Syllabus for Unit Tests	
Unit Test I	Units I, II, and III
Unit Test II	Units IV, V, and VI

PROCESS HEAT TRANSFER

Designation: Professional Core

Pre-requisite Courses: Basic knowledge of physics and mathematics; Material and energy balance calculations

Teaching Scheme	Examination Scheme	Credits Allotted
Lectures : 03Hours/Week	End Semester Examination : 60 Marks	Theory : 03
Practical : 04 Hours/Week	Internal Assessment : 40 Marks	TW/OR/PR : 02
Total : 07 Hours/Week	Term-work (TW) : 25 Marks	Total Credits : 05
	Practical/Oral : 25 Marks	
	Total : 150 Marks	

Course Outcomes

1	Estimate rate of heat transfer by conduction mode.
2	Estimation of overall heat transfer coefficient.
3	Estimation of heat transfer coefficient for natural and forced convection using appropriate empirical correlation.
4	Estimate rate of heat transfer in boiling and condensation phenomena.
5	Estimation of radiative heat transfer rate.
6	Estimation of time required to raise/reduce the temperature of given process/operation by a desired degree.

Topics Covered

UNIT-I	Conduction Concept of heat conduction; Fourier's law of heat conduction; Thermal conductivity: solids, liquids and gases; Effect of temperature and pressure on thermal conductivity; Steady state heat conduction through composite wall; Steady state heat conduction through a variable area: Cylinder and sphere; Steady state heat conduction with heat sources: plane wall, cylinder and sphere; Average temperature calculations.	(06Hours)
UNIT-II	Heat Transfer Coefficient Concept of convective heat transfer and heat transfer coefficient; Newton's law of convective heat transfer; Overall heat transfer coefficient: Heat transfer between fluids separated by plane wall and cylindrical wall; Heat transfer from extended surfaces; Thermal contact resistance; Critical insulation thickness; Optimum insulation thickness.	(06 Hours)
UNIT-III	Natural and Forced Convection Concept of natural and forced convection; Estimation of heat transfer coefficients: Dimensional analysis and dimensionless groups; Factors affecting individual heat transfer coefficient; Empirical correlations for natural convection: flat plate, cylinder and sphere; Empirical correlations for forced convection: Internal flows (laminar and turbulent flow through circular	(06Hours)

	and non-circular pipes) and external flow (flat plate, cylinder and sphere); Heat transfer with variable driving force: Counter current and co-current operations; Momentum and heat transfer analogies.	
UNIT-IV	Boiling and Condensation Concept of boiling; Boiling regimes and heat transfer rate: Natural convection, nucleate boiling, transition boiling and film boiling; Concept of condensation; Film-wise and drop-wise condensation; Film condensation on vertical and horizontal surfaces; Estimation of condensation heat transfer coefficient: Nusselt's theory; Factors affecting the rate of condensation.	(06 Hours)
UNIT-V	Radiation Concept of radiation; Blackbody radiation; Radiative heat transfer laws: Planck's law, Wien's law, Stefan-Boltzmann law, Kirchhoff's law; Radiative heat exchange between surfaces: View factor; Rate of radiation exchange between black and grey bodies; Radiation intercepted by shield; Radiation combined with conduction and convection.	(06 Hours)
UNIT-VI	Unsteady State Heat Transfer Unsteady state heat conduction; Concept of thermal diffusivity; Unsteady state heat transfer in mechanically agitated contactors (MAC): MAC configurations, Overall heat transfer calculations, Estimation of time needed to attain desired temperature for a given operation/process using isothermal and non-isothermal heating medium; Unsteady state heat transfer in multiphase reactors: Estimation of overall heat transfer coefficient and time needed to calculate process temperature attainment.	(06 Hours)

Project Based Learning

1	By determining optimum thickness of insulation give solution to an industrial problem to minimize the heat loss.
2	Design laboratory manuals better than existing ones with clearly shown specimen calculations.
3	With the help of this subject knowledge, write a guideline report on how you would apply your concepts in Industry.
4	Write a technical report on your visit to a process industry.
5	Solve old (last ten years) GATE question papers with reference to heat transfer subject.
6	Group discussion on the recent advances in heat transfer processes.
7	Write a report on your visit to research and development laboratory of national/international repute.
8	Technical interview based on the knowledge of heat transfer.
9	Write a report on the recent advances in heat transfer processes with reference to the current year.
10	Solve old (last five years) question papers with reference to particular topic.
11	Prepare a model for any of the heat transfer equipment.
12	Prepare a report on heat transfer equipments which are newly introduced in the current year.
13	Give fifteen minutes presentation (seminar) on particular topic and prepare a report.
14	Evaluate capacity and economy for any industrial evaporator.
15	Estimate how much heat transfer rate is decreased due to the scale formation on surface of industrial heat transfer equipment?

Term Work	
Term work will consist of the experiments listed below, which are to be performed in laboratory by the students	
1	To determine rate of heat flow and thermal conductivity of an insulating material.
2	To determine thermal conductivity of a metal bar.
3	To study Newton's law of cooling to find rate of heat flow.
4	To determine the local heat transfer coefficients using the various correlations in natural convection.
5	To determine heat transfer coefficient in forced convection.
6	To study film wise condensation.
7	To study drop wise condensation.
8	To determine the critical heat flux
9	To study Stefan-Boltzman law and find the value of its constant.
10	To study heat transfer through a composite wall.
11	To determine emissivity of an aluminum plate.
12	To study unsteady state processes.

Syllabus for Unit Tests	
Unit Test I	Units I, II, and III
Unit Test II	Units IV, V, and VI

FLUID MECHANICS

Designation: Professional Core

Course Pre-requisite: Material and Wave Physics.

Teaching Scheme		Examination Scheme		Credits Allotted
Lectures	: 03 Hours/Week	End Semester Examination	: 60 Marks	Theory : 03
Practical	: 04 Hours/Week	Internal Assessment	: 40 Marks	TW/OR/PR : 02
Total	: 07 Hours/Week	Term-work (TW)	: 25 Marks	Total Credits : 05
		Practical/Oral	: 25 Marks	
		Total	: 150 Marks	

Course Outcomes

- 1 Evaluate properties of fluids using basic concept of fluid flow.
- 2 Apply the basic equations of fluid flow to study various flow systems
- 3 Select an appropriate type of flow measuring device.
- 4 Determine the major and minor energy losses for fluid flowing through a pipe.
- 5 Identify and select various types of fluid moving equipments for fluid flow.
- 6 Determine the friction factors and pressure drop for flow through packed and fluidized bed.

Topics Covered

UNIT-I	<p>Basic Concepts of Fluid Flow Fluid statics and dynamics: Scope and applications; Rheological classification of fluids; Incompressible and compressible fluids; Types of flow: laminar, transition and turbulent flow and their characteristics, Reynolds experiment; Properties of fluids: concept of viscosity, Newton's law of viscosity, viscosity of gases and liquids, eddy viscosity; Concept of fluid pressure and hydrostatic equilibrium.</p>	(06Hours)
UNIT-II	<p>A. Equations of Fluid Flow Equation of continuity and motion: Cartesian coordinates, Navier Stokes equation; Bernoulli's equation: assumptions, equation with and without friction, limitations of Bernoulli's equation, correction factors; Applications of equations of fluid flow.</p> <p>B.Flow of Incompressible Fluids Characteristics of pipe flow: laminar flow in pipes, shear stress distribution and velocity profiles, relationship between skin friction and wall shear, Hagen Poiseuille equation, relation between average and maximum velocity.</p>	(06 Hours)
UNIT-III	<p>A. Turbulent flow Basics of turbulent flow, equations of continuity and motion for turbulent flow, Boussinesq hypothesis, Prandtl mixing length theory, turbulent pipe flow, basis of Universal velocity profile and its use.</p> <p>B. Flow metering devices Pitot tube, orifice meter, venturi meter, rotameter, notches and weirs.</p>	(06Hours)
UNIT-IV	<p>Major and Minor Losses in Pipe Flow Major losses: Head loss due to friction, Darcy-Weisbach equation; Friction</p>	(06 Hours)

	factor: concept, correlations of friction factor for laminar, transition and turbulent flow, friction factor chart (Moody's diagram), frictional loss in highly turbulent flow, effect of wall roughness; Minor losses: pipe entrance and exit, sudden expansion and contraction, fittings, valves, bends etc.	
UNIT-V	Flow Moving Machinery Pumps: types, selection and specifications, characteristic curves, cavitation phenomena, net positive suction head (NPSH) calculations, operating parameters affecting the performance of a pump, calculation of power requirement; Blowers and compressors: selection and specifications, factors affecting performance, power calculations for given duty.	(06 Hours)
UNIT-VI	Flow Past Immersed Bodies Hydrodynamic boundary layer: concept, boundary layer thickness, growth over a flat plate, boundary layer separation, drag on a flat plate for laminar and turbulent flow, drag on immersed bodies; Flow through packed and fluidized beds: flow through beds of solids, motion of particles through the fluid, particle settling, mechanism of fluidization, minimum fluidization velocity, friction factors for flow through beds of solids, pressure drop calculations, particulate and aggregative fluidization, applications of fluidization.	(06 Hours)

Term Work

Term work will consist of the experiments listed below, out of which at least eight experiments should be performed in laboratory by the students.

1	To determine kinematic viscosity and to study the effect of temperature on kinematic viscosity of given oil.
2	To study flow characteristics using Reynolds apparatus and determine Reynolds number.
3	To determine the coefficient of discharge for venturimeter.
4	To determine the coefficient of discharge for orificemeter.
5	To determine Darcy Weisbach coefficient of friction for laminar and turbulent flow.
6	To determine friction and pressure drop for flow through helical/spiral coils.
7	To find losses due to sudden expansion and contraction in pipe.
8	To calculate minimum fluidization velocity using fluidized bed reactor.
9	To verify Bernoulli's theorem.
10	To study characteristics of centrifugal pump.
11	To Study Darcy's law.
12	To study pressure drop in packed bed for different fluid velocities.
13	To determine the coefficient of discharge for different notches like rectangular notch, V notch, and trapezoidal notch.
14	To determine terminal velocity of particles in fluids of different viscosity and plot a graph of drag coefficient (C_D) as a function of NRe .

Project Based Learning:

1	Investigate and prepare a report on any one of the following topics.
	a) Importance of fluid flow operations in chemical industries.
	b) Pumps, blowers and compressors.
	c) Flow measuring devices.
2	Students have to study any five NPTEL videos related to fluid flow operations and prepare/present power point presentation.

3	Visit to suppliers and prepare a report on detailed specifications of following fluid moving equipments.
	a) Pumps.
	b) Blowers.
	c) Compressors.
4.	Visit to suppliers and prepare a report on detailed specifications of following flow measuring devices.
	a) Venturimeter.
	b) Orificemeter.
	c) Pitot tube.
	d) Roatameters.
5.	Students have to visit chemical industry and make a detailed report on overall fluid flow operations.
6.	Prepare models for various types of valves and write industrial applications.
7.	Prepare models for various types of bends and write industrial applications.
8.	Prepare models for various types of fittings and write industrial applications.
9.	Prepare a report on fluid flow operations which are newly introduced in the current year.
10	Write a report on your visit to research and development laboratory of national/international repute.
11	Technical interview based on knowledge of fluid flow operations.
12	With the help of this subject knowledge, write a report on how you would apply your concepts in industry.
Students in a group of 3 to 4 shall complete any one project from the above list. In addition to these above stated topics concern faculty member may design his/her won topics.

Syllabus for Unit Tests	
Unit Test I	Units I, II, and III
Unit Test II	Units IV, V, and VI

PARTICULATE TECHNOLOGY

Designation: Professional Core

Pre-requisite Courses: None.

Teaching Scheme		Examination Scheme		Credits Allotted
Lectures	: 04 Hours/Week	End Semester Examination	: 60 Marks	Theory : 04
Practical	: 02 Hours /Week	Internal Assessment	: 40 Marks	TW/OR/PR : 01
		Term-work (TW)	: 25 Marks	Total credits : 05
		Practical/Oral	: 25 Marks	
		Total	: 150 Marks	

Course Outcomes: After completion of the course students will be able to

1	To select suitable type of screening and size reduction equipment for different particle sizes
2	To select suitable type of thickeners and clarifiers for separation of suspended solid particles from liquid for example applications in Wastewater treatment plants.
3	To apply beneficiation techniques in Chemical Industries.
4	To select a suitable type of conveyor for transportation of different types of solids
5	To select a suitable type of agitator for mixing and agitation and to estimate power consumption in mixing and agitation.
6	To select a suitable type of filter for filtration of a slurry or a suspension.

Topics Covered

UNIT-I	Screening and Size Reduction of Solids Properties of solids; Performance of screening equipment; Testing sieves; Tyler standard sieve series; Sieve shaker; Types of screen analysis; Necessity of size reduction; Crushing efficiency; Energy requirement calculations by using crushing laws; Classification of size reduction equipment: Crushers, Grinders, Ultrafine grinders, Cutters, Dry versus wet grinding; Open and closed circuit grinding.	(08 Hours)
UNIT-II	Settling and Sedimentation Motion of particle in fluid; Drag force; Drag coefficient; Gravity settling methods; Terminal falling velocity; Stoke's law and Newton's law of settling; Gravity sedimentation operations; Sedimentation test; Kynch theory; Determination of thickener area and depth of thickener; Thickeners, Clarifiers, Sedimentation centrifuges.	(08 Hours)
UNIT-III	Beneficiation Equipment Froth flotation; Magnetic separator; Scrubbers; Electrostatic precipitators; Mineral jig; Cyclone separator; Hydro cyclone types and centrifuges.	(08 Hours)
UNIT-IV	Handling and Conveying of Solids Storage of solids; Characteristics of bulk solids; Conveyors: Principle, Construction and Working, Advantages, Disadvantages and Design calculations of Belt Conveyors, Screw conveyors, Chain & Flight conveyors, Bucket elevators and Pneumatic conveyors.	(08 Hours)
UNIT-V	Mixing and Agitation Types of Impellers; Flow patterns in un-baffled and baffled tanks; Draft tube; Mechanically agitated vessel; Power requirement in mixing;	(08 Hours)

	Performance of mixers; Paste and viscous material mixing; Solid-solid mixing; Batch and continuous mixers; Agitator selection.	
UNIT-VI	Filtration Classification of filtration and filters; Theory of filtration-equations; Filter media and filter aids; Batch and continuous filters; Plate and frame filter press; Filling and washing in a filter press; Horizontal pressure leaf filters; Rotary drum vacuum filters; Fabric filter: Centrifugal filters-basket type.	(08 Hours)
List of Experiments:		
Term work will consist of the experiments listed below, of which at least eight should be performed in laboratory by the students.		
1	To determine effectiveness of given set of standard screen.	
2	To determine energy consumption and crushing law constants for jaw crusher.	
3	To determine Critical speed of Ball mill & Average particle size of the product obtained in ball mill.	
4	To determine mixing Index of a mixture in Ribbon Blender. OR To determine mixing Index of mixture in Sigma Mixer.	
5	To determine filter medium resistance and cake resistance by using Vacuum Leaf filter.	
6	To determine filter medium resistance and cake resistance by using Plate & frame Filter Press OR by using centrifuge machine.	
7	To determine area of batch thickener by conducting batch sedimentation test.	
8	To determine separation efficiency by using froth flotation cell.	
9	To determine separation efficiency by using magnetic separator.	
10	To determine efficiency of Cyclone separator.	
Project Base Learning :		
1	What is surface loading rate explain in brief. The flow into clarifier is 3.2 MGD in tank 80 feet long and 40 feet wide. What is surface loading rate?	
2	Research on Recent trends in particle size technology.	
3	Watch the NPTEL video on this subject of any TWO modules and summarize it	
4	Solve numerical problems asked in previous THREE year question papers.	
5	Solve questions asked on filtration in previous THREE year question papers.	
6	If your particles are not spherical which equivalent particle size would be suitable to calculate for the purpose of filtration	
7	What media are used in filters? What factors affect filter efficiency?	
8	How does sedimentation fit in to the waste water treatment process?	
9	What zones are present in sedimentation basin?	
10	How is sedimentation sludge disposed of?	
11	Pilot scale solid-liquid fluidization: Expansion characteristics of solids	
12	Estimate power consumption for homogeneous system	
13	Industry related unit operation (ANY ONE INDUSTRY) detailing of it.	
14	How does filtration fit into the water treatment process?	
15	How Does Filtration clean water?	
16	What types of filters are used for water treatment? Explain in brief

Unit Test -II	UNIT – IV,V,VI

MATERIAL SCIENCE AND ENGINEERING

Designation: Professional Core

Pre-requisite Courses: Chemistry, Physics and Biology

Teaching Scheme	Examination Scheme	Credits Allotted
Lectures : 4 Hours/Week	End Semester Examination : 60 Marks	Theory : 04
	Internal Assessment : 40 Marks	Total credits : 04
	Total : 100Marks	

Course Outcomes:

After completion of the course students would be able to:

- 1 Appraise material properties to choose appropriate material for desired application
- 2 Compare properties of metals and alloys to select appropriate metal for desired application
- 3 Analyze properties of hydrocarbon materials and recommend proper material for desired application
- 4 Define appropriate ceramic material for required applications
- 5 Assess possibility of material failure by mechanical and chemical failure based upon application and environmental conditions
- 6 Design appropriate preventive measure to avoid material failure

Topics covered

UNIT-I	Introduction Introduction to materials; Bonding between atoms: metallic, ionic, covalent; Van der Waals forces; Role of materials selection in design; Structure-property-processing-performance relationships; Materials and criteria for selection of material in process industries; Material properties: Mechanical, thermal, chemical, electrical, magnetic and technological properties; Modification and control of material properties.	(08 Hours)
UNIT-II	Metal and Their Alloys <i>Ferrous materials:</i> Pure iron, cast iron, mild steel, stainless steels, special alloy steels, iron and iron carbide; Phase diagram: Heat treatment of carbon steels. <i>Nonferrous materials:</i> Lead, tin, aluminium, zinc, nickel, copper, magnesium and their alloys; Properties and applications in process industries.	(08 Hours)
UNIT-III	Hydrocarbon Materials <i>Polymers:</i> Natural and synthetic polymeric materials; Polymer material structure and properties: Deformation, flow and melt characteristics, morphology and order in crystalline polymers, mechanical properties of polymers; Polymer structure and physical properties correlation; Selection of polymeric materials for equipment linings; Fibre reinforced plastic; Application of special polymers like Polyester, Teflon in engineering; Sustainable and biodegradable polymers; Depolymerization; Polymer composites and blends <i>Paints, Coatings and Adhesives:</i> Compositions, properties and applications	(08 Hours)
UNIT-IV	Ceramic, Glasses and Cement Definition of ceramics and glasses; Interaction between structure, processing, and properties; Applications of ceramic and glass materials; Crystalline and	(08 Hours)

	non-crystalline ceramics: Silicates, refractory, clays, glass, vitreous silica and borosilicate. Cement and its properties: Special cements, cement concrete, RCC- Pre stressed concrete.	
UNIT-V	Material Failure Analysis <i>Thermal and mechanical failures:</i> Creep; Stress; Crystal structure and defects: Vacancies, equilibrium concentration of vacancies, interstitial and substitution impurities in solids, dislocations, types and characteristics of dislocations, interfacial defects, stacking faults <i>Chemical failure:</i> Acid base environment, water; Corrosion: Theories of corrosion, corrosion attack methods; Types of corrosion: Chemical, biochemical, and electrochemical; Internal and external factors affecting corrosion of chemical equipments; Corrosion charts for process equipment.	(08 Hours)
UNIT-VI	Material failure prevention Property enhancement by electroplating; Glass and ceramic linings; Polymer lining; Paints; Coatings; Heat treatment techniques; Alloy preparation; Composite and blend formation; Control and prevention of corrosion.	(08 Hours)

5	Lee J. L. and Evans: Selecting Engineering Materials for Chemical and Process Plants, Business Works, New York, 1974
6	Raghavan V.: Material Science and Engineering, 4 th Ed. PHI Learning Private Limited, India, 2015

Project based learning: Below is the list of possible topics, which is for guidance faculty can design and provide relevant topics in addition to these

1	Study and prepare a presentation of different materials, their bonds, bond energy and their effect on material properties
2	Study and prepare a presentation on factors affecting selection of material for any particular engineering application
3	Investigate and prepare the report on cast iron, composition of cast iron and variation in property and application of cast iron based on its composition
4	Investigate and prepare the report on stainless steel and its types, composition of stainless steel based upon its types and variation in property and application of stainless steel based on its composition
5	Investigate and prepare the report on lead and its alloys, composition of alloys and variation in property and application of alloys based on its composition
6	Investigate and prepare the report on Tin and its alloys, composition of alloys and variation in property and application of alloys based on its composition
7	Investigate and prepare the report on Aluminium and its alloys, composition of alloys and variation in property and application of alloys based on its composition

8	Investigate and prepare the report on Nickel and its alloys, composition of alloys and variation in property and application of alloys based on its composition
9	Investigate and prepare the report on Copper and its alloys, composition of alloys and variation in property and application of alloys based on its composition
10	Investigate and prepare the report on Magnesium and its alloys, composition of alloys and variation in property and application of alloys based on its composition
11	Investigate and prepare the report on properties and benefits of polymer, property tuning based upon monomer and composition variation
12	Investigate and prepare the report on properties and benefits of polymer, property tuning based upon monomer and composition variation
13	Investigate and prepare the report on biodegradable polymers and depolymerization, its importance and environmental impact
14	Investigate and prepare the report on surface coating, its importance, and preparation of surface for the same
15	Investigate and prepare the report on effect of composition variation and processing on the properties and applicability of ceramics
16	Investigate and prepare a report on the causes of material failure (chemical or mechanical) by taking a suitable industrial or real life example

Syllabus for Unit Test:

Unit Test : I	UNIT: I, II, and III
Unit Test : II	UNIT : IV, V, and VI

PYTHON PROGRAMMING

Designation: Computational

Course Pre-requisite: Basic knowledge of computer fundamentals.

Teaching Scheme	Examination Scheme	Credits Allotted
Practical : 04 Hours/Week	Term-work (TW) : 50 Marks	TW/OR/PR : 02
Total : 04 Hours/Week	Practical/Oral : 50 Marks	Total Credits : 02
	Total : 100 Marks	

Course Outcomes

1	Develop algorithm and explain building blocks of algorithms.
2	Elaborate data type and operators.
3	Elucidate concept of control flow statements and functions
4	Elaborate concept of advanced data types
5	Elucidate concept of data structure
6	Elucidate concept of files, modules, packages.

Topics Covered

UNIT-I	<p>ALGORITHMIC PROBLEM SOLVING Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). 1. Programs based on arithmetic operations. 2. Programs based on operators. 3. Programs based on areas of different geometrical figures.</p>
UNIT-II	<p>DATA, EXPRESSIONS, STATEMENTS Python interpreter and interactive mode; Values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments, modules and functions, function definition and use, flow of execution, parameters and arguments. 4. Write a program to exchange the values of two variables. 5. Programs based on data types.</p>
UNIT-III	<p>CONTROL FLOW, FUNCTIONS Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module. 6. Programs based on conditional statements. 7. Programs based on loop statements. 8. Programs based on functions. 9. Programs based on recursion. 10. Programs based on local and global scope.</p>
UNIT-IV	<p>LISTS, TUPLES, DICTIONARIES Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and</p>

	<p>methods; advanced list processing - list comprehension.</p> <p>11. Programs based on list.</p> <p>12. Programs based on tuple.</p> <p>13. Programs based on dictionaries.</p>
UNIT-V	<p>DATA STRUCTURE</p> <p>Lists as arrays. OOPs concepts; linear search, binary search, selection sort, insertion sort, mergesort, histogram.</p> <p>14. Programs based on searching.</p> <p>15. Programs based on sorting.</p> <p>16. Programs based on OOPs concept.</p>
UNIT-VI	<p>FILES, MODULES, PACKAGES</p> <p>Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages. Application to Data Science.</p> <p>17. Programs based on files.</p> <p>18. Programs based on modules.</p> <p>19. Programs based on exception handling.</p>
<p>In addition to these above stated programs/practical's concern faculty member may design his/her own programs / practical's.</p>	
Term Work	
<p>Term work will consist of the programs/practical listed above, out of which any eight programs/practical's are to be performed in laboratory by the students.</p>

VOCATIONAL COURSE – I: ANALYTICAL TECHNIQUES

Designation: Basic Science

Course Pre-requisites: Basic Chemistry

Teaching Scheme	Examination Scheme	Credits Allotted
Practical : 04 Hours/Week	Term-work (TW) : 25 Marks	TW/OR/PR : 02
Total : 04 Hours/Week	Practical/Oral : 25 Marks	Total Credits : 02
	Total : 50 Marks	

Course Outcomes

After completion of the course students will be able to

1. Analyse the samples using HPLC and define its content and concentration
2. Analyse the samples using GC and define its content and concentration
3. Analyse the samples using UV and FTIR, and define its content and concentration
4. Analyse the samples for carbon, fluoride ion content and define its flow properties
5. Analyse water and fuel samples for properties and composition
6. Analyse the samples for surface properties and particle size

Topics Covered

Analytical Method - I	High Precision Liquid Chromatography Analysis principle; Criteria of selection; Preparation of samples; Selection of eluent and detector; Selection of elution conditions; Standardization and calibration; Sample analysis: Qualitative and quantitative results	(08 Hours)
Analytical Method - II	Gas Chromatography Analysis principle; Criteria of selection; Preparation of samples; Selection of eluent and detector; Temperature programming; Elution conditions; Standardization and calibration; Sample analysis: Qualitative and quantitative results	(08 Hours)
Analytical Method - III	Spectrographic analysis Analysis principle and limitations of spectroscopic analysis UV-vis spectrophotometry: Beer-Lambert's law; Preparation of samples; Dilutions; Standardization and calibration; Sample analysis: Qualitative and quantitative assessment Fourier Transfer Infrared Spectroscopy: Preparation of samples; KBr pellet formation; Film analysis; Powder analysis; Interpretation of data: Sample analysis	(08 Hours)
Analytical Method - IV	Carbon and Fluoride Ion analysis Selection of methods for analysis; Preparation of samples; Standardization; Analysis and interpretation Viscometry analysis Redwood and plate and cone type viscometers: Measurement principle; Sample Analysis;	(08 Hours)
Analytical Method-	Fuel Analysis: Bomb calorimetry; Flash point analysis; Fire point analysis; Coal analysis: Ultimate and proximate analysis; Moisture content measurement	(08 Hours)

V	by Karl Fisher titration: Standardization and data analysis. Water Analysis: Concept of Biological oxygen demand (BOD), Chemical oxygen demand (COD), Total Organic Carbon (TOC) and heavy metal content analysis; Sample analysis	
Analytical Method - VI	Surface and particle analysis: <i>Particle size analysis:</i> Principle; Preparation of solution or dispersion; Sample analysis <i>Atomic forced microscopic analysis:</i> Principle; AFM analysis.	(08 Hours)
The analytical methods and their applications would be defined along with background information, principal and application determination, limitation and applications

NUMERICAL METHODS FOR CHEMICAL ENGINEERING		
Designation: Professional Core		
Pre-requisites courses: Basic knowledge of mathematics including derivative, integration etc.		
Teaching Scheme	Examination Scheme	Credits Allotted
Lectures : 04 Hours/Week	End Semester Examination : 60 Marks	Theory : 04
Total : 04 Hours/Week	Internal Assessment : 40 Marks	Total Credits : 04
	Total : 100 Marks	
Course Outcomes		
After completion of the course students will be able to		
1	Estimate the true percent relative error for given problem	
2	Compute the roots of the equation using bracketing methods and open methods	
3	Solve Chemical Engineering problems using regression analysis	
4	Solve Chemical Engineering problems using numerical differentiation methods	
5	Evaluate the integral value using Trapezoidal rule, Simpson's 1/3 rd rule, Simpson's 3/8 th rule, and Romberg integration	
6	Apply finite difference methods to solve boundary value problems	
Topics covered		
UNIT-I	Approximations and Error Analysis Approximations; Significant figures; Accuracy and precision; Error definitions; Round off error; Truncation error; True percent relative error; Prespecified percent tolerance; Total numerical error; Error propagation; Error analysis of numerical differentiation; Root mean square error; Mean square error; Analysis of variance.	(08Hours)
UNIT-II	Engineering Applications: Roots of equations Bracketing methods: Bisection method, False position method; Open methods: Secant method, Newton-Rapson method, Modified Newton-Rapson method; Roots of Polynomials: Mueller's method, Bairstow's method, Picard's method; Solve Chemical Engineering problems using above methods.	(08 Hours)
UNIT-III	Regression analysis and Interpolation Regression analysis: Linear regression, Least square regression, Logistic regression, Polynomial regression, Nonlinear Regression, Curve fitting, Regression Vs Classification. Interpolation: Direct Method, Lagrange interpolating polynomials, Newton's Divided-Difference interpolating polynomials, Sterling's interpolation, Inverse	(08 Hours)

	interpolation, Approximation of functions. Solve Chemical Engineering problems using above methods.	
UNIT-IV	Engineering Applications: Differential Equations Problems based on Process Calculation, Fluid Flow operation and Heat Transfer to be solved using following methods: Euler's method, Modified Euler's method, 2 nd order Runge-Kutta Method, 4 th order Runge-Kutta method; Picard's method of successive approximations; Taylor series method; Milne's predictor-corrector method; Richardson Extrapolation; Ordinary Differential Equation: Boundary Value Problems.	(08 Hours)
UNIT-V	Numerical Integration Solve Chemical Engineering problems using Newton- Cotes integration, Trapezoidal rule, Simpson's 1/3 rd rule, Simpson's 3/8 th rule, Romberg integration; Cauchy integral formula; Multiple application of Simpson's 1/3 rd , 3/8 th rule, Trapezoidal rule.	(08 Hours)
UNIT-VI	Finite Difference Methods Introduction to finite difference method; Boundary value problems of exact differential equations up to second order; Hyperbolic equations; Finite difference approximations to derivatives; Elliptical Equation; Control Volume Approach; Heat Conduction Equation. Problems based on Process Calculation, Fluid Flow operation and Heat Transfer to be solved using these methods.	(08 Hours)
Assignments		
There will be six (6) assignments from various units mentioned in the syllabus. Each assignment will carry 10 marks.		
1.	Estimate the error and do the error analysis for any chemical Engineering based problem	
2.	Find the roots of equations for the problems based on Fluid Mechanics, Heat Transfer	
3.	Solve the equations from Heat Transfer, Fluid Mechanics, and Particulate Technology using numerical differentiation methods	
4.	Estimate the integral value for the problems based on Heat Transfer, Fluid Mechanics, Chemical Engineering Thermodynamics, and Particulate Technology etc.	
5.	Solve Chemical Engineering problems using regression analysis	
6.	Solve the boundary value problems using finite difference methods	
7.	Solve old (last five years) question papers with reference to particular topic	
8.	Solve old (last five years) GATE paper questions of Numerical Methods for Chemical Engineering subject	
9.	With suitable case study explain in detail how this subject is prerequisite for Process Modeling of chemical processes	
10.	With the help of this subject knowledge, write a guideline report on how you would apply your concepts for industrial practice	

Project Based Learning	
Students in a group of 3 to 4 shall complete any one project from the below list	
1.	Estimate the roots of polymeric equations for fluid flow operations, equations such as buoyancy of any ball, liquid level in manometer etc.
2.	Apply numerical differentiation techniques to solve the case studies of process heat transfer.
3.	Evaluate the integral value/area under the curve for given equations related to any unit operation/process.
4.	Apply finite difference method for boundary value problems of exact differential equations up to second order for specific chemical engineering system.
5.	Collect experimental data from open source literature and do the regression analysis.
6.	Apply Sterling's interpolation formula for the given experimental data and calculate the desired results.
7.	Analyze the given experimental data and apply the curve fitting techniques.
8.	Collect experimental data from open source literature, apply regression analysis for prediction and calculate root mean square error (RMSE).
9.	Using Euler's method solve the case study related to transient heat conduction.
10.	Apply the bracketing methods to find the root of equations of fluid flow systems.

Syllabus for Unit Tests	
Unit Test I	Units I, II, and III
Unit Test II	Units IV, V, and VI

CHEMICAL ENGINEERING THERMODYNAMICS II

Designation: Professional Core

Pre-requisite Courses: Basic knowledge of chemistry, physics and mathematics, Chemical engineering thermodynamics, Material and energy balance calculations

Teaching Scheme	Examination Scheme	Credits Allotted
Lectures : 04Hours/Week	End Semester Examination : 60 Marks	Theory : 04
Tutorial : 01Hours/Week	Internal Assessment : 40 Marks	Tutorial : 01
Total : 05 Hours/Week	Total : 100 Marks	Total Credits : 05

Course Outcomes

1	Characterize ideality of gaseous mixtures and liquid solutions.
2	Estimate fugacity coefficient to measure the deviation from ideality.
3	Estimate activity coefficient to measure the deviation from ideality.
4	Analyze vapor liquid equilibrium using thermodynamic stability and consistency tests.
5	Estimate partition coefficient for liquid liquid equilibrium and solid liquid equilibrium.
6	Estimate chemical reaction constant and composition of system at thermodynamic equilibrium.

Topics Covered

UNIT-I	Thermodynamics of Ideal Solution Fundamental property relationships for solutions; Concept of chemical potential and partial molar properties; Estimation of partial molar properties; Gibbs-Duhem equation; Ideal gas mixtures: Gibbs theorem; Ideal solution: Characteristics of ideal solution, Lewis Randall law.	(08 Hours)
UNIT-II	Thermodynamics of Non-ideal Gas Mixtures Concept of non-ideality in gaseous mixtures; Fugacity and fugacity coefficient for non-ideal gas mixtures; Effect of temperature and pressure on fugacity coefficient; Estimation of fugacity coefficient; Concept of residual property; Relation between residual property and fugacity coefficient.	(08 Hours)
UNIT-III	Thermodynamics of Non-ideal Liquid Solution Concept of non-ideality in liquid solution; Activity and activity coefficient for non-ideal solution; Effect of temperature and pressure on activity coefficient; Estimation of activity coefficient; Excess properties: Gibbs excess energy; Relation between excess property and activity coefficient; Excess properties of mixing and heat effects.	(08 Hours)
UNIT-IV	Vapor-liquid equilibrium (VLE): Criteria of vapour liquid equilibria and stability; Basic equation for vapor-liquid equilibrium(Raoult'slaw); Qualitative behavior of VLE; Non-ideality in vapour and liquid phases (Modified Raoult's law); Estimation of liquid phase properties from VLE data; Excess Gibbs free energy models; Azeotropic data; Multicomponent VLE; Bubble point and dew point calculations;	(08 Hours)

	Thermodynamic consistency test for VLE data.	
UNIT-V	Liquid-liquid Equilibria (LLE) and Solid-liquid Equilibria (SLE): Equilibrium and stability; LLE: Basic equation governing LLE, Distribution coefficient (Partition Coefficient), solubility diagram, Intermolecular interactions; SLE: Basic equation governing SLE, Solid liquid equilibrium models and estimation of design parameters.	(08 Hours)
UNIT-VI	Chemical reaction equilibria The reaction coordinate; Application of equilibrium criteria to chemical reactions; The standard Gibbs energy change and the equilibrium constant; Effect of temperature on the equilibrium constant; Evaluation of equilibrium constant; Relation of equilibrium constants to composition; Phase rule for reacting systems; Multi-reaction equilibria.	(08 Hours)

Project Based Learning

1. Group discussions on any of the following topics:
2. Importance of Phase equilibria in chemical industries.
3. Solving numerical in connection with phase equilibria
4. Solving numerical based on application of Rault's law for the calculation of dew point and bubble point
5. Unsolved numerical from the reference books on various topics studied.
6. Draw P-xy and T-xy diagrams.
7. Solving numerical based on chemical reaction equilibrium.
8. Enhancement in collaborative learning is done through, group assignments that will be given to encourage students to work with classmates to discuss and complete homework assignments.
9. Students have to study any five NPTEL videos related to Chemical Engineering Thermodynamics I and prepare/present power point presentation.
10. Solving numerical in connection with the solution thermodynamics
 - a) Questions involving fugacity and activity for the species in solution.
 - b) Thermodynamic properties for pure species and species in solution
11. Preparation of a brief report on applicability of liquid-liquid equilibrium (LLE) in chemical engineering systems.
12. Solve question papers of CET II of previous THREE years.

Syllabus for Unit Tests		
Unit Test I	Units I, II, and III	
Unit Test II	Units IV, V, and VI	

DESIGN OF HEAT TRANSFER EQUIPMENT

Designation: Professional Core

Pre-requisite Courses: Basic knowledge of Heat transfer, Particulate technology, Chemical engineering thermodynamics, Material and energy balance calculations

Teaching Scheme	Examination Scheme	Credits Allotted
Lectures : 03 Hours/Week	End Semester Examination : 60 Marks	Theory : 03
Practical : 04 Hours/Week	Internal Assessment : 40 Marks	TW/OR/PR : 02
Total : 07 Hours/Week	Term-work (TW) : 25 Marks	Total Credits : 05
	Practical/Oral : 25 Marks	
	Total : 150 Marks	

Course Outcomes

1	Design of double pipe heat exchanger
2	Perform process design of shell and tube heat
3	Perform the evaporation calculations and estimate heat transfer area of evaporator.
4	Analyse heat transfer characteristics of mechanically agitated contactors
5	Analyse heat transfer characteristics of fluidised beds
6	Analyse the heat transfer characteristics of furnaces

Topics Covered

UNIT-I	Double pipe heat exchanger(DPHE) Selection criteria of DPHE, Heat load calculations; Estimation of physical properties of fluid if any; Material of construction (MOC); Selection of flow arrangements; LMTD calculations; Estimation of film heat transfer coefficient using appropriate empirical correlation; Estimation of overall heat transfer coefficient; Heat transfer area; Concept of hydraulic diameter; Pressure drop calculations: Design and working pressure.	(08Hours)
UNIT-II	Shell and tube heat exchangers Shell and tube configurations; Heat load calculations; Material of construction (MOC); Estimation of film heat transfer coefficient; Estimation of overall heat transfer coefficient; Heat transfer area and number of tubes; Sizing of shell and tube heat exchanger: Design of baffle, tie rods, tube sheet and nozzles; Pressure drop calculations: Design and working pressure; TEMA standards.	(08 Hours)
UNIT-III	Evaporators Concept of evaporation; Types of evaporators; Performance parameters of evaporators: capacity, economy and steam consumption; Methods of feeding for evaporators; Material and energy balances; Sizing of evaporators; Design	(08 Hours)

	of steam chest: Estimation of heat transfer coefficient and area, boiling point elevation; Factors affecting performance of evaporators; Pressure drop calculations: Design and working pressure.	
UNIT-IV	Mechanically agitated contactors (MAC) Heat transfer configurations of MAC; Heat load calculations; Heat transfer calculations for homogeneous and heterogeneous systems: Estimation of film heat transfer coefficient, overall heat transfer coefficient and heat transfer area; Sizing of MAC; Material of construction (MOC); Factors affecting heat transfer characteristics: system and operating parameters; Indian MAC standards.	(08 Hours)
UNIT-V	Fluidised beds Concept of fluidization; Fluidization regimes; Pressure drop calculations: Effect of superficial velocity and physical properties of solid and fluidising medium; Velocity voidage relationship; Determination of heat transfer rates: Overall heat transfer coefficient calculations; Sizing of fluidised beds based on heat transfer characteristics;	(08 Hours)
UNIT-VI	Furnaces Components of a furnace; Classification, Performance measures in furnaces: Excess air, heat distribution, temperature control, draft control, waste heat recovery; Heat transfer in furnace. Furnace efficiency calculations. Lobo and Evans method. Wohlenberg simplified method.	(08 Hours)

Project Based Learning:

1	Visit to any heat transfer equipment fabrication industry and prepare report on internals of heat exchanger.
2	Perform process design for heat exchanger for given application
3	Visit to sugar industry to observe operation of evaporators and prepare report.
4	Enlist TEMA Standards.
5	Make Power point presentation on recent advances in heat transfer characteristics of any one chemical process equipment
6	Write report on heat transfer aspect and any one multiphase reactor based on recent advances.
7	Design experimental methodology to estimate time needed to heat a given fluid to design temperature with a given heat resource.
8	Designed any one heat transfer equipment on laboratory scale and demonstrate its working.
9	Propose suitable heat exchanger for given operation/ process based rational reasoning.
10	Enlist empirical correlations to estimate HTC in heat exchanger and report applicability.
11	Enlist empirical correlations to estimate HTC in mechanically agitator vessel.
12	Demonstrate effect and specific heat of fluid time needed to raise desired temperature by experimental methodology
13	Enlist possible ways to enhance HTC in a given heat exchange system.

Term Work	
Term work will consist of the experiments listed below, which are to be performed in laboratory by the students	
1	To study temperature distribution and overall heat transfer coefficient, in parallel flow finned tube heat exchanger.
2	To study effectiveness and heat transfer rates in counter flow finned tube heat exchanger.
3	To study temperature distribution, effectiveness, overall heat transfer coefficient, heat transfer rates in double pipe heat exchanger.
4	To study Wilson plot in double pipe heat exchanger.
5	To determine overall heat transfer coefficient, effectiveness for shell and tube heat exchanger.
6	To determine number of tubes, pressure drop for shell and tube heat exchanger.
7	Calculation of heat transfer coefficient, rate of heat flow and effectiveness in Double pipe heat exchanger.
8	Detailed flow arrangements, design and drawing of double pipe heat exchanger
9	Detailed design and drawing of shell and tube heat exchanger
10	Detailed design and drawing of evaporator.
11	Calculation of heat transfer coefficient, No of tubes and rate of heat flow in shell and tube heat exchanger
12	Detailed design and drawing of agitated vessel.

CHEMICAL TECHNOLOGY

Designation: Professional Core

Pre-requisite Courses: Basic knowledge of chemistry

Teaching Scheme		Examination Scheme		Credits Allotted	
Lectures	: 03 Hours/Week	End Semester Examination	: 60 Marks	Theory	: 03
Practical	: 04 Hours/Week	Internal Assessment	: 40 Marks	TW/OR/PR	: 02
Total	: 07 Hours/Week	Term-work (TW)	: 25 Marks	Total Credits	: 05
		Practical/Oral	: 25 Marks		
		Total	: 150 Marks		

Course Outcomes

- 1 | Learn the concept of unit operations and unit processes.
- 2 | Analyze recent methods used in chloro alkali and electrolytic industries.
- 3 | Learn the manufacturing processes used in sulfur and nitrogen industry
- 4 | Learn the recent techniques used in oil industry.
- 5 | Analyze the various processes used in Sugar-Starch industry and fermentation industry.
- 6 | Learn the production methods used in petrochemical industry .

Topics Covered

UNIT-I	<p>Unit operations and Unit processes Unit operations and unit processes; Concept of block diagram; Process flow diagram (ASME guidelines); Major engineering problems; Schematic representation and applications for unit operations and unit processes. Chlor-alkali industry, sea chemicals i) Chlor-alkali industry: Recent processes for the production of soda ash, NaOH and Chlorine ii) Sea chemicals: Sodium-Magnesium compounds, methods for salt recovery</p>	(06 Hours)
UNIT-II	<p>Nitro- Phosphorous Industry and Sulphur Industry i) Nitrogen Industry: Recent processes for the production of Ammonia, Nitric acid, Urea, Ammonium Nitrate ii) Phosphorous Industry: Production of Phosphoric acid, single and triple Super Phosphate, Ammonium Phosphate iii) Sulphur Industry: Production of Sulphur, Sulphuric acid, Ammonium sulphate.</p>	(06 Hours)
UNIT-III	<p>Oils, Fats, Soaps and Detergents Extraction of oil from seeds, Oil purification, Hydrogenation of oil. Solvent extraction process; Biodiesel production Production of soap, natural glycerine, production of detergents.</p>	(06 Hours)
UNIT-IV	<p>Sugar-Starch Industry and Fermentation industry i) Sugar-Starch Industry: Production of Sugar, Starch Derivatives ii) Fermentation Industry: production of ethyl alcohol, citric acid and antibiotics.</p>	(06 Hours)
UNIT-V	<p>Natural products Terpenes, alkaloids, plant pigments, their applications, Methods for extraction, isolation, molecular separation and purification of biomolecules from natural sources.</p>	(06 Hours)

UNIT- VI	Petrochemical Industry i) C1 Compounds: Production of methanol, formaldehyde, and halogenated hydrocarbons. ii) C2 Compounds: Production of ethylene and acetylene- steam cracking of hydrocarbons, ethylene dichloride, vinyl chloride. iii) C3 Compounds: Production of propylene by indirect hydration, acetone, cumene. iv) Aromatic Compounds: Production of phenol, phthalic anhydride, and styrene.	(06 Hours)
*Project Based Learning		
1	Development of working model of belt conveyor	
2	Development of working model of bucket elevator	
3	Prepare prototype of effluent treatment plant with different units like clarifier, bioreactor , pressure sand filter etc. (Activated sludge process: prototype working model)	
4	Prepare prototype of any chemical process industry representing the all the unit operations	
5	Prepare prototype of any chemical process industry representing the all the unit processes	
6	Analyze Safety aspects in Chemical Process industry	
7	Prepare working model of cooling tower	
8	Prepare prototype of distillation column using packed column/rasching rings	
9	Prepare prototype of dryer tray dryer or rotary dryer	
10	Analyze Personal protective equipment used in chemical industry	
*Students in a group of 3 to 4 shall complete any one project from the above list.		
Term Work		
Term work will consist of the experiments listed below, which are to be performed in laboratory by the students.		
1	Determination of saponification value of oil sample.	
2	Application of pH meter to find acidity and alkalinity of a solution.	
3	To study the hydrolysis of cane sugar solution in the presence of an acid by Fehling's solution method and find out the reaction constant.	
4	Determination of the strength of unknown hydrochloric acid by titrating it against caustic soda by conductometric method.	
5	Preparation of laundry soap and to determine its yield.	
6	Analysis of acid oils and soap stocks.	
7	Analysis of Glycerine (sweet water).	
8	Analysis of detergent powders.	
9	Preparation of report on industrial visit.

Unit Test I	Units I, II, and III	
Unit Test II	Units IV, V, and VI	

INDUSTRIAL POLLUTION AND ABATEMENT		
Designation: Professional Core		
Course Pre-requisites:		
Before studying this subject the student should have knowledge of		
1.	Basic fundamentals included in environmental sciences.	
2.	Fundamentals of unit operation.	
Teaching Scheme		
Examination Scheme		
Credits allotted		
Lectures: 04Hours/Week	End Semester Examination : 60 Marks	Theory: 04
Practical: 02Hours/Week	Internal Assessment : 40 Marks	TW/PR/OR: 01
Total : 06 Hours/Week	Term-work (TW) : 25 Marks	Total Credits 05
	Practical/Oral : 25 Marks	
	Total : 150 Marks	
Course Outcomes:		
1.	Identify and demonstrate the characterization of wastewater with statutory limits for disposal.	
2.	To analyze the important parameters of the wastewater such as BOD, COD, DO, etc.	
3.	Demonstrate the various physical unit operations used in the treatment.	
4.	Define the various treatment methods available for wastewater and solid waste.	
5.	Demonstrate the effect of various air pollutants on man and environment.	
6.	Demonstrate the operations of various air pollution control equipments.	
Topics covered		
UNIT - I	Introduction Overview of pollution aspects in Chemical Process Industries (CPI); Types of pollution; Introduction to all prevailing international standards of Health, Safety, and Environment; Environmental laws and regulations; ISO 14000+; Environmental legislation; Air pollution control act; Indian standards for disposal of industrial effluents; Environmental impact assessment; Life cycle assessment.	(08 Hours)
UNIT -II	Air pollution Air pollutants: sources, classification of air pollutants, air quality, air pollution minimisation and control, source and control of fugitive emissions, Effects of air pollutants, Measurement of air pollutants; Air pollution control: Particulate emission control by mechanical separation and electrostatic precipitation, wet gas scrubbing, gaseous emission control by absorption and adsorption, Design of cyclones, ESP, fabric filters and absorbers.	(08 Hours)
UNIT - III	Water pollution and its control Groundwater and surface water pollution: types, sources and effects of water pollutants; Physical treatment: solids removal by setting and sedimentation, filtration centrifugation, coagulation and flocculation; Biological Treatment: Anaerobic and aerobic treatment, biochemical kinetics, trickling filter, activated sludge and lagoons, aeration systems, sludge separation and drying; Assessment of water quality through the measurement of: Dissolved oxygen, biological oxygen demand and chemical oxygen demand.	(08 Hours)
UNIT IV	Advanced treatment methods Advanced oxidation processes viz. Ozonation, Fenton's and photo-Fenton process, electrochemical process, photocatalysis, ultrasound and hydrodynamic cavitation etc. for the treatment of recalcitrant organics and inorganics/metals;	(08 Hours)

	Hybrid treatment processes; recent advanced in treatment methods.	
UNIT- V	Solid waste management Analysis and quantification of hazardous and non-hazardous wastes; Treatment and disposal of solid wastes; Land filling; Leachate treatment; briquetting / gasification and Incineration.	(08 Hours)
UNIT - VI	Industrial case studies Concept of zero discharge system; Application of advanced treatment methods for water reclamation and reuse; Study of minimum two case studies for treatment of industrial waste: pesticide industry, textile industry, pharmaceutical industry etc.	(08 Hours)
Expert Interaction	Lecture(s) by eminent scholar(s) on the topic(s) mentioned in the syllabus.	(02 Hours)
Project based learning		
1	Visit to any waste water treatment plant and specify the advanced in the treatment methods	
2	Conduct the survey of air quality in Pune city	
3	Write a report on concept of zero discharge and its significance	
4	Enlist Indian standards for disposal of industrial effluents.	
5	Prepare power point presentation on recent advances in waste water treatment	
6	Group discussion on health hazards of air and water pollution.	
7	Design a novel method for effective solid waste management.	
8	Demonstrate the applications of biological processes in waste water treatment.	
9	Design the activated sludge process for any particular industrial effluent.	
10	Enlist the characteristics of industrial effluent.	
11	Prepare the report on primary, secondary and tertiary treatment methods used in industries	
12	Visit a pesticide manufacturing industry and prepare a case study for treatment of pesticide industry effluent	
13	Prepare a technical report on the effective treatment of pharmaceutical waste.	
14	Visit to nearby municipal water treatment plant.	
List of Practical:		
1.	Determination of pH, color, and turbidity of a given waste water sample.	
2.	Inorganic characterization of waste water sample.	
3.	Measurement of D. O. of waste water sample.	
4.	Measurement of C. O. D. of waste water sample.	
5.	Estimation of B. O. D. of waste water sample.	
6.	Study of flocculation technique for a given waste water sample.	
7.	Study of froth flotation technique for a given waste water sample.	
8.	Study of sedimentation method for the treatment of waste water.	
9.	Characterization of dairy waste- A report.	
10	Characterization of domestic sewage - A report.	
Text Books/References:

Syllabus for Unit Test:	
Unit Test I	Units I, II, and III
Unit Test II	Units IV, V, and VI

MATLAB PROGRAMMING

Designation: Professional Core

Pre-requisite Courses: Computer fundamentals

Teaching Scheme	Examination Scheme	Credits Allotted
Practical : 04 Hours/Week	TW : 50 Marks	TW/OR/PR : 02
	Practical/Oral : 50 Marks	Total Credits : 02
	Total : 100 Marks	

Course Outcomes:

After completion of the course students would be able to:

- 1 | Develop a basic programme applying MATLAB syntax.
- 2 | Design programs involving matrix and publish report.
- 3 | Develop programs involving loops.
- 4 | Apply MATLAB to solve mathematical problems.
- 5 | Design a program to evaluate Thermodynamics, Process calculation problems.
- 6 | Design a program to evaluate Heat transfer and Fluid flow problems.

Topics Covered

UNIT-I	<p>Getting started with MATLAB Features of MATLAB window: Command window, current directory pane, workspace, command history window, figure window, editor window, data type, file type; Performing operations: Arithmetic operators, create arrays and vectors, working with arrays of number; File creation: creating, saving and executing a script file and function file. Creating and printing simple plots. 1. Programs based on Fundamentals in MATLAB Programming.</p>
UNIT-II	<p>Creating files Programs using Arrays and Matrices; working with anonymous function; symbolic computation; importing and exporting data; publishing reports. 2. Programs based on Matrix calculations. 3. Programs based on function creation and evaluation. 4. Programs based on publishing report.</p>
UNIT-III	<p>Programming Creating a script file; creating function file; programs using while, if and for loop. 5. Programs for script and function file. 6. Programs based on loops. 7. Combined program of script file with function and loops.</p>
UNIT-IV	<p>Applications to Numerical Methods Programs to solve linear and Nonlinear equations; Curve fitting and interpolation; Numerical Integration; Partial and Ordinary differential equation. 8. Program to solve set of linear equations. 9. Program to solve set of non- linear equations. 10. Program based on curve fitting and interpolation. 11. Program based on partial/ ordinary differential equations.</p>
UNIT-V	<p>Application to Chemical Engineering Applications of MATLAB to solve Thermodynamics, physical property estimation and process calculation problems. 12. Vapor pressure estimation of a given component. 13. Estimating bubble point/dew point for a given mixture.</p>

	14. Estimating physical properties of components like humidity, density, viscosity etc.
UNIT-VI	Application to Chemical Engineering Applications of MATLAB to solve Heat Transfer and Fluid Mechanics problems. 15. Program based on flow in horizontal pipe (average velocity calculation). 16. Program for estimating pipe diameter/ power requirement. 17. Program for estimating LMTD 18. Estimating heat transfer coefficient for shell and tube heat exchanger.
In addition to these above stated programs/practical's concern faculty member may design his/her own programs / practical's.	
Term Work	
Term work will consist of the programs/practical listed above, out of which any eight programs/practical's are to be performed in laboratory by the students.	
Text Books/References:

VOCATIONAL COURSE II: INDUSTRIAL HEATING SYSTEMS

Designation: Skill Development

Pre-requisite Courses: Chemical Engineering Thermodynamics, Heat Transfer, Particulate technology

Teaching Scheme	Examination Scheme	Credits Allotted
Practical : 04 Hours/Week	Term-work (TW) : 25 Marks	TW/OR/PR : 02
Total : 04 Hours/Week	Practical/Oral : 25 Marks	Total Credits : 02
	Total : 50 Marks	

Term Work

Term work will consist of the practicals based on the following topics. Any ten practicals are to be performed in laboratory by the students.

Topics Covered

1	Liquid Fired Thermic Fluid Heaters Design principle, selection and characterization of liquid fuel and thermic fluid, Efficiency of system, Control system for thermic fluid heaters, Operation and maintenance of liquid fired thermic fluid heaters.
2	Solid Fired Thermic Fluid Heaters Design principle, selection and characterization of solid fuel and thermic fluid, Efficiency of system, Control system for solid thermic fluid heaters, Operation and maintenance of solid fired thermic fluid heaters.
3	Boiler (Fire-Tube Boiler) Design principle, Construction and working principle, Types of fire tube boilers, Selection criteria, Operation and maintenance of fire tube boilers,
4	Boiler (Water-Tube Boiler) Design principle, Construction and working principle, Types of water tube boilers, Selection criteria, Operation and maintenance of water tube boilers
5	Furnaces Design principle, Classification and types of furnaces, Construction and working principle, Heating distribution within furnace, selection criteria for furnace. Operation and troubleshooting of furnaces.
6	Selection of Heating System for Industrial Purpose Selection criteria and factors to be considered, Characteristics of a good heating system, Risk barriers and uncertainty, Case studies.

*Theory paper of 4 hours duration

Programme: B. Tech. (Civil) Sem – I (2021)

Course: Differential Calculus		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 4 Hours / Week	End Semester Examination: 60 Marks Internal Assessment: 40 Marks	Theory: -04
Tutorial: 1 Hour / Week		Tutorial: - 01
Course Pre-requisites: The students should have knowledge of		
1	Algebra of matrices and its Determinants, Maxima and Minima of single variable functions.	
Course Objectives:		
To study	<ol style="list-style-type: none"> 1. Fundamental theorems, concepts in Matrices, Demoivr's theorem and its applications in engineering. 2. Various techniques in Calculus, Explanation of functions and Infinite series. 3. Partial differentiation, maxima, minima and its applications in engineering. 	
Course Outcomes: The student will be able to		
1	Understand rank of matrix and apply it to solve system of linear equations	
2	Understand the DeMoiver's theorem, hyperbolic functions and apply it in engineering problems.	
3	Understand the Leibnitz's rule and apply it to find nth derivative of a function.	
4	Understand fundamental concepts of convergence, divergence of infinite series and its tests.	
5	Understand the concept of partial differentiation and apply it to find total derivative.	
6	Evaluate the maxima and minima of any two variables functions.	
Course Content:		
UNIT - I	Matrices: Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors.	(08 Hrs)
UNIT - II	Complex Numbers and Applications: Definition, Cartesian, Polar and Exponential Forms, Argand's Diagram, De'Moivre's theorem and its application to find roots of algebraic equations., Hyperbolic Functions, Logarithm of Complex Numbers, Separation into Real and Imaginary parts, Application to problems in Engineering.	(08 Hrs)
UNIT - III	Differential Calculus: Differential Calculus: Successive Differentiation, nth Derivatives of Standard Functions, Leibnitz's Theorem. Expansion of Functions: Taylor's Series and Maclaurin's Series.	(08 Hrs)
UNIT - IV	Differential Calculus: Indeterminate Forms, L' Hospital's Rule, Evaluation of Limits. Infinite Series: Infinite Sequences, Infinite Series, Alternating Series, Tests for Convergence, Absolute and Conditional Convergence, Power series, Range of Convergence.	(08 Hrs)

UNIT - V	Partial Differentiation and Applications: Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables	(08 Hrs)
UNIT - VI	Jacobian: Jacobians and their applications, Chain Rule, Functional Dependence. Maxima and Minima: Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.	(08 Hrs)
Internal Assessment		
	Unit Test: I and II	
Textbooks:		
1. Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar, (Pune Vidyarthi Griha Prakashan, Pune), 7 th Edition, 1988, Reprint 2010.		
2. Higher Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi), 42 th Edition, 2012.		
Reference Books:		
1. Higher Engineering Mathematics by B.V. Ramana (Tata McGraw-Hill), Edition ,2008.		
2. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.), 8 th Edition, 1999, Reprint 2010.		
3. Advanced Engineering Mathematics, 7e, by Peter V. O'Neil (Thomson Learning), Edition 2007		
4. Advanced Engineering Mathematics, 2e, by M. D. Greenberg (Pearson Education), 2 nd , Edition, 2002.		
Project Based learning topics for Differential Calculus:		
Students are expected prepare report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code/proof for it, wherever applicable.		
1. Echelon form		
2. Normal form		
3. Linear and orthogonal transformation		
4. Eigen values and eigen vectors		
5. Argand diagram		
6. De Moivre's theorem		
7. Hyperbolic and logarithmic functions		
8. Leibnitz theorem		
9. Taylor's theorem		
10. L'Hospital rule		
11. Tests for convergence		
12. Euler theorem for homogeneous functions		
13. Total derivative		
14. Maxima and minima for two variable function		
15. Lagrange undetermined multipliers		

Programme: B. Tech. (Civil) Sem – I (2021)

Course: Acoustics and Modern Physics		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 3Hours / Week	End Semester Examination: 60 Marks Internal Assessment: 40 Marks	Theory: 3
Practical: 2 Hours / Week	Term Work: 25Marks	Term Work :1
		Total: 4
Course Pre-requisites: The students should have knowledge of		
1	Basic understanding of physics and calculus.	
Course Objectives:		
	To impart knowledge of basic concepts in physics relevant to engineering applications in a broader sense with a view to lay foundation for the Civil Engineering.	
Course Outcomes: The student will be able to		
1	Summarise the terms damping constant, characteristic frequency, kinetic and potential energy of a spring.	
2	Relate the problems associated with architectural acoustics and give their remedies.	
3	Connect the problems associated with defects and use ultrasonic as a tool in industry for non-destructive testing.	
4	Summarise and solve the engineering problems on Electromagnetism.	
5	Correlate the principles of different types of polarization and structural phase transitions phenomena in ferroelectric systems.	
6	Infer the wave nature of light and apply it to measure stress, pressure and dimension etc.	
Course Content:		
UNIT - I	Waves and oscillation Periodic motion, simple harmonic motion, characteristics of simple harmonic motion, vibration of simple springs mass system (Different combinations), Resonance - definition, damped harmonic oscillator – heavy, critical and light damping, energy decay in a damped harmonic oscillator, quality factor, forced mechanical and electrical oscillators.	(06 Hours)
UNIT - II	Architectural Acoustics Elementary acoustics, Limits of audibility, Audibility curve, Noise and musical sound, timbre, Reverberation and reverberation time, Sabine’s formula (without Derivation), Intensity level, Sound intensity level, Loudness, Sound absorption, Sound absorption coefficient, different types of noise and their remedies, Sound absorption materials, basic requirement for acoustically good hall, factors affecting the architectural acoustics and their remedies.	(06 Hours)
UNIT - III	Ultrasonic & NDT Introduction to ultrasonic, Production of ultrasonic by magnetostriction and	(06 Hours)

	piezoelectric methods Classification of Non-destructive testing methods, Principles of physics in Non-destructive Testing, Advantages of Non-destructive testing methods, Acoustic Emission Testing, Ultrasonic (thickness measurement, flaw detection), Radiography testing.	
UNIT - IV	Electromagnetic Wave Displacement current, Maxwell's equations (derivation), Wave equation for electromagnetic waves, Propagation in free space, Poynting theorem, Characteristic of Transverse electric and magnetic waves, Skin depth, Rectangular and circular waveguides.	(06 Hours)
UNIT - V	Engineering Materials and Applications Paramagnetic materials, diamagnetic materials, ferromagnetic materials, Dielectrics and electric polarisation. Liquid crystals: Noematic, Semitic and cholesteric phases, Liquid crystal display. Multiferroics: Type I & Type II multiferroics and applications, Magneto resistive Oxides: Magnetoresistance.	(06 Hours)
UNIT - VI	Wave optics Interference Interference of waves, interference due to thin film (Uniform and nonuniform), Applications of interference (optical flatness, interference filter, non-reflecting coatings). Diffraction Introduction, Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Plane diffraction grating, Conditions for principal maxima and minima Polarisation Introduction, Double refraction and Huygens's theory, Positive and negative crystals, Nicol prism, Dichroism.	(06 Hours)
Internal Assessment:		
Part- A	UNIT TEST – I and II	
Part- B	Assignments: Six assignments to be given by the subject teacher (Theory)- one from each unit/one mini project with report-students can work in group of 4 Maximum	
Term Work:		
	The term-work shall consist of any eight of the following.	
	1. Oscillation of a Spring - Mass System and a Torsional Pendulum	
	2. To study normal modes of oscillation of two coupled pendulums and to measure the normal mode frequencies.	
	3. To study normal modes of transverse vibration of a stretched string	
	4. Study of resonance in LCR circuit	
	5. To determine the velocity of sound	
	6. Measurement of average SPL across spherical wave front and behavior with the distance	

	7. Expansion chamber muffler: investigation of muffler response as a filter in the low frequency approximation by determining insertion loss.	
	8. Interference of sound using PC speakers	
	9. Determination of velocity of sound in liquid by ultrasonic interferometer	
	10. Ultrasonic probe - a study	
	11. Plotting the hysteresis loop for given magnetic material	
	12. Determination of radius of planoconvex lens/wavelength of light/Flatness testing by Newton's rings	
	13. Determination of wavelength of light using diffraction grating	
	14. Determination of resolving power of telescope	
	15. Determination of thickness of a thin wire by air wedge	
	16. Determination of refractive index for O-ray and E-ray	

Textbooks:

1. A Textbook of Engineering Physics, M N Avadhanulu, P G Kshirsagar and TVS Arun Murthy, S. Chand Publishing (2018)
2. Engineering Physics, R K Gaur and S L Gupta, Dhanpat Rai Publishing Co Pvt Ltd (2015)
3. Concepts of Modern Physics, Arthur Beiser, Shobhit Mahajan and S. Rai Choudhury, McGraw Hill Education (2017)

Reference Books:

1. Fundamentals of Physics, Jearl Walker, David Halliday and Robert Resnick, John Wiley and Sons (2013)
2. Optics, Francis Jenkins and Harvey White, Tata Mcgraw Hill (2017)
3. Principles of Physics, John W. Jewett, Cengage publishing (2013)
4. Introduction to Solid State Physics, C. Kittel, Wiley and Sons (2004)
5. Principles of Solid-State Physics, H. V. Keer, New Age International (1993)
6. Laser and Non-Linear Optics, B. B. Laud, New Age International Private Limited (2011)
7. Nanotechnology: Principles and Practices, Dr. S. K. Kulkarni, Capital Publishing Company (2014)
8. Science of Engineering Materials- C.M. Srivastava and C. Srinivasan, New Age International Pvt. Ltd. (1997)
9. Introduction to Electrodynamics –David R. Griffiths, Pearson (2013)
10. Renewable Energy: Power for a Sustainable Future, Boyle, Oxford University Press (2012)
11. Fundamentals of Physics, Jearl Walker, David Halliday and Robert Resnick, John Wiley and Sons (2013)

Topics for project-based Learning for Acoustics and Modern Physics

1. Measurement and effect of environmental noise in the college
2. Design and simulation of automatic solar powered time regulated water pumping
3. Solar technology: an alternative source of energy for national development

4. Double pendulum and its application
5. Comparison of various method used in measuring the gravitational constant g
6. The physics of stars and their astronomical identification
7. Design and construction of digital distance measuring instrument
8. Electronic eye (Laser Security) as autoswitch/security system
9. Electric power generation by road power
10. Measurement /simulation of reverberation time
11. Study of vibration of bars
12. Determination of absorption coefficient of sound absorbing materials
13. Determination of velocity of O-ray and E-ray in different double refracting materials
14. Need of medium for propagation of sound wave
15. Small wind turbines as a source of electricity

Programme: B. Tech. (Civil) Sem – I (2021)

Course: Construction and Materials		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 4Hours / Week	End Semester Examination: 60 Marks Internal Assessment: 40 Marks	Theory: 4
Practical: 2 Hours / Week	Term Work & OR: 50 Marks	Term Work & OR: 1
		Total:5
Course Pre-requisites: The students should have knowledge of		
1	Basic concepts of Engineering Drawing	
Course Objectives:		
	To develop the knowledge of building components, materials and construction practices	
Course Outcomes: The student will be able to		
1	Elaborate the types of structures and components of building	
2	Explain building foundation, types of masonry	
3	Identify the types of doors, windows and design various staircases	
4	Select and apply the proper type of floors and types of roofs	
5	Illustrate the types of plasters, pointing and paints	
6	Apply the proper formwork and scaffolding, use proper construction safety	
Course Content:		
UNIT - I	Civil Engineering materials and Building Components Civil Engineering scope, Types of Building as per National Building Code and role of Civil engineer; Types of structures based on loading, material and configuration (all types of construction materials); Building components and their functions	(08 Hours)
UNIT - II	Building Foundation, Masonry and Material Foundation: Types – Shallow foundation and Deep foundation, Suitability of foundations, failure of foundation and its causes. Stones and Stone Masonry: Requirement of good building stones, Stone masonry-principal terms, types (Random Rubble, Uncoursed Rubble, Coursed Rubble and Ashlar Masonry) Brickwork and Brick masonry: Characteristics of Bricks, IS Specification of Bricks, Classifications of bricks (Silica, refractory, fire and Fly ash bricks), Types of bonds: English, Flemish, Header, Stretcher.	(08 Hours)
UNIT - III	Doors, Windows and Staircase Doors: Definition and terminology, Installation of doors frames, Types of Doors: Glazed or sash door, flush door, louvered door, collapsible doors, revolving doors, sliding doors, swing doors. Windows: Definition and terminology, Types of window: Casement window, Sliding Window, Louvered or venetian window, gable window, skylight window, Ventilators. Stairs: Classification, Terminology used, Types: Straight staircase, Open well stair, quarter turn stairs, half turn stairs, turning staircase, dog legged	(08 Hours)

	staircase, circular stairs, Bifurcated stairs and spiral stairs, Details of Ramps, Lifts and Escalators. Lintels: Types, Details of R.C.C. lintels and chajja.	
UNIT - IV	Floors and Roofs Flooring: I.S. Specifications, Types of floor finishes and suitability, Construction details of (mud, concrete, brick and stone flooring), Factors for selection of flooring, types of flooring: Timber flooring, tiled flooring, ceramic flooring, mosaic flooring, Industrial flooring: tremix or Vacuum Dewatered Flooring (VDF) Roofs: Types, Suitability, Roof structures, Selection of roof covering material, Methods of water proofing of roofs, Types of trusses, Fixtures & fastenings.	(08 Hours)
UNIT - V	Building Finishes Plastering: Methods, tools used, Mortars, Defects, Plaster types: Lime plaster, cement plaster, gypsum plaster, Plaster of Paris and applications Pointing: Purpose and Types of pointing, Methods of pointing. Paints: Types and applications, Textures, Apex, Plastic emulsion Wall cladding: Materials, method of fixing, wall papering and glazing work.	(08 Hours)
UNIT - VI	Formwork, Scaffolding and Safety in construction Formwork: Necessity, Materials, Factors for selection, Types Scaffolding: Necessity, Materials, Factors for selection Safety in Construction: safety on site, storage of materials, construction safety, prevention of accidents, fire proof construction, repairs and maintenance.	(08 Hours)
Internal Assessment:		
Part- A	UNIT TEST- I :- UNIT – I, II, III	
	UNIT TEST II :- UNIT- IV,V,VI	
Part- B	Assignments: Students should perform theoretical / experimental assignment/s from the list below	
	1) Types of structures and building components	
	2) Building foundations, Stone and Brick Masonry	
	3) Design of staircase.	
	4) Floors and roofs	
	5) Building finishes	
	6) Formwork, scaffolding and Safety in construction	
Term Work:		
Part- A	The term-work shall consist of minimum Five drawing sheets from list below.	
	1) Lettering, Symbols, Types of line and dimensioning	
	2) Foundation: Isolated, Combined footings, Under Reamed Piles, Rafts	
	3) Type of stone masonry: Elevation and Sectional Drawing	
	4) Types of Brick Masonry:	
	5) Types of Doors and windows:	
	6) Types of stairs: plan and sectional drawing	
	7) Trusses: Various types of Trusses	

	8) Site Visit: To understand Various building Material and their use.	
Text Books:		
1.	“Building Construction”-Rangwala,Charotar Publication	
2.	“The Text Book of Building Construction”-S.P.Arora&S.P.Bindra-DhanpatRai Publication	
3.	“Building Technology and Valuation”- TTTI Madras, -- Tata McGraw Hill Publication	
4.	“Building Construction” by B.C.Punmia, Laxmi Publications.	
Reference Books:		
1.	“My Construction Practices” R.B.Chaphalkar	
2.	“A to Z” Building Construction” Mantri Publications	
3.	“Materials of Construction” – Ghose- Tata McGraw Hill Publications	
4.	“Civil engineering Material’- TTTI Chandigarh- Tata McGraw Hill Publications	
5.	‘Building Material Technology by Ruth T. Brantly& L Reed Brantley, Tata McGraw Hill	
6.	Building Materials by S.K.Duggal, New Age International Publishers.

4.	http://home.iitk.ac.in/~mohite/composite_introduction.pdf	
Topics for Project based learning:		
1:	Model making on various components of buildings, report writing, cost analysis and site visit.	
2.	Market survey, sample collections and report writing on all types of construction materials.	
3.	Report on Scope of Civil Engineering in various fields.	
4.	Collecting various National Building codes and report writing.	
5.	Model making on Types of Shallow foundations report writing	
6.	Model making on Types of Deep foundations report writing	
7.	Sample collections of various types of stones used in stone masonry report writing	
8.	Model making on Different types of stone masonry (mentioned in syllabus) report writing	
9.	Model making on various types of Brick bond masonry. (Mentioned in syllabus) report writing	
10.	Model making on different types of Doors report writing	
11.	Model making on different types of windows reports writing	
12.	Model making on different types of staircase report writing	
13.	Market survey, sample collections and report writing on various roofing materials.	
14.	The rain roof water-harvesting systems.	
15.	Site visit, market survey, report writing and cost analysis of various plastering materials.	
16.	Site visit, market survey, report writing and cost analysis of various types of Paint.	
17.	Model making on Types of formwork and designs.	
18.	Model making on various types of Scaffolding and designs.	
19.	Corrosion mechanism, prevention, and repairs measures of RCC structure.	
20	Construction Project Management & Building Information Modelling	

Syllabus

Programme: B.Tech Civil Sem - I (2021)

Course: Civil Engineering Structures and Geology		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 4 Hours / Week	End Semester Examination: 60 Marks Internal Assessment: 40 Marks	TH:- 4
Practical: 2 Hours / Week	TW and PR :- 50 Marks	TW and PR: 1
		Total: 5
Course Pre-requisites: The students should have knowledge of		
1	Basic engineering sciences.	
Course Objectives:		
	To make the student know the variety of Civil Engineering Structures and the importance of Geology for Civil Engineers.	
Course Outcomes: The student will be able to		
1	Identify and know various civil engineering structures based on their function.	
2	Identify and know various civil engineering structures based on their behaviour.	
3	Identify and know various civil engineering structures based on their performance	
4	Students should be able to identify different rocks & minerals.	
5	Students should be able to identify different Geological structures to decide location and type of civil engineering structure.	
6	Students should be able to carry out preliminary geological investigation for Tunnel, Dam & Bridge.	
Course Content:		
UNIT - I	Structures Based on their Function: Types of structures, various functions served by Civil Engineering structures, Structures used for residential purpose, structures used for water storage and retaining, structures used for industries, structures used for transportation, structures used for treatment of water and wastewater, structures used for storage of liquids, special structures like nuclear reactors, towers, chimneys etc..	(08 Hours)
UNIT - II	Structures based on their behaviour: Various behaviours of a structure, Load bearing Structures, Framed Structures, light structures, medium structures, heavy structures, solid structures, tubular structures, cavity walls, shear walls, tall structures, flat slabs, precast and pre-stressed structures.	(08 Hours)
UNIT - III	Structures based on their performance: Various performances of a structure-strength, serviceability, Energy conservation, soil conservation from a structure, water conservation from a structure.	(08 Hours)

	Concept of ECO building, green buildings, Intelligent building, Low-Cost Housing, High rise buildings.	
UNIT - IV	Importance of Geology in Civil Engineering structures. Importance of Geology in Civil Engineering structures Mineralogy and Petrology: Mineralogy: Formation Process of Minerals, types of minerals, classification of minerals. Petrology: Igneous rocks-mineral composition, texture, classification of igneous rock. Secondary rocks- Weathering, texture & structure of sedimentary rocks & its classification. Metamorphic Rocks-Agents & types of metamorphism, building stones.	(08 Hours)
UNIT - V	Structural Geology & Indian Geology: Structural Geology- Outcrop, dip & strike, conformable series, unconformity & overlap, faults & folds in rocks, mode of occurrence of igneous rocks, joints & fractures. Indian Geology- General Principles of stratigraphy, age of the earth & divisions of geological time, physiographic divisions of India & their characteristics, geological history of peninsula, study of formations in peninsula.	(08 Hours)
UNIT - VI	Geological Investigations: Preliminary geological investigations surface survey, use of geological maps & sections, subsurface investigation. drill holes, test pits, trenches, exploratory tunnels, shafts, adits, drifts etc. Limitation of drilling, engineering significance of geological structures.	(08 Hours)
Internal Assessment:		
Part- A	UNIT TEST – I and II	
Part- B	Assignments: Students should perform theoretical / experimental assignment/s from the list below	
	1) Types of structures and their functions.	
	2) Structures based on behavior	
	3) Structures based on performance	
	4) Types of minerals & Their physical properties	
	5) Types of different geological structures	
	6) Preliminary geological investigation.	
Term Work:		
	a) Review project on any one type of structures	
	b) Identification of the Minerals (2 Practical)	
	c) Identification of Igneous rocks (1 Practical)	
	d) Identification of Secondary rocks (1 Practical)	
	e) Identification of Metamorphic rocks (1 Practical)	
	f) Study of Contoured Geological Maps & drawing the sections (Six Practical)	
	g) Visit to site for understanding the geological features.	
Textbooks:		
	1. S.P. Bindra S.P. Arora, “Building Construction”, Laxmi Publication	

2. M. L. Shah, C. M. Kale, S. Y. Patki, "Building Drawing with integrated approach to Built Environment", Tata McGraw Hill Publishers
3. Gupte R.B, "A text book of engineering geology",P.V.G. Publications,Pune.
Reference Books:
1. IS provisions "National Building Code"
2. "Development Control Rules" of local plan sanctioning authority
3. Calendar, "Time Saver Standards for Architectural Design", Tata McGraw Hill Publishers
4. Merit, "Building Design and Construction", Tata McGraw Hill Publishers
5. Engineering Geology & General Geology By Parbin singh
6. General Geology & Engineering Geology by Dr.P.T.Sawant, New Delhi Publication.
Topics for project-based Learning for Civil Engineering Structures and Geology
1. Prepare a chart for structures used for Water treatment and sewage treatment plant.
2. Collect the information of various types of structures.
3. Prepare a model or chart for a retaining wall or any hydraulic structures.
4. Prepare a chart for comparison of load bearing and framed structure.
5. Prepare a prototype model for load bearing structure with showing all components.
6. Prepare a chart for various types of soil and water conservation structures.
7. Prepare a model of Bridge structure.
8. Collect the information of high rise building in India and prepare the report.
9. Prepare a chart or prototype model for Eco friendly and Intelligent building.
10. Effect of solid waste on quality of ground water.
11. Geophysical investigation using seismic refraction method to determine causes of real failure.
12. Resistivity methods used in horizontal and vertical discontinuities in the electrical properties of the Ground water.
13. Structural interpretation and mineral potential using remote sensing data and GIS tools.
14. Application of electrical resistivity method in ground water exploration.
15. Types of minerals.
16. Types of igneous rocks.
17. Types of metamorphic rocks.
18. Types of secondary rocks.
19. Texture of rocks.
20. Folds in rocks.
21. Failure in rocks.
22. Structures in rocks.
23. Determination of rock parameters, specific gravity, density and compressive strength of different types of rocks.

Syllabus
Programme: B. Tech. (Civil) – Sem – I CBCS 2021 Course

Course: Introduction and Opportunities in Civil Engineering		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED: 3</u>
Theory: 3Hours / Week	End Semester Examination: 60 Marks Internal Assessment: 40 Marks	Theory:3
Course Pre-requisites: The students should have knowledge of		
1	Basic Science	
Course Objectives:		
	To develop the knowledge of Basics of Civil Engineering and Building construction.	
Course Outcomes: The student will be able to		
1	Explain the introduction to civil engineering and various discipline.	
2	Elaborate Scope and role of civil engineering in all sectors.	
3	Identify the Civil Engineering project and process.	
4	Select the approvals required for Civil Engineering Construction Projects.	
5	Illustrate the Recent Developments in Civil Engineering	
6	Apply the Opportunities in Civil Engineering	
Course Content:		
UNIT - I	Introduction to Civil Engineering: Introduction to History of Civil Engineering, Definition of Civil Engineering, Various branches of civil Engineering and its application : Structural engineering , Construction engineering , Surveying and mapping engineering, Transportation engineering r, Environmental engineering, Hydraulic and irrigation engineering, Geotechnical engineering, Estimation and coasting ,Project management, Link of Civil Engineering with various discipline of Engineering : Mechanical Engineering, Electrical Engineering, Chemical Engineering, Electronic and Entc, Computer Engineering.	(06 Hours)
UNIT - II	Scope and role of Civil engineering: Impact of infrastructural development on the economy of a country, Role of civil engineers, Importance of planning, Scope of Civil engineering in government sector, Scope of civil engineering in private sector, Role of civil engineering in society	(06 Hours)
UNIT - III	Civil Engineering Project and Process: Need of project, Estimation cost and benefits of project, Cost-benefit ratio, Conceptual approval, technical planning and project proposal, Administrative approval, Detailed project report, Detailed Estimate of cost, Approvals and NOCs, Tendering and contracts, Terms and conditions, Work allotment, Inspection and quality control, Completion, maintenance, Peoples and organizations involved, Role and responsibility of them, (Owner, Engineers, Architects, Contractor, Consultant, Govt departments)	(06 Hours)
UNIT - IV	Approvals required for Civil Engineering Construction Projects: Introduction, Different approvals required for Civil Engineering construction projects, different stages of the projects and approval required at every stage, Authorities for giving approvals, Necessity & Importance of approval, the	(06 Hours)

	procedure for approvals	
UNIT - V	Recent Developments in Civil Engineering Introduction to Automation and mechanization in construction industry – Advantages and Disadvantages, Use of Precast and Pre-Fabrication in Civil Engineering Industry, Concept and Elements of SMART cities, Intelligent buildings, concept of low-cost housing, erection techniques of temporary structures.	(06 Hours)
UNIT - VI	Opportunities in Civil Engineering Introduction, Types of career roles for Civil Engineers, Certifications for Civil Engineering, Required Skill set for Civil Engineering, Employment Opportunities for Civil Engineers, Career path for Civil Engineers- Government sector, Public sector companies and Own start-ups.	(06 Hours)
Text Book:		
1	“Building Construction”-Rangwala,Charotar Publication	
2	“The Text Book of Building Construction”-S.P.Arora&S.P.Bindra-DhanpatRai Publication	
3	“Building Technology and Valuation”- TTTI Madras,Tata McGraw Hill Publication	
4	“Building Construction” by B.C.Punmia, Laxmi Publications.	
Reference Books:		
1	“My Construction Practices ”R.B.Chaphalkar	
2	“A to Z” Building Construction” Mantri Publications	
3	IS provisions “National Building Code”	
4	“Development Control Rules” of local plan sanctioning authority	
5	Calendar, “Time Saver Standards for Architectural Design”, Tata McGraw Hill Publishers	
6	Merit, “Building Design and Construction”, Tata McGraw Hill Publishers	
Syllabus For:		
Unit Test-I	UNIT – I, II, III	
Unit Test-II	UNIT- IV,V,VI	
List of Projects:		
Unit: I	Introduction to Civil Engineering	
1	1.Collection of Structural Information Historical structure of India: Visit, take photos, brows information and prepare report /chart	
2	Give day to day examples of Link of Civil Engineering with various discipline of Engineering: Photos in their day-to-day life they see about link of civil engineering with other discipline and write note in their own words on example they have seen (Minimum one example of link with each discipline)	
3	branches of Civil Engineer - Structural engineering, Construction engineering, Surveying and mapping engineering, Transportation engineering r, Environmental engineering, Hydraulic and irrigation engineering, Geotechnical engineering, Estimation and coasting, Project management: collect information on the branch of civil engineer of their choice and submit power point presentation	

Unit: II	Scope and role of Civil engineering	
4	Infrastructural development: Collect information on infrastructural development of country in last 6 years and prepare booklet on it	
5	Scope of Civil engineering in government sector: collect information on jobs in government sector, selection criteria process and exams for selection. Make a poster and display on notice board of department	
6	Scope of civil engineering in private sector and Role of civil engineering in society: collect information on jobs in private sector, make a poster and display on notice board of department	
Unit: III	Civil Engineering Project and Process	
7	Visit and take a interview of Civil Engineers, Architects, Contractor, Consultant, Govt departments and write your own observations of their work and share in for of class	
Unit: IV	Approvals required for Civil Engineering Construction Projects	
8	Different approvals required for Civil Engineering construction projects: make list of approvals requires brows the information about the process and prepare leaflet (Hard Copy)	
9	Authorities for giving approvals: visit any one approval authority of your place and prepare digital chart and mail to all staff and students of Department and take feed back	
10	Necessity & Importance of approval, the procedure for approvals: Prepare digital leaflet of necessity & importance of approval, the procedure for approvals and mail it to students and take feed back	
Unit: V	Recent Developments in Civil Engineering	
11	Present your ideas on low coast housing: Students have to build model of low coast house and need to explain its importance	
12	Present your ideas on Intelligent building: Students have to build model and explain concept.	
13	Present your ideas on Eco-Friendly building: Students have to build model and explain concept	
Unit: VI	Opportunities in Civil Engineering	
14	PPT on Required Skill set for Civil Engineering	
15	Own start-ups : Present idea of own start-up in front of class	
16	Software in civil engineering and its importance: collect information, download any one free software related to civil engineering and present its working in front of class	
17	Study the building structure where you live and write your observation along with photograph	
18	Study the traffic, traffic signals, parking on your way to college write your observation along with photograph	
19	Study Plumbing system of your house write your observation along with photograph	
20	Write a report on waste management in your house with photograph, discuss with your parents and improve waste management of your house.	

Syllabus

Programme: B.Tech Civil Sem - I (2021)

Course: GRAPHICS FOR CIVIL ENGINEERING

Course: GRAPHICS FOR CIVIL ENGINEERING		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical: 2 Hours / Week	End Semester Examination: -- Internal Assessment: --	Credits: --
	Term Work & OR: 50 Marks	Term Work & OR:01
		Total: 1
Course Pre-requisites: The students should have knowledge of		
1	Basics of Mathematics at Secondary School Level.	
Course Objectives:		
	To provide knowledge about	
	<ul style="list-style-type: none"> • Fundamentals of engineering drawing and curves • Isometric views and projection • Projections of points, lines, planes & solids • Use of CAD tools. 	
Course Outcomes: The student will be able to		
1	Understand dimensioning methods and drawing of engineering curves.	
2	Draw orthographic projections using 1 st angle method of projection*.	
3	Draw Isometric views from given orthographic projections*.	
4	Draw projection of Lines, its traces and projections of planes*.	
5	Draw projection of different solids*.	
6	Draw development of lateral surfaces of solids*.	
	*Using CAD tools	
Course Content:		
UNIT - I	Lines and Dimensioning in Engineering Drawing and Engineering Curves Different types of lines used in drawing practice, Dimensioning–linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension. Ellipse by Arcs of Circles method, Concentric circles method. Involute of a circle, Cycloid. Introduction to Auto CAD commands.	(04 Hours)
UNIT - II	Orthographic Projections Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection	(04 Hours)

	method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections. (Using AutoCAD commands).	
UNIT - III	Isometric Projections Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view. (Using AutoCAD commands)	(04 Hours)
UNIT - IV	Projections of Points & Lines Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only). (Using AutoCAD commands)	(04 Hours)
UNIT - V	Projections of Planes Projections of Planes, Inclination of the plane with HP, VP. (Using AutoCAD commands)	(04 Hours)
UNIT - VI	Projections of Solids Projection of prism, pyramid, cone and cylinder by rotation method. (Using AutoCAD commands)	(04 Hours)
Term Work:		
	All sheets should complete using AutoCAD.	
	1. Types of Lines, Dimensioning practice, free hand lettering, 1 nd and 3 rd angle method symbol.	
	2. Engineering Curves	
	3. Orthographic Projections	
	4. Isometric Views	
	5. Projections of Points and Lines	
	6. Projections of Planes	
	7. Projections of Solids	
Text Books / Reference Books:		
1. "Elementary Engineering Drawing", N. D. Bhatt, Charotar Publishing house, Anand India,		
2. "AutoCAD 2020 Beginning and Intermediate", Munir Hamad, Mercury Learning & Information Publication, 2019.		
3. "Engineering Drawing and Graphics", Venugopal K., New Age International publishers.		
Reference Books		
1. "Text Book on Engineering Drawing", K. L. Narayana & P. Kannaiah, Scitech Publications, Chennai.		
2. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi,		
3. "Engineering Drawing", M. B. Shah and B.C. Rana, 1 st Ed, Pearson Education, 2005		
4. "Engineering Drawing", P. J. Shah, C. Jamnadas and Co., 1 st Edition, 1988		
5. "Engineering Drawing (Geometrical Drawing)", P. S. Gill, 10 th Edition, S. K. Kataria and Sons, 2005		

Syllabus

Programme: B.Tech Civil Sem - I (2021)

WORKSHOP TECHNOLOGY			
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory: - 00 Hours/ Week	End Semester Examination	-----	Theory: 00
Practical: -02 Hours/ Week	IA	-----	
	Term Work	50 Marks	Term Work: 01
	Total	50 Marks	01
Course Pre-requisites: -	Students should have basic knowledge of hand tools used in day to day life.		

Course Objectives:	
The Student should	
1. To acquire the knowledge of basic manufacturing processes.	
2. To identify tools, work material and measuring instruments useful for sheet metal, welding, carpentry, plumbing and Piping practice.	
Course Outcomes:	
The students should be able to	
1.	Understand the basic Manufacturing Processes used in the industry.
2.	Understand various tools and apply suitable tools for suitable operations in civil work.
3.	Understand the importance of safety.

Term work shall consist of any three jobs and demonstrations on rest of the trades, journal consisting of five assignments one on each of the following topics.
Plumbing and Pipe fitting Shop: Study of Pipe joints, Pipe fitting, Cutting, Threading and Laying of pipes. Different tools and equipment like pipe vice, pipe bending machine, dies and die holder, plumbing vice, cutting dies, pipe wrench, ball peen hammer etc. are used for plumbing operations on G.I. pipe.
Welding Shop: Electric arc welding, Study of tools and Operations, Edge preparations, Types of welding joints, Exercises making of various joints. safety practices and general guidelines.
Joining methods: Study of tools and Operations of riveting , Fabrication of toolbox, tray, electrical panel box etc. and study of bolts. joints by bolting etc.
Carpentry Shop: Introduction to wood working, Study of tools and Operations and carpentry joints, Simple exercise using jack plain. To prepare half lap corner joint, mortise and Tennon joints, Simple exercise on woodworking lathe. Safety practices and general guidelines.

Plastic Molding shop: Introduction to plastic molding. types of plastics. types of plastic molding. Exercise on plastic molding machine.

Text Books/ Reference Books

- O.P.Khanna , A Text Book of Welding Technilogy, Dhanpat Rai and Sons
- P.N.Rao , Manufacturing Technology- Vol I, mCgRAW Hill Education 9 India Pvt.
- Chapman W.A.J “ Workshop Technology “ volume I,II.III, ELBS.
- Hajra Choudhary S.K. , Bose S.K. “Elements of Workshop Technology” Volume I,II
- Begman, Manufacturing Processes.

Syllabus

Programme: B.Tech (Civil) Sem – I(2021)

Course: Fundamentals of Problem Solving Logic(Using C)		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS:</u>
Theory: -- Tutorial: --	Semester End Examination: -- Internal Assessment: --	Credits: --
Practical: 2 Hours / Week	Term Work: 25 Marks Oral: --	Credits: 1
Course Pre-requisites: The students should have knowledge of		
1	Basic knowledge of Computer Handling	
Course Objective:		
1	To provide an overview of computers and problem-solving methods using 'C' Language	
2	To serve as a foundation for the study of programming languages.	
Course Outcomes: The student will be able to		
1	Know computer systems	
2	Understand concept and steps towards problem solving	
3	Understand fundamental concepts of C programming language	
4	Use decision control structures	
5	Use modular programming approach	
6	Use of arrays and structures	
Course Content:		
UNIT - I	Introduction to Computing: Components of Computer Systems, Concept of hardware and software, Types of software, Concept of computing, data and information, Introduction to computer programming, Types of programming languages, Software Development Life Cycle	
UNIT - II	Problem solving Techniques: Steps in problem solving techniques: Define the problem, Formulate the mathematical model, develop an algorithm, Write the code for the problem, Test the program. Introduction to program planning tools- algorithm, flowcharts, pseudo codes	
UNIT - III	Programming language 'C': Features of C, basic concepts- header files, compiling and executing a C program, variables, data types, Operators- assignment, arithmetic, relational, logical, increment and decrement, Input and Output functions- print f and scan f	
UNIT - IV	Decision Control Structures in 'C': if-else statement, nested if-else, use of logical operators, Loop control structure: for, while, do-while loops, use of break and continue, Case control structure: switch case	
UNIT - V	Function: Types of functions, Function definition and declaration, function prototype, calling and returning function, passing values between	

	functions, standard library functions and user defined functions, passing array as function parameter, Recursive function.	
UNIT - VI	Arrays and structures in 'C': Concept, declaration, initialization, processing with array, one and multidimensional array, Strings. Structures in 'C': Concept, declaration, accessing structure elements, Array of structures, Pointer to structures, Uses of structures.	
Internal Assessment:		
	NA	
Term Work: Term-work will consist of following assignments		
1	Write a C program to check prime number and even-odd numbers	
2	Write a C program to print sum of digits 1 to 10	
3	Write a C program to swap two numbers	
4	Write a C Program to check whether an alphabet is vowel or consonant	
5	Write a C Program to Find the Length of a String without using string functions	
6	Write a C program to find area and circumference of circle	
7	Write a C program to accept the length of three sides of a triangle and to check triangle as equilateral or not	
8	Write a C program to implement linear search technique	
Oral/Practical:		
	NA	
Reference Books:

Syllabus
Programme: B.Tech Civil Sem - II Course (2021)

Course: Integral Calculus		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 4 Hours / Week	End Semester Examination: 60 Marks Internal Assessment: 40 Marks	Theory: 4
Tutorial: 1 Hour / Week		Tutorial:-01
Course Pre-requisites: The students should have knowledge of		
1	Student should have Basic Knowledge of differential calculus	
Course Objectives:		
To study	1. Methods to evaluate first order, first degree differential equations and its applications in engineering problems. 2. Distinct co-ordinate systems, fourier series and curve tracing. 3. Various techniques for integral calculus and its applications in engineering problem.	
Course Outcomes: The student will be able to		
1	Understand and evaluate first order and first degree differential equations.	
2	Understand the formulation of physical systems as first order, first degree differential equation and evaluate particular solution of it	
3	Understand the Fourier series and apply it to represent periodic function	
4	Understand and evaluate methods of integral calculus and curve tracing.	
5	Understand co-ordinate system and apply it to solve locus problems.	
6	Understand concept of multiple integral and apply it to evaluate area, volume, centre of gravity and moment of inertia.	
Course Content:		
Unit - I	Differential Equations (DE): Definition, Order and Degree of DE, Formation of DE. Solutions of Variable Separable DE, Exact DE, Linear DE and reducible to these types	(08 Hrs)
Unit - II	Application of DE: Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchoff's Law of Electrical Circuits, Motion under Gravity, Rectilinear Motion, One-Dimensional Conduction of Heat.	(08 Hrs)
Unit - III	Fourier Series: Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis. Integral Calculus: Differentiation Under the Integral Sign, Error functions.	(08 Hrs)
Unit - IV	Integral Calculus: Reduction formulae, Beta and Gamma functions Curve Tracing: Tracing of Curves, Cartesian, Polar. Rectification of Curves	(08 Hrs)
Unit - V	Solid Geometry: Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder	(08 Hrs)
Unit - VI	Multiple Integrals and their Applications: Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square	(08 Hrs)

Syllabus
Programme: B.Tech Civil Sem - II Course (2021)

	Values.	
Text Books:		
1. Higher Engineering Mathematics by B.V. Ramana (Tata McGraw-Hill), Edition ,2008.		
2. Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar (Pune Vidyarthi GrihaPrakashan, Pune), 7 th Edition, 1988, Reprint 2010.		
Reference Books:		
1. Advanced Engineering Mathematics, 2e, by M. D. Greenberg (Pearson Education), 2 nd ,Edition, 2002.		
2. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.), 8 th Edition, 1999, Reprint 2010.		
3. Advanced Engineering Mathematics, Wylie C.R. & Barrett L.C. (McGraw-Hill, Inc.) , 6 th Edition, 1995		
4. Higher Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi), 42 th Edition ,2012.		
Syllabus for		
Unit Test-I - UNIT – I, II, III		
Unit Test-II - UNIT- IV, V, VI		
Project Based learning topics for Integral Calculus:		
Students are expected prepare report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code/proof for it, wherever applicable.		
1. Formation of differential equation		
2. Exact differential Equation		
3. Linear differential equation		
4. Newton's law of cooling		
5. Newton's second law of motion		
6. Fourier's law		
7. Kirchhoff's voltage law		
8. Fourier series		
9. Harmonic analysis		
10. Gamma and beta function		
11. Curve tracing		
12. Locating position in three dimensional space		
13. Multiple integrals applications		
14. Error function		
15. Differentiation under integral sign		

Syllabus
Programme: B. Tech. Civil Sem - II Course (2021)

Course: Applied Chemistry		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Theory: 03 Hours/Week	Semester End Examination: 60Marks Internal Assessment: 40Marks	Theory :03
Practical: 02 Hours / Week	Term Work: 25 Marks	Term Work: 01
Course Pre-requisites: The students should have knowledge of		
1	Corrosion, water and wastewater	
2	air pollution and air polluting parameters	
3	properties of cement, fuel cell, solar cell and alloys	
Course Objective:		
	The student should be able to determine properties of water, cement and metal.	
Course Outcomes: The student will be able to		
1	Apply their knowledge for protection of different metals from corrosion.	
2	Develop innovative methods to produce soft water for industrial use and potable water at cheaper cost.	
3	Identify the sources of air pollution and its implications on the environment.	
4	To learn fundamentals of energy storage systems such as battery, solar cell	
5	Outline the importance of testing of cement and its properties and applications.	
6	To understand and analyze the necessity of making an alloy and its applications in various industries.	
Course Content:		
Unit - I	Corrosion And Corrosion Protective Treatments: Introduction, Definition, Types of corrosion, Mechanism of wet corrosion, Protection of Corrosion like, Metallic coatings, Electroplating, Methods of cleaning articles before electrode position, Electroplating methods, Electro less plating, Some electro less plating's, Some other metallic, coatings, Chemical conversion coatings, Organic Coatings, Paints, Varnishes, Enamels, Special paints.	(06-Hrs)
Unit - II	Water And Waste Water Chemistry Introduction, Hardness of water, characteristics imparted by impurities, Analysis of contaminants, Treatment of Water by Zeolite, L-S process, Boiler feed water, Wastewater treatment. Green Chemistry: Definition, Twelve principles of Green Chemistry.	(06-Hrs)
Unit - III	Air Pollution And its Analysis : Pollutants and their sources, pollution by SO ₂ , CO ₂ , CO, NO _x , H ₂ S and other foul-smelling gases. Methods of estimation of CO, NO _x , SO _x and control procedures. Green House effect and Global warming, Ozone	(06-Hrs)

Syllabus

Programme: B. Tech. Civil Sem - II Course (2021)

	depletion by oxides of nitrogen, chlorofluorocarbons and Halogens, removal of sulphur from coal. Control of particulates. Acid Rain, Green house effects, Depletion of Ozone	
Unit - IV	Industrial Practice: Energy Storage Device : Solar cell, Fuel cells, Construction and Working of - Acid and Alkaline Storage Battery, Dry Cell, Ni-Cd Batteries, Ni-Mn Batteries, Li-Ion Batteries, Lead – Acid Batteries.	(06-Hrs)
Unit - V	Cement : Definition, Classification and properties - Natural, Pozzolana & Port land Chemical constituent of Portland cement. Manufacture of Portland cement by wet process. Manufacture of Portland cement by dry process (using flow sheet diagram)Setting& Hardening of Portland cement with chemical reaction. Heat of hydration of cement. Properties and applications of Portland cement, Nano cement Chemical Reactions of Portland Cement, Cement/Water Reaction, Carbonation Reactions, Hydration Reaction Mechanism, Hydration Reaction on Aluminates, Fly ash reaction.	(06-Hrs)
Unit - VI	Alloys : Introduction, Necessity (Purpose) of making alloys, Classification of alloys. Preparation of alloys – Fusion method, Electro deposition method, Composition, Properties & Application of following - (i) Brass (ii) Bronze (iii) Duralumin (iv) Nichrome (v) Steel – Mild, Medium & High.	(06-Hrs)
Term Work: (Experiments)		
1	Determination of dissolved oxygen in water.	
2	Determination of hardness of a given water sample by using EDTA	
3	Measurement of chloride, sulphate and salinity of water samples by Simple titration method. (AgNO ₃ and potassium chromate)	
4	Determination of Ca from cement	
5	To determine the strength of given acid using pH titrations.	
6	Determination of Biochemical Oxygen Demand (BOD)	
7	Study of corrosion of metals in medium of different pH.	
8	To learn the specific charge/discharge characteristics of a Lithium- ion (Li- ion) battery through experimental testing of a remote triggered Li- ion Battery.	
9	To Prepare Phenol formaldehyde/Urea formaldehyde resin.	
10	To study set up of Daniel Cell	
11	Determination of Biological Oxygen Demand (BOD)	
12	To determine pH of soil	
13	To determine Acidity of soil	
14	To Study Lead – Acid Battery	
15	Preparation of borax/ boric acid.	
Assignments:		
Six assignments to be given by the subject teacher (Theory)-one from each unit		

Syllabus
Programme: B. Tech. Civil Sem - II Course (2021)

Reference Books:
1.A Text Book of Engineering Chemistry, Shashi Chawla, Dhanpat Rai & Co, 2004
2.Engineering Chemistry (16th Edition) Jain& Jain, Dhanpat Rai Publishing Company, 2013.
3.Jain P.C & Jain Monica, Engineering Chemistry, Dhanpat Rai & Sons, Delhi, 1992.
4.Bhal&Tuli, Text book of Physical Chemistry (1995), S. Chand & Company, New Delhi.
5.O. G. Palanna , Engineering Chemistry, Tata McGraw-Hill Publication, New Delhi.
6.S. S. Dara, A textbook of Engineering Chemistry, McGraw-Hill Publication, New Delhi.
7.Barrow G.M., Physical Chemistry, McGraw-Hill Publication, New Delhi.
8.Shikha Agarwal, Engineering Chemistry- Fundamentals and applications, Cambridge Publishers - 2015.
9.WILEY, Engineering Chemistry, Wiley India, New Delhi 2014.
Syllabus for Unit Test:
Unit Test -1 :UNIT – I to III
Unit Test -2 :UNIT – IV to VI
Topics for project based Learning for Applied Chemistry
1. Powder Coating methods used for prevention of metals from corrosion
2. Metallic Coating methods used for prevention of metals from corrosion
3. Analysis of various water contaminants
4. Treatment of water by Zeolite method.
5. To find various sources of air pollutants and its analysis.
6. Methods of estimation of CO, NO _x
7. Construction and Working of - Acid and Alkaline Storage Battery
8. Construction and Working of Dry Cell, Ni-Cd Batteries
9. Manufacturing of Portland Cement.
10. To study the properties and applications of Portland cement.
11. Preparation of alloys – Fusion method, Electro deposition method.
12. To study Composition, Properties & Application of (i) Brass (ii) Bronze (iii)Duralumin
13. To study manufacturing of mild steel.
14. To analyze waste water .
15. To determine hardness of water and its ill effects.

Syllabus
Programme: B. Tech. Civil Sem - II Course (2021)

Course: Statics and Dynamics		
TEACHING SCHEME:	EXAMINATION SCHEME:	Total CREDITS: 05
Theory: 04 Hours / Week	Semester End Examination: 60 Marks Internal Assessment: 40 Marks	Theory:04
Practical: 02 Hours / Week	Term Work: 25 Marks	Term work: 01
Course Pre-requisites: The students should have knowledge of		
1	Physics-Forces, Newton's law of motion, Concept of physical quantities, their units and conversion of units, Scalar and Vector	
2	Mathematics-Algebra, Geometry, Concept of differentiation and integration	
Course Objective:		
	The student should be able to determine effect of forces on rigid objects in static and dynamic state.	
Course Outcomes: The student will be able to		
1	calculate resultant and apply conditions of equilibrium.	
2	calculate friction force and its effect.	
3	analyze the truss	
4	calculate centroid and moment of inertia.	
5	evaluate kinematic effect of forces	
6	evaluate kinetic effect of forces	
Course Content:		
Unit - I	Resultant and Equilibrium Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point.	(08Hrs)
Unit - II	Friction Coefficient of Static Friction, Impending motion of Blocks, Ladders and Belts.	(08 Hrs)
Unit - III	Analysis of Truss Analysis of Perfect Trusses - Method of Joint, Method of Section and Graphical Method.	(08 Hrs)
Unit - IV	Centroid and Moment of Inertia Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia.	(08 Hrs)
Unit - V	Kinematics of a Particle Cartesian components, Normal and Tangential components of motion, Relative motion, Dependent motion, Motion of a Projectile,	(08 Hrs)
Unit - VI	Kinetics of a Particle D'Alemberts Principle, Work-Energy Principle and Impulse-Momentum Principle, Coefficient of Restitution, Direct Central Impact.	(08 Hrs)
Assignments:		
	1) Explain different types of forces and types of supports.	
	2) Calculate resultant of given force system	

Syllabus
Programme: B. Tech. Civil Sem - II Course (2021)

	3) Calculate support reactions of the beam	
	4) What is equilibrium? What are conditions of equilibrium?	
	5) Calculate friction force for Blocks and Ladders.	
	6) Calculate tension on sides of Belts.	
	7) Calculate forces in members of truss.	
	8) Calculate centroid of given area.	
	9) Calculate moment of inertia of given area.	
	10) Calculate relative velocity of bodies.	
	11) Calculate motion and path of projectile.	
	12) Apply D'Alemberts Principle to solve given problem.	
	13) Apply Work-Energy Principle to solve given problem.	
	14) Apply Impulse-Momentum Principle to solve given problem.	
	15) Calculate velocity of bodies after impact.	
Term Work: The term-work shall consist of -		
	Part-A: Minimum Five experiments from list below.	
	1) Study of equilibrium of concurrent force system in a plane	
	2) Determination of reactions of Simple and Compound beam.	
	3) Determination of coefficient of friction for Flat Belt.	
	4) Determination of coefficient of friction for Rope.	
	5) Determination of Centroid of line or plane elements.	
	6) Study of Curvilinear motion.	
	7) Determination of Coefficient of Restitution.	
	Part-B: Minimum Five graphical solutions of the problems on different concepts in course content.	
Reference Books:		
	1) Hibbeler R.C., "Engineering Mechanics (Statics and Dynamics)", McMillan Publication	
	2) Beer F.P. and Johnston E.R., "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Tata McGraw Hill Publication.	
	3) Bhavikatti S.S. and Rajashekarappa "Engineering Mechanics", K.G., New Age International (P) Ltd.	
	4) Shames I.H., "Engineering Mechanics (Statics and Dynamics)", Prentice Hall of India (P) Ltd.	
	5) Singer F.L., "Engineering Mechanics (Statics and Dynamics)", Harper and Row Publication	
	6) Meriam J.L. and Kraige L.G., "Engineering Mechanics (Statics and Dynamics)", John Wiley and Sons Publication	
	7) Timoshenko S.P. and Young D.H., "Engineering Mechanics (Statics and Dynamics)", McGraw Hill Publication	
	8) Tayal A.K., "Engineering Mechanics (Statics and Dynamics)", Umesh Publication	
	9) Mokashi V.S., "Engineering Mechanics-I and II (Statics and Dynamics)", Tata McGraw Hill Publication	
Syllabus for Unit Test:		
	Unit Test -1 :UNIT – I to III	
	Unit Test -2 :UNIT – IV to VI	
Topics for Project based Learning for Statics and Dynamics		

Syllabus
Programme: B. Tech. Civil Sem - II Course (2021)

1. Prepare model for various types of beams.
2. Prepare model for various types supports.
3. Prepare chart for various types of force system with suitable real-life examples.
4. Collect the various situations where varignon's theorem is used.
5. Prepare model or chart for equilibrium system of forces of various engineering applications.
6. Prepare chart for different types for trusses with showing various members.
7. Prepare prototype model of any one type of truss.
8. Calculate the forces in members of truss by using analytical method and check it graphically (At least three problems for different types of trusses)
9. Prepare chart of method of joint and method section for analysis of truss with stepwise procedure.
10. Prepare prototype models of the basic geometrical figures and locate the centroid of them.
11. Prepare prototype models of the I and T section and locate the centroid of them.
12. Prepare chart for parallel axis and perpendicular axis theorem with suitable example.
13. Prepare chart regarding the types of friction in various field conditions.
14. Prepare chart for application of friction.
15. Prepare chart for derivation of tangential and normal acceleration.
16. Prepare chart related to projectile motion with suitable example.
17. Development of excel sheet for projectile motion (at least three problems).
18. Development of excel sheet for work energy principle (at least three problems).
19. Prepare chart for work energy and Impulse momentum principle with suitable example.
20. Development of excel sheet for calculation of coefficient of restitution (at least three problems)

Syllabus
Programme: B. Tech. (Civil) – Sem - II CBCS 2021 Course

Basic Land Surveying		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED: 05</u>
Theory: 04Hours / Week	End Semester Examination: 60 Marks	Theory: 04 Credits
Practical: 02Hours / Week	Internal Assessment: 40 Marks	
	Termwork & Practical:: 75 Marks	TW & PR: 01 Credits
Course Pre-requisites:		
The Students should have knowledge of		
1.	Basic Mathematics and geometry	
Course Objectives:		
	To develop the knowledge of basic Surveying techniques required for various construction projects.	
Course Outcomes:		
On completion of the course, the students will be able to:		
1.	Use instruments for linear measurements and prismatic compass for angular measurements.	
2.	Use instruments for levelling and compute reduced levels of ground points	
3.	Use Vernier theodolite for angular measurements and for other applications.	
4.	Use of Tacheometer for computation of distances and reduced levels. Use plane table and its accessories for surveying.	
5.	Set out simple circular curves by various methods.	
6.	Conduct surveys for various construction projects and explain use of modern instruments.	
UNIT - I	Linear measurements and Compass survey	(8Hours)
	Principle, objectives and classification of Surveying. Linear measurements, methods, types of tapes, ranging, field work and plotting. Principle and working of EDM. Compass Survey: types of meridians and bearings, construction and use of prismatic compass, local attraction and its correction, dip and declination.	
UNIT - II	Vertical measurements	(8Hours)
	Introduction, types of levels, principle axes of levels, auto level and its working, temporary and permanent adjustments of auto-level, types of levelling staves, computation of reduced levels, profile levelling and cross sectioning. Contouring – direct and indirect methods, uses of contour maps. Introduction to trigonometrical levelling.	
UNIT - III	Theodolite Survey	(8Hours)
	Study and use of Vernier 20” theodolite, principle axes and temporary adjustments, measurements of horizontal angles by repetition and reiteration method, measurement of vertical angles and other uses, theodolite traversing: computation of consecutive and independent coordinates, adjustment of closed traverse by transit and Bowditch rule, simple cases of omitted measurements.	
UNIT - IV	Tacheometry and Plane Table Survey	(8Hours)

Syllabus
Programme: B. Tech. (Civil) – Sem - II CBCS 2021 Course

	Principle of stadia tacheometry, fixed hair method with vertical staff to determine horizontal distances and elevations of points. Plane table survey, equipment's their uses, methods of plane table survey- radiation, intersection, traversing and resection, errors and precision of plane table survey.	
UNIT - V	Curves	(8Hours)
	Necessity of providing curves, simple circular curves, elements, setting out circular curves by radial and perpendicular offsets, offsets from long chord and offsets from chords produced. Angular method of deflection angles. Transition curves, necessity and types.	
UNIT - VI	Construction Survey and modern equipment's	(8Hours)
	Setting out buildings, survey for roads and tunnels, survey for drainage line, location of bridge piers. Introduction to Total station and its uses, use of digital planimeter for area measurement, study and use of toposheets.	
Assignments:		
1	Computation of corrected bearings of the traverse by different methods.	
2	Solving problems on calculation of reduced levels by different methods.	
3	Preparing contour map of the area from the given spot levels.	
4	Solving problems on trigonometrical leveling.	
5	Computations of independent coordinates of a closed traverse.	
6	Solving problems on omitted measurements.	
7	Calculation of reduced level and distance of a point by tacheometry.	
8	Write details of survey for drainage line with proper sketches.	
Term Work: The term work shall consist of Field book and drawing containing record of (any 12) exercises and project listed below.		
1	Linear measurements with tape and accessories.	
2	Study and use of Prismatic compass.	
3	Study and use of auto level and double check leveling	
4	Compound leveling and fly leveling, calculation by rise and fall method.	
5	Study and use of 20" Vernier Theodolite.	
6	Measurement of horizontal angle of triangle by repetition method and applying check.	
7	Measurement of vertical angle by transit Theodolite	
8	Trigonometrical levelling by transit Theodolite.	
9	Project 1 Road project of minimum length of 250 M including fixing of alignment, profile leveling and cross sectioning.(Two full imperial drawing)	
10	Project 2 Theodolite traverse survey of closed traverse for minimum 0.5	

Syllabus
Programme: B. Tech. (Civil) – Sem - II CBCS 2021 Course

	hectares area including building roads etc. (One full imperial drawing)	
11	Computation of horizontal distance and elevation of points by tachometry for horizontal and inclined sights.	
12	Introduction and study of outfit of plane table and method of radiation.	
13	Intersection method of plane table survey.	
14	Closed plane table traverse survey around a small four-sided building.	
15	Setting out simple circular curve by Rankin's method of deflection angle	
Text Books		
1	Surveying and Levelling Vol I and. II-T.P. Kanetkar and S.V. Kulkarni.	
2	Surveying Vol. I & II - Dr. B.C. Punmia, Ashok K. Jain, Arun K. Jain.	
3	Surveying for Engineers- John Uren & Bill Price- Palgrave Macmillan	
4	Plane Surveying- A.M.ChandraNew age International Publishers	
5	Surveying and Levelling- N. N. Basak, Tata Mc-Graw hill	
6	Surveying Vol. I & II - Dr. K. R. Arora.	
Reference Books:		
1	Surveying: Theory and practice-James M. Anderson, Edward M. Mikhail	
2	Surveying theory and practices-Devis R. E., Foot F.S.	
3	Plane and Geodetic Surveying for Engineers. Vol. I -David clark.	
4	Principles of Surveying. Vol. I - J.G.Olliver, J.Clendinning	
5	Surveying Vol. I & II -S.K.Duggal, Tata Mc-Graw Hill.	
6	Surveying and Levelling - Subramanian, oxford University Press.	
Syllabus for :		
Unit Test-I	UNIT – I, II, III	
Unit Test-II	UNIT- IV,V,VI	
Project List :		
Unit I	Linear measurements and Compass survey	
1	Collect Information of Linear measurement techniques/ instruments from old age till 21 st century, write report along with photos	
2	Conduct closed traverse by prismatic compass and do the necessary calculations	
Unit II	Vertical measurements	
3	Prepare counter sheet by using Excel	
4	Collect Information of Vertical measurement techniques/ instruments from old age till 21 st century, write report along with photos	
5	Vist to laboratory and collect information of levelling instrument and make ppt.	
Unit III	Theodolite Survey	
6	Make a PPT on Problem Solved by Bowditch Rule and present it in class	

Syllabus
Programme: B. Tech. (Civil) – Sem - II CBCS 2021 Course

7	Make a PPT on Problem Solved by transit Rule and present it in class	
8	Leaflet on uses of Theodolite	
Unit IV	Tacheometry and Plane Table Survey	
9	Write a report on- “ Is Tacheometry and Plane table are required in today’s digital world?”	
10	PPT on working of plane table	
11	Make vedio – of your own demonstrating parts and working of Tacheometry, share it with your classmate and take feed back	
12	Digital booklet on numerical of Tacheometry share it with your classmate and take feed back	
Unit V	Curves	
13	Take Photograph of Curves of road you usually use and make a poster and display it on Notice Board.	
14	Digital booklet on numerical of Rankine’s method of Curves share it with your classmate and take feed back	
15	Digital booklet on numerical of offset from long cord method of Curves share it with your classmate and take feed back	
Unit VI	Construction Survey and modern equipment’s	
16	Collect information of latest surveying instrument : its cost, salient features and image and prepare Chart and display it on notice board.	
17	Prepare Digital Chart on Importance of Basic Land Surveying in Civil Engineering share it and collect feed back	
18	Present your idea of modification of any survey instrument in front of class.	
19	Collect information on various software available for surveying	
20	Prepare leaflet on Surveying for various projects.	

Draft Syllabus

Programme: B.Tech Civil (2020)

Sem - II (Civil)

Course: Construction Design & Drawing		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED: 04</u>
Theory: 3 Hours / Week	End Semester Examination: 60 Marks Internal Assessment: 40 Marks	Theory: 03 Credits
Practical: 2 Hours / Week	Term Work and Oral : 50 Marks	Term Work and Oral : 1 Credits
Course Pre-requisites: The students should have knowledge of		
1	Building Construction, Building materials, Knowledge of Engineering Graphics	
Course Objectives:		
	To make the student illustrate the process of building planning and building byelaws	
Course Outcomes: The student will be able to		
1	apply various Principals of planning and building byelaws.	
2	apply design considerations for climate, ventilation, Noise & Acoustics in building planning.	
3	apply design considerations for various building services & fire protection in building planning.	
4	apply design considerations for plumbing services in building planning.	
5	Understand the concept of .development plan	
6	define the legal aspects of plan sanctioning.	
Course Content:		
UNIT - I	Buildings Planning and Regulations Principles of planning for building, Integrated approach in Built Environment. Building Rules Regulations and Byelaws necessity, (National Building Code), plot size, open space around the building. FSI, Building line, control line. Height, room size, Built up area, floor area, carpet area. Rules of lighting ventilation, Drainage and Sanitation; Principles of Architectural design – form, function, utility, aesthetics.	(06 Hours)
UNIT - II	Types of Buildings (a)Types of Residential Building units – Bungalows, Twin bungalows, Row houses, Apartments; Requirements of Public buildings - Educational buildings, buildings for health care, industrial buildings and commercial buildings; Types of drawings - Submission drawings, working drawings and Architectural drawings, Perspective drawings. (b) Concept of ECO building, Green buildings, Intelligent building, Low Cost Housing, Planning considerations in High rise buildings.	(06 Hours)
UNIT - III	Climate, Ventilation and Acoustics Elements of climate, thermal design Principles, Heat exchange of building, Thermal insulation of roof and wall. Function of ventilation, stack effect wind effect, Mechanical ventilation, Air conditioning systems. Effect of noise, Noise control sound insulation, Acoustics reverberation Sabine's formula, acoustical defects, conditions of good acoustics.	(06 Hours)
UNIT - IV	Building Services Constructional requirements for different building services like Electrical, Telecommunication services, Circulation-Lift Types and Capacity, escalators,	(06 Hours)

Draft Syllabus

Programme: B.Tech Civil (2020)

Sem - II (Civil)

	Entertainment services. Fire Protection – Fire safety, fire load, grading of occupancies by fire load, fire escape elements. Plumbing services, fixtures and fastenings, Layout of water supply & drainage system, Rate of water supply, storage and distribution arrangement, Plumbing systems.	
UNIT - V	Necessity and evolution of town planning in India. Development plan and its importance, Various surveys for development plan Objectives and Contents of DP, Land use zoning, Concept of regional plan.	(06 Hours)
UNIT - VI	Legal Aspects of Plan Sanctioning Role of Plan Sanctioning Authority for layout, co-op Housing societies and apartments. Ownership of land, plot, 7/12 abstract, meanings of different terms of 7/12 abstract (Khasra), 6-D form, list of documents to be submitted along with building Plan for sanction from the authority. TDR, certificate of commencement and completion, various no objection certificates to be produced, format of permissions from pollution control board, MSEB, Water Supply and Drainage Department, State or National Highway Department.	(06 Hours)
Assignments: Students should perform theoretical / experimental assignment/s from the list below		
1	Assignment on Building Bye laws for residential buildings	
2	Requirements of Green and intelligent buildings	
3	Describe principles of Thermal design of buildings.	
4	Prepare a layout for water supply and drainage of residential building.	
5	Assignment on Development plan of a city	
6	State and describe various legal documents for building construction.	
Term Work:		
	Preparation of working drawings of any one of the buildings listed below: a) Residential Building b) Commercial Building c) Educational Building d) Industrial Building e) Recreational Building f) Health Club	
	Sheets to be drawn 1) Plan/Typical floor plan to a suitable scale. 2) Elevation and section to a suitable scale. 3) Site plan showing water supply and Drainage 4) Foundation Plan to a suitable scale.	
Text Books:		
1. S.P. Bindra S.P. Arora, “Building Construction”, Laxmi Publication		
2. M. L. Shah, C. M. Kale, S. Y. Patki, “Building Drawing with integrated approach to Built Environment”, Tata McGraw Hill Publishers		
3. Rangwala, “Town Planning”, Charaotar Publications		
Reference Books:		
1. IS provisions “National Building Code”		

Draft Syllabus

Programme: B.Tech Civil (2020)

Sem - II (Civil)

2. “Development Control Rules” of local plan sanctioning authority	
3. Calendar, “Time Saver Standards for Architectural Design”, Tata McGraw Hill Publishers	
4. Merit, “Building Design and Construction”, Tata McGraw Hill Publishers	
Syllabus for	
Unit Test-I	UNIT – I, II, III
Unit Test-II	UNIT- IV, V, VI

Project Based Learning

- 1 Study of National Building code of India to find Building Bye laws for planning residential buildings.
2. With the help of 3 different case studies of residential buildings study the application of Principles of building planning.
- 3 Preparing a measured drawing of a two bed room residential building (Plan, Elevation and section)
- 4 Take case study of green building and study provisions with reference to energy saving, solid waste management, recycling of water , use of green building materials.
- 5 With the help of site visit determine planning requirements for health care buildings and prepare a report.
6. With the help of site visit determine planning requirements for commercial buildings and prepare a report.
- 7 Study the architectural and working drawings for a building construction project and prepare a report.
- 8 With the help of site visit prepare a plumbing layout of a residential building and study various fixtures for plumbing.
- 9 Study of fire safety arrangements for high rise buildings and prepare a report.
- 10 Study the process of preparing development plan of a city and prepare a report.
- 11 With the help of case study prepare a report on zoning in Development plan.
- 12 With the help of site visit determine planning requirements for recreational buildings and prepare a report.
13. Take a case study of intelligent building and study various provisions and prepare a report.
- 14 Study the foundation plan of a residential building and prepare a report on lineout of a building.
- 15 Study the electrical layout plan of a building construction project and prepare a report.
16. Study of various legal documents such as 7/12 extract, TDR certificate, completion certificate.
17. With the help of site visit determine planning requirements for primary school building and prepare a report.
18. Study development control rules of the local authority and prepare a report.
- 19 With the help of site visit determine planning requirements for high rise building and prepare a report.
- 20 Study of Landscape details in a residential complex and prepare a report.

Draft Syllabus

Programme: B.Tech Civil (2020)

Sem - II (Civil)

Syllabus
Programme: B. Tech. Civil Sem - II Course (2021)

Course: Civil Engineering Software – I (AutoCAD)		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED: 01</u>
Practical: 02 Hours / Week	Term Work & Practical : 50 Marks	TW & PR :01
Course Pre-requisites: The students should have knowledge of		
1	Knowledge of basic building aspects	
2	Knowledge of various building components.	
3	Knowledge of various building symbols	
Course Objectives:		
	To make student capable of drawing any kind of Engineering drawing using AutoCAD.	
Course Outcomes: The student will be able to		
1	draw various Engineering drawing using AutoCAD.	
2	draw various elements of a building.	
3	draw various elevation and sections of the building.	
4	Draw and explain various modelling concepts of building construction and building drawing by using AutoCAD.	
Course Content:		
UNIT - I	Introduction to AutoCAD and Command: Introduction to AutoCAD, Basic AutoCAD commands- Line, Circle, Polyline, Rectangle, Polygon, Array, Trim, Offset, Fillet, Changers, Units, Limits, Move, Copy, Paste, Drawing space, Layout, Model.	
UNIT - II	Simple Plan Drawing: Small bungalow plan scaled print out on A3 sheet, 1 BHK and 2 BHK Flats and bungalow plans, Elevation and Section.	
UNIT - III	3D Drawing: 1 BHK Bungalow plans, 3D Truss, 3D Industrial shed, Steel drawing for bungalow.	
Term Work:		
	The term-work shall consist of:	
	1) AutoCAD Drawing of small objects	
	2) AutoCAD Drawing of plan, elevation and section of small building.	
	3) AutoCAD 3D view of small building.	
Text Books:		
“ Mastering AutoCAD 2016 and AutoCAD LT 2016 by Goerge Omura”		
“ Mastering AutoCAD 2017 and AutoCAD LT 2017 by Goerge Omura”		
“ Mastering AutoCAD 2018 and AutoCAD LT 2018 by Goerge Omura”		
“AutoCAD 2018 Instructor perfect paperback by james A. Leach”		
“Beginning AutoCAD Exercise workbook 2018 by Cheryl R. Shrock”		
Reference Books:		
“AutoCad : 2D Reference guide : 1 Paperback=1 january 2010 by C. S. Changeriya”		
“AutoCAD 14 (The Complete Reference) Paperback – Import, 1 December 1998 by David S. Cohn”		

Syllabus
Programme: B. Tech. Civil Sem - II Course (2021)

Course: Object-Oriented Programming (Using C++)		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Practical: 2 Hours / Week	Term Work: 25 Marks	Term Work: 1
Course Pre-requisites:		
1	The students should have basic Knowledge of “C” programming language.	
Course Objective:		
	Students will be able to do basic program in C++	
Course Outcomes: The student will be able to		
1	Explain different Concepts of OOP, Characteristics of OOP.	
2	Demonstrate the use of Data type , Keywords ,Tokens and Control Structures to Solve given Problem.	
3	Demonstrate the use of functions to solve real world problem.	
4	Compare different types of inheritance to solve given problem.	
5	Explain different Types of Constructor and Destructor.	
6	Develop OOP applications using file Handling.	
Course Content:		
Unit -I	Introduction to Object Oriented Programming: Introduction to Object Oriented Programming, Basic Concept of OOP, Characteristics of OOP, Need for OOP, Benefits of OOP, Object Oriented Languages, Applications of OOP.	
Unit -II	Beginning with C++: Overview of C++, Sample C++ Program, C++ statements, Structure of C++ program, Creating source file , compiling and Linking C verses C++, C++ Characteristics, Structure of C++ program, Tokens, Keywords , Identifiers and Constants, Data Types ,Declaration of variables, Dynamic initialization of variables, Control Structures.	
Unit -III	Functions in C++: Function Prototyping, Call by Reference, Inline functions, Default arguments, Function Overloading , Friend and Virtual Functions . Classes and Objects: Class specification , Class Objects , Scope resolution operator, Access specifies Public, Private, Protected, Defining member Functions, Nesting of Member Functions, Private Member Functions, Static Data Members , Static Member Functions,	
Unit - IV	Inheritance and Polymorphism: Defining Derived Classes, Types of Inheritance, Virtual Base Class, Abstract class. Polymorphism: Base class, Virtual Functions, Pure Virtual Functions, Calling a virtual function through a base class reference, Early and Late Binding.	
Unit - V	Constructors and Destructors: Constructors, Parameterized constructors, Default Constructors, Copy constructor, Dynamic Initialization of Objects, Destructors.	
Unit - VI	Managing Console I/O operations: C++ Stream Classes, Unformatted I/O Operations, Working with Files, Opening and Closing a file, Formatted I/O.	

Syllabus
Programme: B. Tech. Civil Sem - II Course (2021)

Term Work:		
1.	Study of different Object Oriented Programming Concept ,Application and benefits of OOP.	
2.	Write a C++ program to find whether given number is perfect number or not.	
3.	Write a C++ Program to find Fibonacci Series.	
4.	Write a C++ Program to find Area of Circle and Triangle Using concept of Function Overloading.	
5.	Write a C++ program for simple Calculator using Class and Object Concept.	
6.	Write a C++ Program for Employee Management System Using Single inheritance, Multiple inheritance and Multilevel inheritance.	
7.	Write a C++ Program to implement Concept of Constructor and Destructor.	
8.	Write a C++ Program for Storing Student Information with the help of File reading and Writing Operations.	
Reference Books:		
1)	Herbert Schildt, "The Complete Reference C++", 4thEdition, Mc Graw Hill, 2003.	
2)	Stanley. B. Lippmann, Josee Lajoie, Barbara. E. Moo, "C++ Primer", 5th Edition, Pearson Education, 2013.	
3)	Scott Meyers:"Effective C++",Third Edition, Addison-Wesley, 2005.	
4)	E. Balaguruswamy, "Object Oriented Programming using C++", 4th Edition, Mc Graw Hill, 2010

COURSE: MECHANICS OF SOLIDS		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Theory: 03 Hours / Week Tutorial: 01 Hour / Week	Semester End Examination: 60 Marks Internal Assessment: 40 Marks	Theory: 03 Tutorial: 01
Practical: 02 Hours / Week	Term Work: 25 Marks	TW :01
Course Pre-requisites: The students should have knowledge of		
1	Statics and Dynamics	
2	Mathematics-Algebra, Geometry, Concept of differentiation and integration	
Course Objective:		
	The student should be able to calculate stresses developed in the material.	
Course Outcomes: The student will be able to		
1	determine axial stresses in the member.	
2	draw shear force and bending moment diagram for determinate beams.	
3	calculate bending stresses and deflection of beam.	
4	calculate shear stresses due to shear force and torsion.	
5	calculate critical load on column.	
6	compute principal stresses using analytical and graphical method.	
Course Content:		
Unit-I	<p>Simple Stresses and Strains Concept of stress and strain: Normal, lateral, shear and volumetric stresses and strains, Stress-strain curve; Elastic constants and their inter relationship; Generalized Hooke's law;</p> <p>Stresses due to Axial Load and Temperature: Axial force diagram; Stresses, strains and deformation of determinate and indeterminate bars of prismatic, homogenous and composite cross section</p>	(06Hrs)
Unit-II	<p>Shear Force and Bending Moment Diagram Concept of Shear Force and Bending Moment; Relation between Shear Force, Bending Moment and intensity of loading; Shear Force Diagram and Bending Moment Diagram of determinate beams due to concentrated load, uniformly distributed load, uniformly varying load and moments Bending moment and loading diagram from given shear force diagram.</p>	(06 Hrs)
Unit-III	<p>Bending Stresses and Deflection of Beam Bending Stresses: Theory and assumptions of pure bending; Moment of resistance; Flexure formula; Flexural rigidity; Modulus of rupture; Flexural stress distribution diagram for various sections; Force resisted by partial cross section.</p> <p>Deflection of Beams: Concept of relation between deflection, slope, bending moment, shear force and intensity of loading; Macaulay's method, Elastic curve.</p>	(06 Hrs)

Unit-IV	Direct and Torsional Shear Stress Shear Stresses: Concept of direct and transverse shear; Shear stress formula; concept of complementary shear stress; Shear stress distribution diagram for symmetrical and unsymmetrical section Torsion of Circular Shafts: Theory, assumptions and derivation of torsional formula; Shear stress distribution across cross section; Twisting moment diagram; Shear stresses and strains in solid, hollow, solid, homogeneous and composite cross sections subjected to twisting moment.	(06 Hrs)
Unit-V	Combined Stresses and Axially Loaded Column Direct and bending stresses for eccentrically loaded short column, Resultant stress diagrams due to axial loads, uni-axial, and bi-axial bending. Concept of core of section for solid and hollow rectangular and circular sections. Axially loaded columns: concept of critical load and buckling, Euler's formula for buckling load with hinged ends, concept of equivalent length for various end conditions, Rankine's formula, safe load on column and limitations of Euler's formula	(06 Hrs)
Unit-VI	Principal Stresses and Principal Planes Normal and shear stresses on any oblique plane. Concept of principal stresses and principal planes. Maximum shear stress; Analytical and graphical method (Mohr's circle method); Combined effect of axial force, bending moment, shear force and torsion.	(06 Hrs)
Internal Assessment:		
	Unit Test -1	UNIT – I, II, III
	Unit Test -2	UNIT – IV, V, VI
Assignments: Students should complete assignments from		
1	Calculate the different stresses for determinate and indeterminate members.	
2	Draw the shear force and bending moment diagram for different types loading acting on simply supported, compound and cantilever beam.	
3	Draw the bending stress distribution diagram for different cross section.	
4	Determination of slope and deflection of beam for various types of loading acting on beam.	
5	Draw the shear stress distribution diagram for different cross section.	
6	Calculate load carrying by column by using Euler's and Rankine Theory.	
7	Calculate principal stress, normal and tangential stress by analytical and graphical method.	
Term Work: The term-work shall consist of Minimum Eight experiments from list below.		
1	Tension test on mild steel	
2	Tension test on tor steel	
3	Direct Shear (Single & Double) test on mild steel	
4	Bending test on timber	
5	Torsion test on mild steel	

6	Impact tests (Izod & Charpy) - Mild Steel, Aluminium, Brass, Copper
7	Hardness test (Rockwell)- mild steel, aluminium, brass copper
8	Compressive Strength of brick
9	Construction of Mohr's Circle for calculation of principal stresses.
10	Development of an excel sheet for calculation of stresses at a point in cross section for given loadings.
11	Development of an excel sheet for calculation of principal stress at a point.

Reference Books:

1	Beer F.P. and Johnston E.R., "Mechanics of Materials", McGraw Hill Publication
2	Singer F. L. & Pytel A., "Strength of Materials", Harper and Row Publication
3	Gere J.M. & Timoshenko S.P., "Mechanics of Materials", CBS Publishers & Distributors
4	Bansal R.K., "Strength of Materials", Laxmi Publications.
5	Ramamrutham S. "Strength of Materials" Dhanapat Rai Publications.
6	Bhavikatti S.S "Strength of Materials", New Age Publications

Topics for project based Learning for Mechanics of Soilds

1.	Draw the stress strain curve of mild steel and tor steel by using excel.
2.	Collect the IS code related to testing of material and specifications for any five materials.
3.	Prepare the chart for various types of stresses and strain with suitable example.
4.	Development of an excel sheet for calculation of Elastic constants, Thermal stresses with suitable example.
5.	Market survey for structural materials (at least ten materials)
6.	Prepare the chart for Shear force and bending moment diagram for simply supported beam (At least Five problems with different types of loading)
7.	Prepare the chart for Shear force and bending moment diagram for Cantilever beam (At least Five problems with different types of loading).
8.	Prepare the chart for Shear force and bending moment diagram for overhanging beam (At least Five problems with different types of loading)
9.	Development of an excel sheet for calculation of bending stresses for different sections. (At least three problem)
10.	Prepare the chart for derivation of flexural formula and bending stress distribution diagram for different section.
11.	Prepare the chart for deflection and slope of simply supported beam (at least five problems with different types of loading)
12.	Prepare the chart for deflection and slope of cantilever beam (at least five problems with different types of loading)
13.	Prepare the chart for derivation of shear stress formula and shear stress distribution diagram for different section.
14.	Prepare the chart for derivation of torsional formula.
15.	Development of an excel sheet for calculation of direct and bending stress in section. (At least three problem)
16.	Prepare the chart for core section (square, rectangular, circular, hollow rectangular and hollow circular).
17.	Development of an excel sheet for load carrying capacity of column by using Euler's theory. (At least three problem)
18.	Collect the photographs along with justification of (a) failure of short and long column (b) Failure of beam in bending and shear.
19.	Draw the Mohr's circle (at least five problems)

20. Prepare the chart for Calculation of normal and shear stress by using graphical method.

Programme : B.Tech. (Civil) Sem. – III (2021)

Course: Construction Equipment & Methods

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS: 05</u>
Theory: 04 Hours / Week	Semester End Examination: 60 Marks	Theory: 04
Practical: 02 Hours / Week	Internal Assessment: 40 Marks	
	Term Work: 25 Marks	Term Work: 01

Course Pre-requisites: The students should have knowledge of

- 1 Building Construction Practices, Building Planning & Design.
- 2 Engineering Economics.
- 3 Concrete Technology.

Course Objective:

Students should get knowledge of Construction Operation Equipment & different methods of advanced construction techniques, tunneling, concreting & dewatering.

Course Outcomes:The student will be able to

- 1 explain various advanced construction techniques.
- 2 apply different construction techniques for underwater construction.
- 3 identify and find output of earth moving equipment.
- 4 describe hoisting & conveying equipment.
- 5 Understand equipment key features, cost and find out its performance.
- 6 describe dewatering, paving equipment & concrete pumps

Course Content:

Unit-I	Advanced Construction Techniques: Construction - Light, Medium & Heavy duty. Launching of Girders, Precast Techniques, Tunnel Driving techniques, Tunnel boring machines (Open & Shield), Road Headers & Boomers, Shotcreting & Guniting. Trenchless Technology, Micro Tunneling. Pneumatic Drilling equipments. Drill & Blast method.	(08 Hrs)
Unit-II	Under Water Construction: Cofferdams Dams & Caissons – Definition, Classification & its use. Dredging Techniques. Construction under deep water (Tremie Method). Classification & different types of Piles, Sheet Piles, Pile driving techniques, Negative skin friction. Use of special types of Formwork. Jetties.	(08 Hrs)
Unit-III	Earth Work Machineries: Fundamentals of Earth work operations. Earth Moving Operations - Types of Earth Work Equipment -Tractors, Motor Graders, Scrapers, Front end loaders – Dozer, Excavators, Rippers, Front Shovel, Back Hoe, Loaders, trucks, dumpers and hauling equipment, Compacting Equipment - Tamping Rollers, Smooth Wheel Rollers, Sheepsfoot Roller, Pneumatic-tyred Roller, Vibrating Compactors, Vibrocompaction methods. Finishing equipment.	(08 Hrs)
Unit-IV	Hoisting & Conveying Equipments: Hoisting & Transporting equipment; types (Derrick, Tower & Mobile), factors affecting for selection. Conveying equipments-: belt, apron, vibrating, pneumatic, flight & spiral or screw conveyors. Hauling	(08 Hrs)

- equipments. Crushers & its types.
- Unit-V Equipment Management & Economics:** (08 Hrs)
 Planning Process of Equipment. Identification – Selection of Equipment - Maintenance Management. Cost Control of Equipment. Safety Management, Equipment cost -: Ownership cost, Operating Cost, Equipment Life and Replacement Analysis. Depreciation Analysis, Safety Management of equipments.
- Unit-VI Dewatering, Paving Equipments & Concrete Pumps:** (08 Hrs)
 Dewatering Techniques; Electro-osmosis method, Well Point System, Paving Equipments; Types, Uses. Asphalt Pavers, Slip Form Pavers, Concrete Pavers. Pumps; Types & Uses. Pumps for concreting.

Internal Assessment:

Unit Test -1	UNIT – I, II, III
Unit Test -2	UNIT – IV, V, VI

Assignments –

- Write short notes on -:
 - Shotcreting
 - Guniting
 - Trenchless technology
 - Drill & Blast method
 - Pneumatic drilling equipments
- Define & differentiate between Cofferdams & Caissons & briefly explain piles & its Classification.
- List out difference between crawler and pneumatic type of wheels?
- Compare belt conveyor with other types of conveyors?
- What are the various equipments used for compacting? Explain them.
- Explain launching of girders.
- What are the different types of equipments used for trenching and tunneling?
- What is Well point system?
- Describe various methods for tunneling in hard rocks.

Term work - :

- Collection of pamphlets and information regarding various construction techniques equipment (Information pertaining to the following aspects should be collected)
 - Types, Different makes of the equipment
 - Useful Life and area of use
 - Equipment performance data
- In context of tunneling, enlist and explain different tunnel driving techniques & tunnel boring machines.

3. Classify, discuss briefly various earth work machineries (any five) & factors affecting in selection including their economics.
4. Classify & explain various hoisting & conveying equipment. Discuss in detail about factors affecting in selection of them & its economics.
5. Explain crushers & its types in detail.
6. Enlist & explain with neat diagrams, different dewatering techniques (electro-osmosis method, well point system).
7. Write a brief note on Pumps & its types. Discuss in detail about various pumps used for concreting.
8. Prepare a Power Point presentation (P.P.T.) on any of the topic of your choice from the entire syllabus after getting approval of topic from your subject teacher.
9. Site Visit report to be prepared after visiting the site covering topics mentioned in syllabi.

Textbooks -:

1. Peurifoy, R., Schexnayder, C., Shapira, A., & Schmitt, R. (2011). "Construction Planning, Equipment, and Methods" (8th ed.). McGraw-Hill.
2. Gransberg, D. D., Popescu, C. M., & Ryan, R. C. (2006). "Construction equipment management for engineers, estimators, and owners" (2nd edition). CRC Press.

Reference Books:

1. Mahesh Verma, "Construction Equipment & Planning & Application", Metropolitan Book Company Private Ltd., New Delhi.
2. Peurifoy Robert L., William B. Ledbetter, "Construction Planning Equipment Methods", McGraw Hill Book Company.
3. Russel James E., "Construction Equipment", Reston Publishing Company.
4. Shetty M.S., "Concrete Technology – Theory & Practice", S. Chand & Company Private Limited.
5. S.C. Sharma & Khanna, "Construction Equipments & its Management",
6. V.R. Phadke "Construction Machinery & Works Management".
7. Day, D. A., & Benjamin, N. B. H. (1991). "Construction equipment guide" (2nd edition). John Wiley & Sons.
8. Harris, F. (1994). "Modern construction and ground engineering equipment and methods" (2nd ed.). Pearson Longman.
9. Nunnally, S. W. (2011). "Construction methods and management" (8th edition.). Prentice Hall.

Project Based Learning topics - :

1. Construction Technology used in defense war fields.
2. Low cost housing - Construction of a low cost house.

3. Tunnel design.
4. Use of dampers in high rise buildings
5. Construction of Overhead Bridge process. (Case study).
6. The invention of slip form technique and cost savings (case study).
7. PILE Construction Technique.
8. Construction techniques used in Empire State Building and Burj Khalifa.
9. For the construction project what capital cost has to be taken in consideration (Case study)?
10. List out some of the software used in the construction sector to estimate cost and monitoring expenses of machineries and perform one application of it on construction site/project?
11. What are the health and safety duties in relation to concrete pumping work? What is to be involved in managing risks associated with concrete pumping?
12. What are the parameters for Selection of Tunneling Method and Parameters Effecting Ground Settlements
13. How to choose the right conveyor system? How much do conveyor systems cost?
14. Why is electro-osmosis (dewatering) so effective in clayey and heterogeneous soils. Explain with a case study?
15. Explain methods of launching girders at a metro rail site in India.
16. How do real estate development and precast concrete elements fit together? Are there any limitations regarding the construction of houses?
17. Construction of Emergency Temporary structures and facilities (Jumbo COVID hospital etc.).
18. What are the hazards associated with construction of cofferdam?
19. What are the different methods of blasting?
20. Explain Mechanical Dredging Operations for Removal of Reservoir Sediment.

Programme: B. Tech (Civil) Sem – III (2021)

COURSE: FLUID MECHANICS		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Theory: 04 Hours / Week	Semester End Examination: 60 Marks Internal Assessment: 40 Marks	Theory: 04
Practical: 02 Hours / Week	Term Work & Oral : 50 Marks	Term Work & Oral: 01
Course Pre-requisites: The students should have knowledge of		
1	Engineering Mathematics	
2	Engineering Physics	
Course Objective:		
	To make the student understand the scope and application of Fluid Mechanics	
Course Outcomes: The student will be able to		
1	describe basic properties of fluids and measure its properties in static conditions	
2	apply knowledge of fluid kinematics and dynamics conditions.	
3	analyse physical phenomenon dimensionally	
4	explain laminar flow and flow through pipes.	
5	explain of boundary layer theory.	
6	describe turbulent flow	
Course Content:		
Unit-I	Properties of Fluids & Statics : Scope and application of fluid mechanics, Physical properties of fluids, Newton's Law of Viscosity, Dynamic & Kinematic Viscosity, Classification of fluids. Statics: Pressure density height relationship & Measurement, Hydrostatic pressure on a plane, Centre of pressure, Buoyancy, Stability of floating bodies, Metacentre and Metacentric height.	(08 Hrs)
Unit-II	Kinematics Types of flow, path lines and streak lines, stream lines, Stream Tube, Continuity Equation in 1-D and 3-D, Velocity potential, Stream functions, Circulation and Vorticity, Concept and Application of Flow Net.	(08 Hrs)
Unit-III	Energy Relationships Derivation of Bernoulli's Equation from Newton's 2nd Law , Limitations, Modified form of Bernoulli's Equation, Total energy and Hydraulic Grade line, Impulse momentum equation..	(08 Hrs)
Unit-IV	Dimensional Analysis and Model Studies Dimensional homogeneity, important dimensionless parameters, Dimensional analysis using Buckingham's theorem, Model studies, Similitude, Model laws, Types of models.	(08 Hrs)
Unit-V	Fundamental of Pipe Flow & Boundary layer theory Reynolds experiment, Classification of Flows based on Reynolds Number, Moody's Diagram, Laminar flow in circular pipe, Hagen Poiseuille's Equation, Introduction to Boundary Layer Theory, Concept of boundary layer, Development of Boundary layer over a flat plate, Laminar and transitional boundary layer, laminar sub layer, General characteristic of	(08 Hrs)

	boundary layer, Boundary layer thickness, Velocity distributions within boundary layer	
Unit-VI	Turbulent flow & Pipe Flow Problems Characteristics of turbulent flow- Instantaneous velocity, Temporal mean velocity, Scale of turbulence and intensity of turbulence, Darcy- Weisbach equation, Flow through pipes: Energy losses in pipe flow, parallel and series pipes, Equivalent Pipe Concept, Pipe network Analysis, Siphons, Hydraulic transmission through pipes, three reservoir problems.	(08 Hrs)
Internal Assessment:		
	Unit Test -1	UNIT – I, II, III
	Unit Test -2	UNIT – IV, V, VI
Assignments: Students should complete assignments from		
1	Solution of numerical problems asked in recent three years of BVU question papers.	
2	Solution of questions asked in recent three years BVU question papers	
3	Report of new topic being discussed in reputed research journals related to fluid mechanics	
4	Mini projects such as collection of information, Brochure, Data, on a topic related to fluid mechanics.	
5	Writing of industrial applications of various topics of syllabus.	
6	Design of new experiments related to fluid mechanics.	
7	Collection of two fluid mechanics NPTEL videos and demonstration of it.	
8	Collection of information about fluid mechanics equipment's /machinery/materials related to fluid mechanics.	
9	Collection of information about fluid mechanics phenomenon and its explanation.	
10	Collection of data of different fluids with reference to their properties.	
Term Work: The term-work shall consist of Minimum Eight experiments from list below.		
1	Determination of Viscosity	
2	Study of Pressure Measuring Devices	
3	Study of Stability of Floating Bodies	
4	Verification of Bernoulli's Theorem.	
5	Calibration of C_d of Venturimeter	
6	Calibration of C_d of Orifice	
7	Calibration of C_d Notch	
8	Study of Laminar flow Using Heleshaw's Apparatus	
9	Study of Laminar flow Using Reynold's Apparatus	
10	Design of Venturimeter (As per IS Code)	
11	Design of Weir (As per IS Code)	
Oral: The Oral examination will be based on above term work and course content.		
Reference Books:		
1	Garde R. J. and Mirajgaonkar "Engineering Fluid Mechanics" ScitechPulication	
2	C.P.Konthadraman "Fluid Mechanics And Machinery" New Age Publications	
3	S. Ramamurtham "Hydraulics and Fluid Mechanics and Fluid Machines" Dhanpat Rai Publishing Company	
4	R. K. Bansal "Fluid Mechanics and Hydraulic Machines" Laxmi Publications	
5	R.K. Rajput "Fluid Mechanics" S Chand Publications	

6	Garde R. J. and Mirajgaonkar “Fluid Mechanics Through Problems” , New Age International New Delhi
7	Modi P.N. and Seth S.M. “ Fluid Mechanics” Standard Book House
Topics for Project Based Learning for Fluid Mechanics	
1	Determining physical properties of 3 different Fluids. (Specific Weight, Mass Density, specific volume , specific gravity)
2	Determining kinematic viscosity at different temperatures of 3 different fluids (Lubricating oils, Cooking oil,)
3	Collection of Newtonian fluid, non Newtonian Fluid, Ideal Plastics and Thixotropic Fluids one each and studying properties of fluids.
4	Based on pressure density height relationship, prepare a sheet showing water pressure on wall of dam of different heights.
5	Prepare a model of a ship showing different Metacentric heights
6	Prepare a model ship showing stable, unstable equilibrium (C.G. and C.P.)
7	Demonstrate and verify Bernoullies theorem using other equipments (Wind Tunnel, etc.)
8	Collection of information and presentation of working of any hydraulic equipment (JCB, Earth moving machinery etc.)
9	Calculation of Energy losses in pipe flow for different flow conditions.
10	Calculation of Coefficient of discharge of Venturimeter by taking 10 different flow readings.
11	Calculation of Coefficient of velocity of Venturimeter by taking 10 different flow readings.
12	Calculation of Coefficient of discharge of Notch by taking 10 different flow readings.
13	Preparing different shaped acrylic notches to measure discharge and calibrating it.
14	Calculate Energy losses in domestic pipe line with given data.
15	Preparing a acrylic model for a dam and testing it.
16	Find Metacentric Height of body containing liquid. Discuss the difference with reference to normal case.
17	Prepare a model Orifice Meter device in a UPVC pipe length.
18	Prepare a model of U Tube manometer
19	Prepare a model of U Tube inclined Manometer
20	Prepare a model of U Tube Micromanometer

Programme: B. Tech (Civil) Sem – III (2021)

COURSE: ECONOMICS & FINANCE		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Theory: 03 Hours / Week	Semester End Examination: 60 Marks Internal Assessment: 40 Marks	Theory:03
Course Pre-requisites: The students should have knowledge of		
1	Construction Design & Drawing	
2	Basic Mathematics	
Course Objective:		
	To make students understand engineering economics and financial management.	
Course Outcomes: The student will be able to		
1	explain the concept of Engineering Economics.	
2	estimate time value of money.	
3	select best project.	
4	find out depreciation cost.	
5	prepare balance sheet.	
6	generate finance for organization.	
Course Content:		
Unit-I	Engineering Economics: Introduction, Definition of Economics, Importance of Engineering economics, basic economics concept-Human wants. Utility, value, cost, price, capital, wealth, equilibrium etc. law of demand, elasticity of demand. The law of supply. Factors influencing production: land, labour, capital and organization	(06 Hrs)
Unit-II	Cash Flow: Basic principles, time value of money, cash flow diagram. Equivalence single payment in the future, present payment compare to uniform series payment. Future payment compare to uniform series payment.	(06 Hrs)
Unit-III	Project Economics and Analysis: Comparison of alternatives, net present value present, future and annual worth method of comparing alternatives, internal rate of return. Break even analysis. Benefit cost ratio	(06 Hrs)
Unit-IV	Depreciation and Value Engineering: Depreciation and methods of depreciations. Inflation, value engineering and value analysis	(06 Hrs)
Unit-V	Financial Management: Financial management, construction accountancy charts of accounts, financial statement, profit and loss account, balance sheet of construction Industry.	(06 Hrs)
Unit-VI	Project Budgeting: Types of capitals, fix and working capital, debentures, shares, public deposits. Forms of foreign capital, money and capital market in India. New economic policy. Role of financial institutions in economic development,	(06 Hrs)

Internal Assessment:		
	Unit Test -1	UNIT – I, II, III
	Unit Test -2	UNIT – IV, V, VI
Assignments: Students should complete assignments from		
1	Preparation of cash flow diagrams and finding out time value of money	
2	Comparison of different projects by different methods	
3	Benefit cost analysis of project	
4	Determination depreciation value of equipment	
5	Preparation of balance sheet for project	
6	Assignment on value analysis	
7	Numerical on engineering economics	
Reference Books:

Topics for project-based Learning for Economics and finance.		
1. The impact of fiscal deficit on economic performance in developing countries. A case study of India.		
2. The effect of taxation on the Indian economic growth.		
3. Privatization of public enterpriser and its implication on economic policy and development.		
4. The impact of capital market on the economic growth in India.		
5. The role of Indian stock exchange in industrial development.		
6. The impact of foreign direct investment on the Indian economy.		
7. Foreign direct investment and employment generation in India.		

8. The role of small business in poverty alleviation.
9. Demand and its determinants.
10. Working capital management.
11. Infrastructure and economic development.
12. Project on supply and its determinants.
13. Depreciation
14. Project selection methods.
15. Time value of money
16. Financial management.
17. New economic policy of India.
18. Forms of foreign capitals.
19. Instrument in capital market (shares).
20. Money Market.

Programme: B. Tech. (Civil) Sem – III (2021)

COURSE: CONCRETE TECHNOLOGY		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Theory: 04 Hours / Week	Semester End Examination: 60 Marks Internal Assessment: 40 Marks	Theory :04
Practical: 02 Hours / Week	Term Work & Oral: 50 Marks	TW & OR: 01
Course Pre-requisites: The students should have knowledge of		
1	Building Materials	
2	Fundamentals of Civil Engineering	
Course Objective:		
	The student should know qualities & properties of concrete.	
Course Outcomes: The student will be able to		
1	test ingredients of concrete	
2	measure workability of concrete.	
3	measure strength of hardened concrete.	
4	describe durability of concrete	
5	apply special concreting techniques	
6	design of concrete mix	
Course Content:		
Unit-I	Constituent of Concrete: Cement - Chemical composition, hydration, heat of hydration, hydrated structure, types of cement, testing of cement as per Indian standard. Aggregates - Utility in concrete, classification, effect of geometry & texture, strength, mechanical properties, moisture content, water absorption, bulking of sand, deleterious substances, sieve analysis, various grading, and grading requirements, sampling & testing as per Indian Standards. Water - General Requirements & limiting values of impurities.	(08 Hrs.)
Unit-II	Fresh concrete: Methods of mixing, transporting, and placing of concrete. Workability – Definition and requirement, factors affecting workability, various tests as per IS and ASTM. Segregation and bleeding, stiffening, re-tempering. Curing: necessity and various methods, micro-cracking. Admixture for concrete.	(08 Hrs.)
Unit-III	Hardened concrete: Compressive and tensile strength and their relationship, tests as per IS and ASTM. Factors affecting strength – water cement ratio, gel space ratio, aggregate cement ratio, properties of ingredients, effect of age, maturity, aggregate cement-paste inter-face, various finishes of concrete. Introduction to aspects of elasticity, shrinkage, and creep. Tests for strength of concrete: Destructive, semi destructive, and non-destructive tests with their limitations, test methods as per IS Code.	(08 Hrs.)

Unit-IV	Durability and permeability of concrete: Definitions, causes, carbonation, cracking Concrete in Aggressive Environment: Alkali – Aggregate Reaction, Sulphate Attack, Chloride Attack, Acid Attack, Effect of Sea Water, Special Coating for Water Proofing, Sulphate Chloride and Acid Attack.	(08 Hrs.)
Unit-V	Special Concrete: Behavior and characteristics of high strength concrete, High Performance Concrete, Fiber Reinforced Concrete, Mass Concreting, Light Weight Concrete, and Concrete for Precast. Special concreting techniques: Pumped concrete, concrete, underwater concrete, pre-placed concrete, vacuum dewatered concrete, hot and cold weather concreting, Ready mix concrete.	(08 Hrs.)
Unit-VI	Concrete Mix Design: Principles of Mix Proportioning, Probabilistic Parameters, Factors Governing Selection of mix. IS Method of Concrete Mix Design, Variability of Test Results, Acceptance Criteria, Various IS Code Provisions.	(08 Hrs.)
Internal Assessment:		
	Unit Test -1	UNIT – I, II, III
	Unit Test -2	UNIT – IV, V, VI
Assignments: Students should complete assignments from		
1	Assignment based on Unit- I	
2	Assignment based on Unit- II	
3	Assignment based on Unit- III	
4	Assignment based on Unit- VI	
5	Assignment based on Unit- V	
6	Assignment based on Unit- VI	
Term Work: The term-work shall consist of from list below.		
A	Test on Aggregate (Minimum 4)	
1	Moisture content, Water Absorption	
2	Specific Gravity of Aggregate	
3	Fineness Modulus of Aggregate	
4	Aggregate Impact Test	
5	Aggregate Crushing Test	
6	Flakiness Index, Elongation Index	
B	Test on Cement (Minimum 3)	
1	Fineness of Cement	
2	Standard consistency and Setting time of Cement.	
3	Compressive strength of Cement	
4	Soundness of Cement	
C	Tests on Concrete (Minimum 3)	
1	Effect of admixture on workability of concrete	
2	Compressive Strength of Concrete	
3	Flexural strength of concrete	

4	Rebound Hammer Test
Oral: The Oral examination will be based on above term work and course content.	
Reference Books:	
1	M S Shetty; 'Concrete Technology', S. Chand Publication New Delhi
2	P Kumar Mehta, 'Monteiro; Concrete Technology', Indian Concrete Institute
3	A. M. Neville; 'Properties of Concrete', Pearson Education
4	A R Santhakumar; 'Concrete Technology', Oxford University Press
5	M L Gambhir; 'Concrete Technology', Tata McGraw Hill
6	IS 456-2000 Indian Standard Plain and Reinforced Concrete - Code of Practice
7	IS 269-1989 Indian Standard Ordinary Portland Cement, 33 Grade — Specification
8	IS 516-1959 Indian Standard Methods of Tests For Strength of Concrete
Topics for Project based learning:	
1.	Market survey, report writing and cost analysis to select types of cements for various construction works.
2.	Site visit to RMC plant (nearby), observations, records and field test of cement.
3.	Conduct various tests as per IS in laboratory on aggregates with reference to syllabus
4.	Site visit to under construction to collect detail information about the ingredients of concrete mix.
5.	Market survey, report writing and cost analysis of Aggregates for various construction works.
6.	Write report on Principal concrete properties affected by the properties of aggregates
7.	Writing complete report and procedure of fresh concrete.
8.	Site visit to nearby RMC plant and draw flow chart.
9.	Conduct various tests on workability of Concrete with reference to syllabus.
10.	Site visit to under construction to observe the quality of fresh concrete.
11.	Market survey of various admixtures used in fresh concrete and writing proper report on each admixture.
12.	Report writing and tests on different grades of concrete.
13.	Report writing and non-destructive tests on hardened concrete of different types.
14.	Preparing Report on all types of Destructive Test conducted in Laboratory.
15.	Report on conducting various tests on Durability and Permeability of Concrete.
16.	Report writing and tests on effect on concrete of Aggressive Environment.
17.	Report on use of different types of admixtures on different grades of concrete.
18.	Site visit and market survey report writing on Special type of Concreting.
19.	Report writing on effects of Mix Design on Special Concreting.
20.	Preparation of Mix Design for Special Type of Concrete and visiting site and getting all information of mix design used on actual site.

Programme: B. Tech. (Civil) Sem – III (2021)

COURSE: COMPUTER AIDED BUILDING PLANNING AND DESIGN (REVIT, BIM)		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Practical: -- Hours / Week	Term Work & Oral: 50 Marks	TW & OR: 02
Course Pre-requisites: The students should have knowledge of		
1	Building Planning and Design	
2	AutoCAD 2D	
Course Objective:		
	The student should be able to prepare building models using Autodesk Revit	
Course Outcomes: The student will be able to		
1	Prepare Architectural working drawing	
2	Draw and modify in Revit Architecture	
3	Edit and modify elements using modify tools	
4	Prepare models of building components	
5	Prepare 3d drawing rendering of 3d models	
6	Explain use of Building Information Modelling and Prepare cost estimating	
Course Content:		
Unit-I	Introduction to BIM and Autodesk Revit: Overview of Revit Architecture Interface, Starting Projects, Viewing Commands, Introduction to Architectural working drawing, Representing Standard base 2D drafting	(8 Hrs)
Unit-II	Basic Drawing in Revit: Drawing Elementary CADD command - Line, Polyline, Polygon, Circle, Polyline, arc, ellipse, Text- Single Text, Multitext, Dtext, Using General Drawing Tools, Editing Elements using tools	(8 Hrs)
Unit-III	Using Modify Tools in Revit: Using General Drawing Tools, Editing Elements using tools, Working with Basic Modify Tools-Erase, Move, Copy, Mirror, Offset, Scale, Stretch, Chamfer, fillet & explode, Working with Additional Modify Tools	(8 Hrs)
Unit-IV	Modelling in Revit: Modelling Walls, Doors and Windows, Floors, Stairs, Railing, Preparing utilization of architectural working drawing	(8 Hrs)
Unit-V	Model Rendering: Practice on 3D drawing & designing, Rendering of 3D model (Light, Material & Landscaping)	(8 Hrs)
Unit-VI	Introduction to BIM: Software Tools, BIM and Project Delivery, BIM and Cost Estimating	(8 Hrs)
Term Work: The term-work shall consist of-		
1	Prepare basic 2D plan using Elementary CADD command	
2	Creating Sheets and adding floor plans and scaling respectively	
3	Prepare different items of building using different materials	
4	Prepare Detail layout plan in Revit	

5	Creating rendering Images and exporting to JPEG
6	Prepare Cost Estimate for two storey Building
<i>Reference Books:</i>

Programme: B. Tech. (Civil) Sem – III (2021)

COURSE: CIVIL ENGINEERING SOFTWARE – II (AUTOCAD 3D)		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Practical: 04 Hours / Week	Term Work & Oral: 75 Marks	TW&OR :02
Course Pre-requisites: The students should have knowledge of		
1	Building Planning and Design	
2	Proficiency in producing 2D drawings in AutoCAD	
Course Objective:		
	The student should be able to prepare 3D models of construction projects	
Course Outcomes: The student will be able to		
1	draw various Engineering drawing using AutoCAD 3D	
2	draw various 3D elements of a building from 2d profiles.	
3	draw various 3D elevation and sections of the building.	
4	draw and explain various modelling concepts of building construction and building drawing by using AutoCAD 3D.	
5	draw using different types of materials	
6	Render 3D models and scale printing of 3D models	
Course Content:		
Unit-I	Introduction to 3D Modelling: Introduction to AutoCAD 3D, Creating solid primitives, Mesh primitives Working in 3D, Commands for Editing in AutoCAD 3D	(8 Hrs)
Unit-II	Modelling Workflow: Creating models from 2D profiles, Creating composite models	(8 Hrs)
Unit-III	Editing Models: Adding detail to your solid models, Editing solid models-Walls, Windows, Door etc	(8 Hrs)
Unit-IV	Visualization: Using visual styles, Using lights for Different view angles	(8 Hrs)
Unit-V	Visualization: Using materials for different Items- Walls, Flooring, Door, Windows, Paints etc.	(8 Hrs)
Unit-VI	AutoCAD 3D Model Rendering Process, Scale Printing of 3D Models in AutoCAD	(8 Hrs)
Term Work: The term-work shall consist of -		
1	Preparation of 3D solid Primitives & Mesh Primitives	
2	Preparation of 3D models from 2D profiles	
3	AutoCAD 3D Drawing of a plan, elevation, and section of small building.	
4	Preparation of AutoCAD 3D views of small building.	
5	Use of different Materials for Items.	
6	3D Model rendering & Scale Printing of models.	

	Oral: The Oral examination will be based on above term work and course content.

2	James A. Leach “AutoCAD 2018 Instructor perfect paperback,SDC Publications
3	Cheryl R. Shrock “Beginning AutoCAD Exercise workbook 2018,Industrial Press Inc., U.S.
4	James A. Leach , Shawna Lockhart, “AutoCAD 2018 Instructor”, SDC Publications

Programme: B. Tech. (Civil) Sem – IV (2021)

Course: Vector Calculus and Differential equations		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 3 Hours / Week	End Semester Examination: 60 Marks Internal Assessment: 40 Marks	Theory: 3
Course Pre-requisites: The students should have knowledge of		
1	differentiation, integration, and differential equation	
2	basic knowledge of vector algebra	
Course Objectives:		
	To form mathematical model and solve mathematical problem in Civil Engineering	
Course Outcomes: The student will be able to		
1	Form mathematical modelling of systems using differential equations and solve the differential equations	
2	Apply mathematical modeling to physical systems using ordinary differential and evaluate particular solution.	
3	Apply mathematical modeling of systems using partial differential equations and solve the partial differential equations	
4	Apply Vector differentiation and integration that finds applications in solid mechanics, fluid flow, heat problems and potential theory etc.	
5	Apply vector integral calculus to solve various problems in Civil Engineering.	
6	Analyze the numerical data by applying statistical methods	
Course Content:		
UNIT - I	Linear Differential Equations (LDE) Solution of nth order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy's & Legendre's DE, Solution of Simultaneous & Symmetric Simultaneous DE.	(06 Hrs.)
UNIT - II	Applications of DE Modeling of problems on bending of beams, whirling of shafts and mass spring systems. Applications of ODE to problems of Civil and allied engineering	(06 Hrs.)
UNIT - III	Applications of PDE Solution of Partial Differential Equations (PDE): Wave equation, 1D and 2D-Heat equation by using Separation of variables, Applications of PDE to problems of Civil and allied engineering	(06 Hrs.)
UNIT - IV	Vector Differential Calculus Physical Interpretation of Vector Differentiation, Vector Differential Operator, Gradient, Divergence and Curl, Directional Derivative, Solenoidal, Irrotational and Conservative Fields, Scalar Potential, Vector Identities	(06 Hrs.)
UNIT - V	Vector Integral Calculus	(06 Hrs.)

	Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence Theorem, Stoke's Theorem. Applications to problems in Fluid Mechanics, Continuity equations, Streamlines, Equations of motion, Bernoulli's equations	
UNIT - VI	Statistics and Probability Measures of Central Tendency, Standard Deviation, Coefficient of Variation, Moments, Skewness and Kurtosis, Correlation and Regression, Reliability of Regression Estimates. Theorems and Properties of Probability, Probability Density Function, Probability Distributions: Binomial, Poisson, Normal and Hypergeometric; Test of Hypothesis: Chi-Square test.	(06 Hrs)
Unit Tests:		
Unit Test I: Unit I to Unit III		
Unit Test II: Unit IV to VI		
Textbooks:		
1. Peter V. O'Neil Advanced Engineering Mathematics by (Cengage Learning).		
2. Erwin Kreyszig Advanced Engineering Mathematics by (Wiley Eastern Ltd.).		
Reference Books:		
1. B.V. Raman Engineering Mathematics by Tata McGraw-Hill.		
2. M. D. Greenberg Advanced Engineering Mathematics, 2E, by Pearson Education		
3. Wylie C.R. & Barrett L.C. Advanced Engineering Mathematics, McGraw-Hill, Inc.		
4. B. S. Grewal Higher Engineering Mathematics by Khanna Publication, Delhi.		
5. P. N. Wartikar & J. N. Wartikar Applied Mathematics Volumes I and II Pune Vidyarthi Griha Prakashan, Pune		
Project Based learning topics for Vector Calculus and Differential equations:-		
Students are expected prepare report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code/proof for it, wherever applicable		
1. Method of variation of parameters		
2. Cauchy's linear differential equation		
3. Legendre's linear differential equation		
4. Bending of beam		
5. Mass spring system		
6. Wave equation		
7. One dimensional heat equation		
8. Laplace equation		
9. Directional derivative		
10. Curl and divergence		
11. Work done		
12. Gauss divergence theorem		
13. Stokes theorem		
14. Central tendency		
15. Measures of dispersion		

16. Skewness and kurtosis
17. Theoretical probability distributions

Programme: B. Tech. (Civil) Sem – IV (2021)

Course: Open Channel Flow and Hydraulic Machinery		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS:</u>
Theory: 04 Hours / Week Tutorial: 02 Hours/week	Semester End Examination: 60 Marks Internal Assessment: 40 Marks Term Work & Oral : 50 Marks	Theory: 04 Term work & Oral :01
Course Pre-requisites: The students should have knowledge of		
1	Fluid Mechanics basics, Types of flows, friction.	
2	Basic knowledge of Water retaining structure like dam, weir etc. irrigation channel.	
3	Basic knowledge of Drag & lift, unsteady flow.	
4	Basic knowledge of Hydro power plant.	
5	Basic knowledge of pumps.	
Course Objective:		
To impart knowledge of open channel flows and hydraulic machinery to students.		
Course Outcomes: The student will be able to		
1	Design most efficient channel section, find critical depth of a flow.	
2	Understand and apply knowledge of various flow profile and their characteristics.	
3	Find energy dissipated in a hydraulic jump.	
4	Calculate forces on vanes for different conditions.	
5	Understand and apply knowledge of turbines.	
6	Understand and apply knowledge of pumps.	
Course Content:		
UNIT - I	Uniform Flow in Open Channels Basic Equations: Continuity Equation, Bernoulli's Equation, & Momentum Equation as applied to open channel one dimensional flow, Velocity distribution in open channel, Chezy's & Manning's formulae, factors affecting Manning's roughness coefficient, Normal depth, Conveyance Section factor, Most efficient channel section, Specific Energy, Specific Energy diagram, Depth-Discharge diagrams, alternate depths, Critical depth, Critical slopes, Froude number, Specific Force, Specific force diagrams, Conjugate depths, Depth-Discharge diagrams with respect to specific force.	(08Hrs)
UNIT - II	Gradually Varied Flow in Open Channels Gradually and rapidly varied flows, their examples, Basic assumptions in the derivation of GVF, Differential equations of GVF, Various GVF profiles, and their characteristics, Computations of GVF	(08Hrs)
UNIT - III	Rapidly Varied Flow Hydraulic Jump in Rectangular and Trapezoidal channels, Classification & Practical uses of Jump, Examples of occurrence of Hydraulic Jump, Conjugate Depths, Energy Dissipation in Hydraulic Jump, Location of Jump, Non Contact Flow measurement Devices for measurement of velocity and discharge in open Channels, Methods Stream gauging	(08Hrs)
UNIT - IV	Unsteady Flow Types, Flow through openings under varying head, Flow Compressibility, Celerity of Elastic Pressure Waves, Water Hammer Phenomenon, Rigid & Elastic water Columns Theories, Simple cases neglecting Friction, rapid acceleration of flow due to sudden opening of valve, surge tanks and their functions, Location and	(08Hrs)

	Classification. Fluid Flow around Submerged Bodies: Practical problems involving fluid flow around submerged bodies, Definition & Expression for Drag, lift, drag coefficient, Types of Drag.	
UNIT - V	Impact of Jet and Turbines Impact of Jet: Force Exerted due to impact of jet on stationary and moving flat and curved plates using linear momentum Principle, Principle of angular momentum, Euler's Momentum Equation for Turbines. Element of Hydropower plant, Hydraulic turbines, Heads & efficiencies, Governing of turbines, Design of Pelton Wheel, Cavitations in turbines, Performance of turbines, Prediction of performance in terms of unit quantities and specific quantities, specific speed.	(08Hrs)
UNIT - VI	Centrifugal Pump Theory of centrifugal pump, Centrifugal head due to rotation, Heads & efficiencies, .Design of Pumps Cavitations, Prediction of performance in terms of specific quantities, specific speed, characteristic curves.	(08Hrs)
Internal Assessment:		
	Unit Test -1	UNIT – I to III
	Unit Test -2	UNIT – IV to VI
Assignments (Any Six)		
1	Solve Four Numerical to find out Critical Depth.	
2	Solve Numerical on GVF to find out flow profiles	
3	Solve Numerical on Hydraulic Jump to find out dissipation of energy.	
4	Solve Numericals to find out forces on different types of vanes.	
5	Solve Numericals on design of Turbines.	
6	Solve Numericals on design of Pumps.	
7	Collection & Study of Information Brochure about different Hydraulic Machineries.	
8	Collection & Study of Information Brochure about Hydraulic Lab Supply Companies	
9	Solve Numericals of Drag & Lift	
Term Work (Any Eight)		
1	Flow around aerofoil.	
2	Flow around a Circular Cylinder.	
3	Impact of jet around flat / curved plate.	
4	Performance Curves of Hydraulic Turbine. Constant Head Characteristic Curve	
5	Characteristics of Centrifugal Pump.	
6	Uniform flow formulae of open channel.	
7	Velocity distribution in open channel flow	
8	Hydraulic jump as energy dissipater	
9	Characteristics of various GVF profiles	
10	Design of Hydraulic Centrifugal Pump	
11	Design of Hydraulic Turbine.	
12	GVF Computations by Direct Step Method	
13	Site Visit	
Oral: The Oral examination will be based on above term work and course content.		
Text Books:		

1	Garde R. J., Mirajgaonkar A. G., "Engineering Fluid Mechanics", Scitech Publication, Chennai
2	Rangaraju K. G., "Open Channel Flow", Tata McGraw Publication
3	Streeter Wylie, "Fluid Mechanics", Tata McGraw Publication
4	Subramanyam K., "Open Channel Flow", Tata McGraw Publication
5	Ven Te Chow, "Open Channel Hydraulics", Tata McGraw Publication
6	Zoeb Husain, Zaniel Alimuddin, "Basic Fluid Mechanics and Hydraulic Machines" BSP Books Pvt. Ltd.
Reference Books	
1	Fox, McDonald, Pritchard, "Fluid Mechanics SI Version" Willey Student Edition
2	Frank M. White, "Fluid Mechanics", McGraw Hills Series
3	C P Konthadraman, R Roodramoorthy, "Fluid Mechanics & Machinery" New Academic Science
Topics for Project Based Learning for Open Channel Flow and Hydraulic Machinery	
1	Prepare a model of Undershot wheel
2	Prepare a model of turbine with curved blades
3	Prepare a model of orifice meter in UPVC pipe
4	Prepare a model of Symmetric aerofoil and test it
5	Prepare a model of asymmetric aerofoil and test it.
6	Prepare a model of Prepare a model of reaction turbine.
7	Prepare a model with hemispherical cups
8	Prepare a smoke to visualize flow pattern around the aerofoil.
9	Prepare a aerofoil model wrapped with cotton fibers around it to visualize turbulent flow in wind tunnel.
10	Prepare a model of Venturimeter conforming to standards.
11	Prepare a flat plate and curved vane (outside) model to be tested in Impact of Jet Apparatus.
12	Prepare a U tube manometer
13	Prepare a U tube inclined manometer
14	Prepare a U tube micro manometer
15	Prepare a Inverted U tube manometer
16	Prepare a detailed drawing for making hydraulic bench consisting of Venturimeter, orifice meter, and head loss through pipe fittings experiments.
17	Locate separation point of an aerofoil experimentally.
18	Locate separation point of a cylinder experimentally.
19	Calculate head loss for a centrifugal pump in water supply use.
20	Compare the drag forces on various shapes experimentally (Sphere, plate, etc)

Programme: B. Tech. (Civil) Sem – IV 2021

Course: Geomechanics		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Theory: 04 Hours / Week	Semester End Examination: 60Marks Internal Assessment: 40Marks	Theory:04
Practical: 02 Hours / Week	Term Work & Oral: 50Marks	TW & OR:1
Course Pre-requisites: The students should have knowledge of		
1	Statics and Dynamics	
2	Mathematics	
3	Fluid mechanics	
Course Objective:		
	To make student capable to determine the index and engineering properties of soil and use of soil as a construction material.	
Course Outcomes: The student will be able to		
1	identify and classify the soil according to formation of soil and its properties.	
2	determine index properties of soil.	
3	calculate coefficient of permeability and effective stresses of soil.	
4	calculate the geostatic stresses and OMC of soil by various methods.	
5	analysis of shear parameters of soil by various method.	
6	compute lateral earth pressure on retaining wall.	
Course Content:		
UNIT – I	Introduction of Geomechanics and soil classification	(08Hrs)
	Introduction to Geomechanics Engineering and its applications to Civil Engineering, Types of soil structure, Field identification of soils basic definitions, three and two phase system of soil, soil classification systems – USCS, IS, HRB, Textural classification, Activity of clay, Sensitivity of clay, Thixotrophy of clay	
UNIT - II	Index Properties of Soil	(08Hrs)
	Index properties of soil – Water content, specific gravity, particle size distribution, Consistency limits, density, relative density, Relationship between index properties of soil.	
UNIT - III	Permeability and Seepage	(08Hrs)
	soil water, permeability-Basic Definition, Darcy's law, factors affecting permeability. Laboratory measurement of permeability: Constant head method and Falling head method as per IS 2720. Total, Neutral and effective stress-principle of effective stress, head gradient and potential, seepage pressure, Upward flow condition, 2 D flow, Laplace equation, flow net:- Characteristics and uses.	
UNIT - IV	Compaction and Stress Distribution	(08Hrs)
	Compaction: - Laboratory compaction tests; Factors affecting compaction; Structure and engineering behaviour of compacted cohesive soils; Field compactions equipments Stresses in soil: Geostatic Stresses, stress distribution, Bossinque's	

	Theory for point load, Westergaard's theory		
UNIT - V	Shear Strength of Soil		(08Hrs)
	<p>Introduction- Shear strength an Engineering Property. Mohr's stress circle, Mohr-Coulomb failure theory. The effective stress principle- Total stress, effective stress and neutral stress / pore water pressure. Peak and Residual shear strength, factors affecting shear strength. Stress-strain behaviour of sands and clays</p> <p>Measurement of Shear Strength- Direct Shear test, Triaxial Compression test, Unconfined Compression test, Vane Shear test. Their suitability for different types of soils, advantages and disadvantages. Different drainage conditions for shear tests.</p>		
UNIT - VI	Earth Pressure		(08Hrs)
	<p>Introduction, Rankine's state of Plastic Equilibrium in soils- Active and Passive states due to wall movement, Earth Pressure at rest. Rankine's Theory : Earth pressure on Retaining wall due to submerged backfill. Backfill with uniform surcharge, backfill with sloping surface, layered backfill.</p>		
Internal Assessment:			
	Unit Test 1	Unit I to III	
	Unit Test 2	Unit No IV to VI	
Assignments:			
1	Study of various relationship between weight and volume, numerical based on it and classification of soil		
2	Study of determination of different index properties of soil and numerical based on it.		
3	Study of permeability and numerical based on it.		
4	Study of compaction of soil and numerical based on it.		
5	Determination of shear parameter of soil by various methods and numerical based on it.		
6	Numerical problem based on calculation of lateral earth pressure on retaining wall.		
Term Work:			
	The term-work shall consist of minimum Eight experiments from list below, out of which first four are compulsory .		
1	Determine water content of given soil sample by oven drying method		
2	Determine specific gravity of given soil by pycnometer method		
3	Determine of consistency limits of soil – Liquid, plastic and shrinkage limit.		
4	Determine the shear parameters of given soil by Direct shear test.		
5	Determine dry unit weight of soil in field by core cutter or sand replacement method.		
6	Determine co-efficient of permeability by constant head test or falling head test of given soil sample.		
7	Determine MDD and OMC by standard proctor test and Modified proctor test of given soil sample.		
8	Determine grain size distribution of given soil sample by mechanical sieve analysis.		

9	Determine the shear parameters of given soil by Unconfined Compression Strength of soil.	
10	Determine the shear parameters of given soil by Triaxial Shear Test	
11	Determine the shear parameters of given soil by Vane Shear Test	
Oral/Practical:		
	The oral examination based on above term work.	
Reference Books:		
1) Punmia B.C., "Soil Mechanics and Foundation Engineering" Laxmi Publications		
2) K. R. Arora, "Soil Mechanics & Foundation Engineering,		
3) C. Venkatramiah, "Geotechnical Engineering", New Age International Publishers		
4) Das, B.M., "Principles of Geotechnical Engineering", Thomson Asia		
5) Ranjan, G. and Rao, A.S.R., "Basic and Applied Soil Mechanics", New Age International Publishers.		
6) Joseph E. Bowels, "Soil mechanics and Foundation Engineering", Tata McGraw Hill Publications Company, New Delhi		
Topics for project based learning for Geomechanics		
1. Prepare the chart of different classification of soils.		
2. Collection the information about soil deposits in various regions of India and show in the map of India		
3. Prepare the chart of different types of soil structure.		
4. Calculate the water content and specific gravity of soil (take at least three different soil sample)		
5. Calculate the consistency limit and flow index of soil (take at least three different soil sample)		
6. Prepare chart showing all basic index properties of soil.		
7. Draw the particle size distribution curve for soil by using excel (take at least two different soil sample)		
8. Prepare the chart for relationship between index properties of soil.		
9. Compare the constant head and falling head method.		
10. Prepare the chart for soil water and permeability of soil.		
11. Draw the flow net for sheet pile or earthen dam.		
12. Compute the permeability of stratified soil deposits by using excel.		
13. Prepare the chart of derivation of Laplace equation for two-dimensional flow.		
14. Compare the standard proctor and modified proctor test.		
15. Collection of information and photographs of machines used for compaction of soil.		
16. Draw the optimum moisture curve for compaction of soil by using excel.		
17. Draw the Mohr's stress circle for triaxial shear test and unconfined compression test.		
18. solution of problems on shear strength parameter by using graphical method. (At least three problem).		
19. Prepare the chart showing lateral earth pressure distribution diagram on retaining wall in various conditions.		
20. Contribution of various scientists in estimation of active and passive earth pressure on retaining wall.		

Programme : B.Tech (Civil) Sem – IV (2021)

COURSE: ANALYSIS OF DETERMINATE STRUCTURES

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS:</u>
Theory: 03 Hours / Week	Semester End Examination: 60 Marks	Theory: 03
Tutorial: 01 Hour / Week	Internal Assessment: 40 Marks	Tutorial: 01

Course Pre-requisites: The students should have knowledge of

- 1 Statics and Dynamics
- 2 Mechanics of Solids

Course Objective:

The student should be able to calculate member forces and deflection of determinate beams, trusses and arches.

Course Outcomes: The student will be able to

- 1 Determine degree of indeterminacy of structures.
- 2 Deflection of joints of determinate truss.
- 3 Construct Influence line diagram for forces in beams.
- 4 Calculate maximum forces in beams using Influence line diagram.
- 5 Calculate maximum forces in truss member using Influence line diagram.
- 6 Calculate forces in three hinged arch.

Course Content:

Unit-I	Basic Concepts Classification of structures, Types of structures, skeletal structures; members and member forces, joints, supports, loads and load effects; Concept of stability; Concepts of indeterminacy and degrees of freedom; Static and Kinematic degree of indeterminacy; Deflected shape of beams and frames.	(06 Hrs)
Unit-II	Strain Energy and Deflection of Truss Strain Energy: Concept of strain energy; Modulus of Resilience; Strain energy due to axial force, shear force, bending moment and torsional moment. Deflection of joints of determinate truss using Castigliano's first theorem	(06 Hrs)
Unit-III	Influence Line Diagrams for beams: Basic Concept of Influence lines, Construction of Influence Line Diagrams (ILD) for Support reactions, Shear Force and Bending Moment at a given section for simply supported beams, overhanging beams and compound beams. Muller-Breslau's principle and its application to above beams.	(06 Hrs)
Unit-IV	Application of Influence Line Diagrams for rolling loads on beams: Rolling loads - Use of influence line diagram for determination of SF and BM in beams due to UDL shorter than span, UDL longer than span, Series of concentrated loads. Conditions for maximum SF and maximum BM values	(06 Hrs)
Unit-V	Influence Line Diagrams and its application for truss: Influence line diagram for axial forces in members of plane determinate trusses. Use of influence line diagram for determination of member forces of plane determinate trusses under dead load and live load.	(06 Hrs)

Unit-VI Analysis of Three Hinged Arch**(06 Hrs)**

Concept and types of arches, Three hinged arches – analysis, Calculation of horizontal Thrust, Radial Shear, Normal Thrust and BM at a cross section.

Internal Assessment:

Unit Test -1	UNIT – I, II, III
Unit Test -2	UNIT – IV, V, VI

Assignments:

Students should complete assignments from

1. Draw different types of structures - space, plane, trusses, beams and frames
2. Draw deflected shapes of different types of structures.
3. Calculate degree of static indeterminacy.
4. Calculate degree of kinematic indeterminacy.
5. Calculate deflection of truss using Castigliano's first theorem.
6. Draw ILD for beams for reaction, SF and BM
7. Calculate maximum SF & BM due to moving loads on beam.
8. Draw ILDs for members of the Truss
9. Calculate maximum axial force in truss due to moving loads.
10. Analyse of three hinged arch

Reference Books:

- 1 Hibbeler R. C., “Structural Analysis”, Prentice Hall Publication
- 2 Aslam Kassimali, “Structural Analysis”, Cengage Learning.
- 3 Timoshenko S. P. & Young, “Theory of Structures”, McGraw Hill Publication
- 4 Bhavikatti S.S., “Structural Analysis- I and II”, Vikas Publication.
- 5 Pandit G. S. & Gupta S. P., “Theory of Structures Vol-I and Vol-II”, Tata McGraw Hill Publication
- 6 Ramamrutham S. & Narayan R., “Theory of Structures”, Dhanpat Rai Publishing Company
- 7 Prakash Rao D. S., “Structural Analysis”, Universities Press Publication
- 8 Menon Devdas “Structural Analysis”, Alpha Science International Publication.
- 9 Khurmi R.S. “Theory of Structures”, S. Chand Publication

Topics for Project Based Learning:

- 1 Make model of different types of supports
- 2 Make model of different types of structure
- 3 Prepare PPT on different types of structures - space, plane, trusses, beams and frames
- 4 Prepare chart for different types of structures - space, plane, trusses, beams and frames
- 5 Make model of beam and frame with different types of supports
- 6 Prepare animated PPT to show deflected shapes of different types of structures.
- 7 Prepare PPT on degree of static indeterminacy
- 8 Prepare PPT on degree of kinematic indeterminacy
- 9 Make skeletal model of truss
- 10 Analyse truss using software.
- 11 Prepare PPT on deflection of truss
- 12 Prepare PPT on ILD of truss

- 13 Prepare chart on ILD of truss
- 14 Draw an ILD of truss using software
- 15 Prepare PPT on ILD of beams
- 16 Prepare chart on ILD of beams
- 17 Draw an ILD of beams using software
- 18 Make model on Muller-Breslau's principle
- 19 Make model of three hinged arch
- 20 Prepare PPT on analysis of three hinged arch
- 21 Prepare chart on analysis of three hinged arch

Programme: B. Tech. (Civil) Sem – IV (2021)

Course: Planning & Management of Construction Projects		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Theory: 04 Hours / Week	Semester End Examination: 60 Marks Internal Assessment: 40 Marks	Theory: 04
Practical: 02 Hours / Week	Term Work & Oral: 50 Marks	TW & OR: 1
Course Pre-requisites: The students should have knowledge of		
1	Building Construction.	
2	Building Planning and Design	
Course Objective:		
	To prepare the student to analyze the network and monitor and control the civil engineering projects.	
Course Outcomes: The student will be able to		
1	prepare organization chart.	
2	Explain bar charts and elements of network	
3	prepare a network and analyze by CPM and PERT methods.	
4	update network and carryout resource allocation	
5	carry out material management	
6	check quality parameters in construction process.	
Course Content:		
UNIT – I	Project Management: Basics of Management, Modern scientific management (Contribution by Fayol, F.W. Taylor, Mayo) Importance, Objectives and functions of Management, Importance of organizational structure, types of organizations, Site Layout.	(08 Hrs)
UNIT - II	Planning & Scheduling: Work breakdown structure, Introduction to Gantt /Bar Charts and its limitations, Milestone Charts, Development of Network Problems, Elements of Network-Event, Activity, Dummy, Types of Networks, Network Rules Microsoft Office Project: Introduction to MS Project	(08 Hrs)
UNIT - III	Network Analysis: Critical Path Method (CPM), Types of Floats, Program Evaluation, and Review Technique (PERT), Time Computations, Slack.	(08 Hrs)
UNIT - IV	Project Monitoring & Control Resource Allocation, Resource Smoothing and Leveling, Crashing of Network, Direct Cost and Indirect Cost, Cost Slope, Updating of Network.	(08 Hrs)
UNIT - V	Material Management: Objectives of material management, material requirement, scheduling, monitoring, inventory control, inventory classification, inventory management, inventory models, economic order quantity, ABC analysis.	(08 Hrs)
UNIT - VI	Total Quality Management:	(08 Hrs)

	Importance of Total Quality Management in Construction Process and Steps Involved, Concept of Quality Control, Quality Assurance, Quality Management and TQM, Six Sigma Concept. MIS -Introduction, Necessity of in Management	
Syllabus for Unit Test:		
	Unit Test -1	UNIT – I to III
	Unit Test -2	UNIT – IV to VI
Term Work: The term-work shall consist of -		
	1) Assignment on different types of organization and their flowcharts.	
	2) Assignment on bar chart and milestone chart.	
	3) Assignments on CPM.	
	4) Assignments on PERT.	
	5) Assignment on crashing of network.	
	6) Assignment on updating of network.	
	7) Assignment on MS Project.	
	8) Mini Project- Preparation Network and analysis for a building construction project and finding out different types of floats.	
Oral:		
	The Oral examination is based on above term work and course content.	
Reference Books:		
	1. Construction Engineering and Management by S. Seetharaman, Umesh Publications, New Delhi.	
	2. PERT & CPM principles & applications by L.S. Srinath, affiliated East West press Pvt. Ltd., New Delhi.	
	3. Project Planning & control with PERT & CPM by Dr. B.C. Punmia, K.K. Khandelwal, Laxmi Publications (P) Ltd, New Delhi.	
	4. Construction Project Management Planning, Scheduling, and controlling by K.K. Chitkara TMH Publishing Company, New Delhi	
	5. Civil Engineering Project Management by Alan C. Twort& J. Gordon Rees, Elsevier	
	6. Project Planning, Analysis selection, Implementation & Review by Prasanna Chandra, Tata McGraw Hill, New Delhi	
Topics for Project Based Learning:		
1.	Prepare a detailed site layout for any one type of Constriction project.	
2.	Prepare a detailed Organizational Structure for at least two types of Projects.	
3.	Prepare two detailed Projects in Microsoft Office Project.	
4.	Prepare a work breakdown structure for two different type of construction projects.	
5.	Prepare two detailed bar charts for any type of construction Project.	
6.	Prepare a detailed Milestone chart for Infrastructure project.	
7.	Prepare a detailed project analysis using Critical Path Method for two different Projects.	
8.	Prepare a detailed project analysis using Program Evaluation and Review Technique for two different types of research projects.	
9.	Prepare a detailed report on use and application of time computation in network analysis for construction projects.	

