in multiphase reactors. Quantification of heat transfer coefficient. Application of	(08 Hours)

	correlations available to different multiphase reactors. Experimental techniques used for estimation of mass transfer coefficient and selection of suitable technique for a multiphase reactor. Effect of geometrical, system, and operating parameters on mass transfer coefficient in multiphase reactors. Quantification of mass transfer coefficient. Application of correlations available to different multiphase reactors.	
UNIT-VI	Design Aspects of Multiphase Reactors Pressure drop, Fractional phase hold- up, mass and heat transfer coefficient, extent of mixing, etc.	(08 Hours)
Assignment: Each student will submit assignments based on different topics in consultation with faculty, in the area of multiphase reactor engineering, keeping track of the recent technological trends and developments

4	Finite Element Methods for Nanoscale Structures	Nanoprocessing
5	MEMES/NEMES	Introduction To Nano-modelling

NANOSCIENCE AND NANOTECHNOLOGY

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

Unit-I

(08 Hours)

Title: Introduction

Scientific Revolutions – Types of nanomachines and nanotechnology-periodic table-Atomic structure molecules and phase Energy -Molecular and Atomic size -surfaces and dimensional space -Top down and bottom up. Misnomers and misconception of Nanotechnology.

Unit-II

(08 Hours)

Title: Nanomaterial Synthesis Methods

Introduction to Nano scale materials - Synthesis and processing, method of nano structured material preparation – mechanical grinding, wet chemical synthesis – sol-gel processing, gas phase synthesis, gas condensation processing, chemical vapor condensation – nano composite synthesis – processing.

Unit-III

(08Hours)

Title: NanoStructures

Introduction, length scale of different structures, definition of nanoscience and nanotechnology, fullerenes, CNTs, graphenes and inorganic nanostructures, the evolution of Nanoscience, quantum dots and electronic structure of various nanophase materials. Clusters of metals and semiconductors, rare gas and molecular clusters, nanowires and nanorods, size dependent properties, size dependent absorption, phonons in nanostructures. Quantum dots - Nano wires-Nano tubes 2D and 3D films Nano and mesopores, micelles, bilayers, vesicles, bio-nano machines-biological membranes. Dendritic and supramolecular structures, metal nanocluster composites, glasses. Biological building blocks, bionanopolymers, self-assembly by Nature. Polypeptide nanowire and protein nanoparticles, nucleic acids, DNA helix. Examples of biological nanostructures, proteins, micelles and vesicles, proteins, Amphiphilicity as a driving force in synthesis of biological structures. Multilayers. Bio-nano interface.

Unit-IV**(08 Hours)****Title: Nanomaterial Properties**

Opportunity at the nano scale - Length and time scale in structures -energy landscapes-Inter dynamic aspects of inter molecular forces -Evolution of band structure and Fermi surface.

Unit-V**(08hours)****Title: Physical Properties Of Nanostructured Materials**

Influence of Nano structuring on Mechanical - Optical, electronic, magnetic and chemical properties –grainsize effects on strength of metals optical properties of quantum dots and quantum wires –electronic transport in quantum wires and carbon nano tubes -magnetic behavior of single domain particles and nanostructures-surface chemistry of tailored monolayer -self assembling. Nano Characterization, mechanical characterization, structural characterization

Unit-VI**(08 Hours)****Title: Applications of Nanotechnology**

Industrial applications of nanomaterials, in the areas of electronics, photonics, biology, health and environment, medicine, defence, chemicals, catalysts, textiles, etc. Application of nanotechnology in remediation of pollution, photocatalysis and other nanocatalysts, greenhouse gases, global warming. Monitoring nanoparticles at work place and sensors used for this. Toxicity of nanoparticles, exposure to nanoparticles and CNTs and influence on respiratory systems.

Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

NANO PHYSICS

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory	: 60 Marks
Duration	: 03 Hours
Unit Test –I	: 20 Marks
Unit Test –II	: 20 Marks
Theory Credits	: 04

Unit-I

(08 Hours)

Atomic and Molecular Physics:

Rutherford atom model, Electron orbits, Bohr atom, Energy levels and spectra, Atomic excitation and atomic spectra, Rotational & Vibrational energy levels, Rotational and Vibrational spectra. Electronic spectra of molecules. Bohr and Sommerfeld atom models - Vector atom model - Pauli's exclusion principle - various quantum numbers - angular momentum and magnetic moment - coupling schemes - LS and JJ coupling - Bohr magneton, Hund's rule, Stern and Gerlach experiment, Zeeman Effect and Stark Effect. Molecular bonding in homo and hetero nuclear molecules, polyatomic molecules, vibration and rotational levels, vibrations and Group frequencies.

Unit-II

(08 Hours)

Quantum Mechanics:

Wave-particle duality, Schrodinger equation and expectation values, Uncertainty principle. Solutions of the one-dimensional Schrodinger equation for free particle, particle in a box, particle in a finite well. Reflection and transmission by a potential step and by a rectangular barrier. Theory of radiation, transition probability for absorption and emission, forbidden transitions, decays, lifetime concepts. Solution of Time independent Schrödinger equation at higher dimensions. Particle in a three dimensional box, linear harmonic oscillator and its solution, density of states, free electron theory of metals. The angular momentum problem. The spin half problem and properties of Pauli spin matrices.

Unit-III

(08Hours)

Solid State Physics:

Amorphous, crystalline, crystals, polycrystals, symmetry. Unit Cells, Crystal Structures (Bravais Lattices), Crystallographic Directions, Crystallographic Planes, Miller Indices, Bragg's Law, X-ray Diffraction. Imperfections of crystal structure: point defects, Grain boundaries, phase boundaries, Dislocations: Screw, Edge and Mixed Dislocations. Free electron theory, Bloch theorem. Motion of electrons in solids, effective mass of electron and hole, reduced, periodic and extended zone scheme, Fermi surfaces, Direct and indirect band gaps in semiconductors, temperature dependence.

Electronic, ionic and orientational polarizabilities, Clausius-Mossotti relation, static and frequency dependence of dielectric constant, Kramers-Kronig relation. Mean field theory, Heisenberg interaction, magnons, origin of domains in magnetic materials.

Unit-IV

(08 Hours)

Electronics:

Semi conducting materials, p-n junction, space charge and electric field distribution at junctions, forward & reverse biased condition, minority & majority carrier currents, Zener and avalanche break downs, Schottky barrier, Shockley diode & silicon control rectifier, Zener diodes, tunnel diodes, photo diodes. Operational amplifier and Applications– Ideal op-amp, equivalent circuit of op-amp, open loop op-amp configurations – inverting, non-inverting and differential amplifiers, lock-in-amplifier. Active filters – types, first and second order active low and high pass filter. Oscillators – basic principles, types- phase shift oscillator, Wien bridge oscillator, triangular wave generator.

Unit-V

(08Hours)

Laser Technology:

Basic principles of lasers, properties of laser beams, population inversion in three and four level lasers, resonance frequencies, modifications of the laser output, single mode operation, Q-switching. Laser materials and types of lasers, solid state lasers, characteristics of dye lasers, semiconductor lasers. Laser applications.

Unit-VI

(08 Hours)

Electrodynamics:

Coulomb's law, Gauss's law, Electrostatic Potential Energy. Biot-Sevart law and Ampere Laws, faraday's law, Maxwell's Equations, Poynting Theorem, Conservation Laws.

Termwork

- At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

14. Thermodynamics and Statistical Mechanics - A N Tikhonov, Peter T Landberg, Peter Theodore Landsberg
15. Thermodynamics and Statistical Mechanics by John M. Seddon , J. D. Gale
16. Statistical Physics by K. Huang
17. Statistical Mechanics-Landau &Lifshitz
18. Statistical Mechanics – Sonntag.
19. Statistical Mechanics – Mc Le Leland

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

NANO CHEMISTRY

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory	: 60 Marks
Duration	: 03 Hours
Unit Test –I	: 20 Marks
Unit Test –II	: 20 Marks
Theory Credits	: 04

Unit-I

(08 Hours)

Title:

Atomic Bonding in solids, Types of bond: Metallic, Ionic, Covalent and vanderwaals bond; Hybridisation; H- bonding Molecular orbital theory for simple molecules such as diatomic molecule etc. Chemical bonding & theories (e.g. Valence band & Molecular Orbital), atomic structure– energy – molecular and atomic size and their properties, Ionic bond, covalent bond, coordination bond,

Unit-II

(08 Hours)

Title: Types of Material

Metals, Semiconductors, Composite materials, Ceramics, Alloys, Polymers, Their Failure Mechanisms, Properties and Application Areas, Solid state chemistry, Chemistry of surfactants, Polymer chemistry, metal complexes, Inorganic Chemistry, Alkoxide and sol-gel Chemistry, Organometallic chemistry, and their fundamentals for synthesis of oxides & other inorganic Nano composites.

Unit-III

(08Hours)

Title: Overview to Thermodynamics

The first and second laws of thermodynamics. Thermodynamic, functions, heat capacity, enthalpy, entropy. Phase equilibrium in one component system, real gases, the interactions between gases. Ehrenfest classification of phase transition, the physical liquid surface; surface tension, curved surfaces, capillary action. Theory of Solution and related topics: Liquid mixtures: free energy as a function of composition, ideal solutions and excess functions.

Unit-IV

(08 Hours)

Title: Chemical Equilibrium

Equilibrium Electrochemistry; electrochemical cells, Methods for calculation of thermodynamic equilibrium. Electrochemical processes, Inorganic complexes, Ionic Equilibria and spectroscopy (UV, IR, Raman), Atomic structure and properties, Organometallic chemistry, Thermodynamics of solids,.

Unit-V**(08Hours)****Title: Diffusion Kinetics**

Diffusion-Fick's Law, mechanisms of diffusion; generation of point defects; self-diffusion; the influence of the pressure and pressure gradient; Kirkendall effect; fast diffusion; influence of isotropic state; experimental methods of investigation of diffusion, Chemical kinetics, Chemistry of surfactants, Basic polymer chemistry, Solid state chemistry, Reactivity of solids, Quantum chemistry

Unit-VI**(08 Hours)****Title: Reaction Kinetics and Photochemistry**

Zero, First & Second order reactions. Dependence of k on Temperature. An overview of collision and activated complex theory. Steady State approximation. Laws of Photochemistry, Fluorescence, Phosphorescence, Chemiluminescence, Jablonski diagram and quenching, Photochemistry of nanomaterials.

Termwork

- At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Books /Text References

1. Physical Chemistry, 1st Edition –Ball.
2. Thermodynamics-Glasston.
3. Principals of Physical Chemistry-Marron-Pruton.
4. Advanced Physical Chemistry – Atkins Peter, Paula Julio
5. Inorganic chemistry-Cotton-Wilkinson.
6. Introduction to Theoretical Chemistry – Jack Simons.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

NANO BIOLOGY

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

Unit-I (08 Hours)

The Cell: the basic unit of life, Molecular components (DNA, protein, lipids, carbohydrates), Expression of genetic information (Transcription, translation), Types of cells: plants, animals, bacteria, viruses and fungi, DNA: Structure, components, physical and chemical properties,

Unit-II (08 Hours)

Amino acids and proteins: structure and reactions of amino acids (hydrophilic and hydrophobic), structure of proteins (primary, secondary, tertiary and quaternary), Enzyme chemistry : kinetics of enzyme catalysis,

Unit-III (08Hours)

Lipids and carbohydrates: Structure and types of lipids, biological membranes, structure and types of carbohydrates, Basic immunology: Adaptive and innate immunity, cells of immune system, Antigens and antibodies structure and functions

Unit-IV (08 Hours)

Cytoskeleton: microtubules, intermediate filaments and microfilaments; cell motility Protein motors: ATP synthase F1 motor, Bacterial Flagellar motor, Proton motive forces, ion channels, chimeric kinesin and myosin motors, Cell signaling, G-protein transmembrane receptors, DNA nanostructures for mechanics and computing, DNA-Protein nanostructures, Biomimetic fabrication of DNA-based metallic nanowires, conjugates and networks.

Unit-V (08Hours)

Biological methods of synthesis: Use of bacteria, fungi, Actinomycetes for nanoparticle synthesis, Magnetotactic bacteria for natural synthesis of magnetic nanoparticles; S-layer proteins, Viruses as components for the formation of nanostructured materials; Synthesis process and application, Role of plants in nanoparticle synthesis

Unit-VI (08 Hours)

Nano-biotechnology: Interaction between biomolecules and nanoparticle surface, Different types of inorganic materials used for the synthesis of hybrid nano-bio assemblies, Nanosensors,

Nanomedicine: Nanotechnology in Diagnostics applications, materials used in Diagnostics and Therapeutic, Environmental and Agricultural Applications of nanotechnology.

Termwork

At least Eight Assignment based on above syllabus

Practicals (Any Five):

1. Microscopic observation of bacterial, plant, fungi and animal cells
2. Temporary preparation of cell / tissues
3. Demonstration of Cytotoxicity/cell viability- Tryphan blue dye exclusion
4. Absorbance spectra of biomolecules (DNA, proteins)
5. Immunodiffusion techniques
6. Isolation and purification of genomic DNA- 2
7. Isolation and purification of plasmid DNA -2
8. Estimation and purification of proteins -2
9. Biological Synthesis of nanoparticles (bacteria, fungi and plants)- 4
10. Demonstration of nanoparticles based drug delivery in cell line-3

Oral

Term work and oral will be based on above syllabus.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

NANO COMPUTING

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Unit Test –I : 20 Marks
Unit Test –II : 20 Marks
Theory Credits : 04

Unit-I

(08 Hours)

Title: Fundamental Principles Of Numerical Methods

Root finding, interpolation and approximation, numerical integration and differentiation, solution of systems of linear equations, least squares data fitting, eigenvalue problems, numerical methods for ODEs - initial value problems and boundary value problems, Scientific Modeling - Numerical data and Numerical operations -Numerical Algorithms -Numerical Programs - Numerical Software - Approximations in Mathematical Model building- Numerical integration - Differentiation -Variational finite element methods-Rayleigh's method-Ritz method.

Unit-II

(08 Hours)

Title: Mathematical Modeling

Introduction to mathematical modeling, review of basic calculus - physical simulation - advantages and limitations - Concept of physical domain and computational domain - assumptions and limitations in numerical solutions – Finite element method and Finite difference method.

Unit-III

(08Hours)

Title: Differential Equations & Applications

Equations of first order, linear differential equations of second order, power series solutions, Laplace transforms, nonlinear differential equations, Fourier series and boundary value problems. Euler method, Runge-Kutta method, boundary values- partial differential equations - separation of variables-wave equation-Laplace equation-nonlinear partial differential equations - Parabolic (Heat/Diffusion) Equation, Derivation, separation of variables, transformation of boundary conditions, Fourier series and transforms.

Unit-IV

(08 Hours)

Title: Simulation

Basic concepts of simulation- data manipulation, data exchange of the structure, properties and processing of materials- Molecular dynamics simulation, Derivation, D'Alembert principle, vibrating string/beam, finite Fourier transforms, method of characteristics, wave equation in 2D.

Unit-V

(08Hours)

Title: Monte Carlo Methods

Basics of the Monte Carlo method-Algorithms for Monte Carlo simulation-Applications to systems of classical particles-modified Monte Carlo techniques-percolation system-variation

Monte Carlo method-diffusion Monte Carlo method - Quantum Monte Carlo method, Finite difference methods - implicit and explicit schemes, truncation error, single step and multi-step schemes. Finite element methods - Galerkin approximation and solution.

Unit-VI

(08 Hours)

Title: Nanoscale Modeling and Simulations

Introduction to Matlab OR Mathematica (and their open source counterparts-Scilab and Octave); examples from nano-optics and nano-electronics, Molecular dynamics, computing and simulations, Simulations from ab initio to multiscale Modeling, Nanodesign Nano-CAD.

Termwork

- At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

NANO FABRICATION AND ADVANCED SYNTHESIS TECHNOLOGY

TEACHING SCHEME

Lectures : 04 Hrs/Week
Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Unit Test –I : 20 Marks
Unit Test –II : 20 Marks
TW/Pract./Oral : 50 Marks
Theory Credits : 04
Practical Credits : 01

Unit-I

(08 Hours)

Title: Bulk synthesis

Synthesis of bulk nano-structured materials –sol gel processing –Mechanical alloying and mechanical milling- Inert gas condensation technique – Nanopolymers – Bulk and nano composite materials

Unit-II

(08 Hours)

Title: Chemical Approaches

Self-assembly, self-assembled monolayers (SAMs). Langmuir-Blodgett (LB) films, clusters, colloids, zeolites, organic block copolymers, emulsion polymerization, templated synthesis, and confined nucleation and/or growth. Biomimetic Approaches: polymer matrix isolation, and surface-templated nucleation and/or crystallization. Electrochemical Approaches: anodic oxidation of alumina films, porous silicon, and pulsed electrochemical deposition.

Unit-III

(08Hours)

Title: Physical Approaches

Vapor deposition and different types of epitaxial growth techniques- pulsed laser deposition, Magnetron sputtering - Micro lithography (photolithography, soft lithography, micromachining, e-beam writing, and scanning probe patterning). Inert gas condensation, Arc discharge, RFplasma, Plasma arc technique, Ion sputtering, Laser ablation, Laser pyrolysis, Ball Milling, Molecular beam epitaxy, Chemical Vapour Deposition method and Electro deposition.

Unit-IV

(08 Hours)

Title: Nanoporous Materials

Nanoporous Materials – Silicon - Zeolites, mesoporous materials - nanomembranes and carbon nanotubes - AgX photography, smart sunglasses, and transparent conducting oxides –molecular sieves – nanosponges.

Unit-V**(08Hours)****Title: Application of Nanomaterials**

Molecular Electronics and Nanoelectronics – Nanobots- Biological Applications – Quantum Devices – Nanomechanics - Carbon Nanotube – Photonics- Nano structures as single electron transistor –principle and design.

Unit-VI**(08 Hours)****Title: Lithography Techniques**

M based nanolithography and nanomanipulation, E beam lithography and SEM based nanolithography and nanomanipulation, Ion beam lithography, oxidation and metallization. Mask and its application. Deep UV lithography, X-ray based lithography.

Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

5. Microfabrication and Nanomanufacturing- Mark James Jackson

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

NANO CHARACTERIZATION

TEACHING SCHEME

Lectures : 04 Hrs/Week
Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Unit Test –I : 20 Marks
Unit Test –II : 20 Marks
TW/Pract./Oral : 50 Marks
Theory Credits : 04
Practical Credits : 01

Unit-I

(08 Hours)

Title: MICROSCOPY

Optical absorption and emission spectroscopy – Basics - AAS – ICP OES – Electron Microscopy: Scanning electron microscopy – Transmission electron microscopy – Scanning tunneling electron microscopy – Image collection in electron microscopes – Environmental transmission electron microscopy – Electron energy loss spectroscopy at the nanometer scale – In-situ nano measurements.- Qualitative approach. Electron Energy Loss Spectroscopy; High Resolution Imaging Techniques- HREM, Atom probe field ion microscopy

Unit-II

(08 Hours)

Title: THERMAL ANALYSIS METHODS

Principle and Instrumentation of Thermogravimetry; Differential Thermal Analysis and Differential scanning calorimetry-Importance of thermal analysis for nanostructures.

Unit-III

(08Hours)

Title: SCANNING PROBE MICROSCOPY

Scanning Probe microscopy – Atomic manipulations – Atomic force microscopy – Scanning probe lithography – Optical microscopy – Confocal microscopy – Scanning near field optical microscopy – Secondary ion mass (SIMS) spectrometry – Matrix assisted laser desorption ionization mass spectrometry (MALDIMS).

Unit-IV

(08 Hours)

Title: SPECTROSCOPIC TECHNIQUES

Introduction to Molecular Spectroscopy and Differences-With Atomic Spectroscopy-Infrared (IR) Spectroscopy and Applications- Microwave Spectroscopy- Raman Spectroscopy and CARS Applications-Electron Spin Resonance Spectroscopy; New Applications of NMR Spectroscopy; Dynamic Nuclear Magnetic Resonance; Double Resonance Technique. Spectroscopy of semiconductors – Excitons – Infrared surface spectroscopy – Raman spectroscopy – Brillouin spectroscopy – Dynamic Light Scattering (DLS) – NMR Spectroscopy – ESR spectroscopy – Mossbauer spectroscopy

Unit-V**(08Hours)****Title: Nanoindentation Mechanical Characterisation**

Nanoindentation principles- elastic and plastic deformation -mechanical properties of materials in small dimensions- models for interpretation of nanoindentation load-displacement curves- Nanoindentation data analysis methods-Hardness testing of thin films and coatings- MD simulation of nanoindentation. Mechanical Characterization – Modulus and load carrying capability of nano region/ compression - microhardness – Fatigue – Abrasion and wear resistance – Super plasticity – Nano indentation – Nano tribology – Nano tribometre – Surface Force apparatus – Quartz crystal microbalance – Friction force microscope.

Unit-VI**(08 Hours)****Title: Structural Characterization**

Neutron and X- ray diffraction – Debye Scherrer formula – Dislocation density – Micro strain macromolecular crystallography using synchrotron radiation – Role for neutron scattering in nano science - Photoluminescence - Thermo luminescence – X-ray absorption Fine Structure (XAFS) – Extended X- ray absorption fine structure (EXAFS) – Electron scattering for chemical Analysis (ESCA). X-ray diffraction (XRD), X-Ray Photoelectron Spectroscopy, X-ray powder diffraction – single crystal diffraction techniques - Determination of accurate lattice parameters – structure analysis - profile analysis - particle size analysis using Scherer formula. X-Ray Characterization of Nanomaterials – EDAX and WDA analysis – EPMA – ZAP corrections.

Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

ENERGY, ENVIRONMENT, SAFETY AND COMMERCIALIZATION FOR NANOTECHNOLOGY

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory	: 60 Marks
Duration	: 03 Hours
Unit Test –I	: 20 Marks
Unit Test –II	: 20 Marks
Theory Credits	: 04

Unit-I (08 Hours)

Title: Renewable Energy Technology

Energy challenges, development and implementation of renewable energy technologies - nanotechnology enabled renewable energy technologies - Energy transport, conversion and storage, Nano, micro and meso scale phenomena and devices.

Unit-II (08 Hours)

Title: Micro Fuel Cell Technology

Micro-fuel cell technologies, integration and performance for micro-fuel cell systems - thin film and microfabrication methods - design methodologies - micro-fuel cell power sources,

Unit-III (08Hours)

Title: Microfluidic Systems

Nano-electromechanical systems and novel microfluidic devices - nano engines - driving mechanisms - power generation - microchannel battery - micro heat engine (MHE) fabrication - thermocapillary forces - Thermocapillary pumping (TCP) - piezoelectric membrane.

Unit-IV (08 Hours)

Title: Hydrogen Storage Methods

Hydrogen storage methods - metal hydrides - size effects - hydrogen storage capacity - hydrogen reaction kinetics - carbon-free cycle- gravimetric and volumetric storage capacities - hydriding/dehydriding kinetics - high enthalpy of formation - and thermal management during the hydriding reaction - distinctive chemical and physical properties - multiple catalytic effects - degradation of the sorption properties - hydride storage materials for automotive applications.

Unit-V (08Hours)

Title: Environmental Concerns of Nanomaterials

Identification of Nano - Specific Risks- Responding to the Challenge -Human health hazard – Risk reduction – Standards – Safety – transportation of NP– Emergency responders. Risk

assessment –Environmental Impact – Predicting hazard – Materials Characterization. Risk Assessment related to nanotechnology – Environmental and policy making - Ecotoxicity measurement of Polychlorinated biphenyl and intermediates in their degradation Vacuum Packaging under inert gas atmosphere, Methodology for Stabilization, Human safety in Nonmaterial processing area.

Unit-VI

(08 Hours)

Title: Product Development with Nanomaterials

Criteria for selection of product- Product development process- Design for Manufacture - Estimate the manufacturing cost- Reduce the support cost- Prototyping- Economics of Product development projects - Elements of Economic analysis- financial models - Sensitive analysis and influence of the quantitative factors.

Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2 -Units IV,V and VI

Elective I: COMPUTATIONAL NANOSCIENCE

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

Unit-I

(08 Hours)

Title: Fundamental Principles Of Numerical Methods

Scientific Modeling - Numerical data and Numerical operations -Numerical Algorithms - Numerical Programs -Numerical Software - Approximations in Mathematical Model building- Numerical integration -Differentiation -Variational finite element methods-Rayleigh's method-Ritz method.

Unit-II

(08 Hours)

Title: Mathematical Modeling

Mathematical modeling - physical simulation - advantages and limitations - process control - Transport phenomena- concept of physical domain and computational domain - assumptions and limitations in numerical solutions – Finite element method and Finite difference method.

Unit-III

(08Hours)

Title: Differential Equations & Applications

Euler method, Runge-Kutta method, Multi step-differential equations-boundary values- Elliptic equations-one dimensional parabolic equation-hyperbolic equation- partial differential equations -separation of variables-wave equation-Laplace equation-nonlinear partial differential equations - approximation methods of nonlinear differential equations.

Unit-IV

(08 Hours)

Title: Simulation

Basic concepts of simulation- data manipulation, data exchange of the structure, properties and processing of materials-Three dimensional model for capillary nanobridges and capillary forces. Molecular dynamics simulation.

Unit-V

(08Hours)

Title: Monte Carlo Methods

Basics of the Monte Carlo method-Algorithms for Monte Carlo simulation-Applications to systems of classical particles-modified Monte Carlo techniques-percolation system-variation Monte Carlo method-diffusion Monte Carlo method - Quantum Monte Carlo method.

Unit-VI

(08 Hours)

Title: Nanoscale Modeling and Simulations

Introduction to Matlab and Mathematics (and their open source counterparts-Scilab and Octave); examples from nano-optics and nano-electronics, Molecular dynamics, computing and simulations, Simulations from ab initio to multiscale Modeling, Nanodesign Nano-CAD.

Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

Elective I: NANO ELECTRONICS

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

Unit-I

(08 Hours)

Title: Semiconductor Nanodevices

Single-Electron Devices; Nano scale MOSFET – Resonant Tunneling Transistor - Single-Electron Transistors; Single-Electron Dynamics; Nanorobotics and Nanomanipulation; Mechanical Molecular Nanodevices; Nanocomputers: Theoretical Models; Optical Fibers for Nanodevices; Photochemical Molecular Devices; DNA-Based Nanodevices; Gas-Based Nanodevices; Micro and Nanomechanics.

Unit-II

(08 Hours)

Title: Electronic And Photonic Molecular Materials

Preparation –Electroluminescent Organic materials - Laser Diodes - Quantum well lasers:- Quantum cascade lasers- Cascade surface-emitting photonic crystal laser- Quantum dot lasers- Quantum wire lasers:- White LEDs - LEDs based on nanowires - LEDs based on nanotubes- LEDs based on nanorods High Efficiency Materials for OLEDs- High Efficiency Materials for OLEDs - Quantum well infrared photo detectors.

Unit-III

(08Hours)

Title: Thermal Sensors

Thermal energy sensors -temperature sensors, heat sensors- Electromagnetic sensors- electrical resistance sensors, electrical current sensors, electrical voltage sensors, electrical power sensors, magnetism sensors - Mechanical sensors -pressure sensors, gas and liquid flow sensors, position sensors - Chemical sensors - Optical and radiation sensors.

Unit-IV

(08 Hours)

Title: Gas Sensor Materials

Criteria for the choice of materials, Experimental aspects – materials, properties, measurement of gas sensing property, sensitivity; Discussion of sensors for various gases, Gas sensors based on semiconductor devices.

Unit-V

(08Hours)

Title: Biosensors

Principles- DNA based biosensors – Protein based biosensors – materials for biosensor applications- fabrication of biosensors—future potential

Unit-VI

(08 Hours)

Title: NanoBio Electronic Systems

Nano Bio Sensors, Bio-Characterization

Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Books /Text References

1. W. Ranier, “Nano Electronics and Information Technology”, Wiley, (2003).
2. K.E. Drexler, “Nano systems”, Wiley, (1992).
3. M.C. Pettey, “Introduction to Molecular Electronics”.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2 -Units IV,V and VI

Elective I: NANO MEDICINE

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

Unit-I

(08 Hours)

Applications of nano-medicine: Bio- Pharmaceuticals, biological implants, diagnostic tools, Genetic testing – imaging – nanoparticles probe

Unit-II

(08 Hours)

Microfabricated drug delivery systems: microneedles- micropumps-microvalves-implantable microchips,

Unit-III

(08Hours)

Nanocarriers : drug delivery : sustained / controlled/ targeted

Unit-IV

(08 Hours)

Polymeric nanoparticulate systems: polymeric micelles as drug carriers – dendrimers as nanoparticulate drug carriers - nanocapsules preparation, characterization and therapeutic applications

Unit-V

(08Hours)

Liposomes for genetic vaccines and cancer therapy - recent advances in microemulsions as drug delivery vehicles, lipoproteins as pharmaceutical carriers, solid lipid nanoparticles as drug carriers Tumor detection and targeting in vivo, Gene Therapy using nanoparticles

Unit-VI

(08 Hours)

Diagnosis, Characterization and Testing of Nano-Bio Systems.

Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Practicals:

1. Liposome based delivery of DNA (GFP based vector) in cells and their detection under fluorescence microscope-4
2. Delivery of nanoparticles based drugs in cells-3
3. Isolation of protein, estimation and running of gel, western blotting to detect a particular protein (e.g. p53)- 5

Books /Text References

1. Dr.Parag Diwan and Ashish Bharadwaj (eds) Nano Medicines, Pentagon Press
2. Vladimir P.Torchilin (Ed.) Nanoparticulates as Drug Carriers, Imperial College Press, North Eastern University, USA
3. Drug Delivery: Engineering Principles for Drug Therapy, M. Salzman.
4. Drug Delivery and Targeting, A.M. Hillery, CRC Press.
5. Drug Delivery: Principles and Applications, B. Wang, Wiley Interscience

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

Elective I: NANO ENGINEERED DEVICES

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

Unit-I

(08 Hours)

Title: Quantum Devices

Quantum Electronic devices – upcoming electronic devices – Electrons in mesoscopic structures – Shortchannel MOS Transistor – Split gate transistor – Electron wave transistor – Electron spin transistor – Quantum cellular Automata – Quantum Dot array – Quantum computer- Bit and Qubit – Coherence and Entanglement – Quantum Parallelism.

Unit-II

(08 Hours)

Title: Tunneling Devices

Tunneling element – Tunnel Effect and Tunneling Elements -Tunneling Diode – Resonant Tunneling Diode – Three -Terminal Resonate Tunneling Devices -Technology of RTD-Digital circuits design based on RTDs –Memory Applications – Basics Logic Circuits – Dynamic Logic Gates - Digital circuits design based on RTBT –RTBT Mobile – RTBT Threshold Gate – RTBT Multiplexer – Single Electron Transistor(SET) – Principle –Coulomb Blockade- Performance – Technology- Circuit Design- Writing and Drivers – Logic and Memory Circuits – SET adder as an Example of a Distributed Circuit – Comparison between FET and SET.

Unit-III

(08Hours)

Title: Superconducting Devices And Photonics

Basics - Macroscopic characteristics – Macroscopic model- Super conducting switching De vices – Cryotron-Josephson Tunneling Devices - Elementary circuits – Associative or Content – Addressable Memory - SQUID– Flux Quantum device –LC –Gate – Magnetic Flux Quantum – Quantum cellular Automata – Quantum computer with Single Flux devices – SFQD- RSFQD – Application of superconducting devices – Intergrated Electronics – Comparison of FET Electronics. Introduction to Photonics - Principle- Fabrication –application.

Unit-IV

(08 Hours)

Title: Uncertainty Of Nanodevices

Limits of Integrated Electronics - Survey of Limits – Replacement of Technologies – Energy Supply and Heat Dissipation – Parameter Spread as Limiting Effect – Limits due to Thermal

Particle motion - Debye Length –Thermal Noise- Reliability of as Limiting Factor – Physical limits – Thermodynamic Limits - Relativistic Limits– Equal Failure Rates by Tunneling and Thermal Noise – Final Objectives of Integrated Electronic Systems -Removal of uncertainty by Nanomachines – Uncertainties in Nanosystems - Uncertainties in the Development of Nanoelectronics.

Unit-V

(08Hours)

Title: Molecular And Bioelectronics

Bioelectronics – molecular processor – DNA Analyser molecular electronics – switches based on fullerenes and nanotubes – polymer electronic – self Assembling circuits – optical molecular memories – DNA computer – Information Processing with chemical reaction – Nanomachines – Parallel Processing - Drexler – Smalley debate – realistic projection- Synergy of Nano-Bio-Info.

Unit-VI

(08 Hours)

Title: Nanobio Systems

Reference(s) :

1Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Books /Text References

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

Elective II: NANO PHOTONICS

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

Unit-I

(08 Hours)

Title: Quantum Confined Materials

Quantum dots – optical transitions – absorption-inter-band transitions-quantum confinement intraband transitions-fluorescence/ luminescence–photoluminescence /fluorescence optically excited emission – electroluminescence emission.

Unit-II

(08 Hours)

Title: Plasmonics

Internal reflection and evanescent waves- plasmons and surface plasmon resonance (SPR)- Attenuated total reflection- Grating SPR coupling- Optical waveguide SPR coupling- SPR dependencies and materials- plasmonics and nanoparticles.

Unit-III

(08Hours)

Title: New Approaches in Nanophotonics

Near-Field Optics- Aperture near-field optics- Apertureless near-field optics- Near-field scanning optical microscopy (NSOM or SNOM)- SNOM based detection of plasmonic energy transport- SNOM based visualization of waveguide structures- SNOM in nanolithography- SNOM based optical data storage and recovery.

Unit-IV

(08 Hours)

Title: Biophotonics

Interaction of light with cells- tissues- nonlinear optical processes with intense laser beams- photoinduced effects in biological systems-generation of optical forces-optical trapping and manipulation of single molecules and cells in optical confinement-laser trapping and dissection for biological systems-single molecule biophysics- DNA protein interactions.

Unit-V**(08Hours)****Title: Photonic Crystals**

Important features of photonic crystals- Presence of photonic bandgap- Anomalous Group Velocity Dispersion- Microcavity-Effects in Photonic Crystals- Fabrication of photonic crystals- Dielectric mirrors and interference filters- Photonic Crystal Laser- PC based LEDs- Photonic crystal fibers (PCFs)- Photonic crystal sensing.

Unit-VI**(08 Hours)****Title: Nanobio Systems****Termwork**

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

Elective II: INDUSTRIAL NANOTECHNOLOGY

TEACHING SCHEME

Lectures : 04 Hrs/Week
Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory	: 60 Marks
Duration	: 03 Hours
Unit Test –I	: 20 Marks
Unit Test –II	: 20 Marks
TW/Pract./Oral	: 50 Marks
Theory Credits	: 04
Practical Credits	: 01

Unit – I

(08 Hours)

Title:Product Design

Concept generation- Product Architecture- Industrial Design Process- Management of Industrial design Process and Assessing the quality of Industrial Design - Establishing the product specification

Unit – II

(08 Hours)

Title: Product Development

Criteria for selection of product- Product development process- Design for Manufacture - Estimate the manufacturing cost- Reduce the support cost- Prototyping- Economics of Product development projects - Elements of Economic analysis- financial models - Sensitive analysis and influence of the quantitative factors.

Unit – III

(08 Hours)

Title:Management Techniques

Technology Management - Scientific Management - Development of management Thought-Principles of Management- Functions of management-planning- organization- Directing, Staffing and Controlling- Management by objective- SWOT analysis- Enterprise Resource planning and supply chain management.

Unit – IV

(08 Hours)

Title: Entrepreneurial Competence & Environment

Concept of Entrepreneurship- Entrepreneurship as a career- Personality Characteristic a successful Entrepreneur- Knowledge and skill required for an Entrepreneur- Business environment- Entrepreneurship Development Training - Center and State government policies and Regulations - International Business.

Unit–V Management Of Small Business (08 Hours)

Pre-feasibility study - Ownership - budgeting - project profile preparation - Feasibility Report preparation - Evaluation Criteria- Market and channel selection- Product launching - Monitoring and Evaluation of Business- Effective Management of Small business.

Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

5. Microsystems and Nanotechnology by Zhaoying Zhou, Zhonglin Wang and Liwei Lin (Nov 28, 2011)

Syllabus for Unit Test

Unit Test 1-- Units I ,II and III

Unit Test 2- Units IV,V and VI

Elective II: NANO MATERIAL SCIENCE

TEACHING SCHEME

Lectures : 04 Hrs/Week
Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks
Duration : 03 Hours
Unit Test –I : 20 Marks
Unit Test –II : 20 Marks
TW/Pract./Oral : 50 Marks
Theory Credits : 04
Practical Credits : 01

Unit-I

(08 Hours)

Title: Physical Properties

Melting point and phase transition processes- quantum-size-effect (QSE). Size-induced metal-insulator-transition (SIMIT)- nano-scale magnets, transparent magnetic materials, and ultrahigh-density magnetic recording materials-chemical physics of atomic and molecular clusters.

Unit-II

(08 Hours)

Title: Physical Chemistry of Solid Surfaces

Surface energy – chemical potential as a function of surface curvature-Electrostatic stabilization-surface charge density-electric potential at the proximity of solid surface-Van der Waals attraction potential.

Unit-III

(08Hours)

Title: Chemistry Aspects

Photochemistry; Photoconductivity; Electrochemistry of Nanomaterials-Diffusion in Nanomaterials; Nanoscale Heat Transfer; Catalysis by gGold Nanoparticles; Transport in Semiconductor Nanostructures; Transition Metal Atoms on Nanocarbon Surfaces; Nanodeposition of Soft Materials; Nanocatalysis.

Unit-IV

(08 Hours)

Title: NanoStructures

Electronic Structure of Nanoparticles- Kinetics in Nanostructured Materials- Zero dimensional, one-dimensional and two dimensional nanostructures- clusters of metals and semiconductors, nanowires, nanostructured beams, and nanocomposites-artificial atomic clusters-Size dependent properties-size dependent absorption spectra-phonons in nanostructures.

Unit-V

(08Hours)

Title: Nanosystems

Nanoparticles through homogeneous nucleation-Growth controlled by diffusion-growth controlled by surface process-influences of reduction reagents-solid state phase segregation-kinetically confined synthesis of nanoparticles-template based synthesis.

Unit-VI

(08 Hours)

Title: Nano Electronics

Quantization of action, charge and flux – electrons in potential well – photons interacting with electrons in solids – diffusion processes – basic information theory – data & bits – data processing - Size Effects on structure and Morphology of free or Supported Nanoparticles – Size and confinement Effects – Fraction of surface atoms – Specific surface energy and surface stress.

Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

Elective II: NANO COMPOSITES

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

Unit-I

(08 Hours)

Title: Metal Based Nanocomposites

Metal Oxide or Metal Ceramic Composites, Different aspects of their preparation techniques, their final properties and functionality.

Unit-II

(08 Hours)

Title: Polymer Based Nanocomposites

Preparation and Characterization of Diblock Copolymer based nanocomposites; Polymer – Carbon Nanotubes based composites, Their electrical, magnetic and mechanical properties. Polymer Dendrimer based composite .Percolation theory for CNT polymer based nanocomposite. Nanoscale reinforcement:Nanoclays:Carbon Nanomaterials,Polymer Matrix Nanocomposite. Lamellar nanocomposite.Application of different nanocomposite in industries:polymer:textile:automotive etc.,

Unit-III

(08Hours)

Title: Properties and Characterization of Nanocomposites

Unit-IV

(08 Hours)

Title: Bionano Composites for Tissue Engineering

Major Physiological systems of current interest to Biomedical Engineers: Cardiovascular, endocrine, nervous, visual, gastrointestinal systems. Tissue Engineering for specific organs such as, Bone marrow, skeletal muscles and cartilage, Cell biological fundamentals of tissue engineering. Application of nanomaterials in biomedical Transplant: architecture , assembly, transportation, nutrients. Concept of transplant and its rejection. Xenotransplantation. Imaging of cancer cells, Tissue imaging by QD, Nanoparticles: principles process, application .MRI.

Unit-V

(08Hours)

Title Manufacturing of Bionanomaterials

Natural and artificial (Microbial Nanoparticles production,Viral Nanoparticles production, Plant and diatoms Nanoparticles production), DNA, peptide, Protein ,enzyme based manufacturing: Application: architecture: electronics, (Topdown, Bottom up):Devices, Nano particles with

biosystems ,Natural biocomposite :spider silk:Bone :shells,CNT based biomaterials: using cnt as a template, Biosensors:using Nano materials with bio systems(Plant and animal cell,DNA,microtubules,antibodies,antigens etc..).Cellular imaging. Bionanoarrays: DNA, Protein, nucleotide based, viruses . DNA based computation . DNA as functional template for nanocircuitry. Nanomotors. Cellular nanosystem interaction :concept, process ,application,Biochip. Magnetic Nanoparticle by bacteria:mechanism of formation, application.

Unit-VI

(08 Hours)

Title: Properties and Characterization of Bionanomaterials

Use of AFM, SEM , TEM, XRD based bionanomaterial characterization, Properties of DNA structure as nanotechnology aspects, Surface modification properties of Cell, antibodies, antigens, proteins, enzymes.

Termwork

At least Eight Assignment based on above syllabus

Oral

Term work and oral will be based on above syllabus.

Syllabus for Unit Test

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

SELF STUDY-I

MODELING AND SIMULATION OF NANOSYSTEMS

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

Unit I:

Introduction to modeling and simulation

Abstract, what is modeling? ,What is simulation?, How to develop a simulation model, How to design a simulation experiment, how to perform simulation analysis, what makes a problem suitable for simulation modeling and analysis, How to select simulation software, benefits of simulation modeling and analysis, what are some pitfalls to guard against in simulation.

Unit II:

Computer Modeling of Nanostructured material

Introduction, Modeling Methods: Molecular dynamics and Monte Carlo Modeling, atomic potential energies and Forces, Multiscale Modeling, Nanostructured Materials: Nanoparticle properties

Unit III:

Microstructure Modeling

Microstructure Modeling, Sintering and grain growth dynamics, mechanical deformation and fracture, shock loading, irrational properties, Nan alloys, Prospects for future modeling

Unit IV:

Molecular Dynamics:

Overview, Nano statistical mechanics, Fundamentals of Molecular Dynamics

Unit V:

Software's for Molecular Dynamics Modeling

Principles of Nano Modeling, PES revisited, accuracy requirements, conclusions

Unit VI:

Application: Nanorobot modeling and simulation

Abstract, introduction, blood components, nanorobot modeling and design, nanorobot simulation

Books /Text References

1. Nanostructure material by Carl C. Koch
2. Nanosystems by K.Eric Drexler

Syllabus for Unit Test

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV,V and VI

SYNTHESIS AND DESIGN OF NANOSCALE PRODUCTS

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

Unit I:

Fundamental concepts of Nanoscale materials, various types of nanomaterials used in Nanotechnology such as CNTs, fullerenes, nanorods, metal oxides, quantum dots, etc.

Unit II:

Approaches such as top-down approach, bottom up approach, biomimetic and functional approach to construct nanomaterials

Unit III:

Nanomaterials related to nanoionics and nanoelectronics, Reticular synthesis and the design of new materials, Synthesis of highly ordered mesoporous materials from layered polysilicates, Flexible Synthesis of Composite Aerogels

Unit IV:

Nanoscale integrated three dimensional circuits

Unit V:

Nanoscale materials for bulk applications

Unit VI:

Toxicological aspects of nanoscaled materials

Syllabus for Unit Test

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV, V and VI

APPLICATIONS OF NANOTECHNOLOGY IN FOOD AND AGRICULTURE

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

Unit I:

Use of nanotechnologies in the agriculture sector

Precision farming for basic agriculture, real time monitoring of soil conditions, combating the crop pathogens and the treatment of waste

Unit II:

Strategic applications of Nanotechnology in agriculture

Development of innovative products in food production, processing, preservation and packaging and applications in agriculture, animal feed and agrochemicals, disease detection tools, targeted treatments

Unit III:

Impact of nanotechnologies in the food sector

Nanotechnology-based food and health food products and food packaging materials, Nano-enabled food contact materials (FCMs) and packaging, Polymer composites with various nanomaterials, coatings containing nanoparticles

Unit IV:

Nanosensors in food sector

Intelligent packaging concepts based on nanosensors, use of nanodiagnostic tools for detection and monitoring in food production, sensing applications, biosensors for detection of herbicides, pesticides and pathogens

Unit V:

Encapsulation technology for nanodelivery systems

Use of micelles, liposomes or biopolymer-based carrier systems, processed nanostructures, inorganic and organic nanomaterials in health food products, surface functionalized nanomaterials

Unit VI:

Health aspects

Assessment of human health risks associated with the use of nanotechnologies and nanomaterials in the food and agriculture sectors, safety, current risk assessment approaches used by FAO/WHO, environmental, ethical, policy and regulatory issues

Books /Text References:

1. Nanotechnology in the Agri-food Sector, Lynn J. Frewer , Willem Norde, Arnout Fischer and Frans Kampers, 2011

4. Handbook of Nanostructured Biomaterials and Their Applications in Nanobiotechnology - Hari Singh Nalwa
5. Nanobiotechnology; ed. C.M. Niemeyer, C.A. Mirkin.

Syllabus for Unit Test

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV,V and VI

FINITE ELEMENT METHODS FOR NANOSCALE STRUCTURES

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

UNIT I:

Calculus of variation, Introduction to calculus of variations, Introduction to equilibrium equations in elasticity, Euler's Lagrange's equations, Principle of virtual work, virtual displacements, Principles of minimum potential energy, boundary value, initial value problems, Flexibility approach, Displacement approach, Different problems in structural analysis

UNIT II:

FEM Procedure, Derivation of FEM equations by variation principle polynomials, Concept of shape functions, Derivation for linear simplex element, Need for integral forms, Interpolation polynomials in global and local coordinates

UNIT III:

Weighted residual Methods: Concept of weighted residual method, Derivation of FEM equations by Galerkin's method, Solving cantilever beam problem by Galerkin's approach Derivation of shape functions for CST triangular elements, Shape functions for rectangular elements, Shape functions for quadrilateral elements.

UNIT IV:

Higher order Elements: Concept of iso-parametric elements, Concept of sub-parametric and super -parametric elements, Concept of Jacobin matrix.
Numerical Integration: Numerical Integration, one point formula and two point formulas

UNIT V:

Different problems of numerical integration evaluation of element stiffness matrix, Automatic mesh generation schemes, Pascal's triangle law for 2D shape functions polynomial, Pascal's triangle law for 3D shape function polynomials, Shape function for beam elements, Hermite shape functions

UNIT VI:

Convergence: Convergence criteria, Compatibility requirements, Geometric isotropy Invariance, Shape functions for iso-parametric elements, Special characteristics of stiffness matrix, direct method for deriving shape functions using Langrage's formula, Plane stress problems

Books /Text References:

4. Nanotechnology Demystified by Linda Williams and Wade Adams (Aug 29, 2006)
5. Microsystems and Nanotechnology by Zhaoying Zhou, Zhonglin Wang and Liwei Lin (Nov 28, 2011)

Syllabus for Unit Test

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV,V and VI

MEMS & NEMS

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

UNIT I:

Introduction

Basic Electronics, Application of Electronics to Mechanical Systems, Various Micro Mechano-Electronic Systems, Various Nano Mechano-Electronic Systems, Components and Applications

UNIT II:

Micro-electromechanical Systems (MEMS)

What is MEMS? Definitions and Classifications, History, Applications, Established MEMS Applications New MEMS Applications, MEMS Market Miniaturization Issues

UNIT III:

MEMS Fabrication Methods

Photolithography, Materials for Micromachining Substrate ,Additive Films and Materials, Bulk Micro machining ,Wet Etching, Dry Etching ,Surface Micro machining , Fusion Bonding, High-Aspect-Ratio-Micromachining,

UNIT IV:

NEMS Fabrication Methods

LIGA, self assembling system, Molecular Manipulation, Laser Micromachining, 3Computer Aided Design, Assembly and System Integration, Packaging, Multi-Chip Modules, Passivation and Encapsulation, Foundry Services

UNIT V:

Applications

MEMS Transducers, Piezoelectric MEMS, Interstitial MEMS, Biochemical analysis, Power MEMS, Acoustical MEMS, Microreactors, Optical MEMS

UNIT VI:

Future of MEMS

Industry Challenges, the Way Ahead, NEMS

Books /Text References/Web Site:

1. An Introduction to MEMS (Micro-electromechanical Systems) – By PRIME Faraday Partnership

<http://www.amazon.co.uk/exec/obidos/ASIN/1844020207>

2. MEMS and NEMS: Systems, Devices, and Structures. Sergey Edward Lyshevski, Rochester Institute of Technology, New York, USA. CRC Press, 2002.
3. Development of micro-diesel injector nozzles via MEMS technology and effects on spray characteristics Seunghyun Baik, James P. Blanchard and Michael L. Corradini (Pdf files)

Syllabus for Unit Test

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV,V and VI

SELF STUDY-II

SILICON NANOSTRUCTURES & CARBON NANOTUBES BASED NANOELECTRONICS

TEACHING SCHEME

Lectures: 04 Hrs/Week

EXAMINATION SCHEME

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

Unit I:

Semiconductor Nanostructures & Nanomaterials

Semiconductor Nanostructures & Nanomaterials: Introduction, Importance of Semiconductor Nanomaterials in Electronic Industry, Various Silicon Nanostructures, Silicon Nanowires

Silicon Quantum Dots, Silicon Nanotubes, Hybrid Silicon-Carbon Nanotubes

Silicon Carbide Nanotubes

Unit II:

Carbon Nanotubes Nanoelectronics

Carbon Nanotubes: Introduction, Synthesis of Carbon Nanotubes, Properties of Carbon Nanotubes, Specific Applications in Electronics, Carbon Nanotube based Field Emission Devices, Carbon Nanotube Transistors, Single Electron Transistor, Ballistic Carbon Nanotube Field Effect Transistor with Palladium Contact

Unit III:

Carbon Nanotubes: Nanoelectronics

Overview of Carbon Nanotube Field Effect Transistor Technology

Unit IV:

Notable Achievements in Nanoelectronics

Single-Molecule Electronics: Molecular electronics, Molecular logic gate, Molecular wires

Solid State Nanoelectronics: Nanocircuitry, Nanolithography, Nanosensors

Unit V:

Silicon Nanotechnology

Silicon Nanotechnology: CMOS Nanotechnology, Ballistic Properties, Memory

Unit VI:

Display Devices

Nano Emissive Display Devices, Quantum Dots, Nano Chips

Nano Electro Mechanical System (NEMS)

Books /Text References:

1. Nanotechnology Demystified by Linda Williams and Wade Adams (Aug 29, 2006)
2. Microsystems and Nanotechnology by Zhaoying Zhou, Zhonglin Wang and Liwei Lin (Nov 28, 2011)
3. Polymeric Nanocomposites: Theory and Practice, By Sati N. Bhattacharya, Musa Rasim Kamal, Rahul K. Gupta, Hanser Verlag
4. Polymer Nanocomposites: Processing, Characterization, And Application, McGraw-Hill.

Syllabus for Unit Test

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV,V and VI

SELF STUDY II

Subject: Nanobioelectronics

Unit I

Semiconductor Fabrication – Top-down techniques

Unit II

Introduction to Semiconductor and Carbon-based nanostructures

Introduction to Carbon-based electronic devices

Unit III

Electrical transport at nanoscale

Coupling of biology and nanoelectronics

Unit IV

Biorecognition and transduction events

Biosensors - Electrochemical and Impedance-based methods

Unit V

DNA bioelectronics

Protein (biomimetic) based nanodevices

Unit VI

Current applications in cancer, regenerative medicine, neuroscience,

SELF STUDY II

Subject: Compound Semiconductor Materials and Devices

Unit I

Introduction to the Compound semiconductor materials and devices

Miller Indices, Reciprocal lattice vector-1, Reciprocal vector -2.

Unit II

Bragg Diffraction-1, Bragg Diffraction-2.

Brillouin Zone, Bandstructure, Effective Mass, Infinite Quantum Well.

Unit III

DOS of Nanostructure-1, DOS of Nanostructure-2, Finite Quantum Well-1.

Finite Quantum Well-2, Triangular Well-1, Triangular well-2,

Double Quantum well-1, Double Quantum Well-2.

Unit IV

Bloch Theorem, Superlattice-1, Superlattice-2.

Heterostructure strain, Band gap engineering.

Unit V

Band alignment, anion rule, Auger recombination.

Unit VI

Long wavelength infrared photodetectors, Quantum cascaded lasers

SELF STUDY II

Subject: Nanoprocessing

Unit I

Introduction, Characterization and manipulation at nano-scale

Scanning electron microscope (SEM)

Transmission electron microscope (TEM)

Unit II

Scanning probe microscope (SPM)

Scanning tunneling microscope (STM)

Atomic force microscope (AFM)

Unit III

X-ray diffraction

Synthesis and processing 0D nanostructures – nanoparticles

Unit IV

Homogeneous nucleation

Synthesis of metallic nanoparticles

Synthesis of nonoxide semiconductor nanoparticles

Synthesis of oxide nanoparticles

Vapor phase synthesis

Solid-state synthesis

Unit V

Heterogeneous nucleation

Spatially confined growth

Core-shell nanoparticles

Unit VI

Synthesis and processing 1D nanostructures – nanowires/nanorods/nanotubes/nanofibers

Bottom-up approaches: Anisotropic growth

Top-down approach – electrospinning

Synthesis and processing 2D nanostructures – thin films

Vapor phase deposition

Liquid phase growth

SELF STUDY PAPER II: SEM IV

Subject: Introduction to Nano-modelling

Unit I

Computational Modelling – Process, Model, Mathematical Model, Methods of Computational Modelling, application to nano-engineering

Unit II

Molecular Dynamic – Modelling & Simulation, Analysis background, Potential Energy Function, Naoscale phenomena, approach to technique

Molecular mechanic – basic aspect, Mechanics of systems of particles, General co-ordinate system, Least Action Principle

Unit III

Energy Minimization - Concept, Methods - First order minimization, Second Order Minimization, Simplex Minimization. Application to molecular dynamic

Unit IV

Statistical Mechanics in Molecular Dynamics – Definition, Ensemble – Micro canonical, Canonical, Isobaric-Isothermal, MD and Time average, Ensemble average

Unit V

Boundary in MD – Periodic Boundary Condition – Fixed simulation cell, semi rigid atomistic boundary

Unit VI

MD Packages - GROMACS – Flow Chart, Computational Lab practical to use of this package

ENGINEERING MATHEMATICS-I

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

MATRICES

Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering .

(08 Hours)

Unit II

COMPLEX NUMBERS AND APPLICATIONS

Definition, Cartesian, Polar and Exponential Forms ,Argand's Diagram, De'Moivre's theorem and its application to find roots of algebraic equations., Hyperbolic Functions, Logarithm of Complex Numbers, Separation into Real and Imaginary parts, Application to problems in Engineering.

(08 Hours)

Unit III

DIFFERENTIAL CALCULUS

Successive Differentiation, nth Derivatives of Standard Functions, Leibnitz's Theorem.

EXPANSION OF FUNCTIONS

Taylor's Series and Maclaurin's Series.

(08 Hours)

Unit IV

DIFFERENTIAL CALCULUS

Indeterminate Forms, L' Hospital's Rule, Evaluation of Limits.

INFINITE SERIES

Infinite Sequences, Infinite Series, Alternating Series, Tests for Convergence, Absolute and Conditional Convergence, Power series, Range of Convergence.

(08 Hours)

Unit V

PARTIAL DIFFERENTIATION AND APPLICATIONS

Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables. Errors and Approximations.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Unit VI

JACOBIAN

Jacobians and their applications, Chain Rule, Functional Dependence.

MAXIMA AND MINIMA

Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.

(08 Hours)

Assignments

1. Rank ,System of Linear Equations.
2. Complex Numbers.
3. Differential Calculus and Expansion of Functions.
4. Indeterminate Forms and Infinite Series.
5. Partial Derivatives, Euler's Theorem on Homogeneous Functions.
6. Jacobians, Maxima and Minima of Functions of two variables.

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Fundamentals of Civil Engineering

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:		
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits		
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks				
		Term Work: 25 Marks		01 Credit		
Course Pre-requisites:						
The Students should have						
1.	Concepts of units and conversions of units.					
2.	Basic knowledge of Chemistry					
3.	Basic knowledge of geography, concept of latitude and longitude.					
Course Objectives:						
To make student understand the scope and application of Civil Engineering						
Course Outcomes:						
Students will be able to understand						
1.	Different building components and material					
2.	Classification of surveying					
3.	Levelling of the ground					
4.	Planning of building					
5.	Methods of irrigation and water supply					
6.	Different methods of transportation					
UNIT - I	Civil Engineering Scope And Applications.				(06 Hours)	
	Civil Engineering scope, importance and applications to other disciplines of Engineering; Civil Engineering construction process and role of Civil engineer; Government authorities related to Civil Engineering; Types of structures based on loading, material and configuration; Building components and their functions; Civil Engineering materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood, glass and aluminum.					
UNIT - II	Surveying				(06 Hours)	
	Objectives, Principles and Classification of Surveying; Linear, angular, Vertical and area Measurements and related instruments.					
UNIT - III	Building Planning And Bye Laws				(06 Hours)	
	Site selection for residential building; Principles of building planning; Building bye laws- necessity, Floor Space Index, Heights, open space requirements, set back distance, ventilation and lighting, concept of carpet and built up area, minimum areas and sizes for residential buildings; Concept of Eco friendly structures and Intelligent buildings.					
UNIT - IV	Foundations and Earthquakes				(06 Hours)	
	Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation. Earthquakes causes, effects and guidelines for earthquake resistant design, earthquake zones.					
UNIT - V	Irrigation And Water Supply				(06 Hours)	
	Rainfall measurement and its use in design of dams; Types of dams, canals, methods of irrigation and their merits and demerits; hydropower structures; Water supply, drinking water requirements and its quality, water and					

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	sewage treatment flow chart.	
UNIT - VI	Infrastructure	(06 Hours)
	Roads- types of roads and their suitability, cross section of roads, meaning of terms ; width of roads, super elevation, camber, gradient ,sight distance, materials used for construction of roads. Railways- Types of gauges, section of railway track, components of railway track, advantages. Bridges: Components - Foundation, Piers, Bearings, Deck. Airways- Components -Runway, Taxiway and Hangers.	
Term Work:		
(Term work shall consist of any eight exercises from the list given below.)		
1.	Study and use of prismatic compass and measurement of bearings.	
2.	Study and use of Dumpy level and reduction of levels by collimation plane method.	
3.	Area measurement by Digital Planimeter.	
4.	Drawing plan and elevation of a residential bungalow.	
5.	Study of features of topographical maps.	
6.	Assignment on collection of information on Civil Engineering materials.	
7.	Assignment on types of foundations.	
8.	Assignment problem on irrigation and hydropower structures.	
9.	Assignment on study of flow chart of water and sewage treatment.	
10.	Assignments on types of transportation systems.	
Text Books:		
1.	“ Surveying- Vol I “ - S.K. Duggal , Tata McGraw Hill Publication.	
2.	“Built Environment” – Shah , Kale, Patki, , Tata McGraw Hill Publication	
3.	“Building Construction” – Dr. B.C. Punmia , Laxmi Publication	
4.	“Irrigation and water Power Engineering “- Dr. P.N. Modi,Standard Publishers ,New Delhi	
5.	“Text book of Transportation Engineering “- Arora, Charotar Publishers.	
6.	Water supply and sanitary engineering-Rangawala, Charotar Publishers.	
7.	“Basic Civil engineering”- M.S. Palanichamy- Tata McGraw Hill Publication	
Reference Books:		
1.	“Surveying –Theory and Practice”-James Anderson- Tata McGraw Hill Publication	
Syllabus for Unit Test:		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

ENGINEERING GRAPHICS

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -04 Hours / Week	End Semester Examination: - 60Marks	<u>05</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

Unit I	<p>Lines and Dimensioning in Engineering Drawing Different types of lines used in drawing practice, Dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.</p> <p>Curves used in Engineering Practice Ellipse by Directrix-Focus method, Arcs of Circle method, Concentric circle method and Oblong method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone, Loci of points- Slider Crank mechanisms.</p>	(6)
Unit II	<p>Orthographic Projection Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections.</p>	(6)
Unit III	<p>Isometric Projections Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, and Sphere.</p>	(6)
Unit IV	<p>Projections of Points and Lines and planes Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines, Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP</p>	(6)
Unit V	<p>Projection of Solids Projection of prism, pyramid, cone and cylinder by rotation method.</p>	(6)
Unit VI	<p>Section of Solids Types of section planes, projections of solids cut by different sections of prism, pyramid, cone and cylinder.</p>	(6)

Term work

Term work shall consist of five half-imperial size or A2 size (594 mm x 420 mm) sheets.
Assignment 05 Problems on each unit in A3 size Drawing Book

SHEETS

1. Types of lines, Dimensioning practice, Free hand lettering, 1st and 3rd angle methods symbol.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

2. Curves and loci of points
3. Projections of Points and Lines and planes
4. Orthographic Projections
5. Isometric views
6. Projection of Solids

Text Books

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India,
2. "Text Book on Engineering Drawing", K.L.Narayana & P.Kannaiah, Scitech Publications, Chennai.
3. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi ,
4. "Engineering Drawing and Graphics", Venugopal K., New Age International Publishers.
5. M. B. Shah and B. C. Rana, "Engineering Drawing", 1st Ed, Pearson Education, 2005
6. P. S. Gill, "Engineering Drawing (Geometrical Drawing)", 10 Edition, S. K. Kataria and Sons, 2005
7. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 Edition, 1988

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

ENGINEERING PHYSICS

Teaching Scheme:	Examination scheme:	Credits Allotted:
Lectures: 4Hrs/Week	End Semester Examination: 60 marks	Theory: 04
Practical: 2Hr/Week	Continuous Assessment: 40 marks Term Work: 25marks	Practical: 01

UNIT – I

MODERN PHYSICS

Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focussing, Wavelength and resolution, Specimen limitation, Depth of field and focus, Electron microscope, Positive rays, Separation of isotopes by Bainbridge mass spectrograph.

NUCLEAR PHYSICS

Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium, Fission energy, Critical mass and size, Reproduction factor, Chain reaction and four factor formula, Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions, Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron,

(08hours)

UNIT – II

SOLID STATE PHYSICS

Band theory of solids, Free electron theory, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.

SUPERCONDUCTIVITY

Introduction, Properties of a super conductor, Meissner's effect, Critical field, Types of superconductors, BCS theory, High temperature superconductors, Application of superconductors.

(08hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT – III

THERMODYNAMICS

Zeroth law of thermodynamics, first law of thermodynamics, determination of J by Joule's method, Applications of first law, heat engines, Carnot's cycle and Carnot's engine, second law of thermodynamics, entropy, change in entropy in reversible and irreversible processes, third law of thermodynamics.

NANOSCIENCE

Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles (Physical and chemical), synthesis of colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications.

(08 hours)

UNIT-IV

OPTICS - I

INTERFERENCE

Interference of waves, Visibility of fringes, interference due to thin film of uniform and non-uniform thickness, Newton's rings, Engineering applications of interference (optical flatness, interference filter, non-reflecting coatings, multi-layer ARC).

DIFFRACTION

Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Diffraction at a circular aperture (Result only), Plane diffraction grating, Conditions for principal maxima and minima, Rayleigh's criterion for resolution, Resolving power of grating and telescope.

(08 hours)

UNIT-V

OPTICS - II

POLARISATION

Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism, Polaroids, Elliptical and circular polarisation, Quarter and half wave plates, Production of polarised light, Analysis of polarised light, half shade polarimeter, LCD.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

LASERS

Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Properties of lasers, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.

(08 Hours)

UNIT-VI

ARCHITECTURAL ACOUSTICS

Elementary acoustics, Limits of audibility, Reverberation and reverberation time, Sabine's formula, Intensity level, Sound intensity level, Sound absorption, Sound absorption coefficient, different types of noise and their remedies, Sound absorption materials, basic requirement for acoustically good hall, factors affecting the architectural acoustics and their remedies.

QUANTUM MECHANICS

Electron diffraction, Davisson and Germer's experiment, Wave nature of matter, De-Broglie waves, Wavelength of matter waves, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box and non rigid box.

(08hours)

TERM WORK

Experiments

Any ten experiments from the following:

1. Determination of band gap of semi-conductor.
2. Solar cell characteristics.
3. e/m by Thomson's method.
4. Uses of CRO for measurement of phase difference and Lissajos figures.
5. Hall effect and Hall coefficient.
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode, Photo diode, LED, Ge/Si diode).
8. Plank's constant by photodiode.
9. Wavelength by diffraction grating.
10. Newton's rings.
11. Ultrasonic interferometer.
12. Sound intensity level measurement.
13. Wavelength of laser by diffraction.
14. Determination of refractive index for O-ray and E-ray.
15. Brewester's law.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Assignments

1. Recent advances in Nanotechnology
2. Nuclear radiation detectors.
3. Atomic force microscope (AFM).
4. Advanced opto-electronic devices.
5. Laser in Industry.
6. Different spectroscopic methods – a comparison (Raman, IR, UVR, etc.).

Unit Tests:

Unit Test I : Unit I, II, III

Unit Test II: Unit IV, V, VI

Reference Books:

1. Physics for Engineers – Srinivasan M.R.
2. A text Book of Engineering Physics- M.N. Avadhanulu, P.G. Kshirsagar
3. Engineering Physics- K. Rajagopal
4. Electronics Principles – A.P.Molvino
5. Fundamentals of Optics – Jenkins and White
6. A Textbook of Sound – Wood
7. Engineering Physics – Sen, Gaur and Gupta

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Fundamentals of Electrical Engineering		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Mathematics	
2.	Physics	
Course Objectives:		
	The course introduces fundamental concepts of DC and AC circuits, electromagnetism, transformer and measuring instruments and electronic components to all first year engineering students.	
Course Outcomes:		
1.	Understand and apply knowledge of basic concepts of work ,power ,energy for electrical, mechanical and thermal systems	
2.	Understand and apply knowledge of Kirchoff's laws and network theorems to solve electrical networks	
3.	Describe construction, principle of operation, specifications and applications of capacitors and batteries	
4.	Describe and apply fundamental concepts of magnetic and electromagnetic circuits for operation of single phase transformer	
5.	Define basic terms of single phase and three phase ac circuits and supply systems	
6.	Know and use electrical safety rules	
UNIT - I	Basic concepts	(06 Hours)
	Concept of EMF, Potential Difference, current, resistance, Ohms law, resistance temperature coefficient, SI units of Work, power, energy. Conversion of energy from one form to another in electrical, mechanical and thermal systems	
UNIT - II	Network Theorems	(06 Hours)
	Voltage source and current sources, ideal and practical, Kirchoff's laws and applications to network solutions using mesh analysis, Simplifications of networks using series- parallel, Star/Delta transformation. Superposition theorem, Thevenin's theorem, Max Power Transfer theorem.	
UNIT - III	Electrostatics	(06 Hours)
	Electrostatic field, electric field intensity, electric field strength, absolute permittivity, relative permittivity, capacitor composite, dielectric capacitors, capacitors in series & parallel, energy stored in capacitors, charging and discharging of capacitors, Batteries-Types, Construction & working.	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT - IV	Magnetic Circuit & Transformer	(06 Hours)
	<p>Magnetic effect of electric current, cross and dot convention, right hand thumb rule, concept of flux, flux linkages, Flux Density, Magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability, B-H curve, hysteresis loop, series-parallel magnetic circuit, composite magnetic circuit, Comparison of electrical and magnetic circuit</p> <p>Farady's law of electromagnetic induction, statically and dynamically induced emf, self inductance, mutual inductance, coefficient of coupling, Single phase transformer construction, principle of operation, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Determination of Efficiency & Regulation by direct load test.</p>	
UNIT - V	AC Fundamentals & AC Circuits	(06 Hours)
	<p>AC waveform definitions , form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar & rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3-ph AC Circuits.</p>	
UNIT - VI	Electrical Wiring and Illumination system	(06 Hours)
	<p>Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED), Study of Electricity bill.</p>	

Term Work:

The term work shall consist of record of minimum eight exercises / experiments.

1. Determination of resistance temperature coefficient
2. Verification of Superposition Theorem
3. Verification of Thevenin's Theorem
4. Verification of Kirchoff's Laws
5. Verification of Maximum power transfer Theorem
6. Time response of RC circuit
7. Study of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$ & $X_L = X_C$
8. Verification of current relations in three phase balanced star and delta connected loads.
9. Direct loading test on Single phase transformer
 - a) Voltage and current ratios.
 - b) Efficiency and regulations .
10. Study of a Residential (L.T.) Bill

Text Books:

- 1) B.L.Theraja- "A Textbook of Electrical Technology" Volume- I, S.Chand and Company Ltd.,New Delhi
- 2) V. K. Mehta, - "Basic Electrical Engineering", S. Chand and Company Ltd., New Delhi
- 3) I. J. Nagrath and Kothari – "Theory and problems of Basic Electrical Engineering", Prentice Hall of

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Workshop Technology

TEACHING SCHEME:

Theory: -
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: -
Continuous Assessment: -
Term Work: 50 Marks

CREDITS ALLOTTED:

01 Credit

Course Pre-requisites: Basic knowledge of hand tools used in day to day life.

Course Objectives: Make the students familiar with basic manufacturing processes

Course Outcomes: students should be able to understand

1. basic Manufacturing Processes used in the industry,
2. importance of safety

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the following topics.

Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances
Term work includes one job involving joint and woodturning.

Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.
Term work to include one job involving fitting to size, male-female fitting with drilling and tapping.

Sheet Metal Practice Introduction to primary technology processes involving bending, punching and drawing various sheet metal joints, development of joints.

Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.
Term work includes one job involving various joining processes like riveting, joining of plastics, welding, brazing, etc.

Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.

Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.

Plumbing (Demonstration Common for Electrical & Non electrical Group)

Types of pipe joints, threading dies, Pipe fittings.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

ENGINEERING MATHEMATICS-II

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

DIFFERENTIAL EQUATIONS (DE)

Definition, Order and Degree of DE, Formation of DE. Solutions of Variable Separable DE, Exact DE, Linear DE and reducible to these types.

(08 Hours)

Unit II

APPLICATIONS OF DIFFERENTIAL EQUATIONS

Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchoff's Law of Electrical Circuits, Motion under Gravity, Rectilinear Motion, Simple Harmonic Motion, One-Dimensional Conduction of Heat, Chemical engineering problems.

(08 Hours)

Unit III

FOURIER SERIES

Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis.

INTEGRAL CALCULUS

Reduction formulae, Beta and Gamma functions.

(08 Hours)

Unit IV

INTEGRAL CALCULUS

Differentiation Under the Integral Sign, Error functions.

CURVE TRACING

Tracing of Curves, Cartesian, Polar and Parametric Curves. Rectification of Curves.

(08 Hours)

Unit V

SOLID GEOMETRY

Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder.

(08 Hours)

Unit VI

MULTIPLE INTEGRALS AND THEIR APPLICATIONS

Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Assignments

1. Differential Equations.
2. Application of DE.
3. Fourier Series and Integral Calculus.
4. DUIS and Curve Tracing.
5. Solid Geometry.
6. Double and Triple integrations, area and volume.

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

FUNDAMENTALS OF MECHANICAL ENGINEERING

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -03Hours / Week	End Semester Examination: - 60Marks	<u>04</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

UNIT-I	<p>Thermodynamics- Heat, work and Internal Energy, Thermodynamic State, Process, Cycle, Thermodynamic System, First Law of Thermodynamics, Application of First Law to steady Flow and Non Flow processes, Limitations of First Law, PMM of first kind (Numerical Treatment), Second Law of Thermodynamics – Statements, Carnot Engine and Carnot Refrigerator, PMM of Second Kind (Elementary treatment only)</p>	(08)
UNIT-II	<p>Introduction to I.C. Engines and turbines- Two stroke, Four Stroke Cycles, Construction and Working of C.I. and S.I. Engines, Hydraulic turbines, steam turbines, gas turbines.(Theoretical study using schematic diagrams)</p> <p>Introduction to refrigeration, compressors & pumps- Vapor compression and vapor absorption system, house hold refrigerator, window air conditioner. Reciprocating and rotary compressor, Reciprocating and centrifugal pump. (Theoretical study using schematic diagrams)</p>	(08)
UNIT-III	<p>Energy Sources - Renewable and nonrenewable, solar flat plate collector, Wind, Geothermal, Wave, Tidal, Hydro power, Bio-gas, Bio-Diesel, Nuclear power.</p> <p>Heat transfer- Statement and explanation of Fourier’s law of heat conduction, Newton’s law of cooling, Stefan Boltzmann’s law. Conducting and insulating materials and their properties, types of heat exchangers and their applications.</p>	(08)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT-IV	<p>Properties of fluids- Introduction, Units of measurements, mass density, specific weight, specific volume and relative density, viscosity, pressure, compressibility and elasticity, gas laws, vapor pressure, surface tension and capillarity, regimes in fluid mechanics, fluid properties and analysis of fluid flow.</p> <p>Properties of Materials and their Applications- Metals – Ferrous and Non-Ferrous, Nonmetallic materials, smart materials, Material selection criteria.</p>	(08)
UNIT-V	<p>Mechanical devices - Types of Belts and belt drives, Chain drive, Types of gears, Types of Couplings, friction clutch (cone and plate), brakes, Power transmission shafts, axles, keys, bush and ball bearings.</p> <p>Mechanisms- Slider crank mechanism, Four bar chain mechanism, List of various inversions of Four bar chain mechanism, Geneva mechanism, Ratchet and Paul mechanism</p>	(08)
UNIT-VI	<p>Machine Tools- Lathe Machine – Centre Lathe, Drilling Machine – Study of Pillar drilling machine, Introduction to NC and CNC machines, Grinding machine, Power saw, Milling Machine.</p> <p>Introduction to manufacturing processes and Their Applications- Casting, Sheet metal forming, Sheet metal cutting, Forging, Fabrication, Metal joining processes.</p>	(08)

List of experiments-

The Term Work shall consist of **any Eight** experiments of following list

1	Measurement of viscosity using Redwood viscometer.
2	Assembly and working of 4-bar, 6-bar, 8-bar planer mechanisms
3	Finding relation between input angle and output angle for various link lengths.
4	Study of domestic refrigerator & window air-conditioner
5	Demonstration of operations of centre lathe
6	Demonstration of operations on drilling machines
7	Demonstration of Two stroke and four stroke engine
8	Study of power transmitting elements: Coupling, Gears and bearings
9	Demonstration of pumps and compressor
10	Study and demonstration of different types of clutches.

10: Engineering Mechanics

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit

Course Pre-requisites:

The Students should have knowledge of

1. Scalar and Vector
2. Newton's law of motion
3. Law of friction
4. Concept of physical quantities, their units and conversion of units
5. Concept of differentiation and integration

Course Objectives:

To develop and apply the concept of resultant and equilibrium for various static and dynamic engineering problems.

Course Outcomes:

The student should be able to

1. calculate resultant and apply conditions of equilibrium.
2. analyze the truss and calculate friction force.
3. calculate centroid and moment of inertia.
4. solve problem on rectilinear motion.
5. solve problems on curvilinear motion.
6. use D'Alembert's principle, Work Energy principle and Impulse Momentum principle for particle.

UNIT - I	Resultant and Equilibrium	(06 Hours)
	Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach.. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point.	
UNIT - II	Truss and Friction	(06 Hours)
	Coefficient of Static Friction, Impending motion of Blocks, Ladders and Belts. Analysis of Perfect Trusses - Method of Joint, Method of Section and Graphical Method.	
UNIT - III	Centroid and Moment of Inertia	(06 Hours)
	Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia.	
UNIT - IV	Kinematics of Rectilinear motion of a Particle	(06 Hours)
	Equations of motion, Constant and variable acceleration, Motion Curves,	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	Relative motion, Dependent motion.	
UNIT - V	Kinematics of Curvilinear motion of a Particle	(06 Hours)
	Motion of a Projectile, Cartesian components, Normal and Tangential components of a curvilinear motion.	
UNIT - VI	Kinetics of a Particle	(06 Hours)
	D'Alemberts Principle, Work-Energy Principle and Impulse-Momentum Principle, Coefficient of Restitution, Direct Central Impact.	
Term Work:		
A) The term-work shall consist of minimum Five experiments from list below.		
1. Determination of reactions of Simple and Compound beam.		
2. Study of equilibrium of concurrent force system in a plane.		
3. Determination of coefficient of friction for Flat Belt.		
4. Determination of coefficient of friction for Rope.		
5. Study of Curvilinear motion.		
6. Determination of Coefficient of Restitution.		
B) The term-work shall also consist of minimum Five graphical solutions of the problems on different topics.		
Text Books:		
1) "Engineering Mechanics (Statics and Dynamics)", Hibbeler R.C., McMillan Publication.		
2) "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.		
3) "Engineering Mechanics", Bhavikatti S.S. and Rajashekarappa K.G., New Age International (P) Ltd.		
Reference Books:		
1. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.		
2. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication.		
3. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.		
4. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.		
5. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.		
6. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I to III	
Unit Test -2	UNIT – IV to VI	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

ENGINEERING CHEMISTRY

Teaching Scheme:
Lectures: 4Hrs/Week
Practical: 2Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory: 04
Practical: 01
Term Work: 25marks

Unit I

WATER

Introduction, Hardness of water, Effect of hard water on boilers and heat exchangers: a) boiler corrosion
b) caustic embrittlement c) scales and sludges d) priming and foaming
Water softening methods for industrial purposes :a) Zeolite process b) Phosphate conditioning Numerical
based on the zeolite process **(08 Hours)**

Unit II

MATERIAL CHEMISTRY

Crystallography : Unit cell, Laws of crystallography, Weiss indices and Miller indices, Crystal defects
(point and line defects), X-ray diffraction – Bragg's Law and numerical.
Cement : Introduction of cement, Hydraulic/ Non-hydraulic cementing materials, classification of cement,
chemistry of portland cement, chemical composition and compound constituents of portland cement,
properties of cement and its applications. **(08 Hours)**

Unit III

FUELS

Introduction, classification of fuels, calorific value of fuels, NCV and GCV, Determination of
calorific values using Bomb calorimeter and Boys' gas calorimeter.
Theoretical calculation of calorific value of a fuel, Analysis of coal a) Proximate b) Ultimate analysis of
coal, Numericals based on NCV, GCV. **(08 Hours)**

Unit IV

CORROSION AND ITS PREVENTION

Corrosion: - Definition, atmospheric corrosion-mechanism, Wet corrosion-mechanism, Electrochemical
and galvanic series, Factors affecting corrosion-nature of metal, nature of environment.
Methods of prevention of corrosion- Cathodic and Anodic protection, Metallic coatings, Electroplating,
Hot dipping. **(08 Hours)**

Unit V

ELECTROCHEMISTRY

Introduction, Arrhenius Ionic theory, Kohlrausch's law of independent migration of ions
Laws of electrolysis: Faradays Laws, Ostwald's dilution law, Acids and Bases, concept of pH and pOH,
Buffer solutions, Solubility Product, Redox Reactions.
Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Overvoltage,
Conductometric Titrations, Fuel cells, Lead Acid Storage Cell and numericals based on the above articles.
(08 Hours)

Unit VI

STEREOCHEMISTRY

Introduction, chirality, optical activity, Enantiomers, Diastereomers, projection formula of tetrahedral
carbon- Newman projection, Wedge projection, Fischer projection, Geometrical isomerism :- cis and trans
isomerism, E and Z isomers

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Optical isomerism :- Mesoform, the number of optical isomers for chiral molecules,
Conformations :- conformations of ethane, conformations of n-butane

(08 Hours)

TERM WORK

Experiments

Any Ten experiments from the following:

1. Estimation of hardness of water by EDTA method.
2. Estimation of chlorine by Mohr's method.
3. Determination of percentage of Ca in given cement sample
4. Determination of coefficient of viscosity by Ostwald's viscometer
5. Study of Bomb calorimeter for determination of calorific value.
6. Determination of calorific value of gas fuel by using Boy's gas calorimeter.
7. Determination of dissolved oxygen in a water sample.
8. To determine the Molecular Weight of polymer
9. Estimation of Copper from brass sample solution by Iodometrically
10. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
11. To standardize NaOH solution and hence find out the strength of given hydrochloric Acid solution
12. To determine Surface Tension of given liquid by Stalagmometer
13. Study of corrosion of metals in medium of different pH.
14. To set up Daniel cell
15. To determine pH of soil
16. To determine Acidity of soil

Assignments

7. Effect of hard water on boilers and heat exchangers
8. Hydraulic/ Non-hydraulic cementing materials
9. Analysis of coal a) Proximate b) ultimate analysis of coal
10. Wet corrosion-mechanism, Electroplating, Hot dipping
11. Geometrical isomerism :- cis and trans isomerism, E and Z isomers
12. Fuel cells

12. Engineering Chemistry by Dara S. S. S Chand Publications
13. Fundamentals of Electrochemistry, V. S. Bagotsky (Ed) Wiley NY (2006)

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Electrical & Electronic Devices		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Fundamentals of semiconductor physics	
Course Objectives:		
	This course introduces basic knowledge about electrical and electronics devices and measuring instruments .The course is designed for beginners to learn specifications, construction, characteristics and application circuits of It also introduces concepts of digital components	
Course Outcomes:		
1.	Classify different resistors, inductors and capacitors and select as per the application requirement.	
2.	Explain construction, characteristics, principle of operation of PMMC,MI, dynamometer type instruments and errors associated with them.	
3.	Describe and apply different methods of resistance measurement.	
4	Identify and describe electronic components, their circuits and electronic instruments (Diode, zener diode , LED, opto electronic device and CRO. Function generator, Digital mutimeter)	
5	Explain characteristics, principle of operation and applications of transistor and FET.	
6	Draw diagram and explain operation of transistor amplifiers , multivibrators and oscillators	
UNIT - I	Electrical Components	(06 Hours)
	Types of Resistors (Fixed, Variable, Precision-Carbon film, metal film, wire wound) ,their standard values, specifications and applications, Classification of capacitors based on dielectrics(Electrolytic, Ceramic, Polyester), their standard values, specifications and applications, Types of Inductors, Specifications & applications, Ferrite core, electromagnets	
UNIT - II	Electrical Measuring Instruments	(06 Hours)
	Static characteristics of an instrument, Accuracy, linearity, sensitivity, reproducibility, resolution, Types of errors, necessity of different torques in indicating instruments, recording instrument integrating instrument., Measurement of current and voltage : Construction, Principle of operation torque equation and sources of errors in PMMC, Moving Iron instrument, dynamometer type instrument, Extension of ranges using shunts and multipliers. Galvanometer: construction, principle of operation of D'Arsonval, vibration and ballistic galvanometer.	
UNIT - III	Measurement of Resistance	(06 Hours)
	Classification of resistances , measurement of Medium resistance ,	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	ammeter voltmeter method , Wheatstone bridge, sensitivity of Wheatstone bridge, limitations of the method , measurement of low resistance .D.C. Potentiometer- Calibration of ammeter and voltmeter application, Kelvin bridge, Ohmmeter , measurement of high resistance , difficulties in measurement , use of guard circuit, direct deflection method , loss of charge method , earth tester and measurement of earth resistance, megger.	
UNIT - IV	Basic Electronic Devices	(06 Hours)
	Diode construction, characteristics , Half wave and full wave rectifier, filters, clipping and clamping circuits, zener diode, LED, seven segment display, photodiode , photo transistor ,opto coupler and optoisolator, DC regulated power supply, Series , Shunt regulator, line and load regulation, Three pin regulator ICs, Function Generator block diagram and working, front panel controls . Cathode Ray Oscilloscope block diagram and working, front panel controls, measurement of voltage and frequency , Digital multimeter block diagram and working	
UNIT - V	BJT Circuits	(06 Hours)
	Construction, characteristics and principle of operation of CE, CB, CC configuration, comparison, biasing circuits, DC operating point Transistor as an amplifier, current gain, α , β relationships, voltage gain , other parameters ,Hybrid parameters (for CE only), frequency response of amplifier . FET construction, characteristics, principle of operation, parameters, FET as an amplifier, Comparison of BJT and FET	
UNIT - VI	Amplifiers & Multivibrators	(06 Hours)
	Multistage transistor amplifier- direct, RC coupled and transformer coupled , Classes of Power amplifiers , efficiency of operation, Feedback amplifiers , concept effect of feedback on gain Transistor Oscillators- Tuned collector, Colpitt's, Hartley, Wien Bridge , RC phase shift oscillator , Transistor as switch - Multivibrators - Astable, Mono stable , Bi-stable.	

Term Work:

The term work shall consists of record of minimum eight experiments. Four from first 6 and four from next 6 out of given below.

1. Study of data sheets & specifications of Electrical Components
2. Study of PMMC,MI & Dynamometer type electrical measuring instruments.
3. Measurement of low resistance by Kelvin's Double Bridge.
4. Measurement of resistance by Voltmeter –Ammeter method.
5. Measurement of earth resistance.
6. Study and use of Megger.
7. Use of cathode ray oscilloscope for voltage and frequency measurement

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

8. Study of half wave, full wave rectifiers with and without filter.
9. To plot characteristics of CB/ CE configuration of transistor.
10. To plot characteristics of FET.
11. Frequency response of RC coupled amplifier.
12. Study of Multivibrators.

Text Books:

1. V K Mehta – “Principles of Electronics” S. Chand Publications
2. B L Theraja – “Electrical Technology”, Vol I & III, S. Chand Publications

Reference Books:

1. A.K.Sawhney - “Electrical measurements & measuring instruments” Dhanpatrai Publications
2. Allen Mottershed, - “Electronics Device and circuit an introduction” PHI Publications
3. Boylestad - “Electronics Devices Circuits & Theory”, PHI Publications.

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Fundamentals of Computer Programming		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: -- Hours / Week	End Semester Examination: --	-- Credits
Practical: 02 Hours / Week	Continuous Assessment: --	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Knowledge of operation of computer as a user	
2.	Basic arithmetic concepts	
3.	Possible awareness of use of software programming language for computation	
Course Objectives:		
	Understand programming fundamentals like algorithms, flow charts, computations, data types, looping, conditions, variables, branching, arrays, files and reporting using C++ with future application in solving mathematical, analytical and algorithm based engineering problem computations..	
Course Outcomes:		
1.	Knowledge of programming fundamentals, programming practices and its use in solving problems	
2.	Knowledge of software programming language C++	
3.	Hands on practical experience of usage of C++ programming for various operations	
UNIT - I	INTRODUCTION TO COMPUTER FUNDAMENTALS	(06 Hours)
	Introduction to: Operating Systems, System Folders, Graphical User Interface, Types of Users, Configuration, System Files, Programming Languages (High level, Assembly, Machine level, Scripting, Natural, 4GL and others), Concept of automation and use of computer programming, Modern Computer Hardware Accessories (Dongle, Wi-Fi, Bluetooth, others)	
UNIT - II	INTRODUCTION TO PROGRAMMING FUNDAMENTALS	(06 Hours)
	Algorithms, Flow-charts, Use and practice of Algorithms and Flow-charts (exchanging values, ascending / descending order, evaluation of series like sin(x) and others), editors, compilers, libraries, interpreters, pseudo code, programming planning, Good programming practices	
UNIT - III	INTRODUCTION TO DATA TYPES AND COMPUTATIONS	(06 Hours)
	Various data types (Integer, Boolean, Binary, Character, Floating, Image, Long, Short and others), data formats like date, time, currency, etc, constants, computations (arithmetic, trigonometric, scientific and others), Concept of structured programming, Iterations, Looping, Flow of programming	
UNIT - IV	PROGRAMMING CONCEPTS USING C++	(06 Hours)
	History of C++, Structured programming concepts, C++ programming basics, Keywords, Include and header files, Instructions, Operands, Data	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	formatting, Basic programming for printing on console, Printing in file, Accepting inputs and managing input and output, Basic reporting	
UNIT - V	OBJECT ORIENTED PROGRAMMING	(06 Hours)
	Object Oriented Programming (OOPS) concepts, Class and objects, Abstraction, Encapsulation, Inheritance, Polymorphism, Functions and its types (inline, static, virtual, member), Parameter passing, Overloading, Constructors and Destructors, Access control	
UNIT - VI	OBJECT ORIENTED PROGRAM DEVELOPMENT USING C++	(06 Hours)
	Software development process, Files and file structure, Common errors and debugging, Introduction to arrays, Programming using OOPS concepts, Functions, Arrays, Calculations and reporting	
<u>Term Work:</u>		
<ol style="list-style-type: none"> 1. Draw algorithm, develop flow chart and write pseudo code for arranging input in ascending / descending order 2. Develop flow-chart of a program using multiple data types, operations / calculations and printing the output in formatted manner (marks, grades and mark list printing) 3. Develop a basic C/C++ program to accept user input, format the input and print the input 4. Develop C/C++ program for experiment no. 1 5. Develop C/C++ program for experiment no. 2 6. Develop C/C++ program using functions and passing variables 7. Develop C/C++ program for using input and output files and arrays 8. Develop C/C++ program for printing report to console and output file using data from input file, user input and arrays with the use of functions 		
Text Books:

	Continuous Assessment: 40 Marks	
Course Pre-requisites:		
Students should have basic knowledge of:		
1.	Differential calculus	
2.	Integral calculus	
3.	Complex numbers	
4.	Vector algebra	
Course Objectives:		
	To develop ability to use the mathematical techniques, skills, and tools necessary for engineering practice.	
Course Outcomes: At the end of the course , the students will be able to:		
1.	Form mathematical modeling of systems using differential equations and ability to solve linear differential equations with constant coefficient.	
2.	Apply basics of analytic functions and the basics in complex integration which is used to evaluate complicated real integrals.	
3.	Apply theorems to compute the Laplace transform, inverse Laplace transforms.	
4	Solve difference equation by Z-transform.	
5	Calculate the gradients and directional derivatives of functions of several variables.	
6	Use Green's theorem to evaluate line integrals along simple closed contours on the plane.	
UNIT - I	Linear Differential Equations (LDE)	(09 Hours)
	Solution of nth order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy's & Legendre's DE, Solution of Simultaneous & Symmetric Simultaneous DE, Modeling of Electrical Circuits.	
UNIT - II	Complex Variables	(09 Hours)
	Functions of Complex Variables, Analytic Functions, C-R Equations, Conformal Mapping, Bilinear Transformation, Cauchy's Theorem, Cauchy's Integral Formula, Laurent's Series, Residue Theorem	
UNIT - III	Transforms	(09 hours)
	Fourier Transform (FT): Complex Exponential Form of Fourier Series, Fourier Integral Theorem, Sine & Cosine Integrals, Fourier Transform, Fourier Sine and Cosine Transform and their Inverses. Introductory Z-Transform (ZT): Definition, Standard Properties, ZT of Standard Sequences and their Inverses. Solution of Simple Difference Equations.	
UNIT – IV	Laplace Transform (LT)	(09 hours)
	Definition of LT, Inverse LT. Properties & theorems. LT of standard functions. LT of some special functions viz., Periodic, Unit Step, Unit Impulse, ramp, jump, Problems on finding LT & inverse LT. Applications of LT and Inverse LT for solving ordinary differential equations.	
UNIT - V	Vector Differential Calculus	(09 Hours)

	Physical Interpretation of Vector Differentiation, Vector Differential Operator, Gradient, Divergence and Curl, Directional Derivative, Solenoidal, Irrotational and Conservative Fields, Scalar Potential, Vector Identities.	
UNIT - VI	Vector Integral Calculus	(09 Hours)
	Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence Theorem, Stoke's Theorem, Applications to Problems in Electro-Magnetic Fields.	
Term Work:		
1. Linear Differential Equations		
2. Complex Variables		
3. Transforms		
4. Laplace Transform		
5. Vector Differential Calculus		
6. Vector Integral Calculus		
Text Books:		
1. Advanced Engineering Mathematics by Peter V. O'Neil (Cengage Learning).		
2. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.).		
Reference Books:		
1. Engineering Mathematics by B.V. Raman (Tata McGraw-Hill).		
2. Advanced Engineering Mathematics, 2e, by M. D. Greenberg (Pearson Education).		
3. Advanced Engineering Mathematics, Wylie C.R. & Barrett L.C. (McGraw-Hill, Inc.)		
4. Higher Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi).		
5. Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar (Pune Vidyarthi Griha Prakashan, Pune).		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Electrical Machines - I		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Practical : 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have knowledge of		
	Basic of Machine, Magnetic theory, AC & DC Fundamentals	
Course Objectives:		
	To develop the students to identify, analyze & to understand the fundamentals, classification, application and selection of DC machine, Transformer & Induction Machines for a particular application as per the operational characteristics.	
Course Outcomes: The students will be able to		
1.	To draw equivalent circuit, phasor diagram and calculate the efficiency and regulation of single phase transformer	
2.	Identify the difference between the single phase and three transformers and also will Apply the concepts and application of the three phase transformer and also can analyze using the basics of additional terms & various connections of the three phase transformer.	
3.	Apply the concepts and application of Electromagnetic Laws, Energy balance.	
4.	Identify different parts, Describe the basics of machine, armature reaction, commutation, characteristics & applications of dc generators, dc motors	
5.	Apply the concepts and application of single phase induction motors and other small size motors.	
6.	Apply the concepts and application of advancements in DC machines & transformers.	
UNIT – I	Single Phase Transformers	(06 Hours)
	Introduction to Single phase transformer, Development of equivalent circuit, Approximate & Exact equivalent circuit, & Phasor diagram, Efficiency of a Transformer, Condition for maximum efficiency, All day efficiency of Transformer, single phase Autotransformer, saving in copper. Kapp regulation diagram, Back to back test, Open circuit and Short circuit tests on single phase Transformer, Routine and Type Test on single phase transformer as per IS, Parallel operation of single phase Transformer.	
UNIT – II	Polyphase Transformers	(06 Hours)
	Comparison between single three phase unit and three single phase units, standard connections & phasor groups, parallel operation of three phase transformers, Three winding transformers, On-Load Tap Changer. Concept of polarity & Polarity Test, open circuit and short circuit tests, Direct Load Test, Sumpner's test (Back to back), I.S. Specifications of transformers. Concept of routine and type tests. Testing of transformers as per I.S. specifications.	
UNIT – III	Principles of Electromechanical Energy Conversion	(06 Hours)
	Introduction, Basic Electromagnetic Laws, EMF induced in a coil rotating in a magnetic field, forces and torques in magnetic field systems, Energy balance, Energy in singly excited magnetic field systems, Determination of magnetic force and torque from Energy, Multiply excited magnetic field systems, Forces and torques in systems with permanent magnets, Dynamic equations	
UNIT – IV	DC Machines	(06 Hours)

	Basic principle of working, Construction, E.M.F. equation of D.C. generators. Process of commutation & types, causes of bad commutation and remedies, Basic principle of working of DC motor, Significance of Back e.m.f., Torque equation, Types, characteristics and applications of d.c. motors, Starting, reversing and armature voltage and field control method of speed control, Armature reaction, Losses, efficiency, condition for maximum efficiency and maximum power output. Testing of DC motor.	
UNIT – V	Fractional Kilowatt Motors	(06 Hours)
	Construction of single phase induction motors, types, double revolving field theory, methods of self-starting, torque-speed/slip characteristics, equivalent circuit, applications, Shaded Pole motor, Commutator motors, Universal motor, Repulsion motors, Servo motors	
UNIT – VI	Modern Trends in DC Machines and Transformers	(06 Hours)
	Construction, working, characteristics and applications of: PMDC Motor, Stepper motor, BLDC motor, Printed Circuit Board Motor, Air Motor, dry type transformer, isolation transformer, Optical CT/PT	
Term Work:		
The Practical's shall consist of record of minimum eight experiments.		
<ol style="list-style-type: none"> 1. Open circuit and short circuit tests on a single phase transformer 2. Performance of standard connections (Scott and open delta) for three phase transformers 3. Sumpner's test on two identical single phase transformers 4. Parallel operation of two single phase transformers 5. Three phase to six phase transformation 6. Identification of DC machine windings and resistances 7. Speed control of D. C. Shunt motor by Armature and Field control 8. Brake test on DC shunt motor 9. Swinburn's Test on DC shunt Motor 10. Load test on single phase induction motor (Split phase induction motor) 11. Computation of Equivalent Circuit of single phase induction motor 12. Load test on ac series motor

2. B. H. Deshmukh, "Electrical Technology", Nirali Prakashan		
3. A. S. Langsdorff, "Theory of Alternator Current Machinery", Tata McGraw Hill		
4. Bhag S. Guru, Huseyin R. Hiziroglu, "Electric Machinery & Transformers", Oxford.		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Linear and Digital Integrated Circuits		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Oral 25marks	01 Credit
Course Prerequisites:		
The students should have knowledge of		
1.	Fundamentals of semiconductor physics, electronics devices	
Course Objectives:		
	This course introduces basic knowledge about linear and Digital integrated circuits. It describes fundamentals of Operational amplifier characteristics and application circuits. It also introduces concepts of digital components, combinational and sequential circuits.	
Course Outcomes: After learning this course the students will be able to		
1.	Specify operational amplifier parameters and connect the operational amplifier to perform basic applications.	
2.	Describe the operation of circuit with proper component ratings, circuit diagram, input, output waveforms.	
3.	Compare specifications of voltage regulator ICs and select as per requirements. Identify pins of IC 555 and analyze circuits of IC 555	
4	Apply knowledge of number conversion and binary arithmetic and to use Boolean algebra to develop K map logic.	
5	Draw logic circuits of multiplexer , de-multiplexer, ADC, DAC	
6	Describe different flip- flops with circuit diagram, truth table and applications such as registers, counters	
UNIT - I	Operational Amplifiers	(06Hours)
	Block diagram and working of operational amplifier, pin diagram and specifications of IC 741, IC 324, operational amplifier parameters input offset current, input offset voltage, Common Mode Rejection Ratio (CMRR), PSRR, slew rate, bandwidth and frequency response, Basic op-amp applications: Inverting amplifier, Non-inverting amplifier, Adder, Subtractor, Instrumentation amplifier, AC voltage follower, V to I and I to V converter	
UNIT - II	Waveform Generators using Operational Amplifiers	(06 Hours)
	Integrator, differentiator, Square, triangular, sine wave generator, saw-tooth, Comparator, zero crossing detector, Schmitt trigger, precision rectifier, peak detector, clipper, clamper, V to F and F to V converter, sample and hold circuit	
UNIT - III	Applications of Op-Amp and Other IC's	(06Hours)
	Voltage regulators using ICs Viz. 78xx, 79xx, LM 317, IC 723 Active filters - configuration with frequency response, Analysis of first order low pass and high pass filters, Timer IC555 construction, working and modes of operation: astable, monostable and sequence timer	
UNIT - IV	Numbering Systems and Boolean Algebra	(06 hours)
	Numbering systems - binary, octal, decimal and hexadecimal and their conversion, codes - BCD, ASCII, Grey and excess3, Binary arithmetic: addition and subtraction by 1's and 2's compliment. Logic gates, Booleans algebra, De-Morgon's theorem, K-map: structure for two and three variables, SOP and POS form reduction of Boolean expressions by K-	

	map 1-bit comparator analysis using K-map	
UNIT - V	Combinational Logic Circuits	(06Hours)
	Comparator, parity generator, Multiplexer, De-multiplexer using K-map, adder, subtractor, arithmetic logic unit, decimal to BCD encoder (74147), BCD to 7 segment decoder/driver (7446/7447), display device, ADC, Dual slope SAR, DAC - binary weighted, ladder type, Memories: RAM - static and dynamic, ROM, PROMS and EPROMS, EEPROMS detailing.	
UNIT - VI	Sequential Logic Circuits	(06 Hours)
	Flip Flops: S-R, Clocked S-R, D latches, Edge triggered D flip-flops, Edge triggered JK flip flops, JK Master-slave flip flop, Registers, Buffer registers, shift registers, controlled shift registers, asynchronous counters, synchronous counter, twisted ring counters, N-module counters, Counter IC's	
Term Work:		
The term work shall consist of record of minimum eight experiments. Four from first 6 and four from next 6 out of given below.		
<ol style="list-style-type: none"> To Study Data sheet of IC 741, 324, IC555, IC 723 To observe op. amp as adder, subtractor To observe operational amplifier as square, triangular wave, sine wave generator. To observe operation of operational amplifier as comparator, ZCD, Schmitt trigger To observe input, output waveforms of an Operational amplifier as integrator and differentiator. Operational amplifier as low pass or high pass filter and observe frequency response To connect IC 555 as mono-stable multi vibrator and observe waveforms. To connect logic gates as per pin diagram and verify truth table To design half adder and full adder using basic gates. To verify operation of various flip flops by truth table To observe shift register operation using IC7495 To understand features of synchronous and asynchronous counter and use them for different modes such as up/down, mode N, frequency divider. To use BCD to 7 segment decoder (7446,7447) BCD to decimal decoder (7441, 7442) To study specifications of ADC and DAC chips 		
Text Books:		
1. D. Roy Choudhary, Shail Jain – “Linear Integrated Circuits” -Wiley Eastern Limited.		
2. R. P. Jain - “Modern Digital Electronics”-Tata McGraw hill		
3. K. R. Botkar –“Integrated circuits”- Khanna publishers

4. James - “Operational amplifier and linear Integrated Circuits Theory and applications”		
5. Charles H. Roth –“Fundamental of Logic Design” –Jaico book		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Digital Computational Techniques

Digital Computational Techniques		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Practical : 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Mathematics (integration, differentiation, simultaneous equations, polynomial equations), Basics of programming, C++ language, Program debugging skills, Flowchart and algorithm development	
Course Objectives:		
	To develop the students for understanding, analyzing and applying numerical methods using digital techniques (C++ and MATLAB) to solve mathematical and engineering problems.	
Course Outcomes: The students will be able to		
1.	Refresh the basics of C++ language and MATLAB and solve problems using multiple numerical techniques with C++ and MATLAB	
2.	Understand importance of high speed calculations, errors involved and preliminary mathematical theorems	
3.	Find the roots of transcendental & polynomial equations	
4.	Understand and use various numerical interpolation methods to solve polynomial equations	
5.	Perform numerical differentiation and integration using multiple methods/techniques	
6.	Solve linear algebraic simultaneous equations using elimination and iterative methods	
UNIT – I	Basics of C++ and MATLAB Programming	(06 Hours)
	Data types, Operator, Variables, Control Statements, Loops, Access Control, Arrays, Functions and their types, Object Oriented Programming (OOPS) concepts, Class and Object, Abstraction, Encapsulation, Inheritance, Polymorphism, Parameter passing, Function overloading, Inline functions, Virtual functions, Friend functions, Members and Functions, MATLAB Basics (operations, built-in functions, commands, arrays, display, files, programming in MATLAB	
UNIT – II	Introduction to Numerical Computations:	(06 Hours)
	Basic principle of numerical methods and necessity of computers for high speed calculations, Floating point algebra with normalized floating point technique, Significant digits, Mathematical preliminaries: Rolle's Theorem, Generalized Rolle's Theorem, Intermediate Value Theorem, Mean Value Theorem for derivatives, Errors and their computations: Absolute, Relative and Percentage errors	
UNIT – III	Transcendental and Polynomial Equations:	(06 Hours)
	Roots of an equation and methods to find the same, Solve equations using Bisection, Secant, Regula-Falsi and Newton-Raphson methods, Single variable and multi variable Newton-Raphson techniques, Curve fitting using least square approximation – first order and second order.	
UNIT – IV	Interpolation:	(06 Hours)
	Introduction to interpolation and calculus of finite differences, Polynomial interpolation methods: Lagranges, Newton's forward, backward & central difference methods, Sterling and Bessel's interpolation	
UNIT – V	Differentiation and Integration:	(06 Hours)
	Numerical differentiation using simple interpolation techniques like Lagrangian and Newton Gregory methods, Numerical integration using Trapezoidal, Simpsons	

	Rule, Solution of ordinary differential equation using Euler's, Modified Euler's, Taylor Series, Runge-Kutta second and fourth order techniques using Hune's and Polygon method	
UNIT – VI	Linear Algebraic Simultaneous Equations:	(06 Hours)
	Direct methods like Gauss Elimination method and Gauss Jordan method, Concept of pivoting – partial and complete, Iterative methods like Gauss-Siedel, Accelerated Gauss-Siedel and Jacobi's method, Matrix inversion using Jordan method and Eigen Values using Power method and Jacobi methods	
Term Work:		
The Practical's shall consist of record of minimum eight experiments.		
13. Newton-Rhapson method using C++ Programming 14. Gauss Elimination method using C++ Programming/MATLAB 15. Gauss Seidel Method using MATLAB 16. Jacobi Method using MATLAB 17. Lagranges Interpolation method using C++ Programming 18. Newtons Divided Difference Interpolation method using C++ Programming 19. Trapezoidal method using C++ Programming 20. Euler's method using C++ Programming 21. Runge-Kutta 4 th Order method using C++ Programming 22. C++ Program on Inheritance 23. C++ Program on Polymorphism 24. C++ Program on derived class constructor and destructor		
Text Books:

Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Electrical Measurement and Instrumentation		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03	End Semester Examination: 60 Marks	03 Credits
Practical: 02	Continuous Assessment: 40 Marks	
	Practical:	01 Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Basic electrical Engineering Parameters such as Voltage, current, Power, Energy, etc.	
2.	Various physical Parameters such as, Temperature, Pressure, Flow, vibration, etc.	
Course Objectives:		
	This course introduces knowledge about electrical measurement and instrumentation. The course is designed to learn different methods of measurements of various electrical parameters and also to learn the different physical parameters with the help of the various measurement and instrumentation techniques.	
Course Outcomes: After learning this course students will be able to		
1.	Explores the importance of measurement and various terms related to measurement. Measure /calculate unknown inductance and capacitance by balancing of AC bridge. State specifications of instrument transformers and use them for high voltage and high current measurement.	
2.	Draw circuit diagram, connect wattmeter for measurement of three phase active and reactive power and energy meter for measurement of energy.	
3.	Draw block diagram, state specifications, functions of various digital/automated meter, harmonic analyzer	
4.	Classify various types of transducers. Explain principle of operation, characteristics, specifications of displacement and level transducers and different methods of measurement.	
5.	Explain principle of operation, characteristics, specifications of Pressure and temperature transducers and different methods of measurement.	
6.	Select appropriate transducer, recorder and display device as per requirement	
UNIT – I	Introduction	(06 Hours)
	<p>Introduction: significance of measurement, classification of instruments, mechanical, electrical, electronic instruments, deflection and null type, applications of measurement system.</p> <p>AC Bridges: Introduction, sources and detectors for ac bridge, general equation for bridge at balance. Measurement of Inductance: Maxwell's Inductance & Maxwell's Inductance – Capacitance Bridge, Anderson's Bridge, Schering Bridge for measurement of capacitance, Wien's Bridge for measurement of frequency, Universal Impedance Bridge</p> <p>Instrument Transformers: Introduction to CT & PT as instrument transformers. Difference between CT operated meter & whole current meter. Advantages of instrument transformers over shunts and multipliers, Accuracy class, burden on instrument transformers, expression for ratio and phase angle errors in case of C.T. and P.T. (No derivation), and precaution in using instrument transformers. Clip on ammeter.</p>	
UNIT - II	Measurement of Power and Energy	(06 Hours)
	<p>Measurement of Power: Construction, working principle, torque equation, advantages/disadvantages, errors and their compensation of dynamometer type wattmeter, low power factor wattmeter, Active & reactive power measurement in three phase balanced & unbalanced system (one wattmeter and two wattmeter methods), Power Measurement using Instrument Transformer, Three Phase wattmeter.</p>	

	Measurement of energy: Energy Meters in AC circuits, Single Phase Induction Type Energy Meter - Construction, principle of operation, torque equation of induction type energy meter, errors and adjustments. Three phase three wires, and three phase four wire energy meter, Electronic energy meter	
UNIT - III	Electronic Devices and Signal Analyzer's	(06 Hours)
	Electronic Voltmeters and their Advantages, Vacuum Tube Voltmeters, difference Amplifier Type Voltmeters, DC Voltmeters with direct Coupled Amplifier, Measurement of Power at Audio and Radio Frequencies. Digital Storage Oscilloscope – Principle of operation and waveform reconstruction. Concept of: Numeric meter & its types (TOD, ABT, Prepaid & panel mounted meters.) Measurement of power & energy by sampling technique automatic meter reading (AMR) and advanced metering infrastructure (AMI), Meter reading instrument (MRI). Wave Analyzers – Frequency Selective Wave Analyzers and Heterodyne Wave Analyzers and its applications. Harmonic Distortion Analyzer, Spectrum Analyzer, Standing Wave Ratio, Power Analyzer.	
UNIT - IV	Displacement and Level Measurement	(06 Hours)
	Introduction to Transducers, classification, basic requirements for transducers and Advantages of Electrical Transducers. Displacement measurement: Potentiometer as displacement transducer, Strain Gauge: Theory of Strain Gauges, Types of strain gauges: Un-bonded and Bonded types their construction, working, advantages and disadvantages, load cell, LVDT & RVDT – construction, working, application, null voltage, specifications, advantages/disadvantages, effect of frequency on performance. Capacitive transducers – Advantages, Disadvantages and Applications. Level measurement: Introduction and importance of level measurement, level measurement methods: mechanical, hydraulic, pneumatic, Electrical types of level gauges using resistance, capacitance, nuclear radiation and ultrasonic sensors	
UNIT - V	Pressure and Temperature Measurement	(06 Hours)
	Pressure Measurement:, classification of pressure as low/medium/ high, absolute/gauge/vacuum, static/dynamic & head pressure. Types of Pressure Measurements Devices, Pressure Measurement using Electrical Transducers as Secondary Transducers. Low Pressure Measurement – Thermocouple Vacuum Gauge, Pirani Gauges and Ionization Type Vacuum. Temperature Measurement: Electrical Resistance Thermometer, Platinum Resistance Thermometer, Semi conductor Thermometers, Thermocouples, Thermistors, Quartz Crystal Thermometers, Bimetallic Thermometers. Electrical methods of temperature measurement – signal conditioning of industrial RTDs and their characteristics – 3 lead and 4 lead RTDs.	
UNIT - VI	Measurement of Velocity and Flow, Recorders and Display Devices	(06 Hours)
	Measurement of Velocity – Moving Magnet Type, Moving Coil Type, Seismic Tape Type. Measurement of Angular Velocity. Measurement of flow – Turbine Meter, Electromagnetic Flow Meters, Hot Wire Anemometer, Ultrasonic Flow Meter. Recorders and Display Devices: Recording Requirement, Analog Recorders, Graphic Recorders, Strip Chart Recorders, Null Type Recorders, X-Y Recorders, Ultraviolet Recorders, Direct Recorders. Digital Display Methods, Digital display Units, Rear Projector Display, Light Emitting Diodes (LED), Liquid Crystal Diodes (LCD), Resolution and Sensitivity of Digital Meters	
Term Work:		
The term work shall consist of record of minimum eight experiments.		
<ol style="list-style-type: none"> 1. Calibration of ammeter and voltmeter with the help of potentiometer. 2. To extend range of wattmeter by use of CT and PT. 3. To measure power in three phase balanced load by one wattmeter method. 4. To measure power in three phase balanced/ unbalanced load by two wattmeter method. 5. To measure reactive power in three phase circuit by one wattmeter method. 		

6. To study and analyze the various electrical parameters using Power Analyzer.
7. To calibrate single phase energy meter at (i) unity power factor (ii) 0.5 lagging power factor (iii) 0.5 leading power factor (analog / Digital)
8. Study of digital storage oscilloscope C.R.O.s of different types and their applications.
9. Measurement of capacitance and loss angle by Schering Bridge.
10. Measurement of inductance by Anderson's bridge.
11. Displacement measurement by LVDT.
12. Strain measurement using strain gauge.
13. Bourdon Tube
14. Study of process control application of using the instrumentation kit.
15. Introduction to thermography, detection of hot spots, oil level, defective winding in transformer using thermo vision techniques.

Text Books:

1. A Course in Electrical and Electronic measurements & Instrumentation – by A. K. Sawhney, Dhanpat Rai & Sons.
2. Electronic Instrumentation: H.S. Kalsi – THM, 2nd Edition 2004.
3. A Course in Electronic and Electronic measurements by J. B. Gupta, S. K. Kataria & Sons.
4. Measurement by Baldwin

Reference Books:

1. Electrical Measurement & Measuring Instruments Fifth edition, by E. W. Golding & Widdies, A. H. Wheeler & Co. Ltd.
2. Electronic measurement and instrumentation by Dr. Rajendra Prasad, Khanna Publisher, New Delhi.
3. Introduction to Measurements and Instrumentation, Second Edition by Ghosh, PHI Publication.
4. Introduction to Measurements and Instrumentation by Anand .PHI Publication

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

B.Tech (Electrical) - SEM-IV

Power Electronics		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Oral 25 marks	01 Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Fundamentals of Electronics Engineering.	
Course Objectives:		
This course introduces basic knowledge about electronics devices used for control of power. It describes characteristics, application circuits of SCR and other power devices.		
Course Outcomes: After learning this course the students will be able to		
1.	Describe specifications, characteristics of power electronics components.	
2.	Explain operation of AC-AC converters at different load conditions with mathematical equation and waveforms	
3.	Explain operation of AC-DC converters at different load conditions with mathematical equation and waveforms	
4	Compare and select among switching device (IGBT, MOSFET, MCT) as per the application requirement.	
5.	Compare and select various Choppers based on application requirements.	
6.	Compare Voltage Source Inverter (VSI) and Current Source Inverter (CSI)	
UNIT - I	Thyristor Power Devices	(06 Hours)
	SCR - static and dynamic characteristics, specifications, two transistor analogy, gate characteristics, triggering circuits, protection of SCR Protection of power circuit from - over voltage, over current & temperature rise (thermal) Design of Snubber circuit.	
UNIT - II	AC to DC Convertors (Single phase and three phase)	(06 Hours)
	Single phase convertor, three phase semi controlled and fully controlled bridges with R, RL and RLE loads, derivation of average and RMS output voltage and current, rectification and inversion mode of operation, concept of overlap angle and associated voltage drop calculation, dual convertor and selection of transformer and semiconductor devices for convertors. Total Harmonic Distortion (THD).	
UNIT - III	AC Voltage Controllers	(06 Hours)
	DIAC, TRIAC - construction, characteristics, four mode operation, specifications, triggering of TRIAC using DIAC, AC voltage regulator principle, single phase and three phase analysis with R and RL Load, Harmonics and ripple factor, Applications of two stage, three stage and multistage voltage controllers, derivation of average and RMS output voltage and current	
UNIT - IV	Transistor Power Devices	(06 Hours)
	MOSFET, IGBT, MCT - Construction, Characteristics, Specifications, Safe Operating Areas, protection, switching action and their control circuit requirement, comparison and area of application of these devices, Diagram and working of Switched Mode Power supply (SMPS) and Uninterrupted Power Supply (UPS)	
UNIT - V	DC to DC Convertors	(06 Hours)
	Principle of operation of chopper, classification on the basis of operating quadrants control techniques, CLC, TRC, PWM and FM techniques, analysis of step up choppers and numerical with RLE load, area of application, necessity of input filter, derivation of average and RMS output voltage and current	
UNIT - VI	DC to AC Inverters	(06 Hours)
	Single phase and three phase inverters principle of operation, VSI and CSI inverters, applications, operating frequency range. PWM inverters: single pulse, multi-pulse and sinusoidal pulse modulation, PWM techniques for voltage control and harmonic elimination.	

Term Work:	
The term work shall consist of record of minimum eight experiments. Four from first 6 and four from next 6 out of given below.	
1. V-I Characteristic of SCR, DIAC & TRIAC	
2. V-I characteristic of power semiconductor devices GTO, MOSFET, IGBT	
3. 1 Phase half Controlled & Full controlled converter (R & RL Load)	
4. 3 phase converter (R, RL, RLE Load)	
5. Step down Chopper circuit (RC technique)	
6. 3 phase Voltage Source transistorized inverter	
7. Firing circuit for 3 phase converter	
8. 1 phase or 3 phase AC voltage regulator	
9. 3 phase AC – DC converter with RLE Load	
10. 1 phase PWM bridge inverter	
11. Commutation circuit of SCR	
12. Design of Snubber Circuit	
13. Collection of data sheets of Power Devices	
14. Summary reports of NPTEL videos on Power Devices	
Text Books:	
1. M. H. Rashid – “Power Electronics” 2009 Edition, Pearson publication	
2. Ned Mohan, Undeland, WP Robins - “Power Electronics” 3 rd edition, John Wiley & Sons International Student edition	
3. B. W. Williams – “Power Electronics” 2 nd edition -Macmillan publication	
4. Dr. P. S. Bhimbra - “Power Electronics” third edition, Khanna Publication	
5. K Hari Babu - “ Power Electronics” - Scitech Publication	
Reference Books:

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Electrical Machines-II		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Basic laws of rotating machines like Faraday's Law, Lenz's Law, etc	
2.	Basics of Electrostatics and electromagnetic	
3.	Transformer operation	
4.	Induction machine operation	
5.	DC Machine operation	
Course Objectives:		
	To understand the theory, operation, characteristics and applications of Three phase Induction, Synchronous Machines and special purpose machines.	
Course Outcomes: The students will be able to		
1.	Describe the basics of synchronous generators & identify the different parts, different excitation systems, armature windings, to find the regulation by different methods of non-salient pole alternator.	
2.	Apply the concepts of three phase synchronous generator and analyze using the basics of different tests on Syn. Gen.	
3.	characteristics of alternators	
4	Understand the concept of synchronization and parallel operation of alternators	
5	Understand working principle, characteristics, operation and applications of synchronous motors	
6	Understand working, characteristics and usage of special purpose electrical machines	
UNIT - I	Synchronous Generators (Alternators) - Principles	(08 Hours)
	Types of synchronous machines & their constructional features, Excitation Systems. Synchronous generator (cylindrical rotor type): Principle of working, Armature Windings & Estimation of winding factor, EMF Equation, Rating of Generator, Generator on no load & balanced load, Armature reaction & its effect under load power factors, Synchronous Impedance, Equivalent Circuit & Phasor Diagram, Synchronous Generator (Salient Pole): Two Reaction Theory model, Estimation of Direct & Quadrature axes Synchronous Reactance by Slip Test, Phasor Diagram. Power Flow (Transfer) Equations, Power – Power angle relation and Capability Curves of synchronous generators.	
UNIT - II	Synchronous Generators (Alternators) - Operation	(08 Hours)
	DC resistance test, Open circuit Test & Short Circuit Test on synchronous generator, Determination of Voltage Regulation by direct load test & by Indirect Methods-EMF, MMF & Potier Triangle Method, Losses & Efficiency and Short Circuit Ratio. Parallel Operation of alternators - Necessity, Conditions, Prime Mover Characteristics & load Sharing. Concept of Infinite bus, alternators connected to infinite bus bar, Methods of	

	synchronizing alternators (synchronizing lamps and synchro-scope), Significance of Synchronizing Power Coefficient.	
UNIT - III	Three Phase Synchronous Motor	(08 Hours)
	Principle of operation, Methods of starting, Equivalent Circuit & Phasor Diagrams, Pull-in & Pull-Out Torque, Power Flow Equations, Operation with constant excitation & variable load and with Constant load & variable excitation (V Curves & Inverted V Curves), Phenomenon of Hunting & its remedies, Applications.	
UNIT - IV	Three Phase Induction Motor – Principles	(08 Hours)
	Construction (Squirrel cage, Wound rotor), Concept of rotating magnetic field, Principle of Operation, Concepts of Speed & Slip, Frequency of rotor voltage & current, Power Flow Diagram & development of Equivalent Circuits, Losses, Relationship between rotor copper loss, rotor input & gross mechanical power developed, Efficiency, Torque–Slip/Speed characteristics, Effect of rotor resistance on Torque-Slip characteristics, Condition for maximum torque, Relations between starting, Full load & Maximum torque.	
UNIT - V	Three Phase Induction Motor – Operation	(08 Hours)
	Starters for cage rotor & wound rotor induction motors (DOL, Star/Delta, Auto transformer, Stator resistance, Rotor resistance, soft starters), Open circuit and short circuit test, Circle diagram and computation of performance parameters, High Torque Cage Motors - Deep bar & Double cage rotor, Speed control mechanisms (VFD, cascading, pole changing, slip power recovery), Cogging & Crawling of induction motors, Applications.	
UNIT - VI	Special Purpose Machines	(08 Hours)
	Construction, working principle, characteristics and applications – Induction Generator, Induction Voltage Regulator, Linear Induction Motor, Synchronous Induction Motor, Permanent Magnet Synchronous Machine, Reluctance motor, Hysteresis motor, AC Series Motor.	
Term Work:		
The term work shall consist of record of minimum eight experiments. Four from first 6 and four from next 6 out of given below.		
<ol style="list-style-type: none"> 1. Direct loading test on alternator 2. Open circuit and short circuit test on alternator – regulation by emf and mmf method 3. Slip test on salient pole alternator – regulation by two reaction theory 4. Synchronization of alternator with bus bar 5. V-Curves of synchronous motor 6. Load test on synchronous motor 7. Load Test on three phase induction motor 8. No load & Blocked Rotor Test on three phase induction motor: Determination of Equivalent Circuit Parameters/Plotting Circle diagram 9. Measurement of Slip by Stroboscopic Method 10. Speed Control of Wound Rotor Induction Motor 11. Demo and study of three phase Linear Induction Motor 12. Study & comparison of Starters of three phase induction motor. 13. Load test on Universal Motor 15. Load Test on PMSM 		
Text Books:

Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Network Analysis		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	Theory : - 03
Practical: 02 Hrs/Week	Continuous Assessment: 40 Marks	Practical : - 01
Tutorial:- 1Hr/Week	Term Work : 25 Marks, Practical: 25 Marks	Total : - 04
Course Pre-requisites:		
The Students should have knowledge of		
1.	Engineering Physics, Fundamentals of Electrical Engineering	
2.	Engineering Mathematics (Differential equations, Integrations, Laplace Transforms, Fourier Transform	
Course Objectives:		
	This course introduces concepts of Network Analysis such that simplification of any complex network applying theorems, classical method (Transient response) or Laplace transform method or Fourier transform method.	
Course Outcomes: The students will be able to		
1.	Calculate solution of differential equation of an active (Excited by an ac source or DC source), Linear, bilateral complicated network using various network theorems.	
2.	Analyze transient response of passive elements in pre-excited or unexcited conditions (initial conditions) using classical method	
3.	Apply Laplace Transform Technique to analyze the behavior & response of passive elements in pre-excited or unexcited conditions (initial conditions)	
4	Represent any network as two port network, Define and calculate various parameters like open circuit impedance, short circuit admittance, Transmission & Hybrid parameters and their applications in electrical domain	
5	Formulate network function for a given circuit and comment about stability from poles and zeros of function.	
6	Analyze a given circuit / waveform using Fourier Transform method.	
UNIT - I	Network Theorems in AC circuits	(06 Hours)
	Introduction, Practical sources, Source transformations, Network reduction using Star – Delta transformation, Loop and node analysis With linearly dependent and independent sources for AC networks, Concepts of super node and super mesh. Thevenin's theorem, Norton's theorem, Superposition theorem, Maximum power transfer theorem, Millman's theorem, Reciprocity theorem, Substitution theorem, Compensation theorem, Tellegen's Theorem	
UNIT - II	Transient Response of Passive Circuits	(06 Hours)
	Introduction, transient response of series R-L and R-C circuit having DC excitation, Transient response in RL and RC circuit with sinusoidal excitation. Transient response in RLC circuit with DC and sinusoidal excitation Resonance, Coupled circuits, Scattering matrix and its application in network analysis	
UNIT - III	Laplace Transformation and its application	(06 Hours)
	Laplace transform of a derivative and integration. Laplace transform of common forcing functions, Initial and final value theorem, Time displacement theorem, Convolution theorem, Impulse response of R-L and R-C Circuit, Application of Laplace transformation technique in electric circuit analysis.	
UNIT - IV	Two Port Networks:	(06 Hours)
	Short circuit admittance, open circuit impedance, transmission and inverse transmission, hybrid and inverse hybrid parameters. Relation between parameter sets, T, π , Ladder, lattice, twin T networks. Input and out put impedance in terms two port parameters. Interconnection of networks. Symmetry and reciprocity	
UNIT - V	Network Functions:	(06 Hours)
	Network function for one port and two port networks: ladder networks, general network,	

	poles and zeros of network functions, Restriction on poles and zeros for driving point functions and transfer functions. Network synthesis of RL,RC,LC circuits	
UNIT - VI	Fourier analysis	(06 Hours)
	Exponential form of Fourier series, trigonometric form of Fourier series, symmetry in Fourier series, Frequency spectrum, properties of Fourier analysis, shifting of function, applications in circuit analysis. Fourier series representation of periodic signals, Fourier integral & Fourier transform analysis with Fourier transform. Convolution integral.	
Term Work:		
The term work shall consist of record of minimum eight experiments.		
<ol style="list-style-type: none"> 1. Verification of Superposition theorem in A.C. circuits. 2. Verification of Thevenin's theorem in A.C. circuits. 3. Verification of Reciprocity theorem in A.C. circuits. 4. Verification of Millmans' theorem. 5. Verification of Maximum Power Transfer theorem in A.C. circuits. 6. Determination of time response of R-C circuit to a step D.C. voltage input. (Charging and discharging of a capacitor through a resistor) 7. Determination of time response of R-L circuit to a step D.C. voltage input. (Rise and decay of current in an inductive circuit) 8. Determination of time response of R-L-C series circuit to a step D.C. voltage input. 9. Determination of parameter of Two Port Network. 10. Determination of Resonance of R-L-C Parallel circuit 11. Determination of Resonance, Bandwidth and Q factor of R-L-C series circuit.

Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Generation, Transmission & Distribution		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03	End Semester Examination: 60 Marks	Theory : - 03
Practical: 02	Continuous Assessment: 40 Marks	Practical : - 01
	Term Work : 25 Marks, Practical: 25 Marks	Total : - 04
Course Pre-requisites:		
The Students should have knowledge of		
1.	Electromagnetic energy conversion system	
2.	Fundamentals of Electrical Engineering	
Course Objectives:		
	This course introduces knowledge about electrical power generation, its transmission and distribution. The course is designed to learn different methods of power generation. Also it focuses on performance of transmission line and distribution system along with its design consideration.	
Course Outcomes: Students will be able to		
1.	Draw block diagram and describe the function of components of various Power Generation techniques by Conventional energy Sources.	
2.	Define and analyze the significance of terms such as load factor , diversity factor etc on economics of power generation Draw block diagram and describe the function of components of various Power Generation techniques by Non Conventional energy Sources.	
3.	Draw block diagram and describe the function of components of various Power Generation techniques by Non Conventional energy Sources.	
4	Calculate string efficiency, sag and R, L, C parameters of different types of transmission line.	
5	Represent TEE and PI model of line and analyze the performance of transmission line.	
6	Explore different type of cables & its calculations along with the computation of performance of AC distribution.	
UNIT - I	Power Generation techniques by Conventional energy Sources	(06 Hours)
	Introduction to energy sources, selection of site – classification – general arrangements and operations – functions of each component – types of turbines – electric generators – advantages and disadvantages - list of major power stations : of Hydro electric , Thermal and Nuclear power plants in India with capacity. Basic layout and working of diesel and gas power plant. Concept of grid, types of grids	
UNIT - II	Load Curves and Economic Aspects	(06 Hours)
	Load Curves: load curve – base load station and peak load station - demand factor – maximum demand – average demand – diversity of load – load factor – diversity factor – significance of high load factor & diversity factor – plant factor – capacity factor – connected load – load duration curve – integrated load duration curve – selection of units. Per capita energy consumption of developed & developing countries. Concept of cogeneration and captive generation.	
UNIT - III	Power Generation techniques by Non -Conventional energy Sources	(06 Hours)
	Different types of Nonconventional Energy Sources, Comparative benefits over conventional type, contribution of conventional & nonconventional energy sources, Solar energy – Its characteristics, basic concept of solar power plant, major solar power plants in India/world, Wind power plant– schematic arrangement - vertical axis, horizontal axis – electrical generator Hybrid solutions : Wind Turbine, diesel, WT-solar etc. – major wind farms in India / world, Power generation by bio gas, biomass, geothermal energy and tidal energy– its types, Magneto Hydro Dynamics (MHD), Concept of carbon credit.	
UNIT - IV	Design of Transmission Line	(06 Hours)

	<p>Transmission Line Components and its types - Line Supports, Conductors, Insulators, Potential distribution over a string of insulators, methods of equalizing the potential, string efficiency.</p> <p>Sag: Catenary curve – calculation of sag and tension – effects of wind and ice loading sag templates – vibration dampers for transmission lines.</p> <p>Corona and interference, Various effects – Skin, Proximity, Ferranti etc.</p> <p>Various Parameters of Transmission Line – Resistance, Inductance and capacitance - their calculation.</p>	
UNIT - V	Transmission Line Performance analysis :	(06 Hours)
	<p>Circuit Representation of Transmission Line: Representation and performance of short, medium and long transmission line – Surge Impedance Loading (SIL), Characteristic Impedance, Generalized circuit constants: - Representation of tee and pi models of lines as two port networks – evaluation and estimation of ABCD constants –sending end and universal power circle diagrams.</p>	
UNIT - VI	Underground Cables and Distribution System	(06 Hours)
	<p>Underground Cables - Classification – construction - insulation resistance – capacitance – dielectric stress in single core cable. Grading of cables. Laying of cables – cable jointing – causes of failure – cable faults and location of faults.</p> <p>Distribution System – Classification – A.C. distribution connection schemes - requirements of distribution system – design consideration – design of radial, ring distributors for concentrated, distributed loads</p>	
Term Work:		
The term work shall consist of record of minimum eight experiments from below list.		
<ol style="list-style-type: none"> 1. Measurement of A, B, C, D constants of short transmission line. 2. Measurement of A, B, C, D constants of Medium transmission line. 3. Measurement of A, B, C, D constants of Long transmission line. 4. Circle diagram of medium transmission line. 5. Circle diagram of short transmission line. 6. Drawing Sheet on power generation by Conventional energy Sources 7. Drawing Sheet on power generation by non Conventional energy Sources 8. Drawing Sheet on types of insulator 9. Drawing Sheet on types of cables 10. Industrial visit to cable manufacturing 11. Industrial Visit report of HPS 12. Industrial Visit report of TPS / GAS PP 13. Industrial Visit report of WPS / Solar PP 		
Text Books:

Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Electrical Engineering Materials		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03Hours / Week	End Semester Examination: 60 Marks	03 Credits
	Continuous Assessment: 40 Marks	
Course Pre-requisites: Engineering Physics		
The Students should have knowledge of		
1.	Electrical Engineering materials	
Course Objectives:		
	To understand in detail the properties of interest of the materials used in Electrical Engineering	
Course Outcomes: Student should able to		
1.	get knowledge about conducting materials.	
2.	get knowledge about magnetic materials.	
3.	get knowledge about insulating materials.	
4	get knowledge about dielectric & optical properties of materials.	
5	get knowledge about Nano materials.	
6	get knowledge about materials for electronics components	
UNIT - I	Electrical Conducting Materials	(06 Hours)
	High conductivity materials : Copper, Aluminum, Iron & Steel ,Alloys of Copper Materials of High Resistivity: Materials used in precision work, Materials used for rheostat, materials used for heating devices. Electrical carbon materials, Superconductivity, Thermoelectric effects, operation of thermocouple, alloys, Thermobimetals, Study of Electrolyte.	
UNIT - II	Magnetic Materials	(06 Hours)
	Classification of magnetic materials: Diamagnetism, Paramagnetism, Ferromagnetism, Anti-ferromagnetism, Ferrimagnetism. Soft magnetic materials, Solid core materials, Sheet steel, electric steel, cold rolled grain oriented silicon steel, hot rolled grain oriented silicon steel, hot rolled silicon steel sheet. Special purpose alloy, Alloyed steels with silicon, high silicon, alloy steel for transformers, low silicon alloy steel for electric rotating machines. Common magnetic materials, Magnetic resonance, Magnetic Shielding	
UNIT - III	Insulating Materials	(06 Hours)
	Electrical properties of insulating materials, Temperature rise and insulating materials, Classification of insulating materials. Insulating materials used in modern electrical machines. Applications of insulating materials: Insulating materials for wires, Insulating materials for laminations, Insulating materials for machines, Insulating materials for transformers. Thermoplastic materials: Poly-vinyl chloride (PVC), Polyethylene, silicons, their important properties & applications. Natural insulating materials: Mica, Asbestos, Ceramic materials, Glass, Cotton, Silk, Jute, Paper, Rubber	
UNIT - IV	Dielectric & Optical Properties of Materials	(06 Hours)
	A).Dielectric Properties of Insulating Materials: Static Field ,Dielectric Parameters [Dielectric constant, Dipole moment, Polarization, Polarizability], Mechanisms of Polarizations-Electronic, Ionic and Orientational Polarization (Descriptive treatment only), Clausius Mossotti Equation, Piezo-Electric, Pyro-Electric & Ferro-Electric Materials, Dielectric Loss and loss Tangent. B) Optical Properties of Materials & Cells used for Power Generation: Photo-Conductivity, Photo-Electric Emission, Photo-Voltaic cells [Materials Used, Construction, Equivalent Circuit, Working and Application], Photo-Conductive cells, Photo-Emissive cells, Photo emitters, photo transistors, photo resistors, application of photo sensitive materials (CRT, Tube Light, Photo Panals)	
UNIT - V	Nano Materials	(06 Hours)

	Introduction, Concepts of Energy bands & various Conducting Mechanism in Nano-structures, Carbon Nano-structures, Carbon Molecules, Carbon Clusters, Carbon Nano-tubes, Applications of Carbon Nano-tubes, Special Topics in Nano Technology such as Single Electron Transistor , Molecular Machines, BN Nanotubes, Nano wires, Application of Nano materials in electrical engineering.	
UNIT - VI	Materials for Electronics Components	(06 Hours)
	Introduction, Resistors: Carbon composition resistors, Insulated moulded resistors, Film type resistors, Cracked carbon resistors, Alloy resistors, Metallic–oxide film resistors, Wire wound resistors, High value resistors, Non linear resistors, Varistors, Variable resistors. Capacitors: Capacitor paper, Loss tangent, Electric strength & operating stress, Mica dielectric capacitors, Ceramic dielectric capacitors, Glass dielectric capacitors, Vitreous enamel dielectric capacitors, plastic dielectric capacitors, Electrolytic capacitors, Air dielectric capacitors, variable capacitors Inductors : Construction, Air cored coils, cored coils

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Oral 25marks	01 Credit

Course Prerequisites:

The students should have knowledge of

Mathematics , Laplace transform , Ordinary differential equation

Course Objectives:

This course introduces concepts of feedback control system. It provides foundation for mathematical modeling of components. It includes application of analytical and graphical techniques for stability analysis of system. These techniques can be used for any industrial system.

Course Outcomes: After learning this course the students will be able to

1. Calculate transfer function of components using mathematical equations.
2. Draw block diagram and signal flow graphs of system and evaluate overall transfer function of closed loop system.
3. Apply different techniques for stability analysis of any system in time domain.
4. Design PID controller and design compensator using root locus technique.
5. Draw Bode plot and Nyquist. plot and comment about stability in frequency domain.
6. Design a system using compensator to meet the desired needs and specifications by bode plot

UNIT I	Introduction	(06 Hours)
	Classification of control system, open loop, closed loop, examples, Block Diagram reduction, signal flow graph, Mason's gain formula. Mathematical Modeling and Transfer function of Electrical, mechanical system , Analogy for mechanical and electrical systems, Potentiometer, Synchronos, AC- DC Servomotor, Stepper motor, Gear Trains, AC-DC servomechanism, Tachogenerator, optical encoder	
UNIT II	Time domain analysis	(06 Hours)
	Standard test signals, Type and order of the system ,Time response of first and second order system to unit step input , Specifications for second order system, Steady state error, static error constants, Characteristic Equation, its roots in complex plane and time response	
UNIT III	Stability analysis in time domain	(06 Hours)
	Concept of stability absolute, relative, Routh-Hurwitz stability criteria , special cases, limitations. Root Locus: Basic properties of root locus. Construction of root locus. Angle and magnitude condition for stable	

	system. Determination of gain for specified damping ratio, Effect of pole, zero addition on root locus, cancellation of poles and zeros	
UNIT IV	Design in time domain	(06 hours)
	Basic concept of PID controller, tuning rules of PID controller, step response of system without and with PID controller, rate feedback , Need of compensation, transfer function of lead, lag, lag- lead , lead and lag compensator design using root locus. Use of SISO design tool in MATLAB	
UNIT V	Frequency domain Analysis	(06 Hours)
	Frequency response of first order and second order system to sinusoidal input, frequency domain specifications, Correlation between time domain and frequency domain , Polar plot, Nyquist stability Criteria, Nyquist plot, Gain margin, Phase margin and stability analysis using polar plots, Bode plot, Determination of Gain margin , phase margins and stability analysis using Bode Plot, Deduction of transfer function using bode plot	
UNIT VI	Design in frequency domain	(06 Hours)
	Bode plot of lead, lag, lag- lead compensating network, Design specifications, Design of lead, lag compensators using bode plot. Comparison of lag, lead compensator effect on system performance. Use of SISO design tool in MATLAB	

Term Work:

The term work shall consist of record of minimum eight experiments. Four from first seven, four from next seven and to ensure at least one experiment on each unit.

1. To plot characteristics of potentiometer and observe potentiometer pair as an error detector.
2. To plot characteristics of Synchro and observe Synchro pair as an error detector.
3. To determine transfer function of D C servomotor.
4. To observe step response of RLC series circuit for different values of R.
5. To analyze i) effect of gain ii) effect of tachometer feedback on output response of D.C. position servomechanism
6. To tune PID controller and analyze step response of temperature/ pressure control system.
7. To plot root locus using MATLAB and determine value of K for given value of damping ratio from the plot. ii) To analyze effect of addition of zero/ pole on root locus
8. To observe frequency response and to draw bode plot of lag, lead network.
9. To analyze stability of system in frequency domain by i) Nyquist plot ii) Bode plot using MATLAB .
10. To design lead compensator using bode plot and observe step response of uncompensated and compensated system.(SISOTOOL in MATLAB)
11. To design lag compensator using root locus technique and observe step response of uncompensated and compensated system. .(SISOTOOL in MATLAB)
12. To design PID controller for second order system to obtain desired performance specifications.
13. To use various commands for block diagram reduction like series, parallel, append, connect, feedback.(MATLAB)

14. To calculate steady state error for different inputs and different types of system(MATLAB)	
Text Books:	
1. I.J. Nagrath, M. Gopal, ““Control System Engineering”, New Age International Publishers – Fourth edition	
2. Katsuhiko Ogata, “Modern control system engineering”, Prentice Hall, 2010.	
3. M.N.Bandopadhyay, “ Control Engineering Theory and practice”- Prentice Hall of India 2006	
Reference Books:	
1. Nise N. S. “Control Systems Engineering”, John Wiley & Sons, Incorporated, 2011	
2. D. Roy Choudhary, "Modern Control Engineering", PHI Learning Pvt. Ltd., 2005	
3. Dorf, Bishop - “Modern control system”, Pearson Education	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Assignments: Assignments should be able to verify course outcome and skills of group work, communication skills

1. To solve numerical on block diagram reduction to calculate overall transfer function of system and verify with Mason’s gain formula
2. To calculate transfer function of equivalent electrical system for given mechanical system.
3. Quiz –Multiple Choice Questions 20
4. To solve numerical on time domain and analyze parameter variations on transient response and steady state error.
5. Solve two years question paper of Pune university unit wise.
6. Solve two years question paper of GATE unit wise.
7. To observe NPTEL video lecture by M. Gopal on any topic of control and give presentations, group discussion.
8. To collect information about controllers used in process control in thermal power plant.
9. To collect information about controllers used in power system for voltage and frequency control.
10. To collect information about controllers used in machine control.
11. To validate the design by hardware.

Microcontroller

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Oral : 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Digital electronics & Microprocessor 8085.	
Course Objectives:		
	This course introduces basic knowledge of Microcontroller 8031/51 & PIC Microcontroller.	
Course Outcomes:		
1.	Understand basic architecture and block diagram of microcontroller 8051.	
2.	Understand the different addressing modes and use them to write instructions	
3.	Understand the basics of interrupt structure of 8051	
4	Understand the 8051 programming.	
5	Introduction to PIC microcontrollers	
6	Understand PIC peripherals	
Introduction		
UNIT - I	Introduction to the concept of micro-controllers. Comparison of microprocessor and microcontroller. Difference between RISC and CISC microcontrollers. Harvard and Von Neumann Architectures, Architecture of 8031/51 microcontroller, Pin diagram, special function registers. Ports, Internal Memory, External memory, Counters and timers in 8051, Clock, Timer modes.	(06 Hours)
UNIT - II	MCS-51 Addressing modes and Instructions Addressing modes, MCS-51 Instruction set, external data moves, code memory read only data moves, Push and Pop, data exchanges, byte level logical operations, bit level logical operations. Rotate and swap operations. Instructions affecting flags, incrementing/decrementing, Arithmetic operations, Jump and call instructions.	(06 Hours)
UNIT - III	Interrupts Serial data I/O, serial data mode interrupt, serial port interrupt, external hardware interrupts, software generated interrupts, interrupt control, interrupt priority in the 8051.	(06 Hours)
UNIT - IV	Applications Applications like Interfacing of 8051 with ADC , Interfacing of 8051 with DAC Interfacing of 8051 to stepper motor, Interfacing of 8051 to DC motor, Application for Traffic Control System.	(06 Hours)

UNIT - V	Introduction to PIC Microcontroller	
	Introduction to PIC 16F8XX family and development tools. CPU architecture and instruction set. Harvard architecture and pipelining, program memory considerations, register file structure and addressing modes, CPU registers.	(06 Hours)
UNIT - VI	PIC Peripherals	
	I/O ports, external interrupts and timers, timer operation, ADC, short overview of synchronous serial port, serial peripheral interface I2C bus.	(06 Hours)
Term Work:		
The term work shall consist of record of minimum eight experiments		
<ol style="list-style-type: none"> 1. Programs of addition, subtraction, multiplication etc. 2. Programs on logical and decision making group of instructions 3. Programs related to interrupt, timer and serial communication logic. 4. Programs related to data transfer between internal and external memory. 5. Simulator based programming. 6. Interfacing of 8051 with ADC 7. Interfacing of 8051 DAC 8. Interfacing of 8051 to stepper motor, DC motor 9. Application for Traffic Control System. 10. Interfacing PIC with LCD. 11. ADC conversion with PIC. 12. Interfacing PIC with keyboard. 		
Text Books:		
<ol style="list-style-type: none"> 1. B.Ram “Fundamentals of Microprocessors and Microcomputers”, edition 1995 Dhanapat Rai Publications 2. Ajay Deshmukh, ‘Microcontrollers Theory and Applications’, TATA McGraw Hill. 3. Myke Predko, ‘Programming and customizing the 8051 microcontroller’, TATA McGraw Hill 		
Reference Books:		
<ol style="list-style-type: none"> 1. M.A.Mazidi “The 8051 micro controller & embedded systems”, Pearson Education Publication 2. K.J.Ayala “The 8051 microcontroller Architecture programming and applications” 3. Kenneth Ayala , Delmar ,Cengage Learning ,” “The 8051 Microcontroller Architecture ,Programming & Applications” Third Edition , TATA McGraw Hill 4. Intel micro controller data book. 5. Microchip PIC family Microcontroller handbook 6. Design with PIC microcontrollers –John Peatman, Pearson Education Asia ,LPE 		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Assignments:

1. Group discussions on any one of the topics.
2. Watch the NPTEL video on this subject of any TWO modules and summarize it.
3. Open book class test on this subject.
4. Give presentation on PIC microcontroller.
5. Solve questioners in the class room on microcontroller.
6. List different microcontroller & compare them.
7. Prepare report on different microcontrollers used in your laboratory.
8. Give a presentation on “commercial aspects of microcontroller”.
9. Give presentation on different applications on PIC microcontroller.
10. Give presentation on different applications on 8051 microcontroller.
11. Program 8051 microcontroller for addition, subtraction & multiplication operations.
12. Write a note on PIC peripherals.
13. Study instruction set of 8051 microcontroller.
14. Study instruction set of PIC microcontroller.

Electrical Machine Design

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	05 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
Tutorial: 01 Hours/ Week	Term Work: 25 Marks & Oral: 25 Marks	01 Credit

Course Pre-requisites:

The Students should have knowledge of

1. Various Materials Used in Electrical Machines
2. Types, construction & working of Transformers
3. Types, construction & working of DC & AC Machines

Course Objectives:

This course introduces Design of Electrical machines for the given specifications

Course Outcomes: The students will be able to

1. Apply the concepts of machines and materials in design of machines.
2. Analyze and estimate the transformer performance parameters
3. To estimate the main dimensions and performance parameters of 3- Induction Machines by understanding the general concepts and constraints in design.
4. To estimate the main dimensions and performance parameters of 1- Induction Machines by understanding the general concepts and constraints in design.
5. To estimate the main dimensions and performance parameters of Synchronous Machines & DC machines by understanding the general concepts and constraints in design.
6. To use different software (AutoCAD) for design.

UNIT - I	Fundamental Aspects, Thermal Design Aspects and General concepts, Constraints in design of Electrical Machines.	(10 Hours)
	<p>Introduction, Design factors, Limitations in design, Modern trends in Design of Electrical Machines, Basic Principles.</p> <p>Modes of heat dissipation, Heating and cooling curves, calculation of heating and cooling time constants, Rating of machines, selection of motor power ratings, Cooling of rotating of rotating machines, Types of duties and ratings and selection of motor capacity. Methods of measurement of temperature rise. Measurement of winding temperature.</p> <p>Relation between Rating and Dimensions of Rotating Machines: Main dimensions, Total loadings, Specific loadings, Output equation, Factors affecting size of rotating machines, Choice of specific magnetic & specific electric loading</p>	

UNIT - II	Design Of Transformer.	(08 Hours)
	Output equation with usual notations, design of core, yoke and windings of transformer. Estimation of resistance and leakage reactance of transformer. Estimation of no-load current, regulation of transformers. Calculation of mechanical forces, methods of cooling & tank design. Design of small single phase transformers.	
UNIT - III	Design of 3- Induction Motors.	(07 Hours)
	General Specifications of 3- Induction Motor. Stator winding design, Stator slot design, Stator teeth design, Depth of stator core, Rotor design: Air gap length, squirrel cage rotor and wound rotor, Design of rotor teeth & rotor core, Estimation of operating characteristics, Dispersion Coefficient.	
UNIT - IV	Design of 1- Induction Motors.	(07 Hours)
	Design of single phase Induction motor: Choice of specific loadings. Determination of main dimensions. Relative size of three phase and single phase Induction motor for same output. Design of main and starting winding for split phase, capacitor start motors. Design of rotor. Operating characteristics.	
UNIT - V	Design of DC & Synchronous Machines.	(08 Hours)
	Design of DC Machines: Design of field system and interpoles. Design of armature. Design of commutator and brushes. Design of heating coil, motor resistance starter, regulators, lifting magnets. Alternators: Output equation, Main dimensions, Choice of specific electric and magnetic loadings, choice of speed and number of poles, different types of pole structure used in synchronous machines. Design of armature: conductors, slots. Armature winding, Design of air-gap, Design of rotor: Height of pole, pole shoe, damper winding. open circuit characteristics, Losses and temperature rise.	
UNIT - VI	Modern Tools for Machine Design.	(08 Hours)
	Design optimization using various FEA (Finite Element Analysis) based machine design packages- Maxwell 2D, 3D, Magnet, 2D FEA analysis. FEMM (Finite Element Method Magnetics) free software.	

Industrial Visit: Industrial visit to a manufacturing unit of transformer or Induction motor.	
Term Work:	
The term work shall consist of 3 Drawing sheets and Design problems. (three in AutoCAD)	
<ol style="list-style-type: none"> 1. Details (Elevation, side view, top view) and assembly of 3- phase (power or distribution) transformer with design report. 2. Details and layout of AC & DC winding with design report. 3. Assembly of 3- phase induction motor.(only sheet) 4. Report based on Industrial visit to a manufacturing unit. (Transformer or Induction motor). 5. Details and assembly of 3-phase Alternator with design report. 6. Assembly of 1- phase transformer. 7. Details and assembly of 3- phase Induction Motor with design report. 8. Assembly of 1- phase Induction Motor. 	
Text Books:	
<ol style="list-style-type: none"> 1. Sawhney A. K., <i>Electrical Machine Design</i>, Dhanpath Rai & Co. (P) Ltd Sixth Edition: 2006 2. M.G. Say – Theory and Performance and Design of A.C. Machines, 3rd Edition, ELBS London. 3. P. P. Silvester and Ferraris’s book on Electrical Machine Design using FEA 	
Reference Books:	
<ol style="list-style-type: none"> 1. A Shanmugasundaram, G. Gangadharan, R. Palani, - Electrical Machine Design Data Book, 3rd Edition, 3rd Reprint 1988 - Wiely Eastern Ltd., - New Delhi 2. K.L. Narang , A Text Book of Electrical Engineering Drawings, Reprint Edition : 1993 / 94 – Satya Prakashan, New Delhi. 3. Vishnu Murti, “Computer Aided Design for Electrical Machines”, B.S. Publications 	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Assignments

1. Students should compile the list of vendors (manufacturers of Transformers, DC Machines, Single phase Induction Motors, PMDC motor, Stepper Motor, contact, and address) along with the details like types, specifications, and costs and should prepare the comparative for the same.
2. Students should prepare the report on “Estimation of no-load current of transformer” or “Estimation of operating characteristics of 3- Induction Motor”.
3. One industrial visit to the Manufacturing industry and the students will prepare the report which includes the consumption pattern of the products produced, process flow diagram and process description, major engineering problems in the industry.
4. Students should prepare the plant-layout for the industry visited.

5. Watch the NPTEL video on this subject of any TWO modules and summarize it
6. Solve Design problems for all types of machines.
7. Students should prepare the Datasheet for different machines.
8. Open book class test (Objective test).
9. Students have to study any One NPTEL videos related to a particular unit in group and prepare/present power point presentation.
10. Visit to Winding workshops, any machine repairing shop and prepare a report on detailed specifications of a machine, construction, types, material used and applications.
11. Students should prepare the report on modern tools in Design of Machines.
12. Prepare models for any types of machines related to the subject and write industrial applications.

Electrical Estimation, Costing & Installation

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits
		Continuous Assessment: 40 Marks		
Course Pre-requisites:				
The Students should have knowledge of				
1.	Introduction of Electrical supply system, typical A.C. power supply scheme, Classification of Supply systems			
2.	Single line diagram of electrical supply system			
Course Objectives:				
	1. To understand the basic concepts, installation, estimation and costing of distribution systems, substation and residential electrification.			
	2. To enable candidate to understand earthing system for residential and commercial Installation.			
	3. To understand practical aspects of condition monitoring and maintenance of various electrical equipments			
Course Outcomes: Student will be able to				
1.	Draft tender documents.			
2.	Do estimation and costing of residential and commercial buildings.			
3.	Select appropriate method for service connection.			
4	Calculate total electrical load.			
5.	Do detail Estimation and costing of industrial installation.			
UNIT - I	Contracts, Tenders And IE Rules			(06 Hours)
	Concept of Contracts and Tenders, Types of Contracts and Contractors, types of tenders, tender notice, procedure for submission and opening of tenders ,requirements of valid contract and good Contractor, comparative statements for selection of contractors, IE rules related to electrical installation, work to permit.			
UNIT - II	Service Connections			(06 Hours)
	Concept of service connections, types of service connections and their features, methods of installation of service connections, difference between underground and over head service connections, service connections for 11KV HT consumers, panel designing, cable jointing.			
UNIT - III	Electrification Of Residential Installation			(06 Hours)
	General rules and guidelines for installation of residential electrification and positioning of equipments, calculation of total electrical load in the residential installation, procedure for the design of number of sub circuits, load calculations and selection of size of wire by considering overload and future expansion, determine length of batten and length of wire, selection of rating for main switch, distribution board, MCB, ELCB			

	and wiring accessories, total estimation and costing of overall residential installation with proper cost of material, labor charges	
UNIT-IV	Electrification Of Commercial Installation	(06 Hours)
	Concept of commercial installation, difference between residential and commercial installation ,types of cables required for commercial installations according to size and core ,general requirements and selection factors for commercial installation, load calculations and selection of size of service connections and nature of supply, decide number of lighting and power sub circuits as per IE rules, decide length of wire required for every sub circuit, decide ratings of wiring accessories, main switch, bus bar MCB,ELCB etc. Decide proper method of earthing for commercial installation find out the estimation chart with proper cost of material,cost of labor, contingencies charges and profit margin.	
UNIT - V	Electrification Of Industrial Installation	(06 Hours)
	Concept of motor wiring circuit and single line diagram, guidelines about power wiring and motor wiring, design considerations of electrical installations in industry/factory/workshop, machine current calculations ,selection of size of wires, cables required for the machines and its controlling unit, decide length and size of cable required for every industrial load, decide ratings of wiring accessories, main switch, bus bar MCB,ELCB etc. for every industrial load, decide proper method of earthing for industrial installation with their costing, find out the estimation chart with proper cost of material, cost of labor, contingencies charges and profit charges and profit margin.	
UNIT - VI	Maintenance	(06 Hours)
	Definition, Need of maintenance, Types of maintenance, Breakdown maintenance, Preventive maintenance, Condition monitoring, Advanced tools and techniques of condition monitoring, Maintenance strategy, Maintenance type selection, Comparison of different maintenance types,	
Text Books:		
4. Surjit Singh – “Electrical Estimating and Costing” Dhanpat Rai Publications		
Reference Books:		
1. S. L. Uppal - “Electrical wiring, estimating & costing” Khanna Publishers		
2. B. V. S. Rao - “Operation and Maintenance of electrical equipments” (Vol. 2) Media promoters and publishers Pvt. Ltd.		
3. Raina.K.B and Bhattacharya S.K.,”Electrical design,Estimating and Costing”,Tata McGraw Hill,NewDelhi		
4. B.D. Arora-Electrical wiring,Estimation and costing-New Heights,New Delhi		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Assignments:

1. To solve numerical on calculations of total electrical load in the residential installation.
2. To solve numerical on calculations of total electrical load in commercial installation.
3. To solve numerical on calculations of total electrical load in industrial installation.
4. To calculate the total electrical load of electrical machine laboratory/any building.
5. To solve two years question papers of University unit wise.
6. To collect information about the recent/new installation techniques.
7. To observe and study the earthing system of our collage & to prepare a report on the earthing system which is used.

Elective I: Engineering Economics and Accountancy

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>		
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits		
		Continuous Assessment: 40 Marks				
Course Pre-requisites:						
The Students should have knowledge of						
1. Fundamental of Electrical Engineering Economics						
Course Objectives:						
<ul style="list-style-type: none"> This course will introduce various concepts and methods of economic analysis in engineering, including the time value of money and its effect on economic decisions, economic equivalence, economic measures of worth, cash flow analysis, equipment depreciation, effects of taxation and inflation, decision making under uncertainty, capital budgeting, replacement decisions, and benefit-cost analysis. 						
Course Outcomes:						
The student will be able to						
1. Understand the economic fundamentals.						
2. Learn about principles of decision making involved in engineering projects.						
3. They learn about: cash flows, time value of money and evaluation of investments and projects.						
UNIT - I	Introduction Managerial Economics - Relationship with other disciplines - Firms: Types, objectives and goals - Managerial decisions - Decision analysis.				(06 Hours)	
UNIT - II	Demand & Supply Analysis Demand - Types of demand - Determinants of demand - Demand function – Demand elasticity - Demand forecasting - Supply - Determinants of supply - Supply function -Supply elasticity.				(06 Hours)	
UNIT - III	Production And Cost Functions Production function - Returns to scale - Production optimization - Least cost input - Isoquants - Managerial uses of production function.				(06 Hours)	
UNIT - IV	Cost Analysis Cost Concepts - Cost function – Types of Cost - Determinants of cost - Short run and Long run cost curves - Cost Output Decision - Estimation of Cost.				(06 Hours)	

UNIT - V	Pricing	(06 Hours)
	Determinants of Price - Pricing under different objectives and different market structures - Price discrimination - Pricing methods in practice – role of Government in pricing control.	
UNIT - IV	Financial Accounting (Elementary Treatment)	(06 Hours)
	Balance sheet and related concepts - Profit & Loss Statement and related concepts - Financial Ratio Analysis - Cash flow analysis - Funds flow analysis – Comparative financial statements - Analysis & Interpretation of financial statements. Investments - Risks and return evaluation of investment decision - Average rate of return - Payback Period - Net Present Value - Internal rate of return.	
Assignment:		
1. Managerial Economics - Relationship with other disciplines		
2. Demand and supply Analysis		
3. Production and cost function		
4. Cost analysis		
5. Pricing		
6. Financial accounting		
Text Books:		
1. McGuigan, Moyer and Harris, 'Managerial Economics; Applications, Strategy and Tactics', Thomson South Western, 10th Edition, 2005.		
2. Prasanna Chandra. 'Fundamentals of Financial Management', Tata Mcgraw Hill Publishing Ltd., 4th edition, 2005.		
Reference Books:		
1. Samuelson. Paul A and Nordhaus W.D., 'Economics', Tata Mcgraw Hill Publishing Company Limited, New Delhi, 2004.		
2. Paresh Shah, 'Basic Financial Accounting for Management', Oxford University Press, New Delhi, 2007.		
3. Salvatore Dominick, 'Managerial Economics in a global economy'. Thomson South Western, 4th Edition, 2001.		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

Elective I: Six Sigma

Elective I: Six Sigma		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
	Continuous Assessment: 40 Marks	
Course Pre-requisites:		
The Students should have knowledge of		
1.	Computer Programming	
Course Objectives:		
	<ol style="list-style-type: none"> 1. To explore the concept of six sigma thoroughly. 2. The actual working of six sigma in industries. 3. Various terms related with six sigma. 4. The outcome and analysis of six and sigma. 	
Course Outcomes: The students will be able to		
1.	Recognize the six sigma organization and concepts of six sigma matrix.	
2.	Explore the six sigma administration	
3.	Explore the Basic Quality Tools & Statistical concepts related with six sigma.	
4.	Explore the Capability Analysis Process capability indices.	
5.	Explicit the concept of DFSS.	
6.	Explore the various concepts regarding objectives and benefits of SPC and Lean Principles.	
UNIT - I	Introduction of Six Sigma Origin of Six Sigma & Basic concept	(06 Hours)
	<p>Six Sigma Overview:-Recognize why organizations use Six Sigma, how they apply its philosophy of Value Focus and goals. Concepts of CTQ / CTP / $Y=f(X)$</p> <p>Six Sigma Metrics:-Recognize key drivers for business (profit, market share, customer satisfaction, efficiency, product differentiation) and how key metrics and scorecards are developed and impact the entire organization. Calculate process performance metrics such as defects per unit (DPU), rolled throughput yield (RTY), cost of poor quality (COPQ), defects per million opportunities (DPMO) & sigma levels</p>	
UNIT - II	Six Sigma Administration	(06 Hours)
	<p>Describe the project selection process, Six Sigma improvement methodology (DMAIC). Six Sigma and other team roles and responsibilities, Describe and define the roles and responsibilities of participants on Six Sigma and others including Black Belt, Master Black Belt, Green Belt, Champion, executive, coach, facilitator, team member, sponsor, process owner.</p> <p>Voice Of Customer Use various methods to collect customer feedback (e.g., surveys, focus groups, interviews, observation) and identify the key elements that make these tools effective. Review survey questions to eliminate bias, vagueness, etc. Define Internal & External Customers,</p>	

	DEFINE Project charter, Stake-holders, Project Team dynamics	
UNIT - III	Basic Project Management & Planning Tools	(06 Hours)
	Describe Process Mapping, SIPOC/COPIS, process inputs, outputs. Design and process failure mode and effects analysis (DFMEA & PFMEA). Basic Tools:- 1) Affinity Diagrams, 2) Interrelationship Digraphs, 3) Tree Diagrams, 4) Prioritization Matrices, 5) Matrix Diagrams, 6) Process Decision Program (PDPC) Charts, 7) Activity Network Diagrams. Quality function deployment (QFD), Basic Quality Tools & Statistical concepts Graphical, Enumerative Tools, Population parameters and sample statistics. Data Types, Measurement scales, Sampling Techniques, Data collection tools - Check Sheets, Stratification. Data Analysis Tools - Pareto diagram, Cause & Effect analysis, Trend Charts, Multi-Vary analysis, Scatter Diagrams, Histogram & Control Charts. Basic Probability Concepts, Measures of Distribution, Dispersion and Central Tendency, Probability distributions - Discrete data - Binomial & Poisson. Continuous data - Normal distribution. Z transform, Central Limit Theorem. Student's t distribution & Chi square distribution.	
UNIT - IV	Capability Analysis Process capability indices	(06 Hours)
	- Short term - Process Capability - Cp, Cpk. Long Term - Process performance indices - Pp, Ppk. Confidence Intervals CI for Means & for Variance. Hypothesis Testing ANOVA & Regression One Way & Multiway ANOVA, Co-relation & Regression analysis MSA Bias, Linearity, Stability and precision/tolerance (P/T) ratio for Continuous data & Percent agreement for Discrete Data. Calculate, analyze, and interpret measurement system capability using repeatability and reproducibility (GR&R) for continuous data. Kappa agreement concepts for Discrete data.	
UNIT - V	DFSS Concepts	(06 Hours)
	DMADV (define, measure, analyze, design, verify) and IDOV (identify, design, optimize, verify), Robust Design Concept. Experimental Methods Introduction to Design of Experiments	
UNIT - VI	Control Methods	(06 Hours)
	Describe the objectives and benefits of SPC, including controlling process performance, identifying special and common causes, Rational sub-grouping, Control Charts for Continuous & Discrete data. Lean Principles Define and describe concepts such as Theory of Constraints, value chain, flow, pull, etc., and tools commonly used to eliminate waste, including kaizen, 5S, error-proofing, value-stream mapping, etc. Value-added and non-value-added activities Identify waste in terms of excess inventory, space, test inspection, rework, transportation, storage, etc., and reduce cycle time to improve throughput.	

--	--	--

Text Books:	
1.	The Six Sigma Black Belt Handbook by MacCarty, Daniels, Bremer and Gupta, TMGH, 2010 Edition Juran Institute's Six Sigma Breakthrough and Beyond by De Feo and Barnard, TMGH. What is Six Sigma? by Peter Pande, TMGH
2.	Six Sigma Management by Blashka, TMGH
3.	All about Six Sigma by Warren Brussee, TMGH
Reference Books:	
1.	Lean Six Sigma by Hubert Ramprasad, Sara Books Pvt.Ltd.
2.	The Certified Six Sigma Black Belt Hand Book, Donald Benbow, Pearson
3.	The Certified Six Sigma Black Belt Hand Book, Donald Benbow, Pearson
4.	Achieving Business Excellence by Pravin Rajpal, Om Books International, India.
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Assignments: Assignments should be able to verify course outcome and skills of group work, communication skills

1. To solve numerical on block diagram reduction to calculate overall transfer function of system and verify with Mason's gain formula
2. To calculate transfer function of equivalent electrical system for given mechanical system.
3. Quiz –Multiple Choice Questions 20
4. To solve numerical on time domain and analyze parameter variations on transient response and steady state error.
5. Solve two years question paper of Pune university unit wise.
6. Solve two years question paper of GATE unit wise.
7. To observe NPTEL video lecture by M. Gopal on any topic of control and give presentations, group discussion.
8. To collect information about controllers used in process control in thermal power plant.
9. To collect information about controllers used in power system for voltage and frequency control.
10. To collect information about controllers used in machine control.
11. To validate the design by hardware.

Elective- I Risk and Derivatives

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
Course Prerequisites:		
The students should have knowledge of		
1.	Management Studies	
Course Objectives:		
	<ol style="list-style-type: none"> 1. To explore the concept of Risk and Derivatives thoroughly. 2. The actual working of Risk and Derivatives in industries. 3. Various terms related with Risk and Derivatives. 	
Course Outcomes: After learning this course the students will be able to		
1.	Explore the various terms related with derivatives	
2.	Explore the various contracts related with the future.	
3.	Explore the term options and various terms associated with options	
4.	Explore the term SWAPS and terms associated with SWAPS.	
5.	Explore to the meaning of risk management and associated terms .	
6.	Explore with various Instruments of External techniques of Risk Management	
UNIT I	<u>Derivatives</u>	(06 Hours)
	Definition and Types Forward Contracts, Futures Contracts, Options, Swaps, Differences between Cash and Future Markets, Types of Traders ,OTC and Exchange Traded Securities, Types of Settlement, Uses and Advantages of Derivatives, Evolution of Derivatives Market in India, Regulations – Framework, Exchange Trading in Derivatives	
UNIT II	<u>Futures Contract</u>	(06 Hours)
	Specifications of Futures Contract, Margin Requirements, Marking to Market, , Hedging using Futures, Types of Futures Contracts – Securities, Stock Index Futures, Currencies and Commodities, Delivery Options, Relationship between Future Prices, Forward Prices and Future Spot Prices, Commodity Futures, Contract Terminology and Specifications for Stock Options and Index Options in NSE, Contract Terminology and specifications for Stock Futures and Index futures in NSE, Contract Terminology and Specifications for Interest Rate Derivatives.	
UNIT III	<u>Options</u>	(06 Hours)
	Meaning and Definition, Exchange Traded Options, OTC Options – Specifications of Options, Call and put Options, American and European	

	Options, Intrinsic Value and Time Value of Options, Option payoff options on Securities, Stock Indices, Currencies and Futures, Options pricing models Differences between Future and Option contracts	
UNIT IV	<u>SWAPS</u>	(06 Hours)
	Definition of SWAP, Interest Rate SWAP, Currency SWAP, Role of Financial Intermediary, Warehousing, Valuation of Interest rate SWAPs and Currency SWAPs Bonds and FRNs	
UNIT V	Introduction to Risk Management	(06 Hours)
	Identifying types of risks, Management of Translation, Transaction and economic Exposure, Quantifying Risk and Hedging techniques, Internal and External Techniques viz Netting, Matching, Leading and Lagging, Price variation, Short Term borrowing, Pricing in Foreign Currency, Assets Liability Management	
UNIT VI	Instruments of External techniques of Risk Management	(06 Hours)
	Forwards, Futures, Swaps, Options, Forward Rate Agreement, Caps, Collars, Floors and their applications, Pricing techniques, Operational aspects.	
Text Books:		
1. Derivatives simplified – An Introduction to Risk Management- P.Vijaya Bhaskar & B.Mahapatra		
Reference Books:		
4. Options and Futures- Hull		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Assignments: Assignments should be able to verify course outcome and skills of group work, communication skills

1. To solve numerical on derivatives
2. Quiz –Multiple Choice Questions 20
3. Solve two years question paper of Pune university unit wise.
4. Solve two years question paper of GATE unit wise.
5. To observe NPTEL video lecture on any topic of control and give presentations, group discussion.
6. Case study on risk management related with any factory or commercial industry.

Elective I: Total Quality Management

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
	Continuous Assessment: 40 Marks	

Course Pre-requisites:

The Students should have knowledge of

1. Power Quality Management

Course Objectives:

1. To introduce the fundamental concepts of total quality management, statistical process control, six sigma and the application of these concepts.
2. To introduce philosophies and strategies to quality related issues.
3. To provide skills in diagnosing and analyzing problems causing variation in manufacturing and service industry processes.
4. To provide a basic understanding of "widely-used" quality analysis tools and techniques.

Course Outcomes:

The student will be able to

1. Develop an understanding on quality management philosophies and frameworks
2. Develop in-depth knowledge on various tools and techniques of quality management
3. Learn the applications of quality tools and techniques in both manufacturing and service industry.

UNIT - I	Quality, Strategic Planning, and Competitive Advantages	(06 Hours)
	Brief History - Definitions of Quality. Quality in Manufacturing and Service Systems. Quality and Price - Quality and Market Share - Quality and Cost - Quality & Competitive Advantage.	
UNIT - II	Principles of Total Quality Management:	(06 Hours)
	Introduction - Elements of Total Quality Management - Malcolm Baldrige National Quality Award Criteria. Benefits of Total Quality Management. The Deming Management Philosophy – The Juran Philosophy – The Crosby Philosophy	
UNIT - III	Customer Focus :	(06 Hours)
	The Customer-Driven Quality Cycle - Quality Function Deployment –Customer Satisfaction Measurement Techniques - Customer Relationship Management Techniques.	
UNIT - IV	TQM Tools & Techniques (I)	(06 Hours)

	The seven traditional tools of quality – New management tools – Six-sigma: Concepts, methodology, applications to manufacturing, service sector including IT – Bench marking – Reason to bench mark, Bench marking process – FMEA – Stages, Types.	
UNIT - V	TQM Tools & Techniques (Ii)	(06 Hours)
	Quality circles – Quality Function Deployment (QFD) – Taguchi quality loss function – TPM – Concepts, improvement needs – Cost of Quality – Performance measures.	
UNIT - VI	Quality Systems	(06 Hours)
	Need for ISO 9000-2008 quality system – elements, documentation, quality auditing- as 9000 –ISO 14000 – concepts, requirements and benefits – case studies of TQM implementation in manufacturing and service sectors.	
Assignment:		
1. Quality , strategic Planning and competitive Advantages		
2. Principles of total quality management		
3. Customer Focus :		
4. TQM tools and techniques (I)		
5. TQM Tools & Techniques (II)		
6. Quality Systems		
Text Books:		
1. Total Quality Management – Sundarajan		
2, Quality Control & Total Quality Management – Jain		
3.Dale H.Besterfiled, et at., “Total Quality Management”, Pearson Education Asia,3rd Edition, Indian Reprint (2006).		
Reference Books:		
1.James R. Evans and William M. Lindsay, “The Management and Control of Quality”, 6th Edition, South-Western (Thomson Learning), 2005.		
2.Oakland, J.S., “TQM – Text with Cases”, Butterworth – Heinemann Ltd., Oxford, 3rd Edition, 200UNIT III		
3.Suganthi,L and Anand Samuel, “Total Quality Management”, Prentice Hall (India) Pvt. Ltd.,2006.		
4.Janakiraman, B and Gopal, R.K, “Total Quality Management – Text and Cases”, Prentice Hall (India) Pvt. Ltd., 2006.		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

Elective I: New Enterprise Creation and Management

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
	Continuous Assessment: 40 Marks	
Course Pre-requisites:		
The Students should have knowledge of		
1.	Progressive Skills	
Course Objectives:		
1.	Develop an understanding of the importance of entrepreneurship in society and the different forms of entrepreneurial activity	
2.	Develop an understanding of the new venture creation process and the life cycle of a new venture from idea development and launch through growth and various exit strategies	
3.	Gain knowledge of business plans, sources of capital, marketing and distribution strategies, operations, organization issues, as well as key legal and ethical considerations affecting entrepreneurial ventures	
Course Outcomes:		
The student will be able to		
1.	Develop your analytical skills: thinking, problem solving, and decision-making	
2.	Learn to analyze and critically evaluate ideas and viewpoints	
3.	Acquire an interest in learning more by questioning and seeking answers	
4.	Learn to find and use resources to answer your questions	
5.	Learn to form conclusions and recommendations and to support them with logic and Evidence.	
UNIT - I	Foundations of Entrepreneurship Development:	(06 Hours)
	<p>Concept and Need of Entrepreneurship Development Definition of Entrepreneur, Entrepreneurship, Innovation, Invention, Creativity, Business Idea, Opportunities through change.</p> <p>Concepts of Entrepreneur, Manager, Entrepreneur / Corporate Entrepreneur –Comparative study - Roles, Responsibilities, Career opportunities.</p> <p>Entrepreneurship as a career, Entrepreneurship as a style of management, The changing role of the entrepreneur: mid-career dilemmas – Closing the window: Sustaining Competitiveness - Maintaining competitive advantage.</p>	

UNIT - II	Theories of Entrepreneurship:	(06 Hours)
	Innovation Theory by Schumpeter & Imitating Theory of High Achievement by McClelland X-Efficiency Theory by Leibenstein Theory of Profit by Knight Theory of Social change by Everett Hagen	
UNIT - III	Influences on Entrepreneurship Development :	(06 Hours)
	Entrepreneurial Traits, External Influences on Entrepreneurship Development: Socio-Cultural, Political, Economic, Personal. Entrepreneurial culture with special reference to Entrepreneurship / Corporate Entrepreneurship. Entrepreneurial Success and Failure: Reasons and Remedies.	
UNIT - IV	Women Entrepreneurs and Business Planning Process	(06 Hours)
	Women Entrepreneurs: Challenges to Woman Entrepreneurs, Achievements of Woman Entrepreneurs, Role Models of Woman Entrepreneurs. Business Planning Process - The business plan as an entrepreneurial tool Elements of Business Plan, Objectives, Market Analysis, Development of Product / idea, Marketing, Finance, Organization & Management, Ownership, Critical risk contingencies of the proposal, Scheduling and milestones.	
UNIT - V	Creating Entrepreneurial Venture	(06 Hours)
	Entrepreneurship Development Cycle Entrepreneurship Development and Government. Role of Central Government and State Government in promoting Entrepreneurship with various incentives, subsidies, grants etc. – with special reference to ‘Export oriented unites’ Role of the following agencies in the Entrepreneurship Development DIC – District Industrial Center SISI – Small Industries Services Institute EDII – Entrepreneurship Development Institute of India NIESBUD – National Institute of Entrepreneurship and Small Business Development NEDB – National Entrepreneurship Development Board	
UNIT - VI	Project Management	(06 Hours)
	Technical, Financial, Marketing Personnel and Management feasibility Reports Financial schemes offered by various financial institutions like Commercial Banks, IDBI, ICICI, SIDBI, SFCs, Venture Capital Funding, Angle Capitalist Case studies of Entrepreneurs – successful, failed, turnaround ventures should be discussed in the class.	
Assignment:		
1. Foundation of entrepreneurship development		
2. Theories of entrepreneurship		
3. Influence pf entrepreneurship development		
4. Women Entrepreneurs and Business Planning Process		
5. Creating Entrepreneurial Venture		
6. Project management		

Text Books:	
1. Dynamics of Entrepreneurship Development – Vasant Desai.	
2. Entrepreneurship Development New Venture Creation – Satish Taneja, S.L.Gupta	
3. Entrepreneurship and Small Business Management – Siropolis	
Reference Books:	
1. Project management – K. Nagarajan.	
2. Corporate Entrepreneurship – Vijay Sathe	
3. New Vistas of Entrepreneurship: Challenges & Opportunities – A. Sahay, M.S.Chhikara	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT – III
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI

Elective I: Operational Research

TEACHING SCHEME:

Theory: 03 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Continuous Assessment: 40 Marks

CREDITS ALLOTTED:

03 Credits

Course Pre-requisites:

The Students should have knowledge of

1. Basics about literature reviews and surveys.

Course Objectives:

1. The objective of this course is to help the students acquire quantitative tools, and use these tools for the analysis and solution of business problems.
2. The emphasis will be on the concepts and application rather than derivations.

Course Outcomes:

The student will be able to learn

1. Methods for making decisions
2. Analyzing the outcome of events
3. Mining and analyzing data using statistics
4. Programming methods
5. Problem-solving and organization
6. Computing algorithms

UNIT – I

Quantitative Techniques and Operations Research

(06 Hours)

Meaning, Scope of Quantitative Techniques and Operations Research in Management, Advantages and Limitations of Quantitative Techniques ,OR Models

UNIT – II

Linear Programming

(06 Hours)

Meaning of Linear .Programming, General Mathematical Formulation of LPP, Graphical Analysis, Simplex Method, Two-phase Method, Big M-Method. Duality and Post Optimality Analysis Advantage and Limitations of LPP.

UNIT - III

Transportation Model

(06 Hours)

Mathematical Formulation, Initial Basic Feasible Solution, Vogel's Approximation Method, Optimization (Minimization and Maximization) Using Modified Distribution Method and Stepping Stone Method.

UNIT - IV	Dynamic Programming	(06 Hours)
	Nature of Dynamic Programming Problem, Dynamic Programming Solutions for Knap Sack, Traveling Salesman (Stage Coach), Assignment of Salesmen to Sales Area and Capital Budgeting. Integer linear programming: Meaning, Application, integer programming algorithm (branch and bound algorithm, cutting plan algorithm).	
UNIT – V	Waiting Line Models and Replacement Models	(06 Hours)
	Introduction, Scope in Management Decisions, Queuing Models M/M/1 (Infinite and Finite Population), Probability Calculations and Application of M/M/C (Infinite Population) Introduction Scope in Management, Single Equipment Replacement Model and Group Replacement.	
UNIT - VI	Game Theory & Markov Chain Analysis	(06 Hours)
	Introduction to Games, Maximin and Minimax Principles, Pure and Mixed Strategies, Solution of Games Using-Algebraic and Graphical Methods. Computation of Sequential Probability of States for Different Periods, Steady State Probability of States and Application of Markov Chain.	
Assignment:		
1. Quantitative Techniques and Operations Research		
2. Linear Programming		
3. Transportation Model		
4. Dynamic Programming		
5. Waiting Line Models and Replacement Models		
6. Game Theory & Markov Chain Analysis		
Text Books:		
1. Hamdy A.Taha, Operations Research: An Introduction , Pearson 2008		
2. H.M. Wagner, Principles of Operations Research with Application to Managerial Decisions , PHI Learning. 2nd Ed., 2009.		
3.Chawla, Operation Research , Kalyani Publication Ludhiyana,2009		
Reference Books:		
1.V. K. Kapoor, Problems and Solutions in Operations Research , New Delhi, Saitan Chand and Sons, 2001		
2. F. Hillier, Introduction to Operation Research , TMH, 2005		
3. Bobby Srinivasan and C.L. Sandblom, Quantitative Analysis for Business Decisions , Singapore, McGraw Hill Publications, 2001.		
4. C.R. Kothari, An Introduction to Operational Research , New Delhi, Vikas Publications, 3rd Ed., 2009.		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

Name of subject: Engineering Mathematics-IV (Optional Subject)

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks Continuous Assessment: 40 Marks	04 Credits

Course Pre-requisites:

The Students should have knowledge of

1. Determinants
2. Matrices
3. Differentiation
4. Integration of functions
5. Differential equation

Course Objectives:

The course aims at making the students familiar about the most basic numerical methods and Concepts like error estimation helpful in various fields of engineering and can be used to simulate the results of various numerical methods.

Course Outcomes:

The student should be able to

1. Derive appropriate numerical methods to solve algebraic and transcendental equations
2. Evaluate the accuracy of common numerical methods.
3. Develop appropriate numerical methods to solve a difference equation.
4. Be familiar with numerical interpolation and approximation of functions, numerical integration and differentiation.
5. Be familiar with numerical solution of ordinary differential equations.
6. To compute Numerical Solution of Partial Differential Equations.

UNIT - I	Numerical solutions of algebraic and transcendental equations	(08 Hours)
	Bisection method, Regula-Falsi method, Newton-Raphson method, Direct iterative method.	
UNIT - II	Solution of system of linear algebraic equation	(08 Hours)
	Matrix inversion method, Gauss- elimination Method, Jordan's method, Crout's method. Gauss-Seidel and Gauss Jacobi's iterative method.	
UNIT - III	Difference equation and Solution of difference equations	(08 Hours)
	Definition of difference equations, formation of difference equation. Solution of Homogeneous and non-homogeneous difference equation with constant and variable coefficients using Boole's operator method and generating functions. Simultaneous difference equation.	
UNIT - IV	Interpolation and Numerical differentiation and integration	(08 Hours)
	Finite difference operator, Interpolation formula with equal and unequal intervals. Divided differences and central differences. Curve fitting: Method of least squares. Straight line, Second degree, parabola, Exponential curve.	

	Differentiation using forward, backward and divided difference General quadrature formula, Trapezoidal rule, Simpson's 1/3rd rule, Simpson's 3/8th rule, Weddle's rule.	
UNIT - V	Numerical solution of I order ordinary differential equation	(08 Hours)
	Solution by Euler's, method Euler' Modified method Taylor's series. Runga-kutta method. Milne's Predictors and Correctors method.	
UNIT - VI	Numerical Solution of Partial Differential Equations	(08 Hours)
	Classification of second order partial differential equations, Solution of Laplace's, Poisson's, heat and wave equations by finite difference methods, Use of method of characteristics for solution of initial and boundary value problems.	
Text Books:

3. C.Ray Wylie & Louis C. Barretle, <i>Advanced Engineering Mathematics</i> , Tata McGraw Hill Publishing Co Ltd., 6/e,2003.		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I,II,III	
Unit Test -2	UNIT – IV,V,VI	

Switchgear And Protection

Switchgear And Protection		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Oral : 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have knowledge of		
	Generation, Transmission & distribution of electrical energy.	
Course Objectives:		
	To develop the students to identify, analyze & to understand the fundamentals, classification, application and selection of various switchgears and different protection schemes of power system components.	
Course Outcomes: The students will be able to		
1.	Elaborate construction and working principle of different types of Circuit interrupting devices & to compute fault levels.	
2.	Describe the need of protective Relaying and operating principles of different types of relays.	
3.	Study different type of faults in transformer, alternator, I.M. and various protective schemes related to them.	
4.	Learn transmission line protection schemes, and characteristics of different types of distance relays.	
5.	Learn over voltage protection schemes, and different neutral earthing.	
6.	Learn substation layouts and PC applications in short circuit studies for designing relaying scheme	
UNIT – I	Fundamentals of power system protection & Circuit interrupting devices.	(06 Hrs.)
	<p>Fundamentals of power system protection: Functions of protective system, Normal and abnormal conditions and their effects on power system, Fault-types, Causes, Essential qualities of protections, Short circuit kVA calculations, and Current limiting reactors.</p> <p>Circuit interrupting devices: Arc formation process, Methods of arc extinction, important terms - re-striking and recovery voltage RRRV. Construction, working & application of low tension switchgear - Fuses, Isolators, MCB, MCCB, ELCB, Contactor, ACB.</p> <p>Construction, working & application of low tension switchgear: - OCB, MOCB, SF6 CB, VCB. Rating of circuit Breaker, Resistance switching and current chopping, capacitive current breaking, auto re-closures. Introduction to HVDC circuit breaking.</p>	
UNIT – II	Protective Relaying	(06 Hrs.)
	Evolution of protective relaying, classification of relays, zones of protection, primary and backup protection, essential qualities of protective relaying. Trip circuit of circuit breaker. Various basic operating principles of protection- over current, (current graded & time graded),directional over current, differential, distance, induction type	

	<p>relay, torque equation in induction type relay, current and time setting in induction relay, Numerical on TSM, PSM and operating time of relay.</p> <p>Static & Digital Relaying</p> <p>Overview of Static relay, block diagram, operating principal, merits & demerits of static relay. Numerical Relays :-Introduction, Block diagram of numerical relay, Sampling theorem, Anti –Aliasing Filter, Block diagram of Phasor Measurement Unit (PMU).</p>	
UNIT–III	Protection of Power System Components	(06 Hrs.)
	<p>Protection of Alternator & Transformer</p> <p>Various faults in Alternator, abnormal operating conditions, protection against stator faults, Protection against rotor faults, protection against loss of excitation and loss of prime mover.</p> <p>Protection of Transformer :</p> <p>Types of faults in transformer. Percentage differential protection in transformers, Restricted E/F protection. Incipient faults, Buchholz relay. Protection against over fluxing. Protection against inrush current</p> <p>3 Phase Induction Motor Protection- Abnormal conditions & causes of failures in 3 phase Induction motor, single phasing protection, Overload protection, Short circuit protection.</p>	
UNIT–IV	Protection of Busbar & Transmission Line	(06 Hrs.)
	<p>Bus bar Protection: Differential protection of bus bars. Selection of C.T. ratios for bus bar protection. High impedance differential relay.</p> <p>Transmission line: over current protection for feeder using directional & non-directional over current relays, Introduction to distance protection, impedance relay, reactance relay, mho relay & Quadrilateral Relays, Introduction to PLCC, block diagram, advantages, disadvantages, three stepped distance protection, Effect of arc resistance, and power swing on performance of distance relay. Realization of distance relays (impedance, reactance and mho relay) using numerical relaying algorithm (flowchart, block diagram), Introduction to Wide Area Measurement (WAM) system.</p>	
UNIT – V	Over voltage protection & System grounding	(06 Hrs.)
	<p>Over voltage protection : Overvoltage, causes of overvoltage, Lightning phenomenon, direct & indirect strokes, protection of overhead transmission lines from direct lightning strokes, Lightning arresters, rod gap type, horn gap type, Thyrite type, Metal oxide (ZnO) type lightning arrester.</p> <p>System grounding: Introduction and importance of earthing, terms and definitions, types of earthing, substation earthing.</p>	
UNIT-VI	Substation layouts & PC applications in short circuit studies for designing relaying scheme :	(06 Hrs.)
	<p>Substation layouts : Classification of substation, selection & location of site, main connection schemes, Equipments used in substation, various symbols – C.B. , L.A., fuses, relays, power transformer, bus bar and its arrangement, CT.- PT, isolators, earthing switch, capacitor bank, batteries PLCC, control room, etc., Connection diagram and its layout.</p> <p>PC applications in short circuit studies for designing relaying scheme: Introduction, Types of faults, and Assumptions for conducting short circuit studies,</p>	

	steps in development of algorithm.	
Term Work:		
The Practical's shall consist of record of minimum eight experiments.		
<ol style="list-style-type: none"> 1. To find the characteristics of MCB using relay testing kit. 2. To find the characteristics of MCCB using relay testing kit. 3. To find the characteristics of Fuse using relay testing kit. 4. To find the pickup and drop off voltage of Contactor 5. To find the characteristics of Induction type over current relay 6. To find the characteristics of Induction type under voltage relay 7. To find the characteristics of microprocessor based over current relay 8. To find the characteristics of microprocessor based under voltage relay 9. To find the characteristics of microprocessor based over voltage relay 10. Differential protection of 3 phase alternator. 11. Protection of transmission line. 12. Report on industrial visit to switchgear training centre /or switchgear/relay manufacturing unit/ or H.T. substation visit. 		
Text Books:

10. Power system Protection and Switchgear – B Ravindranath and M M Chander – Wilsey Eastern Ltd.		
11. L. P. Singh, Digital Protection, New age international Publisher		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Assignments:

1. Market survey for various switchgear devices and prepare report on the same.
2. Industrial visits to Manufacturer of switchgear devices and prepare report.
3. Solve 3 University exam question papers.
4. Prepare report on NPTEL Video lectures on any topic related with syllabus.

5. Solved the unsolved questions from books for every Unit.
6. Solve the GATE question papers Unit wise.
7. Prepare self-study report on topics related with Units.

Power System Analysis

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	TW: 25Marks Practical:25 Marks	01 Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Structure of Power System, Transmission & Distribution Systems, Network Analysis.	
Course Objectives:		
	This course aims at understanding the components of interconnected power system, Representation of these system components in terms of mathematical models and Tools for analyzing the system operation during the normal & abnormal operating conditions.	
Course Outcomes:		
1.	To apply the concepts of Complex Power.	
2.	To interpret Single Line Diagram of power systems & model the power system in per unit	
3.	To formulate the load flow problem for 3-4 bus system & interpret the results.	
4	To compute fault current on the occurrence of symmetrical fault on power system	
5	To convert the unbalanced system parameters to sequence components & vice versa & to compute fault current on the occurrence of SLG, LL and DLG fault on power system	
6	To Derive swing Equation & apply solution to understand the rotor dynamics of synchronous machines	
UNIT - I	Complex Power	(08Hour)
	Structure of Interconnected & Integrated Power System, Formation of National Grid, Present Indian Power Industry, Power system analysis and their necessity. Concept of complex power, Complex power flow through transmission lines, Load on the system, its composition, nature of load curves for various consumer categories, Load voltage-frequency specifications & permissible variations, Real power-frequency and reactive power- voltage dependency, Conventional methods of voltage control of Power system.	
UNIT - II	Power System Modeling	(08Hour)
	Representation of power system-Single line diagram, Representation and modeling of long line, Synchronous generator-simple model such as emf behind reactance, power transformer, three winding transformer. Impedance and Reactance diagrams of power systems and their use. The per unit system of parameter value representation-selection of base, change of base, advantages, its application to impedance/reactance diagram.	
UNIT - III	Load Flow Analysis	(08Hour)
	Development of mathematical models of simple systems by network reduction, Driving point & Transfer Admittance, Concept of Z-bus and Y-	

	bus matrices, Formation of Y Bus Matrix ,Introduction to load flow analysis, Classification of buses, Formation of power flow equations (PFES) for n bus power system, Classification of variables& solution techniques, Newton-Raphson Method(Polar form) for load flow solution ,Introduction to optimal power flow and DC power flow, its importance, necessity and difference from conventional power flow.	
UNIT - IV	Symmetrical Fault Analysis	(08Hour)
	Symmetrical faults on power system, Sudden three [phase short circuit fault on unloaded alternator, Sub-transient, transient and steady state currents and impedances, DC offset and effect of the instant of short circuit on the waveforms, Estimation of fault currents with and without pre-fault current for simple power system, Selection of circuit breakers and current limiting reactors.	
UNIT - V	Unsymmetrical Fault Analysis	(08Hour)
	Methods of symmetrical components, relationships, sequence impedances. Representation of power systems by positive, negative and zero sequence networks, Nature of sequence impedance of power system components. Line-Line, Line-Ground, Line-Line-Ground faults, Analysis of unloaded and pre loaded alternators and simple power systems with and without fault impedance.	
UNIT - VI	Power System Stability	(08Hour)
	Concept of steady state, dynamic and transient stability of power systems and the factors controlling each, Steady state stability, its evaluation and variation of limits of stability under system conditions, Transient stability and importance of rotating machine dynamics in the power system stability evaluation,. The swing equation, its derivation, Equal Area Criteria (Consideration of one machine-infinite bus problem only.)	
Term Work:		
The term work shall consist of record of minimum eight experiments.		
<ol style="list-style-type: none"> 1. Study of effect of VAR compensation on receiving end voltage profile on a transmission line using capacitor bank. 2. Determination of steady state stability limit for transmission line. 3. Determination of steady state limit of a synchronous motor and plotting P- curve. 4. Measurement of sub transient reactance of a salient pole synchronous machine by Static impedance /Dalton – Cameron method. 5. Measurement of negative sequence reactance of synchronous machine. 6. Measurement of zero sequence reactance of synchronous machine. 7. Fault analysis for symmetrical fault by simulation or AC/DC network analyzer. 8. Unsymmetrical fault analysis by simulation or AC/DC network analyzer. 9. Computer aided solution of 3 bus load flow problem using Gauss-Seidel method. 10. Formation of Y bus matrix using computer programming. 11. Study of load flow on 3 bus system using by actual simulation/ AC network analyzer. 		
Text Books:		
<ol style="list-style-type: none"> 1. I J Nagrath , D P Kothari, "Modern Power System Analysis", Tata McGraw Hill Publication 2. Grainger Jhon J, W D Stevenson Jr, "Power System Analysis" Mc-Graw Hill Publication 		

Reference Books:	
1.	O I Elgerd, "Electrical Energy Systems Theory: An Introduction", Tata McGraw Hill Publication
2.	Hadi Sadat," Power Sysem Analysis", McGraw Hill International Publication
3.	A R Bergen and Vijay Vittal,"Power System Analysis", Pearson Education Asia.
4.	J D Glover and M Sarma," Power System Analysis & Design",
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Assignments:

1. Refer the following web sites& prepare presentation on Power Scenario of India
Ministry of Power, CERC, MNRE
2. Sketch the load curves for Residential, Industrial, Agriculture, Municipal and Commercial categories of consumers and compare them with reference to Load factor, Diversity factor. Also plot the monthly load curve of the college substation. Estimate the maximum demand, Load factor.
3. Sketch the single line diagram (SLD) of the college & department power supply system. Enter all the specifications of the power system components & develop SLD using the ETAP software.
4. Develop the power system model of the department/College power system/any other power system (up to 50 buses) & conduct the load flow analysis using E TAP software. Analyse the results using N-R method.
5. Develop the power system model of the department/College power system/any other power system (up to 50 buses) & conduct the short circuit analysis using E TAP software. Analyse the results to confirm the Circuit Breaker ratings.
6. Develop the model of long transmission line and synchronous machine & estimate the steady state stability limit using ETAP/MATLAB software.
7. Self-learn NPTEL sessions on i) Symmetrical Fault Analysis ii) Unsymmetrical Fault Analysis & Generate presentation to explain the concepts: i) Nature of Short Circuit Current ii) Selection of Circuit Breakers iii) Symmetrical components
8. Arrange Industrial Visit to Load Dispatch Center: Prepare Study Report on Control Functions applied by the load dispatcher for Power System Analysis

Modern Control Systems

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Oral 25marks	01 Credit
Course Prerequisites:		
The students should have knowledge of		
	Linear control system , methods of stability analysis, Matrix algebra, Z transform,	
Course Objectives:		
	This course introduces state space modeling and stability analysis of system. It includes phase plane and describing function method of stability analysis of nonlinear system. It also introduces fundamental mathematical concepts and stability analysis of digital control system	
Course Outcomes: After learning this course the students will be able to		
1.	Represent the system equation in various state space models (physical, phase variable, canonical	
2.	Draw block diagram and signal flow graph from state space model of system.	
3.	Calculate the solution of state equation; calculate transfer function from state space model.	
4	Recognize various nonlinearities and its effect on system stability	
5	Compare between Linear and nonlinear, analog and digital, state space and transfer function model	
6	Calculate pulse transfer function of digital system. Explain the mathematical model of digital system and select appropriate sampling frequency.	
7	Describe principle of operation and applications of adaptive control, robust control and Artificial neural network, Fuzzy logic .	
UNIT I	State Variable representation	(08Hours)
	Comparison of transfer function and state variable analysis, concept of state, state space, state vector, state equation of the system, state space representation using physical variable, phase variable and canonical variables with block diagram, Decomposition of transfer function, Eigen values and Eigen Vectors, Diagonalization of the system matrix with distinct and repeated roots.	
UNIT II	State variable stability analysis and design	(08Hours)
	Solution of state equation with and without inputs, State Transition Matrix (STM), Methods to determine STM using Infinite series method ,Laplace transform, Caley Hamilton theorem. Definition of controllability, observability, Kalman's test, Gilbert's test, Determination of transfer	

	functions from state model. State feedback control, pole placement design through state feed back	
UNIT III	Nonlinear system	(08Hours)
	Different types of nonlinearities, peculiar behavior of nonlinear system-response, jump resonance, limit cycle: stable and unstable, amplitude as function of frequency oscillation, nonlinear spring mass system, sub harmonic oscillation, asynchronous quenching, frequency Phase plane method, singular points, phase plane plots using delta method determination stability from state trajectory, relation with time domain analysis. Concept of Describing Function, derivation of describing function of various nonlinear elements, Stability analysis using describing function, existence of limit cycle, Merits demerits of describing function method	
UNIT IV	Discrete time system	(08Hours)
	Basic elements of discrete data system, merits of discrete system, Sampling and selection of sampling period, Sample and hold circuit, A/D and D/A converter, modeling of zero order hold , reconstruction of signals from samples, Shannon's sampling theorem. Z transform – definition, simple functions, Inverse Z transform, linear difference equations and their solution	
UNIT V	Analysis of Discrete time system	(08Hours)
	Derivation of Pulse Transfer function, , pulse transfer function of closed loop system, Bilinear transformation, stability in Z plane, Jury's test, Routh's criteria , State space representation of discrete time systems, state space models from pulsed transfer function.	
UNIT VI	Introduction to advances in control system	(08Hours)
	Adaptive control , Model reference Adaptive control block diagram and working with practical applications, Robust control ,Fuzzy logic , Artificial neural network, algorithm and learning architecture	

Term Work:

The term work shall consist of record of minimum eight experiments .To ensure that at least one experiment on each unit.

1. To convert transfer function into state model i) phase variable form ii) canonical form
2. To derive state model of DC servo motor from physical variables and observe step response, i.e. to solve state equation of DC servo motor
3. To determine Eigen values, Eigen vectors and diagonalises the system.
4. To determine controllability and observability by Kalman's test and Gilbert's test.
5. Design of state feedback gain matrix by pole placement.
6. To plot phase plane trajectory of system with nonlinear elements using SIMULINK.
7. To analyze stability of nonlinear system using describing function.
8. To convert continuous time system to discrete time system and to observe effect of sampling time on step response.
9. To determine the gain for stability in Z domain.

10. To study adaptive control and robust control applications with MATLAB demos.	
Text Books:	
4. I.J. Nagrath, M. Gopal, ““Control System Engineering”, New Age International Publishers – Fourth edition	
5. Katsuhiko Ogata, “Digital control system”, Prentice Hall, 2010.	
6. M.Gopal , “ Digital control system”	
7. Dorf and Bishop , “Modern Control systems”- Pearson education	
Reference Books:	
5. Nise N. S. “Control Systems Engineering”, John Wiley & Sons, Incorporated, 2011	
6. D. Roy Choudhary, "Modern Control Engineering", PHI Learning Pvt. Ltd., 2005	
7. Dorf, Bishop - “Modern control system”, Pearson Education	
8. M. N. Bandyopadhyay, “Control Engineering – Theory and Practice”, Prentice Hall of India Ltd. Delhi	
9. Geir E. Dullered, F.G.Paganini - “ A course in robust control theory “- Springer	
10. Jan Jan tzen- ‘Foundation of Fuzzy control – a practical apporoach – Wiley	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Assignments:

1. To solve numerical on decomposition of transfer function to state variable (different forms)and to draw state diagram
1. To identify state variables of physical system and write down state model.
2. To determine transfer function from given state model
3. To calculate STM by three different methods.
4. To derive describing function of different nonlinearities
5. To draw phase plane trajectory by isoclines method
6. To derive pulse transfer function
7. To prepare comparative analysis of discrete time and continuous time system.
8. To prepare chart of Z transform of standard functions
9. To solve question papers of GATE unit wise.
10. To study Research paper on adaptive control and prepare presentation.
11. To observe NPTEL video on robust control and group discussion related to it.

Industrial Organization & Management

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks Continuous Assessment: 40 Marks	03 Credits
Course Pre-requisites:		
The Students should have knowledge of Professional skill development 1 to 5.		
Course Objectives:		
<ul style="list-style-type: none"> • This course will help the students to understand the basic operations in any organization. • With the technical skill sets, there are also some more things that to be studied to be in any organization. • This course will help the students to learn these aspects. They are going to learn about Management related terms like Depreciation, Replacement engineering, Product Engineering, Production Planning and Inventory Control. • This course will also help to understand the Job Evaluation techniques, Personnel Management, Behavioral Aspects of Management and Operations Research. • This course will complete the overall aspects of the student with technical knowledge with needed management skills. 		
Course Outcomes:		
The student will be able to		
1.	Explore the basic terms related to management like function, principles. Leadership qualities will also get improved.	
2.	Explore the type of companies and the various financial aspects related with the company.	
3.	Exculpate the terms related with the depreciation, replacement and products of the company and to deal with it.	
4	Explore the production and inventory related terms. The control on the inventory and information related with it.	
5	Explore the company's requirement as per the human resource requirement, which also very important part in any company.	
6	Behaviors and ethics of an employee in the organization are to be studied which will be requiring in carrying out the operations research.	
UNIT - I Management		
	Introduction, Phases in Management: scientific management, Behavioral management and Information technology and operations research. Industrial Management, Contents and Principle of Management, Functions of Management: Planning, coordination, motivation and control. Leadership: Qualities of leader, Leading Process. Education and Training of Management. Elements of Quality Management System ISO 9001-2008.	(06 Hrs)

UNIT - II	Formation of Company and Financial Planning	(06 Hrs)
	Introduction, Company definition, Types of company Structure: Proprietorship, Partnership, Joint Stock companies, Limited and Unlimited Company, Private and Public, Corporative, Public, Private and Joint Sector, Trust and Holding Companies. Classification of Capital, Capital Procurement, Structure of Authorized Pattern, Economic Aspects of Cost Patterns, Breakeven Analysis, Financial Management.	
UNIT - III	Depreciation, Replacement and Product Engineering	(06 Hrs)
	Introduction, objective of Business Enterprise, Depreciation and Depreciation Calculation, Estimation of Life of an Engineering Aspects, Replacement of Plant and Machinery, Product Classification, Initiation of Product, Production Analysis, simplifications and Standardization, Product Research, Diversification and specialization, Patent Analysis.	
UNIT - IV	Production Planning and Inventory Control	(06 Hrs)
	Introduction, Production System, Production Types, Production Planning functions, Efficiency of Production planning and Drawing Office Organization. Inventory Control Functions, Procedures for Purchase, Principles of Inventory Control, Inventory Policies, Economic Batch Quantities, Purification of Inventory, control of incoming materials and store Issues. Information flow analysis.	
UNIT - V	Job Evaluation and Personnel Management	(06 Hrs)
	Introduction, Job Evaluations and Analysis, Classification of Job evaluation techniques, Evaluation of wages structures, system of merit rating, measurement of responsibility and wage incentives. Importance of personnel management, human relations, attitude of employers towards employees. Functions of personnel management. Personnel research, labour participation in management. Labour turnover, industrial disputes.	
UNIT - VI	Behavioral Aspects of Management and Operations Research	(06 Hrs)
	Scientific management, Hawthorne Studies, Elton Mayo, Theory X and Theory Y, Herzberg's motivation and Hygiene Theory, Organizational goals and Culture. Stresses at workplace, Interpersonal Behavior, power and Politics in organization. Phases of an Operations Research, formation of some typical problems, competitive model, Program Evaluation and Review Techniques, Graphical and Matrix solution of linear programming models.	

Assignment:

1. Introduction to management
2. Formation of Company and Financial Planning
3. Depreciation, Replacement and Product Engineering
4. Production Planning and Inventory Control
5. Job Evaluation and Personnel Management
6. Behavioral Aspects of Management and Operations Research

Text Books:

1. "Industrial Organization and Management", S. K. Basu, K. C. Sahu, B. Rajiv, PHI learning Private Limited, New Delhi.
2. "Industrial Engineering and Management", O.P. Khanna, Dhanpat Rai & Sons. New Delhi.

Reference Books:	
1. “Industrial Organization and Management: Principles and Practice”, S. Sundaramurthy, R. V. R. Sivagnanam, United Book Corporation.	
2. “Industrial Organization and Management Fundamentals”, Herman B. Henderson, Albert E. Haas Industrial Press.	
3. “Professional Management in Industrial Organisations”, K.P. Kaur, Deep and Deep Publications.	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Elective II: Renewable Energy Systems

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks		
		Term Work: 25 Marks Oral:25Marks		01 Credit
Course Pre-requisites:				
The Students should have knowledge of				
1.	Fundamentals of Electrical Engineering, Power Generation Techniques			
Course Objectives:				
1.	To create awareness of renewable energy sources like wind, solar energy, biogas plant, mini-hydro plant and fuel cell			
2.	To impart knowledge of biogas plant, tidal energy, wave energy, ocean thermal and geothermal energy			
3.	To impart knowledge of energy storage and hybrid systems.			
Course Outcomes:				
	Students are able to			
1.	Uses renewable energy sources			
2.	Utilize wind energy			
3.	Apply solar energy to any equipment			
4	Describe biogas plant, mini-hydro plant and fuel cell			
5.	Compare tidal energy, wave energy, ocean thermal and geothermal energy			
6.	Decide energy storage and hybrid systems for particular application			
UNIT - I	Energy scenario			(06 Hours)
	<p>Classification of energy sources, energy needs of India and energy consumption patterns, worldwide potential of these sources, energy efficiency and energy security, energy economics, energy conservation supply curves,</p> <p>Environmental issues, environmental impacts, global warming and climate change, carbon trading, concept of carbon credits, carbon footprints, carbon dioxide sequestration, atmospheric pollutants, Kyoto protocol, ozone depletion. Concept of clean development CDM and prototype carbon funds PCF. Impacts of renewable energy, Factors favoring and against renewable energy sources. Market survey, International electro technical commission standards for renewable energy sources.</p>			

UNIT - II	Wind energy systems	(06 Hours)
	Types of wind turbines, electrical generators for wind turbines, power in the wind, impact of tower height, measurement of wind speed, maximum rotor efficiency, various controls in wind turbines, fixed speed and variable speed wind turbines, power converters, wind turbine economics, specific wind turbine performance calculations, impacts of wind turbines. Wind turbine specification, stand alone and grid connected wind turbines, offshore wind farm, magnetic levitated wind turbine, floating wind turbine, wind turbines on vessels, installation, maintenance and commissioning of wind turbines. wind turbine system market survey, design, layout, costing, grid integration issues, case studies, data analysis, numericals	
UNIT - III	The solar resource and solar thermal systems	(06 Hours)
	The solar spectrum, the earth's orbit, altitude angle of the sun at solar noon, solar position at any time of day, sun path diagrams for shading analysis, solar time and civil (clock) time, clear sky direct-beam radiation, total clear sky insolation on a collecting surface, monthly clear-sky insolation, solar radiation measurements, average monthly insolation. Direct and diffused radiation and effect on power generation. Solar thermal water heating, types of collectors, efficiency, solar thermal energy generation. Applications of solar thermal system, solar ponds, solar cooker, issues in solar energy, case studies, data analysis, system design, layout, costing, numericals	
UNIT - IV	Solar photovoltaic systems	(06 Hours)
	Basic semiconductor physics, a generic photovoltaic cell, the simplest equivalent circuit for a photovoltaic cell from cells to modules to arrays, the P-V I-V curve under standard test conditions (STC), impacts of temperature and insolation on i-v curves, shading impacts on i-v curves, crystalline silicon technologies, single-crystal czochralski (CZ) silicon, ribbon silicon technologies, cast multi-crystalline silicon, crystalline silicon modules, thin-film photovoltaic, efficiency of PV system. Methods of measurements. : introduction to the major photovoltaic system types, current-voltage curves for loads, grid-connected systems: interfacing with the utility, dc and ac rated power, the "peak-hours" approach to estimating PV performance, capacity factors for PV grid-connected systems, stand-alone PV systems, concentrating solar power (CSP) technologies,PV-powered water pumping, building integrated solar systems, solar facades, solar cars, PV systems – off grid systems and scope for inclusive growth of rural India. Grid autonomy. Bi-directions metering. maximum power point tracking,Calculation of system details. Grid integration issues, case	

	studies, data analysis, grid-connected PV system economics, system trade-offs, dollar-per-watt ambiguities, amortizing costs, grid connected and standalone system sizing, design, layout, costing, payback period,numericals	
UNIT - V	Other sustainable energy sources and hybrid systems	(06 Hours)
	Micro-turbine generation, wave energy conversion systems, tidal energy conversion systems, ocean thermal energy systems, clean coal power plants, biogas, biomass to electrical energy conversion, gasifires, biomass fired boilers, co-firing, cogeneration in sugar industry, energy from municipal solid waste, geo-thermal energy, biomechanical energy, bio-chemical and photosynthesis techniques. Biomass for electricity, small hydro, mini hydro, micro-hydropower, pico hydro,nano hydro systems, electricity from water pipelines, fuel cells, fuel cell efficiency, types of fuel cells, hydrogen production, standalone system,hybrid systems, wind solar hybrid, wind diesel, solar diesel, wind mini hydro hybrid system, numericals	
UNIT - VI	Energy storage	(06 Hours)
	Battery storage, charge regulators, battery types, maintenance, management, fly wheel energy storage, pumped water energy storage, hydrogen energy storage, super capacitor energy storage systems, compressed air energy storage systems, cryogenic energy storage, thermal energy storage, seasonal thermal energy storage. Use of various energy storage techniques in renewable energy sources, numericals	
Term Work:		
1. Fabrication of solar over.		
2. Fabrication of solar cooker.		
3. Desalination of water using solar still.		
4. Fabrication of solar car.		
5. Fabrication of solar updraft tower.		
6.Fabrication of small horizontal axis wind turbine and testing.		
7. Fabrication of small vertical axis wind turbine and testing.		
8. Fabrication of small biogas plant.		
9. Fabrication of a simple fuel cell.		
10. Fabrication of small hydro turbine.		
11. Testing of super capacitor.		
12. Comparison of performance of wind turbine with and without flywheel.		
Text Books:		
1. G. D. Rai, “Non-Conventional Energy Sources”,Khanna Publication		
2. R. Ramesh, “ Renewable energy Technologies”,Narosa Publication		
3. S. Rao, Dr. B. B. Parulekar, “Energy Technology – Non Conventional, Renewable and Conventional”,Khanna Publication		
4. Mittal, “ Non-conventional systems ”,Wheelers publication		

5. Gilbert M. Masters, “Renewable and Efficient Electrical Power Systems”, Wiley -IEEE Press, August 2004

Reference Books

1. Dr. S. P. Sukhatme, “Solar Energy”, Tata McGraw Hills
2. S. Bandopadhyay, “Solar Energy”, Universal publishing.
3. Paul Gipe, “Wind Energy Comes of Age”, John Wiley & Sons Inc.
4. Njenkins, “Wind energy technology”, John wiley and sons
5. Mcniels, Frenkel , Desai , “Solar and wind energy technologies”, Wiley Eastern
6. G. N. Tiwari, SangeetaSuneja, “Solar Thermal Engineering Systems”,Narosa Publishing House
7. L. L. Freris, “Wind Energy Conversion System”, Prentice Hall
8. Mukund Patel, “ Wind and solar systems”, CRC press
9. TapanBhattachary, “Solar photovoltaics for terrestrials
10. MiliMajumdar, “Energy Efficient Buildings in India”, Published by Tata Energy Research Institute & MNRE
11. Thomas Ackermann, “Wind Power in Power Systems”, Wiley Publications
12. Tony Burton et al, “Wind Energy Hand Book”, John Wiley & Sons Inc.
13. Siegfried Heier, Rachel Waddington, “Grid Integration of Wind Energy Conversion Systems”, Wiley Publications

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Assignments

1. Market survey for solar thermal system for water heating and solar photo voltaic system for power generation. Collection of information charts brochures / leaflets from suppliers, manufacturers, cost, technical specification etc. comparative tables for techno commercial information of various products from various companies. List of solar power plants in India and nearby Pune city
2. Clean development mechanism CDM, Carbon credit, carbon credit certificate, types of Carbon Credits, carbon footprints, Measuring carbon footprints, Average carbon emissions per person by country
3. Various wind generators and their comparison w.r.t techno commercial information, their suitability to grid and standalone system, suitability of installation
4. Design of water pumping system for irrigation purpose using wind energy system with a 5 hp pump. Design of suitable water storage facility and drip irrigation system. Size of storage tank. Detailed design with required techno commercial information, turbine size, tower size, cost, market survey for procurement.
5. Design of solar thermal system for hot water system for Bharati Vidyapeeth College of engineering hostel and guest house. The report should involve all techno-commercial

information. Complete design of solar thermal system. Block diagram and detailed diagram of plant for installation and costing. List of suitable vendors for procurement of raw material also should be available in the report with their detailed address, phone numbers, website and email-ID.

6. Design of solar Photovoltaic system for water pumping system for Bharati Vidyapeeth College of engineering campus. The report should involve all techno-commercial information. Complete design of photovoltaic system. Block diagram and detailed diagram of plant for installation and costing. List of suitable vendors for procurement of raw material also should be available in the report with their detailed address, phone numbers, website and email id.
7. Detailed report for grid integration and challenges in grid integration. Recent trends in grid integration. Methods of grid integration for solar and wind power plants. Detailed report.
8. Design of Canteen waste management system for Bharati Vidyapeeth College of engineering canteen with detailed report for feasibility of biogas plant for cooking in canteen and possibility of generation of electricity. The report should involve all techno-commercial information. Complete design of biogas plant for canteen waste. Block diagram and detailed diagram of plant for installation and costing. List of suitable vendors for procurement of raw material also should be available in the report with their detailed address, phone numbers, website and email id.
9. Design of fuel cells for a PMPML bus with all techno commercial information.
10. Design of Solid waste management for katraj area, Pune city, system design and detailed report with all techno commercial information and layout.
11. Design of micro hydro power plant for canal and piped drinking water at parwati pumping station with all techno commercial information and layout.
12. Design of nano hydro system for electrical energy generation system using kinetic energy of water through pipes in a large housing r society with suitable energy storage and illumination system using LED for parking of the society.
13. Types of storage systems for electrical energy. The storage systems suitable for wind energy, solar energy should be given. All other new unconventional methods of storage of energy along with conventional methods should be explained. e.g. super capacitors, compressed air storage, pumped water storage, hydrogen energy storage etc. Techno-commercial comparison all methods should be done. Actual sites where these methods are used should also be mentioned.
14. Industrial visit report for a renewable energy power plant.

Note : - Each practical needs power point presentation and detailed report with techno-commercial information.

Elective II: Programmable Logic Controllers

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Oral:25Marks	01Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Logic gates operations, Boolean algebra, Data types (integer, float, unsigned)	
Course Objectives:		
	This course aims at understanding the basic concepts PLC hardware and PLC software and Programming language like ladder, construction of ladder diagram, their symbol and component of the instruction. Knowledge of analog and digital input and Output devices, PID, SCADA and Communication Protocols.	
Course Outcomes:		
1.	Describe Programmable Logic Controller along with the block diagram with its components in detail.	
2.	Develop architecture of SCADA explaining each unit in detail.	
3.	Develop a software program using modern engineering tools and technique for PLC and SCADA.	
4	Enlist various industrial applications using PLC and SCADA.	
5	Describe the importance of SCADA in critical infrastructure.	
6	Execute, debug and test the programs developed for digital and analog operations.	
UNIT -I	Introduction to PLC	(06 Hours)
	History of PLC, PLC system, Block Diagram of general PLC, PLC input and output module, Sensors and actuators for PLC, Central Processing Unit, Monitors, solid state memory, Power supplies, HMI and Interfaces, Selection criteria for PLC, PLC advantages and disadvantages, Present PLC manufacturers.	
UNIT – II	Programming of PLC	(06 Hours)
	Input ON/OFF switching devices, Input analog devices, Output ON/OFF devices, Output analog devices, Programming equipments, Introduction of Programming languages, Basic components & symbols in ladder diagram, Construction of PLC ladder diagram for programming, Fundamentals of ladder diagram, Boolean logic & relay logic, programming ON/OFF Inputs to produce ON/OFF outputs.	
UNIT – III	PLC Applications	(06 Hours)
	Analog PLC operation, PID control of continuous processes, closed loop systems and common problems, closed loop system using Proportional, Integral & Derivative (PID), PLC interface. Industrial process example: Motors Controls - AC Motor starter, AC	

	motor overload protection, DC motor controller, Variable speed (Variable Frequency) AC motor Drive. Temperature, level and Flow control.	
UNIT - IV	SCADA Systems Overview	(06 Hours)
	Introduction and definitions of SCADA, Principles of SCADA systems, SCADA system evolution. Basic SCADA system Architecture: Human Machine Interface, Master Terminal Unit, Remote Terminal Unit. SCADA data transfer through PLCC. Communication Technologies, Communication system components, SCADA Communication in an electrical power system. SCADA system desirable Properties, Real Time System, SCADA server, SCADA functions.	
UNIT - V	SCADA Architecture	(06 Hours)
	First generation - Monolithic, Second generation - Distributed, Third generation – Networked Architecture, Intelligent Electronic Devices. Operation and control of interconnected power system, Automatic substation control, SCADA configuration, Energy management system, system operating states, system security, State estimation, and SCADA system security issues overview. SCADA systems in the critical Infrastructure: Conventional Electric Power Generation, water Purification System, Chemical Plant, Petroleum Refining Process.	
UNIT - VI	The Evolution Protocols	(06 Hours)
	Overview of Open systems interconnection (OSI) Model, Functions of OSI Model Layers, OSI Protocols, Functions of Transmission control protocol / Internet protocol (TCP/IP) Layers, TCP/IP protocol, DNP3 protocol, IEC layered architecture, Ethernet/IP, Process Field bus (Profibus), Modbus, The Security Implications of the SCADA protocols.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments. Four from first 6 and four from next 6 out of given below.		
<ol style="list-style-type: none"> 1. Interfacing of lamp & button with PLC for ON & OFF operation. Verify all logic gates. 2. Performed delayed operation of lamp by using push button. 3. UP/DOWN counter with RESET instruction. 4. Combination of counter & timer for lamp ON/OFF operation. 5. Set / Reset operation: one push button for ON & other push button for OFF operation. 6. DOL starter & star delta starter operation by using PLC. 7. PLC interfaced with HMI& status read/command transfer operation. 8. Parameter reading of PLC interface with SCADA. 9. Alarm annunciation using PLC &SCADA. 10. Tank level control by using PLC &SCADA. 11. Temperature monitoring by using PLC &SCADA. 12. Reporting & trending in SCADA system. 		

Assignments:	
<ol style="list-style-type: none"> 1. Automation requirement in industries 2. Recent trends in automation 3. Basic concepts in Ladder diagrams 4. Basic programming for automation 5. A solar panels automatic tracking system based on PLC 6. Automated water supply control system using PLC 7. PID implementation of heating tank in industrial plant 8. PLC based SCADA for oil storage 9. Web based remote access laboratory using SCADA 10. Three layer PLC/SCADA system architecture in process automation 	
Text Books:	
3. John R. Hackworth, Frederick D., Hackworth Jr., “Programmable Logic Controllers Programming Methods and Applications”, PHI Publishers.	
4. John W. Webb, Ronald A. Reis, “Programmable Logic Controllers: Principles and Application”, PHI Learning, New Delhi, 5 th Edition.	
5. Ronald L. Krutz, “Securing SCADA System”, Wiley Publications.	
6. Wiley Boltan	
Reference Books:	
5. Batten G. L., “Programmable Controllers”, McGraw Hill Inc., Second Edition	
6. Gordan Clark, Deem Reynders, “Practical Modern SCADA Protocols”, ELSEVIER	
7. P. K. Srivstava, “Programmable Logic Controllers with Applications”, BPB Publications	
8. Krishna Kant, “Computer Based Industrial Control”, PHI	
9. Catalogues and user manuals PLC and SCADA	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Elective II: Signal and Systems

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS</u>
				<u>ALLOTTED:</u>
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks		
		Term Work: 25 Marks Oral:25Marks		01 Credit
Course Pre-Requisites:				
The Students should have				
1.	Mathematics			
2.	Physics			
3.	Fundamentals of Electrical Engineering			
Course Objectives:				
The course introduces fundamental concepts of signals,.				
Course Outcomes:				
1.	Understand and apply knowledge of various types of signals			
2.	Understand and apply knowledge of Fourier analysis to signals			
3.	Understand and apply knowledge of Laplace transforms in Analysis of CT systems .			
4.	Understand and apply fundamental concepts of DTFT			
5.	Understand and apply the Z transform analysis			
6.	Understand and apply the concept of Fourier and Laplace to real time applications			
UNIT - I	CLASSIFICATION OF SIGNALS AND SYSTEMS.			(06 Hours)
	Continuous time signals (CT signals) - Discrete time signals (DT signals) - Step, Ramp, Pulse, Impulse, Sinusoidal, Exponential, Classification of CT and DT signals - Periodic & A periodic signals, Deterministic & Random signals, Energy & Power signals - CT systems and DT systems- Classification of systems – Static & Dynamic, Linear & Nonlinear, Time-variant & Time-invariant, Causal & No causal, Stable & Unstable			
UNIT - II	ANALYSIS OF CONTINUOUS TIME SIGNALS			(06 Hours)
	Fourier series analysis-spectrum of Continuous Time (CT) signals- Fourier and Laplace Transforms in CT Signal Analysis - Properties.			
UNIT - III	LINEAR TIME INVARIANT- CONTINUOUS TIME SYSTEMS			(06 Hours)
	Differential Equation-Block diagram representation-impulse response, convolution integrals-Fourier and Laplace transforms in Analysis of CT systems .			
UNIT - IV	ANALYSIS OF DISCRETE TIME SIGNALS			(06 Hours)
	Baseband Sampling - DTFT – Properties of DTFT - Z Transform – Properties of Z Transform			
UNIT - V	LINEAR TIME INVARIANT-DISCRETE TIME SYSTEMS			(06 Hours)
	Difference Equations-Block diagram representation-Impulse response - Convolution sum- Discrete Fourier and Z Transform Analysis of			

	Recursive & Non-Recursive systems	
UNIT - VI	Real Life Application presentations	(06 Hours)
	Analysis of obstacle detection, Speech and hearing, applications of Fourier Transform, Neuro Electronics, Automation for Smart traffic controller, Image processing, CDMA, Speaker verification, Pattern recognition in forex rates, Use of signals in SETI, SAS in radio astronomy, SAS in economic analysis, SAS in meteorology, SAS in Fourier optics	
Term Work:		
1. Generation of Signals: continuous time and discrete time		
2. Convolution of Signals, Solution of Difference equations		
3. Fourier series representation of continuous time signals		
4. Fourier transform of continuous time signals.		
5. Discrete time Fourier analysis		
6. Introduction to SIMULINK and calculation of output of systems represented by block		
7. Sampling and reconstruction of continuous time signals		
Text Books:		
1) 'Signals and systems' by Rajiv Kapadia, Jaico Publishing		
2) 'Signals and systems' by Anand Kumar		
3) 'Linear Systems and signals' by B.P.Lathi		
4) Textbook on Signals and systems' by Harish Parthasarathy, I.K.International Publishing		
Reference Books:		
1. 'Signals and systems' by Allen Openheim and Wilsky, Prentice Hall Publication		
2. Schaum's outline series book on 'Signals and systems' by H.Hsu and R.Ranjan		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Assignments:

1. Solve the unsolved question from the books Unit wise.
2. Prepare report from NPTEL video lectures.
3. Prepare programming assignments from the syllabus topic.
4. Solve the University Question Papers Unit wise.
5. Group Discussions from syllabus topics from students and prepare report on the same.
6. Topics preparation from students on any topics and prepare PPT on the same.

Elective II: Introduction to JAVA and .NET

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Oral:25Marks	01Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Object Oriented Programming like C++ and Internet concepts	
Course Objectives:		
	To expose students to the programming in JAVA and .NET for basic level programming so that they can program static and dynamic web pages using JAVA and .NET platforms.	
Course Outcomes: After learning the subject students will be able to		
1.	Use basic JAVA programming using JDK	
2.	Construct JAVA programs and applications deployed on server with server components and communication	
3.	Develop JAVA platform applications with database connectivity for dynamic and static web pages	
4	Use basics of .NET platform programming using .NET technologies	
5	Construct web applications using .NET technologies involving server communication and front end	
6	Use .NET platform for building applications using web services	
UNIT - I	Introduction to JAVA	(06 Hours)
	Why Java, Java Virtual Machine (JVM), Features, Variables, Data Types, Operators, Control Statements, Object Oriented Concepts in Java, Libraries, Packages,	
UNIT – II	Server Programming Concepts in JAVA	(06 Hours)
	Java Development Kit (JDK), Exception Handling (try-catch, throws and finally), Java API, Compile and Runtime Environment, JAVA – J2EE, JAVA.awt - Applets, JAVA GUI Components, Java Scripting	
UNIT – III	Database and Application Programming Concepts in JAVA	(06 Hours)
	Java Beans, Web Servers, Servelets, HTTP Request and Response, JDBC, Accessing Database from JSP Page, Exploring JAVA Programs and Applications	
UNIT – IV	Introduction to .NET	(06 Hours)
	Introduction to .NET Framework, Evolution of .NET technologies - CTS, CLS, CLR, MSIL, Introduction to Base Class Library, Introduction to VB.NET - Working with Visual Studio IDÉE – IDE Components, VB.NET Fundamentals – Variables, Data Types, Control Flow Statements, Subroutines, Functions, Object Oriented Concepts in .NET	

UNIT - V	Building Applications with .NET	(06 Hours)
	.NET Class Library, Input and Output, Windows Forms, Building Forms, Responding to User Inputs/Events, Menu Design, Information Presentation, Dialog Control, Working with XML, GUI's	
UNIT - VI	Advanced .NET and Applications	(06 Hours)
	ADO.NET Architecture, Web Programming, Web Services, Database Controls, ADO .NET Programming, Exploring .NET Applications and Programs, Comparison Between J2EE and .NET	
Term Work :		
The term work / assignments shall consist of record of topics from the list given below.		
<ol style="list-style-type: none"> 1. Development of static pages using HTML of an online Departmental Store having home page, login page and items catalog page. 2. Add validations to above static pages of home page, login and items page using Java Script. 3. Creation of a XML document of 20 students. Add their roll numbers, marks obtained in 5 subjects, total and percentage and save this XML document at the server. Write a program that takes students' roll number as an input and returns the students' marks, total and percentage by taking the students' information from the XML document on server. 4. Creation of a JavaBeans which gives converted value of Temperature (in degree Celsius) into equivalent Fahrenheit. 5. Do the assignment using JSP by converting the static web pages of assignment 2 into dynamic web pages. Create database with User Information and Item information. The Item catalog should be dynamically loaded from the database. 6. Implementation of "Hello World!" program using JSP Struts Framework. 7. Repeat all / some of the above experiments using VB.NET.

4. H.M. Deitel and P.J. Deitel, "Java™ How to Program", Prentice-Hall of India, Seventh edition		

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT – III
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI
<u>Assignments:</u>	
<ol style="list-style-type: none">1. Solve the unsolved question from the books Unit wise.2. Prepare report from NPTEL video lectures.3. Prepare programming assignments from the syllabus topic.4. Industrial visit to software company for the learning the applications of JAVA and .NET.5. Solve the University Question Papers Unit wise.6. Group Discussions from syllabus topics from students and prepare report on the same.	

Elective II: Special Purpose Machines

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks Oral:25Marks	01Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Electrical machines (AC and DC)	
Course Objectives:		
	To expose students to construction, principle of operation, performance and applications of special electrical machines as an extension to the study of basic electrical machines.	
Course Outcomes: After learning the subject students will be able to		
1.	Use the MMF and EMF equations for rotating machines	
2.	Analyze, perform basic experiments and can apply use of BLDC and PMSM motors for different applications	
3.	Analyze, perform basic experiments and can apply use of SRM and SYNREL motors for different applications	
4	Analyze, perform basic experiments and can apply use of Linear Induction Motors and Traction Motors for different applications	
5	Analyze, perform basic experiments and can apply use of Transverse Flux - Axial Flux machines and PMSG and DFIG Generators for different applications	
6	Analyze, perform basic experiments and can apply use of small control motors like servo motors, stepper motors, universal motors and PCB motors for different applications	
UNIT - I	Generalized Machine Theory	(06 Hours)
	Energy in singly excited magnetic field systems, Magnetic force and torque from energy, Magnetic force and torque from co-energy, Forces and torques in systems with permanent magnets, Magnetic field production of EMFs in rotating machines	
UNIT – II	Permanent Magnet Special Motors	(06 Hours)
	Types, Construction, Principle of Operation, Characteristics, Drives / Control and Applications of – 1. Brushless DC Motor (BLDC) 2. PM Synchronous Motor (PMSM)	
UNIT – III	Reluctance Type Special Motor	(06 Hours)
	Types, Construction, Principle of operation, Characteristics, Drives / Control and Applications of – Reluctance Motor – includes 1. Switched Reluctance Motors (SRM) 2. Synchronous Reluctance (SYNREL) Motors	

UNIT – IV	Linear and Traction Motors	(06 Hours)
	Types, Construction, Principle of Operation, Characteristics, Drives / Control and Applications of – 1. Linear Induction Motor (LIM) 2. Traction Motors	
UNIT - V	Transverse Flux & Axial Flux Machines and Special Generators	(06 Hours)
	Types, Construction, Principle of Operation, Characteristics, Drives / Control and Applications of – 1. Axial Flux Permanent Magnet (PM) Synchronous Generators 2. Doubly Fed Induction Generators (DFIG) 3. Transverse Flux Machines	
UNIT - VI	Control of Small Special Motors	(06 Hours)
	Types, Construction, Principle of Operation, Characteristics, Drives / Control and Applications of – 1. Stepper / Stepping Motors 2. Servo Motors 3. Printed Circuit Board (PCB) Motors 4. Universal Motors	

Term Work:

The term work / assignments shall consist of record of topics from the list given below.

1. Laboratory demonstration of PMSM motor and drive.
2. Laboratory demonstration of BLDC Drive.
3. Experimental analysis of Reluctance Motor Drive.
4. Laboratory demonstration of Stepper Motor Drive.
5. Laboratory demonstration of Linear Induction Motor.
6. Laboratory demonstration of AC / DC Servo motor.
7. Laboratory demonstration of Induction Generator.

Text Books:

7. P. S. Bimbhra “Generalized Theory of Electrical Machines” Khanna Publishers
8. K. Venkatratnam, ‘Special Electrical Machines’, University Press
9. A. E. Fitzgerald, Charles Kingsley, Stephen Umans, ‘Electric Machinery’, Tata McGraw Hill Publication
10. V. V. Athani, ‘Stepper Motors: Fundamentals, Applications and Design’, New Age International
11. T. J. E. Miller, ‘Brushless Permanent Magnet and Reluctance Motor Drives’, Clarendon Press, Oxford Publication
12. Ion Boldea, ‘Linear Electric Machines, Drives and Maglevs’, CRC Press

Reference Books:

5. M. G. Say “Alternating current Machines”, Pitman & Sons
6. T. Kenjo, ‘Stepping Motors and Their Microprocessor Controls’, Clarendon Press London
7. P. C. Sen, “Principles of Electrical Machines and Power Electronics”, John Willey & Sons

--	--

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Assignments:

1. Solve the unsolved question from the books Unit wise.
2. Prepare report from NPTEL video lectures.
3. Solve the University Question Papers Unit wise.
4. Group Discussions from syllabus topics from students and prepare report on the same.
5. Industrial visit to electrical machine manufacturing company and prepare report on the same.
6. Market survey for various electrical special machines and preparing report on the same.

Elective II: Illumination Engineering

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS</u>
				<u>ALLOTTED:</u>
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits
Practical: 02Hours / Week		Continuous Assessment: 40 Marks		
		Term Work: 25 Marks Oral:25Marks		01Credit
Course Pre-requisites:				
The Students should have knowledge of				
1. Fundamentals of Electrical Engineering & Color acknowledgement.				
Course Objectives:				
1. Basics of Illumination Engineering.				
2. Illumination Design				
3. Interior & Exterior Illumination				
Course Outcomes:				
1. To study working of various light sources.				
2. To design illumination systems as per illumination laws.				
3. To make students perform interior lighting design				
4 To make students perform Exterior lighting design				
5 To study various lighting systems such as solar, cold lighting				
6 To make students able to apply lighting design in green buildings.				
UNIT 1	Basic physics of Light			(06 Hours)
	Nature And Properties Of Light. Radiation, color, eye & vision; different entities of illuminating systems; Light sources: daylight, incandescent, electric discharge, fluorescent, arc lamps and lasers;			
UNIT 2	Illumination design			(06 Hours)
	Luminaries, wiring, switching & control circuits; Laws of illumination; illumination from point, line and surface sources. Photometry and spectrophotometry; photocells. Environment and glare. General illumination design.			
UNIT 3	Interior lighting			(06 Hours)
	Industrial, residential, office departmental stores, indoor stadium, theater and hospitals. Lighting For <i>Hazardous Areas</i>			
UNIT 4	Exterior lighting			(06 Hours)
	Flood, street, aviation and transport lighting, lighting for displays and signaling- neon signs, LED-LCD displays beacons and lighting for surveillance. <i>Sports lighting.</i>			

UNIT 5	Other lighting designs	(06 Hours)
	1) Solar Lighting 2) Day-lighting for building 3) Cold Lighting 4) Energy efficient lighting.	
UNIT 6	Lighting in sustainable buildings	(06 Hours)
	1) Reduction methods of Lighting pollution 2) Significance of Lighting in Green building design. 3) Comparison of conventional and new energy saving lighting appliances. 4) LEED certification	
TermWork:		
1. Study of commercial catalog for LEDs, CFLs and Tubes for understanding lumens output and wattages of each lamps.		
2. Study of Design and assemble various Illuminating lamps.		
3. Study of Design of illumination for Hotel.		
4. Study of Design of illumination for residential sector		
5. Study of Design of illumination for office departmental stores.		
6. Study of Design of illumination for Hospital.		
7. Study of Design of Solar Lighting for College.		
8. Study of Design of Energy efficient lighting		
Text Books:		
National Lighting Code- Published by Govt of India		
Reference Books:		
1) Lamps and Lighting – Edited by J.R.Coaton and A.M.Marsden, 4th Edition		
2) IES Lighting Handbook – IES North America		
3) Interior Lighting – Boer, Fischer, Pub – Philips Technical Library		
4) Website: http://lighting.sustainableources.com/		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Assignments:-

1. Define and explain Radiation, color, eye & vision
2. Discuss Different entities of illuminating systems
3. Write a short note on General illumination design
4. State and explain Laws of illumination
5. Design illumination for Industrial, residential, office departmental stores,
6. Design illumination for indoor stadium, theater and hospitals.
7. Design illumination for Flood, street, aviation and transport lighting
8. Design illumination for lighting for displays

9. Write in brief about Solar Lighting
10. What is Significance of Lighting in Green building design

B.Tech.(Biomedical) Sem-III

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Biomedical) Sem:- III

SUBJECT: - Engineering Mathematics-III

Lecture: 3 hours/week

Tutorial: 1 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

Course prerequisites:

Students should have basic knowledge of:

- Differential calculus
- Integral calculus
- Complex numbers
- Vector algebra

Course objective:

To develop ability to use the mathematical techniques, skills, and tools necessary for engineering practice.

Course Outcomes: On successful completion of this course, students will be able to

1. Form mathematical modeling of systems using differential equations and ability to solve linear differential equations with constant coefficient.
2. Apply basics of analytic functions and the basics in complex integration which is used to evaluate complicated real integrals.
3. Apply theorems to compute the Laplace transform, inverse Laplace transforms.
4. Solve difference equation by Z-transform.
5. Calculate the gradients and directional derivatives of functions of several variables.
6. Use Green's theorem to evaluate line integrals along simple closed contours on the plane.

Contents:

Unit-I

Linear Differential Equations (LDE) (08Hours)

Solution of nth order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy's & Legendre's DE, Solution of Simultaneous & Symmetric Simultaneous DE, Modeling of Electrical Circuits.

Unit-II

Complex Variables (08Hours)

Functions of Complex Variables, Analytic Functions, C-R Equations, Conformal Mapping, Bilinear Transformation, Cauchy's Theorem, Cauchy's Integral Formula, Laurent's Series, Residue Theorem

Unit-III

Transforms (08Hours)

Fourier Transform (FT): Complex Exponential Form of Fourier Series, Fourier Integral Theorem, Sine & Cosine Integrals, Fourier Transform, Fourier Sine and Cosine Transform and their Inverses. Introductory Z-Transform (ZT): Definition, Standard Properties, ZT of Standard Sequences and their Inverses. Solution of Simple Difference Equations.

Unit-IV

Laplace Transform (LT) (08Hours)

Definition of LT, Inverse LT. Properties & theorems. LT of standard functions. LT of some special functions viz., Periodic, Unit Step, Unit Impulse, ramp, jump, . Problems on finding LT & inverse LT. Applications of LT and Inverse LT for solving ordinary differential equations.

Unit -V

Vector Differential Calculus (08Hours)

Physical Interpretation of Vector Differentiation, Vector Differential Operator, Gradient, Divergence and Curl, Directional Derivative, Solenoidal, Irrotational and Conservative Fields, Scalar Potential, Vector Identities.

Unit-VI

Vector Integral Calculus

(08Hours)

Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence Theorem, Stoke's Theorem, Applications to Problems in Electro-Magnetic Fields.

Assignments:

1. Solve the problem based on Linear Differential Equations
2. Solve the problem based on Complex Variables
3. Solve the problem based on Fourier and Z -Transforms
4. Solve the problem based on Laplace Transform
5. Solve the problem based on Vector Differential Calculus
6. Solve the problem based on Vector Integral Calculus

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. Advanced Engineering Mathematics by Peter V. O'Neil (Cengage Learning).
2. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.).

Reference Books:

1. Engineering Mathematics by B.V. Raman (Tata McGraw-Hill).
2. Advanced Engineering Mathematics, 2e, by M. D. Greenberg (Pearson Education).
3. Advanced Engineering Mathematics, Wylie C.R. & Barrett L.C. (McGraw-Hill, Inc.)
4. Higher Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi).
5. Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar (Pune Vidyarthi Griha Prakashan, Pune).

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Biomedical) Sem:- III

SUBJECT: - Analog Electronics

Lecture: 4 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Practical.: 50 marks

Course prerequisites:

- Knowledge of Electronic Components
- Fundamentals of P-N diode.
- Knowledge of BJT and its configuration

Course objective:

1. To make student understand working of bipolar junction transistor and field effect transistor with different biasing techniques
2. To make student understand a practical approach of design and analysis of waveshaping circuits using diode and multivibrator using transistors
3. To make student understand working of FET and MOSFET and its applications
4. To make student understand working of optoelectronic devices and its applications.
5. To make student understand the fabrication process of PCB

Course Outcomes: On successful completion of this course, students will be able to

1. Demonstrate knowledge of working and applications of diode.
2. Demonstrate knowledge of working of BJT with different biasing techniques.
3. Analyze applications of BJT as an amplifier and multivibrator.
4. Explain working of FET and MOSFET and its applications.
5. Demonstrate knowledge of working of optoelectronic devices.
6. Design, built and test any small electronic circuit on PCB.

Contents:

Unit-I

Transistor Biasing (08Hours)

Need of biasing, DC load line analysis, operating point, Thermal runaway. Requirements of a biasing circuit, Different biasing circuits: fixed bias, collector to base bias & voltage divider bias. Stability factor, General expression for stability factor, stability factor for all biasing circuits, Design of biasing circuits, Transistor as an amplifier.

Unit-II

BJT Amplifiers (08Hours)

Two port device and Hybrid model, transistor Hybrid model, h- parameters, Simplified CE Hybrid Model, Analysis of amplifiers using Approximate Model(CE, CC, CB), BJT Single Stage Amplifiers, Small Signal Analysis of Single Stage BJT Amplifiers, Distortion in Amplifiers.

Unit-III

Field Effect Transistor (FET) (08Hours)

Types of FET viz. JFET, MOSFET, JFET -construction, VI characteristics, transfer characteristics, Characteristics Parameters of JFET, FET Biasing(Self Bias, Fixed Bias, Current Source Bias), JFET amplifiers-CS, CD and CG amplifiers, Application of FET.

Unit-IV

MOSFETs (08Hours)

Types of MOSFET viz. D-MOSFET, E-MOSFET, n-MOS, p-MOS and CMOS devices, DMOSFET and EMOSFET characteristics and parameters, non-ideal V-I characteristics viz. finite output resistance, body effect, subthreshold conduction, breakdown effects and temperature effects, MOSFET as VLSI device

Unit -V

Wave shaping and Multivibrator Circuits (08Hours)

Diode as clipper- series and parallel forms of clipper circuits, biased clipper, their operations, Diode as a clamper, voltage multiplier circuits-voltage doubler, tripler and quadrupler configuration, Multivibrator circuits-astable and monostable multivibrator circuit using BJT.

Unit-VI

Optoelectronic devices and PCB design

(08Hours)

Construction, V-I characteristics and applications of LED, LDR, Photodiode, Phototransistor, Photoconductive cell, Photovoltaic cell, optocoupler.

PCB: types of PCB, PCB design rules, layout design, artwork design, fabrication process of single sided PCB, different copper clad laminates, composition of solder metal.

List of Experiments:

1. Biasing techniques of BJT- to find stability factor of self bias, collector to base bias, fixed bias
2. To plot frequency response of single stage CE amplifier and find its bandwidth
3. To plot frequency response of single stage FET amplifier (CS/CD configuration) and find its bandwidth.
4. To study different types of Clipper circuits
5. To study different types Clamper circuits
6. To plot transfer characteristics of Optocoupler
7. To plot V-I and optical characteristics of LED and LDR
8. To plot V-I and optical characteristics of Photodiode and phototransistor

Assignments:

1. Simulation of BJT amplifier using Multisim.
2. Define h-parameters for CE, CB, CC configuration and describe how these parameters are determined from BJT characteristics.
3. Describe fabrication process of MOSFET and any two real time applications of MOSFETs
4. Real time applications of optoelectronics devices such as LED, Optoisolator
5. To design, built and test given electronic circuits (Group activity)
6. Obtain industry exposure based on product design industry and prepare report for the same.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

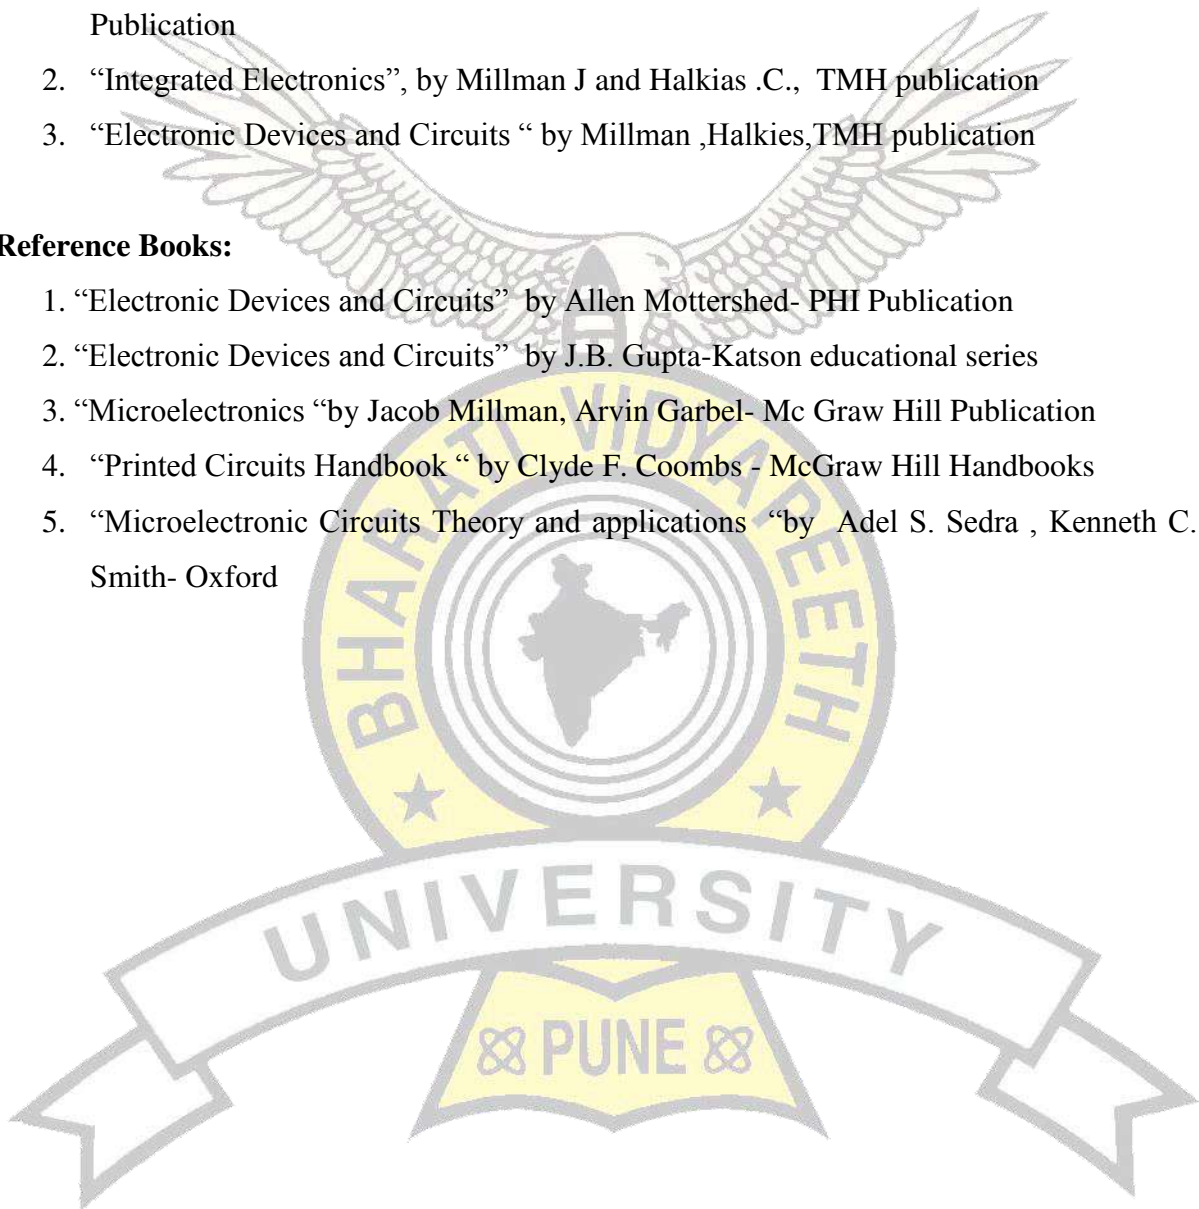

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. “Electronic Devices and Circuits” by S. salivahanan,Suresh kumar- Mc Graw Hill Publication
2. “Integrated Electronics”, by Millman J and Halkias .C., TMH publication
3. “Electronic Devices and Circuits “ by Millman ,Halkies,TMH publication

Reference Books:

1. “Electronic Devices and Circuits” by Allen Mottershed- PHI Publication
2. “Electronic Devices and Circuits” by J.B. Gupta-Katson educational series
3. “Microelectronics “by Jacob Millman, Arvin Garbel- Mc Graw Hill Publication
4. “Printed Circuits Handbook “ by Clyde F. Coombs - McGraw Hill Handbooks
5. “Microelectronic Circuits Theory and applications “by Adel S. Sedra , Kenneth C. Smith- Oxford

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Biomedical) Sem:- III

SUBJECT: - Signals and Systems

Lecture: 3 Hrs/week

Tutorial: 01 Hr/Week

Theory: 60 marks

Unit Test: 20 Marks

Attendance: 10Marks

Assignments: 10Marks

TW & Oral: 50 Marks

Course prerequisites:

Before proceeding with this tutorial, you must have a basic understanding of differential and integral calculus, limits and adequate knowledge of mathematics.

Course objective:

The course aims to develop good understanding about signals, systems and their classification and analysis tools in the time and frequency domain. It also provides knowledge of correlation function and sampling.

Course Outcomes: On successful completion of this course, students will be able to

1. Represent & classify signals, Systems & identify LTI systems
2. Analyze the systems in time domain using convolution.
3. Apply Fourier transform, Laplace transform and Z-Transform for analysis of LTI systems.
4. Conceptualize the effects of sampling on signal and describe the auto correlation and cross correlation between signals.

Contents:

Unit-I

Introduction to signals

(06 Hours)

Definition of signals, classification of signals: continuous time signals & discrete time signals, even & odd signals, periodic & non-periodic, deterministic & non-deterministic,

energy & power, elementary signals: unit impulse, unit step, unit ramp, exponential & sinusoidal, basic operations on signals.

Unit-II

Classification of Discrete time systems (06 Hours)

Definition, Classification of System, System Interconnections, state space analysis, Linear & non-linear, Time-Invariant & Time variant, causal & non-causal, static & dynamic, stable & unstable systems, stability & impulse response of systems to standard signals.

LTI system Analysis: Introduction to LTI systems. Block Diagram, Linear Convolution-Convolution Integral, Impulse response, Methods of Convolution. Properties of convolution

Unit-III

Continuous Time system Analysis: (06 Hours)

Response of LTI Systems to exponential signals, periodic signals. Fourier series, Fourier Transforms, properties, applications of Fourier series & Fourier transforms to the system analysis.

Unit-IV

System Analysis in Laplace Transform (06 Hours)

Laplace Transform: Definition and its properties, ROC and pole zero concept. Applications of Laplace transforms to the LTI system analysis. Inversion using duality, numerical based on properties.

Unit-V

System Analysis in Z-Transform (06 Hours)

Z-Transform: Definition and its properties, Region of Convergence for the Z-Transform, the Inverse z-Transform, Applications of Z-Transform to the LTI system analysis

Unit VI:

Correlation and Spectral Density (06 Hours)

Definition of Correlation and Spectral Density, correlogram, analogy between correlation, covariance and convolution, conceptual basis, auto-correlation, cross correlation, energy/power spectral density, properties of correlation and spectral density, inter relation between correlation and spectral density, Sampling theorem & its proof, aliasing, reconstruction of sampled signals, interpolation.

Assignments:

Perform the following assignments using MATLAB (any three) and Virtual Lab (any three)

1. Generation of Signals
2. Linear convolution of any two signals
3. Fourier transform of given signal
4. Laplace Transform of given signal
5. Z-transform of given signal
6. Sampling Theorem & aliasing effect.

Content Delivery Methods: Chalk & talk, Power point presentation, Quiz

Assessment Methods:

1. Continuous Assessment (Attendance, Assignments/Tutorials, Unit Test)
2. End term Examination

Text Books:

1. Alan V Oppenheim, Alan S, Willsky and A Hamid Nawab, "Signals and Systems" Pearson Education Asia / PHI, 2nd edition, 1997. Indian Reprint 2002
2. Simon Haykins and Barry Van Veen, Signals and Systems John Wiley & sons , Inc,2004.

Reference Books:

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

**Class: B.Tech (Biomedical) SEM: - III
SUBJECT: - Circuit Theory**

Lecture: 3 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Practical: 50 marks

Course prerequisites:

- Knowledge of KCL and KVL Laws from Basic Electrical Engineering
- Knowledge of Linear Differential Equations and Systems of Linear Equations from Engineering Mathematics - I and II.

Course objective:

The objective of the course is to enable the student to perform any of the network analysis task required in the subsequent courses. The student is exposed to some concepts in graph theory for providing a good foundation for the methods of Mesh Analysis and Node Analysis. The transient analysis using Laplace Transforms is also included. The series and parallel resonance circuits which occur quite frequently in electronics are analyzed. The topic of constant K filter is included as it finds many applications in electronic design. The two port network parameters which are of fundamental importance in many courses on electronic devices are included in the last unit.

Course Outcomes: On successful completion of this course, students will be able to:

1. To find voltages and currents in a given network using Mesh Analysis or Node Analysis or Network Theorems.
2. To find voltages and currents in a given network by formulating network equilibrium equations from graph theory.
3. To find the transient response in a given network consisting of series or a parallel combination of resistance, capacitance and inductance.

4. To find all the parameters relating to a given series or a parallel resonant circuit.
5. To design a constant K prototype low pass, high pass, band pass or a band stop passive filter
6. To find any of the two port parameters of a given two port network.

Contents:

Unit I

Fundamentals Of Network

(6 Hours)

KCL, KVL, Source Transformation, Source Shifting, Mesh Analysis, Node Analysis, Super Mesh, Super Node, Mesh and Node Analysis in Sinusoidal Steady State
Network Theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem, Reciprocity Theorem.

Unit II

Application Of Graph Theory

(6 Hours)

Network Graph, tree, cotree & loops, Incidence Matrix, tie set matrix, cut-set matrix, Formulation of equilibrium equations in matrix form, Solution of resistive networks, Principle of Duality

Unit III

Transient Analysis

(6 Hours)

Initial Conditions in networks. A procedure for evaluating initial conditions. Solution of step response in RC, RL, RLC circuits using classical method, Analogous equivalence of mechanical system.

Unit IV

Resonance

(6 Hours)

Resonant condition, Definition of Quality factor. Finding resonant frequency, impedance at resonance, voltage and current variation with frequency, bandwidth, selectivity, magnification factor for series and parallel resonant circuits. General case of resistance present in both branches of parallel resonant circuit. Comparison of series and parallel resonant circuits, Applications of resonant circuits

Unit V

Passive Filters

(6 Hours)

Filter Fundamentals, Image impedance, Characteristic impedance, Propagation constant. Constant K prototype for LPF, HPF, BPF and BSF, m-derived LPF, HPF, Terminating half sections, Composite filters

Unit VI

Two Port Networks

(6 Hours)

Network Functions, Two port network parameters, Z, Y, H, ABCD and other parameters, Relationships between two-port network parameters, Interconnections of two-ports, Reciprocity and Symmetry conditions

List of Experiments:

1. To verify Thevenin's and Norton's Theorem.
2. To verify Superposition and Reciprocity Theorem.
3. To find resonant frequencies of series and parallel circuit.
4. To plot frequency response of frequency selective network (Twin T or Wein Bridge).
5. To plot frequency response & cut-off frequency of constant-k LPF and HPF.
6. To plot frequency response & cut-off frequency of constant-k BPF and BSF.
7. To find Z and Y parameters of given two port network.
8. To find H and ABCD parameters of given two port network.

Assignments:

1. Analyze the circuit using mesh and node analysis.
2. Apply graph theory for circuit.
3. Describe any two real time applications of passive filters.
4. Simulation of series and parallel resonance circuit using Multisim.
5. Transient response of RC, RL and RLC circuit using Multisim.
6. Obtain industry exposure based on product design industry and prepare report for the same.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

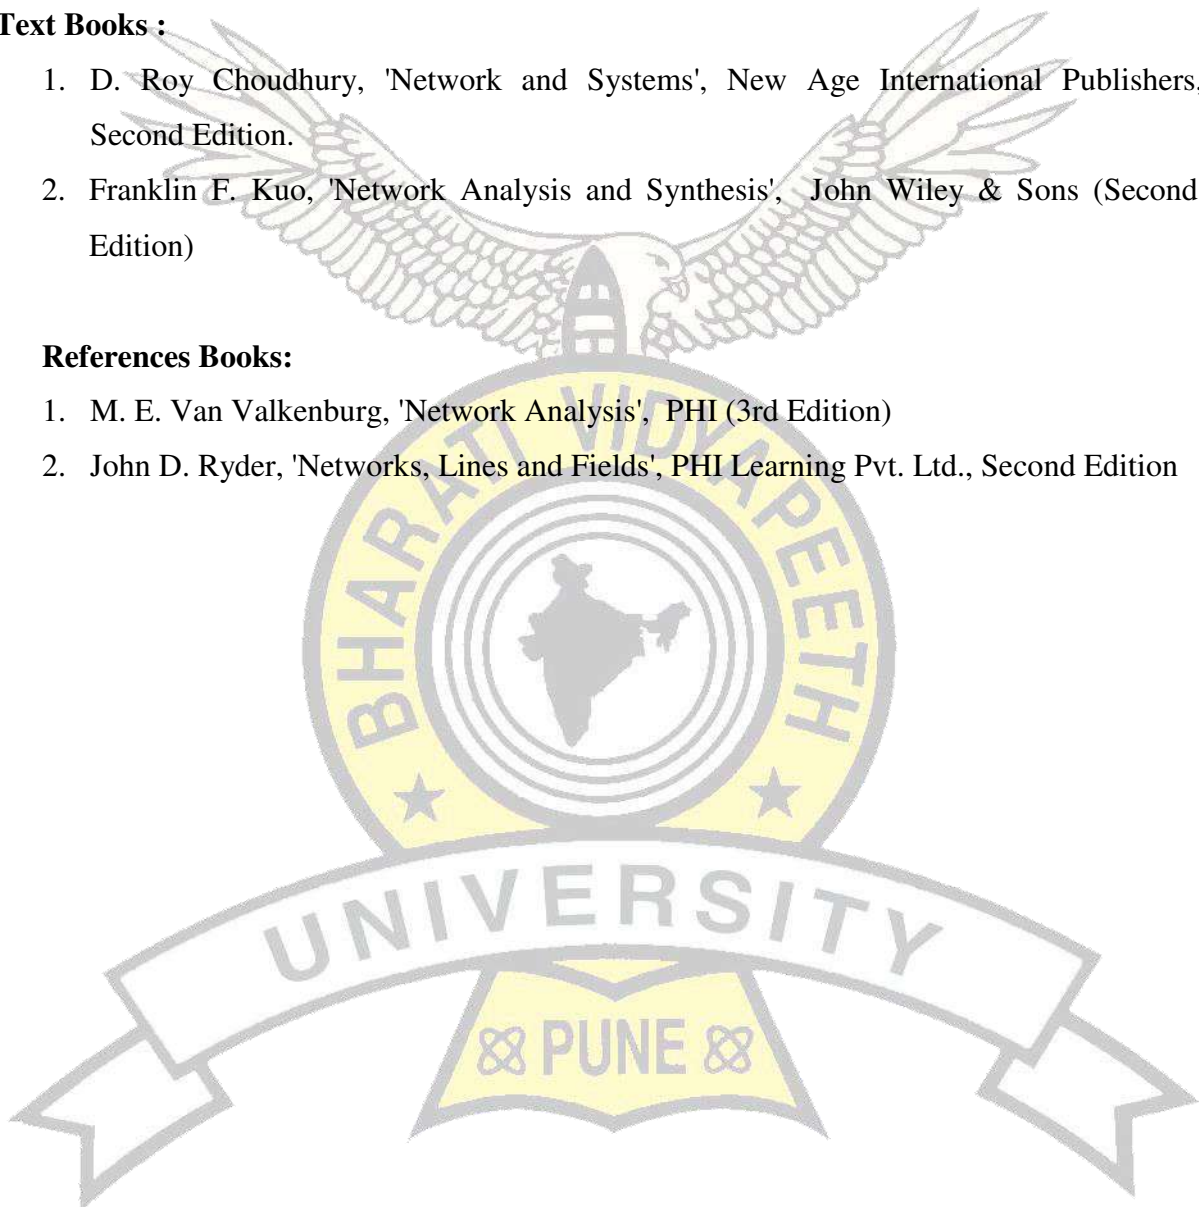

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books :

1. D. Roy Choudhury, 'Network and Systems', New Age International Publishers, Second Edition.
2. Franklin F. Kuo, 'Network Analysis and Synthesis', John Wiley & Sons (Second Edition)

References Books:

1. M. E. Van Valkenburg, 'Network Analysis', PHI (3rd Edition)
2. John D. Ryder, 'Networks, Lines and Fields', PHI Learning Pvt. Ltd., Second Edition

Bharati Vidyapeeth Deemed University,
College of Engineering, Pune

Class: B.Tech (Biomedical) Sem:- III

SUBJECT: - Human Biology

Lecture: 3 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Oral: 50 marks

Course prerequisites:

- Basic knowledge of Human body parts.