10.	Prepare a detailed report on the benefit of use of different types of Floats on Critical Path Method for analysis of construction projects.
11.	Prepare a detailed report on resource allocation in two different types of Construction Projects.
12.	Prepare a detailed report on use of resource smoothing and levelling on construction projects.
13.	Prepare a report on Crashing of Network for Construction Projects with use of Direct cost, Indirect Cost and Cost slope.
14.	Prepare a report on controlling of raw material and work in progress inventory for a construction project.
15.	Prepare a report on use of Inventory Models in Construction Projects.
16.	Prepare a project report on use of inventory control and classification for different types of construction projects.
17.	Prepare a detailed report on Importance on application of Total Quality Management for different types of Construction Projects.
18.	Prepare a report on use of Six Sigma Concept in Construction Projects.
19.	Prepare a report on necessity and use of MIS in Construction Management.
20.	Prepare a report on necessity and use of Quality Control and Quality Assurance for different construction projects.

B. Tech. (Civil) –Sem IV -2021 Course

Plumbing Engineering

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical: -- Hours / Week	Term work & Oral: 50 Marks	Term work & Oral: 02

Course Pre-requisites:

The Students should have knowledge of

1. Basic Civil Engineering. and Civil Engineering Drawing Knowledge
2. Knowledge of Building Planning and Designing.

Course Objectives:

To develop the knowledge of basic Plumbing Engineering techniques required for various construction projects.

Course Outcomes:

On completion of the course, the students will be able to:

1. Identify and select proper tools and use them for the given plumbing work
2. Select appropriate pipes and carry out pipe fitting after carrying out operations like cutting, bending, threading, joining, aligning and other necessary operations
3. Erect simple water supply system. Trace leakage and repair water supply system
4. Plan, prepare and inspect domestic drainage system
5. Select and install sanitary appliances
6. Install heating appliances like geyser, etc.

UNIT - I Introduction to Plumbing System

Introduction to Plumbing System: Cold Water, Gray Water System, Sewage System, Hot Water Circulating System, Irrigation System, Storm Water System
Common Sanitary Fixture Details: Lavatories, Water Closet, Showers, Sinks, Bathtubs, Bidets, Urinals, Floor drains, Layout of Sanitary fixtures in toilet
Formula for flow through pipes: Darcy formula, Chezy's formula, Manning's formula, Hazen formula, Reynolds number (Laminar and Turbulent Flow)
Drainage System: Soil Pipe System, Waste Pipe System, Vent Pipe System, Types of Pumps, Pump Laws, Pump in series and parallel

UNIT - II	Water System
	<p>Cold Water System :Domestic Water Tank (or) Underground reservoirSizing, Elevated Roof Tank (storage cistem) orOverhead tank Sizing, Cold Water Pipe Sizing inB uilding as per flow rate and fixture Unit Method(WFU), Minimum number of smaller diameterwater pipes that can be connected to bigger pipes.Plumbers Chart for Pipe Sizing, Box Formula, Boosterpump sizing & transfer, Pump Sizing(HPWatts), Auto Pneumatic, System & Pressure Tank Sizing,External Water Supply, Pipe Sizing, Pump RoomDesign with valve connection detail, Design of External Water System</p> <p>Gray Water System: Grey water cycle, Water Tank Sizing, Booster PumpCalculation, Grey water pipe sizing, Flush Water, Potable and non potable loop pipe sizing (Software).</p> <p>Hot Water System: Hot Water System Designing, Estimating Hot WaterDemand, Calculating the Capacity of Non-Central &Central Water Heaters, Hot Water Pipe Sizing, Hot Water Circulating Pump Design, Up feed System, Down feed System & Combination of Up feed andDown Feed System, Solar Water heater (EnergySaving Calculation).</p> <p>Irrigation System: Garden Water Supply and Fountain, Garden Water Supply and Fountain pipe sizing, Calculation ofstorage tank, Garden water fountain designing &pump selection</p> <p>Drainage System: Soil and Waste water drain calculation in buildingvertical stack, Branch drain / Discharge pipe,horizontal drain, Fixture unit rating, Maximumnumber of discharge unit allowed in stack, Design ofhorizontal drains by discharge unit method(DFU),Invert level & Slope calculation, Sump Pit Sizing,Submersible Sump Pump Sizing, Design of Septic tank, Soak away pits, Dispersion trenches, Oil andGrease Interceptor Designing, Designing of commonappurtenances, Inspection Chambers and Junctionmanholes, External foul water drainage for building.</p> <p>Storm water System: Designing of Storm water Drainage system inbuilding, Sizing of Rain Water Gutters, External Storm water drainage system Designing.</p>
UNIT - III	Water Balancing Calculation
	Water Balancing Calculation. WTP(Water Treatment Plant), STP(Sewage Treatment Plant), Green Building (Water Saving Calculation), Plumbing Designing for High Rise Building, PRV Calculations
UNIT - IV	Tendering Requirements
	Understanding the tendering requirements, Quantity take off, Preparing Inquiry for Suppliers & Finalizing the suppliers, Final Billing & Quotations finalization
UNIT - V	Preparation of purchase orders
	Preparation of purchase orders, Quotation Evaluation Sheet

UNIT - VI	Plumbing Design Drawing and site Installation
	Representation of Concepts Design Drawing, Design Drawing & Shop Drawing, Location maps, Site Plan, Plan of Roof, Floor plan of the building, Enlarge floor plan of toilet kitchen, Plan elevation & cross section of structures including reinforcement details, Detailing of Plumbing services and preparing plumbing drawing, Isometric Drawings, Riser Diagram, Site Installation Procedure :Testing, Adjusting, Balancing Concept & Process. Installation & Inspection. Safety Measures. Pressure Testing. Testing & Commissioning. Tracking List.
Term Work: The term work shall consist of File and drawing containing record of (any 6) exercises out of which Term work No 6 and 7 are compulsory and project, listed below.	
1. Introduction of available codes in plumbing.	
2. Report on necessity of traps, intercepts and vents	
3. Roles of plumbing contractor and plumbing consultants	
4. Report on Plumbing fixtures and fittings and explain any ten.	
5. Report on materials for water supply and drainage	
6. Detailed hydraulic design for plumbing of G+1 Bungalow	
7. Design solar water piping for G+1 Bungalow	
8. Detailed Plumbing design for high rise structure	
9. Drafting purchase orders for Plumbing Project	
10. Project 1: This syllabus will followed by a live project and a 2 Days Workshop on project implementation OR Project 1: Site Visit and report on site visit	
11. Project 2 :Plumbing Design Drawing and site Installation For a G+1 Bungalow	
Text Books	
1. “Plumbing Engineering, Theory and Practice” by Subhash Patil. SEEMA Publishers Mumbai	
2. “ Plumbing Engineering” by Deolalikar	
Reference Books:	
1. “Plumbing, Sanitation and Domestic Engineering” Volume – 1to 4 by G. S. Williams, Mc Graw Hill	
2. “Plumbing, Sanitation and Domestic Engineering, Data Sheets & Wall Charts” by G. S. Williams, Mc Graw Hill	
3. Codes -- Uniform Plumbing Code-India	

Programme: B. Tech. (Civil) Sem – IV 2021
Course: CONSTRUCTION PRACTICES IN CIVIL ENGINEERING

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDITS ALLOTTED</u>
Practical: 04 Hrs/Week	Term Work –50 marks	Term Work:02

Course Pre-requisites:

The Student Should have knowledge of

1.	Fundamental of Civil engineering.
2.	Building Construction
3.	Engineering mathematics.
4.	Concrete Technology
5.	Building Planning, Designing and Bylaws

Course Objective

1.	To make students understand Civil Engineering Practices.

Course Outcomes

The students will be able to

1.	setout of foundation for buildings.
2.	carry out testing of construction materials
3.	manage inventory on site.
4.	maintain quality control on site.
5.	work as a site engineer

List of Practical (Any 15)

1	Testing of concrete cubes of different grades.
2	Slump test on concrete and effect of plasticizers.
3	Study of reinforcement and its bending for different structural members.
4	Study of various of drawings required on construction sites (Compulsory)
5	Setting out and layout of building foundation.

6	Study of formwork& scaffolding. (Compulsory)
7	Construction of different types of brick masonry bonds, study of recent types of bricks and blocks (Compulsory)
8	Study of plastering & pointing. (Compulsory)
9	Study of different types of tiles. (Compulsory)
10	Introduction - Water supply & sanitary fittings and appliances (Compulsory)
11	Concealed construction practices.
12	Types of paints. (Compulsory)
13	Methods of Waterproofing of toilets & roofs. (Compulsory)
14	Study of Deck Slab
15	Study of stock register format and daily report. (Compulsory)
16	Study of construction of concrete walls
17	Study of precast techniques (Compulsory)
18	Study of Advance Water proofing Techniques
Reference Books:	
1.	A to Z Building Construction by Mantri publication.
2.	My Construction Practices by R.B. Chaphalkar.

Programme: B. Tech (Civil) Sem – IV 2021

Course: Civil Engineering Software III HEC-RAS		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS:
Practical: 04 Hours / Week	Term Work & Oral: 50 Marks	TW & OR:02
Course Pre-requisites: The students should have knowledge of		
1	Basic Knowledge of open channel flow	
2	Direct step method of Gradually Varied flow	
3	HEC-RAS 4.0 and above with PC	
Course Objective:		
	The student should be able to determine flow profiles for given flow conditions	
Course Outcomes: The student will be able to		
1	determine critical depth of flow	
2	determine normal depth of flow	
3	determine depth of flow for uniform flow conditions	
4	determine critical depth of flow in case of confluence of channel.	
5	determine normal depth of flow in case of confluence of channel	
6	determine depth of flow in case of confluence of channel for uniform flow conditions	
Term Work: The term-work shall consist of -		
	1) Analyse a rectangular channel for critical depth.	
	2) Analyse a rectangular channel for normal depth.	
	3) Analyse a trapezoidal channel for critical depth..	
	4) Analyse a trapezoidal channel for uniform depth.	
	5) Analyse a rectangular channel for uniform depth.	
	6) Analyse a trapezoidal channel for normal depth.	
	7) Analyse the flow for uniform depth at a confluence of two channels..	
	8) Analyse the flow for critical depth at a confluence of two channels.	
Oral/Practical: The Oral examination is based on above term work.		

Bharati Vidyapeeth
(Deemed to be University)
Pune, India

College of Engineering, Pune

B.Tech. (Computer Engineering)
Program Curriculum
(2021 Course)

VISION OF UNIVERSITY:

Social Transformation Through Dynamic Education.

MISSION OF UNIVERSITY:

- To make available quality education in different areas of knowledge to the students as per their choice and inclination
- To offer education to the students in a conducive ambience created by enriched infrastructure! and academic facilities in its campuses.
- To bring education within the reach of rural, tribal and girl students by providing them substantive fee concessions and subsidized hostel and mess facilities
- To make available quality education to the students of rural, tribal, and other deprived sections of the population

VISION OF THE INSTITUTE:

To be World Class Institute for Social Transformation Through Dynamic Education.

MISSION OF THE INSTITUTE:

- To provide quality technical education with advanced equipment, qualified faculty members, infrastructure to meet needs of profession and society.
- To provide an environment conducive to innovation, creativity, research, and entrepreneurial leadership.
- To practice and promote professional ethics, transparency and accountability for social community, economic and environmental conditions.

VISION OF THE DEPARTMENT

To pursue and excel in the endeavour for creating globally recognised Computer Engineers through Quality education.

MISSION OF THE DEPARTMENT

- To impart engineering knowledge and skills conforming to a dynamic curriculum.
- To develop professional, entrepreneurial & research competencies encompassing continuous intellectual growth.
- To produce qualified graduates exhibiting societal and ethical responsibilities in working environment.

PROGRAM EDUCATIONAL OBJECTIVES

The students of B.TECH. (COMPUTER ENGINEERING), after graduating with Bachelor of Technology degree in Computer Engineering, will able to

1. Demonstrate technical and professional competencies by applying engineering fundamentals, computing principles and technologies.
2. Learn, Practice, and grow as skilled professionals/entrepreneur/researchers adapting to the evolving computing landscape.
3. Demonstrate professional attitude, ethics, understanding of social context and interpersonal skills leading to a successful career.

PROGRAM SPECIFIC OUTCOMES

1. To design, develop and implement computer programs on hardware towards solving problems.
2. To employ expertise and ethical practise through continuing intellectual growth and adapting to the working environment.

PROGRAM OUTCOMES

- a. Apply the knowledge of mathematics, science, engineering fundamentals, and computing for the solution of complex engineering problems.
- b. Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using computer engineering foundations, principles, and technologies.
- c. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.
- d. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- f. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues, and the consequent responsibilities relevant to the professional engineering practice.
- g. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and the need for sustainable development.
- h. Apply ethical principles while committed to professional responsibilities and norms of the engineering practice.
- i. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
- j. Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- k. Apply the engineering and management principles to one's work, as a member and leader in a team.
- l. Recognise the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

CORELATION BETWEEN GRADUATE ATTRIBUTES AND PROGRAMME OUTCOMES

Graduate Attributes/ Programme Outcomes	a	b	c	d	e	f	g	h	i	j	k	l
Engineering Knowledge	✓											
Problem Analysis		✓										
Design/Development of Solutions			✓									
Conduct Investigations of Complex Problems				✓								
Modern Tool Usage					✓							
The Engineer and Society						✓						
Environment and Sustainability							✓					
Ethics								✓				
Individual and Teamwork									✓			
Communication										✓		
Project Management and Finance											✓	
Life-Long Learning												✓

List of MOOCs

1. Scalable Data Science from IITKGP
2. Technology Forecasting for strategic decision making
3. Hardware modelling using Verilog from IITKGP
4. Information Security and Cyber Forensics from Devi Ahilya Viswavidyalaya, Indore
5. Introduction to Industry 4.0 and Industrial Internet of Things from IITKGP
6. Components and Applications of Internet of Things from Indian Institute of Technology Patna
7. Data Science for Engineers from IITM
8. Innovation and Information Technology Management from Indian Institute of Management Bangalore
9. Reinforcement Learning from IITM
10. Deep Learning – IIT Ropar from Indian Institute of Technology, Ropar
11. Software Testing from IITB
12. Foundations of Cryptography from Indian Institute of Technology Bangalore
13. Social Networks from IIT Ropar
14. Introduction to Parallel Programming in OpenMP from Indian Institute of Technology Delhi
15. Artificial Intelligence Search Methods for Problem Solving from IITM
16. User-centric Computing for Human-Computer Interaction from Indian Institute of Technology Guwahati
17. C Programming and Assembly Language from IITM
18. Evolutionary Computation for Single and Multi-Objective Optimization from Indian Institute of Technology Guwahati
19. Multi-Core Computer Architecture – Storage and Interconnects from IITG
20. Advanced Computer Architecture from Indian Institute of Technology Guwahati
21. Parameterized Algorithms from IITM
22. Randomized Methods in Complexity from Indian Institute of Technology Kanpur
23. Deep Learning for Computer Vision from IIT Hyderabad
24. Advanced Graph Theory from Indian Institute of Technology Kanpur
25. Algorithms for protein modelling and engineering from IITKGP
26. Tools in Scientific Computing from Indian Institute of Technology, Kharagpur
27. Natural Language Processing from IITKGP
28. Traditional and Non-Traditional Optimization Tools from Indian Institute of Technology, Kharagpur
29. Introduction to Quantum Computing: Quantum Algorithms and Qiskit from IBM and IITM
30. Fuzzy Logic and Neural Networks from Indian Institute of Technology, Kharagpur
31. Reinforcement Learning from Indian Institute of Technology Madras
32. GPU Architectures and Programming from Indian Institute of Technology, Kharagpur

33. Information Security - Secure Systems Engineering from Indian Institute of Technology Madras
34. AI: Constraint Satisfaction from Indian Institute of Technology Madras
35. Real Time Operating System from Indian Institute of Technology, Kharagpur
36. Management Information System from Indian Institute of Technology, Kharagpur

B.TECH. (Computer Engineering)

SEMESTER - I

COURSE SYLLABUS

Mathematics for Computing - I

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	03 Hours/Week	University Examination	60 Marks	Lecture	03
Tutorial:	01 Hours/Week	Internal Assessment	40 Marks	Tutorial	01
		Total	100 Marks	Total	04

Course Objectives:

- Linear equations and its basis and dimension.
- Linear mapping and its matrix representation.
- Orthogonalization and diagonalization of matrices.

Prerequisite:

Knowledge of algebra of matrices and determinants

Course Outcomes: On completion of the course, students will have the ability to:

1. Apply rank of matrix in solving system of equations.
2. Identify basis and dimension of matrix.
3. Solve problems on kernel and image of linear transformation.
4. Apply linear operator to represent matrix.
5. Evaluate orthogonalization of inner product space.
6. Use methods to find eigen values and eigen vectors.

Unit I System of Linear Equation 06 Hours

Vectors and linear combinations, Rank of a matrix, Gaussian elimination, LU Decomposition, Solving Systems of Linear Equations using the tools of Matrices.

Unit II Vector Spaces 06 Hours

Definition, linear combination, spanning sets subspaces, linear dependence and independence, basis and dimension, rank of matrix.

Unit III Linear Mapping 06 Hours

Linear mapping, Kernel and image of linear mapping, rank and nullity of a linear mapping, singular and non-singular linear mapping.

Unit IV Linear mapping and matrices 06 Hours

Matrix representation of linear operator, change of base, similarity matrices

Unit V Inner Product space and orthogonalization 06 Hours

Inner product space, Cauchy-schwarz equality, Orthogonality, Orthogonal sets and bases, projections, Gramschidt orthogonalization, orthogonal and positive definite matrices, matrix representation of inner product

Unit VI Diagonalisation: Eigen values and eigen vectors 06 Hours

Characteristic polynomial, Cayley-Hamilton theorem, eigen values and eigen vectors, properties.

Textbooks

1. P. N. Wartikar and J. N. Wartikar, Applied Mathematics (Volumes I and II), 7th Ed., Pune Vidyarthi GrihaPrakashan, Pune, 2013.
2. B. S. Grewal, Higher Engineering Mathematics, 42nd Ed., Khanna Publication, Delhi

3. B.V. Ramana, Higher Engineering Mathematics, 6th Ed., Tata McGraw-Hill, New Delhi, 2008.
4. Erwin Kreyszig, Advanced Engineering Mathematics, 10th Ed., John Wiley & Sons, Inc., 2015.

Reference Books

1. Peter V. O'Neil, Advanced Engineering Mathematics, 7th Ed., Cengage Learning, 2012.
2. Michael Greenberg, Advanced Engineering Mathematics, 2nd Ed., Pearson Education, 1998.

Project Based Learning - Provisional List of Projects

Students are expected prepare report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code for it, wherever applicable.

1. Gauss Elimination method.
2. LU-decomposition method
3. Rank of matrix
4. Linear combination
5. Basis and dimension
6. Spanning sets
7. Kernel and image of linear transformation
8. Rank-nullity theorem
9. Non-singular linear mapping
10. Linear operator
11. Similarity matrices
12. Change of base
13. Cauchy Schwarz equality
14. Orthogonality
15. Gram Schmidt Orthogonalization
16. Matrix representation of matrix
17. Cayley-Hamilton theorem
18. Eigen values and Eigen vectors

(Note: - *Students in a group of 3 to 4 shall complete any one project from the above list)

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit - I, Unit - II, Unit - III
Unit - IV, Unit - V, Unit - VI

Organic and Electrochemistry

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	03 Hours/Week	University Examination	60 Marks	Lecture	03
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term work	25 Marks	Practical	01
		Total	125 Marks	Total	04

Course Objectives:

The student should acquire the knowledge of

- To develop the interest among the students regarding chemistry and their applications in engineering.
- To develop confidence among students about chemistry, how the knowledge of chemistry is applied in technological field.
- The student should understand the concepts of chemistry to lay the groundwork for subsequent studies in the computing field.

Prerequisite:

Basic Chemistry

Course Outcomes: On completion of the course, students will have the ability to:

1. Differentiate between ionic and covalent bonding and classify the bonding in a compound as ionic or covalent.
2. Develop a working knowledge of the twelve fundamental principles of green chemistry and what it is all about.
3. Apply standard reduction potential data to determine the relative strength of oxidizing/reducing agents
4. Demonstrate the knowledge of polymer materials for futuristic engineering applications
5. Describe the properties of materials and Application of semiconductor electronics
6. Describe the manufacturing and refining process of fuels and lubricants

Unit I Chemical Bonding in Molecules

06 Hours

MO theory, Structure, bonding and energy levels of bonding and shapes of many atom molecules, Coordination Chemistry, Electronic spectra and magnetic properties of complexes with relevance to bio-inorganic chemistry, organometallic chemistry.

Unit II Green Chemistry

06 Hours

Introduction, Twelve Principles of Green chemistry, numerical on atom economy, synthesis, adipic acid and indigo. Organic dye- Traditional methods of organic dye. Green solvents (ionic liquid supercritical CO₂), and products from natural materials.

Unit III Electrochemistry

06 Hours

Electrochemical cells and Galvanic cells, EMF of a cell, Single electrode potential, Nernst equation, Electrochemical series, Types of electrodes, Reference electrodes, pH, pOH, acids and basis, Fuel cells, Construction and Working of - Acid and Alkaline Storage Battery, Dry Cell, Ni-Cd Batteries, Li-Ion Batteries, Li-Po Batteries.

Unit IV Polymers for The Electronics Industry **06 Hours**

Polymers, Conduction mechanism, Preparation of conductive polymers, Polyacetylene, Poly (p- phenylene), Polyheterocyclic systems, Polyaniline Poly (Phenylene sulphide), Poly (1,6-heptadiyne), Applications, Photonic applications.

Unit V Semi-Conductors, Insulators and Superconductors **06 Hours**

Semi conductivity in non-elemental materials, Preparations of semiconductors, Chalcogen photoconductors, photocopying process Introduction to Superconductors, types of Superconductors, Properties of superconductors, Applications of Superconductors, Electrical insulators, or Dielectrics.

Unit VI Fuels & Lubricants **06 Hours**

Classification of fuels, Calorific values, Comparison between solid, liquid, and gaseous fuels, Theoretical calculation of calorific value of a fuel, Selection of coal, analysis of coal, Natural Gas, Producer gas, water gas, Lubricants, Mechanism of lubrication, classification of lubricants, lubricating oils, Solid lubricants, Greases or Semi-Solid lubricants, Synthetic lubricants, Lubricating emulsions, Properties of lubricating oils.

Textbooks

1. Polymer Science and technology (2nd Edition), P. Ghosh, Tata McGRAW Hill, 2008.
2. Polymers: Chemistry & Physics of Modern Materials (2nd edition) J.M.G.Cowie, Blackie Academic & Professional, 1994.
3. A Textbook of Engineering Chemistry, Shashi Chawla, Dhanpat Rai & Co, 2004
4. Engineering Chemistry (16th Edition) Jain, Jain, Dhanpat Rai Publishing Company, 2013.

Reference Books

1. Inorganic Chemistry (4th edition), D. F. Shriver and P. W. Atkins, Oxford University, Oxford, 2006.
2. Reactions, Rearrangements and Reagents (4th edition), S. N. Sanyal, Bharti Bhawan (P & D), 2003.
3. Applications of Absorption Spectroscopy of Organic Compounds (4th edition), John R. Dyer, Prentice Hall of India Pvt. Ltd., 1978.

List of Assignments

Six assignments to be given by the course coordinator (Theory)-one from each unit/one mini project with report-students can work in group of 4 Maximum

List of Laboratory Exercises

1. Determination of Hardness of water sample by EDTA method.
2. Determination of Chloride content in water sample by precipitation titration method.
3. To determine strength of acid by pH - metric Titration
4. To measure the Conductance of a solution by conductometric titration
5. Measurement of Surface tension of a given liquid by Stalagmometer.
6. Determination of viscosity of a given liquid by Ostwald's Viscometer.
7. Determination of Saponification value of an oil sample.
8. To determine alkalinity water sample
9. Determination of Hardness of water sample by EDTA method.
10. Determination of Chloride content in water sample by precipitation titration method

11. To determine strength of acid by pH – metric Titration
12. To Prepare Phenol formaldehyde/Urea formaldehyde resin
13. To study set up of Daniel cell.

Project Based Learning - Provisional List of Projects

1. Green Chemistry approach to Nano-Structured Electronics
2. Assessment of Environmentally Benign Photopolymers as an Alternative to the Use of Formaldehyde Based Textile Finishing Agents
3. Solvent-Free Synthesis of Phthalocyanines
4. Synthesis of Conjugated Polymers and Molecules Using Sugar Reagents and Solventless Reactions
5. Environmentally Benign Control of Polymer Solubility: Photoresist Materials Using DNA Mimics
6. Enzymatic Synthesis of Non-Formaldehyde Phenolic Polymers: Control of Hydrogen Peroxide Concentration.
7. The materials chemistry and electrochemistry of lithium and sodium-ion batteries
8. Electroplating- the principles, how different metals can be used and the practical applications
9. Electroplating, Metal Polishing, Anodizing, Phosphating Metal Finishing and Powder Coating Projects.
10. To determine calorific value of a fuel by any suitable method
11. To study various properties of lubricants
12. To study various types of lubricants and its properties.
13. To determine quality of coal sample & its analysis.
14. To study mechanism of lubrication.
15. To study coal analysis & its significance.

Note: - Students in a group of 3 to 4 shall complete any one project from the above list)

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Digital Electronics

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	04 Hours/Week	University Examination	60 Marks	Lecture	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term work	25 Marks	Practical	01
		Total	125 Marks	Total	05

Course Objectives:

- To present the Digital fundamentals, Boolean algebra, and its applications in digital systems
- To familiarize with the design of various combinational digital circuits using logic gates
- To introduce the analysis and design procedures for synchronous and asynchronous sequential circuits
- To understand the various semiconductor memories and related technology

Prerequisite:

Mathematics and Elementary Physics

Course Outcomes: On completion of the course, students will have the ability to:

1. Comprehend different number systems and Boolean algebraic principles.
2. Apply logic design minimization techniques to simplify Boolean expressions
3. Analyse and design combinational logic circuits.
4. Demonstrate the operations of systems with sequential circuit elements.
5. Comprehend characteristics and structure of Programmable Logic Devices and Memory.
6. Draw ASM charts for sequential circuit design.

Unit I Digital systems

08 Hours

Number Systems: Introduction to Number Systems-Decimal, Binary, Octal, Hexadecimal, Conversion of number system, Representation of Negative Numbers, 1's complement and 2's complement.

Binary Arithmetic: Binary addition, Binary subtraction, Subtraction using 1's complement and 2's complement, Binary multiplication, and division.

Digital Codes: BCD code, Excess-3 code, Gray code and ASCII code.

Logic Gates: Logical Operators, Logic Gates-Basic Gates, Universal Gates, realization of other gates using universal gates.

Unit II Logic Design Minimization

08 Hours

Boolean algebra, De Morgan's Theorems, Standard representation of logic functions, Sum of Product (SOP) form, Product of Sum (POS) form, Simplification of logical functions, Minimization of SOP and POS forms using Karnaugh-Maps up to 4 variables Don't care condition, Quine-McCluskey Method.

Unit III Combinational Circuits

08 Hours

Binary and BCD arithmetic, Half Adder, Full Adder, Half Subtractor, Full Subtractor, Binary Adder (IC 7483), BCD adder, Code converters

Multiplexers, De multiplexer, Decoder (IC 74138) and their use in combinational logic design, Priority Encoder, Digital Comparators, Parity generators and Checker (IC 74180), ALU.

Unit IV Sequential Circuits **08 Hours**

Flip-flop: SR, JK, D, T flip flops, Truth Tables and Excitation tables, Conversion from one type to another type of Flip Flop.

Registers: Buffer register, Shift register.

Counters: Asynchronous counters, Synchronous counters, Modulus counters

Unit V FSM and ASM charts **08 Hours**

Introduction to FSM, Moore and Mealy State machine, state machine as a sequential controller. Design of state machines: state table, state assignment, transition/excitation table, excitation maps and equations, logic realization, ASM chart notations, ASM block, State diagram, ASM chart for sequential circuits, Multiplexer Controller.

Unit VI Memory and PLD: **08 Hours**

Semiconductor memories: memory organization, memory expansion, Classification and characteristics of memories, RAM, ROM, EPROM, EEPROM, NVRAM, SRAM, DRAM.

Programmable logic devices: Study of PROM, PAL, PLAs. Architecture of PLA, designing combinational circuits using PLDs.

Textbooks

1. M. Morris Mano and M. D. Ciletti, Digital Design, Pearson Education.
2. RP Jain, Modern Digital Electronics, Tata McGraw Hill Publication.
3. F.J. Hill and G.L. Peterson, Switching Theory and Logic Design, John Wiley
4. J.F.Wakerly "Digital Design: Principles and Practices", 3rd edition, 4th reprint, Pearson Education, 2

Reference Books

1. David J. Comer, Digital Logic & State Machine Design, Oxford University Press.
2. Digital Integrated Electronics- H.Taub & D.Shilling, Mc Graw Hill.

List of Assignments

Six assignments to be given by the course coordinator (Theory)-one from each unit

List of Laboratory Exercises

1. Verify truth tables of logic gates. (AND, OR, XOR, NOT, NAND, NOR). Simplify the given Boolean expression using K-map and implement using gates
2. State De-Morgan's theorem and write Boolean laws. Implement NAND and NOR as Universal gates.
3. Design (truth table, K-map) and implement half and full adder/ subtractor.
4. Design (truth table, K-map) and implement 4-bit BCD to Excess-3 Code converters.
5. Study of magnitude Comparator using IC 7485
6. Implement of logic functions using multiplexer IC 74151 (Verification, cascading & logic function implementation)
7. Implement logic functions using 3:8 decoder IC 74138.
8. Verify truth tables of different types of flip flops.
9. Design (State diagram, state table & K map) and implement 3 bits Up and Down Asynchronous and Synchronous Counter using JK flip-flop
10. Design and implement modulo 'n' counter with IC 7490.

Project Based Learning - Provisional List of Projects

1. Survey report of basic gates ICs 7432, 4011, 4050, 4070,4071,40106
2. Implement combinational logic Circuit of given Boolean Equation.
3. Implement Half Adder and Half Subtractor.

4. Implement Full Adder using two Half Adders
5. Build 4-bit parallel Adder / Subtractor using IC.
6. Build Code Converters: Binary to Gray
7. Build Code Converters: Excess 3 to Binary)
8. Implement Two Bit Magnitude Comparator using IC 7485
9. Implement given combinational logic using MUX
10. Implement 7 segment decoder driver using IC 7447.
11. Build a Decade counter and Up-Down Counter.
12. Build a Shift Registers: SISO and SIPO
13. Implement the Johnson Counter and Ring Counter.
14. Survey Report on Static I/O and transfer Characteristic of TTL and CMOS.
15. Implement given Boolean Function using PLA. (Function and Equation will be given by Subject Teacher)

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Classic Data Structures

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	04 Hours/Week	University Examination	60 Marks	Lecture	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term Work & Practical	50 Marks	Practical	01
		Total	150 Marks	Total	05

Course Objectives:

The course focuses on enabling students to understand how data is stored in computer programs using data structures and facilitate them to use and build fundamental data structures.

Prerequisite:

Programming Basics

Course Outcomes: On completion of the course, students will have the ability to:

1. Compare and contrast the interfaces and internal representation of several linear abstract data types.
2. Solve given problems using array
3. Implement Stacks in a high-level programming language
4. Use and Implement Queues in a high-level programming language
5. Use and Implement lists in a high-level programming language
6. Demonstrate the ability to analyse, design, apply and use data structures and algorithms to solve engineering problems.

Unit I Introduction to Data structures & Arrays

08 Hours

Need of Data structure, Classification of Data Structures, Static Data Organization, Operations on Data Structures, Abstract data Types (ADT).

Arrays: Introduction, Array Operations, representation of Arrays in Memory, Array with Functions, One- & Two-dimensional array in function, Implementation of One- & Two-Dimensional Arrays in Memory.

Applications: string handling, polynomial equation solving, sparse matrix multiplication, tic-tac-toe, and data visualization

Unit II Stacks

08 Hours

Stack Definition and Structure, Operations on Stacks – create stack, Push stack, Pop stack, Stack top, Empty Stack, stack count, Destroy Stack, Array and Linked Representation, Types of Notations – Prefix, Infix and Postfix, Applications of Stack: Reversing Data, Converts Decimal to Binary, Parsing, Postponement, expression Conversion, and evaluation.

Unit III Queue

08 Hours

Queue: Introduction, Definition, ADT for queue, Storage Methods, Queue Operations, Enqueue, Dequeue, Queue front, Queue rear, Queue Example, Create Queue, priority Queue, Circular Queue.

Application of Queue: Categorising Data, Queue Simulation.

Unit IV Linear Lists

08 Hours

Introduction, singly linked list, Circularly Linked List, Doubly Linked lists, Basic operations, - Insertion, Deletion, retrieval, traversal, create List, insert node, delete node, List Search, Empty list, Destroy list.

Unit V Linked Stacks and Linked Queues**08 Hours**

Introduction, Operations on Linked stacks and Linked Queues, Dynamic Memory management and Linked Stacks, Implementation of Linked Representations.

Unit VI Overview of Real time Applications of Linear Data Structures**08 Hours**

Stacks - Balancing of Symbols, Infix to Postfix, Evaluation of Postfix expression, Implementing Function Calls, Finding of Spans, undo sequence in text editor, Matching Tags in HTML and XML.

Linked List - Implement Stack using Linked List.

Queues - Scheduling Jobs, Simulation of real-world queues such as ticket counter or first come first served scenarios, Asynchronous Data Transfer.

Textbooks

3. Mayank Patel, Data Structure and Algorithm With C, Edu creation Publishing, 2018
4. Thomas H. Cormen, Charles E Leiserson, Ronald L Rivest, Clifford Stein, Introduction to Algorithms, MIT Press, 2001.

List of Assignments

1. Show how you can efficiently implement one stack using two queues.
2. What is the most appropriate data structure to print elements of queue in reverse order?
3. You are given a pointer to the first element of a linked list L. There are two possibilities for L, it either ends (snake) or its last element points back to one of the earlier elements in the list (snail). Give an algorithm that tests whether a given list L is a snake or a snail.
4. Check whether the given linked list is either NULL-terminated or ends in a cycle (cyclic).
5. Find nth node from the end of a Linked List
6. Simulate real world queues such as ticket counter.

List of Laboratory Exercises

1. Study assignment on programming IDE Tools
2. Write a program to implement one dimensional array.
3. Write a program to design tic-tac-toe game
4. Write a program to perform basic operation on stack.
5. Write a program to convert and evaluate polish notations.
6. Write a program to perform basic operation on stack.
7. Write a program to implement Priority queue & Double Ended Queue.
8. Write a program to perform basic operation on circular queue.
9. Write a program to implement hashing technique.

10. Write a program to implement searching and sorting techniques

Project Based Learning - Provisional List of Projects

1. Expression Evaluation
2. Traffic Management System
3. Library Management System
4. Employee Record System
5. Dictionary
6. Calendar Application
7. Medical Store Management System
8. Cricket Score Sheet
9. Bank Management System
10. Telephone directory

(Note:- *Students in a group of 3 to 4 shall complete any one project from the above list)

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Computational Thinking and Programming Concepts

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture	04 Hours/Week	University Examination	60 Marks	Lecture	04
Practical	02 Hours/Week	Internal Assessment	40 Marks		
		Term Work & Practical	100 Marks	Practical	01
		Total	200 Marks	Total	05

Course Objective

The aim of this course is to make students to think in a computational manner to a point where they can derive simple algorithms and code the programs to solve some basic problems in their domain of studies.

Prerequisite:

-

Course Outcomes: On completion of the course, students will have the ability to:

1. Formulate a problem and express its solution in such a way that a computer can effectively carry it out.
2. Apply the Computational Thinking (CT) concepts on case studies/problem-based scenarios through hands-on practice of the CT processes.
3. Write algorithm and pseudo code for the identified strategy
4. Use Abstraction and Modelling.
5. Solve given problems through scratch based graphical programming tool
6. Demonstrate logical and algorithmic thinking.

Unit I Overview of Problem Solving

08 Hours

Problem Solving Concepts: Formal Problem Definition, Challenges in Problem Solving, Problem solving with Computers, Framework for Problem Solving. Introduction to Problem solving tools: Flowcharts, algorithm, pseudocode, Data structures.

Unit II Logical and Algorithmic Thinking

08 Hours

Inductive Vs Deductive arguments, Logic, Boolean Logic, Symbolic Logic, Logical operators and their symbols, Propositional Logic
Algorithmic Thinking: Algorithms, Intuition vs precision, defining algorithms, Algorithm constructs, Controlling algorithm execution, Complex conditionals.

Unit III Overview of Computational Thinking

08 Hours

About Computational Thinking, Data Representation and Abstraction - Problem formulation, Devising a Solution, Decomposition, Pattern recognition, Generalisation, Evaluation.

Unit IV Overview of Programming Concepts

08 Hours

Scratch Programming - Working of Scratch, Scratch tool, Motions and Drawing, Looks and Sound, Procedures, Variables, Making decisions, Loops, String Processing, Lists.
Introduction to higher level programming languages like C, Python, C++ and its constructs.

Unit V Limits of Computation

08 Hours

Capacity Measurement in Computers, Estimate of Physical limitations, Benchmarks, Counting the performance, impractical algorithms, Metaphysical limitations, Impossible algorithms.

Unit VI Computational Thinking in Software Development

08 Hours

Effective Building Blocks: Basic Algorithms Constructs, Program State, Code Organization, Using Abstractions and Patterns, Effective Modelling: Objectives, Entities, Relationship, Processes, Usage and General Advice. Testing and Evaluating Programs, Anticipating Bugs, Syntax vs semantic errors, Defensive programming, Verification and validation, Testing the Parts, Testing the Whole, Debugging Case Study: Home Automation System

Textbooks

1. Computational Thinking, By Peter J. Denning and Matti Tedre, The MIT Press Essential Knowledge series
2. Computational Thinking and Coding for Every Student, Jane Krauss, Kiki Prottzman by Corwin Publishers
3. Computational Thinking for the modern problem solver, David D riley, Kenny A Hunt, CRC Press, 2014
4. Computational thinking a beginner's guide to problem solving and programming, Karl Beecher, BCS Learning & Development, 2017

Reference Books

1. How to Solve it by Computer by R. G. Dromey, 1e, Pearson Education.
2. Learn to program with Scratch, Majed Marji, no starch press, 2014
3. Let Us C, Yashavant Kanetkar, Infinity Science Press, 2008
4. Let Us C++, Yashavant Kanetkar, BPB Publications, 1999
5. Introduction to Computation and Programming Using Python, Mit Press, John Guttag, 2016

List of Assignments

1. The Following problems can be solved using SCRATCH Tool: Create a function block that calculates the force needed to accelerate 2,000 kg car 3 m/s²
2. Write different procedures to draw each letter of your name. Name each procedure for the letter that it draws. Then write a script that calls these procedures so you can draw your name on the Stage
3. Write a program that prompts the user to enter five test scores between 1 and 10. The program will then count the number of scores that are greater than 7
4. The Pythagorean theorem states that if a and b are the lengths of the legs of a right triangle and c is the length of the hypotenuse (the longest side), then $a^2 + b^2 = c^2$. Write a program that gets three numbers from the user and determines whether they could represent the sides of a right triangle.
5. Create two lists for storing the items sold in a grocery store and their corresponding prices. Write a program that asks the user to enter an item's name and then displays that item's price, if it is found in the list.
6. Write a program that prompts the user to enter the highest and lowest temperatures for the 12 months of a year. Store the input values in two lists.

List of Laboratory Exercises

1. WAP to SWAP (interchange) 2 numbers without using third variable
2. WAP to find the sum and average of values appearing at the positions divisible by 3 in the given sequence of n values
3. WAP that receives any year from the keyboard and uses a function to determine whether the year is a leap year or not.
4. WAP that uses a function that converts a lowercase character to its uppercase
5. WAP to read n numbers and count even and odd numbers.

6. WAP that uses a recursive function to convert given decimal number into its binary equivalent.
7. WAP to use the suitable function to obtain the prime factors recursively.
8. WAP that uses a function that prints the nth element of Fibonacci series using recursion method.
9. WAP that uses a function to calculate the sum of n odd integers.
10. WAP that uses a function power that calculates the power of a given number.

Project Based Learning - Provisional List of Projects

1. Identify any patterns in the problem.
2. Build Model for various Mathematical Formulas
3. Study the friendship link of any social networking site.
4. Using primary data source study, the voting patterns of our country.
5. Analyse how algorithms effect social media feeds
6. Visualize and Interpret performance of Athlete for any Sport
7. Modularize a given problem into sub problems.
8. Analyse the next moves of a player for Game of Chess
9. Devise a strategy to compute Result of a particular Class
10. Library Management System

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Programming Technologies and Tools Laboratory - I

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Practical:	04 Hours/Week	Term Work & Practical	50 Marks	Practical	02
		Total	50 Marks	Total	02

Course Objective

The course is designed to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs, applications in C. Also, by learning the basic programming constructs they can easily switch over to any other language in future.

Prerequisite:

-

Course Outcomes: On completion of the course, students will have the ability to:

1. Demonstrate the knowledge of C programming Concepts
2. Develop C programs
3. Define Data types and use them in data processing programs.
4. Trace the execution of programs written in C language
5. Write functions and implement.
6. Analyse and interpret the concept of declarations, initialization, operations on pointers and their usage.

Unit I Basics and Operators

08 Hours

General problem-solving strategies, Top-down design, Introduction to program Planning tools- algorithm, flowcharts, and pseudo codes. Introduction to Logic Structures: Sequential structure, Decision Structure, Loop Structure. Features of C, basic concepts, structure of C program, program, declarations, variables, data types, expressions, operator's assignment, arithmetic, relational, logical, increment and decrement, precedence of operators, type conversions, scanf and printf functions

Unit II Control structures

08 Hours

if-else, nested if-else, cascaded if-else and switch statement. C Conditional control structures: for, while do-while Unconditional control structures: break, continue, goto statement.

Unit III Arrays and strings

08 Hours

Declaration initialization of one-dimensional Array, two-dimensional array, accessing array elements, Character Array/String, Character - Handling Library Functions, Standard Input/Output Library Functions for string.

Unit IV Functions and structures

08 Hours

What is a Function, Benefits of a Function, Function Terminology, Array of Structures, How does Function Works , Scope and Lifetime of Variables in function ,Storage Classes of Variables , Call by value and call by reference ,Recursion ,Overview of Structures , Defining and Using a Structure , Structures within a Structure

Unit V Pointers

08 Hours

Declaring and Initializing Pointers, Function and Pointer Parameters, Pointer Arithmetic, Pointer and Arrays, Two Dimensional Arrays and Pointers.

Unit VI Files**08 Hours**

FILE, Opening and Closing of Files, Writing and Reading in Text Format, Writing and Reading in Binary Format, Command Line Arguments

Textbooks

1. Let Us C by Yashavant Kanetkar, 13e, BPB Publication.
2. Brain W.Kernighan & Dennis Ritchie, C Programming Language, 2nd edition, PHI
3. E.Balaguruswamy, Programming in ANSI C 5th Edition McGraw-Hill
4. How to Solve it by Computer by R. G. Dromey, 1e, Pearson Education.

Reference Books

1. C: The Complete Reference by Herbert Schildt.

List of Laboratory Exercises

1. Write a program to read a four-digit integer and print the sum of its digits.
2. Use recursive function calls to evaluate $F(x) = x - x^3 / 3! + x^5 / 5! - x^7 / 7! + \dots$
3. WAP to print the table of n.
4. Write a 'C' Program to evaluate Ackerman Function
5. Given a list of marks ranging from 0 to 100, write a program to compute and print the number of students:
 - (a) who have obtained more than 80 marks,
 - (b) who have obtained more than 60 marks,
 - (c) who have obtained more than 40 marks,
 - (d) who have obtained 40 or less marks,
 - (e) in the range 81 to 100,
 - (f) in the range 61 to 80,
 - (g) in the range 41 to 60, and
 - (h) in the range 0 to 40.
6. Make a Book Shop Inventory. The list should include details such as author, title, price, publisher, stock position. When a particular title and author name is given as input the program should reply whether it is in the list or no. If not, appropriate message should be displayed.
7. Write a program to find the total number of characters in a file.
8. Write a function which takes to integer as argument and return their average in float. WAP to test this function.
9. WAP to read n numbers and count even and odd numbers
10. Write a function which takes to integer as argument and return their sum. WAP to test this function.

Project Based Learning - Provisional List of Projects

1. Hangman Game
2. Modern Periodic Table
3. Pacman Game
4. Personal Diary Management System
5. Phonebook Application
6. Quiz Game
7. School Billing System
8. Snake Game
9. Telecom Billing System
10. Tic-Tac-Toe Game
11. Typing Tutor

B.TECH (Computer Engineering)
SEMESTER - II
COURSE SYLLABUS

Mathematics for Computing - II

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	03 Hours/Week	University Examination	60 Marks	Lecture	03
Tutorial:	01 Hours/Week	Internal Assessment	40 Marks	Tutorial	01
Total			100 Marks	Total	04

Course Objectives:

To equip students with knowledge of:

- Fourier series and integral transforms.
- Multiple integrals and its applications.
- Vector calculus and its applications.

Prerequisite:

The students should have knowledge of vector algebra, derivative, and integration.

Course Outcomes: On completion of the course, students will have the ability to:

1. Use periodic functions as fourier series.
2. Apply methods of finding fourier and Z-transforms.
3. Apply methods of laplace transform of piecewise continuous functions.
4. Identify concepts of double and triple integrals.
5. Apply vector derivative for physical quantities.
6. Evaluate line, surface, and volume integrals.

Unit I Fourier Series

06 Hours

Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis

Unit II Fourier and Z-Transform

06 Hours

Fourier Transform (FT): Complex Exponential Form of Fourier series, Fourier Integral Theorem, Sine & Cosine Integrals, Fourier Transform, Fourier Sine and Cosine Transform and their Inverses. Introductory

Z-Transform (ZT): Definition, Standard Properties, ZT of Standard Sequences and their Inverses. Solution of Simple Difference Equations.

Unit III Laplace Transform and its application

06 Hours

Definition of LT, Inverse LT. Properties & theorems. LT of standard functions. LT of some special functions viz., Periodic, Unit Step, Unit Impulse, ramp, jump, Problems on finding LT & inverse LT. Applications of LT and Inverse LT for solving ordinary differential equations.

Unit IV Multiple Integrals and their Application

06 Hours

Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values, moment of inertia, centre of gravity

Unit V Vector Differential Calculus

06 Hours

Physical interpretation of Vector differentiation, Vector differential operator, Gradient, Divergence and Curl, Directional derivative, Solenoidal, Irrotational and Conservative fields, Scalar potential, Vector identities.

Unit VI Vector Integral Calculus and Applications

06 Hours

Line, Surface, and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence theorem, Stoke's theorem. Applications to problem in engineering.

Textbooks

1. P. N. Wartikar and J. N. Wartikar, Applied Mathematics (Volumes I and II), 7th Ed., Pune Vidyarthi GrihaPrakashan, Pune, 2013.
2. B. S. Grewal, Higher Engineering Mathematics, 42nd Ed., Khanna Publication, Delhi
3. B.V. Ramana, Higher Engineering Mathematics, 6th Ed., Tata McGraw-Hill, New Delhi, 2008.

Reference Books

1. Erwin Kreyszig, Advanced Engineering Mathematics, 10th Ed., John Wiley & Sons, Inc., 2015.
2. Peter V. O'Neil, Advanced Engineering Mathematics, 7th Ed., Cengage Learning, 2012.

List of Assignments

Six assignments to be given by the course coordinator (Theory)-one from each unit

Project Based Learning - Provisional List of Projects

Students are expected prepare report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code for it, wherever applicable.

1. Fourier series
2. Harmonic analysis
3. Fourier transform
4. Z-Transform
5. Laplace transform technique to solve ODE
6. Multiple Integral to evaluate area and volume
7. Directional derivative
8. Divergence and curl
9. Greens theorem
10. Gauss Divergence Theorem
11. Stokes theorem
12. Unit step function
13. Solenoidal and irrotational fields
14. Simple difference equation
15. Periodic functions

Note: - *Students in a group of 3 to 4 shall complete any one project from the above list)

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit - I, Unit - II, Unit - III
Unit - IV, Unit - V, Unit - VI

Physics for Computing Systems

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	03 Hours/Week	University Examination	60 Marks	Lecture	03
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term work	25 Marks	Practical	01
		Total	125 Marks	Total	04

Course Objective

To impart knowledge of basic concepts in physics relevant to engineering applications in a broader sense with a view to lay foundation for the Computer Engineering and Science.

Prerequisite:

Basic understanding of physics and calculus.

Course Outcomes: On completion of the course, students will have the ability to:

1. Interpret the properties of charged particles to develop modern instruments such as electron microscopy.
2. Appraise the wave nature of light and apply it to measure stress, pressure, and dimension etc.
3. Summarise the structure and properties of lasers to their performance and intended applications.
4. Classify the optical fibre, understanding the structure, types, and its applications in the field of communication.
5. Solve quantum physics problems to micro level phenomena and solid-state physics
6. Explain mechanical properties of solid matter and connect to applications in the field of engineering.

Unit I Modern Physics

06 Hours

Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focusing, Electron microscope, Wavelength and resolution, Specimen limitation, Depth of field and focus, Transmission electron microscope (TEM), Scanning electron microscope (SEM), Separation of isotopes by Bainbridge mass spectrograph, Cathode ray tube (CRT).

Unit II Wave Optics

06 Hours

Interference: Interference of waves, interference due to thin film (Uniform and nonuniform (only formula-no derivation is expected), Newton's ring, Applications of interference (optical flatness, highly reflecting films, non-reflecting coatings).

Diffraction: Introduction, Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Plane diffraction grating, Conditions for principal maxima and minima

Polarisation: Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism.

Unit III Lasers

06 Hours

Principle of laser, Einstein's coefficients, Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Single Hetro-junction laser, Gas laser: CO₂ laser, Properties of lasers, Laser speckles, Applications of lasers (Engineering/industry, medicine, Computers)

Unit IV Fibre Optic**06 Hours**

Principle of fibre optics, Construction, Numerical Aperture for step index fibre; critical angle, angle of acceptance, V number, number of modes of propagation, types of optical fibres, Fibre optic communication system, advantages, and disadvantages of fibre optics.

Unit V Quantum Mechanics**06 Hours**

Dual nature of matter, DeBroglie's hypothesis, Heisenberg's uncertainty principle with illustrations, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box, step potential and potential barrier (analytical discussion), tunnelling effect.

Unit VI Solid state physics**06 Hours**

Free electron theory, Density of states, Bloch theorem (Statement only), Origin of band gap, Energy bands in solids, Effective mass of electron, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell, and its characteristics.

Textbooks

1. A Textbook of Engineering Physics, M N Avadhanulu, P G Kshirsagar and TVS Arun Murthy, S. Chand Publishing (2018)
2. Engineering Physics, R K Gaur and S L Gupta, Dhanpat Rai Publishing Co Pvt Ltd (2015)
3. Concepts of Modern Physics, Arthur Beiser, Shobhit Mahajan and S. Rai Choudhury, McGraw Hill Education (2017)

Reference Books

1. Fundamentals of Physics, Jearl Walker, David Halliday and Robert Resnick, John Wiley and Sons (2013)
2. Optics, Francis Jenkins and Harvey White, Tata Mcgraw Hill (2017)
3. Principles of Physics, John W. Jewett, Cengage publishing (2013)
4. Introduction to Solid State Physics, C. Kittel, Wiley and Sons (2004)
5. Principles of Solid-State Physics, H. V. Keer, New Age International (1993)
6. Laser and Non-Linear Optics, B. B. Laud, New Age International Private Limited (2011)
7. Nanotechnology: Principles and Practices, Dr. S. K. Kulkarni, Capital Publishing Company (2014)
8. Science of Engineering Materials- C.M. Srivastava and C. Srinivasan, New Age International Pvt. Ltd. (1997)
9. Introduction to Electrodynamics -David R. Griffiths, Pearson (2013)
10. Renewable Energy: Power for a Sustainable Future, Boyle, Oxford University Press (2012)

List of Assignments

Six assignments to be given by the course coordinator (Theory)-one from each unit/one mini project with report-students can work in group of 4 Maximum.

List of Laboratory Exercises

1. Study of lissajous figure by Cathode Ray Oscilloscope (CRO)
2. Determination of e/m by Thomson method
3. Determination of radius of planoconvex lens/wavelength of light/Flatness testing by Newton's rings
4. Determination of wavelength of light using diffraction grating
5. Determination of resolving power of telescope
6. Determination of thickness of a thin wire by air wedge
7. Determination of refractive index for O-ray and E-ray
8. Determination of divergence of a laser beam
9. Particle size by semiconductor laser
10. Determination of wavelength of laser by diffraction grating
11. To study Hall effect and determine the Hall voltage
12. Calculation of conductivity by four probe methods
13. Study of solar cell characteristics and calculation of fill factor
14. Determination of band gap of semiconductor
15. Determination of Planck's Constant by photoelectric effect

Project Based Learning - Provisional List of Projects

1. Measurement and effect of environmental noise in the college
 2. Design and simulation of automatic solar powered time regulated water pumping
 3. Solar technology: an alternative source of energy for national development
 4. Design and construction of digital distance measuring instrument
 5. Design and construction of automatic bell ringer
 6. Design and construction of remote-control fan
 7. Design and construction of sound or clap activated alarm
 8. Electronic eye (Laser Security) as auto switch/security system
 9. Electric power generation by road power
 10. Determination of absorption coefficient of sound absorbing materials
 11. Determination of velocity of O-ray and E-ray in different double refracting materials
 12. Need of medium for propagation of sound wave
 13. Tesla Coil
 14. Thin film interference in soap film-formation of colours
 15. LiFi- wireless data transfer system using light
- (Note: - *Students in a group of 3 to 4 shall complete any one project from the above list)

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Numerical Computation

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
Lecture:	Hours/Week		Marks		Credits
	04 Hours/Week	University Examination	60 Marks	Lecture	04
		Internal Assessment	40 Marks		
		Total	100 Marks	Total	04

Course Objective

To equip students with the knowledge of:

- Numerical methods to solve linear and system of linear equations.
- Numerical methods for differentiation and integrations.
- Numerical methods for ordinary and partial differential equations

Prerequisite:

Mathematics for Computing - I

Course Outcomes: On completion of the course, students will have the ability to:

1. Apply methods to solve linear and transcendental equations.
2. Solve system of linear equations.
3. Compute finite differences.
4. Apply method for numerical differentiation and integration.
5. Solve ordinary differential equations numerically.
6. Apply methods to solve partial differential equations.

Unit I Solution of Algebraic and Transcendental Equation 08 Hours

Bisection method, Method of false position, Newton's method and Newton-Raphson method, Approximate solution of equation – Horner's method

Unit II Solution of Linear Simultaneous Equation 08 Hours

Gauss elimination method, Gauss-Jordan method, Crout's triangular method, Iterative method of solution- Jacobi iteration method, Gauss-Seidal iteration method, Relaxation method

Unit III Finite Differences 08 Hours

Forward difference operator, Backward difference operator, Central difference operator, Newton's interpolation formula, Newton's forward-backward-central interpolation formula, Sterling formula, Bessel's formula, Interpolation with unequal intervals.

Unit IV Differentiation and Integration 08 Hours

Newton-Cotes's formula, Trapezoidal rule, Simpson one-third rule, Simpson three-eighth rule, Weddle's rule.

Unit V Numerical Solution of ODE 08 Hours

Picard's methods, Taylor series method, Euler's method, Modified Euler's method, Runge - Kutta method, Predictor-corrector method, Milne's method. Adams-Bash fourth method, Second-order differential equation

Unit VI Finite Difference Methods 08 Hours

Finite difference methods for solving second order two - point linear boundary value problems - Finite difference techniques for the solution of two-dimensional Laplace's and Poisson's equations on rectangular domain - One dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods - One dimensional wave equation by explicit method

Textbooks

Reference Books

1. Steven C Chapra, Numerical Methods for Engineers, 5th Edition, McGraw Hill Publication
2. James F. Epperson, An Introduction to Numerical Methods and Analysis, 2nd Edition, Wiley Publication.

List of Assignments

Six assignments to be given by the course coordinator (Theory)-one from each unit.

Project Based Learning - Provisional List of Projects

Students are expected prepare report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code for it, wherever applicable.

1. Bisection method
2. Newton Raphson's method
3. Horner's method
4. Crouts triangular method
5. Gauss Seidel method
6. Jacobi Method
7. Interpolation
8. Trapezoidal Rule
9. Simpson's rules
10. Euler method
11. Runge kutta method
12. Finite difference technique
13. Crank Nicolson method
14. Predictor Corrector method
15. Relaxation method

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit - I, Unit - II, Unit - III

Unit - IV, Unit - V, Unit - VI

Electrical Technology

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	04 Hours/Week	University Examination	60 Marks	Lecture	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term work	25 Marks	Practical	01
		Total	125 Marks	Total	05

Course Objective

To equip students with the knowledge of power system basics, magnetic circuits electrical machines, transformers, wiring, measurements, illumination, and batteries.

Prerequisite:

-

Course Outcomes: On completion of the course, students will have the ability to:

1. Explain the various parameters related to magnetic circuit.
2. Describe basic concepts of AC fundamentals and circuits.
3. Illustrate constructional features and describe different parameters of transformer.
4. Describe basic concepts of power system and three phase circuits.
5. Demonstrate AC and DC electrical machines.
6. Classify types of batteries.

Unit I Magnetic Circuits

08 Hours

Magnetic effect of electric current, Cross & Dot Convention, Right hand thumb rule, Concept of flux, flux linkages, magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability Kirchoff's laws for magnetic circuits. Magnetic circuit concepts, analogy between electric & magnetic circuits, magnetic circuits with DC and AC excitations, magnetic leakage, B-H curve, hysteresis and eddy current losses, magnetic circuit calculations, mutual coupling.

Unit II AC Fundamentals and circuits: AC Fundamentals

08 Hours

Sinusoidal, square, and triangular waveforms – average and effective values, form and peak factors, concept of phasor, phasor representation of sinusoidally varying voltage and current. Analysis of series, parallel and series parallel RLC Circuits: apparent, active & reactive powers, power factor, causes and problems of low power factor, power factor improvement; resonance in series and parallel circuits, bandwidth, and quality factor (simple numerical problems).

Unit III Single Phase Transformer

08 Hours

Faradays law of electromagnetic induction, statically and dynamically induced emf, self-inductance, mutual inductance, coefficient of coupling. Single Phase Transformer: Principle of operation, construction, e.m.f. equation, voltage ratio, current ratio, KVA rating, determination of efficiency and regulation by direct load test, equivalent circuit, power losses, (simple numerical problems), introduction to auto transformer. Three phase transformer and its different winding connections.

Unit IV Introduction to Power System and Three Phase

08 Hours

Circuits: General layout of electrical power system and functions of its elements, standard transmission and distribution voltages, concept of grid (elementary treatment only) Power generation to distribution through

overhead lines and underground cables with single line diagram. Three phase system-its necessity and advantages, meaning of phase sequence, star and delta connections, balanced supply and balanced load, line, and phase voltage/current relations, three phase power and its measurement (simple numerical problems).

Unit V Electrical Machines

08 Hours

DC & AC: Principles of electromechanical energy conversion, DC machines: types, e. m. f. equation of generator and torque equation of motor, characteristics, and applications of dc motors (simple numerical problems). single Phase Induction motor: Principle of operation and introduction to methods of starting, applications. Three Phase Induction Motor: types, Principle of operation, slip-torque characteristics, applications (numerical problems related to slip only).

Unit VI Batteries

08 Hours

Basic idea of primary and secondary cells, Construction, working principle and applications of Lead-Acid, Nickel Cadmium and Silver-Oxide batteries, charging methods used for lead-acid battery (accumulator), Care and maintenance of lead-acid battery, Series and parallel connections of batteries, General idea of solar cells, solar panels and their applications, Introduction to maintenance free batteries, Safe disposal of Batteries; Fuel cell: Principle & Types of fuel cell.

Textbooks

1. B.L.Theraja, A Textbook of Electrical Technology, Vol.1, S.Chand & Company Ltd. New Delhi
2. V.K.Mehta, Basic Electrical Engineering, S Chand & Company Ltd. New Delhi.
3. J.Nagarath and Kothari, Theory and applications of Basic Electrical Engineering, Prentice Hall of India Pvt. Ltd.

Reference Books

1. Electrical Technology - Edward Huges (Pearson)
2. Basic Electrical Engineering - D. P. Kothari, J Nagarath (TMC)
3. Electrical power system technology - S. W. Fordo, D. R. Patric (Prentice Hall)
4. Electrical, Electronics Measurements and Instruments - (Satya Prakashan)

List of Assignments

Six assignments to be given by the course coordinator (Theory)-one from each unit.

List of Laboratory Exercises

1. Plotting B-H characteristics for a material.
2. Load test on single phase transformer.
3. Testing and maintenance of batteries.
4. Verification of voltage and current relationships in star and delta connected 3-phase networks.
5. Load test on DC machine.
6. To find the performance of series R-L-C circuit at different condition
7. OS & SC test on single phase transformer to find efficiency and regulation
8. Speed control of DC motor
9. Study of different types of starters for DC & AC Machine
10. Load test on 3 phase Induction moto

Project Based Learning – Provisional List of Projects

1. Building a small resistive load lamp bank
2. Building a small resistive load lamp bank for various types of connections like series, parallel, star, delta
3. Building a small inductive load lamp bank for various types of connections like series, parallel, star, delta
4. Building a small capacitive load lamp bank for various types of connections like series, parallel, star, delta
5. Building a small resistive load lamp bank
6. Building a staircase wiring model on a board
7. Building a Go down wiring model on a board
8. Rewinding of a choke
9. Rewinding of a small transformer
10. Building a small rectifier circuit on bread board
11. Building a mobile charger circuit on a bread board
12. Building an electric buzzer circuit
13. Building a solar charger for mobile phone
14. Building a small wind turbine
15. Small Agricultural pump model with DC motor
16. Small Agricultural pump model with AC motor

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Paradigms of Programming

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	04 Hours/Week	University Examination	60 Marks	Lecture	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term Work & Practical	50 Marks	Practical	01
		Total	150 Marks	Total	05

Course Objective

The course aim to make students aware of various programming paradigms and emphasising on using object-oriented approach to solve real world problems.

Prerequisite:

-

Course Outcomes: On completion of the course, students will have the ability to:

1. Demonstrate the knowledge of different programming paradigms.
2. Demonstrate the concepts of Object-Oriented Paradigm.
3. Develop programs using object-oriented approach
4. Develop small size programs using different programming language and Paradigm
5. Compare the strengths and weakness of different programming language specific to application context
6. Recognize the concepts of same kind from different programming languages and paradigms

Unit I Overview of programming paradigms 08 Hours

Basic elements of programming languages, compiled vs. interpreted, syntax, semantics, data types, Imperative languages and non-imperative, Scripting languages, Data-oriented languages, Object-oriented languages, Event-driven Programming

Unit II Functional Programming 08 Hours

Definition of a function: domain and range, total and partial functions, strict functions, Recursion, Referential transparency

Unit III Logic Programming 08 Hours

Basic constructs, Facts, rules, queries, processing, goals, predicates, variables, existential queries, conjunctive queries, Definition, and semantics of a logic program.

Recursive programming: Computational model of logic programming

Unit IV Object Oriented programming 08 Hours

Basic concepts: objects, classes, methods, overloading methods, messages inheritance: overriding methods, single inheritance, multiple.

inheritance Interfaces (e.g., in Java), encapsulation, polymorphism.

Unit V Overview of Languages 08 Hours

Ruby: basic concepts, interpreter, strings, control structures, conditionals, loops, (duck) typing, arrays, hashes, symbols.

Prolog: structures, matching structures, equality, comparison operators, arithmetic's, lists, splitting lists, enumerating lists.

Haskell: introduction, basic concepts, basic functions, conditionals, lists, ranges, list comprehension, basics of the type system, modules

Unit VI Advanced Programming

08 Hours

Concurrent programming, serial vs. parallel programming, process communication, basic concepts, data types, atoms, variables, pattern matching, lists, tuples- Database Programming

Erlang - Erlang: modules, functions, local functions, multiple matching possibilities, recursive functions, function evaluation, guards, control structures, anonymous functions, higher-order functions, lists and higher-order functions.

Textbooks

1. Seven Languages in Seven Weeks, Bruce A. Tate, Pragmatic Bookshelf, 2010
2. Programming Languages: Principles and Paradigms, Maurizio Gabrielli, Simone Martini, Springer, 2010
3. Programming Languages - Principles and Paradigms, Allen B. Tucker, Robert E. Noonan: (2nd ed.) McGraw-Hill, 2007
4. Clark R. G., Comparative Programming Languages, Addison-Wesley (3rd Ed.), 2000.
5. Mitchell, J. C. Concepts in Programming Languages, Cambridge University Press, 2002
6. Sebesta, R. W., Concepts of Programming Languages, Global Edition, Addison-Wesley (11th Ed.) 2016
7. Programming Languages: Concepts and Constructs; 2nd Edition, Ravi Sethi, Pearson Education Asia, 1996.

Reference Books

1. Programming Language Principles and Practice by KC Louden
2. Language manuals and on-line resources for programming languages, tools, and projects.

List of Assignments

Six assignments to be given by the course coordinator (Theory)-one from each unit

List of Laboratory Exercises

1. Write a Simple Program (as given by course coordinator) in Ruby
2. Write a simple Program (as given by course coordinator) in Prolog
3. Write a simple Program (as given by course coordinator) in Haskell
4. Write a simple Program (as given by course coordinator) in Erlang
5. Write a program to Implement Concept of Class and Objects.
6. Write a Program to Implement Concept of Method Overloading and Method Overriding
7. Write a program to implement Concept of Inheritance.
8. Write a program to implement Concept of Interface.
9. Write a program to implement Concept of Recursive Function.
10. Study of Database Programming Language approach.

Project Based Learning - Provisional List of Projects

Use the best programming paradigm for the following:

1. Operations on Matrix
2. Recursion
3. Referential transparency
4. The countdown problem
5. tic-tac-toe
6. Lazy evaluation strategy

7. Assume that you have a list of temperature readings from several cities in the world. Some of them are in Celsius and some in Fahrenheit. First let us convert them all to Celsius, then let us print the data neatly.
8. Implement a better password protection scheme: In the program {User, Password} pairs are sent in plain text over the net. Implement a scheme where the password is never stored, instead store the MD5 checksum of the password and transmit this over the net.
9. All users have the same rights: Implement a scheme whereby different users are restricted to which directories they may access.
10. Files are sent as atomic actions: Files are read, transmitted, and written as atomic actions. This may not work if the files become very large. Implement a scheme for sending the files in smaller chunks. Implement a scheme whereby an FTP transfer can be aborted and restarted in the case where we transfer very large files.

Programming Technologies and Tools Laboratory – II

<u>Teaching Scheme</u>		<u>Examination Scheme</u>	<u>Credit Scheme</u>	
	Hours/Week		Marks	Credits
Practical:	04 Hours/Week	Term Work & Practical	50 Marks	Practical 02
		Total	50 Marks	Total 02

Course Objective

The course focuses on making students learn and practise the Object-Oriented programming, to use concepts and solve the problems.

Prerequisite:

-

Course Outcomes: On completion of the course, students will have the ability to:

1. Choose and apply different Concepts of OOP
2. Demonstrate the use of functions to solve real world problem
3. Identify and apply the concept of Access Specifiers, Scope Resolution operator, Data Abstraction
4. Compare different types of inheritance to solve given problem.
5. Develop applications with constructor and polymorphism.
6. Develop OOP applications using file Handling and Exception handling.

Unit I Introduction to Object Oriented Programming with C++ 08 Hours

Introduction to Object Oriented Programming, Basic Concept of OOP, Need for OOP, Benefits of OOP, Object Oriented Languages, Applications of OOP. C versus C++, C++ Characteristics, Structure of C++ program, Tokens, Keywords, Identifiers and Constants, Data Types, Declaration of variables, Dynamic initialization of variables, Control Structures

Unit II Functions in C++ 08 Hours

The Main Function, Function Prototyping, Call by Reference, Inline functions, Default arguments, Function Overloading, Operator Overloading, Operator precedence, Math library functions, Friend and Virtual Functions.

Unit III Classes and Data Abstraction 08 Hours

Class specification, Class Objects, Scope resolution operator, Access specifiers Public, Private, Protected, Defining member Functions, Nesting of Member Functions, Private Member Functions, Static Data Members, Static Member Functions, Data hiding.

Unit IV Inheritance 08 Hours

Defining Derived Classes, Types of Inheritance, Virtual Base Class, Abstract class. Inheritance and protected members, protected base class inheritance, Inheriting multiple base classes, Templates: Class template, class template with parameter, function template, function template with parameter.

Unit V Constructor and destructor 08 Hours

Types of Constructors, Types of copy constructor, constructor overloading, constructor with default parameter, dynamic initialisation of objects, destructor.

Polymorphism: Base class, Virtual Functions, Pure Virtual Functions, Calling a virtual function through a base class reference, Early and Late Binding.

Unit VI Managing, I/O and Working with Files

08 Hours

C++ stream classes, Unformatted IO operations, formatted IO operations, Classes for file stream operations, opening and closing files, Different File Operations in C, Exception handling in C++.

Textbooks

1. E. Balaguruswamy, "Object Oriented Programming using C++", 4th Edition,Mc Graw Hill, 2010.
2. The C++ Programming Language, Bjarne Stroustrup.

Reference Books

1. Yashwant Kenetkar," Let us C++",1stEd., Oxford University Press (2006)
2. Bjrane Stroustrup, "C++ Programming language",3rd edition, Pearson education Asia (1997)

List of Laboratory Exercises

1. Explain basic concept of OOP, characteristics of OOP, Difference between C and CPP.
2. Demonstrate Basic simple CPP Program and Program related Control structures in CPP.
3. Demonstrate Concept of Function in CPP.
4. Demonstrate Concept of Inline Function in CPP.
5. Demonstrate Concept of Function Overloading and Operator Overloading in CPP.
6. Demonstrate Concept of Class and Object with the help of Scope Resolution Operator in CPP.
7. Demonstrate Concept of Different types of inheritance in CPP.
8. Demonstrate Concept of Constructor and Destructor in CPP
9. Demonstrate Concept Friend and Virtual Function in CPP
10. Demonstrate Concept of File handling and Exception handling in CPP.

Project Based Learning - Provisional List of Projects

1. Billing Application
2. Traffic Management System
3. Library Management System
4. Employee Record System
5. Security System
6. Calendar Application
7. Medical Store Management System
8. Cricket Score Sheet
9. Bank Management System
10. Telecom Billing System

Computer System Workshop Technology

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Practical:	02 Hours/Week	Term Work & Practical	100 Marks	Practical	01
		Total	100 Marks	Total	01

Course Objective

This course focuses on enabling students to identify the hardware components of computer, assembling them, running diagnosis, carry out system configurations and installing system and user applications necessary for computing courses.

Prerequisite

-

Course Outcomes: On completion of the course, students will have the ability to:

1. Identify the architecture of a computer and its different components, including their technology evolution.
2. Apply their knowledge about computer peripherals to identify problems.
3. Install and uninstall given software step-by-step
4. Demonstrate the working of Internet
5. Prepare document using Latex
6. Use GitHub tool for coding and collaboration.

Unit I Computer Hardware

06 Hours

Introduction to hardware components, random access memory (RAM), Types of RAM & their speed, tips for buying RAM, how to add memory to a computer, problems when installing memory, Central Processing Unit (CPU), Types Of CPU: considerations when buying a new CPU (Types & Differences), different speeds available for CPU and what do they mean, 32 Bit vs 64 Bit – Which One to Choose & Why? How to choose a CPU type for different needs? Graphic Card & Types, how to install a Graphics Card, installing a CD or DVD burner, Jumper Switch settings, Hard Disk upgrade, Different ports and why we use them - USB, PS2, DivX, Graphic card & types, Virtual Memory and how to configure it for optimum system performance.

Unit II Assembly of Computer and Software Installations

06 Hours

Assembling the motherboard, replacing fan, how to avoid common mistakes during assembly, Installation of system software: Operating system (Windows and Linux), Installation's step for operating system, Dual booting, Configure the BIOS, Installation of Antivirus, Installation of the open-source software such as Scilab, Latex, Installation of Ms Office.

Unit III Basic Diagnostic of Hardware and Software

06 Hours

Diagnosis of Power Up problem, Boot Drive, Errant Keyboard, mouse problems, slow computer performance, Computer freezes and displays BSOD (Blue screen of death), no display on monitor, no sound, computer rebooting or turning itself off, how to troubleshoot a computer that does not boot, Registry Cleaner.

Unit IV Computer Network Environments

06 Hours

Network connecting devices. Configure the TCP/IP setting, connect to Local Area Network and access the Internet, Configuring Wireless network. Server and Its Configuration, Email Clients, Browsers, Office tools, customize web

browsers with the LAN proxy settings, bookmarks, search toolbars and pop-up blockers, Browsing netiquettes and cyber laws. Cloud Access Tools.

Unit V Configuration of External devices

06 Hours

Physical set-up of Printers- Performing test print out, Printing of document etc, Scanner set-up, Webcam, Bluetooth device, Memory card reader, Connecting and Using Projectors.

Unit VI Productivity Tools

06 Hours

Open-Source Tools Such as Latex, GitHub, Latex: Format words, lines, and paragraphs, design pages, create lists, tables, references, and figures in LATEX. Introduction to LaTeX Packages and classes. Using Git, Version Control Systems, interacting with GitHub, Reverting Changes, Creating Pull Requests.

Textbooks

1. Introduction to Information Technology, ITL Education Solutions limited, Pearson Education.
2. PC Hardware and A+Handbook - Kate J. Chase PHI (Microsoft)
3. LaTeX Companion - Leslie Lamport, PHI/Pearson
4. Scilab, from theory to practice Scilab: I. Fundamentals Perrine Mathieu, Philippe Roux 2016
5. ISBN: 978-2-8227-0293-5

Reference Books

1. Computer Fundamentals, MS Office, and Internet & Web Technology by Dinesh Maidasani.
2. IT Essentials PC Hardware and Software Companion Guide Third Edition by David Anfinson and Ken Quamme. - CISCO Press, Pearson Education.
3. <https://nptel.ac.in/courses/106/105/106105081/>
4. <http://nptel.ac.in/courses/106105084/>

List of Laboratory Exercises

1. Demonstrate the Computer Hardware Components and explain its working.
2. Demonstrate the Networking Components and explain its working.
3. Installation of operating system MS windows, Unix on the personal computer
4. Installation of Application software Scilab, Latex, MS office on the personal computer
5. Troubleshooting hardware related problem.
6. Customize web browsers with the LAN proxy settings, bookmarks, search toolbars and pop-up blockers. Also, plug-ins like Macromedia Flash and JRE for applets should be configured.
7. Execution of Important "layout" and formatting commands in Latex,
8. Installation of Antivirus and customize the browsers to block pop ups, block active x downloads to avoid viruses and/or worms
9. Using Scilab commands, perform basic arithmetic and matrix operations
10. Create a Scilab script file to display product of a matrix A and inverse of A.

Project Based Learning - Provisional List of Projects

1. Collect specifications of similar types of hardware and software and prepare report comparing them
2. Assembling and disassembling the PC back to working condition.
3. Installation of operating systems LINUX on Server and different packages on a PC.

4. Practice hardware troubleshooting exercises related to various components of computer like monitor, drives, memory devices, printers etc. and software troubleshooting related to BIOS etc
5. To start your own computer repair workshop. What would your initial planning involve? What would you look for in terms of building, furnishings, tools and any other equipment that you can think of?
6. Cyber Hygiene: Installing antivirus for Windows.
7. Prepare the report of need of programming language in 21st century.
8. Collect various types of computer hardware and prepare summary report
9. Prepare Seminar report using LaTeX
10. Prepare Project report using LaTeX

B.TECH (Computer Engineering)
SEMESTER - III
COURSE SYLLABUS

Discrete Mathematics and Applications

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
Hours/Week		Marks		Credits	
Lecture:	03 Hours/Week	University Examination	60 Marks	Lecture	03
Tutorial:	01 Hours/Week	Internal Assessment	40 Marks	Tutorial	01
		Total	100 Marks	Total	04

Course Objective

The courses emphasise on mathematical foundation required for computing enabling the students to develop logical thinking, reasoning, and problem-solving skills.

Prerequisite:

Elementary Linear Algebra, Mathematics for Computing-I

Course Outcomes: On completion of the course, students will have the ability to:

1. Demonstrate the ability to write and evaluate a proof technique.
2. Apply the basic principles of set theory to analyse the data relationship and prove basic properties of set.
3. Demonstrate an understanding of relations and functions to determine their properties.
4. Apply the knowledge of Boolean algebra for building basic electronic and digital circuits.
5. Solve problems of combinatorics and recurrence relations.
6. Model problems in Computer Science using graphs and trees.

Unit I Mathematical Logic

06 Hours

Propositional Logic, Predicate logic, First order logic, Rules of inference, Introduction to proof techniques, resolution, Mathematical induction, Methods of proofs, Applications.

Unit II Set Theory

06 Hours

Types of sets, Sets operations and laws, Algebra of Sets, Multisets, Application of the principle of inclusion and exclusion.

Number Theory: Modular arithmetic, prime numbers, and properties, GCD, Chinese remainder theorem, Solving congruences, Applications of congruences Cryptography.

Unit III Relations

06 Hours

Basic definition, properties and types of relations, relations and digraphs, paths in relations and digraphs, equivalence and partially ordered relations, Transitive closure and Warshall's algorithm.

Functions: Types of functions, Identity functions, Composition of functions, Mathematical functions, Pigeonhole principle.

Unit IV Algebraic Structures

06 Hours

Isomorphism and Homomorphism Groups, Algebraic Structures with Binary Operations, rings, Cyclic groups, codes.

Lattice: Posets and Hasse Diagrams, Lattice as an algebraic system, Properties of lattices.

Group Codes: The Communication Model and Basic notion of Error Correction, Generation of Codes, Parity Checks, Error recovery in group codes.

Unit V Combinatorics and Recurrence Relations

06 Hours

Combinatorics: Permutations, Sum rule, Product rule, Combinatorial proofs.

Recurrence Relations: Linear Recurrence relation, Second order recurrence relations with constant coefficients, Applications of Recurrence relation.

Unit VI Graph Theory and Application

06 Hours

Definition, Degree, Types, Paths, Circuits, Operations on graphs, and Graph Models, Isomorphism, Connectedness, Planar graphs and their properties, Eulerian and Hamiltonian graphs.

Trees: Basic properties of trees, Binary trees, Application: Graph and Networks: Minimum Spanning Tree, Shortest Path, Huffman coding.

Textbooks

1. J.P. Tremblay and Manohar: Discrete mathematical structures with application to Computer Science, McGraw hill- New Delhi.
2. B. Kolman and R.C. Busby: Discrete mathematical structures for computer science Prentice Hall, New-Delhi.
3. S. Malik and M. K. Sen Discrete Mathematics, Cengage Learning India Pvt. Ltd.

Reference Books

1. Kenneth H. Rosen, Discrete Mathematics, and its applications Eighth Edition McGraw Hill Education
2. Stanat and McAlister, Discrete Mathematics for Computer Science, PHI
3. R.M. Somasundaram Discrete Mathematical Structures, Prentice Hall India Learning Private Limited

List of Assignments

1. Given a fact or a statement prove or disprove using suitable technique.
2. Write the given English language sentences represent in the Symbolic logic
3. Given the statement forms Infer the validity of the statement form
4. Draw a Hasse diagram and find chains and antichains
5. Find the number of ways for any event or given sample space.
6. Given a problem represent in a graph and compute the optimal solution
7. Given a communication network find the path between the given nodes

Project Based Learning - Provisional List of Projects

1. Discrete Mathematics in Railway Planning using graph theory and linear algebra.
2. Object transformations using linear algebra.
3. Discrete mathematics in cryptography.
4. In Google maps to determine fastest driving routes and times.
5. In image processing
6. In relation database using sets.
7. In cyber security using graph theory.
8. Shortest path between two cities using a transportation system.
9. Data compression system with the help of Huffman coding.
10. Find the shortest tour that visits each of a group of cities only once and then ends in the starting city using graphs.

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Data Structures and Algorithmic Thinking

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	04 Hours/Week	University Examination	60 Marks	Lecture	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term Work & Practical	50 Marks	Practical	01
		Total	150 Marks	Total	05

Course Objective

The course enables students to perform tasks that facilitates them to understand interaction between the algorithms and the structure of the data being analysed by these algorithms. This course also focuses to train students in process of algorithmic thinking enabling them to build simpler solutions to various computational problems.

Prerequisite:

Classical Data Structure, Computational Thinking and Programming Concepts, Programming Technologies, and Tools Laboratory 3

Course Outcomes: On completion of the course, students will have the ability to:

1. Comprehend the real time problem.
2. Practise and apply Iterative Thinking
3. Practise and apply Recursive Thinking
4. Demonstrate the use of ADTs,
5. Develop code to illustrate sorting and searching algorithms.
6. Apply algorithms and data structures in various real-life software problems.

Unit I Recursion and Backtracking

08 Hours

Introduction to recursion, why recursion, Format of a Recursive Function, Recursion and Memory, Recursion Vs. Iteration, Algorithms of Recursion, Recursion problems and Solutions.

Introduction to Backtracking, Algorithms of Backtracking, Backtracking problems, and Solutions.

Unit II Trees

08 Hours

Introduction to Trees, Binary Trees, Types of Binary Trees, Properties of Binary Trees, Binary Tree Traversals, Generic Trees (N-ary Trees), Threaded Binary Tree Traversals (Stack or Queue-less Traversals), Expression Trees, XOR Trees, Binary Search Tree, Balanced Binary Search Trees, Adelson-Velskii and Landis (AVL) Trees.

Unit III Priority Queues & Heaps and Disjoint Sets ADT

08 Hours

Introduction to Priority Queues, Priority Queue ADT, Priority Queue Applications, Priority Queue Implementations, Heaps and Binary Heaps, Heapsort, Priority Queue problems and Solutions.

Disjoint Sets ADT - Introduction, Equivalence Relations and Equivalence Classes, Disjoint Sets ADT, Trade-off in Disjoint Sets ADT implementations, Fast UNION Implementation - Slow Find and Quick Find.

Unit IV Graphs Algorithm

08 Hours

Introduction to Graphs, Application of Graphs, Graph Representation, Graph Traversals, Topological Sort, Shortest Path Algorithms, Minimal Spanning Tree, Graph Algorithm problems & Solutions.

Unit V Sorting and Searching**08 Hours**

Introduction to Sorting, Classification of Sorting algorithms, Bubble Sort, Selection Sort, Insertion Sort, Shell Sort, Merge Sort, Heap Sort, Quick Sort, Tree Sort, Comparison of Sorting algorithms, Linear Sorting Algorithms, Counting Sort, Bucket Sort, Radix Sort, Topological Sort, External sorting. Introduction to Searching, Types of Searching, Unordered searching, ordered linear search, Binary search, Interpolation search, Comparison of searching algorithm.

Unit VI Maps, Hash tables and Skip Lists**08 Hours**

Introduction - Hashing, Hash Tables - Hash Functions, Collision Handling schemes, Load Factors, Rehashing, and Efficiency. Map ADT Introduction, Counting Word Frequencies, Sorted Maps, Sorted Search Tables, Skip Lists - Search and Update Operations in a skip list.

Textbooks

1. Data Structures: A Pseudo code approach with C, R. Gillberg, B. Forouzn
2. Data structures using C and C++ by Langsam, Augenstein, Tenenbaum, PHI publication
3. Data Structure and Algorithmic Thinking with Python, CareerMonk Publications, Narasimha Karumanchi, 2016

Reference Books

1. Data Structures and Algorithms in Python, Michael T. Goodrich, Roberto Tamassia, Michael H. Goldwasser, John Wiley & Sons, 2013
2. Think Data Structures- Algorithms and Information Retrieval in Java, Allen B. Downey, O'Reilly, 2017

List of Assignments

1. Write algorithm, pseudocode, and code to solve Recursion Problems like - Towers of Hanoi, whether given array is in sorted order.
2. Write algorithm, pseudocode, and code to solve Backtracking Problems like - Generate all the binary strings with n bits. Assume A [0.. n - 1] is an array of size n, generate all the strings of length k drawn from 0... k - 1.
3. Write algorithm, pseudocode, and code to solve problems like - Give an algorithm for finding maximum element in binary tree.
4. Write algorithm, pseudocode and code to solve AVL Trees problems - Given a height h, give an algorithm for generating the HB(h). HB(h) is generating full binary tree.
5. Prove, is there a min-heap with seven distinct elements so that the pre-order traversal or it gives the elements in sorted order?
6. Travelling Salesperson Problem: Find the shortest path in a graph that visits each vertex at least once, starting and ending at the same vertex'?

List of Laboratory Exercises

1. Finding the length of connected cells of 1s (regions) in a matrix of 0s and 1s.
2. Give an algorithm for finding the maximum element in binary tree without recursion.
3. Give an algorithm for searching a element in binary tree.
4. Give an algorithm for finding the diameter of the binary tree. The diameter of a tree (sometimes called the width) is the number of nodes on the longest path between two leaves in the tree.
5. Implement the Algorithm for Building Expression Tree from Postfix Expression
6. Write and implement an algorithm for deleting an arbitrary element from min heap.

7. Write and implement an algorithm for checking whether a given graph G has simple path from source s to destination d. Assume the graph G is represented using the adjacent matrix.
8. Perform DFS on given graph C.
9. Count the number of connected components of Graph G which is represented in the adjacent matrix.
10. Merging K sorted lists: Given K sorted lists with a total of n elements, write an algorithm to produce a sorted list of all n elements.

Project Based Learning - Provisional List of Projects

1. Design and development of Student attendance system using array data structure.
2. Design and development of Car rental system using Singly linked list (SSL) data structure.
3. Design and development of Inventory management system using suitable data structure.
4. Comparative study of student management system using array, queue, and stack.
5. Design phone dictionary using doubly linked list (DLL).
6. Design and implement of dictionary using hierarchical data structure.
7. Design and implement of expression solver using stack.
8. Design and development quizer (quiz conduction application).
9. Design and development of subject recommendation system.
10. Design and development of Sudoku Solver.

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Computer Organisation and Design

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	04 Hours/Week	University Examination	60 Marks	Lecture	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term Work & Practical	50 Marks	Practical	01
		Total	150 Marks	Total	05

Course Objective

This course aims at providing comprehensive understanding of the organization and architecture of modern-day computers, emphasizing both fundamental principles and role of performance parameters in driving computer design.

Prerequisite:

Digital Electronics

Course Outcomes: On completion of the course, students will have the ability to:

1. Analyse the design issues in terms of speed, technology, cost, performance
2. Understand the architecture and functionality of central processing unit.
3. Learn design approaches implementing control unit
4. Discuss the concept of memory organization.
5. Describe structure and functions of I/o module and Peripherals.
6. Infer Performance Enhancement of Processor

Unit I Computer arithmetic and performance

08 Hours

Computer organization and system architecture, Structure and functions, Von Neumann Architecture, IAS machine. Computer Performance Measurement, Aspects & Factors affecting Computer Performance, MIPS & MFLOPS, designing for performance, fixed and floating-point representations, IEEE 754 format. Booths Algorithm for Signed Multiplication, Restoring and Non-Restoring Division Algorithms.

Unit II Central Processing Unit

08 Hours

Introduction to x86 microprocessor, Architecture, register organization, Segmentation, Instruction execution cycle, addressing modes, and Instruction set. Instruction Formats, Instruction Types, the Instruction Cycle, and Instruction Pipelining, RISC Vs. CISC Architecture

Unit III Control Unit

08 Hours

Instruction Cycle & Micro Operations, Functional Requirements & Operations of the Control Unit, Block Schematic & Control Signals, Single Bus Processor Organization, Control Signal example with Micro Operations and Register Transfer. Control Unit Design Methods - Hardwired Control and Micro-Programmed Control Microinstructions & Formats, Control Memory, Microinstruction Sequencing, Sequencing Techniques, Address Generation, Microinstruction Execution, Microinstruction Encoding

Unit IV Memory

08 Hours

Characteristics of Memory Systems, Internal and External Memory Types. Memory Hierarchy, Principle of Locality, Cache Memory - Basics, Performance Metrics & Improvements, Organization and Mapping Techniques, Handling Cache Misses & Writes, Replacement Algorithms, Cache Controllers

Unit V I/O organization**08 Hours**

Structure and functions of I/o Module, Peripheral devices and their characteristics, Input-output subsystems, I/O device interface, Programmed I/O, Interrupt driven I/O, DMA, Buses-SCSI, USB

Unit VI Performance enhancement of processors**08 Hours**

CPU Performance and its Factors, Evaluating Performance, Enhancing Performance - Pipeline Processing, instruction pipelining, pipeline stages and hazards, The ARM Cortex-A8 and Intel Core i7 Pipelines, Parallel Processing Concepts - Flynn's classifications, Cache coherence in multiprocessor systems, Specialized Architectures - Multi-core systems

Textbooks

1. William Stallings. "Computer organization and architecture: designing for performance". Pearson Education India, 2010
2. Carl Hamacher, Zvonko Vranesic and Safwat Zaky. "Computer Organization", McGraw Hill, 2011.
3. Computer System Architecture M. M. Mano: 3rd ed., Prentice Hall of India, New Delhi, 1993.
4. Computer Architecture and Organization, John P. Hayes.

Reference Books

1. A. S. Tanenbaum "Structured Computer Organization", 4th Edition, Prentice Hall of India, 1991 ISBN: 81-203-1553-7.
2. Computer Organization and Design: The Hardware/Software Interface, David A. Patterson and John L. Hennessy.

List of Assignments

1. Describe structure of IAS computer with neat block diagram.
2. Describe architecture of 8086 with neat block diagram.
3. Draw and Explain Hardware implementation of Booth's algorithm for signed number multiplication
4. Draw flowchart for Booth's Algorithm for multiplication and perform 9×-6
5. Draw and Explain Hardwired control unit using a. Delay element method or b. Sequence Counter method
6. Explain Direct mapping and set associative mapping of cache memory in detail with suitable example

List of Laboratory Exercises

1. Write an Assembly Language program to display system time on screen.
2. Write an Assembly Language program to add and subtract two 8-bit numbers.
3. Write an Assembly Language program to determine 2's complement of a number
4. Write an assembly language program for BCD addition and subtraction.
5. To Apply Booth's Algorithm for illustrating multiplication of signed numbers.
6. To design and illustrate Restoring Division Algorithm.
7. To design and illustrate Non-Restoring Division Algorithm.
8. To design 4-bit ALU (VLAB)
9. Study of Memory Design (VLAB)
10. To design Direct mapped Cache and associative cache (VLAB)

Project Based Learning - Provisional List of Projects

Write program to generate assembly code from prefix code.

1. Simulate a word multiplier.
2. Simulate a word divider.

3. Suggest a high-speed addition method and logic for 4-bit addition
4. Design and implement an arbitrary precision four function calculator.
5. Simulate modern traffic control system.
6. Suggest and design a minimal cpu architecture for controlling the washing machine.
7. Write/create/research a tool for benchmarking of a hardware (CPU).
8. Implement quick sort using assembly language.
9. Implement binary search using assembly language.
10. Implement matrix multiplication using assembly language
11. Microprocessor based automatic attendance recorder
12. Microprocessor based furnace temperature controller.

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Computer Networks

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	03 Hours/Week	University Examination	60 Marks	Lecture	03
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term Work & Practical	50 Marks	Practical	01
		Total	150 Marks	Total	04

Course Objective

This Course emphasis on all theoretical concepts and practical aspects of networking. This course enables the students to understand the networking hardware & concepts through using network simulators.

Prerequisite

Computer System Workshop Technology.

Course Outcomes: On completion of the course, students will have the ability to:

1. Demonstrate the knowledge of computer networking.
2. Elucidate detailed structure of physical and data link layers
3. Demonstrate the knowledge of about Network and Transport Layers.
4. Elucidate the details of Session and Presentation Layers
5. Illustrate the functionality of Application layer
6. Recite the fundamentals of wireless network.

Unit I Fundamentals of Networking

06 Hours

History of network and internet, need of network, Types of networks, Networking hardware, Information transmission, Transmitter, Receiver, Introduction to networking applications and simulators, Introduction to OSI reference model, Introduction to TCP/IP model, Introduction to internet and working of Internet, Introduction to network security, IEEE standards for networking

Unit II Physical and Data Link Layers

06 Hours

Ethernet, LLC, MAC, Framing, Channel Allocation schemes, Error Control, Flow Control, Error Detection and correction, Physical Layer protocols, Data Link layer protocols

Unit III Network and Transport Layers

06 Hours

Network Layer: Network Packet structure and formation, routing algorithms, congestion control algorithms, quality of service, IP Addressing, Subnets, configuring network settings, Network problem solving.
Transport Layers: Segmentation, Congestion control, Connection oriented and connection less services, Network and Transport Layer Protocols.

Unit IV Session and Presentation Layers

06 Hours

Session Layer: Session management, synchronization, Dialog control, Presentation Layer: Encryption-decryption, Compression, File formats, Translation, Session and Presentation Layer protocols, Session and Presentation Layer protocols.

Unit V Application Layer

06 Hours

DNS, URL, Data Cache and streaming, Web Applications, Web browser working, Cloud services, User interface and User interaction, Mail systems, Support of file formats, Application Layer protocols

Unit VI Network Security

06 Hours

Firewall, Types of Firewalls, Cryptography, Symmetric Key Algorithm, Public Key Algorithm, Digital Signatures, Public Key Management, Communication Security, Authentication protocols.

Textbooks

1. Data and computer communications, William Stallings, 10th edition, Pearson
2. Computer networking: a top-down approach, James f. Kurose, Keith w. Ross, 6th edition, Pearson.
3. Computer Networks, Tanenbaum, 5th Edition, Pearson

Reference Books

1. Data communication & networking, Forouzan, 5th edition, McGraw-Hill.
2. Computer Networking Beginners Guide, Russell Scott, 1st edition, Stefano Cardinale

List of Assignments

1. Explain in detail the types of Networks.
2. Consider the real time scenario to explain the error correction and detection.
3. Compare: Connection oriented and Connection less services
4. Consider the real time scenario to explain the role of Session and Presentation Layer in networking
5. Explain in detail: How does the web browser work?
6. Explain in detail: The role of Network Security in computing.

List of Laboratory Exercises

1. Introduction to Computer Network and Network Simulators.
Networking devices, Addresses, Network Security, Internet working, Network Simulators: Cisco Packet Tracer, Netemul, NetSim.
2. Network configuration of PCs and other networking devices
Configuring Computer and Router via OS UI and commands, Networking commands
3. Network configuration of PCs and other networking devices using network simulators.
Observing and configuring PCs, Routers, Switch, Hub, and other networking devices using network simulators
4. Establishment of simple LAN network using real time devices and network simulators.
Establishment of simple LAN network using actual devices like PCs, Switch, Router and through network simulators
5. Communication between two or multiple systems using network simulators.
Establishment of network where two network systems can communicate with each other. Use of PCs, Switch etc. in network simulator.
6. Broadcasting using network simulators.
Establishing network to broadcast the information using network simulator. Use of PCs, Switch and Hub in the network simulator.
7. Establishment of different networks and communication between them using real time devices and network simulators.
Establishment of different networks and communication between using actual devices like PCs, Switch, Router and through network simulators
8. Understanding Protocols of Transport Layer using Network Simulators
Understanding Transport Layer protocols TCP, UDP using networking simulators
9. Implementation of Client-Server Architecture for Same Network using Network Simulators and Programming

Implementing some services of Server with protocols like FTP, HTTP, and others.
Use of PCs, Servers, Switch in Network Simulator. Socket Programming: Use of Python, C, C++, Java for implementing Client Server architecture.

10. Implementation of Client-Server Architecture for different Networks using Network Simulators.

Implementing some services of Server with protocols like FTP, HTTP, and others for different networks. Use of PCs, Servers, Switch and Router in Network Simulator.

11. Understanding Web Browser structure and working
Web browser structure, source code loading, UI generation, Information loading into application layer, file format support and Complete working of web browser.
12. Establishment of wireless network
Establishment of wireless networking using actual devices and via network simulator. Use of Laptops and Wifi Router.

Project Based Learning - Provisional List of Projects

1. IP based patient monitoring system
2. Configuring Internet Router
3. Configuring Network Switch
4. Home Automation system using Wi-Fi
5. Wireless Weather monitoring system using Raspberry pi.
6. Smart Traffic control system
7. Smart energy meter for homes
8. Analysis of IPv4/IPv6 protocols
9. Web System Security.
10. Personalized Web Search with Location Preferences

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Software Engineering

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	04 Hours/Week	University Examination	60 Marks	Lecture	04
Practical:	04 Hours/Week	Internal Assessment	40 Marks		
		Term Work & Oral	50 Marks	Practical	02
		Total	150 Marks	Total	06

Course Objective:

The course emphasises on the building blocks, importance and need of software engineering. It focuses on the various processes, methods, and practices for developing software which makes software engineering as a specific discipline. This course includes elaboration on each phase of software development life cycle methodologies and practices. It further covers the essential knowledge required to ensure the quality and maintenance of developing and developed software.

Prerequisite:

-

Course Outcomes: On completion of the course, students will have the ability to:

1. Apply the Software Engineering approach to software design and development.
2. Apply the Essential processes of SDLC.
3. Demonstrate the knowledge of requirement elicitation by classifying and documenting the requirements
4. Demonstrate software design by modelling artifacts for gathered requirements & analysis.
5. Apply testing strategies and create test cases and test suites
6. Use the project management concepts and tools for managing software project.

Unit I Overview of Software Engineering & Its Methodologies 08 Hours

Defining Software Engineering, Software Engineering Principles, Software Engineering Ethics, Software Process, Project, Product and People.

Overview of Software development lifecycle methodologies: Waterfall, Agile, Lean, Iterative, Spiral, DevOps.

Unit II Requirements and Design 08 Hours

Expressing Requirements, Types of Requirements, Feasibility Study, Elicitation Techniques. Requirements Analysis - Structured Analysis, Object Oriented Modelling, Other Approaches. Requirement Specification, Requirement Validation, Requirement Engineering Tools (CASE).

Software Design: Principles of Software Design, Data Design, Architectural Design, Component Level Design, Object-oriented design, Design Notations, User Interface Design

Unit III Coding and Testing 08 Hours

Coding Guidelines, Coding Methodology, Programming Practice - Top-down, bottom-up, structured programming, information hiding programming, Code verification Techniques, Introduction to No-Code Development approach and tools.

Testing: Software test Characteristics, Test plan, Test Case Design, Testing Strategies, Testing Techniques, Debugging Process, and strategies.

Unit IV Software Quality and Maintenance **08 Hours**

Quality Concepts, ISO 9126 Quality Factors, Mc Call's Quality Factors, SQA plan, SQA Activities, Software Reviews, Sig Sigma & ISO 9000 Quality Standards, capability maturity model, Software Reliability.

Maintenance: Factors affecting software Maintenance, Types of software Maintenance, Software Maintenance Lifecycle.

Unit V SCM and Re-engineering **08 Hours**

Software Configuration Management - Basics, SCM Planning, Project Library, SCM Process - Configuration Identification, Change Control, Version Control, SCM Tools (CASE).

Software re-engineering: Objectives, Principles of Re-engineering, Levels of Abstraction, Software Re-engineering process Model, Business Process Re-Engineering.

Unit VI Software Planning and Cost Estimation **08 Hours**

Responsibility of Software Project Manager, Project Planning, Project Scheduling, People capability maturity model, Risk Management.

Cost Estimation - Basics, Estimation of Resources, Product Cost Factors, Cost Estimation Process, Constructive Cost Model, Function Point Analysis, Decomposition techniques- Problem based Estimation, Process based estimation, use case-based estimation.

Textbooks

1. Fundamentals Of Software Engineering, Rajib Mall Phi Learning, 02-Apr-2014, Isbn 8120348982, 9788120348981
2. "Software Engineering: Principles and Practices, 2nd Edition by Rohit Khurana, Khurana Rohit · 2010, Vikas Publishing House Pvt Limited", ISBN: 9788125939467
3. Software Engineering principles and practices, Rajesh Narang, 2015 McGraw Hill Education, ASINB014ULF4R8

Reference Books

1. Software Engineering: A Practitioner's Approach, By Roger Pressman and Bruce Maxim, McGraw Hill, 9th Edition, ISBN10: 1259872971
2. Software Engineering, by Ian Sommerville, Pearson; 10th edition, ISBN-10: 0133943038

List of Assignments

1. A mini project will be given to the students based on which they need to prepare the following
 - a. Choosing the appropriate SDLC method to develop the given project.
 - b. Develop the project plan along with feasibility study and estimations
 - c. Prepare the Software requirement Specification document
 - d. Prepare the Software Detailed Design Document
 - e. Prepare test cases
 - f. Use CASE tools to perform all the above tasks.

List of Laboratory Exercises

1. Present a Case study on Agile methodology
2. Present a Case study on DevOps
3. For the given project, perform requirement elicitation using tools and prepare SRS.
4. Prepare case study on Tools used to create Unified Modelling Language.
5. Design Structure Model for the given SRS using UML tool.
6. Design Behaviour model for the given SRS using UML tool

7. Prepare the Testcases using the Junit.
8. Prepare case study on Tools used to prepare project Plan.
9. Prepare a case study on Automated testing Tools.
10. Prepare a case study on Total quality management.

Project Based Learning - Provisional List of Projects

1. Flight Vehicle and Aircraft Systems Engineering.
2. Skyscraper
3. Software piracy protection system
4. e-Learning platform
5. Bug tracker
6. Railway tracking and arrival time prediction system
7. Employee management system
8. Camera motion sensor system
9. Operating System task monitoring application
10. Data leakage detection system

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit - I, Unit - II, Unit - III

Unit - IV, Unit - V, Unit - VI

Programming Technologies and Tools Laboratory – III

<u>Teaching Scheme</u>		<u>Examination Scheme</u>	<u>Credit Scheme</u>	
	Hours/Week		Marks	Credits
Practical:	04 Hours/Week	Term Work & Practical	50 Marks	Practical 02
		Total	50 Marks	Total 02

Course Objective:

The course aims to make students aware of python programming.

Prerequisite:

-

Course Outcomes: On completion of the course, students will have the ability to:

1. Demonstrate the knowledge of using data structures in python.
2. Demonstrate the characteristics of object-oriented Python
3. Perform basic operations on file.
4. Understand and implement error and exception handling
5. Design basic GUI using Python Tkinter
6. Implement database connectivity using MySql and SQLite.

Unit I Python Language Basics

08 Hours

Python Interpreter, Running IPython Shell, Running Jupyter Notebook, Tab Completion, Introspection, The %run Command, Executing Code from the Clipboard, Terminal Keyboard Shortcuts, About Magic Commands, Language Semantics, Scalar types, Control flow.

Data Structures and Sequences – Tuple, List, built in sequence functions, dict, set, strings.

Unit II Functions, Modules, Packages

08 Hours

Functions – def statement, returning values, parameters, arguments, local variables, global variables and global statement, Doc Strings, Decorators, lambda, iterators and generators, Modules, Packages.

Unit III Object-Oriented Approach

08 Hours

Classes - A simple class, defining methods, the constructor, Member variables, calling methods, Adding inheritance, Class variables, Class methods and static methods, Properties, Interfaces, New style classes, Doc strings for classes, Private members.

Scope & Namespaces, object, instantiations, Inheritance, Multiple inheritance, Constructors, operator overloading.

Unit IV File Handling and Error

08 Hours

Python file handling: File handling modes, Text & Binary Files – Reading, Writing and Delete.

Error and exception handling: Exceptions, Handling Exceptions, Raising Exceptions, Exception Chaining, User-defined Exceptions, Defining Clean-up Actions, Predefined Clean-up Actions.

Unit V Python Tkinter

08 Hours

Event Driven Programming, GUI frameworks-Tkinter, Windows and windows attribute, Component, Tk widgets-Ttk and Tix widgets, Geometry Management, Events & Binding Functions, simple GUI applications development.

PyGtk – Simple message box, text input dialog box, file selection dialog box.
EasyGUI - Example

Unit VI Backend and Database

08 Hours

Tornado for windows, building python HTTP web server (GET method), Parameter and Python API (resource and query), Building a JSON GET & POST API, the GET and POST API from JavaScript/HTML
SQLite, MySQL -Environment Setup, Database Connection, CRUD operations.

Textbooks

1. Python 3 Object-oriented Programming Second Edition, Dusty Phillips, Packt Publishing
2. MySQL for Python: Database Access Made Easy,
3. Python GUI Programming with Tkinter, Alan D. Moore, O'Reilly Media, Inc.

Reference Books

1. Introduction to Computation and Programming Using Python, John V Guttag, Prentice Hall of India
2. Python Essential Reference 4th Edition, David Beazley, Pearson Education.

List of Laboratory Exercises

1. Study about Anaconda python software.
2. Write a program to understand the control structures of python
3. Write a program to learn different types of structures (list, dictionary, tuples) in python
4. Write a program to learn concept of functions scoping, recursion, and list mutability.
5. Write a program to understand working of exception handling and assertions.
6. Write a program to perform basic operations on text files.
7. Write a program to implement HTTP server using Python
8. Write a program to implement basic GUI application with database connectivity using SQLite
9. Write a program to learn GUI programming using Tkinter
10. Write a program to implement basic GUI application with database connectivity using MySql

Project Based Learning - Provisional List of Projects

1. Design and development of Mad Libs generator.
2. Design and development of electronic mail system (Read, write, send and delete operations).
3. Design and development of store billing system.
4. Design and development of typing speed check web application.
5. Design and development of windows application for music player.
6. Design and development of windows Quiz Application.
7. Design and development of web application for daily expense tracker.
8. Design and development of student portfolio management & CV generator system.
9. Design and development of windows based to do list or sticky notes.
10. Design and development of assignment plagiarism checker

B.TECH (Computer Engineering)
SEMESTER - IV
COURSE SYLLABUS

Probability and Statistics

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	03 Hours/Week	University Examination	60 Marks	Lecture	03
		Internal Assessment	40 Marks		
		Total	100 Marks	Total	03

Course Objectives:

To equip students with the knowledge of:

- Probability theory and expected value.
- Probability distribution and its applications.
- Multiple regression and ANOVA.

Prerequisite:

Elementary Mathematics

Course Outcomes: On completion of the course, students will have the ability to:

1. Apply Bayes theorem to find probability.
2. Compute mathematical expectations.
3. Identify various theoretical distributions.
4. Use correlation coefficient to interpret numerical data.
5. Use regression to estimate the dependent variable.
6. Apply concept of graph in optimization.

Unit I Probability Theory

06 Hours

Definition of probability: classical, empirical, and axiomatic approach of probability, Addition theorem of probability, Multiplication theorem of probability, Bayes' theorem of inverse probability, Properties of probabilities

Unit II Random Variable and Mathematical Expectation.

06 Hours

Definition of random variables, Probability distributions, Probability mass function, Probability density function, Mathematical expectation, Joint and marginal probability distributions, Properties of expectation and variance with proofs, Examples

Unit III Theoretical Probability Distributions

06 Hours

Binomial distribution, Poisson distribution, Normal distribution, Fitting of binomial distributions, Properties of binomial, Poisson and normal distributions, Relation between binomial and normal distributions, Relation between Poisson and normal distributions, Importance of normal distribution

Unit IV Correlation

06 Hours

Introduction, Types of correlation, Correlation and causation, Methods of studying correlation, Karl Pearson's correlation coefficient, Spearman's rank correlation, Coefficient, Properties of Karl Pearson's correlation coefficient, Properties of Spearman's rank correlation coefficient, Probable errors, Examples

Unit V Linear Regression Analysis

06 Hours

Introduction, Linear and non-linear regression, Lines of regression, Derivation of regression lines of y on x and x on y , Angle between the regression lines, Coefficients of regression, Theorems on regression coefficient, Properties of regression coefficient

Unit VI Multiple Regression and AVOVA

06 Hours

Multiple regression & multiple correlation, Analysis of variance (one way, two ways with as well as without interaction)

Textbooks

1. S. C. Gupta, "Fundamentals of Statistics", 46th Edition, Himalaya Publishing House.
2. G. V. Kumbhojkar, "Probability and Random Processes", 14th Edition, C. Jamnadas and co.
3. Murray Spiegel, John Schiller, R. ALU Srinivasan, Probability and Statistics, Schaum's Outlines
4. Kishor S. Trivedi, "Probability, Statistics with Reliability, Queuing and Computer Science Applications", 2nd Edition, Wiley India Pvt. Ltd.

Reference Books

1. Vijay K. Rohatgi, A. K. Md. Ehsanes Saleh, An Introduction to Probability and Statistics, 3 rd Edition, Wiley Publication
2. I.R. Miller, J.E. Freund, and R. Johnson. Fun "Probability and Statistics for Engineers" (4th Edition)

List of Assignments

Six assignments to be given by the course coordinator (Theory)-one from each unit.

Project Based Learning - Provisional List of Projects

Students are expected prepare report on any one topic, write its definition, applications and analyse the hypothetical data. Also, write pseudo code for it, wherever applicable.

1. Bayes theorem
2. Additive and multiplicative law of probability
3. Mathematical expectation
4. Joint and marginal probability distribution
5. Theoretical probability distribution
6. Coefficient of correlation
7. Regression estimates
8. Simple regression model
9. Multiple regression model
10. One way ANOVA
11. Two-way ANOVA
12. Correlation
13. Multiple correlation

Note: - *Students in a group of 3 to 4 shall complete any one project from the above list)

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Models of Computation

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	03 Hours/Week	University Examination:	60 Marks	Lecture	03
Tutorial:	01 Hours/Week	Internal Assessment:	40 Marks	Tutorial	01
Total			100 Marks	Total	
				Total	04

Course Objective:

This course enables students to understand any problem by developing abstract models of computing machines and reasoning about their compute efficiency.

Prerequisite:

Discrete Mathematics, Data Structure and Algorithmic Thinking

Course Outcomes: On completion of the course, students will have the ability to:

1. Define and describe formal models of computation
2. Illustrate examples of languages and computational problems appropriate to different models of computation.
3. Demonstrate the relationships between language classes and regular expression.
4. Design grammars and recognizers for different formal languages
5. Design Language Acceptability by Turing Machine
6. Use models of computation to understand the compiler basics

Unit I Basic Concepts and Automata Theory

06 Hours

Introduction to Theory of Computation- Automata, Alphabet, Symbol, String, Formal Languages, Deterministic Finite Automaton (DFA)- Definition, Representation, Acceptability of a String and Language, Non-Deterministic Finite Automaton (NFA), Equivalence of DFA and NFA, NFA with ϵ -Transition, Equivalence of NFA's with and without ϵ -Transition, Finite Automata with output- Moore machine, Mealy Machine, Equivalence of Moore and Mealy Machine, Minimization of Finite Automata

Unit II Regular Languages

06 Hours

Definition and Examples. Conversion of RE to FA, FA to RE, algebraic laws, applications of RE. Pumping lemma for regular languages and applications. Closure properties of regular Languages Union, Concatenation, Complement, Intersection and Kleene closure. Decidability- Decision properties

Unit III Context Free Grammar (CFG)

06 Hours

Definition, Derivations, Languages, Derivation Trees and Ambiguity, Regular Grammars-Right Linear and Left Linear grammars, Conversion of FA into CFG and Regular grammar into FA, Simplification of CFG, Normal Forms-Chomsky Normal Form (CNF), Greibach Normal Form (GNF), Chomsky Hierarchy, Programming problems based on the properties of CFGs

Unit IV Push Down Automata (PDA)

06 Hours

Introduction, Pushdown Automata (PDA), Transition Diagrams, Functions and Tables, Deterministic Push-down Automata (DPDA) - definition, Nondeterministic Pushdown Automata (NPDA), Equivalence of context free grammars and PDA, properties of context free languages. Introduction to Post Machines (PMs).

Unit V Turing Machine Model

06 Hours

The Turing Machine Model and Definition of TM, Language Acceptability of Turing Machines, Techniques for Turing Machine Construction, Modifications of Turing Machine, Universal Turing machine, Linear Bounded Automata, Church's Thesis, Halting Problem

Unit VI Basics of Compiler

06 Hours

Introduction to Natural language Processing, Syntax analysis language definition. Primitive recursive functions - Recursive and recursively enumerable languages - Universal Turing machine. Lexical analyser, Text editor, and searching using RE.

Textbooks

1. Theory Computation, Vivek Kulkarni, Oxford higher education
2. Theory of Computer Science (Automata, Language & Computation) K. L. P. Mishra & N. Chandrasekaran, PHI Second Edition
3. Theory of Computer Science, E.V. Krishnamurthy, EWP Publication
4. Introduction to languages and the theory of computation by Jhon C Martin Mc Graw Hill
5. Introduction to Automata Theory, Languages, and Computation (third edition), by John Hopcroft, Rajeev Motwani, Jeffrey Ullman, Addison Wesley, 2007.

Reference Books

1. Introduction to Automata Theory, Hopcroft Ullman, Languages & Computations, Narosa
2. Introduction to Computer Theory, Daniel A. Cohen, Wiley Publication
3. Theory of Computation, Dexter C. Kozen, Springer Science & Business Media, 2006

List of Assignments

1. Study of JFLAP tool for Constructing FA
2. Construct regular expressions defined over the alphabet $\Sigma = \{a, b\}$, which denote the given languages.
3. Translate the following Mealy machine into its equivalent Moore machine.
4. Write a context-free grammar (CFG) which generates the language L denoted by: $(a+ b)^* bbb(a+ b)^*$
5. Construct a PDA that accepts the language defined by the following regular grammar.
6. Design a TM to recognize an arbitrary string divisible by 4, from $\Sigma = \{0, 1, 2\}$.

Project Based Learning - Provisional List of Projects

1. Develop a tool to illustrate the algorithm for converting an arbitrary NFA to a DFA.
2. Develop a tool to draw a transition diagram for any given DFA.
3. Approximation algorithms
4. Greedy algorithms.
5. Enumeration of finite automata
6. Enumeration of PDA
7. Enumeration of Turing machines
8. Ambiguous grammars
9. Disambiguation of Grammars
10. Enumeration of Context-free languages
11. Enumeration of Turing machines
12. Universal Turing machines.
13. Randomized Turing machines
14. NP Complete Algorithm

15. Problem solvability using Reduction
16. Design of TM to emulate a finite automaton
17. Design of TM to emulate a PDA
18. Complexity analysis of encryption algorithms using TM.
19. Design of TM to perform sorting
20. Design TM to perform searching.

Syllabus for Unit Tests

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Computer Operating System

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
Hours/Week		Marks		Credits	
Lecture:	03 Hours/Week	University Examination:	60 Marks	Lecture	03
Practical:	02 Hours/Week	Internal Assessment:	40 Marks	Practical	01
		Term Work & Practical	50 Marks		
		Total	150 Marks	Total	04

Course Objective;

The course focuses on the concepts of operating systems enabling students to understand and apply the principles, structure and functioning of Operating system.

Prerequisite:

Computer architecture and Design, Data structures and algorithms, Programming Skills.

Course Outcomes: On completion of the course, students will have the ability to:

1. To learn and apply the Concepts of operating system
2. Infer the concept of process, thread and Inter process communication
3. Outline the concept of concurrency and deadlocks.
4. Analyse of Memory Management and Virtual Memory
5. Utilize the concepts of I/O System for communication
6. Illustrate the Issues in real time operating system.

Unit I Functionalities & Services of an Operating System 06 Hours

Architecture of OS, Goals & Structures of O.S, Basic functions, System Calls & Types, Process Concept, Process Control Block, Linux System calls for Process creation, Inter Process Communication using Shared memory / Message passing.

Unit II Concurrency, Multithreaded programming 06 Hours

Benefits, challenges, models, Pthreads library in Linux: thread creation, cancellation, thread specific data, Thread pools, Signal handling, Scheduling: Pre-emptive, non-pre-emptive algorithms FCFS, SJF, SRT, RR, Thread scheduling: contention scope, Pthread support for scheduling

Unit III Deadlock 06 Hours

Principles of deadlock, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, System calls like signal, Producer Consumer problem (multi-threaded) example Deadlock characterization, Resource graph, Avoidance & Prevention, Safe state, Banker's algorithm, recovery schemes

Unit IV Storage Management 06 Hours

Memory management, logical v/s physical address space, Segmentation, Paging, Page table structures, Virtual memory, Page replacement strategies, File Systems, file operations, types, access methods, Directory structure, Mounting file systems.

Unit V I/O Systems 06 Hours

File concept, Access methods, Directory structure, Filesystem mounting, Protection, Directory implementation, Allocation methods, Free-space management, Disk scheduling, Disk management, Swap-space management, Protection.

Unit VI Issues, Protection and Security

06 Hours

Features of real-time kernels. Real-time CPU scheduling and real-time performance issues, Goals of protection; Domain of protection; Protection models; Security, problems, and threats; Authentication; and Encryption.

Textbooks

1. Operating System Concepts, 9th edition Peter B. Galvin, Greg Gagne, Abraham Silberschatz, John Wiley & Sons, Inc.

Reference Books

1. Modern Operating Systems -By Andrew S. Tanenbaum (PHI)
2. Operating Systems 5th Edition, William Stallings, Pearson Education India

List of Assignments

1. Write in detail about the Quality (Computer Architecture) based on Features and Functionality of latest OS.
2. Discuss in detail the Concurrency mechanism and Multithreaded programming achieved in latest any OS.
3. Explain the mechanism of process and processor management in Unix/Linux OS
4. Discuss in detail the mechanism used for memory management in Linux OS
5. Elaborate in detail the user interface concepts of Linux OS.
6. Write in detail about the Quality (Security Threats) based on Features and functionality of latest OS

List of Laboratory Exercises

1. Basic functionalities and functions of operating system.
2. Write Shell Script to copy the file system from two directories to a new directory in such a way that only the latest file is copied in case there are common files in both the directories.
3. Implementation of FCFS (First Come First Serve) CPU Scheduling.
4. Implementation of SJF (Shortest Job First) CPU Scheduling.
5. Implementation of Round Robin (RR) CPU Scheduling.
6. Producer Consumer Problem Using Semaphores
7. Bankers Algorithm for Deadlock Avoidance
8. Algorithm for Deadlock Detection
9. Page Replacement Algorithms FIFO and LRU
10. Implement Virtualization strategy related to resources.

Project Based Learning - Provisional List of Projects

1. Explore the architectures, features, and functions of open-source operating systems
2. Design the Processes and thread management with deadlock's, synchronization
3. Design Pre-emptive Priority Scheduling algorithm implementation in any language.
4. Java program to analyse page fault for a given page frame using NRU with paging.
5. The project on simulating the multiprogramming of a specific operating system and dealing with CPU scheduling and Job scheduling.
6. Design the project that computes FCFS, SSTF, and SCAN disk-scheduling algorithms
7. Operating Systems mini project to explore the different algorithms of main memory page replacement
8. Develop a client server application to show the inter process communication.
9. Build a file system using the FUSE library.
10. Write a shell interpreter for LINUX.

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Database Management System

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	03 Hours/Week	University Examination:	60 Marks	Lecture	03
Practical:	02 Hours/Week	Internal Assessment:	40 Marks	Practical	01
		Term Work & Practical	50 Marks		
		Total	150 Marks	Total	04

Course Objective:

Introduction to databases mainly focus on relational models and relation database design. The course enables students with the knowledge models, design paradigms and structured query language. This course introduces students to Semantic Modelling, principles of database management systems (DBMS), DBMS architecture, Database Design, data storage and query processing and transaction management. Further, the course also introduces advanced database systems.

Prerequisite:

Mathematics for Computing-I, Data Structure and Algorithmic Thinking.

Course Outcomes: On completion of the course, students will have the ability to:

1. Design a Relational Database by applying the principles of Database Design
2. Compare and Contrast File Processing and Database Processing
3. Convert the Database Design into Relational Tables as per the application requirement
4. Apply the normalisation to Database Design.
5. Use and relate the concept of transaction, concurrency control and recovery in database.
6. Write queries and commands using Structured query language (SQL)

Unit I Overview of Database Systems:

06 Hours

Knowing Database and Database Management system (DBMS), Role and Advantages of DBMS, Problems with Traditional File System Processing, types of databases, Database System Architecture - Conceptual Level, External Level, Internal Level, Mappings, Database Users, 2 Tier Architecture and 3 Tier Architecture. Introduction to Relational Databases: Relations and Relvars, Defining Relations, Optimisation.

Unit II Relational Model:

06 Hours

Values Vs Variables, Types Vs Representations, Type Definition, Operators, Type Generators, Tuples, relation types, Relation Values, Relation variables, Relational Algebra - Syntax and Semantics, Operations, Relational Calculus - Tuple Calculus, Calculus Vs Algebra, Integrity - Predicates and Propositions, Checking Constraints, Constraint classification scheme, Views - Definition, View retrievals and Updates

Unit III Database Design:

06 Hours

Semantic Modelling - Entity Relationship and Extended Entity Relationship model, Functional Dependencies - Trivial and non-trivial dependencies, Closure of a set of dependencies, closure of a set of attributes, Boyce Codd Normal Form, Normalisation - 1NF, 2NF, 3NF, BCNF, higher Normal Forms.

Unit IV Storage and Querying:

06 Hours

JBOD, RAID, Files, Data Dictionary storage, Storage Access, Indexing & Hashing - Basics, Ordered Indices, B+ Tree index Files, B Tree Index Files, Multiple Key Access, Static Hashing and Dynamic Hashing, Bitmap Indices.

Querying - Measures of Query Cost, Selection Operation, Sorting, Join Operation.

Unit V Transaction Management:

06 Hours

Transactions Overview, Transaction Properties, Transaction Log, Concurrency control - Lost Updates, Uncommitted Data, the scheduler, Locking Methods, Time Stamping Methods, Recovery, Isolation Levels, System Recovery, Media Recovery, Savepoints, Serializability.

Unit VI Overview of Advanced Databases:

06 Hours

Object Oriented Database, Distributed Databases, Logic Based Databases, Temporal Databases, Decision support systems. The Information System Design: System Development Life Cycle, Database Lifecycle, Conceptual Design, Logical Design, Database Design Strategies, Centralized vs Decentralised Design, NoSQL

Textbooks

1. Database System Concepts by Abraham Silberschatz, Henry F. Korth, and S. Sudarshan, 6th Edition, McGraw-Hill Education, 2010.

Reference Books

1. C.J. Date, An Introduction to Database Systems, 8/e, Pearson Education, 2004.
2. Peter Rob and Carlos Coronel, Database System- Design, Implementation and Management (7/e), Cengage Learning, 2007.

List of Assignments

The assignments will be based on a mini project for developing a Database for a system like Student Database Management system, Online Retail Database, Medical record Database etc. There will be tasks that will be allocated to the students like

1. Use the Relational Algebra.
2. Design the EER model
3. Convert the EER model to Relational Tables
4. Apply the Normalisation
5. Create the Tables using SQL and using graphical database building tools.
6. Populate and retrieve the data from tables based on requirements.

List of Laboratory Exercises

1. To study about the Database Management Software Tools and Structured Query Language
2. To Write Data Definition Language queries.
3. To Write Data Query Language queries.
4. To Write Data Control Language queries.
5. To query relational tables using nested queries and Aggregate functions.
6. To perform queries using views.
7. To demonstrate the different types of Joins.
8. Find Results for the questions asked related to the given relational Schema: Employee and Department.
9. Find Results for the questions asked related to the given relational Schema: Publications.
10. To Use MongoDB and perform CRUD operations on it.

Project Based Learning - Provisional List of Projects

RDBMS Design and implementation of various Management database systems:

1. Medical Health record management system

2. Patient detail management system
3. Student Management System
4. On-Demand Online Video Streaming
5. Sports
6. Finances Management System
7. Grocery Management System
8. Weather Management System
9. Web Database system
10. E-commerce Database system.

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit - I, Unit - II, Unit - III

Unit - IV, Unit - V, Unit - VI

Wireless Communication

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	04 Hours/Week	University Examination:	60 Marks	Lecture	04
Practical:	02 Hours/Week	Internal Assessment:	40 Marks		
		Term Work & Oral	50 Marks	Practical	01
		Total	150 Marks	Total	05

Course Objective:

The course focuses on the fundamentals of wireless communications and provides an overview of existing and emerging wireless communication Technology and networks.

Prerequisite:

Computer Network, Physics for Computing Systems

Course Outcomes: On completion of the course, students will have the ability to:

1. Use of basic concepts and principles of wireless communication
2. Illustrate knowledge of Medium Access Control
3. Recite the working of Telecommunication Systems
4. Recite the functioning and use the satellite and broadcast systems
5. Apply and use Wireless networks.
6. Illustrate the working of Mobile IP and TCP in wireless communication.

Unit I Introduction to Wireless Communication

08 Hours

Wireless Communication Applications, Open research topics, reference model, Frequencies for Radio transmission – regulations, Signals, Antennas, Signal Propagation – Path Loss of radio signals, Signal propagation effects, multi-path propagation, multiplexing – Space Division Multiplexing, Frequency division multiplexing, time division multiplexing, code division multiplexing. Modulation – Amplitude shift keying, Frequency shift keying, Phase shift keying, Multi carrier modulation. Spread Spectrum – Direct sequence spread spectrum; Frequency hopping spread spectrum.

Unit II Medium Access Control

08 Hours

Specialized MAC requirement, Hidden terminal, and exposed terminals, near and far terminals, SDMA, FDMA, TDMA – Fixed TDM, Classical ALOHA, Slotted ALOHA, Carrier Sense multiple access, Demand assigned multiple access, packet reservation multiple access, Reservation TDMA, Multiple access with collision avoidance, Polling, CDMA – Spread Aloha multiple access, Comparison of SDMA/TDMA/FDMA/CDMA

Unit III Telecommunication Systems

08 Hours

GSM – Mobile services, System architecture, Radio Interface, Protocols, Localisation & calling, Handover, Security.
DECT – System architecture, Protocol architecture
UMTS and IMT – 2000 – UMTS system architecture, UMTS radio interface

Unit IV Satellite Systems and Broadcasting Systems

08 Hours

Primer – Orbital aspects, GEO, LEO, MEO, Line of Sight, Routing, Localisation, Handover, Examples.
Broadcast Systems – Cyclical repletion of data, Digital Audio broadcasting – Multimedia object transfer protocol, Digital Video broadcasting – data broadcasting, high speed internet access.

Unit V Wireless LAN**08 Hours**

Infra-red Vs Radio Transmission, Infrastructure and Ad-hoc network, IEEE 802.11 – System Architecture, Protocol Architecture, Physical layer, Medium Access control layer, MAC management, 802.11a, 802.11b.

Bluetooth – Architecture, Radio Layer, Baseband Layer, Link Manager protocol, L2CAP, Security, IEEE 802.15.

Unit VI Mobile Communication Layers**08 Hours**

Mobile IP – Entities and terminologies, IP packet delivery, Agent discovery, Registration, Tunnelling, and encapsulation, IPV6, DHCP.

Traditional TCP – Congestion control, slow start, fast retransmit/fast recovery, Indirect TCP, Snooping TCP, Mobile TCP.

Introduction to 4G, LTE network and 5G communication.

Textbooks

1. Mobile Communications, 2nd Edition, Jochen H. Schiller, Pearson Education, 2003

Reference Books

1. Wireless Communication, Theodore S. Rappaport, Prentice Hall
2. Andreas.F. Molisch, –Wireless Communications, John Wiley – India, 2006.
3. Wireless Communications and Networking, Vijay Garg, Elsevier
4. Wireless Communication –Andrea Goldsmith, Cambridge University Press, 2011
5. David Tse and Pramod Viswanath, –Fundamentals of Wireless Communication, Cambridge University Press, 2005
6. Dennis Roddy, Satellite Communications Systems, John Wiley & Sons, Ltd 5th Edition

List of Assignments

1. Discuss Comparison of Wireless Technologies in Industrial Application
2. What medium access methods are in use today in wireless networks.
3. Discuss any one System architecture of any latest telecommunication System.
4. Discuss any one latest Digital Audio broadcasting techniques
5. Elaborate latest Protocol Architecture used in practical world.
6. Introduction to 5G networks in Mobile Communication.

List of Laboratory Exercises

1. Introduction to wireless simulation.
2. Configuring wireless networking devices using simulation tool.
3. Establishing wireless LAN network using simulation tool.
4. Configuring wireless router using simulation tool.
5. Case studies on different wireless generations
6. Case studies on IEEE 802.11 Wireless LAN
7. Case studies on different wireless generations.
8. Case studies on short range wireless network
9. Realistic Studies on Wireless Structural Control.
10. Case Studies of Wireless LAN Problems.
11. Case studies on IEEE 802.11 Wireless LAN
12. Case Study of Security Issue in the Wireless Communication System.

Project Based System - Provisional List of Projects

1. Vehicle Tracking System.
2. Accident Identification System.
3. Wireless Camera Position System.
4. Remote Home Security System.

5. Wireless Voting Machine.
6. Wireless Security System.
7. Video Signal Transmitter.
8. Audio Signal Transmitter.
9. RFID based Ambulance Flashing Light with Beeper
10. Bluetooth based Garage Door Opening

Syllabus for Unit Tests:

Unit Test -1

Unit - I, Unit - II, Unit - III

Unit Test -2

Unit - IV, Unit - V, Unit - VI

Design Thinking and Communication

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	02 Hours/Week	Term Work & Practical	50 Marks	Lecture	02
Practical:	04 Hours/Week			Practical	02
		Total	50 Marks	Total	04

Course Objective:

This course focuses on enabling students to use design thinking as a problem-solving tool that includes principles like Human centred, Collaborative teamwork, learning by doing, embrace experimentation, understand patterns relationship and Systems, visualise and present.

Prerequisite:

-

Course Outcomes: On completion of the course, students will have the ability to:

1. Use the design thinking approach.
2. Understand and represent the unique needs of customers
3. Apply Empathy and visual thinking within the context of design thinking.
4. Create physical prototypes / a visual representation of an idea
5. Apply Design thinking for problem solving
6. Create a design thinking culture to drive innovation in an organisational setup

Unit I Design Thinking Background

06 Hours

Definition of Design Thinking, Business uses of Design Thinking, Variety within the Design Thinking Discipline, Design Thinking Mindset.

Fundamental Concepts within the context of design thinking: Empathy, Ethnography, Divergent Thinking, Convergent thinking, Visual Thinking, Assumption testing, Prototyping, Validate

Unit II Resources and Processes

06 Hours

Design Thinking Resources: Human resources, Preferred space, Materials commonly used, dynamic between design thinking teams & organisation.

Design Thinking Processes: Variety of design thinking approaches - Double Diamond approach, d.school 5-stage approach, designing for growth approach, role of Project management within design thinking.

Unit III Process Stages of Designing for Growth

06 Hours

Practice "What Is", "What If", "What wows", "What works" process stage activities to develop a product.

Customer requirement - Knowing Your Users Identifying Needs of Customers Designing with Empathy Designing for Diversity & Inclusion, Customer needs and market, Types of product users Customer needs analysis

Unit IV Design Thinking Tools and Methods

06 Hours

Purposeful Use of Tools and Alignment with Process - Visualization, Journey Mapping, Value Chain Analysis, Mind Mapping, Brainstorming, Concept Development, Assumption Testing, Rapid Prototyping, Customer Co-creation, Learning Launch.

Unit V Design for Services

06 Hours

New Product Development Processes, Design for Products & Services, Sustainability through Design Thinking, Lean & Agile Product/ Service Design, Service development process, Service cycle experience map, Product vs. service systems, Service innovation examples.

Unit VI Innovation

06 Hours

Product Development Processes Innovation Project Lifecycle, Innovation Management Models, Frugal Innovation, Entrepreneurship Vs Intrapreneurship, Innovation for Growth Data-driven Innovation Systematic innovation process: Altitude case study.

Textbooks

1. Designing for growth: A design thinking tool kit for managers”, by Jeanne Liedtka and Tim Ogilvie., 2011, ISBN 978-0-231-15838-1
2. The design thinking playbook: Mindful digital transformation of teams, products, services, businesses and ecosystems”, by Michael Lewrick, Patrick Link, Larry Leifer., 2018, ISBN 978-1-119-46747-2
3. Presumptive design: Design provocations for innovation”, by Leo Frishberg and Charles Lambdin., 2016, ISBN: 978-0-12-803086-8

Reference Books

1. “Systems thinking: Managing chaos and complexity: A platform for designing business architecture.”, “Chapter Seven: Design Thinking”, by Jamshid Gharajedaghi, 2011, ISBN 978-0-12-385915-0
2. "Cross-Cultural and User-Centred Design Thinking in a Global Organization: A Collaborative Case Analysis.”, by Abildgaard, Sille Julie J., and Bo T. Christensen., She Ji: The Journal of Design, Economics, and Innovation 3.4 (2018): 277-289.
3. "Design Thinking: A Method or a Gateway into Design Cognition?.”, by Gabriela Goldschmidt, She Ji: The Journal of Design, Economics, and Innovation 3.2 (2017): 107- 112

List of Laboratory Exercises

1. The Laboratory Exercises will consist of case studies related to problem solving through design thinking. Some of the Case studies are given below:
2. Design thinking applied in product creation like, Mobile and TVs
3. Problem statement like the following will be given to students. For the given case study and simple problems, the students should be able to:
 - a. Complete Design Research plan
 - b. Identifying insights and opportunities
 - c. Perform Ideation and prototype
 - d. Test Final ideas
 - e. Peer feedback and group discussion
 - f. Presentation
 - g. Journey mapping and idea generation
 - h. Develop Presentations in small groups.
 - i. Final Presentations
4. Which principles and approaches in DT can be found in more holistic human-centred software development approaches and how do they differ?
5. How can artefacts with similar purposes, but different forms, be integrated?
6. How can problems be efficiently classified?
7. What are typical project situations which influence the choice of a strategy?

8. Which methods in DT can be found in / reused for other software engineering disciplines (e.g., HCI, TDD)? How do these methods differ? How can they be integrated?
9. How can artefacts, roles, and methods be seamlessly integrated? Which artefacts do overlap? Are shifts in roles and responsibilities necessary? How can milestones be efficiently defined?
10. How can resulting processes be integrated (into the overall life cycle) - for instance SCRUM? How can resulting processes be tailored?
11. The pandemic is forcing us re-evaluate safety of public health vis-a-vis the urban design, public spaces, mobility, products, and services etc. Their existing design does not ensure safety against the risk of virus transmission. Even as the threat of pandemic looms large, scenes of uncontrolled public gathering is common.
12. How to enhance the everyday commuter experience at the Mumbai Local network of Indian Railways (one of the largest and oldest in the country)

Project Based Learning - Provisional List of Projects

1. Demonstrates with a real time scenario, how understanding your customer, or subject, can completely change the perception towards a problem.
2. Show how design thinking can help redefine the values.
3. Using a real time scenario, show how problems affecting diverse groups of people.
4. Show how Issues relating to college culture can be fixed through design thinking.
5. How design thinking helps in educational advances. Cite some real time scenarios.
6. How design thinking enables Entrepreneurial initiatives. Cite some real time scenarios.
7. How design thinking is used for bringing about innovation. Illustrate with real time scenario.
8. Research how design thinking is helping medical breakthroughs. Illustrate with real time scenario.
9. How design thinking reduces the risk associated with launching new ideas, products, and services. Illustrate with real time scenario.
10. Research How to use Design Thinking for software development projects.

Programming Technologies and Tools Laboratory - IV

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
Hours/Week				Credits	
Practical:	04 Hours/Week	Term Work & Practical	50 Marks	Practical	02
		Total	50 Marks	Total	02

Course Objective

The course enables students to implement object-oriented designs with Java.

Prerequisite

Programming Technologies and Tools Laboratory – I, Programming Technologies, and Tools Laboratory – II, Paradigms of Programming.

Course Outcomes: On completion of the course, students will have the ability to:

1. Analyse the basics of Java programming.
2. Identify class, objects for real time problems.
3. Make use of constructor, Garbage Collector, and methods of string class.
4. Explore the concept of inheritance and polymorphism with the help of real time applications.
5. Handle the exception with exception handling mechanism and multi-threading programming.
6. Design the graphical user interface by using Applets and AWT.

Unit I JAVA Primer

08 Hours

Introduction: History and Features of Java, Internals of Java Program, Difference between JDK, JRE and JVM, Internal Details of JVM.

Basics of Java Language-Variable and Reserve / Keywords present in Java, Primitive Data types, Java Operators, Decision making and branching statements in Java

Unit II Classes, Objects and Methods:

08 Hours

Creating a Class, Visibility/Access Modifiers, Encapsulation, Methods: Adding a Method to Class, returning a Value, adding a Method That Takes Parameters, 'this' Keyword, Method Overloading, Object Creation, Using Object as a Parameters, Returning Object, Array of Objects, Memory Allocation: 'new', Static Data Members, Static Methods,

Unit III Constructors, Destructors and String Handling

08 Hours

Use of Constructor, Characteristics of Constructors, Types of Constructors, Constructor Overloading, Constructor with Default Arguments, Symbolic Constants, Garbage Collection, Destructors and Finalizers.

String Handling: String: Immutable String, String Comparison, String Concatenation, Substring, Methods of String class, String Buffer class, StringBuilder class, Creating Immutable class, to String method

Unit IV Inheritance and Polymorphism

08 Hours

Use of Inheritance, Types of Inheritance in Java, Role of Constructors in inheritance, Polymorphism in OOP, Types of Polymorphism, static and dynamic polymorphism, Overriding Super Class Methods. Use of "super" keyword. Interfaces, Implementing interfaces.

Unit V Exception Handling and Multithreaded programming**08 Hours**

Exception Handling: try and catch block, catch block, Nested try, finally block, throw keyword, Exception Propagation, throws keyword, Exception Handling with Method Overriding, Custom Exception.

Introduction to threads, life cycle of a thread, thread states, thread properties, methods in Threads and Runnable, setting priority of threads, synchronization and inter thread communication Life Cycle of a Thread

Unit VI Designing Graphical User Interfaces in Java**08 Hours**

Applet and its use Design Patterns using Applet and JApplet. Run Applet application by browser and applet tool. Applet Architecture. Parameters to Applet Life Cycle of Components and Containers Basics of Components Using Containers Layout Managers and userdefined layout. BorderLayout, FlowLayout, GridLayout, GridBagLayout, BoxLayout. AWT Components Adding a Menu to Window Extending GUI Features Using SWING Components Designing GUI. Advanced swing components like JProgressBar, JSlider, JRadioButton, JTree, JTable, JToggleButton.

Textbooks

1. E. Balaguruswamy, "Object Oriented Programming Using C++ and Java", Tata McGrawHill
2. Steven Holzner et al. "Java 2 Programming", Black Book, Dreamtech Press, 2009.

Reference Books

1. Java The complete reference, Herbert Schildt, McGraw Hill Education (India) Pvt. Ltd. 9th edition, 2014, ISBN: 978-0-07-180856-9 (E-book)
2. Object-Oriented Design Using Java, Dale Skrien, McGraw-Hill Publishing, 2008, ISBN - 0077423097, 9780077423094
3. Mitsunori Ogihara, "Fundamentals of Java Programming", Springer; 2018, ISBN 978-3-319-89490-4
4. Brahma Dathan Sarnath Ramnath, "Object-Oriented Analysis, Design and Implementation an Integrated Approach", Springer; 2nd ed. 2015, ISSN 1863-7310 ISSN 2197-1781 (electronic) Undergraduate Topics in Computer Science ISBN 978-3-319-24278-1, ISBN 978-3-319-24280-4.
5. T. Budd (2009), An Introduction to Object Oriented Programming, 3rd edition, Pearson Education, India.
6. J. Nino, F. A. Hosch (2002), An Introduction to programming and OO design using Java, John Wiley & sons, New Jersey
7. Y. Daniel Liang (2010), Introduction to Java programming, 7th edition, Pearson education, India

List of Laboratory Exercises

1. Write a Java program that prompts the user for an integer and then prints out all prime numbers up to that integer.
2. Write a Java program that describes a class person. It should have instance variables to record name, age, and salary. Create a person object. Set and display its instance variables.
3. Write a Java program that creates a class circle with instance variables for the centre and the radius. Initialize and display its variables
4. Write a Java program that counts the number of objects created by using static variable.
5. Write a Java program to demonstrate the constructors in java.
6. Write a Java program to demonstrate the constructor overloading.
7. Write a Java program to display the use of this keyword

8. Write a Java program that checks whether a given string is a palindrome or not.
9. Write an application that creates an interface' and implements it
10. Write a program that can count the number of instances created for the class.
11. Write an application that executes two threads. One thread displays —Every 1000 milliseconds and other displays —B every 3000 milliseconds. Create the threads by extending the Thread class.
12. Create an abstract class shape. Let rectangle and triangle inherit this shape class. Add necessary functions.
13. Write an application that shows the usage of try, catch, throws and finally.
14. Write an Applet that displays —Hello World|| (Background colour-black, text colour-blue and your name in the status window.)
15. Develop a scientific calculator using swings.

Project Based Learning - Provisional List of Projects

1. Airline reservation system
2. Course management system
3. Data visualization software
4. Electricity billing system
5. e-Healthcare management system
6. Email client software
7. Library management system
8. Network packet sniffer
9. Online bank management system
10. Online medical management system

Elective-II

- 1) Software Defined Radio
- 2) Automotive Electronics
- 3) Computer Vision

*Industry taught course-VI

SEMESTER:- I
SYLLABUS

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. I: Electronics & Telecommunication Engineering
SUBJECT: - LINEAR ALGEBRA and CALCULUS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination: 60 Marks	Credits: 03
Practical: 00	Internal Assessment: 40 Marks	
Tutorial: 01		Credits: 01
		Total Credit: 04
Course Pre-requisites: Class XII Mathematics		
Course Objectives:		
1.	To teach the differential calculus.	
2.	To teach linear algebra and linear transformation.	
3.	To introduce ordinary differential equations.	
Course Outcomes: After learning this course students will be able to		
1	Evaluate the matrices and its application to the system of linear equations.	
2	Evaluate vector spaces and linear transformation	
3	Solve numerical problems involving differential calculus.	
4	Compute maxima, minima, and multiple integrals.	
5	Evaluate the theorems in integral Calculus.	

6	Use the methods of first order and first-degree differential equation.	
UNIT – I	Linear algebra: Matrices	(06 Hours)
	Algebra of Matrices, System of Linear Equations, Linear Dependence and Independence, rank, row operations and Gauss elimination, Applications to systems of linear equations, Cayley – Hamilton Theorem	
UNIT – II	Vector space and Linear Transformations	(06 Hours)
	Vector spaces, subspaces, Eigen values and Eigen Vectors and their basic properties, Linear and Orthogonal Transformations, rank -nullity theorem, Existence and Uniqueness Theorem for Linear Systems, product spaces, Gram-Schmidt process, Diagonalization	
UNIT - III	Differential Calculus	(06 Hours)
	Limits of sequences and functions, continuity, uniform continuity and differentiability, Mean value theorems, L' Hospital's Rule. Euler's Theorem on Homogeneous Functions. Taylor's theorem with proof, Partial derivatives, Chain rule.	
UNIT -IV	Maxima and Minima for several	(06 Hours)
	Maxima, minima, saddle points. gradient, directional derivatives, Lagrange multipliers, Exact differentials, Errors, and approximations. Repeated and multiple integrals applications to volume, surface area, moments of inertia, etc.	

UNIT -V	Integral Calculus	(06 Hours)
	Riemann integral and the fundamental theorem of integral calculus, Rolle's theorem, Applications to length, area, volume, surface area of revolution. Moments, centers of mass and gravity.	
UNIT -VI	Ordinary differential equation	(06 Hours)
	Ordinary differential equations of the 1st order, exactness and integrating factors, applications of first order and first-degree differential equation in orthogonal trajectories and electrical circuits. Picard's iteration method.	
Topics for projects based learning*		
1. Cramer's rule		
2. System of linear equations solution		
3. Rank of matrix		
4. Gauss elimination		
5. LU-decomposition method		
6. Dimension and basis		
7. Gram Schmidt Orthogonalization		
8. rank -nullity theorem		
9. Euler's Theorem on Homogeneous Functions		
10. Maxima and minima for two variable function		
11. Eigen values and Eigen vectors		
12. Multiple integrals applications		
13. Formation of differential equation		
14. Linear differential equation		
15. Kirchhoff's voltage law		
*Students in a group of 3 to 4 shall complete any one project from the above list		

Textbooks/Reference Books
1.'Advanced Engineering Mathematics' by Erwin reyszig
2.'Advanced Engineering Mathematics' by Dennis G. Zill and Warren S. Wright
3.AppliedMathematics(VolumesIandII)byP.N.Wartikar&J.N.Wartikar
4.HigherEngineeringMathematicsbyB.S.Grewal
5.HigherEngineeringMathematicsbyB.V.Ramana
6.AdvancedEngineeringMathematics

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. I: Electronics & Telecommunication Engineering		
SUBJECT: - PHYSICS FOR ELECTRONICS ENGINEERING		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination: 60 Marks	Credits: 03
Practical: 02	Internal Assessment: 40 Marks	
Tutorial: 00	TW: 50 Marks	Credit: 01
		Total Credit: 04
Course Pre-requisites:		
	Basic Physics and Calculus.	
Course Objectives:		
	To impart knowledge of basic concepts in physics relevant to engineering applications in a broader sense with a view to lay foundation for the Electronics and Telecommunication.	
Course Outcomes:		
After learning this course students will be able to		
1	Demonstrate the knowledge of properties of charged particles and their use in modern instruments	
2	Solve the quantum physics problems at micro level phenomena.	
3	Explain mechanical properties of solid matter and connect to applications in the field of engineering.	
4	Demonstrate the working of PN junctions in semiconductor devices under various conditions.	

5	Demonstrate the wave nature of light and apply it to measure stress, pressure and dimension.	
6	Analyze the problems associated with architectural acoustics and give their remedies.	
UNIT – I	Modern Physics	(06 Hours)
	Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focusing, Electron microscope, Wavelength and resolution, Specimen limitation, Depth of field and focus, TEM, SEM and EDS, Separation of isotopes by Bainbridge mass spectrograph, CRT.	
UNIT – II	Quantum mechanics	(06 Hours)
	Dual nature of matter, concept of wave packet, group and phase velocity and relation between them, Physical significance of wave function, Schrodinger's time dependent and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box, Applications of Schrodinger's Equation: Infinite Potential Well and the Potential Barrier.	
UNIT - III	Solid state Electronics-I	(06 Hours)
	Superconductors, properties, Meissner effect, Type I and Type II superconductors, BCS theory of superconductivity (Qualitative) - High T _c superconductors – Applications of superconductors – SQUID, cryotron, magnetic levitation. Formation of Energy Bands, E-k Diagram, Origin of band gap, Energy bands in solids, Effective mass of electron, Fermi-Dirac Distribution, Conductivity in conductor and semi-conductors.	

UNIT -IV	Solid State Electronics-II	(06 Hours)
	Review of intrinsic and Extrinsic semiconductors, The n_0 and p_0 equations, Drift and Diffusion Currents, Regeneration process, Recombination Process, Derivation of Current Continuity Equation, Position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Minority Carrier injection and recombination in Homogeneous Semiconductor, p-n junction formation, Band structure of p-n junction diode under forward and reverse biasing, Junction Capacitance, Photovoltaic effect, Solar cell and its characteristics.	
UNIT -V	Interference, Diffraction and Polarization	(06 Hours)
	<p>Interference: Interference due to thin film of uniform thickness, engineering applications of interference (optical flatness, non-reflecting coatings).</p> <p>Diffraction: Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Diffraction at a circular aperture (Result only), Plane diffraction grating, Conditions for principal maxima and minima.</p> <p>Polarization: Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism</p>	
UNIT -VI	Acoustics	(06 Hours)
	Elementary Acoustics, reverberation and reverberation time, Sabine's formula, pressure and intensity level, different types of noise and their remedies, Electro Acoustic transducers	

	(piezoelectric transducers, electrostatic transducer, magnetic transducer, magneto strictive transducer), Types of Microphones, Loudspeaker, stereophony, sound recording and Sound reinforcement systems.	
<u>Lab Experiment</u> :(Any Eight of the Following)		
1. Study of Lissajous figure by Cathode Ray Oscilloscope (CRO)		
2. Determination of e/m by Thomson method.		
3. Plotting the hysteresis loop for given magnetic material.		
4. To study Hall effect and determine the Hall voltage.		
5. Calculation of conductivity by four probe methods.		
6. Study of solar cell characteristics and calculation of fill factor.		
7. Determination of band gap of semiconductor.		
8. Determination of radius of Plano convex lens/wavelength of light/Flatness testing by Newton's rings		
9. Determination of wavelength of light using diffraction grating.		
10. Determination of resolving power of telescope.		
11. Determination of thickness of a thin wire by air wedge.		
12. Determination of refractive index for O-ray and E-ray.		
13. To determine the velocity of sound.		
14. Measurement of average SPL across spherical wavefront and behavior with the distance.		
15. Expansion chamber muffler: investigation of muffler response as a filter in the low frequency approximation by determining insertion loss.		
16. Interference of sound using PC speakers.		
Assignments		
Six assignments to be given by the subject teacher (Theory)-one from each unit/one mini project with report-students can work in group of 4 Maximum		
Topics for projects based learning*		
1. Design and simulation of automatic solar powered time regulated water pumping		

2. Solar technology: an alternative source of energy for national development
3. Comparison of various method used in measuring the gravitational constant g
4. Possible effects of electromagnetic fields (emf) on human health
5. The design and construction of the hearing aid device
6. Design and construction of digital distance measuring instrument
7. Design and construction of automatic bell ringer
8. Design and construction of sound or clap activated alarm
9. Electronic eye (Laser Security) as autoswitch/security system
10. Electric power generation by road power
11. Wireless power transfer
12. Determination of velocity of O-ray and E-ray in different double refracting materials
13. Quantum confinement effect in wide band semiconductors
14. Tesla Coil
15. LiFi- wireless data transfer system using light
*Students in a group of 3 to 4 shall complete any one project from the above list
Text Books:
1. A Textbook of Engineering Physics, <u>M N Avadhanulu</u> , <u>P G Kshirsagar</u> and <u>TVS Arun Murthy</u> , S. Chand Publishing (2018).
2. Engineering Physics, R K Gaur and S L Gupta, Dhanpat Rai Publishing Co Pvt Ltd (2015)
3. Concepts of Modern Physics, <u>Arthur Beiser</u> , <u>Shobhit Mahajan</u> and <u>S. Rai Choudhury</u> , McGraw Hill Education (2017)
Reference Books:
1. Fundamentals of Physics, <u>Jearl Walker</u> , <u>David Halliday</u> and <u>Robert Resnick</u> , John Wiley and Sons (2013)
2. Optics, <u>Francis Jenkins</u> and <u>Harvey White</u> , Tata Mcgraw Hill (2017)
3. Principles of Physics, <u>John W. Jewett</u> , Cengage publishing (2013)
4. Introduction to Solid State Physics, C. Kittel, Wiley and Sons (2004)
5. Principles of Solid-State Physics, H. V. Keer, New Age International (1993)
6. Laser and Non-Linear Optics, B. B. Laud, New Age International Private Limited (2011)
7. Nanotechnology: Principles and Practices, Dr. S. K. Kulkarni, Capital Publishing Company (2014)
8. Science of Engineering Materials- C.M. Srivastava and C. Srinivasan, New Age International Pvt. Ltd. (1997)
9. Introduction to Electrodynamics –David R. Griffiths, Pearson (2013)

10. Renewable Energy: Power for a Sustainable Future, Boyle, Oxford University Press (2012)

SUBJECT: - ELECTRICAL TECHNOLOGY**

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination: 60 Marks	Credits :04
Practical: 02	Internal Assessment: 40 Marks	
Tutorial: 00	TW: 50 Marks	Credit: 01
		Total Credits: 5
Course Pre-requisites:		
	Physics and Mathematics	
Course Objectives:		
1.	To introduce fundamental concepts, various laws-principles and theorems associated with electrical systems.	
2.	To impart basic knowledge of all electrical quantities such as current, voltage, power, energy, frequency along with different types of fields.	
3.	To provide knowledge about fundamental parameters such as resistance, inductance and capacitance and magnetic circuits, AC and DC circuits	
4.	To provide knowledge of Electrical Measurement technique and Electrical Safety Practices.	
Course Outcomes: After learning this course students will be able to		
1	Calculate the circuit parameters using dc network theorems.	
2	Demonstrate the knowledge of various parameters related to magnetic circuit and single-phase ac circuits.	
3	Classify the various parameters of 3-phase AC circuits and apply the concepts of single-phase transformer.	

4	Demonstrate the knowledge of various power generation and transmission techniques.	
5	Explain the Construction and working principle of DC and AC machines.	
6	Apply the various measurement techniques of circuit parameters and safety norms.	
UNIT – I	DC Circuit Analysis and Network Theorems:	(08 Hours)
	Circuit Concepts: Concepts of network, Active and passive elements, voltage and current sources, concept of linearity and linear network, unilateral and bilateral elements, R, L and C as linear elements, source transformation. Kirchhoff's laws; loop and nodal methods of analysis; star-delta transformation; Network Theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (simple numerical problems).	
UNIT – II	Magnetic Circuit and Single-Phase AC Circuits	(08 Hours)
	Magnetic Circuit: Magnetic circuit concepts, analogy between electric & magnetic circuits, magnetic circuits with DC and AC excitations, magnetic leakage, B-H curve, hysteresis and eddy current losses, magnetic circuit calculations, mutual coupling Single Phase AC Circuits: AC Fundamentals: Sinusoidal, square and triangular waveforms – average and effective values, form and peak factors, concept of phasors, phasor representation of sinusoidally varying voltage and current. Analysis of series, parallel and series parallel RLC Circuits: apparent, active & reactive powers, power factor, causes and problems of low power factor, power factor improvement; resonance in series and parallel circuits, quality factor (simple numerical problems)	
UNIT - III	Three Phase AC Circuits:	(08 Hours)
	Three Phase AC Circuits: Three phase system-its necessity and advantages, meaning of phase sequence, star and delta connections, balanced supply and balanced load, line, and phase voltage/current relations (Simple derivations), three-phase power and its measurement (simple numerical problems). Single Phase Transformer: Principle of operation, construction, e.m. f. equation, equivalent	

	circuit, power losses, efficiency (simple numerical problems), introduction to auto transformer. Three phase transformer and its different winding connections	
UNIT -IV	Power Generation and Power System	(08 Hours)
	<p>Power Generation: Power Generation techniques using conventional (Hydro, Thermal, nuclear, Gas) & non-conventional resources (Solar, Wind, biogas).</p> <p>Introduction to Power System: General layout of electrical power system and functions of its elements, standard transmission, and distribution voltages, layout. Concept of grid (elementary treatment only)</p>	
	DC Machines and AC Machines	(08 Hours)
	<p>DC Machines: Principles of electromechanical energy conversion, DC machines: types, Construction & working, e. m. f. equation of generator and torque equation of motor, speed control, characteristics and applications of dc motors (simple numerical problems).</p> <p>AC Machines: Single Phase Induction motor: Principle of operation and introduction to methods of starting, applications. Three Phase Induction Motor: Principle of operation, slip-torque characteristics, applications (numerical problems related to slip only)</p>	
UNIT -VI	Electrical Measurement technique	(08 Hours)
	<p>Electrical Measurement technique: Electrical instruments such as wattmeter, energy meter, tong-tester, megger, and power analyzer. Measurement of circuit parameters like resistance, inductance and capacitance using DC and AC bridges.</p> <p>Electrical Safety Practises: Electric shock, precautions against shock, First aid for electric shock other hazards of electrical laboratories & safety rules, Objectives of Earthing, types of earthing;</p>	

	pipe and plate earthing, Residual current circuit breaker (RCCB).	
Term Work:		
1. Find the current in the given network using Super position Theorem		
2. Find the current in the given network using Thevenin's and Notton's Theorem		
3. To Plot the B-H characteristics for a magnetic material		
4. To find the voltage and current relationships in R-L series, R-C series, R-L-C series circuit		
5. To find the voltage and current relationships in R-L-C series resonance circuit.		
6. Verification of voltage and current relationships in star and delta connected 3-phase networks		
7. To find efficiency and regulation of single-phase transformer		
8. To control the speed of DC shunt motor using fulx control and armature voltage control method.		
9. To control the speed of DC shunt motor using fulx control and armature voltage control method.		
10. Find the unknown resistance using Kelvin's double bridge.		
11. Find the unknown inductance using Anderson's bridge.		
12. Measurement of power and energy in single phase ac circuit.		
Note: The term work shall be the record of minimum eight experiments performed from the above list.		
Topics for projets based learning*		
1.Design a small circuit for superposition theorem.		
2. Design small circuit to study Thevenin's Theorem.		
3. Design Small circuit to study Norton's Theorem.		
4. Design small circuit to study R-C series circuit.		
5. Design small circuit to study R-L series circuit.		
6. Design small circuit to study R-L-C series circuit.		
7. Design of Tesla Coil.		
8. Design small two winding transformer.		
9. Design small electromagnet.		
10. Design a small doorbell.		

11. Design of wireless power transmission.
12. Design of electric buzzer.
13. Design of small wind farm.
14. Design of small solar power plant.
15. Design of small galvanometer.
*Students in a group of 3 to 4 shall complete any one project from the above list
Text-books:
1. Electrical Technology - Edward Huges (Pearson
1. Basic Electrical Engineering - D. P. Kothari, J Nagarath (TMC)
2. Electrical power system technology - S. W. Fordo, D. R. Patric (Prentice Hall)
Reference Books:
1. Principles of Electronics-Dr. H. M. Rai (Satya Prakashan)
2. Electronic Devices and Circuit Theory- R. L. Boylestad and L. Nashelsky (PHI)
3. Electrical, Electronics Measurements and Instruments - (SatyaPrakashan)
4. Principles of Communication Engineering - Anokh Singh, A. K. Chhabra (S Chand)
5. Electrical Technology - Volume I & volume – II by B L Theraja and AK Theraja(<i>S Chand</i>)

**Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune**

**B. Tech. Sem. I: Electronics & Telecommunication Engineering

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination: 60 Marks	Credits: 04
Practical: 02	Internal Assessment: 40 Marks	
Tutorial: 00	TW & OR: 50 Marks	Credit: 01
		Total Credit: 05
Course Pre-requisites:		
	Physics, Chemistry, Mathematics (Class XII)	
Course Objectives:		
1.	To teach the construction, working, ratings and application of passive devices like resistors, capacitors, inductors, transformers, and relays	
2.	To introduce types of Voltage and current sources	
3.	To teach the construction, working and ratings of devices like PNjunction diode, Schottky diode, Zener diode, bipolar junction transistor	
4.	To teach the construction, working and ratings of field effect transistor and MOSFET	
5.	To teach the construction, working and ratings of optoelectronic devices like LDR, LED, phototransistor, and photovoltaic cell	
6.	To introduce the concept of grounding and shielding, PCB layout design, PCB fabrication process, with the aid of an EDA tool.	

Course Outcomes: After learning this course students will be able to		
1	Classify resistors, capacitors, inductors, and transformer based on their construction, types and ratings and analyze simple circuits consisting of passive devices	
2	Analyze circuits using voltage and current sources	
3	Classify active devices based on their types and ratings and plot their characteristic curves	
4	Classify optoelectronic devices based on their types and ratings and plot their characteristic curves.	
5	Use the concepts of grounding and shielding while designing PCB, explain the PCB design and fabrication and assembly process	
6	Use EDA tools for designing single sided PCB for simple circuits	
UNIT – I		
	Passive Electronic Components	(08 Hours)
	Introduction to the concept of active and passive electronic devices, Types of resistors, construction, ratings and typical applications, Types of capacitors, construction, ratings and typical applications, Types of inductors, construction, ratings and typical applications, Types of transformers, construction, ratings and typical applications, Construction of relays, types and ratings, Analysis of series and parallel resistors and capacitor circuits	
UNIT – II		
	Sources	(08 Hours)
	Types of voltage and current sources (AC and DC), Concept of ideal and non-ideal voltage source, Concept of ideal and non-ideal current source, Series and parallel combinations of sources, Loading effect, Dependent voltage and current sources, Electrochemical cells and batteries, Types and characteristics, Regulation concept (Line regulation, load regulation, temperature stability factor)	

UNIT - III	Diodes and BJT	(08 Hours)
	Classification of material based on band gap theory, Types of semiconductors (p-type and n-type), PN junction diode and its characteristics, Schottky diode, Zener diode, Diode models, Concept of DC and AC load line and ratings of PN junction diode, Introduction to BJT (NPN and PNP) and its construction and working mechanism, BJT configurations and their input and output characteristics, Types and ratings of BJT	
UNIT -IV	FET and MOSFET	(08 Hours)
	Construction and working mechanism of FET, Input and output characteristics of FET, FET configurations, Ratings of FET, Construction and working of DMOSFET and EMOSFET, Characteristics of DMOSFET and EMOSFET, Configurations and ratings of EMOSFET	
UNIT -V	Opto-Electronics	(08 Hours)
	Construction and working of LDR and its characteristics, simple application, Construction and working of LED and its characteristics and ratings, Photo-transistor and its characteristics, Introduction to the concept of electrical isolation and its importance, Construction of opto-isolator(opto-coupler) and its ratings, Construction and working of photovoltaic cell and its characteristics and ratings	
UNIT -VI	PCB (Printed Circuit Board)	(08 Hours)
	Concept of grounding, shielding and its importance, building blocks of PCB (track, pads, fills) and design rules, PCB fabrication and assembly, Introduction to EDA tool for artwork design of a simple single sided PCB Soldering: Types of solder alloys, soldering equipment, specifications of solder alloys	
<u>List of experiments:</u>		

1. Study of resistors, capacitors, and inductors
2. Plot V-I Characteristics of PN Junction Diode
3. Plot V-I Characteristics of Zener Diode
4. Plot Input and Output Characteristics of BJT in CE Configuration
5. Plot Transfer and output characteristics of FET
6. Plot Transfer and output characteristics of EMOSFET
7. Plot characteristics of LDR
8. Plot characteristics of Opto-isolator
9. Study of Relays
Topics for projects based learning*
1.Survey report of types of resistors, capacitors, transformers their form factors, specifications and price
2.Survey report of types of batteries, their form factors, specifications and price
3.Survey report of types of low power relays, their form factors, specifications and price
4.Survey report of types of diodes, BJT, MOSFET, their form factors, specifications and price
5.Build a shunt regulator and measure its line and load regulation
6.Build a full-wave rectifier with capacitor input filter and test it
7.Build a small signal voltage amplifier (BJT) and test it
8.Build a switch using BJT, MOSFET, relay and test it
9.Build a simple day light switch with an LDR, BJT and Relay
10.Build a motion sensor switch
11.Build a fire alarm circuit
12.Implement and test a given circuit on a general purpose PCB

13. Build a simple water level indicator
14. Build a simple temperature indicator
15. Build a LED Light Bulb Circuit
*Students in a group of 3 to 4 shall complete any one project from the above list

B. Tech. Sem. I: Electronics & Telecommunication Engineering

SUBJECT: - C PROGRAMMING

<u>TEACHING SCHEME:</u>			<u>EXAMINATION SCHEME:</u>			<u>CREDITS ALLOTTED:</u>		
Theory: 04			End Semester Examination: 60 Marks			Credits: 04		
Practical: 02			Internal Assessment: 40 Marks					
Tutorial: 00			TW: 50 Marks			Credit: 01		
						Total Credit: 5		
Course Pre-requisites:								
			Flow charts					
Course Objectives:								
			<ul style="list-style-type: none"> • A student will gain a thorough understanding of the fundamentals of C programming. • A student will be able to code, compile, and test C programs. • A Student will be able to solve Problems using C language. 					
Course Outcomes: After learning this course students will be able to								
1	Apply the basic concepts of programming using C language.							
2	Write basic programs using conditional statement.							
3	Use 2 D Array in programming							
4	Create functions and Pass parameters.							
5	Construct structures using Pointers.							
6	Apply basic concepts of graphics using C language.							
UNIT – I								
Introduction Basic of C						(08 Hours)		

	Structure of a C program, identifiers, basic data types and sizes. Constants, variables, arithmetic, relational and logical operators Managing input and output operations, Sample programs.	
UNIT – II	Conditional Statements and Loops	(07 Hours)
	Decision making within a program, conditions, if statement, if-else statement, loops: while loop, do while, for loop. Nested loops, infinite loops, switch statement, sample programs	
UNIT - III	Arrays & Strings	
	Arrays - concepts, declaration, definition, accessing elements, storing elements, Strings and string manipulations, 1-D arrays, 2-D arrays and character arrays, string manipulations, , Array applications: Matrix Operations.	(08 Hours)
UNIT -IV	Functions & Pointers	(07 Hours)
	Basics, parameter passing, storage classes- extern, auto, register, static, scope rules, user defined functions, , recursive functions, Recursive solutions for Fibonacci series, example c programs. Passing arrays & strings to functions.	
UNIT -V	Pointers and Structures	(10 Hours)
	Derived types- structures- declaration, definition, and initialization of structures, accessing structures, nested structures, arrays of structures, structures and functions, pointers to structures, self-referential structures, bit-fields, program applications. Different types of stacks and queues.	

UNIT -VI	Basic of Graphics	(08 Hours)
	Introduction, what is computer Graphics? Area of Computer Graphics. Graphics programming, initializing the graphics, C Graphical functions, simple programs	
<u>List of Experiments:</u>		
1.	<ul style="list-style-type: none"> ▪ Write a C program to take user Input and print it on the screen. ▪ Write a C program to perform addition or subtraction of two numbers. ▪ Write a C program to find whether the number is Odd or Even. ▪ Write a C program to find out Prime numbers. ▪ Write a C program to find out Fibonacci series. 	
2.	<ul style="list-style-type: none"> ▪ Write C programs to print different patterns. ▪ Write a C program to do factorial using recursion. ▪ Write a C program to find out Armstrong number 	
3.	<ul style="list-style-type: none"> ▪ Write a C program to sort the array in Ascending & Descending order. ▪ Write C programs to perform operations on 2-D arrays. ▪ Write a C program to perform different operations on strings. 	
4.	<ul style="list-style-type: none"> ▪ Use of Pointers ▪ Write a C program to swap numbers using pointers. 	

5.	Write a C program to show the use of pointers in arrays.
6.	Write a C program to use functions using pointers.
7.	Write a C program to create student mark sheet using structures.
8.	Write a C program to show the use of structure using pointers.
9.	Write a program showing functions of Graphics programming
10.	Mini Project.
Topics for projects based learning*	
1.Employee Record System Project	
2. Build Calculator (GUI Optional)	
3. Customer Billing System Project:	
4. Medical Store Management System Project	
5. Currency Converter (GUI Optional)	
6. Modern Periodic Table (GUI Optional)	
7. Number System Conversion Project	
8. Phone book / Contact Management System	
9. 100 Years Calender	
10. Hospital Management System Project	
11. Customer Billing system	
12. Tic Tac Toe Game (GUI Optional)	
13. Departmental Store Management.	
14. Build Rock , Paper & Scissors Game (GUI Optional)	
15. Bank Management System	
*Students in a group of 3 to 4 shall complete any one project from the above list	
Text Books:	
1. Programming in ANSI C – E Balagurusamy (5 th Edition-TMH)	

2. C Graphics & Projects – By B M Havaladar

Reference Books:

1. Let Us C- Yashwant Kanitkar

2. Computer Graphics – By Hearn & Baker

3. The C Programming Language. 2nd Edition By Brian Kernighan and Dennis Ritchie

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. I: Electronics & Telecommunication Engineering
SUBJECT: -MATLAB FUNDAMENTALS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 00	End Semester Examination: 00	Credits: 00
Practical: 04	Internal Assessment: 00	
Tutorial: 00	TW: 50 Marks	Credit: 02
		Total Credit: 02
Course Pre-requisites:		
	Mathematics (Class XII) and Linear Algebra and Calculus	
Course Objectives:		
1.	To teach basics of MATLAB software and programming.	
2.	To teach the students Vectors, Arrays and Strings in programming	
3.	To introduce Conditional Statements, Loops and Functions	
4.	To teach the students to perform different operations on Matrices in programming.	
5.	To introduce MATLAB Simulink.	
6.	To introduce MATLAB GUI.	
Course Outcomes: After learning this course students will be able to		
1	Use MATLAB for basic programming.	

2	Use Vectors, Arrays and Strings in programming.
3	Apply knowledge of conditional statements, loops, and functions in programming.
4	Use different operations of Matrices in programming.
5	Design different models using MATLAB Simulink.
6	Design GUI for different applications.
<u>List of experiments:</u>	
1. Introduction to MATLAB	
a) Basics of MATLAB	
2. Commands, Variables and Operators.	
a) Write a program to perform arithmetic and logical operations on scalar data.	
b) Write a program to display sine and cos wave of particular amplitude and frequency.	
3. Vectors	
a) Write a program to find addition, subtraction, multiplication, transpose, and magnitude of given vector.	
b) Write a program to find mean, standard deviation, and variance of given vector.	
4. Conditional Statements and Functions	
a) Write a program to show use of if-then-else statement and while loop	
b) Write a program to import and export data from .csv file.	
5. Arrays and Strings	
a) Write a program to display data using string.	
b) Write a program to compare two given arrays or array elements.	
6. Operations on Matrix	

- a) Write a program to find transpose, determinant, concatenation, and inverse of given matrix.
- b) Write a program to solve given linear equation.

7. GUI

- a) To introduce basics of GUI
- b) To design GUI for any one of the programs mentioned above.

8. Simulink

- a) To introduce basics of Simulink
- b) Develop a model to differentiate and integrate sine wave using Simulink.

Text Books:

1. MATLAB for Beginners-A Gentle Approach, Peter I. Kattan, 2010, ResearchGate publication
2. Getting started with MATLAB, RudraPratap, 2010, Oxford university press.

Reference Books:

1. A Guide to MATLAB, Brian R. Hunt, Ronald L. Lipsman, Jonathan M. Rosenberg, 3rd Edition, Cambridge University Press.
2. Introduction to MATLAB for Engineers, William J. Palm, 3rd Edition, McGraw-Hill Education.

SEMESTER:- II
SYLLABUS

**Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune**

**B. Tech. Sem. II: Electronics & Telecommunication Engineering
SUBJECT: - DIFFERENTIAL EQUATIONS AND COMPLEX ANALYSIS**

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination: 60 Marks	Credits: 03
Practical: 00	Internal Assessment: 40 Marks	
Tutorial: 01		Credits: 01
		Total Credit: 04
Course Pre-requisites:		
	Class XII Mathematics, Linear Algebra and calculus	
Course Objectives:		
1.	To introduce ordinary differential equations for higher order.	
2.	To introduce partial differential equations.	
3.	To introduce complex analysis and conformal mapping.	
4.	To teach sequences, series, and series expansion.	
5.	To introduce ordinary differential equations for higher order.	
6.	To introduce partial differential equations.	
Course Outcomes: After learning this course students will be able to		
1	Solve higher differential equations by different methods	

2	Solve partial differential equations by different methods	
3	Demonstrate the methods of Complex Analysis technique.	
4	Implement the Complex Analysis for potential application	
5	Demonstrate the knowledge of series and sequences.	
6	Solve series expansion problems.	
UNIT – I		
	Ordinary linear differential equations	(06 Hours)
	Ordinary linear differential equations of nth order, solution of homogeneous and non-homogeneous equations. Operator method. Methods of undetermined coefficients and variation of parameters, Systems of differential equations. Mass spring system.	
UNIT – II		
	Partial Differential Equations	(06 Hours)
	Partial differential equations, variable separable method, complementary function and particular integral, initial and boundary value problems (wave equation, 1-D and 2-D heat Equation).	
UNIT - III		
	Complex Differentiation and Integration	(06 Hours)
	Algebra of Complex Number (Polar and exponential form, Power and roots, Regions in a complex plane), Analytic functions, Cauchy's integral theorem, Cauchy's integral formula, Derivatives of analytic functions, Singularities, Residues, Poles and Zeros of Analytic Functions, The Residue Theorem	

UNIT -IV	Conformal mapping	(06 Hours)
	G Geometry of analytic functions: conformal mapping, points linear fractional transformations, conformal mapping for other function. Conformal mappings to potential problems: electrostatic fields, use of conformal mapping: modelling, heat problems, fluid flow, Poisson's Integral formula for potentials, General properties of harmonic functions, uniqueness theorem for the Dirichlet problem.	
UNIT -V	Sequences and Series	(06 Hours)
	Review of sequences, series and convergence tests, Power Series, Power Series Expansions of Analytic Functions, Taylor Series (Taylor's Theorem with Proof), Laurent series (Laurent's Theorem without Proof), Leibnitz's Theorem, Maclaurin's Series	
UNIT -VI	Series Expansion	(06 Hours)
	Multiplication, Division, Integration and Differentiation of Power Series, methods for solutions of ordinary differential equations. Legendre equation and Legendre polynomials, Bessel equations and Bessel functions of first and second kind. Orthogonal sets of functions	
Topics for projects based learning*		
1. Use MATLAB to formulate and solve types of differential equations - Initial value problems and Delay differential equations		
2. Use MATLAB to formulate and solve types of differential equations - Boundary value problems and Partial differential equations		
3. Ordinary Differential Equation (ODE) solvers in MATLAB, solve initial value problems with a variety of properties		
4. Ordinary Differential Equations EULER methods		

5. Ordinary Differential Equations Using built-in function
6. Differential Equations in Python
7. Differential Equations with ODE in Python
8. Partial Differential Equations in Python
9. Solving partial differential equations
10. Complex Line Integration
11. Multi dimensional Conformal mapping
12. Sequences & Series using matlab
13. Sequences and Series -circle packing method
14. An End-to-End Project on Time Series Analysis and Forecasting with Python
15. Time Series Analysis in Python
16. Time Series Classification (with Python)
17. Taylor series with Python
18. Program to print binomial expansion series
*Students in a group of 3 to 4 shall complete any one project from the above list
Textbooks/Reference Books
1. 'Advanced Engineering Mathematics' by Erwin reyszig
2. 'Advanced Engineering Mathematics' by Dennis G. Zill and Warren S. Wright
3. Applied Mathematics (Volumes I and II) by P.N. Wartikar & J.N. Wartikar
4. Higher Engineering Mathematics by B.S. Grewal
5. Higher Engineering Mathematics by B.V. Ramana
6. Advanced Engineering Mathematics

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. II: Electronics & Telecommunication Engineering
SUBJECT: - Chemistry of Electronic Materials

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination: 60 Marks	Credits: 03
Practical: 02	Internal Assessment: 40 Marks	
Tutorial:00	TW: 50 Marks	Credit: 01
		Total Credit: 04
Course Pre-requisites:		
	Basic knowledge of chemistry, Electrochemical series, Electrode potential, Primary and secondary cells, Capacitor, insulator, classification, and properties of polymers.	
Course Objectives:		
	<ul style="list-style-type: none"> • To develop the interest among the students regarding chemistry and their applications in engineering • To develop confidence among students about chemistry, how the knowledge of chemistry is applied in technological field. • The student should understand the concepts of chemistry to lay the groundwork for subsequent studies in the field such as E&TC Engineering 	
Course Outcomes: After learning this course students will be able to		
1	Demonstrate the knowledge of Electrical Insulating Materials with its applications.	
2	Demonstrate the knowledge about Dielectric Strength and Insulation Breakdown for various engineering applications.	
3	Apply the knowledge of crystallography to study of crystal structure	
4	Apply the knowledge Solid Solutions and Two-Phase Solids.	
5	Demonstrate the concept of the battery with its applications	
6	Demonstrate the concepts of spectroscopy and thermogravimetry for various engineering applications.	

UNIT – I	Electronic Materials 1	(06 Hours)
	Electrical Insulating Materials: Introduction - Requirements. Classification based on Substances: Gaseous, Liquid and Solid Insulating Materials. Preparation, Properties and Applications of Ceramic Products: White Wares and Glass - Transformer Oil. Electrical Resistivity: Factors influencing Electrical Resistivity of Materials - Composition, Properties and Applications of High Resistivity Materials: Manganin - Constantan - Molybdenum Disilicide – Nichrome.	
UNIT – II	Electronic Materials 2	(06 Hours)
	Dielectric Strength and Insulation Breakdown: Dielectric Strength: Definition, Dielectric Breakdown and Partial Discharges: Gases, Dielectric Breakdown: Liquids, Dielectric Breakdown: Solids, Capacitor Dielectric Materials: Typical Capacitor Constructions, Dielectrics: Comparison. Piezoelectricity, Ferroelectricity, and Pyroelectricity: Piezoelectricity: Quartz Oscillators and Filters, Ferroelectricity, and Pyroelectricity Crystals, Introduction to Compound Semiconductors.	
UNIT - III	Electronic Materials 3	(06 Hours)
	The Crystalline State: Types of Crystals, Crystal Directions and Planes, Allotropy and Carbon, Crystalline Defects and Their Significance: Point Defects: Vacancies and Impurities, Line Defects: Edge and Screw Dislocations, Planar Defects: Grain Boundaries, Crystal Surfaces and Surface Properties, Stoichiometry, Nonstoichiometric, and Defect Structures, Single- Crystal Czochralski Growth. Glasses and Amorphous Semiconductors: Glasses and Amorphous Solids, Crystalline and amorphous Silicon.	
UNIT -IV	Phase rule and Polymers	(06 Hours)
	Solid Solutions and Two-Phase Solids: Isomorphous Solid Solutions: Isomorphous Alloys, Phase Diagrams: Cu–Ni and Other Isomorphous Alloys, Binary Eutectic Phase Diagrams and Pb–Sn Solders. Polymers, Preparation, Properties and Applications of SF ₆ , Epoxy Resin, Conduction Mechanism, Preparation of Conductive Polymers, Polyacetylene, Poly (P- Phenylene), Polyhetrocyclic Systems, Polyaniline, Poly (Phenylene Sulphide), Poly (1,6-Heptadiyne),	

	Applications.	
UNIT -V	Electrochemistry	(06 Hours)
	Introduction, Acids and Bases, Concept of pH and pOH and Numerical Electrode Potential, Electrochemical Cell, Concentration Cell, Reference Electrodes, Overvoltage, Fuel Cells, Construction and Working of - Acid and Alkaline Storage Battery, Dry Cell, Coin Cell Batteries, Ni-Cd Batteries, Ni-MH Batteries, Li-Ion Batteries, Li-Po Batteries.	
UNIT -VI	Instrumental Methods of Analysis	(06 Hours)
	Introduction, Absorption of Radiation, Instrumentation and Applications of UV-Visible Spectrophotometer and IR Spectrophotometer. Thermal Methods of Analysis TGA, DTA, DSC, Sensors: Oxygen and Glucose Sensor.	
Term Work:		
1. To measure the absorbance of the sample at different wavelengths.		
2. Verification of Beer-Lambert's Law.		
3. Determination of Viscosity Average Molecular Weight of Polymer		
4. Determination of Viscosity of Organic Solvents		
5. To find the tensile strength of polymer.		
6. To determine the pH value of given solutions using pH meter.		
7. To determine pH of soil		
8. To find EMF of the cell.		
9. To calculate the Equilibrium constant.		
10. To predict the spontaneity of the cell reaction.		
11. To learn the specific charge/discharge characteristics of a Lithium- ion (Li- ion) battery through experimental testing of a remote triggered Li- ion Battery.		
12. To Prepare Phenol formaldehyde/Urea formaldehyde resin.		
13. To study set up of Daniel Cell		

Topics for projects based learning*
1. To Prepare and for synthesis of the following polymers,
a. Bakelite
b. Polystyrene
c. Epoxy Resin
2. Synthesis properties and applications of polymer.
3. To Prepare one component system with an example
4. To Prepare two component system with an example 5. How to Make a Battery with Metal, Air, and Saltwater 6. Use a Microbial Fuel Cell to Create Electricity from Waste
7. To Prepare fuel cell
8. To prepare lead acid storage battery. 9. To prepare Oxidic Nanomaterials for High Density Storage in Li-ion Batteries
10 Electrochemical forming is a unique additive manufacturing method which uses electrochemical technologies to manufacture, layer-by-layer, parts of complex geometry.
11. The materials chemistry and electrochemistry of the lithium-air battery
12. . Challenges facing all-solid-state batteries
13. The materials chemistry and electrochemistry of lithium and sodium-ion batteries
14 Electroplating- the principles, how different metals can be used and the practical applications.
15. Electroplating, Metal Polishing, Anodizing, Phosphating Metal Finishing and Powder Coating Projects
*Students in a group of 3 to 4 shall complete any one project from the above list
Text Books:
1. Polymer Science and technology (2nd Edition), P. Ghosh, Tata McGRAW Hill, 2008.
2. Polymers: Chemistry & Physics of Modern Materials (2nd edition) J.M.G.Cowie, Blackie Academic & Professional, 1994.
3. A Text Book of Engineering Chemistry, Shashi Chawla, Dhanpat Rai & Co, 2004
4. Engineering Chemistry (16th Edition) Jain, Jain, Dhanpat Rai Publishing Company, 2013.
5. Chemical sensors and Biosensors, Fundamentals and applications, Florinel Gabriel Banica, Wiley.

6. Microelectronics Circuits, Adel S. Sedra & Kenneth C. Smith, 7th Edition, 2015, ISBN 978-0-19-933913-6, Oxford University Press

Reference Books:

1. Inorganic Chemistry (4th edition), D. F. Shriver and P. W. Atkins, Oxford University, Oxford, 2006.

2. Reactions, Rearrangements and Reagents (4th edition), S. N. Sanyal, Bharti Bhawan (P & D), 2003.

3. Applications of Absorption Spectroscopy of Organic Compounds (4th edition), John R. Dyer, Prentice Hall of India Pvt. Ltd., 1978.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. II: Electronics & Telecommunication Engineering
SUBJECT: - DIGITAL ELECTRONICS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination: 60 Marks	Credits: 04
Practical: 02	Internal Assessment: 40 Marks	
Tutorial: 00	TW& OR: 50 Marks	Credit:01
		Total Credit: 05
Course Pre-requisites:		
	Fundamentals of Number Systems.	
Course Objectives:		
1.	To present the Digital fundamentals, Boolean algebra, and its applications in digital systems	
2.	To familiarize with the design of various combinational digital circuits using logic gates	
3.	To introduce the analysis and design procedures for synchronous and asynchronous sequential circuits	
4.	To understand the various semiconductor memories and related technology	
5.	To introduce the electronic circuits involved in the making of logic gates	
Course Outcomes: After learning this course students will be able to		
1	Demonstrate the knowledge of Digital fundamentals and Boolean algebra.	
2	Apply different minimization techniques on Boolean expression and design logic diagram	
3	Analyze & design digital combinational circuits such as of multiplexers, demultiplexers, encoder, decoder, and arithmetic circuits	

4	Demonstrate the knowledge of operations of basic types of flip-flops & the design of FSM.	
5	Analyze & design digital Sequential circuits such as Shift Registers and Counters	
6	Classify the characteristics of different logic families, PLDs, Semiconductor memories and their applications.	
UNIT – I	Introduction to Digital Systems:	(08 Hours)
	<p>Introduction to Digital electronics Fundamentals</p> <p>Number Systems: Introduction to Number Systems-Decimal, Binary, Octal, Hexadecimal, Conversion of number system, Representation of Negative Numbers, 1's complement and 2's complement.</p> <p>Binary Arithmetic: Binary addition, Binary subtraction, Subtraction using 1's complement and 2's complement, Binary multiplication, and division,</p> <p>Digital Codes: BCD code, Excess-3 code, Gray code, Binary to Excess -3 code conversion and vice versa, ASCII code, EBCDIC code.</p> <p>Logic Gates: Logical Operators, Logic Gates-Basic Gates, Active high and Active low concepts, Universal Gates, and realization of other gates using universal gates, Gate Performance Characteristics and Parameters</p>	
UNIT – II	Boolean Algebra:	(08 Hours)
	<p>Boolean Expressions and Truth Tables, Rules and laws of Boolean algebra, Demorgan's Theorems, Duality Theorem, Simplification of Boolean functions by Boolean laws, Shannon's Theorem.</p> <p>Boolean Function minimization Technique: Introduction: Minterms and sum of minterm form, Maxterm and Product of maxterm form, Reduction technique using Karnaugh maps – 2/3/4/variable K-maps, grouping of variables in K-maps, minimize Boolean expression using K-map and obtain K-map from Boolean expression, Quine Mc Cluskey Method</p>	
UNIT - III	Combinational Logic Design	
	<p>Introduction to Combinational Circuits, Adders: Half-Adder and Full-Adder, Subtractors- Half and Full Subtractor; Parallel adders: Ripple Carry and Look-Ahead Carry Adders.</p>	(08 Hours)

	BCD adder, BCD subtractor, Parity Checker/Generator, Multiplexer, Demultiplexer, Encoder, Priority Encoder; Decoder, BCD to Seven segment Display Decoder, ALU, Code converters, Magnitude comparators	
UNIT -IV	Sequential Logic Design	(08 Hours)
	Introduction to Sequential Circuits: 1 Bit Memory Cell, Latches: SR latch, Gated latch, Flip-Flops: Types of Flip Flops -RS, T, D, JK, Triggering of Flip Flops, Master-Slave JK Flip flop, Characteristic table of Flip-flop, excitation table of Flip-flop, Study of timing parameters of flip-flop.	
UNIT -V	Shift Registers and Counters:	(08 Hours)
	Data transmission in shift register: SISO, SIPO, PISO, PIPO, Bidirectional shift register, universal shift registers. Counters: synchronous counter and asynchronous counter. Introduction to FSM: Moore and Mealy State machine, state machine as a sequential controller. Design of state machines: state table, state assignment, transition/excitation table, excitation maps and equations, logic realization, Effect of clock skew and clock jitter on synchronous designs (Metastability)	
UNIT -VI	Logic Families and Memory Technology:	(08 Hours)
	Logic Family: Digital IC specification terminology, Logic families: TTL, CMOS, ECL families, Interfacing of TTL to CMOS & CMOS to TTL. Programmable logic devices: Study of PROM, PAL, PLAs. Designing combinational circuits using PLDs. Semiconductor memories: Classification and characteristics of memory, different types of RAMs, ROMs and their applications	
List of Practicals to be performed in the laboratory		

1. Study of basic gates using TTL, CMOS: 7432, 4011, 4050, 4070,4071,40106 and Universal Gates.
2. K map-based implementation of combinational logic
3. Design and implementation of Half and Full Adder, Half and Full Subtractor
4. Study of four-bit parallel Adder / Subtractor using IC 7
5. Design and implementation of Code Converters (Binary to Gray, Excess 3 to Binary)
6. Design and implementation of Magnitude Comparator
7. Implementation of combinational logic using MUX
8. Study of Decoder and DEMUX
9. Study of 7 segment decoder driver.
10. Study of Flip Flops (SR FF, D FF, JK FF, T FF)
11. Study of Shift Registers
12. Study of Up-Down Counter and Johnson Counter.
13. Study of Static I/O and transfer Characteristic of TTL
Note: The term work shall be the record of minimum eight experiments performed from the above list
Topics for projects based learning*
1. Survey report of basic gates ICs 7432, 4011, 4050, 4070,4071,40106
2. Implement combinational logic Circuit of given Boolean Equation.
3. Implement Half Adder and Half Subtractor.
4. Implement Full Adder using two Half Adders
5. Build 4-bit parallel Adder / Subtractor using IC.
6. Build Code Converters: Binary to Gray
7. Build Code Converters: Excess 3 to Binary)
8. Implement Two Bit Magnitude Comparator using IC 7485
9. Implement given combinational logic using MUX
10. Implement 7 segment decoder driver using IC 7447.
11. Build a Decade counter and Up-Down Counter.
12. Build a Shift Registers: SISO and SIPO
13. Implement the Johnson Counter and Ring Counter.