Course objective:

This course provides in depth knowledge on Anatomy of Physiology of Different systems exist in Human body.

Course Outcomes: On successful completion of this course, students will be able to

1. Classify types of Bones
2. Demonstrate anatomy of various systems such as cardiovascular Respiratory, Gastrointestinal & Excretory System, various special senses & Central nervous system.
3. Demonstrate Physiology of various systems such as cardiovascular Respiratory, Gastrointestinal, Excretory System & various special senses.

Contents:

Unit-I

General Anatomy

(06 hours)

Anatomy of Cell, Tissues & bones, Types of bones of Upper and Lower extremity.

Unit-II

Systemic Anatomy

(06 hours)

Structure & anatomy of Cardiovascular system, Respiratory system, Gastrointestinal system, Excretory system & reproductive system.

Unit-III

Anatomy of Special Senses & Central nervous system (06 hours)

Anatomy of special senses: Nose, Eye, Ear, Tongue, Skin & CNS: Cerebrum, Cerebellum, Brain Stem & Spinal Cord.

Unit-IV

Physiology of Cardio-respiratory System (06 hours)

Blood: composition, blood groups, blood vessels, blood pressure, blood transfusion, blood clotting, parts of heart, conduction system, ECG, Physiology of respiration

Unit-V

Physiology of Gastrointestinal & Excretory System (06 hours)

Blood, Blood Groups, Blood Transfusion, Blood Pressure, Blood Clotting Physiology of Gastrointestinal system, Excretory system: Physiology of Nephron, urine formation, Functions of Kidney, Physiology of Endocrine System

Unit-VI

Physiology of special Senses (06 hours)

Physiology of Nose, Eye, Ear, Tongue & Skin.

Content Delivery Methods: Chalk & talk, Charts & Models

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books/ References Books:

1. Arthur C. Guyton "Medical Physiology" Prismbook.
2. B.D. Chaurasia "General Anatomy", Third edition, CBS publication.
3. Tortora and Graabowski, "Principles of Anatomy and Physiology", Haper colin Publication

B.Tech.(Biomedical) Sem-IV

Bharati Vidyapeeth Deemed University,
College of Engineering, Pune

Class: B.Tech (Biomedical) Sem:- IV

SUBJECT: - Analog Integrated Circuits

Lecture: 3 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Oral: 50 marks

Course prerequisites:

- Knowledge of KCL and KVL Law
- Basic knowledge of Op-Amp and its configurations

Course objective:

This course provides in depth knowledge on the Op-Amp. Also it introduces the design of PLL, Waveform generators, Timer IC's and Converters.

Course Outcomes: On successful completion of this course, students will be able to

1. Design linear and nonlinear applications of Op-Amp.
2. Design of first and second order active filters.
3. Analyze and design Waveform Generators.
4. Demonstrate knowledge of Phase Locked Loop IC 565 and Converters.
5. Design of multivibrators using Timer IC 555

Contents:

Unit-I

Fundamentals of Operational Amplifier

(06 hours)

Block diagram representation of a typical op-amp, Schematic symbol for op-amp, Definition of integrated circuits, Types of Integrated Circuits, Manufacturers, Designation for IC, IC package types, PIN identification & temp ranges, Ordering information, Characteristics of an op-amp, Internal & external offset voltage compensation, Frequency Response of an op-amp.

Unit-II

Operational Amplifier – Linear circuits

(06 hours)

Inverting amplifier, Non-inverting amplifier, Voltage Follower, Adder, Subtractor, Scaling averaging amplifier, Integrator, Differentiator, Instrumentation amplifier using 1, 2 and 3 op-amps, Instrumentation amplifier using transducer bridge, Peaking amplifier

Unit-III

Operational Amplifier - Non-linear circuits

(06 hours)

Precision half wave rectifier & full wave rectifier, comparator, Schmitt trigger, window detector, log-antilog amplifier and its temperature compensation techniques, log ratio, sample and hold circuit.

Unit-IV

Active filters and waveform generators

(06 hours)

First and second order low pass Butterworth filters, first and second order high pass Butterworth filter, Band pass filter, Band reject filter, All-pass filter, notch filter, Square wave, Triangular wave, Sawtooth wave generator and study of function generator or IC 8038

Unit-V

Special function IC's

(06 hours)

IC 555- as Monostable and Astable Multivibrators and its applications.

IC 565- operating principle of Phase Locked Loop IC 565, Applications like Frequency multiplier, FSK and FM detector

Unit-VI

Interfacing circuits

(06 hours)

V to I & I to V converter, D to A converter- Binary weighted resistors and R & 2R resistors, A to D Converter- Counter-ramp type, Successive approximation and Dual Slope.

List of Experiments:

1. To design and build Integrator and draw frequency response
2. To design and build Differentiator and draw frequency response
3. To design and build precision rectifier

4. To design and build schmitt trigger and find threshold levels
5. To design and build first order Butterworth low pass filter
6. To design and build first order Butterworth high pass filter
7. To design and build triangular waveform generator using IC 741
8. To design and build Function generator using IC 8038
9. To design and build Astable multivibrator using timer IC 555.

Assignments:

1. Find out any three ICs of op-amp other than IC 741 and compare the characteristics with IC 741.
2. List out any two linear applications of op-amp which are not specified in syllabus and explain the working along with circuit diagrams.
3. List out any two non-linear applications of op-amp which are not specified in syllabus and explain the working along with circuit diagrams.
4. Design sinusoidal generators using op-amp for a given frequency.
5. Real time applications of IC555/ IC565.
6. Obtain industry exposure based on product design and prepare report for the same.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. Ramakant A.Gayakwad, OP-AMP and Linear ICs, Prentice Hall of India, 4th Edition, 2010.
2. K. R. Botkar, Integrated Circuits, khanna Publishers, 10th edition, 2010

References Books:

1. David A. Bell, "Operational Amplifiers and Linear ICs", Oxford publication, 3rd edition, 2011
2. Sergio Franco, "Design with Operational Amplifiers and Analog Integrated Circuits", Tata McGraw Hill, 3rd edition, 2008
3. D.Roy Choudhry, Shail Jain, Linear Integrated Circuits, New Age International Pvt. Ltd., 4th edition, 2010.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Biomedical) Sem:- IV

SUBJECT: - Electronic Circuits and applications

Lecture: 4 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Practical.: 50 marks

Course prerequisites:

- Knowledge of linear circuit theory
- Basic concept of BJT

Course objective:

1. To make student understand analysis of multistage transistor amplifier.
2. To make student understand a practical approach of design and analysis of feedback amplifiers ,power amplifiers and oscillators
3. To make student understand analysis and design of voltage regulators.
4. To make student understand the behavior of high frequency BJT amplifiers

Course Outcomes: On successful completion of this course, students will be able to

1. Analyze multistage amplifier.
2. Analyze and design feedback amplifier and power amplifier and oscillators
3. Analyze and design voltage regulators.
4. Characterize behavior of high frequency BJT amplifiers.

Contents:

Unit-I

Multistage amplifiers

(08hours)

Need of Multistage amplifiers, Parameter evaluation such as R_i , R_o , A_v , A_i & Bandwidth for general multi stage amplifier, Analysis & design at low frequency & mid frequency of direct

coupled, RC coupled, transformer coupled (Two stage) amplifier, Darlington amplifier, cascode amplifier

Unit-II

Feedback amplifiers (08 hours)

Concept of feedback, classification of amplifiers, Negative feedback topologies with their block diagram representation, Effect of negative feedback on Input impedance, Output impedance, Gain and Bandwidth with derivation, method of analysis of feedback amplifier, analysis of all feedback topologies.

Unit-III

Power amplifiers (08 hours)

classification of power amplifiers - Class A, Class B, Class C, and Class AB. Operation of - Class A with resistive load; Transformer coupled class A Amplifier; Class B Push – pull amplifier ; Class B Complementary symmetry amplifier. Efficiency analysis for Class A transformer coupled amplifier and Class B push – pull amplifier, cross over distortion in power amplifiers, harmonic analysis

Unit-IV

Oscillators (08 hours)

Positive feedback, Barkhausen criterion, Classification of oscillators, derivation and analysis of RC oscillators, Wien bridge Oscillators, LC Oscillators for frequency of oscillation, Tuned collector oscillator, Piezo-electric effect in crystals and Crystal Oscillator

Unit- V

Regulators (08 hours)

Block schematic of linear regulators, Performance parameters – Load and Line regulations, Ripple rejection, Output resistance Emitter follower regulator, Transistor series regulator, shunt regulator Study and design of regulators using IC's :78XX,79XX,723,LM317, Method of boosting output current using external series pass transistor. Protection circuits – Reverse polarity protection, over circuit, fold back current limiting, over voltage protection.

Unit-VI

High frequency amplifiers

(08hours)

High frequency T model. Common base short circuit current frequency response, alpha cut-off frequency, CE short circuit current frequency response, high frequency hybrid π CE model, Amplifier response taking into account source and load resistances.

List of Experiments:

1. Study of CE two-stage amplifier with capacitive coupling
2. Study of Voltage series and current series feedback amplifiers
3. Study of Voltage shunt and current shunt feedback amplifiers
4. Study of Class B/AB push – pull/ Complementary Symmetry power amplifier.
5. Study of RC Oscillators - phase shift and wien bridge oscillators
6. Study of LC oscillators – Hartley, Colpitt oscillators
7. Study of Linear voltage regulators – series regulator using series pass transistor, shunt regulator using zener diode
8. Study of Fold back current limiting using IC 723

Assignments:

1. Analyze given feedback amplifier.
2. Describe any two real time applications of power amplifier.
3. Simulation of oscillator using Multisim.
4. Describe any two real time applications of regulator.
5. To design, built and test given electronic circuits(Group activity)
6. Obtain industry exposure based on electronic product design and prepare report for the same.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

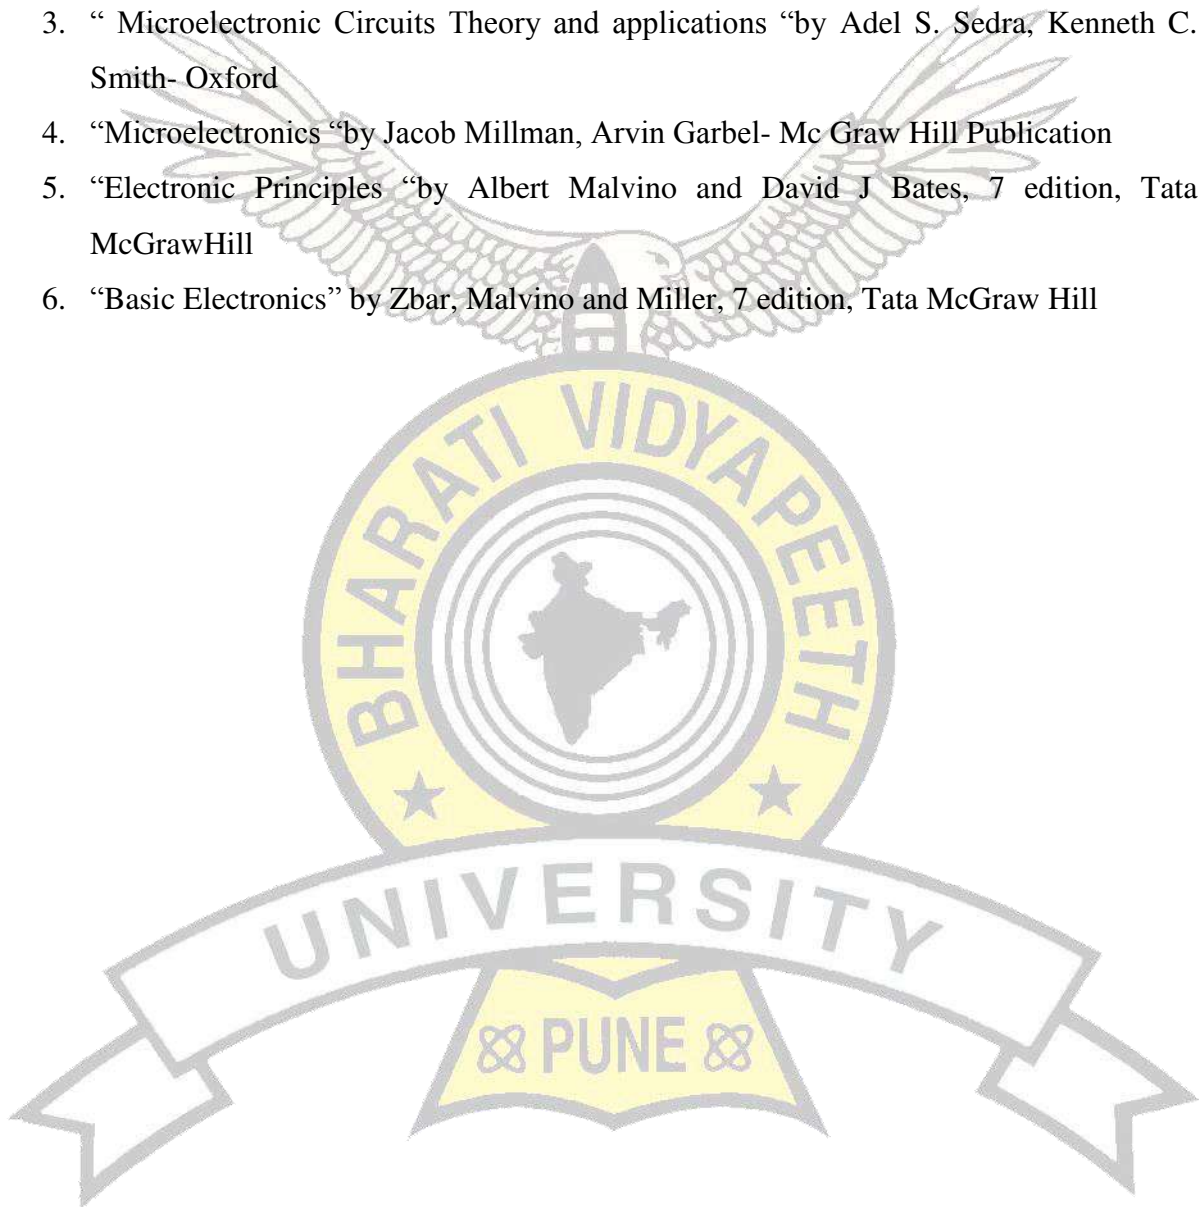

Text Books:

1. “Electronic devices and circuits” by S. Salivahanan, Suresh Kumar Vallavaraj, Mc Graw Hill Publication

2. "Electronic devices and circuits "by Millaman Halkies ,TMH publication
3. "Integrated Electronics", by Millman J and Halkias .C., TMH publication

1. "Electronic Devices and Circuits "by Allen Mottershed- PHI Publication
2. "Electronic Devices and Circuits "by J.B. Gupta- KATSON educational series books
3. " Microelectronic Circuits Theory and applications "by Adel S. Sedra, Kenneth C. Smith- Oxford
4. "Microelectronics "by Jacob Millman, Arvin Garbel- Mc Graw Hill Publication
5. "Electronic Principles "by Albert Malvino and David J Bates, 7 edition, Tata McGrawHill
6. "Basic Electronics" by Zbar, Malvino and Miller, 7 edition, Tata McGraw Hill

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B. Tech. (Biomedical) Sem:- IV

SUBJECT: - Electronic Instruments and Measurement Systems

Lecture: 4 hours/week

Theory: 60 marks

Practical: 2 hours/week

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Practical: 50 marks

Course prerequisites:

- Knowledge of process instrumentation.
- Knowledge of Integrated circuits.

Course objective:

The objective of the course is to introduce the fundamentals of Electronics Instruments and Measurement. Students learn the essential topics in Measurement systems. The course includes an in-depth understanding of oscilloscope, digital storage oscilloscope, analyzers, communication Measurements.

Course Outcomes: On successful completion of this course, students will be able to:

1. Explain the basic operation of measuring instruments.
2. Describe functioning, specifications, and applications of signal analyzing instruments.
3. Describe the basic features of oscilloscope and the internal structures of different types of oscilloscopes.

Contents:

Unit-I

Fundamentals of Instrumentation & Measurement:

(08 hours)

Necessity of Electronic Measurements, Block diagram of electronic measuring system, Concepts of Accuracy, Precision, Linearity, Sensitivity, Resolution, Hysteresis, Calibration

etc. Measurement Errors, Voltage, Current, Resistance measurement using DMM- 4 ½ & 6 ½, Auto zeroing, Auto ranging.

Unit-II

Measuring Instruments (08 hours)

Voltage , current and impedance measurement, VTVM, TVM, DVMs, AC voltmeters true RMS meters, vector voltmeter, vector impedance meter, direct current probes, alternating current probes ,LCR-Q meter.

Unit-III

Signal Generators & counters (08 Hours)

Sine-wave generator, standard signal generators, Frequency synthesized signal generator, swept frequency generator, random noise generator, Audio frequency signal generation, RF generator, Pulse generator (block diagram), Function generator Time, Frequency, Ratio, Time interval, Period & Multiple Period averaging using digital universal frequency counter.

Unit-IV

Signal Analyzers & computer aided measurements: (08 hours)

Harmonic and Wave analyzer, Distortion factor meter, Spectrum analyzer -FFT analyzer, tracking generator, Logic analyzer, logic timing analyzer, logic state analyzer, FFT analyzer, Mixed signal oscilloscope, IEEE 488, VXI based instruments, Introduction of Lab view software.

Unit-V

Communication Measurements: (08 hours)

Communication measurements, Measurements on transmitter and receiver: sensitivity, selectivity, phase jitter, S/N ratio, co-channel interference, SINAD test etc. Network analyzer- system elements, measurement accuracy, scalar network analyzer, vector network analyzer, S-parameter measurement using network analyzer.

Unit-VI

Oscilloscopes: (08 hours)

Overview of analog CRO, dual/ Multi-trace CRO, Various CRO probes & its applications. Digital Storage Oscilloscope - Sampling speed & Memory depth of DSO, Design

considerations, Attachments to DSO for enhancing the functionality, Measurements such as FFT, Math Functions, Curve Tracer, and Power scope.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

List of Experiments:

Any 8 assignments should be conducted from the following list.

1. Peak ,average and r.m.s. measurement using rectifier circuit.
2. Calibration of DVM for any one range: e.g, 200 V dc, 200 V ac, 200mA dc, using Standard calibrator or standard 6½DMM.
3. Measurement using spectrum analyzer and tracking generator. Observing spectrum of AM and FM waveforms for different modulation indices
4. Measurements on DSO:
 - i) FFT analysis of LF signal
 - ii) Capturing transients
 - iii) Storing and retrieving number of different signals
 - iv) Study of various operations like add, subtract, integrate, differentiate.
5. Measurement and timing analysis of digital signals using Logic Analyzer.
6. Experiment with virtual instruments using software such as Lab view.
7. Measurement of Total harmonic distortion using distortion factor meter.
8. Measurements on L-C-R Q meter.
9. Measurements with Universal counter (Frequency, Period, frequency ratio, Period Averaging and Time interval).
10. Study of characteristics of Diode, Transistors using Curve Tracer.
11. Study of Power scope.

Text Books/ Reference Books:

1. Oliver-Cage, “Electronic measurements and instrumentation”, TMH edition.
2. M.M.S. Anand, “Electronics instruments and instrumentation technology”, PHI.

3. Coombs, Clide F. Jr., “Electronic instrument handbook”, McGraw –Hill.
4. Car Joseph, “elements of Electronics Instrumentation and Measurement”, PHI
5. A. J. Bouwens, “Digital Instrumentation”, TATA McGraw Hill.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

**Class: B.Tech (Electronics) SEM: - III
SUBJECT: - Digital Logic Circuits**

Lecture: 3 Hours/Week

Practical: 2 Hours/Week

Theory: 60 marks

Unit Test: 20 Marks

Attendance: 10Marks

Assignments: 10Marks

TW & Practical: 50 Marks

Course Prerequisite:

1. Fundamentals of Number Systems.

Course Objective:

1. To understand principles, characteristics & operations of combinational & sequential logic circuits.
2. To design combinational circuits by using logic gates, MSI circuits, PLDs.
3. To design, implement analyze, asynchronous & synchronous sequential circuits using flip flops.

Course Outcomes: On successful completion of this course, students will be able to

1. Demonstrate the knowledge of Boolean algebra including simplification techniques.
2. Describe the characteristics of Logic families TTL, CMOS, ECL & explain the fundamentals of semiconductor memories.
3. Analyze & design digital combinational circuits such as of multiplexers, Demultiplexer, encoder, decoder and arithmetic circuits.
4. Demonstrate the knowledge of operations of basic types of flip-flops, registers, counters & the design of Finite State Machine.
5. Describe the characteristics of PLDs, Semiconductor memories and their applications.

Contents:

Unit –I

Number Systems, Codes & reduction techniques:

(6 Hours)

Review of Binary number system: Binary addition and subtraction using 1's, 2's complement method, sign magnitude representation. BCD codes, 8421, Excess –3, Grey code, codes with more than four bits, ASCII code.

Fundamental theorems of Boolean algebra, Canonical and standard forms (SOP and POS), minimization of logic functions, Karnaugh maps up to 4 variables, Don't care conditions, Quine Mc-Cluskey method.

Unit-II

Combinational Logic Modules and their Applications

(6 Hours)

Adder, subtractor, carry look ahead adder, BCD adder, magnitude comparator, Excess-3 Adder, series and parallel adder, ALU.

Code conversion, Multiplexer, Demultiplexer, Encoder, Decoder and their applications. Parity generator and checker.

Unit-III

Logic Families

(6 Hours)

Parameter definitions - Noise margin, power dissipation, voltage and current parameters, propagation delay. Typical values for TTL, CMOS & ECL. Two input TTL NAND gate, TTL logic families standard, Totem – pole, open collector, tri-state (concept & application). TTL-CMOS/CMOS-TTL interfacing, comparison of TTL & CMOS ECL.

Unit-IV

Sequential Logic Modules

(7 Hours)

Basic sequential circuits-latches and flip-flops: SR-latch, D-latch, D flip-flop, JK flip-flop, MS J-K flip flop, T flip-flop.

Definition of state machines, Moore and Mealy machine, Design of state machines: state table, state assignment, transition/excitation table, excitation maps and equations, logic realization.

Unit-V

Shift Registers & Counters

(5 Hours)

Registers, Shift registers, Counters (ring counters, twisted ring counters), Sequence Generators, ripple counters, up/down counters, synchronous counters, lock out, Clock Skew, Clock jitter.

Unit-VI

PLDs & Memories

(6 Hours)

Study of PROM, PAL, PLAs. Designing combinational circuits using PLDs.

Classification and characteristics of memory, different types of RAMs, ROMs and their applications, Double Data Rate RAMs.

List of Experiments:

1. Implementation of Boolean functions using logic gates
2. Study of characteristics of typical 74 TTL / 74 CMOS family like: fan in, fan out standard load , noise margin & interfacing with other families
3. Half, Full Adder and subtractor using gates and IC's
4. Code conversion using digital IC's
5. 1 & 2 bit digital comparator and ALU verification
6. Function implementation using Multiplexer and Demultiplexer
7. Sequence generator using MSJK flip flop IC's
8. Study of counters : Ripple , Synchronous , Ring , Johnson , Up-down counter and its application
9. Study of shift registers : Shift left , Shift right , parallel loading and Pulse Train generator
10. BCD Adder/Subtractor with Decoder driver and 7 segment display

Assignments:

1. Implement a multiplexer using Virtual laboratory
2. Design example based on combinational circuit
3. Design for e.g. digital clock, digital event counter, timers, and various multi-vibrator circuits, small processor ports or scrolling display
4. Implementation of combinational logic using PLAs
5. Design a pulse train generator using shift register
6. Design example based on state machine

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

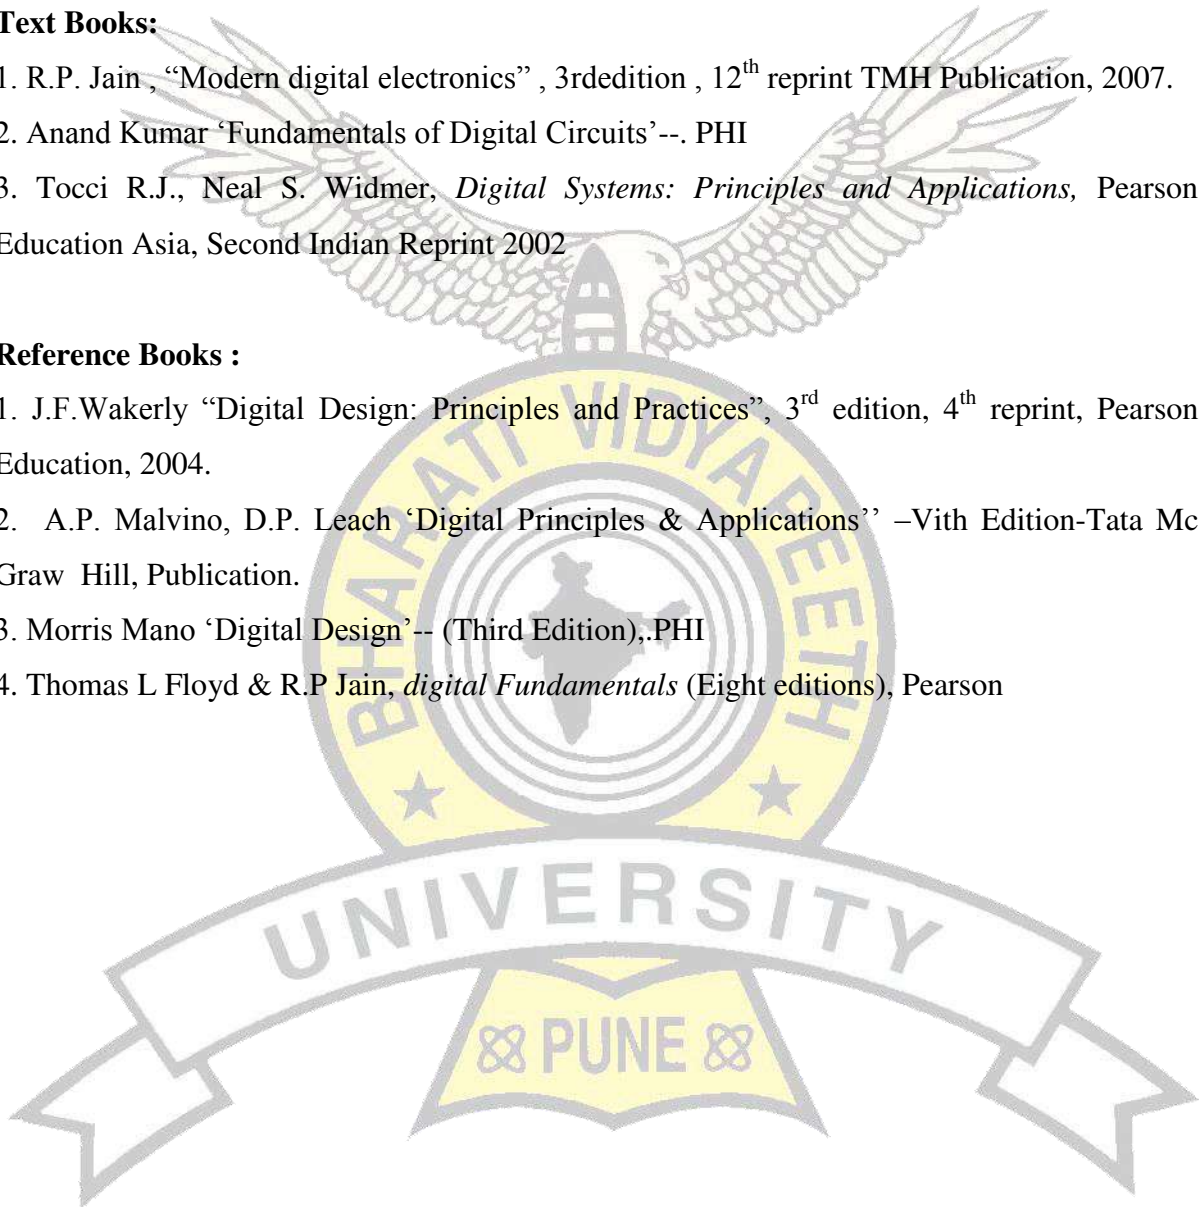

1. Continuous Assessment (Attendance, Assignments/Tutorials, Unit Test)
2. End term Examination

Text Books:

1. R.P. Jain , “Modern digital electronics” , 3rd edition , 12th reprint TMH Publication, 2007.
2. Anand Kumar ‘Fundamentals of Digital Circuits’--. PHI
3. Tocci R.J., Neal S. Widmer, *Digital Systems: Principles and Applications*, Pearson Education Asia, Second Indian Reprint 2002

2. A.P. Malvino, D.P. Leach ‘Digital Principles & Applications’ –Vith Edition-Tata Mc Graw Hill, Publication.
3. Morris Mano ‘Digital Design’-- (Third Edition),.PHI
4. Thomas L Floyd & R.P Jain, *digital Fundamentals* (Eight editions), Pearson

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Biomedical) Sem:- IV

SUBJECT: - Rehabilitation Engineering

Lecture: 3 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & oral: 50 marks

Course prerequisites:

- Basic Knowledge of Bones in Upper & lower Extremity
- Basic knowledge of Joints in Upper and Lower Extremity.

Course objective:

This course provides in depth knowledge on biomechanics of all soft tissues and also about prosthetic and orthotic devices introduces for upper and lower Extremity..

Course Outcomes:

On successful completion of this course, students will be able to:

1. Demonstrate Mechanical properties of soft tissues.
2. Classify various types of Orthosis and Prosthesis.
3. Demonstrate applications of orthosis and prosthesis.
4. Design of Prosthesis for upper extremity

Contents:

Unit-I

Tissue Biomechanics

(06 hours)

General Principles of Biomechanics, Biomechanics of Soft Tissues: Stress strain behaviour, creep stability, biomechanics of Skin, biomechanics of Muscles, Biomechanics of Ligaments, biomechanics of Tendon & Bones.

Unit-II

Movement Biomechanics

(06 hours)

Gait analysis, Forces transmitted by joints, Mass motion action, joint forces results in normal & disabled person, Biomechanical analysis of human motion using instrumentation

Unit-III

Classification of Orthosis

(06 hours)

Principles in designing orthosis, Principles of Three point pressure, International conventions for providing orthosis, upper extremity orthosis, lower extremity orthosis, Recent developments

Unit-IV

Classification of Prosthesis

(06 hours)

Principles in designing prosthesis, International Conventions for Providing Prosthesis, Upper extremity prosthesis, lower Extremity Prosthesis, Recent developments.

Unit-V

Design of upper Extremity Prosthesis

(06 hours)

Introduction to Rehabilitator, Design of Artificial arms, nature of problem, general design considerations, safety & control, biomaterials used for the same.

Unit-VI

Design of Lower Extremity prosthesis

(06 hours)

Design of Artificial limb for lower Extremity ,History of lower limb Prosthesis, Amputation surgery ,recent development.

List of Experiments:

- 1.study of Knee Ankle Foot Orthosis
- 2.Study of Hip Knee Ankle Foot Orthosis
- 3.Study of Below elbow Orthosis
- 4.Lamination of prosthesis
- 5.Study of Milwaukee brace

6.Study of Hand prosthesis and Orthosis

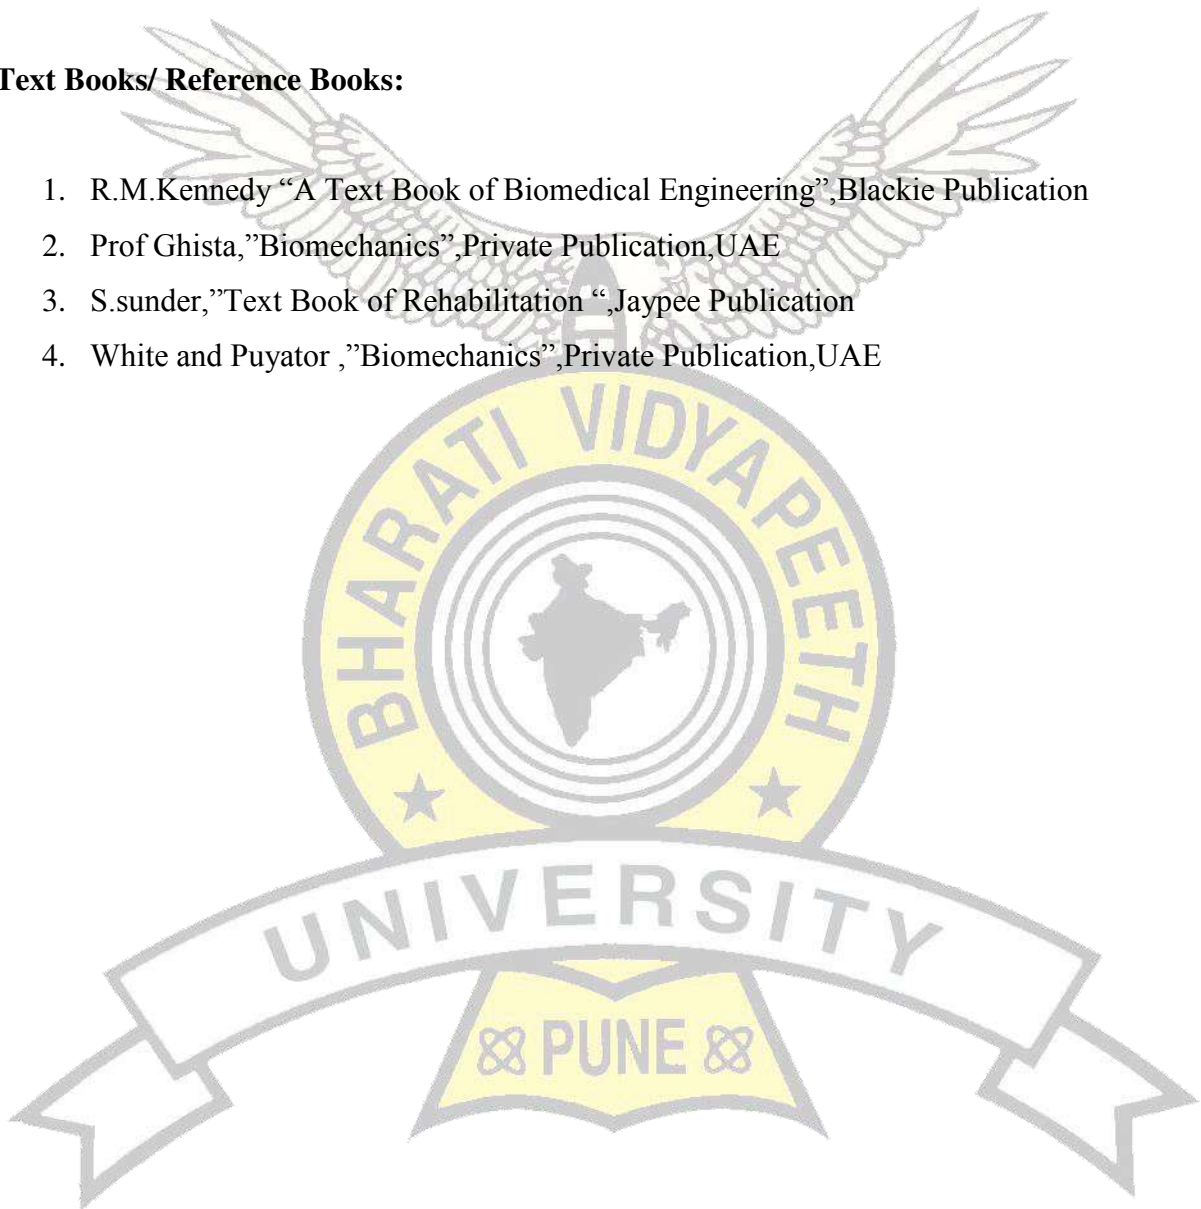

Content Delivery Methods: Chalk & talk, Models

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books/ Reference Books:

1. R.M.Kennedy “A Text Book of Biomedical Engineering”,Blackie Publication
2. Prof Ghista,”Biomechanics”,Private Publication,UAE

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

MATRICES

Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering .

(08 Hours)

Unit II

COMPLEX NUMBERS AND APPLICATIONS

Definition, Cartesian, Polar and Exponential Forms ,Argand's Diagram, De'Moivre's theorem and its application to find roots of algebraic equations., Hyperbolic Functions, Logarithm of Complex Numbers, Separation into Real and Imaginary parts, Application to problems in Engineering.

(08 Hours)

Unit III

DIFFERENTIAL CALCULUS

Successive Differentiation, nth Derivatives of Standard Functions, Leibnitz's Theorem.

EXPANSION OF FUNCTIONS

Taylor's Series and Maclaurin's Series.

(08 Hours)

Unit IV

DIFFERENTIAL CALCULUS

Indeterminate Forms, L' Hospital's Rule, Evaluation of Limits.

INFINITE SERIES

Infinite Sequences, Infinite Series, Alternating Series, Tests for Convergence, Absolute and Conditional Convergence, Power series, Range of Convergence.

(08 Hours)

Unit V

PARTIAL DIFFERENTIATION AND APPLICATIONS

Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables. Errors and Approximations.

(08 Hours)

**Bharati Vidyapeeth
Deemed University, Pune**

Unit VI

JACOBIAN

Jacobians and their applications, Chain Rule, Functional Dependence.

MAXIMA AND MINIMA

Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.

(08 Hours)

Assignments

1. Rank ,System of Linear Equations.
2. Complex Numbers.
3. Differential Calculus and Expansion of Functions.
4. Indeterminate Forms and Infinite Series.
5. Partial Derivatives, Euler's Theorem on Homogeneous Functions.
6. Jacobians, Maxima and Minima of Functions of two variables.

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

**Bharati Vidyapeeth
Deemed University, Pune**

02: Fundamentals of Civil Engineering

02: Fundamentals of Civil Engineering		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Concepts of units and conversions of units.	
2.	Basic knowledge of Chemistry	
3.	Basic knowledge of geography, concept of latitude and longitude.	
Course Objectives:		
	To make student understand the scope and application of Civil Engineering	
Course Outcomes:		
Students will be able to understand		
1.	Different building components and material	
2.	Classification of surveying	
3.	Levelling of the ground	
4.	Planning of building	
5.	Methods of irrigation and water supply	
6.	Different methods of transportation	
UNIT - I		
	Civil Engineering Scope And Applications.	(06 Hours)
	Civil Engineering scope, importance and applications to other	

Bharati Vidyapeeth
Deemed University, Pune

	disciplines of Engineering; Civil Engineering construction process and role of Civil engineer; Government authorities related to Civil Engineering; Types of structures based on loading , material and configuration; Building components and their functions; Civil Engineering materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood , glass and aluminum.	
UNIT - II	Surveying	(06 Hours)
	Objectives, Principles and Classification of Surveying; Linear, angular, Vertical and area Measurements and related instruments.	
UNIT - III	Building Planning And Bye Laws	(06 Hours)
	Site selection for residential building; Principles of building planning; Building bye laws- necessity, Floor Space Index, Heights , open space requirements, set back distance , ventilation and lighting, concept of carpet and built up area, minimum areas and sizes for residential buildings ; Concept of Eco friendly structures and Intelligent buildings.	
UNIT - IV	Foundations and Earthquakes	(06 Hours)
	Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation. Earthquakes causes, effects and guidelines for earthquake resistant design, earthquake zones.	
UNIT - V	Irrigation And Water Supply	(06 Hours)
	Rainfall measurement and its use in design of dams; Types of dams, canals, methods of irrigation and their merits and demerits; hydropower structures ;Water supply, drinking water requirements and its quality, water and sewage treatment flow chart.	
UNIT - VI	Infrastructure	(06 Hours)
	Roads- types of roads and their suitability, cross section of roads, meaning of terms ; width of roads, super elevation, camber, gradient ,sight distance, materials used for construction of roads. Railways- Types of gauges, section of railway track, components of	

**Bharati Vidyapeeth
Deemed University, Pune**

	<p>railway track, advantages.</p> <p>Bridges: Components - Foundation, Piers, Bearings, Deck.</p> <p>Airways- Components -Runway, Taxiway and Hangers.</p>	
Term Work:		
(Term work shall consist of any eight exercises from the list given below.)		
1.	Study and use of prismatic compass and measurement of bearings.	
2.	Study and use of Dumpy level and reduction of levels by collimation plane method.	
3.	Area measurement by Digital Planimeter.	
4.	Drawing plan and elevation of a residential bungalow.	
5.	Study of features of topographical maps.	
6.	Assignment on collection of information on Civil Engineering materials.	
7.	Assignment on types of foundations.	
8.	Assignment problem on irrigation and hydropower structures.	
9.	Assignment on study of flow chart of water and sewage treatment.	
10.	Assignments on types of transportation systems.	
Text Books:		
1.	“ Surveying- Vol I “ - S.K. Duggal , Tata McGraw Hill Publication.	
2.	“Built Environment” – Shah , Kale, Patki, , Tata McGraw Hill Publication	
3.	“Building Construction” – Dr. B.C. Punmia , Laxmi Publication	
4.	“Irrigation and water Power Engineering “- Dr. P.N. Modi,Standard Publishers ,New Delhi	
5.	“Text book of Transportation Engineering “- Arora, Charotar Publishers.	
6.	Water supply and sanitary engineering-Rangawala, Charotar Publishers.	
7.	“Basic Civil engineering”- M.S. Palanichamy- Tata McGraw Hill Publication	

**Bharati Vidyapeeth
Deemed University, Pune**

Reference Books:	
1.	“Surveying –Theory and Practice”-James Anderson- Tata McGraw Hill Publication
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Bharati Vidyapeeth
Deemed University, Pune
ENGINEERING GRAPHICS

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -04 Hours / Week	End Semester Examination: - 60Marks	<u>05</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

Unit I	<p>Lines and Dimensioning in Engineering Drawing</p> <p>Different types of lines used in drawing practice, Dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.</p> <p>Curves used in Engineering Practice</p> <p>Ellipse by Directrix-Focus method, Arcs of Circle method, Concentric circle method and Oblong method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone, Loci of points- Slider Crank mechanisms.</p>	(6)
Unit II	<p>Orthographic Projection</p> <p>Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections.</p>	(6)
Unit III	<p>Isometric Projections</p> <p>Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, and Sphere.</p>	(6)
Unit IV	<p>Projections of Points and Lines and planes</p> <p>Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines, Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP</p>	(6)
Unit V	<p>Projection of Solids</p> <p>Projection of prism, pyramid, cone and cylinder by rotation method.</p>	(6)

**Bharati Vidyapeeth
Deemed University, Pune**

Unit VI	Section of Solids Types of section planes, projections of solids cut by different sections of prism, pyramid, cone and cylinder.	(6)
---------	--	-----

Term work

Term work shall consist of five half-imperial size or A2 size (594 mm x 420 mm) sheets.
Assignment 05 Problems on each unit in A3 size Drawing Book

SHEETS

1. Types of lines, Dimensioning practice, Free hand lettering, 1st and 3rd angle methods symbol.
2. Curves and loci of points
3. Projections of Points and Lines and planes
4. Orthographic Projections
5. Isometric views
6. Projection of Solids

Text Books

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India,
2. "Text Book on Engineering Drawing", K.L.Narayana & P.Kannaiah, Scitech Publications, Chennai.
3. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi ,
4. "Engineering Drawing and Graphics", Venugopal K., New Age International Publishers.
5. M. B. Shah and B. C. Rana, "Engineering Drawing", 1st Ed, Pearson Education, 2005
6. P. S. Gill, "Engineering Drawing (Geometrical Drawing)", 10 Edition, S. K. Kataria and Sons, 2005
7. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 Edition, 1988

Deemed University, Pune
ENGINEERING PHYSICS

Teaching Scheme:	Examination scheme:	Credits Allotted:
Lectures: 4Hrs/Week	End Semester Examination: 60 marks	Theory: 04
Practical: 2Hr/Week	Continuous Assessment: 40 marks	Practical: 01
	Term Work: 25marks	

UNIT – I

MODERN PHYSICS

Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focussing, Wavelength and resolution, Specimen limitation, Depth of field and focus, Electron microscope, Positive rays, Separation of isotopes by Bainbridge mass spectrograph.

NUCLEAR PHYSICS

Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium, Fission energy, Critical mass and size, Reproduction factor, Chain reaction and four factor formula, Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions, Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron,

(08hours)

UNIT – II

SOLID STATE PHYSICS

Band theory of solids, Free electron theory, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.

SUPERCONDUCTIVITY

Introduction, Properties of a super conductor, Meissner's effect, Critical field, Types of superconductors, BCS theory, High temperature superconductors, Application of superconductors.

(08hours)

**Bharati Vidyapeeth
Deemed University, Pune**

UNIT – III

THERMODYNAMICS

Zeroth law of thermodynamics, first law of thermodynamics, determination of J by Joule's method, Applications of first law, heat engines, Carnot's cycle and Carnot's engine, second law of thermodynamics, entropy, change in entropy in reversible and irreversible processes, third law of thermodynamics.

NANOSCIENCE

Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles (Physical and chemical), synthesis of colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications.

(08 hours)

UNIT-IV

OPTICS - I

INTERFERENCE

Interference of waves, Visibility of fringes, interference due to thin film of uniform and non-uniform thickness, Newton's rings, Engineering applications of interference (optical flatness, interference filter, non-reflecting coatings, multi-layer ARC).

DIFFRACTION

Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Diffraction at a circular aperture (Result only), Plane diffraction grating, Conditions for principal maxima and minima, Rayleigh's criterion for resolution, Resolving power of grating and telescope.

(08 hours)

UNIT-V

OPTICS - II

POLARISATION

Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism, Polaroids, Elliptical and circular polarisation, Quarter and half wave plates, Production of polarised light, Analysis of polarised light, half shade polarimeter, LCD.

LASERS

Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Properties of lasers, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.

(08 Hours)

**Bharati Vidyapeeth
Deemed University, Pune**

UNIT-VI

ARCHITECTURAL ACOUSTICS

Elementary acoustics, Limits of audibility, Reverberation and reverberation time, Sabine's formula, Intensity level, Sound intensity level, Sound absorption, Sound absorption coefficient, different types of noise and their remedies, Sound absorption materials, basic requirement for acoustically good hall, factors affecting the architectural acoustics and their remedies.

QUANTUM MECHANICS

Electron diffraction, Davisson and Germer's experiment, Wave nature of matter, De-Broglie waves, Wavelength of matter waves, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box and non rigid box.

(08hours)

TERM WORK

Experiments

Any ten experiments from the following:

1. Determination of band gap of semi-conductor.
2. Solar cell characteristics.
3. e/m by Thomson's method.
4. Uses of CRO for measurement of phase difference and Lissajos figures.
5. Hall effect and Hall coefficient.
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode, Photo diode, LED, Ge/Si diode).
8. Plank's constant by photodiode.
9. Wavelength by diffraction grating.
10. Newton's rings.
11. Ultrasonic interferometer.
12. Sound intensity level measurement.
13. Wavelength of laser by diffraction.
14. Determination of refractive index for O-ray and E-ray.
15. Brewster's law.

Assignments

1. Recent advances in Nanotechnology
2. Nuclear radiation detectors.
3. Atomic force microscope (AFM).
4. Advanced opto-electronic devices.

Bharati Vidyapeeth
Deemed University, Pune

5. Laser in Industry.
6. Different spectroscopic methods – a comparison (Raman, IR, UVR, etc.).

Unit Tests:

Unit Test I : Unit I, II, III

Unit Test II: Unit IV, V, VI

Reference Books:

1. Physics for Engineers – Srinivasan M.R.
2. A text Book of Engineering Physics- M.N. Avadhanulu, P.G. Kshirsagar
3. Engineering Physics- K. Rajagopal
4. Electronics Principles – A.P.Molvino
5. Fundamentals of Optics – Jenkins and White
6. A Textbook of Sound – Wood
7. Engineering Physics – Sen, Gaur and Gupta

Bharati Vidyapeeth
Deemed University, Pune
Chemical Engineering Materials

Teaching Scheme		Examination Scheme		Credits
Lectures	: 3Hrs/week	End semester examination:60 Marks		3
Tutorials	: 1 Hr/week	Continuous assessment	: 40 Marks	
		Term work	: 25 Marks	1
		Total	: 125Marks	4

Course Pre-requisite: Basic understanding of chemistry of bonds

Course Objectives: To get knowledge of selection of material for process industry

Course outcome: Understand material properties, metal and their alloys, polymers, plastics, paints, coatings adhesives, ceramic, cement, glass, material failures and prevention measures.

Unit –I **(06 Hours)**

Introduction

Materials and criteria for selection of material in process industries. Material properties: Mechanical, thermal, chemical, electrical, magnetic and technological properties, modification and control of material properties.

Unit- II **(06 Hours)**

Metal and their alloys

- A. Ferrous materials: Pure iron, cast iron, mild steel, stainless steels, special alloy steels-iron and iron carbide, phase diagram-heat treatment of plain-carbon steels.
- B. Nonferrous materials: Lead, Tin, aluminium, zinc, nickel, copper, Magnesium and their alloys. Properties and applications in process industries.

Unit –III **(06 Hours)**

Hydrocarbon materials

Natural & synthetic polymeric materials

Selection of polymeric materials for equipment linings, fiber reinforced plastic, application of special polymers like Nylon 66, Teflon in engineering. Polymer Composites and blends.

**Bharati Vidyapeeth
Deemed University, Pune**

Paints, coatings and adhesives

Unit-IV

(06 Hours)

Ceramic, glasses and cement

Definition of ceramics and glasses; interaction between structure, processing, and properties; Applications of ceramic and glass materials; Crystalline and non-crystalline ceramics, silicates, refractories, clays, glass, vitreous silica, and borosilicate

Cement and its properties- special cements, cement concrete, RCC- Pre stressed concrete.

Unit- V

(06 Hours)

Material failure analysis

Thermal and mechanical failures: Creep, stress, crystal structure and defects.

Chemical failure: acid base environment, water, Corrosion: Corrosion attack methods, Different types of corrosion: chemical, biochemical, and electrochemical; Internal and external factors affecting corrosion of chemical equipments; corrosion charts for process equipments.

Unit-VI

(06 Hours)

Material failure prevention

Property enhancement by electroplating, glass and ceramic linings, polymer lining, paints, coatings, alloy preparation, composite and blend formation.

Unit tests would follow as:

- | | | |
|-------------|---|-------------------|
| Unit test 1 | : | Unit 1 and unit 2 |
| Unit test 2 | : | Unit 3 and unit 4 |
| Unit test 3 | : | Unit 5 and unit 6 |

Term work includes assignments on

1. Basic criteria for material selection, material properties
2. Ferrous and non-ferrous material recent advanced material of actual application in industry
3. Polymeric advanced material presently applied in industry
4. Cement, ceramic and glass variety to be used in industry
5. Industrial example with analysis of thermal, mechanical and chemical failure.
6. Industrially applied case studies for prevention of material prevention

**Bharati Vidyapeeth
Deemed University, Pune**

Text Books

1. Kodgire V. D. "Material Science and Metallurgy for Engineers", Everest publication India
2. Gowarikar V. R., Vishwanath N V, JaydevShreedhar, "Polymer science", New age International publication, India

Workshop Technology**

TEACHING SCHEME:

Theory: -

Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: -

Continuous Assessment: -

Term Work: 50 Marks

CREDITS ALLOTTED:

01 Credit

Course Pre-requisites: Basic knowledge of hand tools used in day to day life.

Course Objectives: Make the students familiar with basic manufacturing processes

Course Outcomes: students should be able to understand

1. basic Manufacturing Processes used in the industry,
2. importance of safety

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the following topics.

Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances

Term work includes one job involving joint and woodturning.

Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.

Term work to include one job involving fitting to size, male-female fitting with drilling and tapping.

Sheet Metal Practice Introduction to primary technology processes involving bending, punching and drawing various sheet metal joints, development of joints.

Bharati Vidyapeeth
Deemed University, Pune

Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.

Term work includes one job involving various joining processes like riveting, joining of plastics, welding, brazing, etc.

Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.

Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.

Plumbing (Demonstration Common for Electrical & Non electrical Group)

Types of pipe joints, threading dies, Pipe fittings.

Bharati Vidyapeeth
Deemed University, Pune
ENGINEERING MATHEMATICS-II

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

DIFFERENTIAL EQUATIONS (DE)

Definition, Order and Degree of DE, Formation of DE. Solutions of Variable Separable DE, Exact DE, Linear DE and reducible to these types.

(08 Hours)

Unit II

APPLICATIONS OF DIFFERENTIAL EQUATIONS

Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchoff's Law of Electrical Circuits, Motion under Gravity, Rectilinear Motion, Simple Harmonic Motion, One-Dimensional Conduction of Heat, Chemical engineering problems.

(08 Hours)

Unit III

FOURIER SERIES

Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis.

INTEGRAL CALCULUS

Reduction formulae, Beta and Gamma functions.

(08 Hours)

Unit IV

INTEGRAL CALCULUS

Differentiation Under the Integral Sign, Error functions.

CURVE TRACING

Tracing of Curves, Cartesian, Polar and Parametric Curves. Rectification of Curves.

(08 Hours)

Unit V

SOLID GEOMETRY

Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder.

(08 Hours)

**Bharati Vidyapeeth
Deemed University, Pune**

Unit VI

MULTIPLE INTEGRALS AND THEIR APPLICATIONS

Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.

(08 Hours)

Assignments

1. Differential Equations.
2. Application of DE.
3. Fourier Series and Integral Calculus.
4. DUIS and Curve Tracing.
5. Solid Geometry.
6. Double and Triple integrations, area and volume.

Unit Test I :- Unit I, II, III

Unit Test II :- Unit IV, V, VI

Bharati Vidyapeeth
Deemed University, Pune

FUNDAMENTALS OF MECHANICAL ENGINEERING

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -03Hours / Week	End Semester Examination: -60Marks	<u>04</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

UNIT-I	<p>Thermodynamics-</p> <p>Heat, work and Internal Energy, Thermodynamic State, Process, Cycle, Thermodynamic System, First Law of Thermodynamics, Application of First Law to steady Flow and Non Flow processes, Limitations of First Law, PMM of first kind (Numerical Treatment), Second Law of Thermodynamics – Statements, Carnot Engine and Carnot Refrigerator, PMM of Second Kind (Elementary treatment only)</p>	(08)
UNIT-II	<p>Introduction to I.C. Engines and turbines-</p> <p>Two stroke, Four Stroke Cycles, Construction and Working of C.I. and S.I. Engines,</p> <p>Hydraulic turbines, steam turbines, gas turbines.(Theoretical study using schematic diagrams)</p> <p>Introduction to refrigeration, compressors & pumps-</p> <p>Vapor compression and vapor absorption system, house hold refrigerator, window air conditioner. Reciprocating and rotary compressor, Reciprocating and centrifugal pump. (Theoretical study using schematic diagrams)</p>	(08)
UNIT-III	<p>Energy Sources -</p> <p>Renewable and nonrenewable, solar flat plate collector, Wind, Geothermal, Wave, Tidal, Hydro power, Bio-gas, Bio-Diesel, Nuclear power.</p> <p>Heat transfer-</p> <p>Statement and explanation of Fourier’s law of heat conduction, Newton’s law of cooling, Stefan Boltzmann’s law. Conducting and insulating</p>	(08)

Bharati Vidyapeeth
Deemed University, Pune

	materials and their properties, types of heat exchangers and their applications.	
UNIT-IV	<p>Properties of fluids-</p> <p>Introduction, Units of measurements, mass density, specific weight, specific volume and relative density, viscosity, pressure, compressibility and elasticity, gas laws, vapor pressure, surface tension and capillarity, regimes in fluid mechanics, fluid properties and analysis of fluid flow.</p> <p>Properties of Materials and their Applications-</p> <p>Metals – Ferrous and Non-Ferrous, Nonmetallic materials, smart materials, Material selection criteria.</p>	(08)
UNIT-V	<p>Mechanical devices -</p> <p>Types of Belts and belt drives, Chain drive, Types of gears, Types of Couplings, friction clutch (cone and plate), brakes, Power transmission shafts, axles, keys, bush and ball bearings.</p> <p>Mechanisms-</p> <p>Slider crank mechanism, Four bar chain mechanism, List of various inversions of Four bar chain mechanism, Geneva mechanism, Ratchet and Paul mechanism</p>	(08)
UNIT-VI	<p>Machine Tools-</p> <p>Lathe Machine – Centre Lathe, Drilling Machine – Study of Pillar drilling machine, Introduction to NC and CNC machines, Grinding machine, Power saw, Milling Machine.</p> <p>Introduction to manufacturing processes and Their Applications-</p> <p>Casting, Sheet metal forming, Sheet metal cutting, Forging, Fabrication, Metal joining processes.</p>	(08)

List of experiments-

The Term Work shall consist of **any Eight** experiments of following list

1	Measurement of viscosity using Redwood viscometer.
2	Assembly and working of 4-bar, 6-bar, 8-bar planer mechanisms
3	Finding relation between input angle and output angle for various link lengths.

**Bharati Vidyapeeth
Deemed University, Pune**

4	Study of domestic refrigerator & window air-conditioner
5	Demonstration of operations of centre lathe
6	Demonstration of operations on drilling machines
7	Demonstration of Two stroke and four stroke engine
8	Study of power transmitting elements: Coupling, Gears and bearings
9	Demonstration of pumps and compressor
10	Study and demonstration of different types of clutches.

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit

Course Pre-requisites:

The Students should have knowledge of

- | | |
|----|---|
| 1. | Scalar and Vector |
| 2. | Newton's law of motion |
| 3. | Law of friction |
| 4. | Concept of physical quantities, their units and conversion of units |
| 5. | Concept of differentiation and integration |

Course Objectives:

To develop and apply the concept of resultant and equilibrium for various static and dynamic engineering problems.

Course Outcomes:

The student should be able to

- | | |
|----|--|
| 1. | calculate resultant and apply conditions of equilibrium. |
| 2. | analyze the truss and calculate friction force. |
| 3. | calculate centroid and moment of inertia. |
| 4. | solve problem on rectilinear motion. |
| 5. | solve problems on curvilinear motion. |
| 6. | use D'Alembert's principle, Work Energy principle and Impulse Momentum principle for particle. |

Bharati Vidyapeeth
Deemed University, Pune

UNIT - I	Resultant and Equilibrium	(06 Hours)
	Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach.. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point.	
UNIT - II	Truss and Friction	(06 Hours)
	Coefficient of Static Friction, Impending motion of Blocks, Ladders and Belts. Analysis of Perfect Trusses - Method of Joint, Method of Section and Graphical Method.	
UNIT - III	Centroid and Moment of Inertia	(06 Hours)
	Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia.	
UNIT - IV	Kinematics of Rectilinear motion of a Particle	(06 Hours)
	Equations of motion, Constant and variable acceleration, Motion Curves, Relative motion, Dependent motion.	
UNIT - V	Kinematics of Curvilinear motion of a Particle	(06 Hours)
	Motion of a Projectile, Cartesian components, Normal and Tangential components of a curvilinear motion.	
UNIT - VI	Kinetics of a Particle	(06 Hours)
	D'Alemberts Principle, Work-Energy Principle and Impulse-Momentum Principle, Coefficient of Restitution, Direct Central Impact.	

Term Work:

A) The term-work shall consist of minimum **Five** experiments from list below.

1. Determination of reactions of Simple and Compound beam.
2. Study of equilibrium of concurrent force system in a plane.
3. Determination of coefficient of friction for Flat Belt.
4. Determination of coefficient of friction for Rope.
5. Study of Curvilinear motion.
6. Determination of Coefficient of Restitution.

Bharati Vidyapeeth
Deemed University, Pune

B) The term-work shall also consist of minimum **Five** graphical solutions of the problems on different topics.

Text Books:

1) "Engineering Mechanics (Statics and Dynamics)", Hibbeler R.C., McMillan Publication.

2) "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.

Reference Books:

1. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.

2. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication.

3. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.

4. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.

5. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.

6. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.

Syllabus for Unit Test:

Unit Test -1

UNIT – I to III

Unit Test -2

UNIT – IV to VI

Bharati Vidyapeeth
Deemed University, Pune
ENGINEERING CHEMISTRY

Teaching Scheme:
Lectures: 4Hrs/Week
Practical: 2Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory: 04
Practical: 01
Term Work: 25marks

Unit I

WATER

Introduction, Hardness of water, Effect of hard water on boilers and heat exchangers: a) boiler corrosion b) caustic embrittlement c) scales and sludges d) priming and foaming

Water softening methods for industrial purposes :a) Zeolite process b) Phosphate conditioning
Numerical based on the zeolite process **(08 Hours)**

Unit II

MATERIAL CHEMISTRY

Crystallography : Unit cell, Laws of crystallography, Weiss indices and Miller indices, Crystal defects (point and line defects), X-ray diffraction – Bragg's Law and numerical.

Cement : Introduction of cement, Hydraulic/ Non-hydraulic cementing materials, classification of cement, chemistry of portland cement, chemical composition and compound constituents of portland cement, properties of cement and its applications. **(08 Hours)**

Unit III

FUELS

Introduction, classification of fuels, calorific value of fuels, NCV and GCV, Determination of calorific values using Bomb calorimeter and Boys' gas calorimeter.

Theoretical calculation of calorific value of a fuel, Analysis of coal a) Proximate b) Ultimate analysis of coal, Numericals based on NCV, GCV. **(08 Hours)**

Unit IV

CORROSION AND ITS PREVENTION

Corrosion: - Definition, atmospheric corrosion-mechanism, Wet corrosion-mechanism, Electrochemical and galvanic series, Factors affecting corrosion-nature of metal, nature of environment.

Methods of prevention of corrosion- Cathodic and Anodic protection, Metallic coatings, Electroplating, Hot dipping. **(08 Hours)**

Unit V

ELECTROCHEMISTRY

Introduction, Arrhenius Ionic theory, Kohlrausch's law of independent migration of ions

Laws of electrolysis: Faradays Laws, Ostwald's dilution law, Acids and Bases, concept of pH and pOH, Buffer solutions, Solubility Product, Redox Reactions.

Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Overvoltage, Conductometric Titrations, Fuel cells, Lead Acid Storage Cell and numericals based on the above articles. **(08 Hours)**

**Bharati Vidyapeeth
Deemed University, Pune**

Unit VI

STEREOCHEMISTRY

Introduction, chirality, optical activity, Enantiomers, Diastereomers, projection formula of tetrahedral carbon- Newman projection, Wedge projection, Fischer projection, Geometrical isomerism :- cis and trans isomerism, E and Z isomers

Optical isomerism :- Mesoform, the number of optical isomers for chiral molecules,

Conformations :- conformations of ethane, conformations of n-butane

(08 Hours)

TERM WORK

Experiments

Any Ten experiments from the following:

1. Estimation of hardness of water by EDTA method.
2. Estimation of chlorine by Mohr's method.
3. Determination of percentage of Ca in given cement sample
4. Determination of coefficient of viscosity by Ostwald's viscometer
5. Study of Bomb calorimeter for determination of calorific value.
6. Determination of calorific value of gas fuel by using Boy's gas calorimeter.
7. Determination of dissolved oxygen in a water sample.
8. To determine the Molecular Weight of polymer
9. Estimation of Copper from brass sample solution by Iodometrically
10. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
11. To standardize NaOH solution and hence find out the strength of given hydrochloric Acid solution
12. To determine Surface Tension of given liquid by Stalagmometer
13. Study of corrosion of metals in medium of different pH.
14. To set up Daniel cell
15. To determine pH of soil
16. To determine Acidity of soil

Assignments

1. Effect of hard water on boilers and heat exchangers
2. Hydraulic/ Non-hydraulic cementing materials
3. Analysis of coal a) Proximate b) ultimate analysis of coal
4. Wet corrosion-mechanism, Electroplating, Hot dipping
5. Geometrical isomerism :- cis and trans isomerism, E and Z isomers
6. Fuel cells

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

Bharati Vidyapeeth
Deemed University, Pune

02: Fundamentals of Electrical Engineering

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit

Course Pre-requisites:

The Students should have

- | | |
|----|-------------|
| 1. | Mathematics |
| 2. | Physics |

Course Objectives:

The course introduces fundamental concepts of DC and AC circuits, electromagnetism, transformer and measuring instruments and electronic components to all first year engineering students.

Course Outcomes:

- | | |
|----|--|
| 1. | Understand and apply knowledge of basic concepts of work ,power ,energy for electrical, mechanical and thermal systems |
| 2. | Understand and apply knowledge of Kirchoff's laws and network theorems to solve electrical networks |
| 3. | Describe construction, principle of operation, specifications and applications of capacitors and batteries |
| 4. | Describe and apply fundamental concepts of magnetic and electromagnetic circuits for operation of single phase transformer |
| 5. | Define basic terms of single phase and three phase ac circuits and supply systems |
| 6. | Know and use electrical safety rules |

Bharati Vidyapeeth
Deemed University, Pune

UNIT - I	Basic concepts	(06 Hours)
	Concept of EMF, Potential Difference, current, resistance, Ohms law, resistance temperature coefficient, SI units of Work, power, energy. Conversion of energy from one form to another in electrical, mechanical and thermal systems	
UNIT - II	Network Theorems	(06 Hours)
	Voltage source and current sources, ideal and practical, Kirchoff's laws and applications to network solutions using mesh analysis, Simplifications of networks using series- parallel, Star/Delta transformation. Superposition theorem, Thevenin's theorem, Max Power Transfer theorem.	
UNIT - III	Electrostatics	(06 Hours)
	Electrostatic field, electric field intensity, electric field strength, absolute permittivity, relative permittivity, capacitor composite, dielectric capacitors, capacitors in series & parallel, energy stored in capacitors, charging and discharging of capacitors, Batteries-Types, Construction & working.	
UNIT - IV	Magnetic Circuit & Transformer	(06 Hours)
	Magnetic effect of electric current, cross and dot convention, right hand thumb rule, concept of flux, flux linkages, Flux Density, Magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability, B-H curve, hysteresis loop, series-parallel magnetic circuit, composite magnetic circuit, Comparison of electrical and magnetic circuit Farady's law of electromagnetic induction, statically and dynamically induced emf, self inductance, mutual inductance, coefficient of coupling, Single phase transformer construction, principle of operation, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Determination of Efficiency & Regulation by direct load test.	
UNIT - V	AC Fundamentals & AC Circuits	(06 Hours)
	AC waveform definitions , form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar & rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3-ph AC Circuits.	

**Bharati Vidyapeeth
Deemed University, Pune**

UNIT - VI	Electrical Wiring and Illumination system	(06 Hours)
	Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED), Study of Electricity bill.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight exercises / experiments.		
<ol style="list-style-type: none"> 1. Determination of resistance temperature coefficient 2. Verification of Superposition Theorem 3. Verification of Thevenin's Theorem 4. Verification of Kirchoff's Laws 5. Verification of Maximum power transfer Theorem 6. Time response of RC circuit 7. Study of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$ & $X_L = X_C$ 8. Verification of current relations in three phase balanced star and delta connected loads. 9. Direct loading test on Single phase transformer <ol style="list-style-type: none"> a) Voltage and current ratios. b) Efficiency and regulations . 10. Study of a Residential (L.T.) Bill 		
Text Books:		
1) B.L.Theraja- "A Textbook of Electrical Technology" Volume- I, S.Chand and Company Ltd.,New Delhi		
2) V. K. Mehta, - "Basic Electrical Engineering", S. Chand and Company Ltd., New Delhi		
3) I. J. Nagrath and Kothari – "Theory and problems of Basic Electrical Engineering", Prentice Hall of India Pvt. Ltd		
Reference Books:		
1. Edward Hughes – "Electrical Technology"- Seventh Edition, Pearson Education Publication		
2. H. Cotton – "Elements of Electrical Technology", C.B.S. Publications		
3. John Omalley Shawn – "Basic circuits analysis" Mc Graw Hill Publications		
4. Vincent Del Toro – "Principles of Electrical Engineering", PHI Publications		

**Bharati Vidyapeeth
Deemed University, Pune**

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Bharati Vidyapeeth
Deemed University, Pune
Analytical Techniques in Chemical Engineering

Teaching Scheme:

Lectures: - -

Practical: 2 Hr/week

Examination Scheme:

Term work: 50 Marks

Credits:

01

Course pre-requisite: Fundamental knowledge of chemistry involved in analytical techniques.

Course objectives:

1. To develop students acquaintance with various basic analytical techniques available in Chemical Engineering.
2. To provide a base for effective understanding of the core subjects of Chemical Engineering such as Stoichiometry, Environmental Engineering etc.

Course outcome:

After successful completion of the course the student will be able:

1. To independently prepare standard solutions and solutions for given normality/ molarity/ molality
2. To carry out preliminary water and fuel analysis.

Minimum eight practicals should be conducted from the list given below:

I. Standardization

1. To prepare standard alkaline and acidic solutions.

II. Normality/ Molarity/ Molality Concepts

3. Find the strength of given alkaline solution using acidic solution or vice versa.
4. Preparation of solutions for given normality/ molarity/ molality

III. Water Analysis

1. To determine free CO₂ in the given water Sample.
2. Determination of Dissolved oxygen in the given water sample.
3. To determine Acidity of a given water sample.
4. To determine alkalinity of a given water sample.

IV. Fuel Analysis

1. Determination of octane/cetane number
2. Determination of kinematic viscosity
3. Determination of calorific value

**Bharati Vidyapeeth
Deemed University, Pune**

4. Determination of moisture content
5. Ultimate/proximate analysis of solid fuel

Text books/References:

1. Practical organic chemistry, Arthur I. Vogel, Longman publication
2. Experiments in applied chemistry, Sunita Rattan, S. K. Kataria & Sons

BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE
B.Tech (Chemical) - 2014 Course
Semester-III

CHEMICAL ENGINEERING THERMODYNAMICS-I		
Designation: Professional Core		
Course Pre-requisites:		
Students should have knowledge of		
1.	Mathematics	
2.	Physics	
3	Chemistry	
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures : 3 Hours/Week	End Semester Examination : 60 Marks	Theory : 03
Tutorial : 1 Hour /Week	Unit Test : 20 marks	Tutorial : 01
Total : 4 Hours/Week	Continuous Assessment : 20 Marks	Total credits : 04
	Term Work/Oral : 25 Marks	
	Total : 125 Marks	
Course Outcomes:		
After completion of the course students will be able to		
1.	(a) Estimate energy requirement for a system	
2.	(a) Understand second law of thermodynamics and the concept of entropy (b) Calculate efficiency of heat engines and refrigerator, and calculate change in entropy for ideal gas.	
3.	(a) Understand P-T and P-V diagrams for pure fluids (b) Select appropriate equation of state for representing P-V-T behavior of gases and/or liquids.	
4.	(a) Calculate changes in internal energy, enthalpy, and entropy for ideal gases, and also for non-ideal gases through use of residual properties (b) Understand the criterion of phase equilibrium for a pure substance and use it to relate the enthalpy of phase change to the saturation pressure curve via Clausius- Clapeyron equation	
5.	(a) Understand refrigeration and liquefaction cycles.	
6.	(a) Estimate deviation from ideality for real gaseous mixtures and liquid solutions	
Topics covered		
UNIT - I	First Law of Thermodynamics Preliminary concepts of thermodynamics; Statement of first law of thermodynamics; Joules experiment and internal energy; Mathematical form of first law of thermodynamics; State function and path function; Intensive and extensive properties; Enthalpy; Steady state steady flow process; Equilibrium; Phase rule; Reversible and irreversible processes; Constant volume and constant pressure processes.	(08 Hours)

UNIT - II	Second Law of Thermodynamics: Necessity of second law of thermodynamics; Statements of second law of thermodynamics; Heat engine: Carnot approach; Kelvin-Planck statements; Thermodynamic temperature scale; Thermodynamic temperature and the ideal gas scale; Entropy: Clausius approach; Entropy change of ideal gas; Mathematical statement of second law of thermodynamics; Third law of thermodynamics and its mathematical statement	(08 Hours)
UNIT - III	Volumetric Properties of Pure Fluids PVT behavior of pure substance; Basic equation of state; Difference between Ideal gas and real gas; Equation governing PVT behavior of ideal gas; Development of thermodynamic relations for ideal gas for isochoric, isobaric, isothermal, adiabatic, and polytropic processes; Equations governing PVT behavior of real gas: (i) the virial equations, (ii) two parameter equations (van der Waal, and RedlichKwong equations), (iii) compressibility factor: two parameter theorem of corresponding state and three parameter theorem of corresponding state.	(08 Hours)
UNIT - IV	Thermodynamic properties of Fluids: Property relations for homogeneous phases: (i) Thermodynamic relations derived from laws of thermodynamics, Helmholtz energy, and Gibbs energy, (ii) Maxwell relationships; Two-phase systems: Clausius - Clapeyron equation and Antoine equation; Thermodynamic diagrams: (i) temperature-entropy, (ii) pressure-enthalpy, and (iii) enthalpy-entropy (the Mollier diagram).	(08 Hours)
UNIT - V	Refrigeration and Liquefaction The Carnot Cycle; The vapor- compression cycle; Comparison of refrigeration cycle; The Choice of refrigerant; Absorption refrigeration and power cycle; Organic Rankine cycle; Liquefaction processes	(08 Hours)
UNIT - VI	Solution Thermodynamics Fundamental property relation; Phase equilibrium using volumetric properties; Partial molal properties; Ideal gas mixtures and ideal solutions; Concept of fugacity and activity; Concept of residual and excess properties.	(08 Hours)
Tutorials:		
Tutorials will be based on the theoretical and/or numerical covered in six units		
1	Solving numerical in connection with the basic principles of thermodynamics	
2	Questions involving first law applied to pure component systems.	
3	Solving numerical in connection with entropy changes of ideal gas for various thermodynamic processes.	
4	Draw P-T and P-V diagrams for pure substances.	
5	Solving numerical based on application of thermodynamics to transient open and closed systems	
6	Numerical involving Pure Fluid Properties Coupled to 1st and 2nd Laws.	

7	Conducting surprise MCQ test for students
8	Solving numerical based on Refrigeration and Liquefaction.
9	Enhancement in collaborative learning is done through, group assignments that will be given to encourage students to work with classmates to discuss and complete homework assignments.
10	Students have to study any five NPTEL videos related to Chemical Engineering Thermodynamics I and prepare/present power point presentation.
11	Group discussions on any of the following topics: a) Importance of Chemical Engineering Thermodynamics in chemical industries. b) Practical applications involving various thermodynamic processes. c) Ideal Gas, Real Gas, Ideal gas mixture, Ideal solution.
12	Preparation of a brief report on applicability of equations of states (EOS) in chemical engineering systems.
13	Solve question papers of CET I of previous THREE years.
14	Unsolved numerical from the reference books on various topics studied
Text Books/ References:	
1.	J. M. Smith and H. C. Van Ness, "Introduction to Chemical Engineering Thermodynamics", McGraw-Hill Publication
2.	T. E. Daubert, "Chemical Engineering Thermodynamics", McGraw- Hill Publication
3.	B. F. Dodge, "Chemical Engineering Thermodynamics", McGraw- Hill Publication
4.	S. I. Sandler, "Chemical Engineering Thermodynamics", McGraw- Hill Publication
Syllabus for Unit Test:	
Unit Test - I	UNIT– I, II, and III
Unit Test - II	UNIT– IV, V, and VI

STRENGTH OF MATERIAL			
Designation: Breath			
Course Pre-requisites:			
Students should have			
1.	Basic knowledge of Engineering Mechanics		
TEACHING SCHEME:			
EXAMINATION SCHEME:			
CREDITS ALLOTTED:			
Lectures	: 3Hours/Week	End Semester Examination : 60 Marks	Theory : 03
Practical	: 2 Hour /Week	Unit Test : 20 Marks	Practical : 01
Total	: 5 Hours/Week	Continuous Assessment : 20 Marks	Total credits : 04
		Term Work/Practicalal : 25 Marks	
		Total : 125 Marks	
Course Outcomes:			
After completion of the course students will be able to			
1.	Calculate stresses due to axial force.		
2.	Calculate shear force and bending moment in the beam.		
3.	Calculate deflection and bending stress in the beam.		
4.	Calculate shear stress due to shear force and torsion.		
5.	Calculate critical load for column.		
6.	Calculate principal stresses.		
Topics covered			
UNIT-I	<p>Concept of stress and strain: Normal, lateral, shear and volumetric stresses and strains, Stress-strain curve; Elastic constants and their inter relationship; Generalized Hooke's law;</p> <p>Stresses due to Axial Load and Temperature: Axial force diagram; Stresses, strains and deformation of determinate and indeterminate bars of prismatic, homogenous and composite cross section.</p>	(06 Hours)	
UNIT-II	<p>Shear Force and Bending Moment in Beams:</p> <p>Concept of Shear Force and Bending Moment; Relation between Shear Force, Bending Moment and intensity of loading; Shear Force Diagram and Bending Moment Diagram of determinate beams due to concentrated load, uniformly distributed load, uniformly varying load and moments.</p>	(06 Hours)	
UNIT-III	<p>Deflection of Beams:</p> <p>Concept of relation between deflection, slope, bending moment, shear force and intensity of loading; Macaulay's method, Elastic curve.</p> <p>Flexural Stresses: Theory and assumptions of pure bending; Moment of resistance; Flexure formula; Flexural rigidity; Modulus of rupture; Flexural stress distribution diagram for various sections; Force resisted by partial cross section.</p>	(08 Hours)	
UNIT-IV	<p>Shear Stresses: Concept of direct and transverse shear; Shear stress formula; concept of complementary shear stress; Shear stress distribution diagram for symmetrical and unsymmetrical section.</p> <p>Torsion of Circular Shafts: Theory, assumptions and derivation of torsional formula; Shear stress distribution across cross section; Twisting moment diagram; Shear</p>	(06 Hours)	

	stresses and strains in determinate and indeterminate shafts of hollow, solid, homogeneous and composite cross sections subjected to twisting moment; Torsional rigidity.	
UNIT-V	Combined Axial and Bending Stress: Concept; Resultant stress due to the axial load and uni-axial or biaxial bending; Core of section. Axially Loaded Long Columns: Concept of critical load and buckling; Differential equation of elastic curve; Euler's formula for hinged ends; Equivalent length for different end conditions; Limitation of Euler's formula; Rankine's formula.	(06 Hours)
UNIT-VI	Principal Stresses and Principal Planes: Normal and shear stresses on any oblique plane. Concept of principal stresses and principal planes. Maximum shear stress; Analytical and graphical method. (Mohr's circle method); Combined effect of axial force, bending moment, shear force and torsion.	(06 Hours)

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV ,V,VI

PHYSICAL CHEMISTRY

Designation: Basic science

Course Pre-requisites: Basic knowledge for chemistry

TEACHING SCHEME:

Lectures : 03 Hours/Week

Practical : 02 Hours /Week

Total : 05 Hours/Week

EXAMINATION SCHEME:

End Semester Examination : 60 Marks

Unit Test : 20 Marks

Continuous Assessment : 20 Marks

Term Work/Practical : 50 Marks

Total : 150 Marks

CREDITS ALLOTTED:

Theory : 03

Practical : 01

Total credits : 04

Course Outcomes:

After completion of the course students will be able to

1. Explain the basic concepts of bond forming and reactivity.
2. Describe the principles and applications of spectroscopic techniques such as infra-red UV/Visible absorption spectrometry.
3. Demonstrate the principles and functions of the UV and IR spectroscopy for chemical investigations.
4. Recognize the use of catalysts for industrially important processes.
5. Comprehend Structure-Property Relationship.
6. Interpret concept of Surface and Interfacial Chemistry.

Topics covered

UNIT-I	Bonding and reactivity: Aromaticity-conditions necessary for delocalization of electrons, resonance structures stability rules, resonance in phenol, aniline, benzaldehyde, nitrobenzene molecules, Effect of inductive effect and resonance on pKa and pKb values of acids and bases. Reaction intermediates –carbonations, carban ions, free radicals and their stability. Types of reagents, types of reactions.	(06 Hours)
UNIT-II	Reaction mechanisms: Substitution at saturated carbon (SN1, SN2)- mechanism, factors favoring. Electrophilic aromatic substitution in benzene and mono substituted benzenes, activating and deactivating groups , nitration, Friedal-Craft reactions, sulphonation, diazotization. Nucleophilic substitution on on carbonyl carbon. Addition of HX on C=C 1, 2-Eliminations- E1mechanism, E 2, (Saytzeff, Hoffman products), factors favoring. Rearrangements- Beckman, Claisen, Reformatsky.	(06Hours)
UNIT-III	Instrumental methods of chemical analysis: UV-Visible spectroscopy: Lambert-Beer law, λ max, calculation of λ max for olefinic and cyclic structures, instrumentation, interpretation of spectra, applications. IR Spectroscopy: Introduction, instrumentation (double beam spectrophotometer) characteristic absorption in functional and finger print regions, interpretation of spectra, applications.	(06 Hours)
UNIT-IV	Catalysis: Introduction, types of catalyst, criteria or Characteristics of catalyst, adsorption theory of catalysis, catalytic promoters or activators, catalytic poisons, Enzyme catalysis, Applications of catalysts for industrially important processes.	(06 Hours)
UNIT-V	Structure –Property Relationship: Molecular interactions and bonds weaker than covalent bonds, e.g. hydrogen bond,dipole interaction,VDW forces etc.and there effects on various properties	(06 Hours)

	such as refractive index ,viscosity, surface tension, density, thermal conductivity, specific heat, diffusivity, melting point, boiling point, vapor pressure, heat of formation, latent of diffusion and vaporization, non ideal behavior in solutions, group contribution methods for estimation of these properties(including those of polymers and polymeric solutions).	
UNIT-VI	Surface and Interfacial Chemistry: Concept of surface /interfacial energy and surface /interfacial tension, Thermodynamics of surfaces, Gibbs adsorption equation and isotherm, Curved surfaces-Young, Laplace, Kelvin and Thompson equations contact angle and wetting phenomena, adhesion, cohesion, surface active agents: types and applications, surfactant aggregates, emulsions and micro emulsions preparation, stability and application.	(06 Hours)
List of Experiments:		
Term work will consist of the experiments listed below, of which at least eight should be performed in laboratory by the students.		
1.	Preparation of benzoic acid from benzamide.	
2.	Preparation of aspirin from salicylic acid.	
3.	Conductometric titration between strong acid and strong base.	
4.	Determination of percentage purity of sodium Bicarbonate by gravimetry.	
5.	Estimation of Cu ⁺⁺ ions by spectrophotometer/colorimeter.	
6.	Purification of organic compounds by crystallization and sublimation.	
7.	To determine the number of molecules of water of crystallization in BaCl ₂ .2H ₂ O by heating.	
8.	Volumetric estimation of aniline from the given solution.	
9.	Volumetric estimation of acetone from the given solution.	
10.	Determine viscosity of given liquids by Ostwald's viscometer.	
11.	To determine ΔH, ΔG,ΔS of the reaction, $Zn(s) + Cu^{2+}(aq) \longrightarrow Zn^{2+}(aq) + Cu(s)$	
12	Preparation of tetramine copper (II) sulphate.	
13	Preparation of potassiumtrioxalato aluminate.	
14	Preparation of crystal of potash alum.	
15	To determine the equivalent weight of the given metal (Zn or Mg) eudiometrically.	
Assignments:		
1	What is resonance effect? Draw resonating structure of aniline, phenol, phenoxide ion.	
2	Nucleophilic substitution.	
3	Conductometric titrations.	
4	Industrial applications of catalysts.	
5	Adsorption theory of catalysis.	
6	Gibbs adsorption equation and isotherm	
Reference Books		
1	Instrumental methods of chemical analysis ----B.K.Sharma, Goel publ.)	
2	Instrumental methods of chemical analysis ----Chatwal –Anand	
3	Organic chemistry –I L Finar volume I and II	
4	Engineering Chemistry ---S.S.Dara	
5	Physical chemistry –P L Soni	

6	Atkins P.W. and Paula., Physical Chemistry, 8 th Edn., Oxford University Press.	
7	Inorganic chemistry ----Cotton, Wilkinson	
8	Spectroscopy ---Kalsi	
9	Vogels text book of quantitative chemical analysis. (5 th Edn.)	
Syllabus for Unit Test:		
Unit Test -I	UNIT – I ,II,III	
Unit Test -II	UNIT – IV,V,VI

EXAMINATION SCHEME:		
CREDITS ALLOTTED:		
Lectures	: 3Hours/Week	End Semester Examination : 60 Marks
Tutorial	: 1 Hour /Week	Unit Test : 20 Marks
Total	: 4 Hours/Week	Continuous Assessment : 20 Marks.
		Term Work/Oral : 25 Marks
		Total : 125 Marks
		Theory : 03
		Tutorial : 01
		Total credits : 04
Course Outcomes:		
After completion of the course students will be able to		
1.	Explain the concept of units and dimensions and solve the problems on basic chemical calculations.	
2.	Describe the concept of material balance without chemical reactions and solve the problems involved in various unit operations.	
3.	Explain the concept of material balance involving chemical reactions and solve the problems on unit processes carried out in chemical industry.	
4.	Explain the concept of recycle, bypass, purge operations and solve problems based on humidification, recycle, bypass and purge operations.	
5.	Interpret the concepts of energy balance and solve numerical based on them.	
6.	Apply the knowledge of gross and net calorific values of fuel and solve the problems based on them.	
Topics covered		
UNIT-I	Basic Chemical Calculations: Units and dimensions for mass and energy calculation for solid, liquid and gas; Mole concept; Basic composition calculation for homogeneous, two phase and three phase systems,	(08 Hours)
UNIT-II	Material balances without Chemical Reactions: Generalized law of conservation of mass; Mass conservation without chemical reaction; Mass balance for unit operations encountered in chemical process industry : Distillation, extraction, evaporation, blending etc.	(08 Hours)
UNIT-III	Material balances involving Chemical Reactions: Generalization of law of conservation of mass involving chemical reaction and its simplification; Chemical equations and stoichiometry; Some basic concepts: conversion, yield, selectivity; Material balance for unit processes encountered in chemical process industry: nitration, esterification, acylation, sulfonation etc.	(08 Hours)
UNIT-IV	Recycle, bypass and purge operations: Necessity of recycle, bypass and purge streams; Basic calculations of recycle, bypass and purge streams for unit operations and unit processes. Industrial examples of recycling, bypassing and purging with complete mass balance viz. biofuel synthesis, food processing etc.; Humidification operation.	(08 Hours)
UNIT-V	Energy Balance: Basic concepts; heat capacity; Sensible heat and latent heat: Clausius-Clapeyron equation; standard heat of formation, combustion, reaction, Hess's law; General equation of energy balance; Energy balance approach and calculations for exothermic and endothermic reactions with industrial examples; Steam table and its utility; Utility	(08 Hours)

	energy balance calculations.	
UNIT-VI	Fuels and Combustion: Types of fuels: solid, liquid and gas; Calculations of energy content of fuel; Analysis of fuel; oxygen requirement and excessity; Adiabatic flame temperature calculations.	(08 Hours)
Term Work/ Tutorial:		
Term work includes numerical on the following topics.		
1.	Basic chemical calculations.	
2.	Material balances without chemical reactions.	
3.	Material balances involving chemical reactions.	
4.	Recycle, bypass, purge and humidification operation.	
5.	Energy balance.	
6.	Fuels and combustion.	
Assignment:		
1.	Mass and energy balance for any one of following unit operations for given system.	
	a) Distillation	
	b) Evaporation	
	c) Extraction	
	d) Crystallization	
	e) Drying. etc	
2.	Mass and energy balance for any one of following unit processes for given system. These assignment may include overall energy and/or mass balance or energy and/or mass balance over a given chemical process equipment.	
	a) Nitration	
	b) Esterification	
	c) Acylation	
	d) Fermentation	
	e) Sulfonation etc.	
3.	Students have to visit chemical industry and prepare a detailed report on various unit operations and unit processes used in industry.	
4.	Measurement of calorific values of any two types of fuel.	
5.	Group discussions on mass and energy balance for unit operations and unit processes carried out in chemical industry	
6.	Solve last five years GATE question papers with reference to chemical process calculations.	
7.	Students have to study any five NPTEL videos related to chemical process calculations and prepare/present power point presentation.	
8.	Numericals based on above six units.	
9.	Technical interview based on knowledge of chemical process calculations.	
10.	Prepare models for recycle, bypass and purge operations carried out in chemical industry.	
11.	With the help of this subject knowledge, write a report on how you would apply your concepts in industry.	
12.	Prepare a report on unit operations which are newly introduced in the current year.	
13.	Write a report on your visit to research and development laboratory of national/international repute.	
In addition to these above stated assignments concern faculty member may design his/her won.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

MECHANICAL OPERATION

Designation: Professional Core

Course Pre-requisites: None

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Lectures	: 4 Hours/Week	End Semester Examination	: 60 Marks	Theory	: 04
Practical	: 2 Hours /Week	Unit Test	: 20 Marks	Practical	: 01
Total	: 6 Hours/Week	Continuous Assessment	: 20 Marks	Total credits	: 05
		Term Work/Practical	: 50 Marks		
		Total	: 150 Marks		

Course Outcomes:

After completion of the course students will be able to

1. Understand the concept of particle size measurement, distribution and analyze the performance of size reduction equipment.
2. Understand the concept of solid storage and solid conveying.
3. Understand the concept of mixing and Calculate the power requirement for agitator.
4. Understand the concept of particle mechanics and sedimentation
5. Understand the concepts of filtration.
6. Understand the concept of separation of solids from fluids.

Topics covered

UNIT-I	<p>Properties of Solid and Size Reduction Properties of solid:- Particle size and shape, Mixtures of particles, Cumulative and differential screen analysis, Determination of particle size, Screen effectiveness and capacity, Industrial screening equipments. Size Reduction:- Crushing efficiency, energy requirements calculations by using different crushing laws, Size reduction equipments: Primary crushers, secondary crushers, Intermediate & fine grinders, Ultra fine grinders, Cutting machines, open circuit & Closed circuit grinding.</p>	(08 Hours)
UNIT-II	<p>Handling and Transport of Solids Storage of Solids:- Bins, silos, hoppers, Janseen's equation, characteristics of Bulk solids. Transport of Solids:- Conveyors: Working principles, Construction, Advantages, Disadvantages and design calculation of Screw conveyors, Belt Conveyors, Chain & Flight conveyors, Bucket elevators, Pneumatic conveyors.</p>	(08Hours)
UNIT-III	<p>Mixing and Agitation Necessity of mixing & agitation in chemical industries, Mixers for pastes and plastic masses. Mixers for dry powders. Criteria for mixer effectiveness. Mixing index in blending granular solids. Rate of mixing. Types of equipment, Mixing characteristics, Power consumption, Mixing index calculations, Agitator selection.</p>	(08 Hours)
UNIT-IV	<p>Sedimentation Gravity settling method: Motion of particles in fluid, drag force, drag coefficients, effect of particle shape, Stock's law, hindered settling, Terminal velocity, sink and float method, differential settling. Batch sedimentation, equipments for sedimentation, Kynch theory of sedimentation, calculation of area and depth of batch thickeners and continuous thickeners.</p>	(08 Hours)
UNIT-V	<p>Filtration Filter media and filter aids, classification of filtration, pressure drop through filter cake, filter medium resistance, specific cake resistance, Continuous Filtration,</p>	(08 Hours)

	Washing and dewatering of filter cakes, Centrifugal filtration. Selection of filtration equipment.	
UNIT-VI	Separation of solids from fluids Froth flotation, magnetic separator, scrubbers, fiber and fabric filter, and electrostatic precipitators. Mineral jig, cyclone separator, hydro cyclone types and centrifuges, centrifugal clarifier.	(08 Hours)
List of Experiments:		
Term work will consist of the experiments listed below, of which at least eight should be performed in laboratory by the students.		
1.	To determine effectiveness of given set of standard screen.	
2.	To determine energy consumption and crushing law constants for jaw crusher.	
3.	To determine Critical speed of Ball mill & Average particle size of the product obtained in ball mill.	
4.	To determine mixing Index of a mixture in Ribbon Blender. OR To determine mixing Index of mixture in Sigma Mixer.	
5.	To determine filter medium resistance and cake resistance by using Vacuum Leaf filter.	
6.	To determine filter medium resistance and cake resistance by using Plate & frame Filter Press OR by using centrifuge machine.	
7.	To determine area of batch thickener by conducting batch sedimentation test.	
8.	To determine separation efficiency by using froth flotation cell.	
9.	To determine separation efficiency by using magnetic separator.	
10.	To determine efficiency of Cyclone separator.	
Assignments:		
1	Pilot scale solid-liquid fluidization: Expansion characteristics of solids	
2	Estimate power consumption for homogeneous system	
3	Industry related unit operation (ANY ONE INDUSTRY) detailing of it.	
4	How does filtration fit into the water treatment process?	
5	How Does Filtration clean water?	
6	What types of filters are used for water treatment? Explain in brief	
7	Explain hand pump water filter	
8	How does sedimentation fit in to the waste water treatment process?	
9	What zones are present in sedimentation basin?	
10	How is sedimentation sludge disposed of?	
11	What is surface loading rate explain in brief. The flow into clarifier is 3.2 MGD in tank 80 feet long and 40 feet wide. what is surface loading rate?	
12	Recent trends in particle size technology.	
13	Watch the NPTEL video on this subject of any TWO modules and summarize it	
14	Solve numerical problems asked in previous THREE year question papers.	
15	Solve questions asked on filtration in previous THREE year question papers.	
16	If your particles are not spherical which equivalent particle size would be suitable to calculate for the purpose of filtration	
17	What media are used in filters? What factors affect filter efficiency?

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE
B.Tech (Chemical) - 2014 Course
SEMESTER-IV

ENGINEERING MATHEMATICS- III		
Designation: Professional Core		
Course Pre-requisites:		
Students should have		
Basic knowledge of Mathematics including derivative, integration etc.		
TEACHING SCHEME:		
EXAMINATION SCHEME:		
CREDITS ALLOTTED:		
Lectures : 3Hours/Week	End Semester Examination : 60 Marks	Theory : 04
Tutorial : 1 Hour /Week	Unit Test : 20 Marks	Total credits : 04
Total : 4 Hours/Week	Continuous Assessment : 20 Marks	
	Total : 100 Marks	
Course Outcomes:		
After completion of the course students will be able to		
1.	To develop an ability of mathematical modeling of systems using differential equations and ability to solve linear differential equations with constant coefficient	
2.	To develop an ability to solve the Laplace, heat and wave equations for a variety of boundary conditions in domains of simple geometry and with simple boundary conditions; the techniques available will include, separation of variables	
3.	To develop an ability to solve problems on Fourier sine and cosine transform	
4.	To develop an ability to use theorems to compute the Laplace transform, inverse Laplace transforms	
5.	To develop an ability to calculate the gradients and directional derivatives of functions of several variables	
6.	To develop an ability to use Green's theorem to evaluate line integrals along simple closed contours on the plane	
Topics covered		
UNIT-I	Linear Differential Equations (LDE): Solution of nth order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy's & Legendre's DE, Solution of Simultaneous & Symmetric Simultaneous DE. Applications of LDE to chemical engineering problems and allied engineering.	(08 Hours)
UNIT-II	Partial Differential Equations (PDE): Solution of Partial Differential Equations 1) $\frac{\partial u}{\partial t} = a^2 \frac{\partial^2 u}{\partial x^2}$, 2) $\frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2}$, 3) $\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0$	(08 Hours)

	By separating variables only. Applications of PDE to problems of Chemical and allied engineering.	
UNIT-III	Fourier Transform (FT): Fourier Integral theorem. Sine & Cosine Integrals. Fourier Transform, Fourier Cosine Transform, Fourier Sine Transforms and their inverses. Finite FT, Application of FT to problems on one and two dimensional heat flow problems.	(08 Hours)
UNIT-IV	Laplace Transform (LT): Definition of LT, Inverse LT. Properties & theorems. LT of standard functions. LT of some special functions viz. error, 1st order Bessel's, Periodic, Unit Step, Unit Impulse, ramp, jump, parabolic, Si(t) and Ei(t). Problems on finding LT & inverse LT. Applications of LT for solving ordinary differential equations, liquid level systems, consisting of single tank and two tanks in series (interacting and non-interacting systems), second order systems (damped vibrator).	(08 Hours)
UNIT-V	Vector Differentiation: Physical Interpretation of Vector Differentiation. Radial, Transverse, Tangential & Normal components of Velocity and Acceleration. Vector differential operator. Gradient, Divergence & Curl. Directional derivative. Vector identities. Irrotational & Solenoidal fields. Application of vector differentiation to chemical engineering.	(08 Hours)
UNIT-VI	Vector Integration: Line integral, Surface & Volume integrals. Work done, Green's Lemma, Gauss-Divergence and Stoke's Theorem, Applications of Vectors to problems in Fluid Mechanics, Continuity equations, Stream lines, Equations of motion, Bernoulli's equation.	(08 Hours)

Assignments:

1	Linear differential equation with constants coefficients.
2	Application of LDE and partial differential equations.
3	Fourier transform and inverse fourier a function which is neither even nor odd ,for even and odd function
4	Laplace transform and invese laplace transform and its application to differential equation
5	Vector identities and application of vector differential in mechanics.
6	line integral, surface integral and volume integral.

7.	Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar (Pune Vidyarthi Griha Prakashan, Pune).
8.	Advanced Engineering Mathematics with MATLAB, 2e, by Thomas L. Harman, James Dabney and Norman Richert (Brooks/Cole, Thomson Learning).

Syllabus for Unit Test:

Unit Test -I	UNIT – I, II, III
Unit Test -II	UNIT – IV, V, VI

FLUID FLOW OPERATIONS

Designation: Professional Core

Course Pre-requisites:

Students should have knowledge of

1. Physics, Engineering Science and Engineering Mechanics.
2. Elements of Civil Engineering

TEACHING SCHEME:

Lectures : 4 Hours/Week
 Practical : 2 Hour /Week
 Total : 6 Hours/Week

EXAMINATION SCHEME:

End Semester Examination : 60 Marks
 Unit Test : 20 Marks
 Continuous Assessment : 20 Marks.
 Term Work/Practical : 50 Marks
 Total : 150 Marks

CREDITS ALLOTTED:

Theory : 04
 Practical : 01
 Total credits : 05

Course Outcomes:

After completion of the course students will be able to

1. Describe the various properties of fluids and basic concept of fluid flow.
2. Apply the basic equations of fluid flow like Continuity and Bernoulli's equation for solving numerical in fluid flow operations.
3. Apply the basics of turbulent flow and flow measuring devices for solving numerical in fluid flow operations
4. Identify and explain the various types of energy losses for fluid flowing through a pipe.
5. Identify and select various types of fluid moving equipments for fluid flow
6. Explain the construction and working of fluidized bed reactor.

Topics covered

UNIT - I	Basic Concepts of Fluid Flow: Types of fluid: Newtonian and Non-Newtonian fluids; Properties of fluids; Concept of viscosity, calculation and measurement; Models for non-Newtonian fluids; Types of flow: laminar, transition and turbulent and their characteristics; Concept of fluid pressure, pressure measurement and calculation.	(08 Hours)
UNIT - II	Equations of Fluid Flow: Basic equations of fluid flow; Equation of continuity and motion (cartesian, cylindrical and spherical coordinates) in laminar flow and its applications for calculation of velocity profiles, shear stress distribution, volumetric flow rate, power etc. in engineering applications; Flow of incompressible fluids.	(08 Hours)
UNIT - III	Turbulent Flow: Basics of turbulent flow; Equations of continuity and motion for turbulent flows: Reynolds averaging, Boussinesq hypothesis, Prandtl mixing length theory, Turbulent models; Flow measurement: flow measuring devices; Velocity profile;	(08 Hours)
UNIT - IV	Pressure Drop Calculation and Measurement in Pipe Flow: Darcy-Weisbach equation; Bernoulli's equation; Friction factor: laminar, transition and turbulent flow; Models available to predict friction factor; Friction factor: valves, bends, fittings, sudden expansion and contraction, sudden obstruction etc.; Equivalent diameter concept for energy losses.	(08 Hours)

UNIT - V	Flow Moving Equipments: Pumps: Types; Selection and specifications; characteristic curves; cavitation phenomena; Net positive suction head (NPSH) calculations; System and operating parameters affecting pump performance; Calculation of power requirement. Blowers and compressor: Selection and specifications; Factors affecting performance; Power calculations for given duty.	(08 Hours)
UNIT - VI	Flow Through Solids: Expansion characteristics of solids: Drag and drag coefficient (C_D), terminal settling velocity, settling in presence of other particles; voidage-superficial fluid velocity relationship, C_D Vs N_{Re} ; Boundary layer separation; Pressure drop calculation and measurement: skin and form friction, effect of system, operating and geometrical parameters, Ergun equation, experimental methods of measuring pressure drop. Applications of fluidization: catalytic cracking, chromatographic separation etc.	(08 Hours)

Term Work:

Term work will consist of the experiments listed below, out of which at least eight experiments should be performed in laboratory by the students.

1.	To determine kinematic viscosity and to study the effect of temperature on kinematic viscosity of given oil.
2.	To study flow characteristics using Reynolds apparatus and determine Reynolds number.
3.	To determine the coefficient of discharge for venturimeter.
4.	To determine the coefficient of discharge for orificemeter.
5.	To determine Darcy Weisbach coefficient of friction of laminar and turbulent flow for given pipe.
6.	To determine friction and pressure drop for flow through helical/spiral coils.
7.	To find losses due to sudden expansion and contraction in pipe.
8.	To calculate minimum fluidization velocity using fluidized bed reactor.
9.	To verify Bernoulli's theorem.
10.	To study characteristics of centrifugal pump.
11.	To Study Darcy's law.
12.	To study pressure drop in packed bed for different fluid velocities.
13.	To determine the coefficient of discharge for different notches like rectangular notch, 45° V notch, 60° V notch and trapezoidal notch.
14.	To determine terminal velocity of particles in fluids of different viscosity and plot a graph of drag coefficient (C_D) as a function of N_{Re} .

Assignments:

1.	Numericals based on above six units.
2.	Visit to suppliers and prepare a report on detailed specifications of following fluid moving equipments.
	a) Pumps.
	b) Blowers.
	c) Compressors.
3.	Visit to suppliers and prepare a report on detailed specifications of following flow measuring devices.
	a) Venturimeter.
	b) Orificemeter.
	c) Pitot tube.
	d) Roatameters.
4.	Students have to study any five NPTEL videos related to fluid flow operations and prepare/present power point presentation.

5.	Students have to visit chemical industry and make a detailed report on overall fluid flow operations.
6.	Group discussions on any one of the following topics.
	a) Importance of fluid flow operations in chemical industries.
	b) Pumps, blowers and compressors.
	c) Flow measuring devices.
7.	Prepare models for various types of valves and write industrial applications.
8.	Prepare models for various types of bends and write industrial applications.
9.	Prepare models for various types of fittings and write industrial applications.
10.	Prepare a report on fluid flow operations which are newly introduced in the current year.
11.	Solve last five years GATE question papers with reference to fluid flow operations subject.
12.	Write a report on your visit to research and development laboratory of national/international repute.
13.	Technical interview based on knowledge of fluid flow operations.
14.	With the help of this subject knowledge, write a report on how you would apply your concepts in industry.
In addition to these above stated assignments concern faculty member may design his/her won.

Syllabus for Unit Test:

Unit Test - I	UNIT– I, II, III
Unit Test - II	UNIT– IV, V, VI

PROCESS HEAT TRANSFER

Designation: Professional Core

Course Pre-requisites:

Students should have

Basic knowledge of units and dimensions, mathematical concepts like differential and integral etc, fluid flow concepts like continuity equation, momentum balance.

TEACHING SCHEME:

Lectures : 4 Hours/Week

Practical : 2 Hour /Week

Total : 6 Hours/Week

EXAMINATION SCHEME:

End Semester Examination : 60 Marks

Unit Test : 20 Marks

Continuous Assessment : 20 Marks

Termwork / practical :50 Marks

Total :150 Marks

CREDITS ALLOTTED:

Theory : 04

Practical : 01

Total credits : 05

Course Outcomes:

After completion of the course students would be able to

1. Evaluate heat loss through pipe insulation, critical and optimum thickness for insulation.
2. Identify the importance of dimensional analysis and derive the dimensionless numbers.
3. Calculate the heat transfer coefficient and heat transfer rate for vertical, horizontal plate in case of film-wise condensation.
4. Apply appropriate empirical correlations to estimate critical heat flux in boiling.
5. Explain the evaporation phenomena and estimate economy of the evaporator.
6. Compute heat transfer rates in case of conduction, convection and radiation.

Topics covered

UNIT-I	<p>Heat conduction Thermal conductivity: solids, liquids, and gases; Generalized equation for heat conduction; Steady state heat conduction through: plane slab, composite slab, hollow cylinder, composite cylinder and hollow sphere; Heat loss through pipe: maximum loss, critical and optimum thickness of insulation; its application for the calculation of temperature profile, maximum temperature rise or drop, heat flow at surface; Heat transfer through extended surfaces of uniform cross section.</p>	(08 Hours)
UNIT-II	<p>Convection without phase change Basic concepts of convection; Natural and forced convection; Dimensional analysis: dimensionless groups and their physical significance; Film coefficients; Factors affecting film coefficient; Fouling resistance; Empirical equations for convection heat transfer in turbulent flow through tubes, through annulus and over a flat plate; Steady state convection heat transfer equation to calculate temperature distribution in laminar and turbulent flows.</p>	(08 Hours)
UNIT-III	<p>Convection with phase change Condensation basic concepts; Dropwise and filmwise condensation; Condensation on surfaces-Nusselt's theory: vertical surface, horizontal surface, and inclined surface. Boiling types; Effect of physical properties; Pool boiling curve; Correlations used in boiling; Concept of critical heat flux.</p>	(08 Hours)
UNIT-IV	<p>Radiation Basic concepts; Thermal radiation; Black body radiation; Properties and laws of radiation; The radiation shape factor; Laws of shape factor; Various cases of radiation between two surfaces; Radiation shields; Radiant heat exchange in an enclosure having black surfaces.</p>	(08 Hours)
UNIT-V	<p>Evaporation</p>	(08 Hours)

	Introduction; Types of evaporators; Material and energy balance; Boiling point elevation; Capacity and economy; Multiple effect evaporators.	
UNIT-VI	Unsteady state processes Unsteady state heat conduction: infinite slab, infinite cylinder, sphere. Heat transfer in agitated vessels: calculation of film coefficient in coil, jacket; heating and cooling times; Application to batch reactor and processes.	(08 Hours)
Assignments		
1.	Write a report on the recent advances in heat transfer processes with reference to the current year.	
2.	Solve old (last five years) question papers with reference to particular topic.	
3.	Prepare a model for any of the heat transfer equipment.	
4.	Prepare a report on heat transfer equipments which are newly introduced in the current year.	
5.	Give fifteen minutes presentation (seminar) on particular topic and prepare a report.	
6.	Evaluate capacity and economy for any industrial evaporator.	
7.	Estimate how much heat transfer rate is decreased due to the scale formation on surface of industrial heat transfer equipment?	
8.	By determining optimum thickness of insulation give solution to an industrial problem to minimize the heat loss.	
9.	Design laboratory manuals better than existing ones with clearly shown specimen calculations.	
10.	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in industry.	
11.	Write a technical report on your visit to a process industry.	
12.	Solve old (last ten years) GATE question papers with reference to heat transfer subject.	
13.	Group discussion on the recent advances in heat transfer processes.	
14.	Write a report on your visit to research and development laboratory of national/international repute.	
15.	Technical interview based on the knowledge of heat transfer.	
In addition to these above stated assignments concerned faculty member may design his/her own assignments		
Term Work:		
Term work will consist of the experiments listed below, out of which any eight experiments are to be performed in laboratory by the students.		
1.	To determine rate of heat flow and thermal conductivity of an insulating material.	
2.	To determine thermal conductivity of a metal bar.	
3.	To study Newton's law of cooling to find rate of heat flow.	
4.	To determine the local heat transfer coefficients using the various correlations in natural convection.	
5.	To determine heat transfer coefficient in forced convection.	
6.	To study film wise condensation.	
7.	To study drop wise condensation.	
8.	To determine the critical heat flux	
9.	To study Stefan-Boltzman law and find the value of its constant.	
10.	To study evaporators.	
11.	To determine emissivity of an aluminum plate.	
12.	To study unsteady state processes.

Unit Test -II	UNIT – IV,V,VI

CHEMICAL PROCESS INDUSTRIES

Designation: Professional Core

Course Pre-requisites: None

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Lectures	: 02 Hours/Week	End Semester Examination	: 60 Marks	Theory	: 03
Tutorial	: 01 Hours /Week	Unit Test	: 20 Marks	Total credits	: 03
Total	: 03 Hours/Week	Continuous Assessment	: 20 Marks		
		Term Work/Oral	: 50Marks		
		Total	: 150 Marks		

Course Outcomes:

After completion of the course students will be able to

1. Understand the concept of Unit operation and Unit processes as well the significance of process flow diagram.
2. Understand the manufacturing processes for soda ash, caustic and chlorine and Indian scenario of chlor-alkali industries.
3. Understand manufacturing processes of sulfur and nitrogen industry
4. Understand nitration of hydrocarbons and typical industrial process for nitration
5. Understand sulfonation and sulfation process used in organic industry
6. Understand processes for various petrochemicals

Topics covered

UNIT-I	Concept of Unit Operation and Unit process: Unit operations and unit processes, Concept of block diagram, process flow diagram (ASME guidelines). Water for the chemical process industry and its treatment: Boiler feed-water, Cooling tower water, Process Plant water.	(08 Hours)
UNIT-II	Chlor -alkali industries: current status (Indian and global), Production and consumption pattern, Different processes for the manufacture of Soda ash, Caustic and chlorine	(08Hours)
UNIT-III	Sulfur Industry: Current status (Indian and global), Production and consumption pattern Sulfur and Manufacture of sulfuric acid, Different processes and comparison. Nitrogen Industry: Current status (Indian and global), Production and consumption pattern Ammonia, Nitric acid, Urea and other nitrogen fertilizers, Mixed fertilizers.	(08 Hours)
UNIT-IV	Nitration: Nitrating Agents, Kinetics and Mechanism of Aromatic Nitration, Nitration of Paraffinic hydrocarbons, Liquid phase nitration, Nitro compounds, and Commercial nitration process.	(08 Hours)
UNIT-V	Sulfonation and Sulfation: Sulfonating and sulfating agents and their principal applications, Sulfonation and Sulfation of aliphatic compounds, Sulfonation of aromatic compounds, Commercial sulfonation process.	(08 Hours)
UNIT-VI	Petrochemicals: Production of petrochemical precursors - olefins and aromatics, Production of ethylene, propylene, formaldehyde, methanol, ethylene oxide, ethanolamine, cumene, ethylene glycol, ethyl benzene	(08 Hours)

List of Practicals:

The practical shall include at least (6) assignments from the various units mentioned in the syllabus.

One industrial visit should be arranged to the process industry and students should prepare the report on the same as a part of the term work.

Expert Interaction:

Lecture(s) by eminent scholar(s) on the topic(s) mentioned in the syllabus.

Assignments:

1	One industrial visit should be arranged to the process industry and the students will prepare the report which includes the consumption pattern of the products produced, process flow diagram and process description, major engineering problems in the industry.
2	Students should prepare the plant-layout for the industry visited.
3	Students should visit one CETP (Central effluent Treatment Plant) nearby and prepare the report which includes different unit operations in CETP, Significance of each unit.
4	Students should visit one STP (Sewage treatment plant) and prepare the report which includes different unit operations in STP, block diagram.
5	Students should compile the list of vendors (manufacturers of pumps, contact, and address) along with the details like type, specifications, and costs and should prepare the comparative for the same.
6	Students should prepare the report on "Material of construction" for pumps for special applications using the data from assignment 4.
7	Students should make a report on "Indian scenario of inorganic industries" which will include the name of industries (from different chemical zones), products manufactured, and production capacity.
8	Students should make a report on "Fertilizer industries in Maharashtra and Gujarat" which will include the name of industries (from different chemical zones), products manufactured, and production capacity.
9	Model making of any one Unit operation used in chemical process industry.
10	Describe the different equipment used to run the process plant with different utilities.
11	Students should compile the list of Boiler manufacturers, contacts, and address along with their product range specifications.
12	Students should compile the list of vendors providing "water treatment plants" in chemical process industries along with their product specifications.
13	Give a presentation on "commercial aspects of petrochemical products".
14	AutoCAD drawing of process flow diagram for any one process from the syllabus

Text Books

1.	Dryden, C. E. "Outlines of Chemical Technology" (Edited and Revised by M.Gopal Rao and Sittig .M) East West Press. ,New Delhi,3 rd Edition(1997).
2.	Austin G. T » Shreve's Chemical Process Industries", 5th ed., McGraw Hill.(1984)
3.	Groggins, Unit process in organic synthesis, Tata McGraw-Hill Education

Reference Books

2	Kirk and Othmer, "Encyclopaedia of Chemical Technology" Wiley (2004).
3	Pandey G.N &Shukla.S.D, "Chemical Technology Vol - I" Vikas publication.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

CHEMICAL ENGINEERING THERMODYNAMICS-II

Designation: Professional Core

Course Pre-requisites:

Students should have knowledge of

- | | |
|----|---------------------------------------|
| 1. | Chemical Engineering Thermodynamics I |
| 2. | Mathematics |
| 3. | Chemistry, Physics |

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Lectures	: 3 Hours/Week	End Semester Examination	: 60 Marks	Theory	: 03
Tutorial	: 2 Hour /Week	Unit Test	: 20 Marks	Tutorial	: 01
		Continuous Assessment	: 20 Marks	Total credits	: 04
		Term Work/Oral	: 50 Marks		
		Total	: 150 Marks		

Course Outcomes:

After completion of the course students will be able to

- | | |
|----|---|
| 1. | a) Understand the concept of fugacity and its application to gaseous and liquid systems
b) Understand residual and excess properties to demarcate non- ideality in gaseous phase and liquid solution |
| 2. | a) Understand criteria of phase equilibrium and stability
b) Make typical phase equilibrium calculations pertaining to VLE, LLE, SLE, SVE, etc. |
| 3. | a) Perform bubble P, dew P, bubble T, and dew T calculations for VLE
b) Carry out thermodynamic consistency test for experimental VLE data |
| 4. | a) Understand the criterion for chemical reaction equilibrium
b) Establish relation of equilibrium constant to composition for gas phase and liquid phase reactions. |
| 5. | a) Calculate equilibrium constant for heterogeneous system
b) Understand phase rule for reacting system and its physical significance |
| 6. | Understand thermodynamics of liquid-liquid equilibrium. |

Topics covered

UNIT - I	<p>Solution Thermodynamics:</p> <p>Concept of chemical potential; chemical potential as a criterion of phase equilibria; Concept of non ideality in gaseous mixtures; Fugacity and fugacity coefficient for species in solution; Methods of determination of fugacity coefficient; Concept of non-ideality in liquid mixtures; Activity and</p>	(06 Hours)
-----------------	--	-------------------

	activity coefficient for species in solution; Excess properties; Gibbs excess energy; Model for estimation of excess property; Property change of mixing and heat effects in mixing.	
UNIT - II	Phase Equilibria: Criteria of phase equilibrium; Criterion of stability; Phase equilibria in single and multi component system; Phase rule: Duhems theorem; LLE, VLLE, SLE, and SVE; Phase diagrams; Dilute solution laws: Nernst's law, osmotic equilibrium.	(06 Hours)
UNIT - III	Vapor-liquid equilibrium (VLE): Qualitative behavior of VLE; Basic equation for vapor- liquid equilibrium; Liquid phase properties from VLE data; VLE at low to moderate pressures: excess Gibbs free energy models; Azeotropic data; VLE at high pressures; Multicomponent vapor- liquid equilibria; Bubble point and dew point calculations; Thermodynamic consistency test for VLE data.	(06 Hours)
UNIT - IV	Chemical reaction equilibria: The reaction coordinate; Application of equilibrium criteria to chemical reactions; The standard Gibbs energy change and the equilibrium constant; Effect of temperature on the equilibrium constant; Evaluation of equilibrium constant; Relation of equilibrium constants to composition; Phase rule for reacting systems; Multi-reaction equilibria.	(06 Hours)
UNIT - V	Heterogeneous reaction equilibrium: Notable industrial heterogeneous systems and thermodynamic role; The Gibbs energy change and equilibrium constant; Estimation of equilibrium constant for heterogeneous system by defining standard state of the phases involved; Pressure of decomposition; Simultaneous reactions; Combined physical and chemical equilibria.	(06 Hours)
UNIT - VI	Liquid-liquid Equilibria (LLE):	(06 Hours)

	Quantitative behavior of LLE; Basic equation governing LLE; Distribution coefficient (Partition Coefficient); Activity coefficient and its determination; Selection of extractant; Solubility parameters and estimation.	
Tutorials/Assignments:		
1	Questions involving fugacity and activity for the species in solution.	
2	Solving numerical in connection with phase equilibria.	
3	Solving numerical based on application of Rault's law for the calculation of dew point and bubble point	
4	Conducting surprise MCQ test for students.	
5	Draw P-xy and T-xy diagrams.	
6	Solving numerical based on chemical reaction equilibrium.	
7	Enhancement in collaborative learning is done through, group assignments that will be given to encourage students to work with classmates to discuss and complete homework assignments.	
8	Students have to study any five NPTEL videos related to Chemical Engineering Thermodynamics I and prepare/present power point presentation.	
9	Group discussions on any of the following topics: a) Importance of Phase equilibria in chemical industries. b) Thermodynamic properties for pure species and species in solution	
10	Preparation of a brief report on applicability of liquid-liquid equilibrium (LLE) in chemical engineering systems.	
11	Solve question papers of CET II of previous THREE years.	
12	Unsolved numerical from the reference books on various topics studied.	
Term Work:		
Term work includes minimum 08 assignments/problems on each unit covered		
Text Books/ References:		
1.	J. M. Smith and H. C. Van Ness, "Introduction to Chemical Engineering Thermodynamics", McGraw- Hill Publication	
2.	T. E. Daubert, "Chemical Engineering Thermodynamics", McGraw- Hill Publication

Total Credits
Semester V : 25
Semester VI : 25
Grand Total : 50

Elective I: Advanced Material Science

Designation: Elective

Course Pre-requisites:

- | | |
|-----------|--|
| 1. | Basic chemistry, Basic physics, Chemical Engineering Materials, Physical chemistry, Chemical Reaction Engineering, Chemical Engineering Thermodynamics |
|-----------|--|

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Lectures: 3 Hours/Week

End Semester Examination: 60 marks

Theory : 03

Continuous Assessment: 40 marks

Course Outcomes:

- | | |
|-----------|---|
| 1. | Explain basics of polymers and their classifications |
| 2. | Explain various polymer properties and the their effect on engineering properties |
| 3. | Determine suitable process for polymer synthesis and describe its mechanism |
| 4. | Understand the basics of polymer characterizations and discuss its effect on properties |
| 5. | Explain the formation of composites and blends in polymers |
| 6. | Explain the methods of polymer compounding and processing |

Topics covered

UNIT-I	Material composites Introduction to composite materials, factors influencing the properties of composite materials like fiber parameter, matrix, interface & molding methods. Phase selection criteria. Reinforcing mechanisms. Interfaces, advantages and disadvantages. Polymer composites. Reinforcing and matrix materials, prepregs, fiber winding techniques, fabrication techniques, laminates, mechanical behavior, etc.	(06 Hours)
UNIT-II	Composite and reinforcement Metal composites, types of reinforcement, chemical compatibility, fabrication processes, mechanical behavior and properties, ceramic composites. Matrices and reinforcement. Why to reinforce ceramics, fabrication methods, crack propagation and mechanical behavior.	(06 Hours)
UNIT-III	Carbon composites Carbon composites, their properties, fabrication methods and their applications, ablative polymers, their applications, air craft materials, introduction to nonmaterial, synthesis & characterization of nonmaterial, application of nonmaterial with special reference to chemical engineering.	(06 Hours)
UNIT-IV	Nuclear materials Atomic structure, atomic number, mass number, isotopes, nuclear energy and nuclear forces, binding energy, nuclear stability, radioactivity, nuclear reactions, nuclear fissions, nuclear fusion, Types of waste –disposal – radiation hazards and prevention	(06 Hours)
UNIT-V	Biomaterials	(06 Hours)

	Properties of biomaterials: Physical, thermal, electrical and optical properties of bio-materials and their application to processing. Novel Biomaterials and Uses in Engineering and Tissue Engineering: Hydrogels, self-assembling peptides, Implants materials: Metallic implant materials, hydroxyapatite glass ceramics carbons, Polymeric implant, medical applications.	Hours)
UNIT-VI	Nanomaterials Basics - distinction between molecules, nanoparticles and bulk materials; size-dependent properties. Nanoparticles: nano cluster, nano rod, nanotube (CNT) and nanowire. Synthesis: precipitation, thermolysis, hydrothermal, solvothermal, electrode position, chemical vapour deposition, laser ablation; Properties and applications	(06 Hours)

Assignments:

1. Prepare the report on any advanced material comprising its significance, preparation, characterization, processing, properties and application

Syllabus for Unit Test:

Unit Test –I	UNIT – I ,II,III
Unit Test –II	UNIT – IV,V,VI

ELECTIVE I COMBUSTION ENGINEERING

Designation: Elective		
Course Pre-requisites:		
Students should have		
1.	Basic knowledge of chemistry	
TEACHING SCHEME:		
EXAMINATION SCHEME:		
CREDITS ALLOTTED:		
Lectures: 3Hours/Week	End Semester Examination: 60 Marks	Theory : 03
	Unit Test: 20 Marks	Total credits: 03
	Continuous Assessment: 20 Marks.	
	Total : 100 Marks	
Course Outcomes:		
After completion of the course students will be able to		
1.	Identify the fundamental definitions, properties and various measurement techniques for fuels.	
2.	Describe the combustion techniques of solid fuel i.e. coal.	
3.	Explain the concept of exploration of crude petroleum and refinery equipments.	
4.	Explain about different important gaseous fuels	
5.	Emphasis is given to combustion of various fuels in the light of thermodynamics and applies the knowledge of gross and net calorific values of fuel and solves the problems based on them.	
6.	Describe the incineration technology.	
Topics covered		
UNIT-I	Introduction: History of Fuels : History of solid fuel, History of liquid fuels and gaseous fuels, Production, present scenario and consumption pattern of fuels, Fundamental definitions, properties and various measurements: Definitions and properties of solid fuels, Definitions and properties of liquid and gaseous fuels, Various measurement techniques.	(06 Hours)
UNIT-II	Solid Fossil Fuel (Coal): Coal classification, composition and basis, Coal mining, Coal preparation and washing, Combustion of coal and coke making (Action of heat on different coal samples, Different types of coal combustion techniques, Coal tar distillation), Coal liquefaction (Direct liquefaction, Indirect liquefaction), Coal gasification	(06 Hours)
UNIT-III	Liquid Fossil Fuel (Petroleum): Exploration of crude petroleum, Evaluation of crude, Distillation (Atmospheric distillation, Vacuum distillation), Secondary processing (Cracking, Thermal cracking, Visbreaking, Coking, Catalytic cracking, Reforming of naphtha, Hydrotreatment, dewaxing, deasphalting), Refinery equipments.	(06 Hours)
UNIT-IV	Gaseous Fuels: Natural gas and LPG, Producer gas, Water gas, Hydrogen, Acetylene, Other fuel gases	(06 Hours)
UNIT-V	Combustion Technology: Fundamentals of thermochemistry, Combustion air calculation, Calculation of calorific value of fuels, Adiabatic flame temperature calculation, Mechanism and kinetics of combustion, Flame properties, Combustion burners, Combustion furnaces, Internal combustion engines	(06 Hours)
UNIT-VI	Incineration Technology: Classification, Key Issues, Pretreatment of Waste, Sorting, Homogenization, Moving Grate Incineration, Rotary Kiln Incineration, Fluidized Bed Incineration, advantages, disadvantages and applications of incineration. Furnaces and Boilers.	(06 Hours)

Assignment:	
1.	Presentations on any topic of combustion engineering.
2.	Recent trends in combustion technology.
3.	Alternative fuel for engines.
4.	Measurement of calorific values of any two types of fuel.
5.	Detail study on solid fossil fuel.
6.	Solve last five years GATE question papers with reference to combustion engineering.
7.	Students have to study any five NPTEL videos related to combustion engineering and prepare/present power point presentation.
8.	Numerical based on above fifth unit.
9.	Detail study on liquid fossil fuel.
10.	Detail study on gaseous fuels.
11.	With the help of this subject knowledge, write a report on how you would apply your concepts in industry.
12.	Prepare a report on combustion technology which is newly introduced in the current year.
13.	Write a report on incineration technology.
In addition to these above stated assignments concern faculty member may design his/her won.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

ELECTIVE-I : MULTIPHASE FLOW

Designation: Elective

Course Pre-requisites:

Students should have basic knowledge of

1 | Fluid Flow Operations

2 | Process Heat Transfer

TEACHING SCHEME:

Lectures : 3 Hours/Week

EXAMINATION SCHEME:

End Semester Examination : 60 Marks

Continuous Assessment : 40 Marks

Total : 100 Marks

CREDITS ALLOTTED:

Theory : 03

Total credits : 03

Course Outcomes:

After completion of the course students will be able to

1. Explain the concept of two phase flow and describe the flow types, flow regimes in horizontal and vertical flow
2. Describe the two phase flow classifications.
3. Explain the mixing power correlations.
4. Identify and explain packed bed, fluidized bed, bubble column and its design aspects.
5. Explain the concept of multiphase flow and identify the flow regimes.
6. Explain cavitation and RTD in multiphase flow system.