14. Survey Report on Static I/O and transfer Characteristic of TTL and CMOS.
15. Implement given Boolean Function using PLA.
*Students in a group of 3 to 4 shall complete any one project from the above list
Text Books:
1. R.P. Jain, —Modern digital electronics, 3rd edition, 12th reprint Tata McGraw Hill Publication
2. Anand Kumar, —Fundamentals of digital circuits, 1st edition, Prentice Hall of India, 2001
3. P.Raja, - Digital Electronics, Second Edition, Scitech Publication (India) Pvt.Ltd.

College of Engineering, Pune

B. Tech. Sem. II: Electronics & Telecommunication Engineering
SUBJECT: - SEMICONDUCTOR DEVICES AND CIRCUITS-I

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>	
Theory: 04		End Semester Examination: 60 Marks		Credits: 04	
Practical: 02		Internal Assessment: 40 Marks			
Tutorial: 00		TW & PR: 50 Marks		Credit: 01	
				Total Credit: 5	
Course Pre-requisites:					
		Elementary Electronics, EDA Tool Practice			
Course Objectives:					
1.		To introduce the methods of analysis, design, and simulation of diode circuits			
2.		To introduce the methods of analysis, design, and simulation of BJT biasing circuits			
3.		To introduce methods to analyze and design and simulate BJT amplifier circuits			
4.		To introduce methods to analyze and design and simulate JFET circuits			
5.		To introduce methods to analyze and design and simulate MOSFET circuits			
6.		To introduce the concept of current mirror and transistorized voltage regulator circuits			
Course Outcomes: After learning this course students will be able to					
1		Analyze and design the diode circuits			
2		Analyze and design the BJT biasing circuits			

3	Analyze and design the BJT amplifier circuits	
4	Analyze and design the JFET circuits	
5	Analyze and design the MOSFET circuits	
6	Analyze and design the current mirror and transistorized voltage regulator circuits	
UNIT – I		
DIODE CIRCUITS		(08 Hours)
	Analysis and design of Rectifier circuits (HWR, FWR, Bridge, Dual Complementary), Capacitor input filter, Clippers, Clampers, Voltage Multipliers, Special diodes (Zener diodes, Schottky diodes, Gold-diffused diodes), Switching circuits, Simple shunt regulator using Zener diode (analysis and design)	
UNIT – II		
BJT CIRCUITS I		(08 Hours)
	Need of biasing circuits, Analysis, and design of BJT biasing circuits like fixed bias, collector to base bias, voltage divider bias, split-supply bias, Concept of DC load line, Concept of stability factor, Derivation of stability factor	
UNIT - III		
BJT CIRCUITS II		(08 Hours)
	Concept of AC load line, BJT as two-port networks, BJT Models small signal models (h-parameter, Ebers-Moll, hybrid π and T), Analysis of CE, CB, CC Amplifiers (Derivation of Z_i , Z_o , A_v , A_i and A_p), Frequency response of BJT amplifiers, Single stage CE voltage amplifier design, large signal BJT model, BJT as switch, power BJT	
UNIT -IV		
JFET CIRCUITS		(08 Hours)

	Analysis and design of JFET biasing (Fixed bias, Self-bias, Voltage divider bias), JFET models, Analysis of CS, CD, CG Amplifiers, Frequency response of JFET amplifiers, Single stage CS amplifier design, FET as switch.	
UNIT -V	MOSFET CIRCUITS	(8 Hours)
	EMOSFET biasing (Fixed bias, negotiated bias/Voltage divide bias), DC load line, MOSFET models, Analysis of MOSFET amplifiers, Single stage CS amplifier design, Frequency response of MOSFET amplifiers, MOSFET as switch, Power MOSFET	
UNIT -VI	OTHER TRANSISTOR CIRCUITS	(08 Hours)
	Concept of current mirror, Analysis of Widlar current source (BJT and MOSFET), Wilson current mirror (BJT and MOSFET), Gilbert gain cell, Series pass transistor voltage regulator, Variable output voltage regulator	
<u>List of experiments:</u>		
1. Observe and measure outputs for rectifier circuits		
2. Observe and measure outputs clipper, clamper, voltage multiplier circuits		
3. Construct BJT biasing circuits (Fixed, Collector to base bias circuit, Voltage divider bias circuit and verify the Q-point.		
4. Measure and plot the frequency response of single stage CE voltage amplifier		
5. Construct FET biasing circuits (Fixed, self-bias circuit, Voltage divider bias circuit and verify the Q-point.		
6. Measure and plot the frequency response of single stage JFET CS voltage amplifier		

7. Construct MOSFET biasing circuits (Fixed, Voltage divider bias circuit and verify the Q-point.
8. Measure and plot the frequency response of single stage MOSFET CS voltage amplifier
9. Construct BJT and MOSFET switch circuits and compare the performance (power dissipation, transient response)
10. Measure and plot regulation characteristics of shunt regulator, series pass transistorized voltage regulator
Topics for projects based learning*
1. Build a voltage quadrupler circuit
2. Build a low current, regulated power supply
3. Build a diode, BJT tester
4. Latching burglar alarm
5. Moisture detector
6. Voltage controlled variable gain amplifier
7. Wind shield wiper control
8. Metal detector
9. Car battery charger
10. Under-voltage/Over-voltage indicator
11. Crystal oscillator
12. DC Flasher with adjustable ON/OFF times
13. Emergency Light
14. Simple intercom
15. Water level indicator with alarm
*Students in a group of 3 to 4 shall complete any one project from the above list

Course Pre-requisites:					
		Basic programming.			
Course Objectives:					
		<ul style="list-style-type: none"> • This course will introduce the concepts of Python language as software development tool. • To gain practical experience in Python programming including fundamental concepts, OOPs, Exception handling, Graphics. 			
Course Outcomes: After learning this course students will be able to					
1	Apply the basic concepts of Python programming.				
2	Write basic programs using control statements.				
3	Use exception handling in Python programs.				
4	Apply object-oriented programming concepts in Python.				
5	Write Python program for simple applications using existing libraries.				

6	Write simple graphics programs.	
UNIT – I	Python Basics	(08 Hours)
	Python Introduction ^[1] , Python Installation ^[1] , Relational operators, Bit-wise operators, Logical operators Python Data Types - Numbers (Integer, Floating Point, Complex Numbers), Strings, Lists, Tuples, Dictionaries, List comprehensions, Python Control Statements	
UNIT – II	Python Core	(08 Hours)
	Python Modules & Functions, Lambda, Scope, Python File Handling, Python Regular Expressions, Sequence Types, Input and output, Recursion, Flow Control, Immutable and Mutable Objects	
UNIT - III	Python Exception Handling	(08 Hours)
	Meaning of Exception, Exception Hierarchy Diagram, Types of Exception- Checked Exception, Unchecked Exception ^[1] , Exception Handling -TRY, CATCH, FINALLY, Raising an Exception, User Defined Exceptions	
UNIT -IV	OOPS, UML & OOAD	(08 Hours)
	Object Oriented Programming (OOPs) - Class & Object, Abstraction, Inheritance, Polymorphism, Encapsulation ^[1] , Object Oriented (OO) Modelling ^[1] , Object Oriented Analysis & Design (OOAD)	

UNIT -V	Python Multi-Threading	(08 Hours)
	Threads in Python [L1][SEP](a) Kernel Threads [L1][SEP](b) User Space Threads or User Threads, Advantages of Threading, Thread States: Life Cycle of a Thread, Thread & Threading Modules, Forking & Synchronizing Threads,Networking	
UNIT -VI	Python Packages and Graphics	(08 Hours)
	Numpy: Introduction, data-types, arrays, arrays manipulation, plotting, testing and debugging, Sharing Data using Sockets, Simple applications of python, Scipy, TKinter	
<u>Term Work:</u> Any 8 of below given list		
1. Evaluate any given expression involving arithmetic operators.		
2. Evaluate any given expression involving logical operators.		
3. Develop python functions to produce given patterns such as diamond, pyramid, triangles.		
4. Usage of different functions present in “math” module.		
5. Write a function that takes two numbers as input parameters and returns their least common multiple.		
6. Write a function that takes two numbers as input parameters and returns their greatest common divisor.		
7. Write a program that takes a sentence as an input and displays the number of words in the sentence.		
8. Ways to sort list of dictionaries by values in Python – Using lambda function.		
9. Write program using “matplotlib” module.		
10. Write program using “NUMPY” module.		
11. Write program using “Scipy” module.		

12. Write program using “TKinter” module.

Topics for projects based learning*

1. Create a Tic-tac-toe game (GUI optional)
2. Build a password encryptor with Hashing.
3. Build Product Price Comparison using webscraping.
4. Create a google image downloader
5. Create a Snake & Ladders game (GUI optional)
6. Build a contact book using indexing
7. Build What’s the word game
8. Build Rock, Paper & Scissors game
9. mp3 file organizer - rebuild a music library's structure from mp3 tag data, and reorganize them in folders. Use Multithreading concepts
10. Create an FTP server
11. Build a functional calculator (GUI optional)
12. Python Email Automation
13. Create a Currency converter (GUI optional)
14. Face Detection using Cv2
15. Biometric Fingerprint detection

*Students in a group of 3 to 4 shall complete any one project from the above list

Text Books:

1. Sheetal Taneja, Naveen Kumar, Python Programming, A modular approach, Pearson publication

Reference Books:

1. Learning Python 5th Edition, O'Reilly Publication
2. Beginning Python: From Novice to professional, by Magnus Lie Hetland, Third Edition, Apress Publication
3. Learning with Python by Allen Downey, Jeffrey Elkner, Chris Meyers, Dreamtech Publication

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. II: Electronics & Telecommunication Engineering
SUBJECT: - COMPUTER AIDED DRAFTING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 00	End Semester Examination: 00	Credits:00
Practical: 04	Internal Assessment: 00	
Tutorial: 00	TW: 50 Marks	Credit: 02
		Total Credit: 02
Course Pre-requisites:		
	Mathematics (Class XII)	
Course Objectives:		
1.	To teach the students Fundamentals of engineering drawing and curves	
2.	To introduce the students Isometric views and projection	
3.	To teach the students Projections of points, lines, planes & solids	
4.	To introduce the students Use of CAD tools.	
Course Outcomes: After learning this course students will be able to		
1	Apply dimensioning methods and drawing of engineering curves.	
2	Draw orthographic projections using I st angle and III rd angle projection Methods*.	
3	Draw Isometric views from given orthographic projections*.	

4	Draw projection of Lines, its traces and projections of planes*.
5	Create projection of different solids*.
6	Develop lateral surfaces of solids*.
*Using CAD tools	
UNIT – I	Lines and Dimensioning in Engineering Drawing and Engineering Curves
	Different types of lines used in drawing practice, Dimensioning–linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension. Ellipse by Arcs of Circles method, Concentric circles method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone & cylinder. Introduction to Auto CAD commands.
UNIT – II	Orthographic Projection
	Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views, and types of cutting planes and their representation, hatching of sections. (Also using AutoCAD commands)
UNIT - III	Isometric Projections
	Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view.

	(Also using AutoCAD commands)	
UNIT -IV	Projections of Points & Lines	
	Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines. (Also using AutoCAD commands)	
UNIT -V	Projections of Planes	
	Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP. (Also using AutoCAD commands)	
UNIT -VI	Projections of Solids	
	Projection of prism, pyramid, cone, and cylinder by rotation method. (Also using AutoCAD commands)	
<u>List of sheets:</u>		
1. Types of lines, Dimensioning practice, free-hand lettering, 1 st and 3 rd angle methods symbol.		
2. Engineering curves.		
3. Orthographic Projections.		
4. Isometric views.		

5. Projections of Points and Lines and planes.
6. Projection of Solids.
7. Enclosure design
<u>Term work:</u>
Term work shall consist of half imperial size or A2 size (594 mm x 420 mm) sheets.
All sheets should complete in drawing hall manually and sheet no 2-7 also completed using AutoCAD with printout on A2 size papers.
Text Books/Reference Books:
3. "Elementary Engineering Drawing", N. D. Bhatt, Charotar Publishing house, Anand India,
4. "Text Book on Engineering Drawing", K. L. Narayana & P. Kannaiah, Scitech Publications, Chennai.
5. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi,
6. "Engineering Drawing and Graphics", Venugopal K., New Age International publishers.
7. "Engineering Drawing", M. B. Shah and B.C. Rana, 1 st Ed, Pearson Education, 2005
8. "Engineering Drawing (Geometrical Drawing)", P. S. Gill, 10 th Edition, S. K. Kataria and Sons, 2005
9. "Engineering Drawing", P. J. Shah, C. Jamnadas and Co., 1 st Edition, 1988

SEMESTER:- III
SYLLABUS

**Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune**

**B. Tech. Sem. III: Electronics & Telecommunication Engineering
SUBJECT: - ADVANCED MATHEMATICS FOR ELECTRONICS**

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination: 60 Marks	Credits: 03
Practical: 00	Internal Assessment: 40 Marks	
Tutorial: 01		Credit:01
		Total Credits: 04
Course Pre-requisites:		
	Class XII Mathematics, Linear Algebra and calculus, Differential equation, and complex analysis	
Course Objectives:		
1.	To introduce the concept of Fourier series.	
2.	To introduce Transforms like Fourier Transform, Laplace Transform and Z Transform.	
3.	To teach vector analysis.	
4.	To introduce optimization and graph theory.	
5.	To teach probability and statistics.	
Course Outcomes: After learning this course students will be able to		
1	Apply Fourier series for solving engineering problems.	
2	Solve numerical problems involving Fourier Transform.	
3	Demonstrate the knowledge of Laplace Transform and Z Transforms.	

4	Apply the concept of optimization and graph theory.	
5	Apply vector analysis for engineering problems.	
6	Solve numerical problems based on probability and statistics.	
UNIT – I	Fourier Series	(06 Hours)
	Definition, Euler's formulae, Conditions for a Fourier expansion, Functions having points of discontinuity, change of interval, expansions of odd and even periodic functions, Half range series. application to difference equations and Markov chains, Fourier series and KL expansion, Fourier series with an emphasis on the application of solving engineering problems, Develop Fourier series expansion of a function over the given interval.	
UNIT – II	Fourier Transform	(06 Hours)
	Fourier transforms, Fourier transform of random process, Fourier sine and cosine transforms, Inverse Fourier, Sine and Cosine Transforms, complex form of Fourier integral, Finite Fourier sine and cosine transforms. Properties of Fourier transform.	
UNIT - III	Laplace Transform & Z Transform	(06 Hours)
	Laplace Transform: Definition, transforms of elementary functions, properties of Laplace transforms, transforms of derivatives, Properties of Laplace transforms, transforms of integral, periodic functions, Inverse Laplace transforms, Inverse Laplace transforms by using partial	

	fractions, Properties of LT. Z Transform: Definition, properties of z transform, Z Transform of basic sequences, Z transform of some standard discrete function inverse Z transform	
UNIT -IV	Optimization and graphs	(06 Hours)
	Basics of optimization, Unconstrained optimization: method of steepest descent, linear programming, simplex method, and difficulties. G Graphs and digraphs, shortest path problems, complexities, Bellman's principle, Dijkstra's Algorithm, shortest spanning trees: greedy algorithm, Prim's algorithm, flows in networks, maximum flow: Ford-Fulkerson algorithm	
UNIT -V	Vector Analysis	(06 Hours)
	Coordinate system, inter-conversion of coordinate systems, Vectors in plane and space, vector operations, gradient, divergence and curl, Gauss's, Green's and Stokes' theorems.	
UNIT -VI	Probability and Statistics	(06 Hours)
	Mean, median, mode, standard deviation, combinatorial probability, probability distributions, binomial distribution, Poisson distribution, exponential distribution, normal distribution, joint and conditional probability, relation of joint and conditional probability, higher order stats	
Topics for projects based learning*		

1. Energy Flow in an Ecosystem: Graphical model
2. Plane Geometry and Vectors
3. Bipartite graph
4. Trellis (graph)
5. Seven Bridges of Königsberg
6. Three-cottage problem
7. Shortest path problem
8. A system of electric charges has a charge density $\rho(x,y,z)$ and produces an electrostatic field $E(x,y,z)$ at points (x,y,z) in space. Gauss' Law states that $\iint_{\Sigma} E \cdot d\sigma = 4\pi \iiint_S \rho dV$ for any closed surface Σ which encloses the charges, with S being the solid region enclosed by Σ . Show that $\nabla \cdot E = 4\pi\rho$. This is one of Maxwell's Equations
9. Show that the gradient of a real-valued function $F(\rho,\theta,\phi)$ in spherical coordinates is:
10. Applications of Vector Fields: in Mechanics
11. Applications of Vector Fields: Electric and Magnetic fields
12. Applications of Vector Fields: Fluids motions
13. Applications of Vector Fields: Heat transfer
14. Routing problems (e.g. Hamiltonian paths, travelling salesman problem)
15. Graph colorings (4-color theorem, chromatic polynomial)
*Students in a group of 3 to 4 shall complete any one project from the above list
Textbooks/Reference Books
1.'Advanced Engineering Mathematics' by Erwin reyszig
2.'Advanced Engineering Mathematics' by Dennis G. Zill and Warren S. Wright
3.AppliedMathematics (VolumesIandII)byP.N.Wartikar&J.N.Wartikar
4.HigherEngineeringMathematicsbyB.S. Grewal
5.HigherEngineeringMathematicsbyB.V. Ramana

6. Advanced Engineering Mathematics

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III: Electronics & Telecommunication Engineering		
SUBJECT: - SEMICONDUCTOR DEVICES AND CIRCUITS II		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination: 60 Marks	Credits: 04
Practical: 02	Internal Assessment: 40 Marks	
Tutorial: 00	TW &PR: 50 Marks	Credit: 01
		Total Credit: 5
Course Pre-requisites:		
	Network theory-Current divider rule, Voltage divider rule, KVL, KCL, Network theorems, h-parameters, passive elements and their response (initial final conditions), Semiconductor theory, semiconductor devices like diodes, BJT, FET, MOSFET, Biasing methods, Single stage amplifier-design and analysis	
Course Objectives:		
	<p>The objective of this course is to cover performance evaluation of various amplifiers by</p> <ul style="list-style-type: none"> • Introducing a concept of the multistage amplifiers, parameter evaluation and related design aspects of multistage amplifiers with the help of derivations. • Teaching a concept of the feedback in the amplifiers, feedback topologies with the help of derivations and their advantages and disadvantages. • Gauging the efficiencies of various types of power amplifiers with the help of derivations. • Teaching a concept and design of the RC and LC oscillators with the help of derivations. • Introducing a concept and types of the differential amplifiers, current mirrors. • Introducing a concept and types of the tuning amplifiers. 	

Course Outcomes: After learning this course students will be able to		
1	Analyze and design discrete multistage amplifier.	
2	Analyze and design negative feedback amplifier.	
3	Classify and analyze discrete power amplifiers.	
4	Analyze and design discrete oscillator circuits.	
5	Analyze various types of the differential amplifiers.	
6	Analyze the effect of tuning in the amplifiers, and the applications where the tuning amplifiers are useful.	
UNIT – I		
UNIT – I	Multistage Amplifiers	(08 Hours)
	Need of the Multistage amplifiers, Types of Multistage Amplifiers-Cascade and Cascade, Cascade-Coupling methods, Frequency response, Parameter evaluation - R_i , R_o , A_v , A_i & Bandwidth for general multistage amplifier, Choice of the transistor configuration in cascade amplifier, Analysis & design of direct coupled, RC coupled (Low frequency, high frequency, and medium frequency analysis), transformer coupled (Low frequency, high frequency and medium frequency analysis) amplifier. Darlington Amplifier, Design of Cascade amplifier	
UNIT – II		
UNIT – II	Negative feedback Amplifiers	(08 Hours)
	Types of basic Amplifiers, Concept and types of feedback, Transfer gain with feedback, Negative feedback topologies with their block Schematics, Effect of negative feedback on Input impedance; Output impedance; Gain and Bandwidth with derivation, Analysis of one circuit for each feedback topology for input impedance, output impedance, gain and bandwidth.	

UNIT - III	Power Amplifiers	(08 Hours)
	Need of Power amplifiers, classification; applications; advantages of power amplifiers - Class A, Class B, Class C, class D and Class AB. Operation of - Class A with resistive load; Transformer coupled class A Amplifier; Class B Push – pull; Class AB Complementary symmetry and Quasi – complementary. Efficiency analysis for Class A transformer coupled amplifier, Class B push – pull amplifier. Comparison of efficiencies of other configurations. Distortion in amplifiers; concept of Total Harmonic Distortion (THD).	
UNIT -IV	Oscillators	(08 Hours)
	Concept of Positive feedback, Condition, and principle of oscillations (Barkhausen criterion), Classification of oscillators, Design analysis of RC and LC oscillators, RC oscillators: Phase shift, Wien bridge Oscillators; LC Oscillators: Hartley, Colpitt's and Clap; Piezo-electric effect in crystals and Crystal Oscillator.	
UNIT -V	Differential Amplifiers	(08 Hours)
	Limitations of CE amplifier, Split supply biasing, Differential amplifier configurations, Dual Input, balanced output differential amplifier, Dual input, unbalanced output differential amplifier, Single input, balanced output differential amplifier, Single input, unbalanced output differential amplifier, FET differential amplifiers, Constant current bias, Current mirrors (revision), Differential mode gains, common mode gain, CMRR calculation, Derivation for output voltage, input and output impedances	

UNIT -VI	Tuned Amplifiers	(08 Hours)
	Introduction, Q-factor, small signal tuned amplifiers, Effect of cascading Single tuned amplifiers on Bandwidth, Effect of cascading Double tuned amplifiers on Bandwidth, Stagger tuned Amplifiers, Comparison of Tuned amplifiers, large signal tuned amplifiers, Stability of Tuned amplifiers, Neutralization	
<u>Term Work:</u> Any 8 of below given list		
1. To find the gain and bandwidth of a 2-stage CE RC coupled amplifier.		
2. To find the gain and bandwidth of a 2-stage transformer coupled amplifier.		
3. To find the gain of a direct coupled amplifier.		
4. To find the gain and bandwidth of a voltage series negative feedback amplifier.		
5. To find the gain and bandwidth of a voltage shunt negative feedback amplifier.		
6. To find the gain and bandwidth of a currentseries negative feedback amplifier.		
7. To find the gain and bandwidth of a current shunt negative feedback amplifier.		
8. To study the response of a Class A direct coupled/ transformer coupled amplifier.		
9. To study the response of a Class B power amplifier.		
10. To find the oscillations frequency of the RC amplifiers-RC phase shift/ Wien bridge oscillator.		
11. To find the oscillations frequency of LC amplifiers-Colpitt's Oscillator/Hartley Oscillator.		
12. To plot frequency response of tuned amplifiers.		
Topics for projects based learning*		
1.Prepare survey report on types of multistage amplifiers.		

2. Build and analyze the 2-stage RC coupled amplifier.
3. Build and analyze the 2-stage transformer coupled amplifier.
4. Build and analyze the 2-stage direct coupled amplifier.
5. Prepare survey report on types of negative feedback amplifiers.
6. Build and analyze 2-stage voltage series negative feedback amplifier.
7. Build and analyze single stage current series negative feedback amplifier.
8. Build and analyze single stage voltage shunt negative feedback amplifier.
9. Build and analyze 2-stage current shunt negative feedback amplifier.
10. Prepare survey report on types of power amplifiers.
11. Implement and analyze class A direct coupled power amplifier.
12. Implement and analyze class B push pull power amplifiers.
13. Prepare survey report on types of oscillators.
14. Implement RC phase shift oscillator and verify it for oscillations frequency.
15. Prepare survey report on types of differential amplifier.
*Students in a group of 3 to 4 shall complete any one project from the above list

**B. Tech. Sem. III: Electronics & Telecommunication Engineering
SUBJECT: - SIGNALS AND LINEAR SYSTEMS**

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>	
Theory: 04		End Semester Examination: 60 Marks		Credits: 04	
Practical: 02		Internal Assessment: 40 Marks			
Tutorial: 00		TW: 25 Marks		Credit: 01	
				Total Credit: 05	
Course Pre-requisites:					
Linear algebra, calculus, MATLAB fundamentals, Differential equations, and complex analysis					
Course Objectives:					
1.	To teach the basic concepts of signals.				
2	To introduce the basic concepts of systems analysis				
3	To introduce the tools in the time and frequency domain.				
4	To provide knowledge of correlation function and sampling.				
Course Outcomes: After learning this course students will be able to					
1	Characterize and analyze the properties of signals.				
2	Classify the systems and analyze in time domain using convolution.				
3	Apply Fourier transform for analysis of LTI systems.				

4	Apply Laplace transform for analysis of LTI systems.	
5	Apply discrete transforms for analysis of LTI systems.	
6	Evaluate the effects of sampling on signal and describe the auto correlation and cross correlation between signals.	
UNIT – I	Introduction to signals	(08 Hours)
	Definition of signals, classification of signals: continuous time signals & discrete time signals, even & odd signals, periodic & non-periodic, deterministic & non-deterministic, energy & power, elementary signals: unit impulse, unit step, unit ramp, exponential & sinusoidal, basic operations on signals.	
UNIT – II	Classification of systems	(08 Hours)
	Definition, Classification of System, System Interconnections, state space analysis, Linear & non -linear, Time-Invariant & Time variant, causal & non-causal, static & dynamic, stable & unstable systems, stability & impulse response of systems to standard signals.	
UNIT - III	Continuous Time System Analysis	(08 Hours)
	Response of LTI Systems to exponential signals, periodic signals. Derivation Fourier series, Discrete time Fourier series and properties, Fourier Transforms, Duality and Parseval's theorem, Fourier analysis examples: Output of LTI Systems Described by Differential, convolution with FT , unit step response of RC circuit, filtering, FT of Gaussian Pulse, Example of the brain waves.	
UNIT -IV	Laplace Transform and Application	(08 Hours)
	Review of Laplace transform and properties, Concept of ROC and properties of ROC, pole	

	zero concepts. Transfer function and condition of stability, Application of Laplace transforms to the LTI system analysis, Convolution with LT, Inversion using duality, Laplace Transform of electrical Circuit, example of control system, calculation of harmonic vibration of the beam, Mathematical models of physical system- Electrical & Mechanical System	
UNIT -V	Discrete Transforms and Applications	(08 Hours)
	Z-Transform: The Region of Convergence for the Z-Transform, Application of Z-Transform to the LTI system analysis. Discrete time Fourier transform, Properties of DTFT, Fast Fourier transform algorithm, Use of FFT in Windows Media Player.	
UNIT -VI	Correlation and Spectral Density	(08 Hours)
	Definition of Correlation and Spectral Density, correlogram, analogy between correlation, covariance and convolution, conceptual basis, auto-correlation, cross correlation, energy/power spectral density, properties of correlation and spectral density, inter relation between correlation and spectral density, Sampling theorem & its proof, aliasing, reconstruction of sampled signals, interpolation.	
<u>Term Work:</u> Any 8 of below given list		
1. Perform the operations on signals		
2. Perform the convolution of signals using formula using MATLAB.		
3. Analyze the synthesis of signals using Fourier Series.		
4. Find the Fourier Transform using MATLAB.		
5. Find the Laplace Transform using MATLAB.		

6. Find the Z-Transform using MATLAB.
7. Find the autocorrelation of sine sequence $x[n]$ with frequency 50Hz and sampling frequency 200Hz, using MATLAB.
8. Find the cross correlation for different signals.
9. Find the Inverse Fourier Transform using MATLAB.
10. Find the Inverse Laplace transform using MATLAB.
11. Find the inverse Z Transform using MATLAB.
12. Find the circular convolution using MATLAB.
Topics for projects based learning*
1. Signals In Natural Domain
2. Signal operations for navigation/obstacle detection
3. Speech production
4. Speech hearing
5. LTI Systems – Eigenfunctions, System Described by differential Equation, Homogenous and Particular Solution
6. LTI Systems-Convolution applications,
7. Periodic Convolution applications,
8. BIBO Stability applications
9. z-Transform Applications– Impulse Response of LTI System Described by Difference Equation
10. Complex Exponential Fourier Series and Trigonometric Fourier Series of Periodic Triangular Wave, Periodic Convolution
11. Real life example on DTFT – Sampling
12. Group/ Phase Delay for LTI systems
13. Implement DFT in Matrix form
14. Implement IDFT in Matrix form
15. FAST FOURIER TRANSFORM ANALYZER
*Students in a group of 3 to 4 shall complete any one project from the above list

1. B.P.Lathi, Signal Processing & Linear Systems, Berkeley Cambridge, 1998 Edition.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III: Electronics & Telecommunication Engineering
SUBJECT: - NETWORK ANALYSIS AND SYNTHESIS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination: 60 Marks	Credits: 04
Practical: 02	Internal Assessment: 40 Marks	
Tutorial: 00	TW & PR: 50 Marks	Credit: 01
		Total Credits: 5
Course Pre-requisites:		
	Knowledge of KCL and KVL Laws from ‘Electrical Technology’, Linear Differential Equations, Systems of Linear Equations and complex numbers from ‘Differential Equations and Complex Analysis’	
Course Objectives:		
	<p>The objective of this course is to cover various methods to find the network parameters as listed below:</p> <ul style="list-style-type: none"> • To teach how to find network parameters (voltages, currents, power) in a given passive circuit by the use of methods- MeshAnalysis, Node Analysis and Network Theorems. • To teach how to find voltages and currents in a given circuit by formulating the network equilibrium equations by the use of graph theory. • To teach how to find the transient response of the series RLC circuits by the use of homogeneous and non-homogeneous equations. • To introduce the resonance phenomenon, curves and related parameters in a given series and a parallel resonant circuit with the help of derivations. • To introduce the two port network parameters, their interrelationships, and interconnections with the help of derivations. 	

	<ul style="list-style-type: none"> To teach how to design a constant K prototype low pass, high pass, band pass and a band stop passive filters for different bandwidths by using filter topologies.
Course Outcomes: After learning this course students will be able to	
1	Analyze passive circuits using Mesh Analysis, Node Analysis and Network Theorems.
2	Apply graph theory by formulating the network equilibrium equations for circuit analysis.
3	Perform Transient Analysis of the Series Reactive Circuits
4	Sketch the resonance curves for a given series and parallel resonant circuits.
5	Compute two port parameters for a given network
6	Design constant-k prototype low pass, high pass, band pass and band stop passive filters.
UNIT – I	DC circuit Analysis and Network Theorems (08 Hours)
	KCL, KVL, Source Transformation, Source Shifting, Mesh Analysis, Node Analysis, Super Mesh, Super Node, Network Theorems- Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem, Reciprocity Theorem
UNIT – II	Formulation of network equilibrium equations using Graph Theory (08 Hours)
	Network Graph, tree, co-tree & loop, Incidence Matrix, Tie-set matrix, Cut-set matrix, Formulation of the equilibrium equations in the matrix form, Solution of the resistive and non-resistive networks, Principle of Duality
UNIT - III	Transient Analysis of the Series Reactive Circuits (08 Hours)

	Initial Conditions in the networks, A procedure for evaluating initial conditions, the step response in RC, RL, RLC circuits using classical method and using Laplace Transform for driven and undriven circuits, Time specifications of RLC circuits, Concept of the natural frequency and damping frequency, Zeta.	
UNIT -IV	Resonance in Series and Parallel RLC Circuits	(08 Hours)
	Resonant condition, Quality factor, Resonant frequency, impedance at resonance, voltage and current variation with frequency, bandwidth, selectivity, magnification factor for series and parallel resonant circuits. Effect of Generator resistance on bandwidth and Selectivity, Comparison of series and parallel resonant circuits, Applications of resonant circuits	
UNIT -V	Two Port Networks	(08 Hours)
	Concept of Two port network, Z, Y, H, ABCD and other parameters, Relationships between two-port network parameters, Reciprocity and Symmetry conditions, Interconnections of two-ports, Analysis of some circuits using two port network parameters theory.	
UNIT -VI	Passive Filter Analysis	(08 Hours)
	Filter Fundamentals, Electrical Properties-Image impedance, Characteristic impedance, Propagation constant, Constant K prototype for LPF, HPF, BPF and BSF, m-derived LPF, HPF, Terminating half sections, Composite filters, Applications of passive filters.	

Term Work: Any 8 of below given list
1. To verify Thevenin's and Norton's Theorem for a given circuit.
2. To verify Superposition and Reciprocity Theorem for a given circuit.
3. To find the resonant frequency of a series RLC circuit.
4. To find the resonant frequency of a parallel RLC circuit.
5. To find the Z parameters of a given two port network.
6. To find the Y parameters of a given two port network.
7. To find the H parameters of a given two port network.
8. To find the ABCD parameters of a given two port network.
9. To find the cut-off frequency and to plot the frequency response of a constant-k LPF.
10. To find the cut-off frequency and to plot the response of a constant-k HPF.
11. To find the cut-off frequencies and to plot the frequency response of a constant-k BPF.
12. To find the cut-off frequencies and to plot the frequency response of a constant-k BSF.
Topics for projects based learning*
1. Build and analyze resistive circuit for current usage.
2. Build and analyze resistive circuit for voltage usage.
3. Build and analyze resistive circuit for power usage.
4. Implement the series RL circuit and verify the initial and final conditions of it.
5. Implement the series RC circuit and verify the initial and final conditions of it.
6. Build and verify series resonance circuit.
7. Build and verify parallel resonance circuit.
8. Verify Z parameters for unknown circuit.
9. Verify Y parameters for unknown circuit.

10. Verify H parameters for unknown circuit.
11. Verify ABCD parameters for unknown circuit.
12. Design and implement prototype Low pass filter and verify its bandwidth.
13. Design and implement prototype High pass filter and verify its bandwidth.
14. Design and implement prototype Band pass filter and verify its bandwidth.
15. Design and implement prototype Band stop filter and verify its bandwidth.
*Students in a group of 3 to 4 shall complete any one project from the above list

1. Franklin F. Kuo, 'Network Analysis and Synthesis', John Wiley & Sons (Second Edition)
2. M. E. Van Valkenburg, 'Network Analysis', PHI (3rd Edition)
3. John D. Ryder, 'Networks, Lines and Fields', PHI Learning Pvt. Ltd., Second Edition

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III: Electronics & Telecommunication Engineering		
SUBJECT: - DATABASE MANAGEMENT SYSTEMS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination: 60 Marks	Credits: 03
Practical: 02	Internal Assessment: 40 Marks	
Tutorial: 00	TW: 25 Marks	Credit: 01
		Total Credits: 04
Course Pre-requisites:		
	Python Programming	
Course Objectives:		
1	To provide a strong formal foundation in database concepts, technology, and practice	
2	To give systematic database design approaches covering conceptual design, logical design, and an overview of physical design	
3	To have good understanding of different type of databases.	
4	To learn a powerful, flexible, and scalable general-purpose database to handle big data	
Course Outcomes: After learning this course students will be able to		
1	Design E-R Model for given requirements and convert the same into database tables.	
2	Apply BCNF Algorithm for Decomposition	

3	Use SQL for query processing.	
4	Use algorithms to solve scheduling conflict	
5	Apply Concurrency algorithm in distributed database	
6	Use NOSQL in database creation.	
UNIT – I		
UNIT – I	Introduction to Databases	(06 Hours)
	Introduction to Database Management Systems, Purpose of Database Systems, Database-System Applications, View of Data, Database Languages, Database System Structure, Data Models, Database Design and ER Model: Entity, Attributes, Relationships, Constraints, Keys, Design Process, Entity Relationship Model, ER Diagram, Design Issues, Extended E-R Features, converting E-R & EER diagram into tables, Introduction to normalization.	
UNIT – II		
UNIT – II	Relational Database Design	(06 Hours)
	Relational Model: Basic concepts, Attributes and Domains, CODD's Rules, Relational Integrity: Domain, Referential Integrities, Enterprise Constraints, Database Design: Features of Good Relational Designs, Normalization, Atomic Domains and First Normal Form, Decomposition using Functional Dependencies, Algorithms for Decomposition, 2NF, 3NF, BCNF, Modeling Temporal Data	
UNIT - III		
UNIT - III	SQL AND PL/SQL	(06 Hours)
	SQL: Characteristics and advantages, SQL Data Types and Literals, DDL, DML, DCL, TCL, SQL Operators, Tables: Creating, Modifying, Deleting, Views: Creating, Dropping, Updating using Views, Indexes, SQL DML Queries: SELECT Query and clauses, Set Operations, Predicates and Joins, Set membership, Tuple Variables, Set comparison, Ordering of Tuples, Aggregate Functions, Nested Queries, Database Modification using SQL Insert, Update and Delete Queries. PL/SQL: concept of Stored Procedures & Functions, Cursors, Triggers, Assertions, roles and privileges, Embedded SQL, Dynamic SQL.	

UNIT -IV	Database Transactions and Query Processing	(06 Hours)
	Basic concept of a Transaction, Transaction Management, Properties of Transactions, Concept of Schedule, Serial Schedule, Serializability: Conflict and View, Cascaded Aborts, Recoverable and Non-recoverable Schedules, Concurrency Control: Need, Locking Methods, Deadlocks, Timestamping Methods, Recovery methods: Shadow-Paging and Log-Based Recovery, Checkpoints, Query Processing, Query Optimization, Performance Tuning	
UNIT -V	Parallel and Distributed Databases	(06 Hours)
	Introduction to Database Architectures: Multi-user DBMS Architectures, Case study- Oracle Architecture. Parallel Databases: Speedup and Scale up, Architectures of Parallel Databases. Distributed Databases: Architecture of Distributed Databases, Distributed Database Design, Distributed Data Storage, Distributed Transaction: Basics, Failure modes, Commit Protocols, Concurrency Control in Distributed Database. Cloud database examples.	
UNIT -VI	NoSQL Database	(06 Hours)
	Introduction to NoSQL Database, Types, and examples of NoSQL Database- Key value store, document store, graph, Performance, Structured verses unstructured data, Distributed Database Model, CAP theorem and BASE Properties, Comparative study of SQL and NoSQL, NoSQL Data Models, Case Study- unstructured data from social media. Introduction to Big Data, HADOOP: HDFS, MapReduce. JSON	
<u>List of Experiments:</u>		
1. Write a query to display all the columns from salesman table. First create a Salesman table.		
2. Design and Develop SQL DDL statements which demonstrate the use of SQL objects such as Table, View, Index, Sequence, Synonym		
3. Design at least 10 SQL queries for suitable database application using SQL DML statements: Insert, Select, Update, Delete with operators, functions, and set operator.		

4. Design at least 10 SQL queries for suitable database application using SQL DML statements: all types of Join, Sub-Query and View.

5. Unnamed PL/SQL code block: Use of Control structure and Exception handling is mandatory.

Write a PL/SQL block of code for the following requirements: -

1. Schema:

1. Borrower(Rollin, Name, Date of Issue, NameofBook, Status)

2. Fine(Roll.no, Date, Amt)

- Accept roll.no & name of book from user.
- Check the number of days (from date of issue), if days are between 15 to 30 then fine amount will be Rs 5 per day.
- If no. of days > 30, per day fine will be Rs 50 per day & for days less than 30, Rs. 5 per day.
- After submitting the book, status will change from I to R.
- If condition of fine is true, then details will be stored into fine table.

Frame the problem statement for writing PL/SQL block in line with above statement.

6. Cursors: (All types: Implicit, Explicit, Cursor FOR Loop, Parameterized Cursor) Write a PL/SQL block of code using parameterized Cursor, that will merge the data available in the newly created table Rollcall with the data available in the table Rollcall. If the data in the first table already exist in the second table, then that data should be skipped. **Frame the separate problem statement for writing PL/SQL block to implement all types of Cursors in line with above statement. The problem statement should clearly state the requirements.**

7. PL/SQL Stored Procedure and Stored Function. Write a Stored Procedure namely proc_Grade for the categorization of student. If marks scored by students in examination is ≤ 1500 and marks ≥ 990 then student will be placed in distinction category if marks scored are between 989 and 900 category is first class, if marks 899 and 825 category is Higher Second Class Write a PL/SQL block for using procedure created with above requirement. Stud_Marks(name, total_marks) Result (Roll, Name, Class) Frame the separate problem statement for writing PL/SQL Stored Procedure and function, inline with above statement. The problem statement should clearly state the requirements

8. PL/SQL Stored Procedure and Stored Function. Write a Stored Procedure namely proc_Grade for the categorization of student. If marks scored by students in examination is ≤ 1500 and marks ≥ 990 then student will be placed in distinction category if marks scored are between 989 and 900 category is first class, if marks 899 and 825 category is Higher Second Class Write a PL/SQL block for using procedure created with above requirement. Stud Marks (name, total marks) Result (Roll, Name, Class) Frame the separate problem

statement for writing PL/SQL Stored Procedure and function, in line with above statement. The problem statement should clearly state the requirements
9. Write a program to implement Mogo DB database connectivity with python Implement Database navigation operations (add, delete, edit etc.) using ODBC/JDBC.
10. Implement MYSQL/Oracle database connectivity with python Implement Database navigation operations (add, delete, edit,) using ODBC/JDBC
11. Mini Project:
Topics for projects based learning*
<p>1. Library Management System</p> <p>An online library management system offers a user-friendly way of issuing books and viewing different books and titles available under a category. This type of Management Information System (MIS) can be easily developed. And SQL queries enable quick retrieval of the required information.</p>
<p>2. Centralized College Database</p> <p>A college has academic departments, such as the Department of English, Department of Mathematics, Department of History, and so on. And each department offers a variety of courses. Now, an instructor can teach more than one course. Let's say a professor takes a class on Statistics and on Calculus.</p>
<p>3. Student Database Management</p> <p>Similarly, you can do a student record-keeping project. The database would contain general student information (such as name, address, contact information, admission year, courses, etc.), attendance file, marks or result file, fee file, scholarship file, etc. An automated student database streamlines the university administration process to a considerable degree.</p>
<p>4. Online Retail Application Database</p> <p>As e-commerce experiences remarkable growth around the world, online retail application databases are among the most popular SQL project ideas.</p>
<p>5. Inventory Control Management</p> <p>Inventory control is the process of ensuring that a business maintains an adequate stock of materials and products to meet customer</p>

demands without delay
<p>6. Hospital Management System</p> <p>It is a web-based system or software that enables you to manage the functioning of a hospital or any other medical setup. It creates a systematic and standardized record of patients, doctors, and rooms, which can be controlled only by the administrator.</p>
<p>7. Railway System Database</p> <p>In this database system, you need to model different train stations, railway tracks between connecting stations, the train details (a unique number for each train), rail routes and schedule of the trains, and passenger booking information.</p>
<p>8. Payroll Management System</p> <p>It is one of the most preferred SQL database project ideas due to its extensive usage across industries. An organization's salary management system calculates the monthly pay, taxes, and social security of its employees.</p>
<p>9. An SMS-based Remote Server Monitoring System</p> <p>Such systems are particularly beneficial for large corporate organizations having massive data centers and multiple servers. Since these servers host many applications, it becomes tricky to monitor their functionality. Usually, when a server is down or has crashed, the clients inform the organization about it.</p>
<p>10. Blood Donation Database</p> <p>This database would store interrelated data on patients, blood donors, and blood banks.</p>
<p>11. Art Gallery Management Database</p> <p>If you are running an art store, you can also organize and manage all your customer information, including names, addresses, the amount spent, liking and interests.</p>
<p>12. Cooking Recipe Portal</p> <p>This is another application of SQL databases in the creative field. You can model a web portal where a stored procedure will display your cooking recipes under different categories.</p>

13. Carbon Emissions Calculator

Lately, environmental conservation has been receiving a lot of attention globally. You can also contribute to the cause by developing a web application that measures the carbon footprint of buildings.

14. A Voice-based Transport Enquiry System

This innovative tool helps you save time while travelling. You would have noticed long queues outside the transport controller's office at public transport terminals. This is where commuters make inquiries about the different types of transport facilities available. In this scenario, technology-enabled transport enquiry systems can result in huge savings of time and effort. You can develop an automated system for bus stands, railway stations, and airports that can receive voice commands and answer in a voice-based format.

15. Pharmacy Management System

Pharmacy Management System is the process of ensuring that a business maintains an adequate stock of medicines and tablets to meet customer demands without delay

*Students in a group of 3 to 4 shall complete any one project from the above list

SUBJECT: EDA TOOL PRACTICES**

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 00	End Semester Examination: 00	Credits: 00
Practical: 02	Internal Assessment: 00	
Tutorial: 00	TW: 50 Marks	Credit: 01
		Total Credit: 01
Course Pre-requisites:		
	Elementary Electronics, Electrical Technology.	
Course Objectives:		
1	To introduce the students to transient analysis of electronic circuits using simulation software (EDA tool)	
2	To teach the students to carry out AC analysis of amplifiers using simulation software (EDA tool)	
3	To introduce the students to simulation tools for basic analog electronic circuits	
4	To introduce the students to simulation tools for basic digital electronic circuits	
5	To teach the students to use virtual instruments in an EDA tool	
6	To train the students to troubleshoot basic circuits with an EDA tool	
Course Outcomes: After learning this course students will be able to		
1	Perform Transient Analysis of simple circuits using EDA tool.	
2	Perform AC Analysis of simple circuits using EDA tool.	

3	Use an EDA tool for simulating basic analog electronic circuits.
4	Use an EDA tool for simulating basic digital electronic circuits.
5	Use virtual instruments in an EDA tool for analyzing and testing basic electrical and electronic circuits.
6	Use EDA tool for troubleshooting basic circuits.
<u>List of experiments:</u>	
1. Study of an EDA tool, concept of simulation, different types of analyses, simulation errors	
2. Study and use virtual instruments, signal, and power sources	
3. Verify Basic circuit laws and theorems using MULTISIM	
4. Construct diode circuits and simulate the same	
5. Construct and analyze BJT biasing circuits	
6. Construct single stage CE amplifier circuit and carry out transient and AC analysis	
7. Implement Boolean equations and implement the same using basic logic gates	
8. Implement circuits with multiplexers and decoders	
9. Troubleshooting a given circuit using EDA tool	
Reference Books:	
4. Circuit Analysis with Multisim, David Báez-López Félix E. Guerrero-Castro, Morgan & Claypool Publishers.	
5. Advanced Circuit Simulation Using Multisim Workbench, David Báez-López Félix E. Guerrero-Castro, Morgan & Claypool Publishers	

**Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune**

**B. Tech. Sem. III: Electronics & Telecommunication Engineering
SUBJECT: - PCB DESIGN AND SOLDERING**

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>	
Theory: 00		End Semester Examination: 00		Credits: 00	
Practical: 04		Internal Assessment: 00			
Tutorial: 00		TW & OR: 50 Marks		Credit:02	
				Total Credit: 02	
Course Pre-requisites:					
		Elementary Electronics			
Course Objectives:					
1		To introduce the basic building blocks for PCB artwork design			
2		To train the student to create simple PCB artwork design using an PCB design tool			
3		To expose the students to soldering process and tools			
4		To train the students to make reliable solder joints			
5		To train the students to de-solder the solder joints			
6		To teach the art of inspecting solder joints			
Course Outcomes: After learning this course students will be able to					
1		Demonstrate the knowledge of selecting proper PCB primitives (track width, pad size, hole size, clearance between pads and tracks,			

	footprints)
2	Use PCB design software for simple single sided PCB artwork design
3	Identify and select appropriate soldering tools for the soldering job
4	Use solder iron for soldering through hole components
5	Use solder iron and de-solder pump /wick for de-soldering through hole components
6	Perform electrical (continuity) and visual inspection for solder joints
<u>List of experiments:</u>	
1. Design a simple (only discrete components) single sided PCB using PCB design software (PCB artwork design flow)	
2. Design a single sided PCB using PCB design software for a circuit with IC components	
3. Design a double-sided PCB using PCB design software	
4. Study and use of tools like solder iron (types and temperature profile), wire-strippers, cutters	
5. Study of solder alloys, flux and rosin	
6. Solder basic electronic components like resistors, capacitors, IC bases (through hole)	
7. Use de-solder pump/wick for de-soldering components	
8. Carry out electrical continuity test and visual inspection for a soldered board	
Reference Books:	
1. Getting Started with Soldering: A Hands-On Guide to Making Electrical and Mechanical Connections, Marc de Vinck, Maker Media, Inc, 2017	
2. Soldering in electronics assembly, MIKE JUDD, Keith Brindley, Newnes,1999	

3. Printed Circuits Handbook, Clyde F. Coombs, Jr., McGraw-Hill, 2008

4. User Manual for the selected PCB Design Software

5. Getting Started with Soldering: A Hands-On Guide to Making Electrical and Mechanical Connections, Marc de Vinck, Maker Media, Inc, 2017

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III: Electronics & Telecommunication Engineering
SUBJECT: - NETWORKING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 00	End Semester Examination: 00	Credits: 00
Practical: 00	Internal Assessment: 00	
Tutorial: 00	TW & OR: 50 Marks	Credit: 02
		Total Credit: 02
Course Pre-requisites:		
The Students should have knowledge of		
1.	Understanding of personal computers and operating systems	
Course Objectives:		
1	To explain the fundamental concepts of networking	
2	To educate with the architecture, protocols, and networking	
3	To update the trends in innovation approach towards development of high-speed networks	
4	To analyze the challenges involved in developing TCP/IP suite	
5	To compare wired and wireless real networks	
6	To explain network security system	
Course Outcomes: After learning this course students will be able to		
1	Design, install, and troubleshoot networks	

2	Identify the protocol in networking	
3	Analyze the required technical competencies for traffic management to embark on growing career as Network Engineer/ Network Administrator	
4	Demonstrate the knowledge of TCP and its application scenarios	
5	Compare different constraints in wired and wireless domain	
6	Identify the systems, protocols, and mechanisms to support network security	
UNIT – I		
	Network & Service	
	Approaches to Network design, Network topologies and design constraints, Transmission media – unguided and guided, OSI Reference Model; TCP/ IP protocol suite, Application Layer Protocols and TCP/IP. Peer-to-peer protocols, Service Models, ARQ Protocols and reliable data transfer service, sliding Window Flow Control.	
UNIT – II		
	Medium Access Control Protocol	
	Multiple access communication, Random access scheduling approaches to medium access control, Delay performance of MAC and channelization schemes, LAN Access methods, Introduction to LAN, MAN, WAN Standards, FDDI, WLAN, Hubs, Bridges and Switches Ethernet networking.	
UNIT - III		
	Packet Switching Networks	
	Network Services and Internal Network Operation, Packet Network Topology, Routing in packet Networks, shortest path Algorithms, and Introduction to traffic management & QoS.	

UNIT -IV	TCP/IP Architecture	
	Medium Access control (MAC) sub layer: MAC protocols: ALOHA, Slotted ALOHA, The Internet Protocol, IP addressing and subnetting, Limitations of IPv4 and Introduction to IPv6, User Datagram protocol, Transmission Control Protocol, Introduction to Internet Routing Protocols.	
UNIT -V	Wireless Routing Protocols and Wired Connectivity	
	Introduction to radio transmissions, Packet radio Routing Internet based mobile ad-hoc networking, communication strategies, routing algorithms Destination sequenced Distance Vector (DSDV), Dynamic source Routing (DSR), Ad-hoc On demand Distance Vector (AODV) & Temporarily Ordered Routing algorithm (TORA), Quality of service. Introduction to optical network, SONET / SDH, Broadcast and select WDM Networks	
UNIT -VI	Network Security & Software Defined Networks	
	Introduction to security, Security approaches, Principles of security, Types of Security attacks, Cryptography: plain text and cipher text, substitution techniques, encryption, and decryption, Software Defined Network: Comparison between SDN and traditional networks, SDN controller, Switch design, Switch Protocols, Control Overhead & Handoff algorithms.	
List of Experiments:		
1. Connecting two or more computers using RJ45		

2. Implementation of bus topology in MATLAB/ NS-2.
3. Implementation of star topology in MATLAB/ NS-2.
4. Simulation of sliding window protocolsMATLAB/ NS-2.
5. Describe functions of OSI layers and its architecture.
6. Explain TCP / IP protocol suite.
7. Explain cryptography, symmetric-key algorithms.
8. Simulation of basic optical network using Optisystem.

Text Books:

1. Computer Networks - Andrew S Tanenbaum, 4th Edition, Pearson Education
2. Data Communications and Networking - Behrouz A. Forouzan, Fifth Edition TMH, 2013
3. William Stallings, High speed Networks TCP/IP & ATM Design Principles, PH, NY

Reference Books:

1. Computer Networking: A Top-Down Approach Featuring the Internet, James F. Kurose, K. W. Ross, 3rd Edition, Pearson Education
2. Rottinghous, John W., and James F. Ransome, Cloud Computing: Implementation, Management and Security, CRC Press, 2017.

SEMESTER:- IV
SYLLABUS

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV: Electronics & Telecommunication Engineering
SUBJECT: - CONTROL SYSTEMS AND APPLICATIONS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination: 60 Marks	Credits: 04
Practical: 02	Internal Assessment: 40 Marks	
Tutorial: 00	TW: 25 Marks	Credit: 01
		Total Credit: 05
Course Pre-requisites:		
The Students should have knowledge of		
1.	Basic knowledge of signals.	
2.	Basic mathematical tools like Laplace transform	
3.	Basic knowledge of software like MATLAB	
Course Objectives:		
	<ul style="list-style-type: none"> • To provide in depth knowledge of the various types of control systems and determination of transfer function using different methods. • To analyze the first order and second order system in time domain. • To introduce the concept of different types of controllers and compensators. • To analyze the control system in frequency domain. 	

	<ul style="list-style-type: none"> • To analyze the digital control systems in time domain. • To provide state variable analysis. 	
Course Outcomes: After learning this course students will be able to		
1	Identify various control systems and determine the ‘Transfer Function’ of a system using block diagram reduction technique and signal flow graph.	
2	Determine the time response for different system, the errors in various control systems; evaluate the stability of a system using Routh’s Stability Criterion and analysis graphical technique such as root locus.	
3	Demonstrate the knowledge of control actions such as Proportional (P), Integral (I), Derivative (D), PI, PID and compensators.	
4	Determine frequency response and different graphical methods like Bode plot and polar plot.	
5	Calculate the time response for digital control systems and design digital control system.	
6	Implement the state variables for state variable model for linear as well as digital control systems.	
UNIT – I	Introduction to Control System	(08 Hours)
	Introduction to analog as well as digital control system, Classification of Control System, control problem, Feedback and Non-feedback Systems, Transfer Function, Block diagram and signal flow graph analysis, Pulse transfer function, Sampled Signal Flow Graph.	
UNIT – II	Time Domain Analysis	(08 Hours)
	Time response of first order & second order system using standard test signal, steady state errors	

	and error constants, Root locus techniques- Basic concept, rules of root locus, application of root locus techniques for control system, Hurwitz and Routh stability criteria.	
UNIT - III	Controllers and Compensators	(08 Hours)
	Effect of Poles and Zeros on the System Stability, Types of Compensators, Lead, Lag, Lead-Lag Compensators design, Control actions – On/Off, P, PI, PD, PID. PLC Architecture, Introduction to Ladder Diagram, Examples of ladder diagram.	
UNIT -IV	Frequency Domain Analysis	(08 Hours)
	Relationship between time & frequency response, Polar plots, Bode plot, stability in frequency domain, Nyquist stability criterion.	
UNIT -V	Digital control systems	(08 Hours)
	Time Response of discrete time systems: Time response specifications, Steady state error, error constants, time response for 1st order and 2nd order systems. Design of sampled data control system: Root locus technique, Bode plot, Nyquist stability criteria, lead compensator design using Bode plot, lead compensator design using Bode plot, lead compensator design using Bode plot.	
UNIT -VI	State variable analysis	(08 Hours)
	State variable representation-Conversion of state variable models to transfer functions- Conversion of transfer functions to state variable models-Solution of state equations-Concepts of	

	Controllability and Observability-Stability of linear systems-Equivalence between transfer function and state variable representations-State variable analysis of digital control system-Digital control design using state feedback.	
<u>Term Work:</u> Any 8 of below given list		
1. Unit Step and Impulse response of the Transfer function using MATLAB.		
2. Transient response of second order system using MATLAB		
3. To draw Root Locus theoretically (analog and digital) and verify it using MATLAB.		
4. To draw Bode plot theoretically (analog and digital) and verify it using MATLAB.		
5. Magnitude and phase plot of Lead network (analog and digital).		
6. Magnitude and phase plot of Lag network (analog and digital).		
7. To study architecture of PLC.		
8. Ladder diagram example using Virtual Lab		
9. Implementation of DOL Starter Virtual Lab		
10. Implementation of On-Delay Timer Virtual Lab		
11. Implementation of Off-Delay Timer Virtual Lab		
12. Implementation of Up-Down Counter Virtual Lab		
13. Implementation of PLC Arithmetic Instructions Virtual Lab		
14. Implementation of PID Controller Virtual Lab		

Topics for projects based learning*

1. Maintaining constant speed (cruise control) and constant temperature (climate control) and maintaining pressure
2. Engine control, steering control, suspension control
3. Control skidding (antiskid system)
4. Automatic warehousing
5. Inventory control
6. Automation of farming
7. Commercial rail transportation
8. Biomedical CS
9. Design and Experimentation of Cable-Driven Platform Stabilization and Control Systems
10. Minimization of Energy Consumption in Underfloor Heating Systems
11. Automatic Water Pump Controller
12. Design, Analysis and Testing of a Flapping Wing Miniature Air Vehicle
13. Design Cognitive mobile robot model
14. PLC Based Performance Analysis Of Range Sensors For A Real-Time Power Plant Coal Level Sensing System.
15. Mine Water Level Fuzzy Control System Design Based On PLC.

*Students in a group of 3 to 4 shall complete any one project from the above list

Text Books:

1. I.J. Nagrath, M.Gopal “Control Systems Engineering”, 5th Edition, New Age International Publication
2. Schaum’s Series book “Feedback Control Systems”.
3. Les Fenical “Control Systems”, 1st Edition, Cengage Learning India.
4. R. Anandanatarajan, P. Ramesh Babu, “Control Systems Engineering”, Scitech Publications

Reference Books:

1. Norman S. Nise “Control Systems Engineering”, 4th edition, Wiley edition.
2. Samarjeet Ghosh, “Control Systems Theory & Applications”, 1st edition, Pearson education.
3. S.K. Bhattacharya, “Control Systems Engineering”, 1st edition, Pearson education.

4. Hackworth, "Programmable Logic Controller", 1st edition, Pearson education.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV: Electronics & Telecommunication Engineering		
SUBJECT: - INTEGRATED CIRCUITS AND APPLICATION		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination: 60 Marks	Credits: 04
Practical: 02	Internal Assessment: 40 Marks	
Tutorial:00	TW & PR: 50 Marks	Credit: 01
		Total Credit: 5
Course Pre-requisites:		
	SDC-I, SDC-2, Electronics Network Theory	
Course Objectives:		
1.	To introduce the OPAMP and its internal building blocks	
2.	To provide the basics of analysis and design of linear and nonlinear applications of Op-Amp	
3.	To introduce the students to design of active filters	
4.	To introduce the students to analysis and design of OPAMP based waveform generators	
5.	To introduce the Timer IC 555 and its applications	
6.	To introduce PLL, Three terminal voltage regulators and ADC/DAC and their applications	
Course Outcomes: After learning this course students will be able to		
1	Visualize the internal blocks of a typical OPAMP IC and interpret the OPAMP parameters	
2	Analyze and design linear and nonlinear applications of OP-AMP.	

3	Analyze and design first and second order active filters using OP-AMP..	
4	Analyze and design Waveform Generators using OP-AMP.	
5	Design of multivibrators using Timer IC 555	
6	Demonstrate knowledge of Phase Locked Loop IC 565 and its application and design linear power supply using three terminal voltage regulators, classify ADC and DAC devices	
UNIT – I		
UNIT – I	OPAMP Internals	(08 Hours)
	Amplifier types (voltage, current, transconductance, trans resistance), Limitations of CE amplifiers, Block diagram of OPAMP, Differential amplifier with and without constant current tail (review), Level Shifter, Complementary Symmetry Output power amplifier, Frequency compensation, Ideal and practical characteristics of OPAMP, Parameters of practical OPAMP, Offset voltage balancing.	
UNIT – II	Linear Applications of OPAMP-I	(08 Hours)
	DC and AC inverting amplifier, DC and AC Non-Inverting Amplifier, DC and AC Voltage Follower circuit, Summing Amplifier, Difference Amplifier, Instrumentation Amplifier, I-V and V-I converters	
UNIT - III	Linear Applications of OPAMP-II	(08 Hours)
	Integrator, Differentiator, Active Filters, Log, and anti-log amplifiers	
UNIT -IV	Non-Linear Applications of OPAMP	(08 Hours)
	Comparator and Schmitt Trigger circuit, Window detector, Precision rectifiers, Peak detector,	

	Sample and Hold circuit	
UNIT -V	Waveform Generators	(08 Hours)
	Positive Feedback and Barkhausen criteria, Wein bridge oscillator, RC Phase shift oscillator, Colpitts oscillator, Hartley oscillator, square wave generator, Triangular wave generator, IC 555 astable and monostable circuits	
UNIT -VI	Voltage Regulators, PLL and Mixed Signal Circuits	(08 Hours)
	Three terminal IC voltage regulators, Voltage Controlled Oscillator and Phase Locked Loop, Parameters of DAC, Digital-to-Analog Converters (Binary weighted, R-2R ladder network type), Analog to Digital Converters (Flash, Successive Approximation, Integrating) Parameters of ADC, Introduction to sigma-delta ADC.	
<u>List of experiments:</u>		
1. Design, build and test DC inverting, non-inverting, and voltage follower circuits		
2. Design, build and test AC inverting, non-inverting and voltage follower circuits, plot frequency response		
3. Design, build and test inverting, non-inverting summing amplifier circuits		
4. Design, build and test integrator circuit and plot frequency response		
5. Design, build and test differentiator circuit and plot frequency response		
6. Design, build and test 1st order active LPF and HPF and plot frequency responses		
7. Design, build and test Wein bridge oscillator		
8. Design, build and test RC phase shift oscillator		
9. Design, build and test astable multivibrator using IC555		

10. Measure line and load regulation of three terminal regulator
Topics for projects based learning*
1. Audio Mixer
2. Stereo Pre-amplifier
3. Graphic Equalizer
4. Burglar alarm
5. Tachometer
6. Universal Battery charger
7. Function Generator
8. Fixed voltage regulated power supply
9. Variable output voltage regulated power supply
10. Dual polarity regulated power supply
11. Electronic stethoscope
12. Digitally selectable precision attenuator
13. Bridge amplifier for stereo
14. Bar graph battery voltage indicator
15. Touch sensitive switch
*Students in a group of 3 to 4 shall complete any one project from the above list
Textbooks:
1. Operational Amplifiers and Linear ICs, David A. Bell, 3rd Edition, 2008, ISBN:0195696131, 9780195696131, Oxford University Press
2. Design with Operational Amplifiers and Analog Integrated Circuits, Sergio Franco, 4th Edition, McGraw-Hill

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV: Electronics & Telecommunication Engineering
SUBJECT: - ELECTROMAGNETICS AND TRANSMISSION LINE

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination: 60 Marks	Credits: 03
Practical: 00	Internal Assessment: 40 Marks	
Tutorial: 01		Credits:01
		Total Credit: 04
Course Pre-requisites:		
	Fundamentals of Vector Analysis and Mathematical Calculus	
Course Objectives:		
	<ul style="list-style-type: none"> • To analyze basic Electrostatic laws such as Coulomb's law and Gauss law • To compute boundary conditions with electrostatic parameters • To analyze basic Magnetostatic laws such as Biot-Savart's Law and Ampere's Law • To evaluate Maxwell's equation • To demonstrate wave propagation through different media • To examine transmission Line and impedance matching techniques 	
Course Outcomes: After learning this course students will be able to		
1	Analyze electric field in different field distributions	

2	Identify the Electrostatic parameters	
3	Analyze magnetostatic field in different field distributions	
4	Evaluate time varying Electric and Magnetic Fields	
5	Characterize wave equation	
6	Compute Transmission Line and its applications	
UNIT – I	Electrostatic-I	(06 Hours)
	Coulomb's law, Electrostatic Field Intensity, Calculation of Electric field for: infinite line, surface, volume charge distribution, Electric flux density, Concept of Divergence, Gauss Law, Application of Gauss's law for: point, infinite line, infinite sheet, uniformly charged sphere.	
UNIT – II	Electrostatic-II	(06 Hours)
	Electric Potential, Relation between Electric Field and Potential, Energy Density, Resistance, Capacitance, Boundary Condition	
UNIT - III	Magnetostatics	(06 Hours)
	Biot-Savart's Law, Application of Biot-Savart's Law, Stoke's Theorem, Ampere's Law, Application of Ampere's Law, Forces due to Magnetic Field, Boundary Conditions, Inductor, and Inductance. Standard inductance configurations: Toroid, Solenoid. Materials in magnetic fields.	

UNIT -IV	Time Varying Fields and Maxwell's Equation	(06 Hours)
	Faraday's Law, Transformer and Motional Electromotive Forces, Displacement Current, Maxwell's Equation in both differential form and integral form.	
UNIT -V	Wave Propagation/ Uniform Plane Wave	(06 Hours)
	Wave Propagation in Lossy Dielectrics, Plane Waves in Lossless Dielectrics, Plane Waves in Free Space, Plane Waves in Good Conductors, Power and Poynting Vector, Reflection of a Plane Wave at Normal Incidence.	
UNIT -VI	Transmission Lines and Impedance Matching Techniques	(06 Hours)
	Transmission Line Parameters, Transmission Line Equations, Input Impedance, Standing Wave Ratio and Power, Smith Chart, Stub Matching Technique, QWT, Single Stub Matching, Double Stub Matching, EMC-EMI, Types of EMC.	
<u>List of Tutorials:</u>		
1. Application of Stoke's theorem.		
2. Application of Gauss's law		
3. Energy stored in capacitor.		
4. Application of Poission's and Laplace's equations.		
5. Boundary conditions for magnetic fields.		
6. Poynting theorem and their applications.		

7. Applications of Smith Chart.
8. Simulation on Electromagnetic Interference and Compatibility
Topics for projects based learning*
1.Design Electrostatic Speakers using the concept of Electrostatic Forces and Energy
2. Study the Faraday Cage
3. Build Lightning Rod
4. Study and survey on Xerography – Electrostatic Imaging
5. Design any Electrostatic Filters
6. Design a gauge that is sensitive to the fluid level in the capacitive gauge.
7. Calculate characteristic impedance and propagation speed of a coaxial cable based on measured dimensions
8. Design a metal detecting device based on mutual inductance
9. Design a non-contact probe that can detect the presence and polarity of a static (or slowly varying) electric field in air
10. Design a non-contact AC current meter
11. Study and survey on Heart Defibrillators
12. Study and survey on Hard Disk Reading and writing process
13. Design Metal detectors
14. Study and survey on Magnetic Resonance Imaging (MRI)
15. Design Magnetic Brakes
*Students in a group of 3 to 4 shall complete any one project from the above list
Text Books:
1.Matthew N. O. Sadiku, “Principles of Electromagnetics”, 4th Edition, Oxford University Press.
Reference Books:
1. John D. Kraus “Electromagnetic”, McGraw Hill.
2. William Hyte “Electromagnetic Engineering”, McGraw Hill
3. Edminister J.A, Electromagnetics, Tata McGraw-Hill.

4. R.K Shevgaonkar, Electromagnetic waves, Tata McGraw-Hill.

5. S Salivahanan & S Karthie, "electromagnetic Field Theory" Vikas Publishing House Ltd.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV: Electronics & Telecommunication Engineering
SUBJECT: - ANALOG COMMUNICATION

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination: 60 Marks	Credits: 04
Practical: 02	Internal Assessment: 40 Marks	
Tutorial:00	TW & OR: 50 Marks	Credit: 01
		Total Credit: 5
Course Pre-requisites:		
	Signals and Linear Systems.	
Course Objectives:		
1.	To introduce essential components of communication system.	
2.	To teach the students DSB-FC modulation and demodulation and its mathematical background	
3.	To teach the students DSB-SC & SSB modulation and demodulation and its mathematical background	
4.	To teach the students frequency modulation and demodulation and its mathematical background	
5.	To introduce the students working of radio receivers.	
6.	To introduce the students analog to digital conversion technique in communication system	
Course Outcomes: After learning this course students will be able to		
1	Identify the basic components and effect of noise on communication system	
2	Demonstrate the knowledge of DSB-FC modulation and demodulation and its mathematical background	

3	Demonstrate the knowledge of DSB-SC & SSB modulation and demodulation and its mathematical background
4	Demonstrate the knowledge of frequency modulation and demodulation and its mathematical background
5	Identify components of communication receiver system.
6	Demonstrate the knowledge of Pulse Modulation technique
UNIT – I Principles of Communication Systems (08 Hours)	
	Review of signals and systems, Frequency domain of signals, Block schematic of communication system, base band signals, RF bands, Necessity of modulation, Types of channels, Noise types - Internal & External, Noise Calculations, Signal to Noise ratio, Noise figure, Noise Temperature
UNIT – II Amplitude Modulation-I (08 Hours)	
	Amplitude Modulation principles, Representation of AM, Frequency spectrum & BW, Modulation index, % modulation, Power relations in AM, Trapezoidal patterns-, high- and low-level AM transmitters, DSB-FC Generation-linear and non-linear modulator, Linear modulators- low- and high-level linear modulators, Non-linear modulators- square law modulator and switching modulator, DSB-FC Demodulation- square law detector and envelope/diode detector.
UNIT - III Amplitude Modulation-II (08 Hours)	
	DSB-SC Principles, DSB-SC Generation Methods: Multiplier modulator, linear modulator, non-linear modulator and switching modulator, DSB-SC Demodulation-synchronous and coherent detection, SSB Principles, SSB Generation Methods: Filter method, phase shift method & the

	third method,SSB Demodulation, Comparison of AM,DSB-SC and SSB, Independent sideband system (ISB), Vestigial sideband (VSB).	
UNIT -IV	Frequency Modulation	(08 Hours)
	Angle Modulation, Principles, mathematical analysis of FM, frequency deviation and percentage modulation, modulation index, deviation ratio, Bessel function,BW requirements, Narrow band & wide band FM, Pre-emphasis and de-emphasis, FM modulators - Direct & Indirect modulator, Direct modulator- varactor diode modulator, reactance modulator-frequency stabilized reactance modulator, Indirect modulator- Armstrong method, FM demodulators - Direct & Indirect detector, Types of direct detectors, Indirect detector-phase locked loop.	
UNIT -V	Radio Receivers	(08 Hours)
	Block diagram of AM receiver- TRF and Super heterodyne receiver,FM receiver, receiverperformance and measurement parameters: Sensitivity, Selectivity, fidelity, Image Frequency Rejection, Automatic Gain Control (AGC)- simple and delayed AGC, IF Amplifiers, Tracking- Two point and three-point tracking, Mixers-separately excited mixers and self-excited mixers.	
UNIT -VI	Pulse Modulation	(08 Hours)
	Sampling process, Sampling Theorem,Nyquist criteria, Sampling types: Natural & flat top sampling, aliasing error and aperture effect, Pulse Modulation-PAM modulator & demodulator, PWM modulator& demodulator, PPM modulator& demodulator, Comparison of PAM,PWM and	

	PPM, Multiplexing, TDM- transmitter and receiver, FDM- transmitter and receiver.	
<u>List of experiments:</u>		
1. Write a MATLAB program for generation of AM signal		
2. Write a MATLAB program for generation of DSB-SC signal		
3. Write a MATLAB program for generation of FM signal		
4. To perform Amplitude Modulation and Demodulation.		
5. To perform DSB-SC Modulation & Demodulation.		
6. To perform Frequency Modulation and Demodulation		
7. To perform sampling and Reconstruction of a signal.		
8. To perform Pulse Amplitude Modulation (PAM.)		
9. To perform Pulse Width Modulation (PWM)		
10. To perform Pulse Position Modulation (PPM)		
Topics for projects based learning*		
1. Survey report on types of noise and its impact on communication system		
2. Survey report on types of AM modulators and demodulators		
3. Build simple AM transmitter system using linear modulator		
4. Build simple AM transmitter system using non-linear modulator		
5. Build simple AM receiver system		
6. Survey report on types of FM modulators and demodulators		

7. Build simple FM transmitter system using direct modulator
8. Build simple FM transmitter system using indirect modulator
9. Build simple FM receiver system using direct demodulator
10. Build simple FM receiver system using indirect demodulator
11. Build a circuit for sampling and reconstruction of a signal.
12. Build the Pulse Amplitude Modulation circuit
13. Build the Pulse Width Modulation circuit
14. Build the Pulse Position Modulation circuit
15. Build the Pulse Position demodulation circuit
*Students in a group of 3 to 4 shall complete any one project from the above list
Text Books:
1. Electronics Communication System, George Kennedy, 4th Edition, Tata McGraw Hill Publication.
2. Modern Digital and analog Communication System, B.P.Lathi, Oxford University press.
Reference Books:
1. Principles of Communication Systems, Taub & Schilling, Tata McGraw-Hill Publication.
2. Communication Systems, Simon Haykin, 4th Edition, John Wiley & Sons.
3. Electronics Communications, Dennis Roddy, John Coolen, 4th Edition- Pearson Education.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV: Electronics & Telecommunication Engineering
SUBJECT: - DATA SCIENCE

<u>TEACHING SCHEME:</u>		<u>EXAMINATION SCHEME:</u>		<u>CREDITS ALLOTTED:</u>	
Theory: 03		End Semester Examination: 60 Marks		Credits: 03	
Practical: 02		Internal Assessment: 40 Marks			
Tutorial: 00		TW: 25 Marks		Credits: 01	
				Total Credits: 04	
Course Pre-requisites:					
		Python Programming and DBMS.			
Course Objectives:					
		<ul style="list-style-type: none"> • To acquire in-depth understanding of the fundamental concepts in data modeling, data analysis, statistics, machine learning techniques. • To strengthen the analytical and problem-solving skill through developing real time Use cases. • To gain practical experience in programming tools for data sciences, database systems, machine learning and Visualization tools. • To empower students with tools and techniques for handling, managing, analyzing and interpreting data. 			
Course Outcomes: After learning this course students will be able to					
1	Develop a schema design, perform ETL operations with normalized techniques.				
2	Visualize the data and detect anomalies with the help of statistical methods.				
3	Implement ANOVA test, Regression & Dimensionality Reduction Techniques.				

4	Model different machine learning algorithms and draw predictive outcomes.	
5	Develop an interactive and functional Dashboard using Power BI.	
6	Visualize the data using Power BI	
UNIT – I	Fundamentals of Data Analysis using MySQL	(06 Hours)
	Introduction to Data Science, DBMS approach to analytics, ER Diagram and Schema design, Normalization techniques, data cleaning and transforming – Extract, Transform & Load.	
UNIT – II	Data Analysis and Visualization with Excel, Python	(06 Hours)
	with Excel: Descriptive statistics, Outlier detection, Visualization: Box plot, Line chart, Pie chart, Bar charts, Histogram. With Python: Pandas and Numpy, Data modelling and transforming, dealing with null values, different data types, preparing data for the model, Visualization with Matplotlib, Seaborn.	
UNIT - III	Advanced Statistics	(06 Hours)
	Analysis of Variance (ANOVA), Regression Analysis: linear regression, multiple linear, and non-linear regression, Dimension Reduction Techniques.	
UNIT -IV	Machine Learning-I	(06 Hours)
	Introduction to Supervised and Unsupervised Learning, Clustering, Decision Trees, Random Forest, Multiple Linear Regression, Logistic Regression, Linear Discriminant Analysis	

UNIT -V	Machine Learning-II	(06 Hours)
	Time Series Forecasting: Introduction to Time Series, Correlation, Forecasting, Autoregressive models; Model Validation, Handling Unstructured Data.	
UNIT -VI	Data visualization using Power BI	(06 Hours)
	Introduction to Power BI, Basic charts and dashboard, Descriptive Statistics, Dimensions and Measures, Visual analytics: Storytelling through data, Dashboard design & principles.	
<u>Term Work:</u> Any 8 of below given list		
1. SQL - Northwind Trader Database: Schema Design, Normalization & Cleaning.		
2. Northwind Trader Database: Querying.		
3. Statistics & Visualization with Excel.		
4. Handling data using Python Pandas – Load (Multiple sources such as – Excel, SQL, CSV, URL), Transform.		
5. Exploratory Data Analysis & Visualization using Python.		
6. Machine Learning [Supervised] – Regression (Linear, Logistic & Multi-Linear.		
7. Machine Learning [Supervised] – Classification (Logistic Regression, Decision Tree & Random Forest, KNN, K Mean Clustering, SVM).		
8. Machine Learning [Time series] – ECG Analysis.		
9. Machine Learning – Titanic Dataset Analysis (EDA)-1 .		
10. Machine Learning – Titanic Dataset Analysis (Visualization & Prediction)-2.		

11. Power BI – Input & Transforming Data.
12. Power BI – Creating Visuals & Reports.
13. Power BI – Dashboard.
Topics for projects based learning*
1. Design/Model a database without normalizing from scratch and create an E-R diagram as schema. Apply normalization techniques to previous created tables and perform Data Wrangling & Data Cleaning.
2. Implement an Email automation system using SQL & Python.
3. Create a Spotify Music Analysis visualization using Python pandas.
4. Create a Crypto currency Analysis visualization using Python pandas.
5. Build a Netflix like Movie recommendation model using Machine Learning.
6. Build a Song recommendation model using Machine Learning.
7. Build a Book recommendation model using Machine Learning.
8. Create a Credit Card Fraud Detection system using Machine Learning Algorithms.
9. Create a cheque clearance model using Machine Learning Algorithm.
10. Twitter Sentiment Analysis.
11. Uber Dataset Time Series Analysis.
12. Build a dynamic functional ChatBot using reddit conversations as dataset.
13. Build a Machine Learning Model with Health Care Data.
14. Create an interactive Super Store Dataset using PowerBI.
15. Create a Dashboard on Covid Vaccine Tracker using PowerBI.
*Students in a group of 3 to 4 shall complete any one project from the above list
Text Books:
1. Introduction to Machine Learning with Python: A Guide for Data Scientists by Andreas C. Mueller, Sarah Guido, O'Reilly Publication.

2. Practical Statistics for Data Scientists by Peter Bruce, Andrew Bruce, O'Reilly Publication.

3. Microsoft Power BI Quick Start Guide: Build dashboards and visualizations to make your data come to life, by Devin Knight , Brian Knight, Packt Publishing.

Reference Books:

1. Python Machine Learning By Example: The easiest way to get into machine learning, by Yuxi (Hayden) Liu, Packt Publishing.

2. Mastering Microsoft Power BI: Expert techniques for effective data analytics and business intelligence, by Brett Powell, Packt Publishing.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV: Electronics & Telecommunication Engineering
SUBJECT: - ADVANCED COMPUTER PROGRAMMING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 00	End Semester Examination: 00	Credits: 00
Practical: 04	Internal Assessment: 00	
Tutorial: 00	TW & OR: 50 Marks	Credit: 02
		Total Credit: 02
Course Pre-requisites:		
1.	C programming.	
Course Objectives:		
	<ol style="list-style-type: none"> 1. To introduce the basic building blocks for JAVA programming 2. To teach the concept of multithreading and exception handling. 3. To teach the lambda functions. 4. To train the student to use java script. 5. To train the student to use HTML. 	
Course Outcomes: After learning this course students will be able to		
1	Demonstrate the knowledge of basic programming in JAVA.	
2	Implement the concept of multithreading and exception handling.	

3	Use the lambda functions.
4	Implement the concept of JavaScript.
5	Implement the concept ofHTML.
6	Design webpage using JavaScript and HTML.
<u>Term Work:</u> Any 16 of below given list	
1. Introduction to basics of JAVA and JAVA installation.	
2. WAP to implement static and non-static members and their execution control flow.	
3. WAP to implement wrapper class.	
4. WAP to implement flow control statements, looping statements and arrays.	
5. WAP to implement:	
a. Inheritance	
b. Abstraction	
6. WAP to implement:	
a. Polymorphism	
b. Encapsulation	
7. WAP to implement exception handling and assertions.	
8. WAP to implement multithreading.	
9. WAP to implement callable and future.	
10. WAP to implement string handling.	

11. WAP to implement IO streams.

12. WAP to implement collection Array List.

13. WAP to implement collection LinkedList.

14. WAP to implement lambda functions with predicates.

15. WAP to implement lambda functions with streams.

16. WAP to implement annotations.

17. WAP to implement the basics of HTML

18. WAP to implement the basics of java script

19. WAP to implement handling of events and errors, debugging with java scripts.

20. A mini-project to create Web Pages using HTML and JavaScript.

Text Books:

1. Programming with Java: A Primer, 3E by E Balagurusamy, Tata McGraw Hill Publishing Company.

Reference Books:

1. Java Complete Reference, Herbert Schildt, McGraw Hill Publishing Company

2. Java: How to Program by Deitel and Deitel

3. Ivan Bayross, “Web Enabled Commercial Applications Development Using HTML, DHTML, JavaScript, Perl – CGI”, BPB Publication.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV: Electronics & Telecommunication Engineering
SUBJECT: - SENSOR MODELLING AND SIMULATION LABORATORY

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 00	End Semester Examination: 00	Credits: 00
Practical: 02	Internal Assessment: 00	
Tutorial: 00	TW & OR: 50 Marks	Credit: 01
		Total Credit: 1
Course Pre-requisites:		
	signals and systems and control systems.	
Course Objectives:		
1.	To introduce the transducers and sensors which will help direct measurement of electronic, electrical, and communication parameters.	
Course Outcomes: After learning this course students will be able to		
1	Characterize the temperature sensors.	
2	Simulate the performance of a bio-sensor.	
3	Measurement of level in a tank using capacitive type level probe.	
4	Characterize the LVDT	
5	Design an orifice plate for a typical application.	

6	Simulate the performance of a chemical sensor.
7	Characterize the strain gauge sensor.
List of Practicals to be performed in the laboratory	
1. To learn the various static and dynamic characteristics of measurement systems.	
2. Characterize the temperature sensor (RTD) on virtual lab	
3. Measurement of level in a tank using capacitive type level probe on virtual lab	
4. Characterize and analyze the working of the LVDT.	
5. Characterize the strain gauge sensor.	
6. To measure and study of Pressure indicator With Pressure Output in percentage	
7. To measure and study of Flow Indicator with Flow rate, Totalizer	
8. To measure and study of Level Indicator with MM, CM and percentage	
9. To study Inductive rotor position sensor with four inductive coils using MATLAB	
10. To study Electrothermal converter using MATLAB.	
11. To study Rotary transformer for measurement of angle of rotation using MATLAB	
12. To study Exponential light-emitting diode with optical power output port using MATLAB	
Text Books&Reference Books:	

1. H. S. Kalsi, "Digital Instrumentation", Tata McGraw Hill

2. Clyde F. Coombs "Electronic Instrumentation Handbook" McGraw Hill

3. Cooper Helfric, "Electronic Instrumentation & Measurement Techniques", Prentice
Hall Publication

Bharati Vidyapeeth
(Deemed to be University)

B. Tech. Sem. IV: Electronics & Telecommunication Engineering		
SUBJECT: - Calibration and Repair of Lab Equipments		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 00	End Semester Examination: 00	Credits: 00
Practical: 00	Internal Assessment: 00	
Tutorial: 00	TW & OR: 50 Marks	Credit: 02
		Total Credits: 2
Course Pre-requisites:		
	Fundamentals of Electrical Engineering, Basic Electronics, Digital Electronics	
Course Objectives:		
	<ul style="list-style-type: none"> To teach the student to use and measurement of Lab Equipment's. To teach measurement characteristics of Lab Equipment's To provide the basics knowledge of analysis and design of Lab Equipment's. To train the students for troubleshoot Lab Equipment's. To train the students for repair Lab Equipment's. To train the students for calibrate Lab Equipment's. 	
Course Outcomes: After learning this course students will be able to		
1	Identity and detect fault in power supply.	
2	Analyze and repair True RMS meter and DMM.	
3	Analyze and repair of Energy meter	

4	Identify and detect fault in Different Indicators.
5	Identify and repair different faults in function generator and Oscilloscope.
6	Measure and Repair Electrosmog Meter.
Term Work:	
	1. Troubleshoot and Repair of power supply.
	2. Troubleshoot and Repair megger digital.
	3. Troubleshoot and Repair Digital Multi-Meter.
	4. Troubleshoot and Repair True RMS meter.
	5. Troubleshoot and Calibrate 1 phase and 3 phase Energy meter.
	6. Troubleshoot and Calibrate Pressure indicator.
	7. Troubleshoot and Calibrate Flow Indicator.
	8. Troubleshoot and Calibrate Level Indicator.
	9. Troubleshoot and Repair function generator
	10. Troubleshoot and Repair CRO and DSO
	11. Troubleshoot and Repair ELECTROSMOG Meter
Text Books:	
	6. “Troubleshooting Electronic Equipment” by R. Khandpur
	7. “How to Diagnose and Fix Everything Electronic” , Second Edition by Michael Jay Geier
Reference Books:

Bharati Vidyapeeth
(Deemed to be University)
Pune, India

College of Engineering, Pune

B.Tech. (Computer Science and Engineering)
Program Curriculum
(2021 Course)

VISION OF UNIVERSITY:

Social Transformation through Dynamic Education

MISSION OF UNIVERSITY:

- To make available quality education in different areas of knowledge to the students as per their choice and inclination.
- To offer education to the students in a conducive ambience created by enriched infrastructure and academic facilities in its campuses.
- To bring education within the reach of rural, tribal and girl students by providing them substantive fee concessions and subsidized hostel and mess facilities.
- To make available quality education to the students of rural, tribal and other deprived sections of the population.

VISION OF THE INSTITUTE:

To be World Class Institute for Social Transformation Through Dynamic Education.

MISSION OF THE INSTITUTE:

- To provide quality technical education with advanced equipment, qualified faculty members, infrastructure to meet needs of profession and society.
- To provide an environment conducive to innovation, creativity, research, and entrepreneurial leadership.
- To practice and promote professional ethics, transparency and accountability for social community, economic and environmental conditions.

VISION OF THE DEPARTMENT

To be focused on innovative and quality education in computer science and engineering that prepares professionals for development of society.

MISSION OF THE DEPARTMENT

- To provide academic environment for the development of skilled professionals
- To cultivate research culture that contributes to the sustainable development of the society.
- To enhance academic and industry collaborations for global exposure.

PROGRAM EDUCATIONAL OBJECTIVES

The students of B.TECH. (Computer Science and Engineering), after graduating will able to,

1. Demonstrate technical and professional competencies by applying Engineering Fundamentals, knowledge of computing and technologies.
2. Exhibit effective personality, good communication and team building skills
3. Adopt to the latest trends in the field of computer science and engineering.

PROGRAM SPECIFIC OUTCOMES

1. To design, develop and implement computer programs on hardware towards solving problems.
2. To employ expertise and ethical practice through continuing intellectual growth and adapting to the working environment.

PROGRAM OUTCOMES

- a. Apply the knowledge of mathematics, science, engineering, and computing to provide a solution of complex engineering problems.
- b. Identify, analyse complex engineering problems to derive conclusions using computer science and engineering knowledge.
- c. Outline resolutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration, societal, and environmental considerations.
- d. Use existing research knowledge and research techniques including design of experiments, data analysis, and synthesis to provide valid inferences.
- e. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools.
- f. Apply inferences obtained by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the subsequent responsibilities relevant to the professional engineering practice.
- g. Recognize the impact of the professional engineering solutions in societal and environmental contexts to demonstrate the knowledge for sustainable development.
- h. Apply ethical principles and execute professional ethics and responsibilities and norms of the engineering practice.
- i. Work effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary surroundings.
- j. Talk effectively on complex engineering activities with the engineering community such as being able to comprehend and write effective reports and design documentation, make effective presentations.
- k. Prove knowledge and understanding of the engineering and management principles and apply these to one's work, as a member and leader in a team.
- l. Recognise the need for and have the preparation and ability to engage in independent and life-long learning in context of technological change.

CORELATION BETWEEN GRADUATE ATTRIBUTES AND PROGRAMME OUTCOMES

Graduate Attributes/ Programme Outcomes	a	b	c	d	e	f	g	h	i	j	k	l
Engineering Knowledge	✓											
Problem Analysis		✓										
Design/Development of solutions			✓									
Conduct Investigations of Complex Problems				✓								
Modern Tool Usage					✓							
The Engineer and Society						✓						
Environment and Sustainability							✓					
Ethics								✓				
Individual and teamwork									✓			
Communication										✓		
Project management and finance											✓	
Life-long learning												✓

B.TECH (Computer Science and Engineering)

SEMESTER – I

COURSE SYLLABUS

Mathematics for Computing-I

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	03 Hours/Week	End Semester Examination	60 Marks	Theory	03
Tutorial:	01 Hours/Week	Internal Assessment	40 Marks	Tutorial	01
		Total	100 Marks	Total	04

Course Objective:

- Linear equations and its basis and dimension.
- Linear mapping and its matrix representation.
- Orthogonalization and diagonalisation of matrices

Prerequisite:

The students should have knowledge of algebra of matrices and determinants.

Course Outcomes: On completion of the course, students will have the ability to:

1. Apply rank of matrix in solving system of equations.
2. Identify basis and dimension of matrix.
3. Solve problems on kernel and image of linear transformation.
4. Apply linear operator to represent matrix.
5. Evaluate orthogonalization of inner product space.
6. Use methods to find eigen values and eigen vectors.

Unit I

06 Hours

System of Linear Equation: Vectors and linear combinations, Rank of a matrix, Gaussian elimination, LU Decomposition, Solving Systems of Linear Equations using the tools of Matrices.

Unit II

06Hours

Vector Spaces: Definition, linear combination, spanning sets subspaces, linear dependence and independence, basis and dimension, rank of matrix.

Unit III

06 Hours

Linear Mapping: Linear mapping, Kernel and image of linear mapping, rank and nullity of a linear mapping, singular and non-singular linear mapping.

Unit IV

06 Hours

Linear mapping and matrices: Matrix representation of linear operator, change of base, similarity matrices.

Unit V

06 Hours

Inner Product space and orthogonalization: Inner product space, Cauchy-schwarz equality, orthogonality, orthogonal sets and bases, projections, Gramschidt orthogonalization, orthogonal and positive definite matrices, matrix representation of inner product.

Unit VI

06Hours

Diagonalisation: Eigen values and eigen vectors: Characteristic polynomial, Cayley-Hamilton theorem, eigen values and eigenvectors, properties.

Textbooks

1. P. N. Wartikar and J. N. Wartikar, Applied Mathematics (Volumes I and II), 7th Ed., Pune Vidyarthi Griha Prakashan, Pune, 2013
2. .B. S. Grewal, Higher Engineering Mathematics, 42nd Ed., Khanna Publication, Delhi
3. B.V. Ramana, Higher Engineering Mathematics, 6th Ed., Tata McGraw-Hill, New Delhi, 2008.

4. Erwin Kreyszig, Advanced Engineering Mathematics, 10th Ed., John Wiley & Sons, Inc., 2015.

Reference Books

1. Peter V. O'Neil, Advanced Engineering Mathematics, 7th Ed., Cengage Learning, 2012.
2. Michael Greenberg, Advanced Engineering Mathematics, 2nd Ed., Pearson Education, 1998.

List of Assignments

Six assignments to be given by the course coordinator (Theory)-one from each unit

Project Based Learning

Students are expected to prepare a report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code for it, wherever applicable.

1. Gauss Elimination method.
2. LU-decomposition method
3. Rank of matrix
4. Linear combination
5. Basis and dimension
6. Spanning sets
7. Kernel and image of linear transformation
8. Rank-nullity theorem
9. Non-singular linear mapping
10. Linear operator
11. Similarity matrices
12. Change of base
13. Cauchy Schwarz equality
14. Orthogonality
15. Gram Schmidt Orthogonalization
16. Matrix representation of matrix
17. Cayley-Hamilton theorem
18. Eigen values and Eigen vectors

(Note:- *Students in a group of 3 to 4 shall complete any one project from the above list)

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Internet Programming

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks	Credits	
Theory:	04 Hours/Week	End Semester Examination	60 Marks	Theory	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term work & Oral	50 Marks	Practical	01
		Total	150 Marks	Total	05

Course Objectives:

To introduce students about all web programming languages with detailed study about HTML, CSS, DHTML, XML and DNS.

Prerequisite:

Basic knowledge about computers, web applications and internet.

Course Outcomes: On completion of the course, students will have the ability to:

1. Explain the fundamentals of programming languages.
2. Implement the Hyper Text Markup Language.
3. Use of Cascading Style Sheets in web page development.
4. Elucidate with implementation of Dynamic Hyper Text Markup Language.
5. Apply the knowledge to implement the Extensible Markup Language.
6. Implement the Hyper Text Transfer Protocol and DNS.

Unit I

08 Hours

Introduction to internet programming: Computer Network, working of internet, Web applications, Introduction to web programming languages: HTML, DHTML, JSP, PHP, Role of the Server on the internet, Introduction to JSP, Introduction about Node JS and angular JS

Unit II

08 Hours

Hyper Text Markup Language: Introduction to HTML, Tags, Div Span, Lists, Images, Hyperlink, Table, Iframe, Form, Headers, all content with HTML5

Unit III

08 Hours

Cascading Style Sheets: Introduction to CSS, Syntax, Selectors, background, Text Fonts, Lists Tables, Box Models, Display Positioning, Floats.

Unit IV

08 Hours

Dynamic Hyper Text Markup Language: Introduction of DHTML- HTML vs. DHTML, Advantages of DHTML, CSS of DHTML, Event Handling, Data Binding, Browser Object Models

Unit V

08 Hours

Extensible Markup Language: Introduction of XML- Features of XML, Anatomy of XML document, The XML Declaration, Element Tags- Nesting and structure, XML text and text formatting element, Table element, Mark-up Element and Attributes, XML Objects, Checking Validity, Understanding XLinks, XPointer, Event-driven Programming, XML Scripting, XML with Style Sheet Technologies- Concept of XSL, XML Schema, Importance of XML schema, Creating Element in XML Schema, XML Schema Types.

Unit VI

08 Hours

Hyper Text Transfer Protocol and DNS: DNS, WWW, HTTP, HTTPs, XML HTTP Request- Introduction, XML Http Request, The XML Http Request Object, Events for the XML Http Request Object, Request Object for XML Http Request, Response Object for XML HttpRequest, Complete working of web browser

Textbooks/ Reference Books:

1. HTML & CSS: The Complete Reference, Fifth Edition Paperback by Thomas Powell, McGraw Hill Education.

- 2.HTML & XHTML: The Complete Reference, byThomas Powell, Mc Graw Hill Education, McGraw-Hill Education.
- 3.XML: The Complete Reference, by Heather Williamson, McGraw Hill Education.
- 4.HTTP Pocket Reference (Pocket Reference (O'Reilly)), Clinton Wong, O'Reilly Publication.
- 5.HTML & XHTML: The Definitive Guide, 5th Edition, by Bill Kennedy and Chuck Musciano, O'Reilly Publications.

List of Assignments:

(Course coordinator can design his/her own theory assignment. Following are samples of theory assignments.)

1. Explain the role of web programming languages in internet.
2. Explain any five HTML tags with example.
3. Consider any web-based example to explain the role of CSS in web programming.
4. Explain the role of DHTML in web programming and web applications.

List of Laboratory Exercises:

1. Introduction to web format files and file extensions.
2. Implementation of simple HTML page.
3. Implementation of Images and Tables.
4. Implementation of frames.
5. Implementation of form.
6. Implementation of CSS.
7. Implementation of DHTML.
8. Implementation of XML.
9. Develop the web page with any scenario where HTML, CSS, XML will be used.
10. Develop any web project for any website or any portal.
11. Case Study on web programming languages.
12. Case Study on any web project

Project Based Learning

1. Website Development Hotel management
2. Website Development Personal Website
3. Website Development Organization website
4. Website Development Dummy Ecommerce website
5. Website Development Login page with user credentials
6. Development of a Employee Interests Survey form / Student survey form
7. Technical documentation page
8. Create image slider
9. Railway concession form
10. Website development for personal portfolio

(Note:- *Students in a group of 3 to 4 shall complete any one project from the above list)

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit – VI

Organic and Electrochemistry

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	03 Hours/Week	End Semester Examination	60 Marks	Theory	03
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term Work	25 Marks	Practical	01
		Total	125 Marks	Total	04

Course Objectives:

The student should acquire the knowledge of

- To develop the interest among the students regarding chemistry and their applications in engineering.
- To develop confidence among students about chemistry, how the knowledge of chemistry is applied in technological field.
- The student should understand the concepts of chemistry to lay the groundwork for subsequent studies in the computing field.

Prerequisite:

Basic Chemistry

Course Outcomes: On completion of the course, students will have the ability to:

1. Differentiate between ionic and covalent bonding and classify the bonding in a compound as ionic or covalent.
2. Develop a working knowledge of the twelve fundamental principles of green chemistry and what it is all about.
3. Apply standard reduction potential data to determine the relative strength of oxidizing/reducing agents
4. Demonstrate the knowledge of polymer materials for futuristic engineering applications
5. Describe the properties of materials and Application of semiconductor electronics
6. Describe the manufacturing and refining process of fuels and lubricants

Unit I

06 Hours

Chemical Bonding in Molecules: MO theory, Structure, bonding and energy levels of bonding and shapes of many atom molecules, Coordination Chemistry, Electronic spectra, and magnetic properties of complexes with relevance to bio-inorganic chemistry, organometallic chemistry.

Unit II

06 Hours

Green Chemistry: Introduction, Twelve Principles of Green chemistry, numerical on atom economy, synthesis, adipic acid and indigo. Organic dye- Traditional methods of organic dye. Green solvents (ionic liquid supercritical CO₂), and products from natural materials.

Unit III

06 Hours

Electrochemistry: Electrochemical cells and Galvanic cells, EMF of a cell, Single electrode potential, Nernst equation, Electrochemical series, Types of electrodes, Reference electrodes, pH, pOH, acids and basis, Fuel cells, Construction and Working of - Acid and Alkaline Storage Battery, Dry Cell, Ni-Cd Batteries, Li-Ion Batteries, Li-Po Batteries.

Unit IV

06 Hours

Polymers for The Electronics Industry: Polymers, Conduction mechanism, Preparation of conductive polymers, Polyacetylene, Poly (p- phenylene), Polyheterocyclic systems, Polyaniline Poly (Phenylene sulphide), Poly (1,6-heptadiyne), Applications, Photonic applications.

Unit V

06 Hours

Semi-Conductors, Insulators and Superconductors: Semi conductivity in non-elemental materials, Preparations of semiconductors, Chalcogen photoconductors, photocopying process

Introduction to Superconductors, types of Superconductors, Properties of superconductors, Applications of Superconductors, Electrical insulators, or Dielectrics.

Unit VI

06 Hours

Fuels & Lubricants: Classification of fuels, Calorific values, Comparison between solid, liquid, and gaseous fuels, Theoretical calculation of calorific value of a fuel, Selection of coal, analysis of coal, Natural Gas, Producer gas, water gas, Lubricants, Mechanism of lubrication, classification of lubricants, lubricating oils, Solid lubricants, Greases or Semi-Solid lubricants, Synthetic lubricants, Lubricating emulsions, Properties of lubricating oils.

Textbooks:

1. Polymer Science and technology (2nd Edition), P. Ghosh, Tata McGraw Hill, 2008.
2. Polymers: Chemistry & Physics of Modern Materials (2nd edition) J.M.G. Cowie, Blackie Academic & Professional, 1994.
3. A Textbook of Engineering Chemistry, Shashi Chawla, Dhanpat Rai & Co, 2004
4. Engineering Chemistry (16th Edition) Jain, Jain, Dhanpat Rai Publishing Company, 2013.

Reference Books:

1. Inorganic Chemistry (4th edition), D. F. Shriver and P. W. Atkins, Oxford University, Oxford, 2006.
2. Reactions, Rearrangements and Reagents (4th edition), S. N. Sanyal, Bharti Bhawan (P & D), 2003.
3. Applications of Absorption Spectroscopy of Organic Compounds (4th edition), John R. Dyer, Prentice Hall of India Pvt. Ltd., 1978.

List of Assignments:

Six assignments to be given by the course coordinator (Theory)-one from each unit/one mini project with report-students can work in group of 4 Maximum

Project Based Learning

1. Green Chemistry approach to Nano-Structured Electronics
2. Assessment of Environmentally Benign Photopolymers as an Alternative to the Use of Formaldehyde Based Textile Finishing Agents
3. Solvent-Free Synthesis of Phthalocyanines
4. Synthesis of Conjugated Polymers and Molecules Using Sugar Reagents and Solventless Reactions
5. Environmentally Benign Control of Polymer Solubility: Photoresist Materials Using DNA Mimics
6. Enzymatic Synthesis of Non-Formaldehyde Phenolic Polymers: Control of Hydrogen Peroxide Concentration.
7. The materials chemistry and electrochemistry of lithium and sodium-ion batteries
8. Electroplating- the principles, how different metals can be used and the practical applications
9. Electroplating, Metal Polishing, Anodizing, Phosphating Metal Finishing and Powder Coating Projects.
10. To determine calorific value of a fuel by any suitable method
11. To study various properties of lubricants
12. To study various types of lubricants and its properties.
13. To determine quality of coal sample & its analysis.
14. To study mechanism of lubrication.
15. To study coal analysis & its significance.

Note: - *Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Determination of Hardness of water sample by EDTA method.
2. Determination of Chloride content in water sample by precipitation titration method.
3. To determine strength of acid by pH – metric Titration
4. To measure the Conductance of a solution by conductometric titration
5. Measurement of Surface tension of a given liquid by Stalagmometer.
6. Determination of viscosity of a given liquid by Ostwald's Viscometer.
7. Determination of Saponification value of an oil sample.
8. To determine alkalinity water sample
9. Determination of Hardness of water sample by EDTA method.
10. Determination of Chloride content in water sample by precipitation titration method

11. To determine strength of acid by pH – metric Titration
12. To Prepare Phenol formaldehyde/Urea formaldehyde resin
13. To study set up of Daniel cell.

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Digital Electronics

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	04 Hours/Week	End Semester Examination	60 Marks	Theory	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term work	50 Marks	Practical	01
		Total	150 Marks	Total	05

Course Objective:

- To present the Digital fundamentals, Boolean algebra and its applications in digital systems
- To familiarize with the design of various combinational digital circuits using logic gates
- To introduce the analysis and design procedures for synchronous and asynchronous sequential circuits
- To understand the various semiconductor memories and related technology

Prerequisite:

Mathematics and Elementary Physics

Course Outcomes: On completion of the course, students will have the ability to:

1. Comprehend different number systems and Boolean algebraic principles.
2. Apply logic design minimization techniques to simplify Boolean expressions
3. Analyse and design combinational logic circuits.
4. Demonstrate the operations of systems with sequential circuit elements.
5. Comprehend characteristics and structure of Programmable Logic Devices and Memory.
6. Draw ASM charts for sequential circuit design.

Unit I

08 Hours

Digital systems: Number Systems: Introduction to Number Systems-Decimal, Binary, Octal, Hexadecimal, Conversion of number system, Representation of Negative Numbers, 1's complement and 2's complement.

Binary Arithmetic: Binary addition, Binary subtraction, Subtraction using 1's complement and 2's complement, Binary multiplication, and division.

Digital Codes: BCD code, Excess-3 code, Gray code and ASCII code.

Logic Gates: Logical Operators, Logic Gates-Basic Gates, Universal Gates, realization of other gates using universal gates.

Unit II

08 Hours

Logic Design Minimization: Boolean algebra, De Morgan's Theorems, Standard representation of logic functions, Sum of Product (SOP) form, Product of Sum (POS) form, Simplification of logical functions, Minimization of SOP and POS forms using Karnaugh-Maps up to 4 variables Don't care condition, Quine-McCluskey Method.

Unit III

08 Hours

Combinational Circuits: Binary and BCD arithmetic, Half Adder, Full Adder, Half Subtractor, Full Subtractor, Binary Adder (IC 7483), BCD adder, Code converters Multiplexers, De multiplexer, Decoder (IC 74138) and their use in combinational logic design, Priority Encoder, Digital Comparators, Parity generators and Checker(IC 74180), ALU

Unit IV

08 Hours

Sequential Circuits: Flip- flop: SR, JK, D, T flip flops, Truth Tables and Excitation tables, Conversion from one type to another type of Flip Flop.

Registers: Buffer register, Shift register.

Counters: Asynchronous counters, Synchronous counters, Modulus counters

Unit V

08 Hours

FSM and ASM charts: Introduction to FSM, Moore and Mealy State machine, state machine as a sequential controller. Design of state machines: state table, state assignment, transition/excitation table, excitation maps and equations, logic realization, ASM chart notations, ASM block, State diagram, ASM chart for sequential circuits, Multiplexer Controller.

Unit VI

08 Hours

Memory and PLD: Semiconductor memories: memory organization, memory expansion, Classification and characteristics of memories, RAM, ROM, EPROM, EEPROM, NVRAM, SRAM, DRAM.

Programmable logic devices: Study of PROM, PAL, PLAs. Architecture of PLA, Designing combinational circuits using PLDs.

Textbooks:

1. M. Morris Mano and M. D. Ciletti, Digital Design, Pearson Education.
2. RP Jain, Modern Digital Electronics, Tata McGraw Hill Publication.
3. F.J. Hill and G.L. Peterson, Switching Theory and Logic Design, John Wiley
4. J.F. Wakerly "Digital Design: Principles and Practices", 3rd edition, 4th reprint, Pearson Education, 2

Reference Books:

1. David J. Comer, Digital Logic & State Machine Design, Oxford University Press.
2. Digital Integrated Electronics- H. Taub & D. Shilling, Mc Graw Hill.

List of Assignments:

Six assignments to be given by the course coordinator (Theory)-one from each unit

Project Based Learning

1. Survey report of basic gates ICs 7432, 4011, 4050, 4070, 4071, 4010
2. Implement combinational logic Circuit of given Boolean Equation.
3. Implement Half Adder and Half Subtractor.
4. Implement Full Adder using two Half Adders
5. Build 4-bit parallel Adder / Subtractor using IC.
6. Build Code Converters: Binary to Gray
7. Build Code Converters: Excess 3 to Binary)
8. Implement Two Bit Magnitude Comparator using IC 7485
9. Implement given combinational logic using MUX
10. Implement 7 segment decoder driver using IC 7447.
11. Build a Decade counter and Up-Down Counter.
12. Build a Shift Registers: SISO and SIPO
13. Implement the Johnson Counter and Ring Counter.
14. Survey Report on Static I/O and transfer Characteristic of TTL and CMOS.
15. Implement given Boolean Function using PLA. (Function and Equation will be given by Subject Teacher)

(Note:- *Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Verify truth tables of logic gates. (AND, OR, XOR, NOT, NAND, NOR). Simplify the given Boolean expression using K-map and implement using gates
2. State De-Morgan's theorem and write Boolean laws. Implement NAND and NOR as Universal gates.
3. Design (truth table, K-map) and implement half and full adder/ subtractor.
4. Design (truth table, K-map) and implement 4-bit BCD to Excess-3 Code converters.
5. Study of magnitude Comparator using IC 7485
6. Implement of logic functions using multiplexer IC 74151 (Verification, cascading & logic function implementation)
7. Implement logic functions using 3:8 decoder IC 74138.
8. Verify truth tables of different types of flip flops.
9. Design (State diagram, state table & K map) and implement 3 bit Up and Down Asynchronous and Synchronous Counter using JK flip-flop

10. Design and implement modulo 'n' counter with IC 7490.

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit – I, Unit – II, Unit - III

Unit – IV, Unit – V, Unit – VI

Programming and Problem Solving

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	04 Hours/Week	End Semester Examination	60 Marks	Theory	04
Practical:	04 Hours/Week	Internal Assessment	40 Marks	Practical	02
		Term Work & Oral	50 Marks		
		Term Work & Practical	50 Marks		
		Total	200 Marks	Total	06

Course Objective:

The course is designed to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs, applications in C. Also by learning the basic programming constructs they can easily switch over to any other language in future.

Prerequisite:

Basic knowledge of mathematics.

Course Outcomes: On completion of the course, students will have the ability to:

1. Describe the steps in problem-solving and write a pseudocode for a given problem.
2. Identify the suitable control structure and write a C code for the same.
3. Write the C code for a given algorithm.
4. Illustrate use of pointers and functions
5. Write programs that perform operations using derived data types.
6. Validate the logic building and code formulation by designing code capable of passing various test cases

Unit I

08 Hours

Introduction to Computer Problem Solving: The problem solving Aspect, Top Down Design, Implementation of Algorithms, Program Verification, The Efficiency of Algorithms, The Analysis of Algorithms, Fundamental Algorithms:

General problem solving strategies: Introduction to program Planning tools- algorithm, flowcharts, and pseudo codes. Introduction to Programming Logic.

Unit II

08 Hours

Control structures: Features of C, basic concepts, structure of C program, program, declarations, variables, data types, expressions, operators assignment, arithmetic, relational, logical, increment and decrement, precedence of operators, type conversions, scanf and printf functions if-else, nested if-else, ladder if-else and switch statement. C Conditional control structures: for, while do-while Unconditional control structures: break, continue, goto statement.

Unit III

08 Hours

Arrays and strings: Declaration initialization of one dimensional Array, two dimensional array, accessing array elements, Character Array/String, Character - Handling Library Functions, Standard Input/Output Library Functions for string.

Unit IV

08 Hours

Functions and structures: What is a Function , Benefits of a Function , Function Terminology , Array of Structures, How does Function Works , Scope and Lifetime of Variables in function ,Storage Classes of Variables , Call by value and call by reference ,Recursion ,Overview of Structures , Defining and Using a Structure , Structures within a Structure.

Unit V

08 Hours

Pointers: Declaring and Initializing Pointers, Function and Pointer Parameters, Pointer Arithmetic, Pointer and Arrays, Two Dimensional Arrays and Pointers.

Unit VI

08 Hours

Files : FILE , Opening and Closing of Files , Writing and Reading in Text Format, Writing and Reading in Binary Format, Command Line Arguments

Textbooks:

1. Let Us C by Yashavant Kanetkar, 13e, BPB Publication.
2. Brain W. Kernighan & Dennis Ritchie, C Programming Language, 2nd edition, PHI.
3. E. Balaguruswamy, Programming in ANSI C 5th Edition McGraw-Hill.
4. How to Solve it by Computer by R. G. Dromey, 1e, Pearson Education.

Reference Books:

1. C: The Complete Reference by Herbert Schildt.

List of Assignments:

1. Write a pseudocode and draw a flowchart for a given problem.
2. Justify the selection of appropriate control structure
3. Write a function to check whether the string is palindrome.
4. List and explain the working of standard string I/O functions.
5. Define a dynamic array to store the student record.
6. List and explain the different modes of opening file.

Project Based Learning

1. Calendar using C
2. Snake Game
3. Cricket score display
4. Quiz game
5. Phone-book application
6. Election System
7. Simple Result system
8. Typing Tutor
9. Bill Calculator
10. Grade Calculator
11. CGPA Calculator
12. Digital Clock
13. Contact Management System
14. IP finder
15. Bank Management System.
16. Departmental Store Management.
17. Hangman Game Project.
18. Library Management System

(Note:- *Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Describe the problem-solving steps.
2. Write a pseudocode and draw a flowchart.
3. Use mathematical operators and basic data types.
4. Demonstrate use of control structures.
5. Demonstrate use of logical operators.
6. Solve the real time problem using single and two dimensional array.
7. Perform the operations on string.
8. Solve the problems using recursive and non-recursive functions.
9. Solve the problems using dynamic memory allocations.
10. Perform the operations on files.

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit – I, Unit – II, Unit - III

Unit – IV, Unit – V, Unit - VI

Computer Aided Drafting

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
Hours/Week				Credits	
Practical:	02 Hours/Week	Term Work	25 Marks	Practical	01
		Total	25 Marks	Total	01

Course Objectives:

To provide knowledge about

- Fundamentals of engineering drawing and curves
- Isometric views and projection
- Projections of points, lines, planes & solids
- Use of CAD tools.

Prerequisite:

Basics of Mathematics at Secondary School Level

Course Outcomes: On completion of the course, students will have the ability to:

1. Understand dimensioning methods and drawing of engineering curves.
2. Draw orthographic projections using 1st angle method of projection.
3. Draw Isometric views from given orthographic projections.
4. Draw projection of Lines, its traces and projections of planes.
5. Draw projection of different solids.
6. Draw development of lateral surfaces of solids.

Unit I

04 Hours

Lines and Dimensioning in Engineering Drawing and Engineering Curves:

Different types of lines used in drawing practice, Dimensioning—linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

Ellipse by Arcs of Circles method, Concentric circles method. Involute of a circle, Cycloid.

Introduction to Auto CAD commands.

Unit II

04 Hours

Orthographic Projections: Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections.(Using AutoCAD commands)

Unit III

04 Hours

Isometric Projections: Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view.(Using AutoCAD commands)

Unit IV

04 Hours

Projections of Points & Lines: Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only). (Using AutoCAD commands).

Unit V

04 Hours

Projections of Planes: Projections of Planes, Inclination of the plane with HP, VP. (Using AutoCAD commands)

Unit VI

04 Hours

Projections of Solids: Projection of prism, pyramid, cone and cylinder by rotation method. (Using AutoCAD commands)

Textbooks:

1. "Elementary Engineering Drawing", N. D. Bhatt, Charotar Publishing house, Anand India,
2. "AutoCAD 2020 Beginning and Intermediate", Munir Hamad, Mercury Learning & Information Publication, 2019.
3. "Engineering Drawing and Graphics", Venugopal K., New Age International publishers.

Reference Books:

1. "Textbook on Engineering Drawing", K. L. Narayana & P. Kannaiah, Scitech Publications, Chennai.
2. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi.
3. "Engineering Drawing", M. B. Shah and B.C. Rana, 1st Ed, Pearson Education, 2005.
4. "Engineering Drawing", P. J. Shah, C. Jammadasand Co., 1st Edition, 1988.
5. "Engineering Drawing (Geometrical Drawing)", P. S. Gill, 10th Edition, S. K. Kataria and Sons, 2005.

List of Laboratory Exercises:

1. Types of lines, Dimensioning practice, free-hand lettering, 1nd and 3rd angle methods symbol.
2. Engineering curves.
3. Orthographic Projections.
4. Isometric views.
5. Projections of Points and Lines and planes.
6. Projection of Solids.

B.TECH (Computer Science and Engineering)

SEMESTER – II

COURSE SYLLABUS

Mathematics for Computing - II

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	03 Hours/Week	End Semester Examination	60 Marks	Theory	03
Tutorial:	01 Hours/Week	Internal Assessment	40 Marks	Tutorial	01
Total			100 Marks	Total	04

Course Objectives:

- Fourier series and integral transforms.
- Multiple integrals and its applications.
- Vector calculus and its applications.

Prerequisite:

The students should have knowledge of vector algebra, derivative and integration.

Course Outcomes: On completion of the course, students will have the ability to:

1. Use periodic functions as Fourier series.
2. Apply methods of finding Fourier and Z-transforms.
3. Apply methods of Laplace transform of piecewise continuous functions.
4. Identify concepts of double and triple integrals.
5. Apply vector derivative for physical quantities.
6. Evaluate line, surface and volume integrals.

Unit I

06 Hours

Fourier Series: Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis

Unit II

06 Hours

Fourier and Z-Transform: Fourier Transform (FT): Complex Exponential Form of Fourier series, Fourier Integral Theorem, Sine & Cosine Integrals, Fourier Transform, Fourier Sine and Cosine Transform and their Inverses. Introductory Z-Transform (ZT): Definition, Standard Properties, ZT of Standard Sequences and their Inverses. Solution of Simple Difference Equations.

Unit III

06 Hours

Laplace Transform and its application: Definition of LT, Inverse LT. Properties & theorems. LT of standard functions. LT of some special functions viz., Periodic, Unit Step, Unit Impulse, ramp, jump,. Problems on finding LT & inverse LT. Applications of LT and Inverse LT for solving ordinary differential equations.

Unit IV

06 Hours

Multiple Integrals and their Application: Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values, moment of inertia, centre of gravity

Unit V

06 Hours

Vector Differential Calculus: Physical interpretation of Vector differentiation, Vector differential operator, Gradient, Divergence and Curl, Directional derivative, Solenoidal, Irrotational and Conservative fields, Scalar potential, Vector identities.

Unit VI

06 Hours

Vector Integral Calculus and Applications: Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence theorem, Stoke's theorem. Applications to problem in engineering.

Textbooks:

1. P. N. Wartikar and J. N. Wartikar, Applied Mathematics (Volumes I and II), 7th Ed., Pune Vidyarthi GrihaPrakashan, Pune, 2013.
2. B. S. Grewal, Higher Engineering Mathematics, 42nd Ed., Khanna Publication, Delhi
3. B.V. Ramana, Higher Engineering Mathematics, 6th Ed., Tata McGraw-Hill, New Delhi, 2008.

Reference Books:

1. Erwin Kreyszig, Advanced Engineering Mathematics, 10th Ed., John Wiley & Sons, Inc., 2015.
2. Peter V. O'Neil, Advanced Engineering Mathematics, 7th Ed., Cengage Learning, 2012.

List of Assignments:

Six assignments to be given by the course coordinator one from each unit.

Project Based Learning

Students are expected prepare report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code for it, wherever applicable.

1. Fourier series
2. Harmonic analysis
3. Fourier transform
4. Z-Transform
5. Laplace transform technique to solve ODE
6. Multiple Integral to evaluate area and volume
7. Directional derivative
8. Divergence and curl
9. Greens theorem
10. Gauss Divergence Theorem
11. Stokes theorem
12. Unit step function
13. Solenoidal and irrotational fields
14. Simple difference equation
15. Periodic functions

Note: -*Students in a group of 3 to 4 shall complete any one project from the above list.

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Probability and Statistics

TEACHING SCHEME

EXAMINATION SCHEME

CREDIT SCHEME

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDIT SCHEME</u>	
				<u>Credits</u>	
Lecture:	4 Hours/Week	End Semester Examination:	60 Marks	Theory	4
Practical:	2 Hours/Week	Internal Assessment:	40 Marks		
		Term Work & Practical:	50 Marks	Practical	1
		Total:	150 Marks	Total	5

Course Objectives:

- Probability theory and expected value.
- Probability distribution and its applications.
- Multiple regression and ANOVA.

Course Outcomes: On completion of the course, students will have the ability to:

1. Apply Bayes theorem to find probability.
2. Compute mathematical expectations.
3. Identify various theoretical distributions.
4. Use correlation coefficient to interpret numerical data.
5. Use regression to estimate the dependent variable.
6. Apply concept of graph in optimization.

Unit I

08 Hours

Probability Theory: Definition of probability: classical, empirical, and axiomatic approach of probability, Addition theorem of probability, Multiplication theorem of probability, Bayes' theorem of inverse probability, Properties of probabilities

Unit II

08 Hours

Random Variable and Mathematical Expectation. Definition of random variables, Probability distributions, Probability mass function, Probability density function, Mathematical expectation, Joint and marginal probability distributions, Properties of expectation and variance with proofs, Examples

Unit III

08 Hours

Theoretical Probability Distributions: Binomial distribution, Poisson distribution, Normal distribution, Fitting of binomial distributions, Properties of binomial, Poisson and normal distributions, Relation between binomial and normal distributions, Relation between Poisson and normal distributions, Importance of normal distribution

Unit IV

08 Hours

Correlation: Introduction, Types of correlation, Correlation and causation, Methods of studying correlation, Karl Pearson's correlation coefficient, Spearman's rank correlation Coefficient, Properties of Karl Pearson's correlation coefficient, Properties of Spearman's rank correlation coefficient, Probable errors, Examples...

Unit V

08 Hours

Linear Regression Analysis: Introduction, Linear and non-linear regression, Lines of regression, Derivation of regression lines of y on x and x on y, Angle between the regression lines, Coefficients of regression, Theorems on regression coefficient, Properties of regression coefficient

Unit VI

08 Hours

Multiple Regression and AVOVA: Multiple regression & multiple correlation, Analysis of variance (one way, two way with as well as without interaction)

Textbooks

- 1.S. C. Gupta, "Fundamentals of Statistics", 46th Edition, Himalaya Publishing House.
- 2.G. V. Kumbhojkar, "Probability and Random Processes", 14th Edition, C. Jamnadas and company.
- 3.Murray Spiegel, John Schiller, R. ALU Srinivasan, Probability and Statistics, Schaum's Outlines
Kishor S. Trivedi, "Probability, Statistics with Reliability, Queuing and Computer Science Applications", 2nd Edition, Wiley India Pvt. Ltd.
- 5.Vijay K. Rohatgi, A. K. Md. Ehsanes Saleh, An Introduction to Probability And Statistics, 3rd Edition, Wiley Publication
- 6.I.R. Miller, J.E. Freund and R. Johnson. Fun "Probability and Statistics for Engineers" (4th Edition)

List of Theory Assignments

One assignment on each unit

Project Based Learning

Students are expected prepare report on any one topic, write its definition, applications and analyse the hypothetical data. Also, write pseudo code for it, wherever applicable.

1. Bayes theorem
2. Additive and multiplicative law of probability
3. Mathematical expectation
4. Joint and marginal probability distribution
5. Theoretical probability distribution
6. Coefficient of correlation
7. Regression estimates
8. Simple regression model
9. Multiple regression model
10. One way ANOVA
11. Two way ANOVA
12. Correlation
13. Multiple correlation

Note: - *Students in a group of 3 to 4 shall complete any one project from the above list.

List of Laboratory Experiments (The course co-ordinator may frame 8-10 experiments)

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Physics for Computing Systems

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	03 Hours/Week	End Semester Examination	60 Marks	Theory	03
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term work	25 Marks	Practical	01
		Total	125 Marks	Total	04

Course Objective:

To impart knowledge of basic concepts in physics relevant to engineering applications in a broader sense with a view to lay foundation for the Computer Engineering and Science.

Prerequisite:

Basic understanding of physics and calculus.

Course Outcomes: On completion of the course, students will have the ability to:

1. Interpret the properties of charged particles to develop modern instruments such as electron microscopy.
2. Appraise the wave nature of light and apply it to measure stress, pressure, and dimension etc.
3. Summarise the structure and properties of lasers to their performance and intended applications.
4. Classify the optical fiber, understanding the structure, types, and its applications in the field of communication.
5. Solve quantum physics problems to micro level phenomena and solid-state physics
6. Explain mechanical properties of solid matter and connect to applications in the field of engineering.

Unit I

06 Hours

Modern Physics Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focusing, Electron microscope, Wavelength and resolution, Specimen limitation, Depth of field and focus, Transmission electron microscope (TEM), Scanning electron microscope (SEM), Separation of isotopes by Bainbridge mass spectrograph, Cathode ray tube (CRT).

Unit II

06 Hours

Wave Optics: Interference of waves, interference due to thin film (Uniform and nonuniform (only formula-no derivation is expected), Newton's ring, Applications of interference (optical flatness, highly reflecting films, non-reflecting coatings). Diffraction Introduction, Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Plane diffraction grating, Conditions for principal maxima and minima Polarisation, Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism.

Unit III

06 Hours

Lasers : Principle of laser, Einstein's coefficients, Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Single Hetro-junction laser, Gas laser: CO2 laser, Properties of lasers, Laser speckles, Applications of lasers (Engineering/ industry, medicine, Computers)

Unit IV

06 Hours

Fibre Optic: Principle of fibre optics, Construction, Numerical Aperture for step index fibre; critical angle, angle of acceptance, V number, number of modes of propagation, types of optical fibres, Fibre optic communication system, advantages, and disadvantages of fibre optics.

Unit V

06 Hours

Quantum Mechanics: Dual nature of matter, DeBroglie's hypothesis, Heisenberg's uncertainty principle with illustrations, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box, step potential and potential barrier (analytical discussion), tunnelling effect.

Unit VI

06 Hours

Solid state physics: Free electron theory, Density of states, Bloch theorem (Statement only), Origin of band gap, Energy bands in solids, Effective mass of electron, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.

Textbooks:

1. A Textbook of Engineering Physics, M N Avadhanulu, P G Kshirsagar and TVS Arun Murthy, S. Chand Publishing (2018)
2. Engineering Physics, R K Gaur and S L Gupta, Dhanpat Rai Publishing Co Pvt Ltd (2015)
3. Concepts of Modern Physics, Arthur Beiser, Shobhit Mahajan and S. Rai Choudhury, McGraw Hill Education (2017)

Reference Books:

1. Fundamentals of Physics, Jearl Walker, David Halliday and Robert Resnick, John Wiley and Sons (2013)
2. Optics, Francis Jenkins and Harvey White, Tata McGraw Hill (2017)
3. Principles of Physics, John W. Jewett, Cengage publishing (2013)
4. Introduction to Solid State Physics, C. Kittel, Wiley and Sons (2004)
5. Principles of Solid State Physics, H. V. Keer, New Age International (1993)
6. Laser and Non-Linear Optics, B. B. Laud, New Age International Private Limited (2011)
7. Nanotechnology: Principles and Practices, Dr. S. K. Kulkarni, Capital Publishing Company (2014)
8. Science of Engineering Materials- C.M. Srivastava and C. Srinivasan, New Age International Pvt. Ltd. (1997)
9. Introduction to Electrodynamics –David R. Griffiths, Pearson (2013)
10. Renewable Energy: Power for a Sustainable Future, Boyle, Oxford University Press (2012)

List of Assignments:

Six assignments to be given by the course coordinator (Theory)-one from each unit/one mini project with report-students can work in group of 4 Maximum

Project Based Learning

1. Measurement and effect of environmental noise in the college
2. Design and simulation of automatic solar powered time regulated water pumping
3. Solar technology: an alternative source of energy for national development
4. Design and construction of digital distance measuring instrument
5. Design and construction of automatic bell ringer
6. Design and construction of remote control fan
7. Design and construction of sound or clap activated alarm
8. Electronic eye (Laser Security) as autos witch/security system
9. Electric power generation by road power
10. Determination of absorption coefficient of sound absorbing materials
11. Determination of velocity of O-ray and E-ray in different double refracting Materials.

12. Need of medium for propagation of sound wave
13. Tesla Coil
14. Thin film interference in soap film-formation of colours
15. LiFi- wireless data transfer system using light

Note: - *Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Study of lissajous figure by Cathode Ray Oscilloscope (CRO)
2. Determination of e/m by Thomson method
3. Determination of radius of planoconvex lens/wavelength of light/Flatness testing by Newton's rings
4. Determination of wavelength of light using diffraction grating
5. Determination of resolving power of telescope
6. Determination of thickness of a thin wire by air wedge
7. Determination of refractive index for O-ray and E-ray
8. Determination of divergence of a laser beam
9. Particle size by semiconductor laser
10. Determination of wavelength of laser by diffraction grating
11. To study Hall effect and determine the Hall voltage
12. Calculation of conductivity by four probe method
13. Study of solar cell characteristics and calculation of fill factor
14. Determination of band gap of semiconductor
15. Determination of Planck's Constant by photoelectric effect

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit:- Unit -I, Unit-II Unit-III
Unit – IV, Unit – V, Unit - VI

Electrical Technology

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	04 Hours/Week	End Semester Examination	60 Marks	Theory	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term work	25 Marks	Practical	01
		Total	125 Marks	Total	05

Course Objective:

To study of power system basics, magnetic circuits electrical machines, transformers, wiring, measurements, illumination and batteries.

Prerequisite: NIL

Course Outcomes: On completion of the course, students will have the ability to:

1. Explain the various parameters related to magnetic circuit.
2. Describe basic concepts of AC fundamentals and circuits.
3. Illustrate constructional features and describe different parameters of transformer.
4. Describe basic concepts of power system and three phase circuits.
5. Demonstrate AC and DC electrical machines.
6. Classify types of batteries.

Unit I

08 Hours

Magnetic Circuits: Magnetic effect of electric current, Cross & Dot Convention, Right hand thumb rule, Concept of flux, flux linkages, magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability Kirchhoff's laws for magnetic circuits. Magnetic circuit concepts, analogy between electric & magnetic circuits, magnetic circuits with DC and AC excitations, magnetic leakage, B-H curve, hysteresis and eddy current losses, magnetic circuit calculations, mutual coupling.

Unit II

08 Hours

AC Fundamentals and circuits: AC Fundamentals: Sinusoidal, square and triangular waveforms – average and effective values, form and peak factors, concept of phasor, phasor representation of sinusoidally varying voltage and current. Analysis of series, parallel and series-parallel RLC Circuits: apparent, active & reactive powers, power factor, causes and problems of low power factor, power factor improvement; resonance in series and parallel circuits, bandwidth and quality factor (simple numerical problems).

Unit III

08 Hours

Single Phase Transformer: Faradays law of electromagnetic induction, statically and dynamically induced emf, self-inductance, mutual inductance, coefficient of coupling. Single Phase Transformer: Principle of operation, construction, e .m. f. equation, voltage ratio, current ratio, KVA rating, determination of efficiency and regulation by direct load test, equivalent circuit, power losses, (simple numerical problems), introduction to auto transformer. Three phase transformer and its different winding connections.

08 Hours

Unit IV

Introduction to Power System and Three Phase: Circuits: General layout of electrical power system and functions of its elements, standard transmission and distribution voltages, concept of grid (elementary treatment only) Power generation to distribution through overhead lines and underground cables with single line diagram. Three phase system-its necessity and advantages, meaning of phase sequence, star and delta connections, balanced supply and balanced load, line and phase voltage/current relations, three phase power and its measurement (simple numerical problems).

Unit V

08 Hours

Electrical Machines: DC & AC: Principles of electromechanical energy conversion, DC machines: types, e. m. f. equation of generator and torque equation of motor, characteristics, and applications of dc motors (simple numerical problems). single Phase Induction motor: Principle of operation and introduction to methods of starting, applications. Three Phase Induction Motor: types, Principle of operation, slip-torque characteristics, applications (numerical problems related to slip only).

Unit VI

08 Hours

Batteries: Basic idea of primary and secondary cells, Construction, working principle and applications of Lead-Acid, Nickel Cadmium and Silver-Oxide batteries, charging methods used for lead-acid battery (accumulator), Care and maintenance of lead-acid battery, Series and parallel connections of batteries, General idea of solar cells, solar panels and their applications, Introduction to maintenance free batteries, Safe disposal of Batteries; Fuel cell: Principle & Types of fuel cell.

Textbooks:

1. B.L.Theraja, A Textbook of Electrical Technology, Vol.1, S.Chand & Company Ltd. New Delhi
2. V.K.Mehta, Basic Electrical Engineering, S Chand & Company Ltd. New Delhi.
3. J.Nagarath and Kothari, Theory and applications of Basic Electrical Engineering, Prentice Hall of India Pvt. Ltd.

Reference Books:

1. Electrical Technology - Edward Huges (Pearson)
2. Basic Electrical Engineering - D. P. Kothari, J Nagarath (TMC)
3. Electrical power system technology - S. W. Fordo, D. R. Patric (Prentice Hall)
4. Electrical, Electronics Measurements and Instruments - (Satya Prakashan)

List of Assignments:

Six assignments to be given by the course coordinator (Theory)-one from each unit.

Project Based Learning

1. Building a small resistive load lamp bank
2. Building a small resistive load lamp bank for various types of connections like series, parallel, star, delta
3. Building a small inductive load lamp bank for various types of connections like series, parallel, star, delta
4. Building a small capacitive load lamp bank for various types of connections like series, parallel, star, delta
5. Building a small resistive load lamp bank
6. Building a staircase wiring model on a board
7. Building a Go down wiring model on a board
8. Rewinding of a choke
9. Rewinding of a small transformer
10. Building a small rectifier circuit on bread board
11. Building a mobile charger circuit on a bread board
12. Building an electric buzzer circuit
13. Building a solar charger for mobile phone
14. Building a small wind turbine
15. Small Agricultural pump model with DC motor
16. Small Agricultural pump model with AC motor

(Note:- *Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Plotting B-H characteristics for a material.
2. Load test on single phase transformer.
3. Testing and maintenance of batteries.
4. Verification of voltage and current relationships in star and delta connected 3-phase networks.
5. Load test on DC machine.
6. To find the performance of series R-L-C circuit at different condition
7. OS & SC test on single phase transformer to find efficiency and regulation
8. Speed control of DC motor
9. Study of different types of starters for DC & AC Machine
10. Load test on 3 phase Induction motor.

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Linear Data Structures

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	04 Hours/Week	End Semester Examination	60 Marks	Theory	04
Practical:	04 Hours/Week	Internal Assessment	40 Marks		
		Term Work & Oral	50 Marks	Practical	02
		Term Work & Practical	50 Marks		
		Total	200 Marks	Total	06

Course Objective:

The objective of the course is to provide the students in-depth knowledge of different Linear Data structures and their use to solve the programming problems.

Prerequisite: Basic knowledge of computer

Course Outcomes: On completion of the course, students will have the ability to:

1. Use appropriate data structure to solve a particular problem
2. Demonstrate the use of linked list and compare it with array.
3. Demonstrate the use of stack as an ADT.
4. Perform the operations on queue.
5. Apply the searching and sorting algorithms
6. Demonstrate the use of Files and different File Organizations

Unit I

08 Hours

Introduction to Data structures: Introduction to algorithm, Algorithm analysis, Big O Notations, Need of Data structure, Classification of Data Structures, Operations on Data Structures. **Arrays:** Introduction, Array Operations, representation of Arrays in Memory, One- & Two-dimensional array in function, Implementation of One- & Two-Dimensional Arrays in Memory, Abstract Data Types.

Unit II

08 Hours

Linear Lists: Introduction, Singly linked list, Circularly Linked List, Doubly Linked lists, Basic operations, - Insertion, Deletion, retrieval, traversal, create List, insert node, delete node, List Search, Empty list, Destroy list, Applications of Linked List

Unit III

08 Hours

Stacks: Stack Structure, Operations on Stacks – create stack, Push stack, Pop stack, Array and Linked Representation, operations (For both array and Linked representation), Types of Notations, Applications of Stack: Reversing Data, Converts Decimal to Binary, Parsing, Postponement.

Unit IV

08 Hours

Queue: Introduction, Definition, Storage Methods Queue Operations- Enqueue, Dequeue, Queue front, Queue rear, Queue Example, Create Queue, priority Queue, Circular Queue, Application of Queue: Categorising Data, Queue. Simulation, Array and Linked representation of queue (operations on array and Linked representation).

Unit V

08 Hours

Implementation & Application: Searching: Linear Search, Binary Search, Hashing: Introduction. Hash Tables, Hash Functions, Collision, Applications
Sorting – Selection Sort, Bubble Sort, Insertion Sort, Merge Quick Sort, Shell Sort

Unit VI

08 Hours

Files and Organization: Introduction, Data Hierarch, File Attributes, Text and Binary Files, Basic File Operations, File Organization, Sequential Organization, Relative File Organization, Indexed Sequential File Organization.

Textbooks:

1. Richard F Gilberg & Behrouz A Forouzan, Data Structures (A Pseudocode Approach with C), second edition, Cengage Learning, 2004.
2. PAI, Data Structures, Tata McGraw-Hill Education, 2008
3. Data Structures Using C, Reema Thareja, OXFORD University Press

Reference Books:

1. Mayank Patel, Data Structure and Algorithm With C, Educreation Publishing, 2018
2. Thomas H. Cormen, Charles E Leiserson, Ronald L Rivest, Clifford Stein, Introduction to Algorithms, MIT Press, 2001.

List of Assignments:

1. Write an algorithm for a given problem and analyse its complexity
2. Describe representation of a linked list in the memory and Write a pseudocode to perform deletion operation on list.
3. Illustrate the use of stack to solve the Tower of Hanoi problem.
4. Write a pseudocode to perform operations on priority queue.
5. Compare bubble sort and selection sort
6. Describe the sequential file organization.

Project Based Learning

1. Expression Evaluation
2. Traffic Management System
3. Library Management System for a small library in a department
4. Employee Record System
5. Dictionary
6. Calendar Application
7. Medical Store Management System
8. Cricket Score Sheet
9. Bank Management System that handles only savings account
10. Ticket booking system for bus

(Note:- *Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Use of array and operations on Array.
2. Operations on singly and doubly linked list.
3. Polynomial operations using linked list.
4. Create stack and demonstrate its use.
5. Develop a priority queue and perform the operations.
6. Demonstrate the use of different file organizations.

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Computer System Workshop Technology

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Practical:	02 Hours/Week	Term Work & Practical	50 Marks	Practical	1
		Total	50 Marks	Total	01

Course Objective:

Provide student a much-needed knowledge of computer hardware and networking, enabling them to identify computer hardware, software and network related problems, and develop an ability to use the basics of computing, necessary for computing courses

Prerequisite:

Basic knowledge of Computer and Electronics.

Course Outcomes: On completion of the course, students will have the ability to:

1. Identify the architecture of a computer and its different components, including their technology evolution.
2. Apply their knowledge about computer peripherals to identify problems.
3. Install and uninstall given software step-by-step.
4. Learn the working of Internet.
5. Prepare document using Latex.
6. Learn GitHub tool for coding and collaboration.

Unit I

04 Hours

Computer hardware peripherals: Introduction to hardware components, random access memory (ram), Types Of RAM & their speed, tips for buying ram, how to add memory to a computer, problems when installing memory, Central Processing Unit (CPU), Types Of CPU: considerations when buying a new CPU (Types & Differences), different speeds available for CPU and what do they mean, 32 Bit vs 64 Bit – Which One To Choose & Why? How to choose a CPU type for different needs? Graphic Card & Types, How to install a Graphics Card, Installing a CD or DVD burner, Jumper Switch settings, Hard Disk upgrade, Different ports and why we use them - USB, PS2, DivX, Graphic card & types, Virtual Memory and how to configure it for optimum system performance.

Unit II

04 Hours

Assembly of Computer and Software Installations: Assembling the motherboard, Replacing fan, how to avoid common mistakes during assembly, Installation of system software: Operating system (Windows and Linux), Installations step for operating system, Dual booting, Configure the BIOS, Installation of Antivirus, Installation of the open source software such as Scilab, Latex Installation of Ms Office.

Unit III

04 Hours

Basic Diagnostic of Hardware and Software :Diagnosis of Power Up problem, Boot Drive, Errant Keyboard, mouse problems, slow computer performance, Computer freezes and displays BSOD (Blue screen of death), no display on monitor, no sound, computer rebooting or turning itself off, how to troubleshoot a computer that does not boot, Registry Cleaner

Unit IV

04 Hours

Computer network environments: Network connecting devices. Configure the TCP/IP setting, connect to Local Area Network and access the Internet, Configuring Wireless network. Server and Its Configuration, Email Clients, Browsers, Office tools, customize web browsers with the LAN proxy settings, bookmarks, search toolbars and pop-up blockers, Browsing netiquettes and cyber laws. Cloud Access Tools

Unit V

04 Hours

Configuration of External devices: Physical set-up of Printers- Performing test print out, Printing of document etc, Scanner set-up, Webcam, Bluetooth device, Memory card reader etc

Unit VI

04 Hours

Productivity tools: Open Source Tools Such as Latex, GitHub LaTeX: Format words, lines, and paragraphs, design pages, create lists, tables, references, and figures in LATEX. Introduction to LaTeX Packages and classes. Using Git, Version Control Systems, interacting with GitHub, Reverting Changes, Creating Pull Requests.

Textbooks:

1. Introduction to Information Technology, IITL Education Solutions limited, Pearson Education.
2. PC Hardware and A Handbook – Kate J. Chase PHI (Microsoft).
3. LaTeX Companion – Leslie Lamport, PHI/Pearson.
4. <https://nptel.ac.in/courses/106/105/106105081/>.
5. <http://nptel.ac.in/courses/106105084/>.
6. <https://guides.github.com/>.
7. Introduction to Linux: Installation and Programming B Venkateswarlu, BS Publication.

Reference Books:

1. IT Essentials PC Hardware and Software Companion Guide Third Edition by David Anfinson and Ken Quamme. – CISCO Press, Pearson Education.
2. Computer Fundamentals, MS Office and Internet & Web Technology by Dinesh Maidasani.

Project Based Learning

1. Collect specifications of similar types of hardware and software and prepare report comparing them
2. Assembling and disassembling the PC back to working condition.
3. Installation of operating systems LINUX on Server and different packages on a PC.
4. Practice hardware troubleshooting exercises related to various components of computer like monitor, drives, memory devices, printers etc. and software troubleshooting related to BIOS etc
5. To start your own computer repair workshop. What would your initial planning involve? What would you look for in terms of building, furnishings, tools and any other equipment that you can think of?
6. Cyber Hygiene: Installing antivirus for Windows.
7. Prepare the report of need of programming language in 21st century.
8. Collect various types of computer hardware and prepare summary report
9. Prepare Seminar report using LaTeX
10. Prepare Project report using LaTeX

(Note: -*Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Demonstrate the Computer Hardware Components and explain its working.
2. Demonstrate the Networking Components and explain its working.
3. Installation of operating system MS windows, Unix on the personal computer
4. Installation of Application software Scilab, Latex, MS office on the personal computer
5. Troubleshooting hardware related problem.
6. Customize web browsers with the LAN proxy settings, bookmarks, search toolbars and pop up blockers. Also, plug-ins like Macromedia Flash and JRE for applets should be configured.
7. Execution of Important “layout” and formatting commands in Latex,
8. Installation of Antivirus and customize the browsers to block pop ups, block active x downloads to avoid viruses and/or worms
9. Assignment on Pull request, code review and collaboration using GitHub.
10. Demonstrate the Computer Hardware Components and explain its working.

B.TECH (Computer Science and Engineering)

SEMESTER – III

COURSE SYLLABUS

Non-Linear Data Structure

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	03 Hours/Week	End Semester Examination	60 Marks	Theory	03
Practical:	04 Hours/Week	Internal Assessment	40 Marks	Tutorial	01
Tutorial:	01 Hours/Week	Term work & Practical	50 Marks	Practical	02
		Total	150 Marks	Total	06

Course Objective:

The objective of the course is to provide the students the knowledge of different Non-linear data structures and how to use these to solve real world problems.

Prerequisite:

Basic Knowledge of Algorithm, programming fundamentals, Data types.ADT, Linear data Structure.

Course Outcomes: On completion of the course, students will have the ability to:

1. Identify and Apply appropriate algorithms on the graph to solve real world problems.
2. Demonstrate the use of trees and binary search trees to solve the real world problem.
3. Compare the different types of trees like AVL trees, BTree,B+ Tree, red Black tree and select an appropriate one to solve a particular one
4. Perform insertion and deletion operation on heap.
5. Apply appropriate hash function for a search process.
6. Explains the use of dictionaries and concept of text processing.

Unit I

06 Hours

Graphs: Introduction to Non-Linear data structure, Graphs, Representation of graph, AND/OR Graphs, ADT for Graph, Traversing a Graph, Dijkstra's Algorithm, Minimum Spanning Trees.

Unit II

06 Hours

Trees: Introduction, Binary Trees, Binary Tree Representation, Tree Traversal Algorithms, Threaded Binary Tree, Binary Search Tree, Operations on Binary Search Tree, Huffman's Algorithm.

Unit III

06 Hours

Special forms of trees: AVL Trees, m-way Search Trees, B Trees, B+ Trees, Red Black Tree, 2-3 Trees, Splay Trees, Applications of Trees.

Unit IV

06 Hours

Heaps:Heaps as priority queues, Heap Implementation, Insertion and Deletion operations, binary heaps, binomial and Fibonacci heaps, heapsort, heaps in Huffman coding.

Unit V

06 Hours

Hashing: Introduction, Hash functions, Collision Resolution Strategies, Types of Hashing, Separate Chaining, Open Addressing, Linear Probing, Quadratic Probing, Double Hashing, Rehashing, Extendible Hashing.

Unit VI

06 Hours

Dictionaries & Text Processing: Definition, Dictionary Abstract Data Type, Implementation of Dictionaries, Text Processing: String +Operations, Brute-Force Pattern Matching, The Boyer-Moore Algorithm, The Knuth-Morris-Pratt Algorithm, Standard tries, Suffix Tries, The Huffman Coding Algorithm.

Textbooks:

1. Mark Allen Weiss, Data Structures and Algorithm Analysis in C++, 2nd Edition, Pearson, 2004.
2. M T Goodrich, Roberto Tamassia, Algorithm Design, John Wiley, 2002.
3. Fundamentals of Data Structures in C by Horowitz, Sahni & Anderson-Freed, 2e Universal Press

Reference Books:

1. T. H. Cormen, C. E. Leiserson, R. L. Rivest, and C. Stein, Introduction to Algorithms, MIT Press, 3/e, 2009.
2. A. M. Tenenbaum, Y. Langsam, and M. J. Augenstein, Data Structures Using C and C++, Prentice Hall, 3/e.

List of Assignments:

The following are some sample assignments. The course co-ordinator will frame one assignment on each unit for internal assessment.

1. Apply the shortest path algorithm on the given graph.
2. Apply the appropriate algorithm and find the solution for the problem.
3. Generate Huffman code
4. Write a pseudocode for tree traversal operation
5. Explain the concept of linear probing
6. Explain the steps in text processing

Project Based Learning

1. Hashing for cryptography
2. Payroll system
3. Network route identifier
4. Path finder
5. Telephone directory
6. Library Management system
7. Document indexing
8. Data Compressor
9. Railway reservation system
10. Supermarket stock management

(Note: -*Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Apply Graph traversal technique.
2. Demonstrate use of Dijkstra's Algorithm.
3. Perform operations on binary search trees.
4. Perform on Tree Traversal Algorithms.
5. Applications and Demonstration on different types of trees.
6. Perform the operations on Heaps.
7. Apply Hash Function to solve the real time problem.
8. Demonstrate use of dictionaries and concept of text processing.
9. Mini Project

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Discrete Mathematical Structures

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	03 Hours/Week	End Semester Examination	60 Marks	Theory	03
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term Work & Oral	50 Marks	Practical	01
		Total	150 Marks	Total	04

Course Objective:

The objective is to provide a mathematical foundation and skills those are required in further study of Computer Science and Engineering. The course Discrete Mathematical Structures deals with discrete objects, countable sets. It helps to develop logical thinking and a wide variety of real-world applications to computer science. It is a very good tool for improving reasoning and problem-solving capabilities.

Prerequisite:

Basic knowledge of Elementary Linear Algebra, Numerical Mathematical Computation, Programming basics.

Course Outcomes: On completion of the course, students will have the ability to:

1. Demonstrate the ability to write the sentences in the symbolic logic and evaluate a proof technique.
2. Apply the basic principles of set theory to analyse the data relationship and prove basic properties of set.
3. Analyse the properties of relations and functions to determine their properties.
4. Apply the knowledge of Boolean algebra for building basic electronic and digital circuits.
5. Solve problems of combinatorics and recurrence relations.
6. Model problems in Computer Science using graphs and trees.

Unit I

06 Hours

Mathematical Logic: Propositional Logic, Predicate logic, First order logic, Rules of inference, Introduction to proof techniques, resolution, Mathematical induction, Methods of proofs.

Unit II

06 Hours

Set Theory: Types of sets, Sets operations and laws, Algebra of Sets, Multisets, Application of the principle of inclusion and exclusion.

Number Theory: Modular arithmetic, prime numbers, and properties, GCD, Chinese remainder theorem, Extended Euclidean algorithm.

Unit III

06 Hours

Relations: Basic definition, properties and types of relations, relations and digraphs, paths in relations and digraphs, equivalence and partially ordered relations, Transitive closure and Warshall's algorithm.

Functions: Types of functions, Identity functions, Composition of functions, Mathematical functions, Pigeonhole principle.

Unit IV

06 Hours

Algebraic Structures: Isomorphism and Homomorphism, Groups, Algebraic Structures with Binary Operations, rings, Cyclic groups, codes.

Lattice: Posets and Hasse Diagrams, Lattice as an algebraic system, Properties of lattices. Group Codes: The Communication Model and Basic notion of Error Correction, Generation of Group codes, Parity Check, Error Recovery

Unit V

06 Hours

Combinatorics and Recurrence Relations:

Combinatorics: Permutations, Sum rule, Product rule, Combinatorial proofs.

Recurrence Relations: Linear Recurrence relation, Second order RR with constant coefficients, Applications of Recurrence Relation.

Concepts of Graphs and Trees: Definition, Degree, Types, Operations on graphs, Paths, Circuits, Connectedness, Planar graphs and their properties, Eulerian and Hamiltonian graphs. Trees: Basic properties of trees, Binary trees, Application: Minimum Spanning Tree, Shortest Path.

Textbooks:

1. J.P. Tremblay and Manohar: Discrete mathematical structures with application to Computer Science, McGraw hill- New Delhi.
2. Kolman and R.C. Busby: Discrete mathematical structures for computer science Prentice Hall, New-Delhi.
3. Malik and M. K. Sen: Discrete Mathematics, Cengage Learning India Pvt. Ltd.
4. R.M. Somasundaram: Discrete Mathematical Structures, Prentice Hall India Learning Private Limited.
5. C.L.Liu, Elements of Discrete Mathematics, second edition, McGraw-Hill Book Company.

Reference Books:

1. Kenneth H. Rosen: Discrete Mathematics and its applications Eighth Edition McGraw Hill Education.
2. Stanat and McAlister: Discrete Mathematics for Computer Science, PHI.

List of Assignments:

The following are some sample assignments. The course co-ordinator will frame one assignment on each unit for internal assessment.

1. Given a fact or a statement prove or disprove using suitable technique.
2. Write the given English language sentences represent in the Symbolic logic.
3. Given the statement forms Infer the validity of the statement form.
4. Draw a Hasse diagram and find chains and antichains.
5. Find the number of ways for any event or given sample space.
6. Given a problem represent in a graph and compute the optimal solution.
7. Given a communication network find the path between the given nodes.

Project Based Learning

1. Discrete Mathematics in Railway Planning using graph theory and linear algebra.
2. Object transformations using linear algebra.
3. Discrete mathematics in cryptography.
4. In Google maps to determine fastest driving routes and times.
5. In image processing
6. In relation database using sets.
7. In cyber security using graph theory.
8. Shortest path between two cities using a transportation system.
9. Data compression system with the help of Huffman coding.
10. Find the shortest tour that visits each of a group of cities only once and then ends in the starting city using graphs.

(Note: -*Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Perform set Operations.
2. Compute a power set of a given set.
3. List various properties of Relation and construct a program to evaluate it with a program.
4. Apply Warshall's algorithm to compute a Transitive Closure of a given relation entered by the user.(Use any suitable programming language).
5. Solve a programming problem based on application of Eulerian and Hamiltonian Graph.
6. Develop a program using RSA algorithm.
7. Develop a program to apply different algorithms on graph and solve areal tie problem.

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Machine Organization and Microprocessor

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	04 Hours/Week	End Semester Examination	60 Marks	Theory	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks	Practical	01
		Term Work & Practical	50 Marks	Total	05
		Total	150 Marks		

Course Objective:

The course would provide students with an understanding of the design of fundamental blocks used in organization of computer system and interfacing techniques of these blocks to achieve different configurations of Machine organization. Students will learn the basic operations of computing hardware and how it interfaces to software.

Prerequisite:

The students should have basic Knowledge Digital electronics and logic design.

Course Outcomes: On completion of the course, students will have the ability to:

1. Explain the architecture and functional blocks of Computer System.
2. List the functional requirements for implementing ALU.
3. Discuss design approaches implementing control unit.
4. Analyse the characteristics and hierarchy of memory system.
5. Describe Peripherals and Input-Output organization.
6. Describe the concepts of parallel processing and pipelining.

Unit I

08 Hours

CPU:-Machine architecture and organization, Von Neumann architecture Structure of IAS machine, memory, input-output subsystems, control unit. Introduction to 80x86 microprocessor, Architecture, Register organization, Segmentation, Instruction execution cycle, Addressing modes, and Instruction set. Instruction Formats, Instruction Types.

Unit II

08 Hours

ALU:-Computer arithmetic, Signed number representation, fixed and floating point representations, character representation. Integer addition and subtraction, signed number multiplication, Booth's multiplier it's Hardware Implementation, Restoring and Non-restoring Division techniques, floating point arithmetic, IEEE 754 format.

Unit III

08 Hours

Control Unit :- Design approaches, Instruction cycle and micro operations, Control signals and timing sequence, design of Hardwired Control unit
Micro instructions and micro program, Organization and Optimization of micro-programmed Control unit, Microinstruction Sequencing, Sequencing Techniques, Address Generation, Microinstruction Execution, Microinstruction Encoding.

Unit IV

08 Hours

Memory:- Characteristics of Memory system, Memory hierarchy, Cache memory, cache size and block size, mapping functions, replacement algorithms, cache coherency, Multilevel Caches, Cache Coherence, Snooping & MESI Protocols, Memory Segmentation & Interleaved Memory System.

Unit V

08 Hours

I/O organization: - I/O module, Peripheral devices and their characteristics, Input-output subsystems, I/O device interface, I/O transfers, interrupt driven and DMA transfer, I/O device interfaces – SCSI, USB, Fire wire.

Unit VI

08 Hours

Parallel Organization – Overview of Instruction Pipelining, Performance Improvement, Flynn’s classification for Multiple Processor Organizations, Closely and Loosely Coupled Multiprocessors Systems, Symmetric Multiprocessor (SMP) Organization, Multithreading – Fine Grained, Coarse Grained & Simultaneous (SMT) Threading, Chip Multiprocessing, Cluster Configuration, UMA, NUMA & CC-NUMA. Multicore Architectures – Hardware & Software Issues in Multicore Organization.

Textbooks:

1. William Stallings. “Computer organization and architecture: designing for performance”. Pearson Education India, 2010
2. Carl Hamacher, Zvonko Vranesic and Safwat Zaky. “Computer Organization”, McGraw Hill, 2011.
3. Computer System Architecture M. M. Mano:, 3rd ed., Prentice Hall of India, New Delhi, 1993.
4. Computer Architecture and Organization, John P. Hayes.

Reference Books:

1. Computer Organization and Design: The Hardware/Software Interface, David A. Patterson and John L. Hennessy.
2. David A. Patterson, John L. Hennessy. “Computer organization and design: the hardware/software interface”. Elsevier, 2011

List of Assignments:

1. Describe the structure of IAS computer with neat block diagram.
2. Describe architecture of 8086 with neat block diagram.
3. Explain the concept of Segmentation and state its advantages and disadvantage.
4. Draw and explain working of Micro programmed Control Unit.
5. Describe structure of IAS computer with neat block diagram.
6. Describe architecture of 8086 with neat block diagram.

Project Based Learning

1. Automatic night lamp with morning alarm
2. Traffic light with sensor + 7segment
3. Multi pattern running lights.
4. .Washing machine
5. Simple Lock Using Keypad and 7 segment
6. Electronic quiz table
7. Electronic Digital Clock
8. .temperature controller
9. Plant Irrigation System
10. Car Parking Management
11. Customer counter for supermarket
12. Electronic queue management system in food stall
13. Safety box
14. Shop lot automatic door with 7segment display
15. Bank queue management system
16. Water level controller
17. Automatic home system
18. Commuter system
19. Automatic room light control
20. Elevator control system

(Note: -*Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Write an Assembly Language program to display system time on screen.
2. Write an Assembly Language program to add and subtract two 8 bit numbers.
3. Write an Assembly Language program to determine 2's complement of a number
4. Write an assembly language program for BCD addition and subtraction.
5. To Apply Booth's Algorithm for illustrating multiplication of signed numbers.
6. To design and illustrate Restoring Division Algorithm.
7. To design and illustrate Non-Restoring Division Algorithm.
8. To design 4 bit ALU (VLAB)
9. Study of Memory Design (VLAB)
10. To design Direct mapped Cache and associative cache (VLAB)

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit – VI

Software Engineering					
<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	04 Hours/Week	End Semester Examination	60 Marks	Theory	04
Practical:	02 Hours/Week	Internal Assessment	40 Marks		
		Term Work & Practical	50 Marks	Practical	01
		Total	150Marks	Total	05

Course Objective:

The main purpose of this course is to impart knowledge on the basic principles of software development life cycle.

Prerequisite:

Programming paradigms, Basic mathematical ability

Course Outcomes: On completion of the course, students will have the ability to:

1. Outline the basic concepts of software engineering lifecycle.
2. Analyse and categorize the requirements of software systems.
3. Design the software qualitatively.
4. Implement the software with the standard guidelines.
5. Validate the software with standard testing techniques.
6. Demonstrate troubleshooting of software application.

Unit I

08 Hours

Introduction:

Software and Software Engineering: The Nature of Software, The Software Process, Software Myths.

Process Models: A Generic Process Model, Prescriptive Process Models, Specialized Process Models, The Unified Process.

Agile Development: Agility, Agility and the Cost of Change, Agile Process, Agile Process Models.

Unit II

08 Hours

Requirement engineering and modelling:

Understanding Requirements: Requirements Engineering, Eliciting Requirements, Building the use case, Building Analysis Model, negotiating requirements and Validating Requirements. Drafting the software requirement specification.

Requirement Analysis and Modelling: Domain Analysis, Object Oriented Analysis, Scenario based Modelling, Class Based Modelling, Behaviour Modelling. CASE Tools.

Unit III

08 Hours

Software project management: Introduction to Software Project Management, Selection of a Project Approach, Project Estimation Techniques, Project Planning and Project Scheduling, Project Organization and Team Structures, Risk Management, Resource Allocation, Project Monitoring and Control, Software Configuration Management, Software Quality Management, CASE Tool.

Unit IV

08 Hours

Design

Design Concepts: The Design Process, Design Model - Data Design model, Architecture Design model, Transform and Transaction Flow, Interface design Flow, Component Level and Deployment level design elements.

Design Concepts – Abstraction, Architecture, Patterns, Modularity, Functional Independence, Refinement, Refactoring, Object-Oriented Design Concepts. CASE Tools in Software Design.

Unit V**08 Hours****Coding and Testing:**

Coding Approach, Coding Standards, Error, Bug, Defects.
Software Testing Life Cycle, Software Testing Principles, Verification and Validation,
Types of Testing, White Box Testing techniques, Black Box Testing techniques,
Testing OO Applications, Website Testing, CASE Tool.

Unit VI**08 Hours**

Implementation and maintenance: Software Maintenance-Software Supportability.
Reengineering-Business Process Reengineering- Software Reengineering- Reverse
Engineering, Restructuring.

Forward Engineering- Economics of Reengineering.

Textbooks:

1. Roger S, “Software Engineering – A Practitioner’s Approach”, seventh edition, Pressman, 2010.
2. Pearson Edu, “Software Engineering by Ian Sommerville”, 9th edition, 2010.

Reference Books:

1. Van Vliet, “Software Engineering: Principles and Practices”–, 2008.
2. Richard Fairley, “Software Engineering Concepts”, 2008..

List of Assignments:

1. Presentation on one topic related to this syllabus.
2. Conducting six Multiple choice question online test on each unit
3. Prepare a report based on the understanding by viewing the NPTEL videos of this subject.
4. Perform the following Assignments:
 - i. Suggest Which SDLC model will be used to develop ATM software? Justify?
 - ii. Develop Requirement Specification for ATM Software.
 - iii. Design the Class Diagram and Use case Diagram for ATM software.
 - iv. Discuss on Automated Software Testing. Create Test cases for Functionality of ATM software using a Test Tool (Test Link).
 - v. Discuss and Prepare IEEE Quality Document for ATM software.
 - vi. Prepare a Gantt chart using MS Project CASE Tool for a small Project.

Project Based Learning

1. ATM system
2. Online Banking system
3. Airline reservation system
4. Railway reservation system
5. Library Management System
6. College Management System
7. Hospital Management system
8. Traffic Monitoring System
9. Hotel Management System
10. Bus ticket reservation system
11. Online shopping system

(Note: -*Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. For the given system, students are required to identify and document the Requirements Specifications.
2. To study and explore the working of any UML modelling CASE Tools.
3. For the given system, students are required to Model UML Use Case Diagrams and Capture the Use Case Scenarios.
4. For the given system, students are required to create data models like ER and EER.
5. For the given system, students are required to Model UML State chart and Activity diagrams.
6. For the given system, students are required to Model UML Class and sequence diagrams.
7. For the given system, students are required to Model UML collaboration, Component and Deployment diagrams.
8. To study and explore the working of any Software Testing CASE Tools.
9. For the given system, students are required to design and execute the test suites.
10. Prepare a case study on Agile Methodologies.

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit – I, Unit – II, Unit - III

Unit – IV, Unit – V, Unit – VI

Object Oriented Methodology

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	04 Hours/Week	End Semester Examination	60 Marks	Theory	04
Practical:	04 Hours/Week	Internal Assessment	40 Marks	Practical	02
		Term Work & Practical	50 Marks	Total	06
		Total	150 Marks		

Course Objective:

- To teach fundamentals of object-oriented concepts and programming.
- To apply the concepts of object-oriented paradigm.
- To develop object-oriented programming skills.
- To design and implement applications for real life problems by using object-oriented programming.

Prerequisite:

Paradigms of Programming.

Course Outcomes: On completion of the course, students will have the ability to:

1. Analyse the basics of object-oriented programming with Java.
2. Identify class, objects, methods for real time problems.
3. Make use of constructor, garbage collector and methods of string class.
4. Explore the concept of inheritance and polymorphism with the help of real time applications.
5. Handle exception with exception handling mechanism and understand the concept of multithreading.
6. Design the graphical user interface by using Applets AWT and SWING.

Unit I

08 Hours

Introduction: History and Features of Java, Difference between Java, C, C++, Internals of Java Program, Difference between JDK, JRE and JVM, Internal Details of JVM, Basics of Java Language-Variable and Reserve / Keywords present in Java, Primitive Data types, Java Operators, Decision making and branching statements in Java.

Unit II

08 Hours

Classes, Objects and Methods: Creating a Class, Visibility/Access Modifiers, Encapsulation, Methods: Adding a Method to Class, returning a Value, adding a Method That Takes Parameters, 'this' Keyword, Method Overloading, Object Creation, Using Object as a Parameters, Returning Object, Array of Objects, Memory Allocation: 'new', Static Data Members, Static Methods.

Unit III

08 Hours

Constructors, Destructors and String Handling: Use of Constructor, Characteristics of Constructors, Types of Constructor, Constructor Overloading, Constructor with Default Arguments, Symbolic Constants, Garbage Collection, Destructors and Finalizers.
String Handling: String: Immutable String, String Comparison, String Concatenation, Substring, Methods of String class, String Buffer class, StringBuilder class, Creating Immutable class, to String method.

Unit IV

08 Hours

Inheritance and Polymorphism: Use of Inheritance, Types of Inheritance in Java, Role of Constructors in inheritance, Polymorphism in OOP, Types of Polymorphism, static and dynamic polymorphism, Overriding Super Class Methods. Use of "super" keyword. Interfaces, Implementing interfaces.

Unit V

08 Hours

Exception Handling and Multithreaded programming:

Exception Handling: try and catch block, catch block, Nested try, finally block, throw keyword, Exception Propagation, throws keyword, Exception Handling with Method Overriding, Custom Exception

Introduction to threads, life cycle of a thread, thread states, thread properties, methods in Threads and Runnable, setting priority of threads, synchronization and inter thread communication Life Cycle of a Thread.

Unit VI

08 Hours

Designing Graphical User Interfaces in Java: Applet and its use, Design Patterns using Applet and JApplet. Run Applet application by browser and applet tool. Applet Architecture. Parameters to Applet Life Cycle.

Basics of Components Using Containers, Layout Managers and User defined layout. Border Layout, Flow Layout, Grid Layout, Grid bag Layout, Box Layout. AWT Components, Adding a Menu to Window, Extending GUI Features Using SWING, Components Designing GUI, Advanced swing components like Progress, JSlider, JRadioButton, JTree, JTable, JToggle Button, etc.

Textbooks

1. E. Balaguruswamy, "Object Oriented Programming Using C++ and Java", Tata McGrawHill
2. Steven Holzner et al. "Java 2 Programming", Black Book, Dreamtech Press, 2009.

Reference Books

7. Y. Daniel Liang (2010), Introduction to Java programming, 7th edition, Pearson education, India.

List of Assignments:

1. Write a program to implement Class and object.
2. Write a program to differentiate between method overloading and method overriding.
3. Write a program to implement Constructor Overloading
4. Write a program to implement different Types of Inheritance in Java
5. Write a program to implement concept of Exception Handling &Multithreaded Programming
6. Write a program to use different controls of AWT classes.
7. Write a program to implement Applet swings.

1. Project Based Learning

1. **Smart City Project**
2. Currency Converter
3. Online Exam Project in Java
4. Moving Balls mini project using Java Applet
5. Text Editor in Java using AWT controls.
6. Album Manager Project in Java
7. Vehicle Management System in Java
8. Music Player project in Java
9. Student Management System Project in Java
10. Simple Calculator project in Java
11. Image to PDF Converter in java
12. Simple Chat System
13. Online Quiz project
14. Pong game in java
15. Tokenize implementation.

(Note:- *Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises

1. Write a program that checks whether a given string is a palindrome or not.
2. Write a program that describes a class person. It should have instance variables to record name, age and salary. Create a person object. Set and display its instance variables.
3. Write a program that creates a class circle with instance variables for the centre and the radius. Initialize and display its variables.
4. Write a program that counts the number of objects created by using static variable.
5. Write a program to demonstrate the constructors in java.
6. Write a program to demonstrate the constructor overloading.
7. Write a program to display the use of this keyword.
8. Write a program to implement Class and Inheritance Concept.
9. Write an application that creates an interface' and implement it.
10. Write a program that can count the number of instances created for the class.
11. Write a program to implement the concept of Multithreaded Programming.
12. Create an abstract class shape. Let rectangle and triangle inherit this shape class. Add necessary functions.
13. Write an application that shows the usage of try, catch, throws and finally.
14. Write an Applet that displays —Hello World (Background colour-black, text colour-blue and your name in the status window).
15. Develop mini project using Applet and Swings.

Syllabus for Unit Tests:

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

B.TECH (Computer Science and Engineering)

SEMESTER – IV

COURSE SYLLABUS

Theory of Computation

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Theory:	03 Hours/Week	End Semester Examination	60 Marks	Theory	03
Tutorial:	01 Hours/Week	Internal Assessment	40 Marks	Tutorial	01
		Total	100 Marks	Total	04

Course Objective:

This course introduces some fundamental concepts in automata theory and formal languages including grammar, finite automaton, regular expression, formal language, pushdown automaton and Turing machine. This subject not only forms the basic models of computation, it also includes the foundation of many branches of computer science, e.g. compilers, software engineering, concurrent systems, etc.

Prerequisite:

Discrete Mathematics

Course Outcomes: On completion of the course, students will have the ability to:

1. Estimate the importance of automata theory in designing computer languages.
2. Demonstrate and understand the relationships between language classes and regular expression
3. Design grammars and recognizers for different formal languages
4. Identify the equivalence of languages described by pushdown automata
5. Evaluate the Language Acceptability by Turing Machine
6. Explain the basics of compiler

Unit I

06 Hours

Preliminaries and Finite state machines: Introduction to Theory of Computation- Automata, Alphabet, Symbol, String, Formal Languages, Deterministic Finite Automaton (DFA)- Definition, Representation, Acceptability of a String and Language, Non Deterministic Finite Automaton (NFA), Equivalence of DFA and NFA, NFA with ϵ -Transition, Equivalence of NFA's with and without ϵ -Transition, Finite Automata with output- Moore machine, Mealy Machine, Equivalence of Moore and Mealy Machine, Minimization of Finite Automata.

Unit II

06 Hours

Regular Languages -Definition and Examples. Conversion of RE To FA, FA to RE, algebraic laws, applications of RE. Pumping lemma for regular languages and applications. Closure properties of regular Languages Union, Concatenation, Complement, Intersection and Kleene closure. Decidability- Decision properties.

Unit III

06 Hours

Context Free Grammar(CFG)-Definition, Derivations, Languages, Derivation Trees and Ambiguity, Regular Grammars-Right Linear and Left Linear grammars, Conversion of FA into CFG and Regular grammar into FA, Simplification of CFG, Normal Forms- Chomsky Normal Form(CNF), Greibach Normal Form (GNF),Chomsky Hierarchy, Programming problems based on the properties of CFGs.

Unit IV

06 Hours

Push Down Automata (PDA): Introduction, Pushdown Automata (PDA), Transition Diagrams, Functions and Tables, Deterministic Push- down Automata (DPDA) - definition, Nondeterministic Pushdown Automata (NPDA), Equivalence of context free grammars and PDA, properties of context free languages. Introduction to Post Machines (PMs).

Unit V

06 Hours

Turing Machines: The Turing Machine Model and Definition of TM, Language Acceptability of Turing Machines, Techniques for Turing Machine Construction,

Modifications of Turing Machine, Composite and Iterative Turing machines, Multi Tape Turing machine, Multi Stack and Multi Track Turing machine, Universal Turing machine, Linear Bounded Automata, Church's Thesis, Halting Problem.

Unit VI

06 Hours

Applications: Applications of Regular expressions, Lexical analyser, Text editor, and searching using RE, Context free grammar, Basics of parsing techniques, application of leftmost and rightmost derivations during parsing, Primitive recursive functions, Recursive and recursively enumerable languages, Introduction to Natural language Processing.

Textbooks:

1. Vivek Kulkarni "Theory Computation" Oxford higher education
2. Theory of Computer Science (Automata, Language & Computation) K. L. P. Mishra & N. Chandrasekaran, PHI Second Edition.
3. E.V. Krishnamurthy, "Theory of Computer Science", EWP Publication.

Reference Books:

1. Hopcroft Ullman, "Introduction to Automata Theory, Languages & Computations, Narosa.
2. Daniel A. Cohen, "Introduction to Computer Theory", Wiley Publication.
3. Automata Theory, Languages, and Computation, John E. Hopcroft Cornell University, Rajeev Motwani Stanford University, Jeffrey D. Ullman Stanford University, 3rd Edition.

List of Assignments:

1. Study of JFLAP tool for Constructing FA.
2. Construct regular expressions defined over the alphabet $\Sigma = \{a, b\}$, which denote the given languages.
3. Translate the following Mealy machine into its equivalent Moore machine.
4. Write a context-free grammar (CFG) which generates the language L denoted by: $(a+ b)^*bbb(a+ b)^*$.
5. Construct a PDA that accepts the language defined by the following regular grammar.
6. Design a TM to recognize an arbitrary string divisible by 4, from $\Sigma = \{0, 1, 2\}$.

Project Based Learning

1. Develop a tool to illustrate the algorithm for converting an arbitrary NFA to a DFA .
2. Develop a tool to draw a transition diagram for any given DFA.
3. Approximation algorithms
4. Greedy algorithms.
5. Enumeration of finite automata
6. Enumeration of PDA
7. Enumeration of Turing machines
8. Ambiguous grammars
9. Disambiguation of Grammars
10. Enumeration of Context-free languages
11. . Enumeration of Turing machines
12. . Universal Turing machines.
13. Randomized Turing machines
14. NP Complete Algorithm
15. Problem solvability using Reduction
16. Design of TM to emulate a finite automata
17. . Design of TM to emulate a PDA
18. Complexity analysis of encryption algorithms using TM.
19. . Design of TM to perform sorting
20. Design TM to perform searching.

Note: -*Students in a group of 3 to 4 shall complete any one project from the above list.

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit – I, Unit – II, Unit - III

Unit – IV, Unit – V, Unit – VI

System Programming and Operating System

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture:	04 Hours/Week	End Semester Examination:	60 Marks		
Practical:	04 Hours/Week	Internal Assessment:	40 Marks	Theory	04
		Term Work & Practical	50 Marks	Practical	02
		Total	150 Marks	Total	06

Course Objectives:

- To help the students understand functioning of various system programs and Compiler, Loaders and Linkers.
- To help students for different concepts of operating system and management with file system.

Prerequisite:

Knowledge of Microprocessor concepts and Assembly language and Concept of system software, application software, knowledge of input output devices and its usage.

Course Outcomes: On completion of the course, students will have the ability to:

1. Apply fundamental concepts and practical skills of system programming.
2. Design and Demonstrate working of assemblers, Loaders and Linkers.
3. Compare and evaluate different scheduling algorithms.
4. Outline the concept of concurrency and deadlocks.
5. Analyse of Memory Management and Virtual Memory.
6. Prepare a comparison report of different operating system.

Unit I

08 Hours

Introduction to Systems Programming: Introduction: Components of System Software, Language Processing Activities, Fundamentals of Language Processing. Assemblers: Elements of Assembly language programming. Simple assembler scheme, Structure of an assembler, Design of single and two pass assembler. Macro Processors: Macro Definition and call, Macro expansion, Nested Macro Calls, Advanced Macro Facilities, Design of a two-pass macro-processor, Case study related to unit contents.

Unit II

08 Hours

Compiler, Loaders and Linkers: Compilers: Basic compilers function, Phases of compilation, memory allocation, compilation of expression, Compilation of expressions, compilation of control structures, Code of optimization. Loaders: Loader Schemes: Compile and go, General Loader Scheme, Absolute loaders, subroutine linkages, relocating loaders, direct linking loaders, Design of an absolute loader. Linkers: Relocation and linking concepts, Design of linker, self-relocating programs, Static and dynamic linker, Case study related to unit contents.

Unit III

08 Hours

Introduction to OS and Process management: Introduction to OS: Architecture, Goals & Structures of O.S, Basic functions, Interaction of O. S. & hardware architecture, System calls, Batch, multiprogramming. Multitasking, time sharing, parallel, distributed & real -time O.S. Process Management: Process Concept, Process states, Process control, Threads, Scheduling: Types of scheduling: Pre-emptive, Nonredemptive, Scheduling algorithms: FCFS, SJF, RR, Case study on Unix /Linux OS.

Unit IV

08 Hours

Concurrency control: Concurrency: Interprocess communication, Mutual Exclusion, Semaphores, Classical Problems of Synchronization: Readers-Writers, Producer Consumer, and Dining Philosopher problem. Deadlock: Principles of deadlock,

Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Case study related to unit contents.

Unit V

08 Hours

Memory Management: Basics of memory management, Swapping, Memory Allocation, Paging, Segmentation, Virtual memory, Demand Paging, Page replacement, Page replacement algorithms – Optimal FIFO, LRU, LRU approximation, Allocation of frames, Case study related to unit contents.

Unit VI

08 Hours

Input and Output, File System: I/O management & Disk scheduling: I/O Devices, Organization of I/O functions, Operating System Design issues, I/O Buffering, Disk Scheduling (FCFS), RAID, Disk Cache. File Management: Concepts, File Organization, File Directories, File Sharing, Record Blocking, Allocation methods, Free Space management, Case study related to unit contents.

Textbooks:

1. System Programming by John J. Donovan, TATA McGRAW-HILL Edition.

Reference Books:

1. Operating System Concepts, 9th edition Peter B. Galvin, Greg Gagne, Abraham Silberschatz, John Wiley & Sons, Inc.
2. Operating Systems 5th Edition, William Stallings, Pearson Education India.
3. D. M. Dhamdhere : “Systems programming and operating system”, Tata McGraw Hill.

List of Assignments:

1. Describe the types of errors that can be identified in the process of language translation. Illustrate the same with example
2. Explain the different types of optimization techniques
3. Compute average waiting time and average response time for the given set of processes.
4. Apply page replacement algorithm and compute the number of page faults.
5. Case study 1
6. Case study 2

Project Based Learning

1. Develop Heap Memory Manager in C
2. Design the Processes and thread management with deadlock's, synchronization
3. Design Preemptive Priority Scheduling algorithm implementation in any language.
4. Java program to analyze page fault for a given page frame using NRU with paging.
5. The project on simulating the multiprogramming of a specific operating system and dealing with CPU scheduling and Job scheduling.
6. Design the project that computes FCFS, SSTF, and SCAN disk-scheduling algorithms
7. Operating Systems mini-project to explore the different algorithms of main memory page replacement
8. Develop any one project on one or two pass assemblers.
9. design a simple language and develop a compiler for the three-address code generation and evaluation using Lex and Yacc.
10. Construct a parser that recognizes a specific language.

Note:- *Students in a group of 3 to 4 shall complete any one project from the above list.

List of Laboratory Exercises:

1. Design one pass assembler
2. Design two pass assembler
3. Write a program to create Dynamic Link Library for any mathematical operation and write an application program to test it
4. Write a program using Lex specifications to implement lexical analysis phase of compiler to count no. of words, lines and characters of given input file.
5. Implement UNIX system calls like ps, fork, join, exec family, and wait for process management.
6. Implementation of various scheduling algorithm.
7. Implementation of Banker's algorithm.
8. Find out the page fault of any given string.
9. Implementation of various Page replacement Algorithm.
10. Study assignment on process scheduling algorithms for latest OS.

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Computer Graphics and Multimedia

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
Lecture:	04 Hours/Week	End Semester Examination:	60 Marks		Credits
Practical:	02 Hours/Week	Internal Assessment:	40 Marks	Theory	04
		Term Work & Practical	50 Marks	Practical	01
		Total	150 Marks	Total	05

Course Objectives:

- To introduce the principles of computer graphics and the components of a graphics system.
- To introduce basic algorithms for drawing line, circle and curves.
- To develop understanding of the basic principles of 2D and 3D computer graphics and how to transform the shapes to fit them as per the picture definition.
- To introduce multimedia architecture and hardware.
- To introduce multimedia file formats.

Prerequisite:

Knowledge of C programming language, Linear Algebra.

Course Outcomes: On completion of the course, students will have the ability to:

1. Apply fundamental concepts and practical skills in computer graphics.
2. Design and apply two-dimensional graphics.
3. Implement and use classic and modern algorithms and data structures in computer graphic to 3-D geometry.
4. Apply Illumination and colour models.
5. Identify suitable file format to develop a multimedia application.
6. Design Basic 3- D Scenes using Blender.

Unit I

08 Hours

Introduction to computer graphics and devices: Introduction to computer graphics, Graphics Primitives: Raster scan & random scan displays, display processor, display file structure, Output primitives, points and lines, line drawing algorithms, loading the frame buffer, line function; circle and ellipse generating algorithms; Pixel addressing and object geometry, filled area primitives. GRAPHIC DEVICES Cathode Ray Tube, Quality of Phosphors, CRTs for Colour Display, Beam Penetration CRT, The Shadow -Mask CRT, Direct View Storage Tube, Tablets, The light Pen, Three Dimensional Devices.

Unit II

08 Hours

Two-dimensional graphics: Two dimensional geometric transformations — Matrix representations and homogeneous coordinates, composite transformations; Two-dimensional viewing — viewing pipeline, viewing coordinate reference frame; window-to-viewport coordinate transformation, Two dimensional viewing functions; clipping operations — point, line, and polygon clipping algorithms.

Unit III

08 Hours

Three-dimensional graphics: Three dimensional concepts; Three-dimensional object representations — Polygon surfaces- Polygon tables- Plane equations — Polygon meshes; Curved Lines and surfaces, Quadratic surfaces; Blobby objects; Spline representations — Bezier curves and surfaces -B-Spline curves and surfaces. TRANSFORMATION AND VIEWING: Three dimensional geometric and modelling transformations — Translation, Rotation, Scaling, composite transformations; Three-dimensional viewing — viewing pipeline, viewing coordinates, Projections, Clipping; Visible surface detection methods.

Unit IV

08 Hours

Illumination and colour models: Light sources, basic illumination models, halftone patterns and dithering techniques; Properties of light, Diffused illumination, point

source illumination, Standard primaries and chromaticity diagram; Intuitive colour concepts, RGB colour model, YIQ colour model, CMY colour model ,HSV colour model; Colour selection, ray tracing.

Unit V

08 Hours

Multimedia system design & multimedia file handling: Multimedia basics – Multimedia applications – Multimedia system architecture – Evolving technologies for multimedia – Defining objects for multimedia systems – Multimedia data interface standards – Multimedia databases. Compression and decompression – Data and file format standards – Multimedia I/O technologies – Digital voice and audio – Video image and animation – Full motion video – Storage and retrieval technologies.

Unit VI

08 Hours

Hypermedia: Multimedia authoring and user interface-Hypermedia messaging - Mobile messaging – Hypermedia message component – Creating hypermedia message – Integrated multimedia message standards– Integrated document management – Distributed multimedia systems. CASE STUDY: BLENDER GRAPHICS Blender Fundamentals—Drawing Basic Shapes— Modelling—Shading & Textures.

Textbooks

1. Donald Hearn and Pauline Baker M, Computer Graphics”, Prentice Hall, New Delhi, second edition.
2. Andleigh, P. K and KiranThakrar, Multimedia Systems and Design, PHI, 2015.

Reference Books

1. Foley, Vandam, Feiner and Hughes, Computer Graphics: Principles and Practice, 2nd Edition, Pearson Education, 2003.
2. Peter Shirley, Michael Ashikhmin, Michael Gleicher, Stephen R Marschner, Erik Reinhard, KelvinSung, and AK Peters, Fundamentals of Computer Graphics, CRC Press, 2010.

List of Assignments:

1. Study on any latest data generating device in computer Graphics .
2. Describe in detail any one color model process.
3. Using the determinant to calculate the signed areas, determine whether the point $p=[23]T$ is in the triangle formed by the points $s=[22]T$, $t=[51]T$ and $r=[35]T$. Show all of your work.
4. Elaborate in detail the any one curve generation methods.
5. Describe how Multimedia system architecture process is used in real time.

Project Based Learning

1. Helicopter game
2. Sinking Ship
3. Scientific calculator
4. Traditional wall Clock
5. Tower of Hanoi game
6. Windmill
7. Steam engine
8. Traffic signal
9. Aquarium
10. Prepare a PowerPoint Presentation
11. Mobile app for online shopping
12. Arrival and departure of the train with announcement and signal
13. Mobile application for online tour guidance app
14. Create a small video on the given topic
15. Story tell mobile app

(Note: -*Students in a group of 3 to 4 shall complete any one project from the above list)

List of Laboratory Exercises:

1. Study of Fundamental Graphics Functions.
2. Implementation of Line drawing algorithms: DDA Algorithm, Bresenham's Algorithm.
3. Implementation of Circle drawing algorithms: Bresenham's Algorithm, Mid-Point Algorithm.
4. Programs on 2D and 3D transformations.
5. Write a program to implement Cohen Sutherland line clipping algorithm.
6. Using Flash/Maya perform different operations (rotation, scaling move etc..) on objects Create a Bouncing Ball using Key frame animation and Path animation.
7. Write a program to make wave audio file.
8. Write a program to create links in HTML.
9. Write a program to create file split.

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Design of Algorithms

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Lecture	03 Hours/Week	End Semester Examination: 60 Marks			
		Internal Assessment:	40 Marks	Theory	03
		Total	100 Marks	Total	03

Course Objective:

The Course gives an overview of about the Performance and Analysis of Algorithms.

Prerequisite:

The students should possess the knowledge of Data Structures and Discrete Mathematics.

Course Outcomes: On completion of the course, students will have the ability to:

1. Analyze the asymptotic performance of algorithms by providing Optimal Solution.
2. Synthesize divide-and-conquer algorithms. Derive and solve recurrences describing the performance of divide-and-conquer algorithms.
3. Analyze the performance of Greedy Methods and describe its limitations.
4. Analyse Dynamic Programming Problems.
5. Solve Problems using Backtracking Approach.
6. Compare NP-Hard, NP-Complete Problems and Online Algorithms.

Unit I

06 Hours

Models of Computation: Algorithm Specification, Pseudocode Conventions Recursive Algorithms, PERFORMANCE ANALYSIS, Space Complexity Time Complexity Asymptotic Notation, Practical Complexities, Performance Measurement Randomized Algorithms Iterative Algorithms: Measures of Progress and Loop Invariants. Steps to develop Iterative Algorithms.

Unit II

06 Hours

Divide-and-Conquer: Binary Search Finding the Maximum and Minimum, Merge Sort, Quick Sort, Performance Measurement: Best Case and Worst-Case Analysis. Strassen's matrix Multiplication.

Unit III

06 Hours

The Greedy Method: Knapsack Problem, Job Sequencing with deadlines, Minimum-Cost Spanning Trees: Prim's Algorithm, Kruskal's Algorithm, Single-Source Shortest Paths.

Unit IV

06 Hours

Dynamic Programming: Multistage graph, All Pairs Shortest paths, Single-Source Shortest Path, Optimal Binary search trees, 0/1-knapsack, The Traveling Salesperson Problem, Basic Traversal and Search Technique.

Unit V

06 Hours

Backtracking: Backtracking: The General Method, The 8- Queens Problem, Sum of Subsets, Graph Colouring, and Hamiltonian Cycles. Branch and Bound: Least Cost (LC) Search, The 15-puzzle Control abstraction of LC Search, Bounding, FIFO Branch and Bound, LC Branch and Bound.

Unit VI

06 Hours

Files: NP-HARD AND NP-COMPLETE PROBLEM Algorithm Complexities: Nondeterministic Algorithms, The classes NP-Hard and NP- Complete, Cook's Theorem, NP-Hard Graph Problems, NP-Hard Scheduling Problems, NP-Hard Code Generation Problems. Approximation Problems. Online Algorithms: The Online Paging Problem, Adversary Models, Paging against an Oblivious Adversary, Relating the Adversaries, The Adaptive Online Adversary, The k-Server Problem

Textbooks:

1. Alfred Aho, John E. Hopcroft, "Design and Analysis of Computer Algorithms", Pearson Education.
2. Thomas Cormen, Charles E Leiserson, Ronald Rivest, "Introduction to Algorithms, Tata Mc-Graw Hill Publication, Second Edition.