Topics covered

UNIT-I	Gas/liquid and liquid/liquid Two phase flow: Scope and significance of multiphase flows, Dimensionless numbers in multiphase flows; Flow types and regimes in horizontal and vertical flow, Regime maps, Behaviour of non-Newtonian fluids in two phase flow.	(06 Hours)
UNIT-II	Flow Classification: Two-phase Co-current flow of Gas-Liquid, Gas-Solid and Liquid-Liquid, Upward and Downward Flow in Vertical pipes. Suspensions of Solid and their transport in Horizontal Pipes. Drag Reduction Phenomena, Laminar, Turbulent and Creeping Flow Regimes.	(06 Hours)
UNIT-III	Mixing Power Correlations: Theories of Intensity and Scale of Turbulence. Calculation of Circulation Velocities and Power Consumption in Agitated Vessels for Newtonian and Non-Newtonian Fluids. Blending and Mixing of Phases, flow patterns. Power requires for aeration to suspend to an Immiscible Liquid or Solids in Slurry Reactors, Prediction of optimum speed of Impeller Rotor. Mixing equipments.	(06 Hours)
UNIT-IV	Quantification of Flow System: Prediction of Holdup, Pressure Drop and bubble size in pipe flow, Lockhart – Martinelli Parameters, Bubble Column and its Design aspects; Flow through Packed Bed and Fluidized Bed, Minimum Carryover Velocity. Holdup Ratios, Pressure Drop and Transport Velocities and their prediction. Solid-Fluid Conveying and Settling.	(06 Hours)
UNIT-V	Flow in Three - Phase Systems:	(06 Hours)

	Introduction to three phase flow; Flow regime identification, pressure drop, void fraction and flow rate measurement, Prediction of Holdup, Pressure Drop and throughput velocities in three –phase system. phase separation and settling behaviour, analysis of stratified and bubble flow, formation of bubbles and drops and their size distribution and hold up in different flow system, momentum and energy relations.	
UNIT-VI	<p>RTD in multiphase flow system: Non-Ideal Flow: Residence time distribution of fluid in vessel, non-ideal flow patterns, E, F, C curve, Mean and variance, residence time, Models for non-ideal flow.</p> <p>Cavitation: Introduction, types of cavitation, mechanism of cavitation. Key features of bubble cavitation: cavitation inception, cavitation bubble collapse, shape distortion during bubble collapse, cavitation damage. Cavitation bubbles: observations of cavitating bubbles, cavitation noise and cavitation luminescence.</p>	(06 Hours)

Assignments

1	Give fifteen minutes presentation (seminar) on particular topic and prepare a report.
2	Students have to study any five NPTEL videos related to multiphase flow and prepare/present power point presentation.
3	Students have to visit chemical industry and make a detailed report on multiphase flow.
4	Write a report on the recent advances in multiphase flow with reference to the current year.
5	Prepare models for bubble column, packed bed and fluidized bed reactors.
6	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in industry.
7	Write a report on your visit to research and development laboratory of national/international repute.
8	Solve old (last five years) GATE question papers with reference to multiphase flow.
9	Group discussions on any one topic from above six units.
10	Technical interview based on the knowledge of multiphase flow.

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Syllabus for Unit Test:	
--------------------------------	--

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

Elective I Rheology

Designation: Elective

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 3 Hours/Week	End Semester Examination: 60 Marks	Theory : 03
Practical : ---	Unit Test: 20 Marks	Practical: ---
Total: 3Hours/Week	Continuous Assessment: 20 Marks	Total credits: 03
	Total :100 Marks	

Course Outcomes:

After completion of the course students would be able to

1. Apply the rheological models to study the rheology of non-Newtonian fluids
2. Describe the operation of instruments used for measurements of rheological properties
3. Obtain the rheological behavior of non-Newtonian fluids
4. Explain the rheological models for rubber compounds
5. Describe the models to represent behavior of polymer liquids
6. Obtain the variable influencing the rheology of fluids

Topics covered

UNIT-I	Introduction Types of fluid flow, time dependant fluids, shear rate dependant fluids, Newtonian and Non Newtonian fluids, Definition of Rheology, Rheological Perspective, The importance of nonlinearity, Solids and liquids, Components of rheological research: Rheometry, Constitutive equations.	(08 Hours)
UNIT-II	Rheological Models Power law fluid Model, Eyring Model, Bingham Plastic fluid model, Ellis fluid model, Eyring-Powel model , Reiner-Phillipoff model , Meter model. Instruments used for measurements of Rheological properties capillary rheometer, melt flow index, cone and plate viscometer, Torque rheometer, Mooney viscometer	(08 Hours)
UNIT-III	Experimental Studies of Rheological Behavior : Steady Shear Flow: Elongation Flow, Oscillating Flow: Stress Relaxation, Temperature Dependence: Processability, Test & Dependence upon Polymer Structure, Shear Flow Boundary Conditions and Slippage, Flow induced Degradation & Mechanochemistry.	(08 Hours)
UNIT-IV	Rheology of Rubber Rheological Models and Approaches to Flow Analysis: One Dimensional Rheological Models for Rubber Compounds: Plastic Viscous Model, Plastic Viscoelastic Model, Thixotropic Model, Equation of Motion and Dimensional Analysis of Non-Newtonian Fluids: General, Viscoelastic Fluids, Plastic Fluids, Energy Equation & Non Isothermal Flow :Energy Equation, Dimensional Analysis, Classification of Flows :Internal & External Flow, Hydrodynamic Lubrication Theory.	(08 Hours)
UNIT-V	Rheology of polymers Introduction	(08 Hours)

	Elastic materials ,Viscous materials, Viscoelasticity, Effect of rate of strain, temperature and time on mechanical behavior of polymeric materials, creep, stress relaxation Models to represent behavior of Polymer Liquids Mechanical models, stress strain response of spring and dashpot Viscoelastic models, Maxwell element, Voigt Oelvin element, response to creep and stress relaxation, Four parameter model, dynamic mechanical properties, behavior of Maxwell element and relaxation spectra	
UNIT-VI	Variable influencing the Rheology of fluids Effect of Temperature, Effect of Pressure, Effect of Molecular weight & Molecular structure, effect of entanglement of molecules & molecular motions.	(08 Hours)

Assignments

1.	Group discussion on the recent advances in rheology.
2.	Presentation on a instruments used for measurements of rheological properties.
3.	Group discussion on importance of studying this elective.
4.	Technical interview based on the knowledge of rheology.
5.	Presentation on rheological models for rubber compounds.
6.	Write a report on your visit to research and development laboratory of national/international repute.
7.	Technical interview based on the knowledge of rheology.
8.	Preparation of report on recent trends in rheology of polymers.
9.	Group discussion on variable influencing the rheology of fluids

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

MASS TRANSFER OPERATION

Designation: Professional Core

Course Pre-requisites:

Students should have basic knowledge of

1 | Heat Transfer operation

2 | Unit Operations and stoichiometry

TEACHING SCHEME:

EXAMINATION SCHEME:

**CREDITS
ALLOTTED:**

Lectures : 4 Hours/Week

End Semester Examination : 60 Marks

Theory : 04

Practical : 2 Hour /Week

Unit Test : 20 Marks

Practical : 01

Total : 6Hours/Week

Continuous Assessment : 20 Marks

Total credits : 05

Term work / practical : 50 Marks

Total : 150 Marks

Course Outcomes:

After completion of the course students would be able to

1. Evaluate diffusivity and rate of diffusion.

2. Evaluate mass transfer coefficients and understand interphase mass transfer.

3. Calculate the height of transfer unit, number of transfer unit, in absorption column.

4. Calculate rate of mass transfer in humidification.

5. Estimate rate and time of drying.

6. Analyze type of crystallization and estimate yield of crystallization.

Topics covered

UNIT-I	<p>Diffusion Molecular diffusion in fluids: Steady state diffusion in fluids at rest and in laminar flow, Steady state diffusion of A through nondiffusing B , equimolar counter diffusion, steady state diffusion in multicomponent mixture , molecular diffusion in fluids, diffusivity of liquids and gases, effect of temperature and pressure on diffusivity, diffusion in solids. Laws of diffusion and empirical equations – Maxwell’s law, Stefan’s law, Winkle man’s method.</p>	(08 Hours)
UNIT-II	<p>Mass transfer Coefficient and Interphase Mass Transfer: a) Mass transfer coefficients: Mass transfer coefficient in laminar flow and in turbulent flow. Relation of individual and overall mass transfer coefficient. Theories of mass transfer. Mass, heat and momentum transfer analogies. b) Interphase mass transfer. Equilibrium in mass transfer, two resistance concept. diffusion between phases. Steady state co-current and counter current processes. continuous crosscurrent, counter-current, crosscurrent cascade operations and mass balances.</p>	(08 Hours)
UNIT-III	<p>Absorption: Introduction to absorption, types of tower packing’s, contact between liquid and gas, pressure drop and limiting flow rates, material balances for each flow , limiting gas-liquid ratio, rate of absorption, calculation of HTU, NTU and</p>	(08 Hours)

	HETP. Alternate forms of transfer coefficients and their relations. Tray Efficiencies, absorption in plate columns, absorption with chemical reaction. Equipments for absorption column.	
UNIT-IV	Humidification: Vapor-liquid equilibrium, enthalpy for pure substances, definitions of humidity terms, adiabatic saturation temperature, wet bulb and dry bulb temperatures, study of humidity charts, lewis relation. method of adiabatic humidification and dehumidification. Equipments for humidification, cooling tower design.	(08 Hours)
UNIT-V	Drying: Basic principles of drying. equilibrium in drying. definitions of terms in drying, types of moisture binding, rate of drying curve, mechanism of batch drying and continuous drying, time requirement for drying, mechanism of moisture movement in solids. Equipments used for drying: Classification of dryers, solids handling in dryers, equipments for batch and continuous drying processes: working principle of tray driers, tower driers, rotary driers, spray driers. Concept of freeze drying	(08 Hours)
UNIT-VI	Crystallisation: Introduction to the process, principal rate of crystallization, Mier's supersaturation theory, growth and properties of crystals, crystallisation rate, calculations of yield, mass and enthalpy balances. Equipments used in crystallization.	(08 Hours)

Assignments

1.	Write a report on the recent advances in mass transfer processes with reference to the current year.
2.	Solve old (last five years) question papers with reference to particular topic.
3.	Prepare a model for any of the Mass transfer equipment.
4.	Prepare a report on Mass transfer equipments which are newly introduced in the current year.
5.	Give fifteen minutes presentation (seminar) on particular topic and prepare a report.
6.	Evaluate efficiencies of different Gas-liquid contact equipment. .
7.	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in industry.
8.	Design laboratory manuals better than existing ones with clearly shown specimen calculations.
9.	Compare working and principles for different mass transfer operations.
10.	Solve numerical for any industrial data.
11.	Write a technical report on your visit to a process industry.
12.	Solve old (last ten years) GATE question papers with reference to Mass transfer-I subject.
13.	Group discussion on the recent advances in mass Transfer equipments.
14.	Write a report on your visit to research and development laboratory of national/international repute.
15.	Technical interview based on the knowledge of Mass transfer.

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Term Work:

Term work will consist of the experiments listed below, out of which any eight experiments are to be

performed in laboratory by the students.	
1.	To calculate diffusion coefficient in Liquid-Liquid diffusion.
2.	To calculate diffusion coefficient in still air..
3.	To study characteristics of Wetted Wall Column.
4.	To calculate individual and overall interface mass transfer coefficient.
5.	To estimate efficiency of cooling Tower.
6.	To estimate rate of drying in tray drier/rotary drier
7.	To study the crystallization process by air, water cooling and seeding.
8.	Humidification and Dehumidification experiment.
9.	To study agitated batch crystallizer
10.	Study of Spray drier

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

CHEMICAL REACTION ENGINEERING-I

Designation: Professional Core		
Course Pre-requisites:		
Students should have basic knowledge of		
1	Analytical and physical Chemistry	
2	Process Calculation	
3	Mathematics including integration and derivation	
TEACHING SCHEME:		
EXAMINATION SCHEME:		
CREDITS ALLOTTED:		
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical : 2 Hour /Week	Unit Test: 20 Marks	Practical: 01
Total : 6Hours/Week	Continuous Assessment: 20 Marks	Total credits: 05
	Termwork / practical:50 Marks	
	Total :150 Marks	
Course Outcomes:		
After completion of the course students would be able to		
1.	Define rates of homogeneous chemical reactions and express the temperature dependent term of a rate equation with Arrhenius' Law and other theories	
2.	Design experiments, analyze and interpret data, and apply the results to chemical systems and processes.	
3.	Design ideal batch reactors, ideal CSTR reactors and ideal plug flow reactors.	
4.	Analyze multiple reactor system, autocatalytic and recycle reactors.	
5.	Specify operating conditions to produce desired products from parallel and series chemical reactions.	
6.	Evaluate effect of temperature on reaction.	
Topics covered		
UNIT-I	Chemical Kinetics: Classification of reactions, rate laws and stoichiometry, relative rates of reaction, reaction order, rate limiting step, half life, concentration-dependent term of a rate equation, temperature-dependent term of a rate equation, Temperature dependency from Arrhenius law, Transition state theory, collision theory, rate equation using partial pressure and concentration, their interrelation, searching for a reaction mechanism.	(08 Hours)
UNIT-II	Interpretation of Batch reactor data: Interpretation of batch experimental kinetics data using integral and differential analysis, constant volume batch reactor system, design equation for zero, first, second and third order irreversible and reversible reactions, graphical interpretation of these equations and their limitations, variable volume batch reactors, design equation for zero, first and second order irreversible and reversible reactions, graphical interpretation of their limitations.	(08 Hours)
UNIT-III	Introduction to Reactor Design Single ideal reactors under steady state conditions, design equations for batch,	(08 Hours)

	mixed flow & plug flow reactor, development of rate expression for mean holding time for a plug flow reactor, space time and space velocity, Introduction to Semi-batch reactor.	
UNIT-IV	Isothermal flow reactors Size comparison of reactor performance, sequences of reactors, reactors with recycle. optimum size determination, reactors in series and parallel, performance of infinite number of back mix reactors in series, back mix and plug flow reactors of different sizes in series and their optimum way of staging, optimum recycle ratio for auto –catalytic (recycle) reactors.	(08 Hours)
UNIT-V	Design of reactors for Single and Multiple reactions Parallel and consecutive reactions in batch, CSTR and PFR, qualitative discussion about product distribution, quantitative treatment of product distribution and reactor size, factors affecting such as choice, optimum yield, conversion, selectivity, reactivity on consecutive and parallel reactions in reactors.	(08 Hours)
UNIT-VI	Non-Isothermal reactor for homogeneous reactor systems Energy balances in reactors, adiabatic operations, non-adiabatic operations, stability of reactors, non-isothermal homogeneous reactor systems, rates of heat exchanges for different reactors, adiabatic operations for batch and continuous reactors, optimum temperature progression, rate, temperature and conversion profiles for exothermic and endothermic reactions.	(08 Hours)

Assignments

1.	Write a report on the recent advances in chemical reaction engineering with reference to the current year.
2.	Give fifteen minutes presentation (seminar) on particular topic and prepare a report.
3.	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in industry.
4.	Derive the rate equations for various combinations of reactors.
5.	Suggest best suitable reactor arrangement for zero, first and second order reaction.
6.	Explain in detail use of kinetics in equipment/reactor design.
7.	Design laboratory manuals better than existing ones with clearly shown specimen calculations.
8.	Solve old (last five years) question papers with reference to particular topic.
9.	Prepare a model for any of the reactor.
10.	Solve old (last ten years) GATE question papers with reference to chemical reaction engineering subject.
11.	Group discussion on the recent advances in reaction engineering.
12.	Write a report on your visit to research and development laboratory of national/international repute.
13.	Technical interview based on the knowledge of chemical reaction engineering.

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Term Work:

Term work will consist of the experiments listed below, out of which any eight experiments are to be performed in laboratory by the students.

1.	Study of first order reaction.
2.	Study of PFR & CSTR combination in second order reaction.

3.	Rate constant of hydrolysis of methyl acetate by dilute HCl.
4	Energy of activation of a reaction between $K_2S_2O_8$ and KI
5.	Study of homogeneous catalytic reaction, decomposition of hydrogen peroxide, acid catalysed ester hydrolysis.
6.	Hydrolysis of ester (e.g. ethyl acetate) by alkali (NaOH).
7.	Study of CSTR combination in first order reactions.
8.	Determination of Arrhenius parameters.
9.	Rate constant for saponification of ethyl acetate with NaOH using CSTR.
10.	Rate constant for saponification of ethyl acetate with NaOH at ambient conditions using PFR.
11.	Rate constant for saponification of ethyl acetate with NaOH at ambient conditions using (i) Isothermal batch reactor (ii) Isothermal CSTR.
12.	Study and operation of an adiabatic batch reactor.
13.	Study of a reversible reaction in a batch reactor.
14.	To determine energy of activation of reaction of ethyl acetate with sodium hydroxide.
15.	Find out specific rate constant and activation energy of a reaction in a plug flow reactor.
16.	Use MATLAB software to simulate Batch / CSTR / Plug flow reactor data.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

CHEMICAL ENGINEERING MATHEMATICS

Designation: Professional Core		
Course Pre-requisites:		
Students should have		
Basic knowledge of Mathematics including derivative, integration etc.		
TEACHING SCHEME:		
EXAMINATION SCHEME:		
CREDITS ALLOTTED:		
Lectures: 3Hours/Week	End Semester Examination: 60 Marks	Theory : 03
Tutorial : 1Hour/Week	Unit Test: 20 Marks	Tutorial : 01
	Continuous Assessment: 20 Marks	Total credits: 04
	Term work / Oral:50 Marks	
	Total: 150	
Course Outcomes:		
After completion of the course students will be able to		
1.	Compute the roots of the equation using methods like Secant method, Bisection method, False position method etc.	
2.	Apply Numerical differentiation methods such Euler's method, Modified Euler's method, Runge-Kutta methods etc.	
3.	Apply Numerical integration methods such as Trapezoidal rule, Simpson method, Romberg method etc.	
4.	Evaluate the problems on special matrices using Matrix inversion method, LU decomposition etc.	
5.	Evaluate curve fitting problems.	
6.	Optimize Linear programming problems.	
Topics covered		
UNIT-I	Root of equation Solve Fluid flow, heat transfer problems using Picard method, Secant method, Bisection method, False position method, Newton-Rapson method, modified Newton-Rapson method, Muller method.	(06 Hours)
UNIT-II	Numerical Differentiation Solve mass transfer, chemical reaction engineering, heat transfer problems using Euler's method, Modified Euler's method, Runge-Kutta methods, Milne's predictor-corrector method, Richardson Extrapolation.	(06 Hours)
UNIT-III	Numerical Integration Trapezoidal rule, Simpson 1/3 and 3/8 rule, Multiple integrals, Romberg integration, Stirlings formula, LaGarange method, Cauchys integral formula.	(06 Hours)

UNIT-IV	Multiple algebraic equations using Matrix Matrix inversion method, Gauss elimination, Gauss Jordan method, LU decomposition method, Gauss Seidal method, Jacobian method.	(06 Hours)
UNIT-V	Curve fitting and Statistics Linear regression, multiple linear regressions, polynomial regression, general linear least squares, Non-linear regression. Introduction to Statistics, application of Statistics, histogram method, measuring centre values by median, mode methods.	(06 Hours)
UNIT-VI	Optimization Graphical method, Simplex method, Golden section search method, Linear programming case studies such as least cost design of tank, least cost treatment of wastewater, chemical Process e.g. reactors, heat exchangers, evaporators etc.	(06 Hours)

Assignments:

There will be six (6) assignments from various units mentioned in the syllabus. Each assignment will carry 10 marks.

List of assignments

1. Finding the roots of polymeric equations mentioned in the fluid mechanics. Equations such as buoyancy of ball, liquid level in manometer etc.
2. Solving the equations from mass transfer, Momentum transfer using Numerical differentiation methods.
3. Evaluating the integrals from heat transfer using Numerical integral methods.
4. Solving linear problems from process calculation using matrix methods.
5. Finding rate equation, equilibrium curve using experimental data.
6. Applying optimization method for equation of cost for various equipments, insulation thickness etc.
7. With the help of this subject knowledge, write a guideline report on how you would apply your concepts in industry
8. Solve old (last five years) question papers with reference to particular topic.
9. Solve old (last ten years) GATE question papers with reference to chemical engineering mathematics subject.

Tutorials / Term work

1. Solving problems on roots of equation.
2. Use numerical differential methods for problems on chemical reaction engineering, mass transfer, heat transfer etc.
3. Use numerical integration methods for problems on chemical reaction engineering, mass transfer, heat transfer etc.
4. Solve problems on multiple algebraic equations using Matrix.
5. Analyze and solve the problems on curve fitting.
6. Applying optimization method for industrial problems.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I , II, III
Unit Test -II	UNIT – IV, V, VI

COMPUTER PROGRAMMING FOR CHEMICAL ENGINEERS - I

Designation: Computing

Course Pre-requisites:

Students should have basic knowledge of

Computer fundamentals

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Lectures	: 3 Hours/Week	End Semester Examination	: 60 Marks	Theory	: 03
Practical	: 2 Hour /Week	Continuous Assessment	: 40 Marks	Practical	: 01
Total	: 5Hours/Week	Term work / practical	: 50 Marks	Total credits	: 04
		Total	:150 Marks		

Course Outcomes:

After completion of the course students will be able to

1. Apply the knowledge of constant, variables and data types used in visual basic and write programs.
2. Write coding in VB and prepare interface using various controls like option button, check box, list box, text box, command button etc.
3. Apply the knowledge of Visual Basic to various chemical engineering calculations.
4. Explain and apply the HTML tags for web page.
5. Design a web page and apply dynamic effects to the page using the knowledge of HTML.
6. Explain and apply the various DHTML tags and object models for web page.

Topics covered

UNIT-I	Visual Basic: Introduction to visual basic, object oriented programming and Graphics User Interface (GUI). Editions of visual basic. Variable: Types of variable declaration, scope of variable. Data Types, conversion of data types, array of controls. Control constructs and loop statements used in visual basic.	(06 Hours)
UNIT-II	Important Visual Basic controls like Text box, command button, option button, check box, list box, combo box, frame, label and Timer control. Events: mouse, key and focus events. Working with menus, toolbars, status bars. Scope of variables and procedures. Data controls. Creating MDI applications.	(06 Hours)
UNIT-III	Application of Visual Basic for Chemical Engineering: Various calculations and solutions in chemical engineering like calculation of LMTD for co-current and counter current heat exchangers, Design of distillation column, evaporator, dryer, mixed flow reactor etc.	(06 Hours)
UNIT-IV	HTML: Introduction to HTML, components of HTML, structure tags, block level tags, text level tags, horizontal rules, colours in web page. Design parameters. List: ordered, unordered and definition list, generating lists.	(06 Hours)
UNIT-V	Web page designing parameters. Adding graphics/images. Hyperlinks. Tables. Frames. Style sheets. Applying dynamic effects to the page. Working with forms in a web page	(06 Hours)
UNIT-VI	DHTML:	(06 Hours)

	Introduction to DHTML, DHTML Object Model. Events. Handling text attributes. Dynamically changing style. Dynamically changing content. Dynamically altering the placement of elements	
--	---	--

Assignments

1.	Discuss the client-server applications with appropriate example
2.	Discuss web applications with appropriate example
3.	Explain e-commerce applications
4.	Design your own home page using various HTML tags
5.	Design your own blog for technical discussion.
6.	Give fifteen minutes presentation (seminar) on particular topic and prepare a report.
7.	To create various animations using Timer control.
8.	Design various unit operations used in chemical industry using knowledge of visual basic.
9.	Students have to study any five NPTEL videos related to HTML, DHTML and visual basic and prepare/present power point presentation.
10.	Programs based on above six units.
11.	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in industry.
12.	Group discussion on the recent advances in HTML, DHTML and visual basic.
13.	Technical interview based on the knowledge of HTML, DHTML and visual basic.

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Term Work:

Term work will consist of the programs/practicals listed below, out of which any eight programs/practicals are to be performed in laboratory by the students.

1.	Development of visual basic interface and programs using click events.
2.	Development of visual basic interface and programs using option button.
3.	Development of visual basic interface and programs using list box control.
4.	Development of visual basic interface and programs using various control statements
5.	Development of visual basic interface and programs using various loop statements
6.	Development of visual basic interface and programs using Timer control.
7.	Application of visual basic to various chemical engineering calculations.
8.	To create table and use of table tags in HTML to design a web page.
9.	Web page design as per given output
10.	Design a web page using the image and hyperlink.
11.	Design a web page using ordered list, unordered list and definition list.
12.	HTML code to display given form.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,IV
Unit Test -II	UNIT – III,V,VI

ELECTIVE II BIOFUEL TECHNOLOGY

Designation: Elective

Course Pre-requisites:

Students should have basic knowledge of

- | | |
|---|--------------------------------|
| 1 | Biology |
| 2 | Basics of Chemical Engineering |

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hours/Week	End Semester Examination: 60 Marks	Theory : 03
Practical : -	Unit Test: 20 Marks	
Total : 3 Hours/Week	Continuous Assessment: 20 Marks	Total credits: 03
	Total :100 Marks	

Course Outcomes:

After completion of the course students would be able to describe

- | | |
|----|---|
| 1. | How petroleum and bio-based fuels affect the global carbon cycle |
| 2. | The attributes of biofuels that make them suitable as a fuel for a specific application |
| 3. | Limitations of petroleum fuel and biofuel and importance of biodiesel |
| 4. | Global impacts of bioethanol and biobutanol on energy sector |
| 5. | Technological advances and challenges to be overcome for biohydrogen production |
| 6. | Importance and aspects of manufacturing processes of microbial fuel cells |

Topics covered

UNIT-I	<p>Introduction to Biofuels: Biofuels, energy use and efficiency, generations of biofuels, alternative energies, types of biofuels, advantages and disadvantages of different biofuels, economics, and policies.</p>	(06 Hours)
UNIT-II	<p>Renewable Feedstocks: Feedstocks: Biomass, starch, sugar, lignocellulosic, agro and industrial by-products, pretreatment of feedstock, biomass production for fuel – algal cultures, yeasts (lipid and carbohydrate), sources of oils – edible and non edible</p>	(06 Hours)
UNIT-III	<p>Production of biodiesel: Chemical, thermodynamic and reaction kinetic aspects of biodiesel production: esterification and transesterification, free fatty acids; saponification; single step and two step biodiesel production, catalysts for biodiesel production – homogeneous (alkali/acidic) and heterogeneous, general procedure of biodiesel production and purification. algal biodiesel production, quality control aspects, methods to improve the biodiesel yield, process flow diagrams</p>	(06 Hours)
UNIT-IV	<p>Production of bioethanol and biobutanol: Process technology for ABE using different feedstocks; by-products of biofuel industry as feedstock; selection of micro-organisms and feedstock – ethanol/butanol tolerance; determination of ABE yield; recovery of biofuels, process integration, advances in bioethanol and biobutanol production.</p>	(06 Hours)

UNIT-V	Production of Biohydrogen: Enzymes involved in H ₂ production; photobiological H ₂ production: biophotolysis and photo-fermentation; H ₂ production by fermentation: biochemical pathway, batch fermentation, factors affecting H ₂ production, carbon sources, process and culture parameters; detection and quantification of H ₂ , reactors for biohydrogen production. Biogas: Use of different feedstock to produce biogas, methods of biogas generation, equipment design to improve the yield, application of biogas as fuel	(06 Hours)
UNIT-VI	Microbial Fuel Cells (MFC): Biochemical basis; components of MFC fuel cell design, microbial cultures, MFC performance methods: substrate and biomass measurements, basic power calculations, MFC performance, single vs two-chamber designs, Applications of MFC	(06 Hours)

Syllabus for Unit Test:

Unit Test -I	UNIT – I , II, III
Unit Test -II	UNIT – IV,V,VI

ELECTIVE II FOOD TECHNOLOGY

Designation: Elective

Course Pre-requisites:

Basic knowledge of microbiology and biochemistry

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Lectures	: 3 Hours/Week	End Semester Examination	: 60	Theory	: 03
		Marks			
Seminar	: -	Unit Test	: 20	Seminar	: -
		Marks			
Total	: 3 Hours/Week	Continuous Assessment	: 20	Total credits	: 03
		Marks			
		Total	: 100		
		Marks			

Course Outcomes:

After completion of the course students would be able to

1. Evaluate analysis of suitable chemical constitute and their significance in food products.
2. Identify the significance of fluid flow and rheological properties of food; develop the Process and equipment design aspect for food processing.
3. Draw basic flow sheet development for food processing, construction and plant layout.
4. Implement suitable equipment design and their design parameters for canning and retort processing.
5. Chose and apply suitable food preservation technique, give details of preservation, significance and estimate economy of the food preservation.
6. Select and do the packaging of fresh food and processed food, implement newer trends in packaging.

Topics covered

UNIT-I	Introduction to food technology : Introduction to food technology, different types of food products, Application of Engineering in Food industries. Analysis of chemical constituents in food products, their characterization and significance.	(06 Hours)
UNIT-II	Food Engineering: Principles of mass and energy balance in food processing operations. Transport phenomena with respect to foods. Fluid dynamics, Rheological properties of foods. Process design aspects. Concentration with thermal and membranes processes. Process and equipment design for food processing.	(06 Hours)
UNIT-III	Food Process Engineering: Important aspects of product and process development. Basic flow sheet development for food processing. Other food processing such as Bakery machines and equipment; Food processing plant layout, material of construction, corrosion, waste utilization.	(06 Hours)
UNIT-IV	Thermal processing: Canning and retort processing – process design and equipment. Equipment design aspects, dryers and their design parameters. Construction of cold	(06 Hours)

	storages, Types of freezers and their design parameters	
UNIT-V	Principles of food preservation: Aims and objectives of preservation and processing of foods. Preservation by high temperature, Preservation by low temperature, Preservation by water removal. Different preservation technique: chemical preservatives. Controlled and modified atmospheric storage.	(06 Hours)
UNIT-VI	Food Packaging Technology: Concept of packaging, Functions of a Food Package, Aseptic Packaging. Packaging as a method for conservation and protection of foods. Different packaging materials and their properties, Environmental friendly food packing material, Food product characteristics and package requirement, Evaluation of quality and safety of packaging materials.	(06 Hours)

Syllabus for Unit Test:

Unit Test -I	UNIT – I , II, III
Unit Test -II	UNIT – IV, V, VI

ELECTIVE-II NANOMATERIALS

Designation: Elective

Course Pre-requisites:

Students should have knowledge of

1. Chemistry, Physics

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Lectures : 3 Hours/Week

End Semester Examination : 60 Marks

Theory : 03

Unit Test : 20 Marks

Total credits : 03

Continuous Assessment : 20 Marks

Total : 100 Marks

Course Outcomes:

After completion of the course students will be able to

1. Define the concept of nanomaterials and Nanotechnology
2. Express various types of nanomaterials and characterization techniques
3. Distinguish between the synthesis techniques for nanomaterials and apply the appropriate synthesis technique.
4. Recognize the properties of nanomaterials and effect on them due to nanoscale.
5. Express the Chemical and Catalytic Aspects of Nanomaterials
6. Recognize the various modes and methods for synthesis of polymer nanocomposite

Topics covered

UNIT - I	<p>Introduction to Nanomaterials Basic definitions: Nanoscience, Nanotechnology, Nanomaterial, Nanostructure, Nanomachine; Historical perspective on nanomaterials, Advantages of nanomaterials, Importance of nanomaterials, Top down and bottom up approaches to manufacture nanomaterials. Applications of Nanomaterials</p> <p>Types of nanomaterial/Nanostructures Classification of nanomaterial based on the number of dimensions: 0-D, 1-D, 2-D, and 3-D nanostructures; Quantum dots, Quantum wire, Core/Shell structures, Nanotubes, nanorodes, nanowires, nanofibers.</p>	(06 Hours)
UNIT - II	<p>Characterization Techniques: X-ray Diffraction, Scanning Electron Microscopy (SEM), Transmission Electron microscopy (TEM), Optical spectroscopy, Atomic Force Micrograph (AFM), Partical Size Analyzer.</p> <p>Synthesis of Nanomaterials: Classification of Nanoparticle Synthesis Techniques, Solid-State Synthesis of Nanoparticles, Vapor-Phase Synthesis of Nanoparticles, Inert Gas Condensation of Nanoparticles, Chemical Vapor Condensation (CVC),</p>	(06 Hours)
UNIT - III	<p>Technology of Nanoparticles Synthesis: Plasma-Based Synthesis of Nanoparticles, Flame-Based Synthesis of Nanoparticles, Spray Pyrolysis of Nanoparticles; Solution Processing of Nanoparticles, Sol-Gel Processing, Solution Precipitation, Water–Oil</p>	(06 Hours)

	Microemulsion (Reverse Micelle) Method.	
UNIT - IV	Nanomaterial properties Physical properties of nanostructured materials, Chemical properties, Mechanical properties, Magnetic and structural properties, Optical properties, Thermal properties; Influence of nano structuring on mechanical, optical, electronic, magnetic and chemical properties; Gramsize effects on strength of metals optical properties of quantum dots and quantum wires, carbon nano tubes: magnetic behavior.	(06 Hours)
UNIT - V	Chemical and Catalytic Aspects of Nanomaterials Nanomaterials in catalysis, Importance of surface to volume ratios, nanocrystal shapes and defects as they relate to heterogeneous catalysis, Controlled pore size materials, nanoparticles as chemical reagents; Examples of metal, metal oxide and metal sulfide nanoparticles in catalytic processes	(06 Hours)
UNIT - VI	Polymer Nanocomposites Generalities on polymer composites, From “Micro” to “Nano” composites: Effect of particle dimensions, Nanocomposites preparation pathways: Importance of the interfacial compatibilization, Current scientific and technical advances in polymer nanocomposites	(06 Hours)
Tutorials/Assignments:		
The internal assessment shall consist of minimum SIX assignments from the following list		
1.	Questions involving classification of nanomaterial	
2.	Prepare one assignment considering any one nanomaterial on: Influence of Nano structuring on Mechanical - Optical, electronic, magnetic and chemical properties	
3.	Conducting surprise MCQ test for students	
4.	Questions involving various techniques employed for nanomaterial characterization	
5.	Enhancement in collaborative learning is done through, group assignments that will be given to encourage students to work with classmates to discuss and complete homework assignments	
6.	Students have to study any five research papers related to specific topic in nanomaterials and prepare/present power point presentation	
7.	Brief report on ‘Environmental, health and ethical concerns that are associated with nanomaterials	
8.	Group discussions on any of the following topics: a) Importance of Nanomaterials in chemical industries. b) Current scientific and technical advances in Nanomaterials c) Methods of synthesis for nanomaterials	
9.	Preparation of a brief report on applicability of nanomaterials in chemical engineering operations	
10.	Conducting open-book class test	
Text Books/ References:		
1.	Charles P. Poole, Frank J. Owens, “Introduction to Nanotechnology”, Wiley Interscience	
2.	B S Murty, P Shankar, Baldev Raj, B B Rath, James Murday, “Textbook of Nanoscience and Nanotechnology” Universities Press (India) Private Limited	
3.	Mark A. Ratner, Daniel Ratner, “Nanotechnology: A gentle introduction to the next Big Idea”, Prentice Hall, 1 st Edition

Syllabus for Unit Test:	
Unit Test - I	UNIT– I, II, and III
Unit Test - II	UNIT– IV, V, and VI

Elective I: Polymer Technology		
Designation: Elective		
Course Pre-requisites:		
1.	Basic chemistry, Physical chemistry, Chemical Reaction Engineering, Chemical Engineering Thermodynamics	
TEACHING SCHEME:		
EXAMINATION SCHEME:		
CREDITS ALLOTTED:		
Lectures: 3 Hours/Week	End Semester Examination: 60 marks	Theory : 03
	Continuous Assessment: 40 marks	
Course Outcomes:		
1.	Explain basics of polymers and their classifications	
2.	Explain various polymer properties and the their effect on engineering properties	
3.	Determine suitable process for polymer synthesis and describe its mechanism	
4.	Understand the basics of polymer characterizations and discuss its effect on properties	
5.	Explain the formation of composites and blends in polymers	
6.	Explain the methods of polymer compounding and processing	
Topics covered		
UNIT-I	Introduction to polymers Introduction, polymer microstructure, homopolymers-heteropolymers, monomers as building block of polymers, historical development, classifications of polymers and polymerization reactions, chain growth and step growth polymerization, mechanism of polymerization, polymer liquids and polymer solids	(06 Hours)
UNIT-II	Polymer properties Molecular weight of polymers (Mw, Mn, Mv), Molecular weight distribution, determination of molecular weights, polymer morphology, polymer structure – linear, branched and crosslinked, presence of functionality, chemical bonding in polymers, stereoisomerism, effect these factors on chemical, thermal and mechanical properties of polymers	(06 Hours)
UNIT-III	Synthesis of polymers Polymerization techniques: bulk, solution, suspension, emulsion polymerization with their merits and demerits, kinetics of polymerization; free radical chain polymerization, cationic polymerization, anionic polymerization, polycondensation, co-polymerization and its kinetics, Smith Ewarts kinetics for emulsion polymerization, continuous emulsion polymerization, Ziegler-Natta catalyst	(06 Hours)
UNIT-IV	Polymer structure and effect on properties Chemical and geometrical structure of polymer molecules, microstructure based on chemical structure, microstructure based on geometrical structure, Glass transition temperature, factors influencing glass transition – molecular	(06 Hours)

	weight, plasticisers, copolymer concentration, and their effect on polymer properties; crystallinity, effect of presence of crystallinity on polymer properties	
UNIT-V	Polymer composite and blends Difference between blends and composites, their significance, choice of polymers for blending, blend miscibility-miscible and immiscible blends, thermodynamics, phase morphology, polymer alloys, polymer eutectics, plastic-plastic, rubber-plastic and rubber-rubber blends, FRP, particulate, long and short fibre reinforced composites.	(06 Hours)
UNIT-VI	Polymer processing and compounding Polymer compounding-need and significance, different compounding ingredients for rubber and plastics, crosslinking and vulcanization. Methods of processing: Compression molding, transfer molding, injection molding, blow molding, reaction injection molding, extrusion, pultrusion, calendaring, rotational molding, thermoforming, rubber processing in two-roll mill, internal mixer.	(06 Hours)
Assignments:		
1.	Prepare the report on any one polymer comprising its significance, preparation, characterization, processing and properties	
References/Text Books:		
1.	Text book for polymer science; F. W. Billmeyer, Wiley Interscience Publications (John Wiley and Sons)	
2.	Polymer Science, V. R. Gowarikar, N. V. Viswanathan, J. Shreedhar; Wiley Estern Limited	
3.	Principles of Polymerizations; Odion G. G.; Mc-Graw Hill	
4.	Fundamentals of polymer Engineering, Arie Ram, Plenum Press	
5.	Polymer Physics, Michael Rubinstein, Ralph H. Colby, Wiley Interscience Publications (John Wiley and Sons)	
6.	Polymer data handbook, James E. Mark (Ed.), Oxford University Press	
Syllabus for Unit Test:		
Unit Test –I	UNIT – I ,II,III	
Unit Test –II	UNIT – IV,V,VI	

SEPARATION TECHNIQUES		
Designation: Professional Core		
Course Pre-requisites:		
Students should have basic knowledge of		
1	Fundamentals of mass transfer	
2	Fundamentals of heat transfer	
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical : 2 Hour /Week	Unit Test: 20 Marks	Practical: 01
Total : 6Hours/Week	Continuous Assessment: 20 Marks	Total credits: 05
	Term work / practical:50 Marks	
	Total :150 Marks	
Course Outcomes:		
After completion of the course students would be able to		
1.	Apply the basics of distillation for the binary separation of ideal and nonideal mixture and determine the extent of separation obtained.	
2.	Describe the operation of continuous rectification and determine the number of stages required for distillation.	
3.	Determine the number of stages required for separation using liquid-liquid extraction and describe the extractors used industrially.	
4.	Obtain the requirement of solvent in leaching operation and obtain the extent of separation.	
5.	Plot the adsorption isotherms and estimate the amount of adsorption using single and multistage operations.	
6.	Explain the operation and applications of novel separation techniques	
Topics covered		
UNIT-I	Introduction: Review of various separation techniques, Selection of the technique of separation, pros and cons of various methods. Basics of Distillation: Equilibrium of vapor and liquid, relative volatility, Raoult's law, Ideal and Non-ideal behavior study, Azeotropes, positive and negative deviation from ideality, Methods of distillation - simple, flash distillation, Rayleigh's equation, Graphical and analytical method for determination of the compositions, Introduction to reactive distillation, Azeotropic distillation, Molecular or low pressure distillation, Extractive distillation.	(08 Hours)
UNIT-II	Rectification: Continuous rectification for binary systems, Tray towers, McCabe Thiele's method of calculation of number of trays, Method of Ponchon Savarit, Enthalpy concentration diagrams, Tray efficiencies, Concept of reflux, cold reflux, partial and total cold reflux, Effect of feed temperature and q-line equation derivation, Total reflux, Optimum reflux, Fenske Underwood equation, Condenser and reboilers used in distillation, Use of open steam for	(08 Hours)

	distillation, Rectification of Azeotropic mixtures. Distillation in packed towers: HETP concept, HTU and NTU calculations, Distillation column internals: Type of trays, Type of packing used.	
UNIT-III	Adsorption: Types of adsorption, Nature of adsorbents, Equilibria in adsorption- Single gases and vapors, adsorption hysteresis, Effect of temperature, Heat of adsorption, adsorption of liquids, Langmuir isotherms, Freundlich isotherms, Introduction to pressure swing and temperature swing adsorption, Equipment: Continuous contact, Steady state moving bed absorbers. Ion exchange process: Basic principles and chemical reactions, Techniques and applications, Equilibria and rate of ion exchange, Equipment studies.	(08 Hours)
UNIT-IV	Liquid- Liquid Extraction: Introduction, Choice of solvent, Ternary equilibrium, Binodal solubility curve, Single stage extraction, Multistage crosscurrent and countercurrent extraction, extraction calculations using triangular and rectangular coordinates, Solvent free basis calculations, Nxy diagrams, Material balances, Continuous countercurrent extraction with reflux, stage efficiency. Continuous countercurrent extraction in packed columns: HTU and NTU calculations. Types of extractors: Stage type and differential extractors.	(08 Hours)
UNIT-V	Leaching (Solid Liquid Extraction): Introduction: Classification of leaching processes, Factors affecting the leaching process, Solid –liquid equilibria. Methods of calculation: Single stage leaching, multistage cross-current leaching, Continuous countercurrent leaching. Leaching Equipments: Unsteady state and steady state equipment.	(08 Hours)
UNIT-VI	Novel separation techniques: Membrane separation techniques- Ultrafiltration, Nano-filtration, Reverse osmosis process, Electro dialysis, Rate based processes such as diffusion coefficient based inert gas generating from air by carbon molecular sieves.	(08 Hours)

Assignments

1.	Group discussion on the recent advances in mass transfer operations.
2.	Solve previous university question papers with reference to particular topic of this subject.
3.	Seminar presentation on a particular topic specified in the syllabus and submission of report based on it.
4.	Estimation of composition of vapor and liquid in flash distillation
5.	Compute the composition of residue and distillate in simple distillation.
6.	Evaluation of number of stages using McCabe Thiele and Ponchon Savarit method.
7.	HTU and NTU calculation for distillation in packed columns.
8.	Group discussion on equipments used for extraction.
9.	Estimate the number of stages required for single and multistage extraction operation.
10.	Estimate the number of stages required for single and multistage leaching operation.
11.	Group discussion on ion exchange technique and its application.
12.	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in industry.

13.	Presentation on novel separation techniques.
14.	Solve old GATE question papers with reference to this subject.
15.	Group discussion on the recent advances in separation techniques.
16.	Write a report on your visit to research and development laboratory of national/international repute.
17.	Technical interview based on the knowledge of separation techniques.

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Term Work:

Term work will consist of the experiments listed below, out of which any eight experiments are to be performed in laboratory by the students.

1.	Simple distillation
2.	Distillation with total reflux
3.	Steam distillation
4.	Equilibrium diagrams for liquid -liquid extraction
5.	Cross current multistage extraction
6.	York Schiebel column for extraction
7.	Bubble cap distillation column
8.	Sieve tray distillation column
9.	Vapour liquid equilibria
10.	Solid liquid extraction of oil
11.	Langmuir and Freundlich adsorption isotherm

Text Books/References:

2.	Coulson J. M. Richardson, "Chemical engineering", Vol, I and II, Pergamon Press.
3.	King C. J., "Separation Techniques", McGraw Hill publication.
4.	Smith B. D., "Design of Equilibrium stage process", McGraw Hill publication.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV, V, VI

CHEMICAL PROCESS EQUIPMENT DESIGN-I

Designation: Professional Core

Course Pre-requisites:

Students should have basic knowledge of

- | | |
|---|--|
| 1 | Unit Operations involved in chemical engineering |
| 2 | Heat transfer and Mass transfer and Mechanical operation equipments. |

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hours/Week	End Semester Examination: 60 Marks	Theory : 03
Drawing : 2 Hour /Week	Unit Test: 20 Marks	Drawing: 01
Total : 5Hours/Week	Continuous Assessment: 20 Marks	Total credits: 04
	Term work / practical:25 Marks	
	Total :125 Marks	

Course Outcomes:

After completion of the course students would be able to

- | | |
|----|--|
| 1. | Apply and understand different codes for equipment design. |
| 2. | Design different heads used for equipments |
| 3. | Identify and design different supports used for process equipments. |
| 4. | Study and design process and mechanical aspect of heat exchangers |
| 5. | Calculate various stresses acting on vessels |
| 6. | Design different equipments like cyclone separator, gravity thickener, decanter, fluid –fluid separator, electrostatic precipitator, cooling towers, evaporators, dryers, crystallizers. |

Topics covered

UNIT-I	<p>Introduction to Process Equipment Design: Introduction to various mechanical properties of materials to be used as material of construction, resistance of metals to corrosion under varying conditions of temperature and pressure etc. Theories of failures, application and use of various codes and standards in design. Representation of different utilities and symbols, General design procedure, equipment classification, study of design parameters such as maximum working pressure, design pressure, design temperature, design stress & factor of safety, design of wall thickness & minimum actual thickness, corrosion allowance, design loading, possions ratio.</p>	(06 Hours)
UNIT-II	<p>Design of pressure vessels and storage tank: Design of pressure vessels and storage tank: Vessels subjected to internal pressure and combined loading, cylindrical and spherical shell, resultant stresses induced in pressure vessel, stresses in high pressure vessels, optimum vessel size, design of various heads & closures such as flat head, torrispherical head, elliptical head, hemispherical head, and conical head. Design of storage tank, types of storage tank, types of roof for storage tank, types of losses in floating roof tank, estimation of nozzle diameter for drain in storage tank.</p>	(06 Hours)
UNIT-III	Introduction to various Supports :	(06 Hours)

	Introduction to various Supports, design of various supports such as skirt support, skirt bearing plate, leg support, bracket support, saddle support, design of tall vertical column, anchor bolts, base ring, ring stiffeners, wind girders, flanges & nozzles, detail design of number of bolts & nozzles. Stresses induced in supports like dead weight, wind load, seismic load.	
UNIT-IV	Design of Heat exchangers : Classification of heat exchangers, flow arrangements, types of heat exchanger, LMTD and effectiveness NTU method, Process design of shell and tube heat exchanger - heat transfer coefficient calculations, number of tube calculation, pressure drop calculation on tube side and shell side. Process design of double pipe heat exchanger, types of fouling, fouling resistance in heat exchangers. Mechanical design aspects of heat exchanger. Differential expansion and thermal stresses in heat exchanger. Introduction to fin type, plate type heat exchanger.	(06 Hours)
UNIT-V	Design of Agitators : Design of Agitators: types of agitators, selection criteria, design of blades, power calculation, flow patterns, calculation of bending moment, twisting moment, and combined effect.	(06 Hours)
UNIT-VI	Design of some separation equipments : Design of some separation equipment like cyclone separator, gravity thickener, decanter, fluid –fluid separator, electrostatic precipitator, evaporators.	(06 Hours)

Assignments

1.	Write a report on different codes and symbols used in design.
2.	Solve old (last five years) question papers with reference to particular topic.
3.	Prepare a model for any of the equipment
4.	Prepare a report on advance equipments which are newly introduced in the current year.
5.	Give fifteen minutes presentation (seminar) on particular topic and prepare a report.
6.	Prepare model for different roofs used in storage vessels.
7.	Prepare a chart for different construction of materials in equipment design.
8.	Prepare a presentations on newly introduced equipments in current year
9.	Design laboratory manuals better than existing ones with clearly shown specimen calculations.
10.	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in designing a economic plant layout for any industry.
11.	Write a technical report on your visit to a process industry.
12.	Solve old (last ten years) GATE question papers with reference to design subject.
13.	Group discussion on the recent advances in equipment design
14.	Write a report on your visit to research and development laboratory of national/international repute.
15.	Technical interview based on the knowledge of design

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Term Work:

Term work will consist of the Practicals and drawings listed below, out of which any eight are to be done by students. Any one drawing in Autocad.

1.	Detailed design and drawing of enclosures and supports
2.	Design of pressure vessels.
3.	Calculation of heat transfer coefficient, No of tubes and rate of heat flow in shell and tube heat exchanger
4	Calculate pressure drop for tube and shell side heat exchanger.
5.	Detailed design and drawing of agitated vessel.
6.	Detailed design and drawing of cyclone separator.
7.	Detailed design and drawing of cooling towers
8.	Detailed design and drawing of crystallizer
9.	Detailed design and drawing of gravity thickener.
10.	Design of storage tanks.
11.	Design of Supports.
12	Calculation of heat transfer coefficient,rate of heat flow and effectiveness in Double pipe heat exchanger.
13	Calculation of heat transfer coefficient,rate of heat flow and effectiveness in fin type heat exchanger.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

CHEMICAL REACTION ENGINEERING-II		
Designation: Professional Core		
Course Pre-requisites:		
Students should have basic knowledge of		
1	Chemical reaction engineering-I	
2	Stoichiometry	
3.	Mass transfer	
TEACHING SCHEME:		
EXAMINATION SCHEME:		
CREDITS ALLOTTED:		
Lectures: 3 Hours/Week	End Semester Examination: 60 Marks	Theory : 03
Practical : 2 Hour /Week	Unit Test: 20 Marks	Practical: 01
Total : 5Hours/Week	Continuous Assessment: 20 Marks	Total credits: 04
	Term work / Oral :50 Marks	
	Total :150 Marks	
Course Outcomes:		
After completion of the course students would be able to		
1.	a) Write the overall rate equation for heterogeneous reactions. b) Study kinetics and design of fluid solid non catalytic reactions.	
2.	Define the mechanism of catalytic reactions.	
3.	Calculate the height of fluid fluid non catalytic reactions.	
4.	Learn the kinetics and design of solid catalyzed reactions.	
5.	Learn the diffusion and reaction kinetics for porous catalyst.	
6.	Develop the kinetics of nonideal flow.	
Topics covered		
UNIT-I	Introduction to heterogeneous reaction systems: Fluid-solid non catalytic reactions: Types of heterogeneous reactions. Steps involved in developing overall rate equation. Linearizing a nonlinear rate equation and contacting patterns for heterogeneous reaction systems. Proposed models i.e. progressive conversion model and unreacted core model. Steps/resistance involved in these models. Individual and overall/global rate equation. Determination of rate controlling step. Application to design of fluid solid reactor by identifying the type of flow of phases.	(06 Hours)
UNIT-II	Fluid-fluid non catalytic reactions: Kinetic regimes for mass transfer and reaction. Rate equation for different cases/regimes. Clues to kinetic regimes using different methods. Application to design of packed bed reactor.	(06Hours)
UNIT-III	Catalysis (fluid-solid catalytic reactions): The nature of catalytic reactions. The mechanism of catalytic reactions. Steps involved in catalytic reactions. Types of adsorption, Langmuir adsorption isotherm. Synthesizing a rate law rate limiting step, preparation of catalyst and its deactivation, poisoning and regeneration. Nature and mechanism of catalyst reactions.	(06 Hours)
UNIT-IV	Solid catalyzed reactions:	(06Hours)

	Introduction, Rate equation, Film resistance controlling, surface flow controlling, Pore diffusion controlling, Experimental methods for finding rates, construction, operation and design of Catalytic reactors : Fixed bed reactor, Fluidized bed reactor.	
UNIT-V	Diffusion and reaction in porous catalysts: Diffusion and reaction in spherical catalyst pellets. Internal effectiveness factor. Overall effectiveness factor. Estimation of diffusion- and reaction-limited regimes. Mass transfer and reaction in a packed-bed. Chemical vapor decomposition (CVD) reactors.	(06Hours)
UNIT-VI	Basics of Non-ideal Flow: The Residence Time Distribution Functions and their Relationships Role of RTD in determining reactor behavior Experimental methods for finding E, the pulse experiment, the step experiment, relationship between E, F & C curve. Introduction to Dispersion Model, Tank in series model.	(06Hours)

Assignments

1.	List different types of heterogeneous reactions in chemical industry.
2.	Write a report on “ Importance of heterogeneous reactions in Chemical Industry”
3.	Select any five industrial heterogeneous reactions and write rate equations for the reactions.
4.	Give power point presentation on models for heterogeneous reactions.
5.	Design a reactor for fluid solid non catalytic reactions.
6.	Do the experiments on Reactor lab software.
7.	Give power point presentation on different types of adsorption isotherms.
8.	Solve any five old question papers.
9.	Solve ten problems on kinetics and design of fluid fluid non catalytic reactions.
10.	List out different types of industrial catalyst with characteristics.
11.	Draw different types of contacting patterns for heterogeneous reactions used in industry.
12.	Give a presentation on any reactor used for heterogeneous reactions in industry
13.	Write a report on research (review) paper on reactors used for heterogeneous reactions.
14.	Industrial visit to a chemical industry.
15.	Write a report on industrial visit. Give emphasis on details of reactor.

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Term Work:

Term work will consist of the experiments listed below, out of which any eight experiments are to be performed in laboratory by the students.

1.	To study residence time distribution in packed bed reactor.
2.	To study residence time distribution in plug flow reactor.
3.	To study residence time distribution in continuous stirred tank reactor.
4.	To study CSTR PFR in series.
5.	To study CSTR in series.
6.	Determination Surface area of catalysts.
7.	Determination of bulk density, apparent density, and true density of catalyst.
8.	Determination Pore volume of catalysts.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

PROCESS INSTRUMENTATION AND INSTRUMENTAL METHODS OF ANALYSIS		
Designation: Professional Core		
Course Pre-requisites:		
Students should have		
	Basic knowledge of Mathematics.	
TEACHING SCHEME:		
EXAMINATION SCHEME:		
CREDITS ALLOTTED:		
Lectures: 3 Hour/Week	End Semester Examination: 60 Marks	Theory : 03
Tutorial : 2 Hour /Week	Unit Test: 20 Marks	Practical : 01
Total: 5 Hour /Week	Continuous Assessment: 20 Marks	Total credits: 04
	TW/Practical: 25 marks	
	Total : 125 Marks	
Course Outcomes:		
After completion of the course students will be able to		
1.	To explain the need of process instrumentation and process control in chemical industries.	
2.	To describe various chemical analysis instruments.	
3.	To explain conductometry, turbidimetry and refractometry.	
4.	To describe chromatography methods.	
5.	To develop an ability to use theorems to compute the Laplace transform, inverse Laplace transforms. To calculate the transfer functions for first order and second order systems.	
6.	To explain various control action for first order and second order system.	
Topics covered		
UNIT-I	Introduction: Basic Concepts and characteristics of measurement system, various elements of instrument, performance characteristics. Temperature measurement: Introduction, methods of temperature measurement by expansion thermometers, filled system thermometers, electrical temperature instruments, pyrometers. Calibration of Thermometers Level measurement: Displacers, ultrasonic, microwaves, laser light.	(06 Hours)
UNIT-II	Introduction to instrumental methods of analysis: General Introduction, classification of instrumental methods, spectroscopy, properties of electromagnetic radiation, pH metry, Karl Fischer Titration. Visible Spectrophotometry & Colorimetry: Deviation from Beer's law, instrumentation applications. Molar compositions of complexes, examples.	(06 Hours)
UNIT-III	Conductometry: Introduction, laws, conductance, measurements, types of conductometric titrations, applications, advantages and disadvantages. Nephelometry and Turbidimetry: Introduction, theory, comparison with spectrophotometry, instrumentation, applications. Refractometry: Introduction, Abbe refractometer, instrumentation, applications.	(06 Hours)

UNIT-IV	<p>Chromatography: Introduction, types, theoretical principles, theories of chromatography, development of chromatography, qualitative and quantitative analysis, applications and numerical.</p> <p>Gas Chromatography: Introduction, principles of gas chromatography, gas liquid chromatography, instrumentation, evaluation, retention volume, resolution. Branches of gas chromatography, applications and numerical.</p> <p>High Performance (Pressure) Liquid Chromatography: Introduction, principles, instrumentation, apparatus & materials, column efficiency and selectivity, applications.</p> <p>GC-MS, LC-MS.</p>	(06 Hours)
UNIT-V	<p>Process dynamics: Introduction, tools of dynamics analysis, ideal forcing function, input output model, transfer function models, proportion of transfer function, poles & zeros of transfer function with qualitative response, dynamic behavior of pure integrator, pure gain, first order & second order systems (with or without dead time), physical example of these systems.</p>	(06 Hours)
UNIT-VI	<p>Introduction to feedback control: Final Control Elements - Valve characteristics. Instrumentation symbols. Introduction to Process Flow Diagram (PFD) and Piping & Instrumentation Diagram (P&ID).</p> <p>Control theory basics: The control loops, process control terms, components of control loops, basic control action i.e. on-off, P, I, D, PI, PD, PID for 1st order process control loops and 2nd order response.</p>	(06 Hours)

List of Experiments:

Term work will consist of the experiments listed below, of which at least eight should be performed in laboratory by the students.

1.	To Study the characteristics of On-Off Controller.
2.	Calibration of Bimetallic thermometer.
3.	Gas Chromatography.
4.	High Performance Liquid Chromatography.
5.	UV Spectrophotometer.
6.	Dynamic behavior of non interacting system.
7.	Dynamic behavior of interacting system.
8.	Mercury Thermometer With well and Without Well.
9.	Conductivity meter.
10.	PH meter analysis.
11.	Manometer Tuning.
12.	To Study the Thermocouple.
13.	Calibration of RTD.

Assignments:

1.	Students have to visit chemical industry and prepare a detailed report on various instruments used for process variable measurement.
2.	Students have to visit chemical industry and prepare a detailed report on various instruments used

	for chemical analysis.
3.	Watch NPTEL video and make report on various instruments used for process variable measurement.
4.	Presentation on instruments used for process variable measurement.
5.	Group discussions on instruments used for process variable measurement.
6.	To find Transfer Function for 1 st order and 2 nd order Instrument or process.
7.	Draw the Control Loop for HE for different process variable control.
8.	Draw the Control Loop for Batch Reactor for different process variable control.
9.	Draw the Control Loop for CSTR for different process variable control.

Syllabus for Unit Test:

Unit Test -I	UNIT – I, II, III
Unit Test -II	UNIT – IV, V, VI

COMPUTER PROGRAMMING FOR CHEMICAL ENGINEERING - II

Designation: Computing

Course Pre-requisites:

Students should have basic knowledge of

- | | |
|---|---|
| 1 | Computer fundamentals |
| 2 | Computer Programming for Chemical Engineering-I |

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical : 2 Hour /Week	Term work / practical : 50 Marks	Practical : 01
		Total credits : 01

Course Outcomes:

After completion of the course students will be able to

- | | |
|----|--|
| 1. | Apply the knowledge of constant, variables, data types and various standard input output functions to write C-programs. |
| 2. | Prepare a flow chart and write C-programs using control constructs and looping statements. |
| 3. | Explain the concept of single dimensional and multidimensional arrays and write C-programs for single dimensional arrays, multidimensional arrays. |
| 4. | Write C-programs using string. |
| 5. | Explain the concept of pointer and write C-programs using pointers. |
| 6. | Apply the knowledge of C-programming language, CHEMCAD, MATLAB for chemical engineering calculations. |

Term Work:

Term work will consist of the programs/practicals listed below, out of which any eight programs/practicals are to be performed in laboratory by the students.

- | | |
|---|---|
| ➤ | <p>C-Programming Language: Introduction, Character sets, constant, variables and <u>Data Types</u>: integer, float, double, char, string. <u>Operators</u>: arithmetic, relational, logical, increment and decrement, assignment, conditional. Standard input-output functions: printf (), scanf (), getch () or getchar().</p> <p>1. Programs based on standard input-output functions used in C-Programming.</p> |
| ➤ | <p><u>Control statements</u>: programs using if statement, if-else statement, goto statement and switch-case statement.</p> <p>2. Programs based on if-else statements.
3. Programs based on goto statements.
4. Programs based on switch-case statements.</p> |
| ➤ | <p><u>Loop statements</u>: programs using while loop, do-while loop and for loop.</p> <p>5. Programs based on while loop.
6. Programs based on do-while loop.
7. Programs based on for loop.
8. Programs to solve chemical engineering problems.</p> |
| ➤ | <p><u>Arrays</u>: single dimensional and multi-dimensional arrays.</p> |

	9. Programs based on single dimensional arrays. 10. Programs based on multi-dimensional arrays.
➤	<u>String:</u> programs using string. String functions: strlen()/ strcpy()/ strrev()/ strcat ()/strlwr ()/strupr ()/ strcmp (). 11. Programs based on strings and string functions. 12. Programs based on string functions.
➤	<u>Pointers:</u> programs using pointers. Use of * and & operators. Pointer arithmetic's. Use of pointers <u>Pointer and function:</u> parameter passing to function by reference and by value. File handling, Linked list 13. Programs based on pointers and function
➤	<u>Application of C-programming language, CHEMCAD and MATLAB for Chemical Engineering:</u> various calculations and solutions in Chemical Engineering. Term work includes programs based on following unit operations 13. Design of co-current and counter current heat exchanger 14. Design of Distillation column 15. Design of Mixed Flow Reactor 16. Design of Evaporator etc.
In addition to these above stated programs / practicals concern faculty member may design his/her own programs / practicals.

CBCS Syllabus: 2014-2015
Sem VII and Sem VIII

CHEMICAL PROCESS EQUIPMENT DESIGN-II

Designation: Professional Core

Course Pre-requisites:

Students should have basic knowledge of

- | | |
|---|--|
| 1 | Unit Operations involved in chemical engineering |
| 2 | Heat transfer and Mass transfer and Mechanical operation equipments. |

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hours/Week	End Semester Examination: 60 Marks	Theory : 03
Drawing : 2 Hour /Week	Unit Test: 20 Marks	Drawing: 01
Total : 5Hours/Week	Continuous Assessment: 20 Marks	Total credits: 04
	Term work / practical:50 Marks	
	Total :150 Marks	

Course Outcomes:

After completion of the course, students would be able to

- | | |
|----|---|
| 1. | Design evaporator and crystallizers. |
| 2. | Design Dryers and Filters. |
| 3. | Design different columns used in distillation/Absorption. |
| 4. | Identify and design different packings used in packed columns. |
| 5. | Calculate height of packing, column diameter in packed columns. |
| 6. | Understand importance of process safety and Hazard Analysis. |

Topics covered

UNIT-I	<p>Evaporators & Crystallizers</p> <p>Classification of vaporizing equipment, evaporators such as kettle, thermosiphon, vertical, horizontal etc., Chemical evaporators, natural circulation & forced circulation evaporators, the calculation of chemical evaporators, crystallizers, types of crystallizers, design considerations. Case studies on evaporators.</p>	(06 Hours)
UNIT-II	<p>Filters & Dryers:</p>	(06 Hours)

	Various types of filters like vacuum filters, pressure filters, centrifuges and rotary drum filters, design of rotary drum filters, including design of drum, shaft, bearing and drive system. Types of dryers, batch type dryers, continuous dryers.	
UNIT-III	Tray Column Design Design of plate column- distillation columns, design variables in distillation, design methods for binary systems, plate efficiency, approximate column sizing, plate Contactors, plate hydraulic design.	(06 Hours)
UNIT-IV	Packed Column Design Choices of packing, types of packing, packed bed height (distillation and absorption), HETP, HTU, NTU, Cornell's method, Onda's method, column diameter, column internals, column auxiliaries.	(06 Hours)
UNIT-V	Piping Design I Definition and Application of Piping, Classification of pipe, Piping Material Specifications, Manufacturing Method, Weight and Size Standards STD , Extra Strong XS , Double Extra Strong XXS etc. Pressure Temperature Rating System, Pipe Fittings, Types of Flanges, Types of Valves,	(06 Hours)
UNIT-VI	Piping Design II Codes and Standards, Piping elements, Pipe Hydraulics and Sizing, Mechanical Design, Fundamentals Piping Drawing, Basics Development of Plot Plan, Equipment and Piping Layout, Stress Analysis Static and Dynamic, Selection and Design of Supports and Expansion Joints, Transient Fluid flow Analysis. Friction Factor, Moody Diagram, Minor Losses in Piping ,Equivalent Length Method & Loss Coefficient Method,	(06 Hours)

Assignments	
--------------------	--

1.	Write a report on different evaporators and crystallizer
2.	Types of Dryers and filters.
3.	Designing of Distillation column.
4.	Designing of Absorption column.
5.	Importance of piping design.

6.	Pipe sizing and supports
7.	Report on Equivalent Length Method & Loss Coefficient Method,
8.	Solve old (last five years) question papers with reference to particular topic.
9.	Prepare a model for any of the equipment
10.	Prepare a report on advance equipments which are newly introduced in the current year.
11.	Give fifteen minutes presentation (seminar) on particular topic and prepare a report.
12.	Solve old (last ten years) GATE question papers with reference to design subject.
13.	Group discussion on the recent advances in equipment design
14.	Write a report on your visit to research and development laboratory of national/international repute.
15.	Technical interview based on the knowledge of design

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Term Work:

Term work will consist of the Practicals and drawings listed below, out of which any eight are to be done by students. Any one drawing in Autocad.

1.	Design and drawing of evaporator.
2.	Design and drawing of crystallizer.
3.	Design and drawing of rotary filter.
4.	Detailed design and drawing of piping layout.
5.	Detailed design and drawing of spray dryer..
6.	Detailed design and drawing of distillation column.
7.	Detailed design and drawing of absorption column..
8.	Study various packings.
9.	Design and calculations of packed column.
10.	Study the contains of stress analysis of pipes.
11.	Detailed design and drawing of piping supports.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

MULTIPHASE REACTION ENGINEERING		
Designation: Professional Core		
Course Pre-requisites:		
Students should have basic knowledge of		
1	Thermodynamics	
2	Transport Processes	
<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDITS ALLOTTED</u>
Lectures : 3 Hours/Week	End Semester Examination : 60 Marks	Theory : 03
	Unit Test : 20 Marks	Practical: 01
	Continuous Assessment : 20 Marks	Total credits: 04
	Total :100 Marks	
Course Outcomes:		
After completion of the course students would be able to		
1	Recognize the importance of multiphase reactors.	
2	Determine chemical reaction equilibrium constant and rate controlling step for heterogeneous system.	
3	Recognize the effect of system and operating parameters on the hydrodynamics of multiphase reactors.	
4	Recognize the significance of mixing and determine extent of mixing in multiphase system	
5	Determine the effect of system, geometric, and operating parameters on heat and mass transfer coefficients.	
6	Enumerate the effect of hold up in the design of multiphase reactors	
Topics covered		
UNIT-I	Introduction to Multiphase Reactor Engineering Types, Classification, Application of Industrial Importance. Two case studies	(06 Hours)
UNIT-II	Thermodynamics and kinetics Notable industrial heterogeneous systems and thermodynamic role. Application of equilibrium criteria to chemical reactions. The Gibbs energy change and equilibrium constant. Estimation of equilibrium constant for heterogeneous system by defining standard state of the phases involved. Determination of rate controlling step: intrinsic kinetics for heterogeneous systems	(06 Hours)
UNIT-III	Hydrodynamic Characteristics Hydrodynamic characteristics of different multiphase reactors: Mechanically	(06 Hours)

	Agitated Contactors (MAC), Bubble Columns, Slurry Reactors, Fluidized Beds, Loop Reactors and Modified Versions	
UNIT-IV	Mixing Studies Effect of geometrical, system, and operating parameters on phase mixing in multiphase reactors. Quantification of phase mixing. Development of a mathematical model.	(06 Hours)
UNIT-V	Heat Transfer and Mass Transfer Studies Effect of geometrical, system, and operating parameters on heat transfer coefficient in multiphase reactors. Quantification of heat transfer coefficient. Application of correlations available to different multiphase reactors. Experimental techniques used for estimation of mass transfer coefficient and selection of suitable technique for a multiphase reactor. Effect of geometrical, system, and operating parameters on mass transfer coefficient in multiphase reactors. Quantification of mass transfer coefficient. Application of correlations available to different multiphase reactors.	(06 Hours)
UNIT-VI	Design Aspects of Multiphase Reactors Pressure drop, Fractional phase hold- up, mass and heat transfer coefficient, extent of mixing, etc.	(06 Hours)

Assignments:

1.	Enumerate any one industrial relevant multiphase system
2.	Refer any one recently published article related to multiphase system and make presentation
3.	Estimate the power requirement for a given impeller
4.	Visit to any chemical process industry to study atleast one multiphase system
5.	List the pressure measurement tools available in the market
6.	List and enumerate physical significance of the empirical correlations available in the literature to estimate liquid dispersion coefficient.
7.	List and enumerate physical significance the empirical correlations available in the literature to estimate mass transfer coefficient.
8.	Refer any review article perati
9.	Technical interview based on the knowledge of analytical techniques.
10.	List out all the principles of the analytical techniques.
11.	Perform any one chromatographic technique.
12.	Find out different types of proteins with structure.
13.	Prepare a report on downstream processing.

In addition to these above stated assignments concerned faculty member may design his/her own

assignments.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

PLANT UTILITIES AND PROCESS SAFETY

Designation: Professional Core

Course Pre-requisites:

Students should have knowledge of

1. Chemical Technology, Chemical Process Industries

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures : 3 Hours/Week	End Semester Examination : 60 Marks	Theory : 03
	Unit Test : 20 Marks	Total credits : 03
	Continuous Assessment : 20 Marks	
	Total : 100 Marks	

Course Outcomes:

After completion of the course students will be able to

1. Identify the common utilities required for Chemical Plant.
2. Express various types of boilers and their selection.
3. Analyze the importance of insulation and air pressure in process.
4. Identify and analyze the hazards.
5. Integrate the theoretical and practice knowledge to understand hazards activities.
6. Implement the safety designs and procedures.

Topics covered

UNIT - I	<p>Identification of common plant utilities</p> <p>Role and importance of plant utilities in chemical plants, Water, compressed air, steam, vacuum, refrigeration, venting, flaring and pollution abating. Water and its quality, storage and distribution for cooling and fire fighting, Water resource management.</p>	(06 Hours)
UNIT - II	<p>Steam Generation and Utilization</p> <p>Steam generation and its application in chemical process plants, distribution and utilization; Types of boilers and their operation; steam economy, Steam condensers and condensate utilization, Steam generation by utilizing process waste heat using thermic fluids, Selection and sizing of boilers; waste heat</p>	(06 Hours)

	boilers.	
UNIT - III	<p>Compressors, blowers and Vacuum Pumps</p> <p>Compressors, blowers and vacuum pumps and their performance characteristics; Methods of developing vacuum and their limitations, material handling under vacuum, Creation of low pressure/vacuum by pumps and ejectors.</p> <p>Refrigeration and HVAC</p> <p>fundamentals of refrigeration, refrigerant management and safety, Selection of refrigerants; Processes of HVAC, Psychometric Chart and Air-Conditioning System, Ventilation and Indoor Air Quality.</p>	(06 Hours)
UNIT - IV	<p>Elements of Safety</p> <p>Elements of safety, safety and site selection; Plant layout and unit plot planning; Definition of risk and hazard, Identification and assessment of the hazards, distinction between hazards and risk, Industrial hygiene, toxicological studies, Hazard operability (HAZOP) hazard analysis (HAZAN); Safety Integrity Level (SIL) Studies; Technology selection and transfer, choosing the right process.</p>	(06 Hours)
UNIT - V	<p>Safety in Chemical Processes</p> <p>Introduction, Chemical Process classification, Process design and safety parameters. Safety parameters in the process design of phenol from cumene, safety in polyvinyl chloride plant.</p> <p>Chemicals and their Hazards</p> <p>Acetonitrile, acetyl chloride, butyl amine, acrylamide, acrylonitrile, allyl alcohol, benzene, bromine, isopropyl alcohol, acetaldehyde, ethylene oxide, butane, n-hexane, anhydrous ammonia, acetone, toluene, p-xylene, acetic acid, monochloro benzene, oleum, carbon monoxide.</p>	(06 Hours)
UNIT - VI	<p>Safety Procedures and Designs</p> <p>Process Safety Hierarchy, Process Safety Strategies, Managing Safety, Safety Reviews and Accident Investigations, Designs for Process Safety, Inherently Safer Designs, Controls: Double Block and Bleed, Safeguards or Redundancy, Block Valves, Explosion Suppression, Designs for Runaway Reactions.</p>	(06 Hours)

Tutorials/Assignments:	
The internal assessment shall consist of minimum SIX assignments from the following list	
1.	Prepare a report on safety issues of any one particular industry.
2.	Prepare Utility Line Diagram (ULD) for typical process.
3.	Write a report on HAZOP study of one particular hazard.
4.	Prepare a report on the color codes for utility pipelines in chemical plants.
5.	Enhancement in collaborative learning is done through, group assignments that will be given to encourage students to work with classmates to discuss and complete homework assignments
6.	Write a report on “ Importance of Industrial Hygiene in Chemical Industry”
7.	Group discussions on any of the following topics: a) Importance of various utilities in chemical industries. b) Process safety in petroleum industry c) HAZOP Vs HAZAN
8.	Design a manual for application of utilities for various plants.
9.	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in industry.
10.	Write a technical report on HAZAN study of any one particular threat.
11.	Elaborate the role of safety engineer in Chemical industry.
12.	Organizing a industrial visit to nearby industry to understand the plant utilities and safety measures.
13.	Write a report on your visit to research and development laboratory of national/international repute.
Text Books/ References:

6.	Trevor A. Kletz, “Hazop & Hazan: Identifying and Assessing Process Industry Hazards”, Fourth Edition, CRC Press, 1999.
Syllabus for Unit Test:	
Unit Test - I	UNIT– I, II, and III
Unit Test - II	UNIT– IV, V, and VI

PROCESS DYNAMICS AND CONTROL

Designation: Professional Core

Course Pre-requisites:

Students should have

1. Basic knowledge of Mathematics.
2. Process Instrumentation and Instrumental Methods of Analysis

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hours/Week	End Semester Examination: 60 Marks	Theory : 03
Tutorial : 2 Hour /Week	Unit Test: 20 Marks	Practical : 01
Total: 5 Hour /Week	Continuous Assessment: 20 Marks	Total credits: 04
	TW/Practical: 50 marks	
	Total : 150 Marks	

Course Outcomes:

After completion of the course students will be able to

1. To give details of basic control action and develop mathematical models for control purpose.
2. To illustrate behavior of chemical processes.
3. To elucidate transient response of system.
4. To describe stability of the system.
5. To analyze frequency response of process.
6. To apply knowledge for controller selection and tuning.

Topics covered

UNIT-I	<p>Introduction: Block diagrams, closed loop and open loop control systems, Basic control actions.</p> <p>Open Loop Response of Simple Systems: Dynamics of first order systems using transfer functions; Various first order responses such as, a thermometer bulb. General response to step, ramp, impulse, and sinusoidal inputs; Concentration and temperature responses of a stirred tank</p>	(06 Hours)
---------------	--	-------------------

UNIT-II	Dynamic Behavior of Chemical Processes: Linearization of liquid level systems; Response of a pressure system, second order systems, the manometer; Response of interacting and non interacting systems. Transfer functions and the input-output models. Dynamics and analysis of first, second and higher order systems.	(06 Hours)
UNIT-III	Transient Response of Control Systems: Servo and regulated operation, General equations for the transient response, proportional control of a signal capacity process; Integral control, Proportional-integral control and derivative action.	(06 Hours)
UNIT-IV	Stability: Concept of stability, Stability criterion, Routh test for stability. Root Locus Analysis: Concept of root locus, Locus diagram.	(06 Hours)
UNIT-V	Frequency Response Analysis: First order systems, Bode diagram, and Complex numbers to get frequency response. Nyquist plot.	(06 Hours)
UNIT-VI	Advanced Control Schemes: Controller selection and tuning, Control valve characteristics and sizing, cascade control, Feed forward and ratio control. Introduction of digital control system.	(06 Hours)

List of Experiments:

Term work will consist of the experiments listed below, of which at least eight should be performed in laboratory by the students.

1.	To study the closed loop pressure control for P control action and calculate offset.
2.	To study the closed loop pressure control for PI action PID action.
3.	To study optimizing performance for pressure control trainer by using tuning technique with help of PID action.
4.	To study closed loop system for servo problem having PI action consideration.
5.	To study the closed loop flow controller
6.	To study the closed loop level controller

7.	To study the ratio controller
8.	To study the cascade controller
9.	Root locus analysis on software (Ex. MATLAB)
10.	Bode plot on software (Ex. MATLAB)
11.	Nyquist plot on software (Ex. MATLAB)
12.	PID control loop simulation for a first order process (Ex. SIMULINK)

Assignments:

1.	Students have to visit chemical industry and prepare a detailed report on various controllers used in industry.
2.	Watch NPTEL video and make report on various topics in process dynamics and control
3.	Group discussions on controllers used for chemical processes.
4.	To find Transfer Function for 1 st order and 2 nd order process.
5.	Draw the Control Loop and Block Diagram for different chemical processes.
6.	Solve numerical questions in last three year question papers.
7.	Write note on Advance Controllers.
8.	Explain Digital Controllers.
9.	Explain IMC Controller in Detail.
10.	Explain MPC Controller in Detail.
11.	Explain process Identification of any Chemical Process in detail
12.	Explain Optimal control of any one Chemical Process.

Syllabus for Unit Test:

Unit Test -I	UNIT – I , II, III
Unit Test -II	UNIT – IV, V, VI

CHEMICAL PROCESS MODELING AND SIMULATION

Designation: Professional Core

Course Pre-requisites:

Students should have basic knowledge of

1	Heat transfer, Mass transfer, Chemical reaction engineering, Process Dynamics and Control
2	Process Calculation
3	Mathematics including integration and derivation

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hours/Week	End Semester Examination: 60 Marks	Theory : 03
Practical : 2 Hour /Week	Unit Test: 20 Marks	Practical: 01
Total : 5Hours/Week	Continuous Assessment: 20 Marks	Total credits: 04
	Term work / practical:50 Marks	
	Total :150 Marks	

Course Outcomes:

After completion of the course students would be able to

1	Express mass balance, energy balance and momentum balance equation for various chemical process systems.
2	Express models for heat transfer equipment such as double pipe heat exchangers, shell and tube heat exchanger, etc.
3	Develop models for distillation columns, etc.
4	Develop models for reaction equipment such as batch reactor, CSTR, etc.
5	Recognize simulation approaches.
6	Simulate model equations using numerical methods.

Topics covered

UNIT-I	<p>Introduction to modeling: Introduction, definition of modeling, different types of models, applications of mathematical modeling, principles of formation, lumped model, distributed parameter model, Fundamental laws: continuity equation, energy equation,</p>	(06 Hours)
---------------	---	-------------------

	equations of motions, transport equations, equations of state, chemical kinetics.	
UNIT-II	Modeling of Heat transfer equipment: Double pipe heat exchanger, shell and tube heat exchanger, two heated tanks, single component vaporizer, steady-state heat Conduction through a hollow cylindrical pipe, heat transfer with coil	(06 Hours)
UNIT-III	Modeling of distillation columns: Ideal binary distillation column, multi component non-ideal distillation column, batch distillation with holdup, flash distillation, packed column design	(06 Hours)
UNIT-IV	Modeling of reactors: Two phase CSTR with heat removal, series of isothermal constant holdup CSTRs, CSTRs with variable holdups, Gas phase-pressurized CSTR, Non-Isothermal CSTR, Batch reactor, gas liquid bubble reactor, semi-batch reactor.	(06 Hours)
UNIT-V	Introduction to simulation: Introduction to simulation, definition of simulation, approaches of simulation: modular approaches, equation-solving approach, decomposition of networks: tearing algorithms, algorithms based on the signal flow graph, algorithms based on reduced digraph.	(06 Hours)
UNIT-VI	Simulations using numerical methods: Use of numerical methods to solve mathematical model equations of Gravity flow tank, Three CSTRs in series, Non-isothermal CSTR, Binary distillation column, Multi-component distillation column, Batch reactor.	(06 Hours)

Assignments

1	Write a report on the importance of modeling with reference to the process industries.
2	Solve old (last five years) question papers with reference to particular topic.
3	Discuss the importance of modeling and simulation w. r. t. science and engineering
4	Prepare a report on application of modeling and simulation.
5	Give fifteen minute presentation (seminar) on particular topic and prepare a report.
6	Obtain any industrial data for modeling and simulation.
7	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in industry.

8	Discuss different software available for modeling and simulation.
9	Write a technical report on your visit to a process industry with respect to modeling.
10	Group discussion on the recent advances in simulation software.
11	Prepare a report on modeling and simulation of all different chemicals reactors.
12	Technical interview based on the knowledge of Modeling simulation.
13	Students may take any industrial case e.g. manufacturing of Maleic anhydride and solve this case using standard simulation software like Aspen Plus, HYSIS
In addition to these above stated assignments concerned faculty member may design his/her own assignments.	
Term Work:	
Term work will consist of the practicals listed below, out of which any eight practicals are to be performed in laboratory by the students.	
1	Study of gravity flow tank.
2	Study of Batch reactor
3	Simulation of CSTR
4	Simulation of bubble point temperature
5	Simulation of distillation column.
6	Simulation of heat exchanger
7	Simulation of first order reaction system in batch reactor.
8	Simulation of first order reaction system in CSTR
9	Study of a reversible reaction in a batch reactor.
10	Simulation of any model equation.
11	Study of CSTR combination in first order reactions.
For simulation, faculty member may use any suitable simulation software like MATLAB, ASPEN, CHEMCAD, etc. In addition to these above stated practicals concerned faculty member may design his/her own practicals.

Syllabus for Unit Test:	
--------------------------------	--

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

INDUSTRIAL MANAGEMENT

Designation: Professional Core

Course Pre-requisites:

Students should have basic knowledge of

1	Concept of Management.
---	------------------------

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Lectures: 3 Hours/Week

End Semester Examination: 60 Marks

Theory : 03

Unit Test: 20 Marks

Drawing: 00

Total:3 Hours/Week

Continuous Assessment: 20 Marks

Total credits: 03

Total :100Marks

Course Outcomes:

After completion of the course, students would be able to

- | | |
|----|---|
| 1. | Know the types of business. |
| 2. | Understand the types of organization |
| 3. | Understand the forms of ownership. |
| 4. | Know the concepts of material management. |
| 5. | Know the concepts quality management. |
| 6. | Know the various acts. |

Topics covered

	Outline of Business	
UNIT-I	Types of Business, Industrial sectors Globalization Management Process, Principles of Management, Functions of Management	(06 Hours)
UNIT-II	Organizational Management Organization, Types of organization, Departmentation, Principles of Organization, Forms of ownership	(06 Hours)
UNIT-III	Financial Management Financial Management- Objectives & Functions, Capital Generation &	(06 Hours)

	Management, Budgets and accounts, Taxation (Excise Tax, Service Tax, Income Tax, Value Added Tax and Custom Duty)	
UNIT-IV	Materials Management Inventory Concept, its classification, functions of inventory, ABC Analysis, Economic Order Quantity Concept, graphical representation, determination of EOQ, Standard steps in Purchasing, Modern Techniques of Material Management, Material Resource Planning (MRP), Enterprise Resource Planning (ERP)	(06 Hours)
UNIT-V	Quality Management Quality Management System, Quality Control, Quality Circle, Quality Assurance, Total Quality and TQM, Kaizen, 5'S', 6 Sigma	(06 Hours)
UNIT-VI	Industrial Legislation and Industrial Safety Safety Management, Causes of accidents, Types of Industrial Accidents, Preventive measures, Safety procedures Factory Act, Air (Prevention and Control of Pollution) Act, Minimum Wages Act, Workman Compensation Act.	(06 Hours)
Assignments		
1.	Types of business.	
2.	Globalization in India	
3.	Different principals of management.	
4.	Various types of organization	
5.	Various forms of ownership	
6.	Capital Generation for an organization.	
7.	ABC Analysis.	
8.	Standard purchase	
9.	Material Resource Planning (MRP), Enterprise Resource Planning (ERP)	
10.	Concepts of quality management.	
11.	Total Quality Management (TQM)	
12.	Kaizen approach in Quality management.	
13.	5'S', 6 Sigma	

14.	Factory Act
15.	Minimum Wages Act, Workman Compensation Act
In addition to these above stated assignments concerned faculty member may design his/her own assignments

4.	Newman W.H., Warren E. K. and McGil A. R., “The process of Management” Prentice- Hall
Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

PLANT DESIGN PROJECT ENGINEERING AND COSTING

Designation: Professional Core

Course Pre-requisites:

Students should have basic knowledge of

1 | Chemical Process Industry

2 | Chemical design

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Lectures: 3 Hours/Week

End Semester Examination: 60 Marks

Theory : 03

Practical : 2 Hour /Week

Unit Test: 20 Marks

Practical: 01

Total : 5Hours/Week

Continuous Assessment: 20 Marks

Total credits: 04

Termwork / Oral :50 Marks

Total :150 Marks

Course Outcomes:

After completion of the course students would be able to

1. | Select appropriate process for a project.
2. | Differentiate the equipment and able to prepare specification sheet.
3. | Learn basic economic concept, to understand and apply this concepts in the project works undertaken and to chemical engineering situation by solving problem.
4. | Evaluate the project cost including capital investment, product cost and the total project cost.
5. | Solve problem on profitability and breakeven analysis.
6. | Control and schedule of the project using CPME/PERT technique, calculations.

Topics covered

UNIT-I	<p>Introduction: Plant design : Design basis, process selection, material of construction, plant location ,plant layout and installation, safety ,start up ,shut down and operating guidelines ,Preliminary techno economic feasibility report .Complete engineering flowsheet drawing.</p>	(06Hours)
---------------	---	------------------

UNIT-II	Optimization and feasibility of plant design, selection of process equipments: Standard versus special equipment selection criteria, and specification sheets. Importance of Laboratory development pilot plant, Indian boiler regulations, factories act.	(06Hours)
UNIT-III	Cost estimation: Cash flow and cumulative cash position for industrial operations, factors affecting estimation of investment and production cost, total capital investment, fixed and working capital investment & their estimations, type of estimates, cost indexes, method for estimating capital investment. Insurance.	(06 Hours)
UNIT-IV	Estimation of total product cost, Estimation of total product cost: manufacturing cost, general expenses, Manufacturing cost: direct production cost, fixed charges, plant overhead cost. Types of depreciation, Method for determining depreciation: straight line method, decline balance method, sum of the year digit method, shrinking fund method etc, payout period.	(06 Hours)
UNIT-V	Profitability, alternative investments and replacement: Methods for profitability evaluation, Evaluation of Break Even Point and its significance, % rate of return, Practical factors in alternative investment and replacement Studies	(06 Hours)
UNIT-VI	Scheduling and Networking of Project Planning of project schedule by BAR CHART, Inventory control scheduling project using CPM/PERT methods. Network diagramming, earliest start time and earliest finish time, Advantages of CPM, Cost to finish the project earlier than normal cost.	(06 Hours)

Assignments

1.	Write a report on plant design for any company for current year.
2.	Write preliminary feasibility report for any industry.
3.	Draw complete engineering drawing for any process industry.
4.	Prepare specification sheet for equipments for any particular industry.
5.	Give power point presentation of different types of cost for industry.
6.	Draw a chart of how cash flow takes place in chemical industry.

7.	Analyze cost index for last ten years and how it changes.
8.	Understand basic concept of depreciation and apply to any chemical industry and calculate the values.
9.	Apply a critical-thinking and problem-solving approach towards factories act.
10.	Specify materials for construction and estimate the cost of investments for chemical industry.
11.	Write complete report for a chemical industry which should include all the factors related to cost estimation.
12.	Give power point presentation on knowledge of safety in chemical industry.
13.	Give power point presentation on importance of break even analysis.
14.	Prepare one network diagramming by using CPM method.
15.	Gove a power point presentation on CPM and PERT for any particular industry.

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Term Work:

Term work will consist of drawing of sheets

	Standard symbols as per IS code
1	Process flow diagram
2	Piping and Instrumentation diagram
3	Plant layout and elevations
4	Utility diagram
5	Piping GA drawing
6	Piping isometrics
7.	Draw any sheet by using Autocad.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

Bharati Vidyapeeth University
College of Engineering
Elective

Elective III: Advanced Oxidation Processes

Designation: Elective

Course Pre-requisites:

Students should have basic knowledge of

1 | Waste water treatment

2 | Engineering Chemistry

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Lectures: 3 Hours/Week

End Semester Examination: 60 Marks

Theory : 03

Practical : 2 Hour /Week

Unit Test: 20 Marks

Practical: 01

Total : 5Hours/Week

Continuous Assessment: 20 Marks

Total credits: 04

Term work / Oral :50 Marks

Total :150 Marks

Course Outcomes:

After completion of the course students would be able to

1. | Demonstrate the mechanism of various advanced oxidation processes (AOPs)

2. | Understand the method of ozonation and photon induced AOPs

3. | Learn the method of heterogeneous photocatalysis and its mechanism

4. | Know the method of homogeneous and heterogeneous Fenton processes and its mechanism

5. | Analyze emerging AOPs and their mechanism

6. | Demonstrate the industrial applications of AOPs

Topics covered

UNIT-I	<p>Introduction to advanced oxidation processes (AOPs) Conventional waste water treatment processes, Fundamentals and background of AOPs for water and wastewater treatment, basic reaction mechanism of AOPs, Role of hydroxyl radicals and their generation, Reaction kinetics and degradation mechanisms of organic pollutants by hydroxyl radicals, Effects of</p>	(06 Hours)
---------------	--	-------------------

	process parameters and scavenging media on degradation efficiency, oxidation potential of AOPs, merits and demerits of various AOPs	
UNIT-II	<p>Ozonation and Photo induced AOPs:</p> <p>Ozonation: background and fundamentals, reaction kinetics and mechanisms, Application of homogeneous and heterogeneous catalytic ozonation in water treatment</p> <p>Fundamentals of UV irradiation, Absorption and bond dissociation energy, UV sources and their characteristics, choice of photo source–used in AOPs and their spectral distributions, mechanism of photo induced AOPs.</p> <p>Photo induced AOPs: Oxidation using ultraviolet irradiation and hydrogen peroxide (UV/H₂O₂), oxidation using ultraviolet irradiation and ozone (UV/Ozone), oxidation using combination of ultraviolet irradiation, hydrogen peroxide and ozone (UV/ H₂O₂ /Ozone).</p>	(06 Hours)
UNIT-III	<p>Heterogeneous photo-catalysis</p> <p>Fundamentals of semiconductor photo-catalysis, various semiconductor particles used in photocatalytic applications, visible light driven photo-catalysts, photocatalytic reactions and kinetic studies and introduction to nano photo-catalysis.</p> <p>Photocatalytic reactors, solar energy driven or artificial light photo reactors, solar collectors, design of slurry or supported catalyst reactors, comparing reactor efficiencies and reuse of catalyst.</p>	(06 Hours)
UNIT-IV	<p>Homogeneous and heterogeneous Fenton processes</p> <p>Fenton process, photo-fenton process, advanced fenton process, the mechanism of fenton based processes, merits and demerits of homogeneous and heterogeneous Fenton processes.</p>	(06Hours)
UNIT-V	<p>Emerging AOPs</p> <p>Electrochemical oxidation, Ultrasound processes; principles of sonochemistry and acoustic cavitation, ultrasound cavitation and its combination with other AOPs, synergistic and antagonistic effects, hydrodynamic cavitation and its combination with other AOPs.</p>	(06 Hours)

UNIT-VI	Industrial applications of AOPs Application of AOPs for industries such as textile, petroleum, pharmaceutical, petrochemical industry etc., decontamination of ground water, cost or economic analysis of various AOPs	(06 Hours)
Assignments		
1.	Write a report on current scenario of advanced oxidation processes.	
2.	Evaluate the use of solar or visible light driven photocatalysts.	
3.	Estimate synergistic effect of combining AOPs with cavitation based processes	
4.	Give power point presentation on semiconductor photocatalysis	
5.	Analyze the industrial applications of AOPs.	
6.	Understand the reaction mechanism of AOPs	
7.	Apply a critical-thinking towards scale-up aspects of AOPs.	
8.	Analyze recent advances in synthesis of mixed oxide photocatalysts.	
9.	Write a technical report on your visit to a waste water treatment plant.	
10.	Give power point presentation on the applications of emerging AOPs	
11.	Group discussion on the recent advances in advanced oxidation processes.	
12.	Make a complete chart of various operations involved in waste water treatment.	
13.	Assess the environmental or safety norms for disposal of waste water.	
In addition to these above stated assignments concerned faculty member may design his/her own assignments		
Term Work:		
Term work will consist of the Seminar :		
	Seminar should be based on recent advances in AOPs. Students may undertake studies in water and waste water treatment using AOPs. Design and scale-up aspects can be studied in detail. Termwork should be based on the technical report on these studies carried out by individual or small group of students.

Syllabus for Unit Test:	
--------------------------------	--

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

ELECTIVE III: FUEL CELL TECHNOLOGY

Designation: Elective

Course Pre-requisites:

Students should have knowledge of

1. Chemistry, Physics, Thermodynamics

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures : 3 Hours/Week	End Semester Examination : 60 Marks	Theory : 03
Practical : 2 Hour /Week	Continuous Assessment : 40 Marks	Practical : 01
	Term Work/Oral : 50 Marks	Total credits : 04
	Total : 150 Marks	

Course Outcomes:

After completion of the course students will be able to

1. Define the concept of fuel cell.
2. Express various types of fuel cell.
3. Distinguish between the fuel cell and electrochemical cell.
4. Express the thermodynamics of fuel cell system.
5. Learn the process of fuel processing
6. Develop enough skills to design systems or components of fuel cells.

Topics covered

UNIT - I	<p>Introduction to Fuel Cell Technology</p> <p>Fuel cell definitions, Need of fuel Cell, Principal of fuel cell technology, Basics Electrochemistry of fuel cell, Calculation of cell potential: activities or concentrations, electrochemical potential; The movement of ions in solution: diffusion and migration, Conductivity and mobility, Liquid junction potentials, ion-selective electrodes.</p>	(06 Hours)
UNIT - II	<p>Classification of Fuel Cells</p> <p>Alkaline Fuel Cells, Phosphoric Acid Fuel Cells, Solid Oxide Fuel Cells, Molten Carbonate Fuel Cells, Direct Methanol Fuel Cells, Proton Exchange</p>	(06 Hours)

	Membrane Fuel Cells	
UNIT - III	<p>Fuel Cell Components Electrolytes, Catalysts, Current collector/ bipolar plate.</p> <p>Fuel cell characterization Possible ways of characterization, In-situ characterization especially I-V characteristics and electrochemical impedance spectroscopy; Cyclic voltammetry; Current interruption technique, Ex-situ characterization especially electrolyte and bipolar plate</p>	(06 Hours)
UNIT - IV	<p>Fuel Cells Thermodynamics Gibb's free energy; reversible and irreversible losses; Fuel cell efficiency, Nernst equation, Effect of temperature, pressure, concentration on Nernst potential, Calculations of electrochemical potential.</p>	(06 Hours)
UNIT - V	<p>Fuel Processing Processing Hydrogen from Alcohols, Producing Hydrogen from Hydrocarbons, Hydrogen from Other Sources, Gas Clean-up, Challenges and Opportunities for Research in Fuel Processing</p>	(06 Hours)
UNIT - VI	<p>Fuel Cell System and system integration Hydrogen Production, Hydrogen Storage, Methods of Hydrogen Storage, Prediction of Hydrogen Uptake in Carbon Materials, Balance of plant and Power electronic and system integration</p>	(06 Hours)

Tutorials/Assignments:

The internal assessment shall consist of minimum SIX assignments.

1.	Questions involving classification of Fuel Cells.
2.	Prepare one assignment considering any one type of fuel cell.
3.	Conducting surprise MCQ test for students
4.	Apply a critical-thinking and problem-solving approach towards the principles of fuel cell.
5.	Enhancement in collaborative learning is done through, group assignments that will be given to encourage students to work with classmates to discuss and complete homework assignments
6.	Students have to study any five research papers related to specific topic and prepare/present power point presentation
7.	Brief report on 'Environmental, health and ethical concerns that are associated with Fuel Cell

	Technology.
8.	Group discussions on any/all of the following topics: d) Classification of Fuel Cells. e) Current scientific and technical advances f) Electrochemical Cell Vs Fuel Cell
9.	Preparation of a brief report on applicability of fuel cells in chemical engineering operations
10.	Write a report on innovations in fuel cell technology in current year.
11.	Learning on performance characteristics of fuel cell power plant and its components.
12.	Identify the operational issues and challenges for all major types of fuel cells and give the presentation on it.
13.	Conducting open-book class test.
In addition to these above stated assignments concerned faculty member may design his/her own assignments	
Term Work:	
Term work will consist of the Seminar :	
	Seminar should be based on theory. Students may undertake studies in design and development, analysis, synthesis, construction and fabrication of equipment, treatment plants. Critical review on product and system generation of new concept, idea and improvement in existing process related to subject. Term work should be based on the technical report on these studies carried out by individual or small group of students.

Syllabus for Unit Test:	
Unit Test - I	UNIT– I, II, and III
Unit Test - II	UNIT– IV, V, and VI

Elective III: Membrane Separation

Designation: Elective

Course Pre-requisites:

1.

Basic chemistry, Physical chemistry, Mass transfer, Fluid flow operations, Chemical Engineering Thermodynamics

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Lectures: 3Hours/Week

End Semester Examination: 60 marks

Theory : 03

Term work: 2 Hour/Week

Continuous Assessment: 40 marks

Tutorial : 01

Term Work: 50 marks

Total Marks: 150 marks

Course Outcomes:

1.

Explain basics of membrane and select proper material depending upon application

2.

Explain the methods of membrane preparation and characterization

3.

Determine suitable process for size based separation and explain its transport mechanism

4.

Understand the transport through non-porous membranes and define membranes for desired application

5.

Explain basics and preparation of membrane for other specialized membrane processes

6.

Design suitable module and parameters for the desired application

Topics covered

UNIT-I

Introduction and Membrane Materials

Introduction, historical development of membrane processes, definition of membrane, permeation, retention and selectivity, membrane processes, their categorization, material for membrane preparation, polymeric material, inorganic materials, mechanical, thermal and chemical stability of membrane based on material, choice of polymer for membrane preparation based on application

(06 Hours)

UNIT-II	<p>Membrane Preparation and Characterizations</p> <p>Preparation of synthetic membranes: phase inversion membranes, preparation of composite membranes, preparation of inorganic membranes</p> <p>Characterization: Porous membranes – electron microscopy, atomic force microscopy, mercury intrusion, bubble point method, permeability method, solute rejection characteristic; non-porous membranes – permeability, surface analysis, wide angle X-ray, DCS/DTA, density measurement</p>	(06 Hours)
UNIT-III	<p>Processes using porous membranes</p> <p>Transport mechanism in porous membranes – Knudsen flow, friction model, sieving mechanism</p> <p>Processes: Microfiltration – membranes details, characteristics, industrial applications; Ultrafiltration - membranes details, characteristics, industrial applications; Nano-filtration - membranes details, characteristics, industrial applications.</p>	(06 Hours)
UNIT-IV	<p>Solution-diffusion based membrane processes</p> <p>Transport mechanism – Solution-diffusion mechanism, solubility, diffusivity, effect of temperature, interaction polymer crystallinity of solubility and diffusivity; Free volume theory</p> <p>Processes: Reverse osmosis - membranes details, characteristics, industrial applications; Gas separation - membranes details, characteristics, industrial applications; Pervaporation - membranes details, characteristics, industrial applications</p>	(06 Hours)
UNIT-V	<p>Other membrane processes</p> <p>Dialysis - membranes details, their preparation, characteristics, transport mechanism, industrial applications; Electrodialysis - membranes details, their preparation, characteristics, industrial applications; Membrane distillation - membranes details, their preparation, characteristics, industrial applications; Membrane bioreactor - membranes details, their preparation, characteristics, industrial applications; Liquid membranes - membranes details, ionic liquids, their preparation, characteristics, industrial applications; ion exchange - membranes details, their preparation, characteristics, industrial applications</p>	(06 Hours)
UNIT-VI	<p>Membrane modules and process design</p>	(06 Hours)

	Selection of process depending upon applications, plate and frame module, spiral wound module, tubular module, capillary module, hollow fiber module, comparison between module configuration, system design, cross flow operations, hybrid dead end/cross flow operations, cascade operations, Process parameters, Energy requirements	
--	---	--

Term work/Practical:

1.	Preparation of microfiltration membranes by phase inversion and their transport analysis.
2.	Preparation of UF membranes and their transport analysis
3.	Study of prepared porous membranes for bubble point analysis
4.	Study of porous membranes for rejection analysis
5.	Surface characterization of membrane by instrumental methods
6.	Preparation of asymmetrically skinned membrane and analyze it for pervaporation
7.	Preparation of thin film composite membranes and analyze its transport properties
8.	Preparation of symmetric membrane and analyze its transport and rejection properties
9.	Study variation in fouling characteristics between dead end and cross flow method
10.	Study separation characteristics of reverse osmosis membranes
11.	Preparation of hollow fiber membranes and study its permeation characteristics
12.	Study dialysis /electrodialysis membrane transport characteristics
13.	Study preparation of membrane bio-reactor and its effect of fermentation system

In addition to these above stated term-work concern faculty member may design his/her own term-work or practicals.

Assignments:

1.	Detail of membrane material, preparation, characterization, module and process design for anyone application
2.	Technical interview based on knowledge of membrane technology.
3.	Students have to study any five NPTEL/you-tube videos related to membrane technology and prepare/present power point presentation.
4.	Group discussions on membrane science and technology related topics.
5.	Prepare a report on innovations in membrane technology and their practical importance.

6.	Conducting open-book class test.
7.	Conducting surprise Multiple choice questions (MCQs) test for students
8.	Students have to study any five research papers related to specific topic and prepare/present power point presentation
9.	With the help of this subject knowledge, write a report on how you would apply your concepts in industry.
10.	Case study on emerging trends in process/product innovation considering membrane technology.
11.	Students have to visit chemical industry and make a detailed report on membrane technologies used in the process.
12.	Write a report on your visit to research and development laboratory of national/international repute.
13.	Write a report on membrane technologies for addressing the problems of Water and Energy.
In addition to these above stated assignments concern faculty member may design his/her own assignments.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

ELECTIVE III: PETROLEUM REFINERY ENGINEERING

Designation: Elective

Course Pre-requisites:

Students should have basic knowledge of

1 | Chemical Process Industry

2 | Mass Transfer

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Lectures: 3 Hours/Week

End Semester Examination: 60 Marks

Theory : 03

Practical : 2 Hour /Week

Unit Test: 20 Marks

Practical: 01

Total : 5Hours/Week

Continuous Assessment: 20 Marks

Total credits: 04

Termwork / Oral :50 Marks

Total :150 Marks

Course Outcomes:

After completion of the course students would be able to

1. Know the composition of crude oil and its products, along with its properties and characterization methods.
2. Demonstrate knowledge of petroleum products, quality control and understand processing of crude oil.
3. Understand the thermal and catalytic cracking process.
4. Learn the process of catalytic reforming, Hydrotreating and Hydrocracking.
5. Get conversant with the process of purification and fractionation of crude oil.
6. Analyze theoretical and practice skills in environmental issues of petroleum refinery.

Topics covered

UNIT-I

Introduction:

Introduction to petroleum refinery, Classification of Crude oil, Characterization of crude oil, Composition of crude Physical properties L6: Crude oil; analysis and distillation, Introduction to refinery "feedstock/s" and refinery products. ASTM nomenclature (ASTM test numbers and their meaning)Introduction to various codes required for petroleum industry

(06 Hours)

UNIT-II	Evaluation of crude oil properties and Design of crude oil distillation column: Dehydration and desalting of crude. Crude Assay ASTM TBP distillations evaluation of crude oil properties.API gravity various average boiling points and mid percent curves Evaluation of properties of crude oil and its fractions. Design concept of crude oil distillation column design.	(06 Hours)
UNIT-III	Thermal and Catalytic cracking: Coking and thermal process, delayed coking, Catalytic cracking, cracking reactions, cracking feedstock, Effect of process, FCC cracking, catalyst ,New designs for fluidized bed catalytic cracking	(06 Hours)
UNIT-IV	Catalytic Reforming : Objective and application of catalytic reforming, process reforming Catalysts, Reformer feed reforming reactor design continuous and semi regenerative process. Hydrotreating and Hydrocracking reactions.	(06Hours)
UNIT-V	Iso merization, Alkylation and Polymerization: Isomerization process, Reactions, Effects of process variables. Alkylation process, Feedstock, reactions, products, catalysts and effect of process variables. Polymerization: Objectives, process, Reactions, catalysts and effect of process variables. Visbreaking	(06 Hours)
UNIT-VI	Environmental issues and New Trends in petroleum refinery operations: Ecological consideration in petroleum refinery, Waste water treatment, control of air pollution, New trends in refinery, Alternative energy sources. Safety aspects in petroleum industry	(06 Hours)

Assignments

1.	Write a report on petroleum refining and energy demand in current year.
2.	Discover the methods used to create clean and reformulated fuels
3.	Evaluate the use of catalysts in petroleum refining..
4.	Estimate refinery CAPEX and OPEX
5.	Give power point presentation on vertical integration in petroleum industry
6.	Learning on different areas of study in upstream, midstream and downstream industry.
7.	Analyze worldwide distribution of oil and gas reserves in current year.

8.	Understand basic procedures and role of all fundamental systems used in petroleum drilling..
9.	Apply a critical-thinking and problem-solving approach towards the principles of petroleum engineering.
10.	Specify materials for construction and estimate the cost of investments for crude oil distillation column.
11.	Write a technical report on your visit to a petroleum refinery.
12.	Give power point presentation on knowledge of safety and pollution control in the refining industries.
13.	Group discussion on the recent advances in petroleum refinery processes.
14.	Make a complete chart of operations involved in petroleum industry.
15.	Assess the economic environment of the petroleum industry.

In addition to these above stated assignments concerned faculty member may design his/her own assignments

Term Work:

Term work will consist of the Seminar :

Seminar should be based on theory. Students may undertake studies in design and development, analysis, synthesis, construction and fabrication of equipment, treatment plants. Critical review on product and system generation of new concept, idea and improvement in existing process related to subject. Termwork should be based on the technical report on these studies carried out by individual or small group of students.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

Elective IV: BIO-SEPARATION		
Designation: Elective		
Course Pre-requisites:		
Students should have basic knowledge of		
1	Basic biology	
2	Analytical chemistry and techniques.	
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hours/Week	End Semester Examination: 60 Marks	Theory : 03
Practical : 2 Hour /Week	Unit Test: 20 Marks	Practical: 01
Total : 5Hours/Week	Continuous Assessment: 20 Marks	Total credits: 04
	Term work / Oral :50 Marks	
	Total :150 Marks	
Course Outcomes:		
After completion of the course students would be able to		
1	Define concept of bio-separation, physico-chemical basis of bio-separation.	
2	Explain low resolution bio-separation techniques.	
3	Describe high resolution bio-separation techniques.	
4	Discuss separation techniques like precipitation, crystallization, etc.	
5	Recognize the emerging bio-separation techniques like expanded-bed chromatography, hybrid bio-separations, etc.	
6	Apply bio-separation knowledge for purification of β amylase, aspartic acid, etc.	
Topics covered		
UNIT-I	INTRODUCTION TO BIOSEPARATION: An overview of bio-separation, Separation of cells and other insolubles from fermented broth. bioproduct purification, characteristics of biological mixtures, physico-chemical basis of bio-separation.	(06 Hours)
UNIT-II	LOW RESOLUTION BIO-SEPARATION TECHNIQUES: Cell disruption, Centrifugation, Liquid-liquid extraction, Leaching, Filtration, Supercritical fluid extraction, Micro-filtration, Ultra-filtration, Adsorption,	(06 Hours)

	Sedimentation	
UNIT-III	HIGH RESOLUTION BIO-SEPARATION TECHNIQUES: Ultra-centrifugation, Different electrophoresis techniques viz. Isoelectric focusing, Affinity separation, Chromatographic techniques viz. Paper, Gel; Ion exchange, Affinity, GLC, HPLC. Dialysis.	(06 Hours)
UNIT-IV	OTHER SEPARATION TECHNIQUES: Zone refining, Molecular sieves, Adductive crystallization, Reactive extraction, Precipitation method using ammonium sulfate, organic solvents, high molecular weight polymers, Reverse osmosis, Foam separation., Aqueous two phase systems,	(06 Hours)
UNIT-V	EMERGING BIO-SEPARATION TECHNIQUES: Membrane and monolith chromatography, Expanded-bed chromatography, High-resolution ultrafiltration, Hybrid bio-separations, Introduction to SEP box and Hyphenated techniques.	(06 Hours)
UNIT-VI	APPLICATIONS OF BIO-SEPARATIONS -CASE STUDIES: Purification of β amylase, aspartic acid, insulin; Food and Beverages: Beer, Citric acid; Bio-chemicals: Butanol.	(06 Hours)

Assignments:

1.	Give fifteen minutes presentation (seminar) on particular topic and prepare a report.
2.	Prepare a mini report of any topic given above.
3.	Write a report on the recent advances in chromatographic processes with reference to the current year.
4.	Prepare a model for any of the topic given above.
5.	Evaluate efficiencies of different chromatographic techniques.
6.	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in industry.
7.	Search out some industries related to bio-separation.
8.	Write a technical report on your visit to a process industry.

9.	Technical interview based on the knowledge of analytical techniques.
10.	List out all the principles of the analytical techniques.
11.	Perform any one chromatographic technique.
12.	Find out different types of proteins with structure.
13.	Prepare a report on downstream processing.

In addition to these above stated assignments concerned faculty member may design his/her own assignments.

Term Work:

Term work will consist of the experiments listed below, out of which any eight experiments are to be performed in laboratory by the students.

1.	Gas chromatography.
2.	Study of membrane separation and its application in industry.
3.	Study of sedimentation and its application in industry.
4	Study of reactive extraction.
5.	Material analysis using paper chromatography
6.	Study of high-resolution ultrafiltration.
7.	Study of gel electrophoresis.
8.	To study molecular sieves.
9.	To estimate efficiency of Centrifugation.
10.	Study of adductive crystallization.

In addition to these above stated experiments concerned faculty member may design his/her own experiments related to course.

Syllabus for Unit Test:	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

ELECTIVE IV: ENERGY ENGINEERING

Designation: Elective

Course Pre-requisites:

Students should have basic knowledge of

1 | Unit operations, Heat Transfer, Mass Transfer

2 | Basic Mathematics and Numerical Techniques.

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Lectures: 3 Hours/Week

End Semester Examination: 60 Marks

Theory : 03

Unit Test: 20 Marks

Total : 3Hours/Week

Continuous Assessment: 20 Marks

Total credits: 03

Total :100 Marks

Course Outcomes:

After completion of the course students would be able to

1. Know the basic energy sources *viz* conventional and non conventional.
2. Evaluate Energy balance and efficiency of any thermal system.
3. Understand the basic need for pinch analysis and HEN.
4. Formulate the problem for given energy system.
5. Model the given energy system and optimize it.
6. Understand different applications of non conventional energy systems.

Topics covered

UNIT-I	<p>Basic Energy Sources : Fossil fuels, Nuclear fuels. Conventional & Renewable Energy Energy Sources: prospecting, extraction and resource assessment and their peculiar characteristics. Direct use of primary energy sources, Conversion of primary into secondary energy sources such as Electricity, Hydrogen, And Nuclear energy etc. Energy Conversion through fission and fusion, Nuclear power generation etc.</p>	(06Hours)
---------------	--	------------------

UNIT-II	Energy Management part I: Importance of energy management. Energy auditing: methodology, analysis of past trends (plant data), closing the energy balance, laws of thermodynamics, measurements, portable and on line instruments. Steam Systems: Boiler -efficiency testing, excess air control, Steam distribution & use- steam traps, condensate recovery, flash steam utilization. Thermal Insulation.	(06 Hours)
UNIT-III	Energy Management part II Energy conservation in Pumps, Fans (flow control), Compressed Air Systems, Refrigeration& air conditioning systems. Heatexchanger networking- concept of pinch, target setting, problem table approach, composite curves.	(06 Hours)
UNIT-IV	Energy Systems Analysis: Case studies of optimization in Energy systems problems. Dealing with uncertainty- probabilistic techniques. Trade-offs between capital & energy using Pinch Analysis. Case studies	(06 Hours)
UNIT-V	Application of Non-conventional energy systems in Industry: Solar energy Applications, Wave Energy and Ocean Thermal Energy, Wind Energy, Biomass Energy, Energy from Waste.	(06 Hours)
UNIT-VI	Economic Analysis: Initial and annual cost, basic definitions, present worth calculations, economic analysis of add on solar system, Energy audit	(06 Hours)

Assignments

1.	Write a report on the recent advances in Energy Efficiency.
2.	Give fifteen minutes presentation (seminar) on particular topic and prepare a report.
3.	Compare the industrial data for energy utilization used in 5 different industries.
4.	Write a report on your heat transfer equipments to minimize energy loss.
5.	Present a seminar on Pinch Technology and HEN.
6.	Present a seminar on thermal equipments involved in industry.
7.	Prepare a model on non conventional energy sources and applications.
8.	Write a energy audit for any single industry.

Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

ELECTIVE - IV: GREEN TECHNOLOGY

Designation: Elective

Course Pre-requisites:

Students should have basic knowledge of chemistry and pollution control.

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Lectures : 3 Hours/Week

End Semester Examination : 60 Marks

Theory : 03

Practical : 2 Hour /Week

Unit Test : 20 Marks

Practical : 01

Total : 5 Hours/Week

Continuous Assessment : 20 Marks

Total credits : 04

Term Work/Oral : 50 Marks

Total : 150Marks

Course Outcomes:

After completion of the course students will be able to:

1. Identify the major environmental issues and describe the need for green technology.
2. Explain green technology principles and protocols.
3. Identify and explain the green synthetic methods.
4. Explain biochemical conversion and bio-photolysis.
5. Explain criteria for choosing appropriate green energy technologies, Green innovation & sustainability.
6. Explain the green house effects, global warming, carbon footprint and ways to overcome them using green technology.

Topics covered

UNIT - I

Introduction and need for green technology:

Overview of Major Environmental Issues, Global Environmental Issues. Air Quality Issues. Water Quality Issues, Ecology, Natural Resources, Waste: Production, Prevention, Problems and Source of waste, cost of Waste, Waste minimization technique, waste treatment and recycling. Description of Risk. Value of Risk Assessment in the Engineering Profession. Risk-Based Environmental Law. Risk Assessment Concepts. Hazard Assessment, Risk Characterization. Role of Industry, Government and Institutions in green

(06 Hours)

	technology.	
UNIT - II	<p>Green technology principals and protocols:</p> <p>Importance, advantages and disadvantages of green technologies, factors affecting green technologies, the twelve basic principles of green chemistry. Sustainable development, atom economy, reduction of toxicity. Use of Renewable Feedstock, Reduction of Derivatives, Catalysis, Design for Degradation, Real-time Analysis for Pollution Prevention, Inherently Safer Chemistry for Accident Prevention.</p>	(06 Hours)
UNIT - III	<p>Green synthetic methods:</p> <p>Microwave synthesis, electro-organic synthesis, Design and development of environmentally friendly chemical pathways: challenges and opportunities. Materials for green chemistry and technology: Catalysis, environmental friendly catalysts, Bio-catalysis, biodegradable polymers, alternative solvents,</p>	(06 Hours)
UNIT - IV	<p>Biochemical conversion:</p> <p>Anaerobic digestion, alcohol production from biomass; Chemical conversion process: hydrolysis and hydrogenation; Biophotolysis: Hydrogen generation from algae biological pathways; Storage and transportation; Applications</p>	(06 Hours)
UNIT - V	<p>Green innovation & sustainability:</p> <p>Criteria for choosing appropriate green energy technologies, life cycle cost; the emerging trends – process/product innovation, Eco/green technologies for addressing the problems of Water, Energy, Health, Agriculture and Biodiversity- WEHAB (eco-restoration/ phyto-remediation, ecological sanitation, renewable energy technologies).</p>	(06 Hours)
UNIT - VI	<p>Green house effect and Global warming:</p> <p>Greenhouse gas emissions, impacts, mitigation and adaptation, carbon credit, carbon footprint ; future energy Systems- clean/green energy technologies; International agreements/conventions on energy and sustainability - United Nations Framework Convention on Climate Change (UNFCCC), Kyoto protocol; sustainable development, Environmental reporting and ISO 14001; climate change business and ISO 14064; green financing; financial initiative by UNEP</p>	(06 Hours)

Term Work:	
Term work will consist of the seminars on the following topics.	
1	Major Environmental Issues and need for green technology
2	Green technology principals and protocols
3	Green synthetic methods
4	Biochemical conversion and Biophotolysis
5	Green innovation & sustainability
6	Green house effect and Global warming
Assignments:	
1.	Technical interview based on knowledge of green technology.
2.	Students have to study any five NPTEL videos related to green technology and prepare/present power point presentation.
3.	Group discussions on any one of the following topics.
	a) Major Environmental Issues.
	b) Green innovation & sustainability.
	c) Global warming
4	Prepare a report on innovations in green technology and their practical importance.
5	Conducting open-book class test.
6	Conducting surprise Multiple choice questions (MCQs) test for students
7	Students have to study any five research papers related to specific topic and prepare/present power point presentation
8	With the help of this subject knowledge, write a report on how you would apply your concepts in industry.
9	Case study on emerging trends in process/product innovation considering green technology.
10	Students have to visit chemical industry and make a detailed report on green technologies used in the process.
11	Write a report on your visit to research and development laboratory of national/international repute.
12	Write a report on eco/green technologies for addressing the problems of Water and Energy.
13	Write a report on eco/green technologies for addressing the problems of Water, Energy, Health, Agriculture and Biodiversity (WEHAB).

In addition to these above stated assignments concern faculty member may design his/her own assignments.

ENGINEERING MATHEMATICS-I**

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
Semester Examination: 60 marks
Continuous Assessment:40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

MATRICES

Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering .

(08 Hours)

Unit II

COMPLEX NUMBERS AND APPLICATIONS

Definition, Cartesian, Polar and Exponential Forms ,Argand's Diagram, De'Moivre's theorem and its application to find roots of algebraic equations., Hyperbolic Functions, Logarithm of Complex Numbers, Separation into Real and Imaginary parts, Application to problems in Engineering.

(08 Hours)

Unit III

DIFFERENTIAL CALCULUS

Successive Differentiation, nth Derivatives of Standard Functions, Leibnitz's Theorem.

EXPANSION OF FUNCTIONS

Taylor's Series and Maclaurin's Series.

(08 Hours)

Unit IV

DIFFERENTIAL CALCULUS

Indeterminate Forms, L' Hospital's Rule, Evaluation of Limits.

INFINITE SERIES

Infinite Sequences, Infinite Series, Alternating Series, Tests for Convergence, Absolute and Conditional Convergence, Power series, Range of Convergence.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Unit V

PARTIAL DIFFERENTIATION AND APPLICATIONS

Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables. Errors and Approximations.

(08 Hours)

Unit VI

JACOBIAN

Jacobians and their applications, Chain Rule, Functional Dependence.

MAXIMA AND MINIMA

Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.

(08 Hours)

Assignments

1. Rank, System of Linear Equations.
2. Complex Numbers.
3. Differential Calculus and Expansion of Functions.
4. Indeterminate Forms and Infinite Series.
5. Partial Derivatives, Euler's Theorem on Homogeneous Functions.
6. Jacobians, Maxima and Minima of Functions of two variables.

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :-Unit IV,V,VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Fundamentals of Civil Engineering

02: Fundamentals of Civil Engineering		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Concepts of units and conversions of units.	
2.	Basic knowledge of Chemistry	
3.	Basic knowledge of geography, concept of latitude and longitude.	
Course Objectives:		
	To make student understand the scope and application of Civil Engineering	
Course Outcomes:		
Students will be able to understand		
1.	Different building components and material	
2.	Classification of surveying	
3.	Levelling of the ground	
4.	Planning of building	
5.	Methods of irrigation and water supply	
6.	Different methods of transportation	
UNIT - I	Civil Engineering Scope And Applications.	(06 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	Civil Engineering scope, importance and applications to other disciplines of Engineering; Civil Engineering construction process and role of Civil engineer; Government authorities related to Civil Engineering; Types of structures based on loading , material and configuration; Building components and their functions; Civil Engineering materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood , glass and aluminum.	
UNIT - II	Surveying	(06 Hours)
	Objectives, Principles and Classification of Surveying; Linear, angular, Vertical and area Measurements and related instruments.	
UNIT - III	Building Planning And Bye Laws	(06 Hours)
	Site selection for residential building; Principles of building planning; Building bye laws- necessity, Floor Space Index, Heights , open space requirements, set back distance , ventilation and lighting, concept of carpet and built up area, minimum areas and sizes for residential buildings ; Concept of Eco friendly structures and Intelligent buildings.	
UNIT - IV	Foundations and Earthquakes	(06 Hours)
	Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation. Earthquakes causes, effects and guidelines for earthquake resistant design, earthquake zones.	
UNIT - V	Irrigation And Water Supply	(06 Hours)
	Rainfall measurement and its use in design of dams; Types of dams, canals, methods of irrigation and their merits and demerits; hydropower structures ;Water supply, drinking water requirements and its quality, water and sewage treatment flow chart.	
UNIT - VI	Infrastructure	(06 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	<p>Roads- types of roads and their suitability, cross section of roads, meaning of terms ; width of roads, super elevation, camber, gradient ,sight distance, materials used for construction of roads.</p> <p>Railways- Types of gauges, section of railway track, components of railway track, advantages.</p> <p>Bridges: Components - Foundation, Piers, Bearings, Deck.</p> <p>Airways- Components -Runway, Taxiway and Hangers.</p>	
<u>Term Work:</u>		
(Term work shall consist of any eight exercises from the list given below.)		
1.	Study and use of prismatic compass and measurement of bearings.	
2.	Study and use of Dumpy level and reduction of levels by collimation plane method.	
3.	Area measurement by Digital Planimeter.	
4.	Drawing plan and elevation of a residential bungalow.	
5.	Study of features of topographical maps.	
6.	Assignment on collection of information on Civil Engineering materials.	
7.	Assignment on types of foundations.	
8.	Assignment problem on irrigation and hydropower structures.	
9.	Assignment on study of flow chart of water and sewage treatment.	
10.	Assignments on types of transportation systems.	
Text Books:		
1.	“ Surveying- Vol I “ - S.K. Duggal , Tata McGraw Hill Publication.	
2.	“Built Environment” – Shah , Kale, Patki, , Tata McGraw Hill Publication	
3.	“Building Construction” – Dr. B.C. Punmia , Laxmi Publication	
4.	“Irrigation and water Power Engineering “- Dr. P.N. Modi,Standard Publishers	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	,New Delhi
5.	“Text book of Transportation Engineering “- Arora, Charotar Publishers.
6.	Water supply and sanitary engineering-Rangawala, Charotar Publishers.
7.	“Basic Civil engineering”- M.S. Palanichamy- Tata McGraw Hill Publication
Reference Books:	
1.	“Surveying –Theory and Practice”-James Anderson- Tata McGraw Hill Publication
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE
ENGINEERING GRAPHICS**

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -04 Hours / Week	End Semester Examination: - 60Marks	<u>05</u>
Practical: 02 Hours / Week	Continuous Assessment: - 40Marks	
	Term Work: 25 Marks	

Unit I	<p>Lines and Dimensioning in Engineering Drawing</p> <p>Different types of lines used in drawing practice, Dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.</p> <p>Curves used in Engineering Practice</p> <p>Ellipse by Directrix-Focus method, Arcs of Circle method, Concentric circle method and Oblong method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone, Loci of points- Slider Crank mechanisms.</p>	(6)
Unit II	<p>Orthographic Projection</p> <p>Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections.</p>	(6)
Unit III	<p>Isometric Projections</p> <p>Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, and Sphere.</p>	(6)
Unit IV	<p>Projections of Points and Lines and planes</p> <p>Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines, Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP</p>	(6)
Unit V	<p>Projection of Solids</p>	(6)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	Projection of prism, pyramid, cone and cylinder by rotation method.	
Unit VI	Section of Solids Types of section planes, projections of solids cut by different sections of prism, pyramid, cone and cylinder.	(6)

Term work

Term work shall consist of five half-imperial size or A2 size (594 mm x 420 mm) sheets.
Assignment 05 Problems on each unit in A3 size Drawing Book

SHEETS

1. Types of lines, Dimensioning practice, Free hand lettering, 1st and 3rd angle methods symbol.
2. Curves and loci of points
3. Projections of Points and Lines and planes
4. Orthographic Projections
5. Isometric views
6. Projection of Solids

Text Books

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India,
2. "Text Book on Engineering Drawing", K.L.Narayana & P.Kannaiah, Scitech Publications, Chennai.

ENGINEERING PHYSICS**

Teaching Scheme:	Examination scheme:	Credits Allotted:
Lectures: 4Hrs/Week	End Semester Examination: 60 marks	Theory: 04
Practical: 2Hr/Week	Continuous Assessment: 40 marks	Practical: 01
	Term Work: 25marks	

UNIT – I

MODERN PHYSICS

Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focussing, Wavelength and resolution, Specimen limitation, Depth of field and focus, Electron microscope, Positive rays, Separation of isotopes by Bainbridge mass spectrograph.

NUCLEAR PHYSICS

Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium, Fission energy, Critical mass and size, Reproduction factor, Chain reaction and four factor formula, Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions, Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron,

(08hours)

UNIT – II

SOLID STATE PHYSICS

Band theory of solids, Free electron theory, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.

SUPERCONDUCTIVITY

Introduction, Properties of a super conductor, Meissner's effect, Critical field, Types of superconductors, BCS theory, High temperature superconductors, Application of superconductors.

(08hours)

UNIT – III

THERMODYNAMICS

Zeroth law of thermodynamics, first law of thermodynamics, determination of J by Joule's method, Applications of first law, heat engines, Carnot's cycle and Carnot's engine, second

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

law of thermodynamics, entropy, change in entropy in reversible and irreversible processes, third law of thermodynamics.

NANOSCIENCE

Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles (Physical and chemical), synthesis of colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications.

(08 hours)

UNIT-IV

OPTICS - I

INTERFERENCE

Interference of waves, Visibility of fringes, interference due to thin film of uniform and non-uniform thickness, Newton's rings, Engineering applications of interference (optical flatness, interference filter, non-reflecting coatings, multi-layer ARC).

DIFFRACTION

Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Diffraction at a circular aperture (Result only), Plane diffraction grating, Conditions for principal maxima and minima, Rayleigh's criterion for resolution, Resolving power of grating and telescope.

(08 hours)

UNIT-V

OPTICS - II

POLARISATION

Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism, Polaroids, Elliptical and circular polarisation, Quarter and half wave plates, Production of polarised light, Analysis of polarised light, half shade polarimeter, LCD.

LASERS

Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Properties of lasers, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.

(08 Hours)

UNIT-VI

ARCHITECTURAL ACOUSTICS

Elementary acoustics, Limits of audibility, Reverberation and reverberation time, Sabine's formula, Intensity level, Sound intensity level, Sound absorption, Sound absorption

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

coefficient, different types of noise and their remedies, Sound absorption materials, basic requirement for acoustically good hall, factors affecting the architectural acoustics and their remedies.

QUANTUM MECHANICS

Electron diffraction, Davisson and Germer's experiment, Wave nature of matter, De-Broglie waves, Wavelength of matter waves, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box and non rigid box.