4. Jon Kleinberg, Eva Tardos, " Algorithm Design", Pearson Education.
5. Robert Sedgewick, Philippe Flajolet, "An Introduction to the Analysis of Algorithms", Addison-Wesley Publication, Second Edition.
6. Jeff Edmonds, How to think about Algorithms, York University, Cambridge University Press.
7. Python Algorithms: Mastering Basic Algorithms in the Python Language, by Magnus Lie, Hetland ,APress.
8. Ian Parberry and William Gasarch, WProblems on Algorithms, Second Edition, Prentice Hall Inc.
9. Rajeev Motwani, PrabhakarRaghavan, Randomized Algorithms, Cambridge University Press.

Reference Books:

1. ElitzHorowith and SartajSahani, S. Rajasekaran, "Fundamentals of Computer Algorithms", Galgotia Publications.

List of Assignments:

1. Calculate the space complexity of various algorithms.
2. Implement Knapsack Algorithm.
3. Implement Prim's Algorithm
4. Implement Kruskal's Algorithms
5. Study and analysis of 8-Queens Problem.
6. Implement Optimal Binary Search Tree.

Project Based Learning

1. Design a Sudoku using Recursion
2. Design a Phonebook
3. Simulate 15 Puzzle Problem
4. Design Tic Tac Toe
5. Travelling Salesman Problem
6. Design a board for simulating N-Queen Problem
7. Implement Multistage Graphs
8. Prime Number Generator
9. Random Number Generator
10. Devise and algorithm for large sparse matrix multiplication

(Note: -*Students in a group of 3 to 4 shall complete any one project from the above list)

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Database Systems

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
Lecture:	04 Hours/Week	End Semester Examination:	60 Marks	Credits	
Practical:	04 Hours/Week	Internal Assessment:	40 Marks	Theory	04
		Term Work & Practical	50 Marks	Practical	02
		Total	150 Marks	Total	06

Course Objective:

This course focuses on the core principles and techniques required in the design and implementation of database systems.

Prerequisite:

Discrete mathematics, Data structures and Programming languages.

Course Outcomes: On completion of the course, students will have the ability to:

1. Use the basic concepts of Database Systems in Database design.
2. Design a Database using ER Modelling
3. Apply SQL queries to interact with Database.
4. Apply normalization on database design to eliminate anomalies.
5. Analyse database transactions and can control them by applying ACID properties.
6. Investigate the knowledge about emerging trends in the area of database for unstructured data and applications for it.

08 Hours

Unit I

Introduction to Databases and Database Design: Introduction, purpose of database system, Data Independence, view of data, Database System architecture- Levels, Mappings, Database users and DBA, applications of DBMS, The importance of data models, Basic building blocks, Business rules, The evolution of data models, Degrees of data abstraction., Database Design Process, ER Diagrams - Entities, Attributes, Relationships, Constraints, keys, extended ER features, Generalization, Specialization, Aggregation, Conceptual design with the E-Rmodel.

Unit II

Relational Model: Introduction to the relational model, Integrity constraints over relations, enforcing integrity constraints, querying relational data, Logical database design: E-R to relational, Introduction to views, Destroying/altering tables and views.
Relational Algebra and Calculus: Preliminaries, relational algebra operators, relational calculus - Tuple and domain relational calculus, expressive power of algebra and calculus.

08 Hours

Unit III

Schema Refinement and Normal Forms: Introduction to schema refinement, functional dependencies, reasoning about FDs. Normal forms: 1NF, 2NF, 3NF, BCNF, properties of decompositions, normalization, schema refinement in database design, case studies.

08 Hours

Unit IV

SQL: Basics of SQL, DDL, DML, DCL, structure – creation, alteration, defining constraints – Primary key, foreign key, unique, not null, check, IN operator, Functions - aggregate functions, Built-in functions – numeric, date, string functions, set operations, sub-queries, correlated sub-queries, Use of group by, having, order by, join and its types, Exist, Any, All, view and its types. transaction control commands – Commit, Rollback, Save point, cursors, stored procedures, Triggers.

08 Hours

Unit V**08 Hours**

Transactions Management: Transaction concept, transaction state, implementation of atomicity and durability, concurrent executions, Serializability, recoverability, implementation of isolation, transaction definition in SQL, testing for Serializability.
Concurrency Control and Recovery System: Concurrency control, lock based protocols, time-stamp based protocols, validation based protocols, multiple granularity. Recovery system - failure classification, storage structure, recovery and atomicity, log- based recovery, shadow paging, buffer management, failure with loss of non-volatile storage, advanced recovery techniques, remote backup systems.

Unit VI**08 Hours**

Emerging Database Technologies: Introduction to unstructured data, NOSQL, Introduction to unstructured data, NOSQL, spatial and geographic databases, Database Analysis Tools multimedia databases, Massive Datasets and Hadoop.

Textbooks:

1. Raghurama Krishnan, Johannes Gehrke , Database Management Systems, 3rd edition, Tata McGraw Hill, New Delhi,India.
2. ElmasriNavate, Fundamentals of Database Systems, Pearson Education,India.

Reference Books:

1. Abraham Silberschatz, Henry F. Korth, S. Sudarshan (2005), Database System Concepts, 5th edition, McGraw-Hill, New Delhi,India.
2. Peter Rob, Carlos Coronel (2009), Database Systems Design, Implementation and Management, 7thedition.

List of Assignments:

1. Define Database. Explain Importance of Data Models in detail
2. Write a short note on Following:
 - a) Relational Algebra and Calculus
 - b) Integrity Constraints
3. Define Normalization. Explain all Normal forms in detail
4. Explain DDL, DML and DCL in detail.
- 5.Explain ACID properties of TCL in detail.\
6. Explain NOSQL and Database Analysis Tools in detail.

Project Based Learning

1. Inventory Management System.
2. Online Jewelry Shopping System
3. Library Management System
4. Online Examination System
5. Hospital Management System
6. Railway Reservation System
7. Payroll Management System
8. Cooking Recipe Portal
9. Art Gallery Management System
10. Student Database Management System
11. Restaurant Management Database System
12. Electric Bill System Database
13. Online Examination System
14. Event Management System
15. Attendance Management System

(Note: -*Students in a group of 3 to 4 shall complete any one project from the above list)

Laboratory Exercises:

1. Draw E-R Diagram and extended ER Diagram (as given by course coordinator) on given System.
2. Demonstrate Queries on Relational Algebra(as given by course coordinator).
3. To discuss normalization and build normalized schema (as given by course coordinator)on given System.
4. Write a SQL Statement ((as given by course coordinator) on DDL,DML and DCL.
5. Demonstrate Queries on Joins(as given by course coordinator).
6. Demonstrate Queries on aggregate functions(as given by course coordinator).
7. Use WEKA tool to derive analytical model for the given dataset.
8. Case study on NOSQL database: MongoDB.

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit – I, Unit – II, Unit - III

Unit – IV, Unit – V, Unit – VI

CSE Skill Lab - I

<u>Teaching Scheme</u>		<u>Examination Scheme</u>		<u>Credit Scheme</u>	
	Hours/Week		Marks		Credits
Practical:	04 Hours/Week	Term Work & Oral	50 Marks	Practical	02
		Term Work & Practical	50 Marks		
		Total	100 Marks		

Course Objective:

The objective of this course is to impart students with the knowledge to setup the development environment, design and develop dynamic database driven web applications using PHP.

Prerequisite:

1. Create PHP programs that use various php library functions,
2. Design interactive forms using PHP.
3. Implement various operations on arrays and control structures in PHP
4. Create database and demonstrate the manipulation of Files, Directories and relational data.
5. Implement cookies and session
6. Develop dynamic web Content.

Unit I

08 Hours

Introduction to Dynamic Web Content & Environment: Overview of HTTP & HTML, Request/Response Procedure, Advantage of PHP, MySQL, JavaScript, CSS & HTML 5, The Apache Web Server, Overview of Open Source. Basics of WAMP, MAMP,LAMP, Installation, Accessing document root, Working Remotely – Looking In, Using FTP, Using IDE.

Unit II

08 Hours

Introduction to PHP, Expression & Control Flow: Incorporating PHP within HTML, Structure of PHP – Comments, Basic Syntax, variables, operators, Assignments, multiline commands, constants, echo & print commands, Functions, variable Scope. Expressions: TRUE or FALSE, Literals & Variables. Operators: Precedence, Associativity, Relational Operators. Conditionals – if, else, elseif, switch operator. Looping: While, do-while, breaking out of loop, continue statement

Unit III

08 Hours

PHP Functions, Objects & Arrays:PHP Functions: Defining, returning a value, Returning an Array, do not Pass arguments by reference, Returning Global Variables, Include statement: include once, require &require once.
PHP Objects: Declaring a class, creating an object, accessing objects, constructors, PHP 5 Destructors, writing methods, declaring properties & constants, inheritance. Arrays: Basic Access, foreach as loop, multidimensional Arrays, Using Array functions.

Unit IV

08 Hours

PHP in Action & Introduction to MySQL:UsingPrintf, Date and Time Functions, File handling, System Calls.Introduction to MySQL: Basics, Database Terms, Accessing MySQL via Command line, MySQL Commands, Data types, Indexes, MySql Functions, Accessing Mysql via PhpMyAdmin, Primary Keys, Relationships, Select Queries, creatingmysqldump, backup file, dumping data in CSV format.

Unit V

08 Hours

Cookies, Sessions, Authentications and Accessing: Using cookies in PHP, HTTP Authentication, Using Sessions. Accessing: Querying a MySQL Database with PHP – The Process, create login file, connecting to database, Practical Example, Preventing Hacking Attempts: Using Placeholders, HTML Injection. Building Forms, Retrieving submitted Data.

Unit VI

08 Hours

Exploring JavaScript: JavaScript and HTML Text – using within a Document Head, Older & Nonstandard Browsers, Including Javascripts, debugging Javascript errors, using variables, semicolon, variables, operators, variable typing, functions, global variables, local variables, Document Object Model, Document.write.

Textbooks:

1. Learning PHP, MySQL & Javascript, Robin Nixon, OREILLY, 4th Edition, 2015.
2. Head First PHP & MySQL-Lynn Beighley & Michael Morrison-O'Reilly.
3. PHP: A Beginner's Guide-Vikram Vaswani- McGraw-Hill Education.

Reference Books:

1. The Complete Reference PHP – Steven Holzner, Tata McGraw-Hill.
2. The Joy of PHP Programming: A Beginner's Guide – Alan Forbes, BeakCheck LLC, 6th edition.

List of Laboratory Exercises:

1. Write a PHP function to count total number of vowels from the string. Accept a string using HTML form.
2. Write a PHP script to print Fibonacci series.
3. Create a student registration form using text box, check box, radio button, select, submit button. Display the user inserted value in new PHP page.
4. Write a program to perform the following operations on an associative array.
Display elements of an array along with their keys.
Display size of array.
Delete an element from an array from the given index.
5. Write a Program to insert a roll no and student name in a database (use PostgreSQL data to create a database).
6. Write PHP script to demonstrate passing variables with cookies.
7. Implement Admin login/logout functionality and cookie wherever required.
8. Write a PHP script to connect MYSQL server from your web application. Write a PHP script to create and drop database.
9. Create database using phpMyAdmin. Write a program to read input data from table and display the information in tabular form.
10. Develop PHP application using forms and database.

Project Based Learning

1. Design personal website using HTML and CSS
2. Login page with user credentials and data base
3. Drawing palette based web page
4. Student registration form with data base connectivity
5. Dummy social networking website
6. Image editing using we page
7. Animation based website
8. Simple game website
9. Ecommerce website with data base connectivity
10. Any Complete web project with real time database connectivity
11. Login authentication
12. Design Survey Form
13. Quiz Game
14. Implement Employee Management System
15. Social Media Dashboard
16. Search Application
17. E-Commerce Website
18. Develop Freelance platform

19. Hospital Management System

Note: -*Students in a group of 3 to 4 shall complete any one project from the above list.

Theory: 03 Hours/Week	End Semester Examination : 60 Marks	Theory : - 03
Tutorial: 01 Hours/Week	Continuous Assessment: 40 Marks	Tutorial : - 01
		Total : - 04
Course Pre-requisites:		
The Students should have knowledge of		
	Basics of Complex number, derivatives and integration.	
Course Objectives:		
	To study	
	<ul style="list-style-type: none"> • Ordinary and partial differentiation. • Vector calculus and its applications. • Complex differentiation and integration. 	
Course Outcomes: Students will be able to		
1.	Understand methods of finding nth derivative of functions.	
2.	Understand methods of finding partial derivatives.	
3.	Understand the method of locating stationary points and value.	
4	Understand line, surface and volume integral.	
5	Understand the analytic functions.	
6	Understand methods of evaluating contour integration	
UNIT - I	Differential Calculus and Expansion Of Functions:	(06 Hours)
	Successive Differentiation, nth Derivatives of Standard Functions, Leibnitz's Theorem, Taylor's Series and Maclaurin's Series.	
UNIT - II	Partial Differentiation And Applications:	(06 Hours)
	Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables. Errors and Approximations.	
UNIT - III	Jacobian and Maxima And Minima:	(06 Hours)
	Jacobians and their applications, Chain Rule, Functional Dependence. Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.	
UNIT - IV	Vector Integral Calculus and Applications:	(06 Hours)
	Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence theorem, Stoke's theorem. Applications to problems in Fluid Mechanics, Continuity equations, Streamlines, Equations of motion, Bernoulli's equation.	
UNIT - V	Complex Variables:	(06 Hours)
	Function $f(z)$ of complex variable, limit, continuity and differentiability of $f(z)$, Analytic function, necessary and sufficient conditions for $f(z)$ to be analytic (without proof), Cauchy-Riemann equations in Cartesian coordinates (without proof) Milne-Thomson method to determine analytic function $f(z)$ when real part (u) or Imaginary part (v) or its combination ($u + v$ or $u-v$) is given, Harmonic function, Harmonic conjugate and orthogonal trajectories.	
UNIT - VI	Complex Integration:	(06 Hours)
	Line Integral, Cauchy's Integral theorem for simple connected and multiply connected regions (without proof), Cauchy's Integral formula (without proof). Taylor's and Laurent's series (without proof). Definition of Singularity, Zeroes, poles of $f(z)$, Residues, Cauchy's Residue Theorem (without proof).	
Project based learning:		
	<ol style="list-style-type: none"> 1. Finite order differentiation of standard functions 2. Leibnitz theorem 3. Errors and Approximation 4. Total derivative 5. Implicit functions 6. Maxima and minima for function of two variables 	

7. Lagrange method of Undetermined multipliers
8. Continuity Equation
9. Bernoulli's Equation
10. Harmonic function
11. Singularities
12. Cauchy Residue Theorem
13. Taylor's and Laurent's series
14. Green's lemma
15. Gauss divergence theorem
16. Stokes theorem
17. Orthogonal Trajectories
18. Analytic functions

Text Books:

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Modern Physics

Modern Physics		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination : 60 Marks	Theory : - 03
Practical: 02 Hrs/Week	Continuous Assessment: 40 Marks	Practical : - 01
	Term Work: 50 Marks	Total : - 04
Course Pre-requisites:		
The Students should have knowledge of		
	Basic understanding of Physics and Calculus.	
Course Objectives:		
	To impart knowledge of basic concepts in physics relevant to engineering applications in a broader sense with a view to lay foundation for the Electrical and Computational Engineering.	
Course Outcomes: Students will be able to		
1.	Interpret the electric and magnetic fields and apply the principles of Coulomb's Law and Gauss's law to electric fields in various coordinate systems.	
2.	Summarize the magnetism, different magnetic materials and its properties.	
3.	Explain mechanical properties of solid matter, and connect to applications in the field of engineering.	
4.	Interpret the properties of nucleus and apply it for socioeconomic purposes.	
5.	Interpret the superconductivity and perfect diamagnetism, and give a qualitative description of the Meissner effect and its applications.	
6.	Summarize the structure and properties of lasers to their performance and intended applications such as optical fiber in the field of communication.	
UNIT - I	Electromagnetic Theory:	(06 Hours)
	Introduction of Electrostatics: electric charge and electric field, electric potential, electric dipole, Gauss's law for electric field on integral form, Capacitors, electrostatic energy. Stationary electromagnetism: magnetic fields and flux density and magnetic forces, Ampere's law for B-field in integral form, Electromagnetic induction: Faraday's and Lenz' laws, self and mutual inductance.	
UNIT - II	Magnetism and Dielectric Materials:	(06 Hours)
	Origin of magnetism, Classification of magnetism on the basis of permeability (qualitative), Domain theory of ferromagnetism, Hard and soft magnetic materials, Dielectric parameter (Dielectric constant, Electric displacement, Polarization & Polarizability), Types of polarization and dielectric materials, temperature and frequency effect, Applications of magnetic devices: transformer cores, magnetic storage.	
UNIT - III	Solid State Physics:	(06 Hours)
	Free electron theory, Density of states, Bloch theorem (Statement only), Origin of band gap, Energy bands in solids, Effective mass of electron, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.	
UNIT - IV	Nuclear and Particle Physics:	(06 Hours)
	Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium, Fission energy, Critical mass and size, Reproduction factor, Chain reaction and four factor formula, Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions (Stellar reaction), Merits and demerits of nuclear energy, Fundamental forces, Particle physics, Quark model, Neutrino properties and their detection.	
UNIT - V	Superconductivity:	(06 Hours)
	Introduction to superconductivity; Properties of superconductors: zero electrical resistance, critical fields, persistent current, Meissner effect- Type I and Type II superconductors, Low and high temperature superconductors (introduction and qualitative), AC/DC Josephson effect; SQUID: basic construction and principle of working, Applications of SQUID, Applications of superconductors.	
UNIT - VI	Laser and Fibre Optics:	(06 Hours)
	Principle of laser, Einstein's coefficients, Spontaneous and stimulated emission, Population inversion, Semiconductor laser, Properties of lasers, Applications of lasers (Engineering/ industry, medicine,	

Computers). Principle of fibre optics, Construction, Numerical Aperture for step index fibre, critical angle, angle of acceptance, types of optical fibres, Fibre optic communication system, advantages and disadvantages of fibre optics.	
Term Work:	
The term work shall consist of record of minimum eight experiments from below list.	
1. Study of changing magnetic flux and induced current associated with Faraday's Law of Induction.	
2. Plotting the hysteresis loop for given magnetic material	
3. To study Hall effect and determine the Hall voltage	
4. Calculation of conductivity by four probe method	
5. Study of solar cell characteristics and calculation of fill factor	
6. Determination of band gap of semiconductor	
7. Determination of divergence of a laser beam	
8. Particle size by semiconductor laser	
9. Determination of wavelength of laser by diffraction grating	
Project based learning:	
1. Construction and application of heat sensor in process control	
2. Design and simulation of automatic solar powered time regulated water pumping	
3. Solar technology: an alternative source of energy for national development	
4. The study on the effect of length on the resistance of a copper wire (verification of ohms law r directly proportional to l)	
5. Possible effects of electromagnetic fields (emf) on human health	
6. Design and construction of digital distance measuring instrument	
7. Design and construction of remote control fan	
8. Design and construction of sound or clap activated alarm	
9. Electronic eye (Laser Security) as autoswitch/security system	
10. Electric power generation by road power	
11. Wireless power transfer	
12. Determination of velocity of O-ray and E-ray in different double refracting materials	
13. Small wind turbines as a source of electricity	
14. Tesla Coil	
15. LiFi- wireless data transfer system using light	
Text Books:	
1. A Textbook of Engineering Physics, M N Avadhanulu, P G Kshirsagar and TVS Arun Murthy, S. Chand Publishing (2018)	
2. Engineering Physics, R K Gaur and S L Gupta, Dhanpat Rai Publishing Co Pvt Ltd (2015)	
3. Concepts of Modern Physics, Arthur Beiser, Shobhit Mahajan and S. Rai Choudhury, McGraw Hill Education (2017)	
Reference Books:	
1. Fundamentals of Physics, Jearl Walker, David Halliday and Robert Resnick, John Wiley and Sons (2013)	
2. Optics, Francis Jenkins and Harvey White, Tata Mcgraw Hill (2017)	
3. Principles of Physics, John W. Jewett, Cengage publishing (2013)	
4. Introduction to Solid State Physics, C. Kittel, Wiley and Sons (2004)	
5. Principles of Solid State Physics, H. V. Keer, New Age International (1993)	
6. Laser and Non-Linear Optics, B. B. Laud, New Age International Private Limited (2011)	
7. Nanotechnology: Principles and Practices, Dr. S. K. Kulkarni, Capital Publishing Company (2014)	
8. Science of Engineering Materials- C.M. Srivastava and C. Srinivasan, New Age International Pvt. Ltd. (1997)	
9. Introduction to Electrodynamics –David R. Griffiths, Pearson (2013)	
10. Renewable Energy: Power for a Sustainable Future, Boyle, Oxford University Press (2012)	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Electromagnetics And Its Applications

Electromagnetics And Its Applications		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS:</u>
Lectures: 04 Hours / Week	End Semester Examination: 60 Marks	Theory: 04
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	Practical: 01
	TW: 25 Marks PR:25 Marks	Total: 05
Course Pre-requisites:		
1. Students should have basic knowledge of physics i.e. electrical energy and power, magnetism, electrostatics, magnetic materials, magnetic fields, electromagnetic theory etc.		
2. Students should have basic knowledge of mathematics i.e. trigonometric functions, matrices, complex numbers, differentiation and integration, vectors etc.		
Course objectives:		
To introduce fundamental concepts of DC Circuit Analysis and Network Theorems, Magnetic circuit and Electromagnetic Induction, AC Fundamentals & Single-Phase AC Circuits, Three Phase AC Circuits, Transformer, Performance and testing of transformer.		
Course Outcomes:		
The students will be able to		
1.	Evaluate D.C. circuits using network theorems.	
2.	Understand theory of electromagnetic induction.	
3.	Describe and estimate single-phase A.C. circuits.	
4.	Analyze and evaluate three-phase A.C. circuits.	
5.	Illustrate constructional features and describe different parameters of transformer.	
6.	Identify and analyze performance of transformer.	
Topics covered		
UNIT - I	DC Circuit Analysis and Network Theorems: Circuit Concepts: Concepts of network, Active and passive elements, voltage and current sources, concept of linearity and linear network, unilateral and bilateral elements, KCL and KVL, Super node and Super mesh analysis, Network reduction using series-parallel and star-delta transformation, Thevenin's theorem, Norton's theorem, Superposition theorem, Maximum power transfer theorem. (Simple numerical problems).	(08 Hours)
UNIT - II	Magnetic circuit and Electromagnetic Induction Magnetic Circuit: flux, flux density, field strength, analogy between electric & magnetic circuits, Right hand thumb rule, magnetic leakage, B-H curve, Magnetic hysteresis, hysteresis and eddy current losses, magnetic circuit calculations, mutual coupling, Series and parallel magnetic circuit and simple numericals. Electromagnetic Induction: Faraday's Law of EMI, Statically and dynamically induced emf, Lenz's Law, Self-Inductance, Coefficient of Self-inductance (L), Mutual inductance, Coefficient of Mutual inductance (M), Sign and dot convention, self-induced EMF and mutually induced EMF, Coefficient of Coupling, Inductance, Energy Stored in Magnetic Field. (Simple numerical problems).	(08 Hours)
UNIT - III	AC Fundamentals & Single-Phase AC Circuits: AC Fundamentals: Sinusoidal, square and triangular waveforms – average and effective values, form and peak factors, concept of phasors, phasor representation of sinusoidally varying voltage and current. Analysis of series, parallel and series-parallel RLC Circuits: apparent, active & reactive powers, power factor, causes and problems of low power factor, power factor improvement; resonance in series and parallel circuits, (simple numerical problems).	(08 Hours)
UNIT -IV	Three Phase AC Circuits: Three phase system-its necessity and advantages, meaning of phase sequence, star and delta connections, balanced supply and balanced load, line and phase voltage/current relations, 3-ph balanced AC Circuits, three-phase power and its measurement (simple numerical problems).	(08 Hours)
UNIT-V	Transformer: Single phase transformer: construction, principle of operation, equivalent circuit, phasor diagram, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Concept of ideal transformer. Three phase transformers: Introduction, Three phase transformer connections, Auto-transformer. Welding transformer.	(08 Hours)
UNIT-VI	Performance and testing of transformer Transformer on no load, Transformer on load, Efficiency of transformer, Condition for maximum efficiency, All-day efficiency, Parallel operation of single-phase transformers, Parallel operation of	(08 Hours)

	three-phase transformers. (simple numerical problems).	
	Transformers tests:Open circuit or No-load test, Separation of core losses,Short circuit or impedance test, Regulation of transformer, Sumpner or Back-to-back test. Determination of Efficiency & Regulation by direct load test.	

List of Practical's to be performed in the laboratory:

1.	Plotting B-H characteristics for a material.
2.	Verification of Kirchhoff's Laws.
3.	Verification of Superposition Theorem.
4.	Verification of Thevenin's Theorem.
5.	Verification of Maximum Power Transfer Theorem.
6.	Identify performance of R-L series, R-C series, R-L-C series circuit.
7.	Identify performance R-L-C parallel circuit.
8.	Verification of voltage and current relationships in star and delta connected 3-phase networks.
9.	Open circuit or No-load test on transformer.
10.	Direct loading test on single phase transformer.
11.	Sumpner or Back-to-back test on transformer.
12.	Determination of Efficiency & Regulation by direct load test.

Note:The term work shall be the record of minimum eight experiments performed from the above list.

Project based learning: Student shall demonstrate minimum one concept based on syllabus topic.

1.	Demonstration of principle of electromagnetism & it's applications.
2.	Study and understand practical specifications of transformer.
3.	Demonstration of phenomenon of electromagnetic induction.
4.	Demonstration of electromagnetism and its applications by using professional software tool.
5.	Home automation system using IoT
6.	Smart Energy meter using GSM
7.	Solar and Smart energy systems
8.	Automatic Solar Tracker
9.	PCB Manufacturing
10.	Smart Calling Bell
11.	Wireless Power transmission
12.	Gas Leakage Detector
13.	Fire detection system 10. Smart Traffic Lighting System
14.	Home automation system using IoT

Note:The term work shall be the record of minimum eight experiments performed from the above list.

Reference Books:

1.	Electrical Technology - Edward Huges (Pearson)
2.	Basic Electrical Engineering - D. P. Kothari, J Nagarath (TMC)
3.	Electrical power system technology - S. W. Fordo, D. R. Patric (Prentice Hall)
4.	Principles of Electronics-Dr. H. M. Rai (SatyaPrakashan)
5.	Electronic Devices and Circuit Theory- R. L. Boylestad and L. Nashelsky (PHI)
6.	Electrical, Electronics Measurements and Instruments - (SatyaPrakashan)
7.	Principles of Communication Engineering - Anokh Singh, A. K. Chhabra (S Chand)
8.	A Textbook of Electrical Technology Volume- I, -B.L.Theraja.S.Chand and Company Ltd., New Delhi
9.	A Textbook of Electrical Technology Volume- II, -B.L.Theraja.S.Chand and Company Ltd., New Delhi
10.	Basic Electrical Engineering-V.K.Mehta,Rohit Mehta,S.Chand and Company Pvt Ltd., New Delhi
11.	Electromagnetics and Applications-David H. Staelin, Department of Electrical Engineering and Computer Science Massachusetts Institute of Technology Cambridge, MA(2011)

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Solid State Devices & Electronic Circuits

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hrs/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 02 Hrs/Week	Continuous Assessment: 40 Marks	Practical: 01
	TW: 25 Marks PR: 25 Marks	Total: 05

Course Pre-requisites:

The Students should have knowledge of

- | | |
|----|--|
| 1. | Fundamentals of Electrical Engineering |
| 2. | Fundamentals of semiconductor physics. |

Course Objectives:

- | | |
|--|---|
| | 1. To study different solid state electronics devices and various electronic systems using these devices and understand the principle of electronic circuits. |
|--|---|

Course Outcomes: After learning this course students will be able to

- | | |
|---|--|
| 1 | Explaining the basic semiconductor devices. |
| 2 | Illustrate active and passive filters. |
| 3 | Explaining about amplifiers and oscillators |
| 4 | Outlining operational amplifiers |
| 5 | Apply amplifiers for creating generalized linear applications. |
| 6 | Illustrating specialized IC applications. |

UNIT - I	Review of semiconductor devices	(08 Hours)
	Rectifier diode Zener diode, Tunnel diode, Schottky diode, LED, PIN diode, photodiode, SCR, TRIAC their symbol, construction, principle of operation characteristics, specifications, mathematical equations and applications. BJT-CE, CB, CC configurations, BJT biasing, FET-biasing, MOSFET biasing, Difference between BJT and FET , Basics of NMOS,PMOS, CMOS. Concept of Device modeling. World wide main manufacturers of various solid state devices.	
UNIT - II	Active & Passive filters	(08 Hours)
	Working of C, L, PI filters, Types of filters: low pass filter, high pass filter, band pass filter , band stop filter, band reject filter, all pass filter. Difference between active and passive filters. Advantages and applications of active and passive filters. Voltage regulators, types and working principle, Block diagram of Regulated DC power supply- Types- Operation of Zener diode voltage regulator, Transistor series voltage regulator, Comparison of series and shunt voltage regulator, use of negative feedback, block diagram and working of SMPS.	
UNIT -III	Amplifiers and oscillators	(08 Hours)
	Frequency response of BJT and MOSFET amplifier. Single stage Transistor amplifier-load line analysis, voltage gain, classification of amplifiers, amplifier equivalent circuit. Multi-stage Transistor Amplifier-RC coupled transistor amplifier, Transformer and direct coupled amplifiers, comparison of different types of coupling. Transistor audio power amplifiers, difference between voltage and power amplifier, classification of power amplifier. Amplifiers with negative feedback. Sinusoidal Oscillators- LC tank circuit, various of types and circuits of Oscillators such as, Hartely oscillator. Phase shift oscillator-Wien bridge oscillator.	
UNIT -IV	Operational Amplifier	(08 Hours)
	Concept of virtual short, The ideal Op-amp, equivalent circuit of Op-amp, ideal voltage transfer curve, open loop Op-amp amplifier configurations-The differential amplifier, The inverting amplifier, The non-inverting amplifier. OP-amp parameters, Block diagram representation of feedback configurations-voltage series feedback amplifier, voltage shunt feedback amplifier, differential amplifiers, Frequency response, high frequency Op-amp, Op-amp as adder and subtractor. Various Op-amp ICs and their manufacturers.	
UNIT - V	General Linear Applications	(08 Hours)
	DC and AC amplifiers, AC amplifier with single supply voltage, The peaking amplifier, Summing, Scaling and averaging amplifiers, Inverting configuration, Non-inverting configuration, Differential	

	configuration, instrumentation amplifiers, logarithmic amplifier, voltage to current converter, current to voltage converter, the integrator, the differentiator, comparators and oscillators. Schmitt trigger circuit, Electrical applications of linear circuits Concept of amplifier against step up transformer in electrical engineering. , Role of solid state devices in electrical engineering.	
UNIT -VI	Specialized IC application	(08 Hours)
	The 555 timer as monostable, astable multivibrantor, applications of monostable and astable multivibrator phase locked loops operating principle , 565 PLL applications, Power amplifiers – power amplifiers using power busters, monolithic power amplifier, voltage regulators –fixed, adjustable, switching and special voltage regulator and commonly ICs used in each type. Various manufacturers and cost of commonly used regulators and timer ICs.	
Term Work:		
The term work shall consist of record of minimum eight experiments.		
1. Study of JFET drain and transfer characteristics.		
2. JFET biasing arrangement Graphical method		
3 Build and Test JFET CS amplifier.		
4 Find performance parameters for JFET amplifier - A_v , R_i , R_o		
5 Simulation of JFET CS amplifier using multisim/spice.		
6 Find performance parameters for JFET amplifier - A_v , R_i , R_o and compare with theoretical and practical results.		
7 Input and Output Characteristics of BJT CE configuration. Find h-parameters from characteristics.		
8 Build and Test BJT in CE amplifier and find performance parameters - A_v , R_i , R_o , A_i		
9 Simulation of BJT CE amplifier using multisim/spice		
10 Study of MOSFET drain and transfer characteristics		
11 Voltage follower by Op-amp.		
12 Inverting amplifier by Op-amp.		
13 Non-inverting amplifier by Op-amp.		
14 Summing amplifier by Op-amp.		
15 Difference amplifier by Op-amp.		
16 Study of any five ICs studied in the subject – relevant diagrams, costing, various configurations, manufacturers, main specifications and introduction of their data sheet.		
17 Self arranged industrial visit to any electronics industry and report writing on same.		
18 Attending seminar session / IEEE conference session/ local conference session/webinar/ talks by any electronics related expert and writing report on same		
Project Based Learning:		
1.Simple LED blinking block.		
2.Simulation of logic gates.		
3.Study of automatic light control.		
4.Design of half wave rectifier (simulation or hardware).		
5. Regulated power supply.		
6.Circuit designing , simulation and electrical parameter measurement.		
7. Application of transistor as a switch.		
8.Study of JFET characteristics using software simulation.		
9. Application of MOSFET as switch.		
10.Application of Op-amp as non-inverting amplifier		
11.Design of inverting amplifier.		
12. Design of non-inverting amplifier.		
13. Design of Op-amp as adder.		
14. Design of Op-amp as subtractor.		
15 Design of Op-amp as difference amplifier.		
Text Books:		
1. Neamen- Semiconductor Physics and DevicesTMH		
2. Bhattacharya & Sharma- Solid State Electronic Devices-Oxford		
3. Maini & Agrawal- Electronics Devices and Circuits-Wiley		
4. Principles of Electronics- V.K.Mehta. S. Chand & Company Limited.		
5. OP-Amps & Linear Integrated Circuits- Ramakant A. Gayakwad		
6. Opearational amplifiers by D.Roychaudhari		

Reference Books:

1. Milman, Halkias & Jit- Electronics Devices and Circuits-TMH
2. Bell-Electronics Devices and Circuits-Oxford
3. Singh & Singh-Electronics Devices and Integrated Circuits-PHI
4. Bogart, Bisley & Rice-Electronics Devices and Circuits-Pearson
5. Kasap-Principles of Electronic Materials and Devices-TMH
6. Boylestad & Nashelsky- Electronics Devices and Circuit Theory-Pearson
7. Salivahanan, Kumar & Vallavaraj- Electronics Devices and Circuits-TMH

Unit Tests:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Computer Architecture & Data Structures with C

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours/Week	End Semester Examination: 60 Marks	Theory: 04
Practical: 02 Hours/Week	Continuous Assessment: 40 Marks	Practical: 01
	TW: 25 Marks & OR: 25 Marks	Total: 05

Course Pre-requisites:

The Students should have knowledge of

Computer System, Applications of Computers and Computer operations.

Course Objectives:

To learn the basic structure and operations of a computer.
Understand and memory and I/O organization of a typical computer system.
Understand the basics and applications of Data Structure.

Course Outcomes: After learning this course students will be able to

1	Explain the basic structure of Computer system and its operation
2	Illustration of Computer Processor and Control Unit
3	Identify Parallelism and Memory Organization
4	Identify the basics of C Programming
5	Discuss the concept of Data Structures
6	Study of Linear and Non Linear Data Structure

UNIT – I	Basic Structure of Computer System	(08 Hours)
	Computational model, Evolution of computer architecture, Functional Units- Basic Operational Concepts, Performance, Instructions: Language of the Computer, Operations, Operands – Instruction representation – Logical operations – decision making – MIPS Addressing.	
UNIT - II	Processor and Control Unit	(08 Hours)
	A Basic MIPS implementation - Building a Datapath - Control Implementation Scheme - Pipelining - Pipelined datapath and control - Handling Data Hazards & Control Hazards - Exceptions.	
UNIT -III	Parallelism and Memory Organization	(08 Hours)
	Parallel processing challenges – Flynn’s classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures – Hardware multithreading – Multi-core processors and other Shared Memory Multiprocessors. Memory Hierarchy - memory technologies - cache memory - measuring and improving cache performance - virtual memory, TLB’s - Accessing I/O Devices - Interrupts - Direct Memory Access - Bus structure - Bus operation - Arbitration - Interface circuits - USB.	
UNIT -IV	C Programming basics	(08 Hours)
	Structure of a C program – compilation and linking processes – Constants, Variables – Data Types – Expressions using operators in C – Managing Input and Output operations – Decision Making and Branching – Looping statements. Arrays – Initialization – Declaration – One dimensional and Two-dimensional arrays. Strings- String operations – String Arrays. Simple programs- sorting- searching – matrix operations.	
UNIT - V	Functions, Pointers, Structures And Unions	(08 Hours)
	Functions – Pass by value – Pass by reference – Recursion – Pointers – Definition – Initialization – Pointers arithmetic. Structures and unions – definition – Structure within a structure – Union – Programs using structures and Unions – Storage classes, Pre-processor directives.	
UNIT -VI	Linear and Non Linear Data Structure	(08 Hours)
	Arrays and its representations – Stacks and Queues – Linked lists – Linked list-based implementation of Stacks and Queues – Evaluation of Expressions – Linked list based polynomial addition. Trees – Binary Trees – Binary tree representation and traversals – Binary Search Trees – Applications of trees. Set representations – Union-Find operations. Graph and its representations – Graph Traversals.	

Term Work:	
The term work shall consist of record of minimum eight experiments.	
<ol style="list-style-type: none"> 1. Study of peripherals, components of a Computer System 2. Study of Binary and Decimal Inter-Conversion system. 3. Study of Binary Addition 4. Study of Binary Subtraction. 5. Study Booth's Multiplication algorithm 6. Study of Restoring Division 7. Study of Non Restoring Division Algorithm 8. Study of Logisim Tool. 9. Realization of the basic logic and universal gates 10. Design of half-adder circuit using basic gates 11. Design of full-adder circuit using basic gates. 12. Program to create & manipulate database using structure 13. Program to add two polynomial using array of structure. 14. Program to implement primitive operation on Sequential file. 15. Program to search for record from a given list of records stored in array using i) Linear search ii) Binary search 16. Program to sort an array of names using i) Bubble sort ii) Insertion sort iii) Quick sort 	
Project based learning:	
<ol style="list-style-type: none"> 1) Development of Phone Book Application in C 2) Development of Temperature Conversion Table 3) Study of Mother Board components. 4) C- Programming experiments 5) Write a C program to add, subtract multiply and divide two non-zero numbers. 6) Write a C program to print all odd numbers from 1 to 100 using for loop and even numbers using while loop. 7) Write a C program to create a menu of math operations using switch case and do-while loop. The program should input 1-2 numbers and give options like square, cube, exponent (x^y or y^x), multiply, divide. ensure non zero numbers. 8) Write a C program to copy all numbers in an array to another array in reverse order and display the result. 9) Write a C program to find the factorial of a given number using recursive function. 10) Write a C program to reverse the string(in the same space) and print the resultant string. Make use of pointers. 11) Project work (Options) : 12) Phonebook application (Non persistent) 13) Temperature conversion table (-50C to 150C) 14) Customer billing system. 15) Bus/ Airplane seat reservation system.

Unit Tests:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Electrical Workshop Practices		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: - NA	End Semester Examination: - NA	NA
Practical: 04 Hours / Week	Continuous Assessment: -	
	TW: 50 Marks	02 Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Basic concepts of electrical engineering.	
Course Objectives:		
	1. To make the students familiar with construction, working and maintenance of electrical appliances in daily use	
	2. To prepare students for working on different hardware projects by developing hardware skills.	
Course Outcomes:		
After successful completion of this course, student will be able to		
1.	Understand the use of electrical safety devices	
2.	Understand the working of electrical tools and their applications	
3.	Understand various electrical accessories and their applications	
4	Undertsand various types of wiring and luminaries.	
5	Undertsand overhauling of a motor / generator	
6	Undertsand electric vehicle, various motors and batteries	
Instructions:		
	<ul style="list-style-type: none"> • Term work shall consist of reports for minimum five exercises. • The exercise must be carried out in a group of maximum 4 students. • Students should write the procedure, observations and conclusion in the form of report which will be evaluated for term work. 	
Content		
I	Electrical Safety Devices and methods awareness Various safety devices for protection of electrical installation, earthing rods, megger, insulation tester, etc. Various safety devices used for first aid and electric fire hazards. Artificial respiration. Electrical safety devices for working on over head lines, inspection of overhead lines with drones, thermal camera Operation of safety equipment, Operation of fire equipment, high voltage maintenance uniform, maintenance with drones and helicopters	
II	Study of Electrical tools Acquaintance of various tools for wiring such as wire stripper, bearing puller, hand drilling machine, pliers etc. and various electrical measuring instruments such as digital and analogue multi-meter, ammeters, voltmeters, wattmeter, frequency meters, phase sequence meters, tong tester, etc. Study of various tools for wiring such as wire stripper, bearing puller, hand drilling machine, pliers etc Study of various electrical measuring equipment such as digital and analogue multi-meter, ammeters, voltmeters, wattmeter, frequency meters, phase sequence meters, tong tester, megger, test lamp, insulation tester, earthing rods, thermal camera etc. Bread board assembly and general-purpose PCB soldering and de-soldering Dismantling and assembly of switchgears in simple electrical installations. Development of hardware kit for DC circuit and network theorems. Development of combined $\pm 12V$, $\pm 5V$ regulated power supply. Development of mobile charger Development of extension board Cable jointing and termination kit	
III	Electrical accessories Soldering kit. s electrical power supplying equipments), Wiring of distribution box . contactors, with wiring. distribution box with MCB, ELCB, RCCB and MCCB. Assembly of star delta starter, autotransformer starter, DOL and 3 point starter with NVC connections and overload operation. Energy meter, Soft starters switches, various sensors temperature sensors, pressure sensors, speed sensors, moisture sensors, humidity sensors, various types of anemometers, solar panel concept of electrical supply ac supply, dc supply, three phase ac supply, electricity bill Electrical components and materials Types of cables, Cable jointing and termination kit, wires, light sources, resistors, capacitors, inductors. transformer, variac, d.c.power supply, insulators, insulating and conducting materials, Gang operated device	

IV	Wiring and luminaries Batten wiring, plastic casing and capping wiring, wooden casing and capping wiring, cleat wiring, conduit wiring, concealed conduit wiring, Wiring of 40 W fluorescent lamp Halogen lamp, sodium vapor lamp, LED lamp, Metal Halide lamps, mercury lamp
V	Overhauling of a motor / generator (hands on experience) Induction motor, synchronous motor, brushless DC motor, dc motor, single phase, three phase Motor rewinding Design and fabrication of reactor/ electromagnet for different inductance values. Design and fabrication of single phase Induction motor / three phase induction motor / alternator,
VI	Electric vehicle and batteries Brushless DC motor, Reluctance motor, Synchronous reluctance motor Harness wiring, Maintenance of electric vehicle, Battery management system
VII	Electric motors <ol style="list-style-type: none"> 1. Dismantle and assemble any available electric motor from above list 2. Removing the old winding of motor 3. Familiarity with rewinding machine 4. Rewinding of electric motor. 5. Maintenance of motor for different faults.
VIII	Domestic appliances for Heating purpose - Water heater, Geyser, Room heater, Electric iron, Oven, Microwave oven <ol style="list-style-type: none"> 1. Maintenance of water heater, 2. Maintenance of Geyser 3. Maintenance of room heater for different faults. 4. Dismantle and assemble the electric iron. 5. Maintenance of electric iron for different faults. 6. Maintenance of oven 7. Maintenance of microwave oven Domestic appliances for Cooling purpose - Refrigerator, Air conditioner <ol style="list-style-type: none"> 1. Maintenance of refrigerator 2. Maintenance of water cooler 3. Check and replace thermostat and relay of refrigerator. 4. Maintenance of window air conditioner 5. Split air conditioner 6. Central air conditioning system Domestic appliances using Motors - Mixer, Grinder Washing machine, ceiling fan, table fan, blower fan, water pump <ol style="list-style-type: none"> 1. Dismantle and assemble the ceiling fan. 2. Dismantle and assemble the table fan. 3. Dismantle and assemble the blower fan. 4. Connection of table and ceiling fans with regulators. 5. Maintenance of ceiling and table fan for different faults 6. Testing of different parts of washing machine. 7. Preventive Maintenance and maintenance of of water pump, 8. Preventive Maintenance and maintenance of washing machine for different faults. 9. Dismantle and reassemble mixer and grinder. 10. Check and replace thermostat and relay of refrigerator. 11. Check the internal connections and identify the fault in microwave oven. 12. Maintenance of refrigerator for different faults. 13. Maintenance of oven for different faults. 14. Maintenance of mixer and grinder for different faults. Domestic appliances for Energy storage - SMPS, UPS <ol style="list-style-type: none"> 1. Practical study of SMPS. 2. Practical study of UPS. 6. Practical study of home inverter.
IX	Electrical workshop visit Study of trouble shooting of electrical equipment based on actual visit to repair workshop.
	List of experiments / jobs to be prepared by students Note : -List of practicals / jobs is not restricted to following topics. Faculty can add new experiment / job related to subject to encourage project based learning. <ol style="list-style-type: none"> 7. Students have to prepare any one job from each group of the given list
	Group 1 wiring and cables

	<ol style="list-style-type: none"> 1. Prepare a batten wiring sample 2. Prepare conduit wiring sample 3. Staircase wiring model 4. Go down wiring model 5. Drawing cross sectional view of different types of cables. <p>Group 2 Rewinding</p> <ol style="list-style-type: none"> 6. Rewinding of choke 7. Manufacturing small transformer <p>Group 3 Renewable Generation</p> <ol style="list-style-type: none"> 8. Preparation of kit for application of small solar panel 9. manufacturing of small horizontal axis wind turbine model 10. manufacturing of small vertical axis wind turbine model <p>Group 4 maintenance of home appliance</p> <ol style="list-style-type: none"> 11. Maintenance of Ceiling fan 12. Maintenance of table fan <p>Group 5 laboratory equipment maintenance</p> <ol style="list-style-type: none"> 13. Maintenance of dimmerstat 14. Dismantle and assemble any available electric motor from above list 15. Study of electricity bill, computation of electricity bill for home for given load 16. Study of specification of all electrical equipment like motors, , generator, transformer, appliances <p>Group 6 charger and battery</p> <ol style="list-style-type: none"> 17. Power supply for charging mobile phones 18. Energy audit preliminary energy audit of any industry 19. Maintenance of battery lead acid battery. Keep level of acid in the lead acid battery using distilled water <p>20. Group 6 load bank and earth resistance</p> <ol style="list-style-type: none"> 21. Preparation of lamp bank with facility of different types of connections 22. Preparation of inductive lamp with facility of different types of connections 23. Preparation of 3 phase Capacitive bank 24. preparation of bridge rectifier using bread board 25. Measurement of earth resistance with earth tester for different types of soils like sand dry soil, wet soil <p>Group 7 maintenance of electrical accessories</p> <ol style="list-style-type: none"> 26. Development of small solar pumping system model 27. Dismantling and assembly of relay 28. Dismantling and assembly of contactor 29. Development of extension board <p>Group 9 industrial visit</p> <ol style="list-style-type: none"> 8. Industrial visit cable manufacturing plant/ transformer manufacturing plant
	<p>Project based learning:</p> <ol style="list-style-type: none"> 1. Prepare a batten wiring sample 2. Prepare conduit wiring sample 3. Rewinding of choke 4. Manufacturing small transformer 5. Preparation of kit for application of small solar panel 6. Industrial visit cable manufacturing plant/ transformer manufacturing plant 7. Maintenance of Ceiling fan 8. Maintenance of table fan 9. Maintenance of dimmerstat 10. Dismantle and assemble any available electric motor from above list 11. Staircase wiring model 12. Go down wiring model 13. Study of electricity bill, computation of electricity bill for home for given load 14. Measurement of earth resistance with earth tester for different types of soils like sand dry soil, wet soil 15. Power supply for charging mobile phones 16. Energy audit preliminary energy audit of any industry 17. Maintenance of battery lead acid battery. Keep level of acid in the lead acid battery using distilled water 18. Preparation of lamp bank with facility of different types of connections 19. Preparation of inductive lamp with facility of different types of connections 20. preparation of bridge rectifier using bread board 21. manufacturing of small horizontal axis wind turbine model 22. manufacturing of small vertical axis wind turbine model

	23. Development of small solar pumping system model 24. Dismantling and assembly of relay 25. Dismantling and assembly of contactor 26. Development of extension board 27. Study of specification of all electrical equipment like motors, , generator, transformer, appliances 28. Drawing cross sectional view of different types of cables.

Bharati Vidyapeeth Deemed to be University, Pune
Faculty of Engineering & Technology
Programme :B.Tech (Electrical Engineering) Sem – II (2021 Course)

Mathematics for Electrical Engineering

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours/Week	End Semester Examination : 60 Marks	Theory : - 04
Tutorial: 01 Hours/Week	Continuous Assessment: 40 Marks	Tutorial : - 01
		Total : - 05

Course Pre-requisites:

The Students should have knowledge of

Algebra of matrices, probability and numerical methods for algebraic equations.

Course Objectives:

To study

- Rank of matrix and test consistency of system of linear equations.
- Fourier series and Fourier transform technique.
- Finite difference methods, probability theory and graph theory.

Course Outcomes: Students will be able to

1. Understand rank of matrix and test consistency of system of linear equations.
2. Understand to represent periodic function as Fourier series.
3. Understand the methods to find Fourier and Z transform.
4. Understand various numerical technique for ordinary and partial differential equation..
5. Understand the hypothesis techniques.
6. Understand the concept of graph and its applications of tree.

UNIT - I	Linear Algebra: Matrices:	(08 Hours)
	Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering	
UNIT - II	Fourier Series and its applications:	(08 Hours)
	Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis	
UNIT - III	Fourier Transform and Z-Transform:	(08 Hours)
	Fourier Transform (FT): Complex Exponential Form of Fourier series, Fourier Integral Theorem, Sine & Cosine Integrals, Fourier Transform, Fourier Sine and Cosine Transform and their Inverses. Introductory Z-Transform (ZT): Definition, Standard Properties, ZT of Standard Sequences and their Inverses. Solution of Simple Difference Equations	
UNIT - IV	Finite Difference Methods:	(08 Hours)
	Finite difference methods for solving second order two - point linear boundary value problems - Finite difference techniques for the solution of two dimensional Laplace's and Poisson's equations on rectangular domain – One dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods – One dimensional wave equation by explicit method.	
UNIT - V	Probability and Probability Distributions:	(08 Hours)
	Probability, Bayes Theorem, Probability density function, Probability distributions: Binomial, Poisson, Normal, Test of hypothesis: Chi-square test, t-test.	
UNIT - VI	Graph theory:	(08 Hours)
	Introduction to graphs, graph terminology, representing graphs and graph isomorphism, connectivity, Euler and Hamilton paths, planar graphs, graph coloring, introduction to trees, application of trees.	

Project based learning:

1. Eigen values and Eigen vectors
2. Cayley Hamilton theorem
3. System of linear equations
4. Fourier Series
5. Harmonic Analysis
6. Wave equation
7. One Dimensional Heat Equation
8. Two Dimensional Heat Equation

9. Coefficient of variation
10. Reliability of regression estimates
11. Chi square test
12. Theoretical probability distribution
13. Bayes theorem
14. Isomorphism of graphs
15. Coloring of graphs
16. Planer graph

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Electro-Chemistry

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours/Week	End Semester Examination : 60 Marks	Theory : - 03
Practical: 02 Hours/Week	Continuous Assessment: 40 Marks	Practical : - 01
	Term Work: 50 Marks	Total : - 04

Course Pre-requisites:

The Students should have knowledge of

Basic understanding of Chemistry, Electrochemical series, Electrode potential, Primary and secondary cells.
Definition of corrosion, Terms related Nano-science.

Course Objectives:

- To develop the interest among the students regarding chemistry and their applications in engineering.
- To develop confidence among students about chemistry, how the knowledge of chemistry is applied in technological field.
- The student should understand the concepts of chemistry to lay the groundwork for subsequent studies in the field such as Electrical Engineering.

Course Outcomes: Students will be able to

1. Understand the concept of the battery with its applications.
2. Understand different types of Hydrogen storage systems for various engineering applications.
3. Understand and apply the knowledge of Processes of nanotechnology.
4. Apply the knowledge of industrial chemical process to study process instrumentation with safety.
5. Understand types of corrosion control measures for various engineering applications.
6. Understand importance of Green Chemistry for Clean Technology.

UNIT - I	Battery and its Types:	(06 Hours)
	Introduction, Batteries and Battery Technology- characteristics, specifications and applications, Construction and Working of - Acid and Alkaline Storage Battery, Dry Cell, Lead acid battery, Coin Cell Batteries, Ni-Cd Batteries, Ni-MH Batteries, Li-Ion Batteries, Li-Po Batteries. Basic Maintenance of Batteries.	
UNIT - II	Energy Storage Systems:	(06 Hours)
	Introduction, Fuel cell, Types and Examples of Fuel Cells, Applications and limitations of Fuel Cells, Flywheel energy storage system. Hydrogen storage with types and reactions:- Physical storage- Metal Hydride and Carbon nano-fibers; Chemical storage :- Sodium boro-hydride and Alkali metal hydrides.	
UNIT - III	Nano-Science and Technology:	(06 Hours)
	Introduction, Nanotechnology applications -Energy sector:- Nano-batteries, Wind power generations – nano-generators, Solar paints or photovoltaic paints – can replace solar panels and Electronic sector:- Nano-RAM etc. Material self assembly, Molecular Vs material self assembly, Self assembling materials, Two dimension assemblies, Meso-scale self assembly (MESA), Coercing colloids, Processes of nanotechnology, Processes used in bottom up approach [sol-gel processing, chemical vapor deposition (CVD), plasma or flame spraying synthesis, laser pyrolysis] Nano-material, Nano-crystals,/Nano-particles, Nanostructure.	
UNIT - IV	Industrial Chemical Process:	(06 Hours)
	Introduction, classification of chemical industries, material of construction and selection of materials, process instrumentation, safety, fire protection and waste disposal, Electro-thermal industries: Introduction, classification and advantages of electric furnace.	
UNIT - V	Protective Coatings:	(06 Hours)
	Introduction, Metallic coatings, Hot dipping :- Galvanising and Tinning Anodizing, Electroplating, Methods of cleaning articles before electro-deposition, Electroplating methods, Electro-less plating, Some other metallic coatings, applications of protective coatings in electrical industry, Chemical conversion coatings, Organic Coatings, Paints, Varnishes, Enamels, Special paints.	
UNIT - VI	Green Chemistry for Clean Technology:	(06 Hours)
	Introduction, Twelve Principles of Green chemistry, Efficiency parameters of reactions, numerical on atom economy, Synthesis by using Traditional and Green pathway for Adipic acid and Indigo, Disadvantages and Advantages related to synthesis method, Green solvents (Ionic liquid supercritical	

	CO ₂) and products from natural materials.	
Term Work:		
The term work shall consist of record of all eight experiments from below list.		
1.	Variation of cell potential in Zn/Zn ²⁺ Cu ²⁺ /Cu with change in concentration of electrolytes (CuSO ₄ or ZnSO ₄) at room temperature.	
2.	Setting of a Galvanic Cell and determination of cell voltage.	
3.	Synthesis of Ni-SiO ₂ nano-composites by Sol-Gel technique.	
4.	To obtain metallic coating on base metal by using the methods, Electroplating and Electro-less plating.	
5.	Determination of rate of corrosion of aluminium in acidic and basic medium.	
6.	Preparation of Grignard Reagent with A Greener Alternative.	
7.	To coat copper and zinc on iron plate using electroplating.	
8.	Colloidal synthesis of 2-6 or 3-5 semiconductor quantum dots nano-particles.	
Project based learning: Students have to complete any six assignments from the list given below:		
1.	Assignment on Acid and Alkaline Storage Battery, Dry Cell and Lead acid battery.	
2.	Assignment on Hydrogen storage with types and reactions.	
3.	Assignment on Processes used in bottom up approach.	
4.	Assignment on material of construction and selection of materials in Industrial chemical process.	
5.	Assignment on Coin Cell Batteries, Ni-Cd Batteries and Ni-MH Batteries.	
6.	Assignment on Molecular Vs material self assembly.	
7.	Assignment on Organic Coatings, Paints, Varnishes, Enamels, Special paints for corrosion prevention.	
8.	Assignment on types of Hot dipping :- Galvanising and Tining.	
9.	Assignment on Green solvents and products from natural materials.	
10.	Assignment on Synthesis by using Traditional and Green pathway for Adipic acid and Indigo.	
Text Books:		
1.	Engineering Chemistry, Dhanpat Rai & Sons, Delhi, 1992.Jain P.C & Jain Monica	
2.	Introduction to Nanotechnology, C. P. Poole Jr. , F. J. Owens, Wiley Interscience, 2003	
3.	Nanotechnology Science, Innovation and Opportunity, L. E. Foster, Pearson Education, 2007	
4.	Engineering Chemistry- Fundamentals and applications, Cambridge Publishers - 2015.Shikha Agarwal	
5.	A Text Book of Engineering Chemistry, Shashi Chawla, Dhanpat Rai & Co, 2004

4.	Environmental Chemistry – A. K. De, 5th Edition (New age international publishers)	
5.	Environmental Chemistry with Green Chemistry A. K Das , Books and Allied (P) Ltd	
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Instrumentation and Measurements		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours/Week	End Semester Examination: 60 Marks	Theory: 04
Practical: 02 Hours/Week	Continuous Assessment: 40 Marks	Practical: 01
	TW: 25 Marks PR: 25 Marks	Total: 05
Course Pre-requisites:		
The Student should have knowledge of		
1.	Basic electrical Engineering Parameters such as Voltage, Current, Power, Energy, etc.	
Course Objectives:		
	This course introduces knowledge about electrical measurements and instrumentation. The course is designed to learn different methods of measurements of various electrical parameters and also to learn the different physical parameters with the help of the various measurement and instrumentation techniques.	
Course Outcomes: After learning this course students will be able to		
1	Explain the importance of measurement and able to find the resistance, inductance and capacitance using various methods.	
2	Explain the construction, working principle of wattmeter and Energy meter and apply the knowledge to measure the power and energy.	
3	Draw block diagram, state specifications, functions of various digital/automated meters, harmonic analyzer. Observe the waveforms and measure the voltage, current, phase and frequency on CRO and to use DSO.	
4	Define, classify transducers and measure the displacement, level and flow using various methods.	
5	Explain principle of operation, characteristics of Pressure, temperature, velocity transducers and different methods of measurement.	
6	Illustrate and explain types of display devices and recorders.	
UNIT – I	Measurement of circuit parameters	(08 Hours)
	<p>Introduction: Classification of measuring instruments, Static characteristics: Error in measurements, sources of error. Dynamic characteristics: standard. Instrument transformers.</p> <p>Measurement of Resistance – Classification of resistances, Measurement of medium resistance – Ammeter-voltmeter method, Wheatstone bridge. Measurement of Low resistance – Kelvin Double bridge. Measurement of high resistance – difficulties, use of guard circuit, Methods: direct deflection, loss of charge, Megger. Measurement of earth resistance – Fall of potential method, earth tester. Localization of cable faults.</p> <p>Measurement of Inductance and Capacitance</p> <p>AC Bridges: Introduction, sources and detectors for ac bridge, general equation for bridge balance. General form of ac bridge. Measurement of Inductance: Maxwell’s Inductance, Hay’s bridge, Anderson’s Bridge, Owen’s bridge.</p> <p>Measurement of Capacitance- De Sauty’s bridge, Schering Bridge, High voltage Schering bridge.</p>	
UNIT - II	Measurement of Power and Energy	(08 Hours)
	<p>Measurement of Power: Construction, working principle, torque equation, advantages/disadvantages, errors and their compensation of dynamometer type wattmeter, low power factor wattmeter, Active & reactive power measurement in three phase balanced & unbalanced system (one wattmeter and two wattmeter methods), Power Measurement using Instrument Transformer, Three Phase wattmeter.</p> <p>Measurement of energy: Energy Meters in AC circuits, Single Phase Induction Type Energy Meter - Construction, principle of operation, torque equation of induction type energy meter, errors and adjustments. Three phase three wires, and three phase four wire energy meter, electronic energy meter</p>	
UNIT - III	Electronic Devices and Signal Analyzer’s	(08 Hours)
	<p>Electronic Voltmeters and their Advantages, Vacuum Tube Voltmeters, difference Amplifier Type Voltmeters, DC Voltmeters with direct Coupled Amplifier, Measurement of Power at Audio and Radio Frequencies. Concept of: Numeric meter & its types (TOD, ABT, Prepaid & panel mounted meters. Measurement of power & energy by sampling technique automatic meter reading (AMR) and advanced metering infrastructure (AMI), Meter reading instrument (MRI). Wave Analyzers – Frequency Selective Wave Analyzers and Heterodyne Wave Analyzers and its applications.</p>	

	Harmonic Distortion Analyzer, Spectrum Analyzer, Standing Wave Ratio, Power Analyzer. CRO and Digital Storage Oscilloscope – Principle of operation and waveform reconstruction.	
UNIT - IV	Displacement, Level and Flow Measurement	(08 Hours)
	Introduction to Transducers, classification, basic requirements for transducers and Advantages of Electrical Transducers. Displacement measurement: Potentiometer as displacement transducer, Strain Gauge: Theory of Strain Gauges, Types of strain gauges: Un-bonded and Bonded types their construction, working, advantages and disadvantages, load cell, LVDT & RVDT – construction, working, application, null voltage, specifications, advantages/disadvantages, effect of frequency on performance. Capacitive transducers – Advantages, Disadvantages and Applications. Level measurement: Introduction and importance of level measurement, level measurement methods: mechanical, hydraulic, pneumatic, Electrical types of level gauges using resistance, capacitance, nuclear radiation and ultrasonic sensors Measurement of flow – Rate of flow, Turbine Meter, Electromagnetic Flow Meters, Hot Wire Anemometer, Ultrasonic Flow Meter.	
UNIT - V	Pressure, Temperature and Velocity Measurement	(08 Hours)
	Pressure Measurement: Introduction, Types of Pressure Measurements Devices, Pressure Measurement using Electrical Transducers as Secondary Transducers. Low Pressure (vacuum) Measurement – Thermocouple Vacuum Gauge, Pirani Gauges and Ionization Type Vacuum. Temperature Measurement: Electrical Resistance Thermometer, Platinum Resistance Thermometer, Semiconductor Thermometers, Thermocouples, Thermistors, Quartz Crystal Thermometers, Bimetallic Thermometers. Electrical methods of temperature measurement – signal conditioning of industrial RTDs and their characteristics – 3 lead and 4 lead RTDs. Measurement of Velocity – Measurement of Linear Velocity: Electromagnetic transducers, Moving Magnet Type, Moving Coil Type, Measurement of Angular Velocity: Electrical Tachometers. Electromagnetic Tachometer Generators. Photoelectric Tachometer.	
UNIT - VI	Display Devices and Recorders	(08 Hours)
	Display Devices: Introduction, electrical Indicating Instruments. Digital Instruments: Advantages of Digital Instruments. Digital versus Analog Instruments. Digital Display Methods, Digital display Units, Rear Projector Display, Light Emitting Diodes (LED), Liquid Crystal Diodes (LCD), Resolution, Sensitivity, accuracy and specifications of Digital Meters. Recorders: Necessity of Recorders. Recording Requirements. Analog Recorders. Graphic Recorders. Strip Chart Recorders, Null Type Recorders, X-Y Recorders, Ultraviolet Recorders, Direct Recorders.	

Term Work:

The term work shall consist of record of minimum eight experiments.

3. Measurement of resistance by Kelvin double bridge/ Wheatstone bridge/Ammeter-voltmeter method
4. Measurement of capacitance and loss angle by Schering Bridge.
5. Measurement of inductance by Anderson's bridge/ Maxwell's Inductance Bridge.
6. Measurement of resistance, capacitance and inductance using LCR meter.
7. To measure power in three phases balanced load by one wattmeter method.
8. To measure power in three phase balanced/ unbalanced load by two wattmeter method.
9. To measure reactive power in three phase circuit by one wattmeter method.
10. To calibrate single phase energy meter at (i) unity power factor (ii) 0.5 lagging power factor (iii) 0.5 leading power factor (analog /Digital)
11. Measurement of Voltage, current and resistance using digital voltmeter and digital multimeter.
12. To study and analyze the various electrical parameters using Power Analyzer.
13. To study the observation of waveforms on CRO, measurements of voltage and current, measurement of phase and frequency using CRO / digital storage oscilloscope
14. Displacement measurement using LVDT.
15. Strain measurement using strain gauge.
16. Study of process control application of using the instrumentation kit.
17. Measurement of Pressure using Bellows, Bourdon gauge, Diaphragm.
18. Calibration of vacuum gauge using vacuum gauge tester.
19. Characterization of RTD (PT100)

Project Based learning topics

1. Measurement of voltage and current using instrument transformers
2. Calibration of voltmeter, ammeter, wattmeter (Using power analyser)

3. Measurement of earth resistance
4. Measurement of insulation resistance.
5. Design / development / simulation of measurement of any physical parameter using transducer/s.
6. Demonstration of 7 segment LED for measurement
7. Selection of digital instrument for specific application using user manual / data sheet

Text Books:

1. A Course in Electrical and Electronic measurements & Instrumentation – by A. K. Sawhney, Dhanpat Rai & Sons.
2. Electronic Instrumentation: H.S. Kalsi – THM, 2nd Edition 2004.
3. A Course in Electronic and Electronic measurements by J. B. Gupta, S. K. Kataria & Sons.

Reference Books:

1. Electrical Measurement & Measuring Instruments Fifth edition, by E. W. Golding & Widdies, A. H. Wheeler & Co. Ltd.
2. Electronic measurement and instrumentation by Dr. Rajendra Prasad, Khanna Publisher, New Delhi.
3. Introduction to Measurements and Instrumentation, Second Edition by Ghosh, PHI Publication.
4. Introduction to Measurements and Instrumentation by Anand. PHI Publication

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Industrial Safety Practices

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS:
Lectures: 03Hours / Week		End Semester Examination: 60 Marks	Theory:03
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	Practical: 01
		Term Work: 25 Marks Oral: 25 Marks	Total: 04
Course Pre-requisites:			
Students should have basic knowledge of safety practices			
Course Objectives:			
1. To make students aware about the hazards while working in industry and respond appropriately in an emergency.			
2. To help prevent workplace injuries, illnesses and fatalities.			
3. To reduce and remove existing dangers to improve working conditions.			
Course Outcomes:			
Students are expected to:			
1	To understand importance of safety		
2	To understand process safety management		
3	To evaluate safety in hazardous area		
4	To apply the knowledge of Industrial safety engineering		
5	To review of IE rules and acts and their significance		
6	To analyse case studies on Industrial Safety Practices		
Topics covered			
UNIT - I	Importance of Safety: Health and environment. Health safety and environmental policy, fundamentals of safety, classification of accidents, Managements responsibility, objectives of safety management, National safety council, Employees state insurance act 1948, approaches to prevent accidents, principles of safety management, safety organization, safety auditing, maintenance of safety, measurements of safety performance, industrial noise and noise control, Industrial Psychology, Industrial accidents and prevention.		(06 Hours)
UNIT - II	Process safety management: Process safety management, legal aspects of safety, safety with respect to plant and machinery, the explosive act 1884, Petroleum act 1934, personal protective equipment, classification of hazards, protection of respiratory system, work permit system, hazards in refineries and process plants, safety in process plants, pollution in some typical process industry. Safe working practices, housekeeping, safe working environment, safety device and tools, precaution in use of ladders, safety instruction during crane operation, safety instruction for welding, burning and cutting and gas welding equipment, electrical safety, case studies, safety in use of electricity, electric shock phenomena, occurrence of electric shock, medical analysis of electric shock and its effect, safety procedures in electric plants, installation of Earthing system.		(06 Hours)
UNIT - III	Safety in hazardous area: Hazard in industrial zones, classification of industrial Enclosures for gases and vapors. Mechanical, Chemical, Environmental and Radiation hazards, Machine guards and safety devices, slings, load limits, lifting tackles and lifting equipment, hydrostatic test, Chemical hazards, industrial toxicology, toxic chemicals and its harmful effects on humans, factors influencing the effect of toxic materials, Units of concentration, control measure, environmental hazards, devices for measuring radiation, safety analysis and risk analysis, risk management, First aid, Safety measures to avoid occupational diseases.		(06 Hours)
UNIT -IV	Industrial Safety Engineering: Industrial Lighting : Purpose of lighting, Uses of good illumination, recommended optimum standards of illumination, Design of lighting installation, Standards for lighting and colour. Vibration and Noise : Activities related to vibrations, its impact on human health, abatement Sources, effects of noise on man, Measurement and evaluation of noise, Silencers, Practical aspects of control of noise. Safety at various Industries: Agro-Industry, Sugar Industry, Textile Industry etc.		(06 Hours)
UNIT-V	Review of IE rules and acts and their significance: Objective and scope –ground clearances and section clearances – standards on electrical safety -		(06 Hours)

	safe limits of current, voltage –Rules regarding first aid and fire fighting facility. The Electricity Act, 2003.	
UNIT-VI	Case studies on Industrial Safety Practices: Case studies in various industries like: Processing industry, Hazardous material industry, Engineering applications industry etc	(06 Hours)
Practicals:		
List of Practical's to be performed in the laboratory:		
<ol style="list-style-type: none"> 1. Demonstration and training of how to use breathing apparatus, 2. Demonstration and training of Emergency evacuation drill, 3. Train students how to rescue employees using emergency rescue equipments inside confined space. 4. With the help of gas detector train students check the level of oxygen and other, Gases in industries, 5. Training of using of windo meter to measure speed level of wind, 6. Train students use noise level meter and find out different level of noise of different equipments and teach them how to be safe, 7. Train students how to use personal protective equipment , 8. First Aid training and demonstration. 		
Project based learning:		
<ol style="list-style-type: none"> 1. Study of Home And Industrial Safety Using Fire And Gas Detection System kit/system 2. Industrial IoT Safety project (IIOT): Industrial Internet of Things using Arduino & ESP8266 3. Study of Anti-Collision Light : LGKT017 Simple Circuit Project 4. Study of First Aid Kits & Construction Safety 5. Study of Personal Protective Equipment (PPE) Kit for industry 6. Study of Electrical Safety Kit for industry 7. Case studies on – Learning industrial Safety through films/Videos 8. Case studies on – Learning industrial Safety through posters/charts 9. Case studies on – Learning industrial Safety through periodicals, research publications 10. Conducting electric safety audit of any institute/Engineering college 11. Conducting power quality audit of any institute/Engineering college 12. Auto power supply control from 4 different sources 13. Over Voltage/Under Voltage Electrical Appliance Protector 14. ATM Machine Gate Security System 15. Do-it-yourself intelligent camera 		
Note:		
The term work shall be the record of minimum eight experiments performed from the above list.		
Project based learning: Student shall demonstrate minimum one concept based on syllabus topic.		
Reference Books:

Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Object Oriented Programming with C++		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours/Week	End Semester Examination: 60 Marks	Theory : - 04
Practical: 02 Hours/Week	Continuous Assessment: 40 Marks	Practical : - 01
	TW: 25 Marks, PR : 25 Marks	Total : - 05
Course Pre-requisites:		
The Students should have knowledge of		
1.	C Programming	
Course Objectives:		
	This course introduces knowledge about language C++ and various parameters associated with programming with C++. The object oriented programming with C++ plays important role in creating platform for other advanced programming languages. This course is considered as strong foundation for software related advancements.	
Course Outcomes: Students will be able to		
1.	Define and describe the basic terms and ideas about object oriented approach along with important paradigms.	
2.	Illustrate the function of various classes and objects under object oriented approach with C++	
3.	Analyze the significance of inheritance and its application.	
4	Describe polymorphism along with hierarchies, categorization, methods of polymorphism.	
5	Describe various files and examine them under object oriented approach followed by exception handling.	
6	Explore concept of pointer, arrays and their significance in C++ programming.	
UNIT - I	Introduction to Object Oriented Programming:	(08 Hours)
	Introduction to Object Oriented Approach, Overview of other paradigms {Functional, Data decomposition}, Basic terms and ideas about Abstraction, Encapsulation, Inheritance, Polymorphism, Review of C, Difference between C and C++, cin, cout, new, delete, operators.	
UNIT - II	Classes and Objects:	(08 Hours)
	Encapsulation, Information hiding, Abstract data types, Object & classes, Attributes, Methods, C++ class declaration, State identity and behavior of an object, Constructors and destructors, Instantiation of objects, Default parameter value, Object types, C++ garbage collection, Dynamic memory allocation, Meta class / abstract classes.	
UNIT - III	Inheritance:	(08 Hours)
	Inheritance, Defining derived classes & Visibility modes, Single, Multilevel, Multiple, Hierarchical and Hybrid inheritance, Virtual base classes & Abstract classes- , Constructors in derived classes, Nesting of classes.	
UNIT - IV	Polymorphism:	(08 Hours)
	Composition Vs. Classification, Hierarchies, Polymorphism, Categorization of polymorphism techniques, Method polymorphism, Polymorphism by parameter, Operator overloading, Parametric Polymorphism.	
UNIT - V	Files and Exception Handling in C++ programming:	(08 Hours)
	Object oriented Language, Application of OOP, Introduction to C++, Application of C++, Program Features, Comments, Output Operators, Iostream File, Namespace, Return Type of main (), Exception handling, Generic Classes, Throwing an exception, catching an exception: The try block, Exception handlers, Termination vs. Resumption, Exception specification, rethrowing an exception, uncaught exceptions, Standard exceptions, Programming with exceptions.	
UNIT - VI	Pointers:	(08 Hours)
	Introduction to Pointer, Declaration and Initialization of Pointer; Dynamic memory allocation/deallocation operators: new, delete; Pointers and Arrays: Array of Pointers, Pointer to an array (1 dimensional array), Function returning a pointer, Reference variables and use of alias; Function call by reference. Pointer to structure: De-reference/Deference operator: *, ->; self referential structure.	
Term Work:		
The term work shall consist of record of minimum eight experiments from below list.		
1. Write a C++ Program to display Names, Roll No., and grades of 3 students who have appeared in the examination. Declare the class of name, Roll No. and grade. Create an array of class objects. Read and display the contents of the array.		

2. Write a C++ program to declare Struct. Initialize and display contents of member variables.
3. Write a C++ program to declare a class. Declare pointer to class. Initialize and display the contents of the class member.
4. Given that an EMPLOYEE class contains following members: data members: Employee number, Employee name, Basic, DA, IT, Net Salary and print data members.
5. Write a C++ program to read the data of N employee and compute Net salary of each employee (DA=52% of Basic and Income Tax (IT) =30% of the gross salary).
6. Write a C++ to illustrate the concepts of console I/O operations.
7. Write a C++ program to use scope resolution operator. Display the various values of the same variables declared at different scope levels.
8. Write a C++ program to allocate memory using new operator.
9. Write a C++ program to create multilevel inheritance. (Hint: Classes A1, A2, A3)
10. Write a C++ program to create an array of pointers. Invoke functions using array objects.
11. Write a C++ program to use pointer for both base and derived classes and call the member function. Use Virtual keyword.

Assignments: (Project based learning)

1. Phone book
2. Temperature conversion table
3. Calculator
4. Games (Snake etc.)
5. Student data
6. Student report card system
7. Calendar
8. Personal Diary Management System
9. Bus reservation system
10. Library management system
11. Face detection using C++
12. Digital clock in C++
13. Attendance management system
14. Students' attendance system
15. Biometric system

Text Books:

4. OOP in C++, 3rd Edition, T. Gaddis, J. Walters and G. Muganda, Wiley Dream Tech Press.

Syllabus for Unit Test:

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Simulation And Programming

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: NA		End Semester Examination: 00 Marks	
Practical: 04		Continuous Assessment: 00 Marks	
		TW: 25 Marks PR: 25 Marks	Credit: 02
Course Pre-requisites:			
The Students should have knowledge of			
1.	Students should have knowledge of Fundamentals of Electrical Engineering, basic mathematics and basic computer operation		
Course Objectives:			
	The course introduces fundamental concepts of simulation and programming for problem solving		
Course Outcomes: After learning this course students will be able to			
1	Describe the concept of simulation		
2	Identify and apply knowledge of software simulation		
3	Describe and Analyze Programming Techniques using application software's.		
4	Describe fundamental concepts of MATLAB Simulink		
5	Apply knowledge MATLAB Simulink in Electric Applications		
6	Elaborate the scope and applications of PCB design		
UNIT – I	Introduction to Simulation:		
	<p>What is simulation: Modeling basics, computer simulation (Popularity and advantages, different kinds of simulation), How simulation gets done (by hand, programming in general languages, simulation languages, high level simulators, Uses of simulations (past , present, future).</p> <p>Fundamentals of simulation: Goals of simulation study, Analysis options(educated guessing, queueing theory, mechanistic simulation), Pieces of simulation model(entities, attributes, variables, resources, queues, statistical accumulators, events, simulation clock, starting and stopping), Event driven hand simulation, Event and process oriented simulation Randomness in simulation, Simulation with spread sheets, conducting simulation studies.</p>		
UNIT - II	Software Tools and Simulation:		
	<p>Types of Analysis: Bias point, Time domain, AC Sweep, DC Sweep, Parametric, Monte Carlo, Noise analysis.</p> <p>Schematic Design: Introduction, Description of P-Spice, Types of analysis, Description of simulation software tools (like OrCAD / PROTEL / Proteus / Microcap) Schematic Description: Introduction, Input files, element values, Nodes, circuit elements, sources, output variables, format of circuit and output files, drawing the schematic, Design rule Check (DRC), Netlist details.</p>		
UNIT -III	Introduction to MATLAB programming:		
	Introduction, starting and ending a MATLAB session, Fundamentals of MATLAB programming (MATLAB variables, arrays, matrices, matlab operators- arithmetic, relational, logical, MATLAB graphics(plots, subplots, other types of plots), benchmarking and looping functions(branching functions, looping functions), miscellaneous functions(string function, input/output function), <i>examples on above topics</i> , advantages of MATLAB, limitations of MATLAB, various matlab commands & their explanation. Introduction to GUI.		
UNIT -IV	MATLAB Simulink Basics:		
	Introduction, Introduction to simulink, starting simulink, simple examples on starting a simulink, solving differential equations in simulink, Commonly used blocks, application block sets (power system toolbox) , user defined functions, Simulink modeling.		
UNIT - V	MATLAB Basic Electrical Engineering Applications:		
	Basic electrical engineering applications(introduction, elementary definitions, basic waveforms, average value -RMS value -peak value, ohms law, Kirchhoff's laws, independent and dependent Dc sources, series and parallel circuits, resonance phenomenon, network theorems, apparent power-active		

	power-reactive power, three phase source and load simulation, transformers. Application related to Wind and Solar.	
UNIT -VI	PCB Design and its Applications:	
	Simulation of following circuits: half wave & full wave rectifier, Zener shunt regulator, transistorized RC coupled amplifier, clipper and clamper. Introduction to PCB design.	
Term Work: The term work shall consist of record of minimum eight experiments and not limited to		
List of experiments:		
<ol style="list-style-type: none"> 1. Schematic drawing & component symbol creation 2. Hierarchical schematic drawing 3. Simulation and analysis (bias point analysis, time domain, AC sweep, DC sweep, parametric) of :RLC Circuit. 4. Experiments based on PCB design which would include component placement, setting design rules, auto routing and interactive routing. 5. Experiments based on noise analysis and Monte-carlo analysis 6. To simulate simple calculator that performs basic tasks such as addition, subtraction, multiplication and division with special operations like computing xy and x!. 7. To accept the number and Compute a) square root of number, b) Square of number, c) Cube of number d) check for prime, d) factorial of number e) prime factors 8. To accept two numbers from user and compute smallest divisor and Greatest Common Divisor of these two numbers. 9. To accept a number from user and print digits of number in a reverse order. 10. To input binary number from user and convert it into decimal number. 11. Experiment on unit 3: Listing of some common MATLAB commands and executing with examples 12. Experiment on unit 4 : Basic simulation projects 13. Experiment on unit 5: Solving network theorems using MATLAB 		
Project based learning:		
1) Project based on Network Theorems in MATLAB		
2) Design of Regulated Power supply in Proteus		
3) Design of Electronic circuitry for household applications in Proteus		
4) Design of Household applications on PCB		
5) Design of Electrical based applications in MATLAB		
Text book:		
1. M. H. Rashid 'Introduction to P-spice using OrCAD for circuits and Electronics' –Pearson Education		
Reference Books:

DC & AC Machines

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours/week	End Semester Examination: 60 Marks	Theory: 04
Practical: 02 Hours/week	Continuous Assessment: 40 Marks	Practical: 01
Tutorial: 1 Hour/Week	Practical: 25 Marks TW: 25Marks	Total: 05

Course Pre-requisites:

The Students should have knowledge of

- | | |
|-----------|--|
| 1. | Magnetic Physics, AC & DC Fundamentals |
| 2. | Basic laws of rotating machines like Faraday's Law, Lenze's Law, etc |
| 3. | Basics of Electrostatics and electromagnetic |
| 4. | Transformer operation |

Course Objectives:

This course introduces knowledge about rotating machines. The course is designed to learn DC and AC machines with their constructional feature, operating principles, performance characteristics and applications. Also, to learn the different tests on machines and various speed control techniques.

Course Outcomes: After learning this course students will be able to

- | | |
|----------|--|
| 1 | Describe the basics of dc machine, armature reaction, commutation, characteristics & applications of dc generators, dc motors & identify the different parts. |
| 2 | Apply the concepts of three phase induction motor and estimate the losses, different motor parameters. |
| 3 | Apply the concepts of induction machine and analyze the results using different tests, draw phasor diagram, state specifications. |
| 4 | Describe & identify the different parts of synchronous generators, different excitation systems, armature windings, estimate winding factor, impedance and reactance by different methods. |
| 5 | Draw the capability curves of synchronous generators; estimate the regulation by different methods and describe the methods of synchronizing alternators. |
| 6 | Describe working principle, characteristics and applications of synchronous motors |

UNIT – I	DC Machines	(06 Hours)
	Introduction, Basic Electromagnetic Laws, Emf induced in a coil rotating in a magnetic field, forces and torques in magnetic field systems, Energy balance, Energy in singly excited magnetic field systems. Construction of DC machines, E.M.F. equation of D.C. generator. Process of commutation & types, causes of bad commutation and remedies, Basic principle of working of DC motor, Significance of Back e.m.f., Torque equation, Types, characteristics and applications of d.c. motors, Starting, reversing and armature voltage and field control method of speed control, Armature reaction, Losses, efficiency, condition for maximum efficiency and maximum power output. Testing of DC motor: Brake test and Swinburne's test. Maintenance, types.	
UNIT - II	Induction Machines Part-I	(06 Hours)
	Construction of 3-phase induction motor, Concept of rotating magnetic field, Principle of Operation, Concepts of Speed & Slip, Frequency of rotor voltage & current, Power Flow Diagram & development of Equivalent Circuits, Losses, Relationship between rotor copper loss, rotor input & gross mechanical power developed, Efficiency, Torque–Slip/Speed characteristics, Effect of rotor resistance on Torque–Slip characteristics, Condition for maximum torque, Relations between starting, Full load & Maximum torque. Starters.	
UNIT - III	Induction Machines Part-II	(06 Hours)
	Open circuit and short circuit test, Circle diagram and computation of performance parameters, High Torque Cage Motors - Deep bar & Double cage rotor, Speed control mechanisms. Cogging & Crawling of induction motors, Applications. Maintenance of induction motor. Construction of single-phase induction motor, double revolving field theory, methods of self-starting and types: Resistance start, Capacitor start, Capacitor start-Capacitor run, Shaded Pole motor, equivalent circuit, torque-speed/slip characteristics, applications.	

UNIT - IV	Synchronous Generators Part-I	(06 Hours)
	Multiply excited magnetic field systems, Forces and torques in systems with permanent magnets, Dynamic equations, Winding in machines and materials used in electrical machines. Types of synchronous machines & their constructional features, Excitation Systems. Principle of working, Estimation of winding factor, EMF Equation, Rating of Generator, Generator on no load & balanced load, Armature reaction & its effect under load power factors, Synchronous Impedance, Equivalent Circuit & Phasor Diagram, Two Reaction Theory model, Estimation of Direct & Quadrature axes Synchronous Reactance by Slip Test, Phasor Diagram.	
UNIT - V	Synchronous Generators Part-II	(06 Hours)
	Power Flow (Transfer) Equations, Power – Power angle relation and Capability Curves of synchronous generators. DC resistance test, Open circuit Test & Short Circuit Test on synchronous generator, Determination of Voltage Regulation by direct load test & by Indirect Methods-EMF, MMF. Losses & Efficiency and Short Circuit Ratio. Parallel Operation of alternators - Necessity, Conditions, Concept of Infinite bus, alternators connected to infinite bus bar, Methods of synchronizing alternators (synchronizing lamps and synchro-scope), Significance of Synchronizing Power Coefficient.	
UNIT - VI	Three Phase Synchronous Motor	(06 Hours)
	Principle of operation, Methods of starting, Equivalent Circuit & Phasor Diagrams, Pull-in & Pull-Out Torque, Power Flow Equations, Operation with constant excitation & variable load and with Constant load & variable excitation (V Curves & Inverted V Curves), Phenomenon of Hunting & its remedies, Applications.	

Term Work:

The term work shall consist of record of minimum eight experiments. (Perform any 3 experiments from DC machines and any 2 experiments from induction machines and synchronous machines)

1. Identification of DC machine windings and resistances.
2. Speed control of D. C. Shunt motor by Armature and Field control.
3. Brake test on DC shunt motor
4. Swinburn's Test on DC shunt Motor.
5. Load Test on three phase induction motor
6. No load & Blocked Rotor Test on three phase induction motor: Determination of Equivalent Circuit Parameters/Plotting Circle diagram
7. Load test on single phase induction motor.
8. Direct loading test on alternator
9. Open circuit and short circuit test on alternator – regulation by emf and mmf method
10. Slip test on salient pole alternator – regulation by two reaction theory
11. Synchronization of alternator with bus bar
12. V-Curves of synchronous motor
13. Load test on synchronous motor

Project Based Learning :

1. Demonstration and operation of three and four point starter
2. Demonstration of reversing the direction of rotation of dc motor
3. Demonstration of verification of Electromagnetic laws
4. Demonstration of operation of Induction Motor as induction generator
5. To identify the windings of single phase induction motor, types of windings
6. MATLAB based project DFIG
7. Application based MATLAB Project:
 - i) Torque speed characteristics of DC Shunt motor for Centrifugal Pumps, Lifts, Weaving Machine, Lathe Machines, Blowers, Fans, Conveyors, Spinning machines, etc
 - ii) Torque speed characteristics of DC Series motor for vacuum cleaner, traction systems, sewing machines, cranes, air compressors etc.
 - iii) Analysis of performance characteristics of 3-phase induction motor – Squirrel Cage IM-for Pumps and submersible, Pressing machine, Lathe machine, Grinding machine, Conveyor, Flour mills, Compressor And other low mechanical power applications
Slip Ring IM-Steel mills, Lift, Crane Machine, Hoist, Line shafts and other heavy mechanical workshops etc
 - iv) Torque speed characteristics of single phase IM for fans, refrigerators, Air-conditioners, Vacuum cleaners, washing machines, centrifugal pumps, tools, small farming appliances, blowers etc
 - v) Similarly for Single phase IM
 - vi) Alternators

vii)	Synchronous motors
8.	Maintenance of Machines: Preparation of maintenance schedule of electrical motors of machine laboratory
9.	List the commonly used instruments for maintenance and find out the voltage between phases and between phase and neutral, test the continuity and insulation, measure earth resistance.
10.	List the commonly used tools for maintenance
11.	Dynamic Model of machines in MATLAB
Text Books:	
1.	Nagrath Kothari, "Electrical Machines", Tata McGraw Hill
2.	A. E. Fitzgerald, Charles Kingsley, Jr. Stephen D. Umans, "Electric Machinery", Tata McGraw Hill
3.	M.G. Say, " Alternating Current Machines", Pitman Publishing Ltd.
4.	Ashfaq Husain, "Electric Machines", Dhanat Rai & Co.

2.	B. H. Deshmukh, "Electrical Technology", NiraliPrakashan
3.	M. G. Say, "Alternating Current Machines", McGraw Hill
4.	A. S. Langsdorff, "Theory of Alternator Current Machinery", Tata McGraw Hill
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT – III
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI

Power System Engineering		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours/Week	End Semester Examination: 60 Marks	Theory : - 04
Practical: 02 Hours/Week	Continuous Assessment: 40 Marks	Practical : - 01
	Term Work : 25 Marks, Oral: 25 Marks	Total : - 05
Course Pre-requisites:		
The Students should have knowledge of		
1.	Electromagnetic energy conversion system	
2.	Electromagnetics and its applications	
Course Objectives:		
	This course introduces knowledge about electrical power generation, its transmission and distribution. The course is designed to learn different methods of power generation. Also it focuses on performance of transmission line and distribution system along with its design consideration.	
Course Outcomes: Students will be able to		
1.	Understand block diagrams and describe the function of components of various Power Generation techniques by Conventional energy Sources.	
2.	Understand block diagrams and describe the function of components of various Power Generation techniques by nonconventional energy Sources.	
3.	Define and analyze the significance of terms such as load factor , diversity factor etc on economics of power generation.	
4	Compute string efficiency, sag and R, L, C parameters of different types of transmission line. (Design transmission line model and understand mechanical components of transmission line.)	
5	Represent TEE and PI model of line and analyze the performance of transmission line.	
6	Explore different type of cables & its calculations along with the computation of performance of AC distribution.	
UNIT - I	Power Generation techniques by Conventional energy Sources	(08 Hours)
	Introduction to energy sources, selection of site – classification – general arrangements and operations – functions of each component – types of turbines – electric generators – advantages and disadvantages - list of major power stations : of Hydro electric , Thermal and Nuclear power plants in India with capacity. Basic layout and working of diesel and gas power plant. Concept of grid, types of grids.	
UNIT - II	Power Generation techniques by Non -Conventional energy Sources	(08 Hours)
	Different types of Nonconventional Energy Sources, Comparative benefits over conventional type, contribution of conventional & nonconventional energy sources, Solar energy – Its characteristics, basic concept of solar power plant, major solar power plants in India/world, Wind power plant– schematic arrangement - vertical axis, horizontal axis – electrical generator Hybrid solutions: Wind Turbine, diesel, WT-solar etc. – major wind farms in India / world, Power generation by bio gas, biomass, geothermal energy and tidal energy– its types, Magneto Hydro Dynamics (MHD), Concept of carbon credit.	
UNIT - III	Load Curves and Economic Aspects	(08 Hours)
	Load Curves: load curve – base load station and peak load station - demand factor – maximum demand – average demand – diversity of load – load factor – diversity factor – significance of high load factor & diversity factor – plant factor – capacity factor – connected load – load duration curve – integrated load duration curve – selection of units. (Simple numericals on various factors) Per capita energy consumption of developed & developing countries. Concept of cogeneration and captive generation.	
UNIT - IV	Design of Transmission Line	(08 Hours)
	Transmission Line Components and its types - Line Supports, Conductors, Insulators, Potential distribution over a string of insulators, methods of equalizing the potential, string efficiency. (Simple numericals) Circle Diagram Sag: Catenary curve – calculation of sag and tension – effects of wind and ice loading sag templates – vibration dampers for transmission lines. (Simple numericals) Corona and interference, Various effects – Skin, Proximity, Ferranti etc. Various Parameters of Transmission Line – Resistance, Inductance and capacitance and their calculation (Simple numericals). String efficiency and methods of improving string efficiency (Simple numericals).	

UNIT - V	Transmission Line Performance analysis :	(08 Hours)
	Circuit Representation of Transmission Line: Representation and performance of short, medium and long transmission line – Surge Impedance Loading (SIL), Characteristic Impedance, Generalized circuit constants: - Representation of tee and pi models of lines as two port networks – evaluation and estimation of ABCD constants (Simple numericals) –sending end and Receiving end.	
UNIT - VI	Underground Cables and Distribution System	(08 Hours)
	Underground Cables - Classification – construction - insulation resistance – capacitance – dielectric stress in single core cable (Simple numericals). Grading of cables. Laying of cables – Cable Terminations, cable jointing – causes of failure – cable faults and location of faults. Distribution System – Classification – A.C. distribution connection schemes - requirements of distribution system – design consideration – design of radial, ring distributors for concentrated, distributed loads.	
Term Work:		
The term work shall consist of record of minimum eight experiments from below list.		
<ol style="list-style-type: none"> 1. Measurement of A, B, C, D constants of short transmission line. 2. Measurement of A, B, C, D constants of Medium transmission line. 3. Measurement of A, B, C, D constants of Long transmission line. 4. Drawing Sheet on power generation by Conventional energy Sources 5. Drawing Sheet on power generation by nonconventional energy Sources 6. Drawing Sheet on types of insulator 7. Drawing Sheet on types of cables 8. Industrial visit to cable manufacturing company. 9. Industrial Visit report of HPS 10. Industrial Visit report of TPS / GAS PP 11. Industrial Visit report of WPS / Solar PP 12. Design analysis of transmission line model using any simulating software. 		
Project based learnings:		
<ol style="list-style-type: none"> 1. Sag calculations using MATLAB 2. String efficiency calculations using MATLAB 3. Load curve calculations using MATLAB 4. Creating small models of Hydroelectric power plant 5. Creating small models of Thermal power plant 6. Creating small models of Nuclear power plant 7. Creating small models of Solar power plant 8. Creating small models of Wind power plant 9. Creating small models of Solar-Thermal power plant 10. Creating small models of Gas-Turbine power plant 11. Creating small models of Biogas power plant 12. Creating small models of Biomass power plant 13. Creating small models of Diesel power plant 14. Creating small models of Geothermal power plant 15. Use of Google earth software to design of transmission line 		
Text Books:

3. A Course in Power Plant Engineering - Arrora, Domkundwar - Dhanpatrai & Co. Publications		
4. A Course in Electrical Power - Soni, Gupta, Bhatanagar - Dhanpatrai & Co. Publications		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Design of Electrical Installations		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours/Week	End Semester Examination: 60 Marks	Theory : 03
Practical: 02 Hours/Week	Continuous Assessment: 40 Marks	Practical: 01
	TW: 25 Marks	Total: 04
Course Pre-requisites:		
The Students should have knowledge of		
1.	Fundamentals of Electrical Engineering	
Course Objectives:		
	<ol style="list-style-type: none"> 1. To understand the basic concepts of regarding design of electrical installations. 2. To enable candidate to understand service connections, domestic commercial and industrial installations. 3. To understand practical aspects of transformer commissioning & HT/LT distribution lines. 	
Course Outcomes: After learning this course students will be able to		
1	Explain electrical installation design methodology.	
2	Develop and design of service connections.	
3	Develop design of domestic and commercial installation.	
4	Develop and design of industrial installation.	
5	Illustrating transformer commissioning and HT/LT distribution lines.	
6	Explain contract and tendering.	
UNIT – I	Electrical Installation Design Methodology	(06 Hours)
	General rules of electrical installation design, Installed power loads - Characteristics and Power loading of an installation, Connection to the MV utility distribution network, Connection to the LV utility distribution network, LV Distribution, Protection against electric shocks and electrical fires, Sizing and protection of conductors, Energy Efficiency in electrical distribution, Characteristics of particular sources and loads, Green and economical energy-Photovoltaic installation.	
UNIT - II	Design of Service Connections	(06 Hours)
	Concept of service connection. Types of service connection and there features. Methods of installation of service connections. Difference between overhead and underground service connection. List of materials and accessories for service connections. IE rules for service connections. Electrical panel designing. Estimation and costing of service connections.	
UNIT -III	Design of Domestic and Commercial Installation	(06 Hours)
	Concept of domestic/commercial installation. The general IS codes regarding internal wiring. General rules while executing internal wiring of domestic/commercial installation. Computing the conductor size and the procedure for determines the size. Define the circuits and sub circuits. Drawing the layout of wiring. Describing the preparation of the estimate and cost of materials used for internal wiring of domestic/commercial buildings. Earthing in domestic/commercial installations. Sequence to be followed to prepare estimation. Compute simple problems. Study of domestic/commercial electricity bill.	
UNIT -IV	Design of Industrial Installation	(06 Hours)
	Concept of motor wiring circuit and single line diagram. Guidelines about power wiring and motor wiring. Design considerations of electrical installation in industry/factory/ workshop. Calculation of input current of the motor. Selection of size and rating of cable. Determination of rating of fuse. Determination of size of conductor. Sequence to be followed to prepare estimation. Proper method of earthing in industrial installation. Finding out estimation chart. IE rules for industrial wiring. Compute simple problems.	
UNIT - V	Transformer Commissioning & HT/LT distribution Lines	(06 Hours)
	Common Pre-commissioning Tests of Transformer, Buchholz Relay Test, Insulation Resistance (IR), Break-Down Voltage (BDV) Test, Voltage Ratio Test, Winding Resistance Measurement	

	<p>Test, Marshalling Box Scheme Check, Temperature Indicator Test, Off-Circuit Tap Selector (OCTS).</p> <p>Difference between HT/LT power, HT/LT power rates- domestic, commercial and industrial rates. Impact of increasing HT lines, Voltage level for HT/LT lines, LT/HT Lines and transmission lines, Loss reduction by improving ratio of HT/LT line in Electrical Distribution System.</p>	
UNIT -VI	Contracts And Tendering	(06 Hours)
	<p>Contracts, Tenders: Concept of contract & tenders, Types of contracts & contractors, Types of tenders, Requirement of valid contract and good contractor, Tender notice, Procedure for submission and opening of tenders, Comparative statement for selection of contractors, Role of Electrical inspector in design and installation and duties, Electrical Liasoning services.</p>	
Term Work:		
The term work shall consist of record of minimum eight experiments.		
<ol style="list-style-type: none"> 1. Study of different IE rules. 2. Drawing sheet on wiring design of domestic installation. 3. Drawing sheet on wiring design of commercial installation. 4. Drawing sheet on wiring design of industrial installation. 5. Finding estimation chart for particular installation. 6. Drawing sheet on design of electrical installation. 7. Drawing sheet on design of HT/LT distribution lines. 8. Experiment to understand contracts/tender procedure by sample example. 		
Project Based Learning		
<ol style="list-style-type: none"> 1. Study-visit and prepare report to one domestic electrical installation under construction. 2. Study-visit and prepare report to one commercial electrical installation under construction. 3. Study-visit and prepare report to one industrial electrical installation under construction. 4. Prepare estimation chart of any one class room in the electrical department. 5. Visit and make report of roof top solar plant. 6. Study of IE rules and make a report on it. 7. Drawing single line diagram of electrical machine lab electrical wiring. 8. Study of Buchholz Relay of distribution transformer around college premises. 9. Do temperature indicator test of distribution transformer around college premises. 10. Do voltage ratio test of distribution transformer around college premises. 11. Perform Winding Resistance Measurement Test on distribution transformer around college premises. 12. Perform Insulation Resistance (IR) Test on distribution transformer around college premises. 13. Perform Break-Down Voltage (BDV) Test on distribution transformer around college premises. 14. Visit & study the electric sub-station in college premises. 15. Study of supply connection of your electrical lab. 16. Visit nearby HT line and study its operation. 17. Study Tender notice appeared in local newspaper & make report. 18. Meet Electrical Inspector and understand his/her duties. 		
Text Books:		
<ol style="list-style-type: none"> 1. Surjit Singh- "Electrical Estimation and Costing", Dhanpat Rai Publications. 		
Reference Books:		
<ol style="list-style-type: none"> 1. S.L.Uppal- "Electrical Wiring, Estimation & Costing", Khanna Publishers 2. B.V.S. Rao- "Operation & Maintenance of Electrical Equipments", (Vol 2) Media Promoters & Publishers Pvt.Ltd. 3. Syllabus for Unit Test:		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Computational Algorithms		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours/Week	End Semester Examination: 60 Marks	Theory : - 04
Practical: 02 Hours/Week	Continuous Assessment: 40 Marks	Practical : - 01
	TW : 25 Marks, OR: 25 marks	Total : - 05
Course Pre-requisites:		
The Students should have knowledge of		
	Differentiation and integration of a single real variable, ordinary differential equations, Fundamentals of Programming languages: MATLAB (Introduction), Linear Algebra, Flowchart and algorithm basics.	
Course Objectives:		
	<ul style="list-style-type: none"> • To emphasize the need of computational techniques and analyze errors involved in the computation. • To provide sound knowledge of various numerical methods. • To apply various numerical methods to obtain solution of different types of equations such as transcendental, simultaneous, ODE etc. and also for interpolation, integration and differentiation. • To impart skills to develop programs using MATLAB 	
Course Outcomes: Students will be able to		
1.	Recall MATLAB Basics, implement basic principles of numerical methods and types of errors in computation and their causes of occurrence.	
2.	Identify various types of equations and apply appropriate numerical method to solve different equations.	
3.	Apply different numerical methods for interpolation, differentiation and numerical integration.	
4	Apply and compare various numerical methods to solve first and second order ODE.	
5	Apply and compare various numerical methods to solve linear simultaneous equations.	
6	Identify various statistical methods and demonstrate applications of algorithm in electrical engineering.	
UNIT - I	MATLAB Basics, Numerical Methods and Errors:	(08 Hours)
	MATLAB: Data types, Operator, Variables, Control Statements, Loops, Access Control, Arrays: Introduction, one and two dimensional arrays. Basic principle of numerical methods: Floating point algebra with normalized floating point technique, Significant digits. Errors: Different types of errors, causes of occurrence and remedies to minimize them. Generalized error formula.	
UNIT - II	Solution of Transcendental and polynomial equation and Curve Fitting:	(08 Hours)
	Solution of Transcendental and polynomial equation: Bisection, Secant, Regula-Falsi, Chebyshev and Newton-Raphson methods, Newton-Raphson method for two variables. Curve Fitting using least square approximation – First order and second order.	
UNIT - III	Interpolation and Numerical Differentiation:	(08 Hours)
	Interpolation: Difference operators, Introduction to interpolation - Newton's forward, backward interpolation formulae, Sterling's and Bessel's central difference formulae, Newton's divided difference formula, Lagrange's interpolation. Numerical Differentiation using Newton's forward and backward interpolation formulae.	
UNIT - IV	Solution of Ordinary Differential Equation(ODE) and Numerical Integration:	(08 Hours)
	Solution of First Order Ordinary Differential Equation (ODE) using Taylor's series method, Euler's, Modified Euler's methods, Solution of Second order ODE using 4th order Runge-Kutta method. Numerical Integration: Trapezoidal and Simpson's rules as special cases of Newton Cote's quadrature technique for single and double integrals.	
UNIT - V	Solution of linear simultaneous equation:	(08 Hours)
	Solution of simultaneous equation: Direct methods - Gauss and Gauss-Jordan elimination methods, concept of pivoting – partial and complete. Iterative methods – Jacobi and Gauss Seidel methods. Matrix Inversion using Jordon method and Eigen values using Power method.	
UNIT - VI	Statistical methods and Application of Algorithms in Electrical Engineering	(08 Hours)
	Statistical Methods: Random Sampling, Sample estimation, Hypothesis testing, Statistical quality control and Monte Carlo methods. Applications: Load Forecasting methods, Condition Monitoring, Battery Management System,	

Electrical Automation, Equation solving methods (simple numerical) for: Load Flow studies, Transient and Harmonic studies.	
Term Work:	
The term work shall consist of record of minimum eight experiments in MATLAB with flowchart and results from below list.	
<ol style="list-style-type: none"> 1. Solution of a polynomial equation using Birge-Vieta method. 2. Solution of a transcendental equation using Bisection or Regula-Falsi method. 3. Solution of two variable non-linear equation using N-R method. 4. Program for interpolation using Newton's forward or backward interpolation. 5. Program for interpolation using Lagrange's or Newton's Divided difference interpolation. 6. First order curve fitting using Least square approximation. 7. Solution of simultaneous equation using Gauss Seidel or Jacobi method. 8. Solution of simultaneous equation using Gauss elimination or Jordon method. 9. To find largest Eigen value using Power method. 10. Solution of Numerical Integration using Simpson's (1/3) rd or (3/8) th rule. 11. Solution of first order ODE using 4th order RK method or Modified Euler method. 	
Project Based Learning:	
<ol style="list-style-type: none"> 1. Develop an algorithm using any of the method for real time applications. 2. Write a review paper for comparative method based on any type of equations to obtain solution. 3. Develop an article for any method using multiple options in algorithm (loops, functions) and analyze the difference in result. 4. Identify applications in electrical engineering where errors are occurred and find solution how to minimize the errors. 5. Develop a web based application (static or dynamic model) for electrical application using relevant software. 	
Text Books:

3. S.S. Sastry, "Introductory methods of Numerical Analysis", PHI Learning Private Ltd.	
4. P. Thangaraj, "Computer oriented Numerical Methods", PHI Learning Private Ltd.	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Industry Taught Course-I Operating Systems

Industry Taught Course-I Operating Systems		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hrs/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 02 Hrs/Week	Continuous Assessment: 40 Marks	Practical: 01
	TW: 25 Marks, OR: 25 Marks	Total: 05
Course Pre-requisites:		
The Students should have knowledge of		
1.	Computer System, Applications of Computers and Computer operation's.	
Course Objectives:		
	To learn the basic structure and operations of a computer. Understand the memory and I/O organization and recent trends	
Course Outcomes: After learning this course students will be able to		
1	Discuss the operating system and their principles	
2	Analyze the process management system	
3	Elaborate the memory management system	
4	Analyze the I/O and file management system	
5	Analyze the recent trends and compare the future technologies	
6	Examine the various applications of computer systems.	
UNIT – I	OPERATING SYSTEM	(08 Hours)
	Computer System functions. The Evolution of Operating Systems, Developments Leading to Modern Operating Systems, Virtual Machines Evolution of Operating System.- Computer System Organization Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.	
UNIT - II	PROCESS AND THREAD MANAGEMENT	(08 Hours)
	Processes-Process Concept, Process Scheduling, Operations on Processes, Interprocess Communication; Threads- Overview, Multicore Programming, Multithreading Models; Thread and SMP Management. Process Synchronization - Critical Section Problem, Mutex Locks, Semaphores, Monitors.	
UNIT -III	MEMORY MANAGEMENT	(08 Hours)
	Memory Management Requirements, Swapping, continuous memory allocation Memory Partitioning: Fixed Partitioning, Dynamic Partitioning, Buddy System, Relocation, Paging, Segmentation. Virtual Memory: Hardware and Control Structures, Operating System Software, Linux Memory Management, Windows Memory Management, Android Memory Management.	
UNIT -IV	INPUT/OUTPUT AND FILE MANAGEMENT	(08 Hours)
	I/O Management and Disk Scheduling: I/O Devices, Organization of the I/O Function, Operating System Design Issues, I/O Buffering, Disk Scheduling, Disk Cache, Linux I/O. File Management: Overview, File Organization and Access, File Directories, File Sharing, Record Blocking, Secondary Storage Management, Linux Virtual File System, Android File Management.	
UNIT - V	TRENDS IN OPERATING SYSTEMS	(08 Hours)
	Linux Kernel Module Programming, Embedded Operating Systems: Characteristics of Embedded Systems, Embedded Linux, and Application specific OS. Basic services of NACH Operating System. Introduction to Service Oriented Operating System (SOOS), Introduction to Ubuntu EDGE OS, etc.	
UNIT -VI	LINUX SYSTEM AND CASE STUDY	(08 Hours)
	Basic Concepts of LINUX, Multifunction Server, Virtualization- Xen, VMware with Linux Host, Android operating system –Features, characteristics, Basic building blocks, Architecture, System services. Case Study: DOS and Windows Operating System, Unix Operating System	

Term Work:	
The term work shall consist of record of minimum eight experiments and not limited to	
1. Process control system calls	
2. Apply Banker's algorithm	
3. Inter process communication in Linux	
4. Linux Kernel configuration, compilation and rebooting from the newly compiled kernel. Requirements	
5. Kernel space programming	
6. Implementing a CPU scheduling policy in a Linux OS.	
7. Implementing a memory management policy in a Linux OS.	
8. Implementing a file system in a Linux OS.	
9. Apply disk Scheduling algorithms	
Project Based Learning	
1) To develop several system calls to enable user programs to interface with the file system.	
2) Functioning threading system- scheduling algorithm, interrupt handling.	
3) To enable the memory system by enabling virtual memory, including adding paging support, stack growth, memory mapped file support, and protects user level pages while in use by the kernel.	
Text Books:	
1. William Stallings, Operating System: Internals and Design Principles, Prentice Hall, 8th Edition, 2014.	
2. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, Operating System Concepts, John Wiley & Sons ,Inc., 9th Edition,2012.	
3. Maurice J. Bach, "Design of UNIX Operating System", PHI	
Reference Books:	
1. Dhananjay M Dhamdhere, 'Operating Systems - A Concept Based approach ', Tata McGraw, Hill publication	
2. Abraham Silberschatz, Peter B. Galvin & Grege Gagne (Wiley)'. Operating System Concepts '	
3. Sumitabha Das, 'Unix Concepts and Applications, Tata McGraw Hill	
4. Achyut S. Godbole, 'Operating System with case studies in Unix, Netware and Windows NT' Tata McGraw Hill	
5. Karim Yoghmour 'Embedded Android', O'Reilly Publication	
Syllabus for Unit Test:	
UnitTest-1	UNIT-I,UNIT-II, UNIT-III
UnitTest-2	UNIT-IV,UNIT-V,UNIT-VI

Application Softwares in Electrical Engineering

Application Softwares in Electrical Engineering		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical: 04 Hrs/Week	Term Work : 25 Marks	TW :- 02
Course Pre-requisites:		
The Students should have knowledge of		
	Basic Electric Machines, Magnetic Theory, Introduction to Electrical Power system , Structure of Electrical power system, Sources of Electrical Energy, Elements of Power system	
Course Objectives:		
	<ul style="list-style-type: none"> • Students will get well familiar with importance of electrical design, different design techniques and application of tools for electrical design and analysis. 	
Course Outcomes: Students will be able to		
1.	Relate the basic knowledge of electrical system with electrical design	
2.	Understand the importance of software tool and explore its GUI	
3.	Apply the knowledge of toolbar for understanding the design concept	
4	Identify various electrical applications as per software tools	
5	Discuss the methods of software simulation in electrical engineering	
6	Apply the knowledge for design and analysis of electrical machines	
UNIT - I Introduction to Electrical Design:		
	Introduction to Electrical System for Electrical Design and analysis, Application of Electrical Design, Purpose of Electrical Design, Basic Design philosophy, Importance of Results from design tools, design optimization, Standard Rules for Electrical Design.	
UNIT - II Introduction to ETAP Software:		
	Introduction to ETAP software, Importance of ETAP for System design, History of ETAP, Key features & Benefits of ETAP, Codes & Standards, Working with ETAP software- Starting ETAP software, Creating a new project, Changing the Project standard, File Management, Exploring GUI.	
UNIT - III Toolbar and Library for ETAP:		
	Toolbar Description - Project Toolbar, Theme Toolbar, System Toolbar, Mode Toolbar, Base & Revision Toolbar, Inserting Circuit Elements- Library for Circuit Elements, System Elements and Components, Element Classification - AC Elements , DC Elements , AC-DC Elements , Instrumentation Elements , Component Editor	
UNIT - IV Introduction to ANSYS Maxwell software:		
	Introduction to ANSYS Maxwell software and general applications, Applications of software in electrical engineering, Maxwell solvers-electric and magnetic solution, GUI, RMXprt tool, Introduction to 2D simulation, Introduction to 3D simulation.	
UNIT - V ANSYS Maxwell software simulation:		
	Finite element method, Selection of Geometry and solver types, Defining analysis plane, selection of solver, model units, Exploiting magnetic/excitation symmetry in model, Assigning material properties, Assigning excitation and boundary conditions, Model verification.	
UNIT - VI Electric Machine simulation:		
	Need for machine simulation, Applications of ANYSY Maxwell software for machine simulation, Design and analysis of any one electric machine using RMXprt tool, Maxwell 2D simulation, Maxwell 3D simulation, Discussion on simulations results.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments in ETAP and ANSYS with flowchart and results from below list.		
1.	Prepare the list of tools used for Electrical Design and Analysis	
2.	Prepare a new project and change the project standard using ETAP software	
3.	Study of system toolbars in details with its application in ETAP software	
4.	Study of system elements and components in ETAP software	
5.	Study of Library for ETAP software and its applications	

6. Study the components editor and its working in ETAP software
7. Design and analysis of any one conventional electrical motor using RMXprt tool.
8. Study of 2D model for any one conventional electrical motor using ANSYS Maxwell software.
9. Study of 3D model for any one conventional electrical motor using ANSYS Maxwell software
10. Design and analysis of any one special purpose machine using RMXprt tool.
11. Study of 2D model for any one special purpose machine using ANSYS Maxwell software.
12. Study of 3D model for any one special purpose machine using ANSYS Maxwell software.
Project based Learning:
<ol style="list-style-type: none"> 1. Obtain and prepare Single Line Diagram from any real time project in ETAP software without any errors. 2. Develop a substation SLD of any voltage level by giving suitable input parameters 3. Generate reports through above analysis and give presentation on the results obtained. 4. Designing Induction motor/BLDC motor/ Switched Reluctance motor as per specifications using RMXprt. 5. 2D model of assigned machine through ANSYS Maxwell software. 6. Develop an article based on any content related to ETAP software get it published in conference/technical journal, etc. 7. Develop an article based on any content related to ANSYS software get it published in conference/technical journal, etc.
Text Books:
<ol style="list-style-type: none"> 1. Hemchandra Madhusudan Shertukde, “Power Systems Analysis Illustrated with MATLAB and ETAP”, CRC Press, Taylor and Francis Group 2. Vocational Course-I AutoCAD Electrical

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
	TW: 25 Marks OR: 25 Marks	Credits: 02

Course Pre-requisites:

The Students should have basic knowledge of

- | | |
|-----------|--|
| 1. | A working knowledge of the AutoCAD software and electrical terminology |
|-----------|--|

Course Objectives:

	Navigate the AutoCAD Electrical user interface.
	’ standards.
	LC modules, and stand- alone
	PLC I/O points.

Course Outcomes: After learning this course students will be able to

1	Illustrate the basics of electrical drawings and list the common symbols in electrical drawings.
2	Explain the basics of schematics.
3	Construct the circuit and mark the cables.
4	Explain the panel layout and identify the components.
5	Explain the PLC, its layout, PLC parameter selection and connection of wires from source to equipment.
6	Compare and examine the generated report.

UNIT – I	Basics of electrical drawings	
	Need of Drawings, Electrical Drawings, Common Symbols in Electrical Drawings, Wire and its Types, Labeling. Design Environment, Basic Workflow, Project Manager, Project Drawing List, Moving Through a Project, Copy Projects, GUI .	
UNIT - II	Schematics	
	Single wires/components, referencing, Ladders, Wire Type, Wire Numbers, PLC I/O wire numbers, 3-Phase Circuits, Source and Destination Signal Arrows, Multi Wire 3-Phase Circuits, Point-2-Point Connectors.	
UNIT - III	Circuit and Cables	
	Cable markers, Fan In/Out, insert saved circuits, save circuits to ICON menu, circuit clipboard, circuit builder, copy component, align, delete component and attribute editing commands. 3 D model of electrical assembly. Drawings of electrical machines half sectional end and half sectional elevation.	
UNIT - IV	Panels	
	Panel Layout, Foot Prints, Footprints from Schematic list, Footprints from icon menu, Din rails, Balloons, Wire Annotations, Create Assembly, Editing & Modifying Footprints. Creating Own Footprint, Placing a Terminal. Terminal Editor	
UNIT - V	PLC	
	Generate PLC Layout Modules, PLC parametric selection, Module layout, Insert PLC modules, Edit PLC module, PLC Database File. Point to Point Wiring Tools, Introduction to Connector Diagrams, Inserting Connectors, Editing & Modifying Connectors, Link components by dashed lines, Grouping Wires	
UNIT - VI	Reports	
	Generate Reports, Types of schematic reports, Generate a schematic report, Types of panel reports, Generate a panel report, Run automatic reports, Automatic report generation, Audit: Missing Catalog, Electrical Audit, Signal Error/ List, Drawing Audit Import/Export: To Spreadsheet. From Spreadsheet	

Term Work:

The term work shall consist of record of minimum eight (2 based on schematics, 2 based on 3D model of electrical assembly, 2 based on panel layout and 2 based on PLC Circuit)sheets.

1. To create a schematic for 3 phase motor starters
2. To create a schematic drawing of any circuit of dc machines experiment
3. To create a schematic drawing of Load test on a Linear Induction Motor
4. To create a schematic drawing of Load test on a AC Series motor.
5. To Create schematic of the given circuit. Design the panel for the user and then generate the report for the components.
6. To draw the half sectional end and half sectional elevation of Squirrel cage motor
7. To draw the half sectional end and half sectional elevation of DC generator
8. To draw the detailed drawing of each part of single phase transformer
9. To draw the 3-phase, double layer lap winding with full pitch and chorded coils
10. To create a panel layout of 3 phase motor starters
11. To create a panel layout of Load test on a Linear Induction Motor
12. To create a panel layout of Load test on a AC Series motor.
13. Create the PLC circuit of the given figure

Special Purpose Machines

Special Purpose Machines		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 02 Hours/Week	Continuous Assessment: 40 Marks	Practical: 01
	TW: 25 Marks Oral: 25 Marks	Total: 05
Course Pre-requisites:		
The Students should have basic knowledge of		
1.	Electrical Machines (DC and AC) and Power Electronics.	
Course Objectives:		
	This course aims at understanding the construction, working principle, control, performance and applications of special purpose machines as an extension to the study of basic electrical machines.	
Course Outcomes: After learning this course students will be able to		
1	Explain construction, principal of operation and applications of special types of DC/AC machines.	
2	Explain types, characteristics and control methods of servo motors.	
3	Describe the types, characteristics of stepper motor and select the motor as per applications.	
4	Explain types, characteristics, applications and control methods of Reluctance motor.	
5	Describe construction, principal of operation and applications of Brushless DC Motor.	
6	Describe construction, principal of operation and applications of Permanent Magnet Synchronous Motor.	
UNIT - I	Special Types of DC/AC Machines	(08 Hours)
	Construction, operating principle, characteristics and applications of: Induction generator, Rosenberg Generator, three wire generator, Electric Welding Generator, Printed Circuit Board Motor, Universal motor, Linear induction motor, DYNA Motors, phase advancer, Rotary Amplifiers, Series Boosters.	
UNIT - II	Control Motors (Servo Motors)	(08 Hours)
	Servo Mechanism, fundamental characteristics, types – DC Servo Motors: field controlled, armature controlled and permanent magnet armature-controlled dc motor with schematic diagrams. AC Servo Motors: Construction, production of torque, torque speed characteristics, types, methods of control and applications.	
UNIT - III	Stepper Motor	(08 Hours)
	Constructional features – Principle of operation. Types of stepper motors-Variable reluctance motor, Hybrid motor, Permanent magnet motor. Single and multistack configurations. Theory of torque production, Torque equations – Modes of excitation. Characteristics of stepper motor - Static and dynamics characteristics. Concepts of lead angles, micro stepping, Drive circuits, Applications and selection of motor.	
UNIT - IV	Reluctance Motors	(8 Hours)
	Synchronous Reluctance Motor: Constructional features, Operating principle, Voltage and Torque Equations, Phasor diagram, performance characteristics and Applications. Switched Reluctance Motor: Constructional features, Principle of operation, Torque production, Steady state performance prediction, Analytical method. Power Converters and their controllers. Methods of Rotor position sensing, Sensor less operation, Characteristics and Closed loop control. Applications. Comparison between VR Stepper Motor and SR Motor	
UNIT - V	Brushless DC Motor	(8 Hours)
	Basic concepts, Magnetic materials. Brushless DC Motor: Construction, Principal of operation, Types, EMF and torque equations – Commutation - Power Converter Circuits and their controllers, Comparison with DC motor, Applications.	
UNIT - VI	Permanent Magnet Synchronous Motor	(8 Hours)
	Sinewave Motor/Permanent Magnet Synchronous Motors (PMSM): Ideal and practical	

	motor.Construction,Principle of operation, EMF and Torque equations, Armature MMF, Synchronous Reactance, Phasor diagram – Torque/speed characteristics - Power controllers - Converter Volt-ampere requirements– Applications.	
Term Work:		
The term work shall consist of record of minimum eight experiments.		
<ol style="list-style-type: none"> 1. Load test on a Universal Motor and determine the performance with dc/ac supply voltages. 2. Laboratory demonstration of Induction Generator. 3. Load test on a Linear Induction Motor and determine the speed thrust characteristic. 4. Laboratory demonstration of AC / DC Servo motor. 5. Experimental analysis of Stepper Motor Drive. 6. Load test in order to determine the performance characteristics of the Reluctance Motor. 7. To determine the d-axis and q-axis synchronous reactance of the Reluctance Motor. 8. Experimental analysis/simulation of Switched Reluctance Motor Drive. 9. Experimental analysis/simulation of Permanent Magnet BLDC Motor Drive 10. Experimental analysis/simulation of PMSM motor drive. 11. Load Characteristics of Brush less DC Motor. 12. Study of different software’s for design and analysis of special purpose machines. 13. Theoretical design of any one type of special purpose machine. 		
Project based learning: Student shall demonstrate minimum one concept based on syllabus topic.		
<ol style="list-style-type: none"> 1. Development of prototype of any one type of special purpose machine. 2. Practical study of any one type of special purpose machine. 3. Theoretical design/software simulation of any one type of special purpose machine.

Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Network & Synthesis

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	Theory : - 04
Practical: 02 Hrs/Week	Continuous Assessment: 40 Marks	Practical : - 01
Tutorial: 01 Hrs/Week	TW : 25 Marks, PR: 25 Marks	Total : - 05

Course Pre-requisites:

The Students should have knowledge of

Terminology of electrical networks, series and parallel combinations of resistance, Laplace transforms , linear differential equations.

Course Objectives:

- To develop the strong foundation for Electrical Networks.
- To develop analytical qualities in Electrical circuits by application of various theorems.
- To understand the behavior of circuits by analyzing the transient response using classical methods and Laplace Transform approach.
- To apply knowledge of laws and Network theory for analysis of 2-port networks and design of other circuits like filters.

Course Outcomes: Students will be able to

1. Calculate current/voltage in electrical circuits using simplification techniques, Mesh, Nodal analysis.
2. Calculate current/voltage in electrical circuits using Network theorems and understand the graph theory.
3. Analyze the response of RLC circuit with electrical supply in transient and steady state.
4. Apply Laplace transform to analyze behavior of an electrical circuit.
5. Derive formula and solve numerical of two port network and Design of filters.
6. Apply knowledge of network theory to find transfer function, poles and zeroes location to perform stability analysis and parallel resonance.

UNIT - I	Basics of Network with types, Mesh & Nodal Analysis	(06 Hours)
	Lumped and Distributed, Linear and Nonlinear, Bilateral and Unilateral, Time-variant and Time invariant. Independent and Dependent (controlled) voltage and current sources. Concept of voltage and current divider, Source transformation and shifting. Network Equations: Network equations on Loop basis and Node basis, choice between Loop analysis and Nodal analysis. Concept of super node and super mesh, mutual inductance, Dot convention for coupled circuits, Concept of duality and dual networks.	
UNIT - II	Network Theorems and Graph Theory:	(06 Hours)
	Network Theorems: Superposition, Thevenin's, Norton, Maximum Power Transfer Theorem, Reciprocity, Millman's theorems applied to electrical networks with all types of sources. Graph Theory: Tree, Co-tree, Incidence matrix, F-cutset Matrix, Tie set B Matrix	
UNIT - III	Transients in RLC circuit:	(06 Hours)
	Solutions of differential equations and network equations using classical method for R-L, R-C and R-L-C circuits with DC and sinusoidal excitation (under-damped, over-damped and critically damped conditions with derivation), Initial and Final Condition (series and parallel).	
UNIT - IV	Laplace Transform and its Applications:	(06 Hours)
	Basic Properties of Laplace Transform, Laplace Transform of Basic R, L and C components, Solutions of differential equations and network equations using Laplace transform method for RL, R-C and R-L-C circuits (series and parallel), Inverse Laplace transforms, transformed networks with initial conditions. Analysis of electrical circuits with applications of step, pulse, impulse & ramp functions, shifted & singular functions the convolution integral, application of initial and final value theorem, Application of Laplace transformation technique in electric circuit analysis.	
UNIT - V	Two port network and Filters:	(06 Hours)
	Two Port Network: Short circuit admittance, open circuit impedance, Hybrid parameters and transmission parameters, Interrelations between parameters. Filters: Introduction to passive filters, low pass filters, high pass filters and m-derived LPF and HPF filters and design.	
UNIT - VI	Network Functions:	(06 Hours)
	Poles and Zeros: Terminal pairs or ports, network functions for the one port and two ports, the	

calculation of network functions, general networks. Poles and zeros of network functions, Restrictions on poles and zeros locations for transfer functions and driving point function, Time – domain behavior from the pole and zero plot. Stability of active networks. Parallel Resonance, Resonance frequency, Quality factor, Current and resonance.	
Term Work:	
The term work shall consist of record of minimum eight experiments:	
<ol style="list-style-type: none"> 1. Verification of Superposition theorem in A.C. circuits. 2. Verification of Thevenin’s theorem in A.C. circuits. 3. Verification of Reciprocity theorem in A.C. circuits. 4. Verification of Millman’s theorem. 5. Verification of Maximum Power Transfer theorem in A.C. circuits. 6. Determination of time response of R-C circuit to a step D.C. voltage input. (Charging and discharging of a capacitor through a resistor). 7. Determination of time response of R-L circuit to a step D.C. voltage input. (Rise and decay of current in an inductive circuit). 8. Determination of time response of R-L-C series circuit to a step D.C. voltage input. 9. Determination of parameter of Two Port Network. 10. Determination of current under parallel Resonance condition. 11. Determination of Resonance, Bandwidth and Q factor of R-L-C series circuit. 	
Project based learning:	
<ol style="list-style-type: none"> 1. Prepare a hardware model based on any of the network theorem and calculate current flowing through the load. 2. Prepare a simulation model for the above hardware model in any software and compare the results with hardware model. 3. Develop an article based on hardware and software model and get it published in conference/technical journal, etc. 4. With the help of CRO perform transient analysis of voltage and current for any of the circuit. 	
Text Books:	
1. Network Analysis Third Edition by M. E. Van Valkenburg, Prentice Hall of India Private Limited.	
2. Network Analysis & Synthesis by G. K. Mittal, Khanna Publication.	
3. Network Analysis and Synthesis by Ravish R Singh, McGraw Hill.	
4. Introduction to Electric Circuits by Alexander & Sadiku, McGraw Hill.	
5. Introduction to Electric Circuits by S. Charkarboorty, Dhanpat Rai & Co.	
6. Fundamentals of Electrical Networks by B.R.Gupta & Vandana Singhal- S.Chand Publications	
7. Electrical Circuit Analysis 2nd Edition by P. Ramesh Babu, Scitech Publication India Pvt. Ltd.	
Reference Books:	
1. Network Analysis by Cramer , McGraw Hill Publication.	
2. Engineering Circuit Analysis by William H. Hayt, Jr. Jack E. Kemmerly, McGraw Hill Publication.	
3. Schaum's Outline of Electric Circuits, McGraw-Hill Education; 7 edition	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Power Electronics

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	Theory: 04
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	Practical: 01
	Term Work: 25 Marks Practical : 25 marks	Total: 05

Course Pre-requisites:

The Students should have knowledge of

1. Fundamentals of Electronics Engineering and Fundamentals of Electrical Engineering

Course Objectives:

To introduce basic knowledge of electronics devices used for control of power.

To describe characteristics and application circuits of SCR and other power devices.

Course Outcomes: After learning this course the students will be able to

1. To Understand the working and application of Power semiconductor devices
2. To Understand the working and application of AC to DC converters
3. To Understand the working and application of AC voltage controllers
4. To evaluate DC to DC converters
5. To study DC to AC inverters
6. To understand the applications of power Electronics

UNIT - I	Power semiconductor devices	(08 Hours)
	<p>Classification of power semiconductor devices Uncontrolled turn-on and turn-off (Diode), Controlled turn-on and uncontrolled turn-off (SCR, TRIAC), Controlled turn-on and controlled turn-off (BJT, MOSFET, Double-diffused MOSFET (DMOS), V shaped gate MOSFET (VMOS), CoolMOS, CoolSic (silicon carbide) MOSFET, CoolGan transistor (Gallium Nitride e-mode HEMTs), Insulated-gate bipolar transistor IGBT, static induction transistor SIT, GTO, Integrated gate-commutated thyristor IGCT, MOS-controlled thyristor MCT, static induction thyristor SITH), Continuous gate signal requirement (BJT, MOSFET, COOLMOS, IGBT, SIT), Diamond wafer technologies for semiconductor device applications, synthetic diamond semiconductor technology. Synthetic chemical-vapor-deposition (CVD) diamond semiconductor technology, Single crystal diamond wafers for high power electronics</p> <p>Thyristor Power Devices SCR - static and dynamic characteristics, specifications, two transistor analogy, gate characteristics, triggering circuits, protection of SCR, SITH Protection of power circuit from - over voltage, over current & temperature rise (thermal) Design of Snubber circuit.</p> <p>Transistor Power Devices MOSFET, IGBT, MCT, COOLMOS, SIT , Construction, Characteristics, Specifications, Safe Operating Areas, protection, switching action and their control circuit requirement, comparison and area of application of these devices, Diagram and working of Switched Mode Power supply (SMPS) and Uninterrupted Power Supply (UPS)</p>	
UNIT - II	AC to DC Convertors (Single phase and three phase)	(08 Hours)
	<p>Single phase convertor, three phase semi controlled and fully controlled bridges with R, RL and RLE loads, derivation of average and RMS output voltage and current, rectification and inversion mode of operation, concept of overlap angle and associated voltage drop calculation, dual convertor and selection of transformer and semiconductor devices for convertors. Total Harmonic Distortion (THD).</p>	
UNIT - III	AC Voltage Controllers	(08 Hours)
	<p>DIAC, TRIAC - construction, characteristics, four mode operation, specifications, triggering of TRIAC using DIAC, AC voltage regulator principle, single phase and three phase analysis with R and RL Load, Harmonics and ripple factor, Applications of two stage, three stage and multistage</p>	

	voltage controllers, derivation of average and RMS output voltage and current	
UNIT - IV	DC to DC Convertors	(08 Hours)
	Principle of operation of chopper, classification on the basis of operating quadrants control techniques, CLC, TRC, PWM and FM techniques, analysis of step up choppers and numerical with RLE load, area of application, necessity of input filter, derivation of average and RMS output voltage and current	
UNIT - V	DC to AC Inverters	(08 Hours)
	Single phase and three phase inverters principle of operation, VSI and CSI inverters, applications, operating frequency range. PWM inverters: single pulse, multi-pulse and sinusoidal pulse modulation, PWM techniques for voltage control and harmonic elimination.	
UNIT - VI	Applications of Power Electronics	(08 Hours)
	Power electronics for renewable energy systems., energy storage systems, smart cities, smart grids, power systems: FACTS, HVDC systems, etc., transport applications (electric vehicles, trains, aircrafts, ships, etc.), industrial applications., medical applications., in military applications. telecommunication applications., energy harvesting systems., consumable applications. home appliances. Wearable devices	

Term Work:

The term work shall consist of minimum eight experiments.

1. to study software based design of converter circuits
2. V-I Characteristic of SCR, DIAC & TRIAC
3. V-I characteristic of power semiconductor devices GTO, MOSFET, IGBT
4. 1 Phase half Controlled & Full controlled converter (R & RL Load)
5. 3 phase converter (R, RL, RLE Load)
6. Step down Chopper circuit (RC technique)
7. 3 phase Voltage Source transistorized inverter
8. Firing circuit for 3 phase converter
9. 1 phase or 3 phase AC voltage regulator
10. 3 phase AC – DC converter with RLE Load
11. 1 phase PWM bridge inverter

Project based learning:

1. Commutation circuit of SCR
2. Design of Snubber Circuit
3. Collection of data sheets of Power Devices
4. Matlab based experiments on power electronics
5. case study of a industry manufacturing convertors
6. to design and build a rectifier circuit in the laboratory
7. to design and build a ac to DC converter circuit in the laboratory
8. to design and build a DC to DC converter circuit in the laboratory
9. to design and build a Dc to AC inverter circuit in the laboratory
10. to design and build a circuit for application in solar energy in the laboratory
11. to design and build a circuit for application in wind energy in the laboratory
12. to design and build a circuit for application in energy storage system in the laboratory

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

Industry Taught Course-II Industrial Organization & Financial Management		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
	Continuous Assessment: 40 Marks	
Course Pre-requisites:		
The students should have knowledge of professional skill development and basic management terms		
Course Objectives:		
	<ol style="list-style-type: none"> To understand the basic operations in any organization, technical skill sets required by people. To learn terms like Depreciation, Replacement engineering, Product Engineering, Production Planning and Inventory Control. To understand the Job Evaluation techniques, Personnel Management, Behavioral Aspects of Management and Operations Research. 	
Course Outcomes:		
The student will be able to		
1.	To understand the basic terms related to management like function, principles.	
2.	To understand various type of companies and the various financial aspects related with the company.	
3.	To understand the terms related with the depreciation, replacement and products of the company	
4	To understand the production and inventory related concept	
5	To understand the concepts of financial management and capital	
6	To understand the concepts of financial services, investment and stock market	
UNIT - I	Management	(06 Hrs)
	Introduction, Phases in Management: scientific management, Behavioral management and Information technology and operations research. Industrial Management, Contents and Principle of Management, Functions of Management: Planning, coordination, motivation and control. Leadership: Qualities of leader, Leading Process. Education and Training of Management. Elements of Quality Management System ISO 9001-2008. SAP, life insurance	
UNIT - II	Formation of Company and startups	(06 Hrs)
	Introduction, Company definition, Types of company Structure: Proprietorship, Partnership, Joint Stock companies, Limited and Unlimited Company, Private and Public, Corporative, Public, Private and Joint Sector, Trust and Holding Companies. Start ups Startup opportunities: The New Industrial Revolution – The Big Idea- Generate Ideas with Brainstorming- Business Startup – Ideation- Venture Choices – The Rise of The startup Economy -The Six Forces of Change – The Startup Equation- The Entrepreneurial Ecosystem -Entrepreneurship in India. Government Initiatives.	
UNIT - III	Depreciation, Replacement and Product Engineering	(06 Hrs)
	Introduction, objective of Business Enterprise, Depreciation and Depreciation Calculation, Estimation of Life of an Engineering Aspects, Replacement of Plant and Machinery, Product Classification, Initiation of Product, Production Analysis, simplifications and Standardization, Product Research, Production Planning and Inventory Control Introduction, Production System, Production Types, Production Planning functions, Efficiency of Production planning and Drawing Office Organization. Inventory Control Functions, Procedures for Purchase,	
UNIT - IV	Job Evaluation and Personnel Management	(06 Hrs)
	Introduction, Job Evaluations and Analysis, Classification of Job evaluation techniques, Evaluation of wages structures, system of merit rating, measurement of responsibility and wage incentives. Importance of personnel management, human relations, Functions of personnel management. , labour participation in management. Labour turnover, industrial disputes. Behavioral Aspects of Management and Operations Research Scientific management, Hawthorne Studies, Elton Mayo, Theory X and Theory Y, Herzberg's motivation and Hygiene Theory, Organizational goals and Culture. Stresses at workplace, Interpersonal Behavior, power and Politics in organization.,	
UNIT - V	Financial management and capital	(06 Hrs)
	Financial Management Micro Economics, Principles of Accounting, Quantitative Methods and Statistics Financial Modeling, Managerial Economics, Corporate Finance, Scope and Functions and role of Finance Managers, Scope of Finance; Financial Management	

	<p>Capital Classification of Capital, Capital Procurement, Cost of Capital, Cost of Capital; Cost of Debt; Cost of Preference Capital; Cost of Equity Capital; Approaches to Derive Cost of Equity; Weighted Average Working capital, Operating Cycle Method, : Management of Cash Motives for Holding Cash; Facets of Cash Management; Cash Planning;</p>	
UNIT - VI	Financial services, investment and stock market	(06 Hrs)
	<p>Meaning of financial services , types , players in financial services , merchant banking , Primary market : face value of shares , debenture issue of shares on premium , discount initial public offer (IPO) , Follow on public offer (FPO). Secondary market : differences between primary and secondary market , role of stock exchanges , demutualization of stock exchanges Derivatives : Types of derivatives optional premium , commodity exchange , commodity derivative Investment Need of Investment , Physical assets like real estate, gold / jewellery, commodities etc, Currency trading, Commodity market Stock market Share market basics B.S.E.. N.S.E : organizational structure , index construction , sensex , NIFTY , sectors, settlement , rolling settlement , pay in and pay out , no delivery period, auction of shares, investor protection, Dmat account, types of charges, primary and secondary market Intra-day trading, Chart study, Basics of Candle stick chart, analysis of candlestick chart, fifteen candle stick patterns,</p>	
Assignments (Project Based Learning): Students need to complete six assignments from following list		
1. Case study 1 study of a start up company		
2. Case study 2 study of human resource department of a company		
3. Case study 3 visit to Bank and study facilities		
4. Conducting an interview for a company		
5. Collecting information for Initiating a startup company in a group		
6. Fundamental Technical analysis of a share		
7. Online investment in commodity market		
8. Online currency trading		
9. Opening a saving bank account		
10. Online Opening of a dmat account,		
11. Opening a of a trading account		
12. Purchasing a share in intraday trading with minimum rupees to get introduction

Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

Database Management System (SQL)

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	Practical: 01
	TW: 25 Marks & PR: 25 Marks	Total: 05

Course Pre-requisites:

The Students should have knowledge of

- 1) Basic understanding of data and data structure
- 2) Basic understanding of programming language

Course Objectives:

- Identify various techniques to communicate with database.
- Relate relevant data for effective processing of data.
- Construct a database to maintain data adroitly.
- Study various queries and tools to deal with the data.
- Understand the relation between data set and respective means to access it.
- Understand influence of data in the effective development of software.

Course Outcomes: After learning this course students will be able to

- | | |
|----------|---|
| 1 | Design database to store data related with application. |
| 2 | Identify technique to deal with data |
| 3 | Extend power of SQL by adding programming paradigm |
| 4 | Predict suitable environment for data processing as per type data |
| 5 | Apply knowledge of DBMS to process the software efficiently |
| 6 | Discuss data computing techniques |

UNIT – I	Introduction to DBMS	(08 Hours)
	What is database management system, Use of database system, view of data, relational databases, database architecture, transaction management, Data Models The importance of data models, Basic building blocks, Business rules, The evolution of data models, Degrees of data abstraction. Design of Database, ER Diagram Database design. ER Model: overview of ER-Model, Constraints, ER-Diagrams, Extended ER Diagrams.	
UNIT - II	Relational database model	(08 Hours)
	Logical view of data, keys, integrity rules. Design of Relational Database: features of good relational database design, Normalization (1NF, 2NF, 3NF, BCNF). Relational Algebra and Calculus Relational algebra: introduction, Selection and projection, set operations, renaming, Joins, Division, syntax, semantics. Operators, grouping and ungrouping, relational comparison. Calculus: Tuple relational calculus, Domain relational Calculus, calculus vs algebra, computational capabilities	
UNIT -III	Integrity Constraints	(08 Hours)
	What are constraints, types of constrains, Integrity constraints, Views: Introduction to views, data independence, security, updates on views, comparison between tables and views Introduction to SQL: data definition, aggregate function, Null Values, nested sub queries, Joined relations. Triggers.	
UNIT -IV	PL/SQL	(08 Hours)
	Introduction ,Declaring Variables , Writing Executable Statements , Interacting with Oracle Server , Writing Control Structures , Working with Composite Data Types , Writing Explicit Cursors , Writing Implicit Cursors , Handling Exceptions , Creating Procedures , Creating Functions , Managing Subprograms , Creating Packages , More Package concepts , Oracle supplied Packages, Manipulating Large Objects , Creating Database Triggers.	
UNIT - V	Transaction management	(08 Hours)
	ACID properties, serializability and concurrency control, Lock based concurrency control (2PL, Deadlocks), Time stamping methods, optimistic methods, database recovery management	
UNIT -VI	Data Intensive Computing	(08 Hours)

	Introduction to big data, unstructured data processing using Hadoop , NoSQL database using MangoDB.	
Term Work:		
The term work shall consist of record of minimum eight experiments and not limited to		
List of experiments:		
1) Draw an ER Diagram to maintain database of Bank		
2) Normalize the database of Library, upto BCNF		
3) Perform the following operation for demonstrating the insertion, updation and deletion using the referential integrity constraints		
4) Calculate turnover of a banks in pune using group by query		
5) WAP to implement auto rollback option on deletion using trigger.		
6) WAP to implement Procedure to calculate square of a number.		
7) Implement implicit cursor using PL/SQL.		
8) Simulate two phase locking protocol on the database of Movie.		
9) Perform document processing using Mango DB,.		
10) Solve word count problem using Hadoop.		
Project Based Learning:		
1. Make a project to maintain employee data using files and dynamic object/structure. The project should be able to read, write, modify, add and search records. Also demonstrate the effect of performing change in employer data definition after few records have been added.		
2. Make an extended ER diagram for insurance management system. Transform this into relation design and implement these relations with appropriate domain and integrity constraints.		
3. Employ various data control restrictions on databases, relations and attributes of relations.		
4. Create a phonebook which enables user to save contacts with additional information and provides various retrieval mechanisms. Provisions should be made to view data in mutiple ways.		
5. Design and develop a library management system. The relations in the system should be normalised upto BCNF		
6. Design and develop a inventory management system and create multiple views on the relations so that users not authorised to edit the relations should be able to views the data.		
7. Implement of audit trails and backup on relations.		
8. Create a student result calculation system. However when updating final results after calculation should be only of stduents who paid complete fees, such that transaction of each row is executed seperately. Hint- use explicit cursor		
9. Develop a student data management system using hash files.		
10. Installation of a NoSQL database and implementing a simple student database to compare with SQL database.		
Text book:		
1. A Silberschatz, H Korth, S Sudarshan, "Database System and Concepts", Sixth Edition McGraw-Hill		
2. Oracle SQL and PL/SQL Guide Till 10gR2		
3. Ramkrishna R., Gehrke J., Database Management Systems, 3rd Edition, McGrawHill		
Reference Books:		
1. Rob, Coronel, "Database Systems", Seventh Edition, Cengage Learning.		
2. Bipin Desai, Introduction to Databse Management Systems.		
3. Groff James R., Paul Weinberg, LAN times guide to SQL.		
Syllabus for Unit Test:		
UnitTest-1	UNIT-I,UNIT-II, UNIT-III	
UnitTest-2	UNIT-IV,UNIT-V,UNIT-VI	

IT Practices

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical: 06 Hours / Week	Term Work : 25 Marks, Oral : 25 Marks	Total : - 03

Course Pre-requisites:

The Students should have knowledge of

1. C Programming

Course Objectives:

This syllabus is a comprehensive study of Core Java. It contains complete industrial Java topics to learn the Java programming language in detail. Java is object oriented, platform independent, simple, secure, architectural-neutral, portable, robust, multi-threaded, high performance, distributed and dynamic.

Course Outcomes: Students will be able to

1. Become familiar with the features of Java Language & fundamentals
2. Discover how to write Java code according to Object-Oriented Programming principles.
3. Become comfortable with concepts such as I/O operations in JAVA & multithreaded programming
4. Learn Java APIs for Collections, I/O Streams
5. Design GUI applications and Applets using AWT and Swing.
6. Develop Multithreaded and Networking applications.

UNIT - I	Java Language Environment & Java Fundamentals:	
	Object Oriented, Platform Independent, Automatic Memory Management, Compiled / Interpreted approach, Robust, Secure, Dynamic Linking, Multi-Threaded, Built-in Networking, Data types, Operators, Control Statements, Arrays, Enhanced for-loop, Enumerated types, Static import, Auto boxing, C-style formatted I/O, Variable arguments.	
UNIT - II	Packages & Exception Handling:	
	Why packages, Understanding Class path, Access modifiers & their Scope, When an exception occurs, Importance of Exception Handling, Exception Propagation, Exception Types, Using try and catch, throw, throws, finally, Writing User defined Exceptions	
UNIT - III	I/O Operations in Java & Multithreaded Programming:	
	Byte Oriented Streams, File Handling, Readers and Writers, Introduction to Multi-Threading, Understanding Threads & its States, Java Threading Model, Thread class & Runnable Interface, Thread Priorities, Thread Synchronization, Interthread Communication, Preventing Deadlocks.	
UNIT - IV	Java Util Package / Collections Framework:	
	Collection & Iterator Interface, Enumeration, List and Array List, Vector, Comparator, Set Interface & Sorted Set, Hashtable, Properties	
UNIT - V	Generics & Abstract Window Toolkit:	
	Introduction to Generics, Using Built-in Generics Collections, Writing Simple Generic Class, Bounded Generics, Wild Card Generics, Graphics, Color and Font, AWT Components/Controls, Event Handling & Layouts.	
UNIT - VI	Swing Programming:	
	Introduction to Swing & MVC Architecture, Light Weight Component, Swing Hierarchy, Atomic Components e.g. JButton, JList and more, Intermediate Container e.g. JPanel, JSplitPane and more, Top-Level Container e.g. JFrame and JApplet, Swing Related Events.	

Term Work:

The term work shall consist of record of minimum eight experiments from below list.

1. Write a Java program that takes a number as input and prints its multiplication table upto 10.
2. Implement a Java function that calculates the sum of digits for a given char array consisting of the digits '0' to '9'. The function should return the digit sum as a long value
3. Write a java program to implement the vectors.
4. Write a java program to open a file and display the contents in the console window.
5. Write a java program to read the student data from user and store it in the file.
6. Design a AWT program to print the factorial for an input value.
7. Design an AWT program to perform various string operations like reverse string, string concatenation etc.
8. Write a java program to implement exception handling.

Assignments: (Project based learning)

1. Write a Java program to print the area and perimeter of a circle.
2. Write a Java program to count the letters, spaces, numbers and other characters of an input string.
3. Write a java program to implement thread life cycle.
4. Write a java program to implement multithreading.
5. Write a java program to copy the contents from one file to other file.
6. Design an AWT application that contains the interface to add student information and display the same.
7. Design a calculator based on AWT application.
8. Design an AWT application to generate result marks sheet.

Text Books:

1. Vaishali Shah, Sharnam Shah, Core Java 8 for Beginners, First Edition, SPD, 2015
2. R. Nageswara Rao, Core Java: An Integrated Approach, First Edition, Dream Tech, 2008

Reference Books:

1. Herbert Schildt, Java: The Complete Reference, 9th Edition, McGraw Hill, 2014
2. Hortsman, Core Java, Volume I: Fundamentals, 9th Edition, Pearson, 2013

Vocational Course-II Solar Power Plant Designing

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
	TW: 25 Marks OR: 25 Marks	Credit: 02
Course Pre-requisites:		
The Students should have knowledge of		
1.	Energy Systems, potential and need of renewable energy.	
Course Objectives:		
	To understand the need and scope of cleaner sources of energy. To motivate the use of Solar and Solar based applications.	
Course Outcomes: After learning this course students will be able to		
1	Discuss the various energy systems and compare its need, adaptability and potential.	
2	Classify the energy sources and understand its capacity and applications.	
3	Discuss the need and various concepts related to Solar system's.	
4	Understand the basics of Solar Photovoltaic systems, examine its types and installations.	
5	Identify the need and scope of solar safety.	
6	Design of Solar Electric system and its applications	
UNIT – I	NEED OF ENERGY	
	Introduction, Definition of Power and energy, difference between power and energy, the role of energy in development, Limitation of renewable energy sources their usefulness seasonal nature, requirement, need for the use of new energy sources. Overview of Global Energy Scenario Various sources of Renewable energy. Potential of Renewable energy. Solar irradiance, irradiation, sun path diagram & peak sun hour	
UNIT - II	TYPES OF ENERGY SOURCES	
	Conventional energy sources Hydro Electric, Thermal, Nuclear, Non-Conventional Energy sources Bio-mass, geo-thermal, solar, wind energy, ocean energy, wave energy, advantages and disadvantages, challenges.	
UNIT -III	SOLAR SYSTEM	
	Solar system: Energy from the sun, solar window, atmospheric effects, diffused radiations, Air mass, effect of Air Mass, seasonal effects, environmental effects on standard test conditions.	
UNIT -IV	PRINCIPLES OF SOLAR PHOTOVOLTAIC SYSTEMS	
	Solar Photovoltaic energy conversion and utilization, solar power generation systems a) off-grid systems b) grid connected systems c) power control and management systems, economics of solar photovoltaic systems, World Energy Requirement, Energy and Role of Photovoltaic, Types of PV Installation, Common Systems type, GRID-TIED System, Hybrid Systems, Photovoltaic in Energy Supply, Types of the solar power plant, the concept of net & gross metering , Selection of inverter, module & balance of system , Array, string & cable layout-KW(rooftop) & MW(ground-mounted) System	
UNIT - V	SOLAR SAFETY	
	Electrical safety, electrical safety rules, simple first aid, general safety of tools and equipment, fire extinguishers, types of fire extinguishers, Guideline of Safety measurement in solar plant, Performance and monitoring system, ways to maximize energy, solar cell utility – scale system performance.	
UNIT -VI	Solar Electric System Installation and Service	
	Applications of Solar Water Heater, Solar lighting systems, Solar cooking, Roof Top, Solar Integration to grid. Design calculation for solar plant , Protection system, earthing calculation & cable sizing	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments and not limited to		
1) Study of Solar Photovoltaic Fencing 2) Study of Solar Cookers		

- 3) Study of Solar Water Heater
- 4) Study of Solar Dryer
- 5) Study of Solar Water Pumping System
- 6) Study of Solar Lighting System
- 7) Study of Solar Photovoltaic System
- 8) Study of Solar Distillation System
- 9) Study of Solar Pond
- 10) Visit to Renewable Energy Integrated Plant
- 11) Open circuit voltage of PV cells
- 12) Short Circuit Current of PV cells

Text book and Reference Books:

- 1) Solar Energy: Fundamentals and Applications Book by H. P Garg, Tata Mc Graw Hill Publishing Company Ltd.
- 2) From Sunlight to Electricity: A Practical Handbook on Solar Photovoltaic Applications Suneel Deambi, The Energy and Resources Institute, TERI
- 3) Solar Electricity Handbook - 2019 Edition: A Simple, Practical Guide to Solar Energy - Designing and Installing Solar Photovoltaic Systems. Michael Boxwell
- 4) Solar Energy: The Physics and Engineering of Photovoltaic Conversion, Technologies and Systems.

MOOC-I

Sr. No.	Title of Course
1	Fundamentals Of Electronic Materials and Devices
2	Introduction to Robotics
3	Product Design and Innovation
4	Non-Conventional Energy Resources
5	Steam and Gas Power Systems
6	Energy Resources and Conversion Processes
7	Sensors and Actuators
8	Elements of Solar Energy Conversion
9	Introduction to internet of things
10	Introduction to Industry 4.0 and Industrial Internet of Things
11	Introduction to Machine Learning
12	Programming, Data Structures and Algorithms Using Python

**B.TECH- ELECTRONICS &
COMMUNICATION ENGINEERING)**

B.TECH (SEM-I)

SYLLABUS

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. I Electronics & Communication Engineering LINEAR ALGEBRA, CALCULUS AND SOLID GEOMETRY		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination (UE): 60Marks	Credits: 04
Practical:--	Internal Assessment (IA): 40 Marks	
Tutorial: 01		Credit:01
	Total:100 Marks	Total Credits:05
Course Pre-requisites:		
The students should have knowledge of		
1	Basic algebra.	
2	Ordinary derivative.	
3	Plane geometry.	
Course Objectives:		
1	Rank, consistency of system of equations and concepts of solid geometry.	
2	Partial derivative and maxima, minima for several variable	
3	Methods of curve tracing and multiple integrals	
Course Outcomes: After learning this course students will be able to		
1	Apply & test rank of matrix for consistency of linear system.	
2	Understand the partial derivative and apply to find errors and approximate values.	
3	Test the functionality using Jacobian.	
4	Trace curves of various types of mathematical functions.	
5	Compute the coordinate system and apply it to locus problems.	
6	Evaluate multiple integrals and apply it evaluate area and volume.	
UNIT – I	Linear Algebra: Matrices	(08 Hours)
	Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering.	
UNIT – II	Partial Differentiation and its applications	(08 Hours)
	Functions of two or more variables, Partial derivatives,	

	Homogeneous functions, Euler's theorem, Total derivative, Change of variables, Errors and Approximations.	
UNIT -III	Jacobian and Maxima and Minima Multivariable Calculus	(08 Hours)
	Partial derivative, Jacobians and their applications, Chain Rule, Functional Dependence. Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.	
UNIT - IV	Fourier series, Integral Calculus and Curve Tracing	(08 Hours)
	Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis, Differentiation Under the Integral Sign, Error functions. Tracing of Curves, Cartesian, Polar and Parametric Curves. Rectification of Curves.	
UNIT -V	Solid Geometry	(08 Hours)
	Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder.	
UNIT - VI	Multiple Integrals and their Application	(08 Hours)
	Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values	
Text Books:		
1. P. N. Wartikar and J. N. Wartikar, "Applied Mathematics" (Volumes I and II), 7 th Ed., Pune Vidyarthi Griha Prakashan, Pune, 2013.		
References Books:		
1. B. S. Grewal, "Higher Engineering Mathematics", 42 th Ed., Khanna Publication, Delhi		
2. B.V. Ramana, "Higher Engineering Mathematics", 6 th Ed., Tata McGraw-Hill, New Delhi, 2008.		
3. Erwin Kreyszig, "Advanced Engineering Mathematics", 10 th Ed., John Wiley & Sons, Inc., 2015.		
4. Peter V. O'Neil, "Advanced Engineering Mathematics", 7 th Ed., Cengage Learning, 2012.		
5. Michael Greenberg, "Advanced Engineering Mathematics", 2 nd Ed., Pearson Education, 1998.		
Project based learning:		
1. Find the eigen values and eigen vectors of any random matrix		
2. Check the linear dependence / independence of vectors		
3. Check the consistency and solve the linear equations		
4. Solve the partial differential equations		
5. Find the error using the concept of total derivative		
6. Check the Functional Dependence using the concept of Jacobian		
7. Find the derivatives of error functions		
8. Find Maxima and Minima of functions of two variables		

9. Use differentiation under the integral Sign to solve integrals
10. Trace the Cartesian curves
11. Trace the polar curves
12. Find the equation of sphere, cone and cylinder using the concept of solid geometry
13. Find root mean square values using integrals
14. Find the volume using triple integrals
15. Find the area using double integral

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. I Electronics & Communication Engineering CHEMISTRY AND ECONOMICS OF MATERIAL SCIENCE		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination(UE): 60Marks	Credits: 04
Practical:02	Internal Assessment (IA): 40 Marks	
Tutorial: --	TW:50 Marks	Credit: 01
	Total:150 Marks	Total Credits:05
Course Pre-requisites:		
The students should have knowledge of		
1	Structure property relationship, types of crystals, Capacitor, insulator, classification and properties of polymers, super capacitors, Green solvents	
Course Objectives:		
1	To develop the interest among the students regarding chemistry and their applications in engineering.	
2	To develop confidence among students about chemistry, how the knowledge of	
3	The student should understand the concepts of chemistry to lay the groundwork for subsequent studies in the field such as E&C Engineering.	
Course Outcomes: After learning this course students will be able to		
1	Describe the properties of materials and application of semiconductor electronics	
2	The student will able to understand various structure of polymers and their effect on different properties of polymers.	
3	Apply constitutive equations of composite materials and understand mechanical behavior at micro and macro levels.	
4	To explain students the importance of economics and environmental issues in material science.	
5	Design and develop sensors using optical methods with desired properties.	
6	Identify the grand challenges of green chemistry and consider what it will take to resolve them.	
UNIT – I	Semiconductors, insulators and Superconductors	(08Hours)
	Semi conductivity in non-elemental materials, Preparations of semiconductors, Chalcogen photoconductors, photocopying process Introduction to Superconductors, types of Superconductors, Properties of superconductors, Applications of Superconductors, Electrical insulators or Dielectrics.	

UNIT – II	Polymers for the Electronics Industry	(08Hours)
	Definition, Classification, Chain Architecture (Linear/Branched, Tacticity, Isomerism), homopolymers, copolymers, graft copolymers and their characteristic properties in reference to their applications. Conduction mechanism, Preparation of conductive polymers, Polyacetylene, Poly (p- phenylene), Polyhetrocyclic systems, Polyaniline, Poly (Phenylene sulphide), Poly (1,6-heptadiyne), Applications, Photonic applications	
UNIT -III	COMPOSITES	(08 Hours)
	Introduction of Composites, Classification of Composites, Organic Matrix Composites, Metal Matrix Composites (MMC), Ceramic Matrix Materials (CMM), Classification Based on Reinforcements, Fiber Reinforced Composites/Fibre Reinforced Polymer (FRP) Composites, Laminar Composites, Particulate Reinforced Composites (PRC), Classification Based on Reinforcements and Matrices, Classification Based On Matrices, Metal Matrix Composites (MMC), Advantages and Limitations of Composites, Materials, Limitations of Composites	
UNIT -IV	ECONOMICS OF ENGINEERING MATERIALS	(08 Hours)
	Introduction, economic considerations, green design, environmental and societal considerations of materials recycling of metals and non-metals recycling issues, limits of recycling, life cycle analysis and its use in design.	
UNIT -V	SENSORS	(08 Hours)
	MEMS, NEMS, Actuators, Biosensors, construction and working of Biosensors and classification of Biosensors, Advantages of Biosensors, Biochips or Biological computers.	
UNIT -VI	GREEN CHEMISTRY	(08 Hours)
	Introduction, Twelve Principles of Green chemistry, numericals on atom economy, synthesis, adipic acid and indigo. Green solvents (ionic liquid supercritical CO ₂), and products from natural materials.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments.		
1. To determine strength of strong acid using pH meter		
2. Titration of a mixture of weak acid and strong acid with strong base using		

conductometer
3. Preparation of polystyrene
4. To determine molecular weight of a polymer by viscosity measurement
5. To determine radius of macromolecule polystyrene/ polyvinyl alcohol by viscosity measurement.
6. Study of corrosion of metals in medium of different pH.
7. To determine pH of soil
8. To determine Acidity of soil
9. Determine the surface concentration of 1-butanol in aqueous solution.
10. Preparation of a conducting polymer.
11. Preparation of Urea-formaldehyde resins
12. To determine strength of strong acid using pH meter
Text Books
1. Bhal & Tuli, "Text book of Physical Chemistry (1995)", S. Chand & Company, New Delhi.
2. S. S. Dara, "A textbook of Engineering Chemistry", McGraw-Hill Publication, New Delhi.
Reference Books:
1. Jain P.C & Jain Monica, "Engineering Chemistry", Dhanpat Rai & Sons, Delhi, 1992.
2. O. G. Palanna, "Engineering Chemistry", Tata McGraw-Hill Publication, New Delhi..
3. F. A. Cotton and G. Wilkinson, "Advanced Inorganic Chemistry (6th edition)", John Wiley
4. P. Ghosh, "Polymer Science and technology (2nd Edition)", Tata McGRAW Hill, 2008.
5. J.M.G.Cowie, "Polymers: Chemistry & Physics of Modern Materials (2nd edition)", Blackie Academic & Professional, 1994.
6. Shikha Agarwal, "Engineering Chemistry- Fundamentals and applications", Cambridge Publishers - 2015.
Project based learning:
1. To Prepare and for synthesis of the following polymers, a. Bakelite b. Polystyrene c. Epoxy Resin
2. Synthesis properties and applications of polymer.
3. To Prepare Glass Hybrid Fibres, Epoxy Composite material using Hand Layup Method
4 To Prepare Fibre Reinforced Composites.
5. To study - Bio diesel and Bio petrol & extraction process of Bio desial.
6. Effect of fertilizers in water
7. Preparation of Gold Nanoparticles Using Tea:
8. Determination of Mercury in Milk by Cold Vapor Atomic Fluorescence:
9. Nitration of Phenols Using $\text{Cu}(\text{NO}_3)_2$
10 Solvent less and One-Pot Synthesis of Cu(II) Phthalocyanine Complex:
11. Density Based Traffic Signal System using Microcontroller and IR Sensors
12 Solar Energy Measurement System using Microcontroller
13 To develop diagnostic biosensor.
14 Electrochemical 3D printing
15. Investigating cell mechanics with Fluid FM force spectroscopy.

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. I Electronics & Communication Engineering ELECTRONIC COMPONENTS AND DEVICES		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination (UE): 60Marks	Credits : 03
Practical:04	Internal Assessment(IA):40 Marks	
	TW & Practical:100 Marks	Credits : 02
	Total Marks:200	Total Credits:05
Course Pre-requisites:		
The students should have knowledge of		
1	Class XII level Physics & Mathematics.	
Course Objectives:		
1	To make the students gain the knowledge of basic electronic passive components.	
2	To provide detailed description of PN junction behavior at the circuit level and its role in the operation of diodes as rectifiers, clippers and clampers	
3	To provide a comprehensive study of bipolar junction transistor.	
4	To learn and analyze transistor biasing circuits.	
5	To observe characteristics and working of FET and MOSFET	
6	To get familiarized with various optoelectronic devices.	
Course Outcomes: After learning this course students will be able to		
1	Identify various Passive components.	
2	Demonstrate knowledge of working of diode with applications such as rectifier, clipper and clamper.	
3	Analyze the characteristics of BJTs in various configurations (CB, CE, and CC).	
4	Design the biasing circuits like fixed bias and voltage divider bias.	
5	Describe the operation of FET and MOSFET.	
6	Demonstrate knowledge of working of optoelectronic devices.	
UNIT – I	Passive Components	(06 Hours)
	Introduction to the concept of active and passive electronic components, Resistors: types of resistors, construction and applications, Capacitor: types of capacitors, construction and applications, Inductor: types of inductors, construction and applications.	
UNIT –II	Diode and applications	(06 Hours)
	Classification of material based on band gap theory, types of	

	semiconductors (p-type and n-type), PN junction Diode: basic structure and operating principle, current-voltage characteristic, Zener breakdown, Avalanche breakdown. Diode Applications: Rectifier circuits: Half-wave and full-wave rectifiers. Full wave Rectifier with capacitor filter. Diode as clipper: series and parallel forms of clipper circuits, biased clipper, Diode as a clamper.	
UNIT -III	Bipolar Junction Transistor	(06 Hours)
	Introduction to Bipolar Junction Transistors, it's construction and working mechanism, configuration of BJT in Common Base, Common Emitter and Common Collector configuration. Input-output characteristics in all three configurations with relevant V-I expressions and definitions of DC gains.	
UNIT -IV	Transistor biasing and applications	(06 Hours)
	Need of biasing, DC load line analysis, operating point, Thermal runaway. Requirements of a biasing circuit, Different biasing circuits: fixed bias, collector to base bias & voltage divider bias. Stability factor, General expression for stability factor, stability factor for biasing circuits, Transistor as an amplifier.	
UNIT -V	FET & MOSFET	(06 Hours)
	FET: Types of FET, JFET Structure, Construction and working mechanism of JFET, V-I characteristics and transfer characteristics, Parameters of JFET. MOSFET: Types of MOSFET, MOSFET Structure, Working of Depletion and Enhancement type MOSFETs, Drain and Transfer Characteristics of D-MOS and E-MOS.	
UNIT-VI	Optoelectronic devices	(06 Hours)
	Construction, V-I characteristics and applications of LED, LDR, Photodiode, Phototransistor, Photoconductive cell, Photovoltaic cell, optocoupler.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments.		
1. To plot V-I characteristics of PN junction diode		
2. To plot V-I characteristics of half wave rectifier		
3. To plot V-I characteristics of Full wave rectifier using Capacitor filter.		
4. To plot input-output characteristics of CE configuration of BJT.		
5. To analyze biasing techniques of BJT: Fixed bias and voltage divider bias		
6. To plot frequency response of single stage CE amplifier and find its bandwidth		
7. To plot frequency response of single stage FET amplifier and find its bandwidth		

8.To plot optical characteristics of LED and LDR
9.To plot optical characteristics of Photodiode and phototransistor
10.To plot transfer characteristics of Optocoupler
Text Books:
1.Robert Boylestad, Electronic Devices and Circuit Theory, Pearson Publication.
2. V.K.Mehta, Principles of Electronics, S Chand & Company Ltd. New Delhi.
3. Millman,Halkies, Electronic Devices and Circuits, TMH publication
Reference Books:
1. Thomas L. Floyd , “Electronic Devices”, Pearson
2. Ben G. Streetman and Sanjay Banerjee, “Solid State Electronic Devices”, Pearson Education India
3. Malvino, “Electronic Principle”, McGraw Hill Education
4. Sedra & Smith, “Microelectronics Engineering”, Oxford University Press
Project Based Learning:
Build the following circuits -
1. PN junction diode in forward and reverse biasing mode.
2. Conversion of AC to pulsating DC using half wave rectifier.
3. AC to DC converter using Full wave rectifier (Center tap Transformer)
4. AC to DC converter using Bridge Rectifier with capacitor filter
5. BJT in CE configuration.
6. Check stability of operating point using fixed bias method.
7. Check stability of operating point using Voltage divider bias method.
8. BJT Amplifier circuit.
9. FET Amplifier Circuit.
10. Optical characteristics of LED and LDR.
11. Optical characteristics of Photodiode and Phototransistor.
12. Characteristics of optocoupler.
13. Zener diode in forward and reverse biasing mode.
14. BJTs as a digital switch
15. Automatic Street Light controller

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. I Electronics & Communication Engineering ELECTRICAL TECHNOLOGY		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination (UE): 60Marks	Credits : 04
Practical: 02	Internal Assessment (IA): 40 Marks	
Tutorial:-	TW: 25 Marks	Credit: 01
	Total Marks:125	Total credits:05
Course Pre-requisites:		
The Students should have knowledge of		
1	Basic physics.	
2	Basic mathematics	
Course Objectives:		
1	To study electrical circuit basics, network theorems, AC fundamentals, electrical machines, transformers, batteries, two port networks.	
Course Outcomes: After learning this course students will be able to		
1	To find voltages and currents in a given network using various network reduction techniques and network theorems	
2	To find parameters relating to a given series or a parallel resonant circuit.	
3	Outline magnetic circuits and types of transformer.	
4	Demonstrate AC and DC electrical machines.	
5	Classify types of batteries.	
6	To find any of the two port parameters of a given two port networks.	
UNIT – I	Introduction to Electrical Circuits and Network Theorems	(08 Hours)
	Circuit concepts, Voltage and Current Sources, Independent and Dependent sources, Voltage-Current relationship for passive elements, Source Transformation and Source shifting techniques, Network Reduction techniques-Series, Parallel, Series-Parallel, Star-to-Delta, Delta-to-Star Transformations, Kirchhoff's Laws, Node and Mesh Analysis, Super node and Super mesh. Thevenin's Theorem, Norton's Theorem, Superposition Theorem, Maximum Power Transfer Theorem	
UNIT –II	AC Fundamentals and circuits:	(08Hours)

	AC Fundamentals: Sinusoidal, square and triangular waveforms – average and effective values, form and peak factors, concept of phasors, phasor representation of sinusoidally varying voltage and current. Analysis of series, parallel and series-parallel RLC Circuits: apparent, active & reactive powers, power factor, causes and problems of low power factor, power factor improvement; resonance in series and parallel circuits, bandwidth and quality factor (simple numerical problems)	
UNIT -III	Magnetic circuits and Types of Transformer:	
	Magnetic Circuit: Kirchhoff's laws for magnetic circuits. Magnetic circuit concepts, analogy between electric & magnetic circuits, magnetic circuits with DC and AC excitations, magnetic leakage, B-H curve, hysteresis and eddy current losses, magnetic circuit calculations, mutual coupling. Faradays law of electromagnetic induction, statically and dynamically induced emf, self inductance, mutual inductance, coefficient of coupling. Single Phase Transformer: Principle of operation, construction, e .m. f. equation, voltage ratio, current ratio, KVA rating ,determination of efficiency and regulation by direct load test, equivalent circuit, power losses,(simple numerical problems), introduction to auto transformer, Three phase transformer and its different winding connections.	(08 Hours)
UNIT -IV	Electrical Machines: DC & AC:	(08 Hours)
	Principles of electro mechanical energy conversion, DC machines: types, e. m. f. equation of generator and torque equation of motor, characteristics and applications of dc motors (simple numerical problems).Single Phase Induction motor: Principle of operation and introduction to methods of starting, applications. Three Phase Induction Motor: types, Principle of operation, slip-torque characteristics, applications (numerical problems related to slip only).	
UNIT -V	Batteries	(08 Hours)
	Basic idea of primary and secondary cells, Construction, working principle and applications of Lead-Acid, Nickel Cadmium and Silver-Oxide batteries, Charging methods used for lead-acid battery (accumulator), Care and maintenance of lead-acid battery, Series and parallel connections of batteries, General idea of solar cells, solar panels and their applications, Introduction to maintenance free batteries, Safe disposal of Batteries; Fuel cell: Principle & Types of fuel cell.	
UNIT -VI	Two Port Networks	(08 Hours)

	Two port parameters: Z, Y, ABCD and H-parameters, Conditions for Reciprocity and Symmetry, Inter-relationship between two-port parameters, Interconnections between two port parameters.	
Term Work:		
The term work shall consist of record of minimum eight experiments.		
1. To verify Thevenin's, Norton's and Superposition Theorem.		
2. To find Steady State response of RL,RC and RLC circuits		
3. To find resonant frequencies of series and parallel circuit.		
4. Load test on single phase transformer.		
5. OS & SC test on single phase transformer to find efficiency and regulation		
6. Load test on DC machine.		
7. Speed control of DC motor		
8. Study of different types of starters for DC & AC Machine		
9. Testing and maintenance of batteries		
10. To find Z and Y parameters of given two port networks.		
11. To find H and ABCD parameters of given two port networks.		
Text Books:		
1. B. L. Theraja, 'A Textbook of Electrical Technology', Vol.1, S. Chand &Company Ltd. New Delhi.		
2. V. K. Mehta, 'Basic Electrical Engineering', S Chand & Company Ltd. New Delhi.		
3. I. J. Nagarath and Kothari, 'Theory and applications of Basic Electrical Engineering', Prentice Hall of India Pvt. Ltd.		
4. D. Roy Choudhury, 'Network and Systems', New Age InternationalPublishers, Second Edition.		
5. Ravish Singh, 'Network analysis and Synthesis, M. Graw Hill Education (India) Private Limited.		
Reference Books:		
1. Edward Huges, 'Electrical Technology' Pearson		
2. D. P. Kothari, J Nagarath, 'Basic Electrical Engineering'. TMC		
3. M. E. Van Valkenburg, 'Network Analysis', PHI, 3rd Edition		
Project based learning:		
1. Design a small circuit to study superposition theorem.		
2. Design small circuit to study Thevenin's Theorem.		
3. Design Small circuit to study Norton's Theorem.		
4. Design small circuit to study R-C series circuit.		
5. Design small circuit to study R-L series circuit.		
6. Design small circuit to study R-L-C series circuit.		
7. Design of small R-L parallel circuit for study.		
8. Design of small R-C parallel circuit for study.		
9. Design of small R-L-C parallel circuit for study.		
10. Design small two winding transformer.		
11. Design small electromagnet.		
12. Design of small chemical battery.		
13. Design of small two port network for study of ABCD parameters.		
14. Design of small electric circuit to study Kirchhoff's voltage laws.		
15. Design of small electric circuit to study Kirchhoff's current laws		

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. I Electronics & Communication Engineering COMPUTATION AND PROGRAMMING USING C		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination(UE): 60Marks	Credits: 03
Practical: 04	Internal Assessment (IA): 40 Marks	
Tutorial:--	TW&Oral: 75 Marks	Credit: 02
	Total Marks:175 Marks	Total Credits:05
Course Pre-requisites:		
1	Students must possess knowledge about basic fundamentals of computer and professional Microsoft office development tools.	
Course Objectives:		
The students should have knowledge of		
1	This course will introduce the concepts of C language software development and compiling tool. By the end of the course, student will be familiar with various fundamentals of C- language.	
Course Outcomes: After learning this course students will be able to		
1	Understand the basic concept of C programming.	
2	Write basic programs using conditional statement.	
3	Use Array in programming.	
4	Use Functions in programming.	
5	Write basic programs using Pointers.	
6	Write basic programs using structures.	
UNIT – I	Introduction:	(06 Hours)
	Basic of C: Structure of a C program, identifiers, basic data types and sizes. Constants, variables, arithmetic, relational and logical operators Managing input and output operations, Sample programs.	
UNIT – II	Conditional Statements and Loops:	(06 Hours)
	Decision making within a program, conditions, if statement, if-else statement, loops: while loop, do while, for loop.Nested loops, infinite loops, switch statement, sample programs.	

UNIT -III	Arrays & Strings	(06 Hours)
	Arrays - concepts, declaration, definition, accessing elements, storing elements, Strings and string manipulations, 1-D arrays, 2-D arrays and character arrays, string manipulations, Array applications: Matrix Operations.	
UNIT -IV	Functions:	(06 Hours)
	Basics, parameter passing, storage classes- extern, auto, register, static, scope rules, user defined functions, recursive functions, Recursive solutions for Fibonacci series, example c programs. Passing arrays & strings to functions.	
UNIT -V	Pointers:	(06 Hours)
	concepts, initialization of pointer variables, pointers and function arguments, passing by address, address arithmetic, Character pointers and functions, pointers to pointers, pointers and multidimensional arrays.	
UNIT -VI	Structures and Linked list	(06Hours)
	Derived types- structures- declaration, definition and initialization of structures, accessing structures, nested structures, arrays of structures, structures and functions, pointers to structures, self-referential structures, unions, typedef, bit-fields, program applications. Concept of linked lists, Types & Advantages linked list, creating a linked list, Inserting and Deleting linked list, Applications of linked list	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments.		
1. Write a C program to take user Input and print it on the screen. a. Perform a C program to perform various mathematical and logical operations. b. Perform a C program to find whether the entered input number is Odd or Even.		
2. Perform a C program to find out Prime numbers.		
3. Write and perform C program to find out Fibonacci series.		
4. Perform and write a C program to find out Armstrong number.		
5. Perform a C programs to print different patterns.		
6. Perform and write a C program to do factorial using recursion.		
7. Perform a C program to sort the given array in Ascending & Descending order.		
8. Perform C programs to perform various operations on 2-D arrays		

9. Perform a C program to perform different operations on strings.
10. Use of Pointers a. Write a C program to swap numbers using pointers b. Write a C program to show the use of pointers in arrays. c. Write a C program to use functions using pointers.
11. Perform a C program to show the use of structure and linked list
12. Perform a C program to create student mark sheet using structures and linked list.
Text Books:
1. E Balagurusamy, “Programming in ANSIC”,5 th Edition-TMH
Reference Books:
1. Yashwant Kanitkar , “Let Us C”,PBP
Project based learning:
1. Bank Management System
2. Diary management System
3. Calendar using C
4. Contact Management System
5. Library Management System
6. Snake Game
7. Bus Reservation system
8. Customer Billing system
9. Hospital Management system
10. Cyber management
11. Cricket score display
12. Employee management system
13. Pacman Game
14. Quiz game
15. Phone-book application
16. Election System
17. Flight ticket booking
18. Tourism Management system
19. Simple Result system
20. Stock Management system

Students in a group of 3 to 4 shall complete any one project from the above list.

B.TECH (SEM-II)

SYLLABUS

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. II Electronics & Communication Engineering		
INTEGRAL TRANSFORMS AND VECTOR CALCULUS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination(UE): 60Marks	Credits : 05
Practical:--	Internal Assessment(IA): 40 Marks	
Tutorial: 01		Credit : 01
	Total Marks: 100 Marks	Total Credits: 05
Course Pre-requisites:		
The students should have knowledge of		
1	Integrals.	
2	Fourier series.	
3	Vector algebra.	
Course Objectives:		
1	Methods to solve differential equations	
2	Various techniques of integral transform.	
3	line, surface and volume integrals.	
Course Outcomes: After learning this course students will be able to		
1	Implement the methods for first order first degree differential equation.	
2	Understand the modeling of physical systems and find the solutions.	
3	Solve the nth order linear differential equation.	
4	Compute the integral transform for various functions.	
5	Apply the Laplace transform for solving differential equations	
6	Understand vector calculus and apply it to evaluate line, surface and volume integrals.	
UNIT – I	Differential Equation	(08 Hours)
	Formation of the ordinary differential equations(ODEs), Solution of an ordinary differential equation, Equations of the first order and first degree, Linear differential equation, Bernoulli's equation, Exact differential equations, Equations reducible to exact equations,	
UNIT–II	Applications of Differential Equation	(08 Hours)
	Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchoff's Law of Electrical Circuits, Motion under	

	Gravity, Rectilinear Motion, Simple Harmonic Motion, One–Dimensional Conduction of Heat.	
UNIT - III	Linear Differential Equations	(08 Hours)
	Solution of nth order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy’s & Legendre’s DE, Solution of Simultaneous & Symmetric Simultaneous DE, Modeling of Electrical Circuits.	
UNIT -IV	Z-transform	(08 Hours)
	Fourier Transform (FT): Complex Exponential Form of Fourier series, Fourier Integral Theorem, Sine & Cosine Integrals, Fourier Transform, Fourier Sine and Cosine Transform and their Inverses. Introductory Z-Transform (ZT): Definition, Standard Properties, ZT of Standard Sequences and their Inverses. Solution of Simple Difference Equations.	
UNIT -V	Laplace Transform	(08 Hours)
	Definition of LT, Inverse LT. Properties & theorems. LT of standard functions. LT of some special functions viz., Periodic, Unit Step, Unit Impulse, ramp, jump, . Problems on finding LT& inverse LT. Applications of LT and Inverse LT for solving ordinary differential equations.	
UNIT-VI	Vector Calculus	(08 Hours)
	Physical Interpretation of Vector Differentiation, Vector Differential Operator, Gradient, Divergence and Curl, Directional Derivative, Solenoidal, Irrotational and Conservative Fields, Scalar Potential, Vector Identities. Line, Surface and Volume integrals, Work-done, Green’s Lemma, Gauss’s Divergence Theorem, Stoke’s Theorem, Applications to Problems in Electro-Magnetic Fields.	
Text Books:		
2. P. N. Wartikar and J. N. Wartikar, “Applied Mathematics (Volumes I and II)”, 7 th Ed., Pune Vidyarthi Griha Prakashan, Pune, 2013.		
References Books:		
1. B. S. Grewal, “Higher Engineering Mathematics”, 42 th Ed., Khanna Publication, Delhi		
2. B.V. Ramana, “Higher Engineering Mathematics”, 6 th Ed., Tata McGraw-Hill, New Delhi, 2008.		
3. Erwin Kreyszig, “Advanced Engineering Mathematics”, 10 th Ed., John Wiley & Sons, Inc., 2015.		

4. Peter V. O'Neil, "Advanced Engineering Mathematics", 7 th Ed., Cengage Learning, 2012.
5. Michael Greenberg, "Advanced Engineering Mathematics", 2 nd Ed., Pearson Education, 1998.
Project based learning:
1. Formation of differential equations
2. Evaluate the electric circuit problem using differential equations
3. Evaluate the heat conduction in 1-D using differential equations
4. Evaluate the rectilinear motion problem using differential equations
5. Evaluate the simple harmonic problem using differential equations
6. Obtain the solution of Simultaneous & Symmetric Simultaneous DE
7. Obtain the solution of Simple Difference Equations using Z-transforms
8. Find the Directional Derivatives
9. Find work done using Green's theorem
10. Find scalar potential using vectors
11. Evaluating integrals using Green's theorem, Gauss's and stoke's theorem
12. Use Laplace transform to solve differential equations
13. Use Laplace transform to solve integrals equations
14. Use Fourier transform to solve integrals
15. Applications of vector integration to solve problems in Electro-Magnetic Fields.
16. Find the conditions for Solenoidal and irrotational vector fields

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. II Electronics & Communication Engineering		
WAVE THEORY AND PHOTONICS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination(UE): 60Marks	Credits : 04
Practical:02	Internal Assessment(IA): 40 Marks	
Tutorial: --	TW:50 Marks	Credit: 01
	Total:150 Marks	Total Credits:05
Course Pre-requisites:		
The students should have knowledge of		
1	Students are expected to have a basic understanding of physics and calculus.	
Course Objectives:		
1	To impart knowledge of basic concepts in physics relevant to engineering applications in a broader sense with a view to lay foundation for the Electronics and Communication Engineering.	
Course Outcomes: After learning this course students will be able to		
1	Connect the problems associated with architectural acoustics and give their remedies and use ultrasonic as a tool in industry for non destructive testing.	
2	Summarize and solve the engineering problems on Electromagnetism	
3	Develop competency and understanding of the principles and applications of lasers and fiber optics.	
4	Solve quantum physics problems to electronic phenomena and solid state physics	
5	Apply the properties of photon in communication engineering	
6	Interpret the need, importance and scope of non conventional and alternate energy resources.	
UNIT – I	Acoustics and Ultrasonics	(08 Hours)
	Acoustics: Intensity, Loudness, Absorption coefficient and its determination, Reverberation and Reverberation time, Factors affecting acoustics of buildings and their remedies, Sources and impacts of noise, Sound level meter, Strategies on controlling noise pollution. Ultrasonic waves and properties, Methods of Ultrasonic production (Magnetostriction and Piezoelectric), Applications of Ultrasonics in Engineering and medicine.	

UNIT – II	Electromagnetic Wave	(08 Hours)
	Displacement current, Maxwell's equations (derivation), Wave equation for electromagnetic waves, Propagation in free space, Poynting theorem, Characteristic of Transverse electric and magnetic waves, Skin depth, Rectangular and circular waveguides.	
UNIT - III	Lasers and Fibre Optics	(08 Hours)
	Lasers introduction, Characteristics of Lasers, Einstein's coefficients and their relations, Lasing action, Working principle and components of CO ₂ Laser, Nd -YAG Laser, Semiconductor diode Laser, Excimer Laser and Free electron Laser, Applications in remote sensing. Principle of Optical fiber, Acceptance angle and acceptance cone, Numerical aperture, V-number, Types of optical fibers (Material, Refractive index and mode), Photonic crystal fibers, Fiber optic communication, Fiber optic sensors.	
UNIT - IV	Quantum Mechanics and Crystal Physics	(08 Hours)
	Quantum mechanics: Inadequacies of Classical Mechanics, De Broglie hypothesis for matter waves, Heisenberg's uncertainty principle, Schrödinger's wave equation, Particle confinement in 1D box (Infinite Square well potential). Crystal Physics: Crystal directions, Planes and Miller indices, Symmetry elements, Quasi crystals, Diamond and HCP crystal structure, Packing factor, Reciprocal lattice, Diffraction of X-rays by crystal planes, Laue method and powder method	
UNIT -V	Photonics	(08Hours)
	Quantum properties of radiation and matter, Photon properties, Duality nature of electromagnetic radiation, Group/phase velocity and dispersion, matter and its interaction, light modulation, Coherence-different types, Two-beam interference and interferometry, Multi-wave interference, Fabry-Perot interferometer, Fraunhofer diffraction, Fresnel diffraction, semiconductor junction characteristics, semiconductor light sources, semiconductor light detectors.	
UNIT - VI	Green Energy Physics	(08 Hours)
	Introduction to Green energy, Solar energy: Energy conversion by photovoltaic principle, Solar cells, Wind energy: Basic components and principle of wind energy conversion systems, Ocean energy: Wave energy, Wave energy conversion devices, Tidal energy, single and double basin tidal power plants, Ocean Thermal Electric	

	Conversion (OTEC), Geothermal energy: Geothermal sources (hydrothermal, geo-pressurized hot dry rocks, magma), Biomass: Biomass and bio-fuels, bio-energies from wastages, Fuel cells: H ₂ O ₂ , Futuristic Energy: Hydrogen, Methane Hydrates, Carbon capture and storage (CCS).	
Term Work:		
The term work shall consist of record of minimum eight experiments.		
1. To determine the velocity of sound		
2. Measurement of average SPL across spherical wavefront and behaviour with the distance		
3. Expansion chamber muffler: investigation of muffler response as a filter in the low frequency approximation by determining insertion loss		
4. Interference of sound using PC speakers		
5. Determination of velocity of sound in liquid by ultrasonic interferometer		
6. Ultrasonic probe - a study		
7. Determination of divergence of a laser beam		
8. Particle size by semiconductor laser		
9. Determination of wavelength of laser by diffraction grating		
10. Determination of Planck's Constant by photoelectric effect		
11. To study Hall effect and determine the Hall voltage		
12. Calculation of conductivity by four probe method		
Text Books:		
1. M N Avadhanulu, P G Kshirsagar and TVS Arun Murthy, "A Textbook of Engineering Physics", S. Chand Publishing (2018)		
2. R K Gaur and S L Gupta, "Engineering Physics", Dhanpat Rai Publishing Co Pvt Ltd (2015)		
3. Arthur Beiser, Shobhit Mahajan and S. Rai Choudhury, "Concepts of Modern Physics", McGraw Hill Education (2017)		
Reference Books:		
1. Jearl Walker, David Halliday and Robert Resnick, "Fundamentals of Physics", John Wiley and Sons (2013)		
2. Francis Jenkins and Harvey White, "Optics", Tata Mcgraw Hill (2017)		
3. John W. Jewett, "Principles of Physics", Cengage publishing (2013)		
4. C. Kittel, "Introduction to Solid State Physics", Wiley and Sons (2004)		
5. H. V. Keer, "Principles of Solid State Physics", New Age International (1993)		
6. B. B. Laud, "Laser and Non-Linear Optics", New Age International Private Limited (2011)		
7. Dr. S. K. Kulkarni, "Nanotechnology: Principles and Practice", Capital Publishing Company (2014)		
8. C.M. Srivastava and C. Srinivasan, "Science of Engineering Materials", New Age International Pvt. Ltd. (1997)		
9. David R. Griffiths, "Introduction to Electrodynamics", Pearson (2013)		
10. Boyle, "Renewable Energy: Power for a Sustainable Future", Oxford University Press (2012)		
Project based learning:		
1. Measurement and effect of environmental noise in the college		
2. Construction and application of heat sensor in process control		
3. Design and simulation of automatic solar powered time regulated water pumping		
4. Solar technology: an alternative source of energy for national development		

5. The study on the effect of length on the resistance of a copper wire (verification of ohms law r directly proportional to l)
6. Possible effects of electromagnetic fields (emf) on human health
7. The design and construction of the hearing aid device
8. Design and construction of digital distance measuring instrument
9. Design and construction of automatic bell ringer
10. Design and construction of sound or clap activated alarm
11. Electronic eye (Laser Security) as autoswitch/security system
12. Determination of velocity of O-ray and E-ray in different double refracting materials
13. Quantum confinement effect in wide band semiconductors
14. Small wind turbines as a source of electricity
15. LiFi- wireless data transfer system using light

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. II Electronics & Communication Engineering		
ELECTRONIC COMMUNICATION		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination (UE): 60Marks	Credits : 03
Practical:04	Internal Assessment (IA): 40 Marks	
	TW & Oral: 100 Marks	Credits : 02
	Total Marks:200 Marks	Total Credits:05
Course Pre-requisites:		
The students should have knowledge of		
1	Solid State Devices	
2	Basic Physics	
3	Basic Mathematics	
Course Objectives:		
1	To introduce the concepts of analogue communication systems.	
2	To equip students with various techniques related to analogue communication such as modulation, demodulation.	
3	To study noise, transmission media etc.	
Course Outcomes: After learning this course students will be able to		
1	Outline the basic concept of communication system, need of modulation, some Terminologies in communication systems.	
2	Classify the transmission media used in communication system.	
3	Outline the different modern communication systems.	
4	Classify the different sources of noise.	
5	Classify & compare the amplitude modulation & demodulation techniques.	
6	Classify & compare the Angle modulation & demodulation techniques.	
UNIT – I	Fundamentals of Communication Engineering	(06 Hours)
	Signals:Basics of signal representation & its analysis, Bandwidth of Signals, Signal Shapes in Communication, Electromagnetic spectrum & typical applications, System: Baseband Systems, Pass band Systems, Communication System:Block diagram of communication systems, Analog Versus Digital Communication System, Modulation and Demodulation in Communication System, Need of Modulation, Classification of modulation techniques, Terminologies in Communication Systems.	

UNIT – II	Transmission Media and Propagation Mechanisms	(06 Hours)
	Wired Media: Twisted Pair, Optical fiber: Structure of a Fiber Optic Cable, Propagation Modes of Fiber Optic Cable, Calculation of Number of Modes in a Fiber, Optical Fiber Index Profile, Optical Fiber's Numerical Aperture (NA), Wireless Media, Wireless Propagation: Ground Wave Propagation, Sky Wave Propagation, Propagation Mechanism.	
UNIT - III	Modern Communication System	(06 Hours)
	Introduction to modern communication system: Operation of communication system, need of modern communications. Communication Technologies: The Internet, Basics of Networks, Optical communication: Introduction to optical communication, Development in optical communication, Wireless communications: Introduction to wireless communication, Wireless communication technologies, Mobile cellular communications, Satellite Communications: Basic principle of operation of satellite communication, Satellite orbits, Introduction to Underwater Communication, Radar.	
UNIT -IV	Noise	(06 Hours)
	Introduction, Sources of noise: External Noise, Internal Noise, Noise calculations(thermal noise),Noise figure: Signal to Noise ratio, definition of noise figure, Classification of noise figure, noise Figure from equivalent noise resistance, Noise Temperature.	
UNIT -V	Amplitude Modulation & Demodulation	(06 Hours)
	Amplitude Modulation: Introduction, Mathematical expression for AM, Modulation index, Frequency spectrum and bandwidth of AM, Time domain representation of AM Power relation in AM, Generation of AM signal: Double sideband full carrier (DSBFC), Double sideband suppressed carrier (DSBSC), SSB, Generation of SSB: Filter method, phase shift method, Third method, Block diagram & working principle of AM Transmitters, AM Receivers: Performance's characteristic of receivers, Tuned radio frequency (TRF) receiver, Super heterodyne receiver, Demodulation of AM Signal.	
UNIT -VI	Angle Modulation& Demodulation	(06 Hours)
	Introduction, Types of angle modulation techniques, Mathematical expression of FM, Modulation index for FM, Frequency spectrum and bandwidth of FM, Narrow band and wide band FM, Pre emphasis and de-emphasis, Generation of frequency modulation techniques: Direct method and indirect method, Pulse analog modulation techniques: Pulse Amplitude Modulation (PAM),Pulse	

	Width Modulation, Pulse Position Modulation, Demodulation of Pulse analog modulated signal, Comparison of AM, FM and PM, Block diagram & working principle of FM Transmitters, Block Diagram& working principle of FM receiver.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments.		
12. Generate AM signals, study their time- and frequency-domain characteristics, and measure their modulation indices (Under modulation, Perfect modulation & Over modulation)		
13. Demonstrate the modulation & demodulation process of DSB-SC.		
14. Demonstrate the modulation & demodulation process of SSB-SC.		
15. Generate & analyze frequency modulated signal & demodulate using FM demodulator.		
16. Analysis of standard signals (square and triangular) and Modulated signals (all types of AM, FM) using spectrum analyzer.		
17. Demonstrate the Pulse Amplitude Modulation & demodulation & their waveforms.		
18. Demonstrate the Pulse Width Modulation & demodulation & their waveforms.		
19. Demonstrate the Pulse Position Modulation & demodulation & their waveforms.		
20. Examine the operation of PAM-TDM.		
21. Study of Super heterodyne (AM) Receiver.		
<u>Textbooks:</u>		
1. S.Haykin , “Communication System” (IV Edition), John Wiley & Sons.		
2. A.B. Carlson, “ Communication Systems”, McGraw-Hill.		
3. B.Lathi , “Modern Analog And Digital Communication Systems”, Oxford Univ.Press.		
4. Taub & Schilling , “Communication Systems”, TMH.		
5. Kennedy, Davis , “Electronic Communication Systems”, (4/e), McGraw Hill, Reprint 2008.		
6. Djafar K. Mynbaev, Lowell L. Scheiner, “Essentials of modern communications” , Wiley.		
<u>Reference Books:</u>		
1. Matin, Mohammad Abdul , “Communication Systems for Electrical Engineers” , springer.		
<u>Project Based Learning:</u>		
1. Testing the connectivity of circuit using DMM.		
2. Testing of devices using DMM.		
3. Construct a circuit for sound amplifier.		
4. Design of regulated power supply.		
5. Construct a circuit for Analog signal multiplier using Op-amp.		
6. Construct a circuit for Analog signal divider using Op-amp.		
7. Construct a circuit for Walkie-talkie.		
8. Construct a circuit for Wireless power transfer.		
9. Construct a circuit for Crystal oscillator tester.		
10. Construct a circuit for Mobile incoming call indicator.		
11. Construct a circuit for FM transmitter.		
12. Construct a circuit for AM Modulator.		
13. Construct a circuit for PAM Modulator.		
14. Construct a circuit for single transistor FM transmitter.		

15. Construct a circuit for solar energy operated mobile charger.

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. II Electronics & Communication Engineering COMPUTER AIDED GRAPHICS		
<u>TEACHINGSCHEM</u> <u>E:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination (UE): 60Marks	Credits : 04
Practical:02	Internal Assessment(IA): 40 Marks	
Tutorial: --	TW: 25 Marks	Credit: 01
	Total Marks:125 Marks	Total Credits:05
Course Pre-requisites:		
The students should have knowledge of		
1	Mathematics	
Course Objectives:		
1	To understand the basic principles of engineering drawing and highlight the importance of Computer Aided Graphics in engineering.	
2	To develop the graphical skills for communication of concepts & idea through technical drawings.	
Course Outcomes: After learning this course students will be able to		
1	Understand the fundamental concepts of Drawing, different types of lines, curves and dimension technique with practical application.	
2	Understand the concept of Orthographic projections and apply it to draw detail views by using 1 st angle projection method.	
3	Understand the concept of isometric projection and apply it to construct 3D view of a component.	
4	Understand the concept of projections of Point, Line and plane; and apply to draw its projection by using 1 st angle projection method and to locate its traces	
5	Understand the concept of projections of different types of solids and apply to draw its projection by using 1 st angle projection method.	
6	Understand the concept of Development of Lateral surfaces; and apply to development of simple Solids.	
UNIT – I	Lines and Dimensioning in Engineering Drawing and Engineering Curves	(08 Hours)
	Introduction to Engineering Drawing, Types of lines and Dimensioning, Layout and size of drawing sheets, Scales Engineering Curves-Ellipse drawing by Focus-Directrix Circle Method and Concentric Circle Method, Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone and Cylinder. Introduction to Auto CAD commands.	

UNIT – II	Orthographic Projection	(08 Hours)
	Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections. (Also using AutoCAD commands)	
UNIT - III	Isometric Projections	(08 Hours)
	Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view. (Also using AutoCAD commands)	
UNIT - IV	Projections of Points, Lines and Planes	(08 Hours)
	Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only), Traces of lines. Projections of Planes -projection of perpendicular and oblique planes (polygonal and circular surfaces), Obtaining true shape of plane surface. (Also using AutoCAD commands)	
UNIT -V	Projection of Solids	(08 Hours)
	Introduction of solids- Types of solids, Projection of solid inclined both reference planes, Projection of common solids such as prism, pyramid, cylinder and cone. (Also using AutoCAD commands)	
UNIT - VI	Development of Lateral Surfaces of Solids	(08 Hours)
	Introduction to development of lateral surfaces and its Industrial application, draw the development of lateral surfaces of cone, pyramid and prism. (Also using AutoCAD commands)	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments.		
1. Types of lines, Dimensioning practice, free-hand lettering, 1 nd and 3 rd angle methods symbol		
2. Engineering curves.		

3. Orthographic Projections.
4. Isometric views.
5. Projections of Points, Lines and planes.
6. Projection of Solids.
7. Development of lateral surfaces
Text Books:
1. N. D. Bhatt , “Elementary Engineering Drawing”, Charotar Publishing house, Anand India,
2. Munir Hamad , “AutoCAD 2020 Beginning and Intermediate” , Mercury Learning & Information Publication, 2019.
3. Venugopal K , “Engineering Drawing and Graphics” ,., New Age International publishers.
Reference Books:
1. K.L.Narayana & P. Kannaiyah , “Text Book on Engineering Drawing” , Scitech Publications, Chennai.
2. Warren J. Luzzader, “Fundamentals of Engineering Drawing”, Prentice Hall of India, New Delhi,
3. M. B. Shah and B.C. Rana, "Engineering Drawing", 1 st Ed, Pearson Education, 2005
4. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 st Edition, 1988
5. P.S.Gill , "Engineering Drawing (Geometrical Drawing)", 10 th Edition, S.K. Kataria and Sons, 2005
Project Based Learning
Following is the list topic for project based learning (Not Limited to) based on the syllabus contents:
1. To obtain industrial drawings to identify the types of lines, dimensioning methods and method of projection.
2. To develop the model/charts based on engineering curves.
3. To prepare model/chart for identification of engineering curves in nature for industrial, societal, etc application.
4. To demonstrate different methods of orthographic projection.
5. To demonstrate projection of Points.
6. To demonstrate projection of Lines.
7. To demonstrate projection of Planes.
8. To demonstrate projection of Solids.
9. To demonstrate developments of surfaces for solids.
10. To demonstrate industrial application of development of surfaces such as steam carrying pipes, Ducts of air conditioning systems, etc.
11. To demonstrate Isometric projection method through model of a cube.

Students in a group of 3 to 4 shall complete any one project from the above list

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. II Electronics & Communication Engineering PYTHON PROGRAMMING		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination: 60 Marks	Credits : 03
Practical:04	Internal Assessment: 40 Marks	
Tutorial: --	TW& Oral: 75 Marks	Credits: 02
	Total Marks:175 Marks	Total Credits:05
Course Pre-requisites:		
The students should have knowledge of		
1	Students should have basic knowledge of programming.	
Course Objectives:		
1	This course will introduce the concepts of Python language software development tool. By the end of the course, student will be familiar with various fundamentals of Python language.	
Course Outcomes: After learning this course students will be able to		
1	Understand the basic concept of Python programming.	
2	Write basic programs using control statement.	
3	Use exception handling.	
4	Learn object oriented programming.	
5	Write basic programs using arrays.	
6	Use Python for simple applications.	
UNIT – I	Python Basics:	(06 Hours)
	Python Introduction, Python Installation, Relational operators, Bitwise operators, Logical operators Python Data Types - Numbers (Integer, Floating Point, Complex Numbers), Strings,Lists, Tuples, Dictionaries, List comprehensions, Python Control Statements	
UNIT – II	Python Core:	(06 Hours)
	Python Modules & Functions, Lambda, Scope, Python File Handling, Python Regular Expressions, Sequence Types, Input and output, Recursion, Flow Control, Immutable and Mutable Objects	
UNIT -	Python Exception Handling:	(06

III		Hours)
	Meaning of Exception, Exception Hierarchy Diagram, Types of Exception- Checked Exception, Unchecked Exception, Exception Handling -TRY, CATCH, FINALLY, Raising an Exception, User Defined Exceptions	
UNIT - IV	OOPS, UML & OOAD:	(06 Hours)
	Object Oriented Programming (OOPs) - Class & Object, Abstraction, Inheritance, Polymorphism, Encapsulation, Object Oriented (OO) Modelling, Object Oriented Analysis & Design (OOAD)	
UNIT - V	PYTHON MULTI-THREADING:	(06 Hours)
	Threads in Python (a) Kernel Threads(b) User Space Threads or User Threads, Advantages of Threading, Thread States: Life Cycle of a Thread, Thread & Threading Modules, Forking & Synchronizing Threads, Networking	
UNIT - VI	Python Packages and Graphics:	(06 Hours)
	Numpy: Introduction, datatypes, arrays, arrays manipulation, plotting, testing and debugging, Sharing Data using Sockets, pycharm in python, Simple applications of python	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments.		
1. Evaluate any given expression involving arithmetic operators		
2. Evaluate any given expression involving logical operators		
3. Develop python functions to produce given patterns such as diamond, pyramid, triangles.		
4. Usage of different functions present in “math” module		
5. Write a function that takes two numbers as input parameters and returns their least common multiple.		
6. Write a function that takes two numbers as input parameters and returns their Greatest common divisor.		
7. Write a function that returns the sum of the digits of a number, passed to it as an argument.		
8. Write a program that takes a sentence as an input and displays the numbers of words in the sentence.		
9. Program to interchange first and last elements in a list		
10. program to print even numbers in a list		
11. Ways to sort list of dictionaries by values in Python – Using lambda function		
12. Example using “matplotlib” module		
13. Example using “NUMPY” module		
14. Evaluate any given expression involving arithmetic operators		
Text Books:		

2. Sheetal Taneja, Naveen Kumar, "Python Programming, A modular approach", Pearson publication
Reference Books:
1. Learning Python 5th Edition, Oreilly Publication.
2. Magnus Lie Hetland, "Beginning Python: From Novice to Professional", Third Edition, Apress Publication
3. Allen Downey, Jeffrey Elkner, Chris Meyers, "Learning with Python", Dreamtech Publication.
4. Paul Berry, "Head-First Python: A Brain-Friendly Guide" (2nd Edition), O'Reilly Media
5. Magnus Lie Hetland, "Python Algorithms: Mastering Basic Algorithms in the Python Language", Apress Pub.
Project Based Learning
1. Design and development of Mad Libs generator.
2. Design and development of electronic mail system (Read, write, send and delete operations).
3. Design and development of store billing system.
4. Design and development of typing speed check web application.
5. Design and development of windows application for music player.
6. Design and development of windows Quiz Application.
7. Design and development of web application for daily expense tracker.
8. Design and development of student portfolio management & CV generator system.
9. Design and development of windows based to do list or sticky notes.
10. Design and development of assignment plagiarism checker.

Students in a group of 3 to 4 shall complete any one project from the above list

B.TECH (SEM-III)

SYLLABUS

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III Electronics & Communication Engineering PROBABILITY AND STATISTICS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination(UE): 60Marks	Credits : 04
Practical: --	Internal Assessment(IA): 40 Marks	
Tutorial: 01		Credit : 01
	Total: 100 Marks	Total Credits: 05
Course Pre-requisites:		
The students should have knowledge of		
1	Measures of central tendency, dispersion, skewness and kurtosis.	
Course Objectives:		
1	To study probability distributions and testing of hypothesis.	
Course Outcomes: After learning this course students will be able to		
1	Understand discrete and continuous probability distributions.	
2	Identify standard probability distributions.	
3	Apply bivariate distributions.	
4	Apply sampling distributions.	
5	Understand concept of point estimation and interval estimation.	
6	Apply ANOVA for one way and two way distribution.	
UNIT – I	Probability and random variables	(08 Hours)
	Concept of probability, Random Variables, Probability Distributions and Expectation: Concept of a random variable, discrete probability distributions, continuous probability distributions, joint probability distributions, mean, variance, covariance.	
UNIT -II	Standard distributions	(08 Hours)
	Gaussian, exponential, Rayleigh, uniform, Bernoulli, binominal, Poisson, Normal, hyper geometric, discrete uniform and conditional distributions, . Functions of a random variable.	
UNIT -III	Joint Distributions	(08 Hours)

	Joint, marginal and conditional distributions, product moments, independent of random variables, bivariate normal distribution.	
UNIT -IV	Sampling Distributions	(08 Hours)
	The central limit theorem, distributions of the sample mean and the sample variance for a normal population, Chi-square, t and F distributions.	
UNIT -V	Estimation	(08 Hours)
	The methods of moments and the of maximum likelihood estimation, confidence intervals for the mean(s) and variance(s) of Normal populations.	
UNIT-VI	Testing of Hypothesis	(08 Hours)
	Null and Alternative hypotheses, the critical and acceptance regions, types of errors, power of the test, the most powerful test and Neyman-Pearson Fundamental Lemma, tests for onesample problems for normal populations, ANOVA I & ANOVA II.	
Text Books		
1. Rohatgi, V K. and Saleh , A. K. Md. Ehsanes, "An Introduction to Probability and Statistics", (John Wiley and Sons) , (2 nd edition)		
2. J.S. Milton & J.C. Arnold, "Introduction to Probability and Statistics" Tata McGrawHill Publication		
References Books		
1. H.J. Larson , "Introduction to Probability Theory and Statistical Inference" Wiley Publication.		
2. S.M.Ross, "Introduction to Probability and Statistics for Engineers and Scientists" Academic Press.		
Project Based Learning:		
Students are expected prepare report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code/proof for it, wherever applicable.		
1) Find the stability of the data using coefficient of variation		
2) Use concept of correlation to find coefficient of correlation between different observations		
3) Use Rank correlation to find correlation for qualitative data		
4) Derive Spearman's Rank correlation		
5) Find the chance of happening particular event using Baye's theorem		
6) Use probability theory to estimate the life of electric equipments		
7) Find the height, weight of the population using the example of normal distribution		
8) Check the goodness of fit using chi-square distribution		
9) Perform ANOVA for single way classification data		
10) Perform ANOVA for two way classification data		
11) simple regression model		
12) Multiple regression model		

13) Coefficient of variation
14) Joint and marginal probability distribution
15) Standard probability distributions

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III Electronics & Communication Engineering SWITCHING THEORY AND LOGIC DESIGN		
<u>TEACHINGSCHE ME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination(UE): 60Marks	Credits : 04
Practical: 02	Internal Assessment (IA): 40 Marks	
Tutorial: --	TW & Practical:50 Marks	Credit : 01
	Total: 150 Marks	Total Credits:05
Course Pre-requisites:		
The Students should have knowledge of		
1	Fundamentals of Number Systems	
2	Knowledge of Boolean algebra laws.	
Course Objectives:		
1	To familiarize with various number representations and conversion between different representation in digital electronic circuits.	
2	To introduce the students to various logic gates, SOP, POS and their minimization techniques	
3	To analyze logic processes and implementation of logical operations using combinational logic circuits.	
4	To describe, analyze and design sequential circuits.	
Course Outcomes: After learning this course students will be able to		
1	Represent numerical values in various number systems and perform number conversions between different number systems.	
2	Apply knowledge of Boolean algebra and other minimization techniques for digital circuit design.	
3	To differentiate between logic families TTL and CMOS.	
4	Identify, formulate and solve a problem based on combinational circuits.	
5	Analyze and design a simple sequential logic circuit.	
6	Implement Digital circuits using VHDL systems	
UNIT – I	Number system & Codes:	(08 Hours)
	Binary number base conversion decimal, octal, hexadecimal numbers, 1's 2's Complement, signed binary numbers binary codes- BCD codes, Gray codes, Excess-3 code, ASCII code & codes for serial data transmission & storage	

	Logic Gates: Positive and Negative Logic, Various Logics Gates with IEEE/ANSI symbols, Boolean equations, truth table and IC Details. Universal Gates & Derived gates	
UNIT – II	Boolean Algebra and Simplification Techniques:	(08 Hours)
	De-Morgan’s theorem – switching functions Introduction, Postulates and Theorems, Various types of Boolean expressions, Simplification Techniques-K-map up to 4 variables, Product of Sum simplification & Sum of product simplification, Don’t care conditions, Quine Mc-Cluskey method	
UNIT - III	Combinational Logic Circuits:	(08 Hours)
	Combinational Circuits and its implementations, Arithmetic Circuits – Adders and Subtractors, BCD Adder, Look-Ahead Carry Generator, ALU, Multiplier, Magnitude comparator. Multiplexer, Encoders, Demultiplexers and Decoders, Parity Generation and Checking.	
UNIT - IV	Sequential Logic Circuits:	(08 Hours)
	R-S and D Flip-flop, Level Triggered and Edge-Triggered Flip-flops, J-K and T Flip-flop, Synchronous and Asynchronous Input, Flip-flop Timing Parameters, Application of Flip-flop. Ripple Counter, Synchronous Counter, Modulus Counter, Binary Ripple Counter, Synchronous Counters, UP/Down Counters, Decade and BCD Counters, Presettable Counters, Decoding Counter, Cascading Counter, Designing Counter with Arbitrary Sequences, Shift Register, Shift Register, Counters	
UNIT -V	Programmable Logic Devices, Memory & Logic Families:	(08 Hours)
	Memories: ROM,PROM,EPROM Programmable Logic Devices(PLD):Programmable Logic Array(PLA),Programmable Array Logic(PAL) CPLD-FPGA Logic Families: Significance of families, Characteristic parameters, Types of Logic Families: TTL,ECL Comparison between various logic families Interfacing. between CMOS and TTL logic families	
UNIT - VI	Introduction to VHDL:	(08 Hours)
	Introduction to VLSI design flow (with reference to an EDA tool),sequential, data flow and structural modeling, functions, procedures, , data objects types, attributes, packages and configurations	
<u>Term Work:</u>		

The term work shall consist of record of minimum eight experiments.
1. Implementation of Boolean functions using logic gates.
2. Study of characteristics of typical 74 TTL / 74 CMOS family like: fan in, fan out standard load , noise margin & interfacing with other families
3. Half, Full Adder and subtractor using gates and IC's
4. Code conversion using digital IC's
5. Function implementation using Multiplexer and Demultiplexer
6. BCD Adder/Subtractor using IC7483.
7.Study of counters : Ripple , Synchronous , Ring , Johnson , Up-down counter and its application
8. Study of shift registers : Shift left , Shift right , parallelloading
9. To model 8:1 mux, 1:8 demux using VHDL.
10.Sequence generator using MS-JK flip flop IC's
Text Books:
1. R.P. Jain , “Modern digital electronics” , 3rd edition , 12 th reprint TMH Publication, 2007
2. Anand Kumar ‘Fundamentals of Digital Circuits’--. PHI
3. J. Bhaskar, “VHDL Primer”, PHI, Third Edition (2009).
Reference Books:
1. J.F.Wakerly “Digital Design: Principles and Practices”, 3 rd edition, 4 th reprint, Pearson Education, 2004.
2. A.P. Malvino, D.P. Leach ‘Digital Principles & Applications’ –Vith Edition-Tata Mc Graw Hill, Publication
3. Morris Mano ‘Digital Design’ -- (Third Edition),.PHI
4. Thomas L Floyd & R.P Jain, “Digital Fundamentals” (Eight editions), Pearson
5. Stephen Brown & Zvonko Vranesic, “Fundamentals of Digital Logic Design with VHDL”, Second Edition, TMH(2009).
Project based learning:
1. To demonstrate the use of NAND as Universal Gate
2. Electronic Eye using basic gates.
3. Light sensor switch circuit using JK-Flip-Flop
4. Morning sun alarm circuit using IC-4011(quad NAND gate)
5. To demonstrate the use of IC 555 as a Pulse Generator Circuit
6. Automatic switch off battery charger using IC 555
7. Fluid Level Control Using IC 4093
8. A pseudo-random number generator
9. 2-Bit-Parallel-or-Flash-Analog-to-Digital-Converter
10. DigitalBank Token Number Display
11. Digital Object Counter
12. Asynchronous-Modulo-16-Down-Counter
13. Analog-Signals-Multiplier
14. 4-line to 16-line decoder Circuit using 7442
15. Simple Electronic Toggle Switch Flip Flop Circuit Using IC 4017

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III Electronics & Communication Engineering ANALOG CIRCUITS AND APPLICATIONS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination(UE): 60 Marks	Credits : 03
Practical: 02	Internal Assessment(IA): 40 Marks	
Tutorial: --	TW & Practical: 50 Marks	Credit: 01
	Total: 150 Marks	Total Credits:04
Course Pre-requisites:		
The Students should have knowledge of		
1	Electronic components and devices.	
Course Objectives:		
1	To understand analysis of single stage and multistage transistor amplifier.	
2	To give a practical approach of analysis of feedback amplifiers ,power amplifiers and oscillators	
3	To understand analysis and design of voltage regulators.	
Course Outcomes: After learning this course students will be able to		
1	Describe and demonstrate BJT single stage amplifier, its hybrid equivalent and hybrid models.	
2	Analyze multistage amplifiers using BJT.	
3	Analyze the importance of negative feedback in amplifiers.	
4	Demonstrate and analyze power amplifier circuits in different modes of operation.	
5	Design various oscillator circuits using BJT.	
6	Design and analyze transistorized series and shunt voltage regulators.	
UNIT – I	Single stage Amplifiers	(06 Hours)
	Classification of Amplifiers – Distortion in Amplifiers, Analysis of CE, CC, and CB Configurations with simplified Hybrid Model, Analysis of CE amplifier with Emitter Resistance and Emitter follower, Miller's Theorem and its dual, Design of Single Stage RC Coupled Amplifier using BJT.	

UNIT – II	Multi Stage Amplifiers	(06 Hours)
	Need of Multistage amplifiers, Parameter evaluation such as R_i , R_o , A_v , A_i & Bandwidth for general multi stage amplifier, Analysis & design at low frequency & mid frequency of direct coupled, RC coupled, transformer coupled (Two stage) amplifier, Darlington amplifier, cascode amplifier	
UNIT - III	Feedback Amplifiers	(06 Hours)
	Concept of feedback, classification of amplifiers, Negative feedback topologies with their block diagram representation, Effect of negative feedback on Input impedance, Output impedance, Gain and Bandwidth with derivation, method of analysis of feedback amplifier, analysis of all feedback topologies.	
UNIT -IV	Power Amplifiers	(06 Hours)
	classification of power amplifiers - Class A, Class B, Class C, and Class AB. Operation of - Class A with resistive load; Transformer coupled class A Amplifier; Class B Push – pull amplifier ; Class B Complementary symmetry amplifier. Efficiency analysis for Class A transformer coupled amplifier and Class B push – pull amplifier, cross over distortion in power amplifiers, harmonic analysis	
UNIT -V	Oscillators	(06 Hours)
	Positive feedback, Barkhausen criterion, Classification of oscillators, derivation and analysis of RC oscillators, Wien bridge Oscillators, LC Oscillators for frequency of oscillation, Tuned collector oscillator, Piezo-electric effect in crystals and Crystal Oscillator	
UNIT -VI	Regulator	(06 Hours)
	Block schematic of linear regulators, Performance parameters – Load and Line regulations, Ripple rejection, Output resistance Emitter follower regulator, Transistor series regulator, shunt regulator Study and design of regulators using IC's: 78XX, 79XX, 723, LM317, Method of boosting output current using external series pass transistor. Protection circuits – Reverse polarity protection, over circuit, fold back current limiting, over voltage protection.	
Term Work:		
The term work shall consist of record of minimum eight experiments.		
1. Analysis of multistage LF amplifier, verification with theoretical values of A_{is} , A_{vs} ,		

R _i , R _o (overall) with square wave testing.
2. Input impedance improvement techniques for emitter follower.
3. Analysis of LF amplifier with negative feedback in Voltage series and current series topology.
4. Analysis of LF amplifier with negative feedback in Voltage shunt and current shunt topology.
5. Measurement of frequency of oscillations of RC Oscillators - phase shift and wien bridge
6. Measurement of frequency of oscillations of LC oscillators – Hartley, Colpitt
7. Biasing analysis of BJT power amplifier in class A, B, C.
8. Regulation characteristic of series and shunt regulators and calculation of S _v and R _o .
Text Books:
1. S. Salivahanan, Suresh Kumar Vallavaraj, “Electronic devices and circuits”, Mc Graw Hill Publication
2. Robert Boylestad, “Electronic Devices and Circuit Theory”, Pearson Publication
Reference Books:
1. Allen Mottershed , “Electronic Devices and Circuits”, PHI Publication
2. J.B. Gupta , “Electronic Devices and Circuits”, Kaison Educational Series
3. Raghbir Singh Khandpur, “Printed circuit boards: Design, fabrication, assembly and testing”, 2006, ISBN 10:0071464204,McGraw Hill
Project Based Learning:
Build the following circuits -
1. A single stage common emitter amplifier.
2. RC coupled multistage amplifier.
3. Darlington amplifier.
4. Voltage shunt negative feedback amplifier.
5. Current shunt negative feedback amplifier.
6. Voltage series negative feedback amplifier.
7. Current series negative feedback amplifier.
8. Class A, B, C power amplifier.
9. RC phase shift oscillator using BJT.
10. Colpitt’s oscillator using BJT.
11. Hartley oscillator using BJT.
12. Shunt voltage regulator using zener diode.
13. Series voltage regulator.
14. IC 723 as basic high/low voltage regulator with fold back current limiting.
15. Flashing LED using astable multi vibrator.

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III Electronics & Communication Engineering SIGNALS AND SYSTEMS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination(UE): 60Marks	Credits : 04
Practical: 02	Internal Assessment(IA): 40 Marks	
	TW & Oral: 50 Marks	Credit : 01
	Total:150 Marks	Total Credits: 05
Course Pre-requisites:		
The students should have knowledge of		
1	Differential and Integral calculus	
2	Vector algebra and algebra of complex numbers	
Course Objectives:		
1	To understand the behavior of signals in time and frequency domain	
2	To understand the characteristics of LTI systems	
3	To analyze continuous and discrete time systems using different transform techniques.	
Course Outcomes: After learning this course students will be able to		
1	Classify signals and perform operations on signals.	
2	Analyze LTI systems using convolution.	
3	Apply Fourier series and Fourier Transform for analysis of signals.	
4	Analyze CT signals and systems using Laplace transform.	
5	Apply Z-transform for the analysis of DT signals and systems.	
6	Sample and reconstruct the signals using sampling technique.	
UNIT –I	Introduction and Classification of signals:	(08 Hours)
	Signals and Systems definition, Types of signals, continuous time and Discrete time signal operations, Amplitude scaling, Time shifting, Time reversal, Time scaling, Mathematical operations additions, subtraction, multiplication of signals, Classification of signals according to their property, Periodic/Aperiodic, Even/Odd, Energy/Power/Causal/Non causal, Deterministic/Random signals	
UNIT –	Time domain representation of LTI System:	(08

II		Hours)
	Introduction to systems, Classification of systems according to their properties, Linear/Nonlinear, Static /Dynamic, Time Invariant/Time-variant, Causal/non causal, Stable/Unstable, Invertible/Non Invertible systems, LTI system: Causality, stability, step response, impulse response, Convolution Integral, convolution sum using graphical method properties and applications.	
UNIT-III	Fourier Analysis of Signals: Fourier Series: - Review of Fourier series of CT and DT signals and its properties (No derivation), Exponential and Trigonometric Fourier series of periodic signals, Amplitude and phase spectra of periodic signals.	(08 Hours)
UNIT-IV	Application of Laplace Transform in Signal processing:	(08 Hours)
	Review of Bilateral and Unilateral Laplace Transform of signals, ROC and its properties. Laplace transforms of standard signals, Inverse Laplace Transform, Solution to differential equation, System transfer function and Response calculations, Poles and Zeros representation	
UNIT -V	Z-transform	(08 Hours)
	Z-transform, Region of convergence and its properties, Inverse z-transform, properties of z transform, relation between Z and Laplace Transform, Analysis and characterization of discrete time LTI systems using z-transform.	
UNIT-VI	Sampling and Correlation:	(08 Hours)
	Sampling theorem, sampling and reconstruction of signal from its samples using interpolation, Effect of under sampling, Correlation, Autocorrelation and cross-correlation of energy and power signals, properties of correlation functions, applications of Correlation, Energy Density Spectrum, Parsevals Theorem, Power Density Spectrum,	
<u>Termwork:</u>		
1. Introduction to MATLAB and its basic functions.		
2. Generate Continuous and discrete time signals.		
3. Perform signal operations on Continuous and discrete time signals.		
4. Find even and odd part of the signal and sequence and find real and imaginary parts of signal.		
5. Compute linear convolution and convolution integral of sequences/signals.		
6. Compute Fourier Transform and Inverse Fourier Transform of a given signal		

/sequence and plot its Magnitude and Phase Spectra.
7. To compute and plot the impulse response and pole-zero diagram of transfer function using Laplace transform.
8. To compute and plot the impulse response and pole-zero diagram of transferfunction using Z-transform.
9. Compute auto correlation and cross correlation between signals and sequences and verify its properties.
10. Verify sampling theorem and reconstruct the signal.
Text Books:
1. Oppenheim, Willsky, S.Hamid Nawab, “Signals and Systems”, PHI,2 nd edition, 2002.
2. M.J. Roberts, “Signals and Systems”, McGraw-Hill, 1 st edition,2003.
3. B.P Lathi, “Principles of linear systems and signals”, Oxford, 2nd edition,2009.
Reference Books:
1. Simon Haykin and Bary Van Veen, “Signals and Systems”, Wiley- India Publications
2. Michal J. Roberts and Govind Sharma, “Signals and Systems”, Tata Mc-Graw Hill Publications
Project Based Learning:
1. Generate basic signals using C / Python programming.
2. Perform multiple operations on signal using C or MATLAB.
3. Visualize signal/data in time and frequency domain using MATLAB.
4. Find the Trigonometric Fourier Series of a given Signal using C/Python/MATLAB.
5. Create Frame-Based Signals using MATLAB simulink.
6. Create Multichannel Signals by combining single channel signals using simulink.
7. Create Multichannel Signals by combining multichannel signals using simulink.
8. Inspect sample and frame rate using simulink.
9. Perform Linear Convolution of two sequences using SCILAB.
10. Represent, Play and plot audio signals with different sampling frequencies using MATLAB.
11. Study of Signal Processing Sound Effects: Introducing a delay, creating an echo effect by repeating the signal, time scaling, time reversal, volume scaling.
12. Create acoustic environment in Simulink.
13. Develop a Python application to generate digital signals.
14. Perform measurement using spectrum analyzer using MATLAB simulink.
15. Filter the frames of noisy wave using MATLAB.

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III Electronics & Communication Engineering PROCESS AND CONTROL SYSTEM		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination (UE): 60Marks	Credits: 03
Practical: --	Internal Assessment (IA): 40 Marks	
Tutorial: --		
	Total: 100 Marks	Total Credits: 03
Course Pre-requisites:		
The Students should have knowledge of		
1	Basic knowledge of signals.	
2	Basic mathematical tools like Laplace Transform.	
Course Objectives:		
1	This course provide in depth knowledge of various control system.	
2	It introduces the stability of system, transducers, DAS etc.	
Course Outcomes: After learning this course students will be able to		
1	Identify various control systems and determine the 'transfer function' of System using block diagram reduction and Signal flow graph.	
2	Determine the error in various control systems.	
3	Evaluate the stability of a system using Routh's stability criteria, root locus, bode plot etc.	
4	Illustrate different specifications of the system in frequency domain.	
5	Measure non-electrical quantities such as displacement, temperature, angular speed etc using suitable transducer.	
6	Compare various control actions such as Proportional (P), Integral (I), Derivative (D), PI, PID.	
UNIT – I	Control System Classification	(06 Hours)
	Open loop, closed loop, Feedback and Non-feedback Systems, continuous, discrete, linear and non-linear control systems. Transfer Function, Analysis of T.F. using Block diagram and signal flow graph.	
UNIT– II	Time Domain Analysis	(06 Hours)
	Transient and steady state responses of first and second order	

	systems, steady state errors, control of transient response, Basic control actions and their effects on transient and steady state responses.	
UNIT-III	Stability	(06 Hours)
	Stability concepts, Routh Hurwitz criterion, Root loci, properties and construction of root loci, effects of adding of poles and zeros, root locus of conditionally stable systems.	
UNIT-IV	Frequency Domain Analysis	(06 Hours)
	Bode plot, gain, magnitude and phase shift plots, frequency domain specifications, peak resonance and resonant frequency of a second order system, gain margin and phase margin, conditionally stable system.	
UNIT -V	Transducers	(06Hours)
	Classification of Transducers and its Characteristics. RTD, Thermocouple, Thermister, capacitive transducer, LVDT, strain gauge, Electromagnetic flow-meter, Piezoelectric Accelerometer, tacho-generators. Internet Things (IoT) for wireless sensor networks.	
UNIT -VI	Controllers	(06Hours)
	Control actions – On/Off Controller, Proportional Controller, Integral Controller, Derivative Controller, Proportional- Integral(PI) Controller, Proportional-Derivative(PD) Controller, PIDController.	
<u>Assignments:</u>		
It shall consist of record of minimum six assignments.		
1. Transfer function of closed loop system.		
2. Transient response specifications of second order system.		
3. To draw Root Locus theoretically and verify it.		
4. To draw Bode plot theoretically and verify it.		
5. To study characteristics of temperature transducer.		
6. To Study characteristics of LVDT for displacement measurement.		
7. Study of Strain Guage.		
8. Internet Things (IoT) for wireless sensor networks.		
9. Study of Various Controllers.		
<u>Text Books:</u>		
1. A. K. Sawhney, “Electrical and Electronic Measurements and Instrumentation”, Dhanpat Rai and Co. Ltd		
<u>Reference Books:</u>		
1. J. Nagrath & M. Gopal, “Modern Control Engineering”, New Age International, New Delhi (Fifth Ediion)2007		

2. H S Kalsi, "Electronic Instrumentation", Tata McGraw-Hill.
3. Ogata, K., "Modern Control Engineering", Prentice Hall, second edition, 1991
Project Based Learning:
1. Design of a Lead Compensator.
2. Design of a Lag Compensator.
3. Displacement measurement using "Linear Variable Differential Transformer".
4. Design of Temperature control system using RTD.
5. Design of Temperature measurement system using thermocouple.
6. Design of Temperature control system Using Thermistor.
7. Design of Load Cell using Strain Guage.
8. Application Internet Things (IoT) using wireless sensor.
9. Transient response analysis for second order system.
10. Design and Simulation of Root Locus for given system.
11. Design and Simulation of Bode plot for given system.
12. Design of on-off controller.
13. Design of Proportional controller.
14. Design of Integral controller.
15. Design of Proportional-Integral controller.
16. Design of Proportional-Integral-Derivative controller.

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III Electronics & Communication Engineering VOCATIONAL COURSE-I PCB DESIGN & ASSEMBLY		
<u>TEACHINGSCHE ME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: --	End Semester Examination(UE): --	
Practical: --	Internal Assessment(IA): --	
Tutorial: --	TW& Oral: 50 Marks	Credits : 02
	Total:50 Marks	Total Credits: 02
Course Pre-requisites:		
The Students should have knowledge of		
1	Basic knowledge of Electronic components.	
Course Objectives:		
1	Become familiar with the simulation software.	
2	Provide in depth knowledge of PCB design.	
3	Introduce the PCB manufacturing.	
Course Outcomes: After learning this course students will be able to		
1	Design electronic circuits, create a schematic, PCB layout.	
2	Become proficient with software skills using EDA tool, for drawing electronic circuit Schematic and PCB Layout.	
3	Fabricate a Prototype PCB using EDA tool.	
4	Demonstrate the knowledge of selecting proper PCB primitives.	
5	Use PCB design software for simple single sided PCB artwork design.	
6	Identify and select appropriate soldering tools for the soldering job.	
Unit-I	Component Selection	
	Principles and Process of Electronic Component Selection: Electrical parameters, Mechanical parameters. Performance, Quality, Availability and price, PCB footprint with Dual -in-Line Package (DIP) and surface mount Packages.(SMP)/ SMD.	
Unit-II	Schematic design	
	Electrical connection between different active and passive electrical components like resistors, capacitors, Integrated circuits IC. Connectivity and functionality between different components. Physical representation of all the electrical connections between active and passive components used in the schematic.	

Unit-III	Circuit Design	
	Design specification, Circuit Design theoretically and implementing on Breadboard, verification and testing.	
Unit-IV	PCB Design	
	Introduction to PCB Design using EDA tool. Design of single sided PCB, Design of Double sided PCB. Verification and testing. PCB Design Implementation with print-out or Gerber file.	
Unit-V	PCB fabrication	
	PCB Manufacturing Process Steps: Design and Output From File to Prototype machine/Film, Printing the Inner layers, Removing the Unwanted Copper, Layer Alignment and Optical Inspection, Layer-up and Bond, Drill, Plating and Copper Deposition, Outer Layer Imaging, Final Etching, Solder Mask Application, Surface Finishing, Electrical Test. PCB fabrication using Prototype machine/Chemical method.	
Unit-VI	Soldering of Component	
	Materials and Equipment: soldering iron, Rosin core solder, Sponge, Solder braid etc. PCB Protection Chemicals. Soldering and de-soldering of Components.	
PCB Plant Visit: At the end of course, students should visit to PCB manufacturing company.		
Text Books:		
1. R.S. Khandpur , “Printed Circuit Boards: Design, Fabrication, and Assembly” ,McGraw-Hill Electronic Engineering		
2. Coombs Clyde, “Printed Circuits Handbook”, McGraw-Hill Education		

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III Electronics & Communication Engineering DATA STRUCTURES		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory:--	End Semester Examination(UE): --	
Practical: 04	Internal Assessment(IA): --	
Tutorial: --	TW& Oral: 50 Marks	Credits:02
	Total:50 Marks	Total Credits: 02
Course Pre-requisites:		
The Students should have knowledge of		
1	Knowledge of C programming	
Course Objectives:		
1	This course provides in depth knowledge of the various types of data structures and various algorithms. Also it introduces the programming for linked list, stack, queues, graph and tree.	
Course Outcomes: After learning this course students will be able to		
1	Write a program using data structure and its types.	
2	Define various operations on linked and double linked lists.	
3	Implement stacks and queues involving linked list.	
4	Perform operations on a tree using linked lists.	
5	Create a graph using adjacency list & traverse it using BFS & DPS methods.	
6	Find the shortest path in each graph using algorithm.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments.		
1. Program to search for record from a given list of records stored in array using i) Linear search ii) Binary search		
2. Program to sort an array of names using i) Bubble sort ii) Insertion sort iii) Quicksort		
3. Program to implement following operation on singly linked list: i) Create ii) Delete iii) Insert iv) Display v) Search		

4. Program to add two polynomials using linked list.
5. Program to implement stack using: i) Array ii) Linkedlist
6. Program to convert an infix expression to postfix expression & evaluate the resultant expression.
7. Program to Implement Queue using: (i) Array (ii) linked list
8. Program to create a Binary search tree & Perform following primitive operation on it: i) Search ii) Delete iii) Traversals (in order, pre-order, post-order-recursive) iv) Non-recursive in order traversal
9. Program to create a graph using adjacency list & traverse it using BFS & DPS methods
Text Books:
1. ISRD group ,“Data structure using C”,TMH.
2. Yashwant kanetkar “Data Structure through C” ,BPB Publication.

2. Weiss, Mark Allen, “Data structure and Algorithm Analysis in C”, Addison Wesley.
3. Richard F Gilberg Behrouz A. Forouzan, Thomson,“Data structure – A Pseudocode Approach with C”, Cengage Learning India
4. Yashwant Kanetkar ,“Let us C” ,BPB Publication

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. III Electronics & Communication Engineering DATABASE MANAGEMENT SYSTEM		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory:--	End Semester Examination(UE): --	
Practical: 04	Internal Assessment (IA): --	
Tutorial: --	TW Oral:50Marks	Credits:02
	Total:50 Marks	Total Credits: 02
Course Pre-requisites:		
The Students should have knowledge of		
1	Computational C.	
Course Objectives:		
1	To explain basic database concepts, applications, data models, schemas and instances.	
2	To demonstrate the use of constraints and relational algebra operations.	
3	Describe the basics of SQL and construct queries using SQL.	
4	To emphasize the importance of normalization in databases.	
5	To facilitate students in Database design	
6	To familiarize issues of concurrency control and transaction management	
Course Outcomes: After learning this course students will be able to		
1	Apply the basic concepts of Database Systems and Applications.	
2	Use the basics of SQL and construct queries using SQL in database creation and interaction	
3	Design a commercial relational database system (Oracle, MySQL) by writing SQL using the system	
4	Analyze and Select storage and recovery techniques of database system.	
5	Use Algorithms to solve scheduling conflict.	
6	Apply Algorithms in distributed database.	
Experiment List		
1. Conceptual Designing using ER Diagrams (Identifying entities, attributes, keys and relationships between entities, cardinalities, generalization, specialization etc.) Note: Student is required to submit a document by drawing ER Diagram to the Lab teacher.		
2. Converting ER Model to Relational Model (Represent entities and relationships in Tabular form, Represent attributes as columns, identifying keys) Note: Student is required to submit a document showing the database tables created from ER Model.		
3. Normalization -To remove the redundancies and anomalies in the above relational tables, Normalize up to Third Normal Form		

4. Creation of Tables using SQL- Overview of using SQL tool, Data types in SQL, Creating Tables (along with Primary and Foreign keys), Altering Tables and Dropping Tables
5. Practicing DML commands- Insert, Select, Update, Delete
6. Practicing Queries using ANY, ALL, IN, EXISTS, NOT EXISTS, UNION,
7. Practicing Sub queries (Nested, Correlated) and Joins (Inner, Outer and Equi)..
8. Practice Queries using COUNT, SUM, AVG, MAX, MIN, GROUP BY, HAVING, VIEWS Creation and Dropping.
9. Practicing on Triggers - creation of trigger, Insertion using trigger, Deletion using trigger, Updating using trigger
10. Procedures- Creation of Stored Procedures, Execution of Procedure, and Modification of Procedure.
11. Cursors- Declaring Cursor, Opening Cursor, Fetching the data, closing the cursor.
Text/Reference Books:
1.Silberschatz A., Korth H., Sudarshan S., "Database System Concepts", McGraw Hill Publishers, ISBN 0
2. Connally T, Begg C., "Database Systems", Pearson Education, ISBN 81

B.TECH (SEM-IV)

SYLLABUS

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV Electronics & Communication Engineering		
DIGITAL COMMUNICATION		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination (UE): 60Marks	Credits : 03
Practical: 02	Internal Assessment (IA) :40Marks	
Tutorial: --	TW & Oral: 50Marks	Credit: 01
	Total:150 Marks	Total Credits: 04
Course Pre-requisites:		
The Students should have knowledge of		
1	Electronic communication	
2	Signals & Systems	
3	Probability and Statistics	
Course Objectives:		
1	To understand the building blocks of digital communication system.	
2	To prepare mathematical background for communication signal analysis.	
3	To understand the basics of baseband and pass band digital communication systems.	
4	To acquire the knowledge of spread spectrum communication systems.	
Course Outcomes: After learning this course students will be able to		
1	Apply different sampling techniques to convert analog signal into discrete sequence	
2	Describe various CW modulation schemes	
3	Learn the generation and detection of band pass modulation techniques	
4	Identify the need of Multiplexing and Synchronization in digital communication and design Scrambler and Un-scrambler. Characterize, sketch various Line Codes	
5	Evaluate probability of error in various digital modulation techniques	
6	Describe the digital communication system with spread spectrum modulation	
UNIT – I	Pulse Modulation	(06 Hours)
	Introduction to Digital Communication System, digital representation of analog signal, advantages of digital communication. Pulse Modulation, Sampling Theorem (time domain analysis) ideal sampling, Natural sampling, Flat top sampling, aliasing effect and aperture effect. Nyquist criteria, Pulse Amplitude Modulation (PAM), Pulse Width Modulation, Pulse Position Modulation, Their generation and Demodulation.	

UNIT – II	Digital transmission of analog signals	(06 Hours)
	Quantization–Uniform, Non-Uniform, Companding, A-Law, μ Law, Pulse code modulation Delta Modulation, Differential Pulse Code Modulation.	
UNIT -III	Band pass Modulation Techniques	(06 Hours)
	ASK, PSK, FSK, Binary Phase shift keying, Differential Phase shift keying, Differential encoded PSK, Quadrature PSK, M-ary PSK, Quadrature Amplitude shift keying (QASK), Binary frequency shift keying, Minimum shift keying (MSK), signal space representation and constellation diagram	
UNIT -IV	Baseband Digital Transmission	(06 Hours)
	Digital Multiplexing: Multiplexers and hierarchies, Data Multiplexers. Data formats and their spectra, synchronization: Bit Synchronization, Scramblers, Frame Synchronization. Inter-symbol Interference, Equalization.	
UNIT -V	Baseband Receivers	(06 Hours)
	Base band signal receiver, Probability of error, Optimum filter, White noise-Matched filter, probability of error of matched filter, correlation, FSK, PSK, non-coherent detection of FSK, DPSK, QPSK, Calculation of error probability for BPSK & BFSK, Signal space to calculate P_e .	
UNIT -VI	Spread Spectrum Techniques	(06 Hours)
	Introduction, Generation of PN Sequences and its properties, Direct Sequence Spread Spectrum Signals, Frequency Hopped Spread Spectrum Signals, Introduction to Multiple Access Techniques: CDMA, TDMA, FDMA.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments.		
1. To verify the sampling theorem		
2. To perform Pulse Code Modulation System (PCM) System		
3. To analyze a Delta modulation system and interpret the modulated and demodulated waveforms		
4. To analyze Adaptive Delta modulation system and interpret the modulated and demodulated waveforms		
5. To analyze ASK (Amplitude Shift Keying) System with waveforms		
6. To analyze PSK (Phase Shift Keying) System with waveforms		
7. To analyze FSK (Frequency Shift Keying) System with waveforms		
8. To analyze of Quadrature Phase Shift Keying (QPSK) with waveforms		

9. To simulate any digital modulation scheme using MATLAB
10. To analyze waveforms of different Data Formats
Text Books :
1. Sklar, Bernard, "Digital Communications, Fundamentals & Applications," Second Edition, Prentice-Hall Inc., 2001.
2. Lathi B P, and Ding Z "Modern Digital and Analog Communication Systems," Fourth Edition, Oxford University Press.
3. Leon W. Couch, "Digital and Analog Communication Systems", Sixth Edition, Pearson Education, 2001.
Reference Books:
1. Haykin Simon, "Digital Communication Systems," Forth Edition, John Wiley and Sons, New Delhi.
2. Taub, D. Schilling, and G. Saha, "Principles of Communication Systems," Third Edition, Tata McGraw Hill.
3. John G. Proakis, "Digital Communication" ,Fifth Edition, Pearson Education.
Project Based Learning:
Implement following systems using matlab and simulink
1. Sampling of the given signal
2. Pulse Width Modulation generator
3. Pulse Position Modulation generator
4. Pulse Amplitude Modulation generator
5. Delta modulation system
6. Quantization of an audio signal
7. Pulse code modulation system
8. Frequency Shift Keying modulator
9. Amplitude Shift Keying modulator
10. Phase Shift Keying modulator
11. Quadrature Phase Shift Keying modulator
12. Unipolar RZ Line coding scheme
13. Bipolar RZ and NRZ line coding scheme
14. Random binary sequence generator
15. Generate the sound

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV Electronics & Communication Engineering MICROCONTROLLER & APPLICATIONS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination(UE): 60Marks	Credits: 04
Practical: 02	Internal Assessment(IA): 40 Marks	
Tutorial: --	TW & Practical: 50 Marks	Credit: 01
	Total:150 Marks	Total Credits: 05
Course Pre-requisites:		
The students should have knowledge of		
1	Basics of Digital Logic Design.	
2	Basics of C programming	
3	Basic of Microprocessor architecture.	
Course Objectives:		
1	To introduce the operation of micro-controllers.	
2	To familiarize with the fundamentals of embedded system architecture, its basic hardware and software elements.	
3	To understand the concept of AVR Controller	
4	To introduce the AVR micro-controller with architecture and programming	
Course Outcomes: After learning this course students will be able to		
1	To describe the different Embedded processors with the specifications/Features.	
2	Give an overview on the architecture and basic concepts of 8051 micro-controller.	
3	To introduce interfacing of 8051.	
4	To describe the AVR Micro-controller architecture.	
5	To familiarize the AVR programming in C.	
6	To introduce the different communication protocols.	
UNIT – I	Review of Processor and Memory:	(08Hours)
	General-purpose processors, single-purpose processors, application specific processors, CISC and RISC processor architecture, memory devices, processor and memory selection for an embedded system, interfacing processor, memory and I/O devices, 8/16-bit microcontrollers.	
UNIT – II	8 Bit Micro Controller 8051:	(08 Hours)

	MCS 51 family architecture: Registers in MCS-51, Parallel I/O ports, Timers & Counters, Memory Organization, Pin Description, Instruction set, Addressing modes, Interrupts in MCS-51, Programming.	
UNIT- III	8051 Serial Communication & Interfacing of 8051	(08 Hours)
	Serial Communication of 8051: Basics, SBUF register, SCON and PCON registers, Modes of operation Simple program of serial communication. Interfacing of 8051 with devices: LED, LCD, keyboard, LM35 temperature sensor & A/D converter	
UNIT- IV	Introduction to AVR microcontroller	(08 Hours)
	Overview of AVR family, AVR Microcontroller architecture, status register, Special function registers, RAM, ROM & EEPROM space, On-Chip peripherals, ATmega32 pin configuration & function of each pin, Fuse bits of AVR.	
UNIT -V	AVR programming in C	(08 Hours)
	AVR Data types, AVR I/O port programming, Timer programming, Input capture and Wave Generator, PWM programming External Interrupt programming, ADC programming, EEPROM programming.	
UNIT- VI	Serial communication protocols	(08 Hours)
	UART protocol, I2C protocol, SPI protocol, Serial Port programming using polling and interrupt, I2C Programming, SPI Programming	
<u>Term Work:</u>		
1. Addition / subtraction / multiplication / division of 8/16 bit data using 8051		
2. Largest/smallest from a series using 8051.		
3. Generate different waveforms: Sine, Square, Triangular, Ramp using DAC interface.		
4. To write a C program to demonstrate LED using 8051 Micro-controller development kit.		
5. To write a C program to demonstrate Seven Segment using 8051 Micro-controller development kit		
6. To write a program to demonstrate Stepper Motor using 8051 Micro-controller development kit.		
7. To write a program to demonstrate LCD using 8051 Micro-controller development kit.		
8. Installation of AVR STUDIO and familiarization of ATMega32 AVR Development Board.		
9. Stepper motor interfacing with ATMega32 in C with ATMega32.		
10. Timer to generate accurate delay using Interrupt in C with ATMega32		

11. Seven Segment Display interfacing with ATmega32 in C.
12. Timer to generate accurate delay using polling in C with ATmega32
13. 16x2 LCD interfacing with ATmega32 in C.
15. Interfacing with ATmega32 in C using I2C protocol
16. On-chip ADC for interfacing analog sensors in C with ATmega32.
Textbooks:
1. Muhammad Ali Mazidi, Janice Gillespie Mazidi, "The 8051 Microcontroller and Embedded System" Pearson Education.
2. Dhananjay Gadre, "Programming and Customizing the AVR Microcontroller", McGraw Hill Education
Reference Books:
1. Kenneth J. Ayala, "The 8051 Micro-controller – Architecture, Programming & Applications", Second Edition Penram International & Thomson Asia
2. Rajkamal, "Embedded System-Architecture, Programming and Design", TMH Publications, Edition 2003
3. Muhammad Ali Mazidi, Sarmad Naimi and Sepehr Naimi, "The AVR Microcontroller and Embedded Systems Using Assembly and C", Pearson Education
Project Based Learning:
Build the following circuits -
1. 8 Channel Quiz Buzzer Circuit using Microcontroller 8051/AVR
2. 8 Channel Quiz Buzzer Circuit using Microcontroller 8051/AVR
3. Automatic Railway Gate Controller with High Speed Alerting System using Micro-controller 8051/AVR
4. Bidirectional Visitor Counter using Microcontroller 8051/AVR
5. Celsius Scale Thermometer using Microcontroller 8051/AVR
6. Digital Tachometer using Microcontroller 8051/AVR
7. Density Based Traffic Signal System using Microcontroller 8051/AVR
8. Digital Temperature Sensor using Micro-controller 8051/AVR
9. Digital Voltmeter using Microcontroller 8051/AVR
10. Line Following Robotic Circuit using Microcontroller 8051/AVR
11. Password Based Door Lock System using Microcontroller 8051/AVR
12. RFID based Attendance System using Micro-controller 8051/AVR
13. Remote Control Circuit through RF using Microcontroller 8051/AVR
14. Street Lights that Glow on Detecting Vehicle Movement using Micro-controller 8051/AVR
15. Sun Tracking Solar Panel using Micro-controller 8051/AVR
16. Temperature Controlled DC Fan using Microcontroller 8051/AVR
17. Ultrasonic Rangefinder using Microcontroller 8051/AVR
18. Water Level Controller using Microcontroller 8051/AVR
19. Water Level Indicator using Micro-controller 8051/AVR
20. Temperature based Ceiling Fan Speed Control System (230V AC Motor) using Micro-controller 8051/AVR

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV Electronics & Communication Engineering		
EM WAVES AND PROPAGATION		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination(UE): 60Marks	Credits : 04
Practical: --	Internal Assessment(IA): 40 Marks	
Tutorial: 01		Credits : 01
	Total:100 Marks	Total Credits: 05
Course Pre-requisites:		
The Students should have knowledge of		
1	Vector calculus and coordinate systems.	
2	Curl, Divergence and Gradient.	
3	Partial differential equations.	
Course Objectives:		
1	Provide fundamentals of Static Electromagnetic Fields.	
2	Explain basics of the vector Differential, Integral operators to Electromagnetic theory	
3	Electrostatic & Electromagnetic fields.	
4	Define and derive different laws in Electrostatic & Electromagnetic fields.	
5	Explain Maxwell's equations and concepts of transmission lines.	
6	Analyze techniques for formulating and solving problems in Electrostatic &	
Course Outcomes: After learning this course students will be able to		
1	Comprehend the fundamentals of Electrostatic and Electromagnetic fields.	
2	Apply Gauss' law, Ampere's Law, Biot-Savart law, Faraday's law and laws related with steady magnetic field while solving problems in Electrostatic and Electromagnetic fields.	
3	Develop field equations from understanding of Maxwell's Equations.	
4	Extend the knowledge of basic properties of transmission lines to analyze Electromagnetic wave propagation in generic transmission line geometries	
5	Demonstrate mathematical skills related with differential, integral and vector calculus.	
6	Apply radiation principles and concept of Antennas	
UNIT – I	Static Electric Fields	(08 Hours)
	Review of Co-ordinate systems, Coulomb's law, line, Surface & Volume Charge distribution. Electric Field Intensity, Electric Field	

	due to infinite line and surface charges, Electric Flux Density, Gauss law (differential and integral form) and its applications, Divergence Theorem, Electric Potential and gradient, Poisson's and Laplace Equations, Work done, Energy Density, Electric Dipole and moment. Polarization in Dielectrics, Boundary conditions for Dielectric and Dielectric, boundary conditions for Conductor and Dielectric, boundary conditions for Conductor and free space	
UNIT –II	Static Magnetic Fields	(08 Hours)
	Biot – Savart's law, Magnetic Field Intensity due to infinite and finite line. Ampere's Circuital Law in integral and differential form, Applications of Amperes Circuital law, Magnetic flux density, Stokes Theorem, vector magnetic potential, Magnetic Torque, moment and dipole, nature of magnetic material, magnetization, Magnetic boundary conditions.	
UNIT - III	Time Varying Fields & Maxwell's Equations	
	Faradays law of induced Emf, displacement current, Maxwell's Equations in point form & Integral form for various fields.	(08 Hours)
UNIT - IV	Wave Propagation and Uniform Plane waves	(08 Hours)
	Wave equations, wave propagation through different medium, wave propagation through free space , wave propagation through dielectric, wave propagation through conductors- skin depth, Poynting theorem, wave polarization, Reflection of plane wave from conducting medium, perfect dielectric., reflection of plane waves at normal incidence, reflection of plane waves at oblique incidence angles.	
UNIT -V	Transmission Lines	(08 Hours)
	Physical Description of Transmission line propagation, Transmission Line equations, Characteristic equation of infinite Transmission Line, Complex analysis of sinusoidal waves, Transmission lines equations & their solutions in phasor form, Uniform terminated 2 coefficient VSWR, smith chart (Numerical expected) and applications, transient analysis of transmission lines.	
UNIT -VI	Waveguides & Antenna Fundamentals	(08 Hours)
	Plane wave analysis of parallel-plate waveguide, rectangular waveguides, TE and TM modes, wave impedance, wave velocities, attenuation in waveguide, EMI/EMC concepts, basic radiation principles, Hertzian dipole, magnetic dipole, thin wire antennas, antenna specifications, antenna arrays.	

List of Tutorials:

1. Find the Electric field intensity and electric flux density at a given point due to following charge distributions. (In all coordinate systems)
 - Point charges
 - Line charges (finite and infinite)
 - Surface charges (finite and infinite)
 - Mixed charges (Point charge, Line charge, Surface charge)
2. Application of Gauss's law
 - Given ρ_v (volume charge density) in a particular region, find \bar{D} (electric flux density) using Law at the given location.
 - Given ρ_s (surface charge density), find \bar{D} (electric flux density) using Gauss's Law at the given location.
 - Given \bar{D} (electric flux density), find total charge enclosed by the surface (Q), ρ_v (volume charge density) using Gauss's Law.(In all coordinate systems)
3. Find the electrostatic fields (Tangential and Normal) at the boundary between,
 - Free space and dielectric medium
 - Free space and conductor
 - Dielectric medium and conductor
 - Two dielectric media.
- 4 Find \bar{H} (Magnetic field intensity) and \bar{B} (Magnetic flux density) at a given point due to,
 - Infinitely long current carrying conductor
 - Finite current carrying conductor
 - Infinite conducting surface
 - Finite conducting surface
 - Different current carrying configurations (i.e. thin conductor, surface altogether)
- 5 For the following current carrying configurations, find the \bar{H} (Magnetic field intensity) in a given region (or point) using Ampere's circuital law.
 - Infinitely long current carrying conductor
 - Infinite cylindrical surfaces of different radii all centered at the same axis.
 - Spherical surfaces of different radii all centered at a given point.
6. Given \bar{H} (or \bar{E}) and the region properties (like ϵ , μ , σ etc.), find \bar{B} , \bar{D} and \bar{E} (\bar{H}) using Maxwell's equations. (In all coordinate systems).
7. Find attenuation constant, propagation constant, intrinsic impedance, values of E/H for different mediums like free space, conductors, and dielectrics.
8. Given the primary constants (R, L, G, C) along with the generator specifications and termination, find secondary constants (α , β , γ , Z_0) and other parameters like Velocity, wavelength, received voltage, received power, reflection coefficient etc.
9. Problems on Impedance matching and design of stub matching using Smith Chart.
10. Find cut-off frequency or waveguide dimensions or phase velocity for rectangular waveguides.

Text Books:

1. A. Murthi, "Electromagnetic fields", S. Chand.
2. Edminister J.A, "Electromagnetics", Tata McGraw-Hill.

Reference Books:

1. Hayt& Buck, “Engineering Electromagnetics”, 7th Edition, Tata McGraw-Hill
2. Kraus,Fleisch, “Electromagnetics with applications”, 5th Edition, McGraw Hill.
3. Jordan & Balmain, “Electromagnetic waves & radiating systems”, 2nd edition, PHI.
4. Matthew N.O. Sadiku, ”Principles of Electromagnetics”, 6 th edition, Oxford
Project Based Learning:
1. Plot Magnitude of a Vector & its Unit Vector MATLAB.
2. Simulate Coulomb Law on MATLAB & Scilab.
3. Plot different charge distributions viz. line charge, volume charge, surface charge in MATLAB.
4. Find & simulate Electric field intensity & flux density for given charge distributions.
5. Verify & plot Divergence theorem with Gauss law in SCILAB & MATLAB.
6. Design a code in SCILAB for relation between E & V, Electric Dipole visualization and verify Poisson’s & Laplace’s Equations.
7. Design & Verify boundary conditions between Free space- conductor-Dielectric in SCILAB.
8. Simulate Biot-Savart’s Law, Magnetic field intensity for different current distributions in SCILAB & MATLAB.
9. Design & Verify Magnetic boundary conditions in SCILAB
10. Visualize & Simulate Maxwell’s Equations for Time varying Fields in MATLAB & SCILAB
11. Visualize EM waves & Uniform Plane waves formation in MATLAB
12. Visualize & Simulate behavior of EM waves in good conductors Lossy-Lossless dielectrics in MATLAB & SCILAB.
13. Find out Transmission line parameters for given frequency in SCILAB, Visualize how standing waves generated & reflected on Transmission line in MATLAB
14. Visualize & plot SWR Circle, Impedance Matching, and reflection coefficient input impedance on SMITH CHART in MATLAB.
15. Visualize & plot Stub Matching problem of Transmission lines SMITH CHART in MATLAB.

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV Electronics & Communication Engineering INTEGRATED CIRCUITS AND AMPLIFIER DESIGN		
<u>TEACHINGSCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04	End Semester Examination(UE): 60Marks	Credits: 04
Practical: 02	Internal Assessment(IA): 40 Marks	
Tutorial: --	TW & Practical :50Marks	Credit: 01
	Total: 150 Marks	Total Credits: 05
Course Pre-requisites:		
The Students should have knowledge of		
1	Knowledge of KCL and KVL Law	
2	Basic knowledge of Op-Amp and its configurations	
Course Objectives:		
1	Familiar in the operational amplifier principle- analysis- design and application.	
2	Gain knowledge on the linear and nonlinear applications of operational amplifiers.	
3	Understand the theory and applications of Active filters and PLL.	
4	Familiar in the ADC- DAC and its classifications.	
5	Understand the few applications of specific ICs.	
Course Outcomes: After learning this course students will be able to		
1	Differentiate IC and Discrete components, understand manufacturing process of IC and analyze how monolithic components are being developed.	
2	Identify different configurations of op-amp analyze the parameters of op-amp and observe the frequency response of operational-amplifier	
3	Understand & demonstrate different applications based on operational-amplifier.	
4	Understand analog multiplier and PLL & demonstrate different applications based on it	
5	Differentiate A/D and D/A converter, understand their types and analyze their applications	
6	Demonstrate the applications of waveform generators, timers and voltage regulators	
UNIT – I	Basics of operational Amplifier	(08 Hours)
	Block diagram representation of a typical op-amp, Differential amplifier, Schematic symbol for op-amp, Definition of integrated	

	circuits, Types of Integrated Circuits, Manufacturers, Designation for IC, IC package types, PIN identification & temp ranges, Ordering information, Characteristics of an op-amp, Internal & external offset voltage compensation, Frequency Response of an op-amp.	
UNIT –II	Operational Amplifier – Linear circuits	(08 Hours)
	Inverting amplifier, non-inverting amplifier, Voltage Follower, V-to-I and I-to-V converters, adder, subtractor, Integrator, Differentiator, peak detector, clipper and clamper, Instrumentation amplifier using 1, 2 and 3 op-amps, Instrumentation amplifier using transducer bridge.	
UNIT -III	Operational Amplifier - Non-linear circuits	(08 Hours)
	Precision half wave rectifier & full wave rectifier, comparator, Schmitt trigger, window detector, log-antilog amplifier and its temperature compensation techniques, log ratio, sample and hold circuit.	
UNIT -IV	Active filters and waveform generators	(08 Hours)
	First and second order low pass Butterworth filters, first and second order high pass Butterworth filter, Band pass filter, Band reject filter, All-pass filter, notch filter, Square wave, Triangular wave, Saw tooth wave generator and study of function generator IC 8038	
UNIT -V	Special function ICS	(08 Hours)
	IC 555- as Monostable and Astable Multivibrators and its applications. IC 565- operating principle of Phase Locked Loop IC 565, Applications like Frequency multiplier, FSK and FM detector.	
UNIT -VI	Interfacing circuits	(08 Hours)
	V to I & I to V converter, D to A converter- Binary weighted resistors and R & 2R resistors, A to D Converter- Counter-ramp type, Successive approximation and Dual Slope.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments.		
1. To design and setup an inverting amplifier circuit with OP AMP 741C for a gain of 10, plot the waveforms, observe the phase reversal, measure the gain.		
2. To demonstrate the use of op-amp as Integrator and Differentiator and draw frequency response.		
3. To demonstrate the use of op-amp as precision rectifier.		
4. To design and setup a Schmitt trigger, plot the input output waveforms and measure		

VUT and VLT.
5. Design and obtain the frequency response of second order Low Pass Filter (LPF) at a high frequency of 1KHz.
6. Design and obtain the frequency response of High Pass Filter (HPF) at a cut off frequency of 1KHz with pass band gain of 2.
7. To design and setup astable multivibrator using Op-amp 555, plot the waveforms and measure the frequency of oscillation
8. To obtain the output of voltage comparator and zero crossing detector.
9. Design instrumentation amplifier the with the help of three Op-amps inverting amplifier and also implement Wheatstone bridge and balance for null condition. (usingVLabs)
10. To design and study the frequency response of Summing Inverting Amplifier circuit.(usingVLabs)
11. Design and simulate triangular/square waveform generator using IC 741.(usingVabs)
12. To construct and study the voltage to current convertor.
13. To construct and study digital to analog converter circuit.
Text Books:
1. Ramakant A. Gayakwad, OP-AMP and Linear ICs, Prentice Hall of India, 4 th Edition,2010.
2. K. R. Botkar, Integrated Circuits, khanna Publishers, 10 th edition, 2010
Reference Books:
1. David A. Bell, “Operational Amplifiers and Linear ICs”, Oxford publication,3 rd edition,2011
2. Sergio Franco, “Design with Operational Amplifiers and Analog Integrated Circuits”, Tata McGraw Hill, 3 rd edition, 2008
3. D.Roy Choudhry, Shail Jain, Linear Integrated Circuits, New Age International Pvt.Ltd., 4 th edition, 2010
Project Based Learning:
1. To design and setup a non-inverting amplifier circuit with OP AMP 741C for a gain of 10, plot the waveforms, observe the phase reversal, measure the gain.
2. To demonstrate the use of op-amp as clipper circuit.
3. Designoperational amplifier 741 tester which test op-amp 741 either is good or fault
4. Design and simulate Temperature to Voltage Converter Circuit.
5. To demonstrate the use of op-amp 741 as an Electronics Thermometer
6. IC 741 based circuit for dark Switch.
7. Hartley andColpittsoscillatorusingop-amp
8. Notch filters using op-amp.
9. Water Level based Alarm Circuit (using IC 555- AstableMultivibrator).
10. Digital Stop Watch
11. FM Radio using PLL.
12. ICL7107 (A/D converter) based Digital Voltmeter.
13. Dimmer circuit for LED Lamp (using IC 555)
14. Electronic Letter Box.
15. 4-line to 16-line decoder Circuit using 7442

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV Electronics & Communication Engineering		
ESSENTIALS OF DATA SCIENCE		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03	End Semester Examination(UE): 60Marks	Credits : 03
Practical: --	Internal Assessment(IA): 40 Marks	
Tutorial: --		
	Total:100 Marks	Total Credits: 03
Course Pre-requisites:		
The Students should have knowledge of		
1	Python programming	
2	Probability & Statistics	
Course Objectives:		
1	Introduce R as a programming language	
2	Introduce the mathematical foundations required for data science	
3	Introduce the first level data science algorithms	
4	Introduce a data analytics problem solving framework	
5	Introduce a practical capstone case study	
Course Outcomes: After learning this course students will be able to		
1	Describe a flow process for data science problems (Remembering)	
2	Classify data science problems into standard typology (Comprehension)	
3	Develop R codes for data science solutions (Application)	
4	Correlate results to the solution approach followed (Analysis)	
5	Assess the solution approach (Evaluation)	
6	Construct use cases to validate approach and identify modifications required (Creating)	
UNIT – I	Introduction to Data Science	(06 Hours)
	Data Science Fundamentals: Data, Data Science Process, Components of Data Science, Data Scientist roles and responsibilities, Introduction to R and R Studio, Variables and Datatypes in R, Data frames, Recasting and Joining of Data frames, Arithmetic, Logical and Matrix Operations in R, Advanced Programming in R: Functions, Data Visualization in R Basic Graphics.	

UNIT - II	Linear Algebra & Statistical Modeling for Data Science	(06 Hours)
	Linear Algebra for Data science, Solving Linear Equations, Linear Algebra - Distance, hyperplanes and half spaces, Eigen values, Eigenvectors, Statistical Modeling, Random Variables and Probability Mass/Density Functions, Sample Statistics, descriptive statistics, notion of probability, distributions, mean, variance, covariance, Hypotheses Testing, Type 1 and Type 2 errors. Testing for parameters of a normal distribution and for percentages based on a single sample and based on two samples. Introduction to the chi-squared test. The concept of p-value. Mean-square estimation and Kalman filtering.	
UNIT -III	Optimization for Data Science	(06 Hours)
	Optimization for Data Science, Unconstrained Multivariate Optimization Gradient (Steepest) Descent (OR) Learning Rule, Multivariate Optimization With Equality Constraints, Solving Data Analysis Problems.	
UNIT-IV	Regression and Classification	(06 Hours)
	Predictive Modeling, Linear Regression, Model Assessment, Diagnostics to Improve Linear Model Fit, Simple Linear Regression Model Building and assessment, Multiple Linear Regression, The least squares error criterion. Relation to maximum likelihood, Analysis of Variance (ANOVA), Logistic Regression, Logistic Regression Implementation in R, Classification , Classification using logistic regression, K - Nearest Neighbors, K-Means Clustering, K - means Implementation in R , Dimension Reduction Techniques.	
UNIT –V	Data Analysis and Visualization	(06Hours)
	Pandas and Numpy, Operating on Data in Pandas, Data modeling and transforming, dealing with null values, different data types, preparing data for the model, Visualization with Matplotlib, Seaborn, Data visualization using Power BI.	
UNIT - VI	Machine Learning	
	Introduction to Supervised and Unsupervised Learning, Clustering, Decision Trees, Random Forest, Time Series Forecasting: Introduction to Time Series, Correlation, Forecasting, Autoregressive models; Model Validation, Handling Unstructured Data, Neural networks, Support vector machine.	(06 Hours)
Text Books:		

1. Practical Statistics for Data Scientists by Peter Bruce, Andrew Bruce, O'Reilly Publication.
2. Introduction to Machine Learning with Python: A Guide for Data Scientists by Andreas C. Mueller, Sarah Guido, O'Reilly Publication.
Reference Books:
1. Mohammed J. Zaki , Wagner Meira, “Data Mining and Machine Learning: Fundamental Concepts and Algorithms”, Jr,1 st Edition. Cambridge University Press
2. Trevor Hastie Robert Tibshirani, “The Elements of Statistical Learning: Data Mining, Inference, and Prediction”, Second Edition Springer Series in Statistics
3. Garrett Golemund and Hadley Wickham, “ R for Data Science”, O’Reilly Pub.
Project Based Learning:
1. Detecting Fake News with Python Dataset/Package: news.csv
2. Real-time Lane Line Detection in Python
3. Sentiment Analysis Project in Rwith Dataset/Package: janeaustenR
4. Build an application to detect colors with Beginner Data Science Project – Color Detection with OpenCV
5. Build a chatbot using Python– Chatbot with NLTK &Keras
6. Design Gender and Age Detection with Data Sciencewith OpenCV
7. Design & buildMovie Recommendation System Project in R
8. Build an application for Customer Segmentation with Machine Learning (K-means Clustering) using R
9. Create a Spotify Music Analysis visualization using Python pandas
10. Create a Crypto currency Analysis visualization using Python pandas.
11. Build a Song recommendation model using Machine Learning.
12. Build a Book recommendation model using Machine Learning.
13. Uber Dataset Time Series Analysis / Uber Data Analysis in R
14. Implement an Email automation system using SQL & Python
15. Practically implement the Deep Learning Project with Source Code Handwritten Digit Recognition with CNN

Students in a group of 3 to 4 shall complete any one project from the above list.

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV Electronics & Communication Engineering VOCATIONAL COURSE-II DOMESTIC APPLIANCES AND MAINTENANCE		
<u>TEACHINGSCHE ME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: --	End Semester Examination(UE): --	
Practical: --	Internal Assessment(IA): --	
Tutorial: --	TW& Oral :50 Marks	Credits: 02
	Total: 50 Marks	Total Credits: 02
Course Pre-requisites:		
The Students should have knowledge of		
1	Basic Electronics	
Course Objectives:		
1	To identify and rectify the faults in domestic appliances like Washing machine, Microwave oven, Mixer, Grinder and Electric kettle.	
Course Outcomes: After learning this course students will be able to		
1	Identify and test passive and active electronics components & study of Multimeter	
2	Troubleshoot the faults in power supply circuits.	
3	Identify and test various mechanical and electrical modules of the washing machine.	
4	Identify electronic parts/components/modules of the Microwave oven.	
5	Identify and rectify the faults in mixer and grinder.	
6	Identify and rectify the faults in electric kettle.	
UNIT –I	Basic Electronic components & Multi meter	
	Different types of resistors, capacitors and inductors, Measurement of resistor using Color code, Measurement using LCR meter. Identify the power rating of components, Dismantle and identify the different parts of a relay, basics of Transformer, Multimeter.	
UNIT –II	Power supply	
	Testing of active components, Practice soldering and de-soldering techniques Assemble and test– half wave, full wave & bridge rectifier circuits with and without filter, different types of fixed positive and negative regulator ICs(78/79 series), Construct a fixed voltage regulator using 78xx/79xx series ICs, Variable voltage regulator using LM 723.	

UNIT -III	Washing Machine	
	Installation of front load washing machine Installation of top load washing machine, Identify the internal and external parts of semi-auto washing machine, Identify the internal and external parts of fully automatic washing machine, Operate semi-automatic washing machine, Operate fully-automatic washing machine, Rectify the fault leading to not working of control panel switches. Rectify the fault leading to not working of pulsator / agitator, Rectify the fault leading to spindrier not working, Rectify the fault leading to one side, rotation of motor. Rectify the fault leading to water inlet.	
UNIT -IV	Microwave oven	
	Internal and external parts of microwave oven. Identify the different touch pad controls their functions, Testing of high voltage diode. Identify the HV capacitor and discharge it. Rectify the fault leading to fuse blows off when cooking is initiated, Rectify the fault leading to not responding of touch switches(front panel). Rectify the fault leading to dead set. Rectify the fault leading to long cooking time. Precautions – importance of interlocking switch in performing maintenance.	
UNIT -V	Mixer and Grinder	
	Dismantle and identification of various parts, wiring, tracing of various controls, Electronic circuits in various types of Mixers/grinders, faults in various types of Mixers/grinders & rectification.	
UNIT -VI	Electric Kettle	
	Identify various components of Electric kettle, controls and trace the circuit and rectify the simulated faults	
List of Practicals:		
Practicals based on maintenance of appliances should be conducted		
Text Books:		
1. Shashi Bhushan Sinha, “Handbook of Repair and Maintenance of Domestic Electronics Appliances”, January 2016, BPB Publications.		
Reference Books:		
1. Michael Jay Geier, “How to Diagnose and Fix Everything Electronic”, Second Edition, Mc Graw Hill education.		

Bharati Vidyapeeth
(Deemed to be University)
College of Engineering, Pune

B. Tech. Sem. IV Electronics & Communication Engineering JAVA PROGRAMMING		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: --	End Semester Examination(UE): --	
Practical: 04	Internal Assessment(IA): --	
Tutorial: --	TW& Oral: 50 Marks	Credits: 02
	Total: 50 Marks	Total Credits: 02
Course Pre-requisites:		
The Students should have knowledge of		
1	Fundamentals of computing	
Course Objectives:		
1	To introduce object oriented programming concepts.	
2	To develop programming ability by learning advanced coding techniques.	
Course Outcomes: After learning this course students will be able to		
1	Demonstrate basic knowledge of object-oriented programming concepts.	
2	Write simple programs in Java.	
3	Get the knowledge of interfaces, packages and different file handing operations.	
4	Familiarize the concept of exception handling.	
5	Conceptualize the technique of multithreading programming.	
6	Apply Java for HTML and Applet applications.	
<u>Term Work:</u>		
The term work shall consist of record of minimum eight experiments.		
	1. Write a Java Program to demonstrate the use of OOP features.	
	2. Write a Java Program to display pattern (Triangle, Pyramid) using different loops.	
	3. Write a Java program to differentiate between method overloading and method overriding.	
	4. Implementation of different string functions by using switch case.	
	5. Write a Java program to understand the use of String buffer class.	
	6. Write a Java Program implement multiple inheritances by using Interface.	
	7. Write a Java program to implement the concept of package.	
	8. Write a Java program to implement concept of Exception Handling.	
	9. Write a Java Program to perform different file operations.	

10. Write a program to implement multithreading.
11. Write a program to implement Frame and different graphics objects.
12. Write a program to implement Java Applet.
Textbooks:
1. E Balagurusamy, “Programming with Java: A Primer, 3E”, Tata McGraw Hill Publishing Company.
2. Herbert Schildt , “Java Complete Reference” , McGraw Hill Publishing Company
3. Deitel and Deitel , “Java: How to Program” , Deitel pub.
Reference Books:
1. Ivan Bayross, “Web Enabled Commercial Applications Development Using HTML, DHTML, JavaScript, Perl – CGI”, BPB Publication.

College of Engineering, Pune

B. Tech. Sem. IV Electronics & Communication Engineering LINUX PROGRAMMING		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: --	End Semester Examination(UE): --	
Practical: 04	Internal Assessment (IA): --	
Tutorial: --	TW& Oral:50 Marks	Credits:02
	Total: 50 Marks	Total Credits: 02
Course Pre-requisites:		
The Students should have knowledge of		
1	Computational C.	
Course Objectives:		
1	Make a Shell script executable. To demonstrate the use of constraints and relational algebra operations.	
2	Execute programs written in C under UNIX environment	
3	To use the following Bourne Shell commands: cat, grep, ls, more, ps, chmod, finger, ftp, etc. To facilitate students in Database design	
4	Learn tracing mechanisms (for debugging), user variables, Bourne Shell variables, read-only variables, positional parameters, reading input to a Bourne Shell script, command substitution, comments.	
Course Outcomes: After learning this course students will be able to		
1	To demonstrate the basic knowledge of Linux commands and file handling utilities by using Linux shell environment	
2	To evaluate the concept of shell scripting programs by using an AWK and SED commands.	
3	To create the directory, how to change and remove the directory.	
4	To analyze the process of how the parent and child relationships	
5	To understand the concept of client-server communication by using sockets.	
6	Discuss shell programming in Linux operating system	
Experiment List		
1. a) Study of Unix/Linux general purpose utility command listman, who, cat, cd, cp, ps, ls, mv, rm, mkdir, rmdir, echo, more, date, time, kill, history, chmod, chown, finger, pwd, cal, log out,shutdown. b) Study of vi editor. c) Study of Bash shell, Bourne shell and C shell in Unix/Linux operating system. d) Study of Unix/Linux file system (tree structure).		

e) Study of .bashrc, /etc/bashrc and Environment variables.
2. Write a C program that makes a copy of a file using standard I/O, and system calls
3. Write a C program to emulate the UNIX ls -l command.
4. Write a C program that illustrates how to execute two commands concurrently with a command pipe.
5. Ex: - ls -l sort
6. Write a C program that illustrates two processes communicating using shared memory
7. Write C program to create a thread using pthreads library and let it run its function.
8. Write a C program to illustrate concurrent execution of threads using pthreads library.
9. Write a shell script that accept a file name starting and ending line numbers as arguments and display all the lines between given line no: Write a shell script that delete all lines containing a specified word
10. Write a shell script that displays a list of all the files in the current directory; Write a shell script that receives any number of file names as arguments checks if every argument supplied is a file or a directory and reports accordingly. whenever the argument is a file or directory.
11. Write a java script to find the number of characters, words and lines in a file? linked list respectively. Write a C Program that makes a copy of a file using standard I/O and system calls? Implement in C the following Unix commands using system calls A) cat B)mv
12. Write a C program that illustrates how an orphan is created; Write a program that illustrates how to execute two commands concurrently with a command pipe.? Write C programs that illustrate communication between two unrelated processes using named pipe.
13. Write a client and server programs (using c) for interaction between server andclient processes using Internet Domain sockets? Write a program to implement the shared memory. Write a client and server programs (using c) for interaction between server and client processes using Internet Domain sockets? . Write a C programthat illustrates two processes.

4. Graham Glass, King Ables, “Unix for programmers and users”, 3rd Edition, Pearson Education.

Bharati Vidyapeeth
(Deemed to be University)
Pune, India

College of Engineering, Pune

B.Tech. (Information Technology)
Program Curriculum (2021 Course)

**BHARATI VIDYAPEETH
(DEEMED TO BE UNIVERSITY),
COLLEGE OF ENGINEERING, PUNE**

Department of Information Technology

VISION OF UNIVERSITY:

Social Transformation Through Dynamic Education

MISSION OF UNIVERSITY:

- To make available quality education in different areas of knowledge to the students as per their choice and inclination.
- To offer education to the students in a conducive ambiance created by enriched infrastructure! and academic facilities in its campuses.
- To bring education within the reach of rural, tribal, and girl students by providing them substantive fee concessions and subsidized hostel and mess facilities.
- To make available quality education to the students of rural, tribal, and other deprived sections of the population.

VISION OF THE INSTITUTE

To be a world-class Institute for Social Transformation through Dynamic Education.

MISSION OF THE INSTITUTE

- To provide quality technical education with advanced equipment, qualified faculty members, infrastructure to meet the needs of the profession and society.
- To provide an environment conducive to innovation, creativity, research, and entrepreneurial leadership.
- To practice and promote professional ethics, transparency, and accountability for social community, economic and environmental conditions.

Program Vision

To be a leading Program transforming students into skilled IT professionals.

Program Mission

- Amplify the student's technical skills by conducting continuing education programs, organizing and participating in various technical events.
- Provide comprehensive support in synchronization with industry to achieve professional and technological excellence.
- Provide an environment for effective social and ethical skills.

Program Educational Objectives:

PEO1: Cultivate IT, graduates, for industry pertaining to Information Technology solutions.

PEO2: Practice technical competency and teamwork abilities.

PEO3: Exhibit social responsibilities by following ethical practices in graduates' professional pursuits.

Program Specific Outcomes

- **PSO 1:** Use knowledge of core and allied courses for developing a computer-based system to deliver a quality product for real-world problems of society.
- **PSO 2:** Apply Modern IT tools and techniques for perusing their professional career by practicing effective communication with team members.
- **PSO 3:** Develop time-bound, cost-effective, and sustainable solutions by following professional ethics.

Program Outcomes

1. Apply knowledge of mathematics and computer science to analyze computer-based information systems.
2. Apply logical and programming skills to identify, formulate and analyze for solving computational problems.
3. Examine complex problems by a diagnosis of available information to provide an appropriate conclusion.
4. Design applications with suitable consideration of societal needs.
5. Use functional skills of modern IT tools and techniques for modeling and implementation.
6. Play the role of a team player to accomplish a common goal.
7. Convey technological concepts through significant documentation and presentation skills.
8. Demonstrate professional conduct by following norms of the engineering practice.
9. Apply software engineering methodologies for sustainable development.
10. Follow ethical and legal practices related to the functioning of the IT industry.
11. Apply management skills and techniques for creating time-bound and Cost-effective projects.
12. Exhibit lifelong learning by upgrading to state-of-the-art IT practices and Technology.

TEACHING SCHEME

EXAMINATION SCHEME

CREDIT SCHEME

Lecture:	3 Hours/Week	End Semester Examination:	60 Marks	Theory	3
Tutorials:	1 Hours/Week	Internal Assessment:	40 Marks	Tutorial	1
Total	4 Hours/Week		100 Marks		4

Course Objective:

To study

1. Linear equations and its basis and dimension.
2. Linear mapping and its matrix representation.
3. Orthogonalization and diagonalization of matrices.

Prerequisite: The students should have knowledge of algebra of matrices and determinants.

Course Outcomes: On completion of the course, students will have the ability to:

1. Apply rank of matrix in solving system of equations.
2. Identify basis and dimension of matrix.
3. Solve problems on kernel and image of linear transformation.
4. Apply linear operator to represent matrix.
5. Evaluate orthogonalization of inner product space.
6. Use methods to find eigen values and eigen vectors.

Unit I

06 Hours

System of Linear Equation: Vectors and linear combinations, Rank of a matrix, Gaussian elimination, LU Decomposition, Solving Systems of Linear Equations using the tools of Matrices.

Unit II

06 Hours

Vector Spaces: Definition, linear combination, spanning sets subspaces, linear dependence and independence, basis and dimension, rank of matrix.

Unit III

06 Hours

Linear Mapping: Linear mapping, Kernel and image of linear mapping, rank and nullity of a linear mapping, singular and non-singular linear mapping

Unit IV

06 Hours

Linear mapping and matrices: Matrix representation of linear operator, change of base, similarity matrices

Unit V

06 Hours

Inner Product space and orthogonalization: Inner product space, Cauchy-schwarz equality, orthogonality, orthogonal sets and bases, projections, Gramschidt orthogonalization, orthogonal and positive definite matrices, matrix representation of inner product

Unit VI

06 Hours

Diagonalization Eigen values and eigen vectors:

Characteristic polynomial, Cayley-Hamilton theorem, eigen values and eigen vectors, properties.

List of Assignment for Internal Assessment will be framed by respective Course Coordinator.

Project Based Learning Assignments*

Note: - *Students in a group of 3 to 4 shall complete any one project from the following list)

Students are expected prepare report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code for it, wherever applicable.

1. Gauss Elimination method.
2. LU-decomposition method
3. Rank of matrix
4. Linear combination
5. Basis and dimension
6. Spanning sets
7. Kernel and image of linear transformation
8. Rank-nullity theorem
9. Non-singular linear mapping
10. Linear operator
11. Similarity matrices
12. Change of base
13. Cauchy Schwarz equality
14. Orthogonality
15. Gram schmidt Orthogonalization
16. Matrix representation of matrix
17. Cayley-Hamilton theorem
18. Eigen values and Eigen vectors

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Physics for Computing System

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lecture: 03 Hours/Week	End Semester Examination: 60Marks	Theory 3
Practical: 02 Hours/Week	Internal Assessment: 40 Marks	
	Term Work: 25 Marks	Practical 1
Total 5 Hours/Week	125 Marks	4

Course Objective: To impart knowledge of basic concepts in physics relevant to engineering applications in a broader sense with a view to lay foundation for the Computer Engineering and Science.

Prerequisite: Students are expected to have a basic understanding of physics and calculus.

Course Outcomes: At the completion of the course, the students should be able to:

1. Interpret the properties of charged particles to develop modern instruments such as electron microscopy.
2. Appraise the wave nature of light and apply it to measure stress, pressure and dimension etc.
3. Summarize the structure and properties of lasers to their performance and intended applications.
4. Classify the optical fiber, understanding the structure, types and its applications in the field of communication.
5. Solve quantum physics problems to micro level phenomena and solid-state physics.
6. Explain mechanical properties of solid matter, and connect to applications in the field of engineering.

Unit I 06 Hours

Modern Physics: Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatics focusing, Electron microscope, Wavelength and resolution, Specimen limitation, Depth of field and focus, Transmission electron microscope (TEM), Scanning electron microscope (SEM), Separation of isotopes by Bainbridge mass spectrograph, Cathode ray tube (CRT).

Unit II 06 Hours

Wave Optics

Interference: Interference of waves, interference due to thin film (Uniform and nonuniform (only formula-no derivation is expected), Newton's ring, Applications of interference (optical flatness, highly reflecting films, non-reflecting coatings).

Diffraction: Introduction, Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Plane diffraction grating, Conditions for principal maxima and minima

Polarization: Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism.

Unit III 06 Hours

Lasers: Principle of laser, Einstein's coefficients, Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Single Hetro-junction laser, Gas laser: CO₂ laser, Properties of lasers, Laser speckles, Applications of lasers (Engineering/ industry, medicine, Computers).

Unit IV**06 Hours**

Fiber Optic: Principle of fiber optics, Construction, Numerical Aperture for step index fiber; critical angle, angle of acceptance, V number, number of modes of propagation, types of optical fibers, Fiber optic communication system, advantages, and disadvantages of fiber optics.

Unit V**06 Hours**

Quantum Mechanics: Dual nature of matter, DeBroglie's hypothesis, Heisenberg's uncertainty principle with illustrations, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box, step potential and potential barrier (analytical discussion), tunnelling effect.

Unit VI**06 Hours**

Solid state physics: Free electron theory, Density of states, Bloch theorem (Statement only), Origin of band gap, Energy bands in solids, Effective mass of electron, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.

Textbooks

1. A Textbook of Engineering Physics, M N Avadhanulu, P G Kshirsagar and TVS Arun Murthy, S. Chand Publishing (2018).
2. Engineering Physics, R K Gaur and S L Gupta, Dhanpat Rai Publishing Co Pvt Ltd (2015)
3. Concepts of Modern Physics, Arthur Beiser, Shobhit Mahajan and S. Rai Choudhury, McGraw Hill Education (2017).

Reference Books

1. Fundamentals of Physics, Jearl Walker, David Halliday and Robert Resnick, JohnWiley and Sons (2013).
2. Optics, Francis Jenkins and Harvey White, Tata Mcgraw Hill (2017).
3. Principles of Physics, John W. Jewett, Cengage publishing (2013).
4. Introduction to Solid State Physics, C. Kittel, Wiley and Sons (2004).
5. Principles of Solid-State Physics, H. V. Keer, New Age International (1993).
6. Laser and Non-Linear Optics, B. B. Laud, New Age International Private Limited (2011).
7. Nanotechnology: Principles and Practices, Dr. S. K. Kulkarni, Capital Publishing Company (2014).
8. Science of Engineering Materials- C.M. Srivastava and C. Srinivasan, New Age International Pvt. Ltd. (1997).
9. Introduction to Electrodynamics –David R. Griffiths, Pearson (2013).
10. Renewable Energy: Power for a Sustainable Future, Boyle, Oxford University Press (2012).

List of Laboratory Exercise (Any Eight of the Following)

1. Study of lissajous figure by Cathode Ray Oscilloscope (CRO).
2. Determination of e/m by Thomson method.
3. Determination of radius of planoconvex lens/wavelength of light/Flatness testing by Newton's rings.
4. Determination of wavelength of light using diffraction grating.
5. Determination of resolving power of telescope.

6. Determination of thickness of a thin wire by air wedge.
7. Determination of refractive index for O-ray and E-ray.
8. Determination of divergence of a laser beam.
9. Particle size by semiconductor laser.
10. Determination of wavelength of laser by diffraction grating.
11. To study Hall effect and determine the Hall voltage.
12. Calculation of conductivity by four probe methods.
13. Study of solar cell characteristics and calculation of fill factor.
14. Determination of band gap of semiconductor.
15. Determination of Planck's Constant by photoelectric effect.

Project Based Learning Assignments*

Note: - *Students in a group of 3 to 4 shall complete any one project from the following list.

1. Measurement and effect of environmental noise in the college
2. Design and simulation of automatic solar powered time regulated water pumping
3. Solar technology: an alternative source of energy for national development
4. Design and construction of digital distance measuring instrument
5. Design and construction of automatic bell ringer.
6. Design and construction of remote-control fan
7. Design and construction of sound or clap activated alarm
8. Electronic eye (Laser Security) as auto switch/security system
9. Electric power generation by road power
10. Determination of absorption coefficient of sound absorbing materials
11. Determination of velocity of O-ray and E-ray in different double refracting materials
12. Need of medium for propagation of sound wave
13. Tesla Coil
14. Thin film interference in soap film-formation of colors
15. LiFi- wireless data transfer system using light

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Computer Aided Drafting

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>	
Lecture: 4 Hours/Week	End Semester Examination: 60 Marks	Theory	4
Practical: 2 Hours/Week	Internal Assessment: 40 Marks Term Work :50Marks	Practical	1
Total: 6 Hours/Week	150 marks		5

Course Objectives:

To provide knowledge about

1. Fundamentals of engineering drawing and curves.
2. Isometric views and projection.
3. Projections of points, lines, planes & solids.
4. Use of CAD tools.

Prerequisite: The students should have knowledge of Basics of mathematics at secondary school level

Course Outcomes: On completion of the course, students will have the ability to:

1. Understand dimensioning methods and drawing of engineering curves.
2. Draw orthographic projections using 1st angle method of projection*.
3. Draw Isometric views from given orthographic projections*.
4. Draw projection of Lines, its traces, and projections of planes*.
5. Draw projection of different solids*.
6. Draw development of lateral surfaces of solids*.

*Using CAD tools

Unit I

08 Hours

Lines and Dimensioning in Engineering Drawing and Engineering Curves:

Different types of lines used in drawing practice, Dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

Ellipse by Arcs of Circle method, Concentric circle method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone & cylinder, Introduction to Auto CAD commands.

Unit II

08 Hours

Orthographic Projections: Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views, and types of cutting planes and their representation, hatching of sections. (Also using AutoCAD commands).

Unit III

08 Hours

Isometric Projections: Isometric view, Isometric scale to draw Isometric projection, non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view. (Also using AutoCAD commands).

Unit IV**08 Hours**

Projections of Points, Lines and Planes: Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines,

Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP. (Also using AutoCAD commands).

Unit V**08 Hours**

Projection of Solids: Projection of prism, pyramid, cone and cylinder by rotation method. (Also using AutoCAD commands).

Unit VI**08 Hours**

Development of Lateral Surfaces of Solids: Introduction to development of lateral surfaces and its Industrial application, draw the development of lateral surfaces of cone, pyramid, and prism. (Also using AutoCAD commands).

Textbooks

1. "Elementary Engineering Drawing", N. D. Bhatt, Charotar Publishing house, Anand India.
2. "AutoCAD 2020 Beginning and Intermediate", Munir Hamad, Mercury Learning & Information Publication, 2019.
3. "Engineering Drawing and Graphics", Venugopal K., New Age International publishers.

Reference Books

1. "Textbook on Engineering Drawing", K. L. Narayana & P. Kannaiah, Scitech Publications, Chennai.
2. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi.
3. "Engineering Drawing", M. B. Shah and B.C. Rana, 1st Ed, Pearson Education, 2005
4. "Engineering Drawing", P. J. Shah, C. Jamnadas and Co., 1st Edition, 1988
5. "Engineering Drawing (Geometrical Drawing)", P. S. Gill, 10th Edition, S. K. Kataria and Sons, 2005.

List of Laboratory Exercise

All sheets should be completed using AutoCAD.

List of Drawing Sheets

1. Types of lines, Dimensioning practice, free-hand lettering, 1nd and 3rd angle methods symbol.
2. Engineering curves.
3. Orthographic Projections.
4. Isometric views.
5. Projections of Points and Lines and planes.
6. Projections of Solids.
7. Development of lateral surfaces

List of Assignments: Assignment questions are supposed to be solved in A3 size sketchbook

1. At least 4 questions on engineering curves.
2. At least 2 questions on orthographic projections without sections.
3. At least 2 questions on sectional orthographic projections.

4. At least 2 questions on isometric views.
5. At least 4 questions on projections of lines.
6. At least 4 questions on projections of planes.
7. At least 4 questions on projections of solids.
8. At least 4 questions on development of lateral surfaces.

Project Based Learning Assignments*

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list)

1. To obtain industrial drawings to identify the types of lines, dimensioning methods and method of projection.
2. To develop the model/charts based on engineering curves.
2. To prepare model/chart for identification of engineering curves in nature for industrial, societal etc application.
4. To demonstrate different methods of orthographic projection.
5. To demonstrate projection of Points.
6. To demonstrate projection of Lines.
7. To demonstrate projection of Planes.
8. To demonstrate projection of Solids.
9. To demonstrate developments of surfaces for solids.
10. To demonstrate industrial application of development of surfaces such as steam carrying pipes, Ducts of air conditioning systems, etc.
11. To demonstrate Isometric projection method through model of a cube.
12. To obtain industrial drawings to identify the types of lines, dimensioning methods, and method of projection.
13. To develop the model/charts based on engineering curves.
14. To prepare model/chart for identification of engineering curves in nature for industrial, societal, etc application.
15. To demonstrate different methods of orthographic projection.

Syllabus for Unit Tests:

Unit Test-1

Unit-I, Unit-II, Unit-III

Unit Test-2

Unit-IV, Unit-V, Unit-VI

Digital Electronics

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory 4
Practical: 2 Hours/Week	Internal Assessment: 40 Marks	Practical 1
	Term Work: 25 Marks	
Total 6 Hours/Week	125 Marks	5

Course Objective:

1. To present the Digital fundamentals, Boolean algebra and its applications in digital systems.
2. To familiarize with the design of various combinational digital circuits using logic gates
3. To introduce the analysis and design procedures for synchronous and asynchronous sequential circuits.
4. To understand the various semiconductor memories and related technology.

Prerequisite: Physics, Mathematics, Basics of electrical engineering

Course Outcomes: On completion of the course, students will have the ability to:

1. Comprehend different number systems and Boolean algebraic principles.
2. Apply logic design minimization techniques to simplify Boolean expressions
3. Analyze and design combinational logic circuits.
4. Demonstrate the operations of systems with sequential circuit elements.
5. Comprehend characteristics and structure of Programmable Logic Devices and Memory.
6. Draw ASM charts for sequential circuit design.

Unit I

08 Hours

Digital systems:

Number Systems: Introduction to Number Systems-Decimal, Binary, Octal, Hexadecimal, Conversion of number system, Representation of Negative Numbers, 1's complement and 2's complement.

Binary Arithmetic: Binary addition, Binary subtraction, Subtraction using 1's complement and 2's complement, Binary multiplication, and division.

Digital Codes: BCD code, Excess-3 code, Gray code and ASCII code.

Logic Gates: Logical Operators, Logic Gates-Basic Gates, Universal Gates, realization of other gates using universal gates.

Unit II

08 Hours

Logic Design Minimization: Boolean algebra, De Morgan's Theorems, Standard representation of logic functions, Sum of Product (SOP) form, Product of Sum (POS) form, Simplification of logical functions, Minimization of SOP and POS forms using Karnaugh-Maps up to 4 variables Don't care condition, Quine-McCluskey Method.

Unit III

08 Hours

Combinational Circuits: Binary and BCD arithmetic, Half Adder, Full Adder, Half Subtractor, Full Subtractor, Binary Adder (IC 7483), BCD adder, Code converters, Multiplexers, De multiplexer, Decoder (IC 74138) and their use in combinational logic design, Priority Encoder, Digital Comparators, Parity generators and Checker (IC 74180), ALU.

Unit IV**08 Hours**

Sequential Circuits: Flip- flop: SR, JK, D, T flip flops, Truth Tables and Excitation tables, Conversion from one type to another type of Flip Flop.

Registers: Buffer register, Shift register.

Counters: Asynchronous counters, Synchronous counters, Modulus counters

Unit V**08 Hours**

FSM and ASM charts: Introduction to FSM, Moore and Mealy State machine, state machine as a sequential controller. Design of state machines: state table, state assignment, transition/excitation table, excitation maps and equations, logic realization, ASM chart notations, ASM block, State diagram, ASM chart for sequential circuits, Multiplexer Controller.

Unit VI**08 Hours**

Memory and PLD: Semiconductor memories: memory organization, memory expansion, Classification and characteristics of memories, RAM, ROM, EPROM, EEPROM, NVRAM, SRAM, DRAM. Programmable logic devices: Study of PROM, PAL, PLAs. Architecture of PLA, designing combinational circuits using PLDs.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks

1. M. Morris Mano and M. D. Ciletti, Digital Design, Pearson Education.
2. R. P. Jain, Modern Digital Electronics, Tata McGraw Hill Publication.
3. F.J. Hill and G.L. Peterson, Switching Theory and Logic Design, John Wiley
4. J.F. Wakerly "Digital Design: Principles and Practices", 3rd edition, 4th reprint, Pearson Education, 2
5. David J. Comer, Digital Logic & State Machine Design, Oxford University Press.
6. Digital Integrated Electronics- H.Taub & D.Shilling, Mc Graw Hill.

List of Laboratory Exercises:

1. Verify truth tables of logic gates. (AND, OR, XOR, NOT, NAND, NOR). Simplify the given Boolean expression using K-map and implement using gates
2. State De-Morgan's theorem and write Boolean laws. Implement NAND and NOR as Universal gates.
3. Design (truth table, K-map) and implement half and full adder/subtractor.
4. Design (truth table, K-map) and implement 4-bit BCD to Excess-3 Code converters.
5. Study of magnitude Comparator using IC 7485.
6. Implement of logic functions using multiplexer IC 74151 (Verification, cascading & logic function implementation).
7. Implement logic functions using 3:8 decoder IC 74138.
8. Verify truth tables of different types of flip flops.
9. Design (State diagram, state table & K map) and implement 3 bits Up and Down Asynchronous and Synchronous Counter using JK flip-flop.
10. Design and implement modulo 'n' counter with IC 7490.

Project Based Learning Assignments*

Note: - *Students in a group of 3 to 4 shall complete any one project from the following list)

1. Survey report of basic gates ICs 7432, 4011, 4050, 4070, 4071, 40106
2. Implement combinational logic Circuit of given Boolean Equation.
3. Implement Half Adder and Half Subtractor.

4. Implement Full Adder using two Half Adders
5. Build 4-bit parallel Adder / Subtractor using IC.
6. Build Code Converters: Binary to Gray
7. Build Code Converters: Excess 3 to Binary)
8. Implement Two Bit Magnitude Comparator using IC 7485
9. Implement given combinational logic using MUX
10. Implement 7 segment decoder driver using IC 7447.
11. Build a Decade counter and Up-Down Counter.
12. Build a Shift Registers: SISO and SIPO
13. Implement the Johnson Counter and Ring Counter.
14. Survey Report on Static I/O and transfer Characteristic of TTL and CMOS.

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit –V, Unit - VI

Structured Programming

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lecture: 4 Hours/Week	End Semester Examination: 60 Marks	Theory 4
Practical: 2 Hours/Week	Internal Assessment: 40 Marks	
	Term Work and Practical: 100 Marks	Practical: 1
Total	6 Hours/Week	200 Marks
		5

Course Objective:

1. To build the programming skills using 'C' to solve real world problems.
2. To provide an overview of fundamental principles, concepts, and constructs of computer programming.

Prerequisite:

Basic knowledge of Computer Handling.

Course Outcomes: On completion of the course, students will have the ability to:

1. Apply steps towards problem solving.
2. Apply fundamental concepts of programming language.
3. Implement conditional, branching and iteration
4. Decompose a problem into functions.
5. Apply programming to solve simple numerical method problems.
6. Exercise structures to formulate programs.

Unit I

08 Hours

Introduction to Computing: Components of computer system, concept of hardware and software, introduction to system software- operating system, editor, compiler, assembler, linker, loader, introduction to computer programming, types of programming languages, software development life cycle, problem solving techniques- fundamental stages of problem solving, define the problem, -designing- development of an algorithm, algorithm design tools- flowcharts, pseudo codes.

Unit II

08 Hours

Programming language 'C': Features of C, header files, pre-processor directives, compiling and executing a C program, syntax and semantic errors, libraries, structure of a C program, declarations, constants, variables, data types, operators and expressions, precedence and associativity of operators, type conversions, input, and output functions- printf and scanf.

Unit III

08 Hours

Control Structures: if-else statement, nested if-else, use of logical operators, Loop control structure: for, while, do-while loops, use of break and continue, Case control structure: switch case
Pointers: Concept, pointer declaration, assignment, initialization, and access.

Unit IV

08 Hours

Function: Types of functions, function definition and declaration, function prototype, calling and returning function, passing values between functions, standard library functions and user defined functions, passing array as function parameter, call-by-value, call-by-reference, recursive function.

Unit V**08 Hours**

Arrays: Concept, declaration, initialization, processing with array, one and multidimensional array, pointer to an array, use of array for searching techniques: linear and binary search. sorting techniques: bubble sort, insertion sort, selection sort, applications of array in image processing.
Strings: concept, declaration, initialization, and standard string library functions.

Unit VI**08 Hours**

Structures: Concept, declaration, accessing structure elements, array of structures, pointer to structures, self-referential structures, use of structures, union.
Introduction command line concepts, programs using command line argument.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks

1. Brian W. Kernighan, Dennis M. Ritchie, "The C Programming Language", Prentice Hall, ISBN 0131103628.
2. Donald E. Knuth, "The Art of Computer Programming", Addison-Wesley, ISBN-10: 0201485419, ISBN13: 978-0201485417.
3. T. E. Bailey, "Program design with pseudo code", Brooks/Cole Publisher, ISBN-10 : 0534055745, ISBN-13: 978-0534055745.
4. Kanetkar Yashavant P, "Let us C", BPB publications.
5. Subrata Saha and Subhodip M., "Basic Computation and Programming with C", Cambridge University of Press, India, ISBN:9781316601853.

Reference Books

- 1 Lamey Robert, "Logical problem solving", Prentice Hall, ISBN: 9780130618825.
- 2 Henry Mullish, Herbert L. Cooper, "The Spirit of C", Thomson Learning, ISBN 0314285008.

List of Laboratory Exercise

1. Write a program to accept the length of three sides of a triangle and to test and print the type of triangle as equilateral, isosceles or right angled or none.
2. Write a program to check whether input number is Prime or not with and without use of recursive function.
3. Write a program to separate digits of input 4-digit integer, separate and display its digits.
4. Write a program to implement linear and binary search techniques.
5. Write a program to implement sorting techniques: Bubble, Selection, and Insertion sorting.
6. Write a program to accept a string and to display the following:
 - (a) Total number of characters in the string.
 - (b) Total number of vowels in the string.
 - (c) Total number of occurrences of character in the string.
 - (d) Check whether string is palindrome or not.
7. Write a program to carry out following operations on strings using library functions.
 - (a) To concatenate a string S2 to string S1.
 - (b) To find the length of a given string.
 - (c) To compare two strings S1 and S2.
 - (d) To copy a string S2 to another string S1.
8. A class teacher wants to keep record of 10 students in the class along with the names and marks obtained in 5 subjects. Write a C program with function that displays.
 - (a) Name of the student with highest marks in a particular subject.
 - (b) Overall percentage result of the class.

- (c) Total number of passing students in the class.
 - (d) Total number of students failing in one subject.
9. Write a program with function to swap values of two elements (call by reference).

Project Based Learning Assignments*

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list)

1. Design and develop a project for Diary management System
2. Design and develop a project for Calendar using C
3. Design and develop a project for Contact Management System
4. Design and develop a project for Library Management System
5. Design and develop a project for Snake Game
6. Design and develop a project for Bus Reservation system
7. Design and develop a project for Hospital Management system
8. Design and develop a project for Employee management system
9. Design and develop a project for Diary management System
10. Design and develop a project for Calendar using C
11. Design and develop a project for Contact Management System
12. Design and develop a project for Library Management System

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit – III

Unit Test -2

Unit – IV, Unit –V, Unit - VI

Computer System Workshop Technology

TEACHING SCHEME

EXAMINATION SCHEME

CREDIT SCHEME

Practical:	4 Hours/Week	Term Work and Practical : 50 Marks	Practical:	2
Total	4 Hours/Week	50 Marks		2

Course Objective:

Provide student a knowledge of computer hardware and networking, enabling them to identify computer hardware, software and network related problems, and develop an ability to use the basics of computing, necessary for computing courses.

Prerequisite: Basic knowledge of Computer and Electronics.

Course Outcomes: On completion of the course, students will have the ability to:

1. Identify the architecture of a computer and its different components, including their technology evolution.
2. Apply their knowledge about computer peripherals to identify problems.
3. Install and uninstall given software step-by-step.
4. Configure local area network to access the Internet.
5. Prepare document using Latex.
6. Use GitHub tool for coding and collaboration.

Unit I

06 Hours

Computer hardware peripherals: Introduction to hardware components, random access memory (RAM), Types Of RAM & their speed, tips for buying ram, how to add memory to a computer, problems when installing memory, Central Processing Unit (CPU), Types Of CPU: considerations when buying a new CPU (Types & Differences), different speeds available for CPU and what do they mean, 32 Bit vs 64 Bit – Which One To Choose & Why? How to choose a CPU type for different needs? Graphic Card & Types, How to install a Graphics Card, Installing a CD or DVD burner, Jumper Switch settings, Hard Disk upgrade, Different ports and why we use them - USB, PS2, DivX, Graphic card & types, Virtual Memory and how to configure it for optimum system performance.

Unit II

06 Hours

Assembly of Computer and Software Installations: Assembling the motherboard, Replacing fan, how to avoid common mistakes during assembly, Installation of system software: Operating system (Windows and Linux), Installations step for operating system, Dual booting, Configure the BIOS, Installation of Antivirus, Installation of the open source software such as Scilab, Latex Installation of MS Office.

Unit III

06 Hours

Basic Diagnostic of Hardware and Software: Diagnosis of Power Up problem, Boot Drive, Errant Keyboard, mouse problems, slow computer performance, Computer freezes and displays BSOD (Blue screen of death), no display on monitor, no sound, computer rebooting or turning itself off, how to troubleshoot a computer that does not boot, Registry Cleaner.

Unit IV**06 Hours**

Computer network environments: Network connecting devices. Configure the TCP/IP setting, connect to Local Area Network and access the Internet, Configuring Wireless network. Server and Its Configuration, Email Clients, Browsers, Office tools, customize web browsers with the LAN proxy settings, bookmarks, search toolbars and pop-up blockers, Browsing netiquettes and cyber laws. Cloud Access Tools.

Unit V**06 Hours**

Configuration of External devices: Physical set-up of Printers- Performing test print out, Printing of document etc, Scanner set-up, Webcam, Bluetooth device, Memory card reader etc.

Unit VI**06 Hours**

Productivity tools: Open-Source Tools Such as Latex, GitHub.

Latex: Format words, lines, and paragraphs, design pages, create lists, tables, references, and figures in LaTeX. Introduction to LaTeX Packages and classes. Using Git, Version Control Systems, interacting with GitHub, Reverting Changes, Creating Pull Requests.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks:

1. Introduction to Information Technology, ITL Education Solutions limited, Pearson Education.
2. PC Hardware and A+Handbook – Kate J. Chase PHI (Microsoft).
3. LaTeX Companion – Leslie Lamport, PHI/Pearson.
4. <https://nptel.ac.in/courses/106/105/106105081/>.
5. <http://nptel.ac.in/courses/106105084/>.
6. <https://guides.github.com/>.
7. Introduction to Linux: Installation and Programming, N B Venkateswarlu, BS Publication.

Reference Books

1. IT Essentials PC Hardware and Software Companion Guide Third Edition by David Anfinson and Ken Quamme. – CISCO Press, Pearson Education.
2. Computer Fundamentals, MS Office, and Internet & Web Technology by Dinesh Maidasani.

List of Laboratory Exercise

1. Demonstrate the Computer Hardware Components and explain its working.
2. Demonstrate the Networking Components and explain its working.
3. Installation of operating system MS windows, Unix on the personal computer
4. Installation of Application software Latex, MS office on the personal computer
5. Troubleshooting hardware related problem.
6. Customize web browsers with the LAN proxy settings, bookmarks, search toolbars and pop-up blockers. Also, plug-ins like Macromedia Flash and JRE for applets should be configured.
7. Execution of Important “layout” and formatting commands in Latex,
8. Installation of Antivirus and customize the browsers to block pop ups, block active x downloads to avoid viruses and/or worms

9. Assignment on Pull request, code review and collaboration using GitHub.

Project Based Learning Assignments

Note: - *Students in a group of 3 to 4 shall complete any one project from the following list

1. Collect specifications of similar types of hardware and software and prepare report comparing them
2. Assembling and disassembling the PC back to working condition.
3. Installation of operating systems LINUX on Server and different packages on a PC.
4. Practice hardware troubleshooting exercises related to various components of computer like monitor, drives, memory devices, printers etc. and software troubleshooting related to BIOS etc
5. To start your own computer repair workshop. What would your initial planning involve? What would you look for in terms of building, furnishings, tools and any other equipment that you can think of?
6. Cyber Hygiene: Installing antivirus for Windows.
7. Prepare the report of need of programming language in 21st century.
8. Collect various types of computer hardware and prepare summary report
9. Prepare Seminar report using LaTeX.
10. Prepare Project report using LaTeX.

B.Tech(Information Technology)
Semester-II

Mathematics for Computing-II

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lecture: 3 Hours/Week	End Semester Examination: 60 Marks	Theory 3
Tutorials 1 Hour/Week	Internal Assessment: 40 Marks	Tutorial 1
Total 4 Hours/Week	100 Marks	4

Course Objectives:

1. Fourier series and integral transforms.
2. Multiple integrals and its applications.
3. Vector calculus and its applications.

Prerequisite: The students should have knowledge of vector algebra, derivative and integration.

Course Outcomes: On completion of the course, students will have the ability to:

1. Use periodic functions as Fourier series.
2. Apply methods of finding Fourier and Z-transforms.
3. Apply methods of Laplace transform of piecewise continuous functions.
4. Identify concepts of double and triple integrals.
5. Apply vector derivative for physical quantities.
6. Evaluate line, surface, and volume integrals.

Unit I

06 Hours

Fourier Series: Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis.

Unit II

06 Hours

Fourier Transform (FT): Complex Exponential Form of Fourier series, Fourier Integral Theorem, Sine & Cosine Integrals, Fourier Transform, Fourier Sine and Cosine Transform and their Inverses. Introductory.

Z-Transform (ZT): Definition, Standard Properties, ZT of Standard Sequences and their Inverses. Solution of Simple Difference Equations.

Unit III

06 Hours

Laplace Transform and its application: Definition of LT, Inverse LT. Properties & theorems. LT of standard functions. LT of some special functions viz., Periodic, Unit Step, Unit Impulse, ramp, jump, Problems on finding LT & inverse LT. Applications of LT and Inverse LT for solving ordinary differential equations.

Unit IV

06 Hours

Multiple Integrals and their Application: Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values, moment of inertia, centre of gravity.

Unit V

06 Hours

Vector Differential Calculus: Physical interpretation of Vector differentiation, Vector differential operator, Gradient, Divergence and Curl, Directional derivative, Solenoidal, Irrotational and Conservative fields, Scalar potential, Vector identities.

Unit VI

06 Hours

Vector Integral Calculus and Applications: Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence theorem, Stoke's theorem. Applications to problem in engineering.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks/Reference books:

- 1.P. N. Wartikar and J. N. Wartikar, Applied Mathematics (Volumes I and II), 7th Ed., Pune Vidyarthi GrihaPrakashan, Pune, 2013.
- 2.B. S. Grewal, Higher Engineering Mathematics, 42nd Ed., Khanna Publication, Delhi
- 3.B.V. Ramana, Higher Engineering Mathematics, 6th Ed., Tata McGraw-Hill, New Delhi, 2008.
- 4.Erwin Kreyszig, Advanced Engineering Mathematics, 10th Ed., John Wiley & Sons, Inc., 2015.
- 5.Peter V. O'Neil, Advanced Engineering Mathematics, 7th Ed., Cengage Learning, 2012.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

Students are expected prepare report on any one topic, write its definition, applications and illustrate with few examples. Also, write pseudo code for it, wherever applicable.

1. Fourier series
2. Harmonic analysis
3. Fourier transform
4. Z-Transform
5. Laplace transform technique to solve ODE
6. Multiple Integral to evaluate area and volume
7. Directional derivative
8. Divergence and curl
9. Greens theorem
10. Gauss Divergence Theorem
11. Stokes theorem
12. Unit step function
13. Solenoidal and irrotational fields
14. Simple difference equation

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Organic and Electrochemistry

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lectures: 3 Hours/Week	End Semester Examination: 60 Marks	Theory 3
Practical: 2 Hours/Week	Internal Assessment: 40 Marks	Practical 1
	Term Work: 25 Marks	
Total 5 Hours/Week	125 Marks	4

Course Objective:

The student should acquire the knowledge of

1. To develop the interest among the students regarding chemistry and their applications in engineering.
2. To develop confidence among students about chemistry, how the knowledge of chemistry is applied in technological field.
3. The student should understand the concepts of chemistry to lay the groundwork for subsequent studies in the computing field.

Prerequisite: Capacitor, insulator, classification and properties of polymers, electromagnetic radiation, electrochemical series

Course Outcomes: On completion of the course, students will be able to:

1. Differentiate between ionic and covalent bonding and classify the bonding in a compound as ionic or covalent.
2. Develop a working knowledge of the twelve fundamental principles of green chemistry and what it is all about.
3. Apply standard reduction potential data to determine the relative strength of oxidizing/reducing agents.
4. Demonstrate the knowledge of polymer materials for futuristic engineering applications.
5. Describe the properties of materials and Application of semiconductor electronics
6. Describe the manufacturing and refining process of fuels and lubricants.

Unit I

06 Hours

Chemical Bonding in Molecules: MO theory, Structure, bonding and energy levels of bonding and shapes of many atom molecules, Coordination Chemistry, Electronic spectra and magnetic properties of complexes with relevance to bio-inorganic chemistry, organ metallic chemistry.

Unit II

06 Hours

Green Chemistry: Introduction, Twelve Principles of Green chemistry, numerical on atom economy, synthesis, adipic acid and indigo. Organic dye-Traditional methods of organic dye. Green solvents (ionic liquid supercritical CO₂), and products from natural materials.

Unit III

06 Hours

Electrochemistry: Electrochemical cells and Galvanic cells, EMF of a cell, Single electrode potential, Nernst equation, Electrochemical series, Types of electrodes, Reference electrodes, pH, pOH, acids and basis, Fuel cells, Construction and Working of - Acid and Alkaline Storage Battery, Dry Cell, Ni-Cd Batteries, Li-Ion Batteries, Li-Po Batteries.

Unit IV **06 Hours**
Polymers for the Electronics Industry: Polymers, Conduction mechanism, Preparation of conductive polymers, Polyacetylene, Poly (p-phenylene), Polyhetrocyclic systems, Polyaniline Poly (Phenylene sulphide), Poly (1,6-heptadiyne), Applications, Photonic applications.

Unit V **06 Hours**
Semi-Conductors, Insulators and Superconductors: Semi conductivity in non-elemental materials, Preparations of semiconductors, Chalcogen photoconductors, photocopying process Introduction to Superconductors, types of Superconductors, Properties of superconductors, Applications of Superconductors, Electrical insulators, or Dielectrics.

Unit VI **06 Hours**
Fuels and Lubricants: Classification of fuels, Calorific values, Comparison between solid, liquid and gaseous fuels, Theoretical calculation of calorific value of a fuel, Selection of coal, analysis of coal, Natural Gas, Producer gas, water gas, Lubricants, Mechanism of lubrication, classification of lubricants, lubricating oils, Solid lubricants, Greases or Semi-Solid lubricants, Synthetic lubricants, Lubricating emulsions, Properties of lubricating oils.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks

1. Polymer Science and technology (2nd Edition), P. Ghosh, Tata McGRAW Hill, 2008.
2. Polymers: Chemistry & Physics of Modern Materials (2nd edition) J.M.G.Cowie, Blackie Academic & Professional, 1994.
3. A Textbook of Engineering Chemistry, Shashi Chawla, Dhanpat Rai & Co, 2004.
4. Engineering Chemistry (16th Edition) Jain, Jain, Dhanpat Rai Publishing Company, 2013.
5. Inorganic Chemistry (4th edition), D. F. Shriver and P. W. Atkins, Oxford University, Oxford, 2006.
6. Applications of Absorption Spectroscopy of Organic Compounds (4th edition), John R. Dyer, Prentice Hall of India Pvt. Ltd., 1978.
7. Reactions, Rearrangements and Reagents (4th edition), S. N. Sanyal, Bharti Bhawan (P & D), 2003.

List of Laboratory Exercise

1. Determination of Hardness of water sample by EDTA method.
2. Determination of Chloride content in water sample by precipitation titration method.
3. To determine strength of acid by pH – metric Titration
4. To measure the Conductance of a solution by conductometric titration
5. Measurement of Surface tension of a given liquid by Stalagmometer.
6. Determination of viscosity of a given liquid by Ostwald's Viscometer.
7. Determination of Saponification value of an oil sample.
8. To determine alkalinity water sample.
9. Determination of Hardness of water sample by EDTA method.
10. Determination of Chloride content in water sample by precipitation titration method.
11. To determine strength of acid by pH – metric Titration
12. To Prepare Phenol formaldehyde/Urea formaldehyde resin.
13. To study set up of Daniel cell.

Project Based Learning Assignments

Note: - *Students in a group of 3 to 4 shall complete any one project from the following list

1. Green Chemistry approach to Nano-Structured Electronics
2. Assessment of Environmentally Benign Photopolymers as an Alternative to the Use of Formaldehyde Based Textile Finishing Agents
3. Solvent-Free Synthesis of Phthalocyanines
4. Synthesis of Conjugated Polymers and Molecules Using Sugar Reagents and Solventless Reactions
5. Environmentally Benign Control of Polymer Solubility: Photoresist Materials Using DNA Mimics
6. Enzymatic Synthesis of Non-Formaldehyde Phenolic Polymers: Control of Hydrogen Peroxide Concentration.
7. The materials chemistry and electrochemistry of lithium and sodium-ion batteries
8. Electroplating- the principles, how different metals can be used and the practical applications
9. Electroplating, Metal Polishing, Anodizing, Phosphating Metal Finishing and Powder Coating Projects.
10. To determine calorific value of a fuel by any suitable method
11. To study various properties of lubricants
12. To study various types of lubricants and its properties.
13. To determine quality of coal sample & its analysis.
14. To study mechanism of lubrication.
15. To study coal analysis & its significance.

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit –V, Unit - VI

Electrical Technology

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDIT SCHEME</u>	
Lecture:	4 Hours/Week	End Semester Examination:	60 Marks	Theory	4
Practical:	2 Hours/Week	Internal Assessment:	40 Marks		
		Term Work:	25 Marks	Practical	1
Total	6 Hours/Week		125 Marks		5

Course Objective:

To study of power system basics, magnetic circuits electrical machines, transformers, wiring, measurements, illumination and batteries.

Course Outcomes: On completion of the course, students will have the ability to:

1. Explain the various parameters related to magnetic circuit.
2. Describe basic concepts of AC fundamentals and circuits.
3. Illustrate constructional features and describe different parameters of transformer.
4. Describe basic concepts of power system and three phase circuits.
5. Demonstrate AC and DC electrical machines.
6. Classify types of batteries.

Unit I

08 Hours

Magnetic Circuits: Magnetic effect of electric current, Cross & Dot Convention, Right hand thumb rule, Concept of flux, flux linkages, magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability Kirchhoff's laws for magnetic circuits. Magnetic circuit concepts, analogy between electric & magnetic circuits, magnetic circuits with DC and AC excitations, magnetic leakage, B-H curve, hysteresis and eddy current losses, magnetic circuit calculations, mutual coupling

Unit II

08 Hours

AC Fundamentals and circuits: AC Fundamentals: Sinusoidal, square and triangular waveforms – average and effective values, form and peak factors, concept of phasor, phasor representation of sinusoidal varying voltage and current. Analysis of series, parallel and series parallel RLC Circuits: apparent, active & reactive powers, power factor, causes and problems of low power factor, power factor improvement; resonance in series and parallel circuits, bandwidth and quality factor (simple numerical problems).

Unit III

08 Hours

Single Phase Transformer: Faradays law of electromagnetic induction, statically and dynamically induced e.m.f, self-inductance, mutual inductance, coefficient of coupling. Single Phase Transformer: Principle of operation, construction, e .m. f. equation, voltage ratio, current ratio, KVA rating ,determination of efficiency and regulation by direct load test, equivalent circuit, power losses,(simple numerical problems), introduction to auto transformer. Three phase transformer and its different winding connections.

Unit IV

08 Hours

Introduction to Power System and Three Phase Circuits: General layout of electrical power system and functions of its elements, standard transmission and distribution voltages, concept of grid (elementary treatment only) Power generation to distribution through overhead lines and underground cables with single line diagram. Three phase system-its necessity and advantages, meaning of phase

sequence, star and delta connections, balanced supply and balanced load, line and phase voltage/current relations, three phase power and its measurement (simple numerical problems).

Unit V

08 Hours

Electrical Machines: DC & AC: Principles of electromechanical energy conversion, DC machines: types, e. m. f. equation of generator and torque equation of motor, characteristics, and applications of dc motors (simple numerical problems). Single Phase Induction motor: Principle of operation and introduction to methods of starting, applications. Three Phase Induction Motor: types, Principle of operation, slip-torque characteristics, applications (numerical problems related to slip only).

Unit VI

08 Hours

Batteries: Basic idea of primary and secondary cells, Construction, working principle and applications of Lead-Acid, Nickel Cadmium and Silver-Oxide batteries, Charging methods used for lead-acid battery (accumulator), Care and maintenance of lead-acid battery, Series and parallel connections of batteries, General idea of solar cells, solar panels and their applications, Introduction to maintenance free batteries, Safe disposal of Batteries; Fuel cell: Principle & Types of fuel cell.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks:

1. B.L.Theraja, A Textbook of Electrical Technology, Vol.1, S.Chand& Company Ltd. New Delhi
2. V.K.Mehta, Basic Electrical Engineering, S Chand & Company Ltd. New Delhi.
3. J.Nagarath and Kothari, Theory and applications of Basic Electrical Engineering, Prentice Hall of India Pvt. Ltd.

Reference Books:

1. Electrical Technology - Edward Huges (Pearson).
2. Basic Electrical Engineering - D. P. Kothari, J Nagarath (TMC).
3. Electrical power system technology - S. W. Fardo, D. R. Patric (Prentice Hall).
4. Electrical, Electronics Measurements and Instruments - (Satya Prakashan).

Project Based Learning Assignments

Note: - *Students in a group of 3 to 4 shall complete any one project from the following list

1. Building a small resistive load lamp bank.
2. Building a small resistive load lamp bank for various types of connections like series, parallel, star, delta
3. Building a small inductive load lamp bank for various types of connections like series, parallel, star, delta
4. Building a small capacitive load lamp bank for various types of connections like series, parallel, star, delta
5. Building a small resistive load lamp bank
6. Building a staircase wiring model on a board
7. Building a Go down wiring model on a board
8. Rewinding of a choke
9. Rewinding of a small transformer
10. Building a small rectifier circuit on bread board
11. Building a mobile charger circuit on a bread board

12. Building an electric buzzer circuit
13. Building a solar charger for mobile phone
14. Building a small wind turbine
15. Small Agricultural pump model with DC motor
16. Small Agricultural pump model with AC motor

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Object Oriented Programming

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lecture: 4 Hours/Week	End Semester Examination: 60 Marks	Theory 4
Practical: 2 Hours/Week	Internal Assessment: 40 Marks	Practical 1
	Term Work and Practical: 75 Marks	
Total 6 Hours/Week	175 Marks	5

Course Objective:

The course focuses on the understanding and practical mastery of object-oriented concepts such as classes, objects, data abstraction, methods, method overloading, inheritance, and polymorphism.

Prerequisite:

Basics of C Programming.

Course Outcomes: On completion of the course, students will have the ability to:

1. Differentiate between top-down and bottom-up programming approach.
2. Associate the object-oriented programming approach in connection with C++.
3. Apply the concepts of array and operator overloading.
4. Implement basic concepts of inheritance.
5. Illustrate the process of data file manipulations using C++
6. Use the concepts of Templates and Exceptions.

Unit I

08 Hours

Introduction to OOP: Programming characteristics of object-oriented languages. Comparison between C and C++. C++ Programming basics: Output using cout. Directives. Input with cin. Type bool. The setw manipulator. Type conversions.

Unit II

08 Hours

Functions: Returning values from functions. Reference arguments. Overloaded function. Inline function. Default arguments. Returning by reference.

Object and Classes: Making sense of core object concepts (Encapsulation, Abstraction, Polymorphism, Classes, Messages Association, Interfaces) Implementation of class in C++, C++ Objects as physical object, C++ object as data types of constructor. Object as function arguments. The default copy constructor, returning object from function. Structures and classes. Classes objects and memory static class data. Const and classes.

Unit III

08 Hours

Arrays and string: arrays fundamentals. Arrays as class Member Data: Arrays of object, string, The standard C++ String class

Operator overloading: Overloading unary operations. Overloading binary operators, data conversion, pitfalls of operators overloading and conversion keywords. Explicit and Mutable.

Unit IV

08 Hours

Inheritance: Concept of inheritance. Derived class and based class. Derived class constructors, member function, inheritance in the English distance class, class hierarchies, inheritance and graphics shapes, public and private inheritance, aggregation: Classes within classes, inheritance, and program development.

Pointer: Addresses and pointers. The address of operator and pointer and arrays. Pointer and Fraction pointer and C-types string. Memory management: New and Delete, pointers to objects, debugging pointers.

Unit V

08 Hours

Virtual Function: Virtual Function, friend function, Static function, Assignment and copy initialization, this pointer, dynamic type information.

Streams and Files: Streams classes, Stream Errors, Disk File I/O with streams, file pointers, error handling in file I/O with member function, overloading the extraction and insertion operators, memory as a stream object, command line arguments, and printer output.

Unit VI

08 Hours

Templates and Exceptions: Function templates, Class templates Exceptions

The Standard Template Library: Introduction algorithms, sequence containers, iterators, specialized iterators, associative containers, strong user-defined object, function objects.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks:

- 1 Object Oriented Programming with C++ Author: E. Balagurusamy.
- 2 C++: The complete Reference Author: Herbert Schildt.

Reference Books:

- 1 Object Oriented Programming C++, Fourth Edition, By Pearson.
- 2 Object Oriented Programming in C++ Author: Robert Lafore.

List of Laboratory Exercise:

1. Describe the OOP Concepts.
2. Demonstrate class concept using suitable programmes.
3. Demonstrate array concepts using suitable programmes.
4. Demonstrate Operator Overloading concepts using suitable programmes.
5. Demonstrate Inheritance and its types using suitable programmes.
6. Demonstrate the use of Pointer using suitable programmes.
7. Demonstrate the types of functions using suitable programmes.
8. Demonstrate File Handling using suitable programmes.
9. Demonstrate Templates using suitable programmes.
10. Implement User define Exception.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Login and Registration System using C++
2. Car Rental System using C++
3. Bookshop inventory system using C++
4. Student Report Management System using C++
5. Sudoku Game using C++
6. Credit Card Validator using C++
7. Using Graphics to Draw and Move Shapes using C++
8. Banking Record System using C++
9. Hotel Management System using C++

10. Student Management System using C++

11. Bus reservation System using C++

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Programming Paradigms

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDIT SCHEME</u>	
Lecture:	4 Hours/Week	End Semester Examination:	60 Marks	Theory	4
Practical:	2 Hours/Week	Internal Assessment:	40 Marks		
		Term Work and Oral:	50 Marks	Practical	1
Total	6 Hours/Week		150 Marks		5

Course Objectives:

1. To introduce the basic building blocks that underlie programming languages.
2. To introduce the basics of programming language design and implementation.

Prerequisite:

Introduction to computing and programming environment.

Course Outcomes:

On completion of the course, students will have the ability to:

1. Compare and contrast a range of programming paradigms.
2. Apply functional programming language features.
3. Implement the concepts of object orientation.
4. Interpret the features of logic programming paradigm.
5. Summarize the use and types of system programs.
6. Discuss the appropriateness of the using a given programming paradigm within a given environment.

Unit I

08 Hours

Introduction to Programming: Role of programming languages, need to study programming languages, Characteristics of Programming Languages

The Nature of Programming Languages: Imperative languages and non-imperative languages, Functional Language, Scripting languages, Data-oriented languages, Object-oriented languages, Event-driven Programming, Language Standardisation

Programming Environments: Compilers and Interpreters, Interactive development tools, Run-time support environments, Debugging Tools, Testing Tools, Configuration Management.

Unit II

08 Hours

Functional Programming: Definition of a function and Subprogram control: domain and range, total and partial functions, strict functions, subprogram sequence control, attributes of data control, shared data in subprograms, different parameter passing methods, lifetime of variables, Recursion, Referential transparency, Storage management. Desirable and undesirable characteristics of procedural programming.

Unit III

08 Hours

Object Orientation: Basic concepts: Objects, classes, methods, overloading methods, messages inheritance: overriding methods, single inheritance, multiple.

Inheritance, Interfaces (e.g., in Java), encapsulation, polymorphism, Implementing object-oriented programming, desirable characteristics of object-oriented programming, Comparative study of C++ and JAVA.

Unit IV**08 Hours**

Logic programming Paradigm: Introduction, Logic programming language model, Brief Introduction to Predicate Calculus, Predicate Calculus and Proving Theorems, An Overview of Logic Programming, The Origins of Prolog, The Basic Elements of Prolog, Deficiencies of Prolog, Applications of Logic Programming Limitations of Logic Programming.

Unit V**08 Hours**

System Programming: Types and functions of system Programs: Language processors and language processing activities, Assemblers, Macro processor, Linker, Loader, Interpreter, Compiler (steps in compilation).

Unit VI**08 Hours**

Additional Programming Paradigms: Data flow programming design principles, Database programming design principles, Network programming design principles, Socket programming in JAVA, Internet programming design principles, windows programming.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks:

1. Roosta Seyed, “Foundations of Programming Languages Design & Implementation”, 3rd Edition, Cenage learning, ISBN-13:978-81-315-1062-9.
2. Pratt T.W., Zelkowitz “Programming Languages: Design and Implementation” PHI, 2002, 3rd Edition, ISBN-81-203-1038-1
3. Sebesta R. W., “Concepts of programming languages”, Pearson Education 2001, 4th edition, ISBN-81-317-0837-3.
4. D.M. Dhamdhare, “Systems Programming and Operating Systems”, Tata McGraw-Hill, ISBN- 13:978-0-07-463579-7
5. Max Bramer, “Logic Programming with Prolog”, 2nd Edition, Springer, ISBN-13 978-1447154860

Reference Books:

1. Sethi Ravi, “Programming Languages: Concepts and Constructs” Pearson Education, ISBN:9788177584226
2. Herbert Schildt, “C++: The Complete Reference, 4th Edition”, McGraw Hill Education; 4th edition, ISBN-13 : 0070532465-978

List of Laboratory Exercises:

1. Implement parameter passing using functional programming approach.
2. Implement recursion using functional programming approach.
3. Implement and comparing lifetime of variable using functional and object-oriented programming approach.
4. Implement and comparing reference passing using functional and object-oriented programming approach.
5. Implement encapsulation in object-oriented programming approach.
6. Case study of Prolog.
7. Implement and compare functions in functional and object-oriented programming approach.
8. Implement concept of binding in functional and object-oriented programming approach
9. Implement inheritance using object-oriented programming approach.

10. Study of a website/software to identify event driven programming elements used.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Make a project in C to maintain student record using files. The project should be able to read, write, modify, add and search records.
2. Make a project in C++ to maintain employee data using files and dynamic object. The project should be able to read, write, modify, add and search records.
3. Implementation of a simple calculator with memory functions in C++ using polymorphism. The screen should continuously display numbers, signs, and symbols similar to calculator. Use shortcut keys for operations and memory functions.
4. Implementation of a simple predicate logic system for diagnosis and applicable medicines using prolog
5. Develop a simulator for assembler. It should accept a assembly program and separate the components of the program as per the data structures of assembler.
6. Develop a macro-processor like program which should identify the macro definitions, macro calls in an assembly program. It should also replace macro calls with macro definitions.
7. Implement a phone book using C/C++.
8. Develop a simple 3-page website to show event elements. It should have at least one registration page to communicate data to and from a server.
9. Implement result calculation system for student marks using each structured programming and object-oriented programming. Make use of files. Compare the difference in both implementation and identify the pros and cons of both implementations with the features of the programming types used.
10. Implement event driven programming on at least one webpage.

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit – III

Unit Test -2

Unit – IV, Unit – V, Unit – VI

Web Programming

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Practical: 4 Hours/Week	Term Work and Practical:75 Marks	Practical: 2
Total: 4 Hours/Week	75 Marks	2

Course Objectives:

To develop the skill & knowledge of Web page design.

Prerequisite:

Basic knowledge in HTML tags & skill of creating web pages should be known

Course Outcomes: On completion of the course, students will have the ability to:

1. Use HTML in website designing according to theme.
2. Design web pages with attributes
3. Design various layout of websites.
4. Implement responsive web design.
5. Implement front end framework with Bootstrap Elements.
6. Build website with Content Management System.

Unit I

06 Hours

HTML Tags: Choose a Website Topic, Overview of HTML Tags, The HTML 5 Template, The Head, Formatting Content, Compound Tags, Character Entities, Commenting and Formatting Code, Other HTML Tags.

HTML Attributes and Images:

Acquiring Images, Graphics File Formats, Editing Images, The img Tag, Absolute Links, Embedding Media, Relative Links, Validating Code

Unit II

06 Hours

CSS – Styling Tags and Page Layout: CSS Basics, Colors and Inline Styles, Internal Style Sheets and Basic Formatting, External Stylesheets, Common Properties. Classes IDs Divs Spans, The Box, Boxes in Boxes, Styling Page Divisions, Additional Resources

Designing with Sections: - Sections and Background Colors, Background Images, Adding a Navigation Bar

Unit III

06 Hours

Publishing Websites: -FTP and Web Servers

JavaScript: - Adding a jQuery Animated Scrolling Effect.

Responsive Design: - Media Queries, Multiple Media Queries, Targeting Devices, Images and Video, Columns and Tweaks, The Viewport

Unit IV

06 Hours

Front End Frameworks: Explore Bootstrap Elements, Downloading Bootstrap, downloading a Bootstrap Example, Reviewing the Example Code, Replacing Page Content, Customizing the Design.

Unit V

06 Hours

Web API: Working of APIs, Relationship between JavaScript, APIs, and other JavaScript tools.

Common browser APIs :- APIs for manipulating documents, APIs that fetch data from the server, APIs for drawing and manipulating graphics, Audio and Video APIs, Device APIs, Client-side storage APIs.

Common third-party APIs :- YouTube API, Facebook suite of APIs, Twitter API.

Unit VI

06 Hours

Content Management Systems: Setting up WordPress, Creating Posts, and Creating Pages, Working with Media, Themes and Widgets.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks:

- 1) Getting Started with Web Components: Build modular and reusable components using HTML, CSS and JavaScript by Prateek Jadhvani.
- 2) Jump Start Bootstrap: Get Up to Speed With Bootstrap in a Weekend By Syed Fazle Rahman.
- 3) Fronted Web Development/Web Designing, HTML, CSS & JavaScript Basic Tutorial by Sachin Srivastav
- 4) Web Design and Development: Website Technologies Fundamentals By Steven Bright.

Reference Books

- 1) HTML and C Learn HTML, CSS, and JavaScript and Build a Website, App, and Game by Young Rewired State and Duncan Beedie.
- 2) Mastering HTML, CSS & Javascript Web Publishing by Laura Lemay, Rafe Colburn
HTML & CSS, and JavaScript & JQuery (2 book set) by Jon Duckett.

List of Laboratory Exercise:

- 1) Design home page for any website according to domain.
- 2) Implement various functionality using different tags of HTML while designing web pages.
- 3) Implement web pages formatting and content formatting using CSS.
- 4) Implement responsive approach in website designing
- 5) Explorer front end framework using Bootstrap Elements
- 6) Demonstrate website design using content management system.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Design website for department and college
2. Design website for e-commerce platform.
3. Design website for reservation system (eg. bus, train, air)
4. Design website for online food delivery system.
5. Design website for CRM (database management).
6. Design website for hospital management system.
7. Design website for advertisement of products.
8. Design website for customer support system.
9. Design website for Business Portfolio.
10. Design website for Quiz Game.
11. Design website for E-library system.
12. Design website for survey system.
13. Design website for Banking system.
14. Design website for social media.
15. Design matrimonial website.

B.Tech(Information Technology)

Semester-III

Discrete Structures and Graph Theory

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDITS SCHEME</u>	
Lecture:	4 Hours/Week	End Semester Examination: 60 Marks		Theory	4
Practical	2 Hours/Week	Internal Assessment:	40 Marks	Term Work	1
		Term Work:	25 Marks		
Total	06 Hours/Week		125 Marks		5

Course Objectives:

1. To apply and relate knowledge of mathematics in computer science.
2. To learn proof theory with propositional calculus and induction.
3. To map, represent and solve network problem with trees and graphs.

Prerequisite:

Basic mathematics and programming fundamentals.

Course Outcomes: On completion of the course, students will have the ability to

1. Formulate real world problems into statement forms using sets and relations which can be solved or proved mathematically using set theory and logic.
2. Design mathematical model from theoretical statements.
Apply counting techniques to real world problems.
4. Apply knowledge of graphs to solve network problems.
5. Design searching algorithm efficiently by applying tree and tree traversal logic.
6. Apply algebraic structure and coding theory in computer science.

Unit I

08 Hours

Propositional Logic and Proof Theory: Sets, Set operations, Finite and Infinite sets, Venn diagram, Principle of inclusion and exclusion, Multisets. Propositions, Conditional Propositions, Logical Connectivity, Propositional calculus, Universal and Existential Quantifiers, Normal forms, methods of proofs, Principal of mathematical induction.

Unit II:

08 Hours

Relations and Functions: Properties of Binary Relations, Closure of relations, Warshall's algorithm, Equivalence, Relations and partitions, Partial ordering relations and lattices, Chains and Anti chains. Functions, Composition of functions, Invertible functions, Pigeonhole Principle.

Unit III

08 Hours

Counting and Recurrence Relations Basic counting principles, permutations, combinations, generalized permutations and combinations (with/without repetitions), Probability theory, Permutations with indistinguishable objects, Binomial coefficients, and identities. Linear Recurrence Relations with constant Coefficients, Homogeneous Solutions, Total solutions.

Unit IV

08 Hours

Graph theory: Basic terminology, multi graphs and weighted graphs, paths and circuits, shortest path in weighted graph, Dijkstra's algorithm, Hamiltonian and Euler paths and circuits, factors of a graph, planer graph and Travelling salesman problem.

Unit V**08 Hours**

Trees: Trees, rooted trees, path length in rooted trees, prefix codes, binary search trees, tree traversal, spanning trees and cut set, minimal spanning trees, Kruskal's and Prim's algorithms for minimal Spanning tree. The Max flow- Min Cut Theorem (Transport network). Case Study- Game Tree, Mini-Max Tree.

Unit VI**08 Hours**

Algebraic Structures: The structure of algebra, Algebraic Systems, Semi Groups, Monoids, Groups, Homomorphism and Normal Subgroups, Congruence relations, Rings, Integral Domains and Fields, coding theory, Polynomial Rings and polynomial Codes.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks:

1. Kenneth H. Rosen, Discrete Mathematics and its Applications, 7th Edition, McGraw Hill.
2. C. L. Liu, D. P. Mohapatra, Elements of Discrete Mathematics: A Computer Oriented Approach, 4th Edition, McGraw Hill.

Reference Books

1. Seymour Lipschutz, M. Lipson, Discrete Mathematics, 3rd Edition, McGraw Hill.
2. P. Tremblay, R. Manohar, Discrete Mathematical Structures With Applications to Computer Science, McGraw Hill.

List of Laboratory Exercise

1. Write a program to implement set operations. (Set size and elements to be taken from user at runtime).
2. Write a program to calculate value of polynomial for variable x. (Highest degree and coefficients to be taken from user at runtime).
3. Write a program to find value of composite function: fogoh. (f(x), (g(x) and h(x) to be taken from user.)
4. Write a program to implement Warshall's algorithm.
5. Write a program to check whether Eulerian circuit is present in the given graph.
6. Write a program to find shortest path between the vertices in given graph.
7. Write a program to create binary search tree for the values taken from user.
8. Write a program to implement various tree traversals.
9. Write a program to implement Kruskal's algorithm.
10. Write a program to implement Prim's algorithm.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Study the writings of Lewis Carroll on symbolic logic. Describe in detail some of the models he used to represent logical arguments and the rules of inference he used in these arguments.
2. Describe a variety of different applications of the Fibonacci numbers to the biological and the physical sciences.

3. Explain how graph theory can help uncover networks of criminals or terrorists by studying relevant social and communication networks.
4. Explain what community structure is in a graph representing a network, such as a social network, a computer network, an information network, or a biological network. Define what a community in such a graph is, and explain what communities represent in graphs representing the types of networks listed.
5. Describe how Euler paths can be used to help determine DNA sequences.
6. Describe some of the strategies and algorithms used to solve the traveling salesperson problem.
7. Five men with different nationalities and with different jobs live in consecutive houses on a street. These houses are painted different colors. The men have different pets and have different favorite drinks. Determine who owns a zebra and whose favorite drink is mineral water (which is one of the favorite drinks) given these clues: The Englishman lives in the red house. The Spaniard owns a dog. The Japanese man is a painter. The Italian drinks tea. The Norwegian lives in the first house on the left. The green house is immediately to the right of the white one. The photographer breeds snails. The diplomat lives in the yellow house. Milk is drunk in the middle house. The owner of the green house drinks coffee. The Norwegian's house is next to the blue one. The violinist drinks orange juice. The fox is in a house next to that of the physician. The horse is in a house next to that of the diplomat.
8. Explain how graph multicolorings can be used in a variety of different models.
9. Define a heap and explain how trees can be turned into heaps. Why are heaps useful in sorting?
10. Describe the techniques used by chess-playing programs such as Deep Blue or stockfish.
11. Discuss the algorithms used in IP multicasting to avoid loops between routers.
12. Compare and contrast some of the most important sorting algorithms in terms of their complexity and when they are used.
13. Describe an algorithm for finding the minimum spanning tree of a graph such that the maximum degree of any vertex in the spanning tree does not exceed a fixed constant k .
14. Describe the origins of mathematical induction. Who were the first people to use it and to which problems did they apply it?
15. Explain how the ideas and concepts of program correctness can be extended to prove that operating systems are secure.

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit – VI

Data Structures

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDIT SCHEME</u>	
Lecture:	4 Hours/Week	End Semester Examination:	60 Marks	Theory	4
Practical:	2 Hours/Week	Internal Assessment:	40 Marks	Practical	1
		Term Work and Practical:	50 Marks		
Total	6 Hours/week		150 Marks		5

Course Objective:

The objective of the course is to familiarize students with fundamentals of data structures and algorithms.

Prerequisite:

Fundamental knowledge programming and problem-solving steps

Course Outcomes: On completion of the course, students will have the ability to:

1. Understand the fundamentals of data structure and algorithms
2. Execute linear sequential data structures
3. Implement linear linked organization data structures
4. Execute nonlinear data structure-trees
5. Implement nonlinear data structure-graph
6. Know hashing and file organization concepts

Unit I

08 Hours

Introduction to Algorithm and Data Structures: Introduction to data structures, types of data structure, abstract data types (ADT), introduction to algorithms, characteristics of algorithms, algorithm design tools: pseudo code and flowchart, relationship among data, data structure and algorithms, analysis of algorithms, asymptotic notation.

Unit II

08 Hours

Sequential Organization Data Structures: Stacks: primitive operations, stack as an ADT, realization of stacks using array, stack operations, multi-stack, applications of stack, expression evaluation and conversion, simulating recursion using stack
Queue: primitive operations, queues as ADT, realization of queue using array, circular queue, double ended queue, priority queue, applications of queue.

Unit III

08 Hours

Linked Organization Data Structures: Introduction, comparison of sequential and linked organizations, comparison of static and dynamic memory allocation, realization of linked lists, dynamic memory management, linked list as ADT, types of linked list, polynomial manipulations, linked stack, linked queue, generalized linked list (GLL) concept, applications of linked list.

Unit IV

08 Hours

Non-Linear Data Structure-Tree: Tree terminology, types of trees, binary tree as an ADT, realization of tree, tree traversals, binary search tree, operations on BST, threaded binary tree, AVL tree, heap tree, applications of trees.

Unit V

08 Hours

Non-Linear Data Structure-Graph: Graph terminologies, graph as an ADT, realization of graphs using adjacency matrix and adjacency list, graph traversals: breadth first search traversal, depth first search traversal, spanning tree, prim's and kruskal's algorithms, topological sorting, applications of graph

Hashing and File Organization:

Hashing: introduction, key terms, hash function, Collision Resolution strategies, hash table overflow, skip list, comparison of hashing and skip lists.

File: concept of file, file organization, sequential file organization, direct access file organization, indexed sequential file organization.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks:

1. Y. Langsam, M. Augenstin, A. Tannenbaum, "Data Structures using C and C++", Prentice Hall of India, , ISBN-81-203-1177-9.

3. S. Lipschutz, "Data Structures", McGraw Hill Pub.
4. Patil V., "Data Structures using C++", Oxford university press, ISBN 0-19-806623-6
5. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, and Clifford Stein, "Introduction to Algorithms"

Reference Books

1. G. A.V, PAI , "Data Structures and Algorithms ", McGraw Hill, ISBN -13: 978-0-07-066726-6
2. M. Welss, "Data Structures and Algorithm Analysis in C++", Pearson Education, ISBN-81-7808-670-0

List of Laboratory Exercise

1. Write a program to implement functions (insert, delete, display) on stack, queue and circular queue data structure.
2. Write a program to convert and solve expression from
3. (a) Infix to Prefix
(b) Infix to Postfix

Evaluate Postfix expression

3. Write a program to implement Singly Linked List manipulation for storing student information (PRN, Name, Marks).
 - a. Display data of top rank student.

How many students secure first class and above rank?

4. Write a program to implement Doubly Linked List manipulation for storing Employee information (Name, Salary, Age).
 - a. Display data of employees having salary more than 50,000.

Display list of employees having age less than 30 and salary greater than 30,000.

5. Write a program to implement Binary Search Tree storing city names and Traversal in BST (Inorder, Preorder, Postorder).
6. Write a program to implement Threaded Binary Tree and its Traversals.
7. Write a program to implement graph traversals: BFS and DFS.
8. Write a program to implement Prim's and Kruskal's algorithms MST.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Design and develop a project for Election System
2. Design and develop a project for Flight ticket booking
3. Design and develop a project for Tourism Management system
4. Design and develop a project for Simple Result system
5. Create a mini project to construct game: Tic-Tac-Toe
6. Design and develop a project for Phone Directory using doubly link list
7. Create a mini project to construct game: Snakes and Ladder
8. School fee enquiry Management System

9. Telecom Billing Management System

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Database Management System			
<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>	
Lecture: 3 Hours/Week	End Semester Examination: 60 Marks	Theory	3
Practical: 2 Hours/Week	Internal Assessment: 40 Marks		
	Term Work and Practical: 50 Marks	Practical:	1
Total 5 Hours/week	150 Marks		4

Course Objective

The objective of the course is to present an introduction to database management systems, with an emphasis on how to organize, maintain and retrieve - efficiently, and effectively - information from a Database Management Systems.

Prerequisite:

Students should have knowledge of

- 1) Basic understanding of data and data structure.
- 2) Basic understanding of programming language.

Course Outcomes: On completion of the course, students will have the ability to:

1. Model an application's data requirements using conceptual modeling tools.
2. Implement concepts of relational algebra and SQL queries.
3. Demonstrate concepts of relational database design.
4. Interpret the query processing and optimization activities in database.
5. Interpret the transaction activities in database.
6. Recognize the emerging database applications and security concerns.

Unit I

06 Hours

Introduction: Introduction to Database system architecture, Data Abstraction, Data Independence.

Data models: Extended Entity-relationship model, network model, relational and object oriented data models, integrity constraints, data manipulation operations.

Unit II

06 Hours

Relational algebra: Fundamental and extended relational algebra operations, Tuple and domain relational calculus

Introduction to SQL: Data definition language, Data Manipulation Language, Joined relations, Views.

Introduction to PL/SQL: Functions, Procedures, Triggers, Cursors.

Unit III

06 Hours

Integrity constraints: What are constraints, types of constraints

Relational database design: Domain and data dependency, Armstrong's axioms, Functional Dependencies, Normal forms (1NF, 2NF, 3NF, BCNF, 4NF), Dependency preservation, Lossless design.

Unit IV

06 Hours

Storage strategies: Indices, B trees, B+ trees, Hashing

Query processing and optimization: Evaluation of relational algebra expressions, Query equivalence, Join strategies, Query optimization algorithms

Unit V

06 Hours

Transaction processing: Concurrency control, ACID property, Serializability of scheduling, Locking and timestamp-based schedulers, Multi-version and optimistic Concurrency Control schemes, Database recovery.

Unit VI

06 Hours

Data Intensive Computing: Introduction to big data, unstructured data processing using Hadoop, NoSQL database using MongoDB

Database Security: Authentication, Authorization and access control, DAC, MAC and RBAC models, Intrusion detection, SQL injection.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks

- 1 Silberschatz, Korth, “Data base System Concepts”, 7th ed., McGraw hill.
- 2 Raghu Ramakrishnan and Johannes Gehrke, “Database Management Systems” (3/e), McGraw Hill.
- 3 Ramez Elmasri and Shamkant B. Navathe, Fundamentals of Database Systems (5/e), Pearson Education.
- 4 C. J. Date, Kannan, “An Introduction to Database Systems”, 8e, Addison-Wesley
- 5 Ivan Bayross, “SQL, PL/SQL the Programming Language of Oracle”, BPB Publication

Reference Books

- 1 Peter Rob and Carlos Coronel, Database System- Design, Implementation and Management (7/e), Cengage Learning, 2007
- 2 Hector Garcia-Molina, Jeff Ullman, and Jennifer Widom, “Database Systems: The Complete Book” (2nd edition), Pearson Prentice Hall

List of Laboratory Exercise

1. Conceptual Designing using ER Diagrams (Identifying entities, attributes, keys and relationships between entities, cardinalities, generalization, specialization etc).
2. Convert ER Model to Relational Model (Represent entities and relationships in Tabular form, represent attributes as columns, identifying keys).
3. Remove the redundancies and anomalies in the above relational Tables, Normalize up to Third Normal Form.
4. Study and implementation of SQL: DDL
Creation of above Tables using SQL- Data types in SQL, Creating Tables (along with Primary and Foreign keys), Altering Tables and Dropping Tables.
5. Study and implementation of SQL: DML, Querying with set operations and wildcards
6. Study and implementation of aggregate functions, joins, nested subqueries in SQL from querying above tables.
7. Study and implementation of views in SQL.
8. Study and implementation of PL/SQL – Control statements.
9. Study and implementation of PL/SQL Functions and stored procedure.
10. Study and implementation of Triggers.
11. Study and implementation of Cursors.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Make a project to maintain employee data using files and dynamic object/structure. The project should be able to read, write, modify, add, and search records. Also demonstrate the effect of performing change in employer data definition after few records have been added.
2. Make an extended ER diagram for insurance management system. Transform this into relation design and implement these relations with appropriate domain and integrity constraints.
3. Employ various data control restrictions on databases, relations, and attributes of relations.
4. Create a phonebook which enables user to save contacts with additional information and

provides various retrieval mechanisms. Provisions should be made to view data in multiple ways.

5. Design and develop a library management system. The relations in the system should be normalized up to BCNF
6. Design and develop a inventory management system and create multiple views on the relations so that users not authorized to edit the relations should be able to views the data.
7. Implement of audit trails and backup on relations.
8. Create a student result calculation system. However, when updating results after calculation should be only of students who paid complete fees, such that transaction of each row is executed separately. Hint- use explicit cursor
9. Develop a student data management system using hash files.
10. Installation of a NoSQL database and implementing a simple student database to compare with SQL database.

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit – I, Unit – II, Unit - III

Unit – IV, Unit – V, Unit - VI

Software Engineering

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lecture: 4 Hours/Week	End Semester Examination: 60 Marks	Theory: 4
Practical: 2 Hours/Week	Internal Assessment: 40 Marks	Term Work: 1
	Term Work : 25 Marks	
Total 6 Hours/Week	125 Marks	5

Course Objective:

This course presents modern software engineering techniques and examines the software life-cycle, including software specification, design, implementation, testing. The course is organized as a project where the students work in a team to address a real-world software engineering assignment. The project is supplemented by exercises and lectures that provide insight into the assignment students are working on and software engineering in general.

Prerequisite: Programming knowledge

Course Outcomes: On completion of the course, students will have the ability to:

1. Compare various software development methods.
2. Identify requirements for project.
3. Apply software analysis principles.
4. State steps involved in software designing.
5. Show working of software engineering tools.
6. Execute a thorough software test.
7. Function effectively as a member of a team engaged in software engineering activities.

Unit I

08 Hours

Introduction to Software Development: Software Development Challenges, Software Scope, Software Engineering Discipline, Software Methodologies and Related Process Models, The Human Side of Software Development, Traditional Life Cycle Models o Waterfall, Incremental Evolutionary, Spiral, CBSE, Alternative Process models: Unified Process, Rapid Application Development, Introduction to Agile Software Engineering Process Models: Extreme Programming o Agile Software Development, DevOps, Site Reliability Engineering. Quality and Process Standards: ISO 9000, SWEBOK, ISO 15504, SEI's Capability Maturity Model (CMM).

Unit II

08 Hours

Requirement engineering: Requirements Development Methodology, Specifying Requirements, Eliciting Accurate Requirements, Documenting Business Requirements, Defining User Requirements, Validating Requirements, Achieving Requirements Traceability, Managing Changing Requirements, Reviews, Walkthroughs, and Inspections, Requirements Modelling, Agile Requirements Engineering.

Business Model Engineering: Business Model Capture Tools, Process Modelling, Capturing the Organization and Location Aspects, Developing a Process Model.

Unit IV

08 Hours

System Design: Problem partitioning, abstraction, top-down and bottom-up design, Structured approach. Design Concepts, The Design model architecture, cohesion and coupling, Data Design, Architectural Styles and Patterns, Architectural Design, Mapping Data flow into Software Architecture. Functional versus object-oriented approach.

Coding: Programming languages and development tools Selecting languages and Tools, Good programming practices Coding Standards.

08 Hours

Unit V

Software configuration management (SCM): Elements of SCM, Base lines, Software configuration items, SCM Repository, SCM process:

Software Engineering Tools: Requirements Management Tools (e.g., IBM Rational Doors), Design Tools (e.g., Sparx Enterprise Architect), Development Tools o IDEs (e.g., Xcode, Eclipse, IntelliJ IDEA, NetBeans, Microsoft Visual Studio, Atom), Source Control Management (e.g., GitHub), Release Orchestration (e.g., Open Make), Collaboration (e.g., Jira, Trello, Slack).

08 Hours

Unit VI

Testing Strategies: Levels of Testing, Functional Testing, Structural Testing, Test Plan, Test Case Specification, Test case design, A strategic approach to software Testing: Verification and Validation Testing, organizing for software Testing, Software Testing Strategy for conventional Architecture: Unit Testing Integration Testing, Validation Testing, System Testing, Debugging, White-box, Black-box testing, Basis path Testing, Control structure testing.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks

1. Roger Pressman, Software Engineering: A Practitioner's Approach, 6th edition, McGraw Hill, 2005. ISBN 0-07-285318-2
2. Somerville, Ian (2001) Addison-Wesley Software Engineering 7th Edition). Massachusetts: Addison Wesley, ISBN 0-321-21026-3
3. Fundamentals of Software Engineering by Rajib Mall

Reference Books

1. Kniberg, H. (2015) Scrum and XP from the Trenches - 2nd Edition,
2. Pro Git: <http://git-scm.com/>

List of Laboratory Exercise

1. Preparing Software Requirements Specifications
2. Performing domain analysis
3. Perform E-R Modeling
4. Perform Data-Flow-Modeling
5. Draw State Diagram
6. Designing Test Suites
7. Calculate cyclomatic Complexity for code snippet

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Android task monitoring
2. Sentiment analysis for product rating
3. Fingerprint-based ATM system
4. Advanced employee management system
5. Image encryption using AES algorithm

6. Fingerprint voting system
7. Weather forecasting system
8. Android local train ticketing system
9. Railway tracking and arrival time prediction system
10. Android Patient Tracker
11. Opinion mining for social networking platforms
12. Automated payroll system with GPS tracking and image capture
13. Data leakage detection system
14. Credit card fraud detection
15. AI shopping system

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit – I, Unit – II, Unit - III

Unit – IV, Unit – V, Unit – VI

Computer Communication and Networks

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lecture: 3 Hours/Week	End Semester Examination: 60 Marks	Theory 3
Practical: 2 Hours/Week	Internal Assessment: 40 Marks	Practical: 1
	Term Work and Practical: 25 Marks	
Total	5 Hours/week	125 Marks
		4

Course Objectives:

1. Build an understanding of the fundamental concepts of computer networking.
2. This course will enable students to understand the layering architecture of OSI reference model and TCP/IP protocol suite, protocols associated with each layer.
3. Learn the different networking architectures and their representations and able to learn the various routing techniques and the transport layer services.

Prerequisite:

Students should have knowledge of

1. How computer networks operate and the fundamentals of data communication.
2. Concepts and fundamental design principles of modern computer networking in a top-down approach, focusing on the Internet's architecture and protocols.

Course Outcomes: On completion of the course, students will have the ability to:

1. Find the components required to build different types of networks.
2. Recognize the different types of network Transmission Media and Technologies.
3. Explain the layered architecture of computer networks and distinguish between the OSI reference model and TCP/IP protocol suite.
4. Match the division of network functionalities with the layers.
5. Distinguish the basic network Layer services and Protocols associated with each network.
6. Identify the protocols and functions associated with the transport layer services.

Unit I

06 Hours

Introduction to data communication and networking: Data Communications: Components, Representations, Data Flow. Digital Transmission: Analog-to-Digital Conversion, Digital-to-Digital Conversion. Analog Transmission: Digital-to-analog Conversion, Analog-to- Analog Conversion.

Networks: Physical Structures, Introduction to Networks – Building Network and Network Types: LAN, WAN, MAN and PAN, Overview of Topology, Concepts of Communication Modes and Transmission Modes. Categories of Networks Internet works.

Unit II

06 Hours

Data Transmission Media and Technologies: Transmission Media: Types of transmission media, principal, Specification of Medium, Performance, and Transmission Impairments. Applications of different transmission media.

Introduction to switching: Switching, Circuit-switched Networks, Packet Switching, Datagram Switching and Datagram networks, Virtual circuit networks, Structure of circuit and packet switch.

Unit III

06 Hours

Network Models: Protocol Layering: Scenarios, Principles, Logical Connections. Reference Models, Functions of the layers of The OSI Model, TCP/IP Protocol Suite: Layered Architecture, Layers in TCP/IP suite and its functioning, Description of layers, services, sockets and ports Encapsulation and D-encapsulation, Addressing, Multiplexing and De-multiplexing, Types of Multiplexing and Multiplexing applications. The OSI Model: OSI Versus TCP/IP.

Unit IV

06 Hours

Networking Devices: Networking Devices: Hubs, Switch, Router, Repeaters, Bridges, Gateway, Modem and Access Point, Backbone networks.

Data-Link Layer:

Introduction: Nodes and Links, Services, Categories of link, Sub layers, Link Layer addressing: Types of addresses, ARP, RARP. Data Link Control (DLC) services: Framing, Flow and Error Control, Data Link Layer Protocols: Simple Protocol, Stop and Wait protocol, Piggybacking.

Unit V

06 Hours

Network Layer: Introduction, Network Layer services: Packetizing, Routing and Forwarding, Other services. IPV4 Addresses: Address Space, Classful Addressing, Classless Addressing, DHCP, Network Address Resolution, Forwarding of IP Packets: Based on destination Address and Label. Overview of IPv6 Addressing – Transition from IPv4 to IPv6 Comparison of IPv4 and IPv6.

Network layer Protocols:

Internet Protocol (IP): Datagram Format, Fragmentation, Options, Security of IPv4 Datagrams, ICMPv4: Messages, Debugging Tools.

Routing: Introduction to Types of Routing, Routing Algorithms: Distance Vector Routing, Link State Routing, Path vector routing, Unicast Routing Protocol: Internet Structure, Routing Information Protocol, Open Shortest Path First, Border Gateway Protocol Version 4.

Unit VI

06 Hours

Transport Layer: Introduction: Transport Layer Services, Connectionless and Connection oriented Protocols, Transport Layer Protocols: Simple protocol, Stop and wait protocol, Go- Back-N Protocol, Selective repeat protocol, User Datagram Protocol: User Datagram, UDP Services, UDP Applications, Transmission Control Protocol: TCP Services, TCP Features, Transmission Policy, Segment header, Connection, State Transition diagram, Windows in TCP, Flow control, Error control, TCP congestion control, Timer Management. Application Layer Paradigms – Client Server Programming – World Wide Web and HTTP, DNS, Electronic Mail (SMTP, POP3, IMAP, MIME).

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks:

1. Data Communications and Networking, Forouzan, 5th Edition, McGraw Hill, 2016 ISBN: 1-25-906475-3.
2. James F. Kurose, Keith W. Ross, —Computer Networking - A Top-Down Approach Featuring the Internet, Seventh Edition, Pearson Education, 2016.

Reference Books:

1. Computer Networks, James J Kurose, Keith W Ross, Pearson Education, 2013,
2. Introductions to Data Communication and Networking, Wayarles Tomasi, Pearson Education,
3. Nader. F. Mir, — Computer and Communication Networks, Pearson Prentice Hall Publishers,
4. 2nd Edition, 2014.
5. Ying-Dar Lin, Ren-Hung Hwang, Fred Baker, —Computer Networks: An Open Source
6. Approachll, Mc Graw Hill Publisher, 2011.
7. Larry L. Peterson, Bruce S. Davie, —Computer Networks: A Systems Approachll, Fifth Edition, Morgan Kaufmann Publishers, 2011.

List of Laboratory Exercise

1. Study and execution of Network commands.
2. Socket programming Client Server using RPC.
3. Demonstration of different types of cables used in data communication.
4. Perform various line coding formats and compare transmission characteristic of each formats.
5. Perform digital carrier modulation techniques used in wireless communication.
6. Study and demonstration of CISCO packet tracer with data transmission.
7. Study and demonstration of CISCO packet tracer with data loss.
8. Perform serial data communication between two data terminal equipment using optical link.
9. Perform Installation of LAN and troubleshooting of frequently occurred problems.
10. Create and test wireless sensor networks using zigbee.
11. To study various aspects of data communication by field visit at data centre.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Network Desktop Manager. Example Modules: Desktop Sharing, Desktop locking and unlocking, IP Port Scanning.
2. Analysis of IPv4/IPv6 protocols over 3G mobile networks
3. Network Traffic Monitoring & windows Remote Manager. Example Modules: Remote Desktop, Remote Chat, Monitoring
4. Learner's Interaction with Information and Communication Technologies.
5. Use of Information-Centric Networks in Revision Control Systems
6. TCP Performance in an EGPRS system
7. Real-Time Networking based Computer Ideas
8. An Internet Voting System Supporting User Privacy
9. Use of Information-Centric Networks in Revision Control Systems.
10. Networking and Security Projects
11. IP based Patient Monitoring System
12. Network Admission Control (NAC) Securing End Point Devices

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit – VI

Information Technology Laboratory - I

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Practical: 4 Hours/Week	Term Work and Practical: 50 Marks	Practical: 2
Tutorials: 1 Hour/Week	Term Work and Oral: 25 Marks	
Total	5 Hours/week	75 Marks
		2

Course Objective

1. Compute time and space complexity for a given program.
2. Demonstrate concepts OOPS using java
3. Solve specified requirement
4. Infer various approaches to decide the efficiency of the given approach.
5. Formulate a given problem by providing the proof of behavior of the given model.
6. Design an application using a platform-independent approach.

Prerequisite:

Basic understanding of Object-Oriented Programming language and logic to solve given problem.

Course Outcomes: On completion of the course, students will have the ability to:

1. Design a solution to a given problem applying logic and features of the java language.
2. Develop their logical skill through various assignments and practicals.
3. Divide complex problem into subpart and then handle every part to achieve the Goal.
4. Model a solution to any real-world problem.
5. Analyze the significance of platform independence.
6. Design application using object-oriented norms.

Unit I

06 Hours

Introduction to Java: Java Fundamentals, Features of Java OOPs concepts Java virtual machine Reflection byte codes Byte code interpretation Data types, variable, arrays, expressions, operators, and control structures - if, switch, and loops like for, do-while, while. Introduction to Objects and classes.

Unit II

06 Hours

Classes and objects: Java Classes, Abstract classes Static classes Inner classes Packages, Wrapper classes. Interfaces This Super Access control, embedded style information Inheritance, Encapsulation, Polymorphism, Data Binding, data abstraction.

Unit III:

06 Hours

String and Arrays: One dimensional Array, Multidimensional array, Array of an object, Introduction to vector. String, StringBuilder, String Buffer, String methods, manipulations.

Unit IV

06 Hours

Exception Handling: Checked exceptions, unchecked exceptions, and Errors, try-catch block, throws, User-defined exception – Throw, Common exception classes.

Unit V

06 Hours

Threading and multithreading: Lifecycle of Thread, Basic functions of thread, multithreading, synchronization.

Unit VI

06 Hours

Collections and Generics: Introduction to collection framework, List, Set, Maps, utility class, Reflection API, Generics.

Textbooks

- 1 OCA Java SE 8 Programmer I Study Guide (Exam 1Z0-808) (Oracle Press) 3rd Edition. by Edward Finegan, Robert Liguori.
- 2 OCA Java SE 8 Programmer, Exam Guide (Exams 1Z0-808) 1st Edition, Kathy Sierra, Bert Bates.
- 3 Programmer's Guide to Java SE 8 Oracle Certified Associate (OCA), Khalid A. Mughal and Rolf W Rasmussen.

Reference Books

- 1 Headfirst Java, 2nd Edition by Kathy Sierra, Bert Bates.
- 2 Java: The Complete Reference, Eleventh Edition 11th Edition, Herbert Schildt.
- 3 OCAJP Associate Java 8 Programmer Certification Fundamentals: 1Z0-808, Hanmant Deshmukh.

List of Laboratory Exercise

1. Maintain record of students and perform CRUD functionality.
2. Write a program to redirect a request using a dynamic approach.
3. Write a program to pass the data using session.
4. Write a servlet to remove spam.
5. Maintain the record of faculty member using jsp action tags and directives.
6. Design a tag to perform the necessary editing in a given report.
7. Design reusable components of the form using taglib.
8. Implement sending and receiving mail utility using Java Mail API.
9. Implement Java Message Service queue.
10. Understand working of framework – struts- case study.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Implement assignment and project submission system.
2. Implement a program to issue Leaving Certificate, Transcripts and Bonafede certificate to student.
3. Implement a program to assign problem statement for practical examination in secured environment.
4. Design a template for NBA report.
5. Design an application for Feedback Management System.
6. Design application to maintain track of research paper with indexing per year.
7. Design a post customized as per social media platform.
8. Design an interface to collect job opportunities and disseminate to eligible student
9. Design a project to track details of Industrial Training.
10. Design notice board application to communicate with students.

B.Tech(Information Technology)

Semester-IV

IT Infrastructure Management

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lecture: 4 Hours/Week	End Semester Examination: 60 Marks	Theory 4
Practical: 2 Hours/Week	Internal Assessment: 40 Marks	Practical 1
	Term Work	
Total- 6 Hours/Week	125 Marks	5

Course Objectives:

Students undergoing this course are expected.

1. To introduce basic postulates of IT Infrastructure Management and shows the correlation
2. between system and service management process
3. Able to Know the Storage and database Management in Information Technology.
4. Infer various approach to decide efficiency of given approach.
5. Able to know the Security Management in IT.
6. To provide detailed knowledge of IT recent trends in globally.

Prerequisite:

Object Oriented Programming language and Logic to solve given problem.

Course Outcomes: On completion of the course, students will have the ability to:

1. Outline IT Infrastructure, management challenges and requirement.
2. Select Service Delivery and Service Support Processes required in IT infrastructure management.
3. Breakdown complex problem into subpart and then handle every part to achieve the goal.
4. Categorize various storage levels in IT.
5. Select security techniques in information technology.
6. Explain new communication mechanism based on emerging trends in information technology.

Unit I 08 Hours

Introduction & It Infrastructure: Information Technology, IT Infrastructure Management, Introduction—IT Infrastructure Management, Challenges in IT Infrastructure Management, Design Issues of IT Organizations and IT Infrastructure, Determining Customers' Requirements, IT Systems Management Process, IT Service Management Process, Information System Design Process

Unit II 08 Hours

Service Delivery Process & Service Support Process: Service Level Management, Financial Management, IT Service Continuity Management, Capacity Management, Availability Management, Configuration Management, Incident Management, Problem Management, Change Management.

Unit III 08 Hours

Storage Management: Introduction to Storage, Backup and Storage, Archive, Retrieve, Disaster Recovery, Space Management, Database and application Protection, Bare, Machine Recovery (BMR), Data Retention

Unit IV 08 Hours

Security Management: Computer Security, Internet Security, Physical Security, Identity Management, Access Control System, Intrusion Detection, Intellectual Property.

Unit V

08 Hours

IT Ethics: Introduction to Cyber Ethics, Intellectual Property, Privacy and Law, Computer Forensics, Ethics and Internet, Cyber Crimes.

Unit VI

08 Hours

Emerging Trends in It: Introduction, Electronic Data Interchange, Infrared Technology, Bluetooth, GSM, WiFi, Standards of Wifi, WiMax, 5G Wireless Technology.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks

1. Gupta, "IT Infrastructure & Its Management", First Edition, Tata McGraw-Hill Education
2. IT Infrastructure and Management by Manoj Kumar Choubey - Published by Pearson Education

Reference Books

1. Firewalls for dummies, Brain Komar, Ronald Beekelaar, Joern Wettern, for Firewall Security, 70-662 MCTS exchange 2010 microsoft press.

List of Laboratory Exercise

1. Enlist and Illustrate Design Issues of IT Organisations and IT Infrastructure.
2. Demonstrate IT Service Continuity Management and Change Management.
3. Design and Implement various Storage Management and Recovery techniques.
4. Summarize different Security Management policies with assistance of Intellectual Property.
5. Setup and maintenance of Storage – Archive, Retrieve, Backup policies.
6. Configuration and Customization of Access Control List and Active Directory.
7. Discriminate various privacy and Cyber Laws with suitable example.
8. Demonstrate different internet security policies with suitable example.
9. Discover different Problem Management within Service Delivery Process.
10. Case Study- Disaster Recovery within Storage Management.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Develop Infrastructure Management System project for Server Management and Maintenance.
2. Develop Infrastructure Management System project for Software Management and Document Management
3. Secure File Storage on Local Machine Using Hybrid Physical Security Techniques.
4. Design security management for New Data center setup
5. Infrastructure Management System project for Monitoring of Bandwidth.
6. Tracking System for Defects. (For Example: Bug tracking and error system based on the web)
7. Implement Secure Backup Software System.
8. Design system for Detecting Data Leaks within storage management.
9. Implement enterprise management of electronic data interchange systems. (For example: Process mining, Good Security Practice)
10. Develop system for Bluetooth Controlled Electronic Home Appliances.

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit – VI

Formal Languages and Computation Theory

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDIT SCHEME</u>	
Lecture:	4 Hours/Week	End Semester Examination:	60 Marks	Theory	4
Practical:	2 Hours/Week	Internal Assessment:	40 Marks	Practical	1
		Term Work:	25 Marks		
Total	6 Hours/Week		125 Marks		5

Course Objective:

Students will learn about a variety of issues in the mathematical development of computer science theory, particularly finite representations for languages and machines. Students will gain more formal understanding of algorithms and procedures.

Prerequisite:

Students should have knowledge of set theory and state transition diagrams.

Course Outcomes: On completion of the course, students will have the ability to

- 1.Design automata machines for strings given.
- 2.Write a regular expression for the given string and find set of strings if regular expression is given.
- 3.Write grammar rules for the strings given.
- 4.Design push down automata for the string and grammar.
- 5.Design Turing machine and apply the same to solve algorithmic problems.
- 6.Apply knowledge computation in complexity theory.

Unit I :

08 Hours

Finite Automata: Introduction to Finite Automata, Structural Representations, Deterministic finite Automata (DFA)-Formal Definition, Simplified notation: State transition graph, Transition table, Language of DFA, Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Equivalence and Minimization of Automata, Conversion of NFA with epsilon to DFA Equivalence of Moore and Mealy Machine. Applications and Limitation of FA.

Unit II

08 Hours

Regular expressions: Regular expression (RE), Definition, Operators of regular expression and their precedence, Algebraic laws for Regular expressions, Kleen's Theorem, Regular expression to DFA, DFA to Regular expression, Non-Regular Languages, Pumping Lemma for regular Languages, Closure properties of Regular Languages, Applications of regular expressions.

Unit III

08 Hours

Grammar: Definition, Production rules, Derivation trees, Ambiguous Grammar, Removal of ambiguity, Regular Grammar, Inter-conversion between RE and Grammar, Reduced form of grammar. Linear grammar: left & right linear grammar, Inter- conversion. Chomsky hierarchy of languages, Context Free Grammar- Definition, Context free language (CFL. Normal Forms- Chomsky Normal Form (CNF), Griebach Normal Form (GNF).

Unit IV

08 Hours

Push Down Automata (PDA): Limitations of FA, PDA: Definition, Uses, Equivalence between FA and PDA, Designing of PDA, Deterministic Push Down Automata and Non-Deterministic Push Down Automata- Definition, Language accepted by PDA, Designing a PDA for CFG, Properties of CFL, Pumping Lemma for CFL. Limitations of PDA, Applications of PDA.

Unit V

08 Hours

Turing Machine (TM): Definition, Model, Comparison of TM, FSM, PDA, Design of TM, Examples of TM- Combinational TM, Iterative TM, Recursive TM, Universal TM, TM as a language acceptor, Some Problems that cannot be solved by Turing Machines, Language accepted by TM, Recursive sets, partially recursive functions. Church's Turing hypothesis, Multitask TM, TM limitations.

Unit VI

08 Hours

Computational Complexity: Decidable problems concerning regular languages, Decidable problems concerning context-free languages, Un-decidability, Halting Problem of TM, Reducibility: Un-decidable Problems from Language Theory, A Simple Un-decidable Problem PCP, Mapping Reducibility Time Complexity: Measuring Complexity, The Class P, Examples of problems in P, The Class NP, NP- completeness.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks

1. "Introduction to Automata Theory, Languages and Computation", Hopcroft J, Motwani R, Ullman, Addison-Wesley, ISBN 81-7808-347-7, Third Edition .
2. "Introduction to Theory of Computation", Michael Sipser, Course Technology, ISBN-10: 053494728X, Forth Edition. ISE.

Reference Books

1. "Introduction to Languages and Theory of Computation", John Martin. Fifth Edition, McGrawHill.
2. "Computational Complexity", Christos H. Papadimitriou, Pearson Education.

List of Laboratory Exercise

1. Solve problems on designing finite automata.
2. Design and inter-convert Moore and Mealy Machine for same problems.
3. Form grammar rules for language of set of regular expression or strings given.
4. Design Push Down Automata for grammar or given string.
5. Construct Turing Machine to solve given problem.
6. Study Assignment on Complexity Theory.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Describe the process of designing the computer. How is it related with the simple automata?
2. Write project based on famous computer scientist Alan Turing. Select suitable material for reference and summarize.
3. Describe the set of problems which can be represented using machines. What are the criteria we can enlist for such representations?

4. Relate the computational theory to World War II. What is the role of cryptography in World War II?
5. Invention of computer as a machine is related to formal automata. How today's complex and high-end computer systems can be mapped to these simple automata. Describe in detail.
6. Select a real-world problem and represent it mathematically. Design an automaton to solve this problem. Write detailed explanation of the entire process.
7. Study any text editor. Enlist its features. Map these features with the concepts you learned in the subject.
8. Enlist set of problems which can be solved, and which cannot be solved by memoryless automata. How memory affects the power of automata? Explain in detail and justify your answer with example.
9. Why Ethereum blockchain must be deterministic? Study and explain application of computation theory to blockchain technology.
10. Can human brain be simulated by Turing machine? Write detailed essay and justify your conclusions with theorem you learned.
11. Study research paper published by Alan Turing and write a summary in your words.
12. What are the similarities and differences between human brain and machine? Support your answers with suitable mathematical model.
13. Study any chess game software. Write the process of developing such software. Describe how this is related to Turing machine.

Syllabus for Unit Tests:

Unit Test -1

Unit Test -2

Unit – I, Unit – II, Unit - III

Unit – IV, Unit – V, Unit – VI

Microprocessors and Microcontrollers

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lecture: 3 Hours/Week	End Semester Examination: 60 Marks	Theory 3
Practical: 2 Hours/Week	Internal Assessment: 40 Marks	Practical 1
Total 5 Hours/Week	Term Work and Practical: 50 Marks	
	150 Marks	4

Course Objective

This course facilitates the learners with the basic knowledge of microprocessors and microcontrollers. Also, the course supports the learners with detailed study of ARM processor and AVR Microcontroller.

Prerequisite:

Digital Electronics, C/C++/Java Programming

Course Outcomes: On completion of the course, students will have the ability to:

1. Learn basics of 16/32-bit Microprocessors.
2. Cognize the ARM Cortex Processor with its architecture and programming.
3. Discover Intel Pentium and i7 processor with its architecture and pipelining.
4. Comprehend basics of 8/16-bit Microcontrollers.
5. Uncover the details of AVR Microcontroller with its architecture and programming.
6. Understand the basics of Arduino and Raspberry Pi Controllers.

Unit I:

06 Hours

Introduction to Microprocessors: Basics of 16-bit and 32-bit processor (Intel 8086 and 80386 processors), Multicore Architecture, Hyperthreading Technology, Instruction Set Architectures (ISA), Multiprocessor Organizations, Inter-Processor Communication (IPC).

Unit II:

06 Hours

Intel Pentium Processor: Features and Internal Architecture, Superscalar Operation, Integer & Floating-Point Pipeline Stages, Branch Prediction Logic, Cache Organization and MESI Protocol, Comparative study of 8086, 80386, Pentium I, Pentium II and Pentium III, Hyper Threading technology and its use in Pentium 4, Intel i7 processor: Features, Architecture, Memory System, Pipelining.

Unit III

06 Hours

ARM Cortex: ARM Micro-architecture (ARMv7/v8/v9/v11), ARM architectures: Generic Interrupt Controller (GIC), Server Base System Architectures, Trusted Base System Architecture (TBSA), System Memory Management Unit (SMMU), Pipelining, ARM OS, ARM Programming.

Unit IV:

06 Hours

Introduction to Microcontrollers: Microprocessors vs Microcontrollers, Basics of 8-bit and 16-bit Microcontrollers (Intel 8051 and 8096 microcontrollers), Applications of microcontrollers.

Unit V

06 Hours

AVR Microcontroller: Types of AVR Microcontrollers, ATmega16/32 8-bit AVR microcontroller: Features, Pin Description, Internal Architecture, Data and Program Memory, AVR Programming using C/Java/Assembly language, Study of VR Studio/Amtel, Studio 7, Visual Micro Lab.

Unit VI

06 Hours

Introduction to Arduino and Raspberry Pi : Introduction, Difference, Arduino Uno and Raspberry Pi Pico (RP2040), microcontrollers, Programming concepts of Arduino Uno with C/C++/Python and IDE, Programming concepts of Raspberry Pi Pico with C/MicroPython.

Textbooks

- 1 Arm Microprocessor Systems Cortex-M Architecture Programming and Interfacing, Muhammad Tahir, T&F India.
- 2 The Definitive Guide to ARM Cortex-M3 and Cortex-M4 Processors, Joseph Yiu.
- 3 ARM A32 Assembly Language, Bruce Smith.
- 3 8051 Microcontrollers, Satish Shah, Oxford University Press.
- 4 Microprocessors and Interfacing, N.Senthil Kumar, M.Saravanan, Oxford University Press
- 5 Programming and Interfacing Atmel AVR Microcontrollers, Grace, Cengage Learning.
- 6 Practical AVR Microcontrollers, Alan Trevennor, Technology In Action.
- 7 Getting Started with Arduino, Massimo Banzi and Michael Shiloh.
- 8 Getting Started with Raspberry Pi, Matt Richardson and Shawn Wallace.