(08hours)

TERM WORK

Experiments

Any ten experiments from the following:

1. Determination of band gap of semi-conductor.
2. Solar cell characteristics.
3. e/m by Thomson's method.
4. Uses of CRO for measurement of phase difference and Lissajos figures.
5. Hall effect and Hall coefficient.
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode, Photo diode, LED, Ge/Si diode).
8. Plank's constant by photodiode.
9. Wavelength by diffraction grating.
10. Newton's rings.
11. Ultrasonic interferometer.
12. Sound intensity level measurement.
13. Wavelength of laser by diffraction.
14. Determination of refractive index for O-ray and E-ray.
15. Brewester's law.

Assignments

1. Recent advances in Nanotechnology
2. Nuclear radiation detectors.
3. Atomic force microscope (AFM).
4. Advanced opto-electronic devices.
5. Laser in Industry.
6. Different spectroscopic methods – a comparison (Raman, IR, UVR, etc.).

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Unit Tests:

Unit Test I : Unit I, II, III

Unit Test II: Unit IV, V, VI

Reference Books:

1. Physics for Engineers – Srinivasan M.R.
2. A text Book of Engineering Physics- M.N. Avadhanulu, P.G. Kshirsagar
3. Engineering Physics- K. Rajagopal
4. Electronics Principles – A.P.Molvino
5. Fundamentals of Optics – Jenkins and White
6. A Textbook of Sound – Wood
7. Engineering Physics – Sen, Gaur and Gupta

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Fundamentals of Electrical Engineering		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Mathematics	
2.	Physics	
Course Objectives:		
	The course introduces fundamental concepts of DC and AC circuits, electromagnetism, transformer and measuring instruments and electronic components to all first year engineering students.	
Course Outcomes:		
1.	Understand and apply knowledge of basic concepts of work ,power ,energy for electrical, mechanical and thermal systems	
2.	Understand and apply knowledge of Kirchoff's laws and network theorems to solve electrical networks	
3.	Describe construction, principle of operation, specifications and applications of capacitors and batteries	
4.	Describe and apply fundamental concepts of magnetic and electromagnetic circuits for operation of single phase transformer	
5.	Define basic terms of single phase and three phase ac circuits and supply systems	
6.	Know and use electrical safety rules	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT - I	Basic concepts	(06 Hours)
	Concept of EMF, Potential Difference, current, resistance, Ohms law, resistance temperature coefficient, SI units of Work, power, energy. Conversion of energy from one form to another in electrical, mechanical and thermal systems	
UNIT - II	Network Theorems	(06 Hours)
	Voltage source and current sources, ideal and practical, Kirchoff's laws and applications to network solutions using mesh analysis, Simplifications of networks using series- parallel, Star/Delta transformation. Superposition theorem, Thevenin's theorem, Max Power Transfer theorem.	
UNIT - III	Electrostatics	(06 Hours)
	Electrostatic field, electric field intensity, electric field strength, absolute permittivity, relative permittivity, capacitor composite, dielectric capacitors, capacitors in series & parallel, energy stored in capacitors, charging and discharging of capacitors, Batteries-Types, Construction & working.	
UNIT - IV	Magnetic Circuit & Transformer	(06 Hours)
	<p>Magnetic effect of electric current, cross and dot convention, right hand thumb rule, concept of flux, flux linkages, Flux Density, Magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability, B-H curve, hysteresis loop, series-parallel magnetic circuit, composite magnetic circuit, Comparison of electrical and magnetic circuit</p> <p>Farady's law of electromagnetic induction, statically and dynamically induced emf, self inductance, mutual inductance, coefficient of coupling,</p> <p>Single phase transformer construction, principle of operation, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Determination of Efficiency & Regulation by direct load test.</p>	
UNIT - V	AC Fundamentals & AC Circuits	(06 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	AC waveform definitions , form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar & rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3-ph AC Circuits.	
UNIT - VI	Electrical Wiring and Illumination system	(06 Hours)
	Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED), Study of Electricity bill.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight exercises / experiments.		
<ol style="list-style-type: none"> 1. Determination of resistance temperature coefficient 2. Verification of Superposition Theorem 3. Verification of Thevenin's Theorem 4. Verification of Kirchoff's Laws 5. Verification of Maximum power transfer Theorem 6. Time response of RC circuit 7. Study of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$ & $X_L = X_C$ 8. Verification of current relations in three phase balanced star and delta connected loads. 9. Direct loading test on Single phase transformer <ol style="list-style-type: none"> a) Voltage and current ratios. b) Efficiency and regulations . 10. Study of a Residential (L.T.) Bill 		
Text Books:		
1) B.L.Theraja- "A Textbook of Electrical Technology" Volume- I, S.Chand and Company Ltd.,New Delhi		
2) V. K. Mehta, - "Basic Electrical Engineering", S. Chand and Company Ltd., New Delhi		
3) I. J. Nagrath and Kothari – "Theory and problems of Basic Electrical Engineering", Prentice Hall of India Pvt. Ltd		
Reference Books:		

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

1. Edward Hughes – “Electrical Technology”- Seventh Edition, Pearson Education Publication	
2. H. Cotton – “Elements of Electrical Technology”, C.B.S. Publications	
3. John Omalley Shawn – “Basic circuits analysis” Mc Graw Hill Publications	
4. Vincent Del Toro – “Principles of Electrical Engineering”, PHI Publications	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

07: Computer Applications in Civil Engineering-I

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: --	End Semester Examination: ---	-----
Practical: 02 Hours / Week	Continuous Assessment:	
	Term Work: 50 Marks	01 Credit

Course Pre-requisites:

The students should have

1. Basic knowledge of computer components, systems and operating of computer
2. Basic mathematical ability

Course Objectives:

To develop an ability to use MS- Excel and MS- Power Point

Course Outcomes:

1. To solve different problems using M S- Excel
2. To generate various graphs and charts by analyzing the given data in Excel
3. To present different problems in various slides using M S – Power Point

Use of computers in Civil Engineering is increasing day by day. Various analysis and design problems can be solved by preparing the programs in Microsoft Office Excel. Also to present any problem properly, knowledge Microsoft PowerPoint is required. Use of Microsoft Office Excel and PowerPoint will make the candidate to analyze and present different problems, the details of which are as listed below:

Learning Microsoft Excel:

- Introduction
- Getting Started
- Data analysis and Calculations using relevant formulae.
- Generate graphs and charts.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Learning Microsoft PowerPoint:

- Introduction
- Getting Started
- Preparation of various slides
- Preparing presentation by giving different effects to the data entered.

Term Work:

Term work shall consist of **8 assignments** as follows:

- 1) Introduction to Microsoft Excel
- 2) Preparation of Excel Sheets with various solved equations.
- 3) Graphical representation of different data.
- 4) A mini project with Microsoft Excel
- 5) Introduction to Microsoft PowerPoint.
- 6) Preparation of slides.
- 7) Insertion of clipart, word-art, histograms, different shapes and various charts.
- 8) A mini project with Microsoft PowerPoint.

Reference Books:

1) "Excel 2013 Bible" by John Walkenbach

2) "Excel 2010 All-in-one For Dummies" by Greg Harvey

3) "Microsoft PowerPoint 2013 Introduction Quick Reference Guide" by Beezix Inc.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE
ENGINEERING MATHEMATICS-II**

Teaching Scheme:

Lectures: 3Hrs/Week

Tutorials: 1Hr/Week

Examination scheme:

End Semester Examination: 60 marks

Continuous Assessment: 40 marks

Credits Allotted:

Theory : 03

Tutorial : 01

Unit I

DIFFERENTIAL EQUATIONS (DE)

Definition, Order and Degree of DE, Formation of DE. Solutions of Variable Separable DE, Exact DE, Linear DE and reducible to these types.

(08 Hours)

Unit II

APPLICATIONS OF DIFFERENTIAL EQUATIONS

Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchoff's Law of Electrical Circuits, Motion under Gravity, Rectilinear Motion, Simple Harmonic Motion, One-Dimensional Conduction of Heat, Chemical engineering problems.

(08 Hours)

Unit III

FOURIER SERIES

Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis.

INTEGRAL CALCULUS

Reduction formulae, Beta and Gamma functions.

(08 Hours)

Unit IV

INTEGRAL CALCULUS

Differentiation Under the Integral Sign, Error functions.

CURVE TRACING

Tracing of Curves, Cartesian, Polar and Parametric Curves. Rectification of Curves.

(08 Hours)

Unit V

SOLID GEOMETRY

Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Unit VI

MULTIPLE INTEGRALS AND THEIR APPLICATIONS

Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.

(08 Hours)

Assignments

1. Differential Equations.
2. Application of DE.
3. Fourier Series and Integral Calculus.
4. DUIS and Curve Tracing.
5. Solid Geometry.
6. Double and Triple integrations, area and volume.

Syllabus for Unit Test:

Unit Test I :- Unit I, II, III

Unit Test II :- Unit IV, V, VI

BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE
FUNDAMENTALS OF MECHANICAL ENGINEERING

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -03Hours / Week	End Semester Examination: - 60Marks	<u>04</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

UNIT-I	<p>Thermodynamics-</p> <p>Heat, work and Internal Energy, Thermodynamic State, Process, Cycle, Thermodynamic System, First Law of Thermodynamics, Application of First Law to steady Flow and Non Flow processes, Limitations of First Law, PMM of first kind (Numerical Treatment), Second Law of Thermodynamics – Statements, Carnot Engine and Carnot Refrigerator, PMM of Second Kind (Elementary treatment only)</p>	(08)
UNIT-II	<p>Introduction to I.C. Engines and turbines-</p> <p>Two stroke, Four Stroke Cycles, Construction and Working of C.I. and S.I. Engines,</p> <p>Hydraulic turbines, steam turbines, gas turbines.(Theoretical study using schematic diagrams)</p> <p>Introduction to refrigeration, compressors & pumps-</p> <p>Vapor compression and vapor absorption system, house hold refrigerator, window air conditioner. Reciprocating and rotary compressor, Reciprocating and centrifugal pump. (Theoretical study using schematic diagrams)</p>	(08)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT-III	<p>Energy Sources -</p> <p>Renewable and nonrenewable, solar flat plate collector, Wind, Geothermal, Wave, Tidal, Hydro power, Bio-gas, Bio-Diesel, Nuclear power.</p> <p>Heat transfer-</p> <p>Statement and explanation of Fourier's law of heat conduction, Newton's law of cooling, Stefan Boltzmann's law. Conducting and insulating materials and their properties, types of heat exchangers and their applications.</p>	(08)

UNIT-IV	<p>Properties of fluids-</p> <p>Introduction, Units of measurements, mass density, specific weight, specific volume and relative density, viscosity, pressure, compressibility and elasticity, gas laws, vapor pressure, surface tension and capillarity, regimes in fluid mechanics, fluid properties and analysis of fluid flow.</p> <p>Properties of Materials and their Applications-</p> <p>Metals – Ferrous and Non-Ferrous, Nonmetallic materials, smart materials, Material selection criteria.</p>	(08)
UNIT-V	<p>Mechanical devices -</p> <p>Types of Belts and belt drives, Chain drive, Types of gears, Types of Couplings, friction clutch (cone and plate), brakes, Power transmission shafts, axles, keys, bush and ball bearings.</p>	(08)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	<p>Mechanisms-</p> <p>Slider crank mechanism, Four bar chain mechanism, List of various inversions of Four bar chain mechanism, Geneva mechanism, Ratchet and Paul mechanism</p>	
UNIT-VI	<p>Machine Tools-</p> <p>Lathe Machine – Centre Lathe, Drilling Machine – Study of Pillar drilling machine, Introduction to NC and CNC machines, Grinding machine, Power saw, Milling Machine.</p> <p>Introduction to manufacturing processes and Their Applications-</p> <p>Casting, Sheet metal forming, Sheet metal cutting, Forging, Fabrication, Metal joining processes.</p>	(08)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

List of experiments-

The Term Work shall consist of **any Eight** experiments of following list

1	Measurement of viscosity using Redwood viscometer.
2	Assembly and working of 4-bar, 6-bar, 8-bar planer mechanisms
3	Finding relation between input angle and output angle for various link lengths.
4	Study of domestic refrigerator & window air-conditioner
5	Demonstration of operations of centre lathe
6	Demonstration of operations on drilling machines
7	Demonstration of Two stroke and four stroke engine
8	Study of power transmitting elements: Coupling, Gears and bearings
9	Demonstration of pumps and compressor
10	Study and demonstration of different types of clutches.

10: Engineering Mechanics

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		03 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks		
		Term Work: 25 Marks		01 Credit
Course Pre-requisites:				
The Students should have knowledge of				
1.	Scalar and Vector			
2.	Newton's law of motion			
3.	Law of friction			
4.	Concept of physical quantities, their units and conversion of units			
5.	Concept of differentiation and integration			
Course Objectives:				
	To develop and apply the concept of resultant and equilibrium for various static and dynamic engineering problems.			
Course Outcomes:				
The student should be able to				
1.	calculate resultant and apply conditions of equilibrium.			
2.	analyze the truss and calculate friction force.			
3.	calculate centroid and moment of inertia.			
4.	solve problem on rectilinear motion.			
5.	solve problems on curvilinear motion.			
6.	use D'Alembert's principle, Work Energy principle and Impulse Momentum principle for particle.			

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT - I	Resultant and Equilibrium	(06 Hours)
	Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach.. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point.	
UNIT - II	Truss and Friction	(06 Hours)
	Coefficient of Static Friction, Impending motion of Blocks, Ladders and Belts. Analysis of Perfect Trusses - Method of Joint, Method of Section and Graphical Method.	
UNIT - III	Centroid and Moment of Inertia	(06 Hours)
	Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia.	
UNIT - IV	Kinematics of Rectilinear motion of a Particle	(06 Hours)
	Equations of motion, Constant and variable acceleration, Motion Curves, Relative motion, Dependent motion.	
UNIT - V	Kinematics of Curvilinear motion of a Particle	(06 Hours)
	Motion of a Projectile, Cartesian components, Normal and Tangential components of a curvilinear motion.	
UNIT - VI	Kinetics of a Particle	(06 Hours)
	D'Alemberts Principle, Work-Energy Principle and Impulse-Momentum	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	Principle, Coefficient of Restitution, Direct Central Impact.	
Term Work:		
A) The term-work shall consist of minimum Five experiments from list below.		
1. Determination of reactions of Simple and Compound beam.		
2. Study of equilibrium of concurrent force system in a plane.		
3. Determination of coefficient of friction for Flat Belt.		
4. Determination of coefficient of friction for Rope.		
5. Study of Curvilinear motion.		
6. Determination of Coefficient of Restitution.		
B) The term-work shall also consist of minimum Five graphical solutions of the problems on different topics.		
Text Books:		
1) "Engineering Mechanics (Statics and Dynamics)", Hibbeler R.C., McMillan Publication.		
2) "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.		
3) "Engineering Mechanics", Bhavikatti S.S. and Rajashekarappa K.G., New Age International (P) Ltd.		
Reference Books:		
1. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.		
2. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication.		
3. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.		
4. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.		
5. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.		
6. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I to III	
Unit Test -2	UNIT – IV to VI	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE
ENGINEERING CHEMISTRY**

Teaching Scheme:
Lectures: 4Hrs/Week
Practical: 2Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory: 04
Practical: 01

Term Work:

25marks

Unit I

WATER

Introduction, Hardness of water, Effect of hard water on boilers and heat exchangers: a) boiler corrosion b) caustic embrittlement c) scales and sludges d) priming and foaming

Water softening methods for industrial purposes :a) Zeolite process b) Phosphate conditioning

Numerical based on the zeolite process

(08 Hours)

Unit II

MATERIAL CHEMISTRY

Crystallography : Unit cell, Laws of crystallography, Weiss indices and Miller indices, Crystal defects (point and line defects), X-ray diffraction – Bragg's Law and numerical.

Cement : Introduction of cement, Hydraulic/ Non-hydraulic cementing materials, classification of cement, chemistry of portland cement, chemical composition and compound constituents of portland cement, properties of cement and its applications.

(08 Hours)

Unit III

FUELS

Introduction, classification of fuels, calorific value of fuels, NCV and GCV, Determination of calorific values using Bomb calorimeter and Boys' gas calorimeter.

Theoretical calculation of calorific value of a fuel, Analysis of coal a) Proximate b) Ultimate analysis of coal, Numericals based on NCV, GCV.

(08 Hours)

Unit IV

CORROSION AND ITS PREVENTION

Corrosion: - Definition, atmospheric corrosion-mechanism, Wet corrosion-mechanism, Electrochemical and galvanic series, Factors affecting corrosion-nature of metal, nature of environment.

Methods of prevention of corrosion- Cathodic and Anodic protection, Metallic coatings, Electroplating, Hot dipping.

(08 Hours)

Unit V

ELECTROCHEMISTRY

Introduction, Arrhenius Ionic theory, Kohlrausch's law of independent migration of ions

Laws of electrolysis: Faradays Laws, Ostwald's dilution law, Acids and Bases, concept of pH and pOH, Buffer solutions, Solubility Product, Redox Reactions.

Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Overvoltage, Conductometric Titrations, Fuel cells, Lead Acid Storage Cell and numericals based on the above articles.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Unit VI

STEREOCHEMISTRY

Introduction, chirality, optical activity, Enantiomers, Diastereomers, projection formula of tetrahedral carbon- Newman projection, Wedge projection, Fischer projection, Geometrical isomerism :- cis and trans isomerism, E and Z isomers

Optical isomerism :- Mesoform, the number of optical isomers for chiral molecules,

Conformations :- conformations of ethane, conformations of n-butane

(08 Hours)

TERM WORK

Experiments

Any Ten experiments from the following:

1. Estimation of hardness of water by EDTA method.
2. Estimation of chlorine by Mohr's method.
3. Determination of percentage of Ca in given cement sample
4. Determination of coefficient of viscosity by Ostwald's viscometer
5. Study of Bomb calorimeter for determination of calorific value.
6. Determination of calorific value of gas fuel by using Boy's gas calorimeter.
7. Determination of dissolved oxygen in a water sample.
8. To determine the Molecular Weight of polymer
9. Estimation of Copper from brass sample solution by Iodometrically
10. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
11. To standardize NaOH solution and hence find out the strength of given hydrochloric Acid solution
12. To determine Surface Tension of given liquid by Stalagmometer
13. Study of corrosion of metals in medium of different pH.
14. To set up Daniel cell
15. To determine pH of soil
16. To determine Acidity of soil

Assignments

7. Effect of hard water on boilers and heat exchangers
8. Hydraulic/ Non-hydraulic cementing materials
9. Analysis of coal a) Proximate b) ultimate analysis of coal
10. Wet corrosion-mechanism, Electroplating, Hot dipping
11. Geometrical isomerism :- cis and trans isomerism, E and Z isomers
12. Fuel cells

12: Building Construction

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		03 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 25 Marks		01 Credit	
Course Pre-requisites:					
The Students should have basic knowledge of					
1.	Fundamentals of civil Engineering				
2.	Concept of Engineering Graphics				
Course Objectives:					
	To develop the knowledge of building components, materials and construction practices				
Course Outcomes:					
The student should able to					
1.	understand different types of foundation and masonry.				
2.	design staircase .				
3.	understand types of Arches and flooring.				
4.	understand different methods of building finishes.				
5.	know different types of formworks.				
6.	understand different properties of construction materials.				
UNIT - I Building Foundations And Masonry (06 Hours)					
	Building foundations: Necessity,Types, Building and its components,				

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	Masonry : Stone, Brick ,Types of bonds in brick masonry, Composite masonry, Hollow and Solid block masonry, Mortars used in construction.	
UNIT - II	Doors , Windows And Stairs	(06 Hours)
	Doors: Classification, Terminology used, Frames, Sizes . Windows :Types , Sizes. Stairs : Classification , Terminology used ,Design of stairs. Lifts,, Escalators, Ramps.	
UNIT - III	Arches, Lintels And Floors	(06 Hours)
	Arches: Classification, Terminology used,, Stability Lintels :Types, Details of R.C.C. lintels and chhajja. Flooring: I.S. Specifications, Types , Factors for selection of flooring.	
UNIT - IV	Roof Construction	(06 Hours)
	Roofs :Types, Suitability, Roof structures, Selection of roof covering material, Methods of water proofing of roofs, Types of trusses, Fixtures & fastenings	
UNIT - V	Building Finishes	(06 Hours)
	Plastering : Methods, tools used, Mortars, Defects ,Plaster of Paris. Pointing: Types, Methods of pointing Paints : Types , Textures, Apex, Plastic emulsion , Wall cladding and its Materials	
UNIT - VI	Formwork , Scaffolding And Smart Materials	(06 Hours)
	Formwork : Necessity , Materials , Factors for selection , Types. Scaffolding : Necessity , Materials ,Factors for selection . Precast concrete , Ferrocurete , Nanoconcrete , Green construction materials, Tremix	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Term Work:	
Plates-(1/4 imperial size)	
a. Symbols of Material & structures	
b. Section of wall	
c. Brick bonds - English bond, Flemish bond	
d. Types of stone masonry	
e. Arches - any three	
f. Types of steel trusses - any three	
g. Paneled Door & Flush doors.	
h. M.S. Window, Aluminum Window, Louvers Windows	
Collection of information brochures related to Construction Material.	
Assignment :One from each Unit.	
Text Books:	
1) "Building Construction"-Rangwala,Charotar Publication	
2) "The Text Book of Building Construction"-S.P.Arora& S.P.Bindra-DhanpatRai Publication	
3) " Building Technology and Valuation"- TTTI Madras,-- Tata McGraw Hill Publication	
Reference Books:	
1) " My Construction Practices "R.B.Chaphalkar	
2)"A to Z" Building Construction" Mantri Publications	
3) "Materials of Construction" – Ghose- Tata McGraw Hill Publications	
4) " Civil engineering Material'- TTTI Chandigarh- Tata McGraw Hill Publications	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I to III
Unit Test -2	UNIT – IV to VII

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE
Workshop Technology**

TEACHING SCHEME:

Theory: -

Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: -

Continuous Assessment: -

Term Work: 50 Marks

CREDITS ALLOTTED:

01 Credit

Course Pre-requisites: Basic knowledge of hand tools used in day to day life.

Course Objectives: Make the students familiar with basic manufacturing processes

Course Outcomes: students should be able to understand

1. basic Manufacturing Processes used in the industry,
2. importance of safety

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the following topics.

Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances

Term work includes one job involving joint and woodturning.

Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.

Term work to include one job involving fitting to size, male-female fitting with drilling and tapping.

Sheet Metal Practice Introduction to primary technology processes involving bending, punching and drawing various sheet metal joints, development of joints.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.

Term work includes one job involving various joining processes like riveting, joining of plastics, welding, brazing, etc.

Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.

Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.

Plumbing (Demonstration Common for Electrical & Non electrical Group)

Types of pipe joints, threading dies, Pipe fittings.

Bharati Vidyapeeth University, Pune

Faculty of Engineering & Technology

01: BUILDING PLANNING , DESIGN AND BYELAWS

01: BUILDING PLANNING , DESIGN AND BYELAWS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory : 3 Hours/ Week	End Semester Exam: 60Marks	03 Credits
Practical : 1 Hour/ Week	Continuous Assessment : 40Marks	
	Term Work & Oral Exam: 50 Marks	01 Credit
Course Pre-requisites:		
The Student Should have		
1	Fundamentals of Civil Engineering	
2	Building Construction Practices	
Course Objective:		
	To make the student understand the process of building planning and building byelaws	
Course Outcomes:		
Student will be able to		
1	describe various types of buildings, their planning and building byelaws.	
2	apply design considerations for climate, ventilation and lighting in building planning.	
3	apply design considerations for Noise & acoustics, fire protection, Electrical & telecommunication and circulation in building planning.	
4	apply design considerations for plumbing services in building planning.	
5	explain the legal aspects of plan sanctioning.	
6	explain the role of town planning authority and various presentation drawings.	
Unit -I	Buildings, Types, Planning and Regulations :	(06 Hours)
	Types of Residential Building units – Bungalows, Twin bungalows, Row houses, Apartments; Requirements of Public buildings - Educational buildings, buildings for health care, industrial buildings and commercial buildings; Principles of planning for building, Integrated approach necessity. Building Rules Regulations and Byelaws necessity, plot size, open space around the building. FSI, Building line, control line. Height, room size, Built up area, floor area, carpet area. Rules of lighting ventilation, Drainage and Sanitation; Types of drawings - Submission drawings, working drawings and Architectural drawing.	

Unit II	Building Services I	(06 Hours)
	<p>(a) Climate - elements of climate, global climate, thermal design Principles, comfort sectors, Heat exchange of building. Thermal insulation of roof and wall.</p> <p>(b) Ventilation and lighting - comfort factors, function of ventilation, stack effect wind effect. Mechanical ventilation, ventilation rate, Air conditioning-design data, cooling load, Air conditioning systems.</p> <p>(c) Noise and acoustics –Effect of noise, comfort standards, Noise control sound insulation, Acoustics reverberation Sabines formula acoustical defects conditions of good acoustics.</p>	
Unit III	Building Services II	(06 Hours)
	<p>(a) Plumbing services, fixtures and fastenings, Layout of water supply & drainage system, Rate of water supply, storage and distribution arrangement, Plumbing systems,</p> <p>(b) Fire Protection – Fire safety, fire load, grading of occupancies by fire load, fire escape elements.</p> <p>(c) Constructional requirements for different building services like Electrical, Telecommunication services, Circulation-Lift escalators, Entertainment services.</p>	
Unit IV	New Planning Concepts of Buildings	(06 Hours)
	Layout plans of different types of buildings, Design and planning of ECO Friendly building, Intelligent building, Low Cost Housing, Planning considerations in High rise buildings.	
Unit V	Legal Aspects of Plan Sanctioning	(06 Hours)
	Role of Plan Sanctioning Authority for layout, co-op Housing societies and apartments. Ownership of land, plot, 7/12 abstract, meanings of different terms of 7/12 abstract, 6-D form, list of documents to be submitted along with building Plan for sanction from the authority. TDR, certificate of commencement and completion, various no objection certificates to be produced, format of permissions from pollution control board, MSEB, Water Supply and Drainage Department, State or National Highway Department.	
Unit VI	Town Planning and Presentation drawings	(06 Hours)
	<p>(a) Necessity of town planning in India. Importance of safety, amenities and services, Development plan, Land use- zoning: Introduction to different zones of land in town planning, Requirements of residential zone, commercial industrial and agricultural zone, open areas, green belts and parks.</p> <p>(b) Axonometric, Perceptive-One point and Two point.</p>	

Term work : It shall consist of :

1.	Preparation of working drawings of any one of the buildings listed below: a) Residential Building b) Commercial Building c) Educational Building d) Industrial Building e) Recreational Building f) Health Club
2.	Sheets to be drawn a) Plan/Typical floor plan to a suitable scale. b) Elevation and section to a suitable scale. c) Site plan showing water supply and Drainage d) Foundation Plan to a suitable scale.
3.	Line plan of remaining five buildings.
4.	Perspective Drawing of different objects.

Assignments:	
1	Study of building bye laws and D.C. rules of local authority
2	Study of different types of drawings.
3	Data collection with respect to climate , ventilation and lighting in building planning.
4	Study of various components of water supply and drainage system of buildings.
5	Case studies with respect to fire fighting of high rise building.
6	Case studies with respect to lift and escalators.
7	Study of constructional requirements with respect to electrical services in buildings.
8	Case studies of Ecofriendly and intelligent buildings.
9	Collecting information about legal aspects of building planning.
10	Writing report on development plan.
Text Books :	
1.	Bindra Arora, “Building Construction”, Laxmi Publication
2.	M. L. Shah, C. M. Kale, S. Y. Patki, “Building Drawing with integrated approach to Built Environment”, Tata McGraw Hill Publishers
3.	Rangwala, “Town Planning” , Charaotar Publications
References :	
3.	IS provisions “National Building Code”
4.	“Development Control Rules” of local plan sanctioning authority
5.	Calendar, “Time Saver Standards for Architectural Design”, Tata McGraw Hill Publishers
6.	Merit, “Building Design and Construction”, Tata McGraw Hill Publishers
Syllabus for Unit Test:	
Unit Test I	Unit I, II, III
Unit Test II	Unit IV, V, VI

02: APPLIED GEOLOGY

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Unit Test: 20Marks	
	Assignment : 10 Marks	
	Attendance: 10 Marks	
	TW & Practical : 50 Marks	01 Credits
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of engineering science	
Course Objectives:		
	To make students understand physical geology, mineralogy, petrology, structural & Indian geology, surface & sub surface water, geological investigation for tunnel, dam, reservoir & bridge	
Course Outcomes:		
1.	Students should be able to identify different rocks & minerals.	
2.	Students should be able to explain Geology of River, Mountain earthquakes & volcanism to decide the location ,type of foundation and type of civil engineering structure	
3.	Students should be able to identify different Geological structures to decide location and type of civil engineering structure.	
4	Students should be able to determine influence of texture & structures of rocks on occurrence of Ground water.	
5	Students should be able to prepare Geological maps and Geological sections for subsurface investigations.	
6	Student should be able to explain different methods of core drilling and core preservation	
UNIT - I	Physical Geology & Introduction to Engineering Geology:	(06 Hours)
	Origin of Earth, Surface Relief of the earth, Earth Movement, Earthquake, Interior of the Earth, Volcanicity: Product of Volcanoes, types of mountains, Different Branches of Geology, Engineering Geology as a Subject.	
UNIT - II	Mineralogy and Petrology:	(06 Hours)
	Mineralogy: Formation Process of Minerals, Types of Minerals, Classification of Minerals. Petrology- Rocks & minerals, Igneous rocks- mineral composition, texture, classification of igneous rock, study of common rock types, secondary rocks- weathering, texture & structure of sedimentary rocks & its classification, metamorphic rocks, agents & types of metamorphism,	

	metamorphic textures Building stones.	
UNIT - III	Structural Geology & Indian Geology:	(06 Hours)
	Structural Geology- Outcrop, dip & strike, conformable series, unconformity & overlap, faults & folds in rocks, mode of occurrence of igneous rocks, joints & fractures. Indian Geology- General Principles of stratigraphy, age of the earth & divisions of geological time, physiographic divisions of India & their characteristics, geological history of peninsula, study of formation in peninsula.	
UNIT - IV	Water: Surface & Sub Surface	(06 Hours)
	Surface Water: Geological action of running water, river valley development, normal & regional cycle of river erosion, waterfalls, ox-bow lakes, flood plane deposits, deltas, rejuvenation & resulting features., Sub - Surface Water: Types of Groundwater, depth zones of groundwater, perched water table, pervious & impervious rocks, geological work done by groundwater, natural springs & seepages, effect of pumping, cone of depression, circle of influence, conservation of groundwater, artesian wells, water bearing capacity of common rocks.	
UNIT - V	Geological Investigations	(06 Hours)
	Preliminary geological investigations- use of geological maps & sections, drill holes, test pits, trenches, exploratory tunnels, shafts, adits, drifts etc., limitation of drilling, engineering significance of geological structures, Tunneling- Influence of geological condition on design & construction method, preliminary geological investigations for tunnels, important geological considerations while choosing alignment, difficulties during tunneling, as related with lithology, nature & structure of materials to be excavated, role of groundwater, geological conditions likely to be troublesome, suitability of common rock types for tunneling, case studies.	
UNIT - VI	Geological Aspects at Dams, Reservoirs & Bridges	(06 Hours)
	Geology of dam site- preliminary geological work at dam site, influence of geological condition on the choice of types & design of dam, favorable & unsuitable geological conditions for locating a dam i.e. landslide, treatment of leaky rocks & geological structures, case studies. Geology of reservoir sites- Dependence of water tightness on physical properties & structures of rocks, geological conditions suitable & unsuitable	

	<p>for reservoir sites, conditions likely to cause leakage through reservoir rim, importance of groundwater studies & effect of rising of water table, case studies.</p> <p>Geology of Bridge Sites- Preliminary geological exploration for bridge piers & bridge abutments, scouring & erosion around bridge piers, influence of nature & structure of rocks on bridge foundation, case studies.</p>	
<p><u>List of Practicals / Term work:</u></p> <ol style="list-style-type: none"> 1) Identification of the Minerals (Two Practical) 2) Identification of Igneous rocks (Two Practical) 3) Identification of Secondary rocks (Two Practical) 4) Identification of Metamorphic rocks (Two Practical) 5) Study of Contoured Geological Maps & drawing the sections (Six Practical) 6) Visit to site of Dam / Tunnel for understanding the geological features. 		
<p><u>Assignments</u></p> <ol style="list-style-type: none"> 1) Collect and describe rock forming minerals & ore forming minerals 2) Collect and describe igneous rocks 3) Collect and describe secondary rocks 4) Collect and describe metamorphic rocks 5) Collect information and photographs of volcanoes 6) Collection of information about waterfalls & ox-bow lakes in India 7) Collection of data about different geological structures like folds, faults & unconformities 8) Conduct survey of ground water in India\ 9) Conduct survey of geological conditions suitable for tunneling. 10) Conduct survey of geological conditions suitable for dam . 		
<p><u>References.</u></p> <ol style="list-style-type: none"> 1) Gupte R. B., “A Text Book of Engineering Geology”, P. V. G. Publications, Pune 2) Legget R., “Geology and Engineering”, McGraw Hill Book Co., London 3) Trefethen J. M., “Geology for Engineers”, D Van Nostrand Co. Inc. 4) Schultz J. R. and A. B. Cleaves, “Geology in Engineering”, John Wiley Inc. 5) Engineering Geology & General Geology by Parbin Singh. 6) General Geology & Engineering Geology by Dr. P. T. Sawant, New Delhi Publication. 		
<p>Syllabus for Unit Test:</p>		
<p>Unit Test -1</p>	<p>UNIT – I, UNIT – II, UNIT - III</p>	
<p>Unit Test -2</p>	<p>UNIT – IV, UNIT – V, UNIT - VI</p>	

03.ENGINEERING ECONOMICS AND FINANCIAL ACCOUNTING

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDITS ALLOTTED</u>
Theory: 03 Hours / Week	Continuous Assessment 40 Marks	03 Credits
Course Pre-requisites:		
The Students should have knowledge of		
1.	Civil Engineering	
2.	Mathematics	
Course Objectives:		
	To make students understand engineering economics and financial management	
Course Outcomes: The Student will be able to		
1.	The Student will be able to draw organization chart.	
2.	The Student will be able find out time value of money.	
3.	The Student will be able select best project.	
4.	The Student will be able find out depreciation cost.	
5.	The Student will be able prepare balance sheet.	
6.	The Student will be able generate finance for his organization.	
UNIT - I	Elementary Economics	(06 Hours)
	Definition of Economics, nature, scope and importance of Engineering economics, basic economics concept-Human wants. Utility, value, cost, price, profit, capital, wealth, equilibrium etc. law of demand, elasticity of demand. The law of supply. Factors influencing production: land, labor, capital and organization.	
UNIT - II	Engineering Economics	(06 Hours)
	Basic principles, time value of money, cash flow diagram. Equivalence-single payment in the future, present payment compare to uniform series payment. Future payment compare to uniform series payment.	
UNIT - III	Project Economics Analysis	(06 Hours)
	Comparison of alternatives, net present value present, future and annual worth method of comparing alternatives, internal rate of return. Break even analysis. Benefit cost ratio	

UNIT - IV	Depreciation and Value Engineering	(06 Hours)
	Depreciation and methods of depreciations. Inflation, value engineering and value analysis.	
UNIT - V	Financial Management	(06 Hours)
	Financial management, construction accountancy charts of accounts, financial statement, profit and loss account, balance sheet, insurance audits and financial risk aspects	
UNIT - VI	Project Budgeting	(06 Hours)
	Types of capitals, fix and working capital, debentures, shares, public deposits. Forms of foreign capital, money and capital market in India. New economical policy. Role of financial institutions in economical development, RBI government of India guidelines for foreign funding in construction projects.	

Assignments

- 1) Preparation of organization chart for small construction project
- 2) Preparation of organization chart for large construction project
- 3) Preparation of cash flow diagrams and finding out time value of money
- 4) Comparison of different projects by different methods
- 5) Benefit cost analysis of project
- 6) Determination depreciation value of equipments
- 7) Preparation of balance sheet for project
- 8) Assignment on value analysis
- 9) Collection of data regarding RBI government of India guide lines for foreign funding in construction project.
- 10) Numericals on engineering economics

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, II, III
Unit Test -2	UNIT – IV, V, VI

04 : MECHANICS OF SOLIDS

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
		Continuous Assessment: 40 Marks			
Course Pre-requisites: The students should have knowledge of-					
1.	Engineering Mechanics				
Course Objectives:					
The student should be able to calculate stresses developed in the material.					
Course Outcomes: The student will be able to					
1.	calculate stresses due to axial force.				
2.	calculate shear force and bending moment in the beam.				
3.	calculate bending stress and deflection in the beam.				
4	calculate shear stress due to shear force and torsion.				
5	calculate critical load for column.				
6	calculate principal stresses.				
UNIT - I Simple Stresses and Strains: (08 Hours)					
	Concept of stress and strain: Normal, lateral, shear and volumetric stresses and strains, Stress-strain curve; Elastic constants and their inter relationship; Generalized Hooke's law; Stresses due to Axial Load and Temperature: Axial force diagram; Stresses, strains and deformation of determinate and indeterminate bars of prismatic, homogenous and composite cross section.				
UNIT - II Shear Force and Bending Moment in Beams: (08 Hours)					
	Concept of Shear Force and Bending Moment; Relation between Shear Force, Bending Moment and intensity of loading; Shear Force Diagram and Bending Moment Diagram of determinate beams due to concentrated load, uniformly distributed load, uniformly varying load and moments;				
UNIT - III Bending Stresses and Deflection of Beam: (08 Hours)					
	Bending Stresses: Theory and assumptions of pure bending; Moment of resistance; Flexure formula; Flexural rigidity; Modulus of rupture; Flexural stress distribution diagram for various sections; Force resisted by partial cross section. Deflection of Beams: Concept of relation between deflection, slope, bending moment, shear force and intensity of loading; Macaulay's method, Elastic curve.				
UNIT - IV Shear Stresses: (08 Hours)					
	Shear Stresses: Concept of direct and transverse shear; Shear stress formula; concept of complementary shear stress; Shear stress distribution diagram for symmetrical and unsymmetrical section. Torsion of Circular Shafts: Theory, assumptions and derivation of torsional				

	formula; Shear stress distribution across cross section; Twisting moment diagram; Shear stresses and strains in determinate and indeterminate shafts of hollow, solid, homogeneous and composite cross sections subjected to twisting moment; Torsional rigidity.	
UNIT - V	Combined Stresses and Axially Loaded Column:	(08 Hours)
	Combined Axial and Bending Stress: Concept; Resultant stress due to the axial load and uni-axial or biaxial bending; Core of section. Axially Loaded Long Columns: Concept of critical load and buckling; Differential equation of elastic curve; Euler's formula for hinged ends; Equivalent length for different end conditions; Limitation of Euler's formula; Rankine's formula, Determination of critical load.	
UNIT - VI	Principal Stresses and Principal Planes:	(08 Hours)
	Normal and shear stresses on any oblique plane. Concept of principal stresses and principal planes. Maximum shear stress; Analytical and graphical method (Mohr's circle method); Combined effect of axial force, bending moment, shear force and torsion.	
Assignments:		
1	Explain different types of stresses with practical example.	
2	Write physical properties of different metals.	
3	Draw shape of SFD and BMD for different types of loading.	
4	Draw SFD and BMD for beams.	
5	Draw bending stress distribution diagram across section	
6	Calculate bending stress at particular point.	
7	Draw deflected shape of beam for different support conditions.	
8	Calculate slope and deflection at particular point.	
9	Draw shear stress distribution diagram across section	
10	Calculate shear stress at particular point.	
11	Explain application of shafts in series and in parallel.	
12	Calculate twist/torque/stresses in shaft.	
13	Draw effect of combined axial and flexure stress.	
14	Draw deflected shape of column under different support conditions.	
15	Calculate critical load for column.	
16	Explain principal stresses and strains.	
17	Draw Mohr's circle for different stresses.	
Text Books:		
1) R. C. Hibbeler, "Mechanics of Materials", Pearson Prentice Hall,		
2) Rajput R. K., "Strength of Materials", S. Chand Publication		
3) Punmia B. C., Jain, Ashok Kr. Jain Arun Kr., "Mechanics of Materials", Laxmi Publication.		
4) Ramamrutham S. & Narayan R., "Strength of Materials", Dhanpat Rai Publishing Co.		
Reference Books:		
1) Beer F..P. and Johnston E.R., "Mechanics of Materials", McGraw Hill Publication		
2) Gere J.M. & Timoshenko S.P., "Mechanics of Materials", CBS Publishers & Distributors		
3) Singer F. L. & Pytel A., "Strength of Materials", Harper and Row Publication		

4) Popov E. P., “Engineering Mechanics of Solids”, Prentice Hall of India (P) Ltd.	
5) Singer F. L. & Pytel A., “Strength of Materials”, Harper and Row Publication	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

05: CONCRETE TECHNOLOGY

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>	
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits	
		Continuous Assessment: 40 Marks			
Course Pre-requisites:					
The Students should have knowledge of					
1.	Fundamentals of Civil Engineering				
2.	Engineering Chemistry				
Course Objectives:					
	The student should know qualities & properties of concrete.				
Course Outcomes:					
The student will be able to					
1.	test Ingredients of concrete.				
2.	measure Workability of concrete.				
3.	measure strength of Hardened concrete.				
4.	design of Concrete Mix.				
5.	describe Durability of concrete.				
6.	explain the use of Admixtures.				
UNIT - I	Ingredients of Concrete:				(06 Hours)
	Cement: Manufacture of Portland cement, Chemical Composition, Bogues compounds, Hydration of cement, Structure of Hydrated cement, ASTM classification and types of cement, Tests of cement and I.S. requirements for ordinary Portland cement. Aggregates: Classification, Properties of aggregates, Deleterious materials, Soundness, Alkali-Aggregate Reaction, Grading of aggregates, Standard Grading curves, Testing of aggregates, Artificial & recycled aggregates. Water: Quality of water IS requirements, Use of sea water.				
UNIT - II	Fresh Concrete:				(06 Hours)
	Workability: Factors affecting workability, Measurements of workability, Suitability of concrete based on degree of workability, Segregation, bleeding. Concreting Process: batching, mixing, transporting, placing and compaction. Curing of Concrete: Methods of curing (study of machinery not expected), Effect of temperature on curing, Steam curing, curing compounds, period for curing, stripping time.				
UNIT - III	Hardened Concrete:				(06 Hours)
	Properties of Hardened concrete Strength of Concrete: General, Compressive strength, Factors affecting strength, Maturity Concept, Tensile strength, Relation between compressive and tensile				

	strength, Flexural strength, Testing under central and third point loading, Shear strength, Bond strength, Elasticity, Creep and Shrinkage: Stress-Strain relation, Modulus of Elasticity, Creep-time curve. Non Destructive Testing: Schmidt's Rebound hammer, Ultrasonic Pulse velocity method.	
UNIT - IV	Concrete Mix Design:	(06 Hours)
	Concept of mix design, Variables in mix design, Statistical Quality Control, Various methods of mix design, Design of mix by Indian Standard recommended method (IS: 10262 & IS: 456), Acceptance criteria.	
UNIT - V	Admixtures in Concrete:	(06 Hours)
	Purpose and functions, Classification Chemical Admixtures: Plasticizers, Super-Plasticizer, Retarders, Air entraining agents, Compatibility of admixtures and cement, Marsh Cone Test. Mineral Pozzolanic/Admixtures:- Fly ash, Silica flume. Self Compacting Concrete, Roller Compacted Concrete, Ready mix concrete; High Performance Concrete.	
UNIT - VI	Special Concrete and Durability of Concrete:	(06 Hours)
	Special Concrete: Light weight concrete, Polymer Concrete, Fiber reinforced concrete, Ferro-cement. Special Concreting: Under water concreting, Cold weather concreting. Durability of Concrete: Definition, Significance, Strength and durability relationship; Permeability, Chemical attack; Sulphate attack; Chloride attack, attack by sea water, Carbonation and measurement of depth of carbonation, Requirement for durability as per IS 456.	

ASSIGNMENTS:

- 1) To find the types of cement from market.
- 2) To find the different types, sizes, shapes of aggregate from market.
- 3) Measurement of workability of fresh concrete by different methods.
- 4) Describe the concreting process from any nearby site.
- 5) Describe the curing of concrete.
- 6) Design the concrete mix by different method.
- 7) Measurement of strength of hardened concrete.
- 8) Measurement of strength of hardened concrete by nondestructive testing.
- 9) Describe the concept of durability of concrete.
- 10) Explain the use of Admixtures in concrete.

Text Books:

- 1) Gambhir M. L., "Concrete Technology", Tata McGraw Hill Publication
- 2) Shetty M. S., "Concrete Technology", S. Chand & Company Ltd.

Reference Books:

- 1) Neville A. M. & Brooks J. J., "Concrete Technology", Pearson Education Publication

2) Neville A. M., "Properties of Concrete", ELBS & Longman Publication

Syllabus for Unit Test:	
--------------------------------	--

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
--------------	---------------------------------

Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI
--------------	--------------------------------

07: COMPUTER APPLICATIONS IN CIVIL ENGINEERING - II

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: --	End Semester Examination: --	--
Practical: 02 Hours / Week	Continuous Assessment: --	
	Term Work: 50 Marks	01 Credit

Course Pre-requisites:

The Students should have

1. Knowledge of basic building aspects.
2. Knowledge of various building components.
3. Knowledge of various building symbols.

Course Objectives:

To make student capable of drawing any kind of Engineering drawing using AutoCAD.

Course Outcomes:

The students will be able to

1. draw various Engineering drawing using AutoCAD.
2. draw various elements of a building.
3. draw various elevation and sections of the building.

CIVIL ENGINEERING SCOPE AND APPLICATIONS II

- Introduction.
- Getting Started.
- Learning commands: Draw and Modify Menu.
- Learning commands through drawings.
- Centerline drawings
- Layers / Filters
- Blocks
- Area Command
- Drawing Presentation :Sheet size and Text Format

Term Work:

- 1) Introduction to the software: Tool bars, Symbols and Various Commands.
- 2) Drawing Plates (minimum 10 in number)
- 3) Drawing Plan, Elevation and Section of G+1 Building.

Text Books:

AutoCAD users Guide

08: TESTING OF MATERIALS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical: 02 Hours / Week	TW&Oral:50Marks	01 Credit

Course Pre-requisites:

The Students should have

1. knowledge of Engineering Mechanics, Solid Mechanics & Concrete Technology.

Course Objectives:

the student should be able to test qualities & strength of the material.

Course Outcomes:

The student will be able to test

1. Metals

2. Cement

3. Aggregates

4. Concrete

Course Contents:

The term work shall consist of minimum **TWELVE** experiments from list below.

	Metal: (min Four)
1	Tension Test – Mild steel, Tor steel
2	Torsion test- Mild Steel
3	Direct Shear test- Mild Steel
4	Izod & Charpy Impact tests- Mild Steel, Aluminum, Brass, Copper
5	Rockwell Hardness test- Mild Steel, Aluminum, Brass, Copper
	Cement: (min Two)
6	Standard consistency and Setting time test on cement
7	Fineness test on Cement
8	Compressive strength of Cement
9	Soundness test on Cement
	Aggregate: (min Two)
10	Specific gravity of Aggregates
11	Fineness Modulus of Aggregate
12	Aggregate Impact Value
13	Aggregate Crushing Value
	Concrete (min Four)
14	Workability of Concrete & effect of admixture.
15	Compressive strength of Concrete
16	Flexural Test of Concrete
17	Split Tensile strength of Concrete
18	Non Destructive Test on concrete –Schmidth's Rebound hammer test
19	Bending test – Timber
20	Compressive Strength test- Bricks

Programme: B. Tech. (Civil) – Sem IV - 2014 Course

09: ENGINEERING MATHEMATICS-III		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	04 Credits
Tutorial: 01 Hours / Week	Continuous Assessment: 40 Marks	
Course Pre-requisites:		
The Students should have		
1.	basic knowledge of differentiation, integration and differential equation	
2.	basic knowledge of vector algebra	
Course Objectives:		
	To form mathematical model and solve mathematical problem in Civil Engineering	
Course Outcomes:		
The student should be able to		
1.	form mathematical modeling of systems using differential equations and solve the differential equations	
2.	apply Vector differentiation and integration that finds applications in solid mechanics, fluid flow, heat problems and potential theory etc	
3.	analyze the numerical data by applying statistical methods	
4.	solve system of linear equation and ordinary differential equation by numerical methods	
5.	apply mathematical modeling of systems using partial differential equations and solve the partial differential equations.	
6.	apply vector integral calculus to solve various problems in Civil Engineering.	
Unit - I	Unit I: Linear Differential Equations (LDE)	(06 Hours)
	Solution of nth order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy's & Legendre's DE, Solution of Simultaneous & Symmetric Simultaneous DE.	
Unit - II	Unit II: Applications of DE	(06 Hours)
	Modeling of problems on bending of beams, whirling of shafts and mass spring systems. Solution of Partial Differential Equations (PDE): 1) $\frac{\partial u}{\partial t} = a^2 \frac{\partial^2 u}{\partial x^2}$, 2) $\frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2}$, 3) $\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0$ by using Separation of variables Applications of PDE to problems of Civil and allied engineering.	

Programme: B. Tech. (Civil) – Sem IV - 2014 Course

Unit - III	Unit III: Numerical Methods	(06 Hours)
	Numerical solutions of (i) System of Linear Equations by Gauss Elimination, Cholesky and Gauss-Seidel methods (ii) Ordinary Differential Equations by Euler's, Modified Euler's, Runge-Kutta 4 th order and Predictor-Corrector methods.	
Unit - IV	Unit IV: Statistics and Probability	(06 Hours)
	Measures of Central Tendency, Standard Deviation, Coefficient of Variation, Moments, Skewness and Kurtosis, Correlation and Regression, Reliability of Regression Estimates. Theorems and Properties of Probability, Probability Density Function, Probability Distributions: Binomial, Poisson, Normal and Hypergeometric; Test of Hypothesis: Chi-Square test	
Unit - V	Unit V: Vector Differential Calculus	(06 Hours)
	Physical Interpretation of Vector Differentiation, Vector Differential Operator, Gradient, Divergence and Curl, Directional Derivative, Solenoidal, Irrotational and Conservative Fields, Scalar Potential, Vector Identities	
Unit - VI	Unit VI: Vector Integral Calculus	(06 Hours)
	Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence Theorem, Stoke's Theorem. Applications to problems in Fluid Mechanics, Continuity equations, Stream lines, Equations of motion, Bernoulli's equations.	

ASSIGNMENTS:

1. Problems on Linear differential equation with constants coefficients.
2. Problems on Application of LDE and partial differential equations.
3. Problems on Numerical methods to solve system of algebraic equation and ordinary differential equation.
4. Problems on Statistical methods and probability distribution.
5. Problems on Vector identities and application of vector differential in mechanics.
6. Problems on Line integral, surface integral and volume integral .

Text Books:

- 1) Peter V. O'Neil Advanced Engineering Mathematics by (Cengage Learning).
- 2) Erwin Kreyszig Advanced Engineering Mathematics by (Wiley Eastern Ltd.).

Reference Books:

- 1) B. V. Raman Engineering Mathematics by Tata McGraw-Hill.
- 2) M. D. Greenberg Advanced Engineering Mathematics, 2E, by Pearson Education.
- 3) Wylie C.R. & Barrett L.C. Advanced Engineering Mathematics, McGraw-Hill, Inc.
- 4) B. S. Grewal Higher Engineering Mathematics by Khanna Publication, Delhi.
- 5) P. N. Wartikar & J. N. Wartikar Applied Mathematics Volumes I and II Pune Vidyanthi Griha Prakashan, Pune.

Syllabus for Unit Test:

Unit Test I	Unit - I, II, III
Unit Test II	Unit - IV, V, VI

10: SURVEYING		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory : 3 Hrs/ Week	End Semester Exam: 60Marks	03 Credits
Practical : 4 Hrs/ Week	Continuous Assessment : 40Marks	
	Term Work & Practical Exam: 50 Marks	01 Credit
Course Pre-requisites:		
The Student Should have		
1.	Basic concept of civil engineering.	
2.	Basics of mathematics and Geometry.	
Course Objective		
1.	To make students understand use of various instruments and process of surveying and levelling.	
Course Outcomes		
The student should be able to		
1.	Explain the use of linear measurements and prismatic compass in surveying.	
2.	Describe the process of vertical measurements and contouring and calculate reduced levels.	
3.	Describe the use of vernier theodolite for angular measurements and calculate coordinates of traverse stations.	
4.	Calculate omitted measurements in traverse survey and describe permanent adjustments of theodolite.	
5.	Explain various methods of setting out curves and describe field procedure of curve setting.	
6.	Explain use of plane table and minor instruments in surveying.	
UNIT - I	Linear measurement and Compass survey	(06 Hours)
	Introduction to land surveying, linear measurements, Tapes and EDM- Construction, working and principle, Direct and Indirect methods of linear measurement and ranging, types of tapes, , locating details with offsets by swinging tape, open cross staff and laser square method, concept of scale, R.F. maps and plan. Study and use of topo sheets. Compass survey: Types of bearing and meridian other than magnetic meridian, local attraction and correction of local attraction, dip, declination, reduction of true bearings, adjustment of closing error.	
UNIT - II	Vertical measurements and contouring.	(06 Hours)
	Instruments for vertical measurement-dumpy level, auto level, laser level and digital level. Principle axes of dumpy level, temporary and permanent adjustment, simple, compound and reciprocal levelling, curvature and refraction corrections, distance to the visible horizon. Contouring: Direct and indirect methods of contouring, uses of contour maps, profile levelling and cross sectioning and their applications, reduction of volume from contour map and tracing grade contour.	
UNIT - III	Measurement of direction by Vernier Theodolite.	(06

		Hours)
	Study of Vernier transit 20” Theodolite, introduction to digital Theodolite use of Theodolite for measurement of horizontal angles by repetition and reiteration, vertical angles and magnetic bearing, prolonging a line, lining in and setting out and angle with a Theodolite, plane trigonometrical levelling. Theodolite traversing: computation of consecutive and independent co-ordinates, adjustment of closed traverse by transit rule and Bowditch’s rule, Gales traverse table.	
UNIT - IV	Omitted measurements, permanent adjustments of transit Theodolite and Tachometry.	(06 Hours)
	Omitted measurements, area calculation by independent co-ordinates, open traverse and its uses, measurement of deflection angles using transit Theodolite, open traverse survey and checks in open traverse. Fundamental axes of Theodolite: testing and permanent adjustment of Theodolite Tachometry: applications and limitations, principle of stadia tachometry, fixed hair method with vertical staff to determine horizontal distances and elevations of points.	
UNIT - V	Curves	(06 Hours)
	Introduction to horizontal and vertical curves, different types and their applications, simple circular curves, elements and setting out by linear methods, offsets from long chord and offsets from chord produced, angular method, Rankin’s method of deflection angle. Transition curves: necessity, types and requirements.	
UNIT - VI	Plane table survey and construction survey.	(06 Hours)
	Equipments required for plane table survey and their uses, methods of plane table survey: radiation, intersection, traversing, and simple resection, errors and precisions in plane table surveying, construction survey- survey for tunnels, drainage line buildings, and roads. Use of laser based electronic range finder.	
	Term work:	
	The term work shall consist of	
	Field book containing record of all exercises and project listed below.	
a)	Road project showing L-section plan Of road with contours and typical cross section	2-sheets
b)	Theodolite traverse survey project.	1-sheets
	List of Practicals:	
	Details of practicals to be performed, Exercise projects and assignments	
1.	Linear measurements with tape and accessories.	
2.	Study and use of auto level and double check leveling	
3.	Compound leveling and fly leveling, calculation by rise and fall method.	
4.	Two peg test for level.	
5.	Study and use of 20” Vernier Theodolite.	

6.	Measurement of horizontal angle of triangle by repetition method and applying check.	
7.	Measurement of vertical angle by transit Theodolite	
8.	Trigonometrical levelling by transit Theodolite.	
Project I	Road project of minimum length of 250 M including fixing of alignment, profile leveling and cross sectioning.	
Project II	Theodolite traverse survey of closed traverse for minimum 0.5 hectares area including building roads etc.	
9.	Computation of horizontal distance and elevation of points by tachometry for horizontal and inclined sights.	
10.	Introduction and study of outfit of plane table and method of radiation.	
11.	Intersection method of plane table survey.	
12.	Closed plane table traverse survey around a small four sided building.	
13.	Setting out simple circular curve by Rankin's method of deflection angle	
14.	Use of laser based electronic range finder.	
	ASSIGNMENTS:	
1	Computation of corrected bearings of the traverse by different methods.	
2	Solving problems on calculation of reduced levels by different methods.	
3	Preparing contour map of the area from the given spot levels.	
4	Study of topographical sheets to record various details shown.	
5	Solving problems on trigonometrical leveling.	
6	Computations of independent coordinates of a closed traverse.	
7	Solving problems on omitted measurements.	
8	Calculation of reduced level and distance of a point by tacheometry.	
9	Computation of data required to set out the simple circular curve by Rankine's method .	
10	Write details of survey for drainage line with proper sketches.	
	Text Book:	
1	Surveying and Levelling by Vol.II-T.P. Kanetkar and S.V. Kulkarni.	
2	Surveying Vol. I & II by Dr. B.C. Punmia, Ashok K. Jain, Arun K. Jain.	
3	Surveying for Engineers- John Uren & Bill Price- Palgrave Macmillan	
4	Plane Surveying-----A.M. Chandra----- New age International Publishers	
5	Surveying and Levelling----N. N. Basak, Tata Mc-Graw hill	
6	Surveying Vol. I & II-----Dr. K. R. Arora.	
	Reference Books:	
1	Surveying: Theory and practice---James M. Anderson, Edward M. Mikhail	
2	Surveying theory and practices---Devise R. E., Foot F.S.	
3	Plane and Geodetic Surveying for Engineers. Vol. I—David clark.	
4	Principles of Surveying. Vol. I by J.G. Olliver, J.Clenning	

5	Surveying Vol. I & II by S.K.Duggal, Tata Mc-Graw Hill.	
6	Surveying and Levelling by Subramanian, oxford University Press.	

Syllabus for Unit Test.

Unit Test I	Units I, II, III
Unit Test II	Units IV, V, VI

11. MECHANICS OF FLUID

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory : 3 Hours / Week	End Semester Exam: 60Marks	03 Credits
Practical : 2 Hours / Week	Continuous Assessment : 40Marks	
	Term Work & Oral Exam: 50 Marks	01 Credit
Course Pre-requisites:		
The Student Should have		
1	Basic Knowledge of units and conversion of units	
2	Basic Knowledge of Engineering Mathematics	
3	Basic Knowledge of Engineering Physics	
Course Objective:		
	To make the student understand the scope and application of Fluid Mechanics	
Course Outcomes:		
Student should be able to		
1.	describe basic properties of fluids and measure its properties in static conditions.	
2.	apply knowledge of fluid kinematics and dynamics conditions.	
3.	analyse physical phenomenon dimensionally.	
4.	explain laminar flow and flow through pipes	
5.	explain of boundary layer theory.	
6.	describe turbulent flow.	
Unit -I	Properties of Fluids & Statics:	(06 Hours)
	Scope and application of fluid mechanics, Physical properties of fluids, Newton's Law of Viscosity, Dynamic & Kinematic Viscosity, Classification of fluids. Statics: Pressure density height relationship & Measurement, Hydrostatic pressure on a plane, Centre of pressure, Buoyancy, Stability of floating bodies, Metacentre and Metacentric height.	
Unit II	Kinematics	(06 Hours)
	Types of flow, path lines and streak lines, stream lines, Stream Tube, Continuity Equation in 1-D and 3-D, Velocity potential, Stream functions, Circulation and Vorticity, Concept and Application of Flow Net.	

Unit III	Kinetics	(06 Hours)
	Derivation of Bernoulli's Equation from Newton's 2nd Law , Limitations, Modified form of Bernoulli's Equation, Total energy and Hydraulic Grade line, , Impulse momentum equation.	
Unit IV	Dimensional Analysis and Model Studies	(06 Hours)
	Dimensional homogeneity, Important dimensionless parameters, Dimensional analysis using Buckingham's π theorem, Model studies, Similitude, Model laws, Types of models.	
Unit V	Fundamental of Pipe Flow & Boundary layer theory	(06 Hours)
	Reynolds experiment, Classification of Flows based on Reynolds Number, Moody's Diagram, Laminar flow in circular pipe ,Hagen Poisullies Equation, Introduction to Boundary Layer Theory, Concept of boundary layer, Development of Boundary layer over a flat plate, Laminar and transitional boundary layer, laminar sub layer, General characteristic of boundary layer, Boundary layer thickness, Velocity distributions within boundary layer	
Unit VI	Turbulent flow & Pipe Flow Problems	(06 Hours)
	Characteristics of turbulent flow- Instantaneous velocity, Temporal mean velocity, Scale of turbulence and intensity of turbulence, Darcy- Weisbach equation, Flow through pipes: Energy losses in pipe flow, parallel and series pipes, Equivalent Pipe Concept, Pipe network Analysis, Siphons, Hydraulic transmission through pipes, three reservoir problems.	
Term work shall consist of any Eight Exercises		
1.	Determination of Viscosity	
2.	Study of Pressure Measuring Devices	
3.	Study of Stability of Floating Bodies	
4.	Verification of Bernoulli's Theorem	
5.	Determination of C_d of Venturimeter	
6.	Determination of C_d of Orifice	
7.	Determination of C_d of Notch	
8.	Study of Laminar flow Using Heleshaw's /	
9.	Study of Laminar flow Using Reynold's Apparatus	
T.W and Oral Examination shall be based on above termwork		
ASSIGNMENTS : Assignments will consist of		
1. Solution of numerical problems asked in recent three years of BVU question papers.		
2. Solution of questions asked in recent three years BVU question papers.		
3. Report of new topic being discussed in reputed research journals related to fluid mechanics.		

4. Mini projects such as collection of information, Brochure, Data, on a topic related to fluid mechanics.
5. Writing of industrial applications of various topics of syllabus.
6. Design of new experiments related to fluid mechanics.
7. Collection of two fluid mechanics NPTEL videos and demonstration of it.
8. Collection of information about fluid mechanics equipment's /machinery/materials related to fluid mechanics.
9. Collection of information about fluid mechanics phenomenon and its explanation.
10. Collection of data of different fluids with reference to their properties.

Text Books:	
1.	Garde R. J. and Mirajgaonkar "Engineering Fluid Mechanics" Scitech Pulication C.P.Konthadraman "Fluid Mechanics And Machinery" New Age Publications
2.	S. Ramamurtham "Hydraulics and Fluid Mechanics and Fluid Machines" Dhanpat Rai Publishing Company
3.	R. K. Bansal "Fluid Mechanics and Hydraulic Machines" Laxmi Publications
4.	R.K. Rajput "Fluid Mechanics" S Chand Publications
5.	Garde R. J. and Mirajgaonkar "Fluid Mechanics Through Problems" , New Age International New Delhi
6.	Modi P.N. and Seth S.M. " Fluid Mechanics" Standard Book House
Reference Books:	
1.	Streeter- Wylie,"Fluid Mechanics", TataMcGrow Hill Publication
2.	Dr. R. J. Garde "Turbulent Flow" New Age Publications
3.	N. Narayana Pillai "Principles of Fluid Mechanics and Fluid Machines" University Press
4.	Edward J. Shaughnessy "Introduction to Fluid Mechanics" Oxford University Press
5.	Baljeet S. Kapoor "Fluid Mechanics" New Age International Publishers
6.	Vijay Gupta "Fluid Mechanics And Its Applications" New Age International Publishers
7.	Robert W. Fox "Introduction to Fluid Mechanics" Willey Student Edition
8.	John F. Douglas "Fluid Mechanics" Perason Publication
9.	James A. Fay "Introduction to Fluid Mechanics" PHI Learning Private Limited
Syllabus for Unit Test	
Unit Test I	Unit I, II, III
Unit Test II	Unit IV, V, VI

12: CONSTRUCTION TECHNIQUES & MACHINERIES

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination : 60 Marks	03 Credits
	Unit Test : 20 Marks	
	Assignment : 10 Marks	
	Attendance : 10 Marks	

Course Pre-requisites:

The Students should have

1. knowledge of Building Construction Practices, Building Planning & Design.
2. knowledge of Engineering Economics.
3. knowledge of Concrete Technology.

Course Objectives:

Students should get knowledge of Construction Operation Equipments & different methods of advanced construction techniques, tunneling, concreting & dewatering.

Course Outcomes:

1. Student will be able to explain erection techniques for high rise structures.
2. Student will be able to Apply different construction techniques in underwater construction.
3. Student will be able to apply grouting techniques.
4. Student will be able to find output of earth moving equipment.
5. Student will be able to explain soil stabilization techniques.
6. Student will be able to describe safety of equipment

UNIT - I	CONSTRUCTION MECHANISATION & HIGH RISE CONSTRUCTIONS	(06 Hours)
	Role of Construction activity in the National (including Urban & Rural) & Global development. Necessity of mechanization in construction industry. Types of construction such as Light, Medium & Heavy duty. Erection techniques for high rise structures, advantages & disadvantages of high rise structures. Scope of infrastructure in India and provisions made.	
UNIT - II	UNDER WATER CONSTRUCTION	(06 Hours)
	Cofferdams Dams & Caissons – Definition, Classification & its use. Dredging Techniques. Construction under deep water (Tremie Method). Classification & different types of Piles, Sheet Piles, Pile driving techniques, Negative skin friction. Use of special types of Formwork. Jetties.	
UNIT - III	ADVANCED CONSTRUCTION TECHNIQUES	(06 Hours)

	Launching of Girders, Precast Techniques, Tunnel Driving techniques, Tunnel boring machines (Open & Shield), Road Headers & Boomers, Placing of concrete in Hot & Cold weather conditions. Shotcreting & Guniting. Trenchless Technology, Micro Tunneling. Pneumatic Drilling equipments. Drill & Blast method.	
UNIT - IV	EARTH WORK MACHINERIES	(06 Hours)
	Classification of Earth Moving machines (rippers, dragline, scrappers, pavers, backhoe) & factors affecting in selection. Group behavior of equipments. Manpower requirement for the equipments. Rollers, Tractors, Bull Dozers, Rippers, Draglines & Clamp Shells, Scrappers, Dumpers, Pavers, Power Shovels, Backhoe -: detailed study of these equipment with classification, uses, output, & economics. Excavating, Transporting & compaction equipments. Importance of record keeping of machineries & mode of payment for them.	
UNIT - V	HOISTING & CONVEYING EQUIPMENTS	(06 Hours)
	Hoisting & Transporting equipment; types (Derrick, Tower & Mobile), factors affecting for selection. Conveying equipments-: belt, apron, vibrating, pneumatic, flight & spiral or screw conveyors. Hauling equipments. Crushers & its types.	
UNIT - VI	DEWATERING, PAVING EQUIPMENTS & CONCRETE PUMPS	(06 Hours)
	Dewatering Techniques; Electro-osmosis method, Well Point System. Paving Equipments; Types, Uses. Asphalt Pavers, Slip Form Pavers, Concrete Pavers. Pumps; Types & Uses. Pumps for concreting.	
ASSIGNMENTS :		
1) Enlist & explain role of construction activity in National & Global development. Explain scope of infrastructure in India & provisions made.		
2) Define with examples; Light, Medium & Heavy construction.		
3) Define & differentiate between Cofferdams & Caissons & briefly explain piles & its classification.		
4) In context of tunneling, enlist different tunnel driving techniques & tunnel boring machines.		
5) Write short notes on -: <ul style="list-style-type: none"> i. Shotcreting ii. Guniting iii. Trenchless technology iv. Drill & Blast method v. Pneumatic drilling equipments 		
6) Classify, discuss briefly various earth work machineries (any five) & factors affecting in		

selection including their economics.	
7) Classify & explain various hoisting & conveying equipment. Discuss in detail about factors affecting in selection of them & its economics.	
8) Explain crushers & its types in detail.	
9) Enlist & explain with neat diagrams, different dewatering techniques (electro-osmosis method, well point system).	
10) Write a brief note on Pumps & its types. Discuss in detail about various pumps used for concreting.	
11) Prepare a Power Point presentation (P.P.T.) on any of the topic of your choice from the entire syllabus after getting approval of topic from your subject teacher.	
Textbooks / Reference Books:	
1) Mahesh Verma, "Construction Equipment & Planning & Application", Metropolitan Book Company Private Ltd., New Delhi.	
2) Peurifoy Robert L., William B. Ledbetter, "Construction Planning Equipment Methods", Mc Graw Hill Book Company.	
3) Russel James E., "Construction Equipment", Reston Publishing Company.	
4) Shetty M.S., "Concrete Technology – Theory & Practice", S. Chand & Company Private Limited.	
5) S.C. Sharma & Khanna, "Construction Equipments & its Management",	
6) V.R. Phadke "Construction Machinery & Works Management".	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

13: STRUCTURAL ANALYSIS - I

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week		End Semester Examination: 60 Marks	04 Credits
Tutorial: 01 Hours / Week		Continuous Assessment: 40 Marks	
Course Pre-requisites: The students should have knowledge of			
1.	Solid Mechanics		
Course Objectives:			
	The student should be able to analyse the structure.		
Course Outcomes: The student will be able to			
1.	calculate degree of indeterminacy of the structure.		
2.	calculate deflection of truss.		
3.	analyse Indeterminate truss using strain energy method.		
4.	calculate fixed end moments.		
5.	analyse plane structure using slope deflection method.		
6.	analyse plane structure using moment distribution method.		
UNIT - I	Basic Concepts:		(06 Hours)
	Types and classification of skeletal structures, members, joints, supports, loads and load effects; Concept of stability; Concepts of indeterminacy and degrees of freedom; Static and Kinematic degree of indeterminacy; Deflected shape of beam and frame. Strain Energy: Concept of strain energy; Modulus of Resilience; Strain energy due to axially force, shear force, bending moment and torsional moment.		
UNIT- II	Deflection of Beam and Truss:		(06 Hours)
	Deflection of determinate beam using conjugate beam method, Deflection of joints of determinate truss using Castigliano's first theorem		
UNIT- III	Analysis of Indeterminate Plane Trusses using Castigliano's theorem:		(06 Hours)
	Analysis of indeterminate trusses by application of Castigliano's second theorem; Effect of Lack of fit, temperature changes and Sinking of support.		
UNIT - IV	Fixed Beam and Clapeyron's Three Moment Theorem:		(06 Hours)
	Fixed Beam: Calculation of fixed end moments due to different types of loads; Effect of sinking of support. Clapeyron's Three moment theorem: Analysis indeterminate beams using three moment theorem for different support conditions; Effect of sinking of support.		
UNIT - V	Slope Deflection Method:		(08 Hours)

	Analysis of continuous beams using slope deflection method-sinking and rotation at support; Deflected shape of beam; Analysis of non- sway and sway rectangular portal frames (with indeterminacy up to 3 degrees);	
UNIT - VI	Moment Distribution Method:	(08 Hours)
	Analysis of continuous beams using moment distribution method-sinking and rotation at support; Analysis of non-sway and sway rectangular portal frames (with indeterminacy up to 3 degrees).	
Assignments:		
1	Draw different types of structures- space, plane, trusses, beams and frames.	
2	Draw deflected shapes of different types of structures	
3	Calculate degree of static indeterminacy.	
4	Calculate degree of kinematic indeterminacy.	
5	Calculate deflection of beam using conjugate beam method.	
6	Calculate deflection of truss using Castigliano's first theorem.	
7	Analysis of indeterminate trusses using Castigliano's second theorem	
8	Write fixed end moments for different loading cases.	
9	Explain three moment theorem	
10	Analysis beam/frame using slope deflection method	
11	Calculate distribution factor at joint.	
12	Analysis non-sway beam/frame using moment distribution method	
13	Analysis sway frame using moment distribution method	
Text Books:		
1) Hibbeler R. C., "Structural Analysis", Prentice Hall Publication		
2) Pandit G. S. & Gupta S. P., "Theory of Structures Vol-I", Tata McGraw Hill Publication		
3) Ramamrutham S. & Narayan R., "Theory of Structures", Dhanpat Rai Publishing Company		
Reference Books:		
1) Prakash Rao D. S., "Structural Analysis", Universities Press Publication		
2) Timoshenko S. P. & Young, "Theory of Structures", McGraw Hill Publication		
3) Aslam Kassimali, "Structural Analysis", Cengage Learning.		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

15: COMPUTER APPLICATION IN CIVIL ENGINEERING - III

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical: 02 Hours / Week	Term work and Practical: 50 Marks	01 Credits
Course Pre-requisites: The students should have knowledge of		
1.	Engineering Mechanics	
2.	Solid Mechanics	
3.	Structural Analysis-I	
Course Objectives:		
	The student should be able to analyse the structure using STAAD.Pro	
Course Outcomes: The student will be able to		
1.	analyse the beams	
2.	analyse the plane frames.	
3.	analyse the plane truss.	
4.	Analyse the structure space.	
	Introduction to STAAD.Pro: Application of software, Getting started, Introduction to Tool bars, Menu bar, working window, setting units, , Local and Global Co-ordinate system etc.	
	Generation of Model: Generation of skeletal model, Defining cross section and section properties, Generate and assign different types of supports, assign different types of nodal and member loads, Define load combination, analysis, static check, load list, post analysis, run analysis, read input file etc	
	Results and Interpretation: Post analysis, extract output/result of axial force, shear force, bending moment, torsional moment, deflection and stresses-their values and graphs. Results from output file, read output file and Interpret the results.	
Term work: Term work consist of assignments on		
	1) Analysis of beams	
	2) Analysis of plane frames	
	3) Analysis of plane trusses	
Practical: The practical examination is based on above syllabus and term work.		
Reference Books:		
	1) T.S. Sharma, “Staad.Pro v8i for beginners” , Notion Press	
	2) Sivakumar Naganathan, “Learn Yourself STAAD.Pro V8i”,Lap Lambert	
	3) Bentley Structures, “Staad.Pro Technical reference manual”, Bentley Community e-book	

16: CIVIL ENGINEERING CONSTRUCTION PRACTICE

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	<u>CREDITS ALLOTTED</u>
Practical: 02Hrs/Week		TW & Oral Exam: 50 marks	01Credits
Course Pre-requisites:			
The Student Should have knowledge of			
1.	Fundamental of Civil engineering.		
2.	Building Construction		
3.	Engineering mathematics.		
4.	Concrete Technology		
5.	Building Planning, Designing and Bylaws		
Course Objective			
1.	To make students understand Civil Engineering Practices.		
Course Outcomes			
The students will be able to			
1.	setout of foundation for buildings.		
2.	carry out testing of construction materials		
3.	manage inventory on site.		
4.	maintain quality control on site.		
5.	work as a site engineer		
List of Practicals (Any 10)			
1.	Setting out and layout of building foundation.		
2.	Study of various types of drawings required on construction sites		
3.	Study of reinforcement and its bending for different structural members.		
4.	Slump test on concrete and effect of plasticizers.		
5.	Study of formwork& scaffolding.		
6.	Construction of different types of brick masonry bonds, study of recent types of bricks and blocks		
7.	Study of plastering & pointing.		
8.	Study of different types of tiles.		
9.	Introduction to water supply & sanitary fittings and appliances.		
10.	Consealed construction practices.		
11.	Types of paints.		
12.	Methods of Waterproofing of toilets & roofs.		
13.	Testing of concrete cubes of of different grades.		
14.	Study of stock register format and daily report.		
15.	Study of construction of concrete walls		
16.	Study of precast techniques		
17.	Study of Deck Slab		
18.	Study of Advance Water proofing Techniques		
Reference Books:			
1.	A to Z Building Construction by Mantri publication.		
2.	My Construction Practices by R.B. Chaphalkar.

31 Structural Design-I*

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 4 Hours / Week	End Semester Examination: 60 Marks	Theory :5
Practical: 2 Hours / Week	Continuous Assessment: 40 Marks	
Tutorial : 1 Hours / Week	Term Work & Oral : 50 Marks	Termwork: 1
Course Pre-requisites:		
The Students should have knowledge of		
1.	Structural Analysis- I	
2.	Mechanics of Solids	
Course Objectives:		
	To make student capable to design different structural elements using steel.	
Course Outcomes:		
The student will be able to		
1.	estimate design load	
2.	design a connection for axial load	
3.	design a members for axial tension	
4.	design a members for axial compression	
5.	design a built up column	
6.	design a beam	
UNIT - I	Design Philosophy	(06 Hours)

	Types of structural elements and their behavior, Introduction to IS:875, Types of Loads, Estimation of Loads, Wind Load on Roof Truss. Load combinations, Design Load, Steel as a structural material, Type of structural steel, Mechanical Properties, Rolled steel sections and engineering properties, Introduction to SP6(1), Strength of Section, Design strength, Partial safety factors, Concept of Limit state design, Introduction to IS:800.	
UNIT - II	Design of Connections for Axial Load	(06 Hours)
	Types of fasteners, advantages and disadvantages, Types of bolts, Design strength of bolts, Design of bolted connection and detailing, Strength of weld, Design of weld and detailing.	
UNIT - III	Design of Axially Loaded Tension Members	(06 Hours)
	Behavior of member in tension, Axial tension capacity of plates, single and double angles and channel section, Design of axially loaded Tension members.	
UNIT - IV	Design of Axially Loaded Compression Members	(06 Hours)
	Behavior of member in compression, Concept of Effective Lengths, Axial compression capacity of single and double angle section, Design of axially loaded compression members	
UNIT - V	Design of Built up Column and Column Base.	(06 Hours)
	Axial compression capacity of Built up Column, Design of built up column, Design of Lacing system, Design of battening system, Design of slab base, Design of gusseted base.	
UNIT - VI	Design of Beams	(06 Hours)
	Behavior of beams, Shear and moment capacity of Laterally supported and laterally unsupported beam. Design of beam, Design of built up section, Curtailment of plates, Design of bolted connections for shear and moment.	
<u>Term Work:</u> The term work shall consist of minimum any ONE projects with 2 numbers of half imperial sheets based on following topics:		

1) Design of roof truss: Load estimation, Analysis of truss, Design force for member, Design of Members, Design of connection, Design of Purlin, Drawing.	
2) Design of Building: Load estimation, Analysis of frame, Design of Secondary beams, main beams, Columns, Beam to Beam, Beam to Column connections, column bases, etc.	
Assignments:	
1) Calculation of Wind load acting on the roof truss.	
2) Design of bolted or welded connection for axial load.	
3) Design of member for axial tensile load.	
4) Calculate axial capacity of member in compression.	
5) Design of lacing or battening connection for built up column	
6) Calculation of moment and shear capacity of rolled / built up section.	
Reference Books:	
1) N. Subhramanian, “ Design of Steel Structures”, Oxford University Press	
2) S. K Duggal, “Limit State Design of Steel Structures”, Tata McGraw-Hill Education	
3) S.S.Bhavikatti, “Design of Steel Structures: By Limit State Method”, I K International Pub	
4) Dr. Ramchandra, “Limit State Design of Steel Structures”, Scientific Publishers	
5) M. R. Shiyekar, “Limit State Design in Structural Steel”, Prentice-Hall of India	
6) IS:800-2007, General Construction in Steel - Code of Practice”	
7) IS:875-1987, “Code of Practice for Design Loads for Buildings and Structures Part (1 to 5)”	
8) IS:808-1989, “Dimensions for Hot Rolled Steel Beam, Column, Channel and Angle Sections”	
9) SP-6(6)- 1972, “Handbook for Structural Engineers”	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, II, III
Unit Test -2	UNIT – IV, V, VI

32: ADVANCED SURVEYING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 3 Hours / Week	End Semester Examination: 60 Marks	Theory: 3
Practical: 2 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work & Oral: 50 Marks	Termwork: 1
Course Pre-requisites:		
The Students should have knowledge of		
1.	Fundamentals of Civil Engineering	
2.	Surveying	
Course Objectives:		
	To make student capable to use advanced surveying techniques for mapping	
Course Outcomes:		
The student will be able to		
1.	explain Geodetic control survey and theory of errors.	
2.	explain various features of modern Total Station for survey .	
3.	describe principles and components of Space Based Positioning System and its applications .	
4.	describe technique of Hydrographic Survey.	
5.	explain basics of Remote sensing and Geographical information System and its applications	
6.	describe the process of Aerial survey and its use in Surveying.	
UNIT - I	Geodetic Control Survey:	(6 Hours)

	Introduction to geodetic control survey, System- Triangulation and Trilateration, Triangulation stations and figures, concept of base line. Types of errors, Probable error and its determination, Laws of weights, Method of least squares, Normal equation, Adjustment of triangulation figure.	
UNIT - II	Total Station Survey:	(6 Hours)
	Concept and necessity of an electronic total station instrument. Types of total station as per EDM , range and angle resolution system. Principle features of an ETS, temporary adjustments, On board programmes such as REM, RDM, Free stationing, resectioning etc. ,traverse survey with ETS. Concept of data down loading and post processing software, Errors in ETS survey.	
UNIT - III	Space Based Positioning Techniques:	(6 Hours)
	Introduction and concept, segments of SBPS- space, control and user. GNSS type SBPS in action-GPS, GLONASS, Compass. RNSS type SBPS in action-Quasi zenith, IRNSS. GPS signals, GPS receivers-navigation and surveying. SBPS positioning systems-absolute and differential. Access denial techniques and ephemeris. SBPS coordinates and heights. Surveying with SBPS. Errors in positioning with SBPS. Applications of SBPS	
UNIT - IV	Hydrographic Survey	(6 Hours)
	Concept, objects, Soundings and instruments and personnel required for sounding, methods of locating soundings. Three point problem and its solution by mechanical, analytical and graphical method. Tides and tidal gauges and establishment of MSL	
UNIT - V	Photogrammetry	(6 Hours)
	Elements of photogrammetry, types of photogrammetry. Aerial photographs their types and scale. Concept of relief displacement, Stereoscopy, parallax and mirror stereoscope, parallax equation and difference in elevation from differential parallax. Ground control. Procedure of aerial survey and flight planning.	
UNIT - VI	Remote Sensing and Geographic Information System :	(6 Hours)
	Remote sensing-concept, types –active and passive, components of remote sensing system, electromagnetic energy and spectrum,	

	<p>atmospheric windows and spectral signature. Remote sensing platforms and sensors. Remote sensing data products, interpretation of remotely sensed images visual and digital. Limitations and applications of remote sensing.</p> <p>Concept and need of GIS, Components- people, procedure, hardware, software and data .Functions- Input, manipulation, management, Query analysis and Visualization. Application and limitations of GIS.</p>	
Assignments:		
1. Solution of problems on Laws of weights and normal equations.		
2. Collection of information for various types of ETS used and available in the market and their salient features		
3. Collection of information of SBPS of various countries and applications of SBPS.		
4. Write a report on Instruments used for measurement of soundings.		
5. Case studies on applications of Remote sensing and GIS.		
6. Case studies on applications of Aerial survey.		
Term Work: Any Ten Experiments		
1. Study and use of one second theodolite and measurement of horizontal angle		
2. Measurement of horizontal angles by reiteration method and Measurement of vertical angle.		
3. Study and use of total station.		
4. Study and use of total station for traverse survey.		
5. Applications of Total Station for REM, RDM.		
6. Study and Use of Nautical Sextant for measurement of horizontal angles.		
7. Study and Use of Mirror stereoscope to find air base distance. parallax bar and determination of difference in elevation by differential parallax		
8. Study and use of parallax bar and determination of difference in elevation by differential parallax.		

9. Adjustment of braced Geodetic quadrilateral	
10. Study and use of Handheld GPS for traverse survey	
11. Solution of three point problem in hydrographic surveying	
12. Study of GIS software.	
Text Books:	
1.Duggal S. K., “Surveying Vol-1, Vol-2”, Tata Mac Graw Hill pub. co., New Delhi	
2.Punmia B. C., “Higher Surveying”, Laxmi Publications, New Delhi	
3. Chandra A.M. ,”Higher Surveying “ ,New Age International Publishers,	
4. Bannister A. and Raymond Baker , “Surveying” , Pearson Education	
5 Anji M. Reddy, “ Text book of Remote Sensing and GIS “ , BSP BS Publications	
Reference Books:	
1.Uren J., W. F. Price, “Surveying for Engineers”, Macmillan Pub	
2.Wolf P. R., “Elements of Photogrammetry”, Mc Graw Hill	
3.Agarwal C. S., Garg P. K., “Remote Sensing in Natural Resources”, Wheeler Publishing	
4. Lo C.P., Albert Yeung , “ Concepts and techniques of GIS “ , Printice Hall of India	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I,II,III
Unit Test -2	UNIT – IV, V ,VI

33: Engineering Project Management

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 3 Hours / Week	End Semester Examination: 60 Marks	Theory -3
Practical: 2 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work & oral: 50 Marks	Termwork -1
Course Pre-requisites:		
The Students should have knowledge of		
1.	Building construction.	
2.	Building planning and design.	
Course Objectives:		
	To prepare the student to analyze the network and monitor and control the civil engineering projects.	
Course Outcomes:		
The student will be able to		
1.	prepare organization chart.	
2.	prepare a network and analyze by CPM and PERT methods.	
3.	update network and carryout resource allocation	
4.	carry out material management	
5.	solve linear programming problem by graphical and simplex methods	
6.	check quality parameters in construction process.	
UNIT - I	Introduction to Project Management	(06 Hours)
	Importance, Objectives and functions of Management, Categories of Project, Project Life Cycle Concept, Importance of organizational	

	structures, types of organization, Project Manager education, experience, authority & responsibility.	
UNIT - II	Project Planning & Scheduling	(6 Hours)
	Gantt /Bar Charts and its limitations, Network planning, network analysis, C.P.M., P.E.R.T., Types of floats, Slack. Ladder network ,	
UNIT - III	Project Monitoring & Control	(6 Hours)
	Resource allocation, resource smoothening and leveling, crashing of network, direct cost and indirect cost, cost slope, updating of network,	
UNIT - IV	Material Management	(6 Hours)
	Objectives of material management, material requirement, scheduling, monitoring, inventory control, inventory classification, inventory management, economic order quantity, inventory models, ABC analysis	
UNIT - V	Linear Programming	(6 Hours)
	Identification & formulation of L.P. problem, requirements and assumptions of linear programming model, graphical method and simplex method	
UNIT - VI	Total Quality Management	(6 Hours)
	Importance of total quality management in construction process and steps involved, concept of quality control, quality assurance, quality management and TQM, study of various quality standards in construction, six sigma concept, designing of quality manual, checklist and inspection reports, necessity of MIS in management	
Assignments -:		
1) Project Manager Education, experience, authority & responsibility.		
2) Draw a bar chart for a building project.		
3) Ladder network analysis.		
4) ABC analysis of small building project.		
5) Problems on linear programming, graphical and simplex method.		
6) Total quality management.		

<u>Term Work :</u>	
1.	Assignment on different types of organization and their flowcharts.
2.	Assignment on bar chart.
3.	Assignments on C.P.M. and P.E.R.T.`
4.	Assignment on resource leveling.
5.	Assignment on crashing of network.
6.	Assignment on updating of network.
7.	Assignment on ABC and EOQ analysis.
8.	Assignment on linear programming, graphical and simplex method.
9.	Study of quality control system of a construction project.
10.	Prepare a network for any construction project containing minimum 25 activities and find out total float and free float.
Text Books:	
1.	Construction Engineering and Management by S. Seetharaman, Umesh Publications, New Delhi.
2.	PERT & CPM principles & applications by L.S. Srinath, affiliated East West press Pvt. Ltd., New Delhi.
3.	Project Planning & control with PERT & CPM by Dr. B.C. Punmia, K.K. Khandelwal, Laxmi Publications (P) Ltd, New Delhi.
Reference Books:	
1.	Construction Management and Planning by B. Sengupta and H. Guha, Tata McGraw Hill Publishing Company, New Delhi.
2.	Construction Project Management Planning, Scheduling and controlling by K.K. Chitkara TMH Publishing Company, New Delhi
3.	Inventory Control by L.C. Zhamb, Everest Publishing House
4.	Project Management by Khatua, Oxford University Press
5.	Project Planning, Analysis selection, Implementation & Review by Prasanna Chandra, Tata McGraw Hill, New Delhi
6.	Civil Engineering Project Management by Alan C. Twort & J. Gordon Rees, Elsevier
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, II & III
Unit Test -2	UNIT – IV, V & VI

34 Structural Analysis-II

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 3 Hours / Week	End Semester Examination: 60 Marks	Theory : 3
	Continuous Assessment: 40 Marks	
Course Pre-requisites:		
The Students should have knowledge of		
1.	Structural Analysis- I	
2.	Mechanics of Solids	
Course Objectives:		
	The student should able to analyse the structure.	
Course Outcomes:		
The student should be able to		
1.	calculate plastic moment capacity of section.	
2.	draw Influence Line Diagrams (ILD) for reaction, Shear Force and Bending Moment	
3.	draw Influence Line Diagrams (ILD) for force in members of truss	
4.	analyse three hinge arch	
5.	analyse two hinge arch	
6.	analyse frame using approximate method.	
UNIT - I	Plastic Analysis of Structure	(06 Hours)

	Elastic and Plastic moment capacity, Plastic hinge, Shape factor, Collapse mechanism, Applications to continuous beams, Fixed beams, Single bay single storied rectangular frames.	
UNIT - II	Influence Line Diagrams and rolling loads for beams:	(06 Hours)
	Basic Concept of Influence lines, Construction of Influence Line Diagrams (ILD) for Support reactions, Shear Force and Bending Moment at a given section for simply supported beams, overhanging beams and compound beams. Muller-Breslau's principle and its application to above beams. Rolling loads - Use of influence line diagram for determination of SF and BM in beams due to UDL shorter than span, UDL longer than span, Series of concentrated loads. Conditions for maximum SF and maximum BM values.	
UNIT - III	Influence Line Diagrams and rolling loads for truss:	(06 Hours)
	Influence line diagram for axial forces in members of plane determinate trusses. Use of influence line diagram for determination of member forces of plane determinate trusses under dead load and live load.	
UNIT - IV	Analysis of Three Hinged Arch	(06 Hours)
	Concept and types of arches, Three hinged arches – analysis, Calculation of horizontal Thrust, Radial Shear, Normal Thrust and BM at a cross section.	
UNIT - V	Analysis of Two Hinged Arch	(06 Hours)
	Two hinged arches – Horizontal Thrust at support, Radial Shear, Normal Thrust and BM at a cross section. BM diagram for concentrated load and UDL.	
UNIT - VI	Approximate Methods of the Analysis:	(06 Hours)
	Approximate methods of analysis of multistoried, multibay, 2-D rigid jointed frames by i) Portal method ii) Cantilever method iii) Substitute Frame Method	

Assignments:	
1) Calculate Plastic moment capacity of the cross section	
2) Draw ILD for beams for reaction, SF and BM	
3) Draw ILDs for members of the Truss	
4) Analyse three hinged arch	
5) Calculate support reactions for two hinged arch.	
6) Analyse frame using any approximate method	
Reference Books:	
1) Hibbeler R. C., “Structural Analysis”, Prentice Hall Publication	
2) Pandit G. S. & Gupta S. P., “Theory of Structures- Vol-II”, Tata McGraw Hill Publication	
3) Timoshenko S. P. & Young, “Theory of Structures”, McGraw Hill Publication	
4) Junnarkar S. B. & Adavi, “Mechanic of Structures”, Charotar Publishing House	
5) Ramamrutham S. & Narayan R., “Theory of Structures”, Dhanpat Rai Publishing Company	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, II, III
Unit Test -2	UNIT – IV, V, VI

35 Advanced Mechanics of Fluids

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	Theory : 3
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work & Oral : 50 Marks	Termwork : 01

Course Pre-requisites:

The Students should have knowledge of

1. Fluid Mechanics basics, Types of flows, friction.
2. Basic knowledge of Water retaining structure like dam, weir etc. irrigation channel.
3. Basic knowledge of Drag & lift, unsteady flow.
4. Basic knowledge of Hydro power plant.
5. Basic knowledge of pumps.

Course Objectives:

To impart knowledge of open channel flows and hydraulic machinery to students.

Course Outcomes:

The student will be able to

1. Design most efficient channel section, find critical depth of a flow.
2. Understand and apply knowledge of various flow profile and their characteristics.
3. Find energy dissipated in a hydraulic jump.

4.	Calculate forces on vanes for different conditions.	
5.	Understand and apply knowledge of turbines.	
6.	Understand and apply knowledge of pumps.	
UNIT - I	Uniform Flow in Open Channels:	(06 Hours)
	Basic Equations: Continuity Equation, Bernoulli's Equation, & Momentum Equation as applied to open channel one dimensional flow, Velocity distribution in open channel, Chezy's & Manning's formulae, factors affecting Manning's roughness coefficient, Normal depth, Conveyance Section factor, Most efficient channel section, Specific Energy, Specific Energy diagram, Depth-Discharge diagrams, alternate depths, Critical depth, Critical slopes, Froude number, Specific Force, Specific force diagrams, Conjugate depths, Depth-Discharge diagrams with respect to specific force.	
UNIT - II	Gradually Varied Flow in Open Channels:	(06 Hours)
	Gradually and rapidly varied flows, their examples, Basic assumptions in the derivation of GVF, Differential equations of GVF, Various GVF profiles, and their characteristics.	
UNIT - III	Rapidly Varied Flow:	(06 Hours)
	Hydraulic Jump in Rectangular and Trapezoidal channels, Classification & Practical uses of Jump, Examples of occurrence of Hydraulic Jump, Conjugate Depths, Energy Dissipation in Hydraulic Jump, Location of Jump, Devices for measurement of velocity and discharge in open Channels, Stream gauging.	
UNIT - IV	Unsteady Flow:	(06 Hours)
	Types, Flow through openings under varying head, Flow Compressibility, Celerity of Elastic Pressure Waves, Water Hammer Phenomenon, Rigid & Elastic water Columns Theories, Simple cases neglecting Friction, rapid	

	acceleration of flow due to sudden opening of valve, surge tanks and their functions, Location and Classification.	
UNIT - V	Fluid Flow Around Submerged Bodies:	(06 Hours)
	Fluid Flow Around Submerged Bodies: Practical problems involving fluid flow around submerged bodies, Definition & Expression for Drag, lift, drag coefficient, Types of Drag.	
UNIT - VI	Hydraulic Machines :	(06 Hours)
	Impact of Jet: Force Exerted due to impact of jet on stationary and moving flat and curved plates using linear momentum Principle, Principle of angular momentum, Euler's Momentum Equation for Turbines. Element of Hydropower plant, Hydraulic turbines, Heads & efficiencies, Governing of turbines, Cavitation in turbines, Performance of turbines, Prediction of performance in terms of unit quantities and specific quantities, specific speed. Theory of centrifugal pump, Centrifugal head due to rotation, Heads & efficiencies, Cavitation, Prediction of performance in terms of specific quantities, specific speed, characteristic curves.	
Assignments (Any Six)		
1. Solve Four Numericals to find out Critical Depth.		
2. Solve Numerical on GVF to find out flow profiles		
3. Solve Numericals on Hydraulic Jump to find out dissipation of energy.		
4. Solve Numericals to find out forces on different types of vanes.		
5. Solve Numericals on design of Turbines.		
6. Solve Numericals on design of Pumps.		
7. Collection & Study of Information Brochure about different Hydraulic Machineries.		
8. Collection & Study of Information Brochure about Hydraulic Lab Supply Companies.		

<u>Term Work: (Any Eight)</u>	
1. Flow around aerofoil.	
2. Flow around a Circular Cylinder.	
3. Impact of jet around flat / curved plate.	
4. Performance Curves of Hydraulic Turbine. Constant Head Characteristic Curve	
5. Characteristics of Centrifugal Pump.	
6. Uniform flow formulae of open channel.	
7. Velocity distribution in open channel flow.	
8. Hydraulic jump as energy dissipater.	
9. Characteristics of various GVF profiles.	
10. Design of Hydraulic Centrifugal Pump.	
11. Design of Hydraulic Turbine.	
12. GVF Computations by Direct Step Method.	
Text Books:	
1. Garde R. J., Mirajgaonkar A. G., “Engineering Fluid Mechanics”, Scitech Publication, Chennai	
2. Rangaraju K. G., “Open Channel Flow”, Tata McGraw Publication	
3. Streeter Wylie, “Fluid Mechanics”, Tata McGraw Publication	
4. Subramanyam K., “Open Channel Flow”, Tata McGraw Publication	
5. Ven Te Chow, “Open Channel Hydraulics”, Tata McGraw Publication	
6. Zueb Husain, Zaniel Alimuddin , “ Basic Fluid Mechanics and Hydraulic Machines” BSP Books Pvt. Ltd. Hyderabad	
Reference Books:	
7. Fox, McDonald, Pritchard, “Fluid Mechanics SI Version” Willey Student Edition	
8. Frank M. White, “Fluid Mechanics”, McGraw Hills Series	
9. C P Konthadraman, R Roodramoorthy, “Fluid Mechanics & Machinery” New Academic Science	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I,II,III
Unit Test -2	UNIT – IV, V, VI

36: Professional Skills Development V

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 4 Hours / Week	End Semester Examination: 100 Marks	4
Course Pre-requisites		
The Students should have knowledge of		
1.	Basic concepts of Maths, Logical reasoning and English Grammar taught in the last semester.	
2.	An overall idea about vocabulary, Public speaking skills taught in the last semester	
3.	Knowledge of writing skills, importance of professionalism in emails and letters.	
4.	Knowledge on handling criticism and the concept of conflicts.	
5.	Awareness of the interpersonal skills like team work and its importance in the corporate sector.	
Course Objectives		
	The Professional Skills Development 5 is an extension of PSD- 4 with focus on the remaining topics of Aptitude, Reasoning and Grammar. The further complex concepts of Aptitude and Grammar aims to acquaint them with the topics and also provide them techniques to solve the question with tricks/methods in a very short period. The English communication and soft skills section of PSD-5 focuses on the higher aspects of soft skills training students on how to handle Group Discussions during placement process and other topics such as grooming them on how to handle conflicts effectively in the corporate scenario and also the correct attitude/approach to solve problems collectively from a team's perspective and also individually.	
Course Outcomes		
The student should be able to		
1.	Learn further concepts of Maths, Logical reasoning and English grammar and apply short cuts/tricks to solve questions in less time. Learn remaining 25-30 rules of grammar topics of tenses and Sub- verb agreement relevant from the recruitment point of view.	

2.	Use Mnemonics, and learn appropriate strategies to handle complex topics in GDs and ways to handle them. Students would learn the appropriate ways of stating opinions, disagreeing or communicating during the Group Discussion Process.
3.	Apply various strategies of conflict resolution through amicable way to settle team conflicts/disputes. They would learn to handle criticism and feedback in a positive way as an individual as well as a team.
5.	Students would learn effective time management strategies- Pareto principle (the 80-20 rule of time management) and apply them in the corporate life. It would be a continuation of the topic covered during the previous semester PSD-4
6.	Learn to handle Case studies effectively and incorporate the right approach towards Case Studies asked during the recruitment process.
Unit I	Aptitude (Maths, Logical Reasoning, English) (24Hours)
	<ul style="list-style-type: none"> • Maths <ul style="list-style-type: none"> ▪ Time, Speed & Distance ▪ Time & Work ▪ Simple Interest & Compound Interest in continuation ▪ Maths Revision • Logical Reasoning <ul style="list-style-type: none"> ▪ Data Interpretation ▪ Data Sufficiency ▪ Set Theory & Syllogisms ▪ Reasoning Revision • English <ul style="list-style-type: none"> ▪ Grammar – II – (Adjective, Verb, Sub- Verb Agreement) ▪ Grammar- (Tenses) ▪ Vocabulary ▪ Verbal Ability- Revision
Unit II	Soft Skills & English Communication (24Hours)
	(6 Hours)
	<ul style="list-style-type: none"> • Situational Conversation • Situational Writing • GD Orientation • Mock GD-1 • Mock GD-2 • Mock GD-3

	<ul style="list-style-type: none">• Conflict Resolution• Problem Solving Skills• Time- Management Skills• Handling Case Studies• Management Games• Business Meeting Etiquettes	
Text Books		
1. APAART: Verbal Ability		
2. APAART: Logical Reasoning		
3. APAART: Quantitative Aptitude		
4. APAART: Speak Well 1 (English Language and Communication)		
5. APAART: Speak Well 2 (Soft Skills)		

37 Structural Design-II

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 3 Hours / Week	End Semester Examination: 60 Marks	Theory: 4
Practical: 2 Hours / Week	Continuous Assessment: 40 Marks	
Tutorial: 1 Hour/Week	Term Work: 25 Marks	Termwork:1
Course Pre-requisites:		
The Students should have knowledge of		
1.	conditions of equilibrium, plotting Shear force and bending moment diagram of beams with various support conditions and various load combinations.	
2.	Determination of bending stress and shear stress in beams.	
3.	Concept of short, long columns, direct and bending stress, principal stress and strains.	
4.	Concrete, concreting techniques and properties of concrete.	
5.	Plastic theory, concepts of planning of staircase, planning of a building.	
Course Objectives:		
	The student should be able to complete the design and detailing of a G+2 storied R.C.C. building.	
Course Outcomes:		
The student will be able to		
1.	differentiate between various design philosophies of R.C.C. and know the properties of materials used in R.C.C. and the partial safety factors in Limit State Method .	
2.	differentiate between under-reinforced, over-reinforced and balanced section , analyse and design a singly reinforced, doubly reinforced and flanged beam by Limit State Method.	
3.	design beams for flexure, shear, bond for various supporting conditions	

4.	design different types of slabs and a staircase.	
5.	design short columns for axial load, uniaxial and biaxial bending by using SP-16.	
6.	design isolated column footings.	
UNIT - I	Materials and Design Approach:	(6 Hours)
	Introduction of R.C.C: Materials: Types of reinforcements, Study of properties of concrete and properties of steel. Introduction to design philosophies of R.C. Structures: Working Stress Method, Ultimate Load method, Limit State Method. Various limit states, semi-probabilistic approach, partial safety factors for materials and loads, various structural elements and loads on the elements, Load combinations.	
UNIT - II	R.C. Sections in Flexure:	(6 Hours)
	R.C. Sections in Flexure: Limit State Method: Assumptions, Strain variation diagram, Stress variation diagram; Concept of under reinforced, balanced, over reinforced section; Design parameters of a singly reinforced rectangular section, Moment of resistance of singly reinforced, doubly reinforced, rectangular, flanged section.	
UNIT – III	Beams:	(6 Hours)
	Design of Beams for Flexure, Shear, Bond : Behaviour of R.C .beam in shear, Shear failure, Shear strength of beam Without shear reinforcement, Design of shear reinforcement. Bond –Introduction, types of bonds, Code provision. Design of beams- Simply supported, cantilever, Continuous – Singly reinforced, doubly reinforced and flanged beam. Introduction to Redistribution of moments in beams: Assumption, Requirements of I.S.456-2000. Various load combinations in continuous beams.	
UNIT – IV	Slabs:	(6 Hours)
	Design of Slabs: One Way Slabs: Simply Supported, Cantilever, Continuous	

	Two Way Slabs: Various support conditions Design of Staircase: Dog legged, Open well	
UNIT – V	Columns:	(6 Hours)
	Design of Columns: Columns- Axially loaded short columns, requirements of minimum eccentricity; Design of short columns for axial load, uniaxial, biaxial bending (use of SP 16); Checking safety of column for biaxial bending	
UNIT-VI	Footings:	(6Hours)
	Design of Footings: Footings- Design of isolated column footing for axial load, uniaxial Bending.	
<u>Term Work:</u>		
<ol style="list-style-type: none"> 1. Design of G+2 storied building for gravity loads only. The design should include all types of slabs, beams, columns, footings and staircase (two flights) (Maximum three students in a group) 2. Report of a site visit related to building structure under construction. 3. Four half imperial drawing sheets . 		
Assignments : Any Six		
<ol style="list-style-type: none"> 1. Assignment based on various methods of design. 2. Assignment based on basic parameters in design-Limit State Method and Working Stress Method. 3. Assignment based on moment of resistance of a singly reinforced beam, doubly reinforced beam, flanged beam. 4. Assignment based on design of various types of slabs. 5. Assignment based on design of various types of beams. 6. Assignment based on staircase design. 7. Assignment based on design of various types of columns. 8. Assignment based on design of isolated footing. 		

9. Making the models of reinforcement in various types of slabs.
10. Making the models of reinforcement in various types of beams.
11. Making the models of reinforcement in columns.
12. Making the models of reinforcement in staircase.
13. Making the models of reinforcement in footing.

4. Dr. H. J. Shah "Reinforced Concrete -Vol.1 (Elementary Reinforced Concrete)" -Charotar Publications

Syllabus for Unit Test:	
Unit Test -1	UNIT – I,II,III
Unit Test -2	UNIT – IV,V,VI

38: Environmental Engineering I

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 3 Hours / Week	End Semester Examination: 60 Marks	Theory: 3
Practical: 2 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work & Practical : 50 Marks	Termwork : 1
Course Pre-requisites:		
The Students should have knowledge of		
1.	Engineering chemistry.	
2.	Engineering mathematics.	
Course Objectives:		
	To make student aware of water treatment, air pollution, solid waste management and environmental management	
Course Outcomes:		
The student will be able to		
1.	Explain the water quality criteria and drinking water quality standards.	
2.	Explain aeration and sedimentation process of water treatment.	
3.	Describe filtration, disinfection and advanced water treatment processes.	
4.	Enumerate the various aspects of air pollution.	
5.	Describe the solid and hazardous waste management.	
6.	Explain the aspects of environmental management.	

UNIT - I	Water-Quantity, Quality and Standard	(06 Hours)
	<p>Water: Surface water sources, Ground water Sources, Water demand and quantity, various demands, Conveyance of water, Factors affecting demand, Design period, population forecasting,</p> <p>Quality of Water: Various Sources, Common impurities and their effects, Physical, Chemical, Biological, radiological characteristics of water, Drinking water quality standards,</p> <p>Flow sheets: Water Treatment Plant (WTP) based on sources of Raw water for Rural and Urban</p>	
UNIT - II	Treatment-Aeration and Sedimentation	(06 Hours)
	<p>Aeration: Types of aerators, gravity aerator and fixed spray aerator.</p> <p>Sedimentation: Plain Sedimentation, Principles and types of plain Sedimentation, details of Sedimentation tank, types of tanks, inlet and outlet arrangements; Design criteria like surface overflow rate, detention time, weir loading, depth of tank. Chemical assisted Sedimentation– Necessity, Unit operation, coagulation, Different coagulants, flocculation, factors affecting flocculation, Design of Clari-flocculator;</p> <p>Tube settlers: Introduction, Design of Tube settler</p>	
UNIT - III	Treatment- Filtration, Disinfection and Advance Technology	(06 Hours)
	<p>Filtration: Necessity, mechanisms, Theory of filtration, types of filters, pressure filters, dual and multimedia filters, Different media, details of filter, Rapid sand filter and slow sand filter, design criteria, working and washing of rapid sand filter, design of rapid sand filter.</p> <p>Disinfection: Necessity, Different methods, chlorination, reactions involved, Free And combined residual chlorine, Break point chlorination. UV disinfection, Ozonation</p> <p>Advance Treatment Methods: Water Softening- Chemical and ion exchange methods, Fluoridation and defluoridation, desalination, membrane technologies.</p>	
UNIT - IV	Air Pollution and Control	(06 Hours)

	<p>Air Pollution: History of Air pollutants, Sources and classification of pollutants and their effects on human health, vegetation and property. Ambient air quality and emission standards,</p> <p>Air Pollution Control: Principles, Removal of gaseous pollutants by adsorption, absorption, reaction and other methods, Particulate Matter Control: settling chambers, cyclone separation, Wet collectors, fabric filters, and electrostatic precipitators.</p>	
UNIT - V	Solid and Hazardous Waste Management	(06 Hours)
	<p>Solid and Hazardous Waste Management: Introduction, Sources, Legislations, Waste Generation, Composition, Source reduction of wastes,</p> <p>Handling and segregation of wastes at source, storage and collection, Transport, Labeling and Handling of Hazardous Wastes, Waste processing, Composting,</p> <p>Solid Wastes Disposal in Landfills, secure landfills and landfill bioreactors, landfill remediation,</p> <p>Integrated Solid waste management: Principles and Elements of Integrated Solid waste management.</p>	
UNIT - VI	Environmental Management	(06 Hours)
	<p>Environmental Management: Introduction, Principle, Fundamentals</p> <p>Environmental Management Systems- Introduction, ISO 14000 series, Environmental Management Plan, Eco – labeling,</p> <p>Environmental Management Tools: Life Cycle Assessment (LCA): Environmental Impact Assessment (EIA) and Environmental Audits</p> <p>Environmental Legislation: Rules and Regulations of Environmental laws in India (Water and Air),</p>	
Assignments:		
1. Draw and explain flow sheets of water treatment plant for different types of water sources		
2. Numericals on design of flocculator, sedimentation tank and tube settler.		
3. Information about various types of filtration units		
4. National ambient air quality standards and control methods of air pollutants		
5. Experiences of solid waste management.		

6. EIA studies	
<u>Term Work: (Any Eight experiments)</u>	
11.	Determination of pH and alkalinity of water samples
12.	Determination of Total Hardness and its components of water samples
13.	Determination of Chlorides of water samples
14.	Determination of Turbidity and optimum dose of alum for raw water samples.
15.	Determination of Optimum dose of chlorine and residual chlorine for water samples.
16.	Determination of calorific value and/or energy content of the solid waste.
17.	Determination of concentration of trace metals (Al, Mn, Cu, Ni, Zn, Pb, Cd, Fe, N, P, K) from water, solid waste, air and soil samples.
18.	Determination of PM 2.5 in ambient air samples.
19.	Determination of concentration of Particulate matter and gaseous pollutants in industrial stack.
20.	Determination of concentration of carbon di-oxide from ambient air/industry/automobile
21.	Site visit
22.	Study of EIA report of infrastructure project.
Text Books:	
4.	Wark Kenneth and Warner C.F, Air pollution its origin and control. Harper and Row Publishers, New York, 1981.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, II, III
Unit Test -2	UNIT – IV, V, VI

39 Estimating, Costing and Valuation

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 3 Hours / Week	End Semester Examination: 60 Marks	Theory -4
Practical: 2 Hours / Week	Continuous Assessment: 40 Marks	Termwork -1
Tutorial : 1 Hour/ week	Term Work & Oral : 50 Marks	
Course Pre-requisites:		
The Students should have knowledge of		
1.	Building Construction and Building planning and Design.	
2.	Structural Design I and Structural Design II.	
3.	Surveying and leveling	
4.	Environmental Engineering I	
5	Infrastructure Engineering	
Course Objectives:		
	To prepare the students to make estimate of building, road, and other civil engineering structures	
Course Outcomes:		
The student will be able to		
1.	explain the specifications for different construction works and materials..	
2.	prepare estimate of the buildings, and other civil engineering structures.	
3.	.carryout rate analysis of different items of construction work	
4.	Carry out valuation of civil engineering structures.	

5.	fill the tender documents.
6.	compare different types of contracts

UNIT - I		(6 Hours)
	<p>Estimating: Definition, importance of quantity surveying, types of estimates, data required for estimates, units of measurement & principles deciding the units, mode of measurement of building works. Abstracting, bill of quantities. Provisional & prime cost items, contingencies, establishment charges, centage charges, Schedule of rates (D. S. R.)</p> <p>Approximate Estimate: Definition, purpose, methods of approximate estimation of building & other civil engineering projects like roads, irrigation & water supply & sanitary engineering, electrical works.</p>	
UNIT - II		(6 Hours)
	<p>Methods of Taking out quantities: long wall, short wall method and centre line method of taking out quantities for different items of building. Estimate of RCC members. IS Codes used for estimating.</p> <p>Specifications: Definition & purpose, types, standard specifications. Drafting detailed specifications with reference to materials, quality, workmanship, method of execution, mode of measurement and payment, for major items such as earthwork, stone/brick masonry, plastering, ceramic tile flooring, R.C.C. work.</p>	
UNIT - III		(6 Hours)
	<p>Analysis of rates: Factors affecting cost of an item of work, materials, sundries, lab our, Tools & plant, overheads & profit. Task work - definition & factors affecting task work. Analysis of rates of any five items.</p> <p>Estimate of Road: Methods of estimate of earthwork for road, canal. Estimate of different types of roads.</p>	
UNIT - IV		(6 Hours)

	<p>Valuation of Properties: Purpose, nature of value, price, cost and value, types of value. Factors affecting value of property. Concept of free hold and lease hold property.</p> <p>Depreciation & methods of working out depreciation, sinking fund, Years purchase, out goings. Methods of Valuation of Building: Land & building basis, Rental basis, Reproduction & replacement cost basis. O₁ form.</p>	
UNIT - V		(6 Hours)
	<p>Tenders: Definition. Methods of inviting tenders, tender notice, Pre- qualifications of contractor, tender documents, preparation of tenders. Submission in 3 bid/ 2 bid or single bid system. Qualitative and quantitative evaluation of tenders, E tendering. Comparative statement, pre- bid conference, acceptance of tenders, various forms of BOT tenders, global tendering. (A mockup exercise of preparation, submission, opening of tender documents is suggested). PPP contracts.</p>	
UNIT - VI		(6 Hours)
	<p>Contracts: General idea, types of contracts viz: lump sum, item rate, cost plus, Conditions of contracts. FIDIC document, standard contract conditions published by MOS and PI, Law of contract. Definition, objective & essentials of valid contract.</p> <p>Conditions of contract: General and Specific conditions. Condition regarding EM, SD, time as an essence of contract. Important conditions regarding addition, alteration, extra items, testing of materials, defective work, subletting, powers delegated to Engineer incharge regarding the above aspect, defect liability period, retention money, interim payment or running account bills, advance payment, secured advance, final bill.</p> <p>Settlement of disputes viz. dispute resolving board, arbitration, concept of partnering. Indian Contract Act. Liquidated damages, termination of contract.</p>	
Assignments		
1. Approximate estimate of different types of buildings		
2. To determine quantities of different items of building and preparation of specifications for construction materials (Any five)		

3. Rate analysis.
4. To carryout the valuation of existing building.
5. Mock up exercise of submission of tender.
6. Types of contracts.
<u>Term Work:</u>
1.Estimate of different structures using long wall short wall method and centre line method
2.Detailed estimate of a single storied R. C. C. framed building using D.S.R. rates
3.Working out quantities of steel reinforcement for a slab, a beam, column footing and preparing bar bending schedule.
4. a)Detailed estimate of roadwork . b) Assignment on road earthwork calculations.
5.Estimating quantities for any two of the following a) House drainage & water supply arrangement. b) Pipe culvert or slab culvert c) Septic tank.
6.Drafting detailed specifications of any five items .
7. Assignment on valuation of building. (O ₁ form)
8.Preparation of draft tender notice.
9. Rate analysis for any five items.
Text Books:
1. Estimating and Costing By: Rangwala Published By: Charotar Publishing House, Anand
2.Estimating, Costing Specifications & valuation in Civil Engineering By: M.Chakraborty
Reference Books:
1.Estimating and Costing in Civil Engineering: Theory and Practice, By: B.N Dutta. Published By: S. Dutta & Company, Lucknow.
2.Civil Engineering Contracts & Estimates By: B.S.Patil Published, Orient Longman Ltd. Mumbai.
3.I.S.1200 (Part 01 to 25): Methods of Measurement of Building and Civil Engineering Works.
4. D.S.R: District Schedule of Rates

Syllabus for Unit Test:	
Unit Test -1	UNIT – I,II,III
Unit Test -2	UNIT – IV, V, VI

40: Geotechnical Engineering

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	Theory: 03
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	Termwork : 01
	Term Work & Oral : 50 Marks	
Course Pre-requisites:		
The Students should have knowledge of		
1.	Engineering Mathematics	
2.	Engineering Mechanics	
3.	Fluid Mechanics	
Course Objectives:		
	To make student capable to determine the properties of soil and use of soil as a construction material.	
Course Outcomes:		
The student will be able to		
1.	determine weight - volume relation in soil as a three phase system	
2.	determine index properties of soil.	
3.	explain the compaction and consolidation process.	
4.	calculate the geostatic stresses and coefficient of permeability.	
5.	measure the shear strength of soil by various methods.	
6.	calculate the active and passive earth pressure by various methods.	

UNIT - I	Introduction to soil mechanics	(6 Hours)
	Soil, Soil formation, soil types its composition, soil structures, clay mineral, soil mechanics, history and development of soil mechanics, basic definitions, weight volume relations in soil as three phase system, soil classification systems – USCS, IS, HRB, Textural classification, Activity of clay, Sensitivity of clay, Thixotrophy of clay	
UNIT - II	Index Properties of Soil	(6 Hours)
	Index properties of soil – Water content, specific gravity, particle size distribution, Consistency limits, density, relative density	
UNIT - III	Permeability and Seepage Analysis	(6 Hours)
	Stresses within a soil, effective stress principle, stress point and stress path, Soil - water systems- capillarity, flow, Darcy’s law, permeability, and tests for its determination, head gradient and potential, seepage pressure, Upward flow condition, 2 D flow, Laplace equation, flow net and applications	
UNIT - IV	Compaction and Stress Distribution	(6 Hours)
	Compaction: - Laboratory compaction tests; Factors affecting compaction; Structure and engineering behaviour of compacted cohesive soils; Field compaction; compaction specifications and field control. Stresses in soil: Geostatic Stresses, stress distribution, Bossinsque’s Theory for point load, Westergaard’s theory	
UNIT - V	Shear Strength	(6 Hours)
	a) Introduction- Shear strength an Engineering Property. Mohr’s stress circle, Mohr-Coulomb failure theory. The effective stress principle- Total stress, effective stress and neutral stress / pore water pressure. Peak and Residual shear strength, factors affecting shear strength. Stress-strain behavior of sands and clays. b) Measurement of Shear Strength- Direct Shear test, Triaxial Compression test, Unconfined Compression test, Vane Shear test. Their suitability for different types of soils, advantages and disadvantages. Different drainage conditions for shear tests.	
UNIT - VI	Earth Pressure Theories	(6 Hours)

	<p>a) Earth Pressure- Introduction, Rankine's state of Plastic Equilibrium in soils- Active and Passive states due to wall movement, Earth Pressure at rest. Rankine's Theory- Earth pressure on Retaining wall due to submerged backfill,</p> <p>b) Backfill with uniform surcharge, backfill with sloping surface, layered backfill. Coulomb's Wedge theory. Rebhann's graphical method of determination of earth pressure.</p>	
--	---	--

Term Work:

Term work shall consist of the following experiments (Any Ten)

1.	Determination of water content by oven drying method
2.	Determination of specific gravity of coarse and fine grained soil
3.	Classification of soil by sieve analysis
4.	Determination of consistency limits – Liquid, plastic and shrinkage limit
5.	Determination of in situ density test – Core cutter and sand replacement method
6.	Determination of coefficient of permeability by – a) Constant Head Method b) Falling Head Method
7.	Determination of OMC and MDD by Standard Proctor Test and Modified Proctor Test
8.	Determination of shear parameters by Direct Shear Test.
9.	Determination of Unconfined Compression Strength of soil
10.	Determination of shear parameters Triaxial Shear Test
11.	Determination of shear parameters Vane Shear Test

Assignments:

1.	Study of various relationships between weight and volume, numerical based on it and classification of soil.
2.	Classification of soil based on the index properties of soil.
3.	Study of permeability and numerical based on it.
4.	Study of Proctor tests, different field compaction equipments.
5.	Determination of shear strength, numerical problems based on it.
6.	Numerical problems based on earth pressure.

Unit Test -2	UNIT – IV, V, VI

41 A: Elective-I: Financial Management

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	Theory - 03
	Continuous Assessment: 40 Marks	
Course Pre-requisites:		
The Students should have knowledge of		
1.	Project Management	
2.	Economics and Management	
3.	Construction Techniques and machinery.	
Course Objectives:		
	Students are expected to prepare company's financial position for decision making.	
Course Outcomes:		
The student will be able to		
1.	manage financial planning of a construction project.	
2.	forecast financial requirement of a construction firm.	
3.	analyze Time-Value of Money.	
4.	determine working capital for construction Project.	
5.	apply theories of capital structures.	
6.	carry out risk analysis of budget.	
UNIT - I	Introduction to Financial Management	(6 Hours)

	Scope and Functions of Financial Management, Role of Finance Manager, Organization of the Finance function, Financial Planning, Financial Statement Analysis	
UNIT - II	Financial Planning	(6 Hours)
	Introduction, Objectives and steps in Financial planning, Factors affecting financial planning, estimation of financial requirement of a construction firm, Capitalization, Sources of Financing	
UNIT - III	Capital Budgeting	(6 Hours)
	Time Value of money – Future value of a single cash flow, annuity, Present value of Single Cash flow, Present Value of Uneven Cash flow, Discounting and Non-discounting techniques – NPV, IRR, BCR and Payback period.	
UNIT - IV	Working Capital Management	(6 Hours)
	Importance and Objectives, factors affecting working Capital, Determination of Working Capital, Working capital financing policy	
UNIT - V	Capital Structure	(6 Hours)
	Introduction, Salient features of Capital Structure, Factors influencing capital structure, Theories of Capital structures – EBIT and MM approach, Financial Management in India	
UNIT - VI	Risk Analysis in Capital Budgeting	(6 Hours)
	Introduction, Types and Sources of Risk in Capital Budgeting, Risk Adjusted Discount Rate, Certainty Equivalent Approach, Probability Distribution Approach, Sensitivity Analysis, Simulation Analysis	
<u>Assignments: (Any Six)</u>		
12.	Assignment on Financial Management.	
13.	Assignment on Financial Planning.	
14.	Assignment on Balance Sheet & Profit-Loss statement.	
15.	Assignment on Cash flows.	
16.	Assignment on NPV, BCR and IRR	
17.	Assignment on working Capital Management with reference to case study.	

18.	Assignment on EBIT approach.
19.	Assignment on MM approach.
20.	Assignment on sensitivity analysis.
21.	Assignment on simulation.
Text Books:	
11.	Financial Management, I.M. Pande, Vikas Publication
12.	Financial Management, C. Paramasivam & T. Subramaniam, New Age International (P) Limited, Publishers.
Reference Books:	
17.	Financial Management, An Introduction, Jim Mc Menamin, Taylor and Francis
18.	Financial Management, M.Y. Khan, P.K. Jain, Tata McGraw Hill Publication
19.	Financial Management, Prasanna Chandra, Tata McGraw Hill Publication
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, II & III
Unit Test -2	UNIT – IV, V & VI

41 B: Elective-I - Advanced Structural Analysis

<u>TEACHING SCHEME:</u>			<u>EXAMINATION SCHEME:</u>			<u>CREDITS ALLOTTED:</u>		
Theory: 3 Hours / Week			End Semester Examination: 60 Marks			Theory: 3		
			Continuous Assessment: 40 Marks					
Course Pre-requisites:								
The Students should have knowledge of								
1.	Structural Analysis- I							
2.	Structural Analysis- II							
Course Objectives:								
	The student should able to analyse the structure.							
Course Outcomes:								
The student will be able to								
1.	calculate deflection of beams and frames using Castigliano's first theorem.							
2.	analyze deflection of beams and frames using Castigliano's second theorem,							
3.	analyze indeterminate beams using Stiffness matrix method.							
4.	analyze indeterminate frames using Stiffness matrix method.							
5.	analyze indeterminate beams using Flexibility matrix method.							
6.	analyze indeterminate frames using Flexibility matrix method.							
UNIT - I		Deflection of Beams and Plane Frames using Strain Energy Method:					(06 Hours)	

	Deflection of determinate beams and rectangular portals by application of Castigliano's first theorem;	
UNIT - II	Analysis of Beams and Plane Frames using Strain Energy Method:	(06 Hours)
	Analysis of indeterminate beams and rectangular portals by application of Castigliano's second theorem with indeterminacy up to two degrees;	
UNIT - III	Analysis of Beams using Stiffness Matrix Method:	(06 Hours)
	Stiffness matrix method of analysis, Formulation of stiffness matrices, Applications to indeterminate beams. (Involving not more than three unknowns).	
UNIT - IV	Analysis of Plane Frames using Stiffness Matrix Method:	(06 Hours)
	Formulation of stiffness matrices for frames, Applications for rigid jointed indeterminate rectangular plane frames. (Involving not more than three unknowns).	
UNIT - V	Analysis of Beams using Flexibility Matrix Method:	(06 Hours)
	Flexibility matrix method of analysis, Formulation of flexibility matrices, Applications to indeterminate beams. (Involving not more than three unknowns).	
UNIT - VI	Analysis of Plane Frames using Flexibility Matrix Method:	(06 Hours)
	Formulation of flexibility matrices for frames, Applications for rigid jointed indeterminate rectangular plane frames. (Involving not more than three unknowns).	
Assignments:		
1) Calculate deflection of beams using Castigliano's first theorem		
2) Analyse indeterminate beams or rectangular portals by application of Castigliano's second theorem		
3) Calculate stiffness matrix for beams		
4) Calculate stiffness matrix for frames		
5) Calculate flexibility matrix for beams		
6) Calculate flexibility matrix for frames

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, II, III
Unit Test -2	UNIT – IV, V, VI

41 C: ELECTIVE I: URBAN WATER MANAGEMENT

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>	
Theory: 03 Hours / Week		End Semester Examination : 60 Marks		Theory :03	
		Continuous Assessment : 40 Marks			
Course Pre-requisites:					
The Students should have knowledge of					
1.	Physics, Chemistry, Mathematics and Statistics				
2.	Ecology, Hydrology, Environment and Climate Change				
3.	Water Engineering and Management				
Course Objectives:					
To learn Urban Water Management (UWM) which promises a better approach than the current system, in which water supply, sanitation, storm water and wastewater are managed by isolated entities, and all four are separated from land-use planning and economic development and adopt UWM and its adaptive, iterative processes will help cities significantly reduce the number of people without access to water and sanitation by providing water services of appropriate quantity and quality, thereby improving the health and productivity of urban residents.					
Course Outcomes:					
The student will be able to					
1.	Understand how cities are growing and changing which is leading to describing the promise of IUWM and how some city case studies that explore the ways in which aspects of IUWM have been put into practice, since every city faces a different challenge and requires context-appropriate solutions.				
2.	Focus on the implications of these changes for urban water resources: in the past, water security efforts focused on water quantity and understand how new concerns about water quality are now emerging.				