Reference Books

- 1 The Definitive Guide to ARM Cortex-M3 Processors, Stellaris, Texas Instruments.
- 2 ARM System-on-Chip Architecture, Steve Furber.
- 3 ARM processor, Santul Bisht, Lambert Publications
- 4 Modern Assembly Language Programming with the ARM Processor, Larry D Pyeatt.
- 5 Programming and Customizing AVR Microcontroller, Dhananjay Gadre.
- 6 Arduino Cookbook 2nd Edition, Michael Margolis.
- 7 Raspberry Pi The Ultimate Guide, Geoff Adams.
- 8 Internet of Things with Raspberry Pi and Arduino, Anita Gehlot.

List of Laboratory Exercise

- 1) Programming Assignments based on ARM Processor (Minimum 3) using Assembly Language.
- 2) Programming Assignments on 8051 using C (Minimum 2).
- 3) Programming Assignments based on AVR Controller (Minimum 3) on AVR Assembly language or Embedded C.
- 4) Study of and Using VR Studio/Atmel Studio 6/ Visual Micro Lab.
Simple programming assignments on Arduino and Raspberry Pi Controllers (1 each) :
Arduino Uno programs on Arduino Desktop IDE or Web IDE using,
a) Assembly/C/Python/Atmel Studio7
b) Raspberry Pi, Pico programs on C/C++/MicroPython.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Design and Implementation of Drunken People Identification with Auto Ignition Disable Function using ARM (Processor/Controller)/AVR Controller/8051 Microcontroller
2. Design and Implementation of Automatic Turn off for Water Pump with Four Different Time Slots using ARM (Processor/Controller)/AVR Controller/8051 Microcontroller
3. Design and Implementation of Gas Leak Detector with Automatic Air Exhaust Using ARM Cortex
4. Design and Implementation of ARM Based Liquid Level Detection & Flow Control
5. Design and Implementation of Motion Based Door Opener (in malls, big shops) using ARM (Processor/Controller)/AVR Controller/8051 Microcontroller

6. Design and Implementation of Fire Detection and Alarm using ARM (Processor/Controller)/AVR Controller/8051 Microcontroller
7. Design and Implementation of Remote-Control Plant Watering System using ARM (Processor/Controller)/AVR Controller/8051 Microcontroller
8. Design and Implementation of Voice Controlled Air Purifier based on Arduino and Raspberry Pi
9. Design and Implementation of Face Recognition Door Lock System based on Arduino and Raspberry Pi
10. Design and Implementation of Vehicle Number Plate Recognition based on Arduino and Raspberry Pi

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit – VI

Applied Algorithms

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDIT SCHEME</u>	
Lecture:	4 Hours/Week	End Semester Examination:	60 Marks	Theory	4
Practical:	2 Hours/Week	Internal Assessment:	40 Marks		
		Term Work:	25 Marks	Practical	1
Total	6 Hours/Week		125 Marks		5

Course Objective:

Understand and compare important algorithmic design paradigms and analysis of algorithms. To choose and extend efficient algorithms required for designs.

Prerequisite:

Students should be well versed with algorithms and operations on basic data structures stacks, queues, linked lists, trees, graphs. Students should have knowledge of searching sorting algorithms.

Course Outcomes: On completion of the course, students will have the ability to:

1. Interpret the performance of algorithms using analysis techniques.
2. Examine the fundamental algorithmic strategies.
3. Compare the fundamental algorithmic strategies.
4. Implement graphs and trees algorithms.
5. Interpret the tractable or intractable problem.
6. Summarize the advance types of algorithms.

Unit I

08 Hours

Introduction to Algorithm analysis: Characteristics of Algorithm. Analysis of Algorithm: Asymptotic analysis of Complexity Bounds – Best, Average and Worst-Case behavior, Performance Measurements of Algorithm, Time and Space Trade-Offs. Analysis of Recursive Algorithms through Recurrence Relations: Substitution Method, Recursion Tree Method and Masters' Theorem.

Unit II

08 Hours

Algorithmic Strategies 1: Brute-Force technique, Heuristics, Greedy algorithms, Divide and Conquer, Illustrations of these techniques for Problem-Solving.

Unit III

08 Hours

Algorithmic Strategies 2: Dynamic Programming, Branch and Bound algorithms, Backtracking, methodologies; Illustrations of these techniques for Problem-Solving.

Unit IV

08 Hours

Graph and Tree Algorithms: Self-Balancing trees, B Trees, B+ Trees, Single source shortest path algorithms, all pair shortest path algorithms, Network Flow Algorithm

Unit V

08 Hours

Tractable and Intractable Problems: Computability of Algorithms, Computability classes – P, NP, NP-complete and NP-hard. Cook's theorem, Standard NP-complete problems and Reduction techniques.

Unit VI

08 Hours

Advanced Topics: Approximation algorithms, Randomized algorithms, Class of problems beyond NP – P SPACE, Introduction to Quantum Algorithms and parallel algorithms.

List of Internal Assignment will be framed by respective Course Coordinator.

Textbooks

1. "Fundamental of Computer Algorithms", E. Horowitz and S. Sahni, Orient Black.
2. "Introduction to Algorithms", T. H. Cormen, C. E. Leiserson and R. L. Rivest, PHI Learning Pvt. Ltd. (Originally MIT Press).
3. "The Design and Analysis of Computer Algorithms", A. Aho, J. Hopcroft and J. Ullman, Pearson Education India.
4. Computer Algorithms: Introduction to Design and Analysis, S. Baase, Pearson Education India.
5. "The Art of Computer Programming", D. E. Knuth, Addison Wesley.

Reference Books

1. M. Welss, "Data Structures and Algorithm Analysis in C++", Pearson Education, ISBN- 81-7808-670-0.
2. G. A.V, PAI , "Data Structures and Algorithms ", McGraw Hill, ISBN -13: 978-0-07-066726-6.

List of Laboratory Exercise

1. From a given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm.
2. Write a Code to find the shortest path using Bellman-Ford algorithm.
3. Write and analyze code to sort an array of integers using merge sort.
4. Write and analyze to sort an array of integers using divide and conquer quick sort Method.
5. Write a program to implement Longest Common Subsequence problem using Dynamic Programming.
6. Write a program to Implement 0/1 Knapsack problem using Dynamic Programming.
7. Write a program to Implement N Queen's problem using Back Tracking.
8. Write a program to implement quick sort using randomize algorithm.
9. Write a program to implement network flow algorithm.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Design and develop a project for Search engine using data structures
2. Design and develop a project for Google form like application
3. Design and develop a project for shortest path calculation for travelling salesman problem
4. Design and develop a project for finding keywords from the paragraph
5. Design and develop a project for Customer Billing system
6. Design and develop a project for word dictionary using search tree concept
7. Design and develop a project for salary calculation of employees based on performance
8. Design and develop a project for password recovery system
9. Create a mini project to construct game: Create Sudoku

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Operating System

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lecture: 3 Hours/Week	End Semester Examination: 60 Marks	Theory: 3
Practical: 2 Hours/Week	Internal Assessment: 40 Marks	Practical: 1
Total 5 Hours/Week	Term Work and Practical: 50 Marks	
	150 Marks	4

Course Objective:

The learning objective of this course is to introduce the internal operation of modern operating systems. The course will cover processes and threads, mutual exclusion, CPU scheduling, deadlock, memory management, and file systems.

Prerequisite:

Programming skills, elementary data structures, algorithms, and computer architecture.

Course Outcomes: On completion of the course, students will have the ability to:

1. Explain the services provided by the system calls.
2. Implement the scheduling algorithms like FCFS, SJF and priority scheduling.
3. Implement the memory allocation techniques like first fit, best fit and worst fit.
4. Explain practical implementation of the inter-process communication of the processes.
5. Implement the file system.
6. Explain the concept of the deadlock occurrence, avoidance and implementation of deadlock free condition.

Unit I

06 Hours

Computer System Overview: Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating system overview- objectives and functions, Evolution of Operating System. - Computer System Organization Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.

Unit II

06 Hours

Process Management: Process Concept, Process states, Process control, Threads, Uni-processor Scheduling: Types of scheduling: Preemptive, Non preemptive, Scheduling algorithms: FCFS, SJF, RR, Priority, Thread Scheduling, Real Time Scheduling. System calls like ps, fork, join, exec family, wait.

Unit III

06 Hours

Memory Management: Memory Management requirements, Memory partitioning: Fixed and Variable Partitioning, Memory Allocation: Allocation Strategies (First Fit, Best Fit, and Worst Fit), Fragmentation, Swapping, and Paging. Segmentation, Demand paging Virtual Memory: Concepts, management of VM, Page Replacement Policies (FIFO, LRU, Optimal, Other Strategies), Thrashing.

Unit IV

06 Hours

Inter Process Communication: Basic Concepts of Concurrency, Cooperating process, Advantage of Cooperating process, Bounded- Buffer - Shared-Memory Solution, Inter-process Communication (IPC), Basic Concepts of Inter-process Communication and Synchronization.

Unit V

06 Hours

File Systems and I/O Systems : Mass Storage system – Overview of Mass Storage Structure, Disk Structure, Disk Scheduling and Management, swap space management; File-System Interface – File concept, Access methods, Directory Structure, Directory organization, File system mounting, File Sharing and Protection; File System Implementation- File System Structure, Directory implementation, Allocation Methods, Free Space Management, Efficiency and Performance, Recovery; I/O Systems – I/O Hardware, Application I/O interface, Kernel I/O subsystem, Streams, Performance.

Unit VI

06 Hours

Concurrency control: Concurrency: Principles of Concurrency, Mutual Exclusion: S/W approaches, H/W Support, Semaphores, pipes, Message Passing, signals, Monitors, Classical Problems of Synchronization: Readers-Writers, Producer Consumer, and Dining Philosopher problem. Deadlock: Principles of deadlock, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, System calls like signal, kill.

Textbooks

1. Abraham Silberschatz, Peter B. Galvin, Greg Gagne, Operating System Concepts. Sixth edition. Addison-Wesley (2003).
2. Modern Operating Systems -By Andrew S. Tanenbaum (PHI).
3. Operating Systems 5th Edition, William Stallings, Pearson Education India.
4. Peterson and Silberschatz, Modern Operating Systems.
5. Harvey M. Deitel, An introduction to operating systems. Addison-Wesley.

List of Internal Assignment will be framed by respective Course Coordinator.

Reference Books

1. A.M. Lister, Fundamentals of Operating Systems. Macmillan (1979).
2. Andrew Tanenbaum & Albert Woodhull, Operating Systems: Design and Implementation. Prentice-Hall.

List of Laboratory Exercise

1. Basic Linux Commands and Overview.
2. Write Shell Script for finding the global complete path for any file.
3. Write Shell Script to broadcast a message to a specified user or a group of users logged on any terminal.
4. Write Shell Script to copy the file system from two directories to a new directory in such a way that only the latest file is copied in case there are common files in both the directories.
5. Write Shell Script to compare identically named files in two different directories and if they are same, copy one of them in a third directory.
6. Write Shell Script to delete zero sized files from a given directory (and all its sub-directories).
7. Implementation of FCFS (First Come First Serve) CPU Scheduling.
8. Implementation of SJF (Shortest Job First) CPU Scheduling.
9. Implementation of FIFO Replacement Algorithm.
10. Implementation of Optimal Page Replacement Algorithm.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Design of Intranet mail system project.
2. Design of First-fit, worst-fit and best-fit for given allocation memory requirements

3. Simulation of the behavior of the multiprogramming operating system and use CPU scheduler, and CPU Execution.
4. Design the FCFS, SSTF, and SCAN disk-scheduling algorithms to simulate a simple disk drive, which has a specified number of logical blocks numbered from 0 onwards.
5. A Java simulator program to analyze the dependency of Page Faults on the Page Frames for incoming page requests.
6. CPU Scheduling Algorithm to calculate Throughput, Utilization, Turn Around time, Waiting Time. Gantt chart displayed for all n processes.
7. To simulate Round Robin algorithm.
8. A multi-threaded TCP server application, which allows multiple users to be registered and login.
9. Write a simple manual describing how to use the shell. The manual should contain enough detail for a beginner to UNIX to use it.
10. To simulate the dispatcher for allocating the process to CPU.

Syllabus for Unit Tests:

- Unit Test -1** Unit – I, Unit – II, Unit - III
Unit Test -2 Unit – IV, Unit – V, Unit – VI

Information Technology Laboratory II

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDIT SCHEME</u>	
Practical:	4 Hours/Week	Term Work and Practical:	50 Marks	Theory	Credits
Tutorial:	1 Hour/Week	Term Work and Oral:	25 Marks	Practical:	2
				Tutorial	1
Total	5 Hour/Week		75 Marks		3

Course Objectives:

- 1) Understand web environment for building the application.
- 2) Implement web application.
- 3) Implement Servlet.
- 4) Implement Java Messaging Services.
- 5) Implement Java Mail API.

Prerequisite:

- 1) Core Java 2) Scripting languages.

Course Outcomes: On completion of the course, students will have the ability to:

1. Understand the lifecycle of web application.
2. Implement session management using servlet.
3. Apply standard and custom tags of JSP.
4. Design competitive web application which will work real web environment.
5. Implement Java Messaging Services.
6. Apply Java Mail API.

Unit I

06 Hours

Introduction to Servlet: Web Application Basics, Architecture and challenges of Web, application. Introduction to servlet, Servlet life cycle, Developing and Deploying Servlets, Exploring Deployment Descriptor (web.xml).

Unit II

06 Hours

Session Management and Servlet Chaining: Handling Request and Response Initializing a Servlet, Accessing Database, Servlet Chaining, Session Tracking & Management, dealing with cookies, Transferring Request, Accessing Web Context, Passing INIT and CONTEXT Parameter, sharing information using scope object Controlling concurrent access User Authentication, Filtering Request and Response, Programming Filter, Filter Mapping, Servlet Listeners.

Unit III

06 Hours

Java Server Pages: Standard Tags: Basic JSP Architecture, Life Cycle of JSP (Translation, compilation), JSP Tags and Expressions, Role of JSP in MVC-2, JSP with Database, JSP Implicit Objects.

Unit IV

06 Hours

Java Server Pages: Custom Tags: Tag Libraries, JSP Expression Language (EL), Using Custom Tag, JSP Capabilities Exception Handling Session Management Directives JSP with Java. Introduction to struts.

Unit V

06 Hours

Java Messaging Services: JMS Architecture, Point-to-Point Messaging Domain, Publisher/Subscriber, Messaging Domain, JMS API, JMS Queue.

Unit VI

06 Hours

Java Mail API: SMTP, POP, IMAP, MIME, NNTP, sending mail, receiving mail, mail with attachment, forward email, delete email.

Textbooks

1. Web Technologies: HTML, JAVASCRIPT, PHP, JAVA, JSP, ASP.NET, XML and Ajax, Black Book: HTML, JavaScript, PHP, Java, Jsp, XML and Ajax, Black Book Paperback – 1 January 2009, Kogent Learning Solutions Inc.
2. Java EE 8 Cookbook: Build reliable applications with the most robust and mature technology for enterprise development, Packt Publication, Elder Moraes.
3. Headfirst Servlets and JSP: Passing the Sun Certified Web Component Developer Exam 2nd Edition, Bryan Basham, Kathy Sierra, Bert Bates.

Reference Books

1. Beginning Java EE 7, Apress Publication, Antonio Goncalves.
2. Java EE 7 Essentials: Enterprise Developer Handbook 1st Edition, Headfirst Publication, Arun Gupta.
3. J2EE: The complete Reference Paperback, Jim Keogh.

List of Laboratory Exercise:

1. Maintain record of students and perform CRUD functionality.
2. Write a program to redirect a request using a dynamic approach.
3. Write a program to pass the data using session.
4. Write a servlet to remove spam.
5. Maintain the record of faculty member using jsp action tags and directives.
6. Design a tag to perform the necessary editing in a given report.
7. Design reusable components of the form using taglib.
8. Implement sending and receiving mail utility using Java Mail API.
9. Implement Java Message Service queue.
10. Understand working of framework – struts- case study.

Project Based Learning Assignments

Note:- *Students in a group of 3 to 4 shall complete any one project from the following list

1. Implement assignment and project submission system.
2. Implement a program to issue Leaving Certificate, Transcripts and Bonafede certificate to student
3. Implement a program to assign problem statement for practical examination in secured environment.
4. Design a template for NBA report.
5. Design an application for Feedback Management System.
6. Design application to maintain track of research paper with indexing per year.
7. Create message and mail communication of given message.
8. Design a post customized as per social media platform.
9. Design an interface to collect job opportunities and disseminate to eligible student
10. Design a project to track details of Industrial Training.

Bharati Vidyapeeth
(Deemed to be University), Pune, India
College of Engineering, Pune
Department of Mechanical Engineering

Vision of the Department

To develop high quality Mechanical Engineers through dynamic education to meet social and global challenges

Mission of the Department

- To provide extensive theoretical & practical knowledge to the students with well-equipped laboratories & ICT tools through motivated faculty members
- To inculcate aptitude for research, innovation and entrepreneurial qualities in students
- To acquaint students with ethical, social and professional responsibilities to adapt to the demands of working environment.

Name of Programme: B. Tech. Mechanical Engineering

Programme Educational Objectives (PEOs)

- To fulfill need of industry and society with theoretical & practical knowledge
- To perform research, innovation, lifelong learning and continued professional development
- To fulfill professional ethics and social responsibilities

Programme Outcomes (POs)

The graduates will be able to

- a.* apply knowledge of mathematics, science and engineering fundamentals for solving complex engineering problems
- b.* identify the need, plan and conduct experiments, analyze data for improving the mechanical processes.
- c.* design and develop mechanical systems considering social and environmental constraints.
- d.* design and develop a complex mechanical system using research based knowledge, advanced mathematical, statistical tools and techniques.

- e.* use information technology (IT) tools for prediction and modeling of routine activities to enhance the work performance.
- f.* know social responsibilities while doing professional engineering practices.
- g.* familiarize with eco-friendly, sustainable and safe working environment.
- h.* take into account professional ethics while designing engineering systems.
- i.* work efficiently as a group leader as well as an individual.
- j.* communicate in written and verbal form with subordinates and supervisors.
- k.* apply project and finance management techniques in multidisciplinary environments.
- l.* take interest in higher education and update the knowledge.

Programme Specific Outcomes (PSOs)

- Apply the knowledge of thermal, design, manufacturing engineering and computational sciences to solve Mechanical Engineering problems.
- Apply Mechanical Engineering principles for research, innovation and develop entrepreneurial skills.
- Apply concepts of Mechanical Engineering to assess societal, environmental, health, safety issues with professional ethics.

Designation of Course	Linear Algebra, Calculus and Complex Variables		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Tutorial: - 01 Hours/ Week	Internal Assessment	40 Marks	
	Tutorial	-	01
	Total	100 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Students should have knowledge of basic algebra. 2. Students should have knowledge of vector algebra. 3. Students should have knowledge of complex numbers.
Course Objectives:-	<p>To provide knowledge about</p> <ol style="list-style-type: none"> 1. Rank, consistency of system of equations and partial differentiation. 2. Vector differentiation and vector integration. 3. Function of complex variable.
Course Outcomes:-	<p>On completion of the course, students will be able to–</p> <ol style="list-style-type: none"> 1. Understand rank of matrix and apply it test consistency of linear system. 2. Understand the partial derivative and evaluate indeterminate forms. 3. Understand vector differential operator and vector identities. 4. Understand line, surface and volume integrals and apply it evaluate to work done. 5. Understand the analytic functions. 6. Understand Taylors and Laurentz series.

Course Contents

Unit-I	Linear Algebra: Matrices	(08 Hrs.)
Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering		
Unit-II	Partial Differentiation and Indeterminate forms	(08 Hrs.)
Functions of two or more variables, Partial derivatives, Homogeneous functions, Euler's theorem, Total derivative, Change of variables. Indeterminate forms: L' Hospital's Rule, Evaluation of Limits		
Unit-III	Vector Differential Calculus	(08 Hrs.)
Physical interpretation of Vector differentiation, Vector differential operator, Gradient, Divergence and Curl, Directional derivative, Solenoidal, Irrotational and Conservative fields, Scalar potential, Vector identities.		
Unit-IV	Vector Integral Calculus and Applications	(08 Hrs.)
Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence theorem, Stoke's theorem. Applications to problems in Fluid Mechanics, Continuity equations, Streamlines, Equations of motion, Bernoulli's equation.		
Unit-V	Complex Variables	(08 Hrs.)
Function $f(z)$ of complex variable, limit, continuity and differentiability of $f(z)$, Analytic function, necessary and sufficient conditions for $f(z)$ to be analytic (without proof), Cauchy-Riemann equations in cartesian coordinates (without proof) Milne-Thomson method to determine analytic function $f(z)$ when real part (u) or Imaginary part (v) or its combination ($u+v$ or $u-v$) is given. Harmonic function, Harmonic conjugate and orthogonal trajectories.		
Unit-VI	Complex Integration	(08 Hrs.)
Line Integral, Cauchy's Integral theorem for simple connected and multiply connected regions (without proof), Cauchy's Integral formula (without proof). Taylor's and Laurent's series (without proof). Definition of Singularity, Zeroes, poles of $f(z)$, Residues, Cauchy's Residue Theorem (without proof).		

Assignments:

Problems and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. Examinations.

1. Linear algebra: matrices
2. Partial differentiation and indeterminate forms
3. Vector differential calculus
4. Vector integral calculus and applications
5. Complex variables
6. Complex integration

Tutorials:

Problems and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. Examinations.

1. Matrix algebra and system of linear equations.
2. Eigen values and eigenvectors.
3. Partial differentiation.
4. Indeterminate forms.
5. Fourier series; gradient, divergence, and curl.
6. Directional derivative, scalar potential and vector identities.
7. Line, surface and volume integrals.
8. Application of Gauss, Stokes and Green's theorems.
9. Analytic functions, Cauchy-Riemann equations.
10. Limit continuity and differentiability.
11. Cauchy's integral theorem and integral formula.
12. Taylor and Laurent series.

Text Books

5. Michael Greenberg, "Advanced Engineering Mathematics", 2nd Ed., Pearson Education, 1998.

Project Based Learning

Students are expected to prepare report on any one topic, write its definition, applications and analyze the hypothetical data. Also, write pseudo code for it, wherever applicable.

1. System of linear equations solution
2. Rank of matrix
3. Total derivative
4. L' Hospital's Rule
5. Dimension and basis

6. Curl and divergence
7. Work done
8. Gauss divergence theorem
9. Stokes theorem
10. Eigen values and Eigen vectors
11. Bernoulli's equation
12. Cauchy-Riemann equations in detail
13. Harmonic conjugate and orthogonal trajectories
14. Cauchy's Integral formula
15. Cauchy's Residue Theorem

Unit Test-

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Waves & Solid State Physics		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	03
Practical:- 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	04

Course Prerequisites:-	Students are expected to have a basic understanding of physics and calculus.
Course Objective	1. To impart knowledge of basic concepts in physics relevant to engineering applications in a broader sense with a view to lay foundation for the Mechanical Engineering.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Infer the wave nature of light and apply it to measure stress, pressure and dimension etc. 2. Summarize the structure and properties of lasers to their performance and intended applications. 3. Explain mechanical properties of solid matter, and connect to applications in the field of engineering. 4. Use the knowledge of nanoscience to develop new materials with tunable properties. 5. Use analytical instruments for understanding the nanomaterials. 6. Interpret the superconductivity and perfect diamagnetism, and give a qualitative description of the Meissner effect and its applications.

Course Contents

Unit-I	Wave Optics	(06 Hrs)
<p>Interference- Interference of waves, interference due to thin film (Uniform and non-uniform), Applications of interference (optical flatness, interference filter, non-reflecting coatings).</p> <p>Diffraction- Introduction, Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Plane diffraction grating, Conditions for principal maxima and minima.</p> <p>Polarisation -Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism.</p>		
Unit-II	Lasers	(06 Hrs.)
<p>Principle of laser, Einstein's coefficients, Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Single Hetro-junction laser, Gas laser: CO₂ laser, Properties of lasers, Laser speckles, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.</p>		
Unit-III	Solid State Physics	(06 Hrs.)
<p>Free electron theory, Density of states, Bloch theorem (Statement only), Origin of band gap, Energy bands in solids, Effective mass of electron, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.</p>		
Unit-IV	Nano-science	(06 Hrs.)
<p>Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles (Physical and chemical), synthesis of colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications, quantum dots – wide band semiconductors, direct/indirect band gap semiconductors.</p>		

Unit-V	Analytical Instruments	(06 Hrs.)
Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatics focusing, Electron sources, Wavelength and resolution, Specimen limitation, Depth of field and focus, Transmission electron microscope (TEM), Scanning electron microscope (SEM), Field emission scanning electron microscope (FESEM), X-ray Spectroscopy, Energy Dispersive X-ray Spectroscopy(EDS), Atomic force microscopy(AFM), X-ray diffraction(XRD), Bragg's law, Powder X-ray diffraction.		
Unit-VI	Smart Materials and Superconductors	(06 Hrs)
Introduction to smart materials, active smart polymers, shape memory alloys, Electro and Magneto Rheological Fluids, Introduction to composites, types of composites. Introduction to superconductivity; Properties of superconductors: zero electrical resistance, critical fields, persistent current, Meissner effect - Type I and Type II superconductors, Low and high temperature superconductors (introduction and qualitative)		

Term Work:

Practical (Any Eight of the Following)

1. Determination of radius of plan convex lens/wavelength of light/Flatness testing by Newton's rings
2. Determination of wavelength of light using diffraction grating
3. Determination of resolving power of telescope
4. Determination of thickness of a thin wire by air wedge
5. Determination of refractive index for O-ray and E-ray
6. Determination of divergence of a laser beam
7. Particle size by semiconductor laser
8. Determination of wavelength of laser by diffraction grating
9. To study Hall effect and determine the Hall voltage
10. Calculation of conductivity by four probe method
11. Study of solar cell characteristics and calculation of fill factor
12. Determination of band gap of semiconductor
13. Synthesis of metal oxide nanoparticles (ZnO/ZnS/Gold)
14. UV-VIS spectra of synthesized semiconductor nanoparticles
15. To determine the velocity of sound
16. Measurement of average SPL across spherical wave front and behavior with the distance
17. Expansion chamber muffler: investigation of muffler response as a filter in the low frequency approximation by determining insertion loss.
18. Interference of sound using PC speakers
19. Determination of velocity of sound in liquid by ultrasonic interferometer
20. Ultrasonic probe - a study
21. Mini-project based on contents of syllabus.

Assignments

Six assignments to be given by the subject teacher (Theory)-one from each unit/one mini project with report-students can work in group of 4 Maximum

Text Books

1. A Textbook of Engineering Physics, M N Avadhanulu, P G Kshirsagar and TVS Arun Murthy, S. Chand Publishing (2018)
2. Engineering Physics, R K Gaur and S L Gupta, Dhanpat Rai Publishing Co Pvt Ltd (2015)
3. Concepts of Modern Physics, Arthur Beiser, Shobhit Mahajan and S. Rai Choudhury, McGraw Hill Education (2017)

Reference Books

1. Fundamentals of Physics, Jearl Walker, David Halliday and Robert Resnick, John Wiley and Sons(2013)
2. Optics, Francis Jenkins and Harvey White, Tata Mcgraw Hill (2017)
3. Principles of Physics, John W. Jewett, Cengage publishing (2013)
4. Introduction to Solid State Physics, C. Kittel, Wiley and Sons(2004)
5. Principles of Solid State Physics, H. V. Keer, New Age International (1993)
6. Laser and Non-Linear Optics, B. B. Laud, New Age International Private Limited (2011)
7. Nanotechnology: Principles and Practices, Dr. S. K. Kulkarni, Capital Publishing Company (2014)
8. Science of Engineering Materials- C.M. Srivastava and C. Srinivasan, New Age International Pvt.Ltd. (1997)
9. Introduction to Electrodynamics –David R. Griffiths, Pearson (2013)
10. Renewable Energy: Power for a Sustainable Future, Boyle, Oxford University Press (2012)

Project Based Learning

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

1. Case study on measurement and effect of environmental noise in the college
2. To develop a demonstration model of heat sensor in process control
3. To develop a demonstration model of automatic solar powered time regulated water pumping
4. Case study on solar technology: an alternative source of energy for national development
5. To develop a demonstration model of double pendulum.
6. The study on the effect of length on the resistance of a copper wire (verification of ohms law r directly proportional to l)
7. To prepare a chart on comparison of various method used in measuring the gravitational constant g
8. To develop a demonstration model of digital distance measuring instrument
9. Case study on electric power generation by road power
10. Case study on vibration of bars.
11. To determine absorption coefficient of sound absorbing materials
12. To develop a demonstration model to understand quantum confinement effect in wide band semiconductors
13. To develop a demonstration model of Tesla Coil
14. To develop a demonstration model of thin film interference in soap film-formation of colours
15. To develop a demonstration model of LiFi- wireless data transfer system using light

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Electrical Engineering Systems		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	05

Course Prerequisites: -	Students should have basic knowledge of Physics, Chemistry and Mathematics
Course Objectives: -	1. The course introduces fundamental concepts of DC and AC Circuits, Electrical Measurement, Transformers, Induction Machines, DC Machines, Basics of power transmission, distribution & safety measures.
Course Outcomes: -	<ol style="list-style-type: none"> Understand and apply knowledge of Basic laws and network theorems to solve electrical networks Understand and apply knowledge of AC Circuits, Switch gear and electrical measuring instruments Understand and apply fundamental concept of magnetic and electromagnetic circuits for operation of Transformers Understand AC motors, it's control techniques for various mechanical engineering applications Understand DC motors, it's control techniques for various mechanical engineering applications Understand working of Transmission, Distribution of power use of safety rules.

Course Contents

Unit-I	DC Circuit Analysis and Network Theorems	(08 Hrs.)
<p>Circuit Concepts: Concepts of network, active and passive elements, voltage and current sources, concept of linearity and linear network, unilateral and bilateral elements, R, L and C as linear elements, source transformation, Kirchhoff's laws, loop and nodal methods of analysis, star-delta transformation.</p> <p>Network Theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (simple numerical problems).</p>		
Unit-II	AC Circuits and Switch Gear, Electrical Measurement	(08 Hrs.)
<p>AC Circuits: Representation of sinusoidal waveforms, peak and RMS values, phasor representation of AC quantities, real power, reactive power, apparent power, power factor. Analysis of single-phase AC circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), series and parallel resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.</p> <p>Measuring Instruments: Power measurement in three phase circuits. Electrical instruments such as wattmeter, energy meter, tong-tester, megger and power analyzer.</p> <p>Switch Gear: Introduction to LT Switchgear, NO and NC Contacts, Contactors, relay, timers, use in control panel, application in interlocking and protection, symbols.</p>		
Unit-III	Magnetic Circuit and Electromagnetic Induction	(08 Hrs.)
<p>Magnetic Circuit: flux, flux density, field strength, analogy between electric & magnetic circuits, magnetic circuits with DC and AC excitations, magnetic leakage, B-H curve, hysteresis and eddy current losses, magnetic circuit calculations, mutual coupling.</p> <p>Electromagnetic Induction: Faradays law of EMI, induced emf, lenz law, self inductance, coefficient of self inductance (L), mutual inductance, coefficient of mutual inductance (M), self induced emf and mutually induced emf, coefficient of coupling, inductance in series, types of inductor, their application and energy stored in magnetic field</p> <p>Transformers: Single phase and Three phase: Working principle, Construction, Types, applications.</p>		

Unit-IV	Induction Machines	(08 Hrs.)
<p>Three Phase Induction Motor: construction, types, rotating magnetic field, principle of operation, slip, frequency of rotor current, rotor emf, rotor current, expression for torque, conditions for maximum torque, torque slip characteristics, starting torque in squirrel cage and slip ring motors, effect of change in supply voltage on torque, slip and speed, relation between full load torque and maximum torque, power stages in induction motor, vector diagram and equivalent circuit, no load and block rotor test, speed control of 3 phase motor, starting methods for 3 phase induction motor, circle diagram, construction and calculation.</p> <p>Single Phase Motor: construction, double revolving field theory, starting methods & types of single-phase motor, equivalent circuit.</p> <p>Servomotor: construction, types, working, characteristics, application in automation and robotics.</p>		
Unit-V	DC Machines	(08 Hrs.)
<p>DC Generator: construction, emf equation of dc generator, methods of excitation, losses, condition for maximum efficiency, armature reaction, interpoles and compensating winding, commutation, methods of improving commutation, characteristics of separately excited and self excited dc generator.</p> <p>DC Motor: Working principle, voltage equation, condition for maximum power, torque developed, operating characteristics of dc motor, starting: 3 point and 4 point starter, speed control methods, Swinburne's and brake test of dc shunt motor. Soft-starting of dc motors.</p>		
Unit-VI	Basic of Power transmission and distribution, Safety Measures	(08 Hrs.)
<p>Basic of Power transmission and distribution: classification of transmission lines, transmission line parameters, ABCD constants, voltage regulation, ferranti effect, efficiency of transmission line. 3-phase 3-wire and 3-phase 4-wire distribution system, feeders, distributors, main lines, comparison of various distribution systems, load power factor improvement techniques.</p> <p>Safety Measures: Safety measures in electrical system, safety rules, basic principles of earthing-types of earthing.</p>		

List of Assignments:

The students will be given total **twelve** assignments (Two assignments on each Unit respectively).

1. DC Circuit Analysis
2. Network Theorems
3. AC Circuits and Switch Gear
4. Electrical Measurement
5. Single Phase Transformer
6. Three Phase Transformer
7. 3 Phase induction motor
8. Single phase motor
9. DC Generator
10. DC Motor
11. Power transmission and distribution
12. Safety Measures

List of Experiments:

Note: Term work shall consist of Minimum **Eight** Experiments from the following list.

List of Practicals to be performed in the laboratory:

1. Plotting B-H characteristics for a material
2. Verification of Kirchhoff's Laws
3. Verification of Superposition Theorem
4. Verification of Thevenin's Theorem
5. Verification of Maximum Power Transfer Theorem
6. Study of R-L series, R-C series, R-L-C series circuit

7. Time response of R-L series and R-C series circuit
8. Verification of voltage and current relationships in star and delta connected 3-phase networks
9. Single lamp controlled by two different switches (staircase)
10. Two lamps controlled independently from two different switches (parallel)
11. Series connected lamps
12. Study of Electricity bill(Industrial / commercial)
13. Direct loading tests on single phase transformer
14. Mini-project based on contents of syllabus.

Text Books

1. Basic Electrical Engineering - D. P. Kothari, J Nagarath (TMC)

Reference Books

2. Electrical Technology - Edward Huges (Pearson)
3. Electrical power system technology - S. W. Fardo, D. R. Patric (Prentice Hall)
4. Principles of Electronics-Dr. H. M. Rai (SatyaPrakashan)
5. Electronic Devices and Circuit Theory- R. L. Boylestad and L. Nashelsky (PHI)
6. Electrical, Electronics Measurements and Instruments - (SatyaPrakashan)

Project Based Learning

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

1. To develop a practical kit for verification of Thevenin's theorem.
2. To develop a practical kit for verification of Superposition theorem.
3. To develop a practical kit for verification of Maximum power transfer theorem
4. To develop a practical kit for verification of Norton's theorem.
5. To develop a practical kit for study of R-L-C Series circuit.
6. To develop a practical kit for study of R-L-C parallel circuit.
7. To develop a practical kit for study of voltage and current relationships in starconnected network.
8. To develop a practical kit to understand voltage and current relationships in delta connected network.
9. To develop a demonstration model of single-phase transformer for practical application.
10. Case study on transformer operation and testing by using professional software.
11. To develop a demonstration model of Smart Energy meter using GSM
12. To develop a demonstration model of Safety measures in electrical system.
13. Case studies on – Learning industrial Safety through films/Videos
14. Case studies on – Learning industrial Safety through posters/charts

Unit Tests

Unit Test-I	Unit-I,II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Computer Aided Drafting & Visualization		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/Week	Internal Assessment	40 Marks	
	Term Work and Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisites: -	Fundamentals of Mathematics
Course Objectives: -	<ol style="list-style-type: none"> To understand the basic principles of engineering drawing and highlight the importance of Computer Aided Drafting in engineering. To develop the graphical skills for communication of concepts & idea through technical drawings.
Course Outcomes:-	<ol style="list-style-type: none"> Understand the fundamental concepts of CAD Drawing, its applications, different types of lines, curves and dimension technique with practical application. Understand the concept of Orthographic projections and apply it to draw detail views by using 1st angle projection method. Understand the concept of isometric projection and apply it to construct 3D view of a component. Understand the concept of projections of Point, Line and plane; and apply to draw its projection by using 1st angle projection method and to locate its traces. Understand the concept of projections of different types of solids and sectioned solids; and apply to draw its projection by using 1st angle projection method. Understand the concept of Development of Lateral surfaces; and apply to development of simple and sectioned Solids.

Course Contents

Unit-I	Fundamentals of CAD and Engineering Curves	(08 Hrs.)
<p>Introduction to Engineering Drawing, Types of lines and Dimensioning, Layout and size of drawing sheets, Scales. Engineering Curves-Ellipse drawing by Focus-Directrix Circle Method and Concentric Circle Method, Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone and Cylinder. Fundamentals of Computer Aided Drafting (CAD) and its applications, Various softwares for Computer Aided Drafting. AutoCAD initial setting and AutoCAD commands</p>		
Unit-II	Orthographic Projection	(08 Hrs.)
<p>Basic principle planes of Projections, First and Third angle method of Projection, Orthographic Projections of given Pictorial view by first angle projection method only, Sectional orthographic Projection. Orthographic Drawing by using AutoCAD.</p>		
Unit-III	Isometric Projections	(08 Hrs.)
<p>Principles of Isometric Projections-Isometric Scale, Isometric Axes, Isometric Projections and Isometric Drawing. Constructions of Isometric view from given Orthographic Views and given origin. Isometric Drawing by using AutoCAD.</p>		
Unit-IV	Projection of Points, Lines and Plane Surfaces	(08 Hrs.)
<p>Projections of Points, Projections of Oblique lines in First Quadrant, Traces. Projections of Planes- Projection of perpendicular and oblique planes (polygonal and circular surfaces), Obtaining true shape of plane surface. Projection of Points, Lines and Plane Surfaces by using AutoCAD.</p>		

Unit-V	Projection of Solids and Sectioned Solids	(08 Hrs.)
Introduction of solids-Types of solids, Projection of solid inclined both reference planes, Projection of common solids such as prism, pyramid, cylinder and cone. Projection of solids cut by AIP and AVP, obtaining true shape of a section. Projection of Solids and Sectioned Solids by using AutoCAD.		
Unit-VI	Development of Lateral Surfaces	(08 Hrs.)
Development of the lateral surfaces of solids like Prisms, pyramids, cylinders and cones. Development of cut solids. Development of Lateral Surfaces by using AutoCAD.		

Term work

Term work shall consist of **seven** A2 size (594 mm x 420 mm) sheets using **AutoCAD**.

1. Types of lines, Dimensioning practice, 1st and 3rd angle methods symbol.
2. Engineering Curves
3. Orthographic Projections
4. Isometric views
5. Projections of Points and Lines and planes
6. Projection of Solids and Section of solids
7. Development of Lateral surfaces

Assignments: Minimum five problems on each unit in A3 size Drawing Book

Textbooks

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India.
2. "Text Book on Engineering Drawing", K.L. Narayana & P. Kanniah, Scitech Publications, Chennai.

Reference Books

1. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi.
2. "Engineering Drawing and Graphics", Venugopal K., New Age International publishers.
3. M. B. Shah and B. C. Rana, "Engineering Drawing", 1st Ed, Pearson Education, 2005.
4. P. S. Gill, "Engineering Drawing (Geometrical Drawing)", 10 Edition, S. K. Kataria and Sons, 2005.
5. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 Edition, 1988.

Project Based Learning

Following is the list of topics for project-based learning (Not Limited to) based on the syllabus contents:

1. To obtain industrial drawings to identify the types of lines, dimensioning methods and method of projection.
2. To develop the model/charts based on engineering curves.
3. To prepare model/chart for identification of engineering curves in nature for industrial, societal, etc application.
4. To demonstrate different methods of orthographic projection.
5. To demonstrate projection of Points.
6. To demonstrate projection of Lines.
7. To demonstrate projection of Planes.
8. To demonstrate projection of Solids.
9. To demonstrate developments of surfaces for solids.
10. To demonstrate industrial application of development of surfaces such as steam carrying pipes, Ducts of air conditioning systems, etc.
11. To demonstrate Isometric projection method through model of a cube.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Statics and Dynamics		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hours/ Week	End Semester Examination	60 Marks	03
	Internal Assessment	40 Marks	
	Total	100 Marks	03

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Physics 2. Engineering mathematics
Course Objective	<ol style="list-style-type: none"> 1. To study different types of forces in a plane. 2. To study Centroid and moment of inertia 3. To study friction in machines 4. To study Kinetics of linear and circular motion 5. To study basics of civil engineering
Course Outcomes:-	<p>The students should be able to</p> <ol style="list-style-type: none"> 1. Understand the concept of force and apply it along with the concept of equilibrium in 2D and 3D system with the help of free body diagram. 2. Understand the significance of centroid and moment of inertia 3. Understand the concept of friction and estimate required force to overcome friction. 4. Analyze body in motion using force and acceleration, work energy, impulse momentum principles 5. Analyze body in motion using centripetal and centrifugal force principles 6. Understand the basic concept of civil material, building component and foundation techniques.

Course Content

Unit-I	Resultant and Equilibrium	(06 Hrs.)
Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point, Virtual work.		
Unit-II	Centroid, Moment of Inertia and Friction	(06 Hrs.)
Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia. Introduction to frictional force, preliminary concepts, laws of friction. Introduction to machines, Relation between Mechanical advantage, Velocity ratio and efficiency, Reversible and non-reversible Machines. Simple lifting machines and their velocity ratio, gear train.		
Unit-III	Analysis of Trusses, Frames and Cables	(06 Hrs.)
Two force members: Introduction to trusses, types of trusses, perfect and redundant trusses, Analysis of plane trusses by method of joint and method of section, cables subjected to point loads. Multi force member: plane frame.		
Unit-IV	Kinematics of particles and rigid body	(06 Hrs.)
Rectilinear motion, velocity and acceleration in terms of rectangular coordinate system, Motion along plane curve path, tangential and normal component of acceleration, motion curves (a-t, v-t, s-t), Projectile motion Rigid body- Introduction to general plane motion,		
Unit -V	Kinetics of Particle	(06 Hrs.)
Force and acceleration, introduction to basic concepts, D'Alembert's principle, equation of dynamic equilibrium, Newton's second law of motion. Work energy principle and law of conservation of energy, impulse and momentum, law of conservation of momentum, Impact and collision.		

Unit-VI	Structural Materials and Foundations	(06 Hrs.)
Types of structures based on loading, material and configuration; structural materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood, glass and aluminium		
Foundations- Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation.		

List of Assignments

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Resultant and equilibrium of forces
2. Centroid & Moment of Inertia
3. Friction
4. Trusses, frames and cables
5. Kinematics of particles
6. Kinematics of rigid body
7. Kinetics of particle
8. Structural materials and foundations

Text Books

1. "Engineering Mechanics", Bhavikatti S.S. and Rajashekarappa K. G., New Age International (P) Ltd.
2. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.
3. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.

Reference Books

1. "Engineering Mechanics (Statics and Dynamics)", Hibbeler R. C., McMillan Publication.
2. "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.
3. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.
4. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication
5. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.
6. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.

Project Based Learning

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

1. To prepare demonstration model for various types of beams.
2. To prepare demonstration model for various types supports.
3. To prepare chart for various types of force system with suitable real-life examples.
4. Case study on various situations where varignon's theorem is used.
5. To prepare demonstration model or to prepare a chart on equilibrium system of forces of various engineering applications.
6. To prepare chart on different types for trusses with showing various members.
7. To prepare demonstration model of any one type of truss.
8. To prepare demonstration model of the basic geometrical figures and locate the centroid of them.

9. To prepare demonstration model of the I and T section and locate the centroid of them.
10. To prepare chart for parallel axis and perpendicular axis theorem with suitable example.
11. To prepare chart on types of friction in various field conditions.
12. To prepare chart on application of friction.
13. To prepare chart on motion curves.
14. To prepare chart related to lifting machine and relevant industrial applications.
15. To development of excel sheet for projectile motion (at least three problems).
16. To development of excel sheet for work energy principle (at least three problems).
17. To prepare chart on work energy and Impulse momentum principle with suitable example.
18. Case study on different structural materials and comparison of its mechanical properties.
19. To prepare demonstration model of different types of foundations.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Metal Joining Processes		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical: -02 hours/Week	Term Work	50 Marks	01
	Total	50 Marks	01

Course Prerequisites:-	Students should have basic knowledge of Materials, Physics, Chemistry and Vocational Course.
Course Objectives:-	The student should 1. To acquire the knowledge of Arc and Gas Welding Processes 2. To acquire the knowledge of Resistance and Solid-state Welding Processes
Course Outcomes:-	The students should be able to– 1. Understand the different Arc and Gas Welding Processes and apply for welding Joints 2. Understand the different Resistance and Solid-state Welding Processes and apply for welding Joints.

Course Contents

Unit-I	Introduction to Welding Processes	(12 Hrs.)
Introduction, Classification of welding processes, Advantages and disadvantages of welding processes Soldering, Brazing. Arc Welding Processes -Carbon arc, Submerged arc, Tungsten inert gas (TIG), Metal inert gas (MIG), Plasma arc, Stud welding and related arc welding processes –Theory, Comparison on merits, limitation and applications, Fluxes used in arc welding. Characteristics of Welding Processes. Gas Welding – Processes and equipment used, Types of flames, Gas cutting– Merits, demerits and applications.		
Unit-II	Resistance Welding and Solid-State Welding	(12 Hrs.)
Resistance Welding – Spot, Seam, Projection, Butt, Percussion welding, Tube welding, Electric resistance welding process, its merits, demerits, and applications. Introduction of Solid-State Welding - Pressure, Diffusion, Ultrasonic, Explosive, Friction, Forge, Principle, Equipment used and Flux used, Merit's, demerits and application of the above process.		

Term Work: List of Experiments

1. Edge Preparation of various welding Joints.
2. Making the Joint with Arc Welding Process. (One Individual Job)
3. Making the Joint with Resistance Welding Process. (One Individual Job with spot welding)
4. Making the Joint with TIG or MIG Welding Process.(One Individual Job)
5. Making the Joint with Gas Welding Process.(One Individual Job)
6. Making the Joint with Soldering Process.(One Individual Job)
7. Making the Joint with Braze Welding Process.(One Individual Job)
8. Study / Demonstration on Ultra Sonic Welding.
9. Study / Demonstration on Friction Welding
10. One Industrial Visit to get the detail Knowledge of Advanced Welding Processes and Latest Technology in Welding.

Text Books

1. O.P.Khanna , A Text Book of Welding Technilogy, DhanpatRai and Sons
2. Md. Ibrahim Khan,Welding Science and Technology, New Age International (P) Ltd.
3. Chapman W.A.J “Workshop Technology “volume I,II,III, ELBS.

Reference Books

1. P.N.Rao , Manufacturing Technology- Vol I, Mcgraw Hill Education 9 India Pvt.
2. HajraChoudhary S.K. , Bose S.K. “Elements of Workshop Technology” Volume I,II
3. Richard Little, “Welding And Welding Technology” Pearsons Education second Edition.

Designation of Course	Soft Computing- I		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical: -04 hours/Week	Term Work and Practical	100 Marks	02
	Total	100 Marks	02

Course Prerequisites	Basic Mathematics
Course Objective	The goal of the course is that students should develop techniques for problem solving using a programming language.
Course Outcomes	<p>Students should</p> <ol style="list-style-type: none"> Understand basics of C++ and apply that knowledge to write simple programs. Understand the uses of operators and apply them in writing programs. Understand the concept of conditional statements apply them in writing programs. Understand the concepts of loops in C++ apply them in writing programs. Understand the concepts of user defined functions, recursion and apply them in writing programs Understand the concept of overloaded functions and apply them in writing programs

Course Contents

Unit-I	Introduction to C++	(08Hrs.)
Introduction to C, C++; Object oriented programming; Programming Fundamentals; Data and Data Types		
Unit-II	Operators in C++	(08Hrs.)
Declarations in C++; Operators in C++; Introduction to classes and objects and strings		
Unit-III	Conditional Statements	(08Hrs.)
Relational and logical operators; If statements; Switch Statements		
Unit-IV	Loops	(08Hrs.)
Loops in C++; For loop; While loop; Do while loop; Jump statement		
Unit-V	Functions I	(08Hrs.)
Functions basic formats; Recursion		
Unit-VI	Functions II	(08Hrs.)
Overloaded functions; Local, Global and Static Variables		

Term Work

Term work shall consist of programs (not limited to) listed below based on syllabus.

1. C++ "Hello, World!" Program
2. C++ Program to Print Number Entered by User
3. C++ Program to Add Two Numbers
4. C++ Program to Find Quotient and Remainder
5. C++ Program to Find Size of int, float, double and char in Your System
6. C++ Program to Swap Two Numbers
7. C++ Program to Find ASCII Value of a Character
8. C++ Program to Multiply two Numbers
9. C++ Program to Check Whether Number is Even or Odd
10. C++ Program to Check Whether a character is Vowel or Consonant.

11. C++ Program to Find Largest Number Among Three Numbers
12. C++ Program to Find All Roots of a Quadratic Equation
13. C++ Program to Calculate Sum of Natural Numbers
14. C++ Program to Check Leap Year
15. C++ Program to Find Factorial
16. C++ Program to Generate Multiplication Table
17. C++ Program to Display Fibonacci Series
18. C++ Program to Find GCD
19. C++ Program to Find LCM
20. C++ Program to Reverse a Number
21. C++ Program to Calculate Power of a Number
22. C++ Program to Check Whether a Number is Palindrome or Not
23. C++ Program to Check Whether a Number is Prime or Not
24. C++ Program to Display Prime Numbers Between Two Intervals
25. C++ Program to Check Armstrong Number
26. C++ Program to Display Armstrong Number Between Two Intervals
27. C++ Program to Display Factors of a Number
28. C++ Programs To Create Pyramid and Pattern
29. C++ Program to Make a Simple Calculator to Add, Subtract, Multiply or Divide Using switch...case
30. C++ Program to Display Prime Numbers Between Two Intervals Using Functions
31. C++ Program to Check Prime Number By Creating a Function
32. C++ Program to Check Whether a Number can be Express as Sum of Two Prime Numbers
33. C++ program to Find Sum of Natural Numbers using Recursion
34. C++ program to Calculate Factorial of a Number Using Recursion
35. C++ Program to Find G.C.D Using Recursion
36. C++ Program to Convert Binary Number to Decimal and vice-versa
37. C++ Program to Convert Octal Number to Decimal and vice-versa
38. C++ Program to Convert Binary Number to Octal and vice-versa
39. C++ program to Reverse a Sentence Using Recursion
40. C++ Program to Calculate Power Using Recursion

TextBooks

1. "Let Us C++", KanetkarYashavant, BPB Publications

Reference Books

1. "C++ programming Today", Barbara Johnston, Prentice Hall of India, New Delhi.
2. "C++ how to program", Paul Deitel and Henry Deitel, Prentice Hall of India, New Delhi.
3. "Accelerated C++: Practical Programming by Example", Andrew Koenig and Barbara E. Moo, Addison-Wesley Publications
4. "C++: The Complete Reference", Herbert Schildt, McGraw Hill Publications.
5. "C++ Primer"; Barbara E. Moo, JoséeLajoie and Stanley B. Lippman; Addison-Wesley Professional
6. "Programming: Principles and Practice Using C++", BjarneStroustrup, Addison-Wesley Professional

Designation of Course	Differential Equations, Probability & Statistics		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	03
Tutorial:- 01 Hours/ Week	Internal Assessment	40 Marks	
	Tutorial	-	01
	Total	100 Marks	04

Course Prerequisites:-	Students should have knowledge of 1. Derivative and Integration 2. Partial derivative 3. Basic of statistics
Course Objectives:-	To provide knowledge about 1. Various methods to solve first order and first degree and n^{th} order differential equation. 2. Integral transform and application of partial differential equation. 3. Methods of interpretation of numerical data and probability distribution.
Course Outcome:-	Students will be able to 1. Understand methods of first order and first-degree differential equation. 2. Understand the methods of n^{th} ordinary differential equation and apply it to mass spring system. 3. Understand Laplace transform and evaluate particular solution of wave, one- and two-dimensional heat equation. 4. Understand the multiple integrals and apply it to evaluate area and volume. 5. Understand various technique to analyze and numerical data. 6. Understand probability distribution and testing of hypothesis.

Course Contents

Unit-I	Differential Equation	(06 Hrs.)
Formation of the ordinary differential equations (ODEs), Solution of an ordinary differential equation, Equations of the first order and first degree, Linear differential equation, Bernoulli's equation, Exact differential equations, Equations reducible to exact equations		
Unit-II	Linear Differential Equations	(06 Hrs.)
Solution of n^{th} order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy's & Legendre's DE, Solution of Simultaneous & Symmetric Simultaneous DE, Mass spring system.		
Unit-III	Laplace Transforms and Applications of Partial Differential Equations	(06 Hrs.)
Laplace transform: Definition of Laplace transforms, Properties of Laplace Transform (Properties without proof). Inverse Laplace Transform, Linearity property, use of standard formulae to find inverse Laplace Transform, finding Inverse Laplace transform using derivative, Partial fractions method & first shift property to find inverse Laplace transform. Inverse Laplace transform using Convolution theorem (without proof). Applications of partial differential equation: Basic concepts, modeling of Vibrating String, Wave equation, One- and two-dimensional Heat flow equations, method of Separation of variables.		
Unit-IV	Multiple Integrals and its Applications	(06 Hrs.)
Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.		
Unit-V	Statistics	(06 Hrs.)
Measures of central tendency, Standard deviation, Coefficient of variation, Moments, Skewness and Kurtosis, Correlation and Regression, Reliability of Regression estimates.		

Unit-VI	Probability and Probability Distributions	(06 Hrs.)
Probability, Bayes Theorem, Probability density function, Probability distributions: Binomial, Poisson, Normal, Test of hypothesis: Chi-square test, t-test.		

Assignments

Problems and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Differential equation.
2. Linear differential equations.
3. Laplace transforms and applications of partial differential equations.
4. Multiple integrals and its applications.
5. Statistics.
6. Probability and probability distribution.

Tutorials:

Problems and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. First order equation (linear and nonlinear),
2. Higher order linear differential equation with constant coefficients
3. Euler-Cauchy equation
4. Legendre's DE
5. Laplace transformation
6. Applications of partial differential equation
7. Double and Triple integrations
8. Applications to area, volume, mean and root mean square values.
9. Sampling theorems, conditional probability; mean, median, mode and deviation.
10. Correlation and regression, reliability of regression estimates.
11. Probability, bayes theorem, probability density function
12. Binomial, poisson and normal distributions.

Text Books

1. P. N. Wartikar and J. N. Wartikar, "Applied Mathematics (Volumes I and II)", 7th Ed., Pune Vidyarthi Griha Prakashan, Pune, 2013.

Reference Books

1. B. S. Grewal, "Higher Engineering Mathematics", 42nd Ed., Khanna Publication, Delhi
2. B.V. Ramana, "Higher Engineering Mathematics", 6th Ed., Tata McGraw-Hill, New Delhi, 2008.
3. Erwin Kreyszig, "Advanced Engineering Mathematics", 10th Ed., John Wiley & Sons, Inc., 2015.
4. Peter V. O'Neil, "Advanced Engineering Mathematics", 7th Ed., Cengage Learning, 2012.
5. Michael Greenberg, "Advanced Engineering Mathematics", 2nd Ed., Pearson Education, 1998.

Project Based learning topics:

Students are expected to prepare report on any one topic, write its definition, applications and analyze the hypothetical data. Also, write pseudo code for it, wherever applicable.

1. Formation of differential equation
2. Exact differential Equation
3. Linear differential equation
4. Solution of nth order LDE with Constant Coefficients

5. Mass spring system
6. Transform (Properties with proof).
7. Applications of partial differential equation in mechanical engineering
8. Multiple integrals applications
9. Applications of Multiple integrals applications to Area, Volume
10. Random Sampling
11. Stratified random sampling
12. Reliability of Regression estimates.
13. Bayes Theorem
14. Probability density function
15. Testing of hypothesis

Unit Test -

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Chemistry of Engineering Materials		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03Hour/ Week	End Semester Examination	60 Marks	03
Practical: -02 Hours/Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	04

Course Prerequisites: -	Higher Secondary chemistry.
Course Objective: -	The student should acquire the knowledge of <ol style="list-style-type: none"> To develop the interest among the students regarding chemistry and their applications in engineering. To develop confidence among students about chemistry, how the knowledge of chemistry is applied in technological field. The student should understand the concepts of chemistry to lay the groundwork for subsequent studies in the field such as Mechanical Engineering.
Course Outcomes: -	After completion of the course students will be able to <ol style="list-style-type: none"> Apply the concept X-ray diffraction technique to study crystal structure. Understand the concept of the metallurgy in the study of metals. Understand and apply the knowledge of Ferrous & Non-Ferrous materials for various engineering applications. Apply the knowledge polymer and plastics to study advanced materials. Understand the knowledge of composite materials for various engineering applications. Understand different types of corrosion and suggest control measures in industries.

Course Contents

Unit-I	Crystal Structures	(06 Hrs.)
Study of crystal structure, Indexing of planes and directions, Slip planes, linear and Planar density calculations, volume density calculations, Imperfections in crystals, effect of crystal structure defects on various properties, Allotropic and polymorphism of metals, formation of solid solutions.		
Unit-II	Extractive Metallurgy	(06 Hrs.)
Introduction, Occurrence of metals, types of ores, concentration of ores by physical methods, Crushing and Sizing, Froth- Flotation, Magnetic Separation, Gravity separation method. Chemical methods- calcination, Roasting, Reduction of ore by Pyrolysis, Chemical reductions, Electrolytic refining of metals.		
Unit-III	Ferrous & Non-Ferrous Materials	(06 Hrs.)
Metallic materials: Introduction, Alloy- definition and classification, purposes of making alloys. Ferrous alloys, Introduction to steel making, blast furnace and electric steel making: Plain carbon steels (mild, medium and high), Nonferrous alloys: Copper alloy (Brass), Nickel alloy (Nichrome), Aluminum alloy (Duralumin and Alnico).		
Green Chemistry: Definition, Twelve principles of Green Chemistry.		
Unit-IV	Introduction to Polymers, Plastics and Rubbers	(06 Hrs.)
Polymers: Introduction, plastics, thermo softening and thermosetting plastics, industrially important plastics like phenol formaldehyde, urea formaldehyde and epoxy resins, Conducting polymers and Biopolymers (Introduction, examples, and applications), types of rubbers, Acrylics.		
Unit-V	Introduction to Composites	(06 Hrs.)
Introduction, types of composite, different types of reinforce materials, characteristics of reinforced materials, matrix materials composition, properties and uses of fibre reinforced plastics (FRP), Carbon fibres, Boron Nylon etc, and glass reinforced plastic (GRP). Ceramic matrix composite. Metal Matrix composite.		

Unit-VI	Corrosion & Protective Coatings	(06Hrs.)
Introduction corrosion, types of corrosion, hydrogen embrittlement, stress corrosion, Pit type corrosion, corrosion prevention methods, Metallic coatings, Electroplating, Methods of cleaning articles before electrodeposition, Electroplating methods, Electroless plating, Some other metallic coatings, Modification of environment, Cathodic Protection, chemical conversion coatings, Organic Coatings, Paints, Varnishes, Enamels, Special paints. CVD and PVD coatings.		

Term Work

List of Experiments

1. Preparation of polystyrene/phenol-formaldehyde/urea-formaldehyde resin.
2. To determine molecular weight/radius of macromolecule polystyrene/ polyvinyl alcohol by viscosity measurement.
3. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method.
4. Study of corrosion of metals in medium of different pH.
5. Determination of rate of corrosion of aluminium in acidic and basic medium.
6. Determination of percentage of Ca in given cement sample
7. Preparation of phenol-formaldehyde resin/ urea-formaldehyde.
8. Estimation of copper in brass solution.
9. Determination of rate of corrosion of aluminium in acidic and basic medium.
10. To obtain metallic coating on base metal by using both the methods, Electroplating and Electroless plating.

Assignments

1. Linear and Planer density calculations with volume density calculations.
2. Extractive Metallurgy.
3. Purposes of making alloy like Ferrous alloys.
4. Twelve principles of Green Chemistry.
5. Conducting polymers and Biopolymers.
6. Thermo softening and thermosetting plastics.
7. Fiber reinforced plastics (FRP).
8. Heat treatment of tool steels
9. Organic Coatings, Paints, Varnishes, Enamels, Special paints for corrosion prevention.
10. Types of corrosion and its preventive measures.

Test Book

1. A Textbook of Engineering Chemistry by S. S. Dara and S. S. Umare, S. Chand & Company Ltd., New Delhi.
2. A Textbook of Engineering Chemistry by C. P. Murthy, C. V. Agarwal and A. Naidu, B S Publications, Hyderabad.
3. A Text Book of Engineering Chemistry, Shashi Chawla, Dhanpat Rai & Co, 2004

Reference Books

1. Material Science and Engineering Metallurgy by V D Kodgire, Everest publications
2. Materials Science by O P Khanna, Khanna publications
3. Engineering Chemistry (16th Edition) Jain, Jain, Dhanpat Rai Publishing Company, 2013.
4. Engineering Chemistry by Dr. A. K. Pahari and Dr. B. S. Chauhan, Laxmi Publications (P) Ltd, New Delhi.
5. Polymer Science, V. R. Gowarikar, N. V. Viswanathan, Jayadev Sreedhar, Wiley Eastern Limited
6. Polymer Science and technology (2nd Edition), P. Ghosh, Tata McGRAW Hill, 2008
7. Polymers: Chemistry & Physics of Modern Materials (2nd edition) J.M.G. Cowie, Blackie Academic & Professional, 1994.

Project Based Learning

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

1. To prepare a demonstration model on Biopolymers.
2. To prepare a epoxy resins by using suitable method.
3. To write a review paper based on applications of fibre reinforced plastics (FRP) and get it published in reputed journal (eg. Google Scholar).
4. With the help of green chemistry principles, to prepare any organic dye by using Traditional and Green pathway.
5. To prepare a demonstration model a hardware model based on Electroless plating and calculate cell voltage.
6. To write a review paper based on Conducting polymers and get it published in reputed journal (eg. Google Scholar).

Unit Test -

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Mechanical Engineering Systems		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hour/ Week	End Semester Examination	60 Marks	04
Practical: -02 Hours/Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	05

Course Prerequisites: -	Higher Secondary Physics
Course Objective: -	To teach students about 1. Introduction to systems in Thermal Engineering 2. Introduction to systems in Design Engineering 3. Introduction to systems in Manufacturing Engineering
Course Outcomes: -	Students should 1. Understand the fundamentals of power producing and absorbing devices. 2. Understand the fundamental concepts of renewable and non-renewable energy systems. 3. Understand the fundamentals of mechanism of machines 4. Understand the fundamentals of power transmitting devices. 5. Understand the fundamentals of machine tools and manufacturing processes. 6. Understand the fundamentals of robotics and its applications.

Course Contents

Unit-I	Power Producing and Absorbing Systems	(08 Hrs.)
<p>Power Producing Systems: I. C. Engines- Basic nomenclature, Classification, S.I and C. I. Engines, Two stroke and four strike engines. Boilers- classification, water tube and fire tube boilers. Steam Turbines: Classification, simple Impulse, and reaction turbines. Water Turbines: Classification, Impulse, and reaction Turbines. Gas Turbines: classification, open and closed gas turbine. Construction, working and applications of all these devices.</p> <p>Power Absorbing Systems: Compressors; Classification, Rotary, reciprocating air compressors, Blower, Pumps: Classification, Rotary, reciprocating pumps, Household refrigerator and window air conditioner.</p>		
Unit-II	Renewable and Non-Renewable Energy Systems	(08 Hrs.)
<p>Renewable energy systems: Solar- P-V Cells, collectors- Flat plate, Parabolic, Trough collector, Heliostat. Wind- Classification of wind Turbines, Horizontal and vertical axis. Biomass gasification, Biogas Plant, Geothermal, Tidal, micro-hydel plant.</p> <p>Non-renewable energy systems: Thermal power plant, hydroelectric power plant, Nuclear power plant, Gas Turbine plant, I.C engine power Plant,</p>		
Unit-III	Introduction to Mechanisms of Machines	(08 Hrs.)
<p>Kinematic link, Kinematic pair, Types of constrained motions, Kinematic chain, Types of joints, Mechanism, Machine, Degree of freedom (Mobility), Kutzbach criterion, Grubler's criterion. Four bar chain and its inversions, Grashoff's law, Slider crank chain and its inversions, Double slider crank chain and its inversions. Geneva Mechanisms, Ratchet and Paul Mechanisms</p>		
Unit-IV	Power Transmitting Devices	(08 Hrs.)
<p>Types of Belts and belt drives, Chain drive, rope drive, Types of gears, Types of Couplings, Types of friction clutch, Power transmission shafts, axles, keys, types of Keys, Sliding Contact and Rolling Contact Bearing, Bush and ball bearings, Types of brakes.</p>		
Unit-V	Introduction to Machine Tools	(08 Hrs.)
<p>Demonstration of: Lathe machine, Centre lathe, wood working lathe, Drilling machine, types of drilling machine, milling machine, Power saw. Grinding machine, cylindrical grinder, and surface grinder. NC machine, CNC machine.</p>		

Unit-VI	Introduction to Robotics	(08 Hrs.)
History of robotics, Definition of robotics and robot, laws of robotics and classification of robot, application of robot, robot anatomy, Degree of freedom, Degree of mobility, Kinematics, joints, work envelope, pay load, reach, speed, acceleration, accuracy, precision, repeatability, Mounting, Footprint, cycle time, Components of robots such as sensor, power conversion unit, Actuators, Manipulators, Controllers, Base and user interface, Future of robotics.		

Term work: Term work shall consist following experiments

1. Study and demonstration of low-pressure boilers.
2. Study and demonstration of IC Engines.
3. Study and demonstration of Refrigeration and Air Conditioning.
4. Study and demonstration of Pumps and Compressors.
5. Study and demonstration of turbines.
6. Study and demonstration of Inversions of 4-bar, Single and Double Slider Crank Mechanisms.
7. Study and demonstration of power transmitting elements.
8. Study and demonstration of operations on center lathe.
9. Study and demonstration of operations on drilling machine.
10. Study and demonstration of robot anatomy.
11. Mini Project on Contents of Syllabus.

Assignment

1. Assignment on power producing and absorbing devices
2. Assignment on renewable and non-renewable energy
3. Assignment on mechanism of machines
4. Assignment on Power Transmitting Devices
5. Assignment on Machine Tools
6. Assignment on Robotics

Text Books

1. A Textbook of Production engineering” P.C. Sharma, S. Chand Publication, New Delhi, 2nd edition, 8th Edition (2014).
2. A Textbook of Manufacturing Technology: Manufacturing Processes, R. K. Rajput, Laxmi Publications (P) Ltd, 2nd Edition 2015
3. R S Khurmi and J K Gupta, Textbook of Thermal Engineering, S Chand publications.

Reference Books

1. V. Ganeshan, Internal Combustion Engine, Tata McGraw-Hill Publication, 4th Edition (2012).
2. R. K. Rajput, Thermal Engineering, Laxmi Publications
3. Ambekar A.G Mechanisms and Machine Theory, Prentice-Hall of India, Eastern Economy Edition (2007)
4. S.S. Ratan, Theory of Machines, , Tata McGraw Hill, 4th Edition
5. Introduction to robotics, S.K.Shah. McGraw Hill, 2nd Editi

Project Based Learning

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

1. To prepare chart of comparison among specification of various models of two wheeler available.
2. To develop demonstration model of low-cost household refrigerator
3. To develop demonstration model of low-cost air conditioner
4. To develop demonstration model of Biogas plant
5. To develop demonstration model of geothermal power plant

6. To develop demonstration model of wind power plant
7. To develop demonstration model of solar energy plant
8. To develop demonstration model of Whitworth quick return mechanism
9. To develop demonstration model of single slider crank chain mechanism with its inversion
10. To develop demonstration model of Ratchet and Paul mechanism
11. To develop demonstration model of mini conveyor using Geneva mechanism

Unit Test

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Electronics Engineering Systems		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory:- 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical:- 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	05

Course Prerequisites:-	Students should have the basic knowledge of Electrical Engineering
Course Objectives:-	<ol style="list-style-type: none"> To provide overview of electronics engineering that serve the foundation of advanced studies in the area of mechanical engineering. This course provides comprehensive idea about working principle Operation and characteristics of electronic devices, transducers, digital electronics, and communication systems.
Course Outcomes:-	<p>On completion of the course, students will be able to–</p> <ol style="list-style-type: none"> Understand the basic electronics devices and linear ICs Understand and apply the concepts of digital electronics. Understand the methods of signal conditioning and its applications. Understand concepts of Analog Communication & Digital communication Understand the concept of transducer and data acquisition system with its application. Understand the concept of Microprocessor & Microcontroller and its applications.

Course Contents

Unit-I	Electronic Devices and Linear ICs	(08 Hrs.)
Rectifiers: Half wave, Full wave and Bridge rectifiers - capacitor filter-wave forms-ripple factor regulation characteristics. Special semiconductor devices: FET, SCR, LED, MOSFET, DIAC, TRIAC, relays, VI characteristics – applications		
Unit-II	Digital Electronics	(08 Hrs.)
Number system – Binary, Decimal, Octal, Hexa decimal, Digital Signal, Combinational and sequential logic circuits, clock signal, Boolean Algebra and Logic gates, Arithmetic Operations, Multiplexers, Demultiplexers, Encoders, Decoders, Flip-flop, Registers, Counters. Integrated circuits & logic families: – Logic levels, noise immunity, fan out, propagation delay, TTL logic family, CMOS logic family, comparison with TTL family		
Unit-III	Signal Conditioning	(08 Hrs.)
Operational amplifiers, Inverting, non-inverting, voltage follower, summing, subtractor, Instrumentation, 555 timer-operating modes: monostable, astable multivibrator, Analog to Digital & Digital to Analog Converters		
Unit-IV	Communication Systems	(08 Hrs.)
Analog Communication & Digital communication: Block diagram of a basic communication system, Frequency spectrum, need for modulation, Methods of modulations- Principles of AM, FM, Pulse analog & pulsed digital modulation, AM/FM transmitters & receivers, satellite communication – Radar system, data transmission and MODEM, Mobile communication systems: cellular concept, simple block diagram of GSM system		
Unit-V	Transducers and Data Acquisition Systems	(08 Hrs.)
Basic requirement of transducers, classification of transducers, passive transducers: Resistive, capacitive, inductive, LVDT, potentiometric strain gauge, thermistor, hall effect, proximity sensors. Active transducers: Piezoelectric, photoelectric & thermocouple. Static characteristics of transducer, selection of transducer. Block diagram of data acquisition systems and its applications.		

Unit-VI	Microprocessor & Microcontroller	(08 Hrs.)
Overview of generic microprocessor, architecture & functional block diagram, comparison of Microprocessor & microcontroller. 8051 Architecture, ports, registers, timers/counters. Serial communications interrupts. Interfacing of relay, stepper motor, LCD Display, Keyboard, ADC.		

Term Work:

Term work shall consist of Minimum Eight **Experiments**.

1. To study and plot regulation characteristics of half wave and full wave rectifier.
2. To study of characteristics of SCR.
3. To study of characteristics of TRIAC
4. To study basic logic gates: AND, OR, NOT, NAND, NOR, Ex-OR, Ex-NOR.
5. Implementation of Boolean functions using logic gates.
6. To study Operational Amplifiers (Op-amps).
7. Study of Amplitude Modulation and Demodulation
8. Study of Frequency Modulation and Demodulation
9. To study characteristics of LVDT for displacement measurement.
10. To study of Microprocessor & Microcontroller

Assignment:

Assignment based on each unit.

Text Books:

1. K.P. Ramchandran, G.K. Vijayaraghavan, M.S. Balasundaram, Mechatronics: Integrated Mechanical Electronic Systems, Wiley Publication, 2008
2. W. Bolton, Mechatronics - A Multidisciplinary approach, 4th Edition, Prentice Hall, 2009.
3. Dr. D.S. Kumar, Mechanical Measurement & Control, Metropolitan Book Co. Pvt. Ltd. New Delhi, 2007
4. M.D. Singh and J.G. Joshi, Mechatronics, 3rd Edition, Prentice Hall, New Delhi, 2009.
5. Mottershed Allen, Electronic Devices & Circuits, PHI
6. R. P. Jain, Modern Digital Electronics, M Graw

Reference Books

1. Thomas L. Floyd, Electronic Devices, Pearson Education (Sixth edition)
2. Millman & Halkis, Electronic Devices & Circuits, PHI
3. Malvino Leach, Digital Principles & Applications, Mc Graw Hill
4. Millman & Halkis, Integrated Electronics, MGH

Project Based Learning:

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

To develop a demonstration model on;

1. Potential Divider and Variable DC bias circuit.
2. DC lighting circuit.
3. Automatic LED Emergency Light.
4. Flashing LED.
5. Dancing Light.
6. Voltage regulator using Zener diode.
7. Cascode amplifier using FET.
8. JFET as an analog switch.
9. FET used as a Multiplexer.
10. JFET acts as a current limiter.
11. LDR & Transistors based Light Detector.

12. LDR Based Smart Electronic Candle.
13. Smart Bulb Holder using LDR.
14. MOC3021 Opto-coupler as a solenoid/valve control.
15. Light controller switch using photo-transistor.

Unit Test -

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Computer Aided Machine Drawing		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/Week	Internal Assessment	40 Marks	
	Term Work and Practical	50 Marks	01
	Total	150 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Fundamentals of Mathematics 2. Mechanical Engineering systems 3. Computer Aided Drafting and Visualisation
Course Objectives:-	<ol style="list-style-type: none"> 1. To make the students understand and interpret drawings of machine components 2. To prepare assembly drawings both manually and using standard CAD packages 3. To familiarize the students with Indian Standards on drawing practices and standard components
Course Outcomes:-	<p>The students will be able to</p> <ol style="list-style-type: none"> 1. Understand fundamentals of machine drawing and conventional representation of machine elements. 2. Understand concept of Geometric Dimensioning and Tolerancing; and apply in machine drawing. 3. Understand and drawing of component assemblies of given part drawings. 4. Understand and drawing of part details with the help of assembly drawings.

Course Contents

Unit-I	Fundamental of Machine Drawing and Conventional Representation	(10 Hrs)
Introduction to Machine Drawing and its importance, Code of practice for Engineering Drawing, BIS specifications – Materials, Welding Joint and symbols, riveted joints, pipe joints, keys, and screwed fasteners. Conventional Representation of dimensioning and sectioning, breaks in pipes and shafts, Screw Threads, springs, gears, foundation bolts, Common features and machine components.		
Unit-II	Geometric Dimensioning and Tolerancing (GD&T)	(10 Hrs)
<p>Limits, Fits and Tolerances: Introduction, Fundamental tolerances, Deviations, Methods of placing limit dimensions, types of fits with symbols and applications, Geometrical Tolerances on drawings. Standards followed in industry, Interpretation of given symbols on drawing.</p> <p>Characteristics of Surface Roughness- Machining Symbols, Indications of surface roughness and its characteristics, Symbols for directions of lay.</p>		
Unit-III	Details to Assembly Drawing	(14 Hrs)
<p>Classification of Drawings- Machine drawing, Production Drawing, Part Drawing, Assembly drawing, Drawings for catalogues and instruction manuals, patent drawings, Drawing Standards, Introduction to unit assembly drawing, steps involved in preparing assembly drawing from details and vice-versa, Blueprint Readings.</p> <p>Preparation of Assembly Drawings: Universal and Oldham's Couplings, Foot-Step Bearings, Lathe Tool Post, Machine Vice, Pipe Vice, Screw Jack, Single Tool post, Square tool post, Clapper block, Revolving Centre, C-Clamp.</p>		
Unit-IV	Assembly to Details Drawing and Production Drawing	(14 Hrs)
<p>Types of Production Drawings- Detail or Part Drawings, Working Assembly Drawings, Detailed Drawings and Manufacturing Methods.</p> <p>Preparation of Detail or Part Drawings: Plummer Block or Pedestal Bearings, Lathe Tail Stock, Drilling Jig, Piston and Connecting Rod, Gland and Stuffing Box Assembly, Gate valve, Globe valve, Non-Return Valve and Steam Stop Valve.</p>		

Term Work

1. Three A2 size sheets of **Details to assembly** drawing using AutoCAD.
2. Three A2 size sheets of **Assembly to details** drawings using AutoCAD.

Assignments

Minimum **Five** Questions based on each unit in A2 size Sheets

Textbook

1. R.K. Dhavan, "A Textbook of Machine Drawing", S Chand Publication, New Delhi.
2. Gopalakrishna K.R., "Machine Drawing", 22nd Edition, Subhas Stores Books Corner, Bangalore, 2013

References

1. N. D. Bhatt and V.M. Panchal, "Machine Drawing", 48th Edition, Charotar Publishers, 2013
2. Junnarkar, N.D., "Machine Drawing", 1st Edition, Pearson Education, 2004
3. N. Siddeshwar, P. Kanniah, V.V.S. Sastri, "Machine Drawing", published by Tata McGrawHill, 2006
4. S. Trymbaka Murthy, "A Text Book of Computer Aided Machine Drawing", CBS Publishers, New Delhi, 2007

Project Based Learning:

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. To develop chart to represent different types of nuts and bolts conventionally along with industrial real life application.
2. To develop chart to represent different types of springs conventionally along with industrial real life application.
3. To develop chart to represent different types of welded and riveted joints conventionally along with industrial real life application.
4. To develop chart to represent different types of gears conventionally long with industrial real life
5. To develop chart to represent different types of bearings conventionally along with industrial real life application.
6. To develop chart to represent different types of foundation bolt conventionally along with industrial real life application.
7. To collect different types of nuts and bolts available in market, to identify their specifications and application.
8. To obtain industrial drawings to identify the limit, fits, tolerances.
9. To demonstrate geometrical tolerances for different industrial/real life application.
10. To prepare assembly and detail drawing of a given machine tool component.
11. To prepare assembly and detail drawing of a given IC engine component.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Sheet Metal Operations		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical:- 02 Hours/ Week	Term Work	50 Marks	01
	Total	50 Marks	01

Course Prerequisites:-	The student should have 1. Basic knowledge of workshop tools. 2. Basic knowledge of Materials
Course Objectives:-	1. The student should understand various tools, operations and use them for carrying out sheet metal operations.
Course Outcomes:-	The students should be able to— 1. Understand the knowledge of marking, cutting, holding tools and machines used in sheet metal industry. 2. Understand the types and use of rivets in sheet metal industry. 3. Understand the principle, construction of dies used in press working operations.

Course Contents

Unit-I	First Aid, Sheet Metal Equipment's and Rivets	(12 Hrs.)
General safety precautions and precautions for sheet metal industry. Measuring, marking, cutting and holding tools. Bench Work and Fitting Tools, Gauges, Introduction to machines in sheet metal Industry: shearing machine, bending machine, circular profile cutting machines. Different types of sheet metal folds. Rivets and its different parts, selection of rivet heads, types of rivets and its uses.		
Unit-II	Introduction to Press Working	(12 Hrs.)
Punching, blanking, shearing, bending and piercing. Punch & Die tolerance and clearance. Introduction to Dies: Simple Dies, Compound Dies, Progressive Dies. Types of presses.		

Term Work: List of Experiments

1. Cutting different types of shapes with hand snip.
2. Practical on bending machine
3. Practical on shearing machine
4. Practical on profile cutting machine.
5. Making hole with solid punch and round punch.
6. Practice for riveting.
7. Practical for making components from sheet metal.
8. Demonstrations of press working operations such as Punching, blanking operations.

Text Books:

1. Khanna O.P. and Lal. M., " Production Technology", Dhanpatrai Publications (P) Ltd., New Delhi.
2. Jain R.K., "Production Technology", Khanna Publishers, Delhi.
3. Choudhary Hajra S. k., Choudhary Hajra A. k. "Elements of Workshop Technology Vol 1 Manufacturing Processes, Publisher: Media Publishers & Promoters, India.
4. Choudhary Hajra S. k., Choudhary Hajra A. k. "Elements of Workshop Technology Vol 2 Machine Tools, Publisher: Media Publishers & Promoters, India.
5. Rajput R. K., "Manufacturing Technology", Laxmi Publications (P)Ltd, New Delhi.
6. Chapman W.A.J "Workshop Technology "volume I, II, III, ELBS.

Designation of Course	Soft Computing- II		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical: -02 hours/Week	Term Work and Practical	75 Marks	01
	Total	75 Marks	01

Course Prerequisites: -	Basic Mathematics
Course Objective: -	The goal of the course is that students should develop techniques for problem solving using a programming language.
Course Outcomes	<p>Students should</p> <ol style="list-style-type: none"> 1. Understand the concept of pointers and apply them to locate variables in memory. 2. Apply the concepts of pointers in functions 3. Understand the concept of one-dimensional arrays and apply them in writing programs 4. Understand the concept of multidimensional arrays and apply them in writing programs 5. Understand the concept of classes and apply them in writing programs 6. Understand the concept of objects and apply them in writing programs

Course Contents

Unit-I	Pointers I	(04 Hrs.)
Data Variables and memory; Address operator: &		
Unit-II	Pointers II	(04 Hrs.)
Pointers; Functions, pointers and Indirection Operators		
Unit-III	Arrays	(04 Hrs.)
Arrays Fundamentals; Arrays and Functions; Character Arrays		
Unit-IV	Multidimensional Arrays	(04 Hrs.)
Multidimensional Arrays; Multidimensional Arrays and Functions; Array filling from data files		
Unit-V	Classes I	(04 Hrs.)
Objects and classes; Class members; Class Destructors		
Unit-VI	Classes II	(04 Hrs.)
Array of objects; Overloaded operators and objects		

Term Work

Term work shall consist programs (not limited to) listed below based on syllabus.

1. C++ Program to Calculate Average of Numbers Using Arrays
2. C++ Program to Find Largest Element of an Array
3. C++ Program to Calculate Standard Deviation
4. C++ Program to Add Two Matrix Using Multi-dimensional Arrays
5. C++ Program to Multiply Two Matrix Using Multi-dimensional Arrays
6. C++ Program to Find Transpose of a Matrix
7. C++ Program to Multiply two Matrices by Passing Matrix to Function
8. C++ Program to Access Elements of an Array Using Pointer
9. C++ Program to Swap Numbers in Cyclic Order Using Call by Reference
10. C++ Program to Find the Frequency of Characters in a String
11. C++ Program to Find the Number of Vowels, Consonants, Digits and White Spaces in a String
12. C++ Program to Remove all Characters in a String Except Alphabets.

13. C++ Program to Find the Length of a String
14. C++ Program to Concatenate Two Strings
15. C++ Program to Copy Strings
16. C++ Program to Sort Elements in Lexicographical Order (Dictionary Order)
17. C++ Program to Store Information of a Student in a Structure
18. C++ Program to Add Two Distances (in inch-feet) System Using Structures
19. C++ Program to Add Complex Numbers by Passing Structure to a Function
20. C++ Program to Calculate Difference Between Two Time Period
21. C++ Program to Store and Display Information Using Structure
22. Increment ++ and Decrement -- Operator Overloading in C++ Programming
23. C++ Program to Subtract Complex Number Using Operator Overloading

TextBooks

1. "Let Us C++", KanetkarYashavant, BPB Publications

Reference Books

1. "C++ programming Today", Barbara Johnston, Prentice Hall of India, New Delhi.
2. "C++ how to program", Paul Deitel and Henry Deitel, Prentice Hall of India, New Delhi.
3. "Accelerated C++: Practical Programming by Example", Andrew Koenig and Barbara E. Moo, Addison-Wesley Publications
4. "C++: The Complete Reference", Herbert Schildt, McGraw Hill Publications.
5. "C++ Primer"; Barbara E. Moo, JoséeLajoie and Stanley B. Lippman; Addison-Wesley Professional
6. "Programming: Principles and Practice Using C++", BjarneStroustrup, Addison-Wesley Professional

Bharati Vidyapeeth
(Deemed to be University), Pune, India
College of Engineering, Pune
Department of Mechanical Engineering

Vision of the Department

To develop high quality Mechanical Engineers through dynamic education to meet social and global challenges

Mission of the Department

- To provide extensive theoretical & practical knowledge to the students with well-equipped laboratories & ICT tools through motivated faculty members
- To inculcate aptitude for research, innovation and entrepreneurial qualities in students
- To acquaint students with ethical, social and professional responsibilities to adapt to the demands of working environment.

Name of Programme: B. Tech. Mechanical Engineering

Programme Educational Objectives (PEOs)

- To fulfill need of industry and society with theoretical & practical knowledge
- To perform research, innovation, lifelong learning and continued professional development
- To fulfill professional ethics and social responsibilities

Programme Outcomes (POs)

The graduates will be able to

- a.* apply knowledge of mathematics, science and engineering fundamentals for solving complex engineering problems
- b.* identify the need, plan and conduct experiments, analyze data for improving the mechanical processes.
- c.* design and develop mechanical systems considering social and environmental constraints.
- d.* design and develop a complex mechanical system using research based knowledge, advanced mathematical, statistical tools and techniques.

- e.* use information technology (IT) tools for prediction and modeling of routine activities to enhance the work performance.
- f.* know social responsibilities while doing professional engineering practices.
- g.* familiarize with eco-friendly, sustainable and safe working environment.
- h.* take into account professional ethics while designing engineering systems.
- i.* work efficiently as a group leader as well as an individual.
- j.* communicate in written and verbal form with subordinates and supervisors.
- k.* apply project and finance management techniques in multidisciplinary environments.
- l.* take interest in higher education and update the knowledge.

Programme Specific Outcomes (PSOs)

- Apply the knowledge of thermal, design, manufacturing engineering and computational sciences to solve Mechanical Engineering problems.
- Apply Mechanical Engineering principles for research, innovation and develop entrepreneurial skills.
- Apply concepts of Mechanical Engineering to assess societal, environmental, health, safety issues with professional ethics.

Designation of Course	Thermodynamics Principles		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work and Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisites:	<ol style="list-style-type: none"> 1. Engineering Mathematics. 2. Engineering Physics.
Course Objectives: -	<p>To provide knowledge about</p> <ol style="list-style-type: none"> 1. Laws of thermodynamics & their applications. 2. Properties of pure substances & vapor processes. 3. Fuels and concepts of combustion.
Course Outcomes: -	<p>On completion of the course, students will be able to–</p> <ol style="list-style-type: none"> 1. Understand concepts of first law of thermodynamic and its application. 2. Understand concepts second law of thermodynamics, entropy and availability. 3. Apply the knowledge of Properties of steam for different vapor Processes. 4. Apply the knowledge of properties of steam for different power cycles. 5. Understand the different air standard cycles and analyze it. 6. Understand the different type of fuels, concepts of combustion and analyze exhaust gas composition.

Course Contents

Unit-I	First Law of Thermodynamics	(08 Hrs.)
<p>Introduction of thermodynamics, Review of basic definitions, (State, Process, Cycle, Path, Quasi- static process, path fiction and point function, Equilibrium), energy and work transfer, zeroth law of thermodynamics, statement of first law of thermodynamics, Joule's experiment, Limitations of first law of thermodynamics.</p> <p>Reversibility and Irreversibility, Applications of first law to flow and non-flow processes and cycles. Steady flow energy equation and its application to different devices (Boiler, Diffuser, Turbine, Compressor, Condenser, throttling process), PMM-I.</p>		
Unit-II	Second Law of Thermodynamics, Entropy and Availability	(08 Hrs.)
<p>Heat engine, refrigerator and heat pump, Kelvin-Planck's statement & Clausius statement, equivalence of Kelvin-Planck's and Clausius statements, perpetual motion machine of second kind (PMM-II), Carnot cycle & Carnot heat engine.</p> <p>Entropy: Clausius Theorem, Entropy as a property, second law analysis for entropy, Clausius inequality, principle of increase of entropy, irreversibility, Temperature – Entropy relation, Third law of thermodynamics.</p> <p>Availability: High- and low-grade energy, available and unavailable energy, loss of available energy due to heat transfer through a finite temperature difference.</p>		
Unit-III	Properties of Pure Substances and Vapor Processes	(08 Hrs.)
<p>Formation of steam, Phase changes, Properties of steam, Use of Steam Tables, Study of P-v, T-s and Mollier diagram for steam, use of P-V, T-S, H-S diagrams for Pure substance, Dryness fraction and its determination, Study of steam calorimeters (Barrel, Separating, Throttling, and combined).</p> <p>Non flow and steady flow vapor processes, constant Pressure Process, constant volume Process, constant temperature Process, Isentropic Process, Polytrophic Process, Hyperbolic Process, work transfer & heat transfer.</p>		

Unit-IV	Vapor Power Cycles	(08 Hrs.)
Carnot cycle, Rankine cycle, Comparison of Carnot cycle and Rankine cycle, Efficiency of Rankine cycle, Relative efficiency, Performance parameters of vapor power cycle, Effect of operating variables on Rankin cycle (Superheating, Boiler pressure, condenser pressure).		
Unit-V	Air Standard Cycles	(08 Hrs.)
Analysis of Air standard cycle, Efficiency and Mean Effective Pressure, Carnot Cycle, Otto Cycle, Diesel cycle, Dual cycle, Comparison of cycles, Atkinson Cycle, Ericsson Cycle, Brayton cycle, Sterling Cycle		
Unit-VI	Fuels and Introduction to Combustion	(08 Hrs.)
Solid- Biomass, Coal types, liquid: petrol, diesel, bio-oil, their Application, Gas: Bio-gas, low calorific value gases, LPG, CNG, and their application. Properties of fuels, Mass fraction, mole fraction, combustion equation, theoretical air, excess and deficient air, stoichiometric and actual air to fuel ratio, Measurement of calorific value of fuels, analysis of products of combustion, gravimetric and volumetric analysis and their conversions, method to determine flue gas analysis - CO, CO ₂ , O ₂ , HC, NO _x , smoke.		

Term Work

Term work shall consist of following **eight** experiments. Hand calculations must be confirmed through a computer programme using any programming language.

1. First laws of thermodynamics apply to steady flow energy equation.
2. Study of different types of steam calorimeters.
3. Determination of dryness fraction using any commercially available test rig.
4. Determination of calorific value using bomb calorimeter.
5. Study of Boy's gas calorimeter.
6. Study and demonstration of exhaust gas analysis by using any commercially available test rig.
7. Demonstration of smoke meter
8. Study of Orsat apparatus.
9. Study and Demonstration of Flash Point.
10. Study and Demonstration of Pour Point.

Assignment:

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

3. Steady flow energy equation with applications
4. Concept of second law of thermodynamics, entropy.
5. Vapour processes.
6. Rankine cycle and vapour power cycle.
7. Air standard cycles.
8. Combustion of fuels.

Text Books

4. R. K. Rajput, Engineering Thermodynamics, Laxmi Publications.

5. Kothandarman & S. Domkundwar, "Thermal Engineering" Dhanpat Rai and Sons.
6. P. L. Ballaney, Thermal Engineering, Khanna Publications.

Project Based Learning

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

1. To demonstrate steady flow energy equation for engineering applications such as heat exchangers, turbo machinery, boiler, etc.
2. To demonstrate first law of thermodynamic by using Joule's experiment.
3. To demonstrate first law of thermodynamic through real life application such as heating of water using a cook stove, operation of a boiler, operation of a turbo machinery, etc.
4. To demonstrate second law of thermodynamic through real life application. (Kelvin-Planck's statement)
5. Demonstration second law of thermodynamic through real life application. (Clausius statement)
6. To demonstrate Boyle's law.
7. To demonstrate Charles's law.
8. To prepare a chart on identification of gas/vapour processes in various real-life applications such as boiler, steam turbine, gas turbine, IC engine cylinder, etc.
9. To prepare a chart on comparison among different air standard cycles for given conditions.
10. To determine calorific values of different types of solid and liquid fuels.

Unit Test

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Mechanisms of Machines		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/Week	Internal Assessment	40 Marks	
	Term Work and Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Mathematics 2. Engineering Physics 3. Engineering Mechanics
Course Objectives:-	<ol style="list-style-type: none"> 1. To make the students conversant with kinematic analysis of mechanisms applied to real life and industrial applications. 2. To develop the competency to analyse the velocity and acceleration in mechanisms using analytical and graphical approach. 3. To develop the competency to analyse the friction clutches, Brakes, dynamometer and flywheel.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Understand the fundamental concept of Lower pair mechanisms and apply to real life and industrial applications. 2. Understand the basic concept of kinematic analysis and evaluate forces acting on reciprocating engine by graphical and analytical method. 3. Understand the concept of velocity and acceleration of any planar mechanism and analyze it graphically by using relative velocity - acceleration method and ICR method, Coriolis component of acceleration. 4. Understand the concept of friction and apply it in application of clutches. 5. Apply the concept of friction to analyze different parameter in Brakes and Dynamometer 6. Understand the fundamental concept of Turning moment diagram and flywheel; and evaluate coefficient fluctuation speed and energy.

Course Contents

Unit-I	Mechanisms with Lower Pair	(08 Hrs.)
<p>Introduction, Pantograph, Straight line mechanisms- Exact and Approximate, Hook Joint, Double Hook's Joint, Steering gear mechanisms: Condition for correct steering, Davis steering gear mechanism, Ackermann steering gear mechanism.</p> <p>Theory and analysis of Compound Pendulum, Concept of equivalent length of simple pendulum, Bifilar suspension, Trifilar suspension.</p>		
Unit-II	Inertial Forces in Reciprocating Parts	(08 Hrs.)
<p>Analytical method for displacement, velocity and acceleration analysis of slider cranks Mechanism. Klein's construction. Dynamics of Reciprocating Engines: Two mass statically and dynamically equivalent system, Correction couple, static and dynamic force analysis of reciprocating engine mechanism, Torque Exerted on crankshaft.</p>		
Unit-III	Kinematic Analysis of Mechanisms: Graphical Methods	(08 Hrs.)
<p>Relative Velocity Method: Relative velocity of a point on a link, Angular velocity of a link, Sliding velocity, Velocity polygons for simple mechanisms.</p> <p>Relative Acceleration Method: Relative acceleration of a point on a link, Angular acceleration of a link, Acceleration polygons for simple mechanisms.</p> <p>Coriolis component of acceleration.</p> <p>Instantaneous Centre of Rotation (ICR) Method(limit to only 6 link mechanisms)- Kennedy's Theorem, Body and space centre.</p>		

Unit-IV	Friction Clutches	(08 Hrs.)
<p>Friction: Friction in turning pair, friction circle, friction axis, friction in slider crank mechanism. Pivot and collar friction.</p> <p>Friction clutches- design considerations, Classification of Clutches, torque transmitting capacity of – Single plate and multi-plate clutch, cone clutch and centrifugal clutch</p>		
Unit-V	Brakes and Dynamometers	(08 Hrs)
<p>Brakes-Introduction, Classification of brakes, material for brake lining, types of brakes, braking torque of - shoe brakes, internal shoe brake, disc brake.</p> <p>Dynamometer-Types of dynamometers, brake power of absorption and transmission type dynamometers – prony brake, rope brake, belt transmission.</p>		
Unit-VI	Turning Moment Diagrams and Flywheel	(08 Hrs.)
<p>Introduction, Turning Moment Diagrams for different types of Engines, Fluctuations of Energy and Speed of Crankshaft, Coefficient of fluctuation of Energy and speed.</p> <p>Flywheel-Introduction, Coefficient of fluctuation of speed, Energy stored in flywheel, dimensions of flywheel rim, Flywheel in punching press.</p>		

Term Work

The following experiments shall be performed

1. Compound Pendulum
2. Bifilar Suspension Method
3. Trifilar Suspension Method
4. Velocity and acceleration analysis using Graphical methods by Klein's construction
5. Velocity analysis using Graphical methods by ICR.
6. Velocity and acceleration analysis using Graphical methods by Polygon method.
7. Velocity and acceleration analysis using Graphical methods i.e., polygons involving Coriolis component.
8. To determine Coriolis's Component of Acceleration at various speeds of rotation and water flow rates.
9. To measure torque transmitting capacity of friction clutch experimentally.
10. Velocity and acceleration analysis of slider cranks mechanism using Computer programming.
11. Tutorial on Turning Moment Diagrams and Flywheel with computer programming
12. Mini-project based on contents of Syllabus.

Assignment

Numerical and/or theory questions on each unit from previous year question papers of GATE/ESE Mechanical Engg. examinations.

Reference Books

1. Thomas Bevan, "Theory of Machines", CBS Publishers & Distributors, Delhi.
2. Shigley J.E. and Uicker J.J., "Theory of Machines and Mechanisms", McGraw Hill, Inc.
3. Ghosh Amitabh and Malik A.K., "Theory of Machines and Mechanisms", East-west Press.
4. Hall A.S., "Kinematics and Linkages Design", Prentice-Hall.
5. Erdman, A. G. & Sandor, G.N., "Mechanism design, Analysis and synthesis", Vol 1, Prentice – Hall of India.

Text Books

1. Rattan S. S., "Theory of Machines", Tata McGraw Hill.
2. Ballaney P. L., "Theory of Machines", Khanna Publishers, Delhi.
3. R. S. khurmi, "Theory of Machines", S Chand Publication.

Project Based Learning

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

1. To develop demonstration model of Pantograph mechanism
2. To develop demonstration model of Ackerman steering gear mechanism.
3. To develop demonstration model of Davis steering gear mechanism.
4. To develop demonstration models of exact straight line motion mechanism.
5. To develop demonstration model to understand Coriolis's Effect.
6. To prepare chart on comparison among different types of clutches with their application.
7. Case study on real life application of clutches used in automobile.
8. To develop demonstration model of Prony brake dynamometer
9. Case study on real life application of Brakes used in automobile.
10. To prepare chart on comparison among different types of dynamometer.
11. To develop demonstration model of flywheel energy storage system.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Mechanics of Fluids		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work and Practical	50 Marks	01
	Total	150 Marks	05

Course Prerequisites: -	<ol style="list-style-type: none"> 1. Engineering Mathematics 2. Engineering Physics 3. Engineering Mechanics
Course Objectives: -	<p>To provide knowledge about</p> <ol style="list-style-type: none"> 1. Properties of fluids, concepts of fluid statics, kinematics & dynamics 2. Concepts of laminar & turbulent fluid flows 3. Flow around immersed bodies and boundary layer flow 4. Dimensional analysis
Course Outcomes: -	<p>On completion of the course, students will be able to–</p> <ol style="list-style-type: none"> 1. Understand properties of fluids and analyze concepts of fluid statics. 2. Understand concepts related to fluid kinematics and analyze practical problems. 3. Understand concepts related to fluid dynamics and analyze practical problems. 4. Understand concepts related to laminar flow, flow around immersed bodies and analyze practical problems. 5. Understand concepts related to flow through pipes, dimensional analysis and analyze practical problems. 6. Understand concepts related to turbulent flows, boundary layer theory and analyze practical problems.

Course Contents

Unit-I	Properties of Fluids & Fluid Statics	(08 Hrs.)
<p>Properties of Fluid: - Definition of fluid, concept of continuum, Density, Specific Weight, Specific Gravity, Dynamic Viscosity, Kinematic Viscosity, Newton's law of viscosity, types of fluid, Rheological diagram, Surface Tension, Capillarity, Compressibility, Vapour pressure, Classification of fluid.</p> <p>Fluid Statics: Hydrostatic law, Pascal's Law, Pressure at a point, Total Pressure, Centre of pressure, Liquid pressure on a plane(Horizontal, Vertical, Inclined) & Curved surfaces, Archimedes Principle, Buoyancy and stability of floating and submerged bodies, Metacentric height.</p>		
Unit-II	Fluid Kinematics	(08 Hrs.)
<p>Description of fluid motion- Eulerian and Lagrangian approach, Types of flow (steady, unsteady, uniform, non-uniform, laminar, turbulent, One, Two and Three dimensional, compressible, incompressible, rotational, Irrotational), Continuity equation in Cartesian co-ordinates, flow net, Control volume, Material derivative and acceleration, Visualization of flow field (Stream, Path and Streak line), velocity in two-dimensional flow, stream function and velocity potential function.</p>		
Unit-III	Fluid Dynamics	(08 Hrs.)
<p>Linear momentum Equation using differential Approach, Introduction to Navier-Stoke's Equation, Euler equation of motion. Derivation of Bernoulli's equation along a streamline, application of Bernoulli's equation to Pitot tube, Venturimeter, Orifice meter, Triangular Notch & Rectangular Notch (Without considering Velocity of Approach), Concept of HGL and THL or TEL.</p>		
Unit-IV	Laminar Flow & Flow around Immersed Bodies	(08 Hrs.)
<p>Definition, relation between pressure and shear stresses, laminar flow through round pipe, fixed parallel plates. Introduction to CFD Methodology (Elementary Treatment). Forces on immersed bodies: -Lift and Drag, Classification of Drag, Flow around circular cylinder and Aerofoil, Development of lift on Aerofoil.</p>		

Unit-V	Flow Through Pipes & Dimensional Analysis	(08 Hrs.)
Energy losses through pipe-Major and Minor losses, Pipes in series and parallel, Darcy-Weisbach equation, Moody diagram, Syphon, Transmission of power, Water hammer in pipes Dimensional Analysis: Dimensions of physical quantities, dimensional homogeneity, Rayleigh's method, Buckingham pi Theorem, Important dimensionless numbers, Model analysis (Reynolds, Froude and Mach).		
Unit-VI	Turbulent Flow, Boundary Layer Flow	(08 Hrs.)
Boundary layer, Laminar and Turbulent flow, Velocity distribution, Development of boundary layer on a flat plate, Boundary layer thickness-displacement, Momentum and Energy, Laminar sub layer, Separation of boundary layer and Methods of controlling, Introduction to compressible fluid flow.		

Term Work

Term work shall consist of following **eight** experiments. Hand calculations must be confirmed through a computer programme using any programming language.

1. Study of Pressure Measuring Devices.
2. Measurement of Viscosity using Redwood Viscometer.
3. Stability of Floating Bodies and Optimum Loading Capacity.
4. Verification of Modified Bernoulli's Equation.
5. Calibration on Venturi meter.
6. Calibration of Orifice meter.
7. Laminar and Turbulent Flow by Reynold's Apparatus.
8. Discharge over Notches.
9. Study of Minor Losses due to Pipe Fitting.

Assignment:

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Fluid statics
2. Fluid kinematics.
3. Venturimeter & orifice meter.
4. Laminar flow and flow around Immersed bodies.
5. Flow through pipes and Dimensional analysis.
6. Boundary conditions for the velocity profiles.

Text Books

1. Dr. R.K. Bansal, A Textbook of Fluid Mechanics and Hydraulic Machines ", Laxmi Publication Pvt. Ltd., New Delhi.
2. R.K. Rajput, A Textbook of Fluid Mechanics and Hydraulic Machines, S. Chand & Company Ltd. New Delhi.

Reference Books:

1. Streeter V. L. and Wylie E. B. Fluid Mechanics McGraw Hill International Book Co.
2. Yunus Cengel, Jhon Cimbala, Fluid Mechanics, Tata McGraw Hill, New Delhi.
3. Streeter & Wylie, Fluid Mechanics, Tata McGraw Hill.
4. Frank White, Fluid Mechanics, McGraw Hill.
5. Dr. P.N. Modi and Dr. S.M. Seth, "Hydraulics and Fluid Mechanics including Hydraulic Machines", Standard Book House.
6. Garde R. J. and Mirajgaonkar, Engineering Fluid Mechanics, Nem Chand & Bros, Roorkee, SCITECH, Publication (India) Pvt. Ltd.

Project Based Learning:

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

1. To demonstrate Pascal's law through real life application such as hydraulic jack, hydraulic press, hydraulic lift, etc.
2. To demonstrate Archimedes's Principle through real life application.
3. To prepare an experimental setup for measurement of viscosity of different oils.
4. To demonstrate different types of fluid flow through Reynold's experiment.
5. To prepare a chart on real life application of different types of fluid flows and its characteristics.
6. To measure the flow velocity using Pitot tube.
7. To prepare a chart on real life application on fluid flow measuring devices.
8. To develop demonstration model for turbulent and laminar flow.
9. To develop demonstration model of simple viscous damper for earthquake resistance.
10. To prepare a chart for industrial applications of Pascal's law.

Unit Test –

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	ITC-I: Manufacturing Technology		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hours/ Week	End Semester Examination	60 Marks	03
	Internal Assessment	40 Marks	
	Total	100 Marks	03

Course Prerequisites:-	The student should have basic knowledge of 1. Manufacturing Processes. 2. Machining Processes.
Course Objectives:-	The student should 1. To acquire the knowledge of Foundry Technology. 2. To acquire the knowledge of hot working and cold working processes. 3. To acquire the knowledge of lathe, drilling, milling, and abrasive machining.
Course Outcomes:-	The students should be able to– 1. Understand the pattern making and mold making. 2. Understand the various casting processes and apply the best casting process for a specific product. 3. Understand the hot working and cold working processes and apply them in Manufacturing. 4. Understand different operations on lathe machine and apply them to create the job. 5. Understand different operations of drilling machine and milling machine and apply them to create the job. 6. Understand various grinding machines and plastic moulding machine and apply them for create the shape.

Course Contents

Unit-I	Pattern and Mould Making	(06 Hrs.)
Introduction to casting, Foundry Layout, Foundry departments and sections, Pattern and pattern making, Design and allowances for patterns, Colour codes for patterns, Storage of patterns. Moulding sand and core sands, Sand control Test, Core and core making –Introduction, Core making Procedure, Types of cores, Core print, Core boxes. Mould and mould making- Moulding Methods, Moulding processes, Design of Gating System.		
Unit-II	Sand Casting and Die Casting Practice	(06 Hrs.)
Sand Casting Practice: Melting furnaces and their selection, Cupola furnace, Induction melting furnaces, Advantages, Limitations, applications, pouring practice and equipment's, Ladle technology, Strike out, Fettling, Cleaning and Surface preparation of castings, Defects in castings. Die Casting Practice: Pressure and gravity die casting, Shell mould casting, Investment casting, Continuous casting, centrifugal casting, Applications, Merits and limitations.		
Unit-III	Hot and Cold Working Processes	(06 Hrs.)
Hot Working Processes: Principle rolling, forging - drops, press, upset. Rolling, forging- extrusion, drawing, spinning, Angle of Contact of rolling, effect of hot working. Cold Working Processes: Cold rolling, swaging, forges extrusion- forward backward impact. Roll forging, tube drawing, wire drawing, spinning, shot peening, high energy rate forming, Stresses in wire drawing operations		

Unit-IV	Theory of Metal Cutting	(06 Hrs.)
Introduction, function, types, construction, accessories, operations, thread cutting, single and multi-start thread cutting, different tools, tool materials, Tool Geometry- Single Point cutting tool, Tool Wear and Tool Life, Mechanics of Metal cutting- Merchant's Circle Diagram, concept of speed, feed, depth of cut. Introduction to Boring Machines- general arrangement and nature of work done.		
Unit-V	Drilling and Milling Machines	(06 Hrs.)
Drilling Machines: Fundamentals of drilling process, twist drill geometry, tool holders, Types of drilling machines, drilling operations. Types of drills, reaming process. Milling Machines: Fundamentals of milling process, cutters-types and geometry, Operations performed on milling machines. Dividing head, methods of indexing.		
Unit-VI	Abrasive Machining Processes, Plastics & Plastic Moulding	(06 Hrs.)
Abrasive Machining Processes: Abrasive machining, abrasives -types, size and geometry, Grinding, grinding wheels, wheel marking, wheel selection. Wheel mounting. Types of grinding machines, grinding faults, Honing, lapping, super finishing, buffing, burnishing process. Plastics & Plastic Moulding: Moulding characteristics of plastic, Moulding process- compression, transfer and injection blow moulding. Mould design- Materials and construction, bulk factor, shrinkage, moulding parameters, moulding machines, extruders.		

Assignments:

1. Pattern and Mould Making.
2. Sand Casting and Die Casting Practice.
3. Hot Working processes and Cold Working Processes.
4. Turning, boring related process.
5. Drilling Machines.
6. Milling Machines.
7. Abrasive Machining Processes and superfinishing processes.
8. Plastics & Plastic Moulding.

Text Books:

1. O. P. Khanna, A text book of Foundry Technology, Dhanpat Rai and Sons
2. P. C. Sharma, Production Engineering, S. Chand Publications
3. R. K. Jain, Production Technology, Khanna Publishers

Reference Book

1. P. N. Rao, Manufacturing Technology- Vol 1, McGraw Hill Education (India) Private Limited
2. P. N. Rao, Manufacturing Technology, Vol- II, McGraw Hill Education (India) Private Limited
3. G. R. Nagpal, Tool Engineering and Design, Khanna Publishers
4. B. S. Raghuvanshi, Workshop Technology, Vol-II, Dhanpat Rai & Co.
5. Hajra Chaudhari, Workshop Technology, Vol.-II
6. Roy A. Lindberg, Process & Materials of Manufacture, PHI
7. E. P. DeGrmo, J. T. Black and A. Kosher, Material and processes in manufacturing, PHI
8. HMT Handbook, Production Technology, TMH

Project Based Learning:

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

- 1 To develop a pattern of a any component using different types of material.
- 2 To develop a core part by using different types of materials.

- 3 To develop a demonstration model of gating system for any mechanical component.
- 5 To develop a demonstration model of Cupola furnace
- 6 To develop a demonstration model of pouring equipment's.
- 7 To prepare a flowchart for investment casting process
- 8 To develop a demonstration model of centrifugal casting
- 9 To develop a demonstration model of wire drawing process
- 10 To develop a demonstration model of mechanical press
- 11 To develop a demonstration model of short penning process
- 12 To develop a demonstration model of different types of rolling mills
- 13 Case study on different types of tools for thread cutting operations
- 14 To prepare a chart on concept of single point cutting tools & its geometry
- 15 To develop a demonstration model of mini bench tapping machine
- 16 To develop a demonstration model of milling mechanisms for vertical/horizontal movement
- 17 To develop a demonstration model of indexing mechanism
- 19 To develop a demonstration model of plastic molding machine
- 20 To develop a demonstration model of buffing machine
- 21 To develop a demonstration model of abrasive belt grinder

Unit Test -

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Strength of Machine Components		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hours/ Week	End Semester Examination	60 Marks	03
Practical: - 02 Hours/Week	Assignments Internal	40 Marks	
Tutorial: - 01 Hours/ Week	Term Work	25 Marks	01
	Tutorial	-	01
	Total	125 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Mathematics 2. Engineering Mechanics 3. Engineering Science
Course Objectives:-	<ol style="list-style-type: none"> 1. Understand simple and principal stress and strain 2. Able to find principal stresses on any oblique plane by analytical and graphical method. 3. Able to draw shear force and bending moment diagram and find slope and deflection of beam 4. Able to draw bending stress and shear stress diagram at different cross section in I, C and T section beam. 5. Able to find stresses in shaft in torsional, combined torsional and bending, combined torsional and axial loading. 6. Able to solve problems on strain energy and Euler's column.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Understand the concept of simple stress and strain and apply to find it for simple component. 2. Understand the concept of principal stress analytical and graphical by Mohr's circle; and apply it to find stresses on any oblique plane inclined to principal plane. 3. Understand the concept of shear force and bending moment and apply it to find shear force diagram and bending moment diagram for any loading condition on simply supported beam and cantilever beam. 4. Understand the concept of slope and deflection and apply it to find for any loading condition on simply supported beam and cantilever beam by maculays double integration method 5. Understand the concept of pure bending and shear and apply it to find bending stress and shear stress diagram of I, C and T section of beam. 6. Understand the concept of column theory and strain energy and apply it for loading condition.

Course Contents

Unit-I	Simple Stress and Strain	(06 Hrs)
<p>Load, Direct or normal stress, Direct strain, Sign convention for direct stress and strain, Elastic materials, Hooke's law, Modulus of elasticity - Young's modulus, Tensile test, Ductile materials, Brittle materials, Poisson's ratio, Application of Poisson's ratio to a two-dimensional stress system, Shear stress, Shear strain, Modulus of rigidity, Relationship Between E, G and K, Double shear, Allowable working stress - factor of safety, Load factor, Thermal stresses,</p>		
Unit-II	Principal Stresses, Theories of Failure	(06 Hrs)
<p>Principal Stresses: Introduction to principal stresses with application, Transformation of Plane Stress, Principal Stresses, and planes (Analytical method and Mohr's Circle), Stresses due to combined Normal and Shear stresses.</p> <p>Theories of Elastic failure: Introduction to theories of failure with application, Maximum principal stress theory, Maximum shear stress theory, Maximum distortion energy theory, Maximum principal strain theory, Maximum strain energy theory.</p>		

Unit-III	Shear Force and Bending Moment Diagram, Slope and Deflection	(06 Hrs)
Types of supports and beams, shear force (S.F.), bending moment (B.M.), S.F. and B. M. sign convention, S.F. and B.M. diagrams for beams carrying different loading conditions. Points of contra flexure, Relationship between S.F, B.M. and intensity of loading. Introduction, Simple bending theory, Neutral axis, Section modulus, second moment of area, Relationship between loading, S.F., B.M., slope and deflection, Double integration method, Macaulay's method for all loading conditions.		
Unit-IV	Stresses in Beams, Thin and Thick cylinders	(06 Hrs)
Bending stresses: Theory of simple bending, assumptions, derivation of flexural formula, second moment of area of common cross sections (rectangular, I,T,C) with respect to centroidal and parallel axes, bending stress distribution diagrams, moment of resistance and section modulus. Shear stresses: Concept, derivation of shear stress distribution formula, shear stress distribution diagrams for common symmetrical sections, maximum and average shears stresses, shear connection between flange and web. Concept of shear centre, Stresses and deformation in Thin Cylindrical and Spherical shells subjected to internal pressure.		
Unit-V	Torsion	(06 Hrs)
Simple torsion theory, Polar second moment of area, Shear stress and shear strain in shafts, Section modulus, Torsional rigidity. Principal stresses, Strain energy in torsion, Variation of data along shaft length-torsion of tapered shafts, Power transmitted by shafts. Stresses in solid circular shaft- Torsional load only, bending load only, combined torsional and bending, Combined Torsion and axial loading.		
Unit-VI	Euler's Columns and Strain Energy	(06 Hrs)
Concept of buckling of columns, derivation of Euler's formula for buckling load for column with hinged ends, concept of equivalent length for various end conditions, limitations of Euler's formula, Rankine's formula, safe load on columns. Strain energy: Strain energy due to axial load (gradual, sudden and impact), Strain energy due to self-weight.		

Term Work

Term work shall consist of following experiments. Hand calculations must be confirmed through a computer programme using any programming language.

1. Tension test for ductile materials
2. Tension test for brittle materials
3. Compression test for ductile materials
4. Compression test for brittle materials
5. Shear test for ductile materials
6. Shear test for brittle materials
7. Torsion test for ductile materials
8. Torsion test for brittle materials
9. Impact Test- IZOD and Charpy
10. Strain Gauge and rosettes theory
11. Testing of hardness by Rockwell
12. Graphical simulation of
 - a. Shear force and bending moment diagrams with different end conditions.
 - b. Slope and deflection.
 - c. Principal stresses through graphical and analytical method.

List of Assignments

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Simple stress and strain.
2. Principal stresses and strain.
3. Shear force and Bending moment diagram and slope and deflection
4. Stresses in beams, thick and thin cylinder

5. Torsion
6. Euler's column and strain energy method

List of Tutorial

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. Examinations.

1. Stresses in simple bar, Elastic modulus and two-dimensional stress systems.
2. Normal, tangential and resultant stresses on any oblique plane inclined to normal plane by analytical and graphical method.
3. Shaft diameter and factor of safety by using theories of failure.
4. Shear and bending moments on cantilever and simply supported beam and draw SFD and BMD.
5. Slope and deflection at any section between beams by using Macaulay's method.
6. Stresses in beam and draw shear stress diagram and bending stress diagram.
7. Shaft diameter and stresses when shaft subjected to torsion, bending combined torsional and bending, combined torsional and axial loads.
8. Euler's column theory and strain energy.

Textbooks

1. A textbook of strength of material by R.K.Bansal

Reference Books

1. V. B. Bhandari, Design of Machine Elements, Tata McGraw Hill Publication
2. J. E. Shigley, Mechanical Engineering Design, McGraw Hill
3. R. Subramanian strength of Material
4. S Ramamrutham, Strength of Material
5. R.K Rajput, Strength of materials

Project Based Learning

Following is the list of topics for project-based learning (Not Limited to) based on syllabus contents:

1. To prepare demonstration model of cantilever beam for the study of deflection in it.
2. To prepare demonstration model of simply supported beam for the study of deflection in it.
3. To prepare demonstration model of fixed beam for the study of deflection in it.
4. To prepare demonstration model of Overhang beam for the study of deflection in it.
5. To prepare the chart on relation between E, G, K with derivation.
6. To prepare demonstration model for studying strain energy with consideration of various conditions like impact load, sudden load, gradual load.
7. To prepare the chart on various concepts used in Principal Stresses & planes.
8. To prepare the chart on concept use in Mohr's Circle method using graphically & analytically.
9. To prepare the chart on Rules and guidelines use for drawing SFD & BMD.
10. To prepare the chart on finding bending stress for I cross-sections.
11. To prepare the chart on finding bending stress for T cross-sections.
12. To prepare the chart on finding bending stress for C cross-sections.
13. To prepare the chart on concepts used in solid & hollow shafts.
14. To prepare the chart and demonstration model of Euler's formula for buckling load.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Manufacturing Technology Laboratory		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical: - 02 Hours/ Week	Term Work	25 Marks	01
	Total	25 Marks	01

Course Prerequisites:-	1. Manufacturing Processes 2. Machining Processes and Materials.
Course Objectives:-	1. To acquire the knowledge of Foundry technology 2. To acquire the knowledge of Machine Technology
Course Outcomes:-	The students should be able to– 1. Understand the various casting processes and apply the best casting process for a specific product. 2. Understand different operations on lathe, drilling, milling and grinding machine and apply it to create the job.

Course Contents

Unit-I	Foundry Technology	(12 Hrs.)
Introduction to casting, Pattern and pattern making, Design and allowances for patterns, Moulding sand and core sands, Sand control Test, Core and core making –Introduction, Core making Procedure, Types of cores, Core print, Core boxes. Mould and mould making-Moulding Methods, Moulding processes, Gating System. Melting furnaces and their selection, Cupola furnace, pouring practice and equipment's Ladle technology, Strike out, Fettling, Cleaning and Surface preparation of castings, Defects in castings.		
Unit-II	Machining Technology	(12 Hrs.)
Lathe-Introduction, function, types, specification, construction accessories, attachments, operations. Oflathe machine. Drilling-Introduction, Types of drilling machines,operations. Milling-Introduction,Types of milling machines,operations, Milling cutters, Dividing head, methods of indexing. Abrasive machining-Introduction, grinding wheels, wheel marking, Types of grinding machines, Grinding faults. Plastic Moulding- Moulding characteristics of plastic, plastic moulding process.		

List of Experiments: (AnyEight)

1. Moulding and core sand testing (Clay content test, moisture content test etc).
2. Strength of Green sand mould and greens sand core.
3. Mold Making Practice.
4. Job on drilling, reaming, tapping.
5. Casting of component by using green sand molding / Die casting.
6. Individual job on center Lathe.
7. Study of dividing indexing mechanism on milling machine.
8. Gear cutting job on Milling Machine.
9. Study and demonstration of Grinding Machines.
10. Job on Grinding Machine.
11. Job on Plastic Molding Machine.

7. E. P. DeGrmo, J. T. Black and A. Kosher, Material and processes in manufacturing, PHI
8. HMT Handbook, Production Technology, TMH

Designation of Course	Python Programming-I		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical: - 04 Hours/ Week	Term Work and Practical	50 Marks	02
	Total	50 Marks	02

Course Prerequisites:-	Basics of C and C++Programming
Course Objectives:-	The students should be able to 1. Readily use the Python programming language 2. Apply various data types and controlstructure. 3. Understand and begin to implementcode
Course Outcomes:-	Upon completion of the course, students will be able to 1. Understand how to install and run python 2. Understand flow control 3. Understand complex datatypes 4. Understand and Apply functions 5. Understand various modules 6. Understand and Apply NumPymodule

Course Contents

Unit-I	Python introduction	(08 Hrs.)
Learn to install and run Python on your computer, Keywords and Identifiers, Statement, Indentation and Comments, Variables, Constants and Literals, Data Types, Type Conversion and Type Casting, Input,Output and Import		
Unit-II	Python Flow Control	(08 Hrs.)
Learn to install and run Python on your computer, Keywords and Identifiers, Statement, Indentation and Comments, Variables, Constants and Literals, Data Types, Type Conversion and Type Casting, Input, Output and Import		
Unit-III	Datatypes	(08 Hrs.)
Numbers, Type Conversion and Mathematics, List, Tuple, Strings, Sets, Dictionary		
Unit-IV	Python Functions	(08 Hrs.)
Function Arguments, Recursion, Anonymous/Lambda Function, Global, Local and Nonlocal variables, Global Keyword		
Unit-V	Python Modules	(08 Hrs.)
Modules in Python, import modules in Python, import statement, Import with renaming, from...import statement, Import all names, Python Module Search Path		
Unit-VI	NumPy Module	(08 Hrs.)
Python Matrix, Add Two Matrices, Transpose a Matrix, Multiply two matrices		

Term Work

1. Basic Exercise for Beginners
Practice and quickly learn Python's necessary skills by solving simple questions and problems. Topics: Variables, Operators, Loops, String, Numbers, List
2. Python LoopExercise
This Python loop exercise aims to help developers to practice branching and Looping techniques in Python.
Topics: If-else statements, loop, and while loop.
3. Python FunctionsExercise
Practice how to create a function, nested functions, and use the function arguments effectively in Python by solving differentquestions.
Topics: Function's arguments, built-in functions.

4. Python String Exercise
Solve Python String exercise to learn and practice String operations and manipulations.
5. Python Data Structure Exercise
Practice widely used Python types such as List, Set, Dictionary, and Tuple operations in Python
6. Python ListExercise
This Python list exercise aims to help Python developers to learn and practice list operations.
7. Python DictionaryExercise
This Python dictionary exercise aims to help Python developers to learn and practice dictionary operations.
8. Python Tuple Exercise
This exercise aims to help Python developers to learn and practice tuple operations.

Designation of Course	Vocational Course I: Automobile Servicing- I		
Teaching Scheme	Examination Scheme		Credits Allotted
	Term Work and Oral	50 Marks	02
	Total	50 Marks	02

Course Prerequisites:	<ol style="list-style-type: none"> 1. Inclination for taking up Two-Wheeler Repairs and Service as a self-employment occupation 2. Knowledge of Mechanical Engineering System
Course Objectives: -	<ol style="list-style-type: none"> 1. To perform skilled mechanical work in diagnosing, repairing and maintaining all major vehicle systems of two-wheeler 2. To provide knowledge on automotive industry and job-related activities as an automotive service technician. 3. To work safely and responsibly within all shop standards and environmental guidelines.
Course Outcomes: -	<ol style="list-style-type: none"> 1. Understand the suspension system of two-wheeler and apply it to diagnosing, repairing and maintaining. 2. Understand the braking and steering system of two-wheeler and apply it to diagnosing, repairing and maintaining. 3. Understand the transmission system of two-wheeler and apply it to diagnosing, repairing and maintaining clutch and gear box. 4. Understand the engine system of two-wheeler and apply it to diagnosing, repairing and maintaining. 5. Understand the ignition system of two-wheeler and apply it to diagnosing, repairing and maintaining. 6. Understand the electrical system other accessories of two-wheeler and apply it to diagnosing, repairing and maintaining.

Course Contents

Unit-I	Suspension System in Two Wheelers	(08 Hrs.)
<p>Safety, Hand Tools and Equipment's, Nomenclature of different parts of vehicle and their locations, Introduction & Function of various parts & System of Two-Wheeler</p> <p>Suspension System: Introduction, Objectives of suspension, Basic requirement, Function of suspension springs, Types of suspension springs, Suspension system trouble shooting.</p>		
Unit-II	Brake and Steering Systems	(08 Hrs.)
<p>Brake System: Principle, Braking requirements, Types of brakes, Drum brakes Disk brakes, Mechanical Brakes, Hydraulic brakes, Brake fluid, Disc brake pads, Braking system trouble shooting.</p> <p>Steering: Steering system & their use, Inspect and adjust rake of front fork, dismantle trailing link, adjust heavy duty thrust races.</p>		
Unit-III	Transmission system in Two Wheelers	(08 Hrs.)
<p>Gear Box: Function of transmission, Necessity of transmission, Types of transmission, Manual transmission, sliding mesh gear box, constant mesh gear box, synchromesh gear box,</p> <p>Clutch: Definition, Requirements of clutch, Principle of friction clutches, Dry friction clutches (Single plate clutch, Multiplate clutch, Centrifugal clutch) Preliminary inspection of clutch, clutch adjustment, Clutch overhaul, clutch trouble shooting.</p> <p>Chain & chain Drive, sprocket (chain, sprocket, shafts)</p>		
Unit-IV	Engine system of Two Wheelers	(08 Hrs.)
<p>Basic engine terminology, Types of engine, Constructional details, working of 2-stroke and 4-stroke engine, Classification of 2-stroke & 4-Stroke Engine & their difference, Engine servicing, Repairing method of Engine, engine removal, engine installation,</p> <p>General theory of Carburetion & Silencer.</p>		

Unit-V	Ignition Systems of Two Wheelers	(08 Hrs.)
Ignition System: Function, Requirement of an ignition system, Types of ignition system, Battery ignition, Magneto ignition Electronic ignition, Components of battery and electronic ignition system, Testing and servicing of ignition system components, Ignition system trouble shooting, Kick-starting system of 2 wheelers.		
Unit-VI	Electrical Systems and Accessories in Two-Wheeler	(08 Hrs.)
Electrical and electronic components used in auto electrical, auto electrical parts wiring, battery inspection and maintenance, testing of battery voltage, testing of electrical parts such as head lamp, horn side indicator, brake light etc. Use of ECM bike scanner.		

List of Experiments-

- 1. Introduction:** Importance of safety and general precaution, Elementary First Aid, Identify the parts & general servicing of Two-Wheeler, washing, cleaning, oiling, greasing and lubricating.
- 2. Suspension Work:** Servicing of suspension changing bush, checking shock absorbers. Cleaning, Checking and oil filling of shock absorbers. Cleaning & checking the wheel bearings and greasing.
- 3. Break Work:** Adjusting brake pedal play, servicing the brake system, cleaning, checking, greasing and assembling. Inspecting the shoes and wheel drums, changing of brake lining. Repairing and maintenance of hydraulic disc brake used in Motorcycles.
- 4. Transmission:** Adjusting clutch lever free play, removing clutch assembly from Two-wheeler, cleaning and inspecting parts. Replacing defective parts. Fitting clutch assembly. Repair work of Automatic clutch and automatic transmission used in motor vehicle
- Checking, adjusting and replacing defective parts (chain, sprocket, shafts) in power transmission from engine to driving wheel.
- 6. Engine Work:** Dismantling the unserviceable engine, cleaning and inspecting the parts, checking engine bore piston rings, connecting rod, bearings, crankshaft, assembling all the parts and measures the gaps. Engine Timing setting and Valve Timing setting of 4 -S Engine. Dismantling a four-stroke engine of two-wheeler cleaning, inspecting and assembling parts.
- Dismantling the air cleaner, cleaning, inspecting, cleaning fuel tank, servicing carburetor, rectifying causes for engine not starting, and high fuel consumption.
- Starting engine, tuning for slow speed, checking smoke, and setting for exhaust gas emission measurement as per norms.
- 9. Ignition System:** Dismantling the C.B. point cleaning electronic Ignition system & inspecting and replacing the pitted points. Making wiring harness and check different Electrical circuits used in Two-wheelers.
- 10. Steering work:** Inspect and adjust rake of front fork, dismantle trailing link, adjust heavy duty thrust races.
- 11. Electrical accessories repair:** Tracing the A.C /D.C electrical circuit in a two-wheeler, checking horn, head light, indicator and replacing if necessary.
- Practice on how to read job-card, General Servicing & road testing of Two-Wheeler.

Text Books

1. Automobile Mechanics, A.K. Babu, S.C.Sharma, T.R. Banga, Khanna Publishing House

Reference Books

1. Automobile Engineering by Kirpal Singh Standard Publishers Distributors.
2. Automotive Engines, A.K. Babu, Khanna Publishing House

Designation of Course	Thermodynamics Applications		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work and Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Mechanical Engineering System. 2. Thermodynamic principals
Course Objectives:-	<ol style="list-style-type: none"> 1. Steam generator and their performance analysis. 2. Reciprocating air compressors, Gas turbines & jet propulsion. 3. Various systems and phenomenon of combustion in I.C. Engine; and Performance analysis of I.C. Engine.
Course Outcomes:-	<p>On completion of the course, students will be able to–</p> <ol style="list-style-type: none"> 1. Understand construction working of steam generators and analysis their performance. 2. Understand construction working of Reciprocating air compressors and analysis their performance. 3. Understand fundamentals of gas turbine, analysis their performance and application of gas turbines & jet propulsion. 4. Understand I.C. Engine systems viz. ignition, cooling, lubrication, and governing. 5. Understand phenomenon of combustion in S.I and C.I. Engine. 6. Understand terms related to I.C. Engine testing and analysis their performance.

Course Contents

Unit-I	High pressure Boilers and Performance of Boilers	(08 Hrs.)
<p>Classification of boilers Features of high-pressure boiler, construction and working of high-pressure boilers, Fluidize bed combustion, boiler mountings and Accessories.</p> <p>Boiler performance calculations- Equivalent evaporation, Boiler efficiency, Energy balance, boiler controls, Boiler draught.</p>		
Unit-II	Reciprocating Air Compressors	(08 Hrs.)
<p>Uses of compressed air, classification, constructional details of single stage reciprocating compressor, computation of work done, isothermal work done, isothermal efficiency, effect of clearance, volumetric efficiency, FAD, theoretical and actual indicator diagrams, method of improving volumetric efficiency. Need of multi staging, multistage compressor, work done, volumetric efficiency, condition for maximum efficiency, intercooling, actual indicator diagram</p>		
Unit-III	Gas Turbines & Jet Propulsion	(08 Hrs.)
<p>Theory and fundamentals of gas turbine, Principals, Classification, Assumption for simple gas turbine cycle analysis, Work ratio, Concepts of maximum and optimum pressure ratio, Actual cycle, Effect of operating variable on thermal efficiency, Regeneration, Intercooling. Reheating and their effect on performance, Closed cycle and Semi-Closed cycle gas turbine plant, Application of gas turbines.</p> <p>Jet Propulsion: Introduction, Theory of jet propulsion, Types of jet engines, Energy flow through jet engine, Thrust, Thrust power, Propulsive, Thermal and overall efficiency, Turbojet, Turboprop, Turbofan and Ducted fan engines, Pulse jet and Ram jet engines, Application of jet engines, Methods of thrust augmentation, Introduction to rocket engines.</p>		

Unit -IV	I. C. Engine Systems	(08 Hrs.)
<p>Fuel supply system for S.I and C.I. Engines, M.P.F.I. system for modern automobile engines, CRDI. Ignition and injection System: Battery & coil ignition system, Magneto ignition system, Electronic ignition system, Advantage over mechanical contact breaker point system. Spark-Advance Mechanisms. Engine Cooling System: Necessity of cooling system, effect of overcooling, Air cooling, Water cooling, Thermostatic radiators. Lubrication System: Mist lubrication system, Dry sump lubrication, Wet sump lubrications, Comparison between Wet sump and Dry sump systems, Oil pump Governing System: Function of Governor, Quality governing, Quantity governing, Hit & miss governing Supercharging: Objects of supercharging, Effects on performance, Limitations, Methods of supercharging & turbocharging, Limitation of turbocharging,</p>		
Unit-V	Combustion in I. C. engines	(08 Hrs.)
<p>Combustion in S. I. Engines: Valve timing Diagram for S.I. engine, Ignition Limit, Stages of combustion, Effect of engine variables on ignition lag & flame propagation, Abnormal combustion: Theories, Effects & Controlling measures, Combustion chambers for S. I. engines Combustion in C. I. Engines: Valve timing Diagram for C.I. engine, Air-fuel ratio for C.I engines, Stages of combustion, Ignition delay & factors influencing delay period, Diesel knock & its control, Combustion chambers for C. I. engines</p>		
Unit-VI	Performance Characteristics & Testing of I.C. Engines	(08 Hrs.)
<p>Introduction to Indian standards for testing of I.C. Engines, Performance characteristics, Determination of brake power, indicated power, Friction power, Methods to determine power and efficiency, Determination of break thermal efficiency, Mechanical efficiency, volumetric efficiency, Variables affecting performance of engine, Mean Effective Pressure, SFC, Air consumption, Energy balance. Engine Emission and their controls.</p>		

Term Work:

Term work shall consist of following experiments. Hand calculations must be confirmed through a computer programme using any programming language.

1. Study and demonstration of boiler mountings.
2. Study and demonstration of boiler Accessories.
3. Trial on steam power plant.
4. Test on reciprocating air compressor.
5. Performance test on rotary air compressor.
6. Trial on multi cylinder petrol engine – Morse Test.
7. Trial on multi-cylinder diesel engine.
8. Study of superchargers & turbochargers
9. Study of I. C. Engine emission norms.
10. Visit to Boiler House
11. Visit to Automobile service station.
12. Mini-Project on the contents of the syllabus

Assignment:

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Boiler performance.
2. Single and multistage reciprocating air compressors
3. Gas turbine performance
4. I C engine systems
5. I C engine combustions
6. Performance of I C engines.

Text Books

1. V. P. Vasandani and D. S. Kumar, Heat Engineering Metropolitan Book Company, New Delhi.
2. R S Khurmi and J K Gupta, Textbook of Thermal Engineering, S Chand publications.

Reference Books

1. R. K. Rajput, Thermal Engineering, Laxmi Publications
2. Y. Cengel & Boles, “Thermodynamics -An engineering approach”, Tata McGraw Hill Publications
3. S. Domkundwar, “Thermodynamics & Heat Engines” Dhanpat Rai and Sons
4. P. K. Nag, “Engineering Thermodynamics”, Tata McGraw Hill Publications
5. P. L. Ballany, “Thermal Engineering”, Khanna Publications
6. Ganesan V, “Internal Combustion Engines”, Tata McGraw Hill Publishing House
7. R. K. Rajput, “Internal Combustion Engines”, Laxmi Publications.
8. M. L. Mathur & R. P. Sharma, “A Course in I. C. Engines”, Dhanpat Rai & Sons
9. V. M. Domkundwar, “A Course in I. C. Engines”, Dhanpat Rai & Co.
10. Shrinivasan, “Automobile Engines”, Tata McGraw Hill Publishing House – CBS Publication

Project Based Learning

Following is the list of Topics for project based learning (Not Limited to) based on the syllabus contents:

1. To prepare a chart on performance testing of boilers.
2. To prepare a chart on comparison among various types of boilers.
3. To prepare a chart on comparison between open and closed cycle gas turbines.
4. To prepare a chart on comparison among various turbo machinery.
5. To prepare a chart on comparison among different types of jet engines.
6. To prepare demonstration model of ignition system.
7. To prepare demonstration model of engine cooling system.
8. To prepare demonstration model of lubrication system.
9. To prepare demonstration model of governing system.
10. To prepare a chart on different processes of combustion in IC engines.
11. Case study on different IC Engine systems used in cars available in market.
12. To prepare a chart on various performance characteristics of IC engines.

Unit Test –

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Machine Design and Analysis-I		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: -02 Hours/Week	Internal Assessment	40 Marks	
	Term Work and Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisites: -	<ol style="list-style-type: none"> 1. Computer Aided Drafting and Visualization 2. Computer Aided Machine Drawing 3. Strength of Machine Components
Course Objectives: -	<ol style="list-style-type: none"> 1. To study basic concepts of machine design. 2. To design and analysis different types of machine elements 3. To design of machine component for finite and infinite life and subjected to fluctuating load.
Course Outcomes: -	<ol style="list-style-type: none"> 1. Understand the basic concept of machine design and evaluate dimensions of simple components. 2. Understand the fundamental concepts for design of shaft, keys and coupling and evaluate forces and dimensions. 3. Understand the concept of designing of Power Screws and Mechanical spring; and analyze it for various applications. 4. Understand the basic concept of fluctuating loads and Analyze design of components under fluctuating loads. 5. Understand the concept of fasteners and threaded joints; and analyze when it is subjected to different loading conditions. 6. Understand the Design concept of welded & riveted joint; and analyze when it is subjected to different loading conditions.

Course Contents

Unit-I	Introduction to Design and Design against Static Load	(08 Hrs)
<p>Introduction to Design: Need for component design, design process, Introductions to concurrent engineering, Design consideration for casting, forging & machined parts, hot & cold worked parts and welded assembly, Introduction to design for manufacture & assembly,</p> <p>Design against Static Load: Modes of failure, Factor of safety, Service factor, stress strain relationship, shear stress & strain, stress due to bending moment, Eccentric axial loading.</p> <p>Design of simple machine parts - Cotter joint, Knuckle joint and Levers, curved beam.</p>		
Unit -II	Shafts, Keys and Coupling	(08 Hrs)
<p>Introduction, Transmission Shafts, Shaft Design on Strength Basis, Shaft Design on Torsional Rigidity Basis, ASME Code for Shaft Design, Design of Hollow Shaft on Strength Basis, Design of Hollow Shaft on Torsional Rigidity Basis, Flexible Shafts</p> <p>Keys— saddle, sunk, feather, woodruff, square, flat, Kennedy key, key design, Types of keys, splines. Couplings- types of couplings, Design of rigid and flexible couplings.</p>		
Unit-III	Power Screws and Mechanical Spring	(08Hrs)
<p>Power Screws, Forms of Threads , Multiple Threaded Screws, Terminology of Power Screw, Torque Requirement—Lifting Load, Torque Requirement—Lowering Load, Self-locking Screw, Efficiency of Square Threaded Screw, Efficiency of Self-locking Screw, Trapezoidal and Acme Threads, Collar Friction Torque, Overall Efficiency, Coefficient of Friction, Design of Screw and Nut, Design of Screw Jack, Differential and Compound Screws, Re-circulating Ball Screw.</p> <p>Mechanical Spring: Types of Springs, Terminology of Helical Springs, Styles of End, Stress and Deflection Equations, Series and Parallel Connections, Design of Helical Springs, Concentric Springs, Helical Torsion Springs, Surge in Spring, Multi-Leaf Spring, Nipping of Leaf Springs, Shot Peening</p>		

Unit-IV	Design for Fluctuating Loads	(08 Hrs)
Stress concentration factor and its Reduction, Stress concentration factor for various machine parts, Cyclic stresses, Fatigue and endurance limit, Notch sensitivity, Cumulative Damage in Fatigue, Design for finite and infinite life, Soderberg, Goodman, Modified Goodman & Gerber criteria.		
Unit-V	Threaded Joints	(08 Hrs)
Basic Types of Screw Fastening, Cap Screws & Setscrews, Bolt of Uniform Strength, Locking Devices, Terminology of Screw Threads, ISO Metric Screw Threads, Bolt under tension, Eccentrically Loaded Bolted Joints in Shear, Eccentric Load Perpendicular to Axis of Bolt, Eccentric Load on Base plate, Torque Requirement for Bolt Tightening, Dimensions of Fasteners, Design of Turnbuckle.		
Unit-VI	Welded and Riveted Joints	(08 Hrs)
Welded Joints- Welding Processes, Strength of Butt and Fillet Joints, Strength of Parallel Fillet Welds, Strength of Transverse Fillet Welds, Axially Loaded Unsymmetrical Welded Joints, Eccentric Load in the Plane of Welds, Welded Joint Subjected to Bending Moment and Torsional Moment, Welding Symbols		
Riveted Joints- Types of Rivet Heads and riveted Joints, Rivet Materials, Types of Failure, Strength Equations, Efficiency of Joint, Caulking and Fullering, Eccentrically Loaded Riveted Joint		

Term work

Term work shall consist of following experiments. Hand calculations must be confirmed through a computer programme using any programming language.

1. Symbolic representation of common machine components using Auto-CAD.
2. Design of machine components such as knuckle joint, cotter joint and lever (anyone) using CAD software.
3. Design of coupling system using CAD software.
4. Design of screw jack using CAD software.

Assignment

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. Examinations.

1. Static loading
2. Design of shafts
3. Power screw
4. Mechanical springs
5. Design of fluctuating load
6. Design of threaded joints
7. Design of welded
8. Riveted joints.

Note: Design data book should be used extensively.

Project Based Learning

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents:

1. To develop Industrial/Real life application demonstration model of different types of Joints. (Cotter joint and Knuckle joint)
2. To observe the system where transmission of power takes place through shaft, Keys, coupling, like Transmission of power from motor to pump/generator/lathe machine/drilling machine. By selecting suitable materials, design the shaft, key and coupling. To prepare design report and assembly drawing indicating overall dimensions, tolerances, and surface finish. Also to prepare bill of materials.

9. To develop a demonstration models of different types of couplings.
10. To develop a demonstration models of different types of keys.
11. To observe the system where transmission of power takes place through power Screws. (e.g. Lead screw of lathe, feed screws of machine tools, Clamping screws, Toggle Jack screw, etc.) Get the required information regarding effort, clamping force, etc., and selecting suitable materials design screw, nut and different simple components in assembly. To prepare design report and assembly drawing indicating overall dimensions, tolerances, and surface finish. Also to prepare bill of materials.
12. To develop demonstration models of different types of springs.
13. To develop demonstration models of different types of threaded joints.
14. To develop demonstration models of different types of fasteners.
15. To develop demonstration models of different types of welded joints.
16. To develop demonstration models of different types of riveted joints.

Textbooks

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Science of Engineering Materials		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: -04 Hours/Week	End Semester Examination	60 Marks	04
	Internal Assessment	40 Marks	
	Total	100 Marks	04

Course Prerequisites:-	The student should have 1. Basic knowledge of physics and chemistry 2. Basic information of engineering materials 3. Basic knowledge of manufacturing processes
Course Objectives:-	The student should acquire the knowledge of 1. The scope, objective and application of materials, engineering properties. 2. Material testing to determine the mechanical properties and its applications in mechanical systems. 3. Different methods to change the mechanical properties.
Course Outcomes:-	The students should be able to 1. Understand basics of plastic deformation, annealing, re- crystallization and apply in mechanical engineering applications. 2. Understand and evaluate different types of mechanical properties. 3. Understand and apply fundamental concept of equilibrium diagrams in selections of alloys for different applications. 4. Understand and apply the different types of heat treatment processes on steels. 5. Understand the different types of alloy steels, tool steels and stainless steels and its applications in mechanical engineering. 6. Understand the concept of powder metallurgy and apply in manufacturing of components.

Course Contents

Unit-I	Plastic Deformation, Recrystallization and Strengthening Mechanism	(08 Hrs.)
Mechanism of plastic deformation, Critical resolve shear stress, Deformation of single crystal and polycrystalline metals, Mechanism of plastic deformation at high temperature, effect of grain size, Work Hardening, Cold and hot working, Annealing and re- crystallization, strengthening Mechanism,		
Unit-II	Mechanical Testing of Metals	(08 Hrs.)
Study of destructive testing Tensile test, Engineering stress and true stress strain, evolution of properties, Numerical based Tensile test, Hardness testing such as Brinell, Rockwell, Vickers and Micro hardness test, Impact test, Fatigue test, Creep test, Cupping test, Non-Destructive testing such as Liquid dye penetrate test, Magnaflux test, Eddy current test, Ultrasonic testing and Radiography testing.		
Unit-III	Equilibrium Diagrams	(08 Hrs.)
Related terms and their definitions, Hume Ruther's rule of solid solubility, solidification, Dendritic growth, cooling curves, Plotting of Equilibrium diagrams, Lever rule, Coring, Isomorph's system, Eutectic system, Partial eutectic and eutectoid system, non-Equilibrium cooling and its effects, Fe- Fe ₃ C equilibrium diagram.		
Unit-IV	Heat Treatment of steels	(08 Hrs.)
Transformation products of austenite, Martensite transformation & characteristics of martensite, Time – Temperature Transformation curve, Critical Cooling rate, Heat treatment of steels - Annealing, Normalizing, Hardening, Hardenability, Martempering, Austempering, Retained austenite, tempering, Ausforming, Secondary hardening, Quench cracks.		

Unit-V	Cast Irons, Alloy Steels & Tool Steels	(08 Hrs.)
Classification of alloying elements, Types of cast irons, Properties of different cast irons, Effect of alloying elements on properties, Specifications of steels, Various alloy steels, Stainless steels – Classification, Applications & properties, Tool Steels – Classification, Applications & properties, heat treatment of tool steels.		
Unit-VI	Powder Metallurgy	(08 Hrs.)
Introduction, Advantages and limitations of powder metallurgy, Production of metals powder, Characteristics of powder, Powder conditioning, Powder Compacting, Hot compacting methods, Sintering and sintering furnaces, Production of powder metallurgical parts such as self-lubricating bearings, ferrites, electric contact materials, Carbide cutting tools etc		

Term Work

Term work shall consist of following experiments

1. Preparation of polystyrene/phenol-formaldehyde/urea-formaldehyde resin.
2. To determine molecular weight/radius of macromolecule polystyrene/ polyvinyl alcohol by viscosity measurement.
3. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method.
4. Study of corrosion of metals in medium of different pH.
5. Determination of rate of corrosion of aluminium in acidic and basic medium.
6. Determination of percentage of Ca in given cement sample
7. Preparation of phenol-formaldehyde resin/ urea-formaldehyde.
8. Estimation of copper in brass solution.
9. Determination of rate of corrosion of aluminium in acidic and basic medium.
10. To obtain metallic coating on base metal by using Electroplating and Electroless plating method.

Assignment

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Mechanism of Plastic deformations
2. Mechanism of recrystallizations
3. Tensile test, Hardness testing
4. calculations a phase and its percentages
5. Heat treatment of steels
6. Cast irons applications
7. Stainless steels
8. Heat treatment of tool steels
9. Production of powder productions
10. Production of powder metallurgical parts

Text Books

1. Material Science and Physical Metallurgy”, Dr.V.D. Kodgere, Everest Publication, Pune.
2. “Material science and Metallurgy”, O P Khanna, Khanna Publication, Delhi
3. “Material Science and Engineering”, R K Rajput, S K Kataria and Sons Publication, Delhi

Reference Books

1. “Physical Metallurgy”, S H Avner, Tata Micro hill Publication, Delhi
2. “Physical Metallurgy” RaghwanV, PHI Learning Pvt. Ltd, Delhi
3. Polymer Science, V. R. Gowarikar, N. V. Viswanathan, Jayadev Sreedhar, Wiley Eastern Limited

4. Polymer Science and technology (2nd Edition), P. Ghosh, Tata McGRAW Hill, 2008
5. Polymers: Chemistry & Physics of Modern Materials (2nd edition) J.M.G. Cowie, Blackie Academic & Professional, 1994.
6. Engineering Chemistry by Dr. A. K. Pahari and Dr. B. S. Chauhan, Laxmi Publications (P) Ltd, New Delhi.
7. Engineering Chemistry (16th Edition) Jain, Jain, DhanpatRai Publishing Company, 2013.

Project Based Learning

Following is the list of Topics for Project Based Learning (Not Limited to) based on the syllabus contents:

1. To develop demonstration model of crystal structure.
2. To prepare a chart on different material and its recrystallization temperatures.
3. To develop a tensile test specimen as per the standards and find its U T S and Y S
4. To find the hardness of any one component by Brinel or Rockwell hardness testing machine
5. To identify flaws and defects in different materials by any NDT methods
6. Case study on case hardening of any mechanical component
7. To perform annealing on any mechanical component
8. To perform hardening operation by either oil quenching or water quenching on any mechanical component.
9. To prepare a chart on properties of different cast irons by using microscope, hardness testing or spark testing.
10. To prepare a flowchart on processing of tool steels
11. To develop demonstrations model of manufacturing of metal powder by atomization technique
12. To develop demonstrations model of different type of powder compacting methods
13. To prepare a flow chart of production process of carbide tools, ferrites, clutch plates and elastic contact materials.
14. To prepare a flow chart of any mechanical component manufactured by powder metallurgy technique

Unit Test

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	ITC-II: Entrepreneurship Development Skills		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hours/ Week	End Semester Examination	60 Marks	03
	Internal Assessment	40 Marks	
	Total	100 Marks	03

Course Prerequisites: -	The student should have 1. Introduction to all engineering subjects 2. Passion to become entrepreneur. 3. Ambition to create employment.
Course Objectives: -	The student should 1. Acquire knowledge of behavioral sciences and to develop positive attitude. 2. Enjoy process of learning and develop habits of language skills. 3. Learn success and failure stories. 4. Acquire basic knowledge of Functional Managements and leadership lessons.
Course Outcomes: -	The students should be able to– 1. Understand and develop personality traits. 2. Understand and use communication and interpersonal skills for grooming. 3. Developing habits of life skills books its review and learnings. 4. Understand and analyze case studies of various organizations. 5. Understand basics of entrepreneurship and its allied elements. 6. Understand role of functional management and processes of running business.

Course Contents

Unit-I	Grooming Personality	(06 Hrs.)
Personality types, attitude, developing positive attitude, Effects of Personality management aptitude (PMA), Behavior of human being, under challenging conditions, qualities needed at top level, traits for top executives, enthusiasm, Nevergiveup attitude.		
Unit-II	Developing Skills	(06 Hrs.)
Communication skills, Interpersonal skills, positive reinforcement, recognition, qualities of a leader, who is leader, behavior of leader, assume infinite responsibility, requirement for professional success.		
Unit-III	Reviews and learning's from life skill books.	(06 Hrs.)
Books Review and learnings, Seven habits of highly effective people, Rich dad poor dad, Seven divine laws, Power of Positive thinking, You Can win, Leader without title, Think and grow rich.		
Unit-IV	Case Studies	(06 Hrs.)
Case studies its introduction, types of case studies its relevance and importance, format, and steps of case studies. Mrs Lata Khare, Mericom, Dangal Girl, M S Dhoni, Helen Keller. Ravindra Jain, Arunima Sinha, Study of a successful athlete, Mohammad Ali, Major Dhyanchand, leadership lessons.		
Unit-V	Entrepreneurship and its allied elements	(06 Hrs.)
Introduction to Entrepreneurship, working capital, introduction to sales, finance, risks and rewards, understand customers, how to develop market, use of social media. Types of marketing, innovation, understand statutory requirements, scaling up, managing vendors, managing employees and contractors, managing banking relations. Ways of raising fund. Understand functional management.		
Unit-VI	Functional management and business processes	(06 Hrs.)
Process of sales, Ethics in selling, Sale with integrity, Sale with honesty, law of familiarity, sale with passion and integrity, upselling and cross selling. Cash flow, definition of business, managing payables, managing commitments in tough times.		

List of Assignments

1. What are different types of personalities? What make them stand themselves different from each other? Choose one type of personality and make an analysis of your personality traits.
2. What different behavioral aspects are important to be a good leader? Analyze and prepare the design thinking model for inculcating behavioral aspects of a leader.
3. Communication is lubricant to run an organization smoothly. State your suitable reasoning in concern to the statement and prepare the model to implement it in your organization.
4. What are different interpersonal skills? why do they play significant role in developing business at peak. Elucidate with suitable examples.
5. Choose a like skills book of your choice and prepare review of it and implement the learning lessons for your business model.
6. Why do books on life skills important for a businessman? State your reasoning with appropriate examples.
7. What is meant by case studies? What is its relevance in the business world? Choose a topic from the enlisted and prepare a case study on it.
8. What is meant by Entrepreneurship? State the importance of functional management in it with suitable examples.
9. What are different business ethics and how do they help you in developing the appropriate policy for your organization?
10. Illustrate the different business process and their roles in developing a successful business.

Text Book

1. Dynamics of Entrepreneurial Development & Management -Vasant Desai Himalaya Publishing House.

Reference Books

1. Principles of Management -P. C. Tripathi, P. N. Reddy; Tata McGraw Hill, 4th Edition, 2010.
2. Entrepreneurship Development -Small Business Enterprises -Poornima M Chrestomathy Pearson Education – 2006.
3. Communication Skills by Pushpa Lata and Sanjay Kumar published Oxford University Press.
4. Developing Communication Skills By Meera Banerjee published by Oxford University Press
5. The Third Wave: An Entrepreneur's Vision of the Future (Hardcover)by Steve Case
6. Losing the Signal: The Untold Story Behind the Extraordinary Rise and Spectacular Fall of BlackBerry by Jacquie McNish
7. The 16 Personality Types: Profiles, Theory, & Type Developmentby A.J. Drenth

Project Based Learning

Following is the list of topics for project based learning (Not Limited to) based on the syllabus contents. Group of students should meet entrepreneur and complete the case studies.

1. Company history, establishment.
2. Type of Industry
3. Entrepreneur personality & his approach.
4. Behavioral aspects (leadership quality)
5. Communication skills & Interpersonal skills
6. Correlation of reference books Review and learnings, seven habits of highly effective people, Rich dad poor dad, Seven divine laws, Power of Positive thinking, You Can win, Leader without title, Think and grow rich. with respect to entrepreneur

7. How the working capital work developed
8. Functioning of Production department,
9. Marketing department
10. Financial department

Unit Test –

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Theory of Machines		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hours/ Week	End Semester Examination	60 Marks	03
Practical: - 02 Hours/Week	Internal Assessment	40 Marks	
Tutorial: - 01 Hour/Week	Term Work and Oral	50 Marks	01
	Tutorial	Internal Evaluation	01
	Total	150 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Physics and Mathematics 2. Engineering Mechanics 3. Mechanisms of Machines
Course Objectives:-	<ol style="list-style-type: none"> 1. To develop competency in understanding of theory of spur and helical gear. 2. To develop competency in different types of gear train. 3. To develop understanding of static and dynamic balancing, cam and follower, gyroscopic forces; and moments.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Understand the gear theory which will be the prerequisite for gear design. 2. Understand torque transmitting capacity in gear trains which will be the prerequisite for gear box design. 3. Apply the principles of balancing of masses to various links, mechanisms and engines 4. Understand the concept of different types of governor and its applications. 5. Analyze various types of cam and followers with different kinds of follower motion. 6. Apply the principles of gyroscopic effects and stabilization on various transport vehicles.

Course Contents

Unit-I	Spur Gears	(06 Hrs)
Classification, Spur gear: definition, terminology, fundamental law of toothed gearing, involute and cycloidal profile, path of contact, arc of contact, conjugate action, contact ratio, minimum number of teeth, interference and under cutting, Friction in gears. Helical gears: nomenclature, Center Distance		
Unit-II	Gear Trains	(06 Hrs)
Types of Gear Trains, analysis of epicyclic gear trains, Holding torque – Simple, compound and epicyclic gear trains, torque on sun and planetary gear train, compound epicyclic gear train, Bevel epicyclic Gear train. Types of gearboxes.		
Unit-III	Balancing	(06 Hrs)
Static and dynamic balancing, balancing of rotating masses in single and several planes, primary and secondary balancing of reciprocating masses, balancing in single cylinder engines, balancing in multi-cylinder in-line engines, direct and reverse cranks method -radial and V-engines.		
Unit-IV	Governors	(06 Hrs)
Introduction, Classification, Centrifugal Governor, Terminology, Watt Governor, Porter Governor, Proell Governor, Hartnell Governor, Wilson-Hartnell Governor. Sensitiveness, Stability, Isochronous, Hunting. Effort and Power of Governor, Controlling Forces, Friction and insensitiveness.		
Unit-V	Cam and Follower	(06 Hrs)
Types of cams and followers, analysis of standard motions to the follower, Determination of cam profiles for different follower motions, analysis of circular arc cam with flat face follower. Methods of control pressure angle, radius of curvature and undercutting. Jump phenomenon of Eccentric cam, Introduction to advanced cam curves (3-4-5 Polynomial cam only)		

Unit-VI	Gyroscope and Step–Less-Regulation	(06 Hrs)
<p>Gyroscopes- Gyroscopic forces and Couples, Gyroscopic stabilisation for ship and Aeroplane, Stability of four-wheel drive vehicle moving on curved path, Stability of a two-wheel vehicle.</p> <p>Continuous Variable Transmissions - Geometry, Velocity and torque analysis of Faceplate variators, Conical variators, Spheroidal and cone variators, Variators with axially displaceable cones, PIV drives. (Theoretical Treatment Only)</p>		

Term Work

Term work shall consist of following experiments. Hand calculations must be confirmed through a computer programme using any programming language.

1. To draw conjugate profile for any general type of gear tooth
2. To generate involute gear tooth profile and to study the effect of undercutting and rack shift using model.
3. To study various types of gearboxes- constant mesh, sliding mesh, synchromesh gear box, Industrial gearbox, differential gearbox.
4. To measure holding torque of the epicyclic gear train.
5. To find the percentage of slip of belt material
6. To balance a system of masses revolving in a plane on a rotating shaft on V Lab
7. To determine the effect of varying mass on the centre of sleeve in Porter and Proell Governor
8. To draw the cam profiles and study the effect of Different follower motions, and Different follower (roller) dimensions
9. To verify the gyroscopic principles.
10. Study of Continuous Variable Transmission and Infinite Variable Transmission.
11. Mini Project based on the contents of the syllabus.

Assignments

Numerical and/or theory questions on each unit from previous year question papers of GATE/ESE Mechanical Engg. examinations.

Tutorial

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Spur Gears
2. Gear Trains
3. Balancing
4. Gyroscope
5. Cam and Follower
6. Governors

Reference Books

1. Thomas Bevan, “Theory of Machines”, CBS Publishers & Distributors, Delhi.
2. Shigley J.E. and Uicker J.J., “Theory of Machines and Mechanisms”, McGraw Hill, Inc.
3. Ghosh Amitabh and Malik A.K., “Theory of Machines and Mechanisms”, East-west Press.
4. Hall A.S., “Kinematics and Linkages Design”, Prentice-Hall.
5. Hartenberg and Denavit, “Kinematic Analysis and Synthesis of Mechanisms”.
6. Erdman, A. G. & Sandor, G.N., “Mechanism design, Analysis and synthesis”, Vol 1, Prentice – Hall of India.

Text Books

1. Rattan S. S., “Theory of Machines”, Tata McGraw Hill.
2. Ballaney P. L., “Theory of Machines”, Khanna Publishers, Delhi.
3. R. S. khurmi, “Theory of Machines’, S Chand Publication.

Project Based Learning

Following is the list of topics for project-based learning (Not Limited to) based on the syllabus contents:

1. To prepare a chart on comparison among different types of gears
2. To prepare a chart to understand various terminology of spur gear.
3. To prepare a chart to understand different methods to avoid interference in spur gear.
4. To develop a mechanical system using simple gear train.
5. To develop a mechanical system using compound gear train.
6. To develop a mechanical system using reverted gear train.
7. To develop a mechanical system using epicyclic gear train.
8. To prepare a chart comparison among different types of gear trains.
9. To develop demonstration model of static and dynamic balancing systems.
10. To develop demonstration model of balancing of rotating masses.
11. To develop demonstration model of balancing of reciprocating masses.
12. Case study on real life applications of various types of governors.
13. To develop demonstration model of a Watt Governor/Portal Governor/Proell Governor.
14. To prepare a chart on comparison among different types of governors.
15. To prepare a chart to understand various terminology of Cam profile.
16. To prepare a chart on comparison among different types of followers.
17. To prepare a chart on comparison among different types of follower motions.
18. To develop demonstration model on real life applications of gyroscopic effect such as Ship, aeroplane, automobile, etc.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Solid Modelling		
Teaching Scheme:	Examination Scheme		Credits Allotted
Practical:- 04 Hours/Week	Term Work and Practical	50 Marks	02
	Total	50 Marks	02

Course Prerequisites: -	1. Computer Aided Drafting and Visualisation 2. Computer Aided Machine Drawing
Course Objectives: -	1. To introduce students to the basic concepts of CAD modelling. 2. To develop the skills in Reading and Interpretation of Engineering Drawings. 3. To familiarize students with SolidWorks Software to Create 2D and 3D model, Assembly, Drafting and Sheet metal modelling.
Course Outcomes: -	The students will be able to 1. Understand the concepts of CAD modelling. 2. Creating 3D machine components using SolidWorks Software. 3. Creating Assembly of machine components using SolidWorks Software. 4. Creating surface model of Automobile Components using SolidWorks Software. 5. Creating detail drawing and generating Bill of Material using SolidWorks Software. 6. Understand the basic concepts of Sheet metal Modelling and Create a machine component using SolidWorks Software.

Course Contents

Unit-I	Introduction to CAD	(08Hrs.)
Introduction to CAD and CAE Features of SolidWorks, Various products available in SolidWorks for Product Design, Simulation, Communication SolidWorks Graphical User Interface - Feature manager design tree, Callouts, Handles, Confirmation corner, mouse buttons, keyboard shortcuts, Command Manager. Sketch Entities, Sketch Tools, Block, Relation and Dimensioning		
Unit-II	Basic Part Modelling	(08 Hrs.)
Part Modelling Tools, Creating Extrude features, Creating Revolve features, Creating Swept features, Creating Loft features, Creating Reference, Creating curves, Fillet features, Inserting Hole types, Creating Chamfer, Shell, rib, pattern and advanced modelling tools.		
Unit-III	Assembly Modelling	(08 Hrs.)
Introduction to Assembly Modelling & Approaches, Applying Advanced Mates and Mechanical Mates, Manipulating Components, Creating Pattern, Creating Explode Views.		
Unit-IV	Surface Modelling	(08 Hrs.)
Surface Modelling tools Creating Extrude, Revolve, Swept, loft, Boundary surface. Inserting Planar Surface, Offset Surface, Radiate Surface. Extending a surface, Surface fill, Ruled Surface, Trimming Surface, Mid surface, Replace Face, Delete face, Un-trim surface, Knit surface, Thickening a Surface, Move Face.		
Unit-V	Drafting of Mechanical Systems	(08 Hrs.)
Generating Views, Creating Dimensions, Inserting Annotations and Bill of Materials.		
Unit-VI	Sheet Metal Modelling	(08 Hrs.)
Constructing the base flange and miter Flange, addition of an Edge Flange, closing corner, Adding Jog, Unfolding the bends, Adding hem and vent.		

Term Work

Term work shall consist of A-3/A4 size printouts of the problems solved in practical's using Solid Works Software.

1. Sketcher drawings
2. Part modelling
3. Parametric Modelling
4. Assembly Modelling
5. Exploded view of Assembly
6. Surface Modelling
7. Drafting of Mechanical Systems
8. Sheet metal modelling

Text Books

1. Kuang-Hua Chang, “Motion Simulation and Mechanism Design with SOLIDWORKS Motion 2018”, SDC Publishers, 2018

Reference Books

1. Ibrahim Zeid and R. Siva-Subramaniam – “CAD/CAM- Theory and Practice”, Tata McGraw Hill, Publishing Co. 2009.
2. Rao P. N., “CAD/CAM”, Tata McGraw Hill.
3. Foley, Van Dam, Feiner and Hughes, “Computer Graphics Principles and Practice”, Second edition, Addison–Wesley, 2000.
4. Martenson, E. Micheal, “Geometric Modelling”, John Wiley & Sons, 1995.
5. Ronald E. Barr, DavorJuricic, Thomas J. Krueger, “Engineering & Computer Graphics Workbook Using SolidWorks 2014”, SDC Publication, 2014.
6. John Willis, Sandeep Dogra, “SOLIDWORKS 2019: A Power Guide for Beginners and Intermediate User”, published by CADArtifex, 2019.

End Semester Practical/Oral examination:

1. Practical examination duration is Two hours, based on the Term work.
2. Questions provided for practical examination should contain minimum five and not more than ten parts.
3. Evaluation of practical examination to be done based on the performance of students work in laboratory.

***Oral examination should also be conducted to check the knowledge of conventional and SolidWorks drawing.**

Designation of Course	Python Programming-II		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical:- 04 Hours/ Week	Term Work and Practical	50 Marks	02
	Total	50 Marks	02

Course Prerequisites:-	1. Soft Computing I 2. Soft Computing II 3. Python Programming-I
Course Objectives:-	The students should be able to 1. Readily use the Python filehandling 2. Apply array to solve engineering problems. 3. Understand data visualization techniques
Course Outcomes:-	Students will be able to 1. Understand file handling. 2. Understand concept of arrays. 3. Understand array manipulation. 4. Understand and Apply random numbers. 5. Understand matplotlib modules. 6. Understand and Apply visualization techniques

Course Contents

Unit -I	Python Files	(08 Hrs.)
Python File I/O, Directory and Files Management, Errors and Built-in Exceptions, Exception Handling Using try, except and finally statement, Custom Exceptions		
Unit -II	NumPy Array	(08 Hrs.)
Create a NumPy ndarray Object, Dimensions in Arrays, 0-D Arrays, 1-D Arrays, 2-D Arrays, 3-D arrays, Access Array Elements, Access 2-D Arrays, Access 3-D Arrays, Negative Indexing		
Unit -III	NumPy Slicing Arrays	(08 Hrs.)
Array Slicing, slicing 2-D Arrays, Shape of an Array, Array Reshaping, Iterating Arrays, Iterating 2-D Arrays, Joining NumPy Arrays, Splitting NumPy Arrays, Sorting Arrays		
Unit -IV	NumPy Random	(08 Hrs.)
Pseudo Random and True Random, Generate Random Number, Generate Random Float, Generate Random Array, Generate Random Number from Array, Normal Distribution, Visualization of Normal Distribution, Binomial Distribution, Poisson Distribution, Uniform Distribution, Exponential Distribution		
Unit -V	Matplotlib	(08 Hrs.)
Install matplotlib, Pyplot API, Figure Class, Axes Class, Multiplot, Subplots () Function, Formatting Axes, Setting Limits, Setting Ticks and Tick Labels		
Unit -VI	Two Dimensional and Three-Dimensional Visualization	(08 Hrs.)
Bar Plot, Histogram, Pie Chart, Scatter Plot, Pie Chart, Contour Plot, 3D Contour Plot, 3D Wireframe plot, 3D Surface plot		

Term Work

1. Read and write given text file (1 exercises)
2. Python NumPy Exercise (2 exercises)
3. Practice NumPy questions such as Array manipulations, numeric ranges, Slicing, indexing, Searching, Sorting, and splitting, and more.
4. Random Data Generation Exercise (2 exercises)
5. Practice and Learn the various techniques to generate random data in Python.

6. Python Matplotlib Exercise (3exercises)
7. Practice Data visualization using Python Matplotlib. Line plot, Style properties, multi-line plot, scatter plot, bar chart, histogram, Pie chart, Subplot, stack plot.

Designation of Course	Vocational Course I: Automobile Servicing- I		
Teaching Scheme	Examination Scheme		Credits Allotted
	Term Work and Oral	50 Marks	02
	Total	50 Marks	02

Course Prerequisites:	1. Basic knowledge of automobile engineering and servicing
Course Objectives: -	<ol style="list-style-type: none"> To perform skilled mechanical work in diagnosing, repairing and maintaining all major vehicle systems of four-wheeler To provide knowledge on automotive industry and job-related activities as an automotive service technician. To work safely and responsibly within all shop standards and environmental guidelines.
Course Outcomes: -	<ol style="list-style-type: none"> Understand and apply different types of tools and workshop equipment in the workshop for servicing. Understand and apply dismantle and reassemble of engines, cooling and transmission of different vehicles Understand and apply dismantle and reassemble of fuel supply system, Steering Mechanism, Wheel Balancing and Wheel Alignment. Understand and apply dismantle and reassemble of Battery, Ignition and Starting System Understand and apply dismantle and reassemble of Tyre Repairer/Inspection, Auto Body Repair, Denting & Painting Understand and apply overhaul of electrical wire harness, lighting, ignition, electronic and air-conditioning systems etc.

Course Contents

Unit-I	Introduction to Four-wheeler Servicing:	(08 Hrs.)
<p>Familiarization of workshop manual. Practice on how to read job-card. Identification of different types of vehicle. Identification of Vehicle Identification Number, Chassis no. & Engine no identification of different types of engine components, Lubrication and Maintenance Schedule</p> <p>Necessity for routine maintenance, Importance of service manuals, Specification of engines- petrol and diesel vehicles(a) Engine (b) Clutch (c) Gear Box (d) Propeller shaft (e) Universal joints (f) Differential (g) Axles and hubs (h) Suspension system (i) Steering system (j) Tyre (k) Chassis (l) Brake-drum and disc Battery (m) Self-starter (n)Dynamo, Checking of compression and vacuum, Car wash – before & after servicing using different types of nozzles Check / replenish / top up – lubricating oil, engine coolant, power steering hydraulic oil, wind screen wiper water. Replace – air cleaner, oil filter & fuel filter Apply Grease to parts / through greasing points (if necessary).</p>		
Unit-II	Engine Servicing, Cooling and Power Transmission	(08 Hrs.)
<p>Engine Service: Introduction, Engine removal, cylinder head, Valve and Valve mechanism, piston connecting rod assembly, cylinder block, crankshaft and main bearing, engine reassembly.</p> <p>Engine tuning: Meaning and scope of engine tuning. Necessity of engine tuning, Engine analysis and tuning with the help of diagnostic computer, Diesel engine injection timing checking.</p> <p>Engine cooling systems: Necessity, Methods of cooling, Radiator, Cooling system trouble shooting.</p> <p>Power Transmission: Remove & refit vehicle body parts (bonnet, front bumper & door) Check / replenish/top up brake fluid, transmission oil. Adjust Hand brake and replace hand brake cable Adjust clutch and brake pedal plays Replace propeller shaft, wheel hub bearings & brake pads.</p>		

Unit-III	Engine Fuel Supply System, Steering, wheel Balancing and Alignment	(08 Hrs.)
<p>Petrol and Diesel Engine Fuel Supply System: Fuel Supply Systems, Fuel pump, Fuel injection, Fuel pump testing, troubleshooting and service, Fuel supply system troubleshooting, Fuel filters and air cleaners. Maintenance Schedule of diesel engine fuel injector, hot plugs, rotary and reciprocating type of fuel injection pump, fuel injection pump of single cylinder engines, hoses & pipelines, priming unit, tanks. Front Axle and Steering: Introduction, Front axle, steering geometry, Steering mechanism, power steering, steering adjustment, Steering trouble shooting. Wheel Balancing: Remove tyre from vehicle. Check tyre & rim and check for run out. Fit the tyre assembly to the vehicle. Wheel Alignment: Check tyres, ride height, wheel bearings, ball joints, control arms bushings and sway bars, shock absorbers, struts & power steering. Identify components, brief working principle & operation of computerized wheel aligner Procedure to make the aligner ready to check wheel alignment. Procedure for taking readings, interpreting alignment readings and rectify steering geometry with wheel aligner – take a printout. Procedures for test drive to confirm the repairs.</p>		
Unit-IV	Battery, Ignition and Starting System	(08 Hrs.)
<p>Battery and Ignition System: Remove and refit head lamp assembly. Check power plug and inspect H.T. cables Clean, Check and Adjust spark plug Cleaning and topping up of a lead acid battery, testing battery with hydrometer, battery tester, connecting battery to a charger for battery charging. Starting System: Starting motor, Starting drives, Electronic starter control, idea of engine starting-system circuit. Testing the starting system and troubleshooting. Ignition System: Idea of Battery-and-coil ignition circuit and its working. Compression ignition of diesel engines.</p>		
Unit-V	Tyre Repairer/Inspection, Auto Body Repair, Denting & Painting	(08 Hrs.)
<p>Tyre Repairer/Inspection: Removal & re-fitting of wheel from light & heavy vehicle. Measurement of tread wear. Dismantling tyre & tube, checking puncture, assembling, inflate it to correct pressure. Vulcanizing of tubes & tyres. Repair tubeless tyre puncture. Air inflation with nitrogen gas inflator according to the manufacturer's recommendation. Practice on Tyre rotation as per vehicle manufacturers recommendation. Auto body repair: Identification of different types of body, chassis and drive lines, Identification of location of parts and panels, Practice on operating the air compressor, Practice on periodical maintenance of air compressor Inspect and decide whether it can be repaired or replaced Remove and refit body panels, doors, floors, wheel boxes and fenders Practice on removing and refitting wind shield glasses. Auto body painting: Consumable's clothing safety, Practice on removing paint from the damaged area Practice on mixing and applying body filler Practice on sanding (block) Practice on mixing and applying putty Practice on applying primer Practice on feather edge sanding and masking Base coat application Surface cleaning and degreasing Second and third coat application Preheating the vehicle and cooling Cutting, scuffing, rubbing and polishing.</p>		
Unit-VI	Modern Electric and Hybrid Vehicles	(08 Hrs.)
<p>Introduction to electric and hybrid electric vehicles, History of hybrid and electric vehicles, Social and environmental importance of electric and hybrid electric vehicles, Electrical basics, Motor and generator basics, Electric and Hybrid Electric Drive Trains Basic concept of electric and hybrid traction, Introduction to various electric and hybrid electric drive train topologies, Advantages, and disadvantages. Power Flow: Power flow control in electric and hybrid electric drive train topologies. Electric Drive Components: Electric drive components used in electric and hybrid vehicles, Electric motor requirements, Direct Current (DC) motors (Brushed and Brushless), Power converters, Drive controllers.</p>		

List of Experiments-

1. To Follow standard operating procedures for using workshop tools and equipment for fault diagnosis or troubleshoot problem in a vehicle.
2. To Understand the auto component manufacturer specifications related to the various components/ aggregates in the vehicle (including major aggregates like engine. gear box, transmission systems propeller shaft etc.)

3. To Service, repair and overhaul of steering system.
4. To Service, repair and overhaul of suspension system.
5. To Service, repair and overhaul of tyres.
6. To Service, repair and overhaul of wheels.
7. To Service, repair and overhaul diesel Engines and its fuel system.
8. To Service, repair and overhaul petrol Engines and its fuel system.
9. To Service, repair and overhaul of cooling system and radiator
10. To Service, repair and overhaul of emission and exhaust system.
11. To Service, repair and overhaul of gearbox, drive-train assembly, and transmission systems (manual, automatic etc.)
12. To Service, repair and overhaul of brake system.
13. To Service, repair, and overhaul of clutch assembly.
14. Repair and overhaul of electronic control unit
15. To Repair and overhaul of electrical wire harness, lighting, ignition, electronic and air-conditioning systems etc.

Text Books

1. Automobile Mechanics, A.K. Babu, S.C.Sharma, T.R. Banga, Khanna Publishing House

Reference Books

1. Automobile Engineering by Kirpal Singh Standard Publishers Distributors.
2. Automotive Engines, A.K. Babu, Khanna Publishing House

Bharati Vidyapeeth
(Deemed to be University), Pune, India
College of Engineering, Pune
Department of Mechanical Engineering

Vision of the Department

To develop high quality Robotics and Automation Engineers through dynamic education to meet social and global challenges

Mission of the Department

- To provide extensive theoretical & practical knowledge to the students with well-equipped laboratories & ICT tools through motivated faculty members
- To inculcate aptitude for research, innovation and entrepreneurial qualities in students
- To acquaint students with ethical, social and professional responsibilities to adapt to the demands of working environment.

Name of Programme: B. Tech. Robotics and Automation Engineering

Programme Educational Objectives (PEOs)

- To fulfill need of industry and society with theoretical & practical knowledge
- To perform research, innovation, lifelong learning and continued professional development
- To fulfill professional ethics and social responsibilities

Programme Outcomes (POs)

The graduates will be able to

- a.* apply knowledge of mathematics, science and engineering fundamentals for solving complex engineering problems
- b.* identify the need, plan and conduct experiments, analyze data for improving the mechanical processes.
- c.* design and develop mechanical systems considering social and environmental constraints.
- d.* design and develop a complex mechanical system using research based knowledge, advanced mathematical, statistical tools and techniques.

- e.* use information technology (IT) tools for prediction and modeling of routine activities to enhance the work performance.
- f.* know social responsibilities while doing professional engineering practices.
- g.* familiarize with eco-friendly, sustainable and safe working environment.
- h.* take into account professional ethics while designing engineering systems.
- i.* work efficiently as a group leader as well as an individual.
- j.* communicate in written and verbal form with subordinates and supervisors.
- k.* apply project and finance management techniques in multidisciplinary environments.
- l.* take interest in higher education and update the knowledge.

*End Sem. Examination of 4 Hrs.; #: Based on TW & internal oral examination

Designation of Course	Linear Algebra, Calculus and Complex Variables		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Tutorial: - 01 Hours/ Week	Internal Assessment	40 Marks	
	Tutorial		01
	Total	100 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Students should have knowledge of basic algebra. 2. Students should have knowledge of vector algebra. 3. Students should have knowledge of complex numbers.
Course Objectives:-	<p>To provide knowledge about</p> <ol style="list-style-type: none"> 1. Rank, consistency of system of equations and partial differentiation. 2. Vector differentiation and vector integration. 3. Function of complex variable.
Course Outcomes:-	<p>On completion of the course, students will be able to–</p> <ol style="list-style-type: none"> 1. Understand rank of matrix and apply it test consistency of linear system. 2. Understand the partial derivative and evaluate indeterminate forms. 3. Understand vector differential operator and vector identities. 4. Understand line, surface and volume integrals and apply it evaluate to work done. 5. Understand the analytic functions. 6. Understand Taylors and Laurentz series.

Course Contents

Unit-I	Linear Algebra: Matrices	(08 Hrs.)
Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering		
Unit-II	Partial Differentiation and Indeterminate forms	(08 Hrs.)
Functions of two or more variables, Partial derivatives, Homogeneous functions, Euler's theorem, Total derivative, Change of variables. Indeterminate forms: L' Hospital's Rule, Evaluation of Limits		
Unit-III	Vector Differential Calculus	(08 Hrs.)
Physical interpretation of Vector differentiation, Vector differential operator, Gradient, Divergence and Curl, Directional derivative, Solenoidal, Irrotational and Conservative fields, Scalar potential, Vector identities.		
Unit-IV	Vector Integral Calculus and Applications	(08 Hrs.)
Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence theorem, Stoke's theorem. Applications to problems in Fluid Mechanics, Continuity equations, Streamlines, Equations of motion, Bernoulli's equation.		
Unit-V	Complex Variables	(08 Hrs.)
Function $f(z)$ of complex variable, limit, continuity and differentiability of $f(z)$, Analytic function, necessary and sufficient conditions for $f(z)$ to be analytic (without proof), Cauchy-Riemann equations in cartesian coordinates (without proof) Milne-Thomson method to determine analytic function $f(z)$ when realpart (u) or Imaginary part (v) or its combination ($u+v$ or $u-v$) is given. Harmonic function, Harmonic conjugate and orthogonal trajectories.		
Unit-VI	Complex Integration	(08 Hrs.)
Line Integral, Cauchy's Integral theorem for simple connected and multiply connected regions (without proof), Cauchy's Integral formula (without proof). Taylor's and Laurent's series (without proof). Definition of Singularity, Zeroes, poles of $f(z)$, Residues, Cauchy's Residue Theorem (without proof).		

Assignments:

Problems and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Linear algebra: matrices
2. Partial differentiation and indeterminate forms
3. Vector differential calculus
4. Vector integral calculus and applications
5. Complex variables
6. Complex integration

Tutorials:

Problems and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Matrix algebra and system of linear equations.
2. Eigen values and eigenvectors.
3. Partial differentiation.
4. Indeterminate forms.
5. Fourier series; gradient, divergence, and curl.
6. Directional derivative, scalar potential and vector identities.
7. Line, surface and volume integrals.
8. Application of Gauss, Stokes and Green's theorems.
9. Analytic functions, Cauchy-Riemann equations.
10. Limit continuity and differentiability.
11. Cauchy's integral theorem and integral formula.
12. Taylor and Laurent series.

Text Books

1. P. N. Wartikar and J. N. Wartikar, "Applied Mathematics (Volumes I)", 7th Ed., Pune Vidyarthi Griha Prakashan, Pune, 2013.
2. P. N. Wartikar and J. N. Wartikar, "Applied Mathematics (Volumes II)", 7th Ed., Pune Vidyarthi Griha Prakashan, Pune, 2013.

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

Students are expected prepare report on any one topic, write its definition, applications and analyze the hypothetical data. Also, write pseudo code for it, wherever applicable.

1. System of linear equations solution
2. Rank of matrix
3. Total derivative
4. L' Hospital's Rule
5. Dimension and basis
6. Curl and divergence
7. Work done
8. Gauss divergence theorem

9. Stokes theorem
10. Eigen values and Eigen vectors
11. Bernoulli's equation
12. Cauchy-Riemann equations in detail
13. Harmonic conjugate and orthogonal trajectories
14. Cauchy's Integral formula
15. Cauchy's Residue Theorem

Unit Test-

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Waves and Solid State Physics		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	03
Practical:- 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	04

Course Prerequisites:-	Students are expected to have a basic understanding of physics and calculus.
Course Objective	1. To impart knowledge of basic concepts in physics relevant to engineering applications in a broader sense with a view to lay foundation for the Mechanical Engineering.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Infer the wave nature of light and apply it to measure stress, pressure and dimension etc. 2. Summarize the structure and properties of lasers to their performance and intended applications. 3. Explain mechanical properties of solid matter, and connect to applications in the field of engineering. 4. Use the knowledge of nanoscience to develop new materials with tunable properties. 5. Use analytical instruments for understanding the nanomaterials. 6. Interpret the superconductivity and perfect diamagnetism, and give a qualitative description of the Meissner effect and its applications.

Course Contents

Unit-I	Wave Optics	(06 Hrs)
<p>Interference- Interference of waves, interference due to thin film (Uniform and non-uniform), Applications of interference (optical flatness, interference filter, non-reflecting coatings).</p> <p>Diffraction- Introduction, Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Plane diffraction grating, Conditions for principal maxima and minima.</p> <p>Polarisation - Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism.</p>		
Unit-II	Lasers	(06 Hrs.)
Principle of laser, Einstein's coefficients, Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Single Hetro-junction laser, Gas laser: CO ₂ laser, Properties of lasers, Laser speckles, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.		
Unit-III	Solid State Physics	(06 Hrs.)
Free electron theory, Density of states, Bloch theorem (Statement only), Origin of band gap, Energy bands in solids, Effective mass of electron, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.		
Unit-IV	Nano-science	(06 Hrs.)
Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles (Physical and chemical), synthesis of colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications, quantum dots – wide band semiconductors, direct/indirect band gap semiconductors.		

Unit-V	Analytical Instruments	(06 Hrs.)
Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatics focusing, Electron sources, Wavelength and resolution, Specimen limitation, Depth of field and focus, Transmission electron microscope (TEM), Scanning electron microscope (SEM), Field emission scanning electron microscope (FESEM), X-ray Spectroscopy, Energy Dispersive X-ray Spectroscopy(EDS), Atomic force microscopy(AFM), X-ray diffraction(XRD), Bragg's law, Powder X-ray diffraction.		
Unit-VI	Smart Materials and Superconductors	(06 Hrs)
Introduction to smart materials, active smart polymers, shape memory alloys, Electro and Magneto Rheological Fluids, Introduction to composites, types of composites. Introduction to superconductivity; Properties of superconductors: zero electrical resistance, critical fields, persistent current, Meissner effect - Type I and Type II superconductors, Low and high temperature superconductors (introduction and qualitative)		

Term Work:

Practical (Any Eight of the Following)

1. Determination of radius of plan convex lens/wavelength of light/Flatness testing by Newton's rings
2. Determination of wavelength of light using diffraction grating
3. Determination of resolving power of telescope
4. Determination of thickness of a thin wire by air wedge
5. Determination of refractive index for O-ray and E-ray
6. Determination of divergence of a laser beam
7. Particle size by semiconductor laser
8. Determination of wavelength of laser by diffraction grating
9. To study Hall effect and determine the Hall voltage
10. Calculation of conductivity by four probe method
11. Study of solar cell characteristics and calculation of fill factor
12. Determination of band gap of semiconductor
13. Synthesis of metal oxide nanoparticles (ZnO/ZnS/Gold)
14. UV-VIS spectra of synthesized semiconductor nanoparticles
15. To determine the velocity of sound
16. Measurement of average SPL across spherical wave front and behavior with the distance
17. Expansion chamber muffler: investigation of muffler response as a filter in the low frequency approximation by determining insertion loss.
18. Interference of sound using PC speakers
19. Determination of velocity of sound in liquid by ultrasonic interferometer
20. Ultrasonic probe - a study
21. Mini-project based on contents of syllabus.

Assignments

Six assignments to be given by the subject teacher (Theory)-one from each unit/one mini project with report-students can work in group of 4 Maximum

Text Books

1. A Textbook of Engineering Physics, M N Avadhanulu, P G Kshirsagar and TVS Arun Murthy, S. Chand Publishing (2018)
2. Engineering Physics, R K Gaur and S L Gupta, Dhanpat Rai Publishing Co Pvt Ltd (2015)
3. Concepts of Modern Physics, Arthur Beiser, Shobhit Mahajan and S. Rai Choudhury, McGraw Hill Education (2017)

Reference Books

1. Fundamentals of Physics, Jearl Walker, David Halliday and Robert Resnick, John Wiley and Sons (2013)
2. Optics, Francis Jenkins and Harvey White, Tata Mcgraw Hill (2017)
3. Principles of Physics, John W. Jewett, Cengage publishing (2013)
4. Introduction to Solid State Physics, C. Kittel, Wiley and Sons (2004)
5. Principles of Solid State Physics, H. V. Keer, New Age International (1993)
6. Laser and Non-Linear Optics, B. B. Laud, New Age International Private Limited (2011)
7. Nanotechnology: Principles and Practices, Dr. S. K. Kulkarni, Capital Publishing Company (2014)
8. Science of Engineering Materials- C.M. Srivastava and C. Srinivasan, New Age International Pvt. Ltd. (1997)
9. Introduction to Electrodynamics –David R. Griffiths, Pearson (2013)
10. Renewable Energy: Power for a Sustainable Future, Boyle, Oxford University Press (2012)

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. Measurement and effect of environmental noise in the college
2. Construction and application of heat sensor in process control
3. Design and simulation of automatic solar powered time regulated water pumping
4. Solar technology: an alternative source of energy for national development
5. Double pendulum and its application
6. The study on the effect of length on the resistance of a copper wire (verification of ohms law r directly proportional to l)
7. Comparison of various method used in measuring the gravitational constant g
8. Design and construction of digital distance measuring instrument
9. Electric power generation by road power
10. Study of vibration of bars
11. Determination of absorption coefficient of sound absorbing materials
12. Quantum confinement effect in wide band semiconductors
13. Tesla Coil
14. Thin film interference in soap film-formation of colours
15. LiFi- wireless data transfer system using light

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Electrical Engineering Systems		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	05

Course Prerequisites: -	Students should have basic knowledge of Physics, Chemistry and Mathematics
Course Objectives: -	1. The course introduces fundamental concepts of DC and AC Circuits, Electrical Measurement, Transformers, Induction Machines, DC Machines, Basics of power transmission, distribution & safety measures.
Course Outcomes: -	<ol style="list-style-type: none"> Understand and apply knowledge of Basic laws and network theorems to solve electrical networks Understand and apply knowledge of AC Circuits, Switch gear and electrical measuring instruments Understand and apply fundamental concept of magnetic and electromagnetic circuits for operation of Transformers Understand AC motors, it's control techniques for various mechanical engineering applications Understand DC motors, it's control techniques for various mechanical engineering applications Understand working of Transmission, Distribution of power use of safety rules.