3.	Understand and design the new tools and strategies to shift from urban water management to IUWM, and develop flexible and adaptable urban water systems.	
4.	Gain insight that how UWM can contribute to cities' resilience in the face of climate change and analyze changing climate demanding water management be approached in a different way.	
5.	Understand, apply and develop an enabling environment for the change toward a framework for integrated urban water management.	
6.	Design, analyze and apply practical approaches for constructing and building GREEN and SMART cities that are inclusive, productive, well governed, and sustainable which leads to foster a new culture of urban water management.	
UNIT - I	Introduction to Urban Water Management	(6 Hours)
	Introduction to Urban Water Management (UWM): Concept, Need, The changing urban context, Expanding city limits, Consequences of globalization and Urbanization, Urban-Rural Conflicts, Special challenges for some cities	
UNIT - II	Water resources and urbanization	(6 Hours)
	Water: Sources, Quantity and Quality, Wastewater: Sources, Quality and Reuse , Effects on Water Demand due to Urbanization, Water Cess Act, Water(Prevention and Control) Act 1974	
UNIT - III	UWM tools and management strategies	(6 Hours)
	Storm water management, Water reclamation and reuse, Water audits and efficient use, Flexible and adaptable urban water systems, Tariffs, payments and other economic tools, Benefit Cost Ratio for Urban Water Management	
UNIT - IV	Climate Change Challenge	(6 Hours)
	Climate Change: Introduction, Cause and Consequences, Climatic Variations in India in recent years, Effect of Climate change on Water Resources and Sanitation, Urban contributions to climate change, Response options , Resilience to climate change	
UNIT - V	Conventional and Integrated Urban Water Management	(6 Hours)
	Conventional Urban Water Management: Introduction, Present Scenario, Advantages and Disadvantages, Integrated Urban Water Management (IUWM): Introduction, Need, Advantages, Urban water governance, Application of IUWM for SMART CITY	

UNIT - VI	Framework for integrated urban water management	(6 Hours)
	Role of Central and Local governments, Involvement of Private sector, Business opportunities and Employment Enhancement, Participation of NGO's and Stakeholder, Sustainable Development and Practices	
Assignments:		
1. Collection of data how cities are growing and changing describing the promise of IUWM		
2. Study of urban water resources: in the past and how new concerns about water quality are now emerging.		
3. Design new tools and strategies to shift from Conventional urban water management to IUWM		
4. Study and data collection of climate change and analyze changing climate demanding water management be approached in a different way.		
5. Design framework for integrated urban water management for Existing and Futuristic SMART Cities		
6. Design, analyze and apply practical approaches for constructing and building GREEN and SMART cities to foster a new culture of urban water management.		
7. Field Visit and Report on SMART City and/or Township in India and/or abroad

Syllabus for Unit Test:

Unit Test -1

UNIT – I, II, III

Unit Test -2	UNIT – IV, V, VI
--------------	------------------

41 D: Elective-I: Docks, Ports and Harbours

<u>TEACHING SCHEME:</u>			<u>EXAMINATION SCHEME:</u>			<u>CREDITS ALLOTTED:</u>		
Theory: 03 Hours / Week			End Semester Examination: 60 Marks			Theory: 03		
			Continuous Assessment: 40 Marks					
Course Pre-requisites:								
The Students should have knowledge of								
1.	Fluid Mechanics							
2.	Advanced Surveying (Hydrographic Survey)							
Course Objectives:								
	To study different marine structures and their design considerations.							
Course Outcomes:								
The student will be able to								
1.	describe development of port.							
2.	describe the wave, tide and the phenomenon related to the same.							
3.	explain different harbour and port facilities.							
4.	design the breakwaters.							
5.	explain the port planning.							
6.	explain marine pollution.							
UNIT - I	Introduction to Ports and Harbours						(6 Hours)	

	History, development of port and ship construction technology along with International trade, Port Development – Indian Scenario	
UNIT - II	Waves and Tides	(6 Hours)
	Concept of generation, propagation and form of wave in coastal zone, global tide phenomenon, types of tides concept of wave tranquility, resonance, coastal sediment transport	
UNIT - III	Ports and Harbours	(6 Hours)
	Harbour : classification, facilities and structures, Approach channel, Marker Buoys, Breakwater layout, Berth and Jetties, Bulk oil container Ports: Loading unloading, storage, Customs and relevant facilities, security, hospital colony, Associated Services, Maintenance facilities, Dry docks, Slipway, locks.	
UNIT - IV	Marine Structures	(6 Hours)
	General design aspects, breakwaters - function, types general design principles, wharves, quays, jetties, piers, pier heads, dolphin, fenders, mooring accessories- function, types, suitability, design and construction features.	
UNIT - V	Port Planning	(6 Hours)
	Modernization of port, Lifting and loading unloading (RORO) facilities, Computerization, Automation, berth occupancy, Port Cost Analysis, Dredging and disposal technology	
UNIT - VI	Port Development	(6 Hours)
	Role of port development and national policy, Public and private sector, Marine pollution and environmental aspects.	
<u>Assignments:</u>		
1. Explain history and development of port in India.		
2. Write the concept of wave generation and propagation in coastal zone		
3. Explain the facilities provided at ports and harbours.		

4. Design a breakwater with the data given.	
5. Write different aspect of port planning.	
6. National policy for port development and environmental aspect of it.	
7. Site visit to CW & PRS	
Text Books:	
1. Basic Coastal Engineering, R.M.Sorenson, J.Wiley & Sons, 1978	
2. Docks and Harbour Engineering,H.P.Oza and G.H.Oza, Charotar Publishing 2013	
3. A Course in Docks and Horbour Engineering, S.P.Bindra, Dhanpatrai Publications	
4. Harbour, Dock and Tunnel Engineering,R.Shrinivasan, Charotar Publishing House Pvt.Ltd (2013)	
Reference Books:	
1.Oceanographical Engineering, R.L.Wiegel, Prentice –Hall 1964	
2.Coastal Engineering, Vols. 1 and 2 , R. Silvester Elsevier Scientific Publishing Co., 1974	
3.N I O Design Manual	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, II, III
Unit Test -2	UNIT – IV, V, VI

41 E: Elective-I: HUMAN RESOURCE MANAGEMENT

<u>TEACHING SCHEME:</u>			<u>EXAMINATION SCHEME:</u>			<u>CREDITS ALLOTTED:</u>		
Theory: 3 Hours / Week			End Semester Examination: 60 Marks			Theory: 03		
			Continuous Assessment: 40 Marks					
Course Pre-requisites:								
The Students should have knowledge of								
1.	Engineering Economics Management							
2.	Project Management							
Course Objectives:								
	To develop the skill of human resource management in construction industry.							
Course Outcomes:								
The student will be able to								
1.	discuss the significance of human resources in construction industry.							
2.	plan human resources.							
3.	describe the recruitment and selection process.							
4.	discuss the significance of training and development of employees.							
5.	analyze the employee benefits and incentives.							
6.	describe employee management relations.							
UNIT - I		Introduction					(6 Hours)	
		History of HRD, Objectives, Functions, HRD in Construction industry, status of construction labour.						
UNIT - II		Human Resource Planning					(6 Hours)	

	Formulating human resource plans, various methods, job analysis, job specifications and job design in construction projects, forecasting personal needs and supply in construction sector.	
UNIT - III	Recruitment & selection	(6 Hours)
	Selecting project manager & project team, external & internal recruitment. Data gathering methods, skill requirement of construction personnel.	
UNIT - IV	Training & Development	(6 Hours)
	The training Process, Individual and organizational development, change management, performance appraisal, use of performance appraisal information establishing the evaluation system, Performance Management / Encouragement, Rewarding Employees	
UNIT - V	Employee Benefits	(6 Hours)
	Employee health and safety, wage and salary administration, incentive system, wages of construction industry, retirement and pensions.	
UNIT - VI	Employee Management Relations	(6 Hours)
	Collective Bargaining, Effective ways of working, trade unions act, labour welfare act, payment of wages act ,workers compensation act ,contract labour act, management of conflicts.	
<u>Assignments:</u>		
1. Case study of HRD in construction industry		
2. Formulating human resource plan		
3. Case study of external and internal recruitment		
4. Report on establishing evaluation system for performance appraisal		
5. Importance on Employee benefits		
6. Report on conversation with HR of any construction industry		
Text Books:		
13.	“Human Resource Development and Management” by “Biswanath Ghosh”, Vikas Publishing House Pvt. Ltd.	
14.	“Human Resource Management” by “S.C. Agarwal”, Dhanpat Rai Publications	
15.	Personnel & Human resource Management – C.B. Mamoria, Himalaya Publishing House	
Reference Books:		

20.	Human resource management – Subbarao, Himalaya Publishing House
21.	Human Resource Management— K. Aswathappa, TMH Pvt. Ltd
22.	“Human Resource Management” by “John Stredwick”
23.	International Human Resource Management--- Gary Diesler
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, II, III
Unit Test -2	UNIT – IV, V, VI

41 F: Elective-I - Green Construction Practices.

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	Theory: 03
	Continuous Assessment: 40 Marks	
Course Pre-requisites:		
The Students should have		
	basic knowledge of conventional construction practices, green materials and immerging trends in the green building industry.	
Course Objectives:		
1.	To understand the concept of sustainability and sustainable development	
2.	To familiarize students with various environmental issues	
3.	To familiarize students with various Green Building Rating Systems	
4.	To understand selection criteria and implementation options for various green material	
5.	To inform the various alternatives materials and construction practices.	
6.	To inform the various recycled and innovative materials and construction techniques through case studies.	
Course Outcomes:		
The student will be able to		
1.	evaluate the immerging trends in the fields of sustainable development and environment.	
2.	evaluate the effects of construction industry on environment.	
3.	understand the various evaluation systems for green buildings.	

4.	implement various green material selection and construction techniques.	
5.	determine immerging trends in alternative materials and construction techniques.	
6.	determine immerging trends in the field of recycled and innovative materials	
UNIT - I	Introduction to Sustainable Development	(06 Hours)
	Basic Concepts of Sustainable Development - History of sustainable development in India and around the world – Sustainable Development an overview Bruntland Commission, UNFCCC – Goals of sustainable development – Energy, Environment and Financial sustainability	
UNIT - II	Environment Management and Impact Assessment	(06 Hours)
	Environment Management Basic: Introduction to biodiversity, Ecosystem and impacts of climate change on environment Environment Laws and Policies: EP Act (Environment Protection Act) Acts related to pollution and climate change	
UNIT - III	Sustainable Architecture and Green Buildings	(06 Hours)
	Green Ratings System: in India and around the world- an introduction Green Rating Systems in India : LEED (IGBC), Griha – Ecohousing,	
UNIT - IV	Green Building Materials and Construction Techniques	(06 Hours)
	Introduction to Green materials – Life Cycle Analysis – Life Cycle Cost Analysis – Selection criteria of Materials and Construction Techniques Green Buildings.	
UNIT - V	Alternative Material and Construction Techniques:	(06 Hours)
	Bamboo, ferrocete, cob-adobe, etc and their construction techniques.	
UNIT - VI	Recycled and Innovative Materials and Construction Techniques	(06 Hours)
	Recycled glass, plastic, recycled debris block. Process of manufacture and construction.	
Assignments:		

22.	Assignment on various building practices carried out conventionally and the consequences.
23.	Assignment on Eco system and food chain,
24.	Assignment on Environmental Impact.
25.	Report writing on Green Material.
26.	Report writing on Indoor Environmental Quality Enhancement facilities.
27.	Case Studies
Text Books:	
16.	Dominique Gauzin – Muller “Sustainable Architecture and Urbanism: Concepts,
17.	Slessor, Eco-Tech : “Sustainable Architecture and High Technology”, Thames and Hudson
18.	Ken Yeang, “Ecodesign : A manual for Ecological Design”, Wiley Academy, 2006.
Reference Books:	
1.	Francis D.K. Ching, Ian M. Shapiro : “Green building Illustrated”
2.	Kumar , Surender, Managi , Shunsuke: “The Economics of Sustainable Development The Case of India “
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, II, III
Unit Test -2	UNIT – IV, V, VI

41 G: Elective-I: Numerical Methods in Civil Engineering

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 3 Hours / Week	End Semester Examination: 60 Marks	Theory: 3
	Continuous Assessment: 40 Marks	
Course Pre-requisites:		
The Students should have knowledge of		
1.	Engineering Mathematics	
2.	Concept of differentiation and integration	
3.	Partial differential equations.	
Course Objectives:		
	To give a broad background to numerical methods common to various branches of civil engineering to the student.	
Course Outcomes:		
The student will be able to		
1.	find out core concepts of error estimate and accuracy of numerical solutions.	
2.	use direct solutions of linear systems.	
3.	use iterative solutions of linear systems.	
4.	use direct solutions of non-linear systems.	
5.	use numerical solutions to solve partial differential equations.	
6.	use numerical integration methods to solve partial differential equations.	
UNIT - I	Introduction to Numerical Methods.	(6 Hours)

	Introduction, need of studying numerical methods, Sources of error in numerical solutions: truncation error, round off error. Order of accuracy - Taylor series expansion.	
UNIT - II	Direct Solutions of Linear Systems	(6 Hours)
	Gauss elimination, Gauss Jordan elimination. Pivoting, inaccuracies due to pivoting. Factorization, Cholesky decomposition.	
UNIT - III	Iterative Solutions of Linear Systems	(6 Hours)
	Jacobi iteration. Gauss Seidel iteration. Convergence criteria.	
UNIT - IV	Direct Solutions of Nonlinear Systems	(6 Hours)
	Newton Raphson iterations to find roots of a 1D nonlinear equation. Generalization to multiple dimensions. Newton Iterations, Quasi Newton iterations. Local and global minimum, rates of convergence, convergence criteria.	
UNIT - V	Numerical Methods to solve partial differential equations.	(6 Hours)
	Difference operators (forward, backward and central difference), Stability and accuracy of solutions, Application of finite difference operators to solve initial and boundary value problems. Numerical quadrature: Trapezoidal rule, simpsons rule, Gauss quadrature.	
UNIT-VI	Numerical integration of time dependent partial differential equations	(6Hours)
	Parabolic equations: algorithms - stability, consistency and convergence, Lax equivalence theorem. Hyperbolic equations: algorithms - Newmark's method, stability and accuracy, convergence, multi-step methods.	
<p>Assignments: Any Six</p> <ol style="list-style-type: none"> 1. Assignment problem based on ‘Gauss -Jordan Method’. 2. Assignment problem based on ‘Gauss -Elimination Method’. 3. Assignment problem based on ‘Gauss –Seidel Iteration Method’. 4. Assignment problem based on ‘Newton-Raphson Method’-1D solution. 5. Assignment problem based on ‘Newton –Raphson Method’-multidimensional solution. 6. Solution of Partial Differential Equation using ‘Trapezoidal Rule’. 		

7. Solution of Partial Differential Equation using ‘Simposon’s Rule’.	
8. Solution of Partial Differential Equation using ‘Gauss Quadrature Rule’.	
9. Solution of Time Dependent Partial Differential Equation .	
Text Books:	
1. Balaguruswamy “ Numerical Methods” Tata Mcgraw Hill Publications	
2. Dr.V.M.Domkundwar “Numerical Methods”	
3. S. S. Sastry “Introductory Methods of Numerical Analysis”, Prentice Hall India	
Reference Books:	
1.T.J.R.Hughes"The Finite Element Method", Prentice Hall, Englewood Cliffs, NJ, 1987.	
2. I.Stakgold , “Green's functions and Boundary Value Problems", Wiley, 1998.	
3.D.Dahlquist and A. Bork "Numerical Methods", Dan Prentice-Hall, Englewood Cliffs, NJ,. 1974.	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I,II,III
Unit Test -2	UNIT – IV,V,VI

ENGINEERING MATHEMATICS-IV (OPTIONAL SUBJECT)

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
Course Pre-requisites:		
The Students should have knowledge of		
1.	Determinants	
2.	Matrices	
3.	Differentiation	
4.	Integration of functions	
5.	Differential equation	
Course Objectives:		
	The course aims at making the students familiar about the most basic numerical methods and concepts like error estimation helpful in various fields of engineering and can be used to simulate the results of various numerical methods.	
Course Outcomes:		
The student should be able to		
1.	derive appropriate numerical methods to solve algebraic and transcendental equations	
2.	evaluate the accuracy of common numerical methods.	

3.	develop appropriate numerical methods to solve a difference equation	
4.	be familiar with numerical interpolation and approximation of functions , numerical integration and differentiation.	
5.	be familiar with numerical solution of ordinary differential equations.	
6.	To compute Numerical Solution of Partial Differential Equations.	
UNIT - I	Numerical solutions of algebraic and transcendental equations	(08 Hours)
	Bisection method, Regula-Falsi method, Newton-Raphson method, Direct iterative method.	
UNIT - II	Solution of system of linear algebraic equation	(08 Hours)
	Matrix inversion method, Gauss- elimination Method, Jordan's method, Crout's method. Gauss-Seidel and Gauss Jacobi's iterative method.	
UNIT - III	Difference equation and Solution of difference equations	(08 Hours)
	Definition of difference equations, formation of difference equation. Solution of Homogeneous and non-homogeneous difference equation with constant and variable coefficients using Boole's operator method and generating functions. Simultaneous difference equation.	
UNIT - IV	Interpolation and Numerical differentiation and integration	(08 Hours)
	Finite difference operator, Interpolation formula with equal and unequal intervals. Divided differences and central differences. Curve fitting : Method of least squares. Straight line, Second degree, parabola, Exponential curve.	

	Differentiation using forward, backward and divided difference General quadrature formula, Trapezoidal rule, Simpson's 1/3rd rule, Simpson's 3/8th rule, Weddle's rule.	
UNIT - V	Numerical solution of I order ordinary differential equation	(08 Hours)
	solution by Euler's, method Euler' Modified method Taylor's series. Runga-kutta method. Milne's Predictors and Correctors method.	
UNIT - VI	Numerical Solution of Partial Differential Equations	(08 Hours)
	Classification of second order partial differential equations, Solution of Laplace's, Poisson's, heat and wave equations by finite difference methods, Use of method of characteristics for solution of initial and boundary value problems.	
Text Books:

Syllabus for Unit Test:		
Unit Test -1	UNIT – I,II,III	
Unit Test -2	UNIT – IV,V,VI	

42 Professional Skills Development VI

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 4 Hours / Week		End Semester Examination: 100 Marks	4
Course Pre-requisites			
The Students should have knowledge of			
1.	Concepts of Maths, Logical reasoning and English Grammar taught in the last semester.		
2.	A basic knowledge of Group Discussion, DO's and Don'ts done in the previous sem.		
3.	Basic knowledge of writing skills, importance of professionalism in emails and letters.		
4.	Knowledge on the concepts of criticism, feedback and conflicts.		
5.	Awareness of the interpersonal skills like team work and introduction to Leadership taught during the last semester.		
6.	Brief idea about professional and business meeting etiquettes.		
Course Objectives			
	The Professional Skills Development 6 is an extension of PSD- 5 with focus on the remaining topics of Aptitude and Grammar. The further complex concepts of Permutation and Combination, Probability and grammatical topics such as prepositions etc would be dealt with. The objective here is to acquaint them with the level of complexity presented in recruitment tests and also provide them techniques to solve such question with tricks/methods in a very short period. The English communication and soft skills section of PSD-6 focuses on the other important aspects of soft skills training students such as techniques of effectively handling Personal Interviews during placement process and understand the dynamics of structured Resume and PIs		
Course Outcomes			
The student should be able to			

1.	Learn further concepts of Maths, Logical reasoning and English grammar and apply short cuts/tricks to solve questions in less time. Learn remaining 25-30 rules of grammar topics such as prepositions, conjunctions etc relevant from the recruitment point of view.
2.	Learn to handle vocabulary questions such as synonyms and analogies in recruitment test and other competitive exams
3.	Understand and Learn techniques/Strategies of how to handle Personal interviews during recruitment process. Through Mock PIs students would be taught the appropriate ways of answering tricky questions in Interview and would learn the correct body language etc to be demonstrated in an interview process.
4.	They would be acquainted with the differences between CV, Bio- Data and Resume and they would learn the correct format of a Résumé along with methods and styles to make their Resumes interesting.
5.	Students would learn to incorporate various rules of written communication in business writing scenario with the appropriate tone and words.
6.	Understand the importance of grooming, body language and etiquettes in the corporate sector. They would be able to conduct themselves in a professional and impressive way by conducting themselves according to situations in the professional sector.
Unit I	Aptitude (Maths, Logical Reasoning, English)
	(24Hours)
	<ul style="list-style-type: none"> • Maths <ul style="list-style-type: none"> ▪ Permutation & Combinatiom ▪ Probability ▪ Maths Revision -1 ▪ Maths Revision - 2 • Logical Reasoning <ul style="list-style-type: none"> ▪ Matching, Selection & Arrangement ▪ Clocks & Calendars, Visual Reasoning ▪ Input , Output & Flow Chart. ▪ Reasoning Revision- 1 ▪ Reasoning Revision-2 • English <ul style="list-style-type: none"> ▪ Grammar – III– (Prepositions& Conjunctions) ▪ Grammar- (Articles & Parallelism) ▪ Verbal Ability Revision- I
Unit II	Soft Skills & English Communication
	(24Hours)

	<ul style="list-style-type: none"> • Resume-I • Resume- II • Mock GD • Mock GD • Personal Interviews-I • Personal Interviews-II • Mock PI • Mock PI • Extempore Speeches, Group Interviews • Written Skills- Revision • Stress Management • Business Writing Tones.

Revised Structure

**BHARATI VIDYAPEETH UNIVERSITY, PUNE
FACULTY OF ENGINEERING and TECHNOLOGY**

Programme: B. Tech. Civil

Reasons for Revision:

- 1. Letter from Secretary, University Grants Commission, New Delhi (D. O. No. F 14-12/2016(CPP II) dated 13th June 2016)**

Action:

- a. Addition of new course Urban Planning at B. Tech. Civil Sem VII
 - b. Subsequent removal of Elective II of B. Tech. Civil Sem VII
 - c. Adjustment of the courses of Elective II in Elective III (Sem VII) and Elective IV (Sem VIII).
 - d. Renaming of Elective III and Elective IV as Elective II (Sem VII) and Elective III (Sem VIII) respectively.
2. Subject Environmental Studies shifted from Sem VIII to Sem VI.

ENGINEERING MATHEMATICS-I

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

MATRICES

Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering .

(08 Hours)

Unit II

COMPLEX NUMBERS AND APPLICATIONS

Definition, Cartesian, Polar and Exponential Forms ,Argand's Diagram, De'Moivre's theorem and its application to find roots of algebraic equations., Hyperbolic Functions, Logarithm of Complex Numbers, Separation into Real and Imaginary parts, Application to problems in Engineering.

(08 Hours)

Unit III

DIFFERENTIAL CALCULUS

Successive Differentiation, nth Derivatives of Standard Functions, Leibnitz's Theorem.

EXPANSION OF FUNCTIONS

Taylor's Series and Maclaurin's Series.

(08 Hours)

Unit IV

DIFFERENTIAL CALCULUS

Indeterminate Forms, L' Hospital's Rule, Evaluation of Limits.

INFINITE SERIES

Infinite Sequences, Infinite Series, Alternating Series, Tests for Convergence, Absolute and Conditional Convergence, Power series, Range of Convergence.

(08 Hours)

Unit V

PARTIAL DIFFERENTIATION AND APPLICATIONS

Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables. Errors and Approximations.

(08 Hours)

Unit VI

JACOBIAN

Jacobians and their applications, Chain Rule, Functional Dependence.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

MAXIMA AND MINIMA

Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.

(08 Hours)

Assignments

1. Rank ,System of Linear Equations.
2. Complex Numbers.
3. Differential Calculus and Expansion of Functions.
4. Indeterminate Forms and Infinite Series.
5. Partial Derivatives, Euler's Theorem on Homogeneous Functions.
6. Jacobians, Maxima and Minima of Functions of two variables.

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Fundamentals of Civil Engineering

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 25 Marks		01 Credit	
Course Pre-requisites:					
The Students should have					
1.	Concepts of units and conversions of units.				
2.	Basic knowledge of Chemistry				
3.	Basic knowledge of geography, concept of latitude and longitude.				
Course Objectives:					
	To make student understand the scope and application of Civil Engineering				
Course Outcomes:					
Students will be able to understand					
1.	Different building components and material				
2.	Classification of surveying				
3.	Levelling of the ground				
4.	Planning of building				
5.	Methods of irrigation and water supply				
6.	Different methods of transportation				
UNIT - I	Civil Engineering Scope And Applications.				(06 Hours)
	Civil Engineering scope, importance and applications to other disciplines of Engineering; Civil Engineering construction process and role of Civil engineer; Government authorities related to Civil Engineering; Types of structures based on loading, material and configuration; Building components and their functions; Civil Engineering materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood, glass and aluminum.				
UNIT - II	Surveying				(06 Hours)
	Objectives, Principles and Classification of Surveying; Linear, angular, Vertical and area Measurements and related instruments.				
UNIT - III	Building Planning And Bye Laws				(06 Hours)
	Site selection for residential building; Principles of building planning; Building bye laws- necessity, Floor Space Index, Heights, open space requirements, set back distance, ventilation and lighting, concept of carpet and built up area, minimum areas and sizes for residential buildings; Concept of Eco friendly structures and Intelligent buildings.				
UNIT - IV	Foundations and Earthquakes				(06 Hours)
	Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation. Earthquakes causes, effects and guidelines for earthquake resistant design, earthquake zones.				
UNIT - V	Irrigation And Water Supply				(06 Hours)
	Rainfall measurement and its use in design of dams; Types of dams, canals, methods of irrigation and their merits and demerits; hydropower structures; Water supply, drinking water requirements and its quality, water and sewage treatment flow chart.				
UNIT - VI	Infrastructure				(06 Hours)
	Roads- types of roads and their suitability, cross section of roads, meaning of				

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	<p>terms ; width of roads, super elevation, camber, gradient ,sight distance, materials used for construction of roads.</p> <p>Railways- Types of gauges, section of railway track, components of railway track, advantages.</p> <p>Bridges: Components - Foundation, Piers, Bearings, Deck.</p> <p>Airways- Components -Runway, Taxiway and Hangers.</p>	
Term Work:		
(Term work shall consist of any eight exercises from the list given below.)		
1.	Study and use of prismatic compass and measurement of bearings.	
2.	Study and use of Dumpy level and reduction of levels by collimation plane method.	
3.	Area measurement by Digital Planimeter.	
4.	Drawing plan and elevation of a residential bungalow.	
5.	Study of features of topographical maps.	
6.	Assignment on collection of information on Civil Engineering materials.	
7.	Assignment on types of foundations.	
8.	Assignment problem on irrigation and hydropower structures.	
9.	Assignment on study of flow chart of water and sewage treatment.	
10.	Assignments on types of transportation systems.	
Text Books:		
1.	“ Surveying- Vol I “ - S.K. Duggal , Tata McGraw Hill Publication.	
2.	“Built Environment” – Shah , Kale, Patki, , Tata McGraw Hill Publication	
3.	“Building Construction” – Dr. B.C. Punmia , Laxmi Publication	
4.	“Irrigation and water Power Engineering “- Dr. P.N. Modi,Standard Publishers ,New Delhi	
5.	“Text book of Transportation Engineering “- Arora, Charotar Publishers.	
6.	Water supply and sanitary engineering-Rangawala, Charotar Publishers.	
7.	“Basic Civil engineering”- M.S. Palanichamy- Tata McGraw Hill Publication	
Reference Books:		
1.	“Surveying –Theory and Practice”-James Anderson- Tata McGraw Hill Publication	
Syllabus for Unit Test:		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI

Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

Unit I	<p>Lines and Dimensioning in Engineering Drawing Different types of lines used in drawing practice, Dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.</p> <p>Curves used in Engineering Practice Ellipse by Directrix-Focus method, Arcs of Circle method, Concentric circle method and Oblong method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone, Loci of points- Slider Crank mechanisms.</p>	(6)
Unit II	<p>Orthographic Projection Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections.</p>	(6)
Unit III	<p>Isometric Projections Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, and Sphere.</p>	(6)
Unit IV	<p>Projections of Points and Lines and planes Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines, Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP</p>	(6)
Unit V	<p>Projection of Solids Projection of prism, pyramid, cone and cylinder by rotation method.</p>	(6)
Unit VI	<p>Section of Solids Types of section planes, projections of solids cut by different sections of prism, pyramid, cone and cylinder.</p>	(6)

Term work

Term work shall consist of five half-imperial size or A2 size (594 mm x 420 mm) sheets. Assignment 05 Problems on each unit in A3 size Drawing Book

SHEETS

1. Types of lines, Dimensioning practice, Free hand lettering, 1st and 3rd angle methods symbol.
2. Curves and loci of points
3. Projections of Points and Lines and planes
4. Orthographic Projections
5. Isometric views

6. Projection of Solids

Text Books

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India,
2. "Text Book on Engineering Drawing", K.L.Narayana & P.Kannaiah, Scitech Publications, Chennai.
3. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India,
New Delhi ,
4. "Engineering Drawing and Graphics", Venugopal K., New Age International
Publishers.
5. M. B. Shah and B. C. Rana, "Engineering Drawing", 1st Ed, Pearson Education, 2005
6. P. S. Gill, "Engineering Drawing (Geometrical Drawing)", 10 Edition, S. K. Kataria
and Sons, 2005
7. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 Edition, 1988

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

ENGINEERING CHEMISTRY

Teaching Scheme:
Lectures: 4Hrs/Week
Practical: 2Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory: 04
Practical: 01
Term Work: 25marks

Unit I

WATER

Introduction, Hardness of water, Effect of hard water on boilers and heat exchangers: a) boiler corrosion b) caustic embrittlement c) scales and sludges d) priming and foaming
Water softening methods for industrial purposes :a) Zeolite process b) Phosphate conditioning Numerical based on the zeolite process
(08 Hours)

Unit II

MATERIAL CHEMISTRY

Crystallography : Unit cell, Laws of crystallography, Weiss indices and Miller indices, Crystal defects (point and line defects), X-ray diffraction – Bragg's Law and numerical.
Cement : Introduction of cement, Hydraulic/ Non-hydraulic cementing materials, classification of cement, chemistry of portland cement, chemical composition and compound constituents of portland cement, properties of cement and its applications.
(08 Hours)

Unit III

FUELS

Introduction, classification of fuels, calorific value of fuels, NCV and GCV, Determination of calorific values using Bomb calorimeter and Boys' gas calorimeter.
Theoretical calculation of calorific value of a fuel, Analysis of coal a) Proximate b) Ultimate analysis of coal, Numericals based on NCV, GCV.
(08 Hours)

Unit IV

CORROSION AND ITS PREVENTION

Corrosion: - Definition, atmospheric corrosion-mechanism, Wet corrosion-mechanism, Electrochemical and galvanic series, Factors affecting corrosion-nature of metal, nature of environment.
Methods of prevention of corrosion- Cathodic and Anodic protection, Metallic coatings, Electroplating, Hot dipping.
(08 Hours)

Unit V

ELECTROCHEMISTRY

Introduction, Arrhenius Ionic theory, Kohlrausch's law of independent migration of ions
Laws of electrolysis: Faradays Laws, Ostwald's dilution law, Acids and Bases, concept of pH and pOH, Buffer solutions, Solubility Product, Redox Reactions.
Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Overvoltage, Conductometric Titrations, Fuel cells, Lead Acid Storage Cell and numericals based on the above articles.
(08 Hours)

Unit VI

STEREOCHEMISTRY

Introduction, chirality, optical activity, Enantiomers, Diastereomers, projection formula of tetrahedral carbon- Newman projection, Wedge projection, Fischer projection, Geometrical isomerism :- cis and trans isomerism, E and Z isomers
Optical isomerism :- Mesoform, the number of optical isomers for chiral molecules,
Conformations :- conformations of ethane, conformations of n-butane
(08 Hours)

TERM WORK

Experiments

Any Ten experiments from the following:

1. Estimation of hardness of water by EDTA method.
2. Estimation of chlorine by Mohr's method.
3. Determination of percentage of Ca in given cement sample
4. Determination of coefficient of viscosity by Ostwald's viscometer
5. Study of Bomb calorimeter for determination of calorific value.
6. Determination of calorific value of gas fuel by using Boy's gas calorimeter.
7. Determination of dissolved oxygen in a water sample.
8. To determine the Molecular Weight of polymer
9. Estimation of Copper from brass sample solution by Iodometrically
10. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
11. To standardize NaOH solution and hence find out the strength of given hydrochloric Acid solution
12. To determine Surface Tension of given liquid by Stalagmometer
13. Study of corrosion of metals in medium of different pH.
14. To set up Daniel cell
15. To determine pH of soil
16. To determine Acidity of soil

Assignments

7. Effect of hard water on boilers and heat exchangers
8. Hydraulic/ Non-hydraulic cementing materials
9. Analysis of coal a) Proximate b) ultimate analysis of coal
10. Wet corrosion-mechanism, Electroplating, Hot dipping
11. Geometrical isomerism :- cis and trans isomerism, E and Z isomers
12. Fuel cells

11. Engineering Chemistry, S. N. Chand and Co., Jalandhar, 31st Edition (1990)
12. Engineering Chemistry by Dara S. S. S Chand Publications
13. Fundamentals of Electrochemistry, V. S. Bagotsky (Ed) Wiley NY (2006)

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Fundamentals of Electrical Engineering		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Mathematics	
2.	Physics	
Course Objectives:		
	The course introduces fundamental concepts of DC and AC circuits, electromagnetism, transformer and measuring instruments and electronic components to all first year engineering students.	
Course Outcomes:		
1.	Understand and apply knowledge of basic concepts of work ,power ,energy for electrical, mechanical and thermal systems	
2.	Understand and apply knowledge of Kirchoff's laws and network theorems to solve electrical networks	
3.	Describe construction, principle of operation, specifications and applications of capacitors and batteries	
4.	Describe and apply fundamental concepts of magnetic and electromagnetic circuits for operation of single phase transformer	
5.	Define basic terms of single phase and three phase ac circuits and supply systems	
6.	Know and use electrical safety rules	
UNIT - I	Basic concepts	(06 Hours)
	Concept of EMF, Potential Difference, current, resistance, Ohms law, resistance temperature coefficient, SI units of Work, power, energy. Conversion of energy from one form to another in electrical, mechanical and thermal systems	
UNIT - II	Network Theorems	(06 Hours)
	Voltage source and current sources, ideal and practical, Kirchoff's laws and applications to network solutions using mesh analysis, Simplifications of networks using series- parallel, Star/Delta transformation. Superposition theorem, Thevenin's theorem, Max Power Transfer theorem.	
UNIT - III	Electrostatics	(06 Hours)
	Electrostatic field, electric field intensity, electric field strength, absolute permittivity, relative permittivity, capacitor composite, dielectric capacitors, capacitors in series & parallel, energy stored in capacitors, charging and discharging of capacitors, Batteries-Types, Construction & working.	
UNIT - IV	Magnetic Circuit & Transformer	(06 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	<p>Magnetic effect of electric current, cross and dot convention, right hand thumb rule, concept of flux, flux linkages, Flux Density, Magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability, B-H curve, hysteresis loop, series-parallel magnetic circuit, composite magnetic circuit, Comparison of electrical and magnetic circuit</p> <p>Farady's law of electromagnetic induction, statically and dynamically induced emf, self inductance, mutual inductance, coefficient of coupling, Single phase transformer construction, principle of operation, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Determination of Efficiency & Regulation by direct load test.</p>	
UNIT - V	AC Fundamentals & AC Circuits	(06 Hours)
	<p>AC waveform definitions , form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar & rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3-ph AC Circuits.</p>	
UNIT - VI	Electrical Wiring and Illumination system	(06 Hours)
	<p>Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED), Study of Electricity bill.</p>	

Term Work:

The term work shall consist of record of minimum eight exercises / experiments.

1. Determination of resistance temperature coefficient
2. Verification of Superposition Theorem
3. Verification of Thevenin's Theorem
4. Verification of Kirchoff's Laws
5. Verification of Maximum power transfer Theorem
6. Time response of RC circuit
7. Study of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$ & $X_L = X_C$
8. Verification of current relations in three phase balanced star and delta connected loads.
9. Direct loading test on Single phase transformer
 - a) Voltage and current ratios.
 - b) Efficiency and regulations .
10. Study of a Residential (L.T.) Bill

Text Books:

- 1) B.L.Theraja- "A Textbook of Electrical Technology" Volume- I, S.Chand and Company Ltd.,New Delhi
- 2) V. K. Mehta, - "Basic Electrical Engineering", S. Chand and Company Ltd., New Delhi
- 3) I. J. Nagrath and Kothari – "Theory and problems of Basic Electrical Engineering", Prentice Hall of India Pvt. Ltd

Reference Books:

1. Edward Hughes – "Electrical Technology"- Seventh Edition, Pearson Education Publication
2. H. Cotton – "Elements of Electrical Technology", C.B.S. Publications
3. John Omalley Shawn – "Basic circuits analysis" Mc Graw Hill Publications

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

4. Vincent Del Toro – “Principles of Electrical Engineering”, PHI Publications	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

ENGINEERING MATHEMATICS-II

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

DIFFERENTIAL EQUATIONS (DE)

Definition, Order and Degree of DE, Formation of DE. Solutions of Variable Separable DE, Exact DE, Linear DE and reducible to these types.

(08 Hours)

Unit II

APPLICATIONS OF DIFFERENTIAL EQUATIONS

Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchoff's Law of Electrical Circuits, Motion under Gravity, Rectilinear Motion, Simple Harmonic Motion, One-Dimensional Conduction of Heat, Chemical engineering problems.

(08 Hours)

Unit III

FOURIER SERIES

Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis.

INTEGRAL CALCULUS

Reduction formulae, Beta and Gamma functions.

(08 Hours)

Unit IV

INTEGRAL CALCULUS

Differentiation Under the Integral Sign, Error functions.

CURVE TRACING

Tracing of Curves, Cartesian, Polar and Parametric Curves. Rectification of Curves.

(08 Hours)

Unit V

SOLID GEOMETRY

Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder.

(08 Hours)

Unit VI

MULTIPLE INTEGRALS AND THEIR APPLICATIONS

Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Assignments

1. Differential Equations.
2. Application of DE.
3. Fourier Series and Integral Calculus.
4. DUIS and Curve Tracing.
5. Solid Geometry.
6. Double and Triple integrations, area and volume.

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

FUNDAMENTALS OF MECHANICAL ENGINEERING

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -03Hours / Week	End Semester Examination: - 60Marks	<u>04</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

UNIT-I	<p>Thermodynamics- Heat, work and Internal Energy, Thermodynamic State, Process, Cycle, Thermodynamic System, First Law of Thermodynamics, Application of First Law to steady Flow and Non Flow processes, Limitations of First Law, PMM of first kind (Numerical Treatment), Second Law of Thermodynamics – Statements, Carnot Engine and Carnot Refrigerator, PMM of Second Kind (Elementary treatment only)</p>	(08)
UNIT-II	<p>Introduction to I.C. Engines and turbines- Two stroke, Four Stroke Cycles, Construction and Working of C.I. and S.I. Engines, Hydraulic turbines, steam turbines, gas turbines.(Theoretical study using schematic diagrams)</p> <p>Introduction to refrigeration, compressors & pumps- Vapor compression and vapor absorption system, house hold refrigerator, window air conditioner. Reciprocating and rotary compressor, Reciprocating and centrifugal pump. (Theoretical study using schematic diagrams)</p>	(08)
UNIT-III	<p>Energy Sources - Renewable and nonrenewable, solar flat plate collector, Wind, Geothermal, Wave, Tidal, Hydro power, Bio-gas, Bio-Diesel, Nuclear power.</p> <p>Heat transfer- Statement and explanation of Fourier’s law of heat conduction, Newton’s law of cooling, Stefan Boltzmann’s law. Conducting and insulating materials and their properties, types of heat exchangers and their applications.</p>	(08)
UNIT-IV	<p>Properties of fluids- Introduction, Units of measurements, mass density, specific weight, specific volume and relative density, viscosity, pressure, compressibility and elasticity, gas laws, vapor pressure, surface tension and capillarity, regimes in fluid mechanics, fluid properties and analysis of fluid flow.</p> <p>Properties of Materials and their Applications- Metals – Ferrous and Non-Ferrous, Nonmetallic materials, smart materials, Material selection criteria.</p>	(08)
UNIT-V	<p>Mechanical devices - Types of Belts and belt drives, Chain drive, Types of gears, Types of Couplings, friction clutch (cone and plate), brakes, Power transmission shafts, axles, keys, bush and ball bearings.</p>	(08)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	<p>Mechanisms- Slider crank mechanism, Four bar chain mechanism, List of various inversions of Four bar chain mechanism, Geneva mechanism, Ratchet and Paul mechanism</p>	
UNIT-VI	<p>Machine Tools- Lathe Machine – Centre Lathe, Drilling Machine – Study of Pillar drilling machine, Introduction to NC and CNC machines, Grinding machine, Power saw, Milling Machine.</p> <p>Introduction to manufacturing processes and Their Applications- Casting, Sheet metal forming, Sheet metal cutting, Forging, Fabrication, Metal joining processes.</p>	(08)

List of experiments-

The Term Work shall consist of **any Eight** experiments of following list

1	Measurement of viscosity using Redwood viscometer.
2	Assembly and working of 4-bar, 6-bar, 8-bar planer mechanisms
3	Finding relation between input angle and output angle for various link lengths.
4	Study of domestic refrigerator & window air-conditioner
5	Demonstration of operations of centre lathe
6	Demonstration of operations on drilling machines
7	Demonstration of Two stroke and four stroke engine
8	Study of power transmitting elements: Coupling, Gears and bearings
9	Demonstration of pumps and compressor
10	Study and demonstration of different types of clutches.

10: Engineering Mechanics

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit

Course Pre-requisites:

The Students should have knowledge of

1. Scalar and Vector
2. Newton's law of motion
3. Law of friction
4. Concept of physical quantities, their units and conversion of units
5. Concept of differentiation and integration

Course Objectives:

To develop and apply the concept of resultant and equilibrium for various static and dynamic engineering problems.

Course Outcomes:

The student should be able to

1. calculate resultant and apply conditions of equilibrium.
2. analyze the truss and calculate friction force.
3. calculate centroid and moment of inertia.
4. solve problem on rectilinear motion.
5. solve problems on curvilinear motion.
6. use D'Alembert's principle, Work Energy principle and Impulse Momentum principle for particle.

UNIT - I	Resultant and Equilibrium	(06 Hours)
	Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point.	
UNIT - II	Truss and Friction	(06 Hours)
	Coefficient of Static Friction, Impending motion of Blocks, Ladders and Belts. Analysis of Perfect Trusses - Method of Joint, Method of Section and Graphical Method.	
UNIT - III	Centroid and Moment of Inertia	(06 Hours)
	Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia.	
UNIT - IV	Kinematics of Rectilinear motion of a Particle	(06 Hours)
	Equations of motion, Constant and variable acceleration, Motion Curves, Relative motion, Dependent motion.	
UNIT - V	Kinematics of Curvilinear motion of a Particle	(06 Hours)
	Motion of a Projectile, Cartesian components, Normal and Tangential components of a curvilinear motion.	
UNIT - VI	Kinetics of a Particle	(06 Hours)
	D'Alemberts Principle, Work-Energy Principle and Impulse-Momentum	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Principle, Coefficient of Restitution, Direct Central Impact.	
Term Work:	
A) The term-work shall consist of minimum Five experiments from list below.	
1. Determination of reactions of Simple and Compound beam.	
2. Study of equilibrium of concurrent force system in a plane.	
3. Determination of coefficient of friction for Flat Belt.	
4. Determination of coefficient of friction for Rope.	
5. Study of Curvilinear motion.	
6. Determination of Coefficient of Restitution.	
B) The term-work shall also consist of minimum Five graphical solutions of the problems on different topics.	
Text Books:	
1) "Engineering Mechanics (Statics and Dynamics)", Hibbeler R.C., McMillan Publication.	
2) "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.	
3) "Engineering Mechanics", Bhavikatti S.S. and Rajashekarappa K.G., New Age International (P) Ltd.	
Reference Books:	
1. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.	
2. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication.	
3. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.	
4. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.	
5. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.	
6. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I to III
Unit Test -2	UNIT – IV to VI

ENGINEERING PHYSICS

Teaching Scheme:	Examination scheme:	Credits Allotted:
Lectures: 4Hrs/Week	End Semester Examination: 60 marks	Theory: 04
Practical: 2Hr/Week	Continuous Assessment: 40 marks	Practical: 01
	Term Work: 25marks	

UNIT – I

MODERN PHYSICS

Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focussing, Wavelength and resolution, Specimen limitation, Depth of field and focus, Electron microscope, Positive rays, Separation of isotopes by Bainbridge mass spectrograph.

NUCLEAR PHYSICS

Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium, Fission energy, Critical mass and size, Reproduction factor, Chain reaction and four factor formula, Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions, Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron,

(08hours)

UNIT – II

SOLID STATE PHYSICS

Band theory of solids, Free electron theory, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.

SUPERCONDUCTIVITY

Introduction, Properties of a super conductor, Meissner's effect, Critical field, Types of superconductors, BCS theory, High temperature superconductors, Application of superconductors.

(08hours)

UNIT – III

THERMODYNAMICS

Zeroth law of thermodynamics, first law of thermodynamics, determination of J by Joule's method, Applications of first law, heat engines, Carnot's cycle and Carnot's engine, second law of thermodynamics, entropy, change in entropy in reversible and irreversible processes, third law of thermodynamics.

NANOSCIENCE

Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles (Physical and chemical), synthesis of colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications.

(08hours)

UNIT-IV

OPTICS - I

INTERFERENCE

Interference of waves, Visibility of fringes, interference due to thin film of uniform and non-uniform thickness, Newton's rings, Engineering applications of interference (optical flatness, interference filter, non-reflecting coatings, multi-layer ARC).

DIFFRACTION

Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Diffraction at a circular aperture (Result only), Plane diffraction grating, Conditions for principal maxima and minima, Rayleigh's criterion for resolution, Resolving power of grating and telescope.

(08 hours)

UNIT-V

OPTICS - II

POLARISATION

Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism, Polaroids, Elliptical and circular polarisation, Quarter and half wave plates, Production of polarised light, Analysis of polarised light, half shade polarimeter, LCD.

LASERS

Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Properties of lasers, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.

(08 Hours)

UNIT-VI

ARCHITECTURAL ACOUSTICS

Elementary acoustics, Limits of audibility, Reverberation and reverberation time, Sabine's formula, Intensity level, Sound intensity level, Sound absorption, Sound absorption coefficient, different types of noise and their remedies, Sound absorption materials, basic requirement for acoustically good hall, factors affecting the architectural acoustics and their remedies.

QUANTUM MECHANICS

Electron diffraction, Davisson and Germer's experiment, Wave nature of matter, De-Broglie waves, Wavelength of matter waves, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box and non rigid box.

(08hours)

TERM WORK

Experiments

Any ten experiments from the following:

1. Determination of band gap of semi-conductor.
2. Solar cell characteristics.
3. e/m by Thomson's method.
4. Uses of CRO for measurement of phase difference and Lissajos figures.
5. Hall effect and Hall coefficient.
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode, Photo diode, LED, Ge/Si diode).
8. Plank's constant by photodiode.
9. Wavelength by diffraction grating.
10. Newton's rings.
11. Ultrasonic interferometer.
12. Sound intensity level measurement.
13. Wavelength of laser by diffraction.
14. Determination of refractive index for O-ray and E-ray.
15. Brewster's law.

Assignments

1. Recent advances in Nanotechnology
2. Nuclear radiation detectors.
3. Atomic force microscope (AFM).
4. Advanced opto-electronic devices.
5. Laser in Industry.
6. Different spectroscopic methods – a comparison (Raman, IR, UVR, etc.).

Unit Tests:

Unit Test I : Unit I, II, III

Unit Test II: Unit IV, V, VI

Reference Books:

1. Physics for Engineers – Srinivasan M.R.
2. A text Book of Engineering Physics- M.N. Avadhanulu, P.G. Kshirsagar
3. Engineering Physics- K. Rajagopal
4. Electronics Principles – A.P.Molvino
5. Fundamentals of Optics – Jenkins and White
6. A Textbook of Sound – Wood
7. Engineering Physics – Sen, Gaur and Gupta

Object-Oriented Programming in 'C++'

TEACHING SCHEME

Lectures : 2 Hrs/week

Practicals : 2 Hrs/week

EXAMINATION SCHEME

ESE (End Semester Examination) : 60 Marks

Continuous Assessment: 40 Marks

Term Work : 25 Marks

Credits : 3 Credits

Course Pre-requisite:

Programming Principles and Paradigms, "C" programming language.

Course Objectives:

- To familiarize with the universal concepts of computer programming.
- To present the syntax and semantics of the "C++" language as well as basic data types offered by the language
- To discuss the principles of the object-oriented model and its implementation in the "C++" language
- To demonstrate the means useful in resolving typical implementation problems with the help of standard "C++" language libraries

Course Outcomes:

At the end of this course students will able to :

- Understand basic concepts of Object Oriented Programming and applications of OOP.
- Use basic, user-defined and derived data types, Operator precedence.
- Apply Decision Structure, Loops and Functions
- Write, Debug and Compile Programs of C++
- Implement OOP concepts like – Inheritance using C++ programming.

UNIT I

(3 Hours)

Principles of Object Oriented Programming:

Object Oriented Programming Paradigm, Basic concepts of Object Oriented Programming, Benefits of OOP, Object Oriented Languages, Applications of OOP.

UNIT II

(5 Hours)

Beginning with C++:

Overview of C++, Sample C++ Program, C++ statements, Structure of C++ program, Creating source file, compiling and Linking, Tokens, Keywords, Identifiers and Constants, Basic data types, User-defined data types, Derived data types, Declaration of variables, Dynamic initialization of variables, Scope Resolution Operator, Operator Overloading, Operator precedence, Control Structures.

UNIT III

(5Hours)

Functions in C++:

The Main Function, Function Prototyping, Call by Reference, Inline functions, Default arguments, Function Overloading, Friend and Virtual Functions.

Classes and Objects:

Class specification, Class Objects, Scope resolution operator, Access specifiers- Public, Private, Protected, Defining member Functions, Nesting of Member Functions, Private Member Functions, Static Data Members, Static Member Functions, Data hiding.

UNIT IV

(6 Hours)

Inheritance: Extending Classes:

Defining Derived Classes, Single Inheritance, Making a Private member inheritable, Multilevel Inheritance, Multiple Inheritance, Hierarchical Inheritance, Hybrid Inheritance, Virtual Base Class, Abstract class. Inheritance and protected members, Protected base class inheritance, Inheriting multiple base classes, Constructors, Destructors, Passing parameters to base class constructors, virtual base classes. STL: An overview, containers, vectors, lists, maps.

UNIT V

(6 Hours)

Constructors and Destructors:

Constructors, Parameterized constructors, Default Constructors, Copy constructor, Dynamic Initialization of Objects, Destructors.

Polymorphism:

Base class, Virtual Functions, Pure Virtual Functions, Calling a virtual function through a base class reference, Early and Late Binding.

UNIT VI

(3 Hours)

Managing Console I/O operations:

C++ Stream Classes, Unformatted I/O Operations, Working with Files, Opening and Closing a file, Formatted I/O.

Text Books/References:

- *Herbert Schildt, "The Complete Reference C++", 4th Edition, Mc Graw Hill, 2003.*

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

Workshop Technology

TEACHING SCHEME:

Theory: -
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: -
Continuous Assessment: -
Term Work: 50 Marks

CREDITS ALLOTTED:

01 Credit

Course Pre-requisites: Basic knowledge of hand tools used in day to day life.

Course Objectives: Make the students familiar with basic manufacturing processes

Course Outcomes: students should be able to understand

1. basic Manufacturing Processes used in the industry,
2. importance of safety

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the following topics.

Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances
Term work includes one job involving joint and woodturning.

Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.
Term work to include one job involving fitting to size, male-female fitting with drilling and tapping.

Sheet Metal Practice Introduction to primary technology processes involving bending, punching and drawing various sheet metal joints, development of joints.

Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.
Term work includes one job involving various joining processes like riveting, joining of plastics, welding, brazing, etc.

Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.

Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.

Plumbing (Demonstration Common for Electrical & Non electrical Group)

Types of pipe joints, threading dies, Pipe fittings.

Total Credits

Semester - III = 25

Semester - IV = 25

Grand Total = 50

01: FUNDAMENTALS OF DATA COMMUNICATION

TEACHING SCHEME:

Theory: 03 Hours / Week

Tutorial: 01 Hrs/Week

EXAMINATION SCHEME:

End Semester Exam: 60 Marks

Unit Test: 20 Marks

Assignment :10 Marks

Attendance: 10 Marks

CREDITS ALLOTTED:

04 Credits

Course Pre-requisites:

The Students should have

1. Knowledge of basic Engineering Mathematics

Course Objectives:

1. Create awareness among the students about theoretical aspects of data communication system
2. To make students aware of various modulation techniques, networking concepts, and error detection and analysis methods.

Course Outcomes:

1. Understand basic concepts and principles of data communications.
2. Differentiate between various Modulation Techniques and their applications.
3. Analyze codes used for Error Detection and Correction
4. Compare the switching techniques in data communication.
5. Comprehend various issues pertaining to Satellite Communications.
6. Gain substantial knowledge of evolution of Cellular communication systems.

UNIT - I Fundamentals of data communications :

(08 Hours)

Simplified data communications model. Frequency Spectrum and Bandwidth. Analog and Digital data transmission - data and signals, analog and digital transmission, their comparison, Digital data rate and bandwidth. Transmission impairments - Attenuation, Delay distortion, Noise, Channel Capacity.

Transmission Media: Guided Transmission Media - Twisted pair wires, Coaxial, Optical fiber. Wireless Transmission - Terrestrial microwave, satellite microwave, broadcast Radio, Infrared.

UNIT - II Digital and Analog Transmission (08 Hours)

Digital Data, Digital Signal, Line coding- characteristics, Line coding schemes- Unipolar encoding: NRZ, RZ, Manchester, Differential Manchester. Bipolar encoding:- AMI, Block coding Analog Data, Digital Signal: Sampling, Sampling theorem, Nyquist rate, Pulse Amplitude Modulation (PAM), Pulse Code Modulation (PCM). PCM Encoder and Decoder, DPCM, ADPCM, Delta modulation. Analog Transmission: Modulation of Analog signals :AM, FM, and Phase Modulation. Digital Modulation Techniques –ASK, FSK, PSK, QAM. Modems. Multiplexing: FDM, TDM, statistical TDM, WDM, OFDM. Multiple Access Techniques: FDMA, TDMA, CDMA.

UNIT - III Information theory and Coding (08 Hours)

Information Rate, Shannon's theorem, Optimum Codes, Huffman Code, Code Efficiency, Error Control Coding, Methods of Controlling Errors, Types of Errors, Types of Codes, Error detection and correction capabilities, Hamming Distance, Hamming Bound, Hamming Codes, CRC Block Codes, Error Detection and Correction, Handshaking Techniques, FEC, ARQ - Stop and Wait, Go Back N, Selective Repeat, Channel Throughput and Efficiency.

UNIT - IV Transmission Modes and Telecommunication (08 Hours)

Parallel transmission, Serial transmission, Asynchronous transmission, synchronous transmission. Line Configurations, full duplex and half duplex transmission. Packet switching: Datagram, virtual circuit. Circuit switching and packet switching, (ISO-OSI) Seven layer model, Physical layer protocol, RS232, etc. Data link level Protocol HDLC, SDLC, X-25, LAN, WAN, ISDN. **Telephone Network:** Wire telephony, Subscriber loop, Trunk circuits. Four wire terminating set. PSTN, Frame Relay.

UNIT - V Satellite and Fiber Optic Communication (08 Hours)

Orbital aspects. Geostationary satellite, Station keeping, Frequency plans and polarization, Transponders, Multiple access methods. Line-of-Sight (LOS) issues in Satellite Communications. Fiber optic communication: Principle of light transmission in Fiber, types and modes of fiber, losses in Fiber. Dispersion, light sources and detectors, fiber optic communication link, Physical Layer of Wireless Media. Case Studies on recent communication technologies.

UNIT - VI Cellular Communication System (08 Hours)

Cell structure, Frequency reuse, Roaming, transmitter, Receiver, Special services provided by cellular phone, IEEE 802.11, WIFI, Bluetooth, GSM, GPRS. High-Speed Digital Access:- DSL Technology-ADSL, xDSL, Spread Spectrum-Concept, Frequency Hopping, Direct Sequence Cellular Telephony:- Basic concepts, Frequency-Reuse Principle, Transmitting, Receiving, Handoff, Roaming. First Generation, Second Generation-GSM, 3G Generation, 4G Networks. Case Studies on recent communication technologies.

Assignments:

1. Outline a comparison of all the various analog modulation techniques.
2. Solve Problems on Signal to Noise Ratio , Channel Bandwidth
3. Solve Problems on Sampling Theorem
4. Outline a comparison of all the various digital modulation techniques.
5. Solve Problems on Line Coding Techniques
6. Solve Problems on Information Rate
7. Solve Problems on Shannon’s Channel Capacity Theorem
8. Solve Problems on Hamming Code
9. Solve Problems on CRC and FEC
10. Discuss LOS issues in Satellite Communication
11. Case Study on current generations of Cellular Mobile Communication System

Text Books:

1. William Stallings -Data and Computer communications - Prentice Hall of India,7th Edition.
2. Behrouz. A Forouzan, Data Communications and Networking, McGraw Hill ,4th edition .
3. Understanding Data Communications, John Wiley & Sons, Ltd7th Edition

Reference Books:

1. Andrews S. Tanenbaum -Computer Networks, Prentice Hall of India, 4th Edition.
2. Dennis Roddy, Satellite Communications Systems, John Wiley & Sons, Ltd 5th Edition
3. Richard Van Nee & Ramjee Prasad., “OFDM for Multimedia Communications”, Artech House Publication, 2001.

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

02: PRINCIPLES OF DATA STRUCTURES

TEACHING SCHEME:

Theory: 03 Hours / Week

Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Unit Tests: 20 Marks

Assignment :10 Marks

Attendance: 10 Marks

Practical + Term Work: 50Marks

CREDITS ALLOTTED:

04 Credits

Course Pre-requisites:

The Students should have

1. Knowledge of programming language C++

Course Objectives:

1. To develop skills to use appropriate data structures and selection of appropriate algorithm in computer engineering applications.

Course Outcomes:

1. Gain knowledge of basic concepts of data structures & Realization of ADT.
2. Apply the implementation of stack for evaluation of POLISH expressions, and other problems using C ++ compiler.
3. Differentiate between linear and nonlinear data structures and implement tree traversal techniques using recursive and non recursive methods.
4. Develop different algorithms for operations on Graphs. Implement programs using different sorting algorithms and Analyze for best, worst and average case.
5. Describe the characteristics of an algorithm, Gain knowledge of time and space complexity. Analyze for the searching algorithms.
6. Gain knowledge of decision problems.

UNIT - I

Introduction to Algorithm and Data Structures:

(06 Hours)

Definition, ADT, Complexity of Algorithms, Asymptotic Notations, Big 'O' Notations, Types of Data Structures, Linear Arrays, Arrays as ADT, Representation of Linear Array, Traversing Linear Array, Searching in Linear Array, Representation of Polynomials using Arrays, Introduction to Stack, Stack as ADT, Array representation of Stacks, Introduction to Queue, Queue as ADT, Array Representation of Queue.

UNIT- II Linked List:

(06 Hours)

Introduction, Singly Linked List ,Traversing, Searching , Insertion and Deletion from a Singly Linked List, Doubly Linked List, Circular Linked List, Stack using Linked List, Linked Representation of Queue, Circular Queue, Application of Stacks and queues.

UNIT III Trees:

(06 Hours)

Introduction, Binary Trees, Binary Tree representation ,Recursive and Non recursive tree traversal algorithms, Threaded Binary Tree, Binary Search Tree, Huffman's Algorithm, AVL Trees, m-way Search Trees, general trees,B Trees, B+ Trees, Red Black Tree, Applications of Trees.

UNIT IV Graphs and Sorting techniques:

(06 Hours)

Introduction, sequential and Linked representation of graph, Dijkstra's Algorithm , ADT for Graph, Traversing a Graph, minimum spanning Trees.

Sorting: Introduction, Bubble sort, Insertion sort, Selection Sort, Merge Sort, shell Sort, Radix Sort, Quick Sort, Hashing, Heap sort. Complexity Analysis of Algorithms.

UNIT V Design and Analysis of Algorithms I :

(06 Hours)

Divide and Conquer The General Method, Greedy Method, Dynamic Programming, Basic Search and Traversal Techniques: Code Optimization, AND/OR Graphs.

UNIT VI Design and Analysis of Algorithms II :

(06 Hours)

Game Trees, Backtracking: The 8-Queens Problem, Graph Coloring, Knapsack Problem, Branch and Bound Method, Introduction to NP- Hard, NP- Complete Problems, Polynomial Complexity .

List of Practical Assignments:

1. Analyze the Complexity of given algorithms and build program for it using c++.
2. Build a program for creation of Stack and Queue using arrays and perform all the operations on it.
3. Construct Linked List, Doubly Linked List, and Circular Linked List and perform all the operations on it.

4. Write a program for application of Stack and Queues.
5. Write a program for Recursive and Non-Recursive traversal on trees.
6. Explain a Huffman's algorithm and build a program in C++ for it.
7. Represent a graph in memory and Implement Dijkstra's algorithm.
8. Write an algorithm for illustrating Bubble Sort, and Quick Sort (any other sorting method may be implemented).
9. Discuss about Threaded Binary Tree, design algorithm for its illustration.
10. Write a program to Implement Minimum Spanning Tree.

Internal Assignment:

Implement mini project with suitable data structures studied in syllabus.

Reference Books:

- 1) Ellis Horowitz, Sartaj Sahani, "Fundamentals of Computer Algorithms", Galgotia Publications.
- 2) GA V Pai, "Data Structures and Algorithms, Concepts, Techniques and Applications, The McGraw Hill Publications.
- 3) Data structures using C and C++ by Langsam, Augenstein, Tenenbaum, PHI publication.

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

03: DIGITAL TECHNIQUES AND LOGIC DESIGN

TEACHING SCHEME:

Theory: 03 Hours / Week

Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Unit Test Tests: 20 Marks

Oral + Term Work: 50Marks

CREDITS ALLOTTED:

04 Credits

Course Pre-requisites:

The Students should have

1. Knowledge of number system and codes
2. Basic Mathematics

Course Objectives:

1. To develop an ability to design system with combinational and sequential circuits elements
2. To introduce digital logic design software.

Course Outcomes:

1. Comprehend different number systems and Boolean algebraic principles.
2. Apply Boolean algebra to simplify and apply design logic.
3. Analyze a given digital system involving combinational circuit elements.
4. Design and Synthesize a system with sequential circuit elements.
5. Understand structure and characteristics of Memory.
6. Validate and implement the PLD based designs using both schematic capture and VHDL

UNIT - I Number Systems and codes:

(06 Hours)

Binary, Octal, Decimal and Hexadecimal number Systems and their conversion, Binary Addition and Subtraction.

Boolean algebra and logic gates:- NAND-NOR Realization. De Morgan's theorems. Theorems and Properties of Boolean Algebra, Standard SOP and POS form,

	Reduction of Boolean functions using Algebraic method, Karnaugh maps. Quine McCluskey Method.	
UNIT - II	Combinational logic design:	(06 Hours)
	Introduction, Half and Full Adder, Half and Full Subtractor, Four Bit Binary Adder and Subtractor, BCD Adder, code conversion, Multiplexers and Demultiplexer(IC 74153 & 74154), Decoders (IC 74138), Parity generator and checker.	
UNIT - III	Sequential Logic Design:	(06 Hours)
	Flip Flops: SR, D, JK, JK Master Slave and T Flip Flop, Truth Tables and Excitation Tables, Flip-flop conversion. Sequential circuit analysis, construction of state diagrams. Counters: Design of Asynchronous and Synchronous Counters, Modulo Counters, UP- DOWN counter. Shift Registers: SISO, SIPO, PIPO, PISO, Bidirectional Shift Register, Universal Shift Register.	
UNIT - IV	Memory :	(06 Hours)
	Random Access Memory, TTL RAM Cell, Parameters, Read/Write Cycles, ROM Types, EPROM Structure and Programming, MOS Static RAM Cell, Dynamic Cell, Refreshing, Memory Cycles.	
UNIT - V	Algorithmic State Machines:	(06 Hours)
	ASM state blocks, ASM Charts, Notations, ASM modeling styles, Design of Simple Controller, Multiplexed Controller Method, RTL Notations and Implementation.	
UNIT - VI	PLD and PLA, Introduction to CPLD and FPGA Computer Aided Design of digital systems:-	(06 Hours)
	Functional Simulation, Timing Simulation, Logic synthesis and optimization, Introduction to VHDL, Introduction to HDL, Framework of VHDL program VHDL-Library, Entity, Architecture, Modeling Styles, Data Objects & Data Types, and Attributes.	

Term Work: The sample practical assignments are given below. This can be used as a guideline and course coordinator can recommend the list of practical assignments.

1. To Describe and illustrate Boolean Functions Using Logic Gates
2. To describe and investigate Half adder, Full Adder, Half Subtractor and Full Subtractor Using Gates And IC's.
3. Illustrate and Investigate Bit Digital Comparator And ALU Verification
4. To describe and devise Up-Down Counter Using JK Flip-Flop.
5. To design and construct Modulo N Counter Using 7490 & 74190 (N>10).
6. To Examine and formulate how to realize Boolean Expression Using Multiplexer.

7. To describe Shift Registers: Shift Left, Shift Right, Parallel Loading And Pulse train Generator.
8. To Discuss on FPGA Devices.
9. To discuss about Typical RAM IC.
10. To Build Combinational Logic Using PLA

Text Books:

- 1)R. P. Jain, “Modern Digital Electronics”, Tata McGraw Hill
- 2) Malvino- Brown, “Digital Computer Electronics” Tata McGraw Hill.
- 3) Douglas L. Perry, “VHDL Programming by Example”, Tata McGraw Hill

Reference Books:

- 1) Donald p Leach, Albert Paul Malvino,“Digital principles and Applications”,Tata McGraw Hill.
- 2) Yarbrough John M. , “Digital Logic Applications and Design “, engage Learning
- 3) M. Morris Mano, “Digital Logic and computer Design”, PHI.

Syllabus for Unit Test:

- | | |
|--------------|---------------------------------|
| Unit Test -1 | UNIT – I, UNIT – II, UNIT - III |
| Unit Test -2 | UNIT – IV, UNIT – V, UNIT - VI |

04: DISCRETE MATHEMATICS AND GRAPH THEORY

TEACHING SCHEME:

Theory: 03 Hours / Week

Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Unit Test Tests: 20 Marks

Assignment :10 Marks

Attendance: 10 Marks

Oral: 50 Marks

Total : 150 Marks

CREDITS ALLOTTED:

Theory:03 Credits

TW/Oral:01 Credit

Course Pre-requisites:

1. Knowledge of basic mathematics.

Course Objectives:

1. To create ability among the students to understand the difference between continuous mathematics and discrete mathematics.
2. To develop the skills to mathematically analyze the characteristics of various discrete structures
3. To develop the skills among the students to apply the discrete mathematical concepts in computer engineering applications

Course Outcomes:

1. Apply knowledge of mathematical and logical notation to define and formally reason about mathematical concepts.
2. Interpret and apply the operations and terminologies associated with relations and functions.
3. Gain knowledge of discrete mathematics techniques for constructing mathematical proofs.
4. Demonstrate and implement the basic concepts in graph theory.
5. Understand various concepts of algebraic systems.
6. Develop fundamental understanding of Elementary Combinatory.

UNIT - I Mathematical Logic: (06 Hours)

Propositional logic; negation ,disjunction and conjunction; implication and equivalence; truth tables; predicates; quantifiers; natural deduction; rules of Inference; methods of proofs; resolution principle; Set theory; Paradoxes in set theory; inductive definition of sets and proof by induction

UNIT - II Relations: (06 Hours)

Properties of Binary Relations, equivalence, transitive closure, compatibility and partial ordering relations, Hasse diagram ,Lattices, Lattice and its Properties, Recurrence Relation: Calculating Coefficient of generating function, solving recurrence relation by substitution. Characteristics roots solution of In homogeneous Recurrence Relation.

UNIT - III Functions: (06 Hours)

Introduction, types of functions and characteristics of functions ,mappings; composition of functions; inverse functions; special functions; hashing functions, recursive function ,recursion in programming languages.

UNIT - IV Graph Theory: (06 Hours)

Representation of Graph, DFS, BFS, Spanning Trees, and planar Graphs. Graph Theory and Applications, Basic Concepts Isomorphism and Sub graphs, Multi graphs and Euler circuits, Hamiltonian graphs, Chromatic Numbers

UNIT - V Algebraic structures: (06 Hours)

Definition and elementary properties of groups, semi groups, monoids, rings, fields, Homomorphism of Groups and Semigroups, Group Codes,Error recovery in group code,vector spaces

UNIT - VI Elementary Combinatorics: (06 Hours)

Basis of counting, Combinations & Permutations, with repetitions, Constrained repetitions, Probability Binomial Coefficients, Binomial Multinomial theorems, the principles of Inclusion –Exclusion. Pigeon hole principles and its application.

Term Work:

The sample practical assignments are given below. This can be used as a guideline and course coordinator can recommend the list of practical assignments.

1. To describe various operations on Set and illustrate the same using C program.
2. Formulate the approach for generating a Power Set of a given set and apply it using C language.
3. List various properties of Relation and construct a program to evaluate it.

4. To formulate a program to find the Transitive Closure of a given relation using C.
5. To Build a program in C for Depth First Search And Breadth First Search on a graph.
6. To state various operations on a Graph and illustrate it using C language.
7. To Justify whether an entered Graph is a Simple or Multiple devising c program.
8. To Produce a Minimal Spanning Tree from given graph Using C programming language.
9. To Examine whether the graph contains Hamiltonian path or Eulerian path using C code.
10. To Build a program to find the various cycles present in the graph.

Assignment:

1. The Term Work prescribed in the syllabus is continuous assessment by the concerned subject faculty.
2. In case of assignments for internal 10 Marks students will be assigned two assignments containing based on problems of different types or any programming assignment and guided for the solution of the problem.
3. The assignments are to be submitted as a hard copy

Text books

- 1) "Discrete Mathematical Structures" : Tremblay and Manohar, Tata McGraw Hill
- 2) "Discrete Mathematics" : 1st edition by Maggard, Thomso
- 3) C.L.Liu, Elements of Discrete Mathematics, 2nd Edition , McGraw Hill Pub
- 4) V. K. Balakrishn, Graph Theory, TMH (Recommended for Graph)

Syllabus for Unit Test:

- | | |
|--------------|---------------------------------|
| Unit Test -1 | UNIT – I, UNIT – II, UNIT - III |
| Unit Test -2 | UNIT – IV, UNIT – V, UNIT - VI |

05: ENGINEERING ECONOMICS AND MANAGEMENT

TEACHING SCHEME:

Theory: 03 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Unit Test: 20 Marks

Attendance:10 Marks

Assignments: 10Marks

Total Marks: 100 Marks

CREDITS ALLOTTED:

03 Credits

Course Pre-requisites:

Students should have

1. Basic knowledge about communication skills.
2. General awareness of economics and financial terms.

Course Objectives:

1. To impart knowledge, with respect to concepts, principles of Economics, which govern the functioning of a firm/organization
2. To explain the students about concept of production, cost, national income, an aggregate supply and aggregate demand consumption.
3. To help the students to understand the fundamental concepts and principles of management, functions of management, various organizational structures and basic knowledge of marketing.

Course Outcomes:

1. Understand the fundamentals of economics and theory of demand and supply.
2. Describe concept of production and cost.
3. Explain the fundamentals of national income and Aggregate supply and aggregate demand consumption.
4. Comprehend the concepts of money and banking.
5. Brief the basic concepts of management and its functions.

6. Describe marketing, production and financial management concepts.

UNIT - I Introduction to Economics

(06 Hours)

Definition of economics, Concept of money, value, goods, wealth, Concept of Engineering economics, Difference between Microeconomics & Macroeconomics, Nature of Economic problem, Relation between Science, Engineering, Technology and Economics. Firm-Meaning, objectives, Theories of firm- concept of profit maximization, Theory of Demand & Supply: determinants, law of demand, law of supply, equilibrium between demand & supply Elasticity: elasticity of demand, price elasticity, income elasticity, cross elasticity, concept of Capital.

UNIT - II Theory of production

(06 Hours)

Theory of production: production function, factors of production (meaning & characteristics of Land, Labour, capital & entrepreneur), Law of variable proportions & law of returns to scale. Cost: short run & long run cost, fixed cost, variable cost, total cost, average cost, marginal cost, opportunity cost, Laws of costs. Break even analysis: introduction, numerical, Return on investment. Inventory Control, Quality related concepts.

UNIT - III Markets

(06 Hours)

Markets: introduction, types of markets & their characteristics (Perfect Competition, Monopoly, Monopolistic Completion, Oligopoly). National Income: meaning, stock and flow concept, NI at current price, NI at constant price, GNP, GDP, NNP,NDP, Personal income, disposal income. Aggregate supply and aggregate demand consumption, Investment and saving functions.

UNIT - IV Money

(06 Hours)

Concept of money and its functions, types. Meaning, objectives and tools of Monetary policy and fiscal policy. Banking: types, functions, Central Bank- RBI; its functions, concepts; CRR, bank rate, repo rate, reverse repo rate, SLR. Functions of central and commercial banks. Inflation, Deflation, Stagflation, Direct and Indirect taxes. . Monetary and cycles, new economic policy, Liberalisation, Globalisation, privatisation, market friendly state, fiscal policy of the government, Meaning and phases of business.

UNIT - V Management and its functions**(06 Hours)**

Introduction to Management, Nature, scope. Management & administration, skill, types and roles of managers. Management Principles: Scientific principles, Administrative principles, Maslow's Hierarchy of needs theory. Functions of Management: Planning, Organizing, Staffing, Directing, Controlling. Organizational Structures: principles of organization, types-formal and informal, line, line & staff, matrix, hybrid, span of control, departmentalization. Decision making- steps in decision making.

UNIT - VI Marketing and Finance Management**(06 Hours)**

Team Management, Leadership –Trait theory and charismatic leadership, Qualities of a good leader, Leadership Styles. Introduction to Marketing management: Marketing Mix, concepts of marketing, demand forecasting and methods, market segmentation. Introduction to Financial management, Financial Statements, Profit and Loss Statement (Income Statement), Balance Sheet. Financial Analysis- Profit Analysis. Introduction to Production Management; definitions, objectives, functions, plant layout-types & factors affecting it, plant location- factors affecting it. Introduction to Human Resource Management; definition, objectives of manpower planning, process, sources of recruitment, process of selection. Corporate Social Responsibility and its importance. Business Ethics.

Assignments:

Quiz/ Test / Mini Project / Case Study / Presentations based on syllabus.

Reference Books:

- 1) R.Paneerselvam, Engineering Economics, PHI publication
- 2) O.P.Khanna, Industrial engineering and management
- 3) Robbins S.P. and Decenzo, Fundamentals of Management
- 4) Tripathy and Reddy, Principles of Management
- 5) N Gregory Mankiw, Economics: Principles of Economics, Cengage Learning
- 6) L.M.Prasad, Principles and Practices of Management
- 7) Dr. K. K. Dewett & M. H. Navalur, Modern Economic Theory, S. Chand Publications
- 8) P.N. Chopra, Principles of Economics, Kalyani Publishers

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

07: PROGRAMMING LABORATORY I

TEACHING SCHEME:

Practical: 04 Hours / Week

EXAMINATION SCHEME:

Term Work (Practical): 50 Marks

CREDITS ALLOTTED:

02 Credits

Course Pre-requisites:

The Students should have

1. Basics concepts of Object Oriented Programming
2. Basic mathematical ability

Course Objectives:

1. At the completion of this course, student is able to read, write, and debug java programs using good programming style.

Course Outcomes:

1. Write java programs using JDK & Solve arithmetic expressions using java program.
2. Gain knowledge & apply concepts of class fundamentals in various programming assignments.
3. Differentiate between String & String Buffer Class. And use different functions of these classes in various programming assignments.
4. Understand and implement the concept of interfaces and packages.
5. Learn the concept of Exception handling and Apply it.
6. Apply the functions of AWT classes in various programming assignments.

UNIT - I Java Evolution: Difference between Java , C, C++, Features of java, The java runtime environment (JDK, JVM, Command Line Arguments), Sample java program, Java statements and program structure, Fundamental programming constructs in java: (Constants, Variables, keywords, Data Types, Operators, Expressions and control structures) **(06 Hours)**

- UNIT - II** **Classes and methods:** Specification of a class, Introduction to Methods, Access specifiers, Constructors, Method overloading, this keyword, finalizer method, recursion, Introducing Final keyword , Concept of array, Introducing Nested and Inner Classes, Inheritance , Using Super, Method overriding, Dynamic method Dispatch, Abstract class concept. **(06 Hours)**
- UNIT - III** **String Handling:** **(06 Hours)**
The String Constructors, String Operations, CharacterExtraction, StringComparison, Modifying a String, String Buffer.
The Collections Framework:
More Utility Classes, Networking, the Applet Class, Event Handling, Collection Interface, List Interface, Set interface, Map Interface , Enumeration Introduction to Swing.
- UNIT - IV** **Package and Interfaces:** **(06 Hours)**
Introduction to package: Types of packages, User define packages, Use of package keyword, Importing packages.
Interfaces: Define and implement interface, use of interfaces to support multiple inheritance, variables in interfaces, interfaces can be extended.
- UNIT - V** **Exception Handling and Multithreaded programming:** **(06 Hours)**
Exception handling: Introduction to exception handling, predefined and user defined exceptions.
Use of try, catch, throw, throws and finally keywords.
Introduction to threads, life cycle of a thread, thread states, thread properties, methods in Threads and Runnable, setting priority of threads, synchronization and inter thread communication
- UNIT - VI** **Introducing the AWT, Using AWT controls, Images:** **(06 Hours)**
Introduction to AWT, events, listeners, event handling methods, a small application to demonstrate use of controls – label, button, check box, text, radio button, Dialog Box, scroll bar, choice controls ,List, Menu bars and Menus layout. Image Fundamentals image Observer, Double Buffering, and ImageProducer.
AWT classes, Frame windows, Creating a Frame Window in an Applet,

Working with graphics, Working with color, Setting the Paint Mode,
Working with Fonts, Control Fundamentals,

Term Work:

1. Introduction to Java.
2. Write a program to implement Class and Inheritance Concept.
3. Write a program to differentiate between method overloading and method overriding.
4. Write a program to understand the use of String class and string buffer class
5. Write a program to implement Applet.
6. Write a program to implement the concept of Package.
7. Write a program to implement concept of Exception Handling.
8. Write a program to implement the concept of Multithreaded Programming
9. Write a program to implement Frame and different graphics objects.
10. Write a program to use different controls of AWT classes.

Text Books:

1. E. Balagurusamy, Programming with Java, 3 e, McGraw-Hill Companies.
2. JAVA 7 Programming, Black Book ,Kogent Learning Solutions Inc.

Reference Books:

1. The complete reference Java 2 Third Edition, TMH publication by Patrick Naughton, Herbert Schildt.
2. Ken Arnold, James Gosling, David Holmes, “The Java Programming Language”, 3e, Sun Microsystems.

08: ENGINEERING MATHEMATICS – III

TEACHING SCHEME:

Theory: 03 Hours / Week

Tutorials: 1Hr/Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Unit Test : 20 Marks

Attendance: 10 Marks

Assignments: 10 Marks

CREDITS ALLOTTED:

04 Credits

Course Pre-requisites:

The Students should have knowledge of

1. Differential calculus
2. Integral calculus.
3. Complex numbers.

Course Objectives:

1. To develop ability to use the mathematical techniques, skills, and tools necessary for engineering practice.

Course Outcomes:

1. Develop mathematical modeling of systems using differential equations and solve linear differential equations with constant coefficient.
2. Evaluate complicated real integrals using basics of analytic functions and the basics in complex integration.
3. Solve problems on Fourier sine and cosine transform and solve difference equation by Z-transform.
4. Apply theorems to compute the Laplace transform, inverse Laplace transforms.
5. Solve system of linear equation and ordinary differential equation by numerical methods.
6. Apply basics of statistics and probability.

UNIT - I Differential Equations:

(08 Hours)

Solution Of Linear Differential Equation Of n^{th} Order With Constant Coefficients, Method Of Variation Of Parameters, Cauchy's and Legendre's Linear Equation, Simultaneous Linear Differential Equations, Total Differential Equations, Symmetrical Simultaneous Differential Equations. Applications to Electrical Circuits.

UNIT - II Complex Variables (08 Hours)

Functions of Complex Variables, Analytic Functions, C-R Equations, Conformal Mapping, Bilinear Transformation, Cauchy's Theorem, Cauchy's Integral Formula, Laurent's Series, Residue Theorem.

UNIT - III Transforms (08Hours)

Fourier transforms: Fourier Integral Theorem, Fourier Sine And Cosine Integrals. Fourier Transform, Fourier Sine And Cosine Transforms, Inverse Fourier Transforms, Discrete Fourier Transform and its Applications.
Z – Transform: Definition, Properties, Inverse Z- Transform. Applications to difference equation, Relationship between Z- Transform and Fourier Transform.

UNIT - IV Laplace Transform (08 Hours)

Definition, Properties and Theorems, Inverse Laplace Transform, Methods of Finding Inverse Laplace Transforms, Laplace Transform of Unit-step Function. Dirac-Delta Functions, Periodic Functions, Ramp Functions.

UNIT - V Numerical Methods (08 Hours)

LU decomposition for systems of linear equations; numerical solutions of non-linear algebraic equations by Secant, Bisection and Newton-Raphson Methods; Numerical integration by trapezoidal and Simpson's rules

UNIT - VI Statistics and Probability (08 Hours)

Measures of Central Tendency, Standard Deviation, Coefficient of Variation, Moments, Skewness and Kurtosis, Correlation and Regression, Reliability of Regression Estimates.

Theorems and Properties of Probability- Baye's Theorem, Probability Density Function, Discrete, Random and Continuous variables, Probability Distributions: Binomial, Poisson, Normal and Hypergeometric; Test of Hypothesis: Chi-Square test.

Stochastic Processes:

Markov Chains, stochastic Matrix.

Term Work:

- 1)Differential equations.
- 2) Complex variables.
- 3)Fourier transform and Z- transform.
- 4)Laplace transform.
- 5)Numerical methods.
- 6) Statistics and Probability.

Text Books:

1. Applied Mathematics (Volumes I and II,III) by P. N. Wartikar & J. N. Wartikar,Pune Vidyarthi Griha Prakashan, Pune.
2. Higher Engineering Mathematics by B. S. Grewal, Khanna Publication, Delhi, 42th edition (2012).

Reference Books:

1. Higher Engineering Mathematics by B.V. Ramana, Tata McGraw-Hill (2008).
2. Advanced Engineering Mathematics by Erwin Kreyszig, Wiley Eastern Ltd, 8th edition(1999).
3. Advanced Engineering Mathematics, 7e, by Peter V. O'Neil, Thomson Learning,6th edition (2007).
4. Advanced Engineering Mathematics, 2e, by M. D. Greenberg, Pearson Education, 2nd edition(2002).

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

09: COMPUTER GRAPHICS AND VISUALIZATION

TEACHING SCHEME:

Theory: 03 Hours / Week
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Unit Test: 20 Marks
Attendance:10 Marks
Assignments:10 Marks
Term Work (Practical): 50 Marks
Total : 150 Marks

CREDITS ALLOTTED:

Theory :03 Credits
TW :01 Credit

Course Pre-requisites:

The Students should have knowledge of

1. Basics of “C” programming language
2. Basic mathematical ability
3. Basics of GLUT

Course Objectives:

1. To familiarize with the universal concepts of computer Graphics Programming.
2. To provide a comprehensive introduction to computer graphics leading to the ability to understand contemporary terminology, progress, issues, and trends.
3. To introduce computer graphics techniques, focusing on 2D and 3D modeling, image synthesis, and rendering.
4. To provide knowledge of how interdisciplinary nature of computer graphics is emphasized in the wide variety of examples and applications.

Course Outcomes:

1. Apply fundamental concepts and practical skills in computer graphics.
2. Implement and use classic and modern algorithms and data structures in computer graphic to 3-D geometry, 3D modeling and 3D object Representation.
3. Acquire practical skills on additional advanced concepts, e.g. hidden surfaces & lines, curves & fractals.
4. Demonstrate graphics programming skills for different animation techniques & virtual reality.
5. Improve different solid modeling skills.
6. Apply basics of rendering & physical based modeling to image.

UNIT - I Basics of Computer Graphics:

(06 Hours)

Introduction to computer graphics, Graphics Primitives: Raster scan & random scan displays, display processor, display file structure, Display devices, Interactive devices, Data generating devices. line segments, vector generation, DDA and Bresenham’s line and circle drawing algorithms, thick lines, character generation methods.

UNIT - II Polygon:

(06 Hours)

Introduction, representation, entering Polygons, Polygon filling: Seed fill, Edge fill, scan conversion algorithm, filling with patterns. Windowing and Clipping Introduction, viewing transforms, 2D clipping, Cohen-Sutherland algorithm, Polygon Clipping, Sutherland-Hodgman algorithm, Generalized clipping

- UNIT - III 3-D Geometry: (06 Hours)**
 2-D Transformation: Basic Transformations, Homogenous coordinates, Rotation about an arbitrary point, coordinate transformation, Inverse transformation, Shear and Reflection transformation.
 3-D Transformations: Displays in three dimensions,, 3D transformations & matrix representation, Rotation about an arbitrary axis, Concept of parallel and perspective projections, Viewing parameters, 3D clipping, 3D viewing transformations. Case Study on 3D modeling and 3D object Representation
- UNIT - IV Hidden Surfaces and Lines: (06 Hours)**
 Back Face removal algorithm,Z-Buffer,Scan Line algorithm, Painter’s algorithm,Hdden line methods. Light, Colour and shading: Introduction, Diffused illumination, point source illumination, shading algorithm, reflections, shadows, ray tracing, Color models and tables, shading algorithm, transparency
- UNIT - V Segments and Animation: (06 Hours)**
 Introduction, The Segment Table, Segment creation, closing a segment, deleting a segment, renaming segment, saving and showing segments,
 Computer animation, Morphing, Methods of controlling animation, animation languages and tools. Virtual Reality,Rendering
- UNIT - VI Curves and Fractals: (06 Hours)**
 Curve generation, Interpolation,Interpolation alogorithm,B-splines,Curved surface patches,Bezier curve,fractals,factal line, surfaces,

Term Work:

1. State and discuss on basics of computer graphics.
2. Design and apply the Bresenham’s circle & line drawing algorithm using C language.
3. Design and build the DDA circle & line drawing algorithm using C language
4. Design and Illustrate 2D & 3D transformation.
- 5 Illustrate and construct 3D clipping algorithms.
6. Build shading algorithm using OpenGL.
7. Design and Construct interpolation algorithm using OpenGL.
8. State and discuss on real-time animation techniques.
9. Design a triangle in 3D format with solid model.(Using C with Open GLUT)
10. Illustrate to Render any 3D object using OpenGL.

Text Books:

2. Apurva A Desai,“Computer Graphics”,PHI Learning Pvt. Ltd.,2010
3. Donald Hearn & M. Pauline Baker, “Computer Graphics C version”, 2nd Ed, Pearson Education
3. David F. Rogers, “Procedural Elements for Computer Graphics”, 2nd Ed – Tata McGraw Hill Edition.
- 4 Tomas Moller and Eric Haines Real-Time Rendering A K Peters Ltd, 2nd edition, 2002
- 5 Alan H. Watt and Mark Watt, Advanced Animation and Rendering Techniques : Theory and Practice, Addison-Wesley, 1992
6. Matt Pharr and Greg Humphreys, Physically based rendering, Morgan Kaufmann,

7. James D. Foley, Andries van Dam, Steven K. Feiner and John F. Hughes, Computer Graphics : Principles & Practices, Addison Wesley, 2nd edition in C

Reference Books:

1. M.N. Sinha, A.D.Udai, "Computer Graphics", Tata McGraw Hill Edition.
2. Foley, Dam, Feiner, Hughes," Computer Graphics Principles & Practice", 2nd Ed, Pearson Education.
3. Hill, Kelly, "Computer Graphics using OpenGL", 3rd Ed, Eastern Economy Edition.

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

10: SYSTEM PROGRAMMING

TEACHING SCHEME:

Theory: 03 Hours / Week

Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Unit Test Tests: 20 Marks

Attendance: 10 Marks

Assignments: 10 Marks

Term Work +Oral: 50Marks

CREDITS ALLOTTED:

Theory: 03 Credits

TW : 01 Credit

Course Pre-requisites:

The Students should have knowledge of

1. Knowledge of Microprocessor concepts and Assembly language

Course Objectives:

1. To help the students understand functioning of various system programs
2. To initiate an understanding of design of language translators and brief about phases of compilers and other
3. To provide a theoretical framework for optimizing the code.
4. To brief the students about operating system concepts

Course Outcomes:

1. Understand theoretical and practical aspects of language translation.
2. Understand and show working and design of assemblers and microprocessors
3. Understand the concept of memory allocation, relocation along with the functions of loaders linkers and use various types of loaders.
4. Gain knowledge about phases of compiler and show it's working.
5. Gain knowledge of various operating system concepts and shell scripting.
6. Understand the concept and use of various device drivers

UNIT - I System Software and Assemblers:

(06 Hours)

	System software concepts, assembler basics, system software Components, Language translators, Language translation fundamentals Machine structure, Elements of Assembly language programming., Structure of an assembler, Design of single and two pass assembler	
UNIT II	- Macro processor	(06 Hours)
	Macro language and macro processor, macro instructions, features of macro facility, macro instruction arguments, conditional macro expansion, macro call within macros, macros instructions defining macros, Macroprocessor design	
UNIT III	- Linkers and Loaders:	(06 Hours)
	Loader scheme, absolute loaders, subroutine linkages, relocating loaders, direct linking loaders, other loader schemes Binders, linking loaders, Overlays, Dynamic Binders, Design of an absolute Loaders, Design of a Direct –Linking loaders. Dynamic Link Libraries.	
UNIT IV	- Compiler:	(06 Hours)
	Basic Compiler Function Compiler phases - Lexical Analysis: Role of a Lexical analyzer, input buffering, specification and recognition of tokens, Designing a lexical analyzer generator, Syntax Analysis: Role of Parser, Top-down parsing, Recursive descent and predictive parsers (LL), Bottom-Up parsing, Operator precedence parsing, LR, SLR and LALR parsers. Intermediate code generation three address code intermediate code forms,. Compiler generation tools –LEX and YACC. Interpreters. Case study: Java Compiler,JIT Compiler, Concurrent Compiler, embedded Compiler.	
UNIT V	- Operating system:-	(06 Hours)
	system concept, Operating system structure.O. S. Components, O.S. Services, System calls. Shell scripting Shell scripting (Bourne Shell (SH), Bourne-Again Shell (BASH), C-Shell (CSH), TCSH, Korn Shell (KSH))Shell commands (Basics, Pipelining, Background/Foreground, File Permissions, etc.) AWK Programing, Process control (ps,jobs, kill,bg,fg,fork,spawn,wait,pipe,socket)	
UNIT VI	- Unix Device Drivers:	(06 Hours)
	Definition, Anatomy and types, Device Programming, Installation and Incorporation of driver routines, Basic device driver operation, Implementation with Line printer, Comparative study between device drivers for Unix and Windows.	

Term Work:

The sample practical assignments are given below. This can be used as a guideline and course coordinator can recommend the list of practical assignments.

1. Design and Build a single pass assembler.
- 2.Design and Build a two pass assembler.

- 3.Design and Build a two pass Macro processor
- 4.Illustrate use of DLLs.
5. Design and apply lexical analyzer using Lex Compiler.
6. Devise some programs using Shell Programming.
7. Illustrate and discuss use of various device drivers.

Text Books:

1. System Programming by John J. Donovan, TATA McGRAW-HILL Edition.
- 2.System Programming by Leland Beck, Pearson Ed.
- 3.D. M. Dhamdere : “Systems programming and operating system”, Tata McGraw Hill
4. Unix device drives by George Pajani, Pearson Education.
5. Bash Pocket Reference (Pocket Reference (O'Reilly))

Reference Books:

Unix programming Environment- Keringham and Pike, Pearson Education

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

11: FUNDAMENTALS OF SOFTWARE ENGINEERING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks Unit Test Tests: 20 Marks Assignment :10 Marks Attendance: 10 Marks	04 Credits

Course Pre-requisites:

The Students should have

1. programming paradigms
2. Basic mathematical ability

Course Objectives:

1. To introduce software engineering and its grandness.
2. To understand the process of developing new technology and the role of experimentation.
3. To introduce ethical and professional issues and to explain why they are of concern to software engineers.
4. Analyze, classify the requirements and design the software.
5. Demonstrate expertise in problem solving in the design, development, validation, evolution and sustainment of (software) products.

Course Outcomes:

- I. Recognize Distinguish Software engineering process models and describe specifications of the software to be developed or modified.
- II. Analyze, classify the requirements and design the software.
- III. Design and develop software qualitatively.
- IV. Analyze, classify, select software development process to develop, and maintain software systems that behave reliably and efficiently.
- V. Demonstrate expertise in problem solving in the design, development, validation,

evolution and sustainment of (software) products.

VI. Apply the techniques, skills, and modern engineering tools as Rational rose and Star UML etc. necessary for designing and constructing software systems

UNIT - I Introduction to Software Engineering (06 Hours)

Defining Software, What & Why Software Engineering? Difference between software and hardware, software engineering – A layered approach, Software Application Domains, Software Myths.

Process Models – Software process Framework, Process activities, Defining Framework Activity? Identifying a Task Set, Process Patterns, Traditional software development process model approach - Linear Framework model, Iterative Framework Model, Parallel Framework model, and Component based Model, Object oriented software development approach.

UNIT - II Software Specification (06 Hours)

What is requirement engineering, Requirement Elicitation and Analysis Process, Elicitation Techniques, Requirement Specification, Functional requirements and Non-Functional Requirements, Drafting Software Requirement Specification?

Requirement Analysis - Domain Analysis, Object Oriented Analysis, Requirement Modelling, Data modelling, and Flow oriented modelling, Functional Modelling, Process specification, CASE tools.

UNIT - III Software Evolution (06 Hours)

System Engineering Hierarchy, Information Engineering, Product Engineering, Introduction to Business area analysis, CASE Tools in software design.

Software Design Process, Design model – Data Design model, Architecture Design model, Transform and Transaction Flow, Interface design Flow, Component Level and Deployment level design elements.

Design Concepts – Abstraction, Architecture, Patterns, Modularity, Functional Independence, Refinement, Refactoring, Object-

Oriented Design Concepts.

UNIT - IV Software Evaluation (06 Hours)

Introduction to Software testing, Bugs, Defects and Errors, Internal and External view of Software testing, Types of Testing – White Box – Basis path testing, Control Structure testing, Black Box, Grey Box testing, Verification and Validation Model, Unit Testing, Integration Testing, System Testing, Strategic issues, Testing Strategy for OOPS .

Debugging – Debugging process, Debugging Strategies, Correcting Errors

UNIT - V Software Quality Assurance (SQA) (06 Hours)

Software Quality and Metrics, Quality Standards, Reviews and Inspection, Software Measurement and metrics, Elements of SQA, SQA tasks, Goals and Metrics, Formal approaches to SQA, SQA Plan, and Software Reliability.

Software Configuration Management – Elements of SCM, Baselines, Software Configuration Items, SCM Features, the SCM process.

UNIT - VI Project Planning and Management (06 Hours)

The management Spectrum – People, Product, Process, Project. Project Planning process, Process Metrics, Software Scope and Feasibility study, Project Scheduling, Software Project Estimation, Effort estimation model, the make-buy Decision, Outsourcing,

Risk management – Software Risks, Risk identification, Risk projection, Risk Refinement, RMMM plan.

CLASS ASSIGNMENTS –Guidelines

1. The Class Assignments with respect to this subject might be conducted using these tools (either one tool or combination):-
 - a. Asking each student to give one presentation on one topic related to this syllabus.
 - b. Conducting six Multiple choice question online test on each unit each test of 10 marks and then average out

- c. Asking students to prepare a report based on their understanding by viewing the NPTEL videos of this subject.
- d. Asking the students to perform these Assignments:-
 - i. Suggest Which SDLC model will be used to develop ATM software. Justify?
 - ii. Develop Requirement Specification for ATM Software.
 - iii. Design the Class Diagram and Use case Diagram for ATM software.
 - iv. Discuss on Automated Software Testing. Create Test cases for Functionality of ATM software using a Test Tool (Test Link).
 - v. Discuss and Prepare IEEE Quality Document for ATM software.
 - vi. Prepare a Gantt chart using MS Project CASE Tool for a small Project.

Text Books:

ROGER PRESSMAN - A Practitioner's Approach", 4th Ed., Tata McGraw Hill Publication Company.

Software Engineering.", Sommerville, 9th Edition, Addison Wesley, 2010

Reference Books:

- 1.ROGER PRESSMAN - A Practitioner's Approach"
- 2.Martin Fowler
- 3.Grady Booch
- 4.Rambaugh
- 5.Pfleeger S. L., "Software Engineering".

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

12: MICROPROCESSOR AND MICROCONTROLLER

TEACHING SCHEME:

Theory: 03 Hours / Week
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Unit Test Tests: 20 Marks
Practical + Term Work: 50Marks marks

CREDITS ALLOTTED:

04 Credits

Course Pre-requisites:

The Students should have

1. Binary number system, Boolean algebra , Combinational and sequential circuits and memory.

Course Objectives:

1. To develop an understanding of the architecture and functions of microprocessors and microcontrollers.
2. To learn machine language programming & interfacing techniques.

Course Outcomes:

1. Describe microprocessor and micro controller architecture.
2. Understand programmer's model of 80386.
3. Understand concepts of segmentation and paging
- 4.. Comprehend hardware and software interaction and integration.
5. Design microcontroller based systems.
6. Write assembly language program using 32 bit registers.

UNIT - I Introduction to 8086

(06 Hours)

Concepts of architecture of 8086 microprocessor and segmentation, 80386 DX architecture, Registers, Salient features of 80386 DX, Signal definition, Addressing modes, Instruction format, Instruction pipelining in 80386.

UNIT - II Real and protected mode

(06 Hours)

	Real mode programming model, Memory addressing in real mode, Interrupt handling and exceptions, Switching between real and protected mode, protected mode register model, segment translation, segment descriptors, paging	
UNIT - III	I/O interface	(06 Hours)
	Programmable peripheral devices and interfacing, Interfacing with PPI 8255, PIC 8259, USART 8251, PIT 8254, DMAC 8237, Block diagram, operating modes and control word formats.	
	Case study- I/O hub.	
UNIT - IV	Multicore Architecture	(06 Hours)
	Intel 64 bit architecture, Pentium processor functional block diagram, memory management, Multicore Architecture, Bus Connections, core to duo and dual core processors, characteristics and design guidelines.	
	.Case study:- i5/i7	
UNIT - V	Introduction to 8051 microcontroller	(06 Hours)
	Comparison of microprocessor and micro controller, Features of 8051, pin definition, 8051 architecture, Register set, memory organization, Timers and counters, serial port, Interrupt structure. Addressing modes, instruction set	
UNIT - VI	Programming and interfacing of 8051	(06 Hours)
	Counter and timer programming, interrupt programming, serial communication programming, Interfacing keyboard and Display. External memory interface, stepper motor interface.	
	Contemporary processor and controller survey.	

Term Work:

List of assignments

- 1) Design and build an Assembly language program for multiplication of two 16 bit numbers using 8086 microprocessor.
- 2) Design and build an ALP to count no. of positive and negative numbers from the array
- 3) Design and build an 8086 ALP to check whether the string is palindrome or not
- 4) Design and build an program to arrange given set of numbers in Ascending/Descending order.
- 5) Design and build an Assembly language program to convert Input hexadecimal to BCD Number.
- 6) Design and build an ALP to program to use GDTR, LDTR and IDTR in Real Mode.
- 7) Design and build an program to switch between real mode and protected mode
- 8) Design and build an Assembly language program to display current time from system.
- 9) Design and build an Assembly language program to interface 8051 Microcontroller with Keyboard and display.

10) Design and build an Assembly language program to interface 8051 Microcontroller with stepper motor.

Text Books:

1. Muhammad Ali Mazidi and Janice Gillispie Mazidi, “ The 8051 Microcontroller and embedded systems”, 2009, Pearson education
2. Krishna Kant “Microprocessors And Microcontrollers Architecture, Programming And System Design 8085, 8086, 8051, 8096” PHI
3. 80386 Microprocessor Handbook, Chris H. Pappas, William H. Murray

Reference Books:

1. intel microprocessor and peripheral handbook(32 bit) 80386 DX
2. D.V.Hall, “Micro Processor and Interfacing “, Tata McGraw-Hill.
3. Microcomputer Systems: The 8086/8088 Family: Architecture, Programming and Design, 2nd ed., Liu & Gibson
4. Intel 64 and IA-32 bit architectures Software Developer’s Manual, Volume 3A, Intel, (Digital Content PDF: 253668.pdf)

Syllabus for Unit Test:

- | | |
|--------------|---------------------------------|
| Unit Test -1 | UNIT – I, UNIT – II, UNIT - III |
| Unit Test -2 | UNIT – IV, UNIT – V, UNIT - VI |

14: PROGRAMMING LABORATORY II

TEACHING SCHEME:

Practical: 04 Hours / Week

EXAMINATION SCHEME:

Term Work (Practical): 50 Marks

CREDITS ALLOTTED:

02 Credits

Course Pre-requisites:

The Students should have

1. Basics concepts of Object Oriented Programming
2. “Java” programming language (Core and Advanced Java)

Course Objectives:

1. To provide an insight of Internet programming and how to design and implement complete applications over the web.
2. To provide hands-on experience of the recent platform, technologies and design Methodologies used in developing web Applications.

Course Outcomes:

1. Develop WEB 2.0 Rich Internet Applications using the hierarchy of objects in HTML and XML.
2. Design dynamic and interactive web pages using HTML and Ajax performing client validation using Java Script.
3. Use ontology and inference engines in semantic web development.
4. Develop full-fledged Enterprise Applications
5. Implement enterprise beans and understand its benefits.
6. Develop Web services using SOAP .

UNIT - I Introduction to WEB 2.0 Rich Internet Applications:

(08 Hours)

Introduction: From Browsers to Rich Clients – browser drawbacks, A solution – rich clients, Rich clients today. HTML 5: Detecting HTML 5 features – Canvas, video, local storage, web workers, offline Applications , geo location, placeholders, input types, doc type, root, headers, articles, dates and times, navigation and footers. Introduction to PHP, Basic rules of PHP program, JSF, The WEB Model and XML,

	XPATH and XSLT .	
UNIT - II	AJAX-I:	(08 Hours)
	Java Script Fundamentals, Objects in Java Script, Dynamic HTML with Java Script, ASP, Basic communication techniques –AJAX with images, Dynamic script loading, AJAX libraries – JQuery, JSON, JSON versus XML, server-side JSON tools.	
UNIT - III	Semantic Web Technologies:	(08 Hours)
	Introduction to Semantic Web, Web 3.0 and Semantic Web; why Semantic Web; Impact of Semantic Web; Myths about Semantic Web; Ontologies: Introduction to Ontology; Types of Ontologies, Basic OWL; Class, Properties and Constraints; Ontology development methodology; Ontology tools- SPARQL, Search Engine Optimization(SEO).	
	Applications of Semantic Web: Software Agents; Semantic Search; Semantic Web Services; Semantics in Social Networking; SOA, ETL; Web crawling, Page Ranking Algorithm.	
UNIT - IV	Enterprise JAVA (J2EE):	(08 Hours)
	Defining the Enterprise, Introducing Enterprise Applications, Creating dynamic content with servlets, using Java server pages(JSP), NetBeans, interacting with relational databases using JDBC,MVC Architecture, JMS, Managing transactions with JTA/JTS, security aspects in system architecture, J2EE design patterns.	
UNIT - V	Enterprise Beans:	(08 Hours)
	Enterprise Bean, Benefits of Enterprise Beans ,When to Use Enterprise Beans, Types of Enterprise Beans - Session Bean, Message-Driven Bean , Contents of an Enterprise Bean ,Packaging Enterprise Beans in EJB JAR Modules ,Naming Conventions for Enterprise Beans ,The Lifecycles of Enterprise Beans - Stateful Session Bean , Stateless Session Bean, Creating the Enterprise Bean . Coding the Enterprise Bean Class.	
UNIT - VI	Web services:	(08 Hours)
	Introduction to Service Oriented Architecture, Combining protocols to build Web services – REST Services, REST – resources, representations, state, transfer – using HTTP methods. Web services using SOAP and WSDL.	

Term Work:

1. Design the static web pages required for a website using HTML 5.
2. Illustrate XML document processing in Java using XPath and XSLT.
3. Illustrate the use of Java Script in performing client side validation.
4. Describe and Build Dynamic web Pages using DHTML with Java Script.
5. Construct small applications using AJAX
6. Design and build small applications using JQuery, JSON and AJAX.
7. Outline and Discuss on Applications of Sematic Web Technologies.
8. Report how to use OWL to develop Ontologies.
9. Construct a Web Crawler
10. Outline and Discuss on implementation of Page Ranking Algorithm
11. Build and Illustrate an Enterprise Applications
12. Build and Apply Web Services using SOAP

FORMAL LANGUAGE AND AUTOMATA THEORY

TEACHING SCHEME:

Theory: 3 Hours / Week

Tutorial: 1 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Continuous Assessment: 40 Marks

CREDITS ALLOTTED:

Theory: 04 Credits

Course Pre-requisites:

1. Discrete Mathematics
2. Introductions to algorithms

Course Objectives:

1. Learn types of grammars.
2. Understand various Computing models like Finite State Machine, Pushdown Automata, and
3. Turing Machine.
4. To Learn various applications of Formal Language Processing

Course Outcomes: After completion of course, students will able to:

1. Illustrate the importance of Automata Theory in designing computer languages.
2. Transform informal problems into formal ones.
3. Infer Grammars, languages modeling and compilers basics.
4. Investigate and prove the equivalence of languages described by pushdown automata
5. Design Language Acceptability by Turing Machine
6. Outline the applicability of the formal language and automata theory concepts.

UNIT I **Finite State Machine (FSM):** Introduction, difference between natural and formal (06 Hours)

languages, Basic machine - design of basic machines. Transition diagram, Transition graph, Acceptance of String, Acceptance of Language, examples, Finite Automata (FA), Deterministic Finite Automaton (DFA) and Non-Deterministic Finite Automaton (NFA), Conversions of NFA with ϵ and without ϵ , Minimization of DFA, Equivalence of NFA and DFA, Limitations of FA.

UNIT II **Regular expressions (RE)** - Introduction, FA and RE, RE to FA, FA to RE, algebraic laws, (06 Hours) applications of REs, FA for regular grammar, Uses of Regular expression, Pumping Lemma.

Moore and Mealy Machines: Introduction, Difference between Moore & Mealy, models, inter conversions, Equivalence of Mealy machine and Moore machine, Uses of both the machines.

UNIT III **Grammar-** Introduction, representation of grammar, Chomsky hierarchy, Context Free (06 Hours)

Grammar- Derivation, sentential form, inference, derivation, parse tree, ambiguity in grammar and language- ambiguous Grammar, removing ambiguity from grammar, Normal Forms- Chomsky normal form, Greibach normal form, Closure properties of CFL, Decision property of CFL, Reduced form grammar removal of unit productions, epsilon production,

useless symbols. left linear and right linear grammars and inter conversions.

- UNIT Push Down Automata (PDA):** Introduction, Pushdown Automata (PDA), Transition Diagrams, Functions and Tables, Deterministic Push- down Automata (DPDA) - definition, Nondeterministic Pushdown Automata (NPDA), Equivalence of context free grammars and PDA, properties of context free languages. Introduction to Post Machines (PMs) **(06 Hours)**
- UNIT Turing Machine (TM):** Introduction, Transitions Diagrams, Functions and Tables, Design of TM as generator, decider and acceptor, comparison of Turing machine (TM) with FSM, PDM, and PM. combination TM, iterative TM, recursive TM, universal TM, Language Acceptability by TM, Recursive sets, partial recursive functions, recursively enumerable sets, Church's Turing hypothesis, multi stack Turing machine, TM limitations. **(06 Hours)**
- UNIT Applications** –Application of RE, FA, PDA, CFG, TM. Syntax analysis language definition. Primitive recursive functions – Recursive and recursively enumerable languages – Universal Turing machine. Lexical analyzer, Text editor, and searching using RE. Introduction to Natural Language Processing. **(06 Hours)**

Assignment:

Note:

For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy.

Text books

1. E.V. Krishnamurthy, “Theory of Computer Science”, EWP Publication
2. Vivek Kulkarni “Theory Computation” Oxford higher education.

Syllabus for Unit Test:

- | | |
|--------------|---------------------------------|
| Unit Test -1 | UNIT – I, UNIT – II, UNIT - III |
| Unit Test -2 | UNIT – IV, UNIT – V, UNIT - VI |

SOFTWARE TESTING

TEACHING SCHEME:

Theory: 03 Hours / Week
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Exam: 60 Marks
Continuous Assessment: 40 Marks
Term Work/Oral: 50 Marks

CREDITS ALLOTTED:

Theory: 03 Credits
TW/OR: 01 Credits

Course Pre-requisites:

The Students should have

1. Basic knowledge of Software Engineering.

Course Objectives:

1. Create awareness among the students about the basic fundamentals of Software Testing Process.
2. To make students aware of various techniques and tools used for testing different kinds of software.

Course Outcomes: After completion of course, students will able to:

1. Define Software Testing level, techniques, test deliverables/artifacts, V-Model.
2. Comprehend various Testing Levels and Techniques.
3. Compare different testing approaches for various kinds of applications.
4. Analyze business and software Risks involved in managing Software Testing Projects. .
5. Outline substantial knowledge of Agile Testing Process.
6. Recite Agile Testing Techniques and Tools.

UNIT I	Introduction:	(06 Hours)
I	Testing as an Engineering Activity – Basic Definitions – Bug, Defect, Verification validation, Debugging ,Software Testing Principles – The Tester’s Role in software Development Organization , Iterative development – Risk Driven and Client Driven, Test driven Development, Evolutionary and adaptive development , Evolutionary requirements analysis – Early “Top Ten” high-level requirements and skillful analysis, Testing Fundamentals- Quality Assurance, Quality Control, V-Model of software testing, Testing techniques and Levels of Testing, Static Vs Dynamic testing, Test deliverables.	
UNIT II	Testing Techniques and Test Case Fundamentals.	(06 Hours)
II	Testing Levels- Unit Testing, Integration Testing, Functional and System Testing, Types of Testing- Stress Testing, Performance Testing, Usability Testing, Non-Functional Testing, Acceptance Testing, Regression Testing, Beta Testing, Testing techniques- Black Box Vs. White Box Testing, Black Box Techniques, White Box Techniques, and Verification Techniques: Inspection, Walk-Through, Peer Reviews. Test Case Fundamentals- Definition, Test Case Template, Test Case Parameters, Kinds of Test cases, Characteristics of Good Test Case, Writing Functional and Boundary Test Cases, Manual Test Cases Vs Automated Test Scripts.	
UNIT III	Testing approaches for different Types of Applications	(06 Hours)
III	Testing COTS (Commercial-Off-the-shelf Software, Web-based applications/e-commerce applications, Object-Oriented Systems, Wireless applications, Testing for security, Website Testing, Foreign Language Testing. Test Automation Tools: Web browser Automation through Selenium, Test	

Management Tool-Test Director, Defect Tracking Tool – Bugzilla, GUI Testing Tool- WinRunner, and Configuration Management Tools.

UNIT Managing Software Testing Projects (06 Hours)

IV Test Planning- Test strategy, Creating a test Plan, Test Plan document, Test Pass/Fail criteria, Risk analysis, Test Scoping and Effort Estimation, Test Scheduling and budgeting. Introduction to Testing Maturity Model (TMM).
Test Metrics: Types, Identifying Test Metrics, Methods for gathering Test metrics, Analyzing and Applying Test Metrics, GQM Paradigm. Defect Management: Defect Tracking, Defect Reporting, Defect Metrics.

UNIT Agile Methodology (06 Hours)

V Introduction to Agile Model, Agile Vs Waterfall Method, Methodologies of Agile Testing - Scrum- Practices, Process flow of Scrum, eXtreme Programming- Phases, Crystal Methodologies, DSDM (Dynamic Software Development Method), Agile Testing Lifecycle. Test-Driven Development, Acceptance Test-Driven Development, and Behavior-Driven Development, Role of the Agile Tester, Assessing Quality Risks in Agile Projects, Techniques in Agile Projects- Acceptance Criteria, Adequate Coverage, Applying Acceptance Test-Driven Development, Exploratory Testing and Agile Testing, Tools in Agile Projects.

UNIT Agile Testing Techniques and Quality Tools: (06 Hours)

VI Agile testing – Nine principles and six concrete practices for testing on agile teams. Six Sigma - Kaoru Ishikawa's Basic Seven QC (Quality Control) Tools- Cause and Effect diagram, Check Sheet, Control charts, Histogram, Pareto chart, Scatter diagram, Flowchart, PDCA (Plan-Do-Check-Act) cycle, Software Testing- ISO Standards, IEEE Standards- IEEE 829, IEEE 1008, IEEE 1012 etc.

Term Work:

1. Introduction to Software Testing Lifecycle Model and the SPRAE Software Testing Framework.
2. Design functional and boundary test cases manually, execute tests, and evaluate test results.
3. Write manual test cases for a C program which demonstrates the working of the following
 - A. Constructs: I) do...while II) switch
 - B. A program written in C language for Matrix Multiplication fails." Introspect the causes for its failure and write down the possible reasons for its failure".
4. Write the test cases for any known application (e.g. Banking application)
5. Create a test plan document for any application (e.g. Library Management System)
6. Consider any system (e.g. ATM system) and study its system specifications and report the various bugs.
7. Running test scripts using automated testing tool (e.g. Win runner)
8. Testing of a web application using the web testing tool (e.g. Selenium)
9. Tracking and reporting bugs using bug tracking tool (e.g. Bugzilla, bugbit)
10. Create a database of manual and automated tests using any open source test management tool.
11. Implement software testing on an Agile Project.

Assignments:

1. The Term Work prescribed in the syllabus is continuous assessment by the concerned subject faculty.
2. In case of assignments for internal 10 marks students will be assigned two assignments containing

- problems of different types or any programming assignment and guided for the solutions of the problem.
3. The assignments are to be submitted as hard copy.

Text Books:

1. William.E. Perry, “Effective Methods for software Testing”, Wiley 3rd Edition.
2. Ron Patton, “Software Testing”, Techmedia.
3. Elfriede Dustin,” Effective Software Testing”, Addison-Wesley, 1st Edition, 2003.
4. Lisa Crispin, Janet Gregory,” Agile Testing”, Addison-Wesley, 11th Edition, 2015.

Reference Books:

1. Marnie Hutcheson,” Software Testing Fundamentals: Methods and Metrics”, Wiley.
2. Paul C. Jorgensen, “Software Testing: A Craftsman's Approach”, Auerbach Publications, 2008.
3. Craig Larman, “Agile and Iterative Development – A Manager’s Guide”, Pearson Education – 2004.

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT – III

Unit Test -2

UNIT – IV, UNIT – V, UNIT – VI

COMPUTER NETWORK

TEACHING SCHEME:

Theory: 3 Hours / Week

Practical: 2 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Continuous Assessment: 40 Marks

Term work/Practical: 50 Marks

CREDITS ALLOTTED:

Theory:03 Credits

TW/PR:01 Credit

Course Pre-requisites:

1. Students should have basic knowledge of Computers and Internet.
2. C/C++/Java programming, algorithms & probability.

Course Objectives:

1. Developing the students with the knowledge of advanced computer networking.
2. Developing students with practical knowledge of latest networking technologies.

Course Outcomes: After completion of course, students will able to:

1. Recite the basics of Computer network.
2. Relate detailed structure of data link layer with other layers.
3. Enumerate the concept of Medium Access Control layer.
4. Recite the details of Network layer.
5. Discuss the details of Transport layer.
6. Infer the functionality of Application layer.

UNIT INTRODUCTION:

(06 Hours)

- I** Internet working, Use of the computer network, Physical layer, Networking hardware devices, networking software, types of networks, OSI model working, TCP/IP reference model, Wireless networks, Buffering, Switching, packets, frames, introduction to latest internet technologies.

UNIT Data Link Layer:

(06 Hours)

- II** Data layer working, Framing, Error Control, Flow Control, error detection and correction, data link protocols, IEEE standards.

UNIT MEDIUM ACCESS CONTROL SUBLAYER:

(06 Hours)

- III** MAC layer working, Ethernet, Static & Dynamic Channel Allocation, multiple access protocols, wireless technologies, RFID.

UNIT NETWORK LAYER: (06 Hours)

- IV Network layer working, Network layer design issues, routing algorithms, congestion control algorithms, quality of service, IP Addresses, Subnets, Configuring network settings, Firewalls, IP V6, Mobile IP V6.

UNIT TRANSPORT LAYER: (06 Hours)

V Transport layer working, services of transport layer and elements of transport protocols, congestion control in transport layer, Transport protocols-TCP &UDP, Performance issues, Mobile TCP.

UNIT APPLICATION LAYER: (06 Hours)

VI Application layer working, DNS, Email, WWW, Audio & video streaming, Content delivery, Caching in Web Browser remote login, Wireless web, browsers, NFS, SNMP, Telnet, FTP, HTTP, WiMAX, WSN.

Term Work:

- Introduction and configuration of networking devices
Practical Study of PC, router, Switches, hubs, servers, repeaters, Wi-Fi modem and its configurations
- Introduction to “CISCO’s Packet tracer”.
Working and study of CISCO’s Packet tracer
- Implementation of Packet switching using “CISCO’s Packet tracer” software.
- Client-Server setup. Connection establishment between client and server. Study of FTP and HTTP through this setup. Study of packet delivery. Simulation of packet delivery.
- Implementation of static routing using “Packet tracer” software.
- Distance vector routing algorithm. Packet switching using static routing algorithm
- Implementation of dynamic routing using “Packet tracer” software.
- Dijkstra's shortest path algorithm. Packet switching using dynamic routing algorithm.
- WAP in C to implement routing algorithm using Bellman Fords distance vector algorithm.
- Study of network throughput and efficiency using “Wireshark software”

- Packet delivery from one system to other. Observe its throughput by using Wireshark software.
- Data encryption using “GnuPG” Software.
- Encryption of the data using GnuPG software. Encrypt data and deliver it to other system and
- Observing the change in file size using Wireshark
- Experiment related to NS2/NS3 tool.
- Case study of “Networking commands in Linux based operating system”

Assignment:

NOTE:

The Term Work prescribed in the syllabus is continuous assessment by the concerned subject faculty.

For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy.

Text Books /Reference books

2. Andrew s. Tanenbaum, David j. Wetherall. Computer networks. 5th ed.: Pearson.
3. Forouzan. Data comm.& netw. 5e. 5th ed.: McGraw-Hill.
4. William Stallings. Data and computer communications. 8th ed.: Pearson.

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

DATABASE MANAGEMENT SYSTEM

TEACHING SCHEME:

Theory: 03 Hours / Week
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Continuous Assessment: 40 Marks
TW/Practical: 50 Marks

CREDITS ALLOTTED:

Theory: 03 Credits
TW/PR: 01 Credit

Course Pre-requisites:

1. Discrete mathematics and Data structures.
2. Programming languages.

Course Objectives:

1. To provide a strong formal foundation in database concepts, technology and practice.
2. To design and develop a database schema.
3. To understand Structured query language (SQL), indexing and query processing.

Course Outcomes: After completion of course, students will able to:

1. Differentiate significance of Database Management System over the file processing system.
2. Illustrate the fundamentals of data models and to conceptualize and depict a database system using data models.
3. Analyze and practice Relational Data Model.
4. Apply SQL queries for database definition and database manipulation.
5. Illustrate transaction management concepts like serializability, concurrency control and recovery system.
6. Investigate the knowledge about emerging trends in the area of database for unstructured data and applications for it

UNIT **Overview of Database Management System**

I Overview of DBMS: Data and Information, Database, characteristics of databases, (06 Hours)

Data Governance and Importance of database, Database Management System (DBMS), structure of DBMS, Objectives of DBMS: Data Availability, Data Integrity, Data Security, and Data Independence. Three level DBMS architecture and Data Abstraction. Classification of DBMS, File based System; Drawbacks of File based System, Advantages of DBMS.

Database Architecture: Two Tier, Three Tier, Multi-Tier. The DBMS Life Cycle, Information Life Cycle, Roles in Database Environment, Database users and Administrator, Introduction to Data models, Need for abstraction, Situation where DBMS is not necessary, DBMS vendors and their products.

UNIT **Data modeling and Design**

II Data modeling: Benefits of Data Modeling, Types of Data Modeling, Phases of (06 Hours)

Data Modeling, Building Blocks of Entity Relationship(E-R) model, Mapping Constraints, Keys, Weak and strong Entity Sets, Extended-R features, Reduction to relational schemas, a case study on building an ER Model.

Database design: Objectives of Database design, Database Design Tool, Features of Design Tool, merits and De-merits of database design tool, Different anomalies in designing a Database, Functional Dependency, Inference Rules, Closure of set

Functional Dependency, Purpose of Normalization, Steps in Normalization: 1 Normal Form(NF), 2NF, 3 NF Boyce-Codd normal form, denormalization: Types of De-normalization, Table De-Normalization Algorithm.

- UNIT III Relational Model and Algebra (06 Hours)**
Relational Data Model: CODD's Rule, Structure Part, Integrity Part, Manipulative, Table & Relation. Concept of Key: Super Key, Candidate Key, Foreign Key. Relational Integrity: Entity Integrity, NULL Integrity, Domain Integrity constraint, Referential Integrity, Data structure, Mapping ER model to Relational model.
Relational Algebra: Unary and Binary Operations, Rename Operation, Union Operation, Intersection, Difference, Division, Cartesian Product, Join Operations. Advantage and Limitation of Relational Algebra.
- UNIT IV SQL and Introduction to PL/SQL (06 Hours)**
SQL: SQL fundamentals, Data Definition Language(DDL), Data Manipulation Language(DML) and Data Control Language(DCL), Basic structure of SQL queries, set operations, Aggregate Functions, Null Values, Domain Constraints, Referential Integrity Constraints, Sub queries, joins, Nested Sub queries, Complex queries, views: Creating, Dropping, Updation using Views.
PL/SQL: Introduction to PL/SQL block, Concept of Cursors, Stored Procedures, Triggers, Java Database Connectivity (JDBC), Open Database Connectivity (ODBC).
- UNIT V Transaction Processing and Query Optimization (06 Hours)**
Transaction processing: Concept of Transaction and its Management, concurrency Anomalies, Schedules, schedules and recoverability, Serializability, Hierarchy of serializable Schedules, Concurrency control and enforcing serializability, Deadlocks, Lock Granularity, Lock based Concurrency control, Multiple Granularity and Intension Locking, Time stamping Control, Optimistic Control, Evaluation of Concurrency Control Mechanism.
Query Processing and Optimization: Issues in Query Processing, Steps in Query Processing, Query decomposition, Query Optimization: Heuristic query optimization, Transformation rules, Heuristics optimization algorithm. Cost estimation in query optimization: Cost of components of query execution, cost for select and join operation, Query execution Plan.
- UNIT VI Data Warehousing and Data mining (06 Hours)**
Data Warehousing: Introduction, Evolution of Data Warehouse, Characteristics, and Benefits, Limitation of Data Warehousing, Main Components of Data Warehouse, Conceptual Models, Data Mart, and Online Analytical Processing (OLAP), Teradata Relational Database Management System(RDBMS), Teradata Technology.
Data Mining: Data Mining Concepts, Knowledge Discovery, Goals of Data Mining, Data Mining techniques, Machine learning using WEKA tool.
Emerging Database Technologies: Introduction to unstructured data, NOSQL, spatial and geographic databases, multimedia databases, Massive Datasets and Hadoop.

Term Work:

The sample practical assignments are given below. This can be used as a guideline and course coordinator can recommend the list of practical assignments.

1. Write a simple PL/SQL program to check whether the given number is palindrome or not and insert into a table reverse if the given number is palindrome?
2. To import various schemas into database system by running the scripts. Schemas are human resource, Order entry, Product Media, Queued shipping, Sales history.
3. To apply the select statements for the given queries.
 - a. Display employees those who make more than \$900 or if their names fall between QUENTIN and ZYRYAB alphabetically.
 - b. Display employees those who make more than \$900 and if their names fall between QUENTIN and ZYRYAB alphabetically.
 - c. Display the name and job title of all employees who do not have a manager.
 - d. Display the name, salary and commission for all employees who earn commissions. Sort data in descending order of salary and commissions.
4. To apply the single column functions:
 - a. WAQ that displays the employee's names with the first letter capitalized and all other letters lowercase and the length of the names, for all employees whose name starts with J, A, or M. Give each column an appropriate label. Sort the results by the employee's name.
 - b. For each employee, display the employee's name and calculate the number of months between today and the date employee was hired. Label the column months worked. Order your results by the number of months employed. Round the number of months up to the closest whole number.
 - c. WAQ that produces following for each employee.
 - i. <Employee name> earns <salary> monthly but wants < 3 times salary>. Label the column dream salaries
5. To discuss normalization and build normalized schema of Hospital Management system.
6. To demonstrate queries on Joins.
 - a. Display the employee name and employee number along with their manager's name and manager number.
 - b. To display all employees including king, who as no manager. Order the results by employee number.
 - c. Display employee name, department name and all the employee who work in the same department as a given employee.
 - d. Create a query to display the name and hire date of any employee hired after employees Davies.
7. To demonstrate queries on aggregate functions
 - a. Determine the number of managers without listing them.
 - b. Display the Manager number and the salary of the lowest paid employee for that manager.
 - c. Display each department name, location, number of employee and the average salary for all employee in that department.
 - d. Create a query that displays total number of employees and of that total, the number of employees hired in 1995, 1996, 1997 and 1998.

8. Use WEKA tool to derive analytical model for the given dataset.
9. Apply the association rules on the dataset and derive the inferences from the results given by WEKA tool.
10. Case study on NOSQL database: MongoDB.

Assignment:

NOTE:

The Term Work prescribed in the syllabus is continuous assessment by the concerned subject faculty. For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy.

Text books:

- 1) Silberschatz A., Korth H., Sudarshan S, "Database System Concepts", 6th Edition, McGraw Hill Publishers.
- 2) Ramakrishna R., Gehrke J., "Database Management Systems", 3rd Edition, McGraw- Hill.

Reference books:

- 1) Elmasri R., Navathe S., "Fundamentals of Database Systems", 5th Edition, Pearson Education.
- 2) Ryan K. Stephens, Ronald R. Plew, "SQL", 4th Edition, Pearson Education.

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

ELECTIVE – I: MULTIMEDIA AND MOBILE APPLICATIONS

TEACHING SCHEME:

Theory: 03 Hours / Week

EXAMINATION SCHEME:

End Semester Exam: 60 Marks
Continuous Assessment: 40 Marks

CREDITS ALLOTTED:

Theory: 03 Credits

The Students should have

1. Basic knowledge of JAVA Programming.
2. Basic knowledge of Data Communication.

Course Objectives:

1. Create awareness among the students about the basic fundamentals in the design and development of multimedia systems and applications.
2. To make students aware of various techniques used for the development of distributed applications for mobile devices as well as introduce them to the design principles for applications for small devices

Course Outcomes: After completion of course, students will able to:

1. Recite basic building blocks of Multimedia systems and applications.
2. Differentiate between various Compression and Decompression Techniques.
3. Comprehend various Multimedia I/O, Storage and Retrieval technologies.
4. Analyze various issues pertaining to Multimedia Application Design.
5. Report on Multimedia Networks.
6. Discuss on Mobile Application Development.

UNIT I Introduction to Multimedia: (06 Hours)

Multimedia- Building Blocks, Overview of Multimedia Applications, Multimedia Systems- Components, Characteristics, key issues and Challenges, Evolving Technologies for Multimedia Systems, Multimedia Streaming Protocols (MSP).
Multimedia Data: Text and static data, Graphics, Images, audio, video.
Multimedia Data Compression- Lossy and Lossless compression techniques.

UNIT II Compression and Decompression Techniques (06 Hours)

Types of Compression, Binary Image Compression Schemes, Color, grayscale, still-video image compression, Discrete Cosine Transform, Video image compression, MPEG Coding methodology, Audio Compression, Data and File format standards- PDF, RTF, TIFF, RIFF, MIDI, JPEG, AVI, JPEG, MPEG.

UNIT III Multimedia I/O, Audio and Video (06 Hours)

Key Technology Issues, Pen Input, Video and Image Display Systems, Print Output Technologies, Image Scanners, Digital Voice and Audio, Video Images and Animation, Full Motion Video, Magnetic Media Technology, WORM optical drives, Cloud-Based Multimedia Storage systems.
Multimedia Databases: Design and Architecture of a Multimedia Database, Organizing Multimedia Databases on The Principle of Uniformity, Media Abstractions, Query Languages for Retrieving Multimedia Data.

UNIT IV Multimedia Application Design (06 Hours)

Types of Multimedia systems - Virtual Reality Design - Components of Multimedia

system - Distributed Application Design Issues - Multimedia Authoring and User Interface - Hypermedia Messaging- Distributed Multimedia Systems, Multimedia Authoring Tools.

UNIT Multimedia Networks (06 Hours)

V Basics of Multimedia Networks, Multimedia Network Communications. Applications: Quality of Multimedia Data Transmission, Multimedia over IP, Multimedia over ATM Networks, Transport of MPEG-4, Media-on-Demand (MOD). Video Broadcasting Standards- HDTV, 4K TV and Ultra HD, Multimedia Content Management (MCM).

UNIT Introduction: Understanding Mobile Platforms, Android as Competition to itself, (06 Hours)

VI Building an App in Android, Debugging Android Apps. Building block of Mobile apps: App user Interface Designing, Layout, User Interface elements, Activity states and lifecycle, Mobile Databases such as SQLite and enterprise data access, Windows Mobile OS (Operating System).

Assignments:

NOTE:

The Term Work prescribed in the syllabus is continuous assessment by the concerned subject faculty.

In case of assignments for internal 10 marks students will be assigned two assignments containing problems of different types or any programming assignment and guided for the solutions of the problem.

The assignments are to be submitted as hard copy.

Text Books:

1. Ralph Steinmetz, Klara Nahrstedt –Multimedia computing, Communication & Application– Pearson Education, 6th Edition.
2. Ze-Nian Le, Mark.S. Drew, Jiang Chuan Liu, Fundamentals of Multimedia, Springer, 2nd edition.
3. JakobIversen, Michael Eierman, Learning Mobile App Development- A Hands-On Guide to Building Apps with iOS and Android, Addison-wesley, 1st edition, 2013.

Reference Books:

1. Tay Vaughan, “Multimedia making It work”, Tata Mc Graw Hill 5th Edition 2001.
2. Fred Halsall, “Multimedia Communications”, Addison Wesley, 1st Edition, 2000.
3. Andleigh P K and Thakrar K, “Multimedia Systems”, Addison Wesley , 1999.
4. Jeff Mc Wherter, Scott Gowell, “Professional Mobile Application Development”, Wiley Publications.

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT – III

Unit Test -2

UNIT – IV, UNIT – V, UNIT – VI

ELECTIVE – I: SCRIPTING LANGUAGES

TEACHING SCHEME:

Theory: 3 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Continuous Assessment: 40 Marks

CREDITS ALLOTTED:

Theory: 03 Credits

Course Pre-requisites:

1. The course prerequisites are some general familiarity with programming language constructs such as loops, functions, and conditionals. And revision of regular expressions.

Course Objectives:

1. The study of the principles of scripting languages
2. Understand the difference between client side and server side scripting.
3. Understand the basic techniques used to create scripts for automating system administration tasks.

Course Outcomes: After completion of course, students will able to:

1. To Exemplify the fundamentals of scripting languages.
2. To design and implement JavaScript programs using web browser.
3. To analyze the DOM model and JSON.
4. To implement JQuery.
5. To demonstrate basics of PHP and implement the program using web server.
6. To exhibit the fundamentals of python script and implement it using python interpreter.

- UNIT I Introduction to Scripting Languages:** Motivation for and applications of Scripting languages; Difference between Scripting languages and non-Scripting languages; Merits of scripting languages; Types of Scripting languages, Client Side Scripting, Scripting for content structuring, Form design, Client Side Validation, dynamic page generation, adding interactivity, Styles, using HTML, DHTML, XHTML, CSS, Java Script. Server Side Scripting, Types of servers - Configuring and Using Web servers, Important features and Examples of other Scripting Languages. **(06 Hours)**
- UNIT II Java Script fundamentals& Working with Java Scripts:** **(06 Hours)**
Introduction to Java Script, History, Variables, Data Conversions, Interaction with the User, Operators, Math and Date Objects, Flow control, String Objects, String Methods, Number Objects, Formatting Numbers, Common Array Methods, Associative Arrays. Implementing Functions: Declaration & Invocation, Passing Arguments, Returning Values, Anonymous Functions and Event Handling.
- UNIT - III JavaScript Objects and JSON:** **(06 Hours)**
Browser Object Model, Document Object Model (DOM), JSON, jQuery Selectors and Filters, DOM Manipulation, jQuery Events, jQuery Event Model, Common jQuery Events, Delegated and Direct Events. jQuery Plugins, Ajax Requests Using jQuery.
- UNIT - IV XML:** Creating Markup with XML, Document Type Definition, Schemas Document Object Model, Simple API for XML, Extensible Stylesheet languages, Formatting Objects, Xpath, XLink and Pointer, Introduction to SOAP, Case Studies, Custom markup languages. Parsers: DOM and SAX - Evolution of AJAX. **(06 Hours)**

UNIT Python Script: Introduction, Conditional Statements, Looping, Control Statements, (06 Hours)
- V String Manipulation, Lists, Tuple, Dictionaries, Functions, Modules, Input-Output, Exception Handling.

UNIT Python Script with OOP: OOPs concepts, Classes in Python, Principles of Object (06 Hours)
- VI Orientation, Instance Methods, File Organization, Special Methods, Class Variables, Inheritance, Polymorphism, Type Identification, Regular expressions, CGI, Database, Networking, Multithreading, GUI Programming.

Assignment:

Note:

The Term Work prescribed in the syllabus is continuous assessment by the concerned subject faculty.

For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy.

Text books:

- 1) Python: The Complete Reference by Martin C. Brown
- 2) JavaScript: The Complete Reference by Thomas Powell, Fritz Schneider.

Reference Books:

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

ELECTIVE – I: SOFTWARE PROJECT MANAGEMENT

TEACHING SCHEME:

Theory: 03 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Continuous Assessment: 40 Marks

CREDITS ALLOTTED:

Theory:03 Credits

Course Pre-requisites:

1. Understanding of Software Development Life cycle(SDLC)
2. Knowledge of management skills and strategies.

Course Objectives:

1. Articulate similarities and differences between IT projects and other types of projects
2. The ability to come up with a project schedule and assign resources
3. Identify project risks, monitor and track project deadlines.
4. The capability to work in a team environment and be aware of different modes of communications

Course Outcomes: After completion of course, students will able to:

1. Practice the process of project management and its application in delivering successful IT projects.
2. Distinguish between the different types of project and follow the stages needed to negotiate an appropriate scope.
3. Plan and Complete the tasks in time effectively and efficiently.
4. Evaluate a project to develop the scope of work, provide accurate cost estimates and to plan the various activities.
5. Identify the resources required for a project and to produce a work plan and resource schedule.
6. Implement the project plans through managing people communications

UNIT An overview of IT Project Management

(06 Hours)

I

Introduction, the state of IT project management, context of project management, need of project Management, project goals, project life cycle, information technology project methodology (ITPM), project feasibility, project selection and approval, project contracting, PMBOK.

UNIT Project Integration & scope Management

(06 Hours)

II

Project management process, project Integration management, the project charter, project Management planning framework, the contents of a project plan, the planning process, project scope definition, Management project scope verification, change control, Work Breakdown Structure (WBS), linear responsibility chart.

- UNIT Project Time Management: (06 Hours)**
III Developing the project schedule, Management Scheduling Charts, logic diagrams and network (AOA, AON), critical path, calendar scheduling and time based network, PDM network, PERT, CPM, Resource loading, resource leveling, allocating scarce resources to projects.
- UNIT Project Quality and Cost Management: (06 Hours)**
IV Quality tools and philosophies, Quality management system, IT Project quality plan. Cost estimating, Cost escalation, Management system development cycle, Cost estimating process, Elements of budgets and estimates, Project cost accounting and MIS, Budgeting using cost accounts, Cost schedules and forecasts.
- UNIT Project Human Resource Management: (06 Hours)**
V Organization and project planning, Resource project team, multidisciplinary teams, project Management environment, project leadership, ethics in projects, multicultural projects, Role of project manager, IT governance.
- UNIT Project Human Communication Management: (06 Hours)**
VI Monitoring and controlling the project, Communication project plan, Project metric, Project Management control, designing the control system, the plan-monitor control cycle, data collection and reporting, reporting performance and progress.

Assignment:

Note: For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy

Text books

Syllabus for Unit Test:

- | | |
|--------------|---------------------------------|
| Unit Test -1 | UNIT – I, UNIT – II, UNIT – III |
| Unit Test -2 | UNIT – IV, UNIT – V, UNIT – VI |

ELECTIVE – I: COMPUTATIONAL GENOMICS

TEACHING SCHEME:

Theory: 3 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Continuous Assessment: 40 Marks
Total: 100 Marks

CREDITS ALLOTTED:

Theory: 03 Credits

Course Pre-requisites:

In order to understand the content, gain knowledge and successfully complete this course, students should have a basic understanding of the computer algorithms, Programming skills and basic mathematics.

Course Objectives:

1. The purpose is to enable students to analyze and Interpret data generated by bioinformatics/genomics technology.
2. Enable student to use statistical concepts to design experiments and analyze high dimensional data.

Course Outcomes: After completion of course, students will able to:

1. Apply knowledge of data structures, algorithms and analysis of algorithms to problems in Computational Genomics
2. Recite and Express Knowledge needed to read and interpret cutting-edge results in computational genomics.
3. Express the strengths and limits of current genomics data analysis methods
4. Prepare to lead new research projects in computational genomics
5. Formulate and/or model a biological problem/system as a computer science problem
6. Investigate the applicability of algorithms & techniques in other domains such as text mining, speech recognition, pattern matching and string searching

UNIT Introduction to Genome Computational (06 Hours)

I Introduction to Challenges in Computational biology: gene finding, Sequence alignment, Database lookup, genome assembly, Regulatory Motif Discovery etc., Introduction to Probability: Probability Distribution, Multiple Random Variables, Random Variables assuming infinite values.
Introduction to Markov & Chebycheff inequalities, Hoeffding's inequality, Monte carlo simulation, Cramer's theorem.

UNIT Algorithms for computational genomics (06 Hours)

II Enumeration Approaches: Exhaustive search, Pruning, greedy algorithms, iterative refinement.
Content based indexing: hashing, database lookup, pre-processing.
Iterative Method: Combining sub problems, memorization, dynamic programming.
Statistical Method: Hypothesis testing, Maximum likelihood, Bayes Law, HMM's.
Machining learning technique: Supervised and unsupervised learning, classification.

UNIT Hidden Markov Processes (06 Hours)

III Markov Processes: Markov property and state transition matrix, estimating the

state transition matrix, stationary Markov chains: recurrent and transient states, hitting probabilities and mean hitting time, Basic properties: Three different looking models, equivalence between three models. The Viterbi algorithm, Baum-Welch Algorithm.

UNIT BLAST THEORY (06 Hours)

IV Anatomy, Problem formulation, Moment generating function, Finding local Matches, Application of main results, Proofs of main results.
BLAST & Database: W-mer Indexing data, Search algorithm, karlin-alschul statistics, Filtering, Two hit Blast, substitution matrices, pigeonhole principle.

UNIT Data Mining (06 Hours)

V Functional Genomics: Splicing & Alternative Splicing, Microarray based Functional genomics.
Data Transformation: data smoothing by discretization, Normalization and standardization, min-max normalization, z-score standardization, use decimal scaling.
Feature Selection: Filter Approaches, Wrapper Approaches.
Clustering Technique: Distance based clustering and measures, K-means Algorithm, k-modes algorithm, Genetic Distance measure, hierarchical clustering, Graph based clustering.

UNIT Classification in Genome and bioinformatics (06 Hours)

VI Bias variance tradeoff in supervised learning, Linear and Nonlinear classifiers, Model complexity and training data set size, support vector machines, Bayesian Approaches, Bayesian Network, Decision tree: tree pruning.
Applications: Sequence alignment using dynamic programming, Scoring matrices for protein sequences.

Assignments:

Note

For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy.

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT – III

Unit Test -2

UNIT – IV, UNIT – V, UNIT – VI

ENGINEERING MATHEMATICS-IV (OPTIONAL SUBJECT)

TEACHING SCHEME:

Theory: 04 Hours / Week

Practical: -- Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Continuous Assessment: 40 Marks

CREDITS ALLOTTED:

04 Credits

Course Pre-requisites:

The Students should have knowledge of

1. Determinants
2. Matrices
3. Differentiation
4. Integration of functions
5. Differential equation

Course Objectives:

The course aims at making the students familiar about the most basic numerical methods and concepts like error estimation helpful in various fields of engineering and can be used to simulate the results of various numerical methods.

Course Outcomes:

The student should be able to

1. Derive appropriate numerical methods to solve algebraic and transcendental equations
2. Evaluate the accuracy of common numerical methods.
3. Develop appropriate numerical methods to solve a difference equation.
4. Be familiar with numerical interpolation and approximation of functions, numerical integration and differentiation.
5. Be familiar with numerical solution of ordinary differential equations.
6. To compute Numerical Solution of Partial Differential Equations.

UNIT - I Numerical solutions of algebraic and transcendental equations: (08 Hours)

Bisection method, Regula-Falsi method, Newton-Raphson method, Direct iterative method.

UNIT - II Solution of system of linear algebraic equation (08 Hours)

Matrix inversion method, Gauss- elimination Method, Jordan's method, Crout's method. Gauss-Seidel and Gauss Jacobi's iterative method.

- UNIT - III** **Difference equation and Solution of difference equations** **(08 Hours)**
 Definition of difference equations, formation of difference equation. Solution of Homogeneous and non-homogeneous difference equation with constant and variable coefficients using Boole's operator method and generating functions. Simultaneous difference equation.
- UNIT - IV** **Interpolation and Numerical differentiation and integration** **(08 Hours)**
 Finite difference operator, Interpolation formula with equal and unequal intervals. Divided differences and central differences. Curve fitting : Method of least squares. Straight line, Second degree, parabola, Exponential curve.
 Differentiation using forward, backward and divided difference General quadrature formula, Trapezoidal rule, Simpson's 1/3rd rule, Simpson's 3/8th rule, Weddle's rule.
- UNIT - V** **Numerical solution of I order ordinary differential equation** **(08 Hours)**
 Solution by Euler's, method Euler' Modified method Taylor's series. Runga-kutta method. Milne's Predictors and Correctors method.
- UNIT - VI** **Numerical Solution of Partial Differential Equations** **(08 Hours)**
 Classification of second order partial differential equations, Solution of Laplace's, Poisson's, heat and wave equations by finite difference methods, Use of method of characteristics for solution of initial and boundary value problems.

Syllabus for Unit Test:

Unit Test -1	UNIT – I,II,III
Unit Test -2	UNIT – IV,V,VI

Programming Lab-III

TEACHING SCHEME:

Practical: 04 Hours / Week

EXAMINATION SCHEME:

Term Work/Practical: 50 Marks

**CREDITS
ALLOTTED:**

TW/PR: 02 Credits

Course Pre-requisites:

The Students should have

1. Basic knowledge of object oriented programming.

Course Objectives:

1. To develop ability to use the computational languages necessary for engineering practice.

Course Outcomes: After completion of course, students will able to:

1. Recite and Express fundamentals of Visual Basic .NET Programming.
2. Illustrate Object Oriented Programming in VB.NET.
3. Demonstrate Windows Forms Application.
4. Apply the concept of developing Console Application.
5. Illustrate Inheritance and Polymorphism.
6. Experiment the data access using ADO.net.

UNIT Getting Started with Visual Basic .NET: (06 Hours)

- I

Introduction to Visual Basic .NET, MS. Net Project, MSIL, JIT, .NET frame

work class library.

Module and Variable: Module and Namespace, Variables, array and structure.

Control flow and Error Handlings: Execution flow control. commands, functions & constants. Error Handling, Debugging .NET applications.

UNIT Object Oriented Programming using VB.NET: (06 Hours)

- II

Methods, properties, constructors, object lifetime, events, Inheritance, in VB.NET., Interfaces, Attributes.

Programming in .NET Framework: Array, Lists and collection file, directories and streams.

UNIT - III Windows Forms Application: **(06 Hours)**

Windows forms Applications, Controls, Data Access in visual basic .NET, ADO.NET, Database connectivity.

UNIT - IV C#.net Language Basics **(06 Hours)**

Datatypes, Common Type System, Reference Type and Value Type, Variables Declaration, Concept of Class and Object.

Implicit and Explicit Casting, casting between other datatypes, Boxing and Unboxing, Enum and Constant, Operators, Control Statements, working with Arrays, working with Methods - Pass by value, Pass by reference.

Developing Console Application

Introduction to Project and Solution in Studio, compiling a C# program, Compiling and Building Projects, Using Command Line Arguments, Importance of Exit code of an application.

UNIT - V Inheritance, Polymorphism and Interface in C#.NET **(06 Hours)**

Exception Handling

Exception, Rules for Handling Exception, Exception classes and its important properties, use of try and catch, throwing exceptions, Importance of finally block.

Introduction to Operator Overloading, DLL, DLL Vs Exe., Types of DLL, concept and use of Class Library, Namespace.

WinForms

Introduction to Windows Forms, Controls, Menus and Context Menus, MenuStrip, ToolStrip, Graphics and GDI, SDI and MDI Applications, Dialogbox (Modal and Modeless), Form Inheritance.

UNIT - VI Data Access using ADO.NET **(06 Hours)**

Introduction to SQL. Creating Database using VS.NET, Establishing Connection with Database. Executing simple Insert, Update and Delete Statements, Executing Select Statement and using SqlDataReader

Data Access using ADO.NET – Dataset, Advantages of Dataset, Concept of Data Adapter, Data Table, DataGridView, Data Row, Adding / Editing / Deleting rows in the Data Table, Working with Data View.

Multithreading: Creating and Managing Threads, Threads Priority, Thread States, Thread Synchronization & Inter-thread Communication., Using Monitor

Delegates & Events: Delegate Declaration, Sample Application.

Term Work:

Concern Staff should frame assignments on Each Unit.

Text Books:

Jesse Liberty Learning Visual Basic .NET, O'Reilly.

Andrew Troelsen Pro C# 2008 and the .NET 3.5 Platform, Apress

Reference Books:

Steven Holzner, VB.NET Programming Black Book, Dreamtec Publications.

Matt Telles, C#Programming Black Book, Dreamtec Publications.
Syllabus for Unit Test: NA

OPERATING SYSTEM

TEACHING SCHEME:

Theory: 3 Hours / Week
Practical: 2 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Continuous Assessment: 40 Marks
TW/Oral: 50 Marks

CREDITS ALLOTTED:

Theory: 03 Credits
TW/OR:01 Credit

Course Pre-requisites:

1. Concept of system software, application software, knowledge of input output devices and its usage

Course Objectives:

1. To enable the students to understand basic concepts of operating system.
2. To brief the students about various design aspects of operating system functionality
3. To give hands on exposure to Linux commands and system.

Course Outcomes: After completion of course, students will able to:

1. Recite and Express theoretical and practical aspects of operating system.
2. Infer the concept of process, thread and Inter process communication
3. Outline the concept of deadlocks, necessary conditions for deadlock and various techniques to handle deadlock
4. Analyze memory management policies.
5. Describe file system File and Input /output structure.
6. Infer LINUX and Android Operating system.

UNIT I	OPERATING SYSTEMS OVERVIEW Computer System Overview-Basic Elements, Instruction Execution, Interrupts, Multiprocessor and Multicore Organization. Operating system Overview-Kernel, Shell, objectives and functions, Evolution of Operating System- Computer System Organization- Operating System Structure and Operations- System Calls, OS Generation and System Boot., Virtual Machines.	(06 Hours)
UNIT II	PROCESS MANAGEMENT Processes-Process Concept, Process Scheduling, Operations on Processes, Inter-process Communication; Threads- Overview, Multicore Programming, Multithreading Models; Thread and SMP Management. Process Synchronization - Critical Section Problem, Mutex Locks, Semaphores, Monitors.	(6 Hours)
UNIT IV	MEMORY MANAGEMENT Main Memory-Contiguous Memory Allocation, Segmentation, Paging, 32 and 64-bit architecture Examples; Virtual Memory- Demand Paging, Page Replacement, Allocation, Thrashing; Allocating Kernel Memory, OS Examples.	(6 Hours)
UNIT V	INPUT/OUTPUT SYSTEMS Mass Storage Structure- Overview, Disk Scheduling and Management; File System Storage-File Concepts, Directory and Disk Structure, Sharing and Protection; File System Implementation- File System Structure, Directory Structure, Allocation Methods, Free Space Management, I/O Systems.	(6 Hours)

UNIT CASE STUDY**(6 Hours)**

VI Basic Concepts, of LINUX Multifunction Server, Virtualization- Xen, VMware with Linux Host, Android operating system –Features, characteristics, Basic building blocks, Architecture, System services.

Term Work:

The sample practical assignments are given below. This can be used as a guideline and course coordinator can recommend the list of practical assignments.

1. Demonstrate the process creation and various states of a process
2. Apply various scheduling algorithms on a process.
3. Apply Banker's algorithm
4. Predict whether a system is in a Safe or Unsafe state.
5. Demonstrate various contiguous memory allocation strategies
6. Demonstrate various page replacement strategies
7. Apply disk Scheduling algorithms

Assignments:**Note:**

The Term Work prescribed in the syllabus is continuous assessment by the concerned subject faculty.

For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy.

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT – VI

DESIGN AND ANALYSIS OF ALGORITHMS

TEACHING SCHEME:

Theory: 3 Hours / Week
Practical: 2 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Continuous Assessment: 40 Marks
TW/Oral: 50 Marks

CREDITS ALLOTTED:

Theory: 03 Credits
TW/OR: 01 Credit

Course Pre-requisites:

1. The students should possess the knowledge of Data Structures

Course Objectives:

1. To be able to understand the performance analysis of algorithms.
2. To analyze Dynamic Programming Algorithms.
3. Understand NP-Hard, NP- complete Problems.

Course Outcomes: After completion of course, students will able to:

1. Analyze time complexity
2. Analyze space complexity
3. Discuss Divide and Conquer Method
4. Design algorithms using greedy Methods
5. Infer Backtracking
6. Outline NP-Hard and NP-Complete Problems

UNIT I	Introduction: Algorithm Specification, Pseudocode Conventions, Recursive Algorithms, Performance Analysis: Space Complexity, Time Complexity, Asymptotic Notations, Performance Measurements.	(06 Hours)
UNIT II	Basic Algorithms: Basics of Probability Theory, Primality testing, Its Advantages and Disadvantages. Elementary Data Structures: Stack, Queues, Binary Trees, Binary Search trees, Heaps, Heap sort, Graphs, Basic Traversal and Search Techniques. Analysis for complexity of all algorithms.	(06 Hours)
UNIT III	Divide and Conquer: General Method, Binary Search, Finding the maximum and minimum, Merge sort, Quick sort, Performance Measurement, Worst case Analysis. Strassens's matrix multiplication.	(06 Hours)
UNIT IV	Greedy Method: The General Method, Knapsack problem, tree vertex splitting, Job sequencing. Minimum Cost Spanning Trees: Prim's Algorithm, Kruskal's Algorithm, Optimal Merge Patterns, Single-Source shortest path. Dynamic Programming: The General Method, Multistage Graph, All pair shortest path, Single Source shortest path, General Weights, Optimal Binary Search Trees, String Editing, 0/1 Knapsack, Traveling Salesman Problem.	(06 Hours)

UNIT V Backtracking: The General Method, The 8- Queens Problem, Sum of Subsets, Graph Coloring, and Hamiltonian Cycles. Branch and Bound: Least Cost (LC) Search, the 15-puzzle Control abstraction of LC Search, Bounding, FIFO Branch and Bound, LC Branch and Bound. **(06 Hours)**

UNIT VI Algorithm Complexities: Non deterministic Algorithms, The classes NP- Hard and NP- Complete, Cook's Theorem, NP-Hard Graph Problems, NP-Hard Scheduling Problems, NP-Hard Code Generation Problems. Approximation Problems. **(06 Hours)**

Term Work:

The sample practical assignments are given below. This can be used as a guideline and course coordinator can recommend the list of practical assignments.

1. Calculate the time complexity of various algorithms.
2. Calculate the space complexity of various algorithms.
3. Implement Knapsack Algorithm.
4. Implement Prim's Algorithm
5. Study and analysis of 8-Queens Problem.
7. Implement Optimal Binary Search Tree.
8. Analyze Quick Sort for Best Case, Worst Case.

Assignments:

Note

The Term Work prescribed in the syllabus is continuous assessment by the concerned subject faculty. For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy.

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

DIGITAL SIGNAL PROCESSING

TEACHING SCHEME:

Theory: 3 Hours / Week
Practical: 2 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Continuous Assessment: 40 Marks
TW/Oral: 50 Marks

CREDITS

ALLOTTED:
Theory: 03 Credits
TW/OR: 01 Credit

Course Pre-requisites:

Basic knowledge of Mathematics, Data communication and Microprocessor

Course Objectives:

1. To analyze discrete time signals and systems in time and frequency domain.
2. To represent structures for discrete time systems.
3. To design digital filters and implement using open source software
4. To understand DSP processors and DSP based applications in real world.

Course Outcomes: After completion of course, students will able to:

1. Classify discrete-time signals and discrete time systems.
2. Evaluate LTI system in frequency domain using Fourier Transform, DFT and FFT.
3. Analyze discrete time signals and LTI system using Z transform.
4. Design structures for discrete time systems
5. Design and implement FIR and IIR filters using different methods.
6. Exhibit enhanced architecture and features of DSP processor.
7. Illustrate applications of DSP in speech and Image Processing.

UNIT Signals and Systems:

I Basic elements of DSP system, Analog to Digital conversion process, Aliasing effect Standard signals, Discrete time systems, classification and properties of discrete time systems, Linear Shift Invariant (LSI) systems, Impulse response, Conditions for causality and stability for LTI systems, Linear convolution. **(06 Hours)**

UNIT Fourier Transform

II Fourier transform of standard signals, Discrete Fourier Transform (DFT), DFT of standard signals, properties of DFT, Circular convolution, correlation, Radix-2 FFT algorithms, Decimation in Time (DIT) and Decimation in Frequency (DIF), Inverse DFT and computation of IDFT, relation between ZT, FT and DFT. **(06 Hours)**

UNIT Z transform

III Region of Convergence (ROC) and its properties, Z transforms of standard signals, properties of Z transform, Inverse Z transform, System functions from Z transform and pole-zero plots, computation of poles and zeros. **(06 Hours)**

UNIT Structures for discrete time systems: Implementation of general difference

IV equation, Basic structures for FIR systems, Basic structures IIR systems, Representation of structures using signal flow graphs, Feedback in IIR systems, Linear phase FIR filters. **(06 Hours)**

UNIT Digital Filters

V Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) filters, IIR filter **(06 Hours)**

design using impulse invariance and bilinear transformation method, Butterworth approximation, FIR filter design using Windows, Gibb's phenomenon.

UNIT VI	DSP Processors Architecture and applications DSP processors fundamentals, Characteristics, Evolution of DSP processors, Comparison of DSP processor and microprocessor, conventional and Enhanced architecture of DSP Case study: - TMS 320C64X Applications of DSP in image processing, Feature extraction and pattern matching. Applications of DSP in speech processing, Speech recognition, speech synthesis, Echo cancellation. Case study: - Multi-rate signal processing.	(06 Hours)
----------------	--	-------------------

Term Work:

The sample practical assignments are given below. This can be used as a guideline and course coordinator can recommend the list of practical assignments.

1. WAP to generate samples of Sine, Cosine, Square and Random signal.
2. WAP to compute linear convolution
3. WAP to find N point DFT of a given sequence.
4. WAP to compute Circular convolution
5. WAP to implement Radix-2 DIT FFT Algorithm.
6. WAP to compute Z transform and draw pole zero plot
7. WAP to compute Z transform and draw pole zero plot
8. Find Fourier transform of various window functions
9. Assignment based on DSP applications in Image processing
10. Assignment based on DSP applications in speech processing

Assignment:

Note:

In case of assignments for internal 10 Marks students will be assigned two assignments based on different computer organization and architecture concepts and guided for the respective assignment.

The assignments are to be submitted as a hard copy

COMPUTER ORGANIZATION AND ARCHITECTURE

TEACHING SCHEME:

Theory: 3 Hours / Week

Tutorial: 1 Hour / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Continuous Assessment: 40 Marks

CREDITS ALLOTTED:

Theory: 04 Credits

Course Pre-requisites:

1. Concept of digital logic and microprocessors
2. Basic Understanding of Computer System

Course Objectives:

1. To understand the core concepts about the computer architecture and computer organization.
2. To understand the design of the various functional units of computer system.

Course Outcomes: After completion of course, students will able to:

1. Solve fixed point and floating point arithmetic problems using algorithms.
2. Infer the architecture and functions of Central Processing Unit.
3. Outline the design approaches and functional requirements for implementing control unit.
4. Describe the I/O organization and interconnections
5. Analyze the characteristics of memory system.
6. Infer multiprocessor configuration and modern computer organization.

UNIT I	CPU structure and function: Components and functions of computer system, CPU architecture, Processor organization, Register Organization, Instruction Cycle, instruction pipeline. RISC and CISC architecture, The Pentium Processor, Power PC., Superscalar processors.	(06 Hours)
UNIT II	Computer Arithmetic ALU, Fixed and Floating point numbers, Integer arithmetic, Booth's algorithm, Hardware implementation, Restoring and Non-Restoring Division algorithm, Floating point representation, IEEE standards.	(06 Hours)
UNIT III	Control Unit Organization Micro-operation and their Register Transfer Language (RTL) specification, Hardware control design methods and implementation, Micro program control, Micro instruction Sequencing, Micro instruction execution.	(06 Hours)
Unit IV	Input/output Organization Computer system, I/O modules, Programmed I/O, Interrupt driven I/O, Interrupt processing, I/O channels and Processor, DMA, Interface circuits, Bus interconnection, Bus arbitration, Standard buses, Standard interfaces, PCI, SCSI,	(06 Hours)

USB bus.

UNIT V Memory Organization (06 Hours)

Internal memory, Characteristics of memory systems, Memory hierarchy, Error correction, Cache memory organization, Mapping, Replacement algorithms, Pentium cache organization, DDR3 Memory Organization, NUMA and UMA caches.
Hard disk drives, RAID levels, Flash drives, USB stick.

UNIT VI Multiprocessor Configuration: (06 Hours)

Flynn's classification for multiprocessor system, closely coupled, loosely coupled and tightly coupled configurations. Problems of Bus contentions, Inter Processor communication.
Multi core systems, Virtual processors. Case study: - Processor architecture in latest Mobile /Laptop.

Assignment:

Note:

The Term Work prescribed in the syllabus is continuous assessment by the concerned subject faculty.

For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy.

Syllabus for Unit Test:

Unit Test -1 UNIT – I, UNIT – II, UNIT - III

Unit Test -2 UNIT – IV, UNIT – V, UNIT - VI

ELECTIVE –II: VLSI

TEACHING SCHEME:

Theory: 03 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Continuous Assessment: 40 Marks

**CREDITS
ALLOTTED:**

Theory:03 Credits

Course Pre-requisites:

1. Analog and Digital Electronics.
2. Semiconductor physics.

Course Objectives:

1. Introduce students to VLSI Design.
2. Introduce students to fabrication and testability techniques.
3. Introduce students to design Low-Power CMOS Logic Circuits.
4. Introduce students to design and simulate digital circuits using FPGA.

Course Outcomes: After completion of course, students will able to:

1. Express concept of Microelectronics and Introduction to MOS Technologies.
2. Outline Layout Design and Tools.
3. Infer Combinational Logical & Sequential Systems.
4. Identify and discuss key problems Dynamic Logic Circuits and its solutions.
5. Relate importance of Low-Power CMOS Logic Circuits.
6. Apply useful criteria for guiding design and evaluation of Chip Input and Output (I/O) Circuits.

UNIT I Review of Microelectronics and Introduction to MOS Technologies: MOS, CMOS, (06 Hours)

I

BiCMOS Technology. Basic Electrical Properties of MOS, CMOS & BiCMOS Circuits: $I_{ds} - V_{ds}$ relationships, Threshold Voltage V_T , G_m , G_{ds} and ω_0 , Pass Transistor, MOS, CMOS & Bi CMOS Inverters, Z_{pu}/Z_{pd} , MOS Transistor circuit model, Latch-up in CMOS circuits.

UNIT II Layout Design and Tools: (06 Hours)

II

Transistor structures, Wires and Vias, Scalable Design rules, Layout Design tools.

Logic Gates & Layouts:

Static Complementary Gates, Switch Logic, Alternative Gate circuits, Low power gates, Resistive and Inductive interconnect delays.

UNIT III Combinational Logic: (06 Hours)

Layouts, Simulation, Delay, Interconnect design, Power optimization, Switch logic and

III Gates.

Sequential Systems:

Memory cells and Arrays, Clocking disciplines, Design, Power optimization, Design validation and testing.

UNIT Dynamic Logic Circuits:

(06 Hours)

IV

Introduction, Basic Principles of Pass Transistor Circuits, Voltage Bootstrapping, Synchronous Dynamic, Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS Circuits, Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).

UNIT Low-Power CMOS Logic Circuits:

(06 Hours)

V

Introduction, Overview of Power Consumption, Low-Power Design Through Voltage Scaling, Estimation and Optimization of Switching Activity, Reduction of Switched Capacitance, Adiabatic Logic Circuits. BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation, Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.

UNIT Chip Input and Output (I/O) Circuits:

(06 Hours)

VI

Introduction, ESD Protection, Input Circuits, Output Circuits and $L(di/dt)$ Noise, On-Chip Clock, Generation and Distribution, Latch-Up and Its Prevention. Design for Manufacturability: Introduction, Process Variations, Basic Concepts and Definitions, Design of Experiments and Performance Modelling, Parametric Yield Estimation, Parametric Yield Maximization, Worst-Case Analysis, Performance Variability Minimization. ASIC Design Flow, Introduction to Verilog, Language Constructs and Conventions in Verilog, Gate Level Modeling, Architecture of FPGA.

Assignments:

Note:

1. For internal assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.
2. The assignments are to be submitted as a hard copy.

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

ELECTIVE –II: NATURAL LANGUAGE PROCESSING

TEACHING SCHEME:

Theory: 3Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Continuous Assessment: 40 Marks

CREDITS ALLOTTED:

Theory:03 Credits

Course Pre-requisites:

Basic understanding of Theory of Computer Science, Systems Software,
Basic mathematics, Probability theory.

Course Objectives:

1. To understand approaches to syntax and semantics in Natural Language Processing and levels of language analysis.
2. To understand current methods for statistical approaches to machine translation.
3. To develop problem solving abilities using Mathematics.

Course Outcomes: After completion of course, students will able to:

1. Outline the Natural Language Processing basics and language representation.
2. Apply various parsing algorithms and its application.
3. Describe language modeling and various clustering techniques.
4. Recite the use of Machine Translation in Natural Language Processing.
5. Apply various filtering methods and semantic networks.
6. Infer advanced tools and parsers for Natural Language Processing.

UNIT I	Introduction to Natural Language Understanding The Study of Language Applications of Natural Language Understanding, Evaluating Language Understanding Systems, The Different Levels of Language Analysis, Representations and Understanding the Organization of Natural Language Understanding Systems, Structure of Natural Language Processing (NLP).	(06 Hours)
UNIT II	Grammars for Natural Language Parsing Algorithms, Robust and Scalable Parsing on Noisy Text as in Web documents, Hybrid of Rule Based and Probabilistic Parsing, Human Preferences in Parsing Encoding Uncertainty: Shift-Reduce Parsers, Deterministic Parser Techniques for Efficient Encoding of Ambiguity Partial Parsing, Part of speech tagging.	(06 Hours)
UNIT III	Natural Language Processing Modeling Automatic Morphology Learning, Named Entities, Maximum Entropy Models, Random Fields, Estimation Techniques, and Language Modeling, Parsing and Syntax, The EM Algorithm in Natural Language Processing, Stochastic Tagging, and Log-Linear Models, Probabilistic Similarity Measures and Clustering, Machine Translation, Discourse Processing: Segmentation.	(06 Hours)
UNIT IV	Natural Language Understanding Methods Finite State Machine Based Morphology; Automatic Morphology Learning;	(06 Hours)

Unsupervised Methods in NLP, Introduction to HMM, HMM Ergodic models, Graphical Models for Sequence Labeling in NLP, Probabilistic parsing, Forward Backward probability, Viterbi Algorithm.

UNIT V Ambiguity Resolution (06 Hours)
Selectional Restrictions, Semantic Filtering Using Selectional Restrictions, Semantic Networks, Statistical Word Sense Disambiguation, Statistical Semantic Preferences, Combining Approaches to Disambiguation.

UNIT VI Advanced tools, techniques and applications of NLP (06 Hours)
Sentiment Analysis; Text Entailment; Robust and Scalable Machine Translation; Cross Lingual Information Retrieval, Some applications like machine translation, database interface, Programming language Python Natural Language Tool Kit (NLTK), NLP applications in web mining and text mining, Parsers for NLP such as Stanford, Open NLP.

Assignments:

Note:

1. For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.
2. The assignments are to be submitted as a hard copy.

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

ELECTIVE – II: HUMAN COMPUTER INTERACTION

TEACHING SCHEME:

Theory: 03 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Continuous Assessment: 40 Marks

**CREDITS
ALLOTTED:**

Theory:03 Credits

Course Pre-requisites:

1. Knowledge of user interface and human psychology.
2. Understanding of Input Output devices.

Course Objectives:

1. To apply knowledge of human psychology, design process on user interface development projects.
2. To provide the user interface designer with concepts and strategies for making design decisions.
3. To expose the user interface designer to tools, techniques and ideas.
4. To identify the importance of good user interface design.

Course Outcomes: After completion of course, students will able to:

1. Express the concept of human computer interaction.
2. Describe the principles of human computer interaction.
3. Outline design goals and standards of HCI designs.
4. Identify and discuss key problems in HCI and its solutions.
5. Recite the importance of software tools and techniques of human factors in developing an interactive system.
6. Apply useful criteria for guiding design and evaluation of user interfaces.

UNIT I	Introduction: Human interaction with computers, importance of human characteristics, human consideration, Motivations for Human Factors in design, Eight golden rules of HCI, Murphy's law. Human Psychology and understanding. Case study on human factors.	(06 Hours)
UNIT II	The graphical user interface: Popularity of graphics, the concept of direct manipulation, graphical system, Web user – Interface popularity, Principles of user interface. Current trends in GUI.	(06 Hours)
UNIT III	Design process: Importance of user interface, definition, importance of good design. Benefits of	(06 Hours)

good design, study of design process components, three Pillars of design, Social Impact for early design review.

UNIT Software Tools and Techniques in Interface: (06 Hours)

IV Specification methods, interface building tools, Interaction Devices: Keyboard and function keys, pointing devices, speech recognition digitization and generation, image and video displays, pointing devices, navigation schemes.

UNIT Screen Designing: (06 Hours)

V Design goals, Screen planning and purpose, organizing screen elements, ordering of screen data and content, screen navigation and flow – visually pleasing composition, presentation information simply and meaningfully information retrieval on web, Case study on screen design. Evaluation of user interface.

UNIT Windows & Components: (06 Hours)

VI Selection of window, individual, multiple window design, image browsing and tightly coupled windows. Selection of devices based and screen based controls. Components – text and messages, icons and increases, Multimedia, colors, uses, problems, choosing colors.

Assignment:

Note:

For internal assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy.

Reference books

- 4) Alan Cooper, Robert Reimann, David Cronin, “Essentials of Interaction Design”, Wiley.
- 5) Alan Dix, Janet Finckay, Greg Goryd, Abowd, Russell, Bealg, “Human Computer Interaction”, Pearson Education.

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

ELECTIVE – II: DATA STORAGE SYSTEMS

TEACHING SCHEME:

Theory: 3 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Continuous Assessment: 40 Marks

CREDITS ALLOTTED:

Theory: 03 Credits

Course Pre-requisites:

In order to understand the content, gain knowledge and successfully complete this course, students should have a basic understanding of the computer architecture, file systems, operating system and networking.

Course Objectives:

1. To enlighten the students with the knowledge of storage systems and to gain exposure to the storage industry

Course Outcomes: After completion of course, students will able to:

1. Describe the data storage systems and its elements
2. Evaluate various types of intelligent storage systems
3. Describe and Evaluate the deployment model of storage systems
4. Evaluate the various storage networking technologies
5. Infer the key processes for managing the storage infrastructure
6. Determine the appropriate storage solution for a given scenario

UNIT Introduction to Data Storage

(06 Hours)

- I** Data, Data Variety, Information, knowledge, Big Data, Data explosion, Storage, **Storage devices and its types**, Memory hierarchy, Secondary storage, tertiary storage. Storage architecture and its evolution, Data center, Components of Data center, Managing Data center.
Introduction to Application workloads, DBMS, Compute, Memory Virtualization, Device Driver, Volume Manager, File System, Object storage, Block storage, Server Virtualization.

UNIT File System and Storage System

(06 Hours)

- III** Local file system, Journaling, Snapshots, Network file systems, Principle, NAS, SAN, DAS.
Case Study: DAFS, Shared Disk File System, GPFS, Comparison of FC SAN, FCoE SAN, iSCSI SAN and NAS. Scale up and scale out architectures.
Protocols: SCSI, iSCSI, SC,FCoE, CIFS vs NFS

UNIT I/O path and Storage Virtualization

(06 Hours)

- IV** Define Virtualization, define storage virtualization, I/O path, Physical channel, Elements in Physical I/O Path, software Layers of I/O Path, Software stack, I/O path virtualized, Demerits and need of storage virtualization, Virtualization entity, replaceable storage device, use of dynamic storage allocation, use of data migration, virtualization on block and file level, virtualization at network level, symmetric and asymmetric.

UNIT Function and Network technologies (06 Hours)

- V** Functions: Instant Copies, Remote Mirroring, consistency groups, LUN Masking, Availability of Disk Storage systems.
Storage network: Transmission technique and protocol, SCSI and storage network, Fiber channel, Link, ports and Topology, IP storage, InfiniBand.

UNIT Performance Monitoring and Management (06 Hours)

- VI** Performance management: Why analyze performance, Capacity Management: capacity planning, I/O Capacity, SLA's, Reactive Style, Casually Observant, Actively Observant, Proactive style, Performance Lifecycle, Performance Hierarchy. Performance Metrics: IOPS, part of an I/O, Throughput, Latency, Utilization, understanding application workload.
Tools: Linux performance commands: TOP, IOSTAT, SAR, IOMeter and Iozone.

Assignments:

Note

For internal Assessment of 10 Marks, students have to submit two assignments based on problems of different types of any programming assignment or theory assignment or any case study or quiz or Multiple Choice Questions etc.

The assignments are to be submitted as a hard copy.

Reference Books

- 1) Information Storage and Management, second edition, EMC education Services, John Wiley & Sons, Inc.
- 2)Storage Networks Explained, second edition, Ulf Troppens, Rainer erkens, Wolafka, haustein, Wolfgang, Wiley, SNIA.
- 3)Introduction to storage area networks and system networking, An IBM Redbooks Publication, Jon Tate, Pall Beck, Hector Hugo Ibarra, Shanmuganathan Kumaravel, Libor Miklas
- 4)The Design and Implementation of a Robust-storage-system Architecture, Robert C. Good, University of Waterloo, 1995,

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

PROGRAMMING LAB- IV

TEACHING SCHEME:

Practical: 4 Hours / Week

EXAMINATION SCHEME:

Term Work (Practical): 50 Marks

**CREDITS
ALLOTTED:**

Credits: 02 Credits

Course Pre-requisites:

1. Students are expected to have some rudimentary knowledge of computer networking in general and a working knowledge of system programming in C/C++ under Unix/Linux.

Course Objectives:

1. To understand inter-process and inter-system communication.
2. To understand socket programming in its entirety.
3. To understand usage of TCP/UDP / Raw sockets.

Course Outcomes: After completion of course, students will able to:

1. Outline the fundamentals of Unix environment.
2. State Process handling.
3. Recite Inter-Process Communication
4. Implement Unix Socket Programming.
5. Infer fundamental concepts of Shell Programming.
6. Implementation of shell meta-characters.

UNIT Overview of Unix OS

I UNIX Architecture, UNIX Standardization, Files and Directories, Unix Installation, Input and Output, Programs and Processes, Error Handling, Logging in, User Identification, System Calls and Library Functions, Signals & Time Values **(06 Hours)**

UNIT Process Environment

II Process Identifiers, Fork Function, Vfork Function, Exit Functions, Wait and Waitpid Functions, Waitid Function, Wait3 and Wait4 Functions, Process Accounting, User Identification, Terminal Logins, Network Logins, Process Groups, Sessions, Introduction of Daemon Processes. Performance Monitoring Tools: Process Status (ps), Top, Xosview, Treeps. **(06 Hours)**

UNIT Inter-process Communication

III System V IPC. Message Passing: Pipes and FIFOs, Message Queues: System V, Synchronization: Mutexes and Condition Variables, Read-Write Locks, Record Locking, System V Semaphores, System V Shared memory. **(06 Hours)**

UNIT Network IPC: Sockets

IV Introduction, Socket Descriptors, Addressing, Connection Establishment, Transport Layer, Socket Introduction, TCP Sockets, UDP Sockets, Raw Sockets, Socket Options, I/O Multiplexing, Name and Address Conversions. **(06 Hours)**

UNIT Introduction to Unix Shell Programming

V Types of Shells, Interactive Shell Scripts, Shell variables, Shell keywords, Positional Parameters, Command line arguments, shell script Arithmetic, Control Instructions, Loop control structure. Shell Metacharacters: Filename Substitution Metacharacters, I/O Redirection, **(06 Hours)**

Process execution, Conditional execution using && and ||, Quoting metacharacters, Special Parameters, Debugging a Script \$* and S@

UNIT Unix Network Tools

(06 Hours)

VI Unix Network Commands related to Connectivity, network interface commands, Routing, Arp, NFS/NIS etc.
Windows power shell: purpose of PowerShell, Windows management framework, cmdlets and understanding syntax.

Term Work:

The sample practical assignments are given below. This can be used as a guideline and course coordinator can recommend the list of practical assignments.

1. Introduction to Unix commands using vi editor.
2. Implementation of Unix System calls
3. Write a program to implement message passing using Pipes and FIFOs.
4. Write a program to implement synchronization using semaphores.
- 5 Write a program to implement synchronization using Mutex variable.
- 6 Write a program to implement client-server communication using TCP sockets.
7. Write a program to implement client-server communication using UDP sockets.
8. Write a program to implement client-server communication using Raw sockets.
9. Write a shell script to pass command line arguments.
10. Write a shell script using metacharacters for I/O redirection.

Grand Total = 50

Distributed Systems

TEACHING SCHEME:

Theory: 3 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Internal Assessment: 40 Marks

CREDITS ALLOTTED:

Theory: 03

Course Pre-requisites:

Data Structures, Operating System, Computer Networking.

Course Objectives:

1. Understand foundation of distributed system
2. Introduce the idea of peer to peer services and file system
3. Understand in detail the system level and support required for distributed system
4. Understand the issues involved in studying process and resource management

Course Outcomes: Upon completion of the course student will able to

1. Discuss trends in distributed Systems.
2. Apply network virtualization.
3. Apply remote method interaction and objects.
4. Design process and resource management systems

UNIT - I Introduction:

(6 Hours)

Need of Distributed system(DS), Examples of Distributed Systems, Pros and Cons of distributed System, models of DS, Trends in Distributed Systems ,focus on resource sharing, challenges, case study world wide web, System model , Inter process communication, The API for internet protocols, External data representation and multicast communication network, Virtualization, Overlay networks.

UNIT - II Communication in Distributed System : (6 Hours)

Case study MPUI remote method Invocation and object : Remote invocation and object : Remote invocation introduction, request reply protocols, remote procedure call, remote method invocation, case study java RMI group communication, publish, subscribe system message queues, shared memory approaches. Distributed objects case study Enterprise java beans from objects to components.

UNIT - III Peer to peer services and file system: (6 Hours)

peer to peer system introduction, napster and its legacy peer to peer systems middleware routing overlays case studies: pastry , japestry, distributed file system introduction file service architecture Andrew file system file system features file model file accessing models file sharing semantics Naming identifiers, address Name resolution, Name space Implementation, name cache LDAP.

UNIT - IV Synchronization and replication: (6 Hours)

Introduction, clocks, events and process states, synchronizing physical clock, logical time and logical clocks, global states, coordination and agreement, Introduction of distributed mutual exclusion, elections transactions and concurrency control, nested transactions, locks, optimistic concurrency control, time stamp ordering, atomic commit

protocols, distributed deadlocks, Replication , Case study CODA.

UNIT - V Process and resource management: (6 Hours)

Process management, process migration, features, mechanism, Threads, models, issues, implementation resource management, introduction, features of scheduling algorithms, task assignment approach, load balancing approach, load sharing approach.

UNIT - VI Security: (6 Hours)

Main threads and techniques for ensuring security (secure channels, firewalls) Fault tolerance and availability (passive /active replication, gossip architectures) application. Pervasive computing environments: active office, home and city, mobility and location- tracking etc.

Assignment:

1. Study of design and implementation issues of Distributed System.
2. Demonstrate the Mutual Exclusion and Deadlock detection of any Distributed System.
3. Study of CORBA RMI and CORBA-SERVICES.
4. Design and implementation issues of Distributed Shared Memory (DSM).
- 5.Design and implementation of any scheduling algorithm of any new DS
6. Study of Security aspects in Distributed System.
7. Case Study NFS and AFS.
8. Study of process management in CODA.
- 9.Case study : applications of pervasive Computing
10. Study of recourse management in Amoeba.

Text books:

1. George Coulouris, Jean Dolimore and Jim Kindberg “Distributed Systems Concepts and Design” fifth edition, Pearson education, 2012.
2. Pradeep K Sinha, “Distributed Operating Systems Concept and Design” Prentice Hall of India .

3. Tanenbaum A.S., Van Steen M “.Distributed Systems, Principles and Paradigms.” Pearson education 2007.

References:

1. Liu M. L. “ Distributed Computing Principles and Applications,” Pearson Education 2004.
2. Nancy A. Lynch, “Distributed Algorithms” Morgan Kaufman publishers USA.
3. Speciner, Kaufman and Perlman, “Network Security” Pearson Education 2009.

Network Security and Cryptography

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 3 Hours / Week	End Semester Examination: 60 Marks	Theory: 03
Practical: 2 Hours / Week	Internal Assessment: 40 Marks	TW & Practical: 01
	Term Work & Practical: 50 Marks	

Course Pre-requisites:

Basic knowledge of computer network.

Course Objectives:

- 1 To understand basics of cryptography, how it has evolved, and some key encryption techniques.
- 2 To learn security policies such as authentication, integrity and confidentiality.

Course Outcomes: Upon completion of the course student will able to

- 1 Understand the basics of network security
- 2 Learn different techniques of cryptography
- 3 Discuss details of key and certificate management
- 4 Learn about system security
- 5 Recite Network and Transport Layer security
- 6 Apply knowledge of network security and cryptography in real life

UNIT - I **Introduction to network security:** **(6 Hours)**
Goals of security, Threat scenarios, Types of attacks: Denial of service, Non-repudiation, Principles of security, A Model for

Network Security, Security approaches and policies, Authentication, Authorization and Accounting, Physical and logical access control, User authentication, Biometrics devices, Security services and mechanisms, Privacy and data protection, Cyber laws.

UNIT - II Symmetric and Asymmetric key cryptography: (6 Hours)

Symmetric and Asymmetric key cryptography:-Plain Text and Cipher Text, Substitution techniques, Transposition Techniques, Encryption and Decryption, Data Encryption standards, Block Cipher Design Principles ,Advanced Encryption Standards, RC4/RC5 algorithm, IDEA, RSA, Blowfish, S-Box theory, ElGamal Cryptosystem. Steganography, COMSEC, TRANSEC.

UNIT - III Key and Certificate Management (6 Hours)

Hash Functions, Digital Signatures, Digital Certificates, Knapsack Algorithm, Certificate & DDOS-Distributed Dos based authentication, Smart Cards, PKIX model, PKI components and Applications, LDAP protocol, Creating Digital certificates using Java, DNS certificates, Key agreement protocols: STS protocol, Diffie-Hellman Key Exchange

UNIT - IV System Security: (6 Hours)

Secure Socket Layer, Secure Electronic Transaction, 3-D Secure protocol, Secure HTTP, Time stamping protocol, Email Security, SMTP, PEM, PGP, Wireless Application protocol, Authentication applications- X.509, Kerberos. Key Distribution Centre, Single Sign ON approaches, Security in GSM and 3G.

UNIT - V Security in Network and Transport Layer: (6 Hours)

ICMP redirect hazard, ARP hazard, secures network infrastructure services: DNS, NTP, SNMP, Secure RSVP, TCP/IP protocol Suite, IP Security-IP security services, Security Associations. IPv4/IPv6 encapsulation header, IKE protocol,

Point to Point Tunneling Protocol, Layer 2 Tunneling Protocol, Replay Attacks, Encapsulating Security Payloads, Data Compression Using Zip.

UNIT - VI Network Security Practices:

(6 Hours)

Types of firewalls, Firewall Configurations and Implementation, Firewall forensic, Firewall services and limitations, Network address Translation (NAT), DMZ networks, Source masking and hidden channels, VPN Architecture, Intruders, Intrusion Detection, Network based and host based Intrusion Prevention System, Intrusion Detection tools, Architecture for Distributed Intrusion Detection, System Integrity Verifiers, Log File Monitors, Honeypots.

Term Work:

1. Introduction to Cryptography based Security Tools.
2. Write a Program in C/Java to implement symmetric encryption.
3. Write a Program in C/Java to implement asymmetric encryption.
4. Introduction to GnuPG encryption system.
5. Implementation of Decryption techniques using secret key in GnuPG.
6. Implementation of various cryptographic algorithms using HashCalc.
7. Study of how Firewall works in computing.
8. Study of how Antivirus works according to offline or online mode.
9. Implement mini project to develop antivirus application.
10. Case study on cyber security

Assignments:

1. Introduction to security and types of attacks.
2. Discuss Security approaches and policies.
3. Study of any one Symmetric key cryptography algorithm.
4. Explain any one Asymmetric key cryptography algorithm.
5. Explain the concept of digital certificates.
6. Explain email security and its security protocols.
7. Study of Key agreement protocols
8. Discuss system level security
9. Study of various protocols in network security

10. Study of network security practices

Text books:

1. Atul Kahate, “Cryptography and Network Security”, 2nd Edition, Tata McGrawHill
2. William Stallings, “Cryptography and Network Security”, Pearson Education.

References:

1. Bruce Schneier ,“Applied Cryptography-Protocols, Algorithms, and Source Code in C”.

3. J.W. Rittiaghouse and William M.Hancok – Elseviers. “Cyber Security Operations Handbook”.
4. Menezes, van Oorschot and Vanstone, “*Handbook of Applied Cryptography*”.

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT – III

Unit Test -2

UNIT – IV, UNIT – V, UNIT – VI

Big Data Analytics and Architecture

TEACHING SCHEME:

Theory: 3 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Internal Assessment: 40 Marks

CREDITS ALLOTTED:

Theory: 03

Course Pre-requisites:

Knowledge on Database Management System, Distributed Computing, Data Mining, File

System, Statistics.

Course Objectives:

This course focuses on the basic concepts of big data, methodologies for analyzing structured and unstructured data using Hadoop & R.

Course Outcomes: Upon completion of the course student will able to

- 1 To outline the Big Data fundamentals and various data challenges getting introduced.
- 2 To accurately and objectively examine, and critically investigate Big Data Technologies and Infrastructure concepts, theories.
- 3 To apply the novel architectures and platforms introduced for Big data, in particular Hadoop and MapReduce.
- 4 Being able to describe and apply the Data Analytics lifecycle to Big Data projects
- 5 To analyze methods and algorithms with respect to data and application requirements, and make appropriate design choices when solving real-world problems.
- 6 To Understand and apply secured policy oriented techniques for solving real-world problems.

UNIT - I Introduction to Big Data:

(6 Hours)

Types of Data, Characteristics of big data Information, Phases: capture, organize, integrate, analyze, and act, Defining Structured Data, exploring sources of big structured data, Understanding the role of relational databases in big data, Defining Unstructured Data, exploring sources of unstructured data, Understanding the role of a CMS in big data management, Integrating data types into a big data environment.

UNIT - II Statistics & Analytics: (6 Hours)

Numerical Data, Summary Statistics, Sampling and Confidence Intervals, From Population to Sampled Data, Different Types of Biases, Probability, Statistical Inference, Conditional Probability and Bayes Rule, Random Variables, Linear Regression, Bayesian Modeling, , Text Analytics, Characteristics of big data analysis, Linear Models, Decision trees, Neural Networks,

UNIT - III Predictive Analysis Process and R:

Data Analytics Lifecycle, Discovery, Data Preparation, Model Planning, Model Building, communicate results, Operationalize, Building a Predictive model.

Introduction to R, R graphical User Interfaces, Data import and Export, Dirty Data, Data Analysis, Statistical Methods for Evaluation, Linear regression with R, Clustering with R hypotheses testing.

UNIT - IV Big Data Storage and Computing Platforms: (6 Hours)

Distributed computing for big data, the changing economics of computing, the problem with latency, Demand meets solutions, Physical infrastructure layer, Big Data Stack, Layer 0: Redundant Physical Infrastructure, Layer 1: Security Infrastructure, Layer 2: Operational Databases, Layer 3: Organizing Data Services and Tools, Layer 4: Analytical Data Warehouses, virtualization in big data, Traditional RDBMS, NoSQL, Design Goals for MongoDB

UNIT - V Hadoop: (6 Hours)

The Core of Hadoop: MapReduce, Hadoop's Lower Levels: HDFS and MapReduce, Improving Programmability: Pig and Hive, Common

building blocks, Key/value pairs, Getting your data into Hadoop, Other Hadoop Components, Hadoop in action.

UNIT - VI Case Studies and Data Privacy:

(6 Hours)

Defining Privacy and Security, Data and User Anonymization Fraud and Big Data, Risk and Big data, Credit Risk Management, Big Data & Algorithm Trading, Advertising and Big Data, The Privacy Landscape, Rights and Responsibilities, Case Study: Recommendation Engine, Sentiment Analysis and Digital Marketing, Healthcare applications.

Assignment:

1. Quizzes and Surprise tests will be conducted for testing the knowledge of students for particular topic.
2. Case study on Resilient Distributed Datasets.
3. Case study on Big Data Analytics with Hadoop.
4. Case study on Big Data Analytics with Spark.
5. Case study on how data analytics stacks work and the factors influencing their performance.
6. Discuss in brief the Association analysis.
7. Prepare a case study on Deep Analysis.
8. Illustrate how WEKA can be used for big data Analysis
9. Illustrate and setup a single node Hadoop cluster.
10. Illustrate the best practices for setting-up and using Hadoop.

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Compiler Design

TEACHING SCHEME:

Theory: 3 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
Internal Assessment: 40 Marks

CREDITS ALLOTTED:

Theory: 03

Course Pre-requisites:

1. The students should have learnt Theory of Computation.
2. Basic of the structure of any Programming Language and Grammars.
3. Know the basics of Computer organization and Assembly Language Programming.

Course Objectives:

1. To study the Compiler Design Tools.
2. To understand the Compiler for various Programming Languages.

Course Outcomes: Upon completion of the course student will able to

1. To have knowledge of LEX and YACC Tools.
2. The students will have the knowledge of Lexical Analysis and formation of TOKENS.
3. Understand Parser and its various techniques.
4. Understand Syntax Directed Translation Scheme
5. Understand the use of Hash Tables and Symbol Tables.
6. Learn the techniques of Code Optimization

UNIT - I The Phases of a Compiler:

(6 Hours)

Translator issues, why to write Compiler, Compilation process in brief, Frontend and Backend Model, Compiler Construction tools, Interpreter and the related issues, Cross Compiler, Incremental Compiler, Boot Strapping, Byte code Compilers.

Lexical Analysis: The role of Lexical Analyzer, Input Buffering, Specification of tokens, recognition of tokens, and language for specifying Lexical Analysis alphabet, Token, Lexical error, Block schematic of Lexical Analyzer, "Automatic Construction of Lexical Analyzer-(LEX), LEX Specification and Features. Pattern Matching Algorithms and their Optimization, use of LEX.

UNIT - II Syntax Analysis Introduction:

(6 Hours)

Role of Parsers, Review of Context Free Grammar for Syntax Analysis. Top down-RD parser, Predictive parsers, LL (k) parsers, Bottom up Parsers - Operator Precedence Parsers, Shift-Reduce: SLR, LR (k),

LALR etc. using Ambiguous Grammars. Error Detection and Recovery, Automatic Construction of Parsers (YACC), YACC specifications. Canonical LR parsers, handling of ambiguous grammars, Error Reporting in LL (1), Operator Precedence and LR Parsing, Efficient Generation of LALR (1) sets, Optimization of LR parsers, Optimization of transformations, Detection, Reporting, Recovery and Repair of errors in the Compilation Process.

Semantic Analysis Need of Semantic Analysis, Type Checking and type Conversion Overloading of Functions and Operators, Polymorphic Functions, Unification Algorithm.

UNIT - III Syntax Directed Translation:

(6 Hours)

Syntax Directed Translation Schemes, Implementation of Syntax Directed Translators , Intermediate Code, Postfix Notation, Parse Trees and Syntax Trees, Three-Address code, Quadruples, and Triples, Translation of Assignment Statements, Boolean Expressions, Translation with a Top-Down Parser. Runtime Environment.

UNIT - IV Code Optimization:

(6 Hours)

Basic blocks and folding, optimization within iterative loops, global optimization through flow graph analysis, Code-Improving Transformations, Machine Dependent Optimization

Introduction, Classification of optimization, Principle sources Of Optimization, optimization of basic blocks, Loops in flow graphs, Optimizing transformations: compile time evaluation, Common sub-expression elimination, variable propagation, code movement, strength reduction, dead code elimination and loop optimization, Local optimization, Global Optimization: Control and data flow analysis, Computing Global Data flow information: Meet over paths, Data flow equations, Data flow analysis, Iterative Data Flow Analysis: Available

expressions, Live Range Identification.

UNIT - V Code Generation Introduction: (6 Hours)

Intermediate languages, Translation of Declarations & Assignments statements. Design issues of a Code generator, Target machine, Runtime storage Management, Basic blocks and flow graphs. Issues in code generation, Target machine description, Basic blocks and flow graphs, next-use information, Register allocation and assignment, Dag representation of basic blocks, Peephole optimization, Generating code from a DAG, Dynamic programming, Semantic stacks, Attributed Translation, Analysis of syntax, Directed Translation, Evaluation of expressions, control structures, Procedure calls.

UNIT - VI Case Study of GCC: (6 Hours)

Architecture, Command Line Options for assembly, preprocessing and Intermediate tokens. Optimization Levels of GCC. GCC Help

Assignment:

1. Study LEX and YACC Tools.
2. Divide a 'C' Language Program into Tokens and design a Lexical Analyzer Program to display the list of tokens in it. Display Libraries used, functions and variables defined
3. Study Top down Parser.
4. Study Bottom up Parser.
5. Study Different Syntax Directed Translation Scheme.
6. Represent High Level Language Instruction in the form of 3 address Code, Quadruples and Triples.
7. Study the different methods of Code Optimization.
8. Write a program to generate a Code for C Language Statements.
9. Study of GCC
10. Create a language translator from C to PHP.

Syllabus for Unit Test:

Unit Test -1 UNIT – I, UNIT – II, UNIT - III

Unit Test -2 UNIT – IV, UNIT – V, UNIT - VI

Elective –III a):Grid Computing

TEACHING SCHEME:

EXAMINATION SCHEME:

CREDITS ALLOTTED:

Theory: 3 Hours / Week

End Semester Examination: 60 Marks

Theory: 03

Internal Assessment: 40 Marks

Course Pre-requisites:

Knowledge of distributed systems.

Course Objectives:

1. Understand how Grid computing helps in solving large scale scientific problems.
2. Learn how to program the grid.
3. Understand the security issues in the grid.

Course Outcomes: Upon completion of the course student will able to

1. Understand basic concepts grid computing with the help of case studies.
2. Understand basic architecture of grid.

UNIT - I Introduction to the Grid:**(6 Hours)**

History and Evolution of Computing from Mainframe to Grid, Difference between Grid and Cloud Computing, Introduction to High Performance Computing and Distributed Computing, Definition of Grid, Characterization of the Grid, Architecture of the Grid, Types of Grids, Scope and Applications of Grid Computing Applications. Grid Computing Organizations and Their Roles: Developing Grid Standards & Best Practice Guidelines.

UNIT - II Grid Services and Monitoring :**(6 Hours)**

Introduction to Open Grid Services Architecture (OGSA) – Motivation – Functionality Requirements – Practical & Detailed view of OGSA/OGSI – Data intensive grid service models – OGSA services. Grid Monitoring Architecture.

UNIT - III Grid Development Toolkits:**(6 Hours)**

GlobusGT3 Toolkit :Architecture - Programming Model Implementation-

High-Level Services

UNIT - IV Grid Scheduling and Resource Management: (6 Hours)

Introduction, Scheduling Paradigms, Working principles of Scheduling, A Review of Condor, SGE, PBS and LSF, Grid Scheduling with QoS.

UNIT - V Grid Security: (6 Hours)

Introduction, Cryptography, Grid Security Infrastructure and Authorization Models, Possible Vulnerabilities.

UNIT - VI Grid Portals and Grid Applications: (6 Hours)

Introduction, First and Second Generation of Grid Portals, GT3 Use Cases, Resource Management Case Studies, Grid Portal Use Cases.

Assignment:

1. Case Studies on Grid Computing.
2. Case Studies on Performance Analysis.
3. Illustrate difference between Grid Computing & Cloud Computing.
4. Explain Grid Monitoring Architecture in detail.
5. Describe Scheduling Paradigms of Grid Computing.
6. Illustrate difference between Condor, SGE, PBS and LSF.
7. Explain Grid Security Infrastructure.
8. Describe Grid Services.
9. Case study of GlobusGT3 Toolkit.
10. Case study of Resource Management.

Text books:

1. Joshy Joseph, and Craif Fellenstein, "Grid Computing", IBM Press, Pearson education, 2011.

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Elective –III b):VLSI and Embedded System

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 3 Hours / Week	End Semester Examination: 60 Marks Internal Assessment: 40 Marks	Theory: 03

Course Pre-requisites:

Digital Logic, Analog Circuits, Operating system, System Software, Computer Architecture and Organization, Basic Microprocessors, Theory of Computation, Discrete Mathematics.

Course Objectives:

To make students aware of basic embedded system architecture ,tools for developing embedded systems and to develop ARM programming model

Course Outcomes: Upon completion of the course student will able to

- 1 Understand the basic architecture of Embedded System.
- 2 Describe the various embedded system development tools
- 3 Develop a ARM programming model
- 4 Explain basic MOS transistor action
- 5 Analyze Combinational and Sequential Logic
- 6 Design Mealy and Moore state models using Verilog.

UNIT - I	<p>Introduction to Embedded Systems: Architecture of Embedded System, Design Methodology, Design Metrics, General Purpose Processor, System On chip. Embedded system design and development, Life-Cycle Models, Development tools. System design specifications Functional design, Architectural design, Prototyping.</p>	(6 Hours)
UNIT - II	<p>ARM Architecture: ARM Design Philosophy, Registers, PSR, Pipeline, Interrupts and Vector Table, Architecture Revision, ARM Processor Families ARM architectural support for operating System, Memory subsystem architecture, Designing a cache system, Memory allocation, Communication protocols.</p>	(6 Hours)
UNIT - III	<p>ARM Programming Model: Instruction Set: Data Processing Instructions, Branch, Load, Store Instructions, PSR Instructions, Conditional Instructions. Register Usage, Other Branch Instructions, Data Processing Instructions, Single-Register and Multi Register Load-Store Instructions, Stack, Software Interrupt Instructions ,Instruction Scheduling, Register Allocation, Conditional Execution and Loops.</p>	(6 Hours)
UNIT - IV	<p>Introduction to MOS Technology: Basic MOS Transistor action: Enhancement and Depletion Modes. Basic electrical properties of MOS, Threshold voltage and Body Effect. Design of MOS inverters with different loads, Basic Logic Gates with CMOS: INVERTER, NAND, NOR, AOI and OAI gates. Transmission gate logic circuits, Bi-CMOS inverter.</p>	(6 Hours)
UNIT - V	<p>Combinational Logic: Manchester, Carry select and Carry Skip adders, Crossbar and barrel shifters, Multiplexer.</p> <p>Sequential Logic: Design of Dynamic Register Element, Dynamic RAM Cell, Static RAM Cell.D flip flop using Transmission gates. NOR and NAND based ROM Memory Design.</p>	(6 Hours)
UNIT - VI	<p>Introduction to HDLs: Basic Concepts of Verilog, Data Types, System Tasks and Compiler Directives. Behavioural Modelling: Structured Procedures,</p>	(6 Hours)

Procedural Assignments, Timing control, Conditional statements, Sequential and Parallel Blocks, Generate Blocks. Switch level Modelling.

Tasks, Functions, Procedural Continuous Assignments, Design of Mealy and Moore state models using Verilog.

Assignment:

1. Define Embedded system and explain it's architecture
2. Study various tools used in development of embedded systems
3. Analyze various memory allocation algorithms
4. Explain in detail ARM architecture
5. Study instruction set required for developing ARM programming model
6. Explain use of basic logic gates in designing a transmission circuit
7. Distinguish between combinational and Sequential logic
8. Explain in detail various types of flip-flops
9. Describe in detail concept of Verilog
10. Case study Embedded system

Text books:

Syllabus for Unit Test:

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

Elective –III c):Artificial Intelligence and Robotics

TEACHING SCHEME:

Theory: 3 Hours/Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Internal Assessment: 40 Marks

CREDITS ALLOTTED:

Theory: 03

Course Pre-requisites:

Data Structures, Algorithms, Discrete Mathematics,

Course Objectives:

To make student aware of basics of Artificial Intelligence (AI), Knowledge representation methods, learning concept and basics of robotics

Course Outcomes: Upon completion of the course student will able to

- 1 Understand the basic search algorithms
- 2 Describe the various knowledge representation strategies
- 3 Understand plan generation systems
- 4 Describe various learning methods
- 5 Understand basic robotics concepts
- 6 Understand kinematics of robot

UNIT - I Introduction to AI and Production systems:

(6 Hours)

Definition, Problem formulation Control strategies ,Search strategies, Problem Characteristics, Production systems, Problem Solving methods,- Problem Graphs Indexing, Heuristic functions, Hill Climbing, Best First Search, Minimax Search for two player games Constraints Satisfaction,- Related algorithms, Performance measure and analysis of search algorithms

UNIT - II Knowledge Representation:

(6 Hours)

Knowledge Representation using predicate logic, Predicate calculus, Resolution, Knowledge representation using predicate calculus Knowledge representation using other logic, Structured representation of knowledge. Production based systems, Frame based systems, Scripts, Conceptual dependency Forward and backward chaining, Rule value approach, Fuzzy

reasoning., Bayesian theory

UNIT - III	Planning: Basic plan generation systems, Components of planning system Advanced, Strips plan generation systems, K-strips strategic explanation Planning with state-space search – partial-order planning – planning graphs – planning and acting in the real world	(6 Hours)
UNIT - IV	Learning: Learning concept, Supervised and unsupervised learning, Learning from observation - Inductive learning – Decision trees – Explanation based learning – Statistical Learning methods - Reinforcement Learning	(6 Hours)
UNIT - V	Robotics an Application of AI : Brief history, types, classification and usage, Science and Technology of robots, Elements of robots -- joints, links, actuators, and sensors Position and orientation of a rigid body, Homogeneous transformations, Representation of joints, link representation using D-H parameters,	(6 Hours)
UNIT - VI	Kinematics of Robots: Kinematics of serial robots, Mass and inertia of links, Lagrangian formulation for equations of motion for serial and parallel manipulators, Generation of symbolic equations of motion using a computer, Simulation Kinematics of parallel robots Dynamics of serial and parallel robots , Modeling and analysis of wheeled mobile robots	(6 Hours)

Assignment:

1. Analyze various search algorithms.
2. Illustrate different knowledge representation strategies with example.
3. Explain in detail Bayesian theory.
4. Describe in detail components of planning system.
5. Describe in detail planning and acting in the real world.
6. Case study learning.
7. Explain in detail the basics of robotics.
8. Describe in detail link representation using DH parameters.
9. Describe in detail kinematics of robotic.
10. Case study robotics.

Text books:

1. Stuart Russel and Peter Nurving, “AI-A Modern Approach”, 2nd Edition, Pearson Education.

|--------------|---------------------------------|
| Unit Test -1 | UNIT – I, UNIT – II, UNIT - III |
| Unit Test -2 | UNIT – IV, UNIT – V, UNIT - VI |

Elective – III d): Ad-Hoc and Sensor Networks

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 3 Hours / Week	End Semester Examination: 60 Marks Internal Assessment: 40 Marks	Theory: 03

Course Pre-requisites:

1. Knowledge of Internet and its working, types of networks.

Course Objectives:

1. Create awareness among the students about the basic fundamentals of Ad-Hoc and Sensor networks.
2. Developing the students with the knowledge of updated networking technology.

Course Outcomes: Upon completion of the course student will able to

1. Understand the basics of ad hoc and sensor networks.
2. Understand the communication mechanism of Ad-Hoc & sensor networks.
3. Learning different routing protocols in Ad-Hoc & sensor networks.
4. Discuss the importance of security in Ad-Hoc & sensor networks.
5. Apply the knowledge about quality of service to Ad-Hoc networks.
6. Learning the structure of Ad-Hoc & Sensor networks by considering real life applications.

UNIT - I	Introduction: Basics of Ad Hoc and Sensor networks, Need of Ad-hoc networks, Types of Ad-hoc networks, Ad-hoc network architectures, Need of sensor networks, Types of sensor networks, Combined approach: Architectures of Ad-hoc & Sensor networks, Working of Ad-hoc & Sensor networks.	(6 Hours)
UNIT - II	Communication in Ad-hoc & Sensor Networks: Wireless communication technology, information transport through electromagnetic spectrum, role of radio waves in wireless networks, wireless channels, wired channels, internet working, Ad-hoc and Sensor network connections, requirement for Ad-Hoc and sensor network connectivity, wireless LAN configuration, multichannel MAC, IEEE 802.11 standards.	(6 Hours)
UNIT - III	Ad-Hoc & Sensor Network Protocols: TCP/IP in Ad-hoc networks, MAC protocols: Ad-hoc networks, sensor networks, Routing Protocols: Ad-hoc networks, multicast routing protocols: an architecture reference model for multicast routing protocols, classifications of multicast routing protocols, comparisons of multicast routing protocols.	(6 Hours)
UNIT - IV	Security in Ad-hoc and Sensor Networks: Need of security in Ad-hoc and sensor network , role of transport layer in ad-hoc and sensor networks, architecture of security layer in Ad-hoc networks, transport layer security protocols, TCP over Ad-hoc wireless networks, security in sensor networks, network security requirements, issues and challenges in security provisioning, network security attacks , secure routing in Ad-hoc and wireless sensor networks, issues in designing a transport layer protocol for Ad-hoc and sensor networks, real life example to understand need of security in Ad-hoc and sensor networks.	(6 Hours)
UNIT - V	QoS and Energy Management : Classifications of QoS Solutions: MAC Layer, Network Layer, Security, QoS Frameworks for Ad hoc Wireless Networks, energy management in Ad-hoc wireless networks, different schemes, types of energy resources, transmission power management schemes, system power management schemes, energy efficiency and utilization schemes in Ad-hoc and Sensor networks, issues and challenges in providing QoS in Ad-hoc and sensor Networks.	(6 Hours)

Programming Lab- V

TEACHING SCHEME:

Practical: 2 Hours / Week

EXAMINATION SCHEME:

Term Work & Practical: 50 Marks

CREDITS ALLOTTED:

TW & Practical: 01

Course Pre-requisites:

If students have any programming experience at all, he should be able to pick up the general R syntax quite easily.

Course Objectives:

To develop ability to use the computational languages necessary for engineering practice

To provide hands- on experience of the recent platform, technologies and design methodologies used in developing applications.

Course Outcomes: Upon completion of the course student will able to

1. Recite R language fundamentals and basic syntax
2. Demonstrate how R is used to perform data analysis
3. Recite major R data structures
4. Illustrate visualizations using R
5. Implement various functions using R studio.
6. Design different Statistical models.

UNIT - I	Understanding Big Data and R basics:	(6 Hours)
	Evolution of R, Features of R, Local Environment Setup, R Command Prompt, R Script File, Comments, R –Data Types, R –Variables, Types of Operators, the alternatives to R.	
UNIT - II	Data structures in R:	(6 Hours)
	Vectors, Vectors and assignment, Vector arithmetic, Generating regular sequences, Character vectors, Index vectors, Lists: Constructing and modifying lists, Matrices ,Arrays, Factors: Ordered and unordered factors, Data Frames: Making data frames, Working with data frames	
UNIT - III	R programming fundamentals:	(6 Hours)
	Conditions and loops, R Programming, R -If Statement, R –If...Else Statement, The if...else if...else Statement, R –Switch Statement, R -Repeat Loop, R-While Loop, R –For Loop, Loop Control Statements, Functions in R, Built-in Function, User-defined Function, Calling a Function, Objects and Classes, Debugging.	
UNIT - IV	Working with data in R:	(6 Hours)
	Getting and Setting the Working Directory, Reading data from files (CSV, EXCEL), The read. table() function, The scan() function, Accessing built-in datasets, , Reading text files, Reading XML File, XML to Data Frame,R-JSON file, JSON to a Data Frame Writing and saving data objects to file in R.	
UNIT - V	Strings and Dates in R:	(6 Hours)
	String operations in R:String Manipulation, Concatenating Strings -paste()	

function, Extracting parts of a string, Regular Expressions, Dates in R, R – Pie Charts, 3D Pie Chart , R-bar chart, Group Bar Chart and Stacked Bar Chart, use of functions ggplot & ggplot2

UNIT - VI Statistical models in R:

(6 Hours)

Defining statistical models; formulae, Linear models, Generic functions for extracting model information, Analysis of variance and model comparison, ANOVA tables, Updating fitted models, Generalized linear models, Graphical procedures, OS facilities, Research and industry Applications of R .

Term Work:

1. Introduction to Big Data Analytics.
2. Assignment based on Looping.
3. String Handling.
4. Storing and Retrieving Data Using Vectors and Data frames
5. Class and object using R.
6. Create Relationship Model & Get The Coefficients
7. Case studies: Perform regression analysis on existing datasets.
8. Plot The Pie Chart With Title And Rainbow Colour Pallet.
9. Reading And Writing Excel CSV Text Files
10. Subject Teacher should take one Mini Project in the group of 2 students based on above syllabus.

Text books:

1. The R Book, by Michael J Crawley 2nd Edition, wiley
2. Hands-On Programming with R: Write Your Own Functions and Simulations by Garrett Grolemond
3. Beginning R: the Statistical Programming Language, wiley

References:

1. “Using R for Numerical Analysis in Science and Engineering”, Chapman & Hall/CRC, 2014, Victor A,Bloomfield.

Industrial Training

TEACHING SCHEME:**EXAMINATION SCHEME:****CREDITS ALLOTTED:**

End Semester Examination: 50 Marks

Term Work & Oral: 03

Course Pre-requisites:

Professional Skills, Knowledge of core computer engineering subjects.

Course Objectives:

- To provide exposure for the students on practical engineering fields
- To have better understanding of engineering practice in general and a sense of frequent possible problems.
- To develop problem Identification abilities in real world
- To experience use of technology /tools for software development.
- To Identify their skills, values, beliefs, interests and personal abilities to develop the skills.
- To prepare and present a report.

Course Outcomes: Upon completion of the course student will able to

- I. Propose a solution to solve real world problems with the help of technology.
- II. Apply software engineering principles.

- III. Evaluate and compare the various methodologies to solve a real world problem.
- IV. Report hands on experience of using modern software development tools.
- V. Assess their skills, values, beliefs, interests and personal abilities and act in congruence with them.
- VI. Identify social and ethical responsibilities and develop skills to compete for lifelong learning.

As a part of the B.Tech Computer Engineering curriculum, Industrial Training is a Practical course, which the students B.Tech Computer Engineering should undergo in reputed Private / Public Sector / Government organization / companies as industrial training of 45 days weeks to be undergone by the student in the summer vacation after the semester VI. Examination. And Oral examination will be conducted at the end of the semester VII.

The Industrial Training Report:

An Industrial Training report should be prepared by each student.. The report is expected to demonstrate development of practical and professional skills in Engineering through technical experience and application of theoretical knowledge. Development of skills in dealing with people, and communication skills form part of the training experience. Students should seek advice from their employers to ensure that no confidential material is included into the report. The student should be able to present the report to prospective employers,

The following should be observed:

- i. Length of training
- ii. Preliminary information
- iii. Technical report/diary References should be made in the text to books, technical papers, standards etc., used during the training period and should be listed.
- iv. Finally, a conclusion should include comprehensive comments on the type and value of experience gained, and how this relates to your professional career.
- v. A copy of the report should be submitted to his/her employer, another copy to the Department (through the respective Adviser). Students should also retain a personal copy of the report.

Seminar

TEACHING SCHEME:

Practical: 2 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 50 Marks

CREDITS ALLOTTED

Term Work & Oral: 01

Course Pre-requisites:

Basics of Software engineering, Knowledge of core computer engineering subjects.

Course Objectives:

- To develop problem Identification abilities in real world.
- To study the use of technology for societal benefits.
- To acquire the knowledge of intellectual topics in computer engineering.
- To prepare and present a document .

Course Outcomes: Upon completion of the course student will able to

- I. Describe the broader trends of technological growth in the computer, engineering fields.
- II. Interpret that technology has profound impact as a trigger for global change.
- III. Develop skills to explore intellectual topics in computer engineering.
- IV. Develop better skills to succeed in the career.

v. Understand the responsibility and the of ethics as an engineer

The student has to prepare for the seminar presentation and present it before the group of students It is recommended that a student should meet the guide regularly during the course of the seminar.

The following are the guidelines for the seminar:

- He /She can select a paper from his/her area of interest.
- Recent research papers from any reputed journals like Springer/ACM/IEEE can be selected.
- After selecting the paper, the student has to get approval from the concerned faculty In charge /Seminar guide.
- Students are required to acquire a thorough knowledge on the subject by referring back papers and reference books.
- The student has to prepare a MS power point Preparation of slides and present it in front of group of students from the same class in presence of seminar guide followed by question answer session
- He /She have to write a comprehensive report about the seminar at the end of the semester.

The term work can be assessed based on selection of topic, decorum, communication skill, preparation of presentations/slide and seminar report.

Project Stage-I

TEACHING SCHEME:

Practical: 8 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 50 Marks

CREDITS ALLOTTED:

TermWork&Oral: 03

Course Pre-requisites:

Basics of Software engineering, Software testing and knowledge of core computer engineering subjects.

Course Objectives:

- To develop problem solving abilities using mathematics.
- To apply algorithmic strategies while solving problems.
- To develop time and space efficient algorithms.
- To develop software engineering documents and testing plans.
- To use algorithmic solutions using distributed, Embedded, concurrent and parallel environments.

Course Outcomes: Upon completion of the course student will able to

- I. Review and understand how previous experiences had an impact on affective states and intellectual performance.

- II. Identify and define the problem.
- III. Decide critically to solve the problem.
- IV. Demonstrate the ability to synthesize complex information from a variety of sources in decision-making.
- V. Predict and develop a group process and desired outcomes.

- VI. Plan and perform collaboratively towards a common purpose.

1. The project will be undertaken preferably by a group of at least 3- 4 students who will jointly work and implement the project over the academic year. The work will involve the design of a system or subsystem in the area of Computer Engineering.

2. If the project is chosen a hardware project it will involve the designing a system or subsystem or upgrading an existing system. The design must be implemented into a working model with necessary software interfacing and a user manual.

3. If the project is chosen in the pure Software Application it must involve the detail Software Design Specifications, Data Structure Layout, File Design, Testing with complete documentation and user interface, with life cycle testing and as an executable package.

4. The group will select a project with the approval of the guide (Staff-members assigned) and submit the name of the project with a synopsis of 2 or 3 pages in the month of August in the academic year. A preliminary study report by the group must be submitted and certified at the end of seventh Semester.

5. It is expected that at least one research paper is published by each group with guide.

The project report stage-I will contain the details

Problem definition and requirement specification, acceptance test procedure (ATP).

- a) System definition, requirement analysis.
- b) System design with UML.
- c) Documentation and references.

Documentation will use UML approach with Presentation, Category, Use Case, Class Diagrams, etc.

Machine Learning

TEACHING SCHEME:

Theory: 3 Hours / Week

Practical: 2 Hours / Week

Tutorial: 1 Hour / Week

EXAMINATION SCHEME:

End Semester Examination: 60

Internal Assessment: 40

Term Work & Oral: 50

CREDITS ALLOTTED:

Theory: 04

TW & Oral: 01

Course Pre-requisites:

Artificial intelligence, Discrete Mathematics, Database Management System, Engineering Mathematics, Programming Languages.

Course Objectives:

To provide a strong formal foundation of Machine Learning concepts and techniques

Course Outcomes: Upon completion of the course student will able to

5. Explain significance of Machine Learning
6. Distinguish between paradigms of Machine Learning.
7. Illustrate use of algorithms in Supervised Learning and Unsupervised Learning.
8. Build Learning Model.
9. Analyze performance of Supervised and Unsupervised Learning
10. Tackle real world problems in the domain of Data Mining, Information Retrieval, Computer vision, Linguistics and Bioinformatics.

UNIT - I Introduction: (6 Hours)

Introduction to statistics, Introduction to Learning Systems, Structure of Learning System, Testing vs Training, learning vs Designing, Goal and Applications of Machine Learning, Examples of Machine Learning Problems, Need of Learning, Machine Intelligence

UNIT - II Machine Learning Techniques: (6 Hours)

Introduction to Machine Learning Techniques: Supervised Learning(SL) Vs Semi Supervised Learning(SSL) vs Unsupervised Learning(USL), Examples of SL, SS, and US Learning, how to choose Machine Learning Technique, Machine Learning Models, and Types, Examples: Linear based Models, Logic Based and Algebraic Models, Probabilistic Models

UNIT - III Classification: (6 Hours)

What is Classification?, Types: Naive Bayes Classifier, Decision Trees, Support Vector Machines, Rule based Classification, Backpropagation, Associative Classification, Classifier Accuracy Measures, Precision and Recall Measures.

UNIT - IV Regression: (6 Hours)

What is Regression? Types: Linear Regression, Logistic Regression, Classification vs Regression, Issues Regarding Classification, and Regression, Assessing performance of Regression, Predictor error measures, Applications of Supervised Learning.

UNIT - V Unsupervised Learning: **(6 Hours)**
Introduction to Clustering, Types: K Means Clustering Algorithm, Mixture Models, Hierarchical Clustering, Anomaly Detection, Neural Networks, Self-Organizing Map(SOM), Applications of Unsupervised Learning.

UNIT - VI **Trends in Machine Learning:** **(6 Hours)**
Ensemble methods for increasing accuracy: Bagging and Boosting, multitask learning, online learning and Sequence Prediction, Data Streams and Active Learning, Introduction to Deep Learning and Reinforcement Learning, Case Study: Latest Machine Learning Tools.

Term Work:

1. Distinguish between Supervised and Unsupervised Machine Learning.
2. Implement Linear and Nonlinear Learning models.
3. Implement Distance based Learning techniques.
4. Write study assignment to build tree based models.
5. Write study assignment to build rule based models.
6. WEKA: Tool for Machine Learning.
7. SCIKIT-LEARN: Tool for Machine Learning.
8. SHOGUN: Tool for Machine Learning.
9. ACCORD: Tool for Machine Learning.
10. Study assignment on Reinforcement Learning technique.

Assignment:

1. Distinguish between Learning and Designing with example.
2. Explain in detail Need of Machine Learning.
3. Explain in detail How to choose Machine Learning Algorithm.
4. Differentiate between different Machine Learning Models.
5. Explain in detail how Classification by Decision Tree Induction.
6. Explain in detail Support Vector Machine for Supervised Learning.
7. Distinguish between Classification and Regression with suitable example.
8. Demonstrate the use of Linear Regression for Supervised Machine Learning.
9. Implement K-Means Clustering Algorithm for Unsupervised Machine Learning.
10. Explain in detail Anomaly Detection.
11. What are the methods used to increase accuracy of machine learning algorithms? Explain.
12. Define Reinforcement Learning with example.

Text books:

1. Jiawei Han, Jian Pei, Micheline Kamber, "Data mining concepts and techniques", 3rd Edition.
2. K.P. Soman, R. Loganathan, V. Ajay, "Machine Learning with SVM and Other Kernel Methods"
3. Witten I.H. Author, "Data Mining Practical Machine Learning Tools and Techniques" 2nd Edition.
4. Peter Flach, Machine Learning: The Art and Science of Algorithms that Make Sense of Data",
Cambridge University Press, Edition 2012.
5. Hastie, Tibshirani, Friedman, "Introduction to Statistical Machine Learning with Applications in R", Springer, 2nd Edition-2012.

References:

2. C. M. Bishop, "Pattern Recognition and Machine Learning", Springer 1st Edition-2013.
3. Ethem Alpaydin, "Introduction to Machine Learning"

Syllabus for Unit Test:

Unit Test -1 UNIT – I, UNIT –II , UNIT –III.

Unit Test -2 UNIT – IV, UNIT – V, UNIT - VI

Image Processing and Pattern Recognition

TEACHING SCHEME:

Theory: 3 Hours / Week

Practical: 2 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60

Internal Assessment: 40

Term Work & Practical: 50

CREDITSALLOTTED:4

Theory: 03

TW& Practical: 01

Course Pre-requisites:

Set theory, Linear algebra and statistics, Computer Graphics and visualization, Signals and system, Digital signal processing.

Course Objectives:

- 1 Students should be able to understand digital image processing and advanced concepts.

- 2 Students should be able to properly implement algorithms using modern computing tools such as MATLAB, and to interpret and present the results.
- 3 To study fundamentals of colour Image Processing

Course Outcomes: Upon completion of the course student will able to

- 1 To explain the digital image processing and digital image formation.
- 2 To illustrate different mathematical preliminaries to deal with digital image processing
- 3 To explain the concept of Image restoration and image segmentation.
- 4 To apply the concept of pattern recognition and its different phases
- 5 To apply knowledge/ skills for solving real world problems.

UNIT – I Digital Image Fundamentals: (6 Hours)

Introduction, Fundamental steps and Components of Digital Image Processing, Image Sampling and Quantization: Basic concepts in Sampling and Quantization, Representing Digital images, Spatial and intensity resolution, Relationship between Pixels, Histogram Processing: Definition, Histogram Equalization,

UNIT – II Image Enhancement: (6 Hours)

Fundamentals of Spatial Filtering- The Mechanics of Spatial Filtering, Generating Spatial, Filter Masks, Noise Model, Smoothing Spatial Filters: Linear filters – Mean filters Non-linear (Order Statistic filters): Median, Mode, Max, Min filters, Image Enhancement by Frequency Domain Methods: Basic steps for Filtering in Frequency Domain, Frequency Domain low pass (Smoothing), High pass (Sharpening)

UNIT – III Image Compression and Segmentation: (6 Hours)

Fundamentals: Coding Redundancy, Spatial and temporal (Interpixel) Redundancy, Some Basic Compression Methods: Lossless Compression methods-Huffman coding, LZW coding, Fundamentals : Point , Line and Edge Detection, Line Detection, Edge Models, Basic Edge detection, Canny edge detector Thresholding : Foundation, Basic Global Thresholding, Optimal global thresholding, Multiple Thresholds.Region based segmentation: region growing, region splitting and merging.

UNIT – IV Morphological Image Processing and Color Image Processing: (6 Hours)

Morphological Image Processing, Preliminaries, Erosion and Dilation, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms: Boundary Extraction, Hole (Region) Filling, thinning, Color Image Processing: Color Fundamentals and Color Models Basics of Full-Color Image Processing, Color Transformations.

UNIT – V Basics of Pattern Recognition: (6 Hours)

Introduction and examples, Clustering vs. Classification; Supervised vs. unsupervised, Decision Boundaries, Decision region / Metric spaces/ distances, Object detection.

UNIT – VI Clustering and Classification: (6 Hours)

Bayes decision rule, Error probability, Linear Discriminates Function (equal covariance matrices)and non- Linear Decision Boundaries (unequal covariance matrices). Clustering: Basics of Clustering; similarity / dissimilarity measures; clustering criteria. Minimum within cluster distance criterion. K-means algorithm, K-medoids, DBSCAN-Density-based Spatial clustering of application

with Noise.

Term Work:

1. Display of Grayscale Images.
2. Write a MATLAB code that reads a gray scale image and generates the flipped image of original image.
3. To enhance contrast using Histogram Equalization
4. Write a program for image enhancement.
5. Write a program for image compression
6. Write a program for Edge detection
7. Write a program for image segmentation
8. Write a program for image morphology
9. Illustrate and discuss use of various method of pattern recognition.
10. Write a program for face detection in MATLAB.

Assignment:

1. Write and explain concepts of histogram processing.
2. Write and explain edge detection and Line detection.
3. Write in details about Filtering in Frequency Domain.
4. Write any two algorithms for segmentation.
5. Write in detail about colour image processing.
6. Write and explain concepts of object detection.

7. Write and explain K-means algorithm.
8. Write and explain DBSCAN.
9. Case study on radiographic images to reduce noise in image.
10. Case study on pattern recognition.

Text books:

1. Rafael C Gonzalez, Richard E Woods, "Digital Image Processing", Pearson Education ,2008.
2. S.Jayaraman, S Esakkirajan,T Veerakumar "Digital Image Processing", McGrawHill Publication,2009.
3. R.O.Duda, P.E.Hart and D.G.Stork, "Pattern Classification", John Wiley.

3. Anil K Jain, "Fundamentals of Digital Image Processing", PHI
4. B Chanda & Dutta Majumdar, "Digital Image Processing and Analysis", PHI
5. Rafael C Gonzalez, Richard E Woods, Eddins, "Digital Image Processing using MATLAB",Pearson Education

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Elective-IV a):Mobile Computing

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 3 Hours / Week	End Semester Examination: 60 Marks	Theory: 03
Practical: 2 Hours / Week	Internal Assessment: 40 Marks	TW & Practical: 01
	Term Work & Practical: 50 Marks	

Course Pre-requisites:

Computer Network , Fundamentals of Data Communication.

Course Objectives:

1. Understand the basic concept of mobile computing
2. Be familiar with network protocol stack
3. Learn the basics of mobile telecommunication
4. Develop system to be used in Ad-Hoc networks
5. Gain knowledge about different mobile platforms and application development

Course Outcomes: Upon completion of the course student will able to

1. Explain the basic of mobile telecommunication system
2. Choose the required functionality at each layer
3. Application identity solution for each functionality at each layer
4. Use similar tool and design Ad-hoc networks
5. Develop mobile application

UNIT - I Introduction: (6 Hours)

Mobile computing: mobile computing compared with wireless networking, mobile computing applications, characteristics of mobile computing, structure of mobile computing application: MAC protocol, wireless MAC issues, fixed assignment schemes, Random assignment schemes, and reservation based schemes.

UNIT - II Mobile Internet Protocol & Transport Layer: (6 Hours)

Overview of mobile IP, features of mobile IP, key mechanism in mobile IP, route optimization. Overview of TCP/IP, Architecture of TCP/IP, Adaption of TCP window, Improvement in TCP performance.

UNIT - III Mobile Telecommunication System: (6 Hours)

Global system for mobile communication (GSM), General packet radio service(GPRS),universal mobile telecommunication system(UMTS) Mobile technology generation, comparison between GMS vs UMTS vs 3G vs 4G vs 5G

UNIT - IV Mobile AD-HOC Network: (6 Hours)

Ad -Hoc basic concept, characteristic, Application, Design issues, Routing, Essential of traditional routing protocol, popular routing

protocol, vehicular Ad-hoc networks (VANET), MANET VS VANET-security.

UNIT - V Mobile Operating System & Application: (6 Hours)

Mobile device operating systems, special constraints & requirements, commercial mobile operating system, software development kit, iOS, iOS architecture, Android, Android architecture, How to develop application via Android, compiling & executing programs in Android, blackberry, window phone.

UNIT - VI Mobile Payment System using Mcommerce: (6 Hours)

Mcommerce- structure, pros & cons, mobile payment system, security issues, application issues, GSM mobility management administration.

Term Work:

1. Explain features of mobile IP & mechanism in mobile IP.
2. Explain comparison between GSM vs UMTS vs GPRS.
3. Explain comparison between 3G vs 4G vs 5G.
4. Develop small application in Android.
5. Develop small application in iOS.
6. Simulate the working of Android networking/Communication entities using software tools.

Assignment:

1. Discuss characteristics and applications of mobile computing
2. Explain structure of mobile computing application.
3. Describe TCP/IP architecture in detail.
4. Explain GPRS system with diagram.
5. Prepare a case study on Mobile OS : Android
6. Discuss in detail the implementation of TCP/IP stack in Mobile networks
7. Prepare a case study on MANET & VANET
8. Prepare a case study on Mobile OS : IOS
9. Prepare a case study on GSM architecture.

Elective – IV b): Design Patterns

TEACHING SCHEME:

Theory: 03 Hours / Week

Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Internal Assessment: 40 Marks

Term Work & practical: 50 Marks

CREDITS ALLOTTED:

Theory: 03

TW & Practical : 01

Course Pre-requisites:

Aware about basic java programming concepts.

Course Objectives:

1. To understand the concept of patterns and the catalog
2. To discuss the Presentation tier design patterns and their affect on: sessions, client access

Course Outcomes: Upon completion of the course student will able to

1. To demonstrate a thorough understanding of patterns and their underlying principles
2. To know what design pattern to apply to a specific problem
3. To demonstrate what tradeoffs need to be made when implementing a design pattern
4. To use design patterns for developing software.
5. To understand the variety of implemented bad practices related to the Business
6. To learn how to use design patterns to keep code quality high without overdesign.

UNIT - I Introduction To Design Patterns:

(6 Hours)

Introduction to design patterns: Design Pattern Definition, Strategy, Observer, Factory, Singleton, Command, Adapter, Facade, Template Method, Iterator, Composite, State, Proxy Design Patterns in Small Talk MVC, Describing Design Patterns, Organizing the Catalog, Solving of Design Problems using Design Patterns, Selection of a Design Pattern, use of Design Patterns.

UNIT - II Designing A Document Editor: (6 Hours)

Design problems, Document structure, Formatting, Embellishing the User Interface, Supporting Multiple Look and Feel standards, Supporting Multiple Window Systems, User Operations, Spelling Checking and Hyphenation.

UNIT - III Design Patterns Catalog: (6 Hours)

Creational Patterns, Abstract Factory, Builder, Factory Method, Prototype, Singleton. Discussion of Creational Patterns.

UNIT - IV Structural Patterns: (6 Hours)

Adapter, Bridge, Composite, Decorator, Façade, Flyweight, Proxy, Discuss of Structural Patterns

UNIT - V Behavioral Patterns: (6 Hours)

Behavioral Patterns- Chain of Responsibility Command, Interpreter, iterator, Mediator, Observer, State, Strategy, Template Method, Visitor, Discussion of Behavioral Patterns, Expectations from Design Patterns.

UNIT - VI Case Studies: (6 Hours)

The World Wide Web - a case study in interoperability, Air Traffic

Control – a case study in designing for high availability, Celsius Tech – a case study in product line development.

Term Work:

1. Review the engineering design for the part of the product that you must implement. (Engineering Design)
2. Create a new project for this assignment and create a package within the project named scoring.
3. Implement creational pattern.
4. Implement the Score interface. (Design Specifications)
5. Implement the Abstract Score class. (Design Specifications)
6. Implement the Leaf Score class. (Design Specifications)
7. Implement the Composite Score class. (Design Specifications)
8. Solve any two Design Problems using Design Patterns.

Assignment:

1. A journal on PCs would like to investigate some properties of different PCs, e.g. the price, performance, etc. The results need to be sorted in a list. There are several sorting algorithms for sorting all the PCs depending on specific characteristics. These sorting algorithms behave differently with respect to the time and space performance. Therefore, it is required to select and switch to a different sorting algorithm at run-time.

a) Which design pattern can be applied to fulfill these requirements?

b) Draw a class diagram that incorporates this pattern.

2. In the future it is expected that class Computer Equipment will be extended with additional operations. The present structure of computer equipment is assumed not to change. It is also not desired to 'pollute' all the existing component classes with new operations.

a) Which design pattern would be suitable for this problem?

3. Study on Template Method in design pattern
4. Study on Proxy Design Patterns in Small Talk MVC.
5. Solve the Design problems using design patterns.
6. Study on Behavioral pattern.

7. Designing a Document Editor for any system
8. Comparison of design pattern catalogs
9. Study of various structural patterns.
10. Case study on Interpretability.

Text books:

1. Gamma, Helm, Johnson, "Design Patterns: Elements of Reusable Object Oriented Software," PEA.
2. Eric Freeman, "Head First Design Patterns", Oreilly.

References:

1. Cooper "Java Design Patterns", Pearson.
2. Horstmann, "Object Oriented Design and Patterns", Wiley.
3. Ali Bahrami, "Object Oriented Systems Development", MCG.

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Elective-IV c):Network Management System

TEACHING SCHEME:

Theory: 3 Hours / Week
 Practical: 2 Hour / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks
 Internal Assessment: 40 Marks
 TW & Practical: 50 Marks

CREDITS ALLOTTED:

Theory: 03
 TW & Practical: 01

Course Pre-requisites:

Computer Network, Discrete Mathematics.

Course Objectives:

1. To help students to understand the principles of network management.
2. To provide knowledge about the various network management strategies and network management protocols.

Course Outcomes: Upon completion of the course student will able to

1. To understand network management architectures and protocols.
2. To gain knowledge about basic components of network management.
3. To gain the information about management communication patterns
4. To understand the protocols associated with network management
5. To gain the knowledge about remote monitoring
6. To understand network management metrics

UNIT - I Introduction to Network Management: (6 Hours)

Importance of network management, The Players: Different Parties with an Interest in Network Management, Case studies of Networking and Management, Challenges of Information Technology Managers, Current Status and future of Network Management,

The Network Operator's Arsenal:

Device Managers and Craft Terminals, Network Analyzers, Element Managers, Management Platforms , Collectors and Probes

UNIT - II The Basic Ingredients of Network Management: (6 Hours)

The Network Devices and its types with Configuration, The Management System, The Management Network, The Management Support Organization: Network Operations Center (NOC).

UNIT - III Management Communication Patterns: (6 Hours)

Layers of Management Interactions, Manager Initiated Interactions: Request and Response, Configuration Operations, Agent Initiated Interactions: Events and Event-Based Management.

UNIT - IV	<p>Common Management Protocols:</p> <p>SNMP (Simple Network Management Protocols): Classic and Perennial Favorite , SNMP Operations , SNMP Messages and Message Structure , SNMPv2/ SNMPv2c , SNMPv3, The SNMP Communication Model, Functional model, SNMPv2 Protocol, Major Changes in SNMPv2, SNMPv2 System architecture, SNMPv2 Structure of Management, Information, The SNMPv2 Management Information Base, SNMPv2 Protocol, Compatibility with SNMPv1.</p>	(6 Hours)
UNIT - V	<p>SNMP Management: RMON (Remote Monitoring):</p> <p>Remote Monitoring Basics, RMON SMI (Structure of Management Information) and Management Information Base (MIB), RMON1, RMON2, ATM Remote Monitoring, A Case Study of Internet Traffic Using RMON.</p> <p>Telecommunications Management Network(TMN):</p> <p>Fundamentals of TMN, TMN Conceptual Model, TMN Standards, TMN Architecture, TMN Management Service Architecture, An Integrated View of TMN, Implementation Issues.</p>	(6 Hours)
UNIT - VI	<p>Management Metrics: Assessing Management Impact and Effectiveness:</p> <p>Network Management Business Impact, Factors that Determine Management Effectiveness, Assessing Network Management Effectiveness.</p> <p>Web-Based Management:</p> <p>NMS with Web Interface and Web-Based Management, Web Interface to SNMP Management, Embedded Web-Based Management</p>	(6 Hours)

Term Work:

1. Installation and study of Packet Analyzer tool Wireshark.
2. Installation and study of Honeypots tool.
3. Installation and study of Ethereal tool.
4. Installation and study of Wi-Fi manager.
5. Installation and study of open source Network Management platform (Network Management Information System).
6. Installation and study of Icinga 2 (Open source network monitoring tool).
7. Installation and study of Zabbix.
8. Configure SNMP Protocol on Cisco Packet Tracer.
9. Configure VLAN on Cisco Packet Tracer.
10. Installation and study of Packet Sniffer.

Assignments:

1. Explain the significance of network management system.
2. Describe the components of network management.
3. Justify the role of device Managers and craft terminals in The Network Operator's Arsenal
4. Explain the layers of management interactions.
5. Illustrate SNMP Messages and Message Structure
6. Explain SNMP communication model
7. Explain the improvement in SNMPv2 over the SNMPv1
8. Explain the RMON (Remote Monitoring) with SMI (Structure of Management Information) and Management Information Base (MIB)
9. Describe the TMN (Telecommunications Management Network) architecture.
10. Explain the NMS(network management system) with the context of Web Interface and Web-Based Management

Text Books

1. Mani Subramanian, "Network Management: Principles and Practice", sixth edition Pearson Education.
2. Alexander Clemm, "Network Management Fundamentals "
3. D.C. Verma, "Principles of Computer Systems and network Management"
4. Morris, Network management, Pearson Education.

5. Mark Burges, Principles of Network System Administration, Wiley Dreamtech.

Reference Books

1. William Stallings, “SNMP, SNMPv2, SNMPv3, and RMON 1 and 2” third edition, Addison-Wesley Professional
2. William Stallings, “Foundations of Modern Networking: SDN, NFV, QoE, IoT, and Cloud”, Addison-Wesley Professional

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Elective – IV d): Parallel and Distributed Computing

TEACHING SCHEME:

Theory: 3 Hours / Week

Practical: 2 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Internal Assessment: 40 Marks

Term Work & Practical: 50 marks

CREDITS ALLOTTED:

Theory: 03

TW & Practical: 01

Course Pre-requisites:

C/C++/Java Programming Languages, Data Structures, Linux/Unix Operating System, Distributed Computing, Computer Organization.

Course Objectives:

To focus on the principles of parallel and distributed computing environment and the

implementation and performance issues associated with them.

Course Outcomes: Upon completion of the course student will able to

1. Ability to recite, explain and model the fundamental concepts and reasoning principles for parallel and distributed systems.
2. Ability to Identify and describe limitations and Challenges of Parallel and Distributed Systems.
3. Ability to adapt and apply the architectural models for various real time applications.
4. Ability to design, analyze algorithms for execution in parallel and distributed settings
5. Ability to report and account for models, limitations, and fundamental concepts in the area of message passing and shared memory concurrency, and apply this understanding to example systems and algorithms.
6. Ability to Outline and assess the significance of high performance computing and its impact in a Computer environment.

UNIT - I Fundamental of Parallel & Distributed Computing:

(6Hours)

Introduction to Parallel Processing Paradigms, Modeling and Characterizing Parallel Algorithms, Balanced Trees, Divide and Conquer, Partitioning, Combining, Language Categories and Parallel Programming Languages.

Introduction to Distributed Computing: Computation Model, Client-Server Systems, Peer to Peer Systems, Modularity, Message Passing, Messages on worldwide web.

UNIT - II Promises and Challenges of Parallel and Distributed Systems:

(6Hours)

Cost vs. Performance Evaluation, Software and General-Purpose PDC, Turing Machine as the Basis, and Consequences, Complexity Measures for Parallelism, Complexity Measures for Distributed Systems, Processing Technology, Networking Technology, Software Tools and Environments, Neural Networks and Complexity Issues, Tolerating Processor Failures in Synchronous Systems, Tolerating Processor Failures in Asynchronous Systems, Wait-Free Implementations of Shared Objects.

UNIT - III Parallel and Distributed Architectures:

(6Hours)

Computational Model, Engineering Model, RISC Architectures, Superscalar and VLIW Processors, SIMD-Processing: Concepts and Systems, MIMD Architectures: Shared and Distributed Memory Designs, Memory Hardware Technology, Memory System Architecture, User-Level Memory Models, and Memory Consistency Models.

UNIT - IV Algorithms & Data Structure for Parallel Programming:

(6Hours)

Arrays and Balanced Binary Trees, Linked Lists, Euler Tour vs. Parentheses String, Priority Queues (Heaps), Search Trees/Dictionaries, Impact of Data Distribution, CU/PE Overlap, Parallel Reduction Operations, Parallel Graph Algorithms, Parallel Computational Geometry.

UNIT - V Communication and its Framework:

(6Hours)

Message-Passing Model, Distributed Shared Memory Model, Message-Passing System: Desirable Features, Socket-Based Message Passing, p4, Parallel Virtual Machine, Message-Passing Interface(MPI), Separation of Data and Control Functions.

Directory-Based Cache Coherence, Shared Memory Consistency Models,

Distributed Memory Architectures, Basic Model: RMI, CORBA, DCOM, Comparison of the Three Paradigms.

UNIT - VI Applications, Tools & Technologies:

(6Hours)

HPC, Mixed-Mode Systems, Examples of Existing Mixed-Machine Heterogeneous Computing Systems, Overview of Clustering, Distinct Uses of Clusters, General-Purpose Parallel Computers, Optical Communication: Free-Space Interconnection, Considerations in Choosing the Interconnection Topology, Broadband Integrated Service Data Network (B-ISDN), Parallel and Distributed Computing Environment Over ATM, Parallelizing Compilers and Preprocessors, Performance Monitoring and benchmarking tools, Performance Visualization, Case Studies: Molecular Modeling, Genetic and Protein Sequence Data.

Term Work:

1. To implement a program that plays Conway's Game of Life. Conway's Game of Life is an example of discrete event simulation, where a world of entities live, die, or are born based on their surrounding neighbors. Each time step simulates another round of living or dying.
2. To implement parallel matrix multiply using Pthreads and evaluate the scalability of your implementation as you increase the problem size and the number of threads.
3. Client-server socket programs - To Design a multi-threaded server, using signals, and learning about the HTTP protocol.
4. To Study about CUDA. Implement a forest fire simulator using CUDA.
5. To Understand Locality, Load balancing, and Synchronization Effects using p-Threads.
6. To analyze the tradeoffs among different synchronization algorithms in terms of their latency, fairness, scalability, traffic, and storage requirements.
7. To understand the role of data communication using MPI as the message passing model. Setup the Environment and use the program of Gaussian Elimination.
8. To write a word count program on map-reduce framework.
9. To write a Jacobi Method to solve a system of linear equations using Map-reduce method.

Assignment:

1. To study about Hadoop Architecture.
2. To Study about Spark Architecture.
3. Prepare a case study on CUDA supporting Parallel programming and distributed application.
4. Case study on how to use Java-based TCP communication through a design of chat client and server program.
5. Case study on how to write a parallel-computing application using MPI Java
6. Case study on MPI
7. Note on comparing RMI and mobile agents in terms of programmability and performance.
8. Case study on design and implementation of a very simple distributed file system.
9. Prepare a presentation and case study on A Modern Multi-Core Processor: Forms of Parallelism + Understanding Latency and BW
10. Prepare a presentation and case study on Workload-Driven Performance

Text Books:

- 1) "Parallel and Distributed Computing: A Survey of Models, Paradigms and Approaches", A Wiley-Interscience publication, Volume 12 of Wiley Series on Parallel and Distributed Computing, Claudia Leopold, 0471358312, 9780471358312.

4. Jacek Błażewicz, Klaus Ecker, Brigitte Plateau, Denis Trystram, "Handbook on Parallel and Distributed Processing, International Handbooks on Information Systems", Springer Science & Business Media, 2013, 3662043033, 9783662043035

Syllabus for Unit Test:

Unit Test -1 UNIT – I, UNIT – II, UNIT - III

Unit Test -2 UNIT – IV, UNIT – V, UNIT - VI

Data Mining and Knowledge Discovery

TEACHING SCHEME:

Theory: 3 Hours / Week

Practical: 2 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 60 Marks

Internal Assessment: 40 Marks

Term Work & Practical: 50 Marks

CREDITS ALLOTTED:

Theory: 03

TW & OR : 01

Course Pre-requisites:

Knowledge of Statistics, Database Management System.

Course Objectives:

1. Identify the scope and necessity of Data Mining & Warehousing for the society.
2. Describe the designing of Data Warehousing so that it can be able to solve the root problems.
3. Understand various tools of Data Mining and their techniques to solve the real time problems.
4. Develop ability to design various algorithms based on data mining tools.

Course Outcomes: Upon completion of the course student will able to

1. Define, describe, and clearly state the objectives of Knowledge Discovery and Data Mining.
2. Describe data mining algorithms
3. Suggest appropriate solutions to data mining problems
4. Analyze data mining algorithms and techniques
5. Identify and or develop software to execute the specified algorithm(s)/data mining technique(s)
6. Identify and distinguish data mining applications from other IT applications

UNIT - I **Introduction to Knowledge Discovery and Data Mining: (6 Hours)**

Data mining fundamentals, Classification of Data mining systems, Integration of Data mining system with Data warehouse, Data Preprocessing, KDD Fundamentals, KDD Process, Data clearing, Data integration and transformation, Data Reduction, Data mining Statistics.

UNIT - II	OLAP: Characteristics of OLAP system, Multidimensional view and data cube, Data Cube implementations and operations, Difference between OLAP, OLTP and OLAP Server-ROLAP, MOLAP, HOLAP Queries.	(6 Hours)
UNIT - III	Association Rule Mining: Introduction, The Task and Naive Algorithm, Apriori Algorithm, Improving the efficiency of Apriori algorithm, Direct hashing and pruning (DHP), Dynamic Item set counting (DIC), Mining frequent patterns without candidate generation (FP Growth).	(6 Hours)
UNIT - IV	Classification: Decision Tree, The Tree Induction Algorithm, Split algorithms based on information theory, Split Algorithm based on Gini Index, Decision tree Rule,	(6 Hours)
UNIT - V	Knowledge discovery: Introduction, KDD Process KDD process steps, Models, Integration of KDD with Database system, KDD system architecture, KDD Lifecycle,	(6 Hours)
UNIT - VI	Clustering: Cluster analysis, Categorization of major clustering methods such as Partitioning methods, Hierarchical methods, Density based methods, grid based methods, Model based clustering methods, clustering high dimensional data, Constraint based analysis, Data mining applications	(6 Hours)

Term Work:

1. Implementing Web document browsing a OLAP using existing ontologies.
2. Show the implementation of Naïve Bayes algorithm.
3. Demonstration of Association rule process on any dataset using apriori algorithm.
4. Case Study: How New York's Fire Department Uses Data Mining
5. Comparison of various data mining tool
6. Implementation/usage of WEKA for classification of social network dataset
7. Implementation/usage of k-nearest neighbor classifier
8. Find predominant themes in a collection of documents (clustering).
9. Clustering images based on feature localization.
10. Case Study on Data mining applications.

Assignment:

1. Explain Data mining Tasks, Issues, Evaluation and Terminologies.

2. Implementation of various KDD models.
3. Define hypercube? How do they apply in OLAP system?
4. State Codd's guidelines for OLAP system?
5. Case study on OLAP.
6. Apply Apriori algorithm to the dataset from Table 13.1 (textbook) and extract all frequent itemsets with support count ≥ 3 . For one longest itemset construct association rules using confidence threshold 50%. Show all your work (candidates, frequent itemsets, etc.).
7. List and explain Association rule mining algorithms in detail.
8. Implementation of Data Cube.
9. Compare various clustering algorithm.
10. Case Study :clustering algorithm

Text books:

1. Jiawei Han & Micheline Kamber, "Data Mining – Concepts and Techniques",Morgan Kaufmann Publishers, Elsevier,2nd Edition, 2006.
2. ",Pang-Ning Tan, Michael Steinbach and Vipin Kumar "Introduction to Data Mining, Pearson education.

References:

1. Arun K Pujari, "Data Mining Techniques",2nd edition, Universities Press.
2. Sam Aanhory & Dennis ,"Data Warehousing in the Real World",Murray Pearson Edn Asia.
3. K.P.Soman,S.Diwakar,V.Ajay, "Insight into Data Mining",PHI,2008.
4. Paulraj Ponnaiah, "Data Warehousing Fundamentals ",Wiley student Edition.

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Project Stage-II

TEACHING SCHEME:

Practical: 16 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: 150 Marks

CREDITS ALLOTTED:

Term Work & Oral: 08

Course Pre-requisites:

Basics of Software engineering, software testing and knowledge of core computer engineering subjects.

Course Objectives:

- To develop problem solving abilities using mathematics.
- To apply algorithmic strategies while solving problems.
- To prepare software engineering documents and design test cases.
- To demonstrate use of algorithmic solutions in real time problem.
- To encourage and expose students for participation in National/ International paper presentation activities.
- Exposure to Learning and knowledge access techniques using Conferences, Journal papers and participation in research activities.

Course Outcomes: Upon completion of the course student will able to

- I. Understand how to solve the problem.
- II. Demonstrate the ability to synthesize complex information from a variety of sources in decision-making
- III. Plan and perform collaboratively towards a common purpose.
- IV. Demonstrate self-advocacy skills and self-reliant behavior.
- V. Demonstrate the ability to develop and maintain satisfying interpersonal relationships.
- VI. Evaluate and conclude the results with documentation.

1. The project will be undertaken preferably by a group of at least 3- 4 students who will jointly work and implement the project over the academic year. The work will involve the design of a system or subsystem in the area of Computer Engineering.

2. If the project is chosen a hardware project it will involve the designing a system –subsystem or upgrading an existing system. The design must be implemented into a working model with necessary software interfacing and a user manual.

3. If the project is chosen in the pure Software Application it must involve the detail Software Design Specifications, Data Structure Layout, File Design, Testing with complete documentation and user interface. With life cycle testing and as an executable package.

The group will submit at the end of Semester-VIII,

- i) The workable project.
- ii) The details of Research paper published in National/ International paper conferences/journals for the project work carried out.
- iii) Project Report in the form of bound journal complete in all aspects, 3 copies for the institute and 1 copy of each student in the group for certification.

The examiner in consultation with the guide will assess the term work.

Oral examination will be based on the project work completed by the candidate.

The project report will contain the following details:

1. Problem definition and requirement specification, acceptance tests procedure (ATP).
2. System definition, requirement analysis.
3. System design.
4. System implementation-code documentation –dataflow diagram / algorithm.
5. Test results and procedure, test report as per ATP.
6. Platform choice, use.
7. Appendix tools used, references.
8. Documentation will use UML approach with Presentation, Category, Use Case, Class Diagrams, etc.

BHARATI VIDYAPEETH (Deemed to be University)
COLLEGE OF ENGINEERING, PUNE-43
B. Tech. (Computer Science & Business Systems)

Vision of the Department

“To syndicate industry and institute to impart high quality knowledge through scholarship, research and creative endeavor”

Mission of the Department

- To impart contemporary technology conforming to a dynamic curriculum.
- To engage in professional development and scholarly endeavor through knowledge of common business principles.
- To promote the awareness of business discipline and ethical responsibility through industry alliance

Programme Educational Objectives

1. Prevail technical competency to concord the industry engrossment.
2. Assimilate business management skills.
3. Instigate business level innovation with societal consideration.

Programme Outcomes

The students of B.Tech (Computer Science & Business Systems) will be able to

- a. Demonstrate logical and programming skills through comprehensive programming foundation.
- b. Apply knowledge of mathematics, computer engineering and basic science to comprehend and solve real world problems.
- c. Develop software applications and processes for complex problems to provide efficient solutions by assessing its environmental, social and ethical constraints.
- d. Investigate and solve complex computing problems with alternate solutions.
- e. Use functional skills of modern IT tools and techniques for engineering activities.
- f. Understand the social and cultural impact of computing on society.
- g. Provide optimized computational solutions that apprehend the societal and environmental aspects.
- h. exhibit the professional, ethical and legal responsibilities related to industry.
- i. Perform as an individual and efficient team player to accomplish a goal.
- j. Present professional concepts through effective communication skills and documentation.
- k. Demonstrate management skills for developing time-bound projects within the available budget and resources.
- l. Develop the ability of life long learning for new IT practices.

Syllabus of Semester I

Mathematics I

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hrs./Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1Hr./Week	Continuous Assessment: 40 marks	
Lab: Nil	Term Work: Nil	

Course Pre Requisites:

The students should have basic Knowledge of high school math, including trigonometry, geometry and calculus

Course Objective:

The course introduces fundamental concepts of Calculus and Discrete Mathematics.

Course Outcomes:

- 1) Evaluate double integral and triple integral to compute area, volume for two dimensional and three-dimensional solid structure.
- 2) Understand and apply basic concepts of Boolean algebra.
- 3) To recall the basic concepts of sets, functions and relations.
- 4) Develop fundamental understanding of Elementary Combinatory.
- 5) Understand various concepts of algebraic systems.
- 6) Student will be able to prove mathematical statements using induction method.

Topics to Be Covered:

UNIT – I

[6 Hours]

Calculus: Differential calculus and integral calculus, double and triple integral.

UNIT – II

[6 Hours]

Application of double and triple integral.

UNIT – III

[6 Hours]

Boolean algebra: Introduction of Boolean algebra, truth table.

UNIT – IV

[6 Hours]

Basic logic gate, basic postulates of Boolean algebra, principle of duality, canonical form, Karnaugh map.

UNIT – V

[6 Hours]

Abstract algebra: Set, relation, group, ring, field.

UNIT – VI

[6 Hours]

Combinatorics: Basic counting, balls and bins problems, generating functions, recurrence relations. Proof techniques, principle of mathematical induction, strong form of induction, pigeonhole principle.

Home Assignments:

Assignments & tutorials covering the following: Successive differentiation, multiple integral, truth table, Karnaugh map, principle of mathematical induction, strong form of induction and pigeonhole principle.

Reference Books:

1. I. N. Herstein, “Topics in Algebra”, John Wiley and Sons.
2. M. Morris Mano, “Digital Logic & Computer Design”, Pearson
3. B. S. Grewal, “Higher Engineering Mathematics”, Khanna Publication, Delhi.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Statistics I

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hrs/Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1Hr/Week	Continuous Assessment: 40 marks	
Lab: Nil	Term Work: Nil	

Course Pre-Requisites:

The students should have basic Knowledge of high school math and calculus

Course Objective:

The course introduces fundamental concepts of statistics and probability

Course Outcomes:

Course outcomes of Statistics-I

- 1) Students will be able to use appropriate statistical terms to describe data.
- 2) Students will be able to use appropriate statistical methods to collect, organize, display and analyze relevant data
- 3) Students will be able to identify the types of sampling.
- 4) Students will be able to understand mathematical expectation and moments generating function.
- 5) Students will be able to apply concepts of various probability distributions to find probabilities.
- 6) Students will be able to apply concepts of Normal, Poisson, Binomial, uniform, exponential, t and F-distribution.

Topics to Be Covered:

UNIT – I

[6 Hours]

Introduction to Statistics: Definition of Statistics. Basic objectives. Applications in various branches of science with examples

Collection of Data: Internal and external data, Primary and secondary Data. Population and sample, Representative sample.

UNIT – II

[6 Hours]

Descriptive Statistics: Classification and tabulation of univariate data, graphical representation, Frequency curves. Descriptive measures - central tendency and dispersion. Bivariate data. Summarization, marginal and conditional frequency distribution. Scatter diagram. Linear regression and correlation. Least squares method. Rank correlation.

UNIT III

[6 Hours]

Sampling Techniques: Random sampling. Sampling from finite and infinite populations. Estimates and standard error (sampling with replacement and sampling without replacement), Sampling distribution of sample mean, stratified random sampling

UNIT – IV

[6 Hours]

Expected values & moments: mathematical expectation & its properties, Moments (including variance) & their properties, interpretation, Moment generating function

UNIT – V

[6 Hours]

Probability Theory: concept of experiments, sample space, event. Definition of Combinatorial Probability. Conditional Probability, Bayes Theorem

UNIT – VI

[6 Hours]

Probability distributions: discrete & continuous distributions, Binomial, Poisson & Geometric distributions, Uniform, Exponential, Normal, Chi-square, t, F distributions

Home Assignments:

Problem sets to be shared by faculty covering the following topics:

Graphical representation of data, Histograms, Descriptive measures - central tendency and dispersion Estimating moments, Distribution parameters, Simulation

Text Books:

1. Introduction of Probability Models, S.M. Ross, Academic Press, N.Y.
2. Fundamentals of Statistics (vol. I and vol. II) - A. Goon, M. Gupta and B. Dasgupta.

Reference Books:

1. A first course in Probability, S.M. Ross.
2. Probability and Statistics for Engineers (4th Edition) - I.R. Miller, J.E. Freund and R. Johnson.
3. Statistical Concepts & Methods - G.K. Bhattacharyya and R.A. Johnson.
4. Introduction to the Theory of Statistics - A.M. Mood, F.A. Graybill & D.C. Boes.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Principles of Electrical Engineering

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	Theory: 3 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work and Oral: 50 Marks	TW and Oral :1 Credit

Course Pre-requisites:

The Students should have knowledge of Mathematics, physics

Course Objectives:

The course introduces fundamental concepts of DC and AC circuits, Electrostatics electromagnetism, transformer, electrical wiring.

Course Outcomes: After learning this course the students will be able to

1. Apply knowledge of basic concepts of work, power, energy for electrical, mechanical and thermal systems
2. Calculate current in electrical network using Kirchoff's laws and network theorems.
3. Describe construction, principle of operation, specifications and applications of capacitors and batteries
4. Define basic terms of single phase and three phase ac circuits and supply systems.
5. Describe and apply fundamental concepts of magnetic and electromagnetic circuits for operation of single phase transformer.
6. Describe types of wiring and earthing system.

Topics to Be Covered:

UNIT – I

[4 Hours]

Basic Concepts: Concept of EMF, Potential Difference, current, resistance, Ohms law, resistance temperature coefficient, SI units of Work, power, energy. Conversion of energy from one form to another in electrical, mechanical and thermal systems

UNIT – II

[8 Hours]

Network Theorems: Voltage source and current sources, ideal and practical, Kirchoff's laws and applications to network solutions using mesh analysis, Simplifications of networks using series-parallel, Star/Delta transformation. Superposition theorem, Thevenin's theorem, Max Power Transfer theorem.

UNIT III

[4 Hours]

Electrostatics: Electrostatic field, electric field intensity, electric field strength, absolute permittivity, relative permittivity, capacitor composite, dielectric capacitors, capacitors in series & parallel, energy stored in capacitors, charging and discharging of capacitors, Batteries-Types, Construction & working.

UNIT – IV

[6 Hours]

AC Fundamentals & AC Circuits: AC waveform definitions, form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar & rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3-ph balanced AC Circuits.

UNIT – V

[8 Hours]

Magnetic Circuits & Transformer: Magnetic effect of electric current, cross and dot convention, right hand thumb rule, concept of flux, flux linkages, Flux Density, Magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability, Ampere's law, B-H curve, hysteresis loop, series-parallel magnetic circuit, composite magnetic circuit, Comparison of electrical and magnetic circuit

Faraday's law of electromagnetic induction, statically and dynamically induced emf, self-inductance, mutual inductance, coefficient of coupling,

Single phase transformer construction, principle of operation, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Determination of Efficiency & Regulation by direct load test.

UNIT – VI

[6 Hours]

Electrical Wiring and Illumination system: Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED), Introduction to measuring devices/sensors and transducers related to electrical signals, Elementary methods for the measurement of electrical quantities in DC and AC systems and their practical application. :

Term Work: The term work shall consist of record of minimum eight exercises / experiments.