Course Contents

Unit-I	DC Circuit Analysis	(08 Hrs.)
Circuit Concepts: Concepts of network, Active and passive elements, voltage and current sources, concept of linearity and linear network, unilateral and bilateral elements, R, L and C as linear elements, source transformation. Kirchhoff's laws; loop and nodal methods of analysis; star-delta transformation.		
Unit-II	AC Circuits and Switch Gear	(08 Hrs.)
Representation of sinusoidal waveforms, peak and RMS values, Phasor representation of AC quantities, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), Series and parallel resonance. Three phase balanced circuits, voltage and current relations in star and delta connections, Power measurement in three phase circuits.		
Unit-III	Network Theorems and Electrical Measurement	(08 Hrs.)
Network Theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (simple numerical problems). Electrical instruments such as wattmeter, energy meter, tong-tester, megger and power analyzer. Introduction to LT Switchgear, NO and NC Contacts, Contactors, relay, timers, use in control panel, application in interlocking and protection, symbols.		
Unit-IV	Induction Machines	(08 Hrs.)
Phase induction motor: Construction, types, rotating magnetic field, principle of operation, slip, frequency of rotor current, rotor EMF, rotor current, expression for torque, conditions for maximum torque, torque slip characteristics, starting torque in squirrel cage and slip ring motors, effect of change in supply voltage on torque, slip and speed, relation between full load torque and maximum torque, Power stages in induction motor, vector diagram and equivalent circuit, circle diagram, construction and calculation, speed control of 3 phase motor, starting methods for 3 phase induction motor.		

Single phase motor: Double revolving field theory, starting methods, no load and block rotor test, equivalent circuit, types of single-phase motor. Servomotor: Servomotor, construction, types, working, characteristics, application in automation and robotics.		
Unit-V	DC Machines	(08 Hrs.)
<p>DC Generator: Construction features, emf equation of dc generator, methods of excitation, losses condition for maximum efficiency, armature reaction, interpoles and compensating winding, commutation, methods of improving commutation, characteristics of separately excited and self excited dc generator.</p> <p>DC Motor: Working principle, voltage equation, condition for maximum power, characteristics, operating characteristics of dc motor, torque developed, starting, 3 point and 4 point starter, speed control methods, Swinburn's and break test of dc shunt motor.</p>		
Unit-VI	Basic of Power transmission and distribution, Safety Measures	(08 Hrs.)
<p>Classification of transmission lines, transmission line parameters, ABCD constants, Voltage regulation, Ferranti effect, efficiency of transmission line. 3-phase 3-wire and 3-phase 4-wire distribution system, feeders, distributors, main lines, comparison of various distribution systems, load power factor improvement techniques. Safety measures in electrical system, basic principles of earthing-types of earthing.</p>		

List of Assignments:

The students will be given total **twelve** assignments (Two assignments on each Unit respectively).

1. DC Circuit Analysis
2. Network Theorems
3. AC Circuits and Switch Gear
4. Electrical Measurement
5. Single Phase Transformer
6. Three Phase Transformer
7. 3 Phase induction motor
8. Single phase motor
9. DC Generator
10. DC Motor
11. Power transmission and distribution
12. Safety Measures

List of Experiments:

Note: Term work shall consist of Minimum **Eight** Experiments from the following list.

1. Plotting B-H characteristics for a material
2. Verification of Kirchhoff's Laws
3. Verification of Superposition Theorem
4. Verification of Thevenin's Theorem
5. Verification of Maximum Power Transfer Theorem
6. Study of R-L series, R-C series, R-L-C series circuit
7. Time response of R-L series and R-C series circuit
8. Verification of voltage and current relationships in star and delta connected 3-phase networks
9. Single lamp controlled by two different switches (staircase)
10. Two lamps controlled independently from two different switches (parallel)
11. Series connected lamps
12. Study of Electricity bill(Industrial / commercial)
13. Direct loading tests on single phase transformer
14. Mini-project based on contents of syllabus.

Text Books

1. Basic Electrical Engineering - D. P. Kothari, J Nagarath (TMC)

Reference Books

2. Electrical Technology - Edward Huges (Pearson)
3. Electrical power system technology - S. W. Fordo, D. R. Patric (Prentice Hall)
4. Principles of Electronics-Dr. H. M. Rai (SatyaPrakashan)
5. Electronic Devices and Circuit Theory- R. L. Boylestad and L. Nashelsky (PHI)
6. Electrical, Electronics Measurements and Instruments - (SatyaPrakashan)

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. Development of practical kit for verification of Thevenin's theorem.
2. Development of practical kit for verification of Superposition theorem.
3. Development of practical kit for verification of Maximum power transfer theorem
4. Development of practical kit for verification of Norton's theorem.
5. Development of practical kit for study of R-L-C Series circuit.
6. Development of practical kit for study of R-L-C parallel circuit.
7. Development of practical kit for study of voltage and current relationships in star connected network.
8. Development of practical kit for study of voltage and current relationships in delta connected network.
9. Demonstration of single-phase transformer application for practical application.
10. Demonstration of transformer operation and testing by using professional software.
11. Development of Smart Energy meter using GSM
12. Demonstration of Safety measures in electrical system.
13. Case studies on – Learning industrial Safety through films/Videos
14. Case studies on – Learning industrial Safety through posters/charts
15. Demonstration of types of earthing.

Unit Tests

Unit Test-I	Unit-I,II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Computer Aided Drafting & Visualization		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/Week	Internal Assessment	40 Marks	
	Term Work & Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisites: -	Fundamentals of Mathematics
Course Objectives: -	<ol style="list-style-type: none"> To understand the basic principles of engineering drawing and highlight the importance of Computer Aided Drafting in engineering. To develop the graphical skills for communication of concepts & idea through technical drawings.
Course Outcomes:-	<ol style="list-style-type: none"> Understand the fundamental concepts of CAD Drawing, its applications, different types of lines, curves and dimension technique with practical application. Understand the concept of Orthographic projections and apply it to draw detail views by using 1st angle projection method. Understand the concept of isometric projection and apply it to construct 3D view of a component. Understand the concept of projections of Point, Line and plane; and apply to draw its projection by using 1st angle projection method and to locate its traces. Understand the concept of projections of different types of solids and sectioned solids; and apply to draw its projection by using 1st angle projection method. Understand the concept of Development of Lateral surfaces; and apply to development of simple and sectioned Solids.

Course Contents

Unit-I	Fundamentals of CAD and Engineering Curves	(08 Hrs.)
<p>Introduction to Engineering Drawing, Types of lines and Dimensioning, Layout and size of drawing sheets, Scales.</p> <p>Engineering Curves-Ellipse drawing by Focus-Directrix Circle Method and Concentric Circle Method, Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone and Cylinder.</p> <p>Fundamentals of Computer Aided Drafting (CAD) and its applications, Various Softwares for Computer Aided Drafting. AutoCAD initial setting and AutoCAD commands</p>		
Unit-II	Orthographic Projection	(08 Hrs.)
<p>Basic principle planes of Projections, First and Third angle method of Projection, Orthographic Projections of given Pictorial view by first angle projection method only, Sectional orthographic Projection. Orthographic Drawing by using AutoCAD.</p>		
Unit-III	Isometric Projections	(08 Hrs.)
<p>Principles of Isometric Projections-Isometric Scale, Isometric Axes, Isometric Projections and Isometric Drawing. Constructions of Isometric view from given Orthographic Views and given origin. Isometric Drawing by using AutoCAD.</p>		
Unit-IV	Projection of Points, Lines and Plane Surfaces	(08 Hrs.)
<p>Projections of Points, Projections of Oblique lines in First Quadrant, Traces.</p>		

Projections of Planes- projection of perpendicular and oblique planes (polygonal and circular surfaces), Obtaining true shape of plane surface. Projection of Points, Lines and Plane Surfaces by using AutoCAD.		
Unit-V	Projection of Solids and Sectioned Solids	(08 Hrs.)
Introduction of solids- Types of solids, Projection of solid inclined both references plane, Projection of common solids such as prism, pyramid, cylinder and cone. Projection of solids cut by AIP and AVP, obtaining true shape of a section. Projection of Solids and Sectioned Solids by using AutoCAD.		
Unit-VI	Development of Lateral Surfaces	(08 Hrs.)
Development of the lateral surfaces of solids like Prisms, pyramids, cylinders and cones. Development of cut solids. Development of Lateral Surfaces by using AutoCAD.		

Term work

Term work shall consist of **seven** A2 size (594 mm x 420 mm) sheets using **AutoCAD**.

Sheets

1. Types of lines, Dimensioning practice, 1st and 3rd angle methods symbol.
2. Engineering Curves
3. Orthographic Projections
4. Isometric views
5. Projections of Points and Lines and planes
6. Projection of Solids and Section of solids
7. Development of Lateral surfaces

Assignments

Minimum five problems on each unit in A3 size Drawing Book

Textbooks

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India.
2. "Text Book on Engineering Drawing", K.L.Narayana & P.Kannaiah, Scitech Publications, Chennai.

Reference Books

1. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi.
2. "Engineering Drawing and Graphics", Venugopal K., New Age International publishers.
3. M. B. Shah and B. C. Rana, "Engineering Drawing", 1st Ed, Pearson Education, 2005.
4. P. S. Gill, "Engineering Drawing (Geometrical Drawing)", 10 Edition, S. K. Kataria and Sons, 2005.
5. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 Edition, 1988.

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. To obtain industrial drawings to identify the types of lines, dimensioning methods and method of projection.
2. To develop the model/charts based on engineering curves.
3. To prepare model/chart for identification of engineering curves in nature for industrial, societal, etc application.
4. To demonstrate different methods of orthographic projection.
5. To demonstrate projection of Points.
6. To demonstrate projection of Lines.
7. To demonstrate projection of Planes.

8. To demonstrate projection of Solids.
9. To demonstrate developments of surfaces for solids.
10. To demonstrate industrial application of development of surfaces such as steam carrying pipes, Ducts of air conditioning systems, etc.
11. To demonstrate Isometric projection method through model of a cube.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Mechanical Engineering Systems		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hour/ Week	End Semester Examination	60 Marks	03
Practical: -02 hours/Week	Internal Assessment	40 Marks	
	Term Work	50 Marks	01
	Total	150 Marks	04

Course Prerequisites: -	Higher Secondary Physics
Course Objective: -	To teach students about 1. Introduction to systems in Thermal Engineering 2. Introduction to systems in Manufacturing Engineering. 3. Introduction to systems in Welding and Joining processes
Course Outcomes: -	Students should 1. Understand the fundamentals of power producing and absorbing devices. 2. Understand the fundamental concepts of power transmitting devices 3. Understand the fundamentals of mechanism of machines 4. Understand the fundamentals of Fusion welding processes and create job as per given specification. 5. Understand the fundamentals of resistance and solid-state welding processes and create job as per given specification. 6. Understand the fundamentals of machine tools and manufacturing processes.

Course Contents

Unit 1	Power Producing and Absorbing Systems	(06 Hrs.)
<p>Power Producing Systems: I. C. Engines- Basic nomenclature, Classification, S.I and C. I. Engines, Two stroke and four stroke engines. Boilers- classification, water tube and fire tube boilers. Steam Turbines: Classification, simple Impulse, and reaction turbines. Water Turbines: Classification, Impulse, and reaction Turbines. Gas Turbines: classification, open and closed gas turbine. Construction, working and applications of all these devices.</p> <p>Power Absorbing Systems: Compressors; Classification, Rotary, reciprocating air compressors, Blower, Pumps: Classification, Rotary, reciprocating pumps, Household refrigerator and window air conditioner.</p>		
Unit 2	Power Transmitting Devices	(06 Hrs.)
Types of Belts and belt drives, Chain drive, rope drive, Types of gears, Types of Couplings, Types of friction clutch, Power transmission shafts, axles, keys, types of Keys, Sliding Contact and Rolling Contact Bearing, Bush and ball bearings, Types of brakes.		
Unit 3	Introduction to Mechanisms of Machines	(06 Hrs.)
Kinematic link, Kinematic pair, Types of constrained motions, Kinematic chain, Types of joints, Mechanism, Machine, Degree of freedom (Mobility), Kutzbach criterion, Grubler's criterion. Four bar chain and its inversions, Grashoff's law, Slider crank chain and its inversions, Double slider crank chain and its inversions. Geneva Mechanisms, Ratchet and Paul Mechanisms.		
Unit 4	Introduction to Welding Processes	(06 Hrs.)
<p>Introduction, Classification of welding processes, Advantages and disadvantages of welding processes Soldering, Brazing.</p> <p>Arc welding processes-Carbon arc, Submerged arc, Tungsten inert gas (TIG), Metal inert gas (MIG), Plasma arc, Stud welding and related arc welding processes –Theory, Comparison on merits, limitation and applications, Fluxes used in arc welding. Characteristics of Welding Processes.</p> <p>Gas welding – Processes and equipment used, Types of flames, Gas cutting– Merits, demerits and applications.</p>		

Unit 5	Resistance Welding and Solid-State Welding	(06 Hrs.)
Resistance welding – Spot, Seam, Projection, Butt, Percussion welding, Tube welding, Electric resistance welding process, its merits, demerits and applications. Introduction of Solid-State Welding- Pressure, Diffusion, Ultrasonic, Explosive, Friction, Forge, Principle, Equipment used and Flux used, Merit's, demerits and application of the above process. ISO welding symbols.		
Unit 6	Introduction to Machine Tools	(06 Hrs.)
Demonstration of Lathe machine, Centre lathe, wood working lathe, Drilling machine, types of drilling machine, milling machine, Power saw. Grinding machine, cylindrical grinder, and surface grinder. NC machine, CNC machine.		

Term work: Term work shall consist following experiments

1. Study and demonstration of low pressure boilers.
2. Study and demonstration of IC Engines.
3. Study and demonstration of Refrigeration and Air Conditioning.
4. Study and demonstration of Pumps and Compressors.
5. Study and demonstration of turbines.
6. Study and demonstration of Inversions of 4-bar, Single and Double Slider Crank Mechanisms.
7. Study and demonstration of operations on resistance welding processes.
8. Study and demonstration of gas welding operations.
9. Study and demonstration of Soldering and brazing
10. Study and demonstration of operations on center lathe.

Assignment

1. Assignment on power producing and absorbing devices
2. Assignment on mechanism of machines
3. Assignment on Power Transmitting Devices
4. Assignment on gas welding
5. Assignment on resistance welding
6. Assignment on centre lathe, drilling and Grinding.
7. Assignment on Milling machine
8. Assignment on NC, CNC machine

Text Books

1. A Textbook of Production engineering” P.C. Sharma, S. Chand Publication, New Delhi, 2nd edition, 8th Edition (2014).
2. A Textbook of Manufacturing Technology: Manufacturing Processes, R. K. Rajput, Laxmi Publications (P) Ltd, 2nd Edition 2015
3. R S Khurmi and J K Gupta, Textbook of Thermal Engineering, S Chand publications.
4. O.P.Khanna , A Text Book of Welding Technology, Dhanpat Rai and Sons

Reference Books

1. V. Ganeshan, Internal Combustion Engine, Tata McGraw-Hill Publication, 4th Edition (2012).
2. R. K. Rajput, Thermal Engineering, Laxmi Publications
3. Ambekar A.G Mechanisms and Machine Theory, Prentice-Hall of India, Eastern Economy Edition (2007)
4. S.S. Ratan, Theory of Machines, , Tata McGraw Hill, 4th Edition
5. Introduction to robotics, S.K.Shah. McGraw Hill, 2nd Edition
6. Richard Little, “Welding And Welding Technology” Pearsons Education second Edition

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. To prepare chart of comparison among specification of various models of two wheeler available.
2. To develop demonstration model of low-cost household refrigerator
3. To develop demonstration model of low-cost air conditioner
4. To develop demonstration model of Biogas plant
5. To develop demonstration model of geothermal power plant
6. To develop demonstration model of wind power plant

7. To develop demonstration model of solar energy plant
8. To develop demonstration model of Whitworth quick return mechanism
9. To develop demonstration model of single slider crank chain mechanism with its inversion
10. To develop demonstration model of Ratchet and Paul mechanism
11. To develop demonstration model of mini conveyor using Geneva mechanism

Unit Test

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Computer Programming: Fundamentals (Using C/C++)		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical: -04 hours/Week	Term Work & Practical	100 Marks	02
	Total	100 Marks	02

Course Prerequisites:-	Basic Mathematics
Course Objective: -	The goal of the course is that students should develop techniques for problem solving using a programming language.
Course Outcomes	<p>Students should</p> <ol style="list-style-type: none"> 1. Understand basics of C/ C++ and apply that knowledge to write simple programs. 2. Understand the uses of operators and apply them in writing programs. 3. Understand the concept of conditional statements apply them in writing programs. 4. Understand the concepts of loops in C/C++ apply them in writing programs. 5. Understand the concepts of user defined functions, recursion and apply them in writing programs 6. Understand the concept of overloaded functions and apply them in writing programs

Course Contents

Unit-I	Introduction to C/ C++	(08 Hrs.)
Introduction to C, C++; Object oriented programming; Programming Fundamentals; Data and Data Types		
Unit-II	Operators in C/C++	(08 Hrs.)
Declarations in C/C++; Operators in C/C++; Introduction to classes and objects and strings		
Unit-III	Conditional Statements	(08 Hrs.)
Relational and logical operators; If statements; Switch Statements		
Unit-IV	Loops	(08 Hrs.)
Loops in C/C++; For loop; While loop; Do while loop; Jump statement		
Unit-V	Functions I	(08 Hrs.)
Functions basic formats; Recursion		
Unit-VI	Functions II	(08 Hrs.)
Overloaded functions; Local, Global and Static Variables		

Term Work

Term work shall consist of programs (not limited to) listed below based on syllabus.

1. C/C++ "Hello, World!" Program
2. C/C++ Program to Print Number Entered by User
3. C/C++ Program to Add Two Numbers
4. C/C++ Program to Find Quotient and Remainder
5. C/C++ Program to Find Size of int, float, double and char in Your System
6. C/C++ Program to Swap Two Numbers
7. C/C++ Program to Find ASCII Value of a Character

8. C/C++ Program to Multiply two Numbers
9. C/C++ Program to Check Whether Number is Even or Odd
10. C/C++ Program to Check Whether a character is Vowel or Consonant.
11. C/C++ Program to Find Largest Number Among Three Numbers
12. C/C++ Program to Find All Roots of a Quadratic Equation
13. C/C++ Program to Calculate Sum of Natural Numbers
14. C/C++ Program to Check Leap Year
15. C/C++ Program to Find Factorial
16. C/C++ Program to Generate Multiplication Table
17. C/C++ Program to Display Fibonacci Series
18. C/C++ Program to Find GCD
19. C/C++ Program to Find LCM
20. C/C++ Program to Reverse a Number
21. C/C++ Program to Calculate Power of a Number
22. C/C++ Program to Check Whether a Number is Palindrome or Not
23. C/C++ Program to Check Whether a Number is Prime or Not
24. C/C++ Program to Display Prime Numbers Between Two Intervals
25. C/C++ Program to Check Armstrong Number
26. C/C++ Program to Display Armstrong Number Between Two Intervals
27. C/C++ Program to Display Factors of a Number
28. C/C++ Programs To Create Pyramid and Pattern
29. C/C++ Program to Make a Simple Calculator to Add, Subtract, Multiply or Divide
Usingswitch...case
30. C/C++ Program to Display Prime Numbers Between Two Intervals Using Functions
31. C/C++ Program to Check Prime Number By Creating a Function
32. C/C++ Program to Check Whether a Number can be Express as Sum of Two Prime Numbers
33. C/C++ program to Find Sum of Natural Numbers using Recursion
34. C/C++ program to Calculate Factorial of a Number Using Recursion
35. C/C++ Program to Find G.C.D Using Recursion
36. C/C++ Program to Convert Binary Number to Decimal and vice-versa
37. C/C++ Program to Convert Octal Number to Decimal and vice-versa
38. C/C++ Program to Convert Binary Number to Octal and vice-versa
39. C/C++ program to Reverse a Sentence Using Recursion
40. C/C++ Program to Calculate Power Using Recursion

Text Books

1. "Let Us C++", Kanetkar Yashavant, BPB Publications

Reference Books

1. "C++ programming Today", Barbara Johnston, Prentice Hall of India, New Delhi.
2. "C++ how to program", Paul Deitel and Henry Deitel, Prentice Hall of India, New Delhi.
3. "Accelerated C++: Practical Programming by Example", Andrew Koenig and Barbara E. Moo, Addison-Wesley Publications
4. "C++: The Complete Reference", Herbert Schildt, McGraw Hill Publications.
5. "C++ Primer"; Barbara E. Moo, Josée Lajoie and Stanley B. Lippman; Addison-Wesley Professional
6. "Programming: Principles and Practice Using C++", Bjarne Stroustrup, Addison-Wesley Professional

Designation of Course	Differential Equations, Probability and Statistics		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory:- 04 Hours/ Week	End Semester Examination	60 Marks	04
Tutorial:- 01 Hours/ Week	Internal Assessment	40 Marks	
	Tutorial		01
	Total	100 Marks	05

Course Prerequisites:-	Students should have knowledge of <ol style="list-style-type: none"> 1. Derivative and Integration 2. Partial derivative 3. Basic of statistics
Course Objectives:-	To provide knowledge about <ol style="list-style-type: none"> 1. Various methods to solve first order and first degree and n^{th} order differential equation. 2. Integral transform and application of partial differential equation. 3. Methods of interpretation of numerical data and probability distribution.
Course Outcome:-	Students will be able to <ol style="list-style-type: none"> 1. Understand methods of first order and first-degree differential equation. 2. Understand the methods of n^{th} ordinary differential equation and apply it to mass spring system. 3. Understand Laplace transform and evaluate particular solution of wave, one- and two-dimensional heat equation. 4. Understand the multiple integrals and apply it to evaluate area and volume. 5. Understand various technique to analyze and numerical data. 6. Understand probability distribution and testing of hypothesis.

Course Contents

Unit-I	Differential Equation	(08 Hrs.)
Formation of the ordinary differential equations (ODEs), Solution of an ordinary differential equation, Equations of the first order and first degree, Linear differential equation, Bernoulli's equation, Exact differential equations, Equations reducible to exact equations		
Unit-II	Linear Differential Equations	(08 Hrs.)
Solution of n^{th} order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy's & Legendre's DE, Solution of Simultaneous & Symmetric Simultaneous DE, Mass spring system.		
Unit-III	Laplace Transforms and Applications of Partial Differential Equations	(08 Hrs.)
Laplace transform: Definition of Laplace transforms, Properties of Laplace Transform (Properties without proof). Inverse Laplace Transform, Linearity property, use of standard formulae to find inverse Laplace Transform, finding Inverse Laplace transform using derivative, Partial fractions method & first shift property to find inverse Laplace transform. Inverse Laplace transform using Convolution theorem (without proof). Applications of partial differential equation: Basic concepts, modeling of Vibrating String, Wave equation, One- and two-dimensional Heat flow equations, method of Separation of variables.		
Unit-IV	Multiple Integrals and its Applications	(08 Hrs.)
Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.		

Unit-V	Statistics	(08 Hrs.)
Measures of central tendency, Standard deviation, Coefficient of variation, Moments, Skewness and Kurtosis, Correlation and Regression, Reliability of Regression estimates.		
Unit-VI	Probability and Probability Distributions	(08 Hrs.)
Probability, Bayes Theorem, Probability density function, Probability distributions: Binomial, Poisson, Normal, Test of hypothesis: Chi-square test, t-test.		

Assignments

Problems and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Differential equation.
2. Linear differential equations.
3. Laplace transforms and applications of partial differential equations.
4. Multiple integrals and its applications.
5. Statistics.
6. Probability and probability distribution.

Tutorials:

Problems and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. First order equation (linear and nonlinear),
2. Higher order linear differential equation with constant coefficients
3. Euler-Cauchy equation
4. Legendre's DE
5. Laplace transformation
6. Applications of partial differential equation
7. Double and Triple integrations
8. Applications to area, volume, mean and root mean square values.
9. Sampling theorems, conditional probability; mean, median, mode and deviation.
10. Correlation and regression, reliability of regression estimates.
11. Probability, bayes theorem, probability density function
12. Binomial, poisson and normal distributions.

Text Books

1. P. N. Wartikar and J. N. Wartikar, "Applied Mathematics (Volumes I and II)", 7th Ed., Pune Vidyarthi Griha Prakashan, Pune, 2013.

Reference Books

1. B. S. Grewal, "Higher Engineering Mathematics", 42nd Ed., Khanna Publication, Delhi
2. B.V. Ramana, "Higher Engineering Mathematics", 6th Ed., Tata McGraw-Hill, New Delhi, 2008.
3. Erwin Kreyszig, "Advanced Engineering Mathematics", 10th Ed., John Wiley & Sons, Inc., 2015.
4. Peter V. O'Neil, "Advanced Engineering Mathematics", 7th Ed., Cengage Learning, 2012.
5. Michael Greenberg, "Advanced Engineering Mathematics", 2nd Ed., Pearson Education, 1998.

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

Students are expected prepare report on any one topic, write its definition, applications and analyze the hypothetical data. Also, write pseudo code for it, wherever applicable.

1. Formation of differential equation
2. Exact differential Equation
3. Linear differential equation
4. Solution of nth order LDE with Constant Coefficients
5. Mass spring system
6. Transform (Properties with proof).

7. Applications of partial differential equation in mechanical engineering
8. Multiple integrals applications
9. Applications of Multiple integrals applications to Area, Volume
10. Random Sampling
11. Stratified random sampling
12. Reliability of Regression estimates.
13. Bayes Theorem
14. Probability density function
15. Testing of hypothesis

Unit Test -

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Chemistry of Engineering Materials		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hour/ Week	End Semester Examination	60 Marks	03
Practical: -02 Hours/Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	04

Course Prerequisites: -	Higher Secondary chemistry.
Course Objective: -	The student should acquire the knowledge of <ol style="list-style-type: none"> To develop the interest among the students regarding chemistry and their applications in engineering. To develop confidence among students about chemistry, how the knowledge of chemistry is applied in technological field. The student should understand the concepts of chemistry to lay the groundwork for subsequent studies in the field such as Mechanical Engineering.
Course Outcomes: -	After completion of the course students will be able to <ol style="list-style-type: none"> Apply the concept X-ray diffraction technique to study crystal structure. Understand the concept of the metallurgy in the study of metals. Understand and apply the knowledge of Ferrous & Non-Ferrous materials for various engineering applications. Apply the knowledge polymer and plastics to study advanced materials. Understand the knowledge of composite materials for various engineering applications. Understand different types of corrosion and suggest control measures in industries.

Course Contents

Unit-I	Crystal Structures	(06 Hrs.)
Study of crystal structure, Indexing of planes and directions, Slip planes, linear and Planar density calculations, volume density calculations, Imperfections in crystals, effect of crystal structure defects on various properties, Allotropic and polymorphism of metals, formation of solid solutions.		
Unit-II	Extractive Metallurgy	(06 Hrs.)
Introduction, Occurrence of metals, types of ores, concentration of ores by physical methods, Crushing and Sizing, Froth- Flotation, Magnetic Separation, Gravity separation method. Chemical methods- calcination, Roasting, Reduction of ore by Pyrolysis, Chemical reductions, Electrolytic refining of metals.		
Unit-III	Ferrous & Non-Ferrous Materials	(06 Hrs.)
Metallic materials: Introduction, Alloy- definition and classification, purposes of making alloys. Ferrous alloys, Introduction to steel making, blast furnace and electric steel making: Plain carbon steels (mild, medium and high), Nonferrous alloys: Copper alloy (Brass), Nickel alloy (Nichrome), Aluminum alloy (Duralumin and Alnico).		
Green Chemistry: Definition, Twelve principles of Green Chemistry.		
Unit-IV	Introduction to Polymers, Plastics and rubbers	(06 Hrs.)
Polymers: Introduction, plastics, thermo softening and thermosetting plastics, industrially important plastics like phenol formaldehyde, urea formaldehyde and epoxy resins, Conducting polymers and Biopolymers (Introduction, examples, and applications), types of rubbers, Acrylics.		

Unit-V	Introduction to Composites	(06 Hrs.)
Introduction, types of composite, different types of reinforce materials, characteristics of reinforced materials, matrix materials composition, properties and uses of fibre reinforced plastics (FRP), Carbon fibres, Boron Nylon etc, and glass reinforced plastic (GRP). Ceramic matrix composite. Metal Matrix composite.		
Unit-VI	Corrosion & Protective Coatings	(06 Hrs.)
Introduction corrosion, types of corrosion, hydrogen embrittlement, stress corrosion, Pit type corrosion, corrosion prevention methods, Metallic coatings, Electroplating, Methods of cleaning articles before Electrode position, Electroplating methods, Electroless plating, Some other metallic coatings, Modification of environment, Cathodic Protection, chemical conversion coatings, Organic Coatings, Paints, Varnishes, Enamels, Special paints. CVD and PVD coatings.		

Term Work

List of Experiments

1. Preparation of polystyrene/phenol-formaldehyde/urea-formaldehyde resin.
2. To determine molecular weight/radius of macromolecule polystyrene/ polyvinyl alcohol by viscosity measurement.
3. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method.
4. Study of corrosion of metals in medium of different pH.
5. Determination of rate of corrosion of aluminum in acidic and basic medium.
6. Determination of percentage of Ca in given cement sample
7. Preparation of phenol-formaldehyde resin/ urea-formaldehyde.
8. Estimation of copper in brass solution.
9. Determination of rate of corrosion of aluminum in acidic and basic medium.
10. To obtain metallic coating on base metal by using both the methods, Electroplating and Electroless plating.

Assignments

1. Linear and Planar density calculations with volume density calculations.
2. Extractive Metallurgy.
3. Purposes of making alloy like Ferrous alloys.
4. Twelve principles of Green Chemistry.
5. Conducting polymers and Biopolymers.
6. Thermo softening and thermosetting plastics.
7. Fiber reinforced plastics (FRP).
8. Heat treatment of tool steels
9. Organic Coatings, Paints, Varnishes, Enamels, Special paints for corrosion prevention.
10. Types of corrosion and its preventive measures.

Test Book

1. A Textbook of Engineering Chemistry by S. S. Dara and S. S. Umare, S. Chand & Company Ltd., New Delhi.
2. A Textbook of Engineering Chemistry by C. P. Murthy, C. V. Agarwal and A. Naidu, B S Publications, Hyderabad.
3. A Text Book of Engineering Chemistry, Shashi Chawla, Dhanpat Rai & Co, 2004

Reference Books

1. Material Science and Engineering Metallurgy by V D Kodgire, Everest publications
2. Materials Science by O P Khanna, Khanna publications
3. Engineering Chemistry (16th Edition) Jain, Jain, Dhanpat Rai Publishing Company, 2013.
4. Engineering Chemistry by Dr. A. K. Pahari and Dr. B. S. Chauhan, Laxmi Publications (P) Ltd, New Delhi.
5. Polymer Science, V. R. Gowariker, N. V. Viswanathan, Jayadev Sreedhar, Wiley Eastern Limited
6. Polymer Science and technology (2nd Edition), P. Ghosh, Tata McGRAW Hill, 2008
7. Polymers: Chemistry & Physics of Modern Materials (2nd edition) J.M.G. Cowie, Blackie Academic & Professional, 1994.

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. Prepare a hardware model based on Biopolymers.
2. Prepare epoxy resins by using suitable method.
3. Write a review paper based on applications of fibre reinforced plastics (FRP) and get it
4. published in reputed journal (eg. Google Scholar).
5. With the help of green chemistry principles, prepare any organic dye by using
6. Traditional and Green pathway.
7. Prepare a hardware model based on Electroless plating and calculate cell voltage.
8. Write a review paper based on Conducting polymers and get it published in reputed journal (eg. Google Scholar).

Unit Test -

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Electronics Engineering Systems		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical:- 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	05

Course Prerequisites:-	Students should have the basic knowledge of Electrical Engineering
Course Objective	<ol style="list-style-type: none"> To teach the construction, working, ratings and application of passive devices like resistors, capacitors, inductors, transformers and relays To introduce types of Voltage and current sources To teach the construction, working and ratings of devices like pn junction diode, Schottky diode, zener diode To teach the construction, working and ratings of field effect transistor To introduce the concept of Transducers and their applications To teach handling of electrical machine
Course Outcomes:-	<p>The students should be able to-</p> <ol style="list-style-type: none"> Classify resistors, capacitors, inductors and transformer based on their construction, types and ratings and analyze simple circuits consisting of passive devices Analyze circuits using voltage and current sources Classify active devices based on their types and ratings and plot their characteristic curves Understand the basic electronics devices and linear ICs Use of various Instruments, transducers and working of electronic circuits used in electronic test and measuring instruments To Understand and apply the concepts of Electric wiring for safety.

Course Contents

Unit 1	Passive Electronic Components	(08 Hrs)
Introduction to the concept of active and passive electronic devices, Types of resistors, construction, ratings and typical applications, Types of capacitors, construction, ratings and typical applications, Types of inductors, construction, ratings and typical applications, Types of transformers, construction, ratings and typical applications, Construction of relays, types and ratings, Analysis of series and parallel resistors and capacitor circuits (R-L, R-C, RLC series circuit, R-L-C parallel circuit).		
Unit 2	Sources	(08 Hrs)
Types of voltage and current sources (AC and DC), Concept of ideal and non-ideal voltage source, Concept of ideal and non-ideal current source, Series and parallel combinations of sources, Loading effect, Dependent voltage and current sources, Electrochemical cells and batteries, Types and characteristics, Regulation concept (Line regulation, load regulation, temperature stability factor), power, energy, Kirchoff's laws and applications to network solutions using mesh analysis		
Unit 3	Diodes	(08 Hrs)
Classification of material based on band gap theory, Types of semiconductors (p-type and n-type),LED and LDR, VI characteristics and applications, pn junction diode and its characteristics, Schottky diode, zener diode, Diode models, Rectifiers: Half wave, Full wave and Bridge rectifiers - capacitor filter-wave forms-ripple factor regulation characteristics		
Unit 4	Transistors	(08 Hrs)
Introduction to BJT (nnp and pnp) and its construction and working mechanism, BJT configurations and their input and output characteristics, FET-construction, V-I characteristics and working, MOSFET-construction, V-I characteristics and working.		
Unit 5	Opto-Electronics	(08 Hrs)
Construction and working of LDR and its characteristics, simple application , Construction and working of LED and its characteristics and ratings, Photo-transistor and its characteristics , Introduction to the concept of electrical isolation and its importance , Construction of opto-isolator(opto-coupler) and its ratings , Construction and working of photovoltaic cell and its characteristics and ratings		

Unit 6	Electrical Wiring and Illumination system	(08 Hrs)
Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED)		

List of Experiments-

Term work shall consist of **Minimum Eight** Experiments.

1. Study of resistors, capacitors and inductors
2. To study and plot regulation characteristics of half wave and full wave rectifier.
3. Plot V-I Characteristics of PN Junction Diode
4. Plot V-I Characteristics of Zener Diode
5. Plot Input and Output Characteristics of BJT in CE Configuration
6. Plot Transfer and output characteristics of FET
7. Plot Transfer and output characteristics of EMOSFET
8. Plot characteristics of LDR
9. To Study characteristics of LVDT for displacement measurement.
10. Study of Relays

Text Books/ Reference Books

1. Passive Components for Circuit Design, Ian Sinclair, 1st Edition 2000, ISBN: 9780750649339, Newnes
2. Grob's Basic Electronics, Mitchel Schultz, 11th Edition, 2010, ISBN-13: 978-0-07-351085-9, McGraw Hill
3. Fundamentals of Electronic Devices and Circuits, David A. Bell, 5th Edition, 2008, ISBN: 0195425235, 9780195425239, Oxford University Press,
4. Microelectronics Circuits, Adel S. Sedra & Kenneth C. Smith, 7th Edition, 2015, ISBN 978-0-19-933913-6, Oxford University Press
5. Dr. D.S. Kumar, Mechanical Measurement & Control, Metropolitan Book Co. Pvt. Ltd. New Delhi, 2007
6. R. P. Jain, Modern Digital Electronics, McGraw Hill

REFERENCE BOOKS

1. Thomas L. Floyd, Electronic Devices, Pearson Education (Sixth edition)
2. Millman & Halkis, Electronic Devices & Circuits, PHI
3. Malvino Leach, Digital Principles & Applications, McGraw Hill

Assignments:

At least ONE assignment on each unit

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

To prepare a demonstration model on:

1. Potential Divider and Variable DC bias circuit.
2. DC lighting circuit.
3. Automatic LED Emergency Light.
4. Flashing LED.
5. Dancing Light.
6. Voltage regulator using Zener diode.
7. Cascode amplifier using FET.
8. JFET as an analog switch.
9. FET used as a Multiplexer.
10. JFET acts as a current limiter.
11. LDR & Transistors based Light Detector.
12. LDR Based Smart Electronic Candle.
13. Smart Bulb Holder using LDR.
14. MOC3021 Opto-coupler as a solenoid/valve control.
15. Light controller switch using photo-transistor.

Unit Tests

Unit Test-I	Unit-I,II,III
Unit Test-II	Unit-IV, V,VI

Designation of Course	Fundamentals of Robotics		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hour/ Week	End Semester Examination	60 Marks	04
Practical: -02 hours/Week	Internal Assessment	40 Marks	
	Term Work & Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisites: -	The student should have <ul style="list-style-type: none"> 1. Basic knowledge of higher secondary Physics 2. Basic knowledge of Mathematics
Course Objective: -	The student should acquire the knowledge of <ul style="list-style-type: none"> 1. The concepts of Robotic system, its components and Configurations. 2. Robot Grippers, Drive systems and Robotics sensors. 3. Application of robots in various fields.
Course Outcomes: -	The student should be able to <ul style="list-style-type: none"> 1. Understand the basic components and configurations of robots. 2. Understand different types of grippers and apply them based on applications. 3. Understand the robot drive systems. 4. Understand the fundamentals of sensors and apply them based on application. 5. Understand the robot control systems. 6. Understand the applications of robots in various fields.

Course Contents

Unit-I	Introduction to Robotics	(08 Hrs.)
History of robots, Classification of robots, Present status and future trends. Basic components of roboticsystem. Robot Joints, Robot Anatomy, Basic terminology- Accuracy, Repeatability, Resolution, Degree of freedom. Basic Configuration of Robots.		
Unit-II	Robot Grippers	(08 Hrs.)
Introduction to End effectors. Consideration in selection of gripper, Types of grippers, Mechanical Grippers, Hooks and Scoops, Magnetic Grippers, Vacuum Grippers, Expandable Bladder Type Grippers, Adhesive Grippers. Specifications of robot. Industrial Robots in Manufacturing trial robots specifications. Selection based on the Application.		
Unit-III	Robotics Drives Systems	(08 Hrs.)
Introduction, Functions of drive systems, Hydraulic actuators- Linear Hydraulic actuators and Rotary Hydraulic actuators. Pneumatic Actuators- Linear Pneumatic actuators and Rotary Pneumatic actuators. Electric Actuators-D.C. Motor, Reversible A.C. Motors, Brushless D.C. Motors, D.C. Servomotors, A.C. Servomotors, Stepper Motors.		
Unit-IV	Robotics Sensors	(08 Hrs.)
Sensors in robot –Introduction, Classification, Internal and external sensors, Touch sensors, Tactile sensor, Proximity and range sensors, Robotic vision sensor, Light sensors, Pressure sensors. Position sensors & Velocity sensors, acceleration sensors, sound sensors, Proximity sensors & Force or Torque sensors.		
Unit-V	Robot Control system.	(08 Hrs.)
Robot controls-Point to point control, Continuous path control, Intelligent robot, Control system for robotjoint, Control actions, Feedback devices, Encoder, Resolver, LVDT, Motion Interpolations, Control architecture- position, path velocity, and force control systems.		
Unit-VI	Applications of Robots	(08 Hrs.)
Robot applications: Robots in continuous arc welding, Spot welding, Spray painting, assembly operation, cleaning, and robot for under water applications. material handling, Robotics and Automation for Industry 4.0, Applications in unmanned systems, defense, medical, biomedical, industries, Co-bot etc.		

Term work:

Term work shall consist of any six experiments from the following list:

1. To study an introduction to basic components of Robot.
2. To study an introduction to Robot configuration
3. To introduce different types of robotics and demonstrate them to identify different parts and components.
4. To study and demonstrations of various robotics sensors.
5. To study and demonstrations of Hydraulic actuators.
6. To study and demonstrations of Pneumatic actuators.
7. To study and demonstrations of Electric actuators.
8. Two Case Studies of Applications in Industry
 - a. Introduction and general considerations in robot applications.
 - b. Case study I: Robot application for Welding.
 - c. Case study II: Robot application for Spray painting.
9. Mini project is based on above syllabus.

Assignment

Assignments questions based on following topic

1. Classification, configuration and characteristics of robot.
2. Robot grippers and their types.
3. Drive systems used in Robots.
4. Sensors used in Robots.
5. Robot control systems.
6. Applications of Robots.

Text Books

1. Mikell P Groover, Nicholas G Odrey, Mitchel Weiss, Roger N Nagel, Ashish Dutta,
2. "Industrial Robotics, Technology programming and Applications", McGraw Hill, 2012.
3. Craig. J. J. "Introduction to Robotics- mechanics and control", Addison- Wesley, 1999.

Reference Books

1. S.R. Deb, "Robotics Technology and flexible automation", Tata McGraw-Hill Education., 2009.
2. Richard D. Klafter, Thomas .A, Chri Elewski, Michael Negin, "Robotics Engineering an Integrated Approach", PHI Learning. 2009.
3. Francis N. Nagy, Andras Siegler, "Engineering foundation of Robotics", Prentice Hall Inc., 1987.
4. P.A. Janaki Raman, "Robotics and Image Processing an Introduction", Tata McGraw Hill Publishing Company Ltd., 1995.
5. Carl D. Crane and Joseph Duffy, "Kinematic Analysis of Robot manipulators", Cambridge University press, 2008.
6. Fu. K. S., Gonzalez. R. C. & Lee C.S.G., "Robotics control, sensing, vision and intelligence", McGrawHill Book co, 1987
7. Ray Asfahl. C., "Robots and Manufacturing Automation", John Wiley & Sons Inc., 1985

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. 2D models of basic components of robotic system
2. 2D models of different configuration of robots and its application
3. Working model and application of mechanical gripper
4. Working model and application of magnetic gripper
5. Working model and application of adhesive gripper
6. Working model and application of expandable ladder gripper
7. Working model of robotic drive system using pipe and syringe
 - a. Linear actuator
 - b. Rotary actuator
8. Selection of electric actuators with respect to its specification and application.

9. Detail description and working model of touch sensor.
10. Detail description and working model of tactile sensor.
11. Detail description and working model of proximity sensor.
12. Detail description and working model of pressure sensor.
13. Detail description and working model of sound sensor.
14. Detail description and working model of temperature sensor.
15. Detail description and working model of torque sensor.
16. Detail description and working model of accelerometer.

Unit Test

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Engineering Mechanics		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hours/ Week	End Semester Examination	60 Marks	03
	Internal Assessment	40 Marks	
	Total	100 Marks	03

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Physics 2. Engineering mathematics
Course Objective	<ol style="list-style-type: none"> 1. To study different types of forces in a plane. 2. To study Centroid and moment of inertia 3. To study friction in machines 4. To study Kinetics of linear and circular motion 5. To study basics of civil engineering
Course Outcomes:-	<p>The students should be able to</p> <ol style="list-style-type: none"> 1. Understand the concept of force and apply it along with the concept of equilibrium in 2D and 3D system with the help of free body diagram. 2. Understand the significance of centroid and moment of inertia 3. Understand the concept of friction and estimate required force to overcome friction. 4. Analyze body in motion using force and acceleration, work energy, impulse momentum principles 5. Analyze body in motion using centripetal and centrifugal force principles 6. Understand the basic concept of civil material, building component and foundation techniques.

Course Content

Unit-I	Resultant and Equilibrium	(06 Hrs.)
Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point, Virtual work.		
Unit-II	Centroid, Moment of Inertia and Friction	(06 Hrs.)
Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia. Introduction to frictional force, preliminary concepts, laws of friction. Introduction to machines, Relation between Mechanical advantage, Velocity ratio and efficiency, Reversible and non-reversible Machines. Simple lifting machines and their velocity ratio, gear train.		
Unit-III	Analysis of Trusses, Frames and Cables	(06 Hrs.)
Two force members: Introduction to trusses, types of trusses, perfect and redundant trusses, Analysis of plane trusses by method of joint and method of section, cables subjected to point loads. Multi force member: plane frame.		
Unit-IV	Kinematics of particles and rigid body	(06 Hrs.)
Rectilinear motion, velocity and acceleration in terms of rectangular coordinate system, Motion along plane curve path, tangential and normal component of acceleration, motion curves (a-t, v-t, s-t), Projectile motion Rigid body- Introduction to general plane motion,		
Unit -V	Kinetics of Particle	(06 Hrs.)
Force and acceleration, introduction to basic concepts, D'Alembert's principle, equation of dynamic equilibrium, Newton's second law of motion. Work energy principle and law of conservation of energy, impulse and momentum, law of conservation of momentum, Impact and collision.		

Unit-VI	Structural Materials and Foundations	(06 Hrs.)
Types of structures based on loading, material and configuration; structural materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood, glass and aluminium Foundations- Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation.		

List of Assignments

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Resultant and equilibrium of forces
2. Centroid & Moment of Inertia
3. Friction
4. Trusses, frames and cables
5. Kinematics of particles
6. Kinematics of rigid body
7. Kinetics of particle
8. Structural materials and foundations

Text Books

1. "Engineering Mechanics", Bhavikatti S.S. and Rajashekarappa K. G., New Age International (P) Ltd.
2. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.
3. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.

Reference Books

1. "Engineering Mechanics (Statics and Dynamics)", Hibbeler R. C., McMillan Publication.
2. "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.
3. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.
4. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication
5. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.
6. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. Prepare model for various types of beams.
2. Prepare model for various types supports.
3. Prepare chart for various types of force system with suitable real-life examples.
4. Collect the various situations where varignon's theorem is used.
5. Prepare model or chart for equilibrium system of forces of various engineering applications.
6. Prepare chart for different types for trusses with showing various members.
7. Prepare prototype model of any one type of truss.
8. Calculate the forces in members of truss by using analytical method and check it graphically (At least three problems for different types of trusses)
9. Prepare prototype models of the basic geometrical figures and locate the centroid of them.
10. Prepare prototype models of the I and T section and locate the centroid of them.
11. Prepare chart for parallel axis and perpendicular axis theorem with suitable example.
12. Prepare chart regarding the types of friction in various field conditions.
13. Prepare chart for application of friction.
14. Prepare chart for motion curves.

15. Prepare chart related to lifting machine and relevant industrial applications.
16. Development of excel sheet for projectile motion (at least three problems).
17. Development of excel sheet for work energy principle (at least three problems).
18. Prepare chart for work energy and Impulse momentum principle with suitable example.
19. Collect the different structural materials and compare its mechanical properties.
20. Prepare models of different types of foundations.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Basics of PLC		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical:- 02 Hours/ Week	Term Work	50 Marks	01
	Total	50 Marks	01

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Basic knowledge of c program 2. Basic Boolean algebra 3. Basic knowledge of computer
Course Objective:-	<ol style="list-style-type: none"> 1. Compare conventional sequential control with programmable logic control system 2. Interface analog and digital input/ output devices with PLC 3. Develop programs using different PLC programming languages for sequential and continuous process
Course Outcomes:-	<ol style="list-style-type: none"> 1. Explain the basic knowledge of PLC and compare with computer 2. Identify the hardware components and I/O devices interfacing with PLC 3. Identify the basic logic to implement Ladder diagram 4. Introduce the basic PLC programming with industrial examples 5. Identify various PLC instructions 6. Identify data handling functions

Course Contents

Unit-I	Introduction to Programmable Logic Controllers (PLCs)	(04 Hrs.)
Introduction; definition & history of the PLC; Principles of Operation; Various parts of a PLC: CPU & programmer/ monitors; PLC input & output modules; Solid state memory; the processor; I/O modules; power supplies. PLC advantage & disadvantage; PLC versus Computers, PLC Application. Programming equipment; proper construction of PLC ladder diagrams; process scanning consideration; PLC operational faults.		
Unit-II	Hardware Components and its interfacing with PLC	(04 Hrs.)
PLC Hardware Components: The I/O section, Discrete I/O Modules, Analog I/O Modules, Special I/O Modules, I/O specifications, The CPU, Memory design, Memory Types, Programming Devices, Selection of wire types and size. Various INPUT /OUTPUT Devices and its interfacing with PLC. Different types of Input devices : Switches: Push button Switches, Toggle Switches, Proximity switches, Photo switches, Temperature Switch, Pressure Switch, and Level Switch, Flow Switches, manually operated switches, Motor starters, Transducers and sensors, Transmitters etc. Their working, specification and interfacing with PLC. Different types of Output devices: Electromagnetic Control Relays, Latching relays, Contactors, Motors, Pumps, Solenoid Valves etc. Their working, specification and interfacing with PLC..		
Unit-III	Fundamentals of Logic	(04 Hrs.)
The Binary Concept, AND, OR and NOT functions, Boolean Algebra, Developing circuits from Boolean Expression expressions, Producing the Boolean equation from given circuit, Hardwired logic versus programmed logic, Programming word level logic instructions. Converting Relay schematics and Boolean equation into PLC Ladder Programs, Writing a ladder logic program directly from a narrative description.		
Unit-IV	Basics of PLC Programming	(04 Hrs.)
Processor Memory Organization, Program Scan, PLC Programming languages, Relay type instructions, Instruction addressing, Branch Instructions, Internal Relay Instructions, Programming Examine if Closed and examine If Open instructions, Entering the ladder diagram, Modes of operation. Creating Ladder Diagrams from Process Control Descriptions. Ladder diagram & sequence listing; large process ladder diagram construction, flow charting as programming method, Industrial Examples		
Unit-V	Data Handling Functions	(04 Hrs.)
Bit Logic Instructions: NO, NC, Set, Reset, rising edge Pulse, Falling Edge Pulse, RS, SR, NOP, OUTPUT etc. Clock: READ_RTC, SET_RTC. Different Logical operation Instructions: INVERT BIT, BYTE, WORD DOUBLE WORD. OR: BIT, BYTE, WORD DOUBLE WORD. AND: BIT, BYTE, WORD DOUBLE WORD. X-OR: BIT, BYTE, WORD DOUBLE WORD.		

Program Control Instructions: The PLC SKIP and MASTER CONTROL RELAY Functions. Introduction; the SKIP function & application; the MASTER CONTROL RELAY function & application. Introduction: Jump with non-return; jump with return		
Unit-VI	Allen bradley PLC	(04 Hrs.)
PLC Data Move Systems. Introduction; PLC MOVE function & application; moving large blocks of PLC data; PLC table & registers moves; other PLC MOVE functions. Other PLC Data Handling Functions. Different Move Instructions: BIT, BYTE, WORD DOUBLE WORD, REAL, SWAP Byte, Move Byte Immediate Read, Move Byte Immediate Write. Different Shift/Rotate Instructions		

List of Experiments:-

1. Introduction to ladder programming & to implement basic logic gates.
2. Develop, Simulate and Test Ladder diagram for a. A Door Bell Operation b. A Combination Lock.
3. Develop, Simulate and Test Ladder diagram for Bottle Filling system.
4. Develop, Simulate and Test Ladder diagram for Traffic Light Control System.
5. Develop, Simulate and Test Ladder diagram for Car Parking system.
6. Develop Simulate and Test Ladder diagram for an alarm annunciator system.
7. Develop, Simulate and Test Ladder diagram for Batch Mixer.
8. Develop, Simulate and Test Ladder diagram for Drink Dispenser system.
9. Develop and test PLC program for three phase motor in both direction.
10. Develop, Simulate and Test Ladder diagram for stepper motor control in forward and reverse direction.
11. Develop and test PLC program for two axis Robotic arm for pick and place application
12. Develop, Simulate and Test Ladder diagram for Packing line system.
13. Develop, Simulate and Test Ladder diagram for an Elevator system.
14. Develop and test PLC program for PID Controller for Temperature control Application.
15. Develop and test PLC program in FBD, SFC, IL, ST, and Ladder Logic Language for Motor starter application.
16. Detail study of PLC Hardware and its interfacing

Text Books:

Lab Manual, Web resources for components data sheets.

1. Complete PLC Design Using Or CAD Capture and PCB Editor 1st Edition, Kindle Edition .
2. <https://www.plccart.com/article/content/PLC-manufacturing-process.html>
3. <https://www.autodesk.in/products/eagle/free-download>

Designation of Course	Object Oriented Programming (Using Python)		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical: - 04 Hours/ Week	Term Work & Practical	100 Marks	02
	Total	100 Marks	02

Course Prerequisites:-	1. Basics of C and C++ Programming
Course Objective	1. Readily use the Python programming language 2. Apply various data types and control structure. 3. Understand and begin to implement code 4. Understand Object Oriented Programming
Course Outcomes:-	Upon completion of the course, students will be able to 1. Understand how to install and run python 2. Understand flow control 3. Understand complex datatypes 4. Understand and Apply functions 5. Understand various modules 6. Understand Object Oriented Programming

Course Contents

Unit-I	Python introduction	(08 Hrs.)
Learn to install and run Python on your computer, Keywords and Identifiers, Statement, Indentation and Comments, Variables, Constants and Literals, Data Types, Type Conversion and Type Casting, Input, Output and Import		
Unit-II	Python Flow Control	(08 Hrs.)
Learn to install and run Python on your computer, Keywords and Identifiers, Statement, Indentation and Comments, Variables, Constants and Literals, Data Types, Type Conversion and Type Casting, Input, Output and Import		
Unit-III	Datatypes	(08 Hrs.)
Function Arguments, Recursion, Anonymous/Lambda Function, Global, Local and Nonlocal variables, Global Keyword		
Unit-IV	Python Functions	(08 Hrs.)
Modules in Python, import modules in Python, import statement, Import with renaming, from...import statement, Import all names, Python Module Search Path		
Unit-V	Matplotlib	(08 Hrs.)
Install matplotlib, Pyplot API, Figure Class, Axes Class, Multiplot, Subplots () Function, Formatting Axes, Setting Limits, Setting Ticks and Tick Labels		
Unit-VI	Object Oriented Programming	(08 Hrs.)
Object, Class, The self , The __init__ method , Class and Instance Variables (Or attributes) , Class and Instance Variables (Or attributes) , Printing Objects, Inheritance, examples of object, is sub class and super.		

Term Work

1. Basic Exercise for Beginners
Practice and quickly learn Python's necessary skills by solving simple questions and problems. Topics: Variables, Operators, Loops, String, Numbers, List
2. Python Loop Exercise
This Python loop exercise aims to help developers to practice branching and Looping techniques in Python.
Topics: If-else statements, loop, and while loop.

3. Python Functions Exercise
Practice how to create a function, nested functions, and use the function arguments effectively in Python by solving different questions.
Topics: Function's arguments, built-in functions.
4. Python String Exercise
Solve Python String exercise to learn and practice String operations and manipulations.
5. Python Data Structure Exercise
Practice widely used Python types such as List, Set, Dictionary, and Tuple operations in Python
6. Python List Exercise
This Python list exercise aims to help Python developers to learn and practice list operations.
7. Python Dictionary Exercise
This Python dictionary exercise aims to help Python developers to learn and practice dictionary operations.
8. Python Tuple Exercise
This exercise aims to help Python developers to learn and practice tuple operations.
9. Object Oriented
Simple Python program that creates a class with a single method.
10. Object Oriented
A Sample class with in it method

Bharati Vidyapeeth
(Deemed to be University), Pune, India
College of Engineering, Pune
Department of Mechanical Engineering

Vision of the Department

To develop high quality Robotics and Automation Engineers through dynamic education to meet social and global challenges

Mission of the Department

- To provide extensive theoretical & practical knowledge to the students with well-equipped laboratories & ICT tools through motivated faculty members
- To inculcate aptitude for research, innovation and entrepreneurial qualities in students
- To acquaint students with ethical, social and professional responsibilities to adapt to the demands of working environment.

Name of Programme: B. Tech. Robotics and Automation Engineering

Programme Educational Objectives (PEOs)

- To fulfill need of industry and society with theoretical & practical knowledge
- To perform research, innovation, lifelong learning and continued professional development
- To fulfill professional ethics and social responsibilities

Programme Outcomes (POs)

The graduates will be able to

- a.* apply knowledge of mathematics, science and engineering fundamentals for solving complex engineering problems
- b.* identify the need, plan and conduct experiments, analyze data for improving the mechanical processes.
- c.* design and develop mechanical systems considering social and environmental constraints.
- d.* design and develop a complex mechanical system using research based knowledge, advanced mathematical, statistical tools and techniques.

- e.* use information technology (IT) tools for prediction and modeling of routine activities to enhance the work performance.
- f.* know social responsibilities while doing professional engineering practices.
- g.* familiarize with eco-friendly, sustainable and safe working environment.
- h.* take into account professional ethics while designing engineering systems.
- i.* work efficiently as a group leader as well as an individual.
- j.* communicate in written and verbal form with subordinates and supervisors.
- k.* apply project and finance management techniques in multidisciplinary environments.
- l.* take interest in higher education and update the knowledge.

Designation of Course	Hydraulics & Pneumatics: Principals		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory:- 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical:- 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work & Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Mathematics. 2. Engineering Physics. 3. Engineering Mechanics.
Course Objectives:-	<p>To provide knowledge about</p> <ol style="list-style-type: none"> 1. Properties of fluids, concepts of fluid statics, kinematics & dynamics. 2. Concepts of fluid power and pumps and its control. 3. Hydraulics and Pneumatics – Actuators and Circuits.
Course Outcomes:-	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Understand properties of fluids and analyze concepts of fluid statics. 2. Understand concepts related to fluid kinematics and analyze practical problems. 3. Understand concepts related to fluid dynamics, flow through pipes and analyze practical problems. 4. Understand concepts related to fluid power system, Power units and accessories and analyze pump performances. 5. Understand concepts related to Control of fluid power and Control valves. 6. Understand concepts related to Hydraulics and Pneumatics – Actuators and Circuits and its application.

Course Contents

Unit 1	Properties of Fluids & Fluid Statics	(8 Hrs.)
<p>Properties of Fluid:- Definition of fluid, concept of continuum, Density, Specific Weight, Specific Gravity, Dynamic Viscosity, Kinematic Viscosity, Newton's law of viscosity, types of fluid, Rheological diagram, Surface Tension, Capillarity, Compressibility, Vapour pressure, Classification of fluid.</p> <p>Fluid Statics: Hydrostatic law, Pascal's Law, Pressure at a point, Total Pressure, Archimedes Principle, Buoyancy and stability of floating and submerged bodies, Metacentric height.</p>		
Unit 2	Fluid Kinematics	(8 Hrs.)
<p>Description of fluid motion- Eulerian and Lagrangian approach, Types of flow (steady, unsteady, uniform, non-uniform, laminar, turbulent, One, Two and Three dimensional, compressible, incompressible, rotational, Irrotational), Continuity equation in Cartesian co-ordinates, flow net, Control volume, Material derivative and acceleration.</p>		
Unit 3	Fluid Dynamics and Losses in Pipes	(8 Hrs.)
<p>Linear momentum Equation using differential Approach, Introduction to Navier-Stoke's Equation, Euler equation of motion, Derivation of Bernoulli's equation along a stream line, application of Bernoulli's equation to Pitot tube.</p> <p>Losses in Pipes: Energy losses through pipe-Major and Minor losses, Pipes in series and parallel, Darcy-Weisbach equation</p>		
Unit 4	Basics of Fluid Power and Pumps	(8 Hrs.)
<p>Components of fluid power system, advantages and limitations. Difference between electrical, pneumatic and fluid power systems. Seals, sealing materials. Types of pipes, hoses, material. Fluid conditioning through filters, strainers, sources of contamination and contamination control.</p> <p>Power units and accessories: Types of power units, reservoir assembly, sizing of reservoirs, constructional details, pressure switches, temperature switches. Accumulators: Types, selection procedure, applications of accumulators. ISO symbols for hydraulic and pneumatic Components</p>		

Pumps: Types, classification, principle of working and constructional details of vane pumps, gear pumps, radial and axial plunger pumps, screw pumps, power and efficiency calculations, and characteristics curves		
Unit 5	Fluid Power Control	(8 Hrs.)
Necessity of fluid control through pressure control, directional control and flow control valves. Control valves: i) Principle of pressure control valves, direct operated and pilot operated pressure relief valves, pressure reducing valve, sequence valve. ii) Principle of flow control valves, pressure compensated and non-compensated flow control valves. iii) Principle of directional control valves, types of directional control valves, two-way, three-way, four-way valves, check valve and shuttle valve. Open centre, close centre, tandem centre valves. Actuating devices- manually operated, mechanically operated, solenoid operated, pilot operated, lever operated.		
Unit 6	Hydraulic & Pneumatic Circuits	(8 Hrs.)
Linear and rotary actuators: Types, construction and characteristics. Cylinder mountings, cushioning of cylinders. Hydraulic & Pneumatic circuits: Simple reciprocating, regenerative, speed control (meter in, meter out and bleed off), sequencing, synchronization, traverse and feed, automatic reciprocating, fail safe circuit, counter balance circuit, actuator locking, unloading circuit, motor breaking circuit etc. Compressors: Types, principle of working and constructional details. Comparison of pneumatic with hydraulic power transmissions. Types of filters, pressure regulators, lubricators, mufflers, dryers, direction control valves, pneumatic actuators, shuttle valve, two pressure valve, quick exhaust valve and time delay valves. Speed regulating methods, pneumatic circuits, reciprocating, cascading time delay etc. Application of pneumatics in low-cost automation and in industrial automation		

Term Work: (Any 8 experiments needs perform during practical's)

1. Study of Pressure Measuring Devices.
2. Measurement of Viscosity using Redwood Viscometer
3. Stability of Floating Bodies and Optimum Loading Capacity.
4. Verification of Modified Bernoullis Equation.
5. Calibration of Venturimeter.
6. Calibration of Orificemeter.
7. Laminar and Turbulent Flow by Reynold's Apparatus.
8. Discharge over Notches.
9. Study of Minor Losses due to Pipe Fitting.
10. Study of flow control valves (Meter in, Meter out Circuits).
11. Study of ISO/JIC Symbols for hydraulic and pneumatic systems.
12. Following experiments to be done on hydraulic trainer
 - a) Regenerative circuit
 - b) Speed control circuit
 - c) Sequencing circuit
 - d) Traverse and feed circuit etc.
13. Following experiments to be done on pneumatic trainer
 - a) Automatic reciprocating circuit
 - b) Speed control circuit
 - c) Pneumatic circuit involving Shuttle valve/ Quick exhaust valve / Two pressure valve
14. Design of simple hydraulic/pneumatic systems used in practice such as hydraulic clamp, jacks, dumper, forklift etc by using fluid simulation software's such as LVSIM®-HYD & PNEU, AUTOMATION STUDIO.
15. Study of accumulators/actuators/intensifiers/hydraulic and pneumatic power brakes.
16. Industrial visit to study Hydraulic / Pneumatic based Automation systems

Assignment:

Assignment Based on each unit.

5. ISO - 1219, Fluid Systems and components, Graphic Symbols
6. Standard Manufacturer’s Catalogues

Project Based Learning

Topics for the project based learning will be given by respective faculty member.

Unit Test -

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Theory of Machines		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/Week	Internal Assessment	40 Marks	
	Term Work & Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Physics and Mathematics 2. Engineering Mechanics
Course Objectives:-	<ol style="list-style-type: none"> 1. To develop competency in understanding of theory of different types of gear. 2. To make the students conversant with kinematic analysis of mechanisms applied to real life and industrial applications. 3. To develop the competency to analyse the velocity and acceleration in mechanisms using analytical and graphical approach. 4. To develop understanding of static and dynamic balancing and gyroscopic effect.
Course Outcomes:-	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Understand the fundamental concept of Lower pair mechanisms and apply to real life and industrial applications. 2. Understand the basic concept of kinematic analysis and evaluate forces acting on reciprocating engine by graphical and analytical method. 3. Understand the concept of velocity and acceleration of any planar mechanism and analyze it graphically by using relative velocity - acceleration method and ICR method, Coriolis component of acceleration. 4. Understand the gear theory which will be the prerequisite for gear design. 5. Apply the principles of balancing of masses to various links, mechanisms and engines 6. Apply the principles of gyroscopic effects and stabilization on various transport vehicles.

Course Contents

Unit-I	Mechanisms with Lower Pair	(08 Hrs.)
<p>Introduction, Pantograph, Straight line mechanisms- Exact and Approximate, Hook Joint, Double Hook's Joint, Steering gear mechanisms: Condition for correct steering, Davis steering gear mechanism, Ackermann steering gear mechanism.</p> <p>Theory and analysis of Compound Pendulum, Concept of equivalent length of simple pendulum, Bifilar suspension, Trifiler suspension.</p>		
Unit-II	Inertial Forces in Reciprocating Parts	(08 Hrs.)
<p>Analytical method for displacement, velocity and acceleration analysis of slider cranks Mechanism. Klein's construction.</p> <p>Dynamics of Reciprocating Engines: Two mass statically and dynamically equivalent system, Correction couple, static and dynamic force analysis of reciprocating engine mechanism, Torque Exerted on crankshaft.</p>		
Unit-III	Kinematic Analysis of Mechanisms: Graphical Methods	(08 Hrs.)
<p>Relative Velocity Method: Relative velocity of a point on a link, Angular velocity of a link, Sliding velocity, Velocity polygons for simple mechanisms.</p> <p>Relative Acceleration Method: Relative acceleration of a point on a link, Angular acceleration of a link, Acceleration polygons for simple mechanisms.</p> <p>Coriolis component of acceleration.</p> <p>Instantaneous Centre of Rotation(ICR) Method (limit to only 6 link mechanisms)- Kennedy's Theorem, Body and space centrede.</p>		

Unit-IV	Gears	(08 Hrs.)
Classification, Spur gear: definition, terminology, fundamental law of toothed gearing, involute and cycloidal profile, path of contact, arc of contact, conjugate action, contact ratio, minimum number of teeth, interference and under cutting, Friction in gears. Helical gears: nomenclature, Center Distance. Worm & Worm wheel, Bevel gears, Spiral gears, Introduction to Gear Box, Electronic Gearing.		
Unit-V	Balancing	(08 Hrs)
Static and dynamic balancing, balancing of rotating masses in single and several planes, primary and secondary balancing of reciprocating masses, balancing in single cylinder engines, balancing in multi-cylinder in-line engines, direct and reverse cranks method -radial and V-engines.		
Unit-VI	Gyroscope	(08 Hrs.)
Gyroscopes- Gyroscopic forces and Couples, Gyroscopic stabilisation for ship and Aeroplane, Stability of four-wheel drive vehicle moving on curved path, Stability of a two-wheel vehicle.		

Term Work

Term work shall consist of following experiments. Hand calculations must be confirmed through a computer programme using any programming language.

1. Compound Pendulum
2. Bifilar Suspension Method
3. Trifilar Suspension Method
4. Velocity and acceleration analysis using Graphical methods by Klein's construction
5. Velocity analysis using Graphical methods by ICR.
6. Velocity and acceleration analysis using Graphical methods by Polygon method.
7. Velocity and acceleration analysis using Graphical methods i.e., polygons involving Coriolis component.
8. To determine Coriolis's Component of Acceleration at various speeds of rotation and water flow rates.
9. To draw conjugate profile for any general type of gear tooth
10. To generate involute gear tooth profile and to study the effect of undercutting and rack shift using model.
11. To balance a system of masses revolving in a plane on a rotating shaft on V Lab
12. To verify the gyroscopic principles.

Assignments

Numerical and/or theory questions on each unit from previous year question papers of GATE/ESE Mechanical Engg. examinations.

Tutorial

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Lower Pair Mechanism
2. Static and dynamic force analysis
3. Velocity and Acceleration analysis using graphical method.
4. Spur Gears
5. Balancing
6. Gyroscope

Reference Books

1. Thomas Bevan, "Theory of Machines", CBS Publishers & Distributors, Delhi.

2. Shigley J.E. and Uicker J.J., “Theory of Machines and Mechanisms”, McGraw Hill, Inc.
3. Ghosh Amitabh and Malik A.K., “Theory of Machines and Mechanisms”, East-west Press.
4. Hall A.S., “Kinematics and Linkages Design”, Prentice-Hall.
5. Hartenberg and Denavit, “Kinematic Analysis and Synthesis of Mechanisms”.
6. Erdman, A. G. & Sandor, G.N., “Mechanism design, Analysis and synthesis”, Vol 1, Prentice –Hall of India.

Text Books

1. Rattan S. S., “Theory of Machines”, Tata McGraw Hill.
2. Ballaney P. L., “Theory of Machines”, Khanna Publishers, Delhi.
3. R. S. khurmi, “Theory of Machines’, S Chand Publication.

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. Demonstration model of Pantograph mechanism
2. Demonstration model of Automobiles steering gear mechanism in real life
3. Demonstration model of Ackerman and Davis steering gear mechanism and its comparison.
4. Demonstration models of exact straight line motion mechanism.
5. Demonstration o relative velocity and acceleration method and Klien’s construction in slider crank mechanism
6. Demonstration model Kennedy’s Theorom (Three centre in line)
7. Demonstration model to understand Coriolli’s Effect
8. Demonstration model of different types of gears
9. Chart to understand various terminology of spur gear
10. Demonstration model for failure modes of gear tooth.
11. Chart to understand different methods to avoid interference in spur gear.
12. Demonstration model of static and dynamic balancing.
13. Demonstration model of balancing of rotating masses.
14. Demonstration model of balancing of reciprocating masses.
15. Demonstration model of balancing V-Engine.
16. Demonstration model to understand gyroscopic effect in Ship, aeroplane and automobile.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Strength of Machine Components		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hours/ Week	End Semester Examination	60 Marks	03
Practical: - 02 Hours/Week	Assignments Internal	40 Marks	
Tutorial: - 01 Hours/ Week	Tutorial		01
	Term Work	25 Marks	01
	Total	125 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Mathematics 2. Engineering Mechanics 3. Engineering Science
Course Objectives:-	<ol style="list-style-type: none"> 1. Understand simple and principal stress and strain 2. Able to find principal stresses on any oblique plane by analytical and graphical method. 3. Able to draw shear force and bending moment diagram and find slope and deflection of beam 4. Able to draw bending stress and shear stress diagram at different cross section in I, C and T section beam. 5. Able to find stresses in shaft in torsional, combined torsional and bending, combined torsional and axial loading. 6. Able to solve problems on strain energy and Euler's column.
Course Outcomes:-	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Understand the concept of simple stress and strain and apply to find it for simple component. 2. Understand the concept of principal stress analytical and graphical by Mohr's circle; and apply it to find stresses on any oblique plane inclined to principal plane. 3. Understand the concept of shear force and bending moment and apply it to find shear force diagram and bending moment diagram for any loading condition on simply supported beam and cantilever beam. 4. Understand the concept of slope and deflection and apply it to find for any loading condition on simply supported beam and cantilever beam by maculays double integration method 5. Understand the concept of pure bending and shear and apply it to find bending stress and shear stress diagram of I, C and T section of beam. 6. Understand the concept of column theory and strain energy and apply it for loading condition.

Course Contents

Unit-I	Simple Stress and Strain	(06 Hrs)
<p>Load, Direct or normal stress ,Direct strain, Sign convention for direct stress and strain ,Elastic materials, Hooke's law, Modulus of elasticity - Young's modulus, Tensile test, Ductile materials, Brittle materials, Poisson's ratio, Application of Poisson's ratio to a two-dimensional stress system, Shear stress, Shear strain, Modulus of rigidity, Relationship Between E, G and K, Double shear, Allowable working stress -factor of safety, Load factor, Thermal stresses.</p>		
Unit-II	Principal Stresses, Theories of Failure	(06 Hrs)
<p>Principal Stresses: Introduction to principal stresses with application, Transformation of Plane Stress, Principal Stresses, and planes (Analytical method and Mohr's Circle), Stresses due to combined Normal and Shear stresses.</p> <p>Theories of Elastic failure: Introduction to theories of failure with application, Maximum principal stress theory, Maximum shear stress theory, Maximum distortion energy theory, Maximum principal strain theory, Maximum strain energy theory.</p>		

Unit-III	Shear Force and Bending Moment Diagram, Slope and Deflection	(06 Hrs)
Types of supports and beams, shear force (S.F.), bending moment (B.M.), S.F. and B. M. sign convention, S.F. and B.M. diagrams for beams carrying different loading conditions. Points of contra flexure, Relationship between S.F, B.M. and intensity of loading. Introduction, Simple bending theory, Neutral axis, Section modulus, second moment of area, Relationship between loading, S.F., B.M., slope and deflection, Double integration method, Macaulay's method for all loading conditions.		
Unit-IV	Bending and Shear Stress in Beam	(06 Hrs)
Bending stresses: Theory of simple bending, assumptions, derivation of flexural formula, second moment of area of common cross sections (rectangular, I, T, C) with respect to centroidal and parallel axes, bending stress distribution diagrams, moment of resistance and section modulus. Shear stresses: Concept, derivation of shear stress distribution formula, shear stress distribution diagrams for common symmetrical sections, maximum and average shears stresses, shear connection between flange and web.		
Unit-V	Torsion	(06 Hrs)
Simple torsion theory, Polar second moment of area, Shear stress and shear strain in shafts, Section modulus, Torsional rigidity. Principal stresses, Strain energy in torsion, Variation of data along shaft length-torsion of tapered shafts, Power transmitted by shafts. Stresses in solid circular shaft- Torsional load only, bending load only, combined torsional and bending, Combined Torsion and axial loading.		
Unit-VI	Euler's Columns and Strain Energy	(06 Hrs)
Concept of buckling of columns, derivation of Euler's formula for buckling load for column with hinged ends, concept of equivalent length for various end conditions, limitations of Euler's formula, Rankine's formula, safe load on columns. Strain energy: Strain energy due to axial load (gradual, sudden and impact), Strain energy due to self-weight.		

Term Work

Term work shall consist of following experiments. Hand calculations must be confirmed through a computer programme using any programming language.

1. Tension test for ductile materials
2. Tension test for brittle materials
3. Compression test for ductile materials
4. Compression test for brittle materials
5. Shear test for ductile materials
6. Shear test for brittle materials
7. Torsion test for ductile materials
8. Torsion test for brittle materials
9. Impact Test- IZOD and Charpy
10. Strain Gauge and rosettes theory
11. Testing of hardness by Rockwell
12. Graphical simulation of
 - a. Shear force and bending moment diagrams with different end conditions.
 - b. Slope and deflection.
 - c. Principal stresses through graphical and analytical method.

List of Assignments

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Simple stress and strain.
2. Principal stresses and strain.
3. Shear force and Bending moment diagram and slope and deflection
4. Stresses in beams, thick and thin cylinder
5. Torsion
6. Euler's column and strain energy method

List of Tutorial

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Stresses in simple bar, Elastic modulus and two-dimensional stress systems.
2. Normal, tangential and resultant stresses on any oblique plane inclined to normal plane by analytical and graphical method.
3. Shaft diameter and factor of safety by using theories of failure.
4. Shear and bending moments on cantilever and simply supported beam and draw SFD and BMD.
5. Slope and deflection at any section between beams by using Macaulay's method.
6. Stresses in beam and draw shear stress diagram and bending stress diagram.
7. Shaft diameter and stresses when shaft subjected to torsion, bending combined torsional and bending, combined torsional and axial loads.
8. Euler's column theory and strain energy.

Textbooks

1. A textbook of strength of material by R.K.Bansal

Reference Books

1. V. B. Bhandari, Design of Machine Elements, Tata McGraw Hill Publication
2. J. E. Shigley, Mechanical Engineering Design, McGraw Hill
3. R. Subramanian strength of Material
4. S Ramamrutham, Strength of Material
5. R.K Rajput, Strength of materials

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. To prepare demonstration model of cantilever beam for the study of deflection in it.
2. To prepare demonstration model of simply supported beam for the study of deflection in it.
3. To prepare demonstration model of fixed beam for the study of deflection in it.
4. To prepare demonstration model of Overhang beam for the study of deflection in it.
5. To prepare the chart on relation between E, G, K with derivation.
6. To prepare demonstration model for studying strain energy with consideration of various conditions like impact load, sudden load, gradual load.
7. To prepare the chart on various concepts used in Principal Stresses & planes.
8. To prepare the chart on concept use in Mohr's Circle method using graphically & analytically.
9. To prepare the chart on Rules and guidelines use for drawing SFD & BMD.
10. To prepare the chart on finding bending stress for I cross-sections.
11. To prepare the chart on finding bending stress for T cross-sections.
12. To prepare the chart on finding bending stress for C cross-sections.
13. To prepare the chart on concepts used in solid & hollow shafts.
14. To prepare the chart and demonstration model of Euler's formula for buckling load.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Electronic Circuits		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hours/ Week	End Semester Examination	60 Marks	03
Practical: - 02 Hours/Week	Assignments Internal	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	04

Course Prerequisites:-	1. Electronics Engineering Systems
Course Objectives:-	<p>The objective of this course is to cover performance evaluation of various amplifiers by</p> <ol style="list-style-type: none"> 1. Introducing a concept of the multistage amplifiers, parameter evaluation and related design aspects of multistage amplifiers with the help of derivations. 2. Teaching a concept of the feedback in the amplifiers, feedback topologies with the help of derivations and their advantages and disadvantages. 3. Gauging the efficiencies of various types of power amplifiers with the help of derivations. 4. Teaching a concept and design of the RC and LC oscillators with the help of derivations. 5. Analyze the biasing of BJT circuit and Amplifier 6. Classify different types of FET
Course Outcomes:-	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Identify applications of BJT 2. Analyze FET operations. 3. Analyze numerical to get values of the input impedance, output impedance, gain and bandwidth in a multistage amplifier. 4. Analyze numerical to get values of the input impedance, output impedance, gain and bandwidth of all the topologies in a negative feedback amplifier. 5. Analyze the efficiencies in power amplifiers. 6. Analyze numerical to get values of the oscillation frequencies of the RC and LC oscillators, and to design the oscillator for the given oscillations frequency.

Course Contents

Unit-I	BJT Biasing	(06 Hrs)
Need of biasing circuits, Analysis and design of BJT biasing circuits like fixed bias, collector to base bias, voltage divider bias, split-supply bias, Concept of DC load line, Concept of stability factor, Derivation of stability factor, Single stage amplifiers		
Unit-II	Field Effect Transistor (FET) Biasing	(06 Hrs)
Types of MOSFET, construction, VI characteristics, FET Biasing-Self Bias, Fixed Bias, Current Source Bias, JFET amplifiers-CS,CD and CG amplifiers, Application of MOSFET.		
Unit-III	Multistage Amplifiers	(06 Hrs)
Projectile Need of the Multistage amplifiers, Types of Multistage amplifiers-Cascade and Cascode, Cascade-Coupling methods, Frequency response, Parameter evaluation - R_i , R_o , A_v , A_i & Bandwidth for general multi stage amplifier, Choice of the transistor configuration in cascade amplifier, Analysis & design of direct coupled, RC coupled (Low frequency, high frequency and medium frequency analysis), transformer coupled (Low frequency, high frequency and medium frequency analysis) amplifier. Darlington Amplifier, Design of Cascode amplifier.		
Unit-IV	Feedback Amplifiers	(06 Hrs)
Types of basic Amplifiers, Concept and types of feedback, Transfer gain with feedback, Negative feedback topologies with their block Schematics, Effect of negative feedback on Input impedance; Output impedance; Gain and Bandwidth with derivation, Analysis of one circuit for each feedback topology for input impedance, output impedance, gain and bandwidth.		

Unit-V	Power Amplifiers	(06 Hrs)
Need of Power amplifiers, classification; applications; advantages of power amplifiers - Class A, Class B, Class C, class D and Class AB. Operation of - Class A with resistive load; Transformer coupled class A Amplifier; Class B Push – pull; Class AB Complementary symmetry and Quasi – complementary. Efficiency analysis for Class A transformer coupled amplifier, Class B push – pull amplifier. Comparison of efficiencies of other configurations. Distortion in amplifiers; concept of Total Harmonic Distortion (THD).		
Unit-VI	Oscillators	(06 Hrs)
Concept of Positive feedback, Condition and principle of oscillations (Barkhausen criterion), Classification of oscillators, Design analysis of RC and LC oscillators, RC oscillators: Phase shift, Wien bridge Oscillators; LC Oscillators: Hartley, Colpitt's and Clap; Piezo-electric effect in crystals and Crystal Oscillator.		

List of Experiments:

1. To find the gain and bandwidth of a 2-stage CE RC coupled amplifier.
2. To find the gain and bandwidth of a 2-stage transformer coupled amplifier.
3. To find the gain of a direct coupled amplifier.
4. To find the gain and bandwidth of a voltage series negative feedback amplifier.
5. To find the gain and bandwidth of a voltage shunt negative feedback amplifier.
6. To find the gain and bandwidth of a current series negative feedback amplifier.
7. To find the gain and bandwidth of a current shunt negative feedback amplifier.
8. To study the response of a Class A direct coupled/ transformer coupled amplifier.
9. To study the response of a Class B power amplifier.
10. To find the oscillations frequency of the RC amplifiers-RC phase shift/ Wien bridge oscillator.
11. To find the oscillations frequency of LC amplifiers-Colpitt's Oscillator/Hartley Oscillator
12. To plot frequency response of tuned amplifiers.

List of Assignments: One assignment on each unit

Text Books:

1. S. Salivahanan and N Suresh Kumar, 'Electronic devices and circuits', Mc Graw Hill Education India Private Limited, Third Edition.

Reference Books:

1. Ramakant A.Gayakwad "Op-amps and Linear Integrated Circuit Technology"Fourth edition
2. Adel S. Sedra, Kenneth C. Smith " Microelectronic Circuits" Oxford series in Electrical and computer engineering

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

To prepare a demonstration model on:

1. Water Level Indicator.
2. LED Emergency Light.
3. Home Security System.
4. AC to DC converter.
5. Automatic Street Light controller
6. Rain Alarm
7. Flashing LED
8. Dancing Light
9. Voltage doubler.
10. Voltage regulator using Zener diode.
11. Reverse Current Protection using diode.

12. BJTs as a digital switch.
13. Cascode amplifier
14. Sine wave generator.
15. FET used as a Multiplexer.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	EMBEDDED SYSTEMS		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: - 02 Hours/Week	Assignments Internal	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	05

Course Prerequisites:-	Electronics Engineering Systems
Course Objectives:-	1. To familiarize students with architecture and features of typical Microcontrollers. 2. To learn interfacing of real world input and output devices and use Embedded C to interface the microcontrollers to various applications.
Course Outcomes:-	1. Use Hardware and software tools for microcontrollers. 2. Write programs using features of 8051 microcontroller. 3. Write programs using features of PIC microcontroller. 4. Develop interfacing of microcontrollers with real world devices.

Course Contents

Unit-I	Introduction to Microcontrollers	(08 Hrs)
Comparison of Microprocessor & Microcontroller. Difference between RISC & CISC architectures, Harvard & Von Neumann architectures. 8051 Microcontroller: architecture, family devices & its derivatives. Ports, registers, memory organization, Programming in Embedded C.		
Unit-II	8051 Microcontroller features	(08 Hrs)
Timers and its modes, Delay generation using timers, Serial Communication with RS232, Interrupt structure, Timers programming with interrupts, Programming in Embedded C.		
Unit-III	Peripheral Interfacing With 8051	(08 Hrs)
8051 based system design – Address decoding, data memory space Interfacing & Applications –LED, LCD, Stepper motor, DAC/ADC, Sensors, Keyboard. Programming in Embedded C.		
Unit-IV	PIC Microcontroller	(08 Hrs)
Comparison of Features of different PIC series, PIC 18F architecture, registers, memory Organization, oscillator options, BOD, power down modes and configuration bit settings, Port structure, interrupts & timers of PIC18F, All programs in embedded C.		
Unit-V	Peripheral Interfacing With PIC-I	(08 Hrs)
Interfacing of PIC18F with LED, Seven segment display, LCD and Keypad. Use of timers with interrupts, PWM generation. All programs in embedded C.		
Unit-VI	Peripheral Interfacing With PIC-II	(08 Hrs)
MSSP structure, CCP and ECCP, Study of UART, SPI, I2C, ADC. Interfacing serial port, ADC, RTC, EEPROM. Motor Control using PIC. All programs in embedded C.		

List of Experiments:

1. BCD to HEX, HEX to BCD conversion in 8051
2. Generate BCD up/ down counter in 8051.
3. Square wave generation using timers in 8051.
4. Serial Communication using 8051.
5. LCD interfacing with 8051.
6. Stepper motor interfacing with 8051.
7. Keyboard interfacing with 8051.

8. ADC/DAC interfacing with 8051.
9. Serial Communication using PIC.
10. LCD interfacing with PIC.
11. Stepper motor interfacing with PIC.
12. Keyboard interfacing with PIC.
13. Seven segment display interfacing with PIC.

List of Assignments: One assignment on each unit

Content Delivery Methods: Chalk & talk, Power point presentation

Text Books:

1. Mazidi, “8051 microcontroller & embedded system” 3rd Edition ,Pearson
2. Mazidi, “PIC microcontroller & embedded system” 3rd Edition ,Pearson

Reference Books:

1. Ajay V. Deshmukh, “Micro-controllers - Theory and Applications”, Tata McGraw Hill.
2. Kenneth J. Ayala, “The 8051 Micro-controller – Architecture, Programming & Applications”, Penram International & Thomson Asia, Second Edition.
3. John B. Peatman, “Design with PIC Micro-controllers”, Pearson Education Asia, Low Price Edition.
4. 18F xxx reference manual

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

To prepare a demonstration model on:

1. Finger Print based attendance management system
2. LPG gas leakage detection system
3. Automatic motor control for filling water tank
4. Fire detection and alert system
5. Room temperature maintenance by automatically adjusting fan speed / AC
6. Home automation
7. Automatic maintenance of green house
8. Alcohol detection and alert family members in case of drunk and drive
9. Patient monitoring through GSM
10. Digital Notice board for college students
11. Line follower robot
12. Path follower robot
13. Public garden automation
14. Voting machine with digital display
15. Design Real Time Clock
16. Automatic City Street Lights control system

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	Data Structures and Algorithms		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Practical:- 04 Hours/ Week	Term Work	25 Marks	01
	Total	25 Marks	01

Course Contents

Unit 1	Introduction to Data structures and Algorithms	(8 Hrs.)
Introduction to data structure, Data representation, Abstract Data types, Primitive data types, Data structure and data types, Differences between data types. Program design. Algorithms and different approaches to designing an algorithm, Complexity, Big O notation, algorithm analysis, recursion. Sorting Bubble sort, Selection sort, Quick sort, Merge sort, Insertion sort.		
Unit 2	Analysis of Algorithms	(8 Hrs.)
Asymptotic notations and their significance, Running time of an algorithm, Time-complexity of an algorithm, Performance analysis of an algorithm, Analysis of iterative and recursive algorithms, Master theorem (without proof).		
Unit 3	Data Structures	(8 Hrs.)
Importance of data structures, Arrays, Stacks, Queues, Linked list, Trees, Hashing table, Binary Search Tree, Heaps.		
Unit 4	Search Trees and Multiway Trees	(8 Hrs.)
Binary tree, Linked and array representation of Binary tree, Binary search tree, Operation: Searching of a Node in a Binary tree, Insertion of a node in binary tree, deletion from a binary tree. Threaded binary tree, Forest. AVL trees Multiway Trees: Issues in large dictionaries, m-way search trees, Btrees, search insert and delete operations, height of B-tree, 2-3 trees, sets and multisets in STL		
Unit 5	Graphs Algorithms	(8 Hrs.)
Definition, terminology, directed and undirected graphs, properties, connectivity in graphs, applications, implementation – adjacency matrix and linked adjacency chains, graph traversal – breadth first and depth first, minimum spanning tree (MST), single source shortest paths.		
Unit 6	Algorithm Design Paradigms	(8 Hrs.)
Divide and Conquer, Brute force, Greedy, Recursive Backtracking and Dynamic programming.		

Text Books:

1. “Data structure using C” ISRD group, TMH.
2. “Data Structure through C” ,Yashwant kanetkar, BPB Publication.
3. Thomas H. Cormen, C.E. Leiserson, R L.Rivest and C. Stein, Introduction to Algorithms, Third edition, MIT Press, 2009.

Reference Books:

1. “Data structure using C” AM Tanenbaum, Y Langsam and MJ Augustein, Prentice Hall India.
2. “Data structure and Algorithm Analysis in C” Weiss, Mark Allen Addison Wesley.
3. “Data structure – A Pseudocode Approach with C”, Richard F Gilberg Behrouz A. Forouzan, Thomson
4. “Let us C”, Yashwant Kanetkar,BPB Publication.
5. SanjoyDasgupta, C.Papadimitriou and U.Vazirani , Algorithms, Tata McGraw-Hill, 2008.
6. A. V. Aho, J.E. Hopcroft and J. D. Ullman, Data Structures and Algorithms, Pearson India, 1st Edition, 2006
7. Sara Baase, Allen Van Gelder, Computer Algorithms, Introduction to Design and Analysis, 3rd edition, Wesley Longman Publishing, 1999.

List of Experiments:

1. Extract the features based on various color models and apply on image and video retrieval
2. Arrays, loops and Lists
3. Stacks and Queues
4. Searching and Sorting

5. Linked List and operations
6. Brute force technique
7. Greedy Technique
8. Backtracking
9. Dynamic Programming
10. Trees and Tree Operations
11. BFS and DFS
12. Minimum Spanning Tree

Designation of Course	MATLAB Programming		
Teaching Scheme	Examination Scheme		Credits Allotted
Practical: -02 hours/Week	Term Work & Practical	50 Marks	01
	Total	50 Marks	01

Course Prerequisites:-	Basic Mathematics
Course Objective: -	The goal of the course is that students should develop techniques for problem solving using a programming language.
Course Outcomes	<p>Students should</p> <ol style="list-style-type: none"> 1. Understand basics of MATLAB and apply that knowledge to write simple programs. 2. Understand the concept of arrays and functions and be able apply them in writing programs/solving problems. 3. Understand the concept of 2D graphics and be able apply them in developing 2D plots 4. Understand the concept of 3D graphics and be able apply them in developing 3D plots 5. Apply MATLAB knowledge to solve algebraic problems 6. Understand the concepts of GUI and apply them in creation of forms and objects

Course Contents

Unit-I	Introduction to MATLAB	(04 Hrs.)
MATLAB Introduction; Platform & Features; Advantages & Disadvantages; MATLAB Commands; MATLAB Environment; Working with Variables & Arrays Workspace, Variables, & Functions; MATLAB Data Types; Control Statements; if...end statement; if-else... end statement; MATLAB switch; Loops: for loop; while loop; break and continue		
Unit-II	Arrays and Functions	(04 Hrs.)
Matrices & Arrays; Multi-Dimensional Arrays; MATLAB Compatible Array; MATLAB Sparse Matrices; MATLAB M-Files; MATLAB Functions; Anonymous Function		
Unit-III	Graphics I: 2D plots	(04 Hrs.)
fplot(); Semilogx(); Semilogy(); loglog(); Polar Plots(); fill(); Bar(); errorbar(); barh(); plotyy(); area(); Pie(); hist(); stem(); Stairs(); compass(); comet(); contour(); quiver(); pcolor();		
Unit-IV	Graphics I: 3D plots	(04 Hrs.)
plot3(); fill3(); contour3(); surf(); surfc(); mesh(); meshz(); waterfall(); stem3(); ribbon(); sphere(); ellipsoid(); cylinder(); slice()		
Unit-V	Algebra in MATLAB	(04 Hrs)
Gauss & Gauss-Jordan Elimination; Eigenvalues & Eigenvectors; Symbolic Mathematics, Polynomials and Interpolation		
Unit-VI	GUI in MATLAB	(04 Hrs.)
Components, Containers, Callback		

Term Work

Term work shall consist of programs and assignments based on syllabus.

1. Introduction to MATLAB commands and Programming
2. Use of Arrays and functions in command prompt and programming
3. Generation of 2D graphs
4. Generation of 3D graphs
5. Solving algebraic problems using MATLAB
6. Creation of GUI forms and objects

Text Books

1. "Getting Started with MATLAB: A Quick Introduction for Scientists & Engineers", Rudra Pratap, Oxford University Press

Reference Books

1. "MATLAB and its Applications in Engineering", Barbara Johnston, Prentice Hall of India, New Delhi.
2. " MATLAB: An Introduction with Applications ", Amos Gilet, Wiley Publication
3. " MATLAB Programming for Engineers ", Stephen Chapman, Cengage Learning India Pvt. Ltd.
4. " Fundamental Concepts of MATLAB Programming: From Learning the Basics to Solving a Problem with MATLAB (English Edition) ", Dr.Brijesh Bakariya, Dr.Kulwinder Singh Parmar, BPB Publications

Designation of Course	Vocational Course-I: Sensors, PLC & HMI: Basic Training		
Teaching Scheme	Examination Scheme		Credits Allotted
	Term Work & Oral	50 Marks	02
	Total	50 Marks	02

Course Prerequisites:-	Digital Electronics, Embedded systems, Power Electronics
Course Objectives:-	<ol style="list-style-type: none"> 1. To introduce the student to the programmable logic controllers sensors. 2. To impart the knowledge of protocols & networking of PLCs 3. To introduce SCADA &DCS 4. To introduce HMI
Course Outcomes:-	<ol style="list-style-type: none"> 1. Understand the general principles of sensors and transducers 2. Understand the requirements for networking of sensors 3. Understand the principle and working of advanced sensors 4. Identify the sensors for typical applications. 5. Identify the components of SCADA & DCS 6. Identify the components of HMI

Course Contents

Unit-I	Fundamentals of Sensors	(8 Hrs)
Performance terminology, static and dynamic characteristics of transducers, classification of sensors and transducers, signal processing and signal conditioning.		
Unit-II	Sensors and Networking	(8 Hrs)
Inductive, capacitive, magnetic, various types of photo sensors, detection methods, through-beam detection, reflex detection & proximity detection, ultrasonic and microwave sensors. Applications and understanding of the above sensors. Networking: Networking of sensors, control of manufacturing process, tracking- the meantime between operations interventions, tracking the yield and mean process time, detection of machining faults, diagnostic systems, resonance vibration analyzer, sensing motor current for signature analysis, temperature sensing.		
Unit-III	Advanced Sensor Technologies	(8 Hrs)
Laser production, characteristics of lasers, types of laser sensors, bar code sensors, benefits of bar coding, transponder, RFID (Radio Frequency Identification), electromagnetic identifier, optical encoders, color sensors, sensing principles, color theory, unit color measurement, colour comparator, color sensing algorithm, fuzzy logic color sensor. fuzzy logic for optoelectronic colour sensor in manufacturing. Sensors in Flexible Manufacturing Systems: Vision sensors, image transformations, robot visual sensing tasks, detecting partially visible objects, sensors in flexible manufacturing.		
Unit-IV	Sensors for Special Applications	(8 Hrs)
A multi objective approach for selection of sensors in manufacturing, cryogenic manufacturing applications, semiconductor absorption sensors, semiconductor temperature detector using photoluminescence temperature detectors using point-contact, sensors in process manufacturing plants, measurement of high temperature, robot control through sensors, other sensors, collection and generation of process signals in decentralized manufacturing system.		
Unit-V	SCADA & DCS	(8 Hrs)
Role of SCADA in Industrial Automation, SCADA System Configuration, RTU, Communication, Introduction to DCS, Architecture of DCS, Input and output modules, communication module, Specifications of DCS.		
Unit-VI	Human Machine Interface	(8 Hrs)
Different Types of Operator Interfaces: Textual, Graphical, Data Handling With HMI, Configuration and Interfacing to PLC and PC, Communication Standards- DF1, Ethernet, DH45, RS232, RS485, Profibus.		

Text Books:

1. "Sensors & control systems in manufacturing.", Sabnesoloman, Mc-Graw Hill book Company Network, 1994
2. "Mechatronics" ,W, Bolton
3. "Programmable Logic Controllers, Principles and Applications"; John W. Webb, Ronold A Reis, 5th Edition, Prentice Hall of India Pvt. Ltd

References Books:

1. "Sensor Technology Handbook", Jon S. Wilson
2. "Mechanical measurement", N.L. Buck & T.G.Buck,
3. "Sensors and Transducers", Ian Sinclair

Designation of Course	Design and Analysis of Machine Component		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: -02 Hours/Week	Internal Assessment	40 Marks	
	Term Work & Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisites: -	<ol style="list-style-type: none"> 1. Computer Aided Drafting and Visualization 2. Computer Aided Machine Drawing 3. Strength of Machine Components
Course Objectives: -	<ol style="list-style-type: none"> 1. To study basic concepts of machine design. 2. To design and analysis different types of machine elements 3. To design of machine component for finite and infinite life and subjected to fluctuating load.
Course Outcomes: -	<ol style="list-style-type: none"> 1. Understand the basic concept of machine design and evaluate dimensions of simple components. 2. Understand the fundamental concepts for design of shaft, keys and coupling and evaluate forces and dimensions. 3. Understand the concept of designing of Power Screws and Mechanical spring and analyze it for various applications. 4. Understand the basic concept of fluctuating loads and Analyze design of components under fluctuating loads. 5. Understand the concept of fasteners and threaded joints; and analyze when it is subjected to different loading conditions. 6. Understand the Design concept of welded & riveted joint;and analyze when it is subjected to different loading conditions.

Course Contents

Unit-I	Introduction to Design and Design against Static Load	(08 Hrs)
<p>Introduction to Design: Need for component design, design process, Introductions to concurrent engineering, Design consideration for casting, forging & machined parts, hot & cold worked parts and welded assembly, Introduction to design for manufacture & assembly,</p> <p>Design against Static Load: Modes of failure, Factor of safety, Service factor, stress strain relationship, shear stress & strain, stress due to bending moment, Eccentric axial loading.</p> <p>Design of simple machine parts - Cotter joint, Knuckle joint and Levers, curved beam.</p>		
Unit -II	Shafts, Keys and Coupling	(08 Hrs)
<p>Introduction, Transmission Shafts, Shaft Design on Strength Basis, Shaft Design on Torsional Rigidity Basis, ASME Code for Shaft Design, Design of Hollow Shaft on Strength Basis, Design of Hollow Shaft on Torsional Rigidity Basis, Flexible Shafts</p> <p>Keys– saddle, sunk, feather, woodruff, square, flat, Kennedy key, key design, Types of keys, splines.</p> <p>Couplings- types of couplings, Design of rigid and flexible couplings.</p>		
Unit-III	Power Screws and Mechanical Spring	(08Hrs)
<p>Power Screws, Forms of Threads , Multiple Threaded Screws, Terminology of Power Screw, Torque Requirement—Lifting Load, Torque Requirement—Lowering Load, Self-locking Screw, Efficiency of Square Threaded Screw, Efficiency of Self-locking Screw, Trapezoidal and Acme Threads, Collar Friction Torque, Overall Efficiency, Coefficient of Friction, Design of Screw and Nut, Design of Screw Jack, Differential and Compound Screws, Re-circulating Ball Screw.</p>		

Mechanical Spring: Types of Springs, Terminology of Helical Springs, Styles of End, Stress and Deflection Equations, Series and Parallel Connections, Design of Helical Springs, Concentric Springs, Helical Torsion Springs, Surge in Spring, Multi-Leaf Spring, Nipping of Leaf Springs, Shot Peening		
Unit-IV	Design for Fluctuating Loads	(08 Hrs)
Stress concentration factor and its Reduction, Stress concentration factor for various machine parts, Cyclic stresses, Fatigue and endurance limit, Notch sensitivity, Cumulative Damage in Fatigue, Design for finite and infinite life, Soderberg, Goodman, Modified Goodman & Gerber criteria.		
Unit-V	Threaded Joints	(08 Hrs)
Basic Types of Screw Fastening, Cap Screws & Setscrews, Bolt of Uniform Strength, Locking Devices, Terminology of Screw Threads, ISO Metric Screw Threads, Bolt under tension, Eccentrically Loaded Bolted Joints in Shear, Eccentric Load Perpendicular to Axis of Bolt, Eccentric Load on Base plate, Torque Requirement for Bolt Tightening, Dimensions of Fasteners, Design of Turnbuckle.		
Unit-VI	Welded and Riveted Joints	(08 Hrs)
Welded Joints- Welding Processes, Strength of Butt and Fillet Joints, Strength of Parallel Fillet Welds, Strength of Transverse Fillet Welds, Axially Loaded Unsymmetrical Welded Joints, Eccentric Load in the Plane of Welds, Welded Joint Subjected to Bending Moment and Torsional Moment, Welding Symbols		
Riveted Joints- Types of Rivet Heads and riveted Joints, Rivet Materials, Types of Failure, Strength Equations, Efficiency of Joint, Caulking and Fullering, Eccentrically Loaded Riveted Joint		

Term work

Term work shall consist of following experiments. Hand calculations must be confirmed through a computer programme using any programming language.

1. Symbolic representation of common machine components using Auto-CAD.
2. Design of machine components such as knuckle joint, cotter joint and lever (anyone) using CAD software.
3. Design of coupling system using CAD software.
4. Design of screw jack using CAD software.

Assignment

Numerical and/or theory questions on following topics from previous year question papers of GATE/ESE Mechanical Engg. examinations.

1. Static loading
2. Design of shafts
3. Power screw
4. Mechanical springs
5. Design of fluctuating load
6. Design of threaded joints
7. Design of welded
8. Riveted joints.

Note: Design data book should be used extensively.

Textbooks

1. V. B. Bhandari, "Design of Machine Elements", Tata McGraw Hill Publication Co. Ltd.
2. R. S. Khurmi And J.K. Gupta "Machine Design", S Chand Publication.
3. Shigley J. E. and Mischke C. R., "Mechanical Engineering Design", McGraw Hill Publication Co. Ltd.
4. Spotts M. F. and Shoup T.E., "Design of Machine Elements", Prentice Hall International.

Reference Books

1. Black P.H. and O. Eugene Adams, "Machine Design", McGraw Hill Book Co. Inc.
2. Willium C. Orthwein, "Machine Components Design", West Publishing Co. and Jaico Publications House.
3. Hall A. S., Holowenko A. R. and Laughlin H. G, "Theory and Problems of Machine Design", Schaum's Outline Series.
4. Sharma C. S. and Purohit Kamlesh, "Design of Machine Elements", PHI Learning Pvt. Ltd.
5. D. K. Aggarwal & Sharma P. C., "Machine Design", S.K Kataria and Sons
6. Gope P. C., "Machine Design: Fundamentals and Applications", PHI Learning Pvt. Ltd.
7. "Design Data- P. S. G." College of Technology, Coimbatore.
8. V. B. Bhandari, "Design Data Book", Tata McGraw Hill Publication Co. Ltd.

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. To develop Industrial/Real life application demonstration model of different types of Joints. (Cotter joint and Knuckle joint)
2. To observe the system where transmission of power takes place through shaft, Keys, coupling, like Transmission of power from motor to pump/generator/lathe machine/drilling machine. By selecting suitable materials, design the shaft, key and coupling. To prepare design report and assembly drawing indicating overall dimensions, tolerances, and surface finish. Also to prepare bill of materials.
3. To develop a demonstration models of different types of couplings.
4. To develop a demonstration models of different types of keys.
5. To observe the system where transmission of power takes place through power Screws. (e.g. Lead screw of lathe, feed screws of machine tools, Clamping screws, Toggle Jack screw, etc.) Get the required information regarding effort, clamping force, etc., and selecting suitable materials design screw, nut and different simple components in assembly. To prepare design report and assembly drawing indicating overall dimensions, tolerances, and surface finish. Also to prepare bill of materials.
6. To develop demonstration models of different types of springs.
7. To develop demonstration models of different types of threaded joints.
8. To develop demonstration models of different types of fasteners.
9. To develop demonstration models of different types of welded joints.
10. To develop demonstration models of different types of riveted joints.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Designation of Course	DIGITAL ELECTRONICS		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical:- 02 Hours/ Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	05

Course Prerequisites:-	Electronics Engineering Systems
Course Objective	<ol style="list-style-type: none"> To present the Digital fundamentals, Boolean algebra and its applications in digital systems To familiarize with the design of various combinational digital circuits using logic gates To introduce the analysis and design procedures for synchronous and asynchronous sequential circuits To explain the various semiconductor memories and related technology To introduce the electronic circuits involved in the making of logic gates To introduce memory operation is PLA
Course Outcomes:-	<p>The students should be able to-</p> <ol style="list-style-type: none"> Use digital electronics in the present contemporary world. Design various combinational digital circuits using logic gates. Do the analysis and design procedures for synchronous and asynchronous sequential circuits. Use the semiconductor memories and related technology. Use electronic circuits involved in the design of logic gates. To understand characteristics of PLDs, Semiconductor memories and their applications

Course Contents

Unit 1	Digital Fundamentals	(08Hrs)
Number Systems – Decimal, Binary, Octal, Hexadecimal, 1's and 2's complements, Codes – Binary, BCD, Excess 3, Gray, Alphanumeric codes, Boolean theorems, Logic gates, Universal gates, Sum of products and product of sums, Minterms and Maxterms, Karnaugh map Minimization and Quine-McCluskey method of minimization		
Unit 2	Combinational Circuit Design	(08Hrs)
Design of Half and Full Adders, Half and Full Subtractors, Binary Parallel Adder – Carry look ahead Adder, BCD Adder, Multiplexer, Demultiplexer, Magnitude Comparator, Decoder, Encoder, Priority Encoder.		
Unit 3	Synchronous Sequential Circuits	(08Hrs)
Flip flops – SR, JK, T, D, Master/Slave FF – operation and excitation tables, Triggering of FF, Analysis and design of clocked sequential circuits – Design - Moore/Mealy models, state minimization, state assignment, circuit implementation – Design of Counters- Ripple Counters, Ring Counters, Shift registers, Universal Shift Register.		
Unit 4	Asynchronous Sequential Circuits	(08Hrs)
Stable and Unstable states, output specifications, cycles and races, state reduction, race free assignments, Hazards, Essential Hazards, Pulse mode sequential circuits, Design of Hazard free circuits.		
Unit 5	Digital Integrated Circuits	(08 Hrs)
Digital integrated circuits: Logic levels, propagation delay, power dissipation, fan-out and fan-in,		

noise margin, logic families and their characteristics-RTL, TTL, ECL, CMOS		
Unit 6	PLDs & Semiconductor Memories: Programmable logic devices	(08Hrs)
Study of PROM, PAL, FPGA, PLAs. Designing combinational circuits using PLDs.		
Semiconductor memories		
Classification and characteristics of memory, different types of RAMs, ROMs and their applications, Double Data Rate RAMs.		

List of Experiments-

Term work shall consist of **Minimum Eight** Experiments.

1. Implementation of Boolean functions using logic gates
2. Study of characteristics of typical 74 TTL / 74 CMOS family like: fan in, fan out standard load, noise margin & interfacing with other families
3. Half, Full Adder and subtractor using gates and IC's
4. Code conversion using digital IC's
5. Function implementation using Multiplexer and Demultiplexer
6. Sequence generator using MSJK flip flop IC's
7. Study of counters : Ripple , Synchronous , Ring , Johnson , Up-down counter and its application
8. Study of shift registers : Shift left , Shift right , parallel loading and Pulse Train generator
9. Study of Full Adder using half adder
10. Study of 2 bit comparator
11. BCD Adder/Subtractor with Decoder driver and 7 segment display

Text Books/ Reference Books

1. M. Morris Mano and Michael D. Ciletti, "Digital Design", 5th Edition, Pearson, 2014.

REFERENCE BOOKS

1. Charles H. Roth. "Fundamentals of Logic Design", 6th Edition, Thomson Learning, 2013.
2. Thomas L. Floyd, "Digital Fundamentals", 10th Edition, Pearson Education Inc, 2011
3. S. Salivahanan and S. Arivazhagan "Digital Electronics", 1st Edition, Vikas Publishing House Pvt Ltd, 2012.
4. Anil K. Maini "Digital Electronics", Wiley, 2014.
5. A. Anand Kumar "Fundamentals of Digital Circuits", 4th Edition, PHI Learning Private Limited, 2016.
6. Soumitra Kumar Mandal " Digital Electronics", McGraw Hill Education Private Limited, 2016.

Assignments:

At least ONE assignment on each unit

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. Survey report of basic gates ICs 7432, 4011, 4050, 4070, 4071, 40106
2. Implement combinational logic Circuit of given Boolean Equation.
3. Implement Half Adder and Half Subtractor.
4. Implement Full Adder using two Half Adders
5. Build 4-bit parallel Adder / Subtractor using IC.
6. Build Code Converters: Binary to Gray
7. Build Code Converters: Excess 3 to Binary)
8. Implement Two Bit Magnitude Comparator using IC 7485
9. Implement given combinational logic using MUX

10. Implement 7 segment decoder driver using IC 7447.
 11. Build a Decade counter and Up-Down Counter.
 12. Build a Shift Registers: SISO and SIPO
 13. Implement the Johnson Counter and Ring Counter.
 14. Survey Report on Static I/O and transfer Characteristic of TTL and CMOS.
 15. Implement given Boolean Function using PLA.
- (Function and Equation will be given by Subject Teacher)

Unit Tests

Unit Test-I	Unit-I,II,III
Unit Test-II	Unit-IV, V,VI

Designation of Course	POWER ELECTRONICS AND DRIVES		
Theory: 03 Hours/ Week	End Semester Examination	60 Marks	03
Practical: 02 Hours / Week	Internal Assessment	40 Marks	
Tutorial: 01 Hour/Week	Tutorial		01
	Term work & Oral	50 Marks	01
	Total	150 Marks	05

Course	Construction, Working Principle & Application of AC and DC motors
Prerequisites:-	Introductions to Electronic Components SCR , Diodes etc
Course Outcomes:-	<ol style="list-style-type: none"> 1. Explore the basic knowledge of the components and dynamics related to electrical drives and also basics of Voltage source converters. 2. Explore the basic knowledge of the components and also basics of Current source converters. 3. Perform and understand the operation of solid state control using Inverters. 4. Analyze and understand the DC Drives. 5. Understand the various Induction motor drives in various applications. 6. Explore the synchronous motor drives as per the industrial point of view.
Course Outcomes:-	<p>The students should be able to-</p> <ol style="list-style-type: none"> 1. Understand the different types of converters. 2. Understand the basic concepts of matrix converter and CSC. 3. Understand the basic concepts multilevel Inverters. 4. Understand the basic concepts DC drives and apply it for different applications. 5. Understand the basic concepts of Induction motor drives and its different types. 6. Understand the basic concepts of Synchronous Motor Drives and apply it for different applications.

Course Contents

Unit 1	Converters	(06 Hrs.)
Voltage Source Converters: Review of 3-ph-full wave bridge converter, operation and harmonics, 3 level voltage source converters. PWM converter. Generalized technique of harmonic elimination and voltage control. Advanced modulation techniques (space vector modulation, 3 rd harmonic PWM) Comparison of PWM techniques. Converter rating.		
Unit 2	Current source converters	(06 Hrs.)
(i) Matrix Converter: 3×3 matrix converter, principle of working, mathematical treatment, comparison of matrix converter with multipulse converter. (ii) Self and Line commutated current source converter: Basic concepts of CSC, converters with self commutating devices.		
Unit 3	Multilevel Inverters	(06 Hrs.)
Multilevel concept, Types of multilevel Inverters, diode clamped multilevel inverter, flying-capacitors multilevel inverters, cascaded multilevel inverter, switching device currents, D.C. link capacitor voltage balancing, features of multilevel inverters, comparison of multilevel inverters. Applications of multilevel Inverter: Reactive power compensation Back to back inertie system.		
Unit 4	DC Drives	(06 Hrs.)
Single phase and 3 phase converter drives. Four quadrant Chopper drives, closed loop control of DC motor, Permanent magnet DC motor drives, DC Servo drives, applications.		

Unit 5	Induction Motor Drives	(06 Hrs.)
3 phase induction motor control, stator voltage control/rotor voltage control, voltage and frequency control, current control, closed loop control of 3-phase induction motor. Soft starters, comparison of variable frequency drives, Speed control by static slip power recovery, induction motor servo drives, applications.		
Unit 6	Synchronous Motor Drives	(06 Hrs.)
Voltage and frequency control, closed loop control of synchronous motors. Synchronous motor servo drive with sinusoidal waveform, synchronous motor servodrive with trapezoidal waveform. Load commutated inverter drives, speed control of synchronous motors by cyclo-converters, applications.		

LIST OF EXPERIMENTS: (Students should perform at least 08 experiments from the following list)

1. Gate Pulse Generation using R, RC and UJT.
2. Characteristics of SCR and Triac
3. Characteristics of MOSFET and IGBT
4. AC to DC half controlled converter
5. AC to DC fully controlled Converter
6. Step down and step up MOSFET based choppers
7. IGBT based single phase PWM inverter
8. IGBT based three phase PWM inverter
9. AC Voltage controller
10. Switched mode power converter.
11. Simulation of PE circuits

(1 Φ &3 Φ semiconverter, 1 Φ &3 Φ fullconverter, dc-dc Converters, ac voltage controllers).

Text Books:

Reference Books and Papers:

1. E. H. Watanabe, R.M. Stephen and Maurico Ardes “New Concepts of instantaneous active and reactive powers in Electrical systems with Generic loads” (IEEE transaction on Power Delivery Vol.8, no.2 April 1993, PP-697-703.
2. L. Benchaita, S. Sadaate and A. Salemnia – “A comparison of voltage source and current source shunt Active filter by simulation and Experimentation” (IEEE Transaction on Power Systems, Vol 14, No.2, May 99, PP 642-647.
3. H. Akagi, E.H. Watanabe and M. Aredes “Instantaneous Power Theory and Applications to Power Conditioning, IEEE Press, New York.

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. Review paper on applications of Power electronic switches with and without Snubber (i) IGBT (ii) MOSFET
2. Modeling and system simulation of basic electrical circuits using MATLAB-SIMULINK/SCILAB
3. Modeling and System simulation of basic power electronic circuits using MATLAB-SIMULINK/SCILAB
4. Development of AC Source with Single Diode fed Resistive and Resistive-Inductive Load
5. Development of AC source with Single SCR fed Resistive and Resistive-Inductive Load
6. Modeling and System Simulation of SCR based full converter with different types of load using MATLAB-Simulink/SCILAB
7. Development of prototype of Full converter fed resistive load
8. Development of prototype of Full converter fed Resistive-Back Emf (RE) load at different firing angles
9. Development of prototype of Full Converter fed Resistive-Inductive Load at different firing angles
10. Development of prototype of Full converter fed DC motor load at different firing angles
11. Circuit Simulation of Voltage Source Inverter and study of spectrum analysis with and without filter using MATLAB/SCILAB
12. Development of prototype of Single phase square wave inverter
13. Development of prototype of Three phase sine PWM inverter
14. Generation of PWM gate pulses with duty cycle control using PWM peripheral of microcontroller (TI-C2000 family/ PIC18)
15. Design of Driver Circuit using IR2110
16. Design and testing of signal conditioning circuit to interface voltage/current sensor with microcontroller (TI-C2000 family/ PIC18)
17. Design of PI controller using OP-AMP
18. PCB design and fabrication of DC power supply using any PCB design software (open source- KiCAD/students version)

Unit Tests

Unit Test-I	Unit-I,II,III
Unit Test-II	Unit-IV, V,VI

Designation of Course	Manufacturing Technology-I		
Teaching Scheme	Examination Scheme		Credits Allotted
Theory: - 03 Hours/ Week	End Semester Examination	60 Marks	03
Practical: 02 Hours/Week	Internal Assessment	40 Marks	
	Term work	50 Marks	01
	Total	150 Marks	04

Course Prerequisites:-	The student should have basic knowledge of 1. Mechanical engineering system 2. Engineering materials 3. Advanced metallurgical technology
Course Objectives:-	The student should 1. To acquire the knowledge of Foundry Technology. 2. To acquire the knowledge of hot and cold working processes. 3. To acquire the knowledge of lathe, drilling, milling, and sheet metal operations.
Course Outcomes:-	The students should be able to– 1. Understand the pattern and mold making. 2. Understand the various casting processes and apply the best casting process for a specific product. 3. Understand the hot working and cold working processes and apply them in Manufacturing. 4. Understand different operations on lathe machine and apply them to create the job. 5. Understand different operations of drilling machine and milling machine and apply them to create the job. 6. Understand various sheet metal operations and apply them to create the job.

Course Contents

Unit 1	Pattern and Mould Making	(06 Hrs.)
Introduction to casting, Foundry Layout, Foundry departments and sections, Pattern and pattern making, Design and allowances for patterns, Colour codes for patterns, Storage of patterns. Moulding sand and core sands, Sand control test, Core and core making –Introduction, Core making Procedure, Types of cores, Core print, Core boxes. Mould and mould making-Moulding Methods, Moulding processes, Design of Gating System.		
Unit 2	Sand Casting and Die Casting Practice	(06 Hrs.)
Sand Casting Practice: Melting furnaces and their selection, Cupola furnace, Induction melting furnaces, Advantages, Limitations, applications, pouring practice and equipment's, Ladle technology, Strike out, Fettling, Cleaning and Surface preparation of castings, Defects in castings. Die Casting Practice: Pressure and gravity die casting, Shell mould casting, Investment casting, Continuous casting, centrifugal casting, Applications, Merits and limitations.		
Unit 3	Hot and Cold Working Processes	(06 Hrs.)
Hot Working Processes: Principle rolling, forging - drops, press, upset. Rolling, forging- extrusion, drawing, spinning, Angle of Contact of rolling, effect of hot working. Cold Working Processes: Cold rolling, swaging, forges extrusion- forward backward impact. Roll forging, tube drawing, wire drawing, spinning, shot peening, high energy rate forming, Stresses in wire drawing operations.		
Unit 4	Introduction to sheet metal Working	(06 Hrs.)
Introduction to machines in sheet metal Industry: shearing machine, bending machine, circular profile cutting machines. Rivets and its different parts, Punching, blanking, shearing, bending, and piercing. Punch & Die tolerance and clearance. Introduction to Dies: Simple Dies, Compound Dies, Progressive Dies. Types of presses.		

Unit 5	Theory of Metal Cutting	(06 Hrs.)
Introduction of Lathe, function, types, construction, accessories, operations, thread cutting, single and multi-start thread cutting different tools, tool materials, Tool Geometry- Single Point cutting tool, Tool Wear and Tool Life, Mechanics of Metal cutting- Merchant's Circle Diagram, concept of speed, feed, depth of cut. Introduction to Boring Machines- general arrangement and nature of work done.		
Unit 6	Drilling Milling and Grinding Machines	(06 Hrs.)
Drilling Machines: Fundamentals of drilling process, twist drill geometry, tool holders, Types of drilling machines, drilling operations. Types of drills, reaming process. Milling Machines: Fundamentals of milling process, cutters-types and geometry, Operations performed on milling machines. Dividing head, methods of indexing, Introduction to grinding Machines.		

Assignments:

1. Pattern and Mould Making.
2. Sand Casting and Die Casting Practice.
3. Hot Working processes and Cold Working Processes.
4. Turning, boring related process.
5. Drilling Machines.
6. Milling Machines.
7. Rivets and its different parts.
8. Punch & Die tolerance and clearance.

List of Experiments: (Any Eight)

1. Moulding and core sand testing (Clay content test, moisture content test etc.).
2. Strength of Green sand mould and greens sand core.
3. Mold Making Practice.
4. Job on drilling, reaming, tapping.
5. Casting of component by using green sand molding / Die casting.
6. Individual job on center Lathe.
7. Study of dividing indexing mechanism on milling machine.
8. Gear cutting job on Milling Machine.
9. Study and demonstration of Grinding Machines.
10. Job on sheet metal working.

Text Books:

1. O. P. Khanna, A text book of Foundry Technology, Dhanpat Rai and Sons
2. P. C. Sharma, Production Engineering, S. Chand Publications
3. R. K. Jain, Production Technology, Khanna Publishers

Reference Book

1. P. N. Rao, Manufacturing Technology- Vol 1, McGraw Hill Education (India) Private Limited
2. P. N. Rao, Manufacturing Technology, Vol- II, McGraw Hill Education (India) Private Limited
3. G. R. Nagpal, Tool Engineering and Design, Khanna Publishers
4. B. S. Raghuvanshi, Workshop Technology, Vol-II, Dhanpat Rai & Co.
5. Hajra Chaudhari, Workshop Technology, Vol.-II
6. Roy A. Lindberg, Process & Materials of Manufacture, PHI
7. E. P. DeGrmo, J. T. Black and A. Kosher, Material and processes in manufacturing, PHI
8. HMT Handbook, Production Technology, TMH

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. Working model of all types of patterns
2. Different types of gates in casting process
3. Different types of runners layout
4. Design and working model of gating system for any simple mechanical component
5. 2D model for detailed sand casting process
6. 2D model for detailed die casting process
7. Selection criteria, detail specifications, brands available in market and cost comparison of pressure and gravity die casting machine
8. Selection criteria, detail specifications, brands available in market and cost comparison of shell moulding
9. Selection criteria, detail specifications, brands available in market and cost comparison of centrifugal casting
10. Selection criteria, detail specifications, brands available in market and cost comparison of rolling machines
11. Selection criteria, detail specifications, brands available in market and cost comparison of wire drawing
12. Selection criteria, detail specifications, brands available in market and cost comparison of forging machine
13. Design and working model of simple die
14. Design and working model of compound die
15. Design and working model of combination die
16. Design and working model of progressive die
17. Selection criteria, detail specifications, brands available in market and cost comparison of lathe machine
18. Selection criteria, detail specifications, brands available in market and cost comparison of drilling machine
19. Selection criteria, detail specifications, brands available in market and cost comparison of milling machine
20. Selection criteria, detail specifications, brands available in market and cost comparison of CNC machine

Unit Test -

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	AUTOMATIC CONTROL SYSTEMS		
Teaching Scheme:	Examination Scheme		Credits Allotted
Theory: - 04 Hours/ Week	End Semester Examination	60 Marks	04
Practical: 02 Hours/Week	Internal Assessment	40 Marks	
	Term Work	25 Marks	01
	Total	125 Marks	05

Course Prerequisites: -	<ol style="list-style-type: none"> 1. Mathematics & Science 2. Basic Electrical Engineering. 3. Sensors and Measurement System.
Course Objectives: -	<ol style="list-style-type: none"> 1. Familiarization with Control System Principles and Applications of Control System. 2. Calculate and Estimate the Stability Measures, Time Response Measures from the Analysis of Mathematical Models of Some Simple Engineering Systems. 3. Develop Data Acquisition System using Controllers and apply it for Industrial Automation Application.
Course Outcomes: -	<p>The students should be able to</p> <ol style="list-style-type: none"> 1. Understand the basic concepts of automatic control systems 2. Obtain an overall transfer function of control system by using block diagram algebra methods 3. Determine the time and frequency response of control systems 4. Determine the (absolute) stability of a closed-loop control system using Routh-Hurwitz's stability criterion. 5. Apply fundamentals of PID controllers and use it in industrial automation 6. Select and use control system components for industrial automation.

Course Contents

Unit-I	Introduction to Automatic Control systems	(08 Hrs.)
Open Loop system, Closed Loop system, Conversion of an Open Loop system to a Closed Loop system, Servo Mechanism, Feed Forward Systems, Adaptive Control Systems, Classification of Control Systems, the design process. Transfer Function, Concept of Poles & Zeros of a Transfer Function, Properties of Transfer Function, Transfer Function of Basic Devices; Mathematical Modelling of Mechanical and Electrical Systems. Mechatronics System & Its Examples, Mechatronics System Components.		
Unit-II	Block Diagram Representation	(08 Hrs.)
Block Diagram Definitions, Generating a Block Diagram from a Physical System, Canonical Form, Rules for Block Diagram Reduction, Reduction of Block Diagram, Reducing to Unity Feedback Systems, Examples on Block Diagram Reduction.		
Unit-III	Time Response and Frequency Response Analysis	(08 Hrs.)
Time response of control system, standard test signal, Time Response, Analysis of First and Second order system, Time Domain specifications. Step response of second order system. Steady-state errors, static error constants, steady state, analysis of different type of Systems using step. Ramp and parabolic inputs, Frequency Response Specification, Co-relation between Time and Frequency Domain		
Unit-IV	Stability Analysis	(08 Hrs.)
Stable system, Unstable System, Marginally Stable System, Time Response of Poles, Hurwitz Stability Criterion, Routh Stability Criterion, Routh Criterion Special Cases, Relative Stability, Application of Routh's Criterion.		
Unit-V	Controllers	(08 Hrs.)
Introduction to Controllers, Control System Parameters, Controller Modes, Control Actions, Types of		

Controllers-ON-OFF Controller, Proportional Controller (P-Controller), Proportional + Integral Controller(P-I Controller), Proportional + Derivative Controller (P-D Controller), Proportional +Integral+ Derivative Controller (P-I-D Controller), Effect of Proportional, Integral, and derivative control on the Time Response of the System

Unit-VI	Control System Components	(08 Hrs.)
----------------	----------------------------------	------------------

Data Acquisition: Elements of a Data Acquisition and Control System, Overview of the Input/Output Process, Analog to Digital (A/D) Conversion, Digital to Analog (D/A) Conversion, Data Acquisition Case Studies. Variable Frequency Drive, Servomotor.

Switches: Construction, symbolic representation, working, application of Toggle switch, Slide switch, DIP

switch, Rotary switch, Thumbwheel switch, Selector switch, Push button, Drum switch, Limit switch, Temperature switch, Pressure switch, Level switch, Flow switch.

Relays: Construction, working, specifications/selection criteria and applications of electromechanical relay, Reed relay, hermetically sealed relay, Solid state relays.

Contactors: Construction, working, specifications and applications of contactors. Comparison between relay& contactor.

Term Work:

Term work shall consist record of minimum 8 experiments from the following;

1. Analysis of following control system parameters using software like MATLAB/SIMULINK
 - a. Plot the pole-zero configuration in s-plane for the given transfer function
 - b. Stability analysis of given control system using Routh-Hurwitz's criterion
 - c. Determine the transfer function for given closed loop system in block diagram representation.
 - d. Plot unit step response of given transfer function and find peak overshoot, peak time, rise time and delay time.
2. To study the basic Open and Closed Loop Control system
3. To study the Water Level Control Using Industrial PLC
4. Determination of step & impulse response for a first order unity feedback system
5. Study of P, P+I, P+D, P+I+D control actions using any Trainer Kit / Simulation Software.
6. Study of A/D and D/A Converters.
7. Study the functions and applications of variable frequency drive (VFD).
8. Study the functions and applications of AC servomotor.
9. Study of various switches, Relays and Contactors.
10. Study of Data Acquisition System and Interfacing of sensors with computer using DAQ Cards
11. Identification of different control system components in PLC based mini assembly cell

Text Books/Reference Books:

9. Singh M. D. and Joshi J. G., "Mechatronics", 3rd Edition, Prentice Hall, New Delhi, 2009.

Project Based Learning

Following is the list of topic for project based learning (Not Limited to) based on the syllabus contents:

1. Prepare a simple circuit for Open Loop Control systems for any Engineering application
2. Prepare a simple circuit for Closed Loop Control systems for any Engineering application
3. Prepare a simple working model which depicts an application of Mechatronics System
4. Generate a Block Diagram Algebra for any Mechanical System using Block Diagram Algebra rules.
5. Prepare Mathematical Model of any simple Mechanical Systems using MATLAB
6. Prepare a MATLAB Code to find the Time Response of Control system.
7. Solve the any Control system Characteristics equation for Stability Analysis using MATLAB
8. Prepare a simple control industrial application using Proportional Controller using any simulation software
9. Prepare a simple model which depicts the application of PID Controller using any simulation software
10. Prepare a circuit which depicts the operation of Analog to Digital Converter
11. Prepare a circuit which depicts the operation of Digital to Analog Converter
12. Identify Mechatronics Systems from Day-to-Day Applications and mention all the system components used
13. Prepare a simple circuit which depicts application of different Switches
14. Prepare a simple circuit which depicts application of different Relays
15. Prepare a simple circuit which depicts application of different Contactors
16. Prepare a simple Data Acquisition System and Interfacing of sensors with computer for temperature sensors
17. Prepare a simple Data Acquisition System and Interfacing of sensors with computer for Load Cell
18. Prepare a Model to control water level in Tank

Unit Test -

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Designation of Course	Solid Modelling		
Teaching Scheme:	Examination Scheme		Credits Allotted
Practical:- 04 Hours/Week	Term Work & Practical	50 Marks	02
	Total	50 Marks	02

Course Prerequisites: -	<ol style="list-style-type: none"> 1. Computer Aided Drafting and Visualisation 2. Computer Aided Machine Drawing
Course Objectives: -	<ol style="list-style-type: none"> 1. To introduce students to the basic concepts of CAD modelling. 2. To develop the skills in Reading and Interpretation of Engineering Drawings. 3. To familiarize students with modeling Software to Create 2D and 3D model, Assembly, Drafting and Sheet metal modelling.
Course Outcomes: -	<p>The students will be able to</p> <ol style="list-style-type: none"> 1. Understand the concepts of CAD modelling. 2. Creating 3D machine components using Modeling Software. 3. Creating Assembly of machine components using Modeling Software. 4. Creating surface model of Automobile Components using Modeling Software. 5. Creating detail drawing and generating Bill of Material using Modeling Software. 6. Understand the basic concepts of Sheet metal Modelling and Create a machine component using modeling Software.

Course Contents

Unit-I	Introduction to CAD	(08 Hrs.)
Introduction to CAD and CAE Features, Various products available for Product Design, Simulation, Communication modeling Graphical User Interface - Feature manager design tree, Callouts, Handles, Confirmation corner, mouse buttons, keyboard shortcuts, Command Manager. Sketch Entities, Sketch Tools, Block, Relation and Dimensioning.		
Unit-II	Basic Part Modelling	(08 Hrs.)
Part Modelling Tools, Creating Extrude features, Creating Revolve features, Creating Swept features, Creating Loft features, Creating Reference, Creating curves, Fillet features, Inserting Hole types, Creating Chamfer, Shell, rib, pattern and advanced modelling tools.		
Unit-III	Assembly modelling	(08 Hrs.)
Introduction to Assembly Modelling & Approaches, Applying Advanced Mates and Mechanical Mates, Manipulating Components, Creating Pattern, Creating Explode Views.		
Unit-IV	Surface Modelling	(08 Hrs.)
Surface Modelling tools Creating Extrude, Revolve, Swept, loft, Boundary surface. Inserting Planar Surface, Offset Surface, Radiate Surface. Extending a surface, Surface fill, Ruled Surface, Trimming Surface, Mid surface, Replace Face, Delete face, Un-trim surface, Knit surface, Thickening a Surface, Move Face.		
Unit-V	Drafting of Mechanical Systems	(08 Hrs.)
Generating Views, Creating Dimensions, Inserting Annotations and Bill of Materials.		
Unit-VI	Sheet Metal Modelling	(08 Hrs.)
Constructing the base flange and miter Flange, addition of an Edge Flange, closing corner, Adding Jog, Unfolding the bends, Adding hem and vent.		

Term Work

Term work shall consist of A-3/A4 size printouts of the problems solved in practical's using Solid Works Software.

1. Sketcher drawings
2. Part modelling
3. Parametric Modelling
4. Assembly Modelling
5. Exploded view of Assembly
6. Surface Modelling
7. Drafting of Mechanical Systems
8. Sheet metal modelling

Text Books

1. Kuang-Hua Chang, "Motion Simulation and Mechanism Design with MODELING Motion 2018", SDC Publishers, 2018

Reference Books

1. Ibrahim Zeid and R. Siva-Subramaniam – "CAD/CAM- Theory and Practice", Tata McGraw Hill, Publishing Co. 2009.
2. Rao P. N., "CAD/CAM", Tata McGraw Hill.

End Semester Practical/Oral examination:

1. Practical examination duration is Two hours, based on the Term work.
2. Questions provided for practical examination should contain minimum five and not more than ten parts.
3. Evaluation of practical examination to be done based on the performance of students work in laboratory.

***Oral examination should also be conducted to check the knowledge of conventional and Solid Works drawing.**

Designation of Course	Vocational Course-II: PLC, HMI & Automation: Advanced Training		
Teaching Scheme:	Examination Scheme		Credits Allotted
	Term Work & Oral	50 Marks	02
	Total	50 Marks	02

Course Prerequisites: -	C Programming
Course Objectives: -	<ol style="list-style-type: none"> 1. To introduce the functions of given industrial automation system. 2. To introduce input-output devices in PLC. 3. To introduce HMI and PLC interfacing
Course Outcomes: -	<ol style="list-style-type: none"> 1. Understand the functions and characteristics of given industrial automation system 2. Interface the given I/O device with appropriate PLC module 3. Understand working of HMI 4. Identify HMI hardware and software. 5. Interface PLC & HMI. 6. Understand the control panels of various industry HMIs

Course Contents

Unit-I	Introduction to Industrial Automation	(08 Hrs.)
Need and benefits of Industrial Automation, Automation Hierarchy, Basic components of automation system, description of each component, Types of automation system:-Fixed, programmable, flexible, Different systems for Industrial automation: PLC, HMI, SCADA, DCS, Drives		
Unit-II	PLC Programming and Applications	(08 Hrs.)
PLC I/O addressing, PLC programming Instructions : Relay type instructions, timer instructions: On delay, off delay, retentive. Counter instructions, Up. Down. High speed, Logical instructions, Comparison Instructions, Data handling Instructions. Arithmetic instructions, PLC programming language-Functional Block Diagram (FBD). Instruction List, Structured text, Sequential Function Chart (SFC), Ladder Programming, Simple Programming examples using ladder logic: Language based on relay, timer counter, logical, comparison, arithmetic and data handling instructions PLC based applications: Motor sequence control, Traffic light control, elevator control, Tank level control, conveyor system, Stepper motor control, reactor control		
Unit-III	Human Machine Interface (HMI)	(08 Hrs.)
History of User Interface Designing, I/O channels, Hardware, Software and Operating environments, The Psychopathology of everyday Things, Psychology of everyday actions, Reasoning and problem solving . The computer: Devices, Memory, processing and networks. Interaction: Models, frameworks, Ergonomics, styles, elements, interactivity, Paradigms, Security Features of HMI		
Unit-IV	HMI Selection and programming	(08 Hrs.)
HMI Interfacing Considerations, HMI Hardware Selection, HMI Software Selection, HMI Ergonomics, Configuring System Communications, Security Delta HMI programming: Communication to PLC Tags, Alarms, Trends, DataLog Screens, Animation. Download / upload Making Applications Download & Upload the Programs Creating Alarm Messages Communication with PLC Fault Finding and Trouble Shooting		
Unit-V	PLC & HMI	(08 Hrs.)
Communications - PLC to HMI, operator station design, Operator Interfaces Types, Textual, Graphical, animation, Interlocking tagging, HMI assembling and Wiring, HMI Data Handling		
Unit-VI	HMI in Industries	(08 Hrs.)
Role of HMI in Industries, Hardware & Architecture Source & Sink Concepts Wiring different field devices to PLC, Siemens KTP 600 Basic color PN (Key Touch Panel), Siemens TP177A DP (Touch Panel), Delta DOP-B07S411 (Touch Panel), Mitsubishi GS Series, HMI/SCADA development for the Pressure Control Station.

Bharati Vidyapeeth Deemed University
College of Engineering, Pune- 411043
The Structure of the Curriculum: 2007 Course

B. TECH. MECHANICAL: SEMESTER- I & II

Bharati Vidyapeeth University
College of Engineering, Pune
Department of Mechanical Engineering

Vision: To provide mechanical engineers capable of dealing with global challenges

Mission: Social transformation through dynamic education

Programme Educational Objectives (PEOs):

Graduates will be able,

- To fulfill need of industry with theoretical and practical knowledge
- To engage in lifelong learning and continued professional development
- To fulfill social responsibilities

Programme Outcomes (POs):

- a. To apply knowledge of mathematics, science and engineering fundamentals for solving engineering problems
- b. To identify the need, plan and conduct experiments, analyze data for improving the mechanical processes
- c. To design and develop mechanical systems considering social and environmental constraints.
- d. To design and develop a complex mechanical system using advanced mathematical and statistical tools and techniques
- e. Use of information technology (IT) tools for prediction and modeling of routine activities to enhance the work performance
- f. To know social responsibilities while doing professional engineering practice.
- g. To become familiar with eco-friendly, sustainable and safe work environment.
- h. To take into account professional ethics while designing engineering systems.
- i. Able to work efficiently as a group leader as well as an individual.
- j. To communicate in written and verbal form with subordinates and supervisors
- k. To apply project and finance management techniques in multidisciplinary environments.
- l. To create interest for higher education and updating the knowledge.

B. TECH. MECHANICAL: SEMESTER- I

Total Duration: 31 Hrs./ week									
Total Marks: 700									
Course Code	Course	Teaching Scheme (Hrs.)			Examination Scheme (Marks)				Total Marks

*Subject with Four hours Theory Paper

Rules for Conducting Tests

Mode of the test

- In each semester for each subject three tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.
- Each test shall carry 20 marks.
- University examination pattern has given weightage of 20 marks for the tests.
- To calculate these marks following procedure is followed:
 - i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
 - ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
 - iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
 - iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
 - v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; these marks will be final marks obtained by the student. No scaling up is permitted.
 - vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.
- Paper pattern for tests
 - i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

ii) There will not be any sub-questions.

- For granting the term it is mandatory to appear for all three tests conducted in each semester.
- Roll nos. allotted to students shall be the examination nos. for the tests.

Department of Mechanical Engineering
ENGINEERING MATHEMATICS-I
(Course No.K70101)

Designation of Course		Engineering Mathematics-I	
Teaching Scheme:		Examination Scheme:	
Theory:-	04 Hours/ Week	Theory	80 Marks
Practical:-	-- Hours / Week	Duration	03 Hours
Tutorials:-	01 Hours / Week	Unit Test	20 Marks
		T. W. & Or.	-- Marks

Course Prerequisites:-	Basic Knowledge of Algebra
Course Outcomes:-	<ol style="list-style-type: none"> 1. To develop an ability to solve the consistency of any type of systems. 2. To develop an ability to find the roots of equations using DeMoiver's theorem and to locate imaginary points using argand diagram. 3. To develop an ability to find the derivative using Leibnitz's rule. 4. To develop an ability to test convergence and divergence of infinite series 5. To develop an ability to find total derivative 6. To develop an ability to find maxima and minima of any 7. function of two variables

Course Contents

Unit 1	Matrices:	(08 Hrs.)
Rank of a Matrix, Reduction to Normal Form, Consistency of Systems of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations, Eigen values and Eigen vectors, Cayley- Hamilton Theorem, Reduction of Quadratic Forms, Sylvester's Theorem (without proof) to find functions of a matrix, Application to problems in Engineering(Translation and Rotation of Matrix)		
Unit 2	Complex Numbers and Applications:	(08 Hrs.)
Definition, Cartesian, Polar and Exponential Forms, Argand's Diagram, Diagram's DeMoiver's Theorem and its applications, Hyperbolic Functions and Logarithms of Complex Numbers, Separation of Real and Imaginary Parts, Application to problems in Engineering.		
Unit 3	Differential Calculus:	(08 Hrs.)
Successive Differentiation, n (th) Derivatives of Standard Functions, Leibnitz's Theorem. Mean Values Theorems: Rolle's Theorem, Lagrange's and Cauchy's Mean Value Theorems.		
Unit 4	Infinite Series:	(08 Hrs.)
Infinite Sequences, Infinite Series, Alternating Series, Test for Convergence, Absolute and Conditional Convergence, Power Series, Range of Convergence. Expansion of Functions: Taylor's Maclaurin's Series.		
Unit 5	Differential Calculus:	(08 Hrs.)
Indeterminate Forms, L Hospital's Rule and Evaluation of limits. Partial Differentiation and Applications: Partial Derivatives, Euler's Theorem on Homogeneous Functions, Composite Function, Total Derivatives, Differentiation of Implicit Functions, Change of		

Independent Variables.		
Unit 6	Jacobian:	(08 Hrs.)
Jacobians and their applications, Chain Rule, Functional Dependence, Errors and Approximations.		
Maxima and Minima:		
Maxima and Minima of Functions of two variables, Lagrange's Method of Undetermined Multipliers.		

Text Books/ Reference Books

4. Advanced Engineering Mathematics, 2nd Edition, M. D. Greenberg (Pearson Education)
5. Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi.
6. Applied Mathematics (Volume I & II) P. N. Wartikar and J. N. Wartikar
7. A text Book of Engineering Mathematics- I, P. N. Wartikar and J. N. Wartikar

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

ENGINEERING SCIENCE-I
(Course No.K70102)

Designation of Course	Engineering Science-I		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	03 Hours	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T. W. & Or.	25 Marks	

Course Prerequisites:-	Basics knowledge of Science and fundamentals Laws
Course Outcomes:-	<p>Students will be able to associate the wave nature of light and apply it to measure stress, pressure and dimension etc</p> <p>To discuss the concept of transverse waves</p> <p>To judge the problems associated with architectural acoustics and give their remedies and use ultrasonic as a tool in industry for Non-Destructive Testing.</p> <p>Students will be able to understand the methods involved in improving quality of water for domestic and industrial purposes</p> <p>Students will be able to associate the basic concepts of electrochemical techniques and its applications in society</p> <p>To recognize the properties and applications of fossil fuels and derived fuels.</p>

Course Contents

PHYSICS		
Unit 1	Optics-I	(08 Hrs.)
<p>Interference: Interference of waves. Visibility of fringes, interference due to thin film of uniform and non-uniform thickness, Newton's rings, Michelson's interferometer, Engineering applications of interference (optical flatness, interference filter, non-reflection coatings, multi-layer ARC, gravitational sensors using interference (for detection of mineral deposits.)</p> <p>Diffraction: Classes of diffraction, diffraction at a single slit (geometrical Method), condition for maximum and minimum, Diffraction at a circular aperture (Result only) Plane diffraction grating Conditions for principal maximum and minimum, Rayleigh's criterion for resolution, Resolving power of grating and telescope, Fresnel's zone plate, Gabor's zone plate.</p>		
Unit 2	Optics-II	(08 Hrs.)
<p><u>Polarisation</u>: Introduction, Polarisation by reflection, Law of Malus, Brewster's Double refraction and Huygen's theory, Positive and negative crystals Nicol prism, Dichroism, Polaroids, Elliptical and circular polarization, Quarter and half wave plates, Production of polarized light, Analysis of polarized light, Photoelasticity.</p> <p><u>Lasers</u>: Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser. Semiconductor laser, Properties of Lasers, Applications of lasers (engineering / industry, medicine, communication, computers.)</p> <p>Holography, Compton effect, Compton shift.</p>		
Unit 3	Acoustics and Ultrasonic's:	(08 Hrs.)
<p>Elementary acoustics: Reverberation and reverberation time, Sabine's formula, Intensity level, Sound intensity level, Threshold of hearing, Audibility curve, Limits of audibility, Ultrasonic waves, Production</p>		

of ultrasonic waves by piezo-electric oscillator and magnetostrictive oscillator, Application of ultrasonic waves.

Superconductivity and Spectroscopy: Introduction, Properties of a super conductor, Meissner's effect, Critical, Field, Type of superconductors, BCS theory, High temperature superconductors. .Application of superconductors. Effect of magnetic field on spectral lines-Zeeman effect (normal and anomalous), Raman effect

Text Books/ Reference Books

4. Modern Physics - B. L. Thereja, S. Chand & Company Ltd. Introduction to
5. Solid State Physics - C. Kittel, Wiley Eastern Ltd. Engineering Physics -
6. Sen, Gaur and Gupta, Dhanpat Rai & Sons

CHEMISTRY

Unit 4	Water:	(08 Hrs.)
Structure of water, Effects of hard water on boilers and heat exchangers (a) corrosion (b) caustic embrittlement (c) scales and sludges (d) priming and foaming. Water softening methods for industrial purpose: (a) Permuted or zeolite process (b) Phosphate conditioning. Water softening for drinking purpose: Drinking water or Municipal water and purification of water for domestic use (a) Removal of suspended impurities: screening, sedimentation, filtration (b) Removal of microorganism-by boiling, by adding bleaching powder, by chlorination, by using chloramines tablets, by using Ozone gas Toxic elements in water and their adverse effects: Toxic effects of the elements like Arsenic, cadmium, lead and Mercury etc. Numerical based on the Zeolites.		
Unit 5	Electrochemistry:	(08 Hrs.)
Introduction, Arrhenius Ionic theory, Kohlrausch's law of conductivity of electrolytes, Law of independent migration of ions, Laws of electrolysis, Ostwald's dilution law, Acids and Base, concept of pH and pOH, Buffer solutions, Solubility Product, Redox Reactions. Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Polarization, Decomposition Potential, Overvoltage, and Conduct metric Titrations. Batteries, Fuel cells, Aluminum-Air Battery, Lead Acid Storage Cell, numerical based on the above articles.		
Unit 6	Fuels:	(08 Hrs.)
Classification of fuels, calorific value of fuels, NCV and GCV, Determination of calorific values using Bomb calorimeter and Boys' gas calorimeter, Theoretical calculation of calorific value of a fuel, Analysis of coal: a) proximate b) ultimate analysis of coal, Pulverized coal metallurgical coke, Petroleum cracking synthetic Petrol, Refining of gasoline, Reforming knocking Non Petroleum fuels like natural gas and oil gas, Analysis of fuel gas, Petrochemicals, Numerical based NCV, GCV

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

ELEMENTS OF MECHANICAL ENGINEERING
(Course No: K60103)

Designation of Course	Elements Of Mechanical Engineering	
Teaching Scheme:	Examination Scheme:	
Theory:- 04 Hours/ Week	Theory	80 Marks
Practical:- 02 Hours/ Week	Duration	03 Hours
Tutorials:- -- Hours/ Week	Unit Test	20 Marks
	T. W.	25 Marks

Course Prerequisites:-	Basics of Science and Mathematics
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to understand fundamental concepts and definition. 2. Able to understand power conversion mechanical devices. 3. Able to differentiate between conventional and non-conventional energy sources. 4. Able to understand basic modes of Heat transfer. 5. Able to understand the different laws of ideal gasses. 6. Able to understand different manufacturing processes.

Course Contents

Unit 1	Thermodynamic Concepts and Laws:	(08 Hrs.)
<p>Fundamental Concepts and Definitions: Thermodynamic system, Surroundings and boundary, Thermodynamic properties, Thermodynamic processes and cycles, Energy, Power, Work and heat. Zeroth law of Thermodynamics, Temperature and Temperature scale, Pressure and its measurement, Macro and microscopic approach</p> <p>Laws of Thermodynamics: Principles of conservation of mass and energy, continuity equation, First law of Thermodynamics, Joule's experiment. Application of first law to non-flow processes and cycles. Concept of internal energy, flow energy and enthalpy. Application of steady flow energy equation to nozzles, turbines, heat exchangers and pumps.</p>		
Unit 2	Power Conversion Devices:	(08 Hrs.)
<p>Power Producing Devices: Boilers and Steam turbines, reciprocating I. C. Engines, Gas turbines, Hydraulic turbines, Compressed air motor. (Theoretical study using schematic diagrams). Power Absorbing Devices: Reciprocating pumps and compressors, Centrifugal pumps and rotary compressors. Study of Household, refrigerators and window air conditioners using schematic diagrams. (Elementary treatment only. No Numerical)</p>		
Unit 3	Energy Sources and Heat Transfer:	(08 Hrs.)
<p>Sources of Energy: Thermal, Hydraulic, Nuclear, Wind, Solar, Tidal, Biogas, ocean thermal energy (Schematic of plant layout) Heat Transfer: Basic modes of heat transfer, conduction, convection and radiation. Statement and explanation of Fourier's law of heat conduction, Newton's law of cooling, Stefan-Boltzmann's law of radiation. Conducting and insulating materials and their properties. Description and types of heat exchangers.</p>		
Unit 4	Processes of Ideal Gases and Steam:	(08 Hrs.)
<p>Ideal gas and Processes: Ideal gas definition, Gas Laws, The characteristic equation of ideal gas, Universal gas constant, Relationship between C_p and C_v. Non flow processes using ideal gases. Properties and Processes of Steam: Formation of steam, phase changes, properties of steam. Use of steam tables, Work done and heat transfer</p>		

during constant pressure, constant volume, isothermal, hyperbolic, adiabatic, polytropic and throttling processes on steam		
Unit 5	Manufacturing Process:	(08 Hrs.)
Metal Cutting Machine Tools: Lathe Machine - Centre lathe (Basic elements, working principle and types of operations). Drilling Machine - Pillar drilling machine (operation only) Introduction to NC, CNC machines, classification, principles and explanation with block diagram, Sheet metal working, piercing and blanking operations on punching press. Non-traditional machining processes like electro-discharge machining and electro-chemical machining. Metal Joining Processes: Welding, soldering, brazing methods and applications.		
Unit 6	Mechanical Devices and Machine Elements:	(08 Hrs.)
Individual and group drives, belt drive, rope drive, chain drive, gear drive and friction clutches (types and applications only). Power transmission shafts, axles, Keys, couplings, bush and ball bearings (Types and applications only). Description and application of ON-OFF valves, Non return valves, pressure regulating valves, throttle valves and butterfly valves.		

Term- work

The term work shall consist of the study and demonstration on any five from the first six and any three from remaining list

1. Water tube boiler or smoke tube boiler
2. Reciprocating air compressor
3. Internal combustion engine
4. Household refrigerator / window air conditioner
5. Heat exchangers
6. Water turbines
7. Power transmission devices
8. Lathe and drilling machine
9. Valves
10. NC/CNC Machine

Text Books/ Reference Books

1. Thermodynamics and Heat Engines by Domkundwar and Kothandarman, Publisher Dhanpat rai & Co. Ltd,
2. Educational and Technical Publisher
3. Elements of Workshop Technology Vol- I and II by Choudhary, Hajara S. K., Media Promoters & Publishers
4. Basic Engineering Thermodynamics by Reyner, Joel, Publisher - Addison Wesley Longman Limited
5. Thermodynamics and Engineering Approach by Y. A. Cengal and M. A. Boles, Tata McGraw Hill Publishing Ltd., New Delhi
6. Design of Machine Elements, V. B. Bhandari, Tata McGraw Hill Publishing Company Ltd.
7. Theory of Machines- S. S. Rattan, Tata Mc Graw Hill Publishing Company Ltd.

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

ELEMENTS OF CIVIL ENGINEERING
(Course No.K20104)

Designation of Course	Elements Of Civil Engineering		
Teaching Scheme:	Examination Scheme:		
Theory:- 03 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	03 Hours	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T. W. & Or.	25 Marks	

Course Prerequisites:-	Basics of Science, measurements and Mathematics
Course Outcomes:-	<p>Students should be able to describe various branches of Civil engineering and principles of Surveying.</p> <p>Students should know use of Prismatic compass for measurement of bearings and computations of included angles.</p> <p>Students should know use of level and computation of RLs and principles of modern surveying equipments</p> <p>Students should know principles of building planning and bye laws.</p> <p>Students should know function and types of foundations</p> <p>Students should be able to describe components of infrastructure elements such as roads, railways and bridges.</p>

Course Contents

Unit 1	Introduction and Linear Measurements:	(07 Hrs.)
Branches of Civil Engineering, applications of Civil Engineering to other disciplines in Engineering, role of Civil Engineer in various construction activities. Principles of surveying, classification of surveys, scale and Representative fraction, linear measurement - instruments used, direct ranging.		
Unit 2	Angular Measurement:	(06 Hrs.)
Study of prismatic compass, types of bearings and reference meridians, measurement of bearing and angles, local attraction and its adjustment, adjustment of closing error, dip and declination, open and closed traverse.		
Unit 3	Vertical Measurements and Modern Equipment:	(07 Hrs.)
Study and use of auto and dumpy level and leveling staff, temporary adjustment of dumpy level, types of bench marks, reduction of levels by collimation plane and rise and fall method. Contours - uses and characteristics. Modern equipments - Electronics Distance Meter - principle and basic functions, Total Station and its field applications, study of Global Positioning System, measurement of area by mechanical and digital planimeter.		
Unit 4	Building Planning, Construction and Materials:	(07 Hrs.)
Building Planning: Site selection, building plans, elevation, and principles of planning. Building byelaws-necessity, Floor Space Index, heights, open space requirement, set back distances, ventilation and lighting, concept of carpet and built up area. Constructions: types of structures-load bearing, framed and composite structures, building components. Construction materials: concrete and its ingredients, cement, reinforcement steel, bricks.		
Unit 5	Foundations:	(08 Hrs.)
Building foundation- necessity and functions, concept of bearing capacity of soil and rock, foundation		

settlement, differential settlement, types of foundation - shallow and deep, and causes of foundation failure. Earthquake, causes of earthquake, Definition of terms- focus, epicenter, isoseismal lines, seismograph, seismogram, intensity, magnitude of earthquake, earthquake zones as per IS codes, effect of earthquake on civil structures.

Unit 6	Infrastructure:	(08 Hrs.)
---------------	------------------------	------------------

Roads- types of roads and their suitability, cross section of roads; meaning of terms: width of road, super elevation, camber, gradients, sight distance; materials used in construction of roads. Railways- advantages types of gauges, section of railway track, components of railway track. Bridges-necessity, components of bridges - sub structures and super structure.

Text Books/ Reference Books

1. Introduction to Surveying - M. Anderson, McGraw Hill Publication Surveying for Engineers - W. Uren, J. Price, Macmillan Publication.
2. Surveying and Leveling - T. P. Kanetkar and S. V. Kulkarni, PVG Publication, Pune Building Construction - S. P Bindra and S. P. Arrora, Dhanpatrai Publication, New Delhi.
3. Building Design and Drawing - Shah, Kale, Patki. Tata McGraw Hill Publication Foundation Engineering- Dr. B. J Kasmalkar, PVG Publication, Pune.
4. Principals of Geotechnical Engineering - B. M. Das, Thomson Brooks.
5. Text Book of Engineering Geology - Dr. R. B. Gupte, PVG Publication, Pune Transportation Engineering - R. Paquette, John Wiley and Sons.
6. Highway Engineering - Khanna Justo, Khanna Publishers, New Delhi.

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

ENVIRONMENTAL STUDIES
(Course No. K20105)

Designation of Course	Environmental Studies	
Teaching Scheme:	Examination Scheme:	
Theory:- 03 Hours/ Week	Theory	80 Marks
Practical:- -- Hours/ Week	Duration	03 Hours
Tutorials:- --Hours/ Week	Unit Test	20 Marks
	T. W. & Or.	25 Marks

Course Prerequisites:-	Basic knowledge of environment, natural resources, soils types.
Course Outcomes:-	<ol style="list-style-type: none"> 1. The student should be able to explain multidisciplinary nature of Environmental Studies. 2. The student should be able to explain natural resources available in the environment and its associated problems 3. The student should be able to discuss concept of ecosystem and its components 4. The student should be able to describe concept of Biodiversity 5. The student should be able to explain sources of and control measures of environmental pollution 6. The student should be able to describe social and environmental issues.

Course Contents

Unit 1	The Multi-disciplinary nature of Environmental Studies:	(02 Hrs.)
	<ul style="list-style-type: none"> • Definition, Scope and Importance • Need for public awareness 	
Unit 2	Natural Resources:	(08 Hrs.)
	<ul style="list-style-type: none"> • Renewable and non-renewable resources • Natural resources and associated problems <ol style="list-style-type: none"> a. Forest resources: Use and over-exploitation, deforestation case studies. Timber extraction, mining, dams and their effects on forest and tribal people. b. Water resources: Use and over-utilization of surface and ground water, floods, drought, conflict's over water, dams-benefits and problems. c. Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies. d. Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer- pesticide problems, water logging, salinity, case studies. e. Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies. f. Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification. • Role of individual in conservation of natural resources. • Equitable use of resources for sustainable lifestyles. 	
Unit 3	Ecosystems:	(06 Hrs.)
	<ul style="list-style-type: none"> • Concept of an ecosystem. • Structure and function of an ecosystem. 	

- Producers, consumers and decomposers.
- Energy flow in the ecosystem.
- Ecological succession.
- Food chains, food webs and ecological pyramids.
- Introduction, types, characteristics, features, structure and function of the following ecosystems : -
 1. Forest ecosystem.
 2. Grassland ecosystem.
 3. Desert ecosystem.
 4. Aquatic ecosystems (ponds, streams, rivers, oceans, estuaries)

Unit 4	Biodiversity and its Conservation:	(08 Hrs.)
---------------	---	------------------

- Introduction : Definition: genetics, species and ecosystem diversity
- Biographical classification of India
- Value of bio-diversity: consumptive use, productive use, social, ethical, aesthetic and option values.
- Biodiversity at global, national and local level.
- India as a mega - diversity nation.
- Hot spots of biodiversity.
- Threats to bio-diversity: habitat loss, poaching of wildlife conflict, man wildlife conflicts.
- Endangered and endemic species of India.
- Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity

Unit 5	Definition, causes, effects and control measures of :	(07 Hrs.)
---------------	--	------------------

- Definition, causes, effects and control measures of :
 - a) Air Pollution
 - b) Water Pollution
 - c) Soil Pollution
 - d) Marine Pollution
 - e) Noise Pollution
 - f) Thermal Pollution
 - g) Nuclear Hazards
- Solid waste management: Causes, effects and Control measures of urban and industrial wastes.
- Role of an individual in prevention of pollution.
- Pollution case studies.
- Disaster management: Floods, cyclone and landslides.

Unit 6	Social Issues and the Environment	(07 Hrs.)
---------------	--	------------------

- From unsustainable to sustainable development.
- Urban problems related to energy.
- Water conservation: rain water harvesting, watershed management.
- Resettlement and rehabilitation of people; its problems and concerns. Case studies.
- Environmental ethics: Issues and possible solutions.
- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.
- Waste land reclamation.
- Consumerism and waste products.
- Environment Protection Act
- Air (Prevention and Control of Pollution) Act.
- Water (Prevention and Control of Pollution) Act.
- Wildlife Protection Act.

<ul style="list-style-type: none"> • Forest Conservation Act. • Issues involved in enforcement of environmental legislation. • Public awareness. 		
Unit 7	Human population and the Environment:	(07 Hrs.)
<ul style="list-style-type: none"> • Population growth, variation among nations. • Population explosion-Family Welfare Programme. • Environment and Human Health. • Human Rights. • Value Education. • HIV/AIDS Women and Child Welfare. • Role of Information Technology in Environment and Human Health. • Case studies. 		
Unit 8	Field Work / Term Work:	(07 Hrs.)
<ul style="list-style-type: none"> • Visit to a local area to document environmental assets river / forest / grassland / hill/ mountain. • Visit to a local polluted site - Urban /Rural/ Industrial /Agricultural. • Study of simple ecosystems- pond, river, hill slope, etc. The core module syllabus for Environmental studies includes class room teaching and field work. The syllabus is divided into 8 units, covering 48 lectures. The first 7 units, which cover 44 lectures, are class room teaching based and intended to enhance knowledge skills and attitude to environment. Unit 8 is based on field activities, to be covered over 4 lecture hours, and would provide students with firsthand knowledge on various local environmental aspects

Unit Test

Unit Test 1	Unit I, II & III
Unit Test 2	Unit IV & V
Unit Test 3	Unit VI & VII

ENGINEERING GRAPHICS - I
(Course No: - K60106)

Designation of Course	Engineering Graphics - I	
Teaching Scheme:	Examination Scheme:	
Theory:- 02 Hours/ Week	Theory	-- Marks
Practical:- 02 Hours / Week	Duration	-- Hours
Tutorials:- -- Hours / Week	Unit Test	-- Marks
	T. W.	50 Marks

Course Prerequisites:-	Basic Knowledge of Mathematics
Course Outcomes:-	<ol style="list-style-type: none"> 1. Differentiate Ist angle and IIIrd angle projection Method. 2. Interpret views of the object and to draw by using Isometric projection method and to draw different Engineering Curves

Course Contents

Unit 1	Orthographic Projections and Missing Views:	(08 Hrs.)
Quadrants 1 st and 3 rd angle method of orthographic projections. Concept of horizontal, vertical and end vertical planes. Sectional views. Interpretation of an object from the given orthographic projections. Drawing of the third view from the two views. Dimensioning of the views.		
Unit 2	Isometric Projection, Geometrical Curves, Link Mechanisms, CAD	(06 Hrs.)
To draw isometric projection or isometric view from given orthographic projections of an object. Isometric scale. To draw Ellipse, Cycloid, Spiral, Involute and Helix. To find the locus of points in simple mechanisms. To write commands in order to get / draw the figures of simple objects using Auto-CAD.		

Term work

Term work shall consist of five half-imperial size or A2 size (594 mm x 420 mm) sheets and one assignment on Auto-CAD.

Sheets

1. Types of lines, Dimensioning practice, Free hand lettering, 1st and 3rd angle method symbol.
2. Orthographic Projections Missing views
3. Isometric views
4. Curves and loci of points

Assignment

Drawing of simple figures using AutoCAD and writing the required commands in order.

WORKSHOP PRACTICE-I
(Course No.60107)

Designation of Course	Workshop Practice-I		
Teaching Scheme:	Examination Scheme:		
Theory:- -- Hours/ Week	Theory	-- Marks	
Practical:- 02 Hours / Week	Duration	-- Hours	
Tutorials:- -- Hours / Week	Unit Test	-- Marks	
	T. W.	50 Marks	

Course Prerequisites:-	Basic knowledge of mathematics, basic components of machine.
Course Outcomes:-	<ol style="list-style-type: none"> 1. The student should know the different sections of metal and wood working process. 2. The student should able to handle the marking, measuring and cutting tools used for wood working 3. The student should able to get the practical knowledge of gas welding and arc welding processes. 4. The student should able to know the different types of welding joints. 5. The student should able to get the practical knowledge of soldering process. 6. The student should able to get the introduction about centre lathe and CNC lathe machines.

Course Contents

Term work of Workshop Practice I and Workshop Practice II shall consist of two sets viz.SET A and SET B. Students are required to complete any one set in first semester for term work of Workshop Practice I and the remaining set shall be completed as term work of Workshop Practice II in second semester.

Set A shall consist of

Jobs:

- 1) Wood Working- one job involving joint, wood turning, use of filler materials and adhesives
- 2) Welding- one job with edge preparation and simple joint using gas or arc welding.
- 3) Soldering- Fabrication of at least 5 electronic components on a PCB.
- 4) Demonstration on a centre lathe and CNC lathe.

OR

A suitable combination of above operations to make a composite job either individually or in a group.

Journal:

Journal shall consist of write-up about materials, equipments used in above processes, specific procedures followed, and safety precautions.

Set B shall consist of

Jobs:

- 1) Fitting- One job with one joint along with drilling, tapping, hacksaw cutting
- 2) Tin smithy- One job including riveting/soldering
- 3) Black Smithy- One job with at least two different operations
- 4) Plastic molding- One plastic component on injection molding machine.

OR

A suitable combination of above operations to make a composite job either individually or in a group.

Journal:

Journal shall consist of write-up about materials, equipments used in above processes, specific procedures followed, and safety precautions.

At the end of each semester students are required to submit the completed jobs and Journal for assessment of work done in workshop.

Department of Mechanical Engineering
ENGINEERING MATHEMATICS – II
(Course No. K70108)

Designation of Course	ENGINEERING MATHEMATICS – II		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- -- Hours/ Week	Duration	03 Hours	
Tutorials:- 01 Hours/ Week	Unit Test	20 Marks	
	T. W.	-- Marks	

Course Prerequisites:-	Student should have knowledge of Mathematics-I
Course Outcomes:-	<ol style="list-style-type: none"> 1. To develop an ability to solve differential equations of first order and first degree. 2. To develop an ability to form mathematical model of rectilinear motion, electric circuit, Fourier heat conduction, Newton's law of cooling. 3. To develop an ability to transform the Cartesian co-ordinates into spherical polar and cylindrical coordinate systems. 4. To develop an ability to represent periodic function as Fourier series. 5. To develop an ability to evaluate definite integral by DUIS rules and to trace Cartesian and polar curves. 6. To develop an ability to apply methods to find area and volume by double and triple integration.

Course Contents

Unit 1	Differential Equations:	(09 Hrs.)
Differential Equations of First Order and First Degree, Exact Differential Equations and Reducible to Exact form, Linear Differential Equations, Reducible to Linear types, Method of Substitution and Miscellaneous Types, Differential Equations of First and Higher degree		
Unit 2	Applications of Differential Equations (of First Order and First Degree):	(08 Hrs.)
Orthogonal Trajectories, Atmospheric Pressure, Newton's Law of Cooling, Motion Under Gravity and Rectilinear Motion, L-R, R-C and L-C Circuits, Applications to Mass-Spring System, One Dimensional Conduction of Heat Applications to Chemical Engineering.		
Unit 3	Solid Geometry:	(09 Hrs.)
Cartesian, Spherical Polar and Cylindrical Coordinate systems, Relation between coordinate systems. Sphere, Tangent Plane of the Sphere, Sphere through a Circle, Orthogonal Spheres, Cone and Cylinder, Quadratic surfaces.		
Unit 4	Fourier Series:	(09 Hrs.)
Definition and Dirichlet's Conditions, Full range Fourier series on $c \leq x \leq c + 2\pi$ and $c \leq x \leq c + 2L$, Expansions of even and odd Periodic functions and on $-\pi \leq x \leq \pi$ and $-L \leq x \leq L$, Half Range Fourier Expansions Harmonic Analysis and Application to problems in Engineering. Reduction formulae for Trigonometric functions, Beta and Gamma functions.		
Unit 5	Foundations:	(08 Hrs.)
Integral Calculus (Single Integral):		

Differentiation Under the Sign of Integration, Error functions.

Curve Tracing:

Tracing of Cartesian, Polar and Parametric curves, Rectification of curves.

Unit 6 Multiple Integrals and their Application:

(09 Hrs.)

Double and Triple Integrations, Application of Multiple Integral to Areas and Volumes, Mean and RMS Values, Mass, Centre of Gravity and Moment of Inertia.

6. Applied Mathematics (Volume I & II) by P. N. Wartikar and J. N. Wartikar (Pune Vidyarthi Griha Prakashan).
7. A Text Book of Engineering Mathematics - II by P. N. Wartikar and J. N. Wartikar.

Unit Tests-

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

ENGINEERING SCIENCE – II
(Course No. K70109)

Designation of Course	Engineering Science – II		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	03 Hours	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T. W.	25 Marks	

Course Prerequisites:-	Students should have knowledge of Engineering Science-I
Course Outcomes:-	<ol style="list-style-type: none"> 1. To use the properties of charged particles to develop modern instruments and explain the mechanism of fusion and fission. 2. To understand the behavior of quantum particles in different types of potentials. 3. To understand the basics of semiconductors and its uses to develop devices such as diode, transistor, solar cell etc. 4. Students will be able to understand the fundamental principles of corrosion and methods used for minimizing corrosion. 5. To recognize the preparation, properties and applications of polymeric materials.

Course Contents

PHYSICS		
Unit 1	Modern Physics:	(09 Hrs.)
Motion of a charged particle in electric and magnetic fields, Electrostatic and Magneto static focusing, Wavelength and resolution. Specimen limitation, Depth of field and focus. Electron microscope. Positive rays, Separation of isotopes by Bainbridge mass spectrograph. Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium. Fission energy, Critical mass and size. Reproduction factor, Chain reaction and four factor formula. Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions. Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron, Microtron.		
Unit 2	Quantum Mechanics:	(08 Hrs.)
Wave nature of matter, De-Broglie waves. Wavelength of matter waves. Electron diffraction, Davisson and Germer's experiment, Heisenberg's uncertainty principle with illustrations, Schrodinger's time dependant and time independent wave equation, Physical significance of wave function. Application of Schrodinger's time independent wave equation to the problems of (1) Electron gas, (2) Step potential (3) Potential barrier, (4) Particle in a rigid box (5) Particle in a non-rigid box (Boundary condition and result).		
Unit 3	Electrical Properties:	(07 Hrs.)
Band theory of solids. Band structures of Lithium, Sodium, Beryllium, Silicon and Diamond, Classification of solids on the basis of band theory. Fermi-Dirac probability function and position of		

Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semiconductors. Band structure of p-n junction diode under forward and reverse biasing, Conductivity in semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.		
<i>CHEMISTRY</i>		
Unit 4	Corrosion And Its Control:	(08 Hrs.)
Definition, dry or Chemical corrosion, wet or Electrochemical corrosion, mechanism of wet or electrochemical corrosion, Galvanic Corrosion, concentration cell corrosion passivity, underground or soil corrosion, pitting corrosion, inter granular corrosion, stress corrosion, microbiological corrosion. Electrochemical and galvanic series, Factors influencing corrosion and corrosion control.		
Unit 5	Polymers:	(08 Hrs.)
Definition and Classification based on origin and thermal behavior, Polymerization reactions, Functionality, Degree of Polymerization, tacticity. Types of Polymerization - Addition and condensation, Thermo-softening and Thermosetting Plastics, Polymerisation reactions, properties and uses of some polymers such as Polyethylene, Polypropylene, Polyvinyl Acetate, Polystyrene, Teflon, Melamine Formaldehyde, PMMA, SBR. Polymers in Medicine and surgery, Polymer blends and Alloys, Engineering Plastics.		
Unit 6	Instrumental Methods of Chemical Analysis:	(08 Hrs.)
Infrared Spectroscopy, Visible Spectroscopy, Ultraviolet Spectroscopy. Introduction, Principle, Instrumentation (Schematic Diagram) and Engineering Applications of the above Techniques.		

PHYSICS: Term Work Experiments:

Any five experiments from the following:

1. Determination of band gap of semi-conductor
2. Solar cell characteristics.
3. E/m by Thomson's method.
4. Uses of CRO for measurement of phase difference by Lissajous figures
5. Hall effect and Hall coefficient
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode. Photo diode. LED, Ge/Si diode)
8. Plank's constant by photodiode.

Assignments:

Any **two** of following:

1. Harmonic oscillator
2. Nuclear radiation detectors.
3. Scanning electron microscope and scanning tunneling microscope
4. Advanced opto-electronic devices

Text Books /References

1. Physics for Engineers - Srinivasan M. R., New Age International (P) Ltd.
2. Atomic Physics - Weher and Richards, Narosa Publishing House

5. Principle of Electronics - V. K. Mehta, S. Chand & Company Ltd.
6. Electronics Principles - A. P. Molvino, McGraw Hill International Book Company Ltd.

CHEMISTRY: Experiments:

Any **five** of the following:

1. To Determine the Molecular Weight of a polymer
2. Estimation of Copper from brass sample solution Iodometrically
3. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
4. To find the Radius of Macro Molecule by Viscometer
5. To Determine Surface Tension of a liquid by Stalagmometer
6. Determination of the strength of unknown liquid by using the colorimeter

Text Books / References

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

ENGINEERING MECHANICS
(Course No.K20110)

Designation of Course	Engineering Mechanics		
Teaching Scheme:	Examination Scheme:		
Theory:- 4 Hours/ Week	Theory	80 Marks	
Practical:- 2 Hours/ Week	Duration	03 Hours	
Tutorials:- - Hours/ Week	Unit Test	20 Marks	
	T. W.	25 Marks	

Course Prerequisites:-	Basic knowledge of physics and mathematics.
Course Outcomes:-	<ol style="list-style-type: none"> 1. The student should able to calculate Resultant of the Force system and also apply conditions of equilibrium for different problems. 2. The student should able to calculate Centroid and moment of Inertia of areas. 3. The student should be able to calculate effect friction force. 4. The student should be able to calculate velocity, acceleration, displacement, time for bodies in motion. 5. The student should be able to use D'Alemberts principle, Work-energy principle and Impulse momentum principle. 6. The student should be able to use concept of ICR for rigid body motion.

Course Contents

Unit 1	Force system in a plane	(8 Hrs.)
Types of forces classification of a force system Resolution of forces Resultant of a force system in a Plane- Analytical and Graphical approach Moment of a force, Couple, Force and Couple system About a point. Equilibrant, Free Body Diagram, Types of Supports, Conditions of Equilibrium Equilibrium of a force system in a plane.		
Unit 2	Force system in a Space and Moment of Inertia	(8 Hrs.)
Resultant and Equilibrium of a force system in a space, moment of a force about a point and About in line. Centroid of a line element, plane areas and volume, center of gravity, Moment Of inertia.		
Unit 3	Application of Static Equilibrium	(8 Hrs.)
Analysis of perfect Trusses – Method of Joint, Method of Section and graphical Method, Analysis of Pin Jointed Frames ,Analysis of cables subjected to Concentrated Load Coefficient of Static Friction Impending motion of Blocks , Ladder and wedges, Belt friction & Band-brake system.		
Unit 4	Kinematics of a Particle	(8 Hrs.)
Kinematics of Rectilinear motion of Particles – Equations of motion , Motion Curves ,Relative motion Dependent motion. Kinematics of Curvilinear motion of practical -Equation of motion in Cartesian, Polar and Path variable co-ordinate system, motion of projectile.		
Unit 5	Kinetics of a Particle	(8 Hrs.)
Kinetics of Rectilinear Motion of Particles , Newton's Second Law of motion , D Alembert's principal , Work- Energy Principal ,Impulse-Momentum Principal, Direct Central Impact, Coefficient of Restitution,		

Spring Force. Kinetics of Curvilinear motion of Particles: D'Alembert's principle, Work-Energy Principle, Impulse-Momentum Principle, Oblique Central Impact		
Unit 6	Rigid Body Motion	(8 Hrs.)
Kinematics of Rigid bodies: Translation and Rotation about a fixed axis, General Plane Motion, Concept of Instantaneous center of Rotation. Kinetics of Rigid bodies: General Plane motion, D'Alembert's Principle, Work-Energy Principle.		

Term Work Experiments:

A) The term-work shall consist of total SIX experiments. (Minimum THREE from each section)

Section - I

1. Determination of reactions of Simple and Compound beam. Study of equilibrium of concurrent force system in a space.
2. Determination of coefficient of friction for Flat Belt and Rope. Verification of Law of Polygon of forces.
3. Study of Simple Lifting Machine.

Section - II

1. Study of Curvilinear motion. Determination of Coefficient of Restitution.
2. Determination of gravitational acceleration using Compound Pendulum. Determination of Moment of Inertia of Fly wheel.
3. Determination of Moment of Inertia of Irregular shape body using Torsional Pendulum.

B) The term-work shall also consist of minimum SIX graphical solutions of the problems on different topics. (Minimum THREE from each section)

Unit Tests-

Unit Test-I	Unit-I & IV
Unit Test-II	Unit-II & V
Unit Test-III	Unit-III & VI

ENGINEERING GRAPHICS-II
(Course No. K60111)

Designation of Course	Engineering Graphics-II		
Teaching Scheme:	Examination Scheme:		
Theory:- 03 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	04 Hours	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T. W.	50 Marks	

Course Prerequisites:-	Knowledge of basic drawing, mathematics and geometry.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to understand projection of Lines and Planes 2. Able to understand projection of solids and its sections. 3. Able to understand development of different solids. 4. Able to understand intersection of surfaces of solids

Course Contents

Unit 1	Projections of Lines and Projections of Planes.	(12 Hrs.)
Projections of points. Projections of lines situated in 1st quadrant only Horizontal trace (HT) Vertical trace (VT) Applications of lines. Auxiliary inclined plane (AIP), Auxiliary vertical plane (AVP), distance between skew lines, distance of a point from a line. Projections of planes, True shape of plane, Angle between two planes, distance of a point from a plane.		
Unit 2	Projections of Solids and Sections of Solids:	(12 Hrs.)
Projections of solids such as prisms, pyramids, cylinder, cone and sphere. Projections of solids in combination. Sections of above solids by AIP and AVP True shape of section.		
Unit 3	Development of Surfaces of Solids	(09 Hrs.)
To draw the development of the lateral surfaces of cut prism, pyramid, cylinder and cone. To draw orthographic projections from the given developed surface of solid.		
Unit 4	Intersection of Surfaces of Solids:	(09 Hrs.)
To draw the lines or the curves of intersection of the surfaces of solids excluding following combination. Pyramid-pyramid, Pyramid-cone, Cone-cone, Sphere-cone, Sphere pyramid.		

Term Work

Term work shall consists of six half-imperial size or A2 size (594mm x 420mm) Sheets

1. Projections of lines
2. Projections of planes
3. Projections of solids
4. Sections of solids
5. Development of surfaces
6. Intersections of surfaces

Note:

Paper shall be based on the topics covered in the syllabus of Engineering Graphics-I and Engineering Graphics-II

Unit Test:

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

ELEMENTS OF ELECTRICAL & ELECTRONIC ENGINEERING
(Course No. K40112)

Designation of Course	Elements Of Electrical & Electronic Engineering		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	03 Hours	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T. W.	25 Marks	

Course Prerequisites:-	Basic knowledge of physics, electronics, electrical.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to understand and apply knowledge of basic laws and theorems to solve simple electrical dc circuits. 2. Able to define basic terms of single phase and three phase ac circuits and supply systems. Draw vector diagram and solve simple numerical on ac circuits. 3. Able to describe fundamental concepts of magnetic and electromagnetic circuits. Explain principle of transformer and calculate efficiency and regulation of transformer 4. Able to draw power supply system layout, block diagram of SMPS, UPS. Know and use electrical safety rules. 5. Able to specify and select electronic components as per required application. 6. Able to specify and select suitable measuring instruments for required application.

Course Contents

Unit 1	Basic Concepts in Electrical Circuits:	(08 Hrs.)
Fundamental electrical quantities: Potential difference(voltage),current, power, energy, circuit elements-resistance, inductance, capacitance, laws for dc circuits analysis-Kirchhoff's voltage and current law, superposition theorem, the venin's theorem, maximum power transfer theorem.		
Unit 2	AC Circuits:	(08 Hrs.)
Graphical, mathematical and phase representation of ac voltage and currents, instantaneous, average and RMS value, peak factor form factor, periodic time, frequency, phase difference, power factor and complex power, analysis of series and parallel single phase ac circuits consisting of R,L,C combinations and Resonance phenomenon. Concept of 3-phase ac supply, supply specifications, phase sequence, star and delta connection and their line and phase values, current, voltage and power relationship for balanced 3-phase star and delta connected loads(with phase representation)		
Unit 3	Magnetic circuits and Transformer	(08 Hrs.)
Magnetic effects of an electric current ,magnetic circuit concepts terms MMF, flux density, field intensity, permeability, reluctance, composite series and parallel magnetic circuits, magnetization and hysteresis curve hysteresis and eddy current loss. Introduction to 1-phase transformer, function, principle of operation, types ,specifications, EMF equations ideal and practical transformer ,operation on no load and load conditions, losses, efficiency, regulation, determination of efficiency and regulation by direct loading introduction to auto transformation and instrument transformers.		
Unit 4	Electrical power Systems:	(08 Hrs.)

Generation, transmission and distribution systems layout ,types of supply system 3 phase-3wire,3phase-4 wire ac system rectifiers half wave, full wave, bridge wave with relevant wave forms, UPS, SMPS, stabilizers. Electrical safety, Necessity of earthing-safety and first aid measures against electrical shock.		
Unit 5	Electrical and Electronic component, device and Integrated Circuits:	(08 Hrs.)
Basic principle and applications of D.C. machines, connection diagram, load characteristics and applications, three phase induction and working principle. Types of resistance (fixed, variable, precision-carbon film, metal film, wire wound) their standard values specifications and applications .classification of capacitors based on dielectrics ,their standard values, specification and applications, study of different core materials depending on range of frequencies for inductors and transformers. Flat package, SMD's, pin configuration and cooling of LC's mounting of LC's basic block diagram and its explanation along with specifications of Mobile phones fax machines, Microwaves , personal computers.		
Unit 6	Electrical and Electronic Instruments:	(08 Hrs.)
Salient constructional features, operating principle, specification of PMMC and MI voltmeter and ammeter, Dynamometer- wattmeter, Induction type single phase energy meter. Basic block diagram, its explanation, specification and application of Digital millimeter, Function generator, CRO.		

List of Practical's to be performed in the laboratory

1. Verification of Kirchhoff's current and voltage laws for D. C. network Verification of superposition theorem for a given D. C. network.
2. Experimental verification of current flowing through a branch of D. C. circuit using the venin's theorem.
3. Verification of maximum power transfer theorem for D. C. circuit Performance of 1-phase a. c. R-L-C circuit and developing phase or diagram Verification of relationship between star and delta connection (balanced).
4. Efficiency and regulation of a given 1-phase transformer by direct loading Testing and operation of domestic appliances.
5. Use of CRO for obtaining wave forms of electrical quantities Load characteristics of different rectifiers.

4. Principles of Electronics-Dr. H. M. Rai
5. Electronic Devices and circuit Theory- R. L. Boylestad and L. Nashelsky
6. Electrical, Electronics Measurements and Instrument
7. Principles of Communication Engineering- Anokh Singh, A. K. Chhabra

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

COMPUTER FUNDAMENTALS AND INFORMATION TECHNOLOGY
(Course No. K70113)

Designation of Course	Computer Fundamentals And Information Technology		
Teaching Scheme:	Examination Scheme:		
Theory:- ---Hours/ Week		Theory	-- Marks
Practical:- 02 Hours/ Week		Duration	--Hours
Tutorials:- -- Hours/ Week		Unit Test	-- Marks
		T.W.	25 Marks

Course Prerequisites:-	Basic Computer software knowledge and computer accessories.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to study different types of Number Systems and Conversion Techniques. 2. Able to understand the working of different types of Input/ Output Devices 3. Able to learn Software installations on Various Platforms 4. Able to develop familiarity with MS Office Suite. 5. Able to understand the Characteristics of Object Oriented Programming. 6. Able to write simple programs in C++.

Course Contents

Unit 1	Computer Fundamentals	
Computer basics, data representation, number system. Computer architecture, Microcomputer PC hardware: CPU, Memory, Disks, Cards, Slots, Floppy And Modem.		
Unit 2	Input / Output / Storage Devices	
<p>Input devices: function, typical examples of input devices with their installation such As keyword, mouse, scanners, bar code readers, MICR readers, Audio and Video input Devices.</p> <p>Output devices: Typical examples of output devices with their installation such as VDU, printers, TFT, Audio and Video output devices. Storage devices: Primary storage such as RAM, ROM, secondary storage such as floppy disk, hard disk, CD ROM, ZIP drives tape drives, DAT etc.</p>		
Unit 3	Software	
Software characteristics, Types of software's files, Introduction to OS with DOS Commands. Operating environment such as windows. Programming language with High level and low-level programming. Utility packages such as MS office with MS- Word, Power Point, Excel, CAD and their typical applications in engineering.		
Unit 4	MS-Windows	
Introduction, Installation, Utilization, Features, and Accessories-notepad, paint, and word pad. Communication, Entertainment, System tools: disk cleaning, scan disk, Formatting disk, disk defragmentation etc. System setting. Control panel, desktop. Internet: Modem Types, Connectivity, TCP/IP, ISP, ISDN, Getting connected, and WWW. Browsers such as IE-5, Email, Newsgroups, Chatting, and Internet security. Search engines such as yahoo, Google, info seek, Alta Vista, hot boat etc. Computer Network, Basic concept. Layers, Topologies, Introduction to Networking. Types of LAN, WAN, MAN, Internet working. Wireless networks, Satellite links		

Unit 5	Database Management Systems (DBMS)	
File concepts. Database, logical and physical databases. Data modeling: hierarchical, Network, relational, and object oriented. Concept of normalization: database creation And modification using SQL. Sample queries. Multi Media System: Introduction to Multimedia System, Multimedia components, Text, audio, video, etc.		
Unit 6	Latest trends in Information Technology	
Study of MIS, BIS, GIS, OOP Concepts: Comparison of structured and object oriented Programming language, object structures. Object classes. Inheritance, Object identity. Encapsulation, Polymorphism.		

Term Work:

Term work will consist of ten assignments based on above syllabus out of which four assignments will be based on C programming language.

Assignment List:

1. Study of various Input and Output devices like Keyboard, Mouse, Scanner, Monitor, Printer etc.
2. Software Installation: Install any Office suite for study purpose
3. Study of any Office suite: Features make new documents, save documents, edit documents.
4. Study of various data representation & conversion techniques (Decimal to Octal, Decimal to binary, Decimal to hexadecimal)
5. Study of an operating system and list its features like I/O processing, memory management, process management.
6. Study basic of basic UNIX OS Commands (directory, file maintenance commands)
7. Compare the basic features of Windows OS with Linux or UNIX OS? Design a Spreadsheet for a given application
8. Study of Search Engines (like Google, Yahoo, AltaVista, Info Seek) and its features & WWW technologies.
9. Design a 3-D structure using any design tool
10. List and study database driven software.
11. Create a Database in any suitable application and perform add, delete and modify operations on it
12. Write a C++ program to compare 3 integer and display the greatest number
13. Write a C++ program to perform arithmetic operations on two complex numbers using operator overloading
14. Write a C++ program to study the concept of Inheritance

Required Software for above assignments:

1. UNIX / Linux
2. MS Windows
3. Open Office / MS Office / Star Office
4. 3D Studio MAX /Maya
5. Turbo C++

Text Book/References

1. Dr. V Rajaraman: Computer Fundamentals
2. Peter Norton: Inside IBM PC, (TMH)
3. Tannanbaum: Computer Networks, (TMH)

4. Korth: Database Management Systems, (TMH)
5. Yashwant Kanitkar: C-Programming
6. C Programming Language : Reference and Users Manuals, Microsoft Press
7. Steven Alter: Information Systems, Addison Wesley
8. Stroutstrup: Programming in C, (TMH)

WORKSHOP PRACTICE-II
(Course No: K60114)

Designation of Course	Workshop Practice-II		
Teaching Scheme:	Examination Scheme:		
Theory:- -- Hours/ Week	Theory	-- Marks	
Practical:- 02 Hours/ Week	Duration	-- Hours	
Tutorials:- -- Hours/ Week	Unit Test	-- Marks	
	T. W.	50 Marks	

Course Prerequisites:-	Basic knowledge of fabrication techniques, machine components.
Course Outcomes:-	<ol style="list-style-type: none"> 1. The student should know the different sections of metal and wood working processes. 2. The student should be able to handle the marking, measuring and cutting tools used in fitting section. 3. The student should be able to get the practical Knowledge of sheet metal work. 4. The student should be able to handle the different tools used in black smithy. 5. The student should be able to get the Practical Knowledge of plastic molding process. 6. The student should be able to get the Practical Knowledge of Plumbing process.

Course Contents

Students are required to complete the remaining set as the Term Work of Workshop Practice - II

Set A shall consist of

Jobs:

- 1) Woodworking-one job involving joint, woodturning, use of filler materials and adhesives
- 2) Welding- one job with edge preparation and simple joint using gas or arc welding.
- 3) Soldering- Fabrication of at least 5 electronic components on a PCB.
- 4) Demonstration on a centre lathe and CNC lathe.

OR

A suitable combination of above operations to make a composite job either individually or in a group.

Journal:

Journal shall consist of write-up about materials, equipments used in above processes, specific procedures followed, and safety precautions.

Set B shall consist of

Jobs:

- 1) Fitting- one job with one joint along with drilling, tapping, hacksaw cutting
- 2) Tin smithy- One job including riveting/ soldering
- 3) Black Smithy- One job with at least two different operations
- 4) Plastic moulding- one plastic component on injection moulding machine.

OR

A suitable combination of above operations to make a composite job either individually or in a group.

Journal:

Journal shall consist of write-up about materials, equipments used in above processes, specific procedures followed, and safety precautions

At the end of each semester students are required to submit the completed jobs and journal for assessment of work done in workshop

Rules regarding ATKT, Continuous Assessment and award of Class

A. T. K. T.

- A candidate who is granted term for B. Tech. Semester-I will be allowed to keep term for his/her B. Tech. Semester-II examination even if he/she appears and fails or does not appear at B. Tech. Semester-I examination.
- A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B. Tech. Semester-IV examination even if he/she appears and fails or does not appear at B. Tech. Semester-III examination.
- A candidate who is granted term for B. Tech. Semester-V will be allowed to keep term for his/her B. Tech. Semester-VI examination if he/she appear and fails or does not appear at B. Tech. Semester-V examination.
- A candidate who is granted term for B. Tech. Semester-VII will be allowed to keep term for his/her B. Tech. Semester-VIII examination if he/she appears and fails or does not appear at B. Tech. Semester-VII examination.
- A candidate shall be allowed to keep term for the B. Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B. Tech. Semester-I & II taken together.
- A candidate shall be allowed to keep term for the B. Tech. Semester-V of respective course if he/she has no backlog of B. Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.
- A candidate shall be allowed to keep term for the B. Tech. Semester-VII course if he/she has no backlog of B. Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

- In respect of Term work at B. Tech. Semester-I & II, B. Tech. Semester-III & IV and B. Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment

or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

- Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.
- For B. Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

- Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or more marks but less	First Class
C	Aggregate 55% or more marks but less	Higher Second Class
D	Aggregate 50% or more marks but less	Second Class
E	Aggregate 40% or more marks but less	Pass Class

Bharati Vidyapeeth Deemed University
College of Engineering, Pune- 411043
The Structure of the Curriculum: 2007 Course

B. TECH. MECHANICAL: SEMESTER- III & IV

Bharati Vidyapeeth University
College of Engineering, Pune
Department of Mechanical Engineering

Vision: To provide mechanical engineers capable of dealing with global challenges

Mission: Social transformation through dynamic education

Programme Educational Objectives (PEOs):

Graduates will be able,

- To fulfill need of industry with theoretical and practical knowledge
- To engage in lifelong learning and continued professional development
- To fulfill social responsibilities

Programme Outcomes (POs):

- a. To apply knowledge of mathematics, science and engineering fundamentals for solving engineering problems
- b. To identify the need, plan and conduct experiments, analyze data for improving the mechanical processes
- c. To design and develop mechanical systems considering social and environmental constraints.
- d. To design and develop a complex mechanical system using advanced mathematical and statistical tools and techniques
- e. Use of information technology (IT) tools for prediction and modeling of routine activities to enhance the work performance
- f. To know social responsibilities while doing professional engineering practice.
- g. To become familiar with eco-friendly, sustainable and safe work environment.
- h. To take into account professional ethics while designing engineering systems.
- i. Able to work efficiently as a group leader as well as an individual.
- j. To communicate in written and verbal form with subordinates and supervisors
- k. To apply project and finance management techniques in multidisciplinary environments.
- l. To create interest for higher education and updating the knowledge.

B. TECH. MECHANICAL: SEMESTER- III

Total Duration: 30 Hrs./ week									
Total Marks: 750									
Course Code	Course	Teaching Scheme (Hrs.)			Examination Scheme (Marks)				Total Marks

*Subject with Four hours Theory Paper

Rules for Conducting Tests

Mode of the test

- In each semester for each subject three tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.
- Each test shall carry 20 marks.
- University examination pattern has given weightage of 20 marks for the tests.
- To calculate these marks following procedure is followed:
 - i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
 - ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
 - iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
 - iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
 - v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; these marks will be final marks obtained by the student. No scaling up is permitted.
 - vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.
- Paper pattern for tests
 - i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

ii) There will not be any sub-questions.

- For granting the term it is mandatory to appear for all three tests conducted in each semester.
- Roll nos. allotted to students shall be the examination nos. for the tests.

Department of Mechanical Engineering
STRENGTH OF MACHINE ELEMENTS
(Course No: K60201)

Designation of Course	Strength of Machine Elements		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	03 Marks	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T. W. & Or.	50 Marks	

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Mathematics 2. Engineering Mechanics
Course Outcomes:-	<ol style="list-style-type: none"> 1. Calculate stress and strain in machine components 2. Find out maximum load carrying capacity under tensile, compressive, torsion tests 3. Assess different types of failures 4. Use shear force and bending moment diagrams for different loading conditions in beams and shaft 5. Use analysis in simple machine elements 6. Calculate diameter of joints

Course Contents

Unit 1	Simple Stresses & Strain in Machine Parts	(08 Hrs.)
Concept of stress & strain, types of stresses, strains – linear, lateral, shear, thermal, volumetric, hooks law, Poison's ratio, modulus of elasticity, modulus of rigidity, bulk modulus, stress-strain diagram for ductile & brittle material, yield strength, ultimate strength, buckling, impact loading, suddenly applied loading, Thermal stresses in machine elements.		
Unit 2	Engineering Materials	(08 Hrs.)
Mechanical properties of engineering materials, creep, stress concentration, selection of materials, cast iron, BIS system of designation of steel, plain carbon steel, overseas standards, cast steel, aluminum alloys, die casting alloys, weighted point method.		
Unit 3	Principle Stresses	(08 Hrs.)
Normal & shear stresses & strain on any oblique plane, concept of principle planes, derivation of expression of principle stresses & maximum shear stresses, position of principle planes & planes of maximum shear, graphical solution using Mohr's circle, combined effect of axial force, bending & torsion. Theories of Failure: Maximum normal stress theory, Maximum shear stress theory, Maximum distortion energy theory, Maximum strain theory, Maximum strain energy theory, their application & limitation to engineering material, composite member design.		
Unit 4	Shear force Diagram & Bending Moment Diagram of Shafts and Beams	(08 Hrs.)
SFD & BMD of shaft with different end conditions, simply supported, cantilever, and overhang, with all types' loads, concentrated load conditions, torsional deflection of shaft, and lateral deflection of shaft by Maculley's method, moment area method, Castigliano's theorem.		

Unit 5	Stress Analysis of Knuckle and Cotter Join	(08 Hrs.)
Bending of curved bars, stresses in ring, chain link, crane hook, eccentric loading, design of knuckle & cotter joint & chain link.		
Unit 6	Threaded and Riveted Joints	(08 Hrs.)
Basic types of screw fastenings, uniform strength bolts, ISO metric screw threads, Eccentrically loaded bolt joint load perpendicular to bolt axis, eccentric load on circular base, cylindrical bolts, turn buckle design		

Term work

The Journal containing the record of following:

1. Experiment on Tension test on M.S. bar.
2. Experiment on Compression test on M.S. bar.
3. Experiment on Shear test on M.S. bar.
4. Experiment on Torsion test on M. S. bar.
5. Experiment on Impact test.

Drawing file containing two half imperial sheets:

1. Drawing sheet of SFD - BMD of shafts using computer.
2. Drawing sheet of Mohr's circle.

Any two assignments based on above syllabus.

Text Books/ Reference Books

1. Timoshenko & Young, Engineering Mechanics, Tata McGraw Hill Book Publishing Co. Ltd. 1985
2. James Gere, Mechanics of Materials, Thomson Learning
3. S Ramamrutham, Strength of Materials
4. V. B. Bhandari, Design of Machine Elements, Tata McGraw Hill Publication
5. J. E. Shigley, Mechanical Engineering Design, McGraw Hill

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

APPLIED THERMODYNAMICS
(Course No: K60202)

Designation of Course	Applied Thermodynamics	
Teaching Scheme:	Examination Scheme:	
Theory:- 04 Hours/ Week	Theory	80 Marks
Practical:- 02 Hours/ Week	Duration	03 Hours
Tutorials:- -- Hours/ Week	Unit Test	20 Marks
	T.W. & Or.	50 Marks
Course Prerequisites:-	<ol style="list-style-type: none"> 1. Knowledge of basic concept of thermodynamics 2. Knowledge of basic gas laws 3. Knowledge of pumps and compressors 	
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to understand 2nd law of thermodynamics and its applications 2. Able to calculate Air Standard efficiency of petrol and Diesel cycle. 3. Able to draw heat balance sheet of boiler. 4. Able to understand working of Single and Multistage air compressor. 5. Able to understand working of rotary compressor. 6. Able to analyse flue gas analysis 	

Course Contents

Unit 1	Second Law of Thermodynamics and Entropy	(08 Hrs.)
<p>Limitations of first law of thermodynamics, heat engine, refrigerator and heat pump, Kelvin-Planck's statement & clausius statement, equivalence of Kelvin-Planck's and clausius statements, perpetual motion machine of second kind, carnot cycle & carnot heat engine. Entropy as a property, second law analysis for entropy, clausius inequality, principle of increase of entropy, irreversibility.</p>		
Unit 2	Air Standard Cycles and Vapour Processes	(08 Hrs.)
<p>Concept of air standard cycles, assumptions, Otto, diesel & dual cycle, thermal efficiency, mean effective pressure, comparison of Otto, diesel & dual cycle, actual cycle, deviation from theoretical cycle, relative efficiency.</p> <p>Non flow and steady flow vapor processes, change of properties, work transfer & heat transfer, use of P-V, T-S, H-S diagrams for steam, determination of dryness fraction, study of calorimeters.</p>		
Unit 3	Steam Generators and Vapour Power Cycle	(08 Hrs.)
<p>Classification, constructional details of process and power boiler, boiler mountings and accessories, equivalent evaporation, boiler efficiency, energy balance, boiler controls, boiler draught. Carnot cycle using steam, ideal Rankin cycle, calculation of thermal efficiency, specific steam consumption, work ratio, comparison of Carnot and Rankin cycle, effect of superheat.</p>		
Unit 4	Single Stage Reciprocating Air Compressor and Multi Stage Reciprocating Air Compressor	(08 Hrs.)
<p>Uses of compressed air, classification, constructional details of single stage compressor, computation of work done, isothermal work done, isothermal efficiency, effect of clearance, volumetric efficiency, FAD, theoretical and actual indicator diagrams, method of improving volumetric efficiency. Need of multi staging, multi stage compressor, work done, volumetric efficiency, condition for maximum efficiency, intercooling, actual indicator diagram.</p>		
Unit 5	Rotary Compressor	(08 Hrs.)

Introduction, classification and working principles of different types of compressors, comparison between reciprocating and rotary compressors, positive displacement and rotodynamic compressors, static and total head, work done efficiencies, surging, and choking, stalling, characteristics curves for rotodynamic compressors. Selection of compressors for various applications.

Unit 6	Fuels and Combustion and Availability	(08 Hrs.)
---------------	--	------------------

Mass fraction, mole fraction, combustion equation, theoretical air, excess and deficient air, stoichiometric and actual air to fuel ratio, analysis of products of combustion, gravimetric and volumetric analysis and their conversions, method to determine flue gas analysis - CO, CO₂, O₂, HC, NO_x, smoke. High and low grade energy, available and unavailable energy, loss of available energy due to heat transfer through a finite temperature difference.

Oral: Based on above term work.

Term Work

1. Term work shall consist of record of minimum eight experiments of the following:
2. Determination of calorific value using bomb calorimeter.
3. Demonstration to determine exhaust gas analysis by using any commercially available test rig.
4. Test on reciprocating air compressor to determine volumetric efficiency, isothermal efficiency and FAD.
5. Determination of dryness fraction using any commercial available test rig. Study of boiler mounting and accessories.
6. Study of package boiler / modern boiler.
7. Report on visit to any process industry, which uses boiler.
8. Trial on boiler to determine boiler efficiency, equivalent evaporation and energy balance sheet.
9. Performance test on rotary air compressor/ blower. Study of rotary type positive displacement compressor.

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

INDUSTRIAL ELECTRONICS AND ELECTRICAL ENGINEERING
(Course No. K50261)

Designation of Course	Industrial Electronics And Electrical Engineering		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical: 02 Hours/ Week	Duration	03 Hours	
Tutorials: -- Hours/ Week	Unit Test	20 Marks	
	T.W. & Or.	50 Marks	

Course Prerequisites:-	Basic knowledge of electronics, electrical and Motors.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to understand and apply knowledge of basic laws and theorems to solve simple electrical dc circuits. 2. Able to define basic terms of single phase and three phase ac circuits and supply systems. Draw vector diagram and solve simple numerical on ac circuits. 3. Able to describe fundamental concepts of magnetic and electromagnetic circuits. Explain principle of transformer and calculate efficiency and regulation of transformer 4. Able to draw power supply system layout, block diagram of SMPS, UPS. Know and use electrical safety rules. 5. Able to specify and select electronic components as per required application. 6. Able to specify and select suitable measuring instruments for required application

Course Contents

Unit 1	D C Machines	(08 Hrs.)
Construction, generator action, e.m.f. equations, types, shunt, series, compound generators (elementary treatment). Motoring action, types - Shunt and series, significance of back e.m.f., torque - speed equations, torque - armature, current speed - armature current, torque - speed characteristics, different methods of speed control for shunt and series motor, starters of DC motors. Applications Of D C motor		
Unit 2	Three Phase Induction Motors:	(08 Hrs.)
Concept of rotating magnetic field Principle of operation, slip, slip torque equation, , torque slip characteristics, Methods of starting of I M , relation between slip, of mechanical power developed and copper loss, efficiency of motor, applications of 3-phase I M Principle of working, construction and applications (descriptive treatment only) of. I) Single phase induction motors: Resistance split phase, capacitor split phase and shaded pole motors. ii) Special purpose motors: Stepper motors, servomotors, A.C. series motors, Universal motors.		
Unit 3	Synchronous Machines :	(08 Hrs.)
Alternators: Constructional features, salient pole and cylindrical type rotors, synchronous speed. Frequency of induced e.m.f. Equations, winding factors, regulation of an alternator. (Synchronous impedance method only). Synchronous motors: Principle of working phasor diagram, effect of variation of load and excitation, methods of starting, general application, applications as asynchronous condenser		

Unit 4	Study of Power Control Devices:	(08 Hrs.)
Construction and working of SCR, Triac, Power MOSFET, IGBT, Characteristics and, Triggering circuits using Diac / UJT, simple applications like Controlled rectifiers light dimmers, fan regulators. Study of UPS (Only block diagram)		
Unit 5	Linear and Digital ICs	(08 Hrs.)
Introduction to IC Op-Amp (like 741), ideal parameters, open loop and closed loop gain , Op-Amp with negative feedback as a small signal amplifier (e.g. Inverting and non-inverting configurations) Op-Amp as Instrumentation Amplifier, Audio Power Op-Amp. IC's like TBA 810, LM380, Op-Amp as comparator, Op-Amp as wave form generator (Square and ramp), case study of Waveform generator IC such as 8038 or XR 2206. Timing Circuits Using IC 555 as mono stable and a stable multi vibrator and its applications in Mechanical Engg., sequential timers. Binary and BCD adder, Subtractor, Study of flip-flops, shift registers, counters, applications of digital circuits such as staircase, traffic light, lift controller, sequential controllers, display devices like LED, LCD, opto- isolators and opto-couplers.		
Unit 6	Industrial Applications:	(08 Hrs.)
Advantage of electrical heating, various methods of heating a) Resistance heating: Requirements of heating element materials, various heating element materials, design of Heating elements. b) Induction heating: Core type furnace, Ajax - Wyatt furnace, coreless induction type furnace, high frequency Eddy current heating. Dialectical heating: General principles Resistance welding and arc welding transformers, storage welding, RF heating, ultrasonic method of testing of materials, principles at LASER and applications, Use of CRO as display devices for industrial application.		

List of Practical

The Term-work shall consist of record of following experiments (Any Eight) (4 from Electronics and 4 from Electrical)

1. Study of UPS Systems: Instruments: UPS Kit, CRO, DMM Or
2. Controlled rectifiers using SCR with UJT triggering for a lamp load. Instruments: Power-Scope, DMM
3. Applications of Op-Amp. Using 741 (Any Two)
4. Square wave generators/ramp. Generator
Instrumentation Amplifier
Op-Amp as comparator and Schmitt trigger
5. Instruments: Dual trace CRO, Dual power supply, Function generator
6. Sequential timer using IC 555 and square wave generator. Instruments: Power supply, Dual trace CRO, stop-watch. Application of logic gates (one bit comparator) and combinational circuits e.g. traffic lights
7. Combinational lock lift, control, code conversion
8. Shift register IC 7495 and its application a sequence generator OR
9. Experiment on CNC programming (to be conducted in workshop)
10. Speed control of D. C. shunt motor by armature voltage and flux control methods and study Of D.C. shunt motor starters
11. Load test on D. C. shunt motor Load test on D. C. series motors
12. Regulation of alternator by synchronous impedance method Load test on three phase induction motor
13. Regulation of alternator by direct loading method
14. Study of various single-phase Induction motor

Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

MANUFACTURING PROCESSES
(Course No.K60241)

Designation of Course	Manufacturing Processes		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- -- Hours/ Week	Duration	03 Hours	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T.W. & Or.	-- Marks	

Course Prerequisites:-	Basic knowledge of workshop practice and fabrication techniques.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to understand different casting processes 2. Able to know different hot working and cold working processes 3. Able to understand different welding process 4. Able to understand different operations performed on lathe machine 5. Able to understand different drilling and milling operations 6. Able to get knowledge of abrasive machining and plastic moulding

Course Contents

Unit 1	Expendable Mould and Permanent Mould Casting Processes:	(08 Hrs.)
Sand casting, Types of pattern materials, pattern making allowances, core prints, Moulding sand- properties and testing, Hand and machine moulding, core, core boxes, core making melting and pouring, Melting furnaces- Cupola, fuel fired, electric arc, Induction furnaces, Cleaning, Finishing and heat treatment of castings, Defects in casting lost foam process, Shell moulding, Investment casting. Die casting low pressure permanent mould castings hot and cold chamber processes, Centrifugal casting, Semi-centrifugal casting. Centrifuging, Continuous casting		
Unit 2	Hot & Cold Working Processes	(08 Hrs.)
<p>A) Hot working processes: Principle, rolling, forging - drops, press, upset. Rolling, forging- extrusion, drawing, spinning, effect of hot working.</p> <p>B) Cold working processes Cold rolling, swaging, forging extrusion- forward backward impact. Roll forging, tube drawing, wire drawing, spinning, shot peening, high energy rate forming, sheet metal, working- types of press, drives, different operations, and types of dies.</p>		
Unit 3	Joining Process:	(08 Hrs.)
<p>a) welding process-</p> <ol style="list-style-type: none"> i) Arc weld - theory SMAW, GTAW, GMAW, FCAW, Submerged arc welding stud welding. ii) Resistance welding- Theory, spot, seam, projection welding processes. iii) Gas welding iv) Friction welding, ultrasonic welding, thermit welding, electron beam and laser welding. <p>b) Use of adhesives for joining. Classification of adhesives, types of adhesives and their applications, surface preparation and various joints</p>		
Unit 4	Turning, Boring related Process:	(08 Hrs.)
Introduction, function, types, construction accessories operations, thread cutting, single and multi start thread cutting, different tools, tool materials, Tool Geometry, concepts of speed, feed, depth of cut, Introduction to boring		

gmachinesgeneralarrangementandnatureofworkdone		
Unit 5	Drilling and Milling Machines:	(08 Hrs.)
<p>A) Drilling :</p> <p>Fundamentals of drilling process, twist drill geometry, tool holders, Types of drilling machines, drilling operations. Types of drills, reaming process.</p> <p>B) milling machines:</p> <p>Fundamentals of milling process, cutters-types and geometry, Operations performed on milling machines. Dividing head, methods of indexing. Gear train calculations for helical and cam milling</p>		
Unit 6	Abrasive Machining Process & Plastics & Plastic Moulding:	(08 Hrs.)
<p>Abrasive machining processes: Abrasive machining, abrasives -types, size and geometry, Grinding, grinding wheels, wheel marking, wheel selection. Wheel mounting. Types of grinding machines, Grinding faults, Honing, lapping, super finishing, buffing, burnishing process. Plastics & Plastic Moulding: Moulding characteristics of plastic, Moulding process- compression, transfer, and injection blow moulding. Mould design- Materials and construction, bulk factor, shrinkage, moulding parameters, moulding machines, extruders</p>

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

FLUID MECHANICS
(Course No. K60203)

Designation of Course	Fluid Mechanics		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	03 Hours	
Tutorials:- - Hours/ Week	Unit Test	20 Marks	
	T. W. & Or.	50 Marks	

Course Prerequisites:-	<p>Student should have knowledge of</p> <ol style="list-style-type: none"> 1. Fundamentals of Mechanical engineering. 2. Analysis of forces and moments. 3. Laws of motion, kinetics and kinematics.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to understand behaviour of fluids 2. Able to use appropriate pressure measuring devices 3. Able to apply Bernoulli's energy equation 4. Able to distinguish between laminar and Turbulent flow 5. Able to calculate losses in the piping system 6. Able to verify dimensional analysis results

Course Contents

Unit 1	Fluid Properties & Fluid Kinematics:	(10 Hrs.)
<p>Definition of fluid, Types of fluids, Viscosity, Compressibility, Vapour pressure, Surface tension, Capillarity, Velocity of sound, Mach number. Types of Flow – Steady, Unsteady, Uniform, Non-uniform, Laminar, Turbulent, One, Two & Three dimensional, Compressible, Incompressible, Rotational, Irrotational, Stream lines, Path lines, Streak lines, Velocity components, Convective & Local acceleration, Velocity potential, Stream function, Flow net.</p>		
Unit 2	Fluid Statics:	(06 Hrs.)
<p>Pressure at a point, Pascal's law, Devices for pressure measurement, Liquid pressure on plane & curved surfaces, Centre of pressure, Buoyancy & stability of floating & submerged bodies, Meta centric height.</p>		
Unit 3	Fluid Dynamics:	(08 Hrs.)
<p>Equations of motion, Continuity equation, Euler's equation of motion along a stream line, Bernoulli's equation, Application of Bernoulli's equation to pitot tube, Venturimeter, Orifices, Orifice Meter, Triangular & Rectangular notch.</p>		
Unit 4	Laminar Flow & Flow around Immersed Bodies:	(08 Hrs.)

Definition, Relation between pressure & shear stresses, Laminar flow through a circular pipe, Hagen Poiseuille equation, Fixed parallel plates, One fixed & one moving plate. Flow around Immersed Bodies: Lift & drag, Classification of drag, Flow around circular cylinder & Aerofoil, Development of lift on Aerofoil.		
Unit 5	Flow through Pipes:	(08 Hrs.)
Energy losses through pipe, Darcy Weisbach equation, Minor losses in pipes, Pipes in series & parallel, Equivalent pipe, Flow through siphon, Hydraulic power transmission through pipe.		
Unit 6	Turbulent Flow & Boundary Layer:	(08 Hrs.)
Definition of turbulent flow, Velocity distribution, Development of boundary layer on flat plate, Separation of boundary layer & methods of controlling. Dimensions of physical quantities, Dimensional homogeneity, Buckingham π theorem, Similarity, Important dimensionless numbers.		

Term Work

1. A journal containing record of any eight experiments of the following:
2. To find viscosity of liquids & its variation with temperature.
3. Study of pressure measuring devices.
4. Stability of floating body & optimum loading capacity.
5. Verification of modified Bernoulli's equation.
6. Calibration of Venturimeter.
7. Calibration of 'V' notch.
8. Study of minor losses due to pipe fittings.
9. Study of laminar & turbulent flows by Reynolds apparatus.
10. Study flow around immersed bodies by Hales haw apparatus.
11. Verification of friction factor for laminar & turbulent flow through pipes.

Oral

Based on above term work

Text Books/ Reference Books

1. Streeter V. L. & Wylie E. B., Fluid Mechanics, McGraw Hill International Book Co.
2. Kumar K. L., Engineering Fluid Mechanics, Eurasia Publishing House.
3. Dr. P. N. Modi and Dr. S. M. Seth, "Hydraulics and Fluid Mechanics Including Hydraulic Machines", Standard Book House.
4. R. K. Rajput, Fluid Mechanics, S. Chand.
5. Garde R. J. and Mirajgaonkar, Engineering Fluid Mechanics, New Chand & Bros; Roorkee

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

WORKSHOP PRACTICE III
(Course No: K60242)

Designation of Course	Workshop Practice III		
Teaching Scheme:	Examination Scheme:		
Theory:- -- Hours/ Week	Theory	-- Marks	
Practical:- 02 Hours/ Week	Duration	-- Hours	
Tutorials:- -- Hours/ Week	Unit Test	-- Marks	
	T. W. & Pr.	50 Marks	

Course Prerequisites:-	Student should have basic knowledge of welding, soldering, Lathe Machine.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to perform different forging operations 2. Able to perform different operations on lathe machine 3. Able to handle different wood working tools and equipments to prepare the pattern 4. Able to perform joints with arc welding.

Course Contents

Each candidate shall be required to complete and submit the following term work.

Jobs

1. Forging and grinding of lathe tool with one knife and other end V one job.
2. Plain and taper turning one job.
3. Making a pattern involving wood turning one job.
4. Welding (gas or arc) one job.

Journal and Demonstration

A journal shall consist of assignments based on M/C tools. These should include sketches and description as given below-(Any Five)

1. Mechanical test on weldment (To check tension, bend properties)
2. Plasma arc welding
3. At least one assignment on joining process
4. Demonstrations of lathe machine
5. Assignment on turning boring process
6. Demonstration of drilling machine
7. Assignment on drilling machine

Practical Assignment Scheme

A practical examination of three hours duration based on above term work shall be conducted at the end of semester.

Department of Mechanical Engineering
ENGINEERING MATHEMATICS – II
(Course No. K70108)

Designation of Course	ENGINEERING MATHEMATICS – II		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- -- Hours/ Week	Duration	03 Hours	
Tutorials:- 01 Hours/ Week	Unit Test	20 Marks	
	T. W.	-- Marks	

Course Prerequisites:-	Student should have knowledge of Mathematics-I
Course Outcomes:-	<ol style="list-style-type: none"> To develop an ability to solve differential equations of first order and first degree. To develop an ability to form mathematical model of rectilinear motion, electric circuit, Fourier heat conduction, Newton's law of cooling. To develop an ability to transform the Cartesian co-ordinates into spherical polar and cylindrical coordinate systems. To develop an ability to represent periodic function as Fourier series. To develop an ability to evaluate definite integral by DUIS rules and to trace Cartesian and polar curves. To develop an ability to apply methods to find area and volume by double and triple integration.

Course Contents

Unit 1	Differential Equations:	(09 Hrs.)
Differential Equations of First Order and First Degree, Exact Differential Equations and Reducible to Exact form, Linear Differential Equations, Reducible to Linear types, Method of Substitution and Miscellaneous Types, Differential Equations of First and Higher degree		
Unit 2	Applications of Differential Equations (of First Order and First Degree):	(08 Hrs.)
Orthogonal Trajectories, Atmospheric Pressure, Newton's Law of Cooling, Motion Under Gravity and Rectilinear Motion, L-R, R-C and L-C Circuits, Applications to Mass-Spring System, One Dimensional Conduction of Heat Applications to Chemical Engineering.		
Unit 3	Solid Geometry:	(09 Hrs.)
Cartesian, Spherical Polar and Cylindrical Coordinate systems, Relation between coordinate systems. Sphere, Tangent Plane of the Sphere, Sphere through a Circle, Orthogonal Spheres, Cone and Cylinder, Quadratic surfaces.		
Unit 4	Fourier Series:	(09 Hrs.)
Definition and Dirichlet's Conditions, Full range Fourier series on $c \leq x \leq c + 2\pi$ and $c \leq x \leq c + 2L$, Expansions of even and odd Periodic functions and on $-\pi \leq x \leq \pi$ and $-L \leq x \leq L$, Half Range Fourier Expansions Harmonic Analysis and Application to problems in Engineering. Reduction formulae for Trigonometric functions, Beta and Gamma functions.		
Unit 5	Foundations:	(08 Hrs.)
Integral Calculus (Single Integral):		

Differentiation Under the Sign of Integration, Error functions.

Curve Tracing:

Tracing of Cartesian, Polar and Parametric curves, Rectification of curves.

Unit 6 Multiple Integrals and their Application:

(09 Hrs.)

Double and Triple Integrations, Application of Multiple Integral to Areas and Volumes, Mean and RMS Values, Mass, Centre of Gravity and Moment of Inertia.

Text Books / References

1. Advanced Engineering Mathematics, 5th Edition, by Peter V. O'Neil (Thomson Learning).
2. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.).
3. Advanced Engineering Mathematics by Wylie C.R. and Barrett L. C. (McGraw-Hill).
4. Advanced Engineering Mathematics, 2nd Edition, by M. D. Greenberg (Pearson Education).
5. Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi).
6. Applied Mathematics (Volume I & II) by P. N. Wartikar and J. N. Wartikar (Pune Vidyarthi Griha Prakashan).
7. A Text Book of Engineering Mathematics - II by P. N. Wartikar and J. N. Wartikar.

Unit Tests-

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

ENGINEERING SCIENCE – II
(Course No. K70109)

Designation of Course	Engineering Science – II		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	03 Hours	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T. W.	25 Marks	

Course Prerequisites:-	Students should have knowledge of Engineering Science-I
Course Outcomes:-	<ol style="list-style-type: none"> 1. To use the properties of charged particles to develop modern instruments and explain the mechanism of fusion and fission. 2. To understand the behavior of quantum particles in different types of potentials. 3. To understand the basics of semiconductors and its uses to develop devices such as diode, transistor, solar cell etc. 4. Students will be able to understand the fundamental principles of corrosion and methods used for minimizing corrosion. 5. To recognize the preparation, properties and applications of polymeric materials.

Course Contents

PHYSICS		
Unit 1	Modern Physics:	(09 Hrs.)
Motion of a charged particle in electric and magnetic fields, Electrostatic and Magneto static focusing, Wavelength and resolution. Specimen limitation, Depth of field and focus. Electron microscope. Positive rays, Separation of isotopes by Bainbridge mass spectrograph. Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium. Fission energy, Critical mass and size. Reproduction factor, Chain reaction and four factor formula. Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions. Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron, Microtron.		
Unit 2	Quantum Mechanics:	(08 Hrs.)
Wave nature of matter, De-Broglie waves. Wavelength of matter waves. Electron diffraction, Davisson and Germer's experiment, Heisenberg's uncertainty principle with illustrations, Schrodinger's time dependant and time independent wave equation, Physical significance of wave function. Application of Schrodinger's time independent wave equation to the problems of (1) Electron gas, (2) Step potential (3) Potential barrier, (4) Particle in a rigid box (5) Particle in a non-rigid box (Boundary condition and result).		
Unit 3	Electrical Properties:	(07 Hrs.)
Band theory of solids. Band structures of Lithium, Sodium, Beryllium, Silicon and Diamond, Classification of solids on the basis of band theory. Fermi-Dirac probability function and position of		

Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semiconductors. Band structure of p-n junction diode under forward and reverse biasing, Conductivity in semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.		
<i>CHEMISTRY</i>		
Unit 4	Corrosion And Its Control:	(08 Hrs.)
Definition, dry or Chemical corrosion, wet or Electrochemical corrosion, mechanism of wet or electrochemical corrosion, Galvanic Corrosion, concentration cell corrosion passivity, underground or soil corrosion, pitting corrosion, inter granular corrosion, stress corrosion, microbiological corrosion. Electrochemical and galvanic series, Factors influencing corrosion and corrosion control.		
Unit 5	Polymers:	(08 Hrs.)
Definition and Classification based on origin and thermal behavior, Polymerization reactions, Functionality, Degree of Polymerization, tacticity. Types of Polymerization - Addition and condensation, Thermo-softening and Thermosetting Plastics, Polymerisation reactions, properties and uses of some polymers such as Polyethylene, Polypropylene, Polyvinyl Acetate, Polystyrene, Teflon, Melamine Formaldehyde, PMMA, SBR. Polymers in Medicine and surgery, Polymer blends and Alloys, Engineering Plastics.		
Unit 6	Instrumental Methods of Chemical Analysis:	(08 Hrs.)
Infrared Spectroscopy, Visible Spectroscopy, Ultraviolet Spectroscopy. Introduction, Principle, Instrumentation (Schematic Diagram) and Engineering Applications of the above Techniques.		

PHYSICS: Term Work Experiments:

Any five experiments from the following:

1. Determination of band gap of semi-conductor
2. Solar cell characteristics.
3. E/m by Thomson's method.
4. Uses of CRO for measurement of phase difference by Lissajous figures
5. Hall effect and Hall coefficient
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode. Photo diode. LED, Ge/Si diode)
8. Plank's constant by photodiode.

Assignments:

Any **two** of following:

1. Harmonic oscillator
2. Nuclear radiation detectors.
3. Scanning electron microscope and scanning tunneling microscope
4. Advanced opto-electronic devices

Text Books /References

1. Physics for Engineers - Srinivasan M. R., New Age International (P) Ltd.
2. Atomic Physics - Weher and Richards, Narosa Publishing House
3. Modern Physics - B. L. Thereja, S. Chand & Company Ltd.

5. Principle of Electronics - V. K. Mehta, S. Chand & Company Ltd.
6. Electronics Principles - A. P. Molvino, McGraw Hill International Book Company Ltd.

CHEMISTRY: Experiments:

Any **five** of the following:

1. To Determine the Molecular Weight of a polymer
2. Estimation of Copper from brass sample solution Iodometrically
3. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
4. To find the Radius of Macro Molecule by Viscometer
5. To Determine Surface Tension of a liquid by Stalagmometer
6. Determination of the strength of unknown liquid by using the colorimeter

Text Books / References

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

ENGINEERING MECHANICS
(Course No.K20110)

Designation of Course	Engineering Mechanics		
Teaching Scheme:	Examination Scheme:		
Theory:- 4 Hours/ Week	Theory	80 Marks	
Practical:- 2 Hours/ Week	Duration	03 Hours	
Tutorials:- - Hours/ Week	Unit Test	20 Marks	
	T. W.	25 Marks	

Course Prerequisites:-	Basic knowledge of physics and mathematics.
Course Outcomes:-	<ol style="list-style-type: none"> 1. The student should able to calculate Resultant of the Force system and also apply conditions of equilibrium for different problems. 2. The student should able to calculate Centroid and moment of Inertia of areas. 3. The student should be able to calculate effect friction force. 4. The student should be able to calculate velocity, acceleration, displacement, time for bodies in motion. 5. The student should be able to use D'Alemberts principle, Work-energy principle and Impulse momentum principle. 6. The student should be able to use concept of ICR for rigid body motion.

Course Contents

Unit 1	Force system in a plane	(8 Hrs.)
Types of forces classification of a force system Resolution of forces Resultant of a force system in a Plane- Analytical and Graphical approach Moment of a force, Couple, Force and Couple system About a point. Equilibrant, Free Body Diagram, Types of Supports, Conditions of Equilibrium Equilibrium of a force system in a plane.		
Unit 2	Force system in a Space and Moment of Inertia	(8 Hrs.)
Resultant and Equilibrium of a force system in a space, moment of a force about a point and About in line. Centroid of a line element, plane areas and volume, center of gravity, Moment Of inertia.		
Unit 3	Application of Static Equilibrium	(8 Hrs.)
Analysis of perfect Trusses – Method of Joint, Method of Section and graphical Method, Analysis of Pin Jointed Frames ,Analysis of cables subjected to Concentrated Load Coefficient of Static Friction Impending motion of Blocks , Ladder and wedges, Belt friction & Band-brake system.		
Unit 4	Kinematics of a Particle	(8 Hrs.)
Kinematics of Rectilinear motion of Particles – Equations of motion , Motion Curves ,Relative motion Dependent motion. Kinematics of Curvilinear motion of practical -Equation of motion in Cartesian, Polar and Path variable co-ordinate system, motion of projectile.		
Unit 5	Kinetics of a Particle	(8 Hrs.)
Kinetics of Rectilinear Motion of Particles , Newton's Second Law of motion , D'Alembert's principal , Work- Energy Principal ,Impulse-Momentum Principal, Direct Central Impact, Coefficient of Restitution,		

Spring Force. Kinetics of Curvilinear motion of Particles: D'Alembert's principle, Work-Energy Principle, Impulse-Momentum Principle, Oblique Central Impact		
Unit 6	Rigid Body Motion	(8 Hrs.)
Kinematics of Rigid bodies: Translation and Rotation about a fixed axis, General Plane Motion, Concept of Instantaneous center of Rotation. Kinetics of Rigid bodies: General Plane motion, D'Alembert's Principle, Work-Energy Principle.		

Term Work Experiments:

A) The term-work shall consist of total SIX experiments. (Minimum THREE from each section)

Section - I

1. Determination of reactions of Simple and Compound beam. Study of equilibrium of concurrent force system in a space.
2. Determination of coefficient of friction for Flat Belt and Rope. Verification of Law of Polygon of forces.
3. Study of Simple Lifting Machine.

Section - II

1. Study of Curvilinear motion. Determination of Coefficient of Restitution.
2. Determination of gravitational acceleration using Compound Pendulum. Determination of Moment of Inertia of Fly wheel.
3. Determination of Moment of Inertia of Irregular shape body using Torsional Pendulum.

B) The term-work shall also consist of minimum SIX graphical solutions of the problems on different topics. (Minimum THREE from each section)

Unit Tests-

Unit Test-I	Unit-I & IV
Unit Test-II	Unit-II & V
Unit Test-III	Unit-III & VI

ENGINEERING GRAPHICS-II
(Course No. K60111)

Designation of Course	Engineering Graphics-II		
Teaching Scheme:	Examination Scheme:		
Theory:- 03 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	04 Hours	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T. W.	50 Marks	

Course Prerequisites:-	Knowledge of basic drawing, mathematics and geometry.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to understand projection of Lines and Planes 2. Able to understand projection of solids and its sections. 3. Able to understand development of different solids. 4. Able to understand intersection of surfaces of solids

Course Contents

Unit 1	Projections of Lines and Projections of Planes.	(12 Hrs.)
Projections of points. Projections of lines situated in 1st quadrant only Horizontal trace (HT) Vertical trace (VT) Applications of lines. Auxiliary inclined plane (AIP), Auxiliary vertical plane (AVP), distance between skew lines, distance of a point from a line. Projections of planes, True shape of plane, Angle between two planes, distance of a point from a plane.		
Unit 2	Projections of Solids and Sections of Solids:	(12 Hrs.)
Projections of solids such as prisms, pyramids, cylinder, cone and sphere. Projections of solids in combination. Sections of above solids by AIP and AVP True shape of section.		
Unit 3	Development of Surfaces of Solids	(09 Hrs.)
To draw the development of the lateral surfaces of cut prism, pyramid, cylinder and cone. To draw orthographic projections from the given developed surface of solid.		
Unit 4	Intersection of Surfaces of Solids:	(09 Hrs.)
To draw the lines or the curves of intersection of the surfaces of solids excluding following combination. Pyramid-pyramid, Pyramid-cone, Cone-cone, Sphere-cone, Sphere pyramid.		

Term Work

Term work shall consists of six half-imperial size or A2 size (594mm x 420mm) Sheets

1. Projections of lines
2. Projections of planes
3. Projections of solids
4. Sections of solids
5. Development of surfaces
6. Intersections of surfaces

Note:

Paper shall be based on the topics covered in the syllabus of Engineering Graphics-I and Engineering Graphics-II

Unit Test:

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

ELEMENTS OF ELECTRICAL & ELECTRONIC ENGINEERING
(Course No. K40112)

Designation of Course	Elements Of Electrical & Electronic Engineering		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	03 Hours	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T. W.	25 Marks	

Course Prerequisites:-	Basic knowledge of physics, electronics, electrical.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to understand and apply knowledge of basic laws and theorems to solve simple electrical dc circuits. 2. Able to define basic terms of single phase and three phase ac circuits and supply systems. Draw vector diagram and solve simple numerical on ac circuits. 3. Able to describe fundamental concepts of magnetic and electromagnetic circuits. Explain principle of transformer and calculate efficiency and regulation of transformer 4. Able to draw power supply system layout, block diagram of SMPS, UPS. Know and use electrical safety rules. 5. Able to specify and select electronic components as per required application. 6. Able to specify and select suitable measuring instruments for required application.

Course Contents

Unit 1	Basic Concepts in Electrical Circuits:	(08 Hrs.)
Fundamental electrical quantities: Potential difference(voltage),current, power, energy, circuit elements-resistance, inductance, capacitance, laws for dc circuits analysis-Kirchhoff's voltage and current law, superposition theorem, the venin's theorem, maximum power transfer theorem.		
Unit 2	AC Circuits:	(08 Hrs.)
Graphical, mathematical and phase representation of ac voltage and currents, instantaneous, average and RMS value, peak factor form factor, periodic time, frequency, phase difference, power factor and complex power, analysis of series and parallel single phase ac circuits consisting of R,L,C combinations and Resonance phenomenon. Concept of 3-phase ac supply, supply specifications, phase sequence, star and delta connection and their line and phase values, current, voltage and power relationship for balanced 3-phase star and delta connected loads(with phase representation)		
Unit 3	Magnetic circuits and Transformer	(08 Hrs.)
Magnetic effects of an electric current ,magnetic circuit concepts terms MMF, flux density, field intensity, permeability, reluctance, composite series and parallel magnetic circuits, magnetization and hysteresis curve hysteresis and eddy current loss. Introduction to 1-phase transformer, function, principle of operation, types ,specifications, EMF equations ideal and practical transformer ,operation on no load and load conditions, losses, efficiency, regulation, determination of efficiency and regulation by direct loading introduction to auto transformation and instrument transformers.		
Unit 4	Electrical power Systems:	(08 Hrs.)

Generation, transmission and distribution systems layout ,types of supply system 3 phase-3wire,3phase-4 wire ac system rectifiers half wave, full wave, bridge wave with relevant wave forms, UPS, SMPS, stabilizers. Electrical safety, Necessity of earthing-safety and first aid measures against electrical shock.		
Unit 5	Electrical and Electronic component, device and Integrated Circuits:	(08 Hrs.)
Basic principle and applications of D.C. machines, connection diagram, load characteristics and applications, three phase induction and working principle. Types of resistance (fixed, variable, precision-carbon film, metal film, wire wound) their standard values specifications and applications .classification of capacitors based on dielectrics ,their standard values, specification and applications, study of different core materials depending on range of frequencies for inductors and transformers. Flat package, SMD's, pin configuration and cooling of LC's mounting of LC's basic block diagram and its explanation along with specifications of Mobile phones fax machines, Microwaves , personal computers.		
Unit 6	Electrical and Electronic Instruments:	(08 Hrs.)
Salient constructional features, operating principle, specification of PMMC and MI voltmeter and ammeter, Dynamometer- wattmeter, Induction type single phase energy meter. Basic block diagram, its explanation, specification and application of Digital millimeter, Function generator, CRO.		

List of Practical's to be performed in the laboratory

1. Verification of Kirchhoff's current and voltage laws for D. C. network Verification of superposition theorem for a given D. C. network.
2. Experimental verification of current flowing through a branch of D. C. circuit using the venin's theorem.
3. Verification of maximum power transfer theorem for D. C. circuit Performance of 1-phase a. c. R-L-C circuit and developing phase or diagram Verification of relationship between star and delta connection (balanced).
4. Efficiency and regulation of a given 1-phase transformer by direct loading Testing and operation of domestic appliances.
5. Use of CRO for obtaining wave forms of electrical quantities Load characteristics of different rectifiers.

Text Books/ Reference Books

1. Electrical Technology- Edward Huges
2. Basic Electrical Engineering D. P. Kothari, Nagrath
3. Electrical power system technology-S.W. Fordo, D. R. Patrick
4. Principles of Electronics-Dr. H. M. Rai
5. Electronic Devices and circuit Theory- R. L. Boylestad and L. Nashelsky
6. Electrical, Electronics Measurements and Instrument
7. Principles of Communication Engineering- Anokh Singh, A. K. Chhabra

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

COMPUTER FUNDAMENTALS AND INFORMATION TECHNOLOGY
(Course No. K70113)

Designation of Course	Computer Fundamentals And Information Technology		
Teaching Scheme:	Examination Scheme:		
Theory:- ---Hours/ Week		Theory	-- Marks
Practical:- 02 Hours/ Week		Duration	--Hours
Tutorials:- -- Hours/ Week		Unit Test	-- Marks
		T.W.	25 Marks

Course Prerequisites:-	Basic Computer software knowledge and computer accessories.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to study different types of Number Systems and Conversion Techniques. 2. Able to understand the working of different types of Input/ Output Devices 3. Able to learn Software installations on Various Platforms 4. Able to develop familiarity with MS Office Suite. 5. Able to understand the Characteristics of Object Oriented Programming. 6. Able to write simple programs in C++.

Course Contents

Unit 1	Computer Fundamentals	
Computer basics, data representation, number system. Computer architecture, Microcomputer PC hardware: CPU, Memory, Disks, Cards, Slots, Floppy And Modem.		
Unit 2	Input / Output / Storage Devices	
<p>Input devices: function, typical examples of input devices with their installation such As keyword, mouse, scanners, bar code readers, MICR readers, Audio and Video input Devices.</p> <p>Output devices: Typical examples of output devices with their installation such as VDU, printers, TFT, Audio and Video output devices. Storage devices: Primary storage such as RAM, ROM, secondary storage such as floppy disk, hard disk, CD ROM, ZIP drives tape drives, DAT etc.</p>		
Unit 3	Software	
Software characteristics, Types of software's files, Introduction to OS with DOS Commands. Operating environment such as windows. Programming language with High level and low-level programming. Utility packages such as MS office with MS- Word, Power Point, Excel, CAD and their typical applications in engineering.		
Unit 4	MS-Windows	
Introduction, Installation, Utilization, Features, and Accessories-notepad, paint, and word pad. Communication, Entertainment, System tools: disk cleaning, scan disk, Formatting disk, disk defragmentation etc. System setting. Control panel, desktop. Internet: Modem Types, Connectivity, TCP/IP, ISP, ISDN, Getting connected, and WWW. Browsers such as IE-5, Email, Newsgroups, Chatting, and Internet security. Search engines such as yahoo, Google, info seek, Alta Vista, hot boat etc. Computer Network, Basic concept. Layers, Topologies, Introduction to Networking. Types of LAN, WAN, MAN, Internet working. Wireless networks, Satellite links		

Unit 5	Database Management Systems (DBMS)	
File concepts. Database, logical and physical databases. Data modeling: hierarchical, Network, relational, and object oriented. Concept of normalization: database creation And modification using SQL. Sample queries. Multi Media System: Introduction to Multimedia System, Multimedia components, Text, audio, video, etc.		
Unit 6	Latest trends in Information Technology	
Study of MIS, BIS, GIS, OOP Concepts: Comparison of structured and object oriented Programming language, object structures. Object classes. Inheritance, Object identity. Encapsulation, Polymorphism.		

Term Work:

Term work will consist of ten assignments based on above syllabus out of which four assignments will be based on C programming language.

Assignment List:

1. Study of various Input and Output devices like Keyboard, Mouse, Scanner, Monitor, Printer etc.
2. Software Installation: Install any Office suite for study purpose
3. Study of any Office suite: Features make new documents, save documents, edit documents.
4. Study of various data representation & conversion techniques (Decimal to Octal, Decimal to binary, Decimal to hexadecimal)
5. Study of an operating system and list its features like I/O processing, memory management, process management.
6. Study basic of basic UNIX OS Commands (directory, file maintenance commands)
7. Compare the basic features of Windows OS with Linux or UNIX OS? Design a Spreadsheet for a given application
8. Study of Search Engines (like Google, Yahoo, AltaVista, Info Seek) and its features & WWW technologies.
9. Design a 3-D structure using any design tool
10. List and study database driven software.
11. Create a Database in any suitable application and perform add, delete and modify operations on it
12. Write a C++ program to compare 3 integer and display the greatest number
13. Write a C++ program to perform arithmetic operations on two complex numbers using operator overloading
14. Write a C++ program to study the concept of Inheritance

Required Software for above assignments:

1. UNIX / Linux
2. MS Windows
3. Open Office / MS Office / Star Office
4. 3D Studio MAX /Maya
5. Turbo C++

Text Book/References

1. Dr. V Rajaraman: Computer Fundamentals
2. Peter Norton: Inside IBM PC, (TMH)
3. Tannanbaum: Computer Networks, (TMH)

4. Korth: Database Management Systems, (TMH)
5. Yashwant Kanitkar: C-Programming
6. C Programming Language : Reference and Users Manuals, Microsoft Press
7. Steven Alter: Information Systems, Addison Wesley
8. Stroutstrup: Programming in C, (TMH)

WORKSHOP PRACTICE-II
(Course No: K60114)

Designation of Course	Workshop Practice-II		
Teaching Scheme:	Examination Scheme:		
Theory:- -- Hours/ Week	Theory	-- Marks	
Practical:- 02 Hours/ Week	Duration	-- Hours	
Tutorials:- -- Hours/ Week	Unit Test	-- Marks	
	T. W.	50 Marks	

Course Prerequisites:-	Basic knowledge of fabrication techniques, machine components.
Course Outcomes:-	<ol style="list-style-type: none"> 1. The student should know the different sections of metal and wood working processes. 2. The student should be able to handle the marking, measuring and cutting tools used in fitting section. 3. The student should be able to get the practical Knowledge of sheet metal work. 4. The student should be able to handle the different tools used in black smithy. 5. The student should be able to get the Practical Knowledge of plastic molding process. 6. The student should be able to get the Practical Knowledge of Plumbing process.

Course Contents

Students are required to complete the remaining set as the Term Work of Workshop Practice - II

Set A shall consist of

Jobs:

- 1) Woodworking-one job involving joint, woodturning, use of filler materials and adhesives
- 2) Welding- one job with edge preparation and simple joint using gas or arc welding.
- 3) Soldering- Fabrication of at least 5 electronic components on a PCB.
- 4) Demonstration on a centre lathe and CNC lathe.

OR

A suitable combination of above operations to make a composite job either individually or in a group.

Journal:

Journal shall consist of write-up about materials, equipments used in above processes, specific procedures followed, and safety precautions.

Set B shall consist of

Jobs:

- 1) Fitting- one job with one joint along with drilling, tapping, hacksaw cutting
- 2) Tin smithy- One job including riveting/ soldering
- 3) Black Smithy- One job with at least two different operations
- 4) Plastic moulding- one plastic component on injection moulding machine.

OR

A suitable combination of above operations to make a composite job either individually or in a group.

Journal:

Journal shall consist of write-up about materials, equipments used in above processes, specific procedures followed, and safety precautions

At the end of each semester students are required to submit the completed jobs and journal for assessment of work done in workshop

Department of Mechanical Engineering

ENGINEERING MATHEMATICS-III (Course No. K70208)

Designation of Course	Engineering Mathematics-III		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- -- Hours/ Week	Duration	03 Hours	
Tutorials:- 01 Hours/ Week	Unit Test	20 Marks	
	T. W. & Or.	----	

Course Prerequisites:-	Student should have knowledge of differential equations, Fourier Series.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to develop an ability of mathematical modeling of systems using differential equations and ability to solve linear differential equations with constant coefficient. 2. Able to develop an ability to solve the Laplace, heat and wave equations for a variety of boundary conditions in domains of simple geometry and with simple boundary conditions; the techniques available will include, separation of variables. 3. Able to develop an ability to use theorems to compute the Laplace transform, inverse Laplace transforms. 4. Able to develop an ability to understand basics of statistics and probability. 5. Able to develop an ability to calculate the gradients and directional derivatives of functions of several variables 6. Able to develop an ability to use Green's theorem to evaluate line integrals along simple closed contours on the plane.

Course Contents

Unit 1	Differential equations:	(09 Hrs.)
Solution of Linear differential equation of n^{th} order with constant coefficients, Method of variation of parameters, Cauchy's (Homogeneous type) and Legendre's linear equations. Simultaneous linear differential equations, Total differential equation, Symmetrical Simultaneous differential equations.		
Unit 2	Applications of differential equations:	(08 Hrs.)
Application to mass spring systems with coupled masses, equivalent electrical circuits. Solution of multi degree of freedom systems (Vertical and Horizontal). By matrix method, Natural frequencies and normal modes of vibration. Applications of Partial differential equations: Solution of wave equation, one and two-dimensional heat flow equation by method of separating variables. Application to mechanical and allied engineering problems.		
Unit 3	Transforms:	(09 Hrs.)
Fourier <u>t</u> ransforms: Fourier integral theorem, Fourier sine and cosine integrals, Fourier Transform,		

Fourier sine and cosine transforms, Inverse Fourier transforms, Solution of boundary value problems using Fourier transform (Diffusion equation only). La place Transform: Definition, Properties and Theorems, Inverse Laplace transform, Methods of finding inverse Laplace transform, Application to solution of linear differential equations.		
Unit 4	Statistics and Probability:	(09 Hrs.)
Measures of central tendency, Standard deviation, Coefficient of variation, Moments, Skewness and Kurtosis, Correlation and Regression, Reliability of Regression Estimates. Probability density function and probability mass function, Binomial, Poisson's, Normal and Hyper geometric distributions, Test of Hypothesis: Chi-Square test of goodness of fit and Independence of attributes, Introduction to Decision and Quality control.		
Unit 5	Vector Differentiation:	(09 Hrs.)
Radial, Transverse, Tangential, Normal components of linear velocity and acceleration, Gradient, Divergence and Curl, Directional derivative, vector identities Irrotational and Solenoidal Vector fields.		
Unit 6	Vector Integration:	(08 Hrs.)
Line integral, Surface integral and Volume integral, Work done, Gauss- Divergence theorem, Stoke's theorem and Greens lemma. Applications to fluid flow, Streamline's, Continuity equation, Motion equation and Bernoulli's equation.

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

INTERNAL COMBUSTION ENGINES
(Course No.K60204)

Designation of Course	Internal Combustion Engines		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	03 Hours	
Tutorials:- -- Hours/ Week	Unit Test	20 Marks	
	T. W. & Pr.	50 Marks	

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Basic information of thermodynamics. 2. Basic knowledge of fluid mechanics.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Identifying different components of IC engines 2. Able to calculate efficiency of different air standard cycles 3. Able to understand working principles of carburetors, fuel injection systems, fuel pumps 4. Determination of power, fuel consumption, efficiency of the engine 5. Understand detonation and knocking processes 6. PUC norms Bharat I-IV and Euro I-IV

Course Contents

Unit 1	Constructional Features of Reciprocating I. C. Engine: And Cycle Analysis of I. C. Engines:	(08 Hrs.)
Engine components and Engine classification. Fuel air cycle analysis .Comparison of P-V diagram of air standard cycles Fuel air cycle & actual cycle.		
Unit 2	Fuel Supply Systems:	(08 Hrs.)
S.I. Engines: Carburetion, Mixture requirements, Essential parts of modern carburetor, Carburetors used on automobiles, Calculation of A/F ratio, M.P.F.I. system for modern automobile engines. C.I. Engines: Functional requirements of an injection system, Typical arrangement of solid injection system, Types of fuel injection system, Fuel pump & fuel injectors, Quantity of fuel & size of nozzle orifice.		
Unit 3	Ignition System:	(08 Hrs.)
Battery & coil ignition system Magneto ignition system Electronic ignition system Advantage over mechanical contact breaker point system Engine Cooling System: Air cooling, Water cooling, Thermostatic radiators Lubrication System: Dry sump lubrication Wet sump lubrication – Fully pressurized, Oil filters Governing System: Quality governing Quantity governing, Hit & miss governing		
Unit 4	Testing & Performance of I. C. Engine And Supercharging:	(08 Hrs.)
Determination of brake power, Indicated power, Friction power, Determination of brake thermal efficiency, Mechanical efficiency, Volumetric efficiency, Energy balance, Performance characteristics. Objects of supercharging, Effects on performance, Limits, Methods of supercharging & turbo charging, Limitation of turbo charging.		

Unit 5	Combustion in S. I. Engines And Combustion in C. I. Engines:	(08 Hrs.)
Stages of combustion, Effect of engine variables on ignition lag & flame propagation, Abnormal combustion: Theories, Effects & Controlling measures, Combustion chambers for S. I. engines. Stages of combustion, Ignition delay & factors influencing delay period, Diesel knock & its control, Combustion chambers for C. I. engines.		
Unit 6	Emissions & Pollution Control And Fuels:	(08 Hrs.)
Emissions from S. I. and C. I. engines & their harmful effects, Catalytic convertors, Contemporary & proposed emission norms, BHARAT I to IV emission norms. Types of fuels for I. C. engines, Rating of S. I. & C. I. engine fuels, Alternative fuels for I. C. engines & future trends, Hybrid vehicles.		

Term Work

1. A journal containing record of any eight experiments of the following: Study of carburetor / MPFI system
2. Study of fuel pump & injector.
3. Trial on multi cylinder petrol engine – Morse Test.
4. Trial on diesel engine to determine energy balance & variable load performance. Variable speed trial on petrol / diesel engine.
5. Trial on computerized I. C. engine to plot P – θ diagram.
6. Trial / demonstration of smoke meter & exhaust gas analyzer. Study of battery, magneto & electronic ignition system.
7. Study of superchargers & turbochargers.
8. Study of combustion chambers in S. I. & C. I. engines.

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

THEORY OF MACHINES- I
(Course No: K60205)

Designation of Course	Theory of Machines- I	
Teaching Scheme:	Examination Scheme:	
Theory:- 04 Hours/ Week	Theory	80 Marks
Practical:- 02 Hours/ Week	Duration	04 Hours
Tutorials:- -- Hours/ Week	Unit Test	20 Marks
	T. W. & Or.	50 Marks

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Mathematics 2. Engineering Mechanics
Course Outcomes:-	<ol style="list-style-type: none"> 1. Understand various concepts related to mechanisms of machines 2. Use mechanism for appropriate application 3. Draw velocity, acceleration, inertia force polygons 4. Calculate velocity, acceleration of mechanism elements 5. Calculate forces on different parts of engine 6. Understand synthesis of mechanisms

Course Contents

Unit 1	Basic Concept and Definition	(06 Hrs.)
Link - Binary, ternary, quaternary, Structure, Machine, Mechanism, Kinematic pair - Classification, Kinematic Chain and Mechanism - Grubler's criteria for movability of chains and mechanism as locked constrained, Unconstrained based on grubler's criteria, Inversion of single slider and double slider crank chain, Inversion of four bar chain.		
Unit 2	Mechanism with lower Pair	(06 Hrs.)
Study of Pentograph, Study of exact straight line motion mechanism, Study of approximate straight line motion mechanism, Steering Gear Mechanisms, Hook's or Universal joint, Ratchets and Escapement Mechanism, Swinging / Rocking Mechanism, Indexing Mechanism.		
Unit 3	Velocity and Acceleration Analysis	(12 Hrs.)
Instantaneous centre method to determine velocities, Methods of locating Instantaneous center, Kennedy's theorem of three centers, Body and space Centroides. Relative velocity and Relative acceleration Method, Coriolis component of acceleration. Klien's construction.		
Unit 4	Analytical Method	(06 Hrs.)
Velocity and Acceleration by Vector Algebra, Complex Algebra and Analytical method.		
Unit 5	Static and Dynamic Force Analysis	(10 Hrs.)
D'Alemberts Principle, Radius of gyration of rigid bodies, Theory of compound pendulum, Bifillar & Trifillar Suspension, Dynamically equivalent system, correction couple Inertia in I.C. Engine Mechanism by analytical and graphical Method, Inertia of Geared system.		
Unit 6	Introduction to Analysis and Synthesis of Mechanism	(08 Hrs.)
Type, Number and Dimensional Synthesis, Function Generation, Path Generation and Body Guidance, Two position synthesis of slider crank mechanism, Two position synthesis of crank and rocker mechanism, Crank rocker mechanism with optimum transmission angle, Three positionsynthesis, Frudenstein method.		

Term Work

1. Determination of Moment of inertia by Bifilar / Trifillar Suspension Method.
2. Compound Pendulum.
3. Experimental verification of displacement relation of different shaft angle for single Hooke's joint
4. Assignment
5. Developing a computer program for velocity and acceleration analysis of slider crank mechanism / Four bar mechanism.
6. Study of steering gear mechanism.
7. Drawing sheets
8. Velocity by Instantaneous Centre Method
9. Relative Velocity and Relative Acceleration Method
10. Coriolis component of acceleration.
11. Straight line Motion Mechanism.
12. Inertia force analysis using graphical method

Unit Tests-

Unit Test-I	Unit-I, II
Unit Test-II	Unit-III, IV
Unit Test-III	Unit-V, VI

MATERIAL SCIENCE AND ENGINEERING METALLURGY

(Course No: K60243)

Designation of Course	Material Science and Engineering Metallurgy		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical:- 02 Hours/ Week	Duration	03 Hours	
Tutorials:- - Hours/ Week	Unit Test	20 Marks	
	T.W. & Or.	50 Marks	

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Physics 2. Engineering Chemistry
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to do selections of metals and non-metals as per mechanical properties, density, ductile and brittle. 2. Able to do Mechanical testing, Nondestructive as per standard methods. 3. Able to do Plotting of Equilibrium diagram and use it in manufacturing for producing different types of alloys. 4. Able to do working in Steel Manufacturing industry as well as processing industry. 5. Able to do work in ceramics and composite manufacturing industry. 6. Able to do apply knowledge of Nonferrous metals in actual industrial and society problems related to corrosion

Course Contents

Unit 1	Crystal Structure of Metals and Plastic Deformation	(08 Hrs.)
Study of crystal structure, Indexing of planes and directions, Imperfections in crystals, Mechanism of plastic deformation, Deformation of single crystal, Polycrystalline metals, Critical resolve shear stress, Work Hardening, Cold and hot working, Annealing and re - crystallization.		
Unit 2	Mechanical Testing of Metals:	(08 Hrs.)
Study of destructive testing, Tensile test, Engineering stress and true stress strain, Numerical based on Evolution of properties, Hardness testing such as Brinell, Rockwell, Vickers and Micro hardness test, Impact test, Fatigue test, Creep test, Cupping test, Non Destructive testing such as Liquid dye penetrate test, Magna flux test, Eddy current test, Ultrasonic testing and Radiography testing.		
Unit 3	Study of Equilibrium Diagrams:	(08 Hrs.)
Related terms and their definitions, Hume Ruther's rule of solids solubility, Allotropy and polymorphism, Solidification, Dendritic growth, Cooling curves, Plotting of Equilibrium diagrams, Lever rule, Coring, Eutectic system, Partial eutectic and eutectoid system, Non Equilibrium cooling and its effects.		
Unit 4	Study of Steel and Cast Irons:	(08 Hrs.)
Production of steel and cast Irons, Allotropy of Iron, Iron and Iron Carbide Equilibrium Diagram, Classification of Steels, Specifications of steels, Plain Carbon steel, Applications and microstructure of steels, Study of cast iron, Classification and applications of cast irons, Properties and manufacturing methods, Effect of alloying elements Alloy cast irons etc.		

Unit 5	Study of Non-Ferrous Materials:	(08 Hrs.)
Introduction, Copper and its alloy, Alpha and alpha beta brasses, Zinc Equivalent, Copper Nickel alloy, Bronzes, Aluminum and its alloy, Precipitation and age hardening, Dispersion strengthening, Nickel and its alloy, Metals at High and Low Temperature, Bearing Materials etc.		
Unit 6	Study of Composite Materials and Ceramics:	(08 Hrs.)
Introduction, Classification of composites, Types of composite, Properties, Metal matrix composite, Ceramic matrix composite, Fiber Reinforced plastic, Manufacturing methods, Applications in Different field. Ceramic, Properties and applications of ceramics. Manufacturing of ceramics.		

Term Work

List of Experiments :(AnyEight)

1. Tensile test to determine strength and other mechanical properties
2. Hardness test Brinell and Vickers
3. Rockwell and Poldi hardness test
4. Study of Microstructure of plain carbon steel
5. Study of Microstructure of cast irons
6. Magnetic Particle test
7. Liquid Penetrate test
8. Ultrasonic Test
9. Visual inspection of casting and welded components

COMPUTER AIDED DRAFTING AND MACHINE DRAWING
(Course No: K60206)

Designation of Course	Computer Aided Drafting And Machine Drawing		
Teaching Scheme:	Examination Scheme:		
Theory:- 04 Hours/ Week	Theory	80 Marks	
Practical: 02 Hours/ Week	Duration	04 Hours	
Drawing:- 02 Hours/ Week	Unit Test	20 Marks	
	T.W. & Pr.	50 Marks	

Course Prerequisites:-	Student should have knowledge of engineering graphics and fundamentals of computer.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to design simple components with tolerances 2. Able to understand different types of joints used in engineering practices 3. Able to interpret the assembly drawing and draw components drawing. 4. Able to use CAD Software. 5. Able to understand 3D drawings and surface modelling 6. Able to understand basic concepts in AUTOLISP

Course Contents

Unit 1	Dimensioning Practices:	(04 Hrs.)
<p>Terms and Notations, Leader, Extension Lines, Terminations and Origin indication, Functional dimension, Non-functional dimension, Datum dimension, Redundant and auxiliary dimension, Chain dimensioning, Running dimensioning, Co-ordinate dimensioning, Symmetrical or equidistant dimensioning, Methods of dimensioning Common features: Diameters, Radii, Hole sizes, chamfers, Screw threads, Chords, Arcs, Angles, Spheres, Cylinders, Squares. Conventional Representation of Machine Components As per SP-46 (1988), ISO Systems of Tolerancing, Tolerance and Allowances, Unilateral and Bilateral limits. Maximum Material Condition (MMC), Methods of tolerance, Indications of deviations and limits of sizes, Tolerances for linear and Angular dimensions, Types of fits with symbols and applications, Types of nut locking arrangements, Threaded hole and stud assembly. Set screws: Grub screws, Geometric Tolerancing, General definitions, Symbols, Interpretations, Conventional representation on part drawing Surface Roughness: Surface feature, Machining symbols, Roughness value (Ra) Roughness grade numbers, Conventional representation on part Drawing, Manufacturing process and Surface finish.</p>		
Unit 2	Types of joints:	(04 Hrs.)
<p>Thread forms and their properties, Standard Tables of ISO Metric Threads, Thread designation, Single and multi start threads, Right and left hand threads, Types screws, bolt and nuts, Types of nut locking Arrangements, Threaded hole and stud assembly, Set screws, Grubs screws, Screwed Joints Welded Joints, Types of pipes and pipe joints, Flange joint Spigot and socket joints , Cotter joint, Hydraulic pipe joints Screwed and flanged union , Expansion joints, Stuffing box and Gland, Piping Layouts, Conventional representation of pipe fitting</p>		
Unit 3	Assembly and Part Drawing:	(08 Hrs.)
<p>Production Drawing, Bill of Materials Assembly and Part Drawings, Such as: Boiler mounting, Steam engines, Machine tools, Automobile Parts</p>		
Unit 4	Introduction to Computer Aided Drafting:	(06 Hrs.)

Working Interface of AutoCAD, Drawing Limits, Creating 2-D Drawing in AutoCAD, AutoCAD commands, Editing commands in AutoCAD, Dimensioning in AutoCAD, Creating text in Auto CAD, Changing object properties Scale, Object Snap Mode, Display control in AutoCAD, Layer		
Unit 5	3-D Drawing, Surface Modeling:	(10 Hrs.)
WCS, View Point, and UCS, Working with UCS, Orthographic Views Surface Modeling: Box, Wedge, Pyramid, Cone, Sphere, Dome, Dish Introduction to Solid Modeling: Box, Wedge, Cylinder, Cone, Sphere, Extrude, Revolved, Slice section, Union, Subtract.		
Unit 6	Introduction to AUTOLISP:	(08 Hrs.)
Concepts of Parametric Programming Data Types AUTO LISP, Integers, Real Numbers, Strings, Symbols Lists, Selection Sets, Data Types Conversion: Integer to Real, String List, Real to Integer, AUTO LISP Math Functions: Addition, Subtraction, Multiplication, Division Maximum and Minimum of Numbers, Remainder and Exponential Operating Functions. Get Functions for user input, Working with Lists and Entities, and Filtering from Lists, Editing Lists and Entities Introduction to Decision. Making and Looping in AUTO LISP.		

Term Work

1. Firstsheetbasedondimensioningpractice,conventionandsymbolsinmachine drawing
2. TwoDrawingAssignmentsbasedonAssemblyandDetailsofMachineParts,Automobile parts, Engine, Boiler parts etc. (One Drawing assignment preferably on Auto CAD)
3. Four Auto CAD drawing assignments
4. Four Auto Lisp Programming assignments

T.W. & Oral

Term work and oral will be based on above syllabus

Practical Assignment Schemes

1. Signals And Systems
2. Concerned staff member is directed to frame two assignments on each Unit

WORKSHOP PRACTICE IV
(Course No.K60244)

Designation of Course	Workshop Practice IV		
Teaching Scheme:	Examination Scheme:		
Theory:- -- Hours/ Week	Theory	-- Marks	
Practical:- 02 Hours/ Week	Duration	-- Hours	
Tutorials:- -- Hours/ Week	Unit Test	-- Marks	
	T. W. & Or.	50 Marks	

Course Prerequisites:-	Students should have knowledge of welding, machining, drilling and manufacturing techniques.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to perform different operations on lathe and drilling machines 2. Able to perform different operations on milling machine 3. Able to perform different operations on grinding machine 4. Able to get knowledge of NC/CNC machines.

Course Contents

Content:

Each candidate shall be required to complete and submit the following term work.

Part - A:

One composite job consisting of machining of components covering operations on: Lathe, Shaping Drilling, Milling, Grinding Machines. Composite job should consist of 3 to 4 components and covering 5 to 6 different machining operations including one precision turning operation.

Part - B:

Demonstration on NC/CNC machine or trainer for manufacturing of simple components.

Journal:

A journal will have assignments of M/C tools. This should include sketches and description as given below - (Any Five)

1. Moulding and core testing (clay content test, moisture content test)
2. Fluidity test using fluidity spiral.
3. Green strength of mould and green strength of core.
4. At least one assignment on casting process.
5. Demonstrations of Grinding machine
6. Assignment on Grinding Machine
7. Demonstration and assignment on non-conventional machining process.

Practical Examination:

A practical examination of Six hours based on term work shall be conducted at the end of semester.

Rules regarding ATKT, Continuous Assessment and award of Class

A. T. K. T.

- A candidate who is granted term for B. Tech. Semester-I will be allowed to keep term for his/her B. Tech. Semester-II examination even if he/she appears and fails or does not appear at B. Tech. Semester-I examination.
- A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B. Tech. Semester-IV examination even if he/she appears and fails or does not appear at B. Tech. Semester-III examination.
- A candidate who is granted term for B. Tech. Semester-V will be allowed to keep term for his/her B. Tech. Semester-VI examination if he/she appear and fails or does not appear at B. Tech. Semester-V examination.
- A candidate who is granted term for B. Tech. Semester-VII will be allowed to keep term for his/her B. Tech. Semester-VIII examination if he/she appears and fails or does not appear at B. Tech. Semester-VII examination.
- A candidate shall be allowed to keep term for the B. Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B. Tech. Semester-I & II taken together.
- A candidate shall be allowed to keep term for the B. Tech. Semester-V of respective course if he/she has no backlog of B. Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.
- A candidate shall be allowed to keep term for the B. Tech. Semester-VII course if he/she has no backlog of B. Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

- In respect of Term work at B. Tech. Semester-I & II, B. Tech. Semester-III & IV and B. Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment

or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

- Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.
- For B. Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

- Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or more marks but less	First Class
C	Aggregate 55% or more marks but less	Higher Second Class
D	Aggregate 50% or more marks but less	Second Class
E	Aggregate 40% or more marks but less	Pass Class

BHARATI VIDYAPEETH UNIVERSITY, PUNE

B. Tech. (BIOMEDICAL) (Sem. III & IV)

HIGHLIGHTS

Bharati Vidyapeeth University College of Engineering (BVUCOE) is the largest Engineering College in Maharashtra with an intake of 700 students in each academic year. Imparting quality technical education from Under Graduate to Doctorate Level, BVUCOE is probably the only Engineering College in India with an accreditation from both NAAC as well as NBA. The faculty at BVUCOE boasts of highly qualified academicians, a quality that is further emphasized by the fact that 15 of them are presently pursuing their Ph.D. degree.

BVUCOE has been ranked 29th amongst the Top 50 Technical Schools of India in survey conducted by DATAQUEST-IDC. We have enjoyed a ranking in this list for the last 4 years. Research is of utmost importance in all our programs. A total of 113 research papers were published in the academic year 2007-2008.

Currently we have 12 ongoing research projects. The infrastructure of BVUCOE is state-of-the-art with 62 classrooms, 59 laboratories and a well-stocked library that currently holds 27,130 titles. The college has an international presence with MoUs signed with the North Carolina A&T State University (Greensboro, USA), University of Venice (Italy), Actel Corporation (USA). Corporate interaction is also inculcated in our programs through our association with Oracle India Ltd., Infosys Ltd. and Tata Consultancy Services.

SALIENT FEATURES

Biomedical Engineering is the application of Engineering Principles & Techniques to the medical field. It combines the design & problem solving skills of engineering with medical & biological sciences to help improve patient health care & the quality of life of individual.

Biomedical Engineering is an interdisciplinary field, influenced by various fields & sources. It integrates physical, chemical, mathematical & computational sciences & Engineering principles to study biology, medicine, human behavior & health. It advances fundamental concepts; creates knowledge from the molecular to the organ system behavior & develops innovative biologies, materials, processes, implants, devices & informatics approaches of disease for patient rehabilitation & for improving health.

Biomedical Engineering is a study that uses engineering expertise to analyze & solve problems in biology & medicine. It is usually based on one of the traditional engineering disciplines, such as Electrical or Mechanical Engineering. There has been a great expansion of Biomedical Engineering in areas such as Medical Electronics, Clinical Engineering, Bio-materials, & Rehabilitation Engineering.

The scope of the field is enormous; from cardiac monitors to clinical computing, artificial hearts to contact lenses, wheel chairs to artificial tendons, modelling dialysis therapy to modelling the cardiovascular systems. In most aspects of health care, disease prevention & treatment or rehabilitation, there are problems that require an engineering approach. These may include developing systems to maintain & enhance life, designing replacement parts for people, or creating systems to allow the handicapped to use computers for work & communication.

Major Groups / Areas

Biomedical Instrumentation, Biomedical Digital Signal Processing, Nuclear Medicine, Advanced Medical Imaging, Biomechanics and Biomaterials

Major Equipments

X-ray Machine (Demo type), ECG Stress Test Software with Tread Mill, Blood Cell Counter, Spectrophotometer (Demo Type), Gas Chromatography System (Demo Type), Pacemaker (External/Internal)(Demo type), Defibrillator (Demo Type), Solid State Electrosurgery (Demo Type).

Software

MATLAB, Labview, EEG Software, EMG Software, ECG Stress Test Software, PET Software, ECG Central Monitoring Software, ECG Monitoring Software.

Laboratories

Biomedical Lab - I, Biomedical Lab - II

RULES FOR CONDUCTING TESTS

Mode of the test

In each semester for each subject three tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.

Each test shall carry 20 marks.

University examination pattern has given weightage of 20 marks for the tests.

To calculate these marks following procedure is followed:

- i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
- ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
- iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
- iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
- v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; These marks will be final marks obtained by the student. No scaling up is permitted.
- vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.

Paper Pattern for Tests

- i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

- ii) There will not be any sub-questions.

For granting the term it is mandatory to appear for all the three tests conducted in each semester.

Roll numbers allotted to the students shall be the examination numbers for the tests.

SEMESTER - III

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(07 Hours)

Introduction To Signals:

Signals: Definition of signal, Classification of signals. Continuous and Discrete time, Analog & Digital, Periodic & Non-periodic, Deterministic and non-deterministic, Energy & Power. Basic Signals & Operations on signals, Sine, Cosine, Exponential, and Unit step, Unit impulse, even, odd. Time shifting, time scaling, Differentiation and integration of signals.

Unit-II

(09 Hours)

Classification of Discrete Time System:

Definition, Classification, Linear & Nonlinear, Time variant and time invariant, Causal & Non-Causal, Static & dynamic, Stability.

LTI System Analysis: Introduction to LTI systems. Block Diagram & System Terminology. Impulse response. Convolution & Methods of Convolution. Properties of convolution, System interconnections, stability & impulse response of systems to standard signals.

Unit-III

(08 Hours)

Continuous Time System Analysis:

Response of LTI systems to exponential signals, periodic signals. Fourier series, Fourier transforms, properties, application of Fourier series & Fourier transforms to the system analysis.

Laplace Transforms: Definition and its properties, methods of inversion (Review only), application to LTI system analysis.

Unit-IV

(09 Hours)

Sampling Theorem And Correlation:

Correlation The correlation function: Conceptual basis, Energy signals, power-signals, Autocorrelation: Relation to signal energy and signal

power, Properties of auto-correlation, Crosscorrelation: Properties of cross-correlation, Sampling Theorem and its proof, effects of under sampling, sampling of band pass signals.

Unit-V

(08 Hours)

Probability:

Sample space, Event, Probability, Conditional Probability and statistical independence. Random Variables, Discrete Random Variable, Cumulative Distributive Function, Continuous Random Variable, Probability Density Function, Properties of CDF and PDF.

Unit-VI

(07 Hours)

Random Variables And Random Processes:

Transformation of random variables, Statistical averages, Mean, Moments and expectations, Standard Deviation and Variance, Chebyshev inequality, Multivariate expectations. Probability models, Binomial, Poisson's, Gaussian, Rayleigh.

Random Process: Ensemble averages and correlation functions, Ergodic and stationary process. Gaussian process.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

**TEACHING SCHEME**

Lectures : 04 Hrs/week

Practical : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Study of Electronic Materials & Components and Semiconductor Diode Characteristics:

Classification of materials based on band gaps, types of resistors like fixed, variable, precision, Carbon film, metal film, wire wound, their standard values, specifications & applications, classifications of capacitors based on dielectrics, standard values, specifications & application of capacitors, types of capacitors like electrolytic, ceramic, paper, mica, tantalum, plastic film etc., study of different core materials depending on range of frequencies for inductors & transformers, semiconductor materials Si, Ge, AIII & BV group components with their properties. Diffusion phenomenon, voltage equivalent of temperature, total current (drift diffusion), current components in forward biased/reverse biased p-n junction diode, cut in voltage, reverse saturation current.

Unit-II

(08 Hours)

Application of Semiconductor Diodes:

Diode as rectifier, half wave, full wave & bridge rectifier with and without capacitor filter, different types of filters L-section & choke input, parameters like ripple factor efficiency, transformer utilization factor (TUF), peak inverse voltage (PIV), I_{max} , I_{surge} , Derivation of ripple factor for L, C & L section filter, bleeder resistor, diode as a wave-shaping element in clipping and clamping circuits, voltage multipliers.

Unit-III

(08 Hours)

Bipolar Junction Transistor (BJT):

BJT as a two port device, configuration of BJT [Common Emitter (CE) / Common Base (CB)/Common Collector (CC)], input-output and transfer characteristics in all three configurations with relevant V-I expressions and

definitions of DC current gains, concept of load line and quiescent point (Q point) with active, cut off, saturation region of operation of BJT, early effect and punch through effect, various biasing circuits for CE configuration, definition of stability factors for CE transistor and their derivations for above circuits, condition to avoid thermal runaway, absolute maximum ratings of BJT as referred to data sheets.

Unit-IV

(08 Hours)

BJT as Small Signal Amplifier:

Small signal low frequency (LF) - h parameter model in CE, CB, CC configuration concept of AC equivalent circuit of single stage amplifier, need of coupling and bypass capacitor; analysis CE, CB, CC amplifier for current gain (A_i), voltage gain (A_v), input impedance (R_i), output impedance (R_o) in terms of h-parameter, simplified h-parameter model, effect of biasing and source resistance on performance of single stage amplifier, concept of frequency response.

Unit-V

(08 Hours)

Field Effect Transistor (FET):

Construction of p-channel and n-channel junction field effect transistor (JFET), depletion metal oxide semiconductor FET (D-MOSFET), enhancement metal oxide semiconductor FET (E-MOSFET) output and transfer characteristics of each with definitions of parameters like transconductance (g_m), drain resistance (r_d), and biasing techniques for all types, small signal LF model of FET, analysis of [Common Source (CS), Common drain (CD), Common gate (CG)] amplifier for voltage gain and input- output impedance, comparison of BJT / JFET and metal oxide semiconductor FET (MOSFET), frequency response for FET amplifier, absolute maximum ratings / specifications of FET as referred to data sheet.

Unit-VI

(08 Hours)

Considerations of Printed circuit boards (PCB):

Design fabrication and assembly: mechanical dimensions of devices and components used in electronics circuit and their dependence on package of device, rules of preparing layout and drawing artwork, fabrication process of single sided PCB board, double sided printed through holes (DPTH), various copper clad laminates, composition of solder metal.

List of Practical

Study of electronic components
Study of CRO
Study of Clippers and Clampers
Biasing Circuits
Frequency response of single stage CE amplifier
Comparison of CE, CC, CB amplifier
FET as an amplifier
Half wave and Full wave rectifier
Opto-isolator
FET characteristics
H-parameter measurement
PCB design of small circuits

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

General Anatomy:

Cell, Tissues, Six parts of the Body, Types of Bones with Examples, Bones of Upper & Lower Extremities, Special groups of Muscles, Skin

Unit-II

(08 Hours)

Systemic Anatomy:

Organ & Structures of following Systems: Cardiovascular System, Respiratory System, Gastrointestinal System, Excretory System, Reproductive System.

Unit-III

(08 Hours)

Central Nervous System & Special Senses:

In Short Anatomy of Cerebrum, Cerebellum, Brain Stem & Spinal Cord, Eye, Ear, Nose & Tongue

Unit-IV

(08 Hours)

Physiology of Cardio-Respiratory System:

Blood: Plasma & Blood Components, Coagulation, Hemoglobin, Blood Groups, Blood Transfusion; Vessels: Pulse, Blood Pressure; Heart: Parts, Conducting System, Cardiac Cycle, ECG, Physiology of Respiration: External Respiration, Gaseous Exchange, Artificial Respiration, Spirometer, Peak flow meter

Unit-V

(08 Hours)

Physiology of Gastrointestinal, Reproductive & Endocrine System:

Secretions of all digestive organs & Their Functions, Physiology of Nephron, Urine Formation Excretion of Urine & Function of Kidney, Functions of Male & Female Reproductive Organs, All Endocrine Glands, their Secretions & Functions & Control of Secretions.

Unit-VI

(08 Hours)

Physiology of Nervous System & Sense Organs:

Functions of Cerebrum, Cerebellum, Brain Stem & Spinal Cord, Functions of Eye, Ear, Nose, Tongue & Skin.

List of Practical

Study of anatomy of Tissue, Cell

Study of anatomy of Endocrine system and Skeleton system

Study of physiology of Blood and Cardiovascular system

Study of physiology of Nervous System

Study of Spirometer and peak Flow Meter

Study of physiology of Female Reproductive System and Male Reproductive System

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(09 Hours)

Differential Equations:

Solution of Linear differential equation of nth order with constant coefficients, Method of variation of parameters, Cauchy's and Legendre's linear equations, Simultaneous linear differential equations, Total differential equations, Symmetrical simultaneous differential equations. Applications to Electrical circuits

Unit-II

(08 Hours)

Complex Variables:

Function of complex variables, Analytic function, Cauchy-Riemann equations, Conformal mapping, Bilinear transformation, Residue theorem, Cauchy's Integral theorem and Cauchy's Integral formula.

Unit-III

(09 Hours)

Transforms:

Fourier transforms: Fourier integral theorem, Fourier sine and cosine integrals, Fourier transform, Fourier sine and cosine transforms, Inverse Fourier transforms, Discrete Fourier transform and its applications. Z- Transform: Definition, Properties, Inverse Z-Transform, Applications to difference equation, Relationship between Z-Transform and Fourier Transform.

Unit-IV

(09 Hours)

Laplace Transform:

Definition, Properties and Theorems, Inverse Laplace transform, Methods of finding Inverse Laplace transforms, Laplace transform of Unit-step function, Dirac-delta functions, Periodic functions, Ramp functions, Error function, First order Bessel's function, $Si(t)$, $Ci(t)$, $Ei(t)$. Applications to solution of linear differential equations.

Unit-V

(09 Hours)

Vector Differentiation:

Vector Differentiation, Gradient, Divergence and Curl, Directional derivative, Vector identities, Irrotational and Solenoidal vector fields.

Unit-VI

(08 Hours)

Vector Integration:

Line integral, Surface integral and Volume integral, Work done, Gauss-Divergence theorem, Stoke's theorem and Green's lemma, Applications to Electromagnetic fields.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/week
Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks
Duration : 03 Hours
Unit Test : 20 Marks
T. W. & Pr. : 50 Marks
T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Network Techniques and Network Theorem:

Network definition, mesh and node analysis, principle of duality, source transformation, simplification of network, T & Π conversion, twin T & Wien bridge network, Superposition theorem, Thevenin's theorem, Norton's theorem, Reciprocity theorem, Maximum power transfer theorem.

Unit-II

(08 Hours)

Transient analysis and Resonance:

Undriven and driven RC, RL, RLC circuits, initial conditions. Figure of merit (Q- factor), conditions for resonance, various properties of series and parallel resonance.

Unit-III

(08 Hours)

Two Port network:

Various types of four terminal networks, definition of characteristic impedance, propagation constant, image impedance, iterative impedance, calculation of above parameters

Unit-IV

(08 Hours)

Passive Filters:

Filter fundamentals, low pass filter (LPF), high pass filter (HPF), band pass filter (BPF), band stop filter (BSF) , prototype(constant K) and m derived filters, composite filters

Unit-V

(08 Hours)

Network Functions:

Terminals and terminal pairs, network functions, poles and zeroes and

their significance, Z, Y, H, ABCD parameters, interrelationship between parameters, interconnection of two port networks, study of ideal transformer.

Unit-VI

(08 Hours)

Network Synthesis:

Positive real function, properties of LC, RL, RC, driving point functions, realization of Positive real function (PRF) in four canonical forms for one Port network.

List of Practicals

- To study the various characteristics of two port network
- To study the Twin-T network
- Study of Z and Y parameters
- To study the characteristics of series and parallel resonance
- To verify superposition theorem, Norton's Theorem
- To study frequency response of Band Pass Filter
- To study frequency response of High Pass Filter
- To study frequency response of Low Pass Filter

Text Books / References

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

SEMESTER - IV

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

BioMechanics:

General principles of Biomechanics, Analysis of biological subsystems from Biomechanical view and rise modeling instrumentation

Tissue Biomechanics:

Direct, shear, bending and torque actions and the Corresponding stresses, strains in biological tissues, Stress relaxation and creep Stability & instability, biomechanical characterization of bone and the soft Connective (Skin, tendon, ligaments) covering structure, function and physiological Factors.

Unit-II

(08 Hours)

Movement Biomechanics:

Gait analysis, body and limb mass & motion characteristic actions, forces transmitted by joints, Joint forces result in the normal and disabled human body, normal and fast gait on the level, Strain and ramp ascent & descent, Joint replacement.

Unit-III

(08 Hours)

Prosthetics and Orthotics:

Principles in designing Orthosis and Prostheses: Principles of three point pressure, total contact, partial weight relieving. Positions of anatomical axis and corresponding movements of the body parts, International conventions with respect to above. Purpose for providing prostheses and Orthosis: Various aspects regarding diagnosis, Prognosis, stature and socio-economic conditions.

Unit-IV

(08 Hours)

Classification in Prosthetics and Orthotics :

Lower Extremity Orthosis and prostheses, Upper Extremity Orthosis and

Prostheses, Spinal Orthosis. Recent developments in Prostheses & Orthosis.

Unit-V

(08 Hours)

Material Technology in Prostheses and Orthosis:

Indigenous metals and their alloys. Different types of leather and leather tanning. Types of Rubber. Thermoplastic and Thermosetting resins. Wood and binding materials

Unit-VI

(08 Hours)

Artificial Machines and Implants:

Introduction, basic transport Paper, Artificial lungs / Respirator, Artificial Kidney, Intra- Aortic Balloon pumps.

List of Practicals

- Study of Hip Knee Ankle Foot Orthosis
- Study of Hip Knee Ankle Foot Prosthesis
- Study of Below Elbow Orthosis
- Lamination of Prosthesis
- Study of Milwaukee Brase
- Study of Hand Prosthesis and Orthosis

Text Books / References

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(08 Hours)

Error Analysis and Standards:

Types of errors, Statistical analysis of errors, probability of errors, Limiting errors, standards of measurements - classification - Primary, Secondary and working standards, standards for - mass, length, time, frequency, voltage, current, resistance, inductance, capacitance.

Unit-II

(08 Hours)

Input/Output Devices:

Digital I/O devices - punched card, paper tape, bar codes, line printer, ink jet printer, digital tape recording, Method of Digital recording, floppy disk, Displays - LED, LCD, LED seven segment display driver, Alpha numeric display, Bar graph display. Brief comparison with analog displays & recorders.

Unit-III

(08 Hours)

Digital Instruments:

Automation in voltmeter (ranging, zeroing, polarity indication), DMM (digital multimeter) circuit (block diagram), Accuracy & guarding of DVM, significance of $\frac{1}{2}$ & $\frac{3}{4}$ digits, Sine wave Generator, Square wave generator, Pulse generator, Function generator, Wave analyzer, Harmonic distortion analyzer, Heterodyne wave analyzer, spectrum analyzer, Frequency response analyzer, Lock-in amplifier.

Unit-IV

(08 Hours)

Digital Counters and Timers:

Circuitry of logic elements (DTL, TTL FAMILIES), Interfaces and LOGIC converters, Basic internal counter circuitry, modes of operation ac, rms, digital time and frequency. Ratiometric sampling plug in units and special functions, Accuracy.

Unit-V

(08 Hours)

Cathode Ray Oscilloscope:

Block Diagram, Delay line, Horizontal Deflection system, Vertical Deflection system, Types of CRO'S –single beam, double beam, digital storage and sampling, brief comparison between CROs, block diagram, its features like roll, refresh, sampling rate and specification. Application in Instrumentation and measurement, virtual oscilloscope.

Unit-VI

(08 Hours)

Sources of Noise and Preventive Maintenance:

Brief Descriptions towards Sources of noise and their reduction techniques, preventive maintenance and troubleshooting of electronic equipments.

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

**TEACHING SCHEME**

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

PH & Buffers:

Water: Properties of water, its biological significance, Dissociation of water & ionic products. PH: Definition, Dissociation of strong electrolytes, Ionization of weak acids & bases, Henderson - Hasselbalch equation. Buffers: Definition & concept, Buffers in biological system, Paper of acid-base balance.

Molecular interactions:

Vander waal's forces, Non-covalent & covalent bonds, Hydrogen bond, Hydrophobic bond, Electrostatic bond, Peptide bond, Disulphide bond and Glycosidic bond.

Unit-II

(08 Hours)

Carbohydrates:

Classification, Stereo chemical properties of carbohydrates, Biological & chemical Significance, Physical & chemical properties of Carbohydrates

Unit-III

(08 Hours)

Lipids:

Introduction & classification, Fatty acids, prostaglandins, Acyl glycerol waves Phospholipids, Sphingolipids, Glycolipids & their biological significance, Lipoproteins, Biological significance of Lipids, Distribution of lipids in pro & eukaryotic cells.

Unit-IV

(08 Hours)

Proteins:

Amino acids: Structure, Essential & Non - essential amino acids, Non - protein amino acids. Properties of amino acids physical properties, Reactions of amino acid, carboxyl group amino acids, R group simple peptides, Classification of proteins: Primary, secondary, tertiary,

quaternary, Fibrous proteins: Keratin silk collagen, Globular proteins: Cytochrome, Antibodies, Blood proteins, Hormones (oxytocin, vasopressin, and glucagons, ACTH, Insulin) Enzymes.

Unit-V

(08 Hours)

Enzymes:

Classification (outline), Properties: Enzyme - substrate complex, specificity, effect of concentration & dilution of enzyme, effect of pH & temperature, Inhibition & activation.

Nucleic acids:

Purines & Pyrimidines, Nucleosides & Nucleotides, RNA - structure, types & functions. DNA- Structure, properties, Watson - Crick model, physiochemical properties of DNA & Biological significance.

Unit-VI

(08 Hours)

Vitamins:

Water-soluble vitamins, Fat-soluble vitamins

Minerals:

Elementary knowledge of the Role of following minerals: Na, K, Ca, Mg, Zn, Mn, Fe, Cu.

Biochemical energetics:

Energy rich compounds ADP, ATP, GTP & Co. Exergonic and Endergonic Reactions, Coupled Reactions, Laws of thermodynamics, Role of high-energy phosphate molecule.

List of Practicals

- Identification of carbohydrate
- Protein estimation by uret method
- Sorensens formal titration
- Determination of acid value of given oil sample
- Estimation of vitamin-C by using 26 Dichlorophynol indophynol
- Estimation of Dextrose Dihypoidate method

123

K50249: PRINCIPLES OF INSTRUMENTATION & MEASUREMENTS

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Basic concepts of measurement:

Characteristics of measuring devices-accuracy, precision, linearity, repeatability, hysteresis, threshold, calibration, errors.

Unit-II

(08 Hours)

Transducers & Sensors:

Introduction, requirements, definition, classification, specifications, types of sensors and transducers for measurement of temperature, pressure, flow, strain, displacement, vibration.

Unit-III

(08 Hours)

Optical transducers:

Fundamentals of electromagnetic (EM) radiation, light sources (Lasers & LEDs) Characteristics of light, photometry photodetectors, optical fiber sensors and the Applications.

Unit-IV

(08 Hours)

Bipotential Electrodes:

Electrode electrolyte interface, half-cell potential polarization, polarizable and non-polarizable electrodes, calomel electrode, electrode circuit model, electrode skin interface and motion artifact, body surface electrodes, internal electrodes, needle and wire electrodes (different types), Micro electrodes metal, supported metal, micropipette, microelectronic, Properties of micro electrodes, method of use of electrodes for measurement of ECG, EEG, EMG

Unit-V

(08 Hours)

Flow measurement:

Plethysmography, electromagnetic indicator, indicator dilution, thermal

convection and Ultrasonic.

Chemical Transducers:

Blood gas and acid base physiology, reference electrode, pH, pO₂, pCO₂, electrodes, transcutaneous arterial oxygen tension, CO₂ tension monitoring, enzyme electrode.

Unit-VI

(08 Hours)

Passive circuits:

Divider circuits, bridge circuits, RC filters. Grounding and shielding techniques, low and high resistance measurement techniques.

List of Practicals

- To study the characteristics of Resistance Temperature Detector
- To study the characteristics of Proportional Integral Difference Controller
- To study the characteristics of Thermocouple
- To study the characteristics of ON-OFF controller
- To study the characteristics of Linear Variable Differential Transformer
- Study of Strain Gauge

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K50250: ELECTRONIC DEVICES AND CIRCUITS - II

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Multistage Low Frequency Amplifiers (BJT/FET):

Necessity of cascading low frequency (LF) small signal amplifier in various configurations techniques for improving input impedance for CC stage (darlington connection, boot strapping), CE - CE cascade, CE - CB cascade arrangement, effect of cascading on frequency response of single stage and cascaded amplifier, square wave testing or step response audio frequency (AF) amplifier.

Unit-II

(08 Hours)

LF amplifiers with Negative Feedback:

Block schematic of amplifier with negative feedback, gain with feedback, consequences of Introducing negative feedback in small signal and multistage amplifier, classification of amplifier in view of feedback concept, types of sampling and mixing, ways of introducing negative feedback in amplifiers i.e. [voltage amplifier, current amplifier, resistance amplifier, transconductance amplifier], voltage series, voltage shunt, current series, current shunt and effects of negative feedback on input and output impedance in all four types, methodology of feedback amplifier analysis.

Unit-III

(08 Hours)

Operational Amplifiers (Op-Amp's):

Internal block schematic of monolithic op-amp IC, analysis of transistorized difference amplifier stage, method of improving common mode rejection ratio (CMRR), definition and measurements of Op-amp parameters like input offset voltage and current, bias current CMRR, power supply rejection ratio (PSRR), open loop gain etc, concept of dc amplification inability of op-amp to work as linear small signal

amplifier in open loop, Op-amp with closed loop negative feedback, close loop gain, frequency response of op-amp, linear applications like inverting and non-inverting amplifier, summing and difference amplifier.

Unit-IV

(08 Hours)

Large signal (power) AF amplifiers and Oscillators:

Classification of amplifiers in class A, B, C etc., concept of large signal amplification, total harmonic distortion, push-pull configuration, efficiency of power conversion, CE transformer coupled amplifier, complementary symmetry CC power amplifier in single dual supply version efficiency and distortion, graphical techniques to calculate harmonic distortion, cross over distortion, safe operating area (SOA) and its limits, secondary breakdown, heat sink, its standard shapes and sizes, thermal calculations and resistances, Employing positive feedback in amplifier, problems of instability, Barkhausen criteria for Sinusoidal oscillators, derivations and analysis of transistorized RC phase-shift / Wein-bridge Oscillators, frequency expressions and gain requirements, LC oscillators: Hartley, Colpitts, Crystal (Miller and Pierce), unijunction transistor (UJT) relaxation oscillators.

Unit-V

(08 Hours)

Voltage Regulators:

Zener diode as shunt regulator, emitter follower regulator, transistorized series feedback type regulator, comparison of above discrete regulators on the basis of voltage stability factor (S_v), Temperature stability factor (S_t), output resistance (R_o), constant voltage (CV) / constant current (CC) modes, over voltage / over current protection circuit, internal block diagram, pin diagram and specifications of IC regulator 723, applications of IC 723, SOA of IC regulators.

Unit-VI

(08 Hours)

Hybrid π (II) small signal model of BJT and Introduction power Devices such as Thyristors and MOSFETS:

Relations with h-parameters, definitions of f_{α} , f_{β} , f_t , calculations of A_I , A_V with finite load and source resistances for CE stage, gain bandwidth product, tuned load, loaded and Unloaded Q, insertion loss, single tuned

amplifiers, staggered tuning, cascade configuration for high Frequency (HF) amplification.

Note: No rigorous mathematical treatment is expected.

List of Practicals

Analysis of Multistage LF Amplifier using BJT, verify with theoretical values of A_{is} , A_{vs} , R_i , R_o (overall) with Square wave testing and comment on the results

Input impedance improvement techniques for emitter follower

Analysis of LF with negative Feedback for voltage and current series topology

Analysis of LF with negative Feedback for voltage and current shunt topology

Power Amplifier:

a) Class A, B, C

b) Class AB Push Pull Complementary Symmetry

Transistorized differential amplifier: Measurement of CMRR

Measurement of frequency of oscillation for Crystal oscillator, RC Phase Shift oscillator, LC oscillator

Op-Amp-I: Measurement of DC parameters such as input offset voltage and current, input bias current

Op-Amp-II: Measurement of AC parameters such as CMRR, Slew rate, Z_i , Z_o , frequency response for FH and FT

Linear applications of Op-Amp such as summing, difference, voltage Follower, signal phase shifter

Study of Instrumentation amplifiers using Op-Amp

Regulation characteristics of Voltage Series and Shunt Regulator and calculation of S_v and R_o

IC -723 Regulator as negative regulator

IC - 723 as basic high/ low voltage regulator with simple/ fold back current limiting.

Design build and test for given specification

Unit Test 3	Unit V & VI

RULES REGARDING ATKT, CONTINUOUS ASSESSMENT AND AWARD OF CLASS

A. T. K. T.

A candidate who is granted term for B.Tech. Semester-I will be allowed to keep term for his/her B.Tech. Semester-II examination even if he/she appears and fails or does not appear at B.Tech. Semester-I examination.

A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B.Tech. Semester-IV examination even if he/she appears and fails or does not appear at B.Tech. Semester-III examination.

A candidate who is granted term for B.Tech. Semester-V will be allowed to keep term for his/her B.Tech. Semester-VI examination if he/she appear and fails or does not appear at B.Tech. Semester-V examination.

A candidate who is granted term for B.Tech. Semester-VII will be allowed to keep term for his/her B.Tech. Semester-VIII examination if he/she appears and fails or does not appear at B.Tech. Semester-VII examination.

A student shall be allowed to keep term for the B.Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B.Tch. Semester-I & II taken together.

A student shall be allowed to keep term for the B.Tech. Semester-V of respective course if he/she has no backlog of B.Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.

A student shall be allowed to keep term for the B.Tech. Semester-VII course if he/she has no backlog of B.Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

In respect of Term work at B.Tech. Semester-I & II, B.Tech. Semester-III & IV and B.Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.

For B.Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or marks but less than 66%	First Class
C	Aggregate 55% or more marks but less than 60%	Higher Second Class
D	Aggregate 50% or more marks but less than 55%	Second Class
E	Aggregate 40% or more marks but less than 50%	Pass Class

COURSE STRUCTURE & SYLLABUS

BHARATI VIDYAPEETH UNIVERSITY, PUNE

B. Tech. (CHEMICAL) (Sem. III & IV)

HIGHLIGHTS

Bharati Vidyapeeth University College of Engineering (BVUCOE) is the largest Engineering College in Maharashtra with an intake of 700 students in each academic year. Imparting quality technical education from Under Graduate to Doctorate Level, BVUCOE is probably the only Engineering College in India with an accreditation from both NAAC as well as NBA. The faculty at BVUCOE boasts of highly qualified academicians, a quality that is further emphasized by the fact that 15 of them are presently pursuing their Ph.D. degree.

BVUCOE has been ranked 29th amongst the Top 50 Technical Schools of India in survey conducted by DATAQUEST-IDC. We have enjoyed a ranking in this list for the last 4 years. Research is of utmost importance in all our programs. A total of 113 research papers were published in the academic year 2007-2008.

Currently we have 12 ongoing research projects. The infrastructure of BVUCOE is state-of-the-art with 62 classrooms, 59 laboratories and a well-stocked library that currently holds 27,130 titles. The college has an international presence with MoUs signed with the North Carolina A&T State University (Greensboro, USA), University of Venice (Italy), Actel Corporation (USA). Corporate interaction is also inculcated in our programs through our association with Oracle India Ltd., Infosys Ltd. and Tata Consultancy Services.

DEPARTMENT OF CHEMICAL ENGINEERING

Department of Chemical Engineering is one of the oldest department in Pune region and known for its very valuable contribution in providing high caliber, outstanding professionals to the industry and R & D establishments.

Being our own university, the department has got freedom to design and adopt the change in the structure and content of the syllabus in consultation with the industrial experts and researchers to suit their requirement. The department of chemical engineering desires its students to excel in the changing trends in the global economy. The salient features of the present course designed are:

- Computer Education with advanced simulation softwares
- Industrial training after VIIth semester for the period of six weeks
- Wide range of advanced elective subjects
- Expert interaction on each subject by the experts from the various fields

The department also conducts a post graduate course in Chemical Engineering. The P. G. students perform their dissertation work in collaboration with National Chemical Laboratories (NCL), Pune.

The Department of Chemical Engineering has following well equipped laboratories:

- Mechanical Operations
- Heat Transfer
- Mass Transfer
- Chemical Reaction Engineering
- Process Dynamics Instrumentation and Control
- Instrumental Analysis
- Software Laboratory - CHEMCAD, MATLAB, FEMLAB, gPROMS, T. K. Solver

The faculty has constantly endeavored to improve the academic standards and pursue the R & D work, publishing the academic research papers in the National and International journals. Some of the faculty members have presented their research papers at various conferences/seminars and workshops. As a result of continuous efforts by the faculty, the department has received the following funds/grants from the AICTE, New Delhi.

Young Career Award Research Project (10 Lakh)

Research Promotion Scheme (RPS) Grant (5.75 Lakh)

MODROB's for various chemical engineering laboratories (12 Lakh)

The department has the state of Art facilities of:

Gas Chromatography (G. C.)

High Pressure Liquid Chromatography (HPLC)

U.V.- Visible Spectrophotometer

Fluoride ion selective electrode meter

Department plans to provide low priced testing facility for Industry and research laboratories. Students' community actively involved in R & D experimentation can avail the same for affordable rates.

STRUCTURE & EXAMINATION PATTERN

B. Tech. - Chemical Engineering

Semester III									Total Duration : 32 Hrs/Week
									Total Marks : 750

RULES FOR CONDUCTING TESTS

Mode of the test

In each semester for each subject three tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.

Each test shall carry 20 marks.

University examination pattern has given weightage of 20 marks for the tests.

To calculate these marks following procedure is followed:

- i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
- ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
- iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
- iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
- v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; These marks will be final marks obtained by the student. No scaling up is permitted.
- vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.

Paper Pattern for Tests

- i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

- ii) There will not be any sub-questions.

For granting the term it is mandatory to appear for all the three tests conducted in each semester.

Roll numbers allotted to the students shall be the examination numbers for the tests.

SEMESTER - III

**TEACHING SCHEME**

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Structural Effect and Reactivity :

Benzene and aromaticity, concept of aromaticity ($4n+2$), condition's necessary for demoralization, breaking and formation of bonds (Reaction intermediate). Factors affecting electron availability - Inductive effect, Resonance effect (resonance structures of naphthalene, anthracene, aniline, phenoxide ion, benzaldehyde, nitrobenzene, etc.), hyperconjugation, steric effect, tautomerism. Effects of resonance, inductive effect, steric effect on pKa and pKb, value of simple acids and bases. Types of reactions, types of reagents.

Unit-II

(10 Hours)

Reaction Mechanism :**Mechanism of reaction involving carbonium ion intermediates:**

Nucleophilic substitution - Hydrolysis of alkyl halide (SN^1 Mechanism). Also discuss SN^2 mechanism and factors affecting SN reactions.

Electrophilic substitution in benzene and mono-substituted benzene, nitration, sulphonation, halogenation, Friedal Craft alkylation and acylation.

Electrophilic addition to C=C, polar addition of hydrogen halides and water, alkylation, dimerisation.

Elimination's - E^1 reaction in acid catalyzed dehydration of alcohols, base catalyzed dehydro-halogenation of alkyl halides, comparison of elimination with substitution. Also cover E^2 mechanism.

Rearrangement- Beckman rearrangement.

Mechanism of reactions involving carbanion intermediates:

Addition of carbon nucleophile to C=O, Grignard reaction for preparation of primary, secondary, and tertiary alcohol's and carboxylic acids.

Nucleophilic substitution by carbon nucleophile-Wurtz reaction.

Carbanion involved in condensation-Aldol condensation and Claisen ester condensation.

Rearrangement involving carbanion-Favorskii rearrangement

Unit-III

(06 Hours)

Spectroscopy:

Revision of UV. & I.R. spectroscopy. Application of UV & I.R. spectroscopy for identification of simple organic compounds (simple problems).

Unit-IV

(08 Hours)

Gaseous State:

Gaseous state I - Behavior of ideal gases, kinetic molecular theory of gases. The kinetic gas equation. Derivation of gas laws from gas equation, kinetic energy and temperature. Types of molecular velocities and their calculations, mean free path and collision frequency, collision diameter and degrees of freedom. Law of equipartition of energies, specific heat and molar heats of gases.

Gaseous state II - Behavior of real gases-ideal and real gases, deviation from ideal behavior, Vander Wall's equation of state and its limitations intermolecular forces. The critical phenomenon, experimental determination of critical constants of a gas, critical phenomenon and Andrews experiments, Vander Wall's equation and critical state, calculation of critical constants. Numericals based on above article.

Unit-V

(08 Hours)

Solution:

Solution-Definition, why substances dissolve, temperature and solubility, solution of gas in gas, gases in liquid, Henry's law, the ideal solution, Raoult's law of ideal solution, solutions of liquids in liquids, theory of dilute solution. Colligative properties, osmosis, osmotic pressure, measurement of osmotic pressure. Colligative properties of dilute solution - lowering of vapor pressure, elevation of boiling point and thermodynamic derivation, depression in freezing point and thermodynamic derivation. Abnormal behavior of solutions of electrolytes. Numericals on all above. Numericals based on this article.

Unit-VI

(08 Hours)

Instrumental Methods of Chemical Analysis:

Principles and working of flame photometer UV-Visible spectrophotometer, Gas Chromatograph, Conductivity meter, pH meter, Atomic Absorption Spectrophotometer, Polarimeter, Potentiometer, Karl Fischer Titrator.

List of Practicals - I Volumetric Analysis (Any Two)

Volumetric estimation of amide from the given solution of amide.

Volumetric estimation of acetone from the given solution.

Estimation of aniline / phenol from the given solution.

List of Practicals - II Preparations (Any Two)

Preparation of benzoic acid from benzamide.

Preparation of osazone derivative of glucose.

Preparation of aspirin from salicylic acid.

List of Practicals - III (Any Eight)

To determine the molecular weight of a given solute by freezing point of naphthalene.

To determine heat of solution of KNO_3 / NH_4Cl by studying their solubility in water.

To determine the equivalent weight of the given metal (Zn or Mg) Eudiometrically.

To determine distribution coefficient of iodine between water and CCl_4 .

To standardize $\text{Na}_2\text{S}_2\text{O}_3$ solution by preparing $\text{K}_2\text{Cr}_2\text{O}_7$ & to estimate % of copper from given solution.

Heat of neutralization.

Thermodynamic parameters.

Purification of organic compound by recrystallization and sublimation and to find their physical constant (any four compounds)

Experiments on UV-Vis spectrophotometer.

Estimation of percentage of sugar by polarimeter.

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

K10202: PRINCIPLES OF DESIGN AND MATERIAL TECHNOLOGY

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(07 Hours)

Introduction to Process Equipment Design:

General design procedure, Equipment classification, Design codes, Study of design parameters such as maximum working pressure, design pressure, design temperature, design stress & factor of safety, design of wall thickness & minimum actual thickness, Corrosion allowance, Design loading, Poissons ratio. Design of various heads & closures such as flat head, torrispherical head, elliptical head, hemispherical head, conical head.

Unit-II

(08 Hours)

Design of Machine Elements:

Design of machine elements such as agitators, shafts, keys and couplings
Valves: General construction working selection of globe valve, stop valve, three-way valve, steam trap, non rising stem, diaphragm.
Pumps: General construction working application of different pumps, fan blowers.

Unit-III

(09 Hours)

Introduction to Vessels and Vessel Elements:

Introduction to various vessels such as Pressure vessel, Storage vessel etc. Vessel Supports- Design of various such as skirt support, leg support, bracket support, saddle support, leg support, design of tall vertical column. Flanges & Nozzles- Detail design of Flanges, Gasket, Bolts & Nozzles.

Unit-IV

(08 Hours)

Ferrous and non-ferrous materials and its alloys (Al ,Cu , Ni , Ti , and its alloys, babbites). Engineering properties, Metal- metal and metal -nonmetal composites, Heat treatment of steels. Surface treatments: Electroplating, anodizing, lining.

Unit-V

(08 Hours)

Corrosion and its classification, Environmental study and method of elimination and prevention, Polymers: engineering plastics and rubbers, their typical properties and applications, Testing of polymers, Types of organic protective coatings, Factors determining choice of materials of constructions in chemical industry.

Unit-VI

(08 Hours)

Various types of composite materials used in chemical industry and their applications, Crystalline and non-crystalline ceramic systems, Glass and porcelain enamels, Refractories.

List of Drawing Practical

Drawing Sheets (4 Nos. A-1) based on the following equipment :

Detail drawing of Various Heads.

Machine drawing conventions. Production drawing showing tolerances, various bolts, types of thread.

Types of valve - assembly and detailed drawing of globe, gate, needle, check, relief and safety valves, gear and vane pumps, reciprocating and centrifugal pumps.

Mechanical drive components : Shaft, Keys and Couplings.

Various types of vessels and accessories.

AUTOCAD assignment on A-4 sheets.

AUTOCAD Exercises (2 Nos.)

Sectional drawing of assemblies of components with the use of important commands of AUTOCAD. Components : knuckle joint, flanges coupling, stuffing box, cottor joint, valve, etc.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

123

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Concept of Stress and Strain:

Concept of stress, strain; Normal, lateral, shear and volumetric stresses and strains; Stress-strain curve; Elastic constants and their relationship; Generalized Hooke's law.

Axial and Thermal Stresses

Axial force diagram; Stresses, strains and deformation of determinate and indeterminate, prismatic and tapered cross section, homogenous and composite bars; due to concentrated loading, self weight and temperature effect; Axial rigidity.

Unit-II

(08 Hours)

Axially Loaded Long Columns:

Concept of critical load and buckling; Differential equation of elastic curve; Euler's formula for hinged ends; Equivalent length for different end conditions; Limitation of Euler's formula; Rankine's formula; Johnson's formula.

Direct and Bending Stress:

Concept; Resultant stress due to the axial load and uniaxial or biaxial bending; Core of section; Effect of lateral force and self weight; Application to columns, retaining walls, dams, chimneys etc.

Unit-III

(08 Hours)

Principal Stresses and Principal Planes:

Normal and shear stresses on any oblique plane; Concept of principal stresses and principal planes; Maximum shear stress; Analytical and graphical method. (Mohr's circle method); Combined effect of axial force, bending moment, shear force and torsion; Theories of failure.

Strain Energy:

Concept of strain energy; Modulus of Resilience and Toughness; Strain

energy for axially loaded members due to gradual, sudden and impact load; Strain energy due to self weight

Unit-IV

(08 Hours)

Shear Force and Bending Moment in Beams:

Concept of Shear Force and Bending Moment; Relation between Shear Force, Bending Moment and intensity of loading; Shear Force Diagram and Bending Moment Diagram due to point load, uniformly distributed load, uniformly varying load and moments for the simple and compound beams; Elastic curve.

Flexure Stresses:

Theory and assumptions of pure bending; Moment of resistance; Flexure formula; Flexural rigidity; Modulus of rupture; Flexural stress distribution diagram for various sections; Force resisted by partial cross section.

Unit-V

(08 Hours)

Shear Stresses:

Concept of direct and transverse shear; Shear stress formula; Concept of complementary shear stress; Shear stress distribution diagram for symmetrical and unsymmetrical section.

Torsion of Circular Shafts:

Theory, assumptions and derivation of torsional formula; Shear stress distribution across cross section; Twisting moment diagram; Shear stresses and strains in determinate and indeterminate shafts of hollow, solid, homogeneous and composite cross sections subjected to twisting moment; Torsional rigidity.

Unit-VI

(08 Hours)

Slope and Deflection of Beams:

Concept of relation between deflection, slope, bending moment, shear force and intensity of loading; Double Integration method; Macaulay's method; Moment area Method; Conjugate beam method.

Pressure Vessels:

Stresses, strains and deformation in thin walled cylindrical and spherical vessels due to internal fluid pressure; Thick cylinders; Lamé's equation of stresses.

Term-work:

The term-work shall consist of minimum TEN experiments from the following list:

Tension test – Mild Steel, Tor Steel, Aluminum

Compressive Strength test-Concrete

Compressive Strength test-Cement

Bending test – Timber

Bend Re-bend test- Mild Steel, Tor Steel

Direct Shear test- Mild Steel, Aluminum

Torsion test- Mild Steel, Aluminum

Izod & Charpy Impact test- Mild Steel, Aluminum, Brass, Copper

Rockwell Hardness test- Mild Steel, Aluminum, Brass, Copper

Fatigue test- Mild Steel, Aluminum

Block board test

Drawing up of SFD and BMD using computer software

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

TEACHING SCHEME

Lectures : 04 Hrs/week
Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks
Duration : 03 Hours
Unit Test : 20 Marks
T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Properties and Handling of Particulate Solids:

Properties of solids: Particle size and shape. Screen analysis: Cumulative and differential. Specific surface of mixture. Standard screen series. Properties of particulate masses: Pressure in mass of particles. Angle of internal friction and angle of repose. Storage of solids.

Conveyors:

Basic types of conveyors. Basic principles of design and criteria for selection of conveyors.

Unit-II

(08 Hours)

Size Reduction:

Principles of comminution: Criteria for comminution, Energy and power requirement in comminution, Laws of comminution. Size reduction equipment: Crushers , grinders and ultrafine grinders, cutting machines, Open and closed circuit grinding.

Unit-III

(08 Hours)

Screening:

Types of screening equipment, Material balance and effectiveness of a screen, Comparison of ideal and actual screen.

Centrifugal settling process:

Working and theory of cyclone separator, Hydrocyclone and centrifugal sedimentation.

Gas filters. Fiber and fabric filters. Froth filtration. Magnetic separation. Electrostatic separations. Tabling and jigging.

Unit-IV

(08 Hours)

Filtration :

Introduction. Equipment for filtration. Theory of filtration : filter media and filter aids, pressure drop through filter cake, compressible and incompressible filter cakes, cake and filter medium resistance, washing of cakes. Principles of cake filtration for constant rate and constant pressure filtration. Principles of continuous filtration. Principles of centrifugal filtration.

Unit-V

(08 Hours)

Separation based on motion of particles through the liquids:

Gravity Settling Process: Gravity classifiers, Sorting classifiers, Terminal settling velocity, Free and hindered settling, Stokes law and Newton's law, Sink and float method, Differential method.

Sedimentation and Thickening: Batch sedimentation test. Types of thickeners. Design calculations: Kynch theory of sedimentation, Calculation of area of thickener.

Unit-VI

(08 Hours)

Mixing of Solids and Pastes:

Mixers for pastes and plastic masses. Mixers for dry powders. Criteria for mixer effectiveness. Mixing index in blending granular solids. Rate of mixing.

Mixing and agitation of liquids:

Types of equipment, Mixing characteristics, Power consumption, Mixing index calculations.

Term work

Term will consist of the experiments. listed below of which at least eight should be performed in laboratory by the students .In addition, two more topics given in the list may be given as assignments.

List of Practicals

- Determining the effectiveness of a screen
- Determining the properties of particle beds
- Determining the area of a thickener by conducting batch sedimentation test

Study of free settling of particles through fluids of different density and viscosity
Determining efficiency of a cyclone separator
Determining the resistance of a filter cloth and cake by using vacuum leaf filter or plate and frame press
Determining the energy consumption and crushing law constants for jaw crusher and ball mill or drop weight crusher
To study the behavior of a bed during the fluidization and determine the minimum fluidization velocity
Ore separation by froth floatation cell
Study of belt conveyor, bucket elevator and pneumatic conveyor

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K10205: STOICHIOMETRY

TEACHING SCHEME

Lectures : 04Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(06 Hours)

Overview of the needs of Process Engineer:

Importance of material and energy balance calculations in raw material and energy requirement .Calculations and performance analysis of a process plant. Material and energy balance equations as foundations of process design and process modeling and simulation.

Units and Dimensions:

Basic and derived units. Different unit systems. Relation between mole and mass, average molecular weight of a mixture. Different units of concentration: molarity, normality, molality, density, PPM, mol % and weight %.

Unit-II

(09 Hours)

Material balances without Chemical Reactions:

Concept of material balance in respect of mass and moles. Material balance problems without chemical reactions. Material balance involved in unit operations: viz. absorption, stripping, distillation, extraction, crystallization, evaporation and drying. Chemical equation and stoichiometry.

Unit-III

(09 Hours)

Material balances involving Chemical Reactions:

Concept, material balance calculations, Recycle, bypass and purge operations.

Unit-IV

(06 Hours)

Gases, Vapours, Liquids and Solids:

Ideal gas law calculations. Compressibility factor . Vapor pressure of liquids. Steam table and vapor pressure of water .Saturation , partial saturation and humidity of gas-vapor mixture .Material balances

involving condensation and vaporization. Equilibrium composition determination for vapor-liquid, liquid-liquid and solid-liquid systems. (Binary Systems only) Solubility diagrams.

Unit-V

(10 Hours)

Energy Balance:

General energy balance equation and its appropriate reduction for the purpose of process calculations. Calculation of enthalpy changes with and without Phase change and using heat capacity equations of the type $C_p = a + bT + cT^2 + \dots$. Standard heat of formation : Sources and prediction tools. Standard heat of combustion . Standard heat of reaction. Standard heat of Solution. Heat of reaction from heats of formation and heats of combustion. Use of Hess's law in enthalpy change calculations. Energy balance problems involving exothermic and endothermic reactions. Adiabatic reaction temperature. Problems based on heats of dissolution. Use of steam table for enthalpy of water and steam. Utility calculations involving steam and cooling water.

Unit-VI

(08 Hours)

Fuels and Combustion:

Proximate and ultimate analysis. Gross and Net calorific values. Stoichiometric and excess air calculations. Adiabatic or theoretical flame temperature calculations.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K10206: COMPUTER PROGRAMMING FOR CHEMICAL ENGINEERING - I

TEACHING SCHEME

Lectures : 02 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

T. W. & Or : 50 Marks

Unit-I

(04 Hours)

Introduction to C-Programming, Character sets, constant, variables and Data Types: int, float, double, char, string. Operators: arithmetic, relational, logical, increment and decrement, assignment, conditional. Standard input-output functions: printf (), scanf (), getch () or getchar ().

Unit-II

(05 Hours)

Control statements: programs using if statement, if-else statement, goto statement and switch-case statement.

Loop statements: programs using while loop, do-while loop and for loop.

Unit-III

(04 Hours)

Arrays: single dimension, double dimension. String: programs using string. String functions: strlen ()/strcpy()/ strev()/ strcat ()/strlwr ()/strupr ()/ strcmp ()).

Unit-IV

(04 Hours)

Pointers: programs using pointers. Use of * and & operators. pointer arithmetic's. Use of pointers. Pointer and function: parameter passing to function by reference and by value. File handling, Linked list

Unit-V

(04 Hours)

Application of C-programming for Chemical Engineering: various calculations and solutions in Chemical Engineering.

Unit-VI

(03 Hours)

Number systems and conversion, Computers and communication: single user, multi-user, work station, client server systems. Programming languages: classification, machine code, assembly language, fourth generation languages.

List of Practicals

Minimum number of practicals: 7

Unsolved problems/assignments from the reference books should be given in the practical hours to do the programming. The problem(s) should be such that it will keep the students engaged for 2 hours

A report on the above should be submitted as term work

SEMESTER - IV

123

**TEACHING SCHEME**

Lectures : 04Hrs/week

Practical : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Biomolecules:

Carbohydrates: Definition, classification, Reactions of carbohydrate oxidation, reduction, osazone formation, ester formation, isomerization, D and L configuration, cyclic structure of glucose, fructose, Fischer-Haworth projection chair form. Brief account and cyclic structure of disaccharides-maltose, sucrose, cellobiose polysaccharide starch.

Aminoacids, proteins and enzymes: α -amino acids, Fischer projection and relative configuration. Classification of α -amino acids, properties and reactions. Proteins-Formation of peptide linkage, features of peptide linkage, α helical configuration, β -pleated structure, primary, secondary, tertiary and quaternary structure of proteins.

Unit-II

(08 Hours)

Transition Elements and their Complexes:

Transition elements, study of d^1 transition series with respect to oxidation states, magnetic behaviour, colour, ability to form complexes and catalytic behaviour.

Co-ordination compounds-different terms-C.N., ligands, EAN, etc. Nature of metal ligand bonding-VBT and CFT-Formation and above properties in tetrahedral, square planar and octahedral complexes of d^1 transition series on the basis of VBT and CFT.

Unit-III

(08 Hours)

Volumetric Analysis:

Standard solutions and various methods of expressing various methods of solutions, equivalent weights in different types of reactions. Primary and secondary standard solutions, their preparations. Classification of volumetric analysis- Acid-base, complexometric, oxidation-reduction,

precipitation-with specific examples, theories of indicators used in all above types of titrations, titration curve (acid-base, redox). Numericals on all above.

Unit-IV

(06 Hours)

Colligative Properties and their Experimental Determination:

Boiling Point Elevation, Freezing Point depression, Osmotic Pressure. Numericals based on the topic.

Unit-V

(08 Hours)

Surface Chemistry:

Interparticle forces, adsorption isotherms, determination of the surface area of fine powders using BET theory, surface films.

Catalyst Science:

Modern theories of catalysis physicochemical investigations of catalysts, kinetics of catalytic reactions, the Langmuir Hinshelwood approach.

Unit-VI

(10 Hours)

Industrial chemistry: Oil, Soap & Detergent

Fats & Oils:

Analysis & composition, extraction of oils-pressing, rendering & solvent extraction, bleaching & refining.

Soaps:

Raw materials & manufacture, types of soaps

Detergents:

Classification & application, raw materials & manufacture, Enzyme & Zeolite based detergents, biodegradable detergents.

List of Practicals - I

Organic Qualitative Analysis (8 compounds):

Preliminary tests, type, elements, functional group & physical constants.

List of Practicals - II(Any Two)

To determine loss in weight & percentage composition of NaHCO_3 by gravimetric method.

To determine water of crystallization of $\text{MgSO}_4 \cdot x\text{H}_2\text{O}$ by gravimetric method.

To determine water of crystallization of $\text{BaCl}_2 \cdot x\text{H}_2\text{O}$ by gravimetric method.

List of Practicals - III(Any Two)

Determine λ -max for KMnO_4 & find concentration of unknown solution by using colorimetric measurements.

Determine surface tension of a given liquid by stalagmometer.

Identification of organic compounds by using IR & UV spectroscopy.

List of Practicals - IV(Any Two)

Preparation of tetra mine Cu (II) sulphate

Preparation of potassium tri-oxalato ferrate.

Preparation of crystal of potash alum.

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(09Hours)

Differential Equations:

Solution of Linear differential equation of n^{th} order with constant coefficients, Method of variation of parameters, Cauchy's and Legendre's linear equations. Simultaneous linear differential equations, Total differential equations, Symmetrical simultaneous differential equations.

Unit-II

(09Hours)

Applications of Differential Equations:

Applications to bending of beams, whirling of shafts and chemical engineering problems.

Applications of Partial Differential Equations:

Solution of wave equation, one and two dimensional heat flow equations by method of separating variables. Applications to problems in chemical and allied engineering.

Unit-III

(08Hours)

Fourier Transform:

Fourier integral theorem, Fourier sine and cosine integrals, Fourier transform, Fourier sine and cosine transforms, Inverse Fourier transforms, Solution of boundary value problems using Fourier transform (Diffusion equation only).

Unit-IV

(09Hours)

Laplace Transform:

Definition, Properties and Theorems, Inverse Laplace transform, Laplace transform of Unit-step function, Dirac-delta functions, Periodic functions, Ramp functions, Error function, First order Bessel's function, $Si(t)$, $Ci(t)$, $Ei(t)$.

Applications to solution of linear differential equations, Liquid level

system consisting of single tank and two tanks in series (interacting and non interacting systems), Second order systems (damped vibrator).

Unit-V

(09 Hours)

Vector Differentiation:

Radial, Transverse, Tangential, Normal components of linear velocity and acceleration. Gradient, Divergence and Curl, Directional derivative, Vector identities, Irrotational and Solenoidal Vector fields.

Unit-VI

(08 Hours)

Vector Integration:

Line integral, Surface integral and Volume integral, Work done, Gauss Divergence theorem, Stoke's theorem and Green's lemma. Applications to fluid flow, Stream lines, Continuity equation, Motion equation and Bernoulli's equation.

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(09 Hours)

Introduction:

Scope and applications

Fluid Statics:

Review and properties of fluids and related concepts. Concepts of pressure and hydrostatic equilibrium. Barometric equation. Manometer of different types.

Fluid Flow Phenomena:

Review of velocity fields, velocity gradients and the shear stress field in laminar flow. Dynamic and kinematic viscosity. Newtonian and Non-Newtonian fluid behavior, Reynolds No. Transition from laminar to turbulent flow for Newtonian and Non-Newtonian fluids. Nature of turbulence. Eddy viscosity.

Flow in Boundary Layer:

Basic concept . Boundary layer growth along a flat plate .Thickness of boundary layer. Boundary layer separation and wake formation. Qualitative discussion on importance of boundary layer in heat and mass transfer.

Unit -II

(08 Hours)

Dimensional Analysis:

Fundamental dimensions. Units of various quantities used in fluid mechanics Dimensional analysis. Importance of dimensional analysis in experimental design. Applications of dimensional analysis.

Basic Equations of Fluid Flow:

Review of equations of continuity. Bernoulli's equation with and without friction, correction terms in Bernoulli's equations, applications to various cases.

Unit-III

(07 Hours)

Flow of Incompressible Fluids:

Review of skin friction and wall shear in cylindrical tubes. Hagen Poisuille equation for Newtonian fluids . Laminar flow of Newtonian fluids. Turbulent flow in pipes and in closed conduits . Universal velocity distribution law and its limitations. Von Karman equation.

Smooth pipe flow in Newtonian fluids :

Friction factor .Friction factor as a function of a Reynolds No. Effect of roughness parameters . Use of friction factor versus Reynolds No. chart with allowance of pipe roughness and non-circular cross section for the solution of process flow problems (Moody's diagram)

Unit-IV

(07 Hours)

Newtonian Flow past immersed bodies :

Flow past a sphere: Study of motion of spherical particle in an incompressible fluid. Particle Reynolds No. Settling velocity of a spherical particle in Stokes and in Newton's regimes .

Flow through a packed bed:Friction in flow through a packed bed. Packed bed Reynolds No. and Ergun equation.

Flow through a fluidized bed: Fluidization phenomena. Curve of pressure drop as a function of superficial velocity. Types of fluidization. Minimum fluidization velocity using Ergun equation .

Unit-V

(09 Hours)

Transportation and Metering of Fluids:

Fluid moving machinery: Operation , selection and specification of pumps, fans, blowers. Calculation of power consumption and volumetric flow. Priming, Cavitation and NPSH calculations.

Flow Measurement Devices: Orificemeter, Venturimeter, Pitot tube and Rotameter.

Unit-VI

(08 Hours)

Piping of Fluids:

Calculations of minor losses . Losses due to sudden contraction and expansion .Losses due to bends and fittings. Losses at the entrance and

exit. Concept of equivalent length. Pipes in series, pipes in parallel.
Pipelines containing pumps. Optimum pipe diameter.

Gas/liquid and liquid/liquid Two phase flow :

Flow types and regimes in horizontal and vertical flow. Regime maps.
Behavior of non-Newtonian fluids in two phase flow.

Flow through orifices, notches and weirs

Term work

Term work will consist of the experiments listed below , of which at least eight should be performed in laboratory by the students. In addition, two more subjects from the list may be given as assignments.

Determination of viscosity.

Flow through pipes. Analysis for laminar and turbulent regions

Flow through packed bed.

Flow through Venturimeter.

Flow through Orificemeter.

Flow through pipe fittings.

Verification of Darcy's law.

Characteristics of centrifugal pump.

Pump and blower specification writing in a format routinely used by process industry.

Trial and error solution to a given flow problem on a computer.

Flow through fluidized bed/packed bed.

Study of motion of particles in fluids of different viscosity.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K10211: HEAT TRANSFER - I

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(05 Hours)

Modes of Heat Transfer:

Conduction, convection and radiation. Fundamental laws employed:
Conservation of mass, heat and momentum.

Dimensional Analysis:

Fundamental dimensions, units of various quantities used in heat transfer, importance of dimensional analysis in experimental design and data reduction, dimensional analysis applicable to three modes of heat transfer, dimensionless numbers with significance used in heat transfer.

Unit-II

(10 Hours)

Conduction:

Fourier's law of heat conduction. Thermal conductivity of solids, liquids and gases. Differential equations from shell balances for steady (rectangular and cylindrical) and unsteady state conduction and their solutions for particular cases. Steady state conduction in infinite slab, infinitely long hollow cylinder, hollow sphere. Concepts of thermal resistance, contact coefficient, thermal conductance. Thermal resistance of infinite composite slab and cylinder. Heat loss through pipe insulation and optimum thickness of insulation. Critical radius of insulation. Unsteady state conduction. Heat transfer from extended surfaces. Efficiency of longitudinal fins. Heat transfer coefficient, pressure drop, wall temperature in heat exchangers with fins.

Unit-III

(10 Hours)

Convection:

Newton's law of cooling. Shell balances for heat convection. Classification of convection.

Natural convection: empirical correlations laminar and turbulent flow, vertical plates, walls, cylinders, horizontal plates and cylinders.

Forced convection: empirical correlations laminar and turbulent flow, forced convection inside tubes and ducts.

Individual and overall heat transfer coefficient, Fouling factor.

The colburn analogy: colburn j factor.

Thermal boundary layer: Heat transfer in laminar and turbulent boundary layer. Boundary layer thickness in laminar and turbulent flow.

Reynolds analogy. Analogy between heat and momentum transfer in turbulent flow.

Unit-IV

(09 Hours)

Radiation:

Stefan- Boltzman's law. Common terms in radiation: black body, gray body, opaque body, white body, emissive power, emissivity, Absorptivity, transmissivity and reflectivity.

Radiation laws: Kirchoff's law , Wein's displacement law, Planck's law. Solid angle. Intensity of radiation. Radiant exchange between two finite and infinite black surfaces. Radiant exchange between two infinite parallel gray planes. Radiation shield. Radiation shape factor, laws of shape factor. Radiant heat exchange in an enclosure having black surfaces.

Unit-V

(07 Hours)

Furnaces:

Types and classification of different furnaces. Characteristics of an efficient furnace. Heat transfer in furnace. Furnace efficiency calculations. Lobo and Evans method. Wohlenberg simplified method. Orrock-Hudson method.

Unit-VI

(07 Hours)

Heat transfer in agitated vessels, packed bed, fluidized bed, gases at high Velocity. Heat transfer coefficient for liquid metals, forced cross flow heat exchanger, cross flow of air/ gas across a tube.

Term work

Term work will consist of the experiments listed below , of which at least eight should be performed in laboratory by the students. In addition, four more assignments should be given to the students.

List of Practical

- To determine thermal conductivity of a metal bar .
- To determine Stefan-Boltzman constant .
- To determine thermal conductivity of an insulating material.
- To determine heat transfer coefficient in natural convection.
- To determine heat transfer coefficient in forced convection.
- To determine emmissivity of aluminium plate .
- To determine heat transfer coefficient for pin fin .
- Heat transfer in furnace.
- Study of heat transfer in agitated vessels.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K10212: CHEMICAL ENGINEERING THERMODYNAMICS-I

TEACHING SCHEME

Lectures : 04 Hrs/week

Tutorial : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or : 50 Marks

Unit-I

(07 Hours)

Introduction to Chemical Engineering Thermodynamics:

Introduction; Basic concepts of energy, work, heat, scope of thermodynamics, fundamental and derived quantities, state and path functions, thermodynamic systems, reversible & irreversible processes.

Unit-II

(08 Hours)

First Law of Thermodynamics:

Statements, First law for cyclic process, Internal energy, Enthalpy, Heat capacity, Intensive & Extensive process, Equilibrium, Phase rule, Constant volume & constant pressure process.

Unit-III

(09 Hours)

Volumetric Properties of Pure Fluids:

The P.V.T. behavior of pure substance, the virial equations & their application Types of process ideal & real gas, Compressibility factor, the constant volume, constant pressure, adiabatic, polytropic processes, real gas, Vander Wall equation, Redlich Kwong equation, Peng-Robinson equation, Benedict-Webb Rubin equation, Cubic equation, Heat effect

Unit-IV

(08 Hours)

Second Law of Thermodynamics:

Relevance of second law, Kelvin-Planck statement, Thermodynamic temp. scale Carnot cycle, entropy, Third law of thermodynamics, mathematical statement of 2nd law, statement of 3rd law.

Unit-V

(09 Hours)

Thermodynamic properties of Fluids:

Maxwell relationships, residual properties, residual properties by equations of state, two-phase systems, Clausius - Clapeyron equation, type of thermodynamic diagram, availability.

Unit-VI

(07 Hours)

System of Variable Composition-Ideal Behavior:

Fundamental property relation, Solution, properties of solution, Chemical potential Ideal gas mixture, ideal solution & Raoult's law, Henry's law

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K40213: ELECTRICAL AND ELECTRONICS TECHNOLOGY

TEACHING SCHEME

Lectures : 02 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

T. W. & Or. : 50 Marks

Unit-I

(04 Hours)

Three phase Circuits: Revision, Basic three phase voltage and current relations in Y & delta Measurements of power in three phase circuits using two-wattmeter method for balanced star and delta loads. Measurement of reactive power using single-wattmeter.

D. C. motors: Principal of working. Construction. Types. Characteristics. Starters. Method of speed control. Applications.

Unit-II

(04 Hours)

Induction Motors:

- a) Three phase : Rotating, Magnetic Field, Slip and Torque-slip. Characteristics, Starters, Applications, Simple calculations,
- b) Single phase: Types, Starting methods, Applications. (No mathematical treatment)

Unit-III

(04 Hours)

Introduction to Alternator:

Construction, Working principle, Regulation methods: (only by OC & SC Test using synchronized Impedance method only)
Electrical heating: Introduction, Resistance and dielectric heating (Descriptive treatment only)

Unit-IV

(05 Hours)

Transistors:

Transistors as an amplifier, Biasing circuits, different configurations of amplifiers, Audio Frequency Amplifiers, Frequency response, FET.

Unit-V

(04 Hours)

Introduction to Operational Amplifiers:

Salient features. Inverting and Non-Inverting type amplifiers, Operational Amplifiers as adder, subtractor, multiplier integrator etc. Introduction to Logic Gates: AND, NAND, OR, NOR with truth tables.

Unit-VI

(04 Hours)

Special devices:

UJT, DIAC, TRIAC, SCR.

Study of power supplying function. Function generators. Digital multimeter. (Descriptive treatment only.)

Practical

The term work will consist of eight practicals out of the list given below. (4 experiments from electrical technology and 4 experiment from Electronics technology)

List of Practical

Electrical Technology:

Measurement of power and reactive power in three phase circuit using two-wattmeter and single-wattmeter.

Break test on D. C. shunt motor.

Speed variation of D. C. shunt motor using armature voltage and field current Method.

Load test of three phase Induction motor.

To find regulation of Alternator by OC and SC test.

Study of DC motor starter.

Study of starters for 3 phase Induction motors.

Electronics Technology:

Frequency response of single stage Audio Frequency Amplifier.

Study of Transistor characteristics. (C. C. only)

Study of Operational Amplifier circuits.
Study of SCR characteristics.
Study of Digital Multimeter and Function Generator.
Study of triac characteristics.

RULES REGARDING ATKT, CONTINUOUS ASSESSMENT and AWARD of CLASS

A. T. K. T.

A candidate who is granted term for B.Tech. Semester-I will be allowed to keep term for his/her B.Tech. Semester-II examination even if he/she appears and fails or does not appear at B.Tech. Semester-I examination.

A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B.Tech. Semester-IV examination even if he/she appears and fails or does not appear at B.Tech. Semester-III examination.

A candidate who is granted term for B.Tech. Semester-V will be allowed to keep term for his/her B.Tech. Semester-VI examination if he/she appear and fails or does not appear at B.Tech. Semester-V examination.

A candidate who is granted term for B.Tech. Semester-VII will be allowed to keep term for his/her B.Tech. Semester-VIII examination if he/she appears and fails or does not appear at B.Tech. Semester-VII examination.

A student shall be allowed to keep term for the B.Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B.Tch. Semester-I & II taken together.

A student shall be allowed to keep term for the B.Tech. Semester-V of respective course if he/she has no backlog of B.Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.

A student shall be allowed to keep term for the B.Tech. Semester-VII course if he/she has no backlog of B.Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

In respect of Term work at B.Tech. Semester-I & II, B.Tech. Semester-III & IV and B.Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.

For B.Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or marks but less than 66%	First Class
C	Aggregate 55% or more marks but less than 60%	Higher Second Class
D	Aggregate 50% or more marks but less than 55%	Second Class
E	Aggregate 40% or more marks but less than 50%	Pass Class

HIGHLIGHTS

Bharati Vidyapeeth University College of Engineering is the largest engineering college in Maharashtra with an intake of 700 students in each academic year. Imparting quality technical education from undergraduate to doctorate Level, BVUCOE is probably the only engineering college in India with an accreditation from both NAAC as well as NBA. The faculty at BVUCOE boasts of highly qualified academicians, a quality that is further emphasized by the fact that 15 of them are presently pursuing their Ph.D. degree.

BVUCOE has been ranked 29th amongst the Top50 Technical Schools of India in survey conducted by DATAQUEST-IDC. We have Enjoyed a ranking in this list for the last 4 years. Research is of utmost importance in all our programs. A total of 113 research papers were published in 2007-2008.

Currently we have 12 outgoing research projects. The infrastructure BVUCOE is state-of-the-art with 62 classrooms, 59 laboratories and a well-stocked library that currently holds 27,130 titles. The college has an international presence with MOUs signed with the North Carolina A&T State University (Greensboro, USA), University of Venice (Italy), Actel Corporation (USA). Corporate interaction is also inculcated in our programs through our association with Oracle India Ltd., Infosys Ltd. and Tata Consultancy Services.

SALIENT FEATURES

The Construction activity is the second largest economic activity in India next only to agriculture. The amount of money invested and the jobs provided by the Civil Engineering industry are much larger than any other industry. Overall globalization of the economy has resulted in more and more demand for better infrastructure facilities like roads, bridges, airports and project related to water resources. The Civil Engineer therefore has to play a major role in the development of the country. The Department of Civil Engineering desires its students to excel in the changing trends in global economy.

The department of Civil Engineering has developed two fold:

It has well-established laboratories in subjects of Structural Engineering, Environmental, Hydraulics, Geotechnical, Transportation, Geology, Surveying and Computer Engineering. The department also maintains a well-equipped audio - visual room with facilities like VCR, TV, and overhead and slide project for projecting videocassettes, CDs, slides and transparencies containing technical demonstrations. There are more than 200 videocassettes and CDs, 35 wall charts demonstrating various Civil Engineering theories and techniques.

The department has developed linkages with C. W. P. R. S. Pune and INSWAREB Vishakhapattanan for research works in Hydraulics and concrete materials. The department also has access to laboratories of CW & PRS and libraries of IAT, Pune and I. I. T. Powai, Mumbai. The department maintains a separate departmental library consisting of some rare books.

The teaching staff of the department is actively involved in research works. The research works on protection of scour around bridge piers by riprap, use of mineral admixtures in concrete are some of the research work successfully done. The faculties of the department routinely publish their works in reputed journals and conferences at national and international level. The testing and consultancy cell of the department caters to the various technical services in Hydraulics, Soil Mechanics, Bridge and Dam foundations, Environmental Engineering, Concrete Materials and Surveying.

The department also runs a postgraduate course in Hydraulic Engineering. This course is blessed by the guidance of some of the internationally recognized scientists in the field of Hydraulics. The P.G. Students perform their dissertation works in collaboration with CW & PRS laboratories, especially the model studies. The undergraduate and postgraduate students have unlimited access to the Internet facility provided by the department. The Civil Engineering Students Association (CESA) serves as a platform for the overall development of the students. The CESA organizes personality development programs, guest lectures of experts; site visits to Civil Engineering projects and is also actively involved in social programs. The department has also organized national level workshop on artificial neural network, Hydraulic structures and advances in concrete technology in the last few years.

MAJOR GROUPS/AREAS

Hydraulic Engineering, Structural Engineering, Computer Aided Analysis and Design, Concrete Technology, Environmental Engineering, Foundation Engineering, Surveying, Project feasibility, Engineering Geology.

EXPERTISE IN RESEARCH AND CONSULTANCY

Pump Testing, Precision Survey works, Analysis and Design of Structures, Testing of Concrete, Building materials and Metals, Concrete Composites, Air & noise pollution, Water quality, Geological Investigation for Civil Engineering Structures.

MAJOR EQUIPMENTS

Universal Testing Machine (1000KN & 200KN) with computer attachment, Compression Testing Machine (2000KN), Concrete Mixer, Torsion Testing Machine, Polariscope, Wind Tunnel, Tilting Flume, Airflow Bench, Standard Penetration Tests set up, Electronic Distance Meter, High Volume Sampler with PMIO, Spectrophotometer, Nephelo Turbidity meter, Flame Photometer, Noise Level Meter.

SOFTWARE

Auto CAD 2000, STAAD-PRO, Geo-Concept GIS, MATLAB, Hit-Office

LABORATORIES

Testing of Materials, Engineering Mechanics, Geotechnical & Transportation Engineering Environmental Engineering , Fluid Mechanics & Hydraulic Machinery, Survey Laboratory, Geology Laboratory

STRUCTURE & EXAMINATION PATTERN

RULES FOR CONDUCTING TESTS

Mode of the test

In each semester for each subject three tests shall be conducted. The Schedule for the same will be declared at the commencement of academic year in the academic calendar.

Each test shall carry 20 marks.

University examination pattern has given weightage of 20 marks for the tests.

To calculate these marks following procedure is followed:

- i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
- ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
- iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
- iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
- v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; These marks will be final marks obtained by the student. No scaling up is permitted.
- vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.

Paper Pattern for Tests

- i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

- ii) There will not be any sub-questions.

For granting the term it is mandatory to appear for all the three tests conducted in each semester.

Roll numbers allotted to the students shall be the examination numbers for the tests.

SEMESTER - III

K20201: BUILDING CONSTRUCTION PRACTICES

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Building and Building Foundations:

Building and its components, Types of Structures and their suitability, Different types of foundations, Design criterion for R.C.C. Column, footing and plinth beams, Earthquake resistant foundations.

Unit-II

(08 Hours)

Stone Masonry and Brick Masonry:

Different types of Stones, Characteristics of good building stones, Principles of masonry construction, Types of stone masonry, various proportions of mortar used in constructions. Bricks: Qualities, tests and special types of bricks. I.S. Sizes of bricks, Types of bonds, Reinforced brickwork, composite masonry, Hollow and solid block masonry, cavity walls.

Unit-III

(08 Hours)

Arches, Lintels and Floors:

Arches: Terms used, methods of construction, Types of arches, stability of arches

Lintels: Types, details of RCC lintel & Chhajja

Flooring: Types & I.S. Specifications, Ground Floor & Upper floor design & construction requirements, varieties of floor finishes, types of floorings. Precast flooring, factors for selection of flooring.

Unit-IV

(08 Hours)

Roof Construction:

Types of roof & their suitability, roof structure, selection of roof covering material, R.C.C., G.I Sheets, A.C. Sheets, water proofing, rainwater drainage system. Truss types, advantages of steel trusses, false ceiling materials & method of fixing. Different types of shell structures.

Unit-V

(08 Hours)

Doors, Windows and Stairs:

Types of doors, windows, different types of materials used for frames and shutters. Fixtures and fastenings used, Types of stairs, Design and construction of stairs ramps, lifts and escalators.

Unit-VI

(08 Hours)

Building Finishes and Miscellaneous Materials:

Building Finishes & Miscellaneous Materials, Plastering, pointing, Types and material used, Mortars, White washing lime & its types, colour washing, Distempering, Types of paints. Wall cladding materials and their fixing methods, use of glazing work for windows.

Glass: types & properties, Fiber glass. Use of plastics

Water proofing: Methods and Systems.

Term Work

A) Plates (1/4 imperial size)

B) Drawings on full imperial size sheets

A) Plates :- Plates are prepared by drawing as per list specified below;

Symbols and conventional signs of materials

Different Types of Foundations (Any Five)

Types of stone masonry

Arches in stone & brick masonry to be drawn using AutoCAD

Bonds in Brick work to be drawn using AutoCAD

Types of floors (any Three)

Different types of roofs to be drawn using AutoCAD

C.C.T.W. Panelled door – Plan, Elevation Section.

Flush door

Types of Windows

Types of stairs

Reports of site visit to construction sites. (min. 2 visits)

Collection of advertisement related to construction materials & Machinery. (Minimum ten)

B) Drawing on imperial size sheets.

Sheet No.1: Single Storied Residential building with load bearing structure.

Details to be drawn – Plan, elevation and section to the scale of 1:50. And Site plan to the scale of 1:200.

Sheet No.2: Axonometric View of Sheet No.1.

Sheet No.3: G+1, R.C.C. Residential building from given data. Details to be drawn:

1. Plan, front elevation, section to the scale of 1:50
2. Site plan to the scale of 1:200

Text Books/References

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

**TEACHING SCHEME**

Lectures : 04Hrs/week

Practical : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit -I

(08 Hours)

Introduction: Objects, Scope and Subdivisions.

General Geology: Surface relief of the earth. External and internal agents modifying the earth, Weathering, Erosion, Denudation and

Decomposition. Earth Movement, Metamorphism, Volcanism.

Petrology: Rock and mineral. Silicate and non silicate minerals, Rock forming minerals, Primary and secondary minerals, Essential and accessory minerals.

Igneous rocks: Mineral composition, Felsic and mafic minerals. Textures, Reasons for textural variation. Dependence of degree of crystallization and shape and size of crystals on conditions of cooling. Conditions of cooling of Plutonic, Hypabyssal and Volcanic rocks. Gas cavities and secondary infillings in volcanic rocks. Classification : Study common rock types described in practical work.

Secondary rocks: Rock weathering, Decomposition and disintegration, favorable conditions, Processes and products of decomposition and disintegration transport and deposition. Classification: Residual, Sedimentary, Chemical and Organic Deposits.

Sedimentary Deposits: Agents of transport. Textural characteristics Clastic texture, Stratification and Lamination. Consolidation by welding and cementation. Grain size classification.

Metamorphic Rocks: Agents and types of metamorphism. Metamorphic textures, Contact, Cataclastic, Dynamothermal and Plutonic metamorphism.

Unit-II

(08 Hours)

Physical Geology:

Geological action of running water, River valley development, Normal and Regional cycle of river erosion. Water falls, Ox-bow lakes, flood plain deposits, Deltas. Rejuvenation and resulting features such as canyons,

River terraces and incised meanders. Earth movements, Earthquakes, Interior of the earth, Earthquake zones. Geological considerations for choosing sites of buildings in seismic areas Earthquake Resistant structures Volcanism, Types of mountains.

Unit-III

(08 Hours)

Structural Geology and Indian Geology:

Structural Geology: Outcrop, Dip and Strike, Conformable series. Unconformity and overlap. Different types of faults and folds in rocks. Inlier and outlier. Modes of occurrence of igneous rocks, Joints and fractures

Indian Geology: General principles of stratigraphy. Age of the earth and divisions of geological time. Physiographic divisions of India and their characteristics. Geological history of Peninsula. Study of formations in Peninsula and the significance of their structural characters in major Civil Engineering activities, Economic minerals and building stones.

Unit-IV

(08 Hours)

Ground Water: Meteoric. Connate and Juvenile water, Depth zones of groundwater. Perched watertable. Influence of textures and structures of rocks on ground water storage and movement. Pervious and impervious rocks. Geological work of groundwater, Effects of solution and deposition. Natural springs and seepages, Depression and contact springs. Hot springs and geysers, wells. Effects of dams and canals, Effect of pumping, Cone of depression, Circle of influence. Conservation of groundwater. Artesian wells, Waterbearing capacity of common rocks. Locating groundwater supplies. Case histories.

Building stones: Requirements of a good building stone. Dependence of strength, durability, ease of dressing, availability of blocks of suitable size and appearance on mineral composition, textures and field structures. Suitability of common rocks as building stone.

Landslides: Causes. Role of water. Stability of slopes in consolidated materials. Influence of dip and slope. Safe and unsafe slopes. Prevention of landslides, Keeping slopes free from water. Retaining walls. Vegetation. Slope treatment, Precautions to be taken while aligning roads etc. across hills and making cuts in hill side. Case histories.

Unit-V

(08 Hours)

Geological Investigations:

Preliminary Geological Investigations: Use of Geological maps and sections, Verification of surface data by subsurface exploration. Drill holes. Test pits, trenches, Exploratory tunnels, Shafts, Adits, Drifts etc. Compilation and interpretation of information obtained from these. Correlation of surface data with results of subsurface exploration. Limitations of drilling. Engineering significance of Geological structures such as Stratification. Dips. Folds, Faults, Joints. Fractures. Crush zones, Fault zones. Dykes etc. Case histories.

Tunneling: Influence of geological conditions on design and construction methods. Preliminary geological investigations for tunnels. Important geological considerations while choosing alignment. Difficulties during tunneling as related with lithology, nature and structures of materials to be excavated. Role of groundwater. Geological conditions likely to be troublesome. Suitability of common rock types for tunneling. Unlined tunnels. Case histories.

Unit-VI

(08 Hours)

Geology of Sites:

Geology of Dam Sites: Dependence of strength, Stability and watertightness of foundation rocks on their physical characters and geological structures. Influence of geological conditions on the choice of types and design of dam. Preliminary geological work on dam sites. Favourable and unsuitable geological conditions for locating a dam. Precautions to be taken to counteract conditions. Treatment of leaky rocks, Faults Folds Dykes, Crush zones, Joints. Fractures, Unfavourable dips. etc. Earthquakes in regions of dams. Case histories. Geology of reservoir sites: Dependence of water tightness on physical properties and structures of rocks, Geological conditions suitable and unsuitable for reservoir sites. Conditions likely to cause leakage through reservoir rim. Importance of ground water studies and effects of raising of water table. Case histories. Geology of Bridge Sites: Importance of bridge foundations, Preliminary geological exploration for bridge piers and bridge abutments. Scouring and erosion around bridge piers. Influence of nature and structures of rocks on bridge foundations. Case histories.

List of Practical

Identification of the following minerals in hand specimens: (Two Experiments)
Quartz and its varieties, Gypsum, Fluorite, Barytes, Tourmaline, Beryl, Graphite, Asbestos, Talc, Kyanite, Garnet, Galena. Magnetite. Haematite. Limonite, Iron pyrites, Chromite, Bauxite.

Identification of the following rock types in hand specimens: (Seven Experiments)
Granites, Syenites, diorites, gabbros, rhyolites, trachytes, andesites, basalts, varieties of Deccan Trap rocks, volcanic breccias. Tachylytes pegmatites, dolerites, graphic granites - Laterites, bauxites, conglomerates, breccias, sandstones, quartzites, grits, arkoses, shales, mudstones, chemical and organic limestones.

Maps: (Twelve Experiments)

Construction of geological sections from countoured geological maps, interpreting geological features without drawing sections, solution fo engineering geological problems such as alignment of dams, tunnels, roads canals, bridges etc., based on geological maps.

Data interpretation: (Two Experiments)

Logging of drill core and interpretation of drilling data. Graphical representation of core log.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04Hrs/week

Practical : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

General Anatomy:

Concept of Stress and Strain: Concept of stress and strain: Normal, lateral, shear and volumetric stresses and strains, Stress-strain curve. Elastic constants and their inter relationship. Generalized Hooke's law.

Axial and Thermal Stresses: Axial force diagram; Stresses, strains and deformation of determinate and indeterminate, prismatic and tapered cross section, homogenous and composite bars; due to concentrated loading, self weight and temperature effect; Axial rigidity.

Unit-II

(08 Hours)

Axially Loaded Long Columns:

Concept of critical load and buckling; Differential equation of elastic curve; Euler's formula for hinged ends; Equivalent length for different end conditions; Limitation of Euler's formula; Rankine's formula; Johnson's formula; Direct and Bending Stress : Concept; Resultant stress due to the axial load and uniaxial or biaxial bending; Core of section; Effect of lateral force and self weight; Application to columns, retaining walls, dams, chimneys etc.

Unit-III

(08 Hours)

Principal Stresses and Principal Planes:

Normal and shear stresses on any oblique plane. Concept of principal stresses and principal planes. Maximum shear stress; Analytical and graphical method. (Mohr's circle method); Combined effect of axial force, bending moment, shear force and torsion; Theories of failure;

Strain Energy: Concept of strain energy; Modulus of Resilience and Toughness; Strain energy for axially loaded members due to gradual, sudden and impact load; Strain energy due to self weight;

Unit-IV

(08 Hours)

Shear Force and Bending Moment in Beams:

Concept of Shear Force and Bending Moment; Relation between Shear Force, Bending Moment and intensity of loading; Shear Force Diagram and Bending Moment Diagram due to point load, uniformly distributed load, uniformly varying load and moments for the simple and compound beams; Elastic curve.

Flexural Stresses: Theory and assumptions of pure bending; Moment of resistance; Flexure formula; Flexural rigidity; Modulus of rupture; Flexural stress distribution diagram for various sections; Force resisted by partial cross section.

Unit-V

(08 Hours)

Shear Stresses:

Concept of direct and transverse shear; Shear stress formula; Concept of complementary shear stress; Shear stress distribution diagram for symmetrical and unsymmetrical section.

Torsion of Circular Shafts: Theory, assumptions and derivation of torsional formula; Shear stress distribution across cross section; Twisting moment diagram; Shear stresses and strains in determinate and indeterminate shafts of hollow, solid, homogeneous and composite cross sections subjected to twisting moment; Torsional rigidity.

Unit-VI

(08 Hours)

Slope and Deflection of Beams:

Concept of relation between deflection, slope, bending moment, shear force and intensity of loading; Double Integration method; Macaulay's method.

Pressure Vessels: Stresses, strains and deformation in thin walled cylindrical and spherical vessels due to internal fluid pressure; Thick cylinders; Lame's equation of stresses.

Term-work and Oral

A) Term work

The term-work shall consist of minimum TWELVE experiments.

1. Tension test – Mild Steel, Tor Steel, Aluminum.
2. Compressive Strength test- Bricks.

3. Bending test – Timber.
4. Transverse test- Roof tiles.
5. Flexure test- Flooring tiles.
6. Bend Re-bend test- Mild Steel, Tor Steel.
7. Direct Shear test- Mild Steel, Aluminum.
8. Torsion test- Mild Steel, Aluminum.
9. Izod & Charpy Impact test- Mild Steel, Aluminum, Brass, Copper
10. Rockwell Hardness test- Mild Steel, Aluminum, Brass, Copper
11. Abrasion test- Flooring tiles
12. Fatigue test- Mild Steel, Aluminum
13. Water Absorption test- Bricks
14. Block board test
15. Brittle coat

B) Oral:

Oral shall be based on above term work.

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

TEACHING SCHEME

Lectures : 04Hrs/week

Practical : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Ingredients of Concrete:

Cement: Manufacture of Portland cement, Chemical Composition, Bogues compounds, Hydration of cement, Structure of Hydrated cement, ASTM classification and types of cement, Tests of cement and I.S. requirements for ordinary Portland cement.

Aggregates: Classification, Properties of aggregates, Deleterious materials, Soundness, Alkali-Aggregate Reaction, Grading of aggregates, Standard Grading curves, Testing of aggregates, Artificial & recycled aggregates.

Water: Quality of water IS requirements, Use of sea water.

Unit-II

(08 Hours)

Fresh Concrete:

Workability: Factors affecting workability, Measurements of workability, Suitability of concrete based on degree of workability, Segregation, bleeding.

Concreting Process: batching, mixing, transporting, placing and compaction.

Curing of Concrete: Methods of curing (study of machinery not expected), Effect of temperature on curing, Steam curing, curing compounds, period for curing, stripping time, Analysis of fresh concrete.

Unit-III

(08 Hours)

Hardened Concrete:

Properties of Hardened concrete

Strength of Concrete: General, Compressive strength, Factors affecting strength, Maturity Concept, Tensile strength, Relation between compressive and tensile strength, Flexural strength, Testing under central and third point loading, Shear strength, Bond strength,

Elasticity, Creep and Shrinkage: Stress-Strain relation, Modulus of Elasticity, Creep-time curve, classification of shrinkage.

Non Destructive Testing: Schmidt's Rebound hammer, Pull out test, Ultrasonic Pulse velocity method.

Unit-IV

(08 Hours)

Concrete Mix Design:

Concept of mix design, Variables in mix design, Statistical Quality Control, Various methods of mix design, Design of mix by Indian Standard recommended method (IS: 10262-1982 & IS: 456-2000), and DO method, Acceptance criteria.

Unit-V

(08 Hours)

Admixtures in Concrete and Special Concreting Techniques:

Purpose and functions, Classification

Chemical Admixtures: Plasticizers, Super-Plasticizer, Retarders, Air entraining agents, Compatibility of admixtures and cement, Marsh Cone Test.

Mineral Pozzolanic/Admixtures:- Fly ash, Silica fume, GGBS, Rice Husk Ash

Special Concreting: Under water concreting, Cold weather concreting

Unit-VI

(08 Hours)

Special Concrete and Durability of Concrete:

Special Concrete: Light weight concrete, Polymer Concrete, Fiber reinforced concrete, Roller Compacted Concrete, Self Compacting Concrete, Ferro-cement, Pumped Concrete, Ready mix concrete; High Performance Concrete.

Durability of Concrete: Definition, Significance, Strength and durability relationship; Permeability, Chemical attack; Sulphate attack; Chloride attack, attack by sea water, Carbonation and measurement of depth of carbonation, Requirement for durability as per IS 456-2000.

Term-work:

The term-work shall consist of (ANY FIFTEEN) experiments from PART A where as PART B is compulsory.

PART A: List of Experiment

- 1) Fineness test on Cement
- 2) Standard consistency and Setting time test on cement
- 3) Soundness test on Cement
- 4) Compressive strength test on Cement.
- 5) Moisture content & Water absorption of aggregates.
- 6) Specific gravity of Aggregates.
- 7) Elongation and Flakiness Index of Aggregates.
- 8) Fineness Modulus of Aggregate.
- 9) Aggregate Impact Value.
- 10) Aggregates Crushing Value.
- 11) Measurement of Workability of Concrete (Slump, Compaction factor, Flow table and Vee-bee test)
- 12) Study of effect of admixtures (Superplastsizer & Retarding agent) on concrete.
- 13) Concrete mix design using IS code method.
- 14) Compressive strength of Concrete.
- 15) Split Tensile strength of Concrete.
- 16) Flexural Test of Concrete.
- 17) Non Destructive Test on concrete –Schmidth's Rebound hammer test

PART-B: Site Visit with site visit report:

- 1) NDT Project on any site under construction
- 2) Study of any of the advances in Concrete Technology (RMC Plant, Pumped Concrete, Roller Compacted Concrete, Self Compacted Concrete, Tremix flooring etc)

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

K20205 -ENGINEERING ECONOMICS AND MANAGEMENT

TEACHING SCHEME

Lectures : 04Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(08 Hours)

Elementary Economics and Production:

Definition of Economics, nature, scope and importance of engineering economics, basic economics concept - Human wants. Utility, value, cost, price, profit, capital, wealth, equilibrium etc. law of demand, elasticity of demand. The law of supply. Factors influencing production: land, labour, capital and organization. Characteristics and rewards, factors of production. Division of labors, specialization, scales of production, economics of scale.

Unit-II

(08 Hours)

Finance and Construction:

Types of capitals - Fixed and Working Capital Use of Capital. Shares, Debentures. Public deposits. Forms of foreign capital. Money and capital market in India. Constituents of Indian capital market. Various sources of building finance and nature of their operations. New economic policy, liberalisation, Extending privatization and globalisation. Role of Financial institutions in economic development. Forms of business organization: Sole, Proprietorship, Partnership, Joint Stock Company. Private line. Co-operative Society, Unlimited.

Unit-III

(08 Hours)

Introduction to Management:

Management Theories and Principles. Contributions by Taylor, Mayo, Fayol, McGregor, Frank and Gilberth. Management by objectives and decision-making. Manager: Qualities, Functions and Experience. Role of "Project Manager. Introduction to Project Life cycle. Major types of constructions. Selection of professional services --contractors.

Unit-IV

(08 Hours)

Construction Organization:

Importance of organization. Principles of forming organization Span of control, Types of organization - Line, Function, Line and Staff, Committee and matrix. Motivation for the Project team-Interpersonal behaviour in project organization-perceptions of Owners and Contractors. Manpower Planning, Organising, Staffing, directing and Controlling-Personnel Principles.

Unit-V

(08 Hours)

Project Planning:

Planning - Purpose and objective, Strategies, Policies and Rules, Steps in planning. Execution, Operation and maintenance in relation with various Civil Engineering projects. Resources required for construction projects.

Unit-VI

(08 Hours)

Personnel Management:

Nature and Scope of Personnel management, Manpower planning, Job - Analysis, Description, Recruitment, selection, job evaluation techniques, Human relations in construction: client-contractor, Contractor- project staff, Labour, Public etc.

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

K20206 - COMPUTER APPLICATION IN CIVIL ENGINEERING - I

TEACHING SCHEME

Practical : 04Hrs/week

EXAMINATION SCHEME

T. W. & Pr. : 50 Marks

To a Civil engineer drawing is of immense importance, Civil engineer in his scope may not draw but needs to read the drawings. Application of AutoCAD is widely used by the industry and there is basic need of knowing AutoCAD by an engineer. In this subject AutoCAD software, a Civil Engineering application will be taught. This subject covers all the commands used to create and modify the drawing. Students as guided by the faculty have to draw different drawings related to civil engineering, details of which are mentioned below:

Learning Auto Cad:

1. Introduction
2. Getting Started
3. Learning commands: Draw and Modify menu
4. Learning commands through drawings
5. Centerline drawing
6. Layers / Filters
7. Blocks
8. Area command
9. Drawing Presentation: Sheet size and Text Format.

List of Practicals

Drawing plan, Elevation and Section of G +1 Building
Theory assignment giving details of all commands used
Drawing plates. (minimum 10 numbers)

Text Book/References

AutoCAD: Users Guide. 2000

SEMESTER - IV

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(09 Hours)

Differential Equations:

Solution of Linear differential equation of nth order with constant coefficients, Method of variation of parameters, Cauchy's and Legendre's linear equations. Simultaneous Linear differential equations, Total differential equations, Symmetrical Simultaneous differential equations.

Unit-II

(09 Hours)

Applications of Differential Equations:

Applications to cantilever, bending of beams, whirling of shafts, Mass spring systems.

Applications of Partial Differential Equations:

Solution of wave equation, one and two dimensional heat flow equations by method of separating variables. Applications to civil and allied engineering problems.

Unit-III

(08 Hours)

Numerical Methods:

Numerical solutions of System of Linear equations by Gauss elimination, LU Decomposition, Cholesky, Jacobi and Gauss-Seidel methods. Numerical solutions of Ordinary differential equations by Euler's, Modified Euler's, Runge- Kutta 4th order, and Predictor-Corrector methods.

Unit-IV

(09 Hours)

Statistics and Probability:

Measure of Central tendency, Standard deviation, Coefficient of variation, Moments, Skewness and Kurtosis, Correlation and Regression, Reliability of Regression Estimates.

Probability density function and Probability mass function, Binomial, Poisson, Normal and Hypergeometric distributions, Test of Hypothesis: Chi-square test of goodness of fit and Independence of attributes, Introduction to Decision and Quality Control.

Unit-V

(09 Hours)

Vector Differentiation:

Radial, Transverse, Tangential, Normal components of linear velocity and acceleration, Gradient, Divergence and Curl, Directional derivative, Vector identities, Irrotational and Solenoidal Vector fields.

Unit-VI

(08 Hours)

Vector Integration:

Line integral, Surface integral and Volume integral, Work done, Gauss's-Divergence theorem, Stoke's theorem and Green's lemma. Applications to fluid flow, Streamlines, Continuity equation, Motion equation and Bernoulli's equation.

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

TEACHING SCHEME

Lectures : 04 Hrs/Week

Drawing : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 04 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Building Planning Natural and Built Environment, Ecology, Environment and Man relationship, Principles of planning for building, Integrated approach necessity, concept of building as Environmental Filter. Building Rules Regulations and Byelaws necessity, plot size, open space around the building. FSI, Building line, control line. Height, room size, Built up area, floor area, carpet area. Rules of lighting ventilation, Drainage and Sanitation.

Unit-II

(08 Hours)

Design of Building: Climate, elements of climate, global climate, thermal design Principles, comfort sectors, Heat exchange of building. Heat transfer loads - definition, calculation of U value of temperature gradient. Thermal insulation of roof and wall. Ventilation comfort factors, function of ventilation, stack effect wind effect. Mechanical ventilation, ventilation rate, Air conditioning-design data, cooling load, Air conditioning systems.

Unit-III

(08 Hours)

Lighting Principles of Day Lighting Design of Windows, Sky components, Noise and acoustics -Effect of noise, comfort standards, Noise control sound insulation, Acoustics reverberation Sabines formula acoustical defects conditions of good acoustics. Fire Protection - Fire safety, fire load, grading of occupancies by fire load, fire escape elements.

Unit-IV

(08 Hours)

Building Services:

Constructional requirements for different building services, Electrical, Telecommunication services, Circulation-Lift escalators, Entertainment services plumbing services, Layout of water supply & drainage system, Rate of water supply, storage and distribution arrangement, Plumbing systems, septic tank, garbage disposal arrangement.

Unit-V

(08 Hours)

Design concept of ECO building, Green buildings, Intelligent building, Low Cost Housing, Planning considerations in High rise buildings.

Unit-VI

(06 Hours)

Perspective drawing, one point and two point perspective.

Term Work

- 1) Sheet No1-Perspective Drawing of different objects.
- 2) Project Work-Detailed planning, designing and drawing of any one of the buildings listed below:

1. Residential Building
2. Commercial Building
3. Educational Building
4. Industrial Building
5. Recreational Building
6. Health Club

Sheets to be drawn in project work

- Layout plan of project with a suitable scale
- Plan/Typical floor plan to a suitable scale.
- Elevation and section to a suitable scale.
- Parking plan/Terrace plan to a suitable scale.
- Foundation Plan to a suitable scale.
- Lay out plan showing water supply and Drainage
- Line plan of any five buildings mentioned in project work.

Report File

File shall consist of

1. Data collection, line plan, planning considerations and approximate cost of building
2. Visit report to project buildings
3. Advertisement / Brochures regarding scheme of promoters and Builders

Oral examination shall include sketching and viva.

Text Books/References

Calendar, "Time Saver Standards for Architectural Design", Tata McGraw Hill Publishers

Merit, "Building Design and Construction", Tata McGraw Hill Publishers

Bindra Arora, "Building Construction", Laxmi Publication

M. L. Shah, C. M. Kale, B. Y. Patki, "Building Drawing with integrated approach to Built Environment", Tata McGraw Hill Publishers

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04Hrs/week
Practical : 04Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks
Duration : 03 Hours
Unit Test : 20 Marks
T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Leveling:

Study of -Dumpy level, Auto level, Laser Level. Profile leveling - Longitudinal section and cross-section .Plotting of L section and cross section, Ground profile and cross section, working profile. Reciprocal leveling; Curvature and refraction correction, Distance to visible horizon. Principle Axes of dumpy level; Permanent Adjustment of level Adjustment of bull's eye bubble or Round Bubble. Line of collimation and Sensitiveness of bubble tube.

Unit-II

(08 Hours)

Theodolite Survey:

Introduction to 20" Vernier theodolite, Types of theodolites, Principal axes of Theodolite. Use of Theodolite -Measurement of horizontal angle, vertical angle, Magnetic bearing, Prolonging a line, Lining-in, Measuring deflection angles, setting out angles. Finding out elevation of objects, (Base accessible and inaccessible) by trigometrical observations. Theodolite traversing: Items of work checking of traverse open and close, Computation of consecutive and independent co-ordinates, Adjustment of closed traverse, balancing the traverse using Gales traverse table.

Unit-III

(08 Hours)

E.D.M.:

Omitted measurements, Area calculations by Co-ordinates. Testing and permanent adjustment of transit theodolite. Principal of stadia, fixed hair method with vertical staff to determine horizontal distance and elevation of points. Introduction to tachometric surveying. Introduction to Digital Theodolite, Digital angle Measurement. Introduction and Theory of EDM.

Unit-IV

(08 Hours)

Horizontal and vertical curves:

Horizontal and vertical curves Purpose. Simple circular curves-Elements and setting out of circular curves by linear i.e. Offsets from chords produced, offsets from long chord and angular methods i.e. Rankin's method, Two theodolite method. Compound curves - Elements and setting out compound curves. Introduction to reverse curves-Elements, Location and Uses.

Unit-V

(08 Hours)

Transition Curves and Plane Table Survey:

Transition Curves -Types and uses, Length of transition curves, Elements of cubic parabola, process to set out a transition curve by deflection angle method. Accessories required for plane table survey and uses of accessories: Advantages and disadvantages and Limitation of Plane table Survey. Methods of plane table survey, Radiation, Intersection, Traversing, Resection, Errors in plane table surveying.

Unit-VI

(08 Hours)

Minor Instruments used in surveying:

Two point and three point problems and their solutions by different methods. Reconnaissance survey Preliminary survey locating obligatory points fixing gradients paper and field locations, Construction Survey. Study and use of Abney level, Box sextant.

Term work

The term Work shall consists of

Field book containing record of all exercises and project listed below.

- | | |
|--|----------|
| a) Theodolite traverse survey project. | 1 Sheet |
| b) Plane table traverse survey project. | 1 Sheet |
| c) Road project showing L- Section plan
of road with contours and typical cross section | 2 Sheets |

List of Practicals

Details of practical to be performed, Exercise projects and assignments

Study and use of auto level and double check leveling

Study of laser level, Compound levelling and fly levelling, calculation By Rise and Fall Method

Study of theodolite and Practice of reading

Measurement of Horizontal angle of triangle by repetition method and applying Check

Measurement of vertical angle by Transit Theodolites

Project I- Theodolite traverse survey of closed traverse for minimum 0.5 Hectares including building, roads, etc.

Computation of Horizontal distance and elevation of points by tachometry for horizontal and inclined sights

Introduction and study of outfit of plane table and method of Radiation

Intersection Methods of plane table survey

Project II- Plane table survey project of closed traverse of Minimum of four sides for at least 0.5 Hectares Area including building, roads, etc.

Solution of Three point problem in plane tabling

Setting out of a simple circular curve by Rankin's Method of Deflection angles, by offsets from Chords produced

Study and use of Abney level, Box sextant

Setting out a simple Building on Ground from a given a foundation plan

Project III- Road project of Minimum length of 250 m including fixing of Alignment, Profile leveling and cross sectioning and calculations to be done at the site

Two peg test for dumpy level.

Setting out angle using Theodolite.

Measurement of distance by using EDM

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

TEACHING SCHEME

Lectures : 04Hrs/week

Tutorials : 01Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Basic Concepts of Structural Analysis:

Types and classification of skeletal structures, members, joints, supports, loads and load effects; Concept of stability; Concepts of indeterminacy and degrees of freedom; Static and Kinematic degree of indeterminacy; Concepts of strain energy; Strain energy due to axial force, shear force, bending moment and torsion; Deflection of determinate beams by Moment area method and Conjugate beam method.

Unit-II

(08 Hours)

Analysis of Plane Trusses using Strain Energy Method:

Castigliano's first theorem; Deflections of determinate trusses; Castigliano's second theorem; Analysis of redundant Trusses; Lack of fit and temperature changes in members; Sinking of supports; Graphical method-Williot diagram.

Unit-III

(08 Hours)

Analysis of Beams and Plane Frames using Strain Energy Method:

Deflection of determinate beams and rectangular portals by application of Castigliano's first theorem; Analysis of indeterminate beams and rectangular portals by application of Castigliano's second theorem with indeterminacy up to two degrees; Maxwell's theorem of reciprocal displacements and Betti's law.

Unit-IV

(08 Hours)

Fixed Beams and Three Moment Theorem:

Analysis of propped cantilevers and fixed Beams; Sinking of support; Analysis of continuous beams by Clapeyron's theorem of three moments.

Unit-V

(08 Hours)

Slope Deflection Method:

Analysis of continuous beams using slope deflection method-sinking and rotation at support; Deflected shape of beam; Analysis of sway and non-sway rectangular portal frames. (Involving not more than three unknowns); Deflected shape of frame.

Unit-VI

(08 Hours)

Moment Distribution Method:

Analysis of continuous beams using moment distribution method-sinking and rotation at support; Analysis of sway and non-sway rectangular portal frames. (Involving not more than three unknowns)

Term-work

The term-work shall consist of total TWELVE assignments (two from each unit).

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

TEACHING SCHEME

Lectures : 04 Hrs/Week
Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks
Duration : 03 Hours
Unit Test : 20 Marks
T. W. & Or. : 50 Marks

Unit-I

(10Hours)

Introduction & Properties of Fluids:

Scope and application of fluid mechanics, Newton's law of viscosity, SI system of units, Physical properties of fluids- Density, Specific Weight, Specific Volume, Relative density, Dynamic & Kinematic Viscosity, classification of fluids, Newtonian & Non Newtonian fluids, Ideal and Real fluids Compressibility, Cohesion, Adhesion, Surface Tension, Capillarity, Vapor pressure.

Statics:

Pressure at a point, Pascal's law, Pressure density height relationship, Measurement, Hydrostatic pressure on a plane & curved surface, Centre of pressure, Pressure diagrams, Practical application related to Hydrostatic pressure and Centre of Pressure. Buoyancy, Stability of floating bodies, Metacentre and metacentric height, Submerged bodies, Relative Equilibrium, Fluid masses subjected to uniform linear acceleration and rotation about vertical axis, Free and forced vortices.

Unit-II

(08Hours)

Kinematics and Dynamics:

Kinematics: Methods of describing the motion of fluid, Velocity and acceleration of fluid particle, Types of flow- steady and unsteady, Uniform and non-uniform, Laminar and turbulent, one, two, and three dimensional flows, streamlines, path lines and streak lines, stream tubes, Equation of continuity for one dimensional flow along a stream line and for three dimensional flow in Cartesian coordinate system, Circulation and Vorticity, Rotational and Irrotational motion, Velocity potential, Stream functions and flow net, Methods of drawing flow net, Uses of flow net.

Dynamics: Forces acting on fluid masses in motion, Euler's equation of motion along a stream line and for three dimensional flow in Cartesian coordinate, Introduction of Euler's equation of motion, Bernoulli's Equation motion, Limitations, Kinetic energy correction factor, Total

energy and hydraulics grade line, Cavitation, Linear momentum equation, Momentum correction factor, Application of continuity equation-Bernoulli and momentum equation, flow measuring devices and Pitot tube, Venturimeter, Orifice Meter, Nozzle meter, Rota meter, orifices, Mouthpieces, Notches and weirs.

Unit-III

(08 Hours)

Dimensional Analysis and Model Studies:

Dimensions of physical quantities, Dimensional homogeneity, Dimensional analysis using Rayleigh's and Buckingham's π theorem, important dimensionless parameters and their significance, Model studies: Geometric, Kinematics and Dynamic similitude, Model laws, Types of models, Application of dimensional analysis and model studies to fluid flow problems.

Unit-IV

(08 Hours)

Laminar Flow:

Laminar flow in circular pipe, Laminar flow between parallel plates, Stokes law, Methods of measurement of viscosity, Flow through porous media, Darcy's law Reynolds experiment, Transition from laminar to turbulent flow,

Flow through pipes: Pipe flow problems, Energy losses in pipe flow, parallel and series pipes, pumps and turbines in pipeline, pipe network various arrangements of pipes, siphons, Hydraulic transmission through pipes, three reservoir problem.

Unit-V

(08 Hours)

Boundary layer theory:

Concept of boundary layer, Development of Boundary layer over a flat plate, Laminar and transitional boundary layer, laminar sub layer, General characteristic of boundary layer, Boundary layer thickness, Velocity distributions within boundary layer, Momentum equation for obtaining boundary layer thickness, local and mean drag Coefficient, Hydro dynamically smooth and rough boundaries, Boundary layer separation and its control.

Unit-VI

(08 Hours)

Turbulent flow:

Phenomenon of turbulence, characteristics of turbulent flow- velocity and pressure fluctuations, instantaneous velocity, Temporal mean velocity, Scale of turbulence and intensity of turbulence, mixing length hypothesis, Velocity distributions in turbulent flow for smooth and rough pipes and their integration- Darcy- Weisbach equation, Variation of friction factor for laminar flow and for smooth and rough turbulent flow, Nikuradse's experiment on artificially roughened pipes, Stanton diagram, friction factor for commercial pipe, Moody's diagram, White Colebrook's equations.

Term Work

Term work will consist of journal giving the detailed report of experiments and assignments performed.

Oral Examination

Oral examination shall be based on the above term work.

List of Practicals

Following experiments (Any Eight) and assignments (Any Two) on the above theory are to be performed

Measurement of viscosity

Study of Pressure measuring devices

Stability of floating bodies

Flow net by Electrical Analogy for flow below weir (with and without sheet pile)

Verification of Bernoulli's theorem with reference to losses of energy

Calibration of Venturimeter / Orifice meter

Calibration of Orifice / Notch

Study of Laminar flow using Reynold's apparatus / Heleshaw's apparatus

Study of Laminar and Turbulent flow through pipes

Study of Boundary layer on smooth and rough plate

a) Flow net by Graphical Method

b) Trial and error solution of three reservoir problem

c) Solution of pipe network problem by 'Hardy-Cross Method'

In addition to above experiments and assignments, it is desirable to solve problem on the following experiments

a) Study of minor losses in pipe flow

b) Study of development of boundary layer over a flat plate

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

K20212 - COMPUTER APPLICATIONS IN CIVIL ENGINEERING - II

TEACHING SCHEME

Lectures : 01 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

T.W. & Pr. : 50 Marks

Use of computers in Civil Engineering is increasing day by day, applications and development of new software's has created openings for the civil engineers in the software industry. This subject covers introduction to the basic languages C and C++.

Exercises covered under this subject should help logical development of the students through problem solving and all the syntaxes required to write the programs in this languages should be taught. Object oriented programming approach should be used for writing the program. Details of practicals are given below:

CONCEPT:

1. Numerical Problems for logical development

- a. Algorithms
- b. Flow Charts
- c. Home Assignments for logical development (Minimum. Ten Nos.)

2. Syntaxes of C ++

- a. Variables, Operators, Data Types
- b. Input, Output
- c. If, if-else, switch ... case
- d. While, do ... while, for
- e. Arrays, strings, structures
- f. Functions
- g. Classes, objects, data access specifiers.
- h. Object Oriented Programming approach of writing program.

3. Civil Engineering applications using above syntaxes

List of Practicals

Programs on Civil Engineering problems. (Minimum. Ten Nos.)

Emphasis should be given on logical development

Text Books/References

Rohert Lafore, "Object Oriented Programming in Turbo C++"

E. Balagulusamy, "Object Oriented Programming with C++"

J.S. Chitode, "Numerical Computational Techniques" (For Problems)

RULES REGARDING ATKT, CONTINUOUS ASSESSMENT AND AWARD OF CLASS

A. T. K. T.

A candidate who is granted term for B.Tech. Semester-I will be allowed to keep term for his/her B.Tech. Semester-II examination even if he/she appears and fails or does not appear at B.Tech. Semester-I examination.

A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B.Tech. Semester-IV examination even if he/she appears and fails or does not appear at B.Tech. Semester-III examination.

A candidate who is granted term for B.Tech. Semester-V will be allowed to keep term for his/her B.Tech. Semester-VI examination if he/she appear and fails or does not appear at B.Tech. Semester-V examination.

A candidate who is granted term for B.Tech. Semester-VII will be allowed to keep term for his/her B.Tech. Semester-VIII examination if he/she appears and fails or does not appear at B.Tech. Semester-VII examination.

A student shall be allowed to keep term for the B.Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B.Tch. Semester-I & II taken together.

A student shall be allowed to keep term for the B.Tech. Semester-V of respective course if he/she has no backlog of B.Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.

A student shall be allowed to keep term for the B.Tech. Semester-VII course if he/she has no backlog of B.Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

In respect of Term work at B.Tech. Semester-I & II, B.Tech. Semester- III & IV and B.Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.

For B.Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or marks but less than 66%	First Class
C	Aggregate 55% or more marks but less than 60%	Higher Second Class
D	Aggregate 50% or more marks but less than 55%	Second Class
E	Aggregate 40% or more marks but less than 50%	Pass Class

BHARATI VIDYAPEETH UNIVERSITY, Pune.

**B. Tech. (COMPUTER)
(Sem. III & IV)**

COURSE STRUCTURE & SYLLABUS

BHARATI VIDYAPEETH UNIVERSITY, PUNE

B. Tech. (COMPUTER) (Sem. III & IV)

HIGHLIGHTS

Bharati Vidyapeeth University College of Engineering (BVUCOE) is the largest Engineering College in Maharashtra with an intake of 700 students in each academic year. Imparting quality technical education from Under Graduate to Doctorate Level, BVUCOE is probably the only Engineering College in India with an accreditation from both NAAC as well as NBA. The faculty at BVUCOE boasts of highly qualified academicians, a quality that is further emphasized by the fact that 15 of them are presently pursuing their Ph.D. degree.

BVUCOE has been ranked 29th amongst the Top 50 Technical Schools of India in survey conducted by DATAQUEST-IDC. We have enjoyed a ranking in this list for the last 4 years. Research is of utmost importance in all our programs. A total of 113 research papers were published in the academic year 2007-2008.

Currently we have 12 ongoing research projects. The infrastructure of BVUCOE is state-of-the-art with 62 classrooms, 59 laboratories and a well-stocked library that currently holds 27,130 titles. The college has an international presence with MoUs signed with the North Carolina A&T State University (Greensboro, USA), University of Venice (Italy), Actel Corporation (USA). Corporate interaction is also inculcated in our programs through our association with Oracle India Ltd., Infosys Ltd. and Tata Consultancy Services.

SALIENT FEATURES

The field of engineering reflects the technological dynamism present in today's world. The department has an under-graduate programme viz. B.Tech. (Comp) and a post-graduate programme viz. M.Tech. (Comp). The department has incorporated all the latest facilities for the benefit of the students. The department has 8 well-equipped laboratories, with three servers. The latest software and hardware equipments are provided to the students. The department has specialized laboratories in Digital Signal Processing, Multimedia Techniques, Linux and Software Engineering.

The Association of Computer & Information Technology Engineering Students (ACIES) organizes different events, guest lectures for the students. The syllabi of the department are revised regularly so as to match the needs of the industry. Apart from giving thorough technical knowledge using the state-of-art technology, the students are taught communication skills and are given experience in working in groups on live projects.

MAJOR GROUPS/AREAS

Operating Systems, Multimedia, Image Processing, Computer Networks, Software Engineering, System Programming

EXPERTISE IN RESEARCH AND CONSULTANCY

The department of Computer Engineering has received fund from AICTE for Modernization of Research Laboratory "Object Oriented Modeling and Design".

ON GOING RESEARCH PROJECTS

Extended Log Structural File System For Linux Operating System, Platform Independent File Transfer, Block based Image Processing, Process Based Generic Modeling at Real Time Complex System with specific reference to Visual Modeling, DOUT - Distributed Opportunistic Unit Testing

COMPLETED PROJECTS

Visual Modeling of Real Time System, NeTailor- A Network Patch Management Solution, Voice Message Transform, Artillery Command Post Execution Software, MAFCOG 1.0 Mathematical Formula Analysis and Generator, Object Oriented Learning Environment Using ASP, Real Time Complex System, Implementation of Sniffers.

MAJOR EQUIPMENTS

Pentium -I 120/150 MHz - 25, Pentium - III 550 MHz - 10, Pentium -III 933 MHz - 68, Pentium -IV 2.46GHz - 94, Pentium - IV 1.7GHz - 10, Pentium - IV (IBM) 2.8GHz - 100.

SOFTWARES

- Operating Systems** : MS-DOS, Windows 95, Windows 98, SCO Xenix 2.1, Linux 7.0, Microsoft OS/2 Sdk Ver 1.02, Sun Solaris 7.1
- RDBMS** : Oracle 8, Oracle 8i, Oracle 9i, SQL Ver 7.0 & 8.0
- Developing Softwares** : Visual Studio 6.0, Microsoft Office-2000, Turbo C ++ For DOS 4.5, Microsoft C 6.0, Microsoft Fortran, Turbo Pascal, Microsoft COBOL, Turbo C, Visual Studio MS.Net, Developer 2000, MS Project 2003
- Web Designing Softwares** : Adobe Photoshop, PageMaker, Corel Draw
- Customized Softwares** : Payroll, Stores/Purchase, Library/Libsys, Student, Exam Section, Admission

LABORATORIES

Information Technology, Computer Graphics, Artificial Intelligence, Database Management System, Digital Signal Processing, Linux, Software Engineering, Microprocessor

STRUCTURE & EXAMINATION PATTERN

B. Tech. - Computer Engineering

Semester III									Total Duration : 32Hrs/Week	
									Total Marks : 750	
Subject