1. Determination of resistance temperature coefficient
2. Verification of Superposition Theorem
3. Verification of Thevenin's Theorem
4. Verification of Kirchoff's Laws
5. Verification of Maximum power transfer Theorem

6. Time response of RC circuit
7. Study of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$ & $X_L = X_C$
8. Verification of current relations in three phase balanced star and delta connected loads.
9. Direct loading test on Single phase transformer
 - a) Voltage and current ratios.
 - b) Efficiency and regulations.
10. Study of a Residential (L.T.) Bill

Text Books:

1. B.L. Theraja- “A Textbook of Electrical Technology” Volume- I, S.Chand and Company Ltd.,New Delhi
2. V. K. Mehta, - “Basic Electrical Engineering”, S. Chand and Company Ltd., New Delhi
3. I. J. Nagrath and Kothari – “Theory and problems of Basic Electrical Engineering”, Prentice Hall of India Pvt. Ltd

Reference Books:

1. Edward Hughes – “Electrical Technology”- Seventh Edition, Pearson Education Publication
2. H. Cotton – “Elements of Electrical Technology”, C.B.S. Publications
3. John Omalley Shawn – “Basic circuits analysis” Mc Graw Hill Publications
4. Vincent Del Toro – “Principles of Electrical Engineering”, PHI Publications

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Fundamentals of Computer Science

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hrs./Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1Hr/Week	Continuous Assessment: 40 marks	
Lab: 2Hrs./Week	Term work & Practical: 50 Marks	TW and Practical :1 Credit

Course Pre-Requisites:

Knowledge of Class XII level computers will be helpful, but not mandatory.

Course Objective:

The course introduces fundamental concepts of computer science

Course Outcomes:

1. Understand the basics of computer science & the process of moving from a problem statement to a computational formulation of a method for solving the problem.
2. Apply the basic concepts of control structures.
3. Understand basic concepts of function.
4. Implement concept of arrays and pointers.
5. Develop an application using the concept of file handling.
6. Describe unix system interface and programming method.

Topics to Be Covered:

UNIT – I

[6 Hours]

General problem Solving concepts and Imperative languages: Algorithm, and Flowchart for problem solving with Sequential Logic Structure, Decisions and Loops.

Imperative languages: Introduction to imperative language; syntax and constructs of a specific language (ANSI C) .**Types Operator and Expressions with discussion of variable naming and Hungarian Notation:** Variable Names, Data Type and Sizes (Little Endian Big Endian), Constants, Declarations, Arithmetic Operators, Relational Operators, Logical Operators, Type Conversion, Increment Decrement Operators, Bitwise Operators, Assignment Operators and Expressions, Precedence and Order of Evaluation, proper variable naming and Hungarian Notation

UNIT – II

[6 Hours]

Control Flow with discussion on structured and unstructured programming: Statements and Blocks, If-Else-If, Switch, Loops – while, do, for, break and continue, Goto Labels, structured and un- structured programming

UNIT – III

[6 Hours]

Functions and Program Structure with discussion on standard library: Basics of functions, parameter passing and returning type, C main return as integer, External, Auto, Local, Static, Register Variables, Scope Rules, Block structure, Initialization, Recursion, Preprocessor, Standard Library Functions and return types

UNIT – IV

[6 Hours]

Pointers and Arrays: Pointers and address, Pointers and Function Arguments, Pointers and Arrays, Address Arithmetic, character Pointers and Functions, Pointer Arrays, Pointer to Pointer, Multi-dimensional array and Row/column major formats, Initialisation of Pointer Arrays, Command line arguments, Pointer to functions, complicated declarations and how they are evaluated.

UNIT – V

[6 Hours]

Structures: Basic Structures, Structures and Functions, Array of structures, Pointer of structures, Self-referral Structures, Table look up, Typedef, Unions, Bit-fields

Input and Output: Standard I/O, Formatted Output – printf, Formated Input – scanf, Variable length argument list, file access including FILE structure, fopen, stdin, sdtout and stderr, Error Handling including exit, perror and error.h, Line I/O, related miscellaneous functions

UNIT – VI

[6 Hours]

Unix system Interface: File Descriptor, Low level I/O – read and write, Open, create, close and unlink, Random access – lseek, Discussions on Listing Directory, Storage allocator

Programming Method: Debugging, Macro, User Defined Header, User Defined Library Function, makefile utility.

Home Assignments:

1. Algorithm and flowcharts of small problems like GCD
2. Structured code writing with:
 - i. Small but tricky codes
 - ii. Proper parameter passing
 - iii. Command line Arguments
 - iv. Variable parameter
 - v. Pointer to functions

- vi. User defined header
- vii. Make file utility
- viii. Multi file program and user defined libraries
- ix. Interesting substring matching / searching programs
- x. Parsing related assignments

Text Books:

- 1. B. W. Kernighan and D. M. Ritchi, “The C Programming Language”, Second Edition, PHI.
- 2. B. Gottfried, “Programming in C”, Second Edition, Schaum Outline Series.

Reference Books:

- 1. Herbert Schildt, “C: The Complete Reference”, Fourth Edition, McGraw Hill.
- 2. Yashavant Kanetkar, “Let Us C”, BPB Publications.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Fundamentals of Physics

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hrs. /Week	Semester Examination: 60 marks	Theory: 3 Credits
Tutorials: Nil	Continuous Assessment: 40 marks	
Lab: 2 Hrs. / Week	Term Work and Oral : 50 marks	TW and Oral :1 Credit

Course Pre-Requisites:

Knowledge of Class XII level Physics and Mathematics

Course Objective:

The course introduces fundamental concepts of physics

Course Outcomes:

1. To understand the Importance of applications of Applied Physics in daily life
2. To provide students with a basic understanding of the Physics that may be required by engineers in the course of their careers
3. To impart knowledge related to the importance of EM waves and magnetic materials
4. To enhance knowledge related to lasers and its different components to make it suitable for various purposes
5. To introduce most important concepts of superconductivity, crystallography and fiber optics to the students
6. To introduce the learners to the basics of Special theory of relativity, X- rays, Quantum Mechanics

Topics to Be Covered:

UNIT – I

[6 Hours]

Oscillations: Periodic motion-simple harmonic motion-characteristics of simple harmonic motion-vibration of simple springs mass system. Resonance-definition., damped harmonic oscillator – heavy, critical and light damping, energy decay in a damped harmonic oscillator, quality factor, forced mechanical and electrical oscillators

UNIT – II

[6 Hours]

Classical Optics: Theory of interference fringes-types of interference-Fresnel’s prism-Newton’s rings, Diffraction-Two kinds of diffraction-Difference between interference and diffraction-Fresnel’s half period zone and zone plate-Fraunhofer diffraction at single slit-plane diffraction grating. Temporal and Spatial Coherence, Polarization - Concept of production of polarized beam of light from two SHM acting at right angle; plane, elliptical and circularly polarized light, Brewster’s law, double refraction.

UNIT – III

[6 Hours]

Quantum Physics: Introduction - Planck's quantum theory- Matter waves, de-Broglie wavelength, Heisenberg's Uncertainty principle, time independent and time dependent Schrödinger's wave equation, Physical significance of wave function, Particle in a one dimensional potential box, Heisenberg Picture.

UNIT – IV

[6 Hours]

X-ray & Crystallography: Crystallography - Basic terms-types of crystal systems, Bravais lattices, miller indices, d spacing, Debye Scherrer powder method, laue method- Atomic packing factor for SC, BCC, FCC and HCP structures. Semiconductor Physics - conductor, semiconductor and Insulator; Basic concept of Band theory

UNIT – V

[6 Hours]

Modern Optics: Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: Ruby Laser, CO₂ and Neodymium lasers; Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, laser speckles, applications of lasers in engineering. Fiber optics and Applications, Types of optical fibers

UNIT – VI

[6 Hours]

Thermodynamics: Zeroth law of thermodynamics, first law of thermodynamics, determination of J by Joule's method, Applications of first law, heat engines, Carnot's cycle and Carnot's engine, second law of thermodynamics, entropy, change in entropy in reversible and irreversible processes, third law of thermodynamics.

Home Assignments:

Problems based on Newton rings, Michelson interference, young double slit

Laboratory

- 1) Magnetic field along the axis of current carrying coil – Stewart and Gee
- 2) Determination of Hall coefficient of semiconductor
- 3) Determination of Plank constant
- 4) Determination of wave length of light by Laser diffraction method
- 5) Determination of wave length of light by Newton's Ring method
- 6) Determination of laser and optical fiber parameters
- 7) Determination of Stefan's Constant.

Text Books:

1. Halliday, Resnic and Walker, Fundamentals of Physics, 9th Ed., John Wiley, 2011.
2. Beiser A, Concepts of Modern Physics, 5th Ed., McGraw Hill International, 2003.

3. Ajoy Ghatak, Optics, 5th Ed., Tata McGraw Hill, 2012
4. University Physics-Sears & Zemansky (Addison-Wesley)

Reference Books:

1. Basic Engineering Physics-Amal Chakraborty (Chaya Prakashani Pvt. Ltd.)
2. Basic Engineering Physics-I -Sujoy Bhattacharya, Saumen Paul (TMH)

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Business Communication & Value Science – I

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 2Hr./Week	Semester Examination: 50 marks	Theory: 3 Credits
Tutorials: 1 Hr. / Week	Continuous Assessment: No	
Lab: 2 Hrs. / Week	Term Work and Oral: 50 marks	TW and Oral :1 Credit

Course Pre-Requisites:

1. Basic communication in tenses (past, present, future).
2. Awareness of common words (adjectives used in daily verbal communication).
3. Basic idea of sentence formation and thereby paragraph building and writing.
4. Communication according to daily and varied contextual scenarios.
5. Basic communication model/channel (sender, receiver and feedback), Active and passive listening skills.
6. Basic social etiquettes and knowledge of group work and communication that will enhance their professional growth.

Course Objective:

The course aims to augment student's overall communication and interpersonal skills by engaging them in group activities and thus aid in helping them to emerge as professionals. The English language topics for this semester focus on the development of basic fluency in English, usage of words and also introduce them to the concept and importance of interpersonal skills so as to effectively present their personalities.

Course Outcomes:

1. Speak fluently in English without errors in tenses and hence present themselves as effective English communicators. They will be able to learn the 12 tenses and use them appropriately.
2. Differentiate between active and passive vocabulary and be able to use the 60 words discussed in class for their daily conversation and 40 words also given as assignments.
3. The ability to process their ideas and thoughts (verbal communication) into written communication in an effective, coherent and logical manner within a stipulated time and specific word limit of 100-150 words for paragraph writing.
4. Present them in a certain manner by using the 50-55 phrases discussed in class appropriately for group discussions, personal interviews during the campus recruitment process/competitive exams.
5. Enhance their communication skills by acquainting with the 2 important aspects of communication and helping them to overcome the 10 most common barriers of communication. Learn the 7 different types of listening skills; differentiate effective listening skills and understand the importance of it through 5 activities held in class and implement them in professional life.

6. Understand the importance of team work, team motivation and effective team communication for further implementation in the corporate life. They should also be able to identify concretely between team and group dynamics.

Topics to Be Covered:

UNIT – I [6 Hours]

Essential Grammar – I: Tenses: Basic forms and use, sentence formation (general & Technical), Common errors, Parts of speech through context, Direct and reported speech structures and voices.

UNIT – II [6 Hours]

Vocabulary Enrichment: Exposure to words from General Service List (GSL) by West, Academic word list (AWL) technical specific terms related to the field of technology, phrases, idioms, significant abbreviations formal business vocabulary

Phonetic: Pronunciation, Reduction of MTI in spoken English, Question formation with emphasis on common errors made during conversation

UNIT – III [6 Hours]

Written Communication – I: Letter Writing –Formal and Informal letter writing, Application letters, Report writing academic and business report, Job application letter

UNIT – IV [6 Hours]

Communication Skills: Importance of effective communication, types of communication- verbal and non - verbal, barriers of communication, effective communication, Listening Skills: Law of nature- Importance of listening skills, Difference between listening and hearing, Types of listening.

UNIT – V [6 Hours]

Self - Awareness & Self Development: Self - Assessment, Self - Appraisal, SWOT, Goal setting - Personal & career- Self-Assessment, Self-Awareness, Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Self-Esteem, Self - appraisal, Personal Goal setting, Career Planning, Personal success factors, Handling failure, Depression and Habit, relating SWOT analysis & goal setting, and prioritization

Socio-Cultural and Cross-Cultural Sensitivities at the Workplace: What is Inclusion? Women's contributions in Industry, work issues faced by women, what is sexual harassment, what is appropriate behavior for everyone at work

UNIT – VI [6 Hours]

Interpersonal Skills – I: Team work, Team effectiveness, Group discussion, Decision making - Team Communication. Team, Conflict Resolution, Team Goal Setting, Team Motivation Understanding Team Development, Team Problem Solving, Building the team dynamics. Multicultural team activity

Time Management: The Time management matrix, apply the Pareto Principle (80/20 Rule) to time management issues, to prioritize using decision matrices, to beat the most common time wasters, how to plan, how to handle interruptions, to maximize your personal effectiveness, how to say “no” to Time wasters

Values of a good manager: Understanding Corporate Values and behavior; Personal / Human Values; Pride and grace in Nationalist

Text Books:

1. Business Communication – Dr. Saroj Hire math
2. English vocabulary in use – Alan McCarthy and O’Dell

There will be handouts and reference links shared.

Reference Books

1. Strategic Writing by Charles Marsh
2. The Seven Basic Plots by Christopher Booker

BHARATI VIDYAPEETH (Deemed to be University)

COLLEGE OF ENGINEERING, PUNE-43

B. Tech. (Computer Science & Business Systems)

Syllabus of Semester II

Mathematics II

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hrs./Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1Hr./Week	Continuous Assessment: 40 marks	
Lab: Nil	Term Work: Nil	

Course Pre-Requisites:

The students should have basic Knowledge of high school math, Boolean algebra and calculus.

Course Objective:

To develop ability to use the mathematical techniques, skills, and tools necessary for computer science.

Course Outcomes:

At the end of the course, a student will be able to:

- 1) Apply knowledge of basics of Matrices, Determinants.
- 2) Solve the consistency of any type of systems
- 3) Describe Vector space, Orthogonality and Projection.
- 4) Apply methods Gram-Schmidt orthogonalization and QR decomposition.
- 5) Calculate Eigenvalues and Eigenvectors.
- 6) Describe Singular value decomposition and Principal component analysis.

Topics to Be Covered:

UNIT – I

[6 Hours]

Introduction to Matrices and Determinants, Solution of Linear Equations, Cramer's rule, Inverse of a Matrix.

UNIT – II

[6 Hours]

Vectors and linear combinations, Rank of a matrix, Gaussian elimination, LU Decomposition, Solving Systems of Linear Equations using the tools of Matrices.

UNIT – III

[6 Hours]

Vector space, Dimension, Basis, Orthogonality, Projection.

UNIT – IV

[6 Hours]

Gram-Schmidt orthogonalization and QR decomposition.

UNIT – V

[6 Hours]

Eigenvalues and Eigenvectors, Positive definite matrices, Linear transformations, Hermitian and Unitary matrices.

UNIT – VI

[6 Hours]

Singular value decomposition and Principal component analysis, Introduction to their applications in Image Processing and Machine Learning.

Home Assignments:

Assignments & tutorials covering the following: Vectors and linear combinations, Matrices, Determinants, Linear transformations, Complete solution to $AX=b$, Eigenvalues and Eigenvectors.

Text Book:

1. B. S. Grewal, “Higher Engineering Mathematics”, Khanna Publication, Delhi.

Reference Books:

1. Advanced Engineering Mathematics, 7e, by Peter V. O'Neil.
2. Advanced Engineering Mathematics, 2e, by M. D. Greenberg, Pearson Education.
3. Introduction to linear algebra, 5th Edition, Gilbert Strang.
4. Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar, Pune Vidyarthi Griha Prakashan, Pune.
5. Digital Image Processing, R C Gonzalez and R E Woods.
6. <https://machinelearningmastery.com/introduction-matrices-machine-learning/>

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Statistics II

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hrs/Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1Hr/Week	Continuous Assessment: 40 marks	
Lab: Nil	Term Work: Nil	

Course Pre-requisites:

Basic of statistics and probability, Basic programming experience (in any language)

Course Objective:

The course introduces fundamental concepts of linear statistical models, estimation methods, hypothesis testing and fundamental concepts of programming in R

Course Outcomes:

The students completing this course will be able to

1. Understand the basic concepts of Statistical Inference,
2. Understand the basic concepts of Estimation methods,
3. Understand the basic concepts of Hypothesis Testing
4. Understand the basic concepts of linear statistical models.
5. Understand Introductory R language fundamentals, basic syntax and how to use R; what R is and how it's used to perform data analysis;
6. Understand major R data structures and create visualizations using R.

UNIT – I [6 Hours]

Linear Statistical Models: Simple linear regression & correlation, multiple regression & multiple correlation, Analysis of variance (one way, two way with as well as without interaction)

UNIT – II [6 Hours]

Estimation: Point estimation, criteria for good estimates (unbiasedness, consistency), Methods of estimation including maximum likelihood estimation.

UNIT – III [6 Hours]

Sufficient Statistic: concept & examples, complete sufficiency, their application in estimation

UNIT – IV [6 Hours]

Test of hypothesis: concept & formulation, type I and type II errors, Neyman Pearson lemma, Procedures of testing

UNIT – V

[6 Hours]

Non-parametric Inference: Comparison with parametric inference, Use of order statistics. Sign test, Wilcoxon signed rank test, Mann-Whitney test, Run test, Kolmogorov-Smirnov test. Spearman’s and Kendall’s test. Tolerance region

Basics of Time Series Analysis & Forecasting: Stationary, ARIMA Models: Identification, Estimation and Forecasting.

UNIT – VI

[6 Hours]

R statistical programming language: Introduction to R, Functions, Control flow and Loops, Working with Vectors and Matrices, Reading in Data, Writing Data, Working with Data, Manipulating Data, Simulation, Linear model, Graphics in R

Home Assignments:

Problem sets to be shared by faculty covering the following topics:

Estimation Methods: Parametric & Non – Parametric, Hypothesis Testing

Text Books:

1. Probability and Statistics for Engineers (4th Edition) - I.R. Miller, J.E. Freund and R. Johnson.
2. Fundamentals of Statistics (vol. I and vol. II) - A. Goon, M. Gupta and B. Dasgupta.
3. Hands-on Programming with R - Garrett Grolemund
4. R for Everyone: Advanced Analytics and Graphics - Jared P. Lander

Reference Books:

1. Statistical Theory with Engineering Application - A. Hald.
2. Statistical Methods - G.W. Snedecor and W.G. Cochran.
3. Statistical Concepts & Methods - G.K. Bhattacharyya and R.A. Johnson.
4. Introduction to Linear Regression Analysis - D.C. Montgomery & E.Peck
5. Introduction to the Theory of Statistics - A.M. Mood, F.A. Graybill & D.C. Boes.
6. Practical Non-Parametric Statistics - W.J. Conover
7. Applied Regression Analysis - N. Draper & H. Smith

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Data Structures & Problem Solving

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hrs. / Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1 Hr. / Week	Continuous Assessment: 40 marks	
Lab: 2 Hrs./ Week	Term Work and Practical: 50 Marks	TW and Practical :1 Credit

Course Pre Requisites:

Students should have knowledge of Fundamentals of data types and programming concepts

Course Objective:

The course is aimed to provide an understanding of key concepts underlying the choice and implementation of data structures, algorithms and step by step approach in solving problems with the help of these fundamental data structures.

Course Outcomes:

Students will be able to:

- 1) Understand the fundamentals and analysis of algorithms
- 2) Understand and implement Linear data structures
- 3) Understand and implement Non Linear data structure of Trees.
- 4) Understand and implement Non Linear data structure of Graphs.
- 5) Understand and implement the .
- 6) Understand the concepts of distributed system security.

Topics to Be Covered:

UNIT – I

[6 Hours]

Basic Terminologies & Introduction to Algorithm and Data Organization: Algorithm specification, Recursion, Performance analysis, Asymptotic Notation - The Big-O, Omega and Theta notation, Programming Style, Refinement of Coding - Time-Space Trade Off, Testing, Data Abstraction

UNIT – II

[6 Hours]

Linear Data Structure: Array, Stack, Queue, Linked-list and its types, Various Representations, Operations & Applications of Linear Data Structures

UNIT – III

[6 Hours]

Non-linear Data Structure Trees Binary Tree, Threaded Binary Tree, Binary Search Tree, B & B+ Tree, AVL Tree, Splay Tree), Various Representations, Operations : search and traversal algorithms and complexity analysis
Applications of Trees.

UNIT – IV

[6 Hours]

Non-linear Data Structure Graphs: Graphs : Directed and Undirected, Various Representations
Operations: Search and traversal algorithms and complexity analysis
Applications of Graphs.

UNIT – V

[6 Hours]

Searching and Sorting: Sequential Search, Binary Search, Breadth First Search, Depth First Search, Insertion Sort, Selection Sort, Shell Sort, Divide and Conquer Sort, Merge Sort, Quick Sort, Heap Sort, Introduction to Hashing

UNIT – VI

[6 Hours]

File: Organisation (Sequential, Direct, Indexed Sequential, Hashed) and various types of accessing schemes

Home Assignments:

1. Towers of Hanoi using user defined stacks.
2. Reading, writing, and addition of polynomials.
3. Line editors with line count, word count showing on the screen.
4. Trees with all operations.
5. All graph algorithms.
6. Saving / retrieving non-linear data structure in/from a file

Text Books:

1. Fundamentals of Data Structures, E. Horowitz and S. Sahni, 1977
2. Data Structures and Algorithms, Alfred V. Aho, John E. Hopcroft, Jeffrey D. Ullman

Reference Books:

1. The Art of Computer Programming: Volume 1: Fundamental Algorithms, Donald E. Knuth
2. Introduction to Algorithms, Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein.
3. Open Data Structures: An Introduction (Open Paths to Enriched Learning)), 31st ed. Edition , Pat Morin

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Fundamentals of Economics

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hrs/Week	Semester Examination: 60 marks	Theory: 3 Credits
Tutorials: Nil	Continuous Assessment: 40 marks	
Lab: Nil	Term Work: Nil	

Course Pre-requisites:

Knowledge of Class XII level Mathematics

Course Objective:

1. To impart knowledge, with respect to concepts, principles of Economics, which govern the functioning of a firm/organization
2. To explain the students about concept of production, cost, national income, an aggregate supply and aggregate demand consumption

Course Outcomes:

After completing this course, students should be able to:

1. Demonstrate an understanding of the methods and principles of microeconomic and macroeconomic theory, including tradeoffs, opportunity costs, and marginal decision making.
2. Explain how markets work and how market prices are determined using principles of supply and demand.
3. Assess the impact of market failure such as externalities, and public goods and evaluate possible public policy remedies.
4. Analyze financial markets and investments, including the stock market, and their relation to the economy.
5. Evaluate key economic indicators (including GDP, unemployment, inflation) and their use in evaluating macroeconomic conditions.
6. Understand major macroeconomic tools, including fiscal and monetary policies, and their use in managing the economy. Also apply ethical principles in a variety of economic contexts.

Topics to Be Covered:

UNIT – I

[6 Hours]

Microeconomics

Principles of Demand and Supply – Supply Curves of Firms – Elasticity of Supply

Demand Curves of Households – Elasticity of Demand Equilibrium and Comparative Statics
(Shift of a Curve and Movement along the Curve) Welfare Analysis – Consumers’ and
Producers’ Surplus – Price Ceilings and Price Floors

UNIT – II

[6 Hours]

Consumer Behaviour – Axioms of Choice – Budget Constraints and Indifference Curves
Consumer’s Equilibrium – Effects of a Price Change, Income and Substitution Effects –
Derivation of a Demand Curve
Applications – Tax and Subsidies – Intertemporal Consumption – Suppliers’ Income Effect

UNIT – III

[6 Hours]

Theory of Production – Production Function and Iso-quants – Cost Minimization
Cost Curves – Total, Average and Marginal Costs – Long Run and Short Run Costs
Equilibrium of a Firm Under Perfect Competition Monopoly and Monopolistic Competition

UNIT – IV

[6 Hours]

Macroeconomics

National Income and its Components – GNP, NNP, GDP, NDP
Consumption Function
Investment
Simple Keynesian Model of Income Determination and the Keynesian Multiplier
Government Sector – Taxes and Subsidies
External Sector – Exports and Imports

UNIT – V

[6 Hours]

Money – Definitions
Demand for Money – Transactionary and Speculative Demand
Supply of Money – Bank’s Credit Creation Multiplier
Integrating Money and Commodity Markets – IS, LM Model
Business Cycles and Stabilization – Monetary and Fiscal Policy – Central Bank and the
Government

UNIT – VI

[6 Hours]

The Classical Paradigm – Price and Wage Rigidities – Voluntary and Involuntary Unemployment.

Home Assignments:

In the discussion topics mentioned above, students should be asked to prepare in advance in groups
and present in class

Text Books:

1. Microeconomics- Pindyck, Robert S., and Daniel L. Rubinfeld Microeconomics
2. Macroeconomics- Dornbusch, Fischer and Startz

Reference Books:

Other articles could be sent through email as and when a relevant topic is discussed.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Principles of Electronics

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 3Hrs/Week	Semester Examination: 60 marks	Theory: 3 Credits
Tutorials: Nil	Continuous Assessment: 40 marks	
Lab: 2 Hrs/ Week	Term Work and Oral: 50 marks	TW and Oral :1 Credit

Course Pre Requisites:

The students should have knowledge of Class XII level Electronics, Physics & Mathematics

Course Objective:

The course introduces fundamental concepts of electronics

Course Outcomes:

Students will be able to,

1. Identify semiconductor materials, draw band-diagrams, distinguish between intrinsic and extrinsic semiconductors.
2. Explain the phenomenon of rectification, draw the I-V characteristics and calculate ripple factor.
3. Explain the I-V characteristics of BJTs – both input and output; learn to bias transistors as an amplifier.
4. Describe FET and MOSFET and differentiate between BJT, FET and MOSFET.
5. Explain the fundamentals of feedback amplifiers and Operational Amplifier .
6. Demonstrate the knowledge of Boolean algebra including simplification techniques and operation of basic types of flip-flops.

Topics to Be Covered:

UNIT – I

[6 Hours]

Semiconductors: Crystalline material: Mechanical properties, Energy band theory, Fermi levels; Conductors, Semiconductors & Insulators: electrical properties, band diagrams. Semiconductors: intrinsic & extrinsic, energy band diagram, P&N-type semiconductors, drift & diffusion carriers.

UNIT – II

[6 Hours]

Diodes and Diode Circuits: Formation of P-N junction, energy band diagram, built-in-potential, forward and reverse biased P-N junction, formation of depletion zone, V-I characteristics, Zener breakdown, Avalanche breakdown and its reverse characteristics; Junction capacitance. Linear piecewise model; Rectifier circuits: half wave, full wave, PIV, DC voltage and current, ripple factor, efficiency, idea of regulation.

UNIT – III

[6 Hours]

Bipolar Junction Transistors: Formation of PNP / NPN junctions; transistor mechanism and principle of transistors, CE, CB, CC configuration, transistor characteristics: cut-off active and saturation mode, transistor action, injection efficiency, base transport factor and current amplification factors for CB and CE modes. Biasing and Bias stability: calculation of stability factor

UNIT – IV

[6 Hours]

Field Effect Transistors: Concept of Field Effect Transistors (channel width modulation), Gate isolation types, JFET Structure and characteristics, MOSFET Structure and characteristics, depletion and enhancement type; CS, CG, CD configurations; CMOS: Basic Principles

UNIT – V

[6 Hours]

Feed Back Amplifier, and Operational Amplifiers: Concept (Block diagram), properties, positive and negative feedback, loop gain, open loop gain, feedback factors; topologies of feedback amplifier; effect of feedback on gain, output impedance, input impedance, sensitivities (qualitative), bandwidth stability. Introduction to integrated circuits, operational amplifier and its terminal properties; Application of operational amplifier; inverting and non-inverting mode of operation, Adders, Subtractors, Constant-gain multiplier, Voltage follower, Comparator, Integrator, Differentiator

Digital Electronics Fundamentals: Difference between analog and digital signals, Boolean algebra, Basic and Universal Gates, Symbols, Truth tables, logic expressions, Logic simplification using K- map, Logic ICs, half and full adder/subtractor, multiplexers, demultiplexers, flip-flops, shift registers, counters.

List of Experiments:

1. To plot V-I characteristics of PN junction diode.
2. To plot regulation characteristics of half wave rectifier
3. To plot regulation characteristics of Full wave rectifier
4. To plot input-output characteristics of CE configuration of BJT.
5. To study Biasing techniques of BJT- to find stability factor of self bias, collector to base bias, fixed bias circuits.
6. To plot frequency response of single stage FET amplifier (CS/CD configuration) and find its bandwidth.
7. To study Colpitts Oscillator.
8. Study of OP-AMP circuits: Inverting and Non-inverting Amplifier.
9. Study of basic logic gates and De-Morgan's Theorem.
10. Study of half adder and full adder.

List of Assignments: -

1. Describe applications of diodes as Clippers and Clampers.
2. Describe application of Zener diode as Voltage regulator.
3. Study of characteristic curves for CB configuration of BJT using Virtual Lab.
4. Simulation of BJT amplifier using Virtual Lab.
5. Design and Implementation of Various Arithmetic Circuits using Virtual Lab.
6. To design, built and test any electronic circuit (Group activity)

Text Books:

1. Sedra & Smith: Microelectronics Engineering
2. Millman & Halkias: Integrated Electronics

Reference Books:

1. Electronic Devices and Circuit Theory by Robert Boylestad
2. Solid State Electronic Devices by Streetman, Banerjee
3. Malvino: Electronic Principle

4. Schilling & Belove: Electronics Circuits
5. Millman & Grabal: Microelectronics
6. Salivahanan: Electronics Devices & Circuits
7. Boylestad & Nashelsky: Electronic Devices & Circuit Theory

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Business Communication & Value Science - II

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 2 Hrs/Week	Semester Examination: 50 marks	Theory: 3 Credits
Tutorials: 1 Hr/ Week	Continuous Assessment: Nil	
Lab: 2 Hrs/ Week	Term Work and Oral: 50 marks	TW and Oral :1 Credit

Course Pre-requisites:

1. Basic knowledge of the parts of speech in English.
2. Vocabulary covered in the previous semester along with basic knowledge of verbs & adverbs.
3. Basic awareness of the need of speaking skills within social circle.
4. The elements of team dynamics done during the previous semester with proper application.
5. Basic awareness of the concepts of feedback, criticism.
6. The various common conflicts that may arise at varied situations.

Course Objective:

The course aims to augment students overall communication and interpersonal skills by engaging them in group activities and thus aid in helping them to emerge as professionals. The soft skills topics for this semester are intended to develop student's expertise on public speaking skills and to deal positively with criticism and so as to effectively present their personalities

Course Outcomes:

By the end of the course, students should be able to

1. Speak fluently in English without errors in the sentence construction and hence present themselves as effective English communicators. They will be able to learn 20-25 common errors made in parts of speech and also use 10 modal verbs efficiently during professional communication.
2. Differentiate between vocabulary used as adjectives, verbs and adverbs and be able to use the 60-70 words for their daily conversation.

3. Overcome the fear of speaking and will be aware of the 3 types of public speaking necessary according to the contemporary requirements. They would be able to deliver a public speech according to the need of the audience and also be aware of positive body language to be manifested during a speech.
4. Deal with the deeper parameters of working in teams like team motivation, multicultural team activity and team conflict resolution.
5. Analyze them relating to their hobbies and strengths and hence set realistic goals in terms of personal and professional growth. They will be able to identify at least 5-7 strengths and a couple of goals to be achieved that will enable their lives to be directed appropriately.
6. Apply 5-6 positive strategies to diversity and inclusion during team work.

Topics to Be Covered:

UNIT – I

[6 Hours]

Essential Grammar – II: Application of tenses, Auxiliaries- correct usage and importance in formal communication, Business Vocabulary - Vocabulary exercises through web-based applications

UNIT – II

[6 Hours]

Written Communication II: Email writing- Formal and Informal email writing structure, Inquiry letters, Instruction letters, complaint letters, Routine business letters, Sales Letters etc. Technical writing, Essay writing, Paragraph writing.

UNIT – III

[6 Hours]

Vocabulary- II: Vocabulary exercises through web-based applications, Usage and application through mock meetings

Situational Conversation: Application of grammar and correct spoken English according to context/ situation and application in business scenario.

UNIT – IV

[6 Hours]

Fundamentals of Effective Communication: Public Speaking: fundamentals of effective public speaking, types- Extempore speech, manuscript speech, and ways to enhance public speaking skills, storytelling, oral review

Presentation Skills: PowerPoint presentations, Effective ways to structure the presentation, importance of body language

Leadership Skills, Leader’s Role, Responsibilities And Skill Required: Understanding good Leadership behaviors, Learning the difference between Leadership and Management, Gaining insight into your Patterns, Beliefs and Rules, Defining Qualities and Strengths of leadership, Determining how well you perceive what's going on around you, interpersonal Skills and Communication Skills, Learning about Commitment and How to Move Things Forward, Making Key Decisions, Handling Your and Other People's Stress, Empowering, Motivating and Inspiring Others, Leading by example, effective feedback.

Problem Solving Skill: Problem solving skill, Confidence building

UNIT – V

[6 Hours]

Corporate / Business Etiquettes: Corporate grooming & dressing, etiquettes in social & office Setting-Understand the importance of professional behavior at the work place, Understand and Implement etiquettes in workplace, presenting oneself with finesse and making others comfortable in a business setting. Importance of first impression, Grooming, Wardrobe, Introduction to Ethics in engineering and ethical reasoning, rights and responsibilities

UNIT – VI

[6 Hours]

Diversity and Inclusion Part II: Socio-Cultural and Cross-Cultural Sensitivities at the Workplace: PwD and LGBT at the workplace, Learning disabilities at the workplace; Caste, class, regionalism, religion and poverty: the different identities of Indian employees and employers and how to include everyone; Global diversity identities of race, religion, nationhood; Appropriate Social Media Use

Values Sciences Part II: Values of a good manager: Ethics in Business; Embodying organizational pride with grace

Text Books:

1. Business Communication Today by Bovee, Thill, Raina
2. APAART: Speak Well 1 (English Language and Communication)
3. APAART: Speak Well 2 (Soft Skills)

Reference Books:

1. Strategic Communication by Charles Marsh
2. English vocabulary in use – Alan Mc’Carthy and O’dell
3. Business Communication – Dr. Saroj Hiremath

Self Learning Module

BHARATI VIDYAPEETH (Deemed to be University)
COLLEGE OF ENGINEERING, PUNE-43
B. Tech. (Computer Science & Business Systems)

Vision of the Department

“To syndicate industry and institute to impart high quality knowledge through scholarship, research and creative endeavor”

Mission of the Department

- To impart contemporary technology conforming to a dynamic curriculum.
- To engage in professional development and scholarly endeavor through knowledge of common business principles.
- To promote the awareness of business discipline and ethical responsibility through industry alliance

Programme Educational Objectives

1. Prevail technical competency to concord the industry engrossment.
2. Assimilate business management skills.
3. Instigate business level innovation with societal consideration.

Programme Outcomes

The students of B.Tech (Computer Science & Business Systems) will be able to

- a. Demonstrate logical and programming skills through comprehensive programming foundation.
- b. Apply knowledge of mathematics, computer engineering and basic science to comprehend and solve real world problems.
- c. Develop software applications and processes for complex problems to provide efficient solutions by assessing its environmental, social and ethical constraints.
- d. Investigate and solve complex computing problems with alternate solutions.
- e. Use functional skills of modern IT tools and techniques for engineering activities.
- f. Understand the social and cultural impact of computing on society.
- g. Provide optimized computational solutions that apprehend the societal and environmental aspects.
- h. exhibit the professional, ethical and legal responsibilities related to industry.
- i. Perform as an individual and efficient team player to accomplish a goal.
- j. Present professional concepts through effective communication skills and documentation.
- k. Demonstrate management skills for developing time-bound projects within the available budget and resources.
- l. Develop the ability of lifelong learning for new IT practices.

FORMAL LANGUAGE & AUTOMATA THEORY

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: 3Hrs./Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1Hr./Week	Continuous Assessment: 40 marks	
Lab: Nil	Term Work: Nil	

Course Pre Requisites:

The students should have basic Knowledge Set algebra, elementary formal logic, constructing proofs, recurrence relations, Discrete Structures and Data structures and problem solving.

Course Objective:

1. To understand problem classification and problem solving by machines.
2. To understand the basics of automata theory and its operations.
3. To study computing machines by describing, classifying and comparing different types of computational models.
4. Encourage students to study theory of computability and complexity.
5. To understand the P and NP class problems and its classification.
6. To understand the fundamentals of problem decidability and reducibility.

Course Outcomes:

- 1) To construct finite state machines to solve problems in computing.
- 2) To write mathematical expressions for the formal languages.
- 3) To understand context free and context sensitive languages.
- 4) To construct Turing Machine for formal languages.
- 5) To express the understanding of the decidability and undecidability problems.
- 6) To understand NP Hard and complete problems.

Topics to Be Covered:

UNIT – I

[6 Hours]

Introduction: Alphabet, Strings and languages, Graphs, Directed Graphs, Trees.

UNIT – II

[6 Hours]

Regular languages and finite automata: Regular expressions and languages, deterministic finite automata (DFA) and equivalence with regular expressions, nondeterministic finite automata (NFA) and equivalence with DFA, regular grammars and equivalence with finite automata, properties of regular languages, *Kleene's theorem*, pumping lemma for regular languages, *Myhill-Nerode theorem and its uses*, minimization of finite automata.

UNIT – III

[6 Hours]

Context-free languages and pushdown automata: Productions and Derivation, Context-free grammars (CFG) and languages (CFL), Chomsky hierarchy of languages, Chomsky Normal Forms and Greibach normal forms, nondeterministic pushdown automata (PDA) and equivalence with CFG, parse trees, ambiguity in CFG, pumping lemma for context-free languages, deterministic pushdown automata, closure properties of CFLs.

Context-sensitive languages: Context-sensitive grammars (CSG) and languages, linear bounded automata and equivalence with CSG.

UNIT – IV

[6 Hours]

Turing machines: The basic model for Turing machines (TM), Turing recognizable (recursively enumerable) and Turing-decidable (recursive) languages and their closure properties, variants of Turing machines, nondeterministic TMs and equivalence with deterministic TMs, unrestricted grammars and equivalence with Turing machines, TMs as enumerators.

UNIT – V

[6 Hours]

Undecidability: Church-Turing thesis, universal Turing machine, the universal and diagonalization languages, reduction between languages and Rice's theorem, undecidable problems about languages.

UNIT – VI

[6 Hours]

Basic Introduction to Complexity: Introductory ideas on Time complexity of deterministic and nondeterministic Turing machines, P and NP, NP-completeness, Cook's Theorem, other NP-Complete problems.

Reference Books:

Text Books:

1. *Introduction to Automata Theory, Languages, and Computation* John E. Hopcroft, Rajeev Motwani and Jeffrey D. Ullman.

Reference Books:

1. *Elements of the Theory of Computation*, Harry R. Lewis and Christos H. Papadimitriou.
2. *Automata and Computability*, Dexter C. Kozen.
3. *Introduction to the Theory of Computation*, Michael Sipser.
4. *Introduction to Languages and the Theory of Computation*, John Martin.
5. *Computers and Intractability: A Guide to the Theory of NP Completeness*, M. R. Garey and D. S. Johnson.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Syllabus of Semester III

Computer Organization & Architecture

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	Theory: 4 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work and Oral: 50 Marks	TW and Oral :1 Credit

Course Pre-Requisites:

The students should have basic Knowledge Digital electronics and computer system

Course Objective:

To understand the design of the various functional units of computer system.

Course Outcomes:

After completion of this course students will be able to

- 1) Explain the architecture and functions of Central Processing Unit.
- 2) Solve fixed point and floating-point arithmetic problems using algorithms
- 3) List the design approaches and functional requirements for implementing control unit.
- 4) Analyze the characteristics of memory system.
- 5) Describe the I/O organization and interconnections.
- 6) Infer parallel processing and multiprocessor configuration.

Topics to Be Covered:

UNIT – I

[8 Hours]

Revision of basics in Boolean logic and Combinational/Sequential Circuits.

Functional blocks of a computer: CPU, memory, input-output subsystems, control unit.

Introduction to x86 architecture

Instruction set architecture of a CPU: Registers, instruction execution cycle, RTL interpretation of instructions, addressing modes, instruction set. Outlining instruction sets of some common CPUs.

UNIT – II

[8 Hours]

Data representation: Signed number representation, fixed and floating point representations, character representation.

Computer arithmetic: Integer addition and subtraction, ripple carry adder, carry look-ahead adder, etc. multiplication – shift-and-add, Booth multiplier, carry save multiplier, etc. Division restoring and non-restoring techniques, floating point arithmetic, IEEE 754 format.

UNIT III

[8 Hours]

CPU control unit design: Hardwired and micro-programmed design approaches, design of a simple hypothetical CPU.

UNIT – IV

[8 Hours]

Memory system design: Semiconductor memory technologies, memory organization.

Memory organization: Memory interleaving, concept of hierarchical memory organization, cache memory, cache size vs. block size, mapping functions, replacement algorithms, write policies.

UNIT – V

[4 Hours]

Peripheral devices and their characteristics: Input-output subsystems, I/O device interface, I/O transfers – program controlled, interrupt driven and DMA, privileged and non-privileged instructions, software interrupts and exceptions. Programs and processes – role of interrupts in process state transitions, I/O device interfaces – SCSI, USB

UNIT – VI

[4 Hours]

Pipelining: Basic concepts of pipelining, throughput and speedup, pipeline hazards.

Parallel Processors: Introduction to parallel processors, Concurrent access to memory and cache coherency.

Home Assignments: Assignments covering the following topics should be given

1. Booth's algorithm for multiplication
2. Restoring and non-restoring division
3. Fixed point and floating point representation

4. Programmer's model of 80386
5. Hardwired and micro-programmed design approaches.
6. Characteristics of Memory system
7. Cache organization and address mapping
8. Virtual memory and replacement algorithms
9. Calculating throughput and speed in pipelining
10. Multiprocessor architecture

Text Books:

1. Computer System Architecture M. M. Mano., 3rd ed., Prentice Hall of India, New Delhi, 1993.
2. Computer Organization and Design: The Hardware/Software Interface, David A. Patterson and John L. Hennessy.
3. Computer Organization and Embedded Systems, Carl Hamacher.

Reference Books:

1. Computer Architecture and Organization, John P. Hayes.
2. Computer Organization and Architecture: Designing for Performance, William Stallings

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

B.Tech (Computer Science & Business Systems)

Semester – III

OBJECT ORIENTED PROGRAMMING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hrs./Week	Semester Examination: 60 marks	Theory: 3 Credits
Practical: 2 Hrs/Week	Continuous Assessment: 40 marks	
	Term Work and Practical: 50 marks	Term Work and Practical: 1 Credit

Course Pre Requisites:

The students should have basic Knowledge of “C” programming language.

Course Objective:

The course introduces fundamental concepts of Object oriented programming.

Course Outcomes:

At the end of this course students will able to:

- 1) Understand basic concepts of Procedural programming and, the overview of C programming language
- 2) Understand some basic difference between C and C++.
- 3) Understand basic concepts of Object Oriented Programming, classes and objects in OOP.
- 4) Apply the concept of Access Specifier, friend function, constructor, destructor and Error Handling using C++ programs
- 5) Implement the concept of polymorphism, virtual functions and inheritance using C++
- 6) Develop OOP applications using Templates and file Handling.

Topics to Be Covered:

UNIT-I

[6 Hours]

Procedural programming, An Overview of C: Types Operator and Expressions, Scope and Lifetime, Constants, Pointers, Arrays, and References, Control Flow, Functions and Program Structure, Namespaces, error handling, Input and Output (C-way), Library Functions (string, math, stdlib), Command line arguments, Pre-processor directive

UNIT-II

[6 Hours]

Some difference between C and C++: Single line comments, Local variable declaration within function scope, function declaration, function overloading, stronger type checking, Reference variable, parameter passing – value vs reference, passing pointer by value or reference, #define

constant vs const, Operator new and delete, the typecasting operator, Inline Functions in contrast to macro, default arguments

UNIT-III

[6 Hours]

The Fundamentals of Object Oriented Programming: Necessity for OOP, Data Hiding, Data Abstraction, Encapsulation, Procedural Abstraction, Class and Object.

UNIT-IV

[6 Hours]

More extensions to C in C++ to provide OOP Facilities: Scope of Class and Scope Resolution Operator, Member Function of a Class, private, protected and public Access Specifier, this Keyword, Constructors and Destructors, friend class, error handling (exception)

UNIT-V

[6 Hours]

Essentials of Object Oriented Programming: overloading, Inheritance – Single and Multiple, Class Hierarchy, Pointers to Objects, Assignment of an Object to another Object, Polymorphism through dynamic binding, Virtual Functions, Overloading, overriding and hiding, Error Handling

UNIT-VI

[6 Hours]

Generic Programming: Template concept, class template, function template, template specialization

Input and Output: Streams, Files, Library functions, formatted output

Object Oriented Design and Modelling: UML concept, Use case for requirement capturing, Class diagram, Activity diagram and Sequence Diagram for design, Corresponding C++ code from design

Text Books:

1. The C++ Programming Language, Bjarne Stroustrup.
2. C++ and Object-Oriented Programming Paradigm, Debasish Jana

Reference Books:

1. Programming – Principles and Practice Using C++, Bjarne Stroustrup.
2. The Design and Evolution of C++, Bjarne Stroustrup.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

B.Tech in Computer Science & Business Systems

Final Syllabus, Semester – III

Computational Statistics

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	Theory: 3 Credits
Practical: 04 Hours / Week	Continuous Assessment: 40 Marks	TW and Practical :1 Credit
	Term Work and Practical: 50 Marks	

Course Pre-requisites: The Students should have knowledge of basics of statistics.

Course Objectives:

The aim of this course is to give graduate students a solid foundation of computational statistics, basics of analysis and Python programming. The course objective is to exercise students for data set handling, data wrangling, data visualization etc. using Python.

Course Outcomes:

- Understand basics of normal distribution and linear regression model.
- Apply knowledge of multivariate regression and discriminant analysis.
- Outline component analysis and factor analysis.
- Design various clusters
- Understand and demonstrate fundamentals of Python programming.
- Demonstrate visualization in Python

Topics to Be Covered:

UNIT – I

[8 Hours]

Multivariate Normal Distribution: Multivariate Normal Distribution Functions, Conditional Distribution and its relation to regression model, Estimation of parameters.

Multiple Linear Regression Model: Standard multiple regression models with emphasis on detection of collinearity, outliers, non-normality and autocorrelation, Validation of model assumptions.

UNIT – II

[5 Hours]

Multivariate Regression: Assumptions of Multivariate Regression Models, Parameter estimation, Multivariate Analysis of variance and covariance.

Discriminant Analysis: Statistical background, linear discriminant function analysis, Estimating linear discriminant functions and their properties.

UNIT III

[7 Hours]

Principal Component Analysis: Principal components, Algorithm for conducting principal component analysis, deciding on how many principal components to retain, H-plot.

Factor Analysis: Factor analysis model, Extracting common factors, determining number of factors, Transformation of factor analysis solutions, Factor scores.

UNIT – IV

[5 Hours]

Clustering and Segmentation Analysis: Introduction, Types of clustering, Correlations and distances, clustering by partitioning methods, hierarchical clustering, overlapping clustering, K-Means Clustering-Profiling and Interpreting Clusters.

UNIT – V

[6 Hours]

Python Concepts, Data Structures, Classes: Interpreter, Program Execution, Statements, Expressions, Flow Controls, Functions, Numeric Types, Sequences and Class Definition, Constructors, Text & Binary Files - Reading and Writing.

Data Wrangling: Combining and Merging Datasets, Reshaping and Pivoting, Data Transformation, String Manipulation, Regular Expressions

UNIT – VI

[6 Hours]

Data Aggregation, Group Operations, Time series: GroupBy Mechanics, Data Aggregation, Groupwise Operations and Transformations, Pivot Tables and Cross Tabulations, Time Series Basics, Data Ranges, Frequencies and Shifting

Visualization in Python: Matplotlib package, Plotting Graphs, Controlling Graph, Adding Text, More Graph Types, Getting and setting values, Patches.

Term Work

1. Introduction to python programming (String operation, Mathematical operation, loops, branching).
2. Implementation of classes and constructor in Python.
3. Implementation of basic data structures in Python.
4. File Handling in the Python.
5. Introduction to data set handling in Python.
6. Implement various pre-defined libraries in Python like Panda, NumPy, Cbor (Drawing of statistical graph).
7. Implementation Multivariate Normal Distribution.
8. Implementation Multiple Linear Regression Model
9. Implementation Multivariate Regression
10. Implementation Discriminant Analysis
11. Implementation clustering and segmentation
12. Implementation of data wrangling, data aggregation, group operations and time series operations.
13. Data Visualization in Python.

Text Books:

1. *An Introduction to Multivariate Statistical Analysis*, T.W. Anderson.
2. *Applied Multivariate Data Analysis, Vol I & II*, J.D. Jobson.
3. *Beginning Python: From Novice to Professional*, Magnus Lie Hetland. Edition, 2005.

Reference Books:

1. *The Foundations of Factor Analysis*, A.S. Mulaik.
2. *Introduction to Linear Regression Analysis*, D.C. Montgomery and E.A. Peck.
3. *Python for Data Analysis*, Wes Mc Kinney.
4. *Programming Python*, Mark Lutz.
5. *Python 3 for Absolute Beginners*, Tim Hall and J-P Stacey.

SOFTWARE ENGINEERING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4Hrs./Week	Semester Examination: 60 marks	Theory: 5 Credits
Tutorials: 1Hr./Week	Continuous Assessment: 40 marks	Term Work and Practical credit: 1
Lab: 2Hrs./Week	Term Work and Practical: 50	

Course Pre Requisites:

The students should have sound knowledge of data structures, programming experience and an extensive hands-on experience of using software.

Course Objective:

The course introduces key aspects of software engineering processes for the development of a complex software system.

Course Outcomes:

1. Learn importance of software engineering process and its principles
2. Understand the software development life cycle with appropriate models
3. Understand software quality concepts
4. Document user requirements using suitable techniques
5. Analyze the software design from and Object Oriented perspective.
6. Apply appropriate testing techniques on a software

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction: Programming in the small vs. programming in the large; software project failures and importance of software quality and timely availability; engineering approach to software development; role of software engineering towards successful execution of large software projects; emergence of software engineering as a discipline.

UNIT – II [6 Hours]

Software Project Management: Basic concepts of life cycle models – different models and milestones; software project planning –identification of activities and resources; concepts of feasibility study; techniques for estimation of schedule and effort; software cost estimation models and concepts of software engineering economics; techniques of software project control and reporting; introduction to measurement of software size; introduction to the concepts of risk and its mitigation; configuration management.

UNIT – III [6 Hours]

Software Quality and Reliability: Internal and external qualities; process and product quality; principles to achieve software quality; introduction to different software quality models like McCall, Boehm, FURPS / FURPS+, Dromey, ISO – 9126; introduction to Capability Maturity Models (CMM and CMMI); introduction to software reliability, reliability models and estimation.

UNIT – IV [6 Hours]

Software Requirements Analysis, Design and Construction: Introduction to Software Requirements Specifications (SRS) and requirement elicitation techniques; techniques for requirement modeling – decision tables, event tables, state transition tables, Petri nets; requirements documentation through use cases; introduction to UML, introduction to software metrics and metrics based control methods; measures of code and design quality.

UNIT – V [6 Hours]

Object Oriented Analysis, Design and Construction: Concepts -- the principles of abstraction, modularity, specification, encapsulation and information hiding; concepts of abstract data type; Class Responsibility Collaborator (CRC) model; quality of design; design measurements; concepts of design patterns; Refactoring; object oriented construction principles; object oriented metrics.

UNIT – VI [6 Hours]

Software Testing: Introduction to faults and failures; basic testing concepts; concepts of verification and validation; black box and white box tests; white box test coverage – code coverage, condition coverage, branch coverage; basic concepts of black-box tests – equivalence classes, boundary value tests, usage of state tables; testing use cases; transaction based testing; testing for non-functional requirements – volume, performance and efficiency; concepts of inspection.

Home Assignments:

1. UML diagrams
2. Data Flow Diagrams
3. Testing
4. Software project covering various software development methodology techniques will be implemented.

Text Books:

1. *Software Engineering*, Ian Sommerville
2. *Object Oriented Software Engineering: A Use Case Driven Approach* --Ivar Jacobson

Reference Books:

3. *Fundamentals of Software Engineering*, Carlo Ghezzi, Jazayeri Mehdi, Mandrioli Dino

4. *Software Requirements and Specification: A Lexicon of Practice, Principles and Prejudices*, Michael Jackson
5. *The Unified Development Process*, Ivar Jacobson, Grady Booch, James Rumbaugh
6. *Design Patterns: Elements of Object-Oriented Reusable Software*, Erich Gamma, Richard Helm, Ralph Johnson, John Vlissides
7. *Software Metrics: A Rigorous and Practical Approach*, Norman E Fenton, Shari Lawrence Pfleeger

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

OPERATING SYSTEM

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4Hrs./Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 0Hr./Week	Continuous Assessment: 40 marks	Term Work and Practical credit: 1
Lab: 2Hrs./Week	Term Work and Practical: 50	

Course Pre Requisites:

Prerequisites for this course include thorough knowledge in some high-level programming language of C or C++ and UNIX and Linux as programs are to be implemented by writing C code during the course and will cover the details of C and its close relationship to UNIX and Linux in the case study in 6th unit.

Course Objective:

1. To learn the basic concepts of Operating Systems.
2. To learn the mechanisms of OS to handle processes and threads and their communication
3. To learn the methods of process scheduling.
4. To gain knowledge on Mutual exclusion algorithms, deadlock detection algorithms and agreement protocols
5. To know the management aspects of memory management and virtual memory
6. To learn programmatically file management techniques

Course Outcomes:

1. To learn the evolution of operating system.
2. To Understand the concept of process and process state transition and thread and concept of multithreading.
3. Understand the importance of scheduling and types of scheduling algorithms.
4. To understand the inter process communication strategies, concept of deadlock and criteria of deadlock occurrence along with its avoidance
5. To understand the memory management techniques, paging and segmentation.
6. To understand the file management and disk management techniques

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction: Concept of Operating Systems (OS), Generations of OS, Types of OS, OS Services, Interrupt handling and System Calls, Basic architectural concepts of an OS, Concept of Virtual Machine, Resource Manager view, process view and hierarchical view of an OS.

UNIT – II [6 Hours]

Processes: Definition, Process Relationship, Different states of a Process, Process State transitions, Process Control Block (PCB), Context switching.

Thread: Definition, Various states, Benefits of threads, Types of threads, Concept of multithreads.

UNIT – III [6 Hours]

Process Scheduling: Foundation and Scheduling objectives, Types of Schedulers, Scheduling criteria: CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time.

Scheduling algorithms: Pre-emptive and non-pre-emptive, FCFS, SJF, RR; Multiprocessor scheduling: Real Time scheduling: RM and EDF.

UNIT – IV [6 Hours]

Inter-process Communication: Concurrent processes, precedence graphs, Critical Section, Race Conditions, Mutual Exclusion, Hardware Solution, Semaphores, Strict Alternation, Peterson's Solution, The Producer / Consumer Problem, Event Counters, Monitors, Message Passing, Classical IPC Problems: Reader's & Writer Problem, Dining Philosopher Problem, Barber's shop problem.

Deadlocks: Definition, Necessary and sufficient conditions for Deadlock, Deadlock Prevention, Deadlock Avoidance: Banker's algorithm, Deadlock detection and Recovery.

Concurrent Programming: Critical region, conditional critical region, monitors, concurrent languages, communicating sequential process (CSP); Deadlocks - prevention, avoidance, detection and recovery.

UNIT – V [6 Hours]

Memory Management: Basic concept, Logical and Physical address maps, Memory allocation: Contiguous Memory allocation – Fixed and variable partition– Internal and External fragmentation and Compaction.

Virtual Memory: Basics of Virtual Memory – Hardware and control structures – Locality of reference, Page allocation, Partitioning, Paging, Page fault, Working Set, Segmentation, Demand paging, Page Replacement algorithms: Optimal, First in First Out (FIFO), Second Chance (SC), Not recently used (NRU) and Least Recently used (LRU).

UNIT – VI [6 Hours]

I/O Hardware: I/O devices, Device controllers, Direct Memory Access, Principles of I/O.

File Management: Concept of File, Access methods, File types, File operation, Directory structure, File System structure, Allocation methods (contiguous, linked, indexed), Free-space management (bit vector, linked list, grouping), directory implementation (linear list, hash table), efficiency and performance.

Disk Management: Disk structure, Disk scheduling - FCFS, SSTF, SCAN, C-SCAN, Disk reliability, Disk formatting, Boot-block, Bad blocks.

Case study: UNIX OS file system, shell, filters, shell programming, programming with the standard I/O, UNIX system calls.

Home Assignments:

1. To implement scheduling algorithms
2. To implement resource allocation graph
3. To implement Banker's Algorithm
4. To implement the shell programming in UNIX OS

Text Books:

1. Operating System Concepts Essentials. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne.

Reference Books:

1. *Operating Systems: Internals and Design Principles*. William Stallings.
2. *Operating System: A Design-oriented Approach*. Charles Patrick Crowley.
3. *Operating Systems: A Modern Perspective*. Gary J. Nutt.
4. *Design of the Unix Operating Systems*. Maurice J. Bach.
5. *Understanding the Linux Kernel*, Daniel Pierre Bovet, Marco Cesati.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Database Management Systems

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hrs./Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: NIL	Continuous Assessment: 40 marks	Term Work and Practical : 1 credit
Lab: 2 Hrs./Week	Term Work and Practical: 50	

Course Objectives:

- 1) Identify various techniques to communicate with database.
- 2) Relate relevant data for effective processing of data.
- 3) Construct a database to maintain data adroitly.
- 4) Study various queries and tools to deal with the data.
- 5) Understand the relation between data set and respective means to access it.
- 6) Understand influence of data in the effective development of software.

Course Prerequisites:

Students should have knowledge of

- 1) Basic understanding of data and data structure
- 2) Basic understanding of programming language

Course Outcomes:

1. Model an application's data requirements using conceptual modeling tools
2. Demonstrate concepts of relational algebra and queries
3. Demonstrate concepts of relational database design
4. Interpret the query processing and optimization activities in database
5. Interpret the transaction activities in database
6. Recognize the emerging database applications and security concerns

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction: Introduction to Database. Hierarchical, Network and Relational Models.

Database system architecture: Data Abstraction, Data Independence, Data Definition Language (DDL), Data Manipulation Language (DML).

Data models: Entity-relationship model, network model, relational and object oriented data models, integrity constraints, data manipulation operations.

UNIT – II[6 Hours]

Relational query languages: Relational algebra, Tuple and domain relational calculus,SQL3, DDL and DML constructs, Open source and Commercial DBMS - MYSQL,ORACLE, DB2, SQL server.

UNIT – III [6 Hours]

Relational database design: Domain and data dependency, Armstrong's axioms, Functional Dependencies, Normal forms, Dependency preservation, Lossless design.

UNIT – IV [6 Hours]

Query processing and optimization: Evaluation of relational algebra expressions, Queryequivalence, Join strategies, Query optimization algorithms.

Storage strategies: Indices, B-trees, Hashing.

UNIT – V [6 Hours]

Transaction processing: Concurrency control, ACID property, Serializability of scheduling, Locking and timestamp based schedulers, Multi-version and optimistic Concurrency Control schemes, Database recovery.

UNIT – VI [6 Hours]

Database Security: Authentication, Authorization and access control, DAC, MAC and RBAC models, Intrusion detection, SQL injection.

Advanced topics: Object oriented and object relational databases, Logical databases, Webdatabases, Distributed databases, Data warehousing and data mining.

Assignments:

Assignments & tutorials covering the relational database design and operations in SQL and PL/SQL

Text Books:

1. Database System Concepts. Abraham Silberschatz, Henry F. Korth and S. Sudarshan.

Reference Books:

1. *Principles of Database and Knowledge – Base Systems*, Vol 1 by J. D. Ullman.
2. *Fundamentals of Database Systems*. R. Elmasri and S. Navathe.
3. *Foundations of Databases*. Serge Abiteboul, Richard Hull, VictorVianu.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Software Design with UML

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4Hrs./Week	Semester Examination: 60 marks	Theory: 4 Credits
Lab: 2Hrs./Week	Continuous Assessment: 40 marks	Term Work and Practical credit: 1
	Term Work and Practical: 50	

Course Pre Requisites:

The students should have sound knowledge software engineering and programming experience using data structures.

Course Objective:

To model software solutions, application structures, system behavior and business processes using .

Course Outcomes:

7. Apply Unified Modeling Language (UML) for representation of an object-oriented system using different modeling views
8. Analyze requirements to represent logical design that is recognized by various object relationships.
9. Identify interaction among structural elements to translate analysis model into design model.
10. Model dependencies among packages and package element ownership
11. Model dynamic behavior of the system and message flow from one object to other.
12. Envision the topology of the physical components of a system where the software components are utilized

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction to on Object Oriented Technologies and the UML Method: Software development process: The Waterfall Model vs. The Spiral Model; The Software Crisis, description of the real world using the Objects Model; Classes, inheritance and multiple configurations; Quality software characteristics; Description of the Object Oriented Analysis process vs. the Structure Analysis Model. **UML Language:** Standards; Elements of the language; General description of various models; The process of Object Oriented software development; Description of Design Patterns; Technological Description of Distributed Systems.

UNIT – II [6 Hours]

Requirements Analysis Using Case Modeling AND The Logical View Design: Analysis of system requirements; Actor definitions; Writing a case goal; Use Case Diagrams; Use Case Relationships. **The Static Structure Diagrams:** The Class Diagram Model; Attributes descriptions; Operations descriptions; Connections descriptions in the Static Model; Association, Generalization, Aggregation, Dependency, Interfacing, Multiplicity.

UNIT – III [6 Hours]

Transfer from Analysis to Design in the Characterization Stage: Interaction Diagrams: Description of goal; Defining UML Method, Operation, Object Interface, Class; Sequence Diagram; Finding objects from Flow of Events; Describing the process of finding objects using a Sequence Diagram; Describing the process of finding objects using a Collaboration Diagram

UNIT – IV [6 Hours]

Package Diagram Model: Description of the model; White box, black box; Connections between packages; Interfaces. ; Create Package Diagram; Drill Down.

UNIT – V [6 Hours]

Dynamic Model: State Diagram / Activity Diagram: Description of the State Diagram; Events Handling; Description of the Activity Diagram; Exercise in State Machines.

UNIT – VI [6 Hours]

Component Diagram Model: Physical Aspect; Logical Aspect; Connections and Dependencies; User face; Initial DB design in a UML environment. **Deployment Model:** Processors; Connections; Components; Tasks; Threads; Signals and Events.

Home Assignments:

5. Study of UML notations
6. Class diagram
7. Interaction diagrams
8. Activity diagram
9. State diagram
10. Software project covering various software development methodology techniques will be implemented.

Text Books:

1. Object-Oriented Software Engineering: using UML, Patterns, and Java. Bernd Bruegge and Allen H. Dutoit.

Reference Books:

1. Design Patterns: Elements of Reusable Object-Oriented Software. Erich Gamma, Richard Helm, Ralph Johnson, and John M. Vlissides.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Introduction to Innovation, IP Management & Entrepreneurship

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hrs./Week	Semester Examination: 60 marks	Theory: 5 Credits
Tutorials: 0Hr./Week	Continuous Assessment: 40 marks	Term Work and Practical credit: 1
Lab: 0Hrs./Week	Term Work and Practical: 00	

Course Pre Requisites:

Good knowledge of Fundamentals of Management (Covered in Year 2, Semester 1)

Course Objective:

The major emphasis of the course will be on creating a learning system through which management students can enhance their innovation and creative thinking skills, acquaint themselves with the special challenges of starting new ventures and use IPR as an effective tool to protect their innovations and intangible assets from exploitation.

Course Outcomes:

As a part of this course, students will:

- Learn to be familiar with creative and innovative thinking styles.
- Learn opportunity reorganization and entrepreneurship skills.
- Learn to investigate, understand and internalize the process of founding a startup.
- Understand financial aspects of Entrepreneurship.
- Learn to manage various types of IPR to protect competitive advantage.
- Understand the types of IP.

Topics to Be Covered:

UNIT – I [6 Hours]

Innovation: What and Why?

Innovation as a core business process, Sources of innovation, Knowledge push vs. need pull innovations.

Class Discussion- Is innovation manageable or just a random gambling activity?

UNIT – II [6 Hours]

Building an Innovative Organization

Creating new products and services, Exploiting open innovation and collaboration, Use of innovation for starting a new venture

Class Discussion- Innovation: Co-operating across networks vs. 'go-it-alone' approach

UNIT – III [6 Hours]

Entrepreneurship:

- Opportunity recognition and entry strategies
- Entrepreneurship as a Style of Management
- Maintaining Competitive Advantage- Use of IPR to protect Innovation

UNIT – IV [6 Hours]

Entrepreneurship- Financial Planning:

- Financial Projections and Valuation
- Stages of financing
- Debt, Venture Capital and other forms of Financing

UNIT – V [6 Hours]

Intellectual Property Rights (IPR)

- Introduction and the economics behind development of IPR: Business Perspective
- IPR in India – Genesis and Development
- International Context
- Concept of IP Management, Use in marketing

UNIT – VI [6 Hours]

Types of Intellectual Property

- Patent- Procedure, Licensing and Assignment, Infringement and Penalty
- Trademark- Use in marketing, example of trademarks- Domain name
- Geographical Indications- What is GI, Why protect them?

- Copyright- What is copyright
- Industrial Designs- What is design? How to protect?

Class Discussion- Major Court battles regarding violation of patents between corporate companies.

Home Assignments:

Case study materials book will be given to students. Students are required to meet in groups before coming to class and prepare on the case for the day. Instructor may ask the student groups to present their analysis and findings to the class.

Further, the topic for class discussion will be mentioned beforehand and students should be ready to discuss these topics (in groups) in class. Students are required to meet in groups before coming to class and prepare on the topic. Few topics are mentioned below as examples. Instructor can add or change any topic as per requirement.

Topic 1- Is innovation manageable or just a random gambling activity?

Topic 2- Innovation: Co-operating across networks vs. ‘go-it-alone’ approach.

Topic 3- Major Court battles regarding violation of patents between corporate companies.

Text Books:

1. Joe Tidd, John Bessant. *Managing Innovation: Integrating Technological, Market and Organizational Change*
2. Case Study Materials: To be distributed for class discussion

Syllabus for Unit Test:	Unit
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Business Communication and Value Science-III

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 2Hrs./Week	Semester Examination: 50 marks	Theory: Credits 02
Tutorials: 0 Hr./Week	Continuous Assessment: No	Term Work Credit: 02
Lab: 4 Hrs./Week	Term Work and Oral: 50	

Course Pre Requisites:

Good knowledge of Business Communication and Value Science (Covered Semester 1 and 2) Basic Knowledge of English (verbal and written) Completion of all units from Semesters 1 and 2

Course Objective:

Develop technical writing skills; introduce students to Self-analysis techniques like SWOT & TOWS and develop the sense of Pluralism & cultural spaces, Cross-cultural communication, Science of Nation building.

Course Outcomes:

Upon completion of the course, students shall have ability to

Apply & analyze the basic principles of SWOT & life positions.

Understand, analyze & leverage the power of motivation in real life.

Identify & respect pluralism in cultural spaces.

Understand and apply the concepts of Global, glocal and translocational

Analyze cross cultural communication

Apply the science of Nation building, the diverse culture of India

Identify the common mistakes made in cross-cultural communication, tools of technical writing, recognize the roles and relations of different genders.

Understand Artificial intelligence & recognize its impact in daily life

Topics to Be Covered:

UNIT – I

[6 Hours]

SWOT and Life Positions:

Summarize the basic principles of SWOT and Life Positions; apply SWOT in real life scenarios. TOWS analysis, research on TOWS and find out how you can turn your threat into opportunity

UNIT – II

[6 Hours]

SWOT and TOWS:

Research through SWOT and TOWS on what are the strengths they have identified to survive in the VUCA World, Motivation: its role and application in real life.

UNIT – III

[6 Hours]

Pluralism in cultural spaces:

Identify pluralism in cultural spaces, Respect pluralism in cultural spaces, Differentiate between the different cultures of India,

UNIT – IV

[6 Hours]

Cross cultural communication

Define the terms global, glocal and translocational, Differentiate between global, glocal and translocational culture, implications of cross-cultural communication, common mistakes made in cross-cultural communication, roles and relations of different genders

UNIT – V

[6 Hours]

Nation Building:

Role of science in nation building, tools and best practices of technical writing, technical writing in real-life scenarios

UNIT – VI

[6 Hours]

Roles of technical writing in science and technology:

AI (artificial intelligence), the importance of AI, Designing College in the year 2090 with help of technical writing and technology, role of technical writing in science and technology, IOT

Text Books:

1. Swot Analysis: A Guide to Swot for Business Studies Students by [Alan Sarsby](#)
2. The SWOT Analysis: Using Your Strength to Overcome Weaknesses, Using Opportunities to Overcome Threats by [Lawrence G. Fine](#)
3. Cross-Cultural and Intercultural Communication by [William B. Gudykunst](#)

Operations Research

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 2Hrs./Week	Semester Examination: 60 marks	Theory: 2 Credits
Tutorials: 0Hr./Week	Continuous Assessment: 40 marks	Term Work and Practical credit: 1
Lab: 2Hrs./Week	Term Work and Practical: 50	

Course Pre Requisites:

Good knowledge of mathematics (Covered in Year 1,2)

Course Objective:

Course Outcomes:

As a part of this course, students will:

- Understand OR problem and associated models.
- Understand Linear Algebra.
- Use transportation and assignment problems.
- Use PERT for modeling.
- Use Inventory Control System.
- Apply queuing theory and modulation techniques.

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction to OR:

Origin of OR and its definition. Concept of optimizing performance measure, Types of OR problems, Deterministic vs. Stochastic optimization, Phases of OR problem approach – problem formulation, building mathematical model, deriving solutions, validating model, controlling and implementing solution.

UNIT – II [6 Hours]

Linear Programming:

Linear programming – Examples from industrial cases, formulation & definitions, Matrix form. Implicit assumptions of LPP.

Some basic concepts and results of linear algebra – Vectors, Matrices, Linear Independence / Dependence of vectors, Rank, Basis, System of linear eqns., Hyperplane, Convex set, Convex polyhedron, Extreme points, Basic feasible solutions.

Geometric method: 2-variable case, Special cases – infeasibility, unboundedness, redundancy & degeneracy, Sensitivity analysis.

Simplex Algorithm – slack, surplus & artificial variables, computational details, big-M method, identification and resolution of special cases through simplex iterations.

Duality – formulation, results, fundamental theorem of duality, dual-simplex and primal-dual algorithms.

UNIT – III [6 Hours]

Transportation and Assignment problems:

TP - Examples, Definitions – decision variables, supply & demand constraints, formulation, Balanced & unbalanced situations, Solution methods – NWCR, minimum cost and VAM, test for optimality (MODI method), degeneracy and its resolution.

AP - Examples, Definitions – decision variables, constraints, formulation, Balanced & unbalanced situations, Solution method – Hungarian, test for optimality (MODI method), degeneracy & its resolution.

UNIT – IV [6 Hours]

PERT – CPM:

Project definition, Project scheduling techniques – Gantt chart, PERT & CPM, Determination of critical paths, Estimation of Project time and its variance in PERT using statistical principles, Concept of project crashing/time-cost trade-off.

UNIT – V [6 Hours]

Inventory Control:

Functions of inventory and its disadvantages, ABC analysis, Concept of inventory costs, Basics of inventory policy (order, lead time, types), Fixed order-quantity models – EOQ, POQ & Quantity discount models. EOQ models for discrete units, sensitivity analysis and Robustness, Special cases of EOQ models for safety stock with known / unknown stock out situations, models under prescribed policy, Probabilistic situations.

UNIT – VI [6 Hours]

Queuing Theory:

Definitions – queue (waiting line), waiting costs, characteristics (arrival, queue, service discipline) of queuing system, queue types (channel vs. phase).

Kendall's notation, Little's law, steady state behavior, Poisson's Process & queue, Models with examples - M/M/1 and its performance measures; M/M/m and its performance measures; brief description about some special models.

Simulation Methodology:

Definition and steps of simulation, random number, random number generator, Discrete Event System Simulation – clock, event list, Application in Scheduling, Queuing systems and Inventory systems.

Text Books:

3. *Operations Research: An Introduction.* H.A. Taha.

Reference Books:

1. *Linear Programming.* K.G. Murthy.
2. *Linear Programming.* G. Hadley.
3. *Principles of OR with Application to Managerial Decisions.* H.M. Wagner.
4. *Introduction to Operations Research.* F.S. Hiller and G.J. Lieberman.
5. *Elements of Queuing Theory.* Thomas L. Saaty.
6. *Operations Research and Management Science, Handbook:* Edited By A. Ravi Ravindran.
7. *Management Guide to PERT/CPM.* Wiest & Levy.
8. *Modern Inventory Management.* J.W. Prichard and R.H. Eagle.

Syllabus for Unit Test:	Unit
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Essence of Indian Traditional Knowledge

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 2Hrs./Week	Semester Examination: 50 marks	Theory: Non-Credits

Course Objective: Give exposure to the repositories of our indigenous knowledge and wisdom which have evolved over centuries, and they still continue to serve social and cultural functions.

Course Outcomes: Student will be able to

1. Understand basic principles, thought process, reasoning and inference of Indian Traditional Knowledge Systems.
2. Recognize wisdom of Sanskrit literature and its importance in modern society with rapid technological advancements.
3. Be familiar with scientific worldview and basic principles of Yoga and holistic health care system
4. Understand that sustainability is at the core of Indian Traditional Knowledge Systems connecting society and nature.

Topics to Be Covered:

UNIT – I [6 Hours]

Basic Structure of Indian Knowledge System: The historical impact of social change on traditional knowledge systems. Indigenous Knowledge (IK), Traditional Knowledge (TK) Vs western knowledge traditional knowledge vis-à-vis formal knowledge. Significance of TK Protection, value of TK in global economy, Role of Government to harness TK. The Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006, Plant Varieties Protection and Farmer's Rights Act, 2001 (PPVFR Act).

UNIT – II [6 Hours]

Modern Science and Indian Knowledge System; Mathematics in India, Early Historical Period, The Classical Period, The Classical Period, post-Āryabhaṭa, Features of Indian Mathematics. Early Chemical Techniques, Atomism in Vaiśeṣika, Chemistry in Early Literature, Indian Philosophy Sāṃkhya, Yoga, Vaiśeṣika, Nyāya, Mīmāṃsā, Vedānta, Sāṃkhya.

UNIT – III [6 Hours]

Yoga and Holistic Health care: Ayurveda for Life, Health and Well-being ,Definition of Ayurveda, The Principles of Ayurvedic Healing, Treating diseases to restore health, Astanga Ayurveda.

Reference Books:

1. V. Sivaramakrishnan (Ed.), Cultural Heritage of India-course material, Bharatiya Vidya Bhavan, Mumbai. 5th Edition, 2014.

2. Swami Jitatmanand, Holistic Science and Vedant, Bharatiya Vidya Bhavan.
3. "Knowledge Traditions and Practices of India" Kapil Kapoor, Michel Danino
4. RN Jha, Science of Consciousness Psychotherapy and Yoga Practices, Vidyanidhi Prakasham, Delhi, 2016

DESIGN AND ANALYSIS OF ALGORITHMS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hrs./Week	Semester Examination: 60 marks	Theory: 3 Credits
Tutorials: NA	Continuous Assessment: 40 marks	Term Work and Practical Credit: 1
Lab: 2 Hrs./Week	Term Work and Practical: 50	

Course Pre Requisites: Students should be well versed with algorithms and operations on basic data structures stacks, queues, linked lists, trees, graphs. Students should have knowledge of searching sorting algorithms.

Course Objective: Understand and compare important algorithmic design paradigms and methods of analysis. To choose and extend efficient algorithms required for designs.

Course Outcomes:

After successful completion of this course students will be able to :

1. Interpret the performance of algorithms using analysis techniques.
2. Examine the fundamental algorithmic strategies.
3. Compare the fundamental algorithmic strategies.
4. Implement Graphs and trees algorithms.
5. Interpret the tractable or intractable problem.
6. Summarize the advance types of algorithms.

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction: Characteristics of Algorithm. Analysis of Algorithm: Asymptotic analysis of Complexity Bounds – Best, Average and Worst-Case behavior; Performance Measurements of Algorithm, Time and Space Trade-Offs, Analysis of Recursive Algorithms through Recurrence Relations: Substitution Method, Recursion Tree Method and Masters' Theorem.

UNIT – II [6 Hours]

Fundamental Algorithmic Strategies: Brute-Force technique, Heuristics, Greedy algorithms, , Illustrations of these techniques for Problem-Solving

UNIT – III [6 Hours]

Fundamental Algorithmic Strategies (contd.) : Dynamic Programming, Branch and Bound algorithms, Backtracking methodologies; Illustrations of these techniques for Problem-Solving

UNIT – IV [6 Hours]

Graph and Tree Algorithms: Traversal algorithms: Depth First Search (DFS) and Breadth First Search (BFS); Shortest path algorithms, Transitive closure, Minimum Spanning Tree, Topological sorting, Network Flow Algorithm.

UNIT – V [6 Hours]

Tractable and Intractable Problems: Computability of Algorithms, Computability classes – P, NP, NP-complete and NP-hard. Cook’s theorem, Standard NP-complete problems and Reduction techniques.

UNIT – VI [6 Hours]

Advanced Topics: Approximation algorithms, Randomized algorithms, Class of problems beyond NP – P SPACE, Introduction to Quantum Algorithms.

Home Assignments:

Implementation of Different Algorithms based on various algorithmic strategies studied above using C

Text Books:

1. *Fundamental of Computer Algorithms*, E. Horowitz and S. Sahni, Orient Black Swan
2. *Introduction to Algorithms*, T. H. Cormen, C. E. Leiserson and R. L. Rivest, PHI Learning Pvt. Ltd. (Originally MIT Press)

Reference Books:

1. *The Design and Analysis of Computer Algorithms*, A. Aho, J. Hopcroft and J. Ullman, Pearson Education India
2. *Computer Algorithms: Introduction to Design and Analysis*, S. Baase, Pearson Education India
3. *The Art of Computer Programming, Vol. 1, Vol. 2 and Vol. 3*, .D. E. Knuth, Addison Wesley

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Compiler Design

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hrs./Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1Hr./Week	Continuous Assessment: 40 marks	Term Work and Oral credit: 1
Lab: 2Hrs./Week	Term Work and Oral: 50	

Course Pre Requisites:

1. The students should have learnt Theory of Computation.
2. Basic of the structure of any Programming Language and Grammars.
3. Know the basics of Computer organization and Assembly Language Programming.

Course Objective:

1. To study the Compiler Design Tools.
2. To understand the Compiler for various Programming Languages.

Course Outcomes:

1. Understands compiler and various phases in compilation.
2. Understand Parser and its various techniques.
3. Understands Syntax Directed Translation, Symbol Tables and their applications.
4. Learn the techniques of Code Optimization.
5. Learn the techniques of Code improvement.
6. Understands compilation of Object Oriented features.

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction: Phases of compilation and overview. Lexical Analysis (scanner): Regular languages, finite automata, regular expressions, relating regular expressions and finite automata, scanner generator (lex, flex).

UNIT – II [6 Hours]

Syntax Analysis (Top down Parser): Context-free languages and grammars, push-down automata, Elimination of Left recursion, Elimination of Left factoring, Top down parsing, FIRST and FOLLOW, Non-Recursive Predictive Parsing, LL(1) grammars .

UNIT – III [6 Hours]

Syntax Analysis (Bottom Up Parser): Operator grammars, Bottom-up parsing, Shift Reduce Parser, LR(O), SLR(1), LR(1), CLR,LALR(1) grammars, ambiguity and LR parsing, LALR(1) parser generator (yacc, bison)

UNIT – IV [6 Hours]

Semantic Analysis: Attribute grammars, syntax directed definition, evaluation and flow of attribute in a syntax tree.

Symbol Table: Basic structure, symbol attributes and management. Run-time environment: Procedure activation, parameter passing, value return, memory allocation, scope.

. UNIT – V [6 Hours]

Intermediate Code Generation: Translation of different language features, different types of intermediate forms

Code Improvement (optimization): Control-flow, data-flow dependence etc.; local optimization, global optimization, loop optimization, peep-hole optimization etc.

UNIT – VI [6 Hours]

Architecture dependent code improvement: Instruction scheduling (for pipeline), loop optimization (for cache memory) etc. Register allocation and target code generation.

Advanced topics: Type systems, data abstraction, compilation of Object Oriented features and non-imperative programming languages.

Home Assignments:

Assignments using Lex and Yacc

Text Books:

1. Compilers: Principles, Techniques and Tools, V. Aho, R. Sethi and J. Ullman.
2. Lex & Yacc, Levine R. John, Tony Mason and Doug Brown

Reference Books:

The Design and Evolution of C++, Bjarne Stroustrup.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

FUNDAMENTALS OF MANAGEMENT

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hrs/Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: NIL	Continuous Assessment: 40 marks	Term Work and Practical Credit: NIL
Lab: NIL	Term Work and Practical: Nil	

Course Pre Requisites: Preliminary awareness about the functioning of any organization

Course Objective:

1. To impart knowledge about various management and organization principles which governs the functioning of a firm/organization
2. To explain about concepts of leadership, organizational design, organization behavior and managerial ethics.

Course Outcomes: After completion of course, students should be able to

1. Understand the evolution of management
2. Explain intricacies of different functions of management.
3. Categorize behavior of individuals in an organization
4. Distinguish between approaches to organizational design.
5. Analyze importance and types of work ethics
6. Identify importance and traits of leadership

Topics to Be Covered:

UNIT – I [6 Hours]

Management Theories: Concept and Foundations of Management, Evolution of Management Thoughts [Pre-Scientific Management Era (before 1880), Classical management Era (1880-1930), Neo-classical Management Era (1930-1950), Modern Management era (1950-on word). Contribution of Management Thinkers: Taylor, Fayol, Elton Mayo etc.

UNIT – II [6 Hours]

Functions of Management- Planning, Organizing, Staffing, Directing, Controlling

UNIT – III [6 Hours]

Organization Behavior: Introduction, Personality, Perception, Learning and Reinforcement, Motivation, Group Dynamics, Power & Influence, Work Stress and Stress Management, Decision Making, Problems in Decision Making, Decision Making, Organizational Culture, Managing Cultural Diversity

UNIT – IV [6 Hours]

Organizational Design: Classical, Neoclassical and Contingency approaches to organizational design; Organizational theory and design, Organizational structure (Simple Structure, Functional Structure, Divisional Structure, Matrix Structure)

UNIT – V [6 Hours]

Managerial Ethics: Ethics and Business, Ethics of Marketing & advertising, Ethics of Finance & Accounting, Decision – making frameworks, Business and Social Responsibility, International Standards, Corporate Governance, Corporate Citizenship, Corporate Social Responsibility

UNIT – VI [6 Hours]

Leadership: Concept, Nature, Importance, Attributes of a leader, developing leaders across the organization, Leadership Grid.

Home Assignments: The topic for class discussion will be mentioned beforehand and students should be ready to discuss these topics (in groups) in class. Students are required to meet in groups before coming to class and prepare on the topic. Few topics are mentioned below as examples. Instructor can add or change any topic as per requirement.

1. Topic: Corporate social responsibility (CSR) and HRM implications: What does it mean to be socially responsible within an increasingly financially driven market economy?
2. Topic: Leaders are Born, Not Made! The debate

Text Books: Richard L. Daft, *Understanding the Theory and Design of Organizations*

Reference Books:

1. Stephen P. Robbins, Timothy A. Judge, Neharika Vohra, *Organizational Behavior*
2. Other relevant articles or books could be sent later to the students.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

BUSINESS STRATEGY

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hrs./Week	Semester Examination: 60 marks	Theory: 3 Credits
Tutorials: NIL	Continuous Assessment: 40 marks	Term Work and Practical credit: NIL
Lab: NIL	Term Work and Practical: NIL	

Course Pre Requisites: Introductory awareness of Business terminologies and functions

Course Objective: Familiarize the fundamental principles and practices of business development

Course Outcomes:

This course will help students,

1. To summarize the important concepts of strategic management
2. To identify the process and capabilities for internal environment of a firm.
3. To understand the strategies applicable for external environments of firm
4. To examine corporate strategies
5. To compare the various business growth strategies
6. To understand the process of strategy implementation

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction to Strategic Management

- Importance of Strategic Management
- Vision and Objectives
- Schools of thought in Strategic Management
- Strategy Content, Process, and Practice
- Fit Concept and Configuration Perspective in Strategic Management

UNIT – II [6 Hours]

Internal Environment of Firm- Recognizing a Firm's Intellectual Assets

- Core Competence as the Root of Competitive Advantage
- Sources of Sustained Competitive Advantage
- Business Processes and Capabilities-based Approach to Strategy

UNIT – III [6 Hours]

External Environments of Firm- Competitive Strategy

- Five Forces of Industry Attractiveness that Shape Strategy
- The concept of Strategic Groups, and Industry Life Cycle
- Generic Strategies
- Generic Strategies and the Value Chain
-

UNIT – IV [6 Hours]

Corporate Strategy

- The Motive for Diversification
- Related and Unrelated Diversification
- Business Portfolio Analysis

UNIT – V [6 Hours]

Growth Strategies

- Expansion, Integration and Diversification
- Strategic Alliances, Joint Ventures, and Mergers & Acquisitions

UNIT – VI [6 Hours]

Strategy Implementation: Structure and Systems

- The 7S Framework
- Strategic Control and Corporate Governance

Home Assignments:

- Latest business events would be discussed in class and students should be ready to discuss these events (in groups). The topic will be mentioned beforehand. Students are required to meet in groups before coming to class and prepare on the topic.
- There will be periodic homework assignments relating to the course concepts or mini-cases. Specific instructions will be given separately.

Text Books:

1. Robert M. Grant (2012). *Contemporary Strategic Management*, Blackwell, 7th Edition.

Reference Books:

1. M.E. Porter, *Competitive Strategy*, 1980. M.E. Porter,
2. *Competitive Advantage*, 1985 Richard Rumelt (2011).
Good Strategy Bad Strategy: The Difference and Why It Matters.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

DESIGN THINKING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hrs./Week	Semester Examination: 60 marks	Theory: 3 Credits
Tutorials: NA	Continuous Assessment: 40 marks	Term Work credit: 1
Lab: 2 Hrs./Week	Term Work and Oral: 50	

Course Pre Requisites: Students should be well versed Completion of all units from Semesters 1, 2, 3 and 4

Course Objective:

1. Recognize the importance of DT
2. Explain the phases in the DT process
3. List the steps required to complete each phase in DT process
4. Apply each phase in the DT process
5. Use doodling and storytelling in presenting ideas and prototypes
6. Create value proposition statements as part of their presentations
7. Recognize how DT can help in functional work
8. Recognize how Agile and DT complement each other to deliver customer satisfaction

Course Outcomes:

After successful completion of this course students will be able to:

1. Implement the Phases in the DT process
2. Identify the steps required to conduct an immersion activity
3. Design personas to create problem statements in the define phase of DT
4. Apply the steps in the ideate phase of DT
5. Design a prototype to create a value proposition statement
6. Test a prototype created through a DT process

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction: Recognize the importance of Design Thinking why is Design Thinking important for business?, Why is Design Thinking important for you? , Identify the steps in the DT process What is DT? Empathize (search for rich stories and find some love), Define (user need and insights – their POV), Ideate (ideas, ideas, ideas), Prototype (build to learn), Test (show, don't tell)

UNIT – II [6 Hours]

Empathy Phase: Recognize the steps in the empathize phase of DT, What is empathy? Ask What? How? Why?, Different types to developing Empathy towards People Identify the steps required to conduct an immersion activity, How to empathize?, Intro to Immersion Activity, Conduct an immersion activity and fill up the DT question template, Immersion activity

UNIT – III [6 Hours]

Define Phase: Creating personas: Recognize the steps to create personas in the define phase of DT, What is a persona and how do I create one? Four Different Perspectives on Personas 1)Goal-directed Personas 2)Role-Based Personas 3) Engaging Personas 4) Fictional Personas, 10 steps to Creating Your Engaging Personas and Scenarios Recognize the steps to create problem statements in the define phase of DT, Problem statements, Defining problem statements, Define the problem statements in the define phase of DT

UNIT – IV [6 Hours]

Ideate Phase: How to Ideate?, Recognize the steps in the ideate phase of DT, Apply the steps in the ideate phase of DT, Ideation games: Game 1: Six Thinking Hats, Game 2: Million-dollar idea, Ideate to find solutions, Characteristics Required for Successful Ideation, Recognize how doodling can help to express ideas, Recognize the importance storytelling in presenting ideas and prototypes, What is Storytelling in DT?

UNIT – V [6 Hours]

prototype phase: Recognize the importance of the prototype phase in DT, Prototype your idea, Create a prototype: Types of Prototyping 1)Low-Fidelity Prototyping 2) High-Fidelity Prototyping , Guidelines for Prototyping, Recognize the importance of service value proposition, Create a value proposition statement

UNIT – VI [6 Hours]

Testing Phase: Testing in Design Thinking, Test the Prototype, Role of DT in your work, discuss How DT can help me to become a better coder?, Agile and DT complement each other to deliver customer satisfaction, Share your Satori.

Home Assignments:

Implementation of Different Design Thinking Phase based on various activities.

Text Books:

There are no prescribed texts for Semester 5 – there will be handouts and reference links shared.

Reference Books:

Hooked by Nir Eyal

The Art of Creative Thinking by Rod Judkins

Start Up nation by Dan Senor and Saul singer

Start with Why by Simon Sinek

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Practical

Summative Assessment based on End Semester Project

Bloom's Level	Topics	Contents		Marks
Understand	Understand, Analyze, Apply	Option 1: Each group needs to present a Prototype of how they can apply DT in their functional work or coding. Examples will be provided to explain what exactly they need to do. Option 2: Each group will apply DT to create a prototype to improve any existing product or service. For both options, groups need to complete all phases of the Stanford DT model and include the outputs of each phase in their presentation.		50
Apply	Conduct and apply DT in the project.		12 Hours	
Analyze				

Elective -I Machine Learning

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3Hrs./Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1Hr./Week	Continuous Assessment: 40 marks	Term Work and Oral Credit: 1
Lab: 2 Hrs./Week	Term Work and Oral: 50	

Course Pre-Requisites:

- 1) Basic concepts of statistics.
- 2) Knowledge of fundamentals of AI.

Course Objective:

- 1) To simulate decision making and thinking in machine.
- 2) To understand standard Machine Learning practices.
- 3) To apply algorithms for precise result.

Course Outcomes: Students will be able to

1. Learn relationship between human and machine.
2. Implement basic classification algorithms
3. Implement enhanced classification algorithms
4. Implement HMM in detail
5. Apply concepts of regression for various application
6. Apply expectation maximization techniques for optimization.

Topics to Be Covered:

UNIT – I

[6 Hours]

Introduction to Machine Learning (ML); Relationship between ML and human learning; A quick survey of major models of how machines learn; Example applications of ML

UNIT – II

[6 Hours]

Classification: Supervised Learning; The problem of classification; Feature engineering; Training and testing classifier models; Cross-validation; Model evaluation (precision, recall, F1-measure, accuracy, area under curve); Statistical decision theory including discriminant functions and decision surfaces.

UNIT – III

[6 Hours]

Naive Bayes classification; Bayesian networks; Decision Tree and Random Forests; k-Nearest neighbor classification; Support Vector Machines; Artificial neural networks including backpropagation; Applications of classifications; Ensembles of classifiers including bagging and boosting.

UNIT – IV

[6 Hours]

Hidden Markov Models (HMM) with forward-backward and Viterbi algorithms; Sequence classification using HMM; Conditional random fields; Applications of sequence classification such as part-of-speech tagging.

UNIT – V

[6 Hours]

Regression: Multi-variable regression; Model evaluation; Least squares regression; Regularization; LASSO; Applications of regression Association rule mining algorithms including apriori.

UNIT – VI

[6 Hours]

Expectation-Maximization (EM) algorithm for unsupervised learning Clustering: average linkage; Ward's algorithm; Minimum spanning tree clustering; K-nearest neighbors clustering; BIRCH; CURE; DBSCAN Anomaly and outlier detection methods.

Home Assignments:

- (1) Introduction to WEKA and R
- (2) Classification of some public domain datasets in UCI ML repository

Mini projects in the Lab:

- (1) Implementation of one clustering algorithm
- (3) Implementation of one association rule mining algorithm
- (4) Implementation of one anomaly detection algorithms
- (5) Implementation of EM algorithm for some specific problem

Text Books:

Reference Books:

- [1] C. Bishop, **Pattern Recognition and Machine Learning**, Springer, 2007.
- [2] E. Alpaydin, **Introduction to Machine Learning**, 3/e, Prentice-Hall, 2014.
- [3] A. Rostamizadeh, A. Talwalkar, M. Mohri, **Foundations of Machine Learning**, MIT Press.
- [4] A. Webb, **Statistical Pattern Recognition**, 3/e, Wiley, 2011.

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Computer Network

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hrs/Week	Semester Examination: 60 marks	Theory: 3 Credits
Tutorials: NIL	Continuous Assessment: 40 marks	Term Work and Practical credit: 1
Lab: 2 Hrs./Week	Term Work and Practical: 50	

Course Pre Requisites: The prerequisite for this class is successful completion of Object Oriented Design, Data Structures, Data Communications.

Course Objective:

1. Become familiar with layered communication architectures (OSI and TCP/IP).
2. Understand the client/server model and key application layer protocols.
3. Learn sockets programming and how to implement client/server programs.
4. Understand the concepts of reliable data transfer and how TCP implements these concepts.
5. Know the principles of congestion control and trade-offs in fairness and efficiency.
6. Learn the principles of routing and the semantics and syntax of IP.

Course Outcomes:

1. Have a good understanding of the OSI Reference
2. Analyze the requirements for a given organizational structure and select the most appropriate networking architecture and technologies;
3. Specify and identify deficiencies in existing protocols, and then go onto formulate new and better protocols;
4. Have an understanding of the issues surrounding Mobile and Wireless Networks.
5. Have a working knowledge of datagram and internet socket programming
6. Have a basic knowledge of the use of cryptography and network security

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction: Computer networks and distributed systems, Classifications of computer networks, Preliminaries of layered network structures.**Data communication Components:** Representation of data and its flow, Various Connection Topology, Protocols and Standards, OSI model, Transmission Media.**LAN:** Wired LAN, Wireless LAN, Virtual LAN

UNIT – II[6 Hours]

Data Link Layer and Medium Access Sub Layer: Fundamentals of Error Detection and Error Correction, Block coding, Hamming Distance, CRC; Flow Control and Error control protocols - Stop and Wait, Go-back-N ARQ, Selective Repeat ARQ, Sliding Window, Piggybacking, Random Access, Multiple access protocols - Pure ALOHA, Slotted ALOHA, CSMA/CD, CDMA/CA\

UNIT – III [6 Hours]

Network Layer: Switching, Logical addressing – IPV4, IPV6; Address mapping – ARP, RARP, BOOTP and DHCP–Delivery, Forwarding and Unicast Routing protocols.

UNIT – IV [6 Hours]

Application Layer: DNS, DDNS, TELNET, EMAIL, FTP, WWW, HTTP, SNMP, Bluetooth, Firewalls.

UNIT – V [6 Hours]

Techniques for Bandwidth utilization: Multiplexing - Frequency division, Time division and Wave division, Concepts on spread spectrum.

UNIT – VI [6 Hours]

Network Security: Electronic mail, directory services and network management, Basic concepts of Cryptography.

Home Assignments:

1. Socket Programming using C/C++
2. Network System Administration: Understanding switches and routers

Text Books:

1. *Computer Networks*, A. Tannenbaum.
2. *Data and Computer Communication*, William Stallings

Reference Books:

3. *Network Security*, Kaufman, R. Perlman and M. Speciner.
4. *UNIX Network Programming*, Vol. 1,2 & 3, W. Richard Stevens

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Subject Name : Information Security

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4Hrs./Week	Semester Examination: 60 marks	Theory: 5 Credits
Tutorials: 1Hr./Week	Continuous Assessment: 40 marks	Term Work and Practical credit: 1
Lab: 2Hrs./Week	Term Work and Practical: 50	

Course Prerequisites:		
Students should have primary knowledge of		
<ol style="list-style-type: none"> 1 Fundamentals of Digital Communication and Computer Networks. 2. Operating Systems 		
Course Objectives:		
<ul style="list-style-type: none"> • Discuss various administrative, technical, governance, regularity and policy aspects of Information Security Management. • Discuss and provide hands on approaches to better understand and to devise strategies related to security policy. • Understand different security issues related to computer network, operating systems and database systems. 		
Course Outcome:		
Students will be able to:		
1) Understand security parameters and cryptosystems.		
2) Understand security and access control models.		
3) Understand aspect of information security management including planning, process, policy, procedure and monitoring.		
4) Understand various issues related to threats like Threat Analysis, Threat Modeling, threat awareness and threat modeling		
5) Understand security issues related to networks, operating systems and database.		
6) Learn information audit and business continuity planning concepts.		
UNIT-I	Overview of Security Parameters and Cryptosystems	(6 Hours)
	Confidentiality, integrity and availability; Security violation and threats; Security policy and procedure; Assumptions and Trust; Security Assurance, Implementation and Operational Issues; Security Life Cycle. Simple Cryptosystems: Enciphering Matrices, Encryption Schemes, Symmetric and, Asymmetric Cryptosystems, Cryptanalysis, Different Ciphers used for Information Security, Secure Cryptosystem.	

UNIT-II	Access Control Models	(6 Hours)
	Discretionary, mandatory, roll-based and task-based models, unified models, access control algebra, temporal and spatio-temporal models, Authorization and Authentication - types, policies and techniques, Trusted Computing and multilevel security - Security models, Trusted Systems.	
UNIT-III	Security Policies	(6 Hours)
	Confidentiality policies, integrity policies, hybrid policies, non-interference and policy composition, international standards, Security certification - Security monitoring and Auditing - Security Requirements Specifications - Security Policies and Procedures, Role of Information Security Department	
UNIT-IV	Security Threats	(6 Hours)
	Sources of security threats- Motives - Target Assets and Vulnerabilities – Consequences of threats- E-mail threats - Web-threats - Intruders and Hackers, Insider threats, Cyber crime Security Threat Management: Risk Assessment - Forensic Analysis - Security threat correlation – Threat awareness - Vulnerability sources and assessment- Vulnerability assessment tools -Threat identification - Threat Analysis - Threat Modeling - Model for Information Security Planning,	
UNIT-V	Logic-based System	(6 Hours)
	Malicious logic, vulnerability analysis, auditing, intrusion detection. Applications: Network security, user security, program security. Database Security Architecture, Operating Systems Security, Enterprise Security, Data privacy, introduction to digital forensics, Incidence Response and Forensics, enterprise security specification, Software security issues, Email and Internet use policies, Third Party Development - Intellectual Property Issues.	
UNIT-VI	Auditing and Business Continuity Planning	(6 Hours)
	Introduction to information security audit and principles of audit. Business continuity planning and disaster recovery. Case study: 9/11 tragedy. Backup and recovery techniques for applications and storage. Computer forensics: techniques and tools. Forensic tools VMware, Security testing tool BackTrack, Audit Tools: NESSUS and	

	NMAP. Information Security Standards and Compliance: Overview of ISO 17799 Standard. Legal and Ethical issues, Database auditing	
Assignment List:		
1.	Assignments on different ciphers.	
2.	Assignments on RSA, DSA, DES, AES, Blowfish, TripleDES.	
3.	Assignment based on the presentation on following topics: ISO 17799 Standard NESSUS and NMAP Audit Tools Asymmetric Cryptosystems	
4.	Case study on secure configuration of Email Server	
5.	Case study on Incidence Response and Forensics analysis	
6.	Assignment on Computer Forensic Tools	
Text Books:		
1)	Neal Koblitz, “A Course in Number Theory and Cryptography”, 2 nd Edition, Springer, 2002.	
2)	Johannes A. Buchman, “Introduction to Cryptography”, 2 nd Edition, Springer, 2004.	
3)	Serge Vaudenay, “Classical Introduction to Cryptography – Applications for Communication Security”, Springer, 2006.	
4)	Victor Shoup, “A Computational Introduction to Number Theory and Algebra”, Cambridge University Press, 2005.	
5)	William Stallings and Lawrie Brown, “Computer Security: Principles and Practice”, Prentice Hall, 2008.	
6)	Thomas Calabres and Tom Calabrese, “Information Security Intelligence: Cryptographic Principles & Application”, Thomson Delmar Learning, 2004.	
Reference Books:		
1)	.Nina Godbole, Information Systems Security-Security Management, Metrics, Frameworks and Best Practices, Wiley, 2009	
2)	Information Security Policies, Procedures, and Standards:Guidelines for Effective Information Security Management (Paperback) Auerbach,1 st edition, 2001	
3)	Neal Koblitz, “A Course in Number Theory and Cryptography”, 2 nd Edition, Springer, 2002.	
4)	Swiderski, Frank and Syndex, “Threat Modeling”, Microsoft Press, 2004.	
Syllabus for Unit Test:		
Unit Test -1	Unit I ,II and III	
Unit Test -2	Unit IV, V and VI	

Artificial Intelligence

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4Hrs./Week	Semester Examination: 60 marks	Theory: 5 Credits
Tutorials: 1Hr./Week	Continuous Assessment: 40 marks	Term Work and Practical credit: 1
Lab: 2Hrs./Week	Term Work and Practical: 50	

Course Pre Requisites: Discrete mathematics, Data structures,

Course Objective:

To provide the insight to the students the about basic knowledge representation, problem solving, and learning methods of artificial intelligence.

Course Outcomes:

After completion of the course the students will able to,

1. Describe the concept of Artificial Intelligence, Intelligent agents and Learning agents
2. Identify issues in problem solving and apply the appropriate search methods.
3. Use the appropriate search method and identify the constraints
4. Describe and select the different knowledge representation methods
5. Identify the components of planning for a particular System
6. Use appropriate domain knowledge and develop an Expert system

UNIT – I [6 Hours]

Introduction, Overview of Artificial intelligence: Problems of AI, AI technique, Tic - Tac - Toe problem. Intelligent Agents, Agents & environment, nature of environment, structure of agents, goal based agents, utility based agents, learning agents.

UNIT – II[6 Hours]

Problem Solving, Problems, Problem Space & search: Defining the problem as state space search, production system, problem characteristics, issues in the design of search programs.

Search techniques: Problem solving agents, searching for solutions; uniform search strategies: breadth first search, depth first search, depth limited search, bidirectional search, comparing uniform search strategies. Heuristic search strategies Greedy best-first search, A* search, AO* search, memory bounded heuristic search: local search algorithms & optimization problems: Hill climbing search, simulated annealing search, local beam search

UNIT – III [6 Hours]

Constraint satisfaction problems: Local search for constraints Satisfaction problems. Adversarial search, Games, optimal decisions & strategies in games, the minimax search procedure, alpha-beta pruning, additional refinements, iterative deepening.

UNIT – IV

Knowledge & reasoning: Knowledge representation issues, representation & mapping, approaches to knowledge representation. Using predicate logic, representing simple fact in logic, representing instant & ISA relationship, computable functions & predicates, resolution, natural deduction. Representing knowledge using rules, Procedural verses declarative knowledge, logic programming, forward verses backward reasoning, matching, control knowledge.

UNIT – V [6 Hours]

Probabilistic reasoning: Representing knowledge in an uncertain domain, the semantics of Bayesian networks, Dempster-Shafer theory, Planning Overview, components of a planning system, Goal stack planning, Hierarchical planning, other planning techniques.

UNIT – VI [6 Hours]

Expert Systems: Representing and using domain knowledge, expert system shells, and knowledge acquisition.

Home Assignments:

Assignments should include problems related to the topics covered in lectures, like heuristics, optimal search, and graph heuristics. Constraint satisfaction problems, k-nearest neighbors, decision trees, etc. can be included in home assignments.

Text Books:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach
2. Artificial Intelligence, Russel, Pearson

Reference Books:

1. Artificial Intelligence, Ritch & Knight, TMH
2. Introduction to Artificial Intelligence & Expert Systems, Patterson, PHI
3. Logic & Prolog Programming, Saroj Kaushik, New Age International
4. Expert Systems, Giarranto, VIKAS

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

FINANCIAL AND COST ACCOUNTING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hrs/Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: NIL	Continuous Assessment: 40 marks	Term Work and Practical credit: -- NIL
Lab: NIL	Term Work and Practical: -- NIL	

Course Pre Requisites: familiarity with common concepts and terminologies in economics and accounts.

Course Objective:

1. To impart knowledge about different ways of accounting process
2. Understanding and interpreting financial statements.

Course Outcomes:

After successful completion of this course students will be able to

1. Understand the important concepts of accounting and their importance in management
2. Interpret the accounting process
3. Analyze financial statements
4. Review the cash flow and fund flow techniques
5. Interpret the costing systems
6. Infer the accounts and reports

Topics to Be Covered:

UNIT – I [6 Hours]

Accounting Concept: Introduction, Techniques and Conventions, Financial Statements- Understanding & Interpreting Financial Statements

UNIT – II [6 Hours]

Accounting Process:

- Book Keeping and Record Maintenance
- Fundamental Principles and Double Entry
- Journal, Ledger, Trial Balance, Balance Sheet, Final Accounts
- Cash Book and Subsidiary Books

- Rectification of Errors

UNIT – III [6 Hours]

Financial Statements: Form and Contents of Financial Statements, Analyzing and Interpreting Financial Statements, Accounting Standards.

Class Discussion: Corporate Accounting Fraud- A Case Study of Satyam

.UNIT – IV [6 Hours]

Cash Flow and Fund Flow Techniques: Introduction, How to prepare, Difference between them

UNIT – V [6 Hours]

Costing Systems:

- Elements of Cost
- Cost Behavior, Cost Allocation, OH Allocation
- Unit Costing, Process Costing, Job Costing
- Absorption Costing, Marginal Costing, Cost Volume Profit Analysis
- Budgets
- ABC Analysis

Class Discussion: Application of costing concepts in the Service Sector

UNIT – VI [6 Hours]

Company Accounts and Annual Reports:

- Audit Reports and Statutory Requirements
- Directors Report
- Notes to Accounts
- Pitfalls

Home Assignments: Case study materials book will be given to students. Students are required to meet in groups before coming to class and prepare on the case for the day. Instructor may ask the student groups to present their analysis and findings to the class.

Further, the topic for class discussion will be mentioned beforehand and students should be prepared to discuss these topics in class. Few topics are mentioned below as examples. Instructor can add or change any topic as per requirement.

1. Topic: Corporate Accounting Fraud: A Case Study of Satyam
2. Topic: Application of costing concepts in the Service Sector

Text Books:

1. Robert N Anthony, David Hawkins, Kenneth Marchant, *Accounting: Texts and Cases*, McGraw-Hill
2. Case Study Materials: To be distributed for class discussion

Reference Books:

Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

B. Tech (Computer Science and Business Systems) Sem-VI
BUSINESS COMMUNICATION & VALUE SCIENCE – IV

Designation of Course	BUSINESS COMMUNICATION & VALUE SCIENCE – IV		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	50 Marks	Theory: 03 Tutorial: 00 Practical: 01
Practical : 02 Hours/ Week	Term Work & Oral	50 Marks	
	Total	100 Marks	
	Continuous Assessment	Yes	04

Course Prerequisites:-	Basic Knowledge of English (verbal and written) Completion of all units from Semesters 1, 2, 3, 4 and 5
Course Objective	Recognize the importance of diversity in workplace, Recognize the best practices of communicative writing, Understand the importance of emotional intelligence in personal and professional lives, Apply emotional intelligence in real life scenarios, Use the best practices of public speaking in real life scenarios, Understand the importance of corporate social responsibility (CSR), Understand the importance of corporate etiquettes, Practice corporate etiquettes in real life scenarios
Course Outcomes:-	<p>Upon completion of the course, students shall have ability to</p> <ol style="list-style-type: none"> 01. Understand the importance of diversity in workplace 02. Recognize the best practices of communicative writing 03. Apply knowledge of multiple intelligences and learning styles in interpersonal interactions 04. Recognize the attributes needed to function and grow in a corporate environment 05. Identify the best practices to manage stress 06. Understand the importance of corporate social responsibility (CSR)

Course Contents

Unit 1	Diversity and Inclusion at workplace	(6 Hrs.)
<p>Recapitulation activity of Satori, Introduce the concept of Diversity in corporate environments through an activity. Understand the importance of diversity and inclusion at workplace, Diversity and inclusion matter at workplace.</p>		
Unit 2	Communicative Writing:	(6 Hrs.)
<p>Aspects of communicative writing, Application of communicative writing in real life scenarios , Use of charts and graphs in communicative writing, The best practices of communicative writing</p>		
Unit 3	Emotional Intelligence	(6 Hrs.)
<p>what is emotional intelligence?, Emotional intelligence in personal and professional lives its importance need and application, public speaking at workplace, Importance , need and ways, The best practices of public speaking, Apply public speaking in real life scenarios</p>		
Unit 4	Corporate Social Responsibility (CSR)	(6 Hrs.)
<p>Corporate social responsibility (CSR) its importance and need, Stalwarts in CSR, the attributes needed to function and grow in a corporate environment, the best practices to share and receive feedback for CSR</p>		
Unit 5	Intelligences and learning styles in interpersonal interactions:	(6 Hrs.)
<p>Application of emotional intelligence in real life scenarios, intelligences and learning styles in interpersonal interactions, the impact of conflicts, Basic guidelines required to manage conflicts</p>		
Unit 6	Corporate etiquette, Stress & Time Management:	(6 Hrs.)
<p>The key features of corporate etiquette, Application of the business idioms and corporate terms, the impact of stress in life and work, the best practices to manage stress, the importance of time management, the best time management practices</p>		
Project: (Summative Assessment based on End Semester Project)	<p>Each group to create a POC (Proof of Concept) for their start-up applying their learning's from the CSBS course (core subjects + BCVS).</p> <p>The evaluation for this POC will be done as part of the Sem end assessment by the TCS team. During the assessment, students need to share the journey of creating their start-up: from inception to POC.</p>

ELECTIVE II : Robotics and Embedded Systems

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hrs./Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1Hr./Week	Continuous Assessment: 40 marks	Term Work and Oral Credit: 1
Lab: 2Hrs./Week	Term Work and Oral: 50	

Course Prerequisites:		
Students should have primary knowledge of		
<ol style="list-style-type: none"> 1 Good programming skills in C/C++. Basic knowledge of linear algebra. (for Robotics) 2. Basic knowledge of operating system 3. Basic knowledge of microprocessors and microcontrollers 		
Course Objectives:		
During the course the students will: - <ol style="list-style-type: none"> 1) Learn the concepts of embedded system, its components and its application areas. 2) Learn the concepts of robotics and robot design components. 		
Course Outcome:		
Students will be able to:		
<ul style="list-style-type: none"> • Acquire knowledge about microcontrollers embedded processors and their applications. • Understand the internal architecture and interfacing of different peripheral devices with Microcontrollers. • Understand the role of embedded systems in industry. • Understand the concepts of real time operating system. • Understand various applications of embedded system and various electronics parts used in embedded system design. • Understand different concepts in robotics, various parts used in robotics. 		
UNIT-I	Introduction to Embedded System	(6 Hours)

	Embedded system Vs General computing systems, History of Embedded systems, Purpose of Embedded systems, Microprocessor and Microcontroller, Hardware architecture of the real time systems.	
UNIT-II	Devices and Communication Buses	(6 Hours)
	I/O types, serial and parallel communication devices, wireless communication devices, timer and counting devices, watchdog timer, real time clock, serial bus communication protocols, parallel communication network using ISA, PCI, PCT-X, Intrnet embedded system network protocols, USB, Bluetooth.	
UNIT-III	Program Modeling	(6 Hours)
	Program Modeling Concepts; Fundamental issues in Hardware software co-design, Unified Modeling Language(UML), Hardware Software trade-offs DFG model, state machine programming model, model for multiprocessor system.	
UNIT-IV	Real Time Operating Systems	(6 Hours)
	Operating system basics, Tasks, Process and Threads, Multiprocessing and multitasking, task communication, task synchronization, qualities of good RTOS. Real time scheduling: Clock Driven, Weighted Round Robin, Priority Driven Approach, RM,EDF algorithms	
UNIT-V	Examples of Embedded System	(6 Hours)
	Mobile phones, RFID, WISENET, Robotics, Biomedical Applications, Brain machine interface etc. Popular microcontrollers used in embedded systems, sensors, actuators, Design of microcontroller systems using ADC/DAC, LED/LCD, PWM, Keyboard, Stepper motor etc.	
UNIT-VI	Robotics	(6 Hours)
	Robotics: Introduction, Elements of robots -- joints, links, actuators, and sensors Kinematics: Kinematics of serial robots, Kinematics of parallel robots, Motion planning and control Advanced Topics on Robotics: Sensing distance and direction, Line Following Algorithms, Feedback Systems, Other topics on advance robotic techniques	

List of Practical Assignments		
1.	Arithmetic Operations using 8051	
2	Interfacing ADC and DAC	
3	Interfacing LED and PWM	
4	Interfacing real time clock and serial port	
5	Interfacing keyboard and LCD	
6	Flashing of LEDES	
7	Interfacing stepper motor and temperature sensor.	
8	Study of robotic arm and its configuration	
9	Study the robotic end effectors	
List of Assignments/Tutorials		
	1) Assignment on State machine programming model of Fibonacci sequence generator. 2) Assignment on actuator behavior. 3) Assignment on Real time scheduling algorithms. 4) Assignment on CAN protocol. 5) Assignment on microcontrollers used in embedded systems. 6) Assignment on Program Modeling concepts.	
Text Books:		
1)	Introduction to Embedded Systems : Shibu K. V. (TMH)	
2)	Embedded System Design – A unified hardware and software introduction: F. Vahid (John Wiley)	
3)	Embedded Systems : Rajkamal (TMH)	
4)	Embedded Systems : L. B. Das (Pearson)	
5)	The 8051 Microcontroller and embedded systems by Muhammad Ali Mazidi, PHI.	
6)	Robotics: Fundamental Concepts and Analysis, Oxford University Press	
Reference Books:		
1)	Embedded System design : S. Heath (Elsevier)	
2)	Embedded microcontroller and processor design: G. Osborn (Pearson)	
3)	Embedded systems design by Steve Heath, Newnes	
Syllabus for Unit Test:		

Unit Test -1	Unit I,II and III
Unit Test -2	Unit IV, V and VI

ELECTIVE II : DATA MINING AND ANALYTICS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 3 Hrs/Week	Semester Examination: 60 marks	Theory: 4 Credits
Tutorials: 1 Hr./Week	Continuous Assessment: 40 marks	Term Work and Oral Credit: 1
Lab: 2 Hrs/Week	Term Work and Oral: 50	

Course Pre Requisites: Student should possess a strong mathematical background in Probability and Statistics. Also should have programming proficiency with algorithmic approach.

Course Objective: is to make statistical foundation, followed by various machine learning and data mining algorithms. This course will also give coverage to practical systems and software used in data analytics.

Course Outcomes:

1. Understand basic concepts and techniques of Data Mining
2. Evaluate different models used for OLAP and data preprocessing.
3. Classify and differentiate between situations for applying data-mining techniques such as frequent pattern mining, association, correlation, classification, prediction, cluster, and outlier analysis.
4. Apply knowledge for understanding data and select suitable linear, nonlinear data model and time series analysis model.
5. Develop skills of using data mining software for solving practical problems.
6. Understand and apply several statistical analysis techniques: regression, ANOVA, data reduction

Topics to Be Covered:

UNIT – I [6 Hours]

Introduction to Data Mining: What is data mining? Related technologies - Machine Learning, DBMS, OLAP, Statistics, Stages of the Data Mining Process, Data Mining Techniques, Knowledge Representation Methods, Applications

UNIT – II[6 Hours]

Data preprocessing: Data cleaning, Data transformation, Data reduction, Discretization and generating concept hierarchies, Installing Weka 3 Data Mining System, Experiments with Weka - filters, discretization

Data mining knowledge representation: Task relevant data, Background knowledge, Representing input data and output knowledge, Visualization techniques

Attribute-oriented analysis: Attribute generalization, Attribute relevance, Class comparison, Statistical measures

UNIT – III [6 Hours]

Data mining algorithms - Association rules: Motivation and terminology, Example: mining weather data, Basic idea: item sets, Generating item sets and rules efficiently, Correlation analysis

Data mining algorithms - Classification: Basic learning/mining tasks, Inferring rudimentary rules: 1R, algorithm, Decision trees, covering rules

Data mining algorithms – Prediction: The prediction task, Statistical (Bayesian) classification, Bayesian networks, Instance-based methods (nearest neighbor), linear models

UNIT – IV [6 Hours]

Descriptive analytics: Data Modeling, Trend Analysis, Simple Linear Regression Analysis

Forecasting models: Heuristic methods, predictive modeling and pattern discovery, Logistic Regression: Logit transform, ML estimation, Tests of hypotheses, Wald test, LR test, score test, test for overall regression, multiple logistic regression, forward, backward method, interpretation of parameters, relation with categorical data analysis. Interpreting Regression Models, Implementing Predictive Models

UNIT – V [6 Hours]

Generalized Linear model: link functions such as Poisson, binomial, inverse binomial, inverse Gaussian, Gamma.

Non Linear Regression (NLS): Linearization transforms, their uses & limitations, examination of non-linearity, initial estimates, iterative procedures for NLS, grid search, Newton-Raphson, steepest descent, Marquardt's methods. Introduction to semiparametric regression models, additive regression models. Introduction to nonparametric regression methods

UNIT – VI [6 Hours]

Time Series Analysis: Auto - Covariance, Auto-correlation and their properties. Exploratory time series analysis, Test for trend and seasonality, Exponential and moving average smoothing, Holt – Winter smoothing, forecasting based on smoothing

Linear time series models: Autoregressive, Moving Average, Autoregressive Moving Average and Autoregressive Integrated Moving Average models; Estimation of ARMA models such as Yule-Walker estimation for AR Processes, Maximum likelihood and least squares estimation for ARMA Processes, Forecasting using ARIMA models

Prescriptive Analytics: Mathematical optimization, Networks modeling-Multi-objective optimization-Stochastic modeling, Decision and Risk analysis, Decision trees.

Home Assignments:

Course faculty must design one home assignment on every unit.

Text Books:

1. Jiawei Han and Micheline Kamber, “Data Mining: Concepts and Techniques”, Morgan Kaufmann Publishers, 3rd ed, 2010.
2. Lior Rokach and Oded Maimon, “Data Mining and Knowledge Discovery Handbook”, Springer, 2nd edition, 2010
3. Box, G.E.P and Jenkins G.M. (1970) Time Series Analysis, Forecasting and Control, Holden-Day.

Reference Books:

1. Draper, N. R. and Smith, H. (1998). Applied Regression Analysis (John Wiley) Third Edition.
- Hosmer, D. W. and Lemeshow, S. (1989). Applied Logistic Regression (Wiley).

Course Overview

This course teaches concepts of User Centered Design.

Prerequisite:

Basic understanding of web and mobile app development

Course Outcomes: On completion of the course, students will have the ability to:

1. To sensitise the students to the fundamentals of User Centred Design and User Experience their relevance and contribution to businesses
2. Familiarise them to the facets of User Experience (UX) Design, particularly as applied to the digital artefacts
3. Appreciation of user research, solution conceptualisation and validation as interwoven activities in the design and development lifecycle
4. Acquire the ability to constructively engage with the Design professionals they would work with in the future

Unit I 06 Hours

Introduction to User Centred Design.

Unit II 06 Hours

Aspects of User Centred Design
Product Appreciation Assignment – Evaluating the product from user centred design aspects such as functionality, ease of use, ergonomics, and aesthetics.

Unit III 06 Hours

Heuristic Evaluation: Heuristic Principles, Examples
Heuristic Evaluation: Group Assignment initiation (Website and App)
Evaluation for key tasks of the app or website for heuristic principles, severity, recommendations.

Unit IV 06 Hours

Group Project identification, UX Research
Understanding users, their goals, context of use, and environment of use.
Research Techniques: Contextual Enquiry, User Interviews, Competitive Analysis for UX

Unit V 06 Hours

Scenarios and Persona Technique , Presentation of Personas for the group project, Design Thinking Technique, Discovery and brainstorming, Concept Development, Task flow detailing for the Project

Unit VI

06 Hours

Prototyping Techniques

Paper, Electronic, Prototyping Tools, Project Prototyping Iteration 1, Project Prototyping Iteration 2

Textbooks

1. Interaction Design: Beyond Human-Computer Interaction, 4th Edition, Jenny Preece, Helen Sharp and Yvonne Rogers
2. About Face, 4th Edition, Alan Cooper and Robert Reimann
3. Understanding Design Thinking, Lean, and Agile - Jonny Schneider.

Reference Books

1. Observing the User Experience, Second Edition: A Practitioner's Guide to User Research. Elizabeth Goodman, Mike Kuniavsky, Andrea Moed
2. The Elements of User Experience: User-Centered Design for the Web and Beyond 2nd Edition, Jesse James Garrett

List of Assignments

2 -3 Assignment to be framed on each Unit.

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

IT Workshop

Total150Total4

Course Overview

Prerequisite:

Need to know basics of image representation.

Course Outcomes: On completion of the course, students will have the ability to:

1. Understand Matlab
2. Learn Matlab Workspace
3. Learn Mathematical functions of Matlab
4. Learn Plotting
5. Understand Matlab Programming
6. Learn Debugging

Unit I 06 Hours

Introduction to MATLAB

History, basic features, strengths and weaknesses, good programming practices and plan your code.

Unit II 06 Hours

Working with variables, workspace and miscellaneous commands

Creating MATLAB variables, overwriting variable, error messages, making corrections, controlling the hierarchy of operations or precedence, controlling the appearance of floating point number, managing the workspace, keeping track of your work session, entering multiple statements per line, miscellaneous commands.

Unit III 06 Hours

Matrix, array and basic mathematical functions

Matrix generation, entering a vector, entering a matrix, matrix indexing, colon operator, linear spacing, creating a sub-matrix, dimension, matrix operations and functions matrix generators, special matrices, array and array operations, solving linear equations, other mathematical functions.

Unit IV 06 Hours

Basic plotting

Overview, creating simple plots, adding titles, axis labels, and annotations,

multiple data sets in one plot, specifying line styles and colours

Unit V

06 Hours

Introduction to programming

Introduction, M-File Scripts, script side-effects, M-File functions, anatomy of a M-File function, input and output arguments, input to a script file, output commands

Control flow and operators

``if ... end" structure, relational and logical operators, ``for...end" loop, ``while ... end" loop, other flow structures, operator precedence, saving output to a file

Unit VI

06 Hours

Debugging M-files

Debugging process, preparing for debugging, setting breakpoints, running with breakpoints, examining values, correcting and ending debugging, correcting an M-file

Textbooks

1. *Digital Image Processing using MATLAB*. Rafael C. Gonzalez, Richard E. Woods, Steven Eddins, Pearson Education, Inc., 2004.
2. *MATLAB: A Practical Introduction to Programming and Problem Solving*. Stormy Attaway, Butterworth-Heinemann.

Total	100 Marks	Total	3	

Course Overview

This course intends to introduce students to understand the financial aspects of IT projects. They shall understand the management of funds for a project and risks and returns involved therein.

Prerequisite:

Students should be familiar with the basic concepts of economics and project life cycle.

Course Outcomes: On completion of the course, students will have the ability to:

1. Interpret the fundamental concepts of financial management time value of money
2. Categorise valuation of securities, risks and returns
3. Summarise leverage for deciding financial angle of IT projects
4. Understand capital cost and budgeting
5. Understand working Capital and cash management
6. Analyse accounts receivable management

Unit I

06 Hours

Introduction : Introduction to Financial Management - Goals of the firm - Financial Environments.

Time Value of Money : Simple and Compound Interest Rates, Amortization, Computing more than once a year, Annuity Factor.

Unit II

06 Hours

Valuation of Securities : Bond Valuation, Preferred Stock Valuation, Common Stock Valuation, Concept of Yield and YTM.

Risk & Return: Defining Risk and Return, Using Probability Distributions to Measure Risk, Attitudes Toward Risk, Risk and Return in a Portfolio Context, Diversification, The Capital Asset Pricing Model (CAPM)

Unit III

06 Hours

Operating & Financial Leverage: Operating Leverage, Financial Leverage, Total Leverage, Indifference Analysis in leverage study

Unit IV

06 Hours

Cost of Capital : Concept, Computation of Specific Cost of Capital for Equity - Preference - Debt, Weighted Average Cost of Capital - Factors affecting Cost of Capital 4L

Capital Budgeting : The Capital Budgeting Concept & Process - An Overview, Generating Investment Project Proposals, Estimating Project, After Tax Incremental Operating Cash Flows, Capital Budgeting Techniques, Project Evaluation and Selection - Alternative Methods

Unit V

06 Hours

Working Capital Management: Overview, Working Capital Issues, Financing Current Assets (Short Term and Long Term- Mix), Combining Liability Structures and Current Asset Decisions, Estimation of Working Capital.

Cash Management: Motives for Holding cash, Speeding Up Cash Receipts, Slowing Down Cash Payouts, Electronic Commerce, Outsourcing, Cash Balances to maintain, Factoring

Unit VI

06 Hours

Accounts Receivable Management: Credit & Collection Policies, Analyzing the Credit Applicant, Credit References, Selecting optimum Credit period. 4L

Textbooks

1. Chandra, Prasanna - Financial Management - Theory & Practice, Tata McGraw Hill.

Reference Books

1. Srivastava, Misra: Financial Management, OUP
2. Van Horne and Wachowicz : Fundamentals of Financial Management, Prentice Hall/ Pearson Education

List of Assignments

Case studies based on Time Value of Money, Valuation of Securities, Risk & Return, Cost of Capital, Capital Budgeting, Working Capital Management, Cash Management, Accounts Receivable Management

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Human Resource Management

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDIT SCHEME</u>	
Lecture:	03Hours/Week	End Semester Examination:	60Marks	Theory	Credits 03
Practical:	NA	Continuous Assessment:	40 Marks		
Tutorials:	NA	TW & Practical:	Marks	TW & Practical:	NA
		TW & Oral:	NA	TW & Oral:	NA
		Term Work	NA	Term Work	
Total :	100 Marks	Total	3		

Course Overview

Students must be aware of the basic principles of Human Resource Management because success in today's complex business environment depends on effective management of its human resources. This introductory course on Human Resource Management will familiarize the students with the basic concepts, roles, functional areas and activities of HR and help students understand organization's employees, their interest, motivation and satisfaction, and their belief of fair treatment- all of which actually impact the firm's current performance and sustainability in the long run.

Prerequisite: NIL

Course Outcomes: On completion of the course, students will have the ability to:

1. Effectively manage and plan key **human resource** functions within organizations.
2. Examine current issues, trends, practices, and processes in **HRM**.
3. Contribute to employee performance **management** and organizational effectiveness.
4. Problem-solve **human resource** challenges.
5. Develop employability skills for the Canadian workplace.

Unit I **06 Hours**
Human Resource Management: Concept and Challenges, HR Philosophy, Policies, Procedures and Practices.

Unit II **06 Hours**
Human Resource System Design: HR Profession, and HR Department, Line Management Responsibility in HRM, Measuring HR, Human resources accounting and audit; Human resource information system

Unit III **06 Hours**
Functional Areas of HRM: recruitment and staffing, benefits, compensation, employee relations, HR compliance, organizational design, training and development, human resource information systems (H.R.I.S.) and payroll.

Unit IV **06 Hours**
Human Resource Planning: Demand Forecasting, Action Plans– Retention, Training, Redeployment & Staffing, Succession Planning

Unit V **06 Hours**

Strategic Management of Human Resources: SHRM, relationship between HR strategy and overall corporate strategy, HR as a Factor of Competitive Advantage, Managing Diversity in the Workplace

Unit VI

06 Hours

Human Resource Management in Service Sector- Special considerations for Service Sector including

- Managing the Customer – Employee Interaction
- Employee Empowerment and Customer Satisfaction
- Service Failure and Customer Recovery – the Role of Communication and Training
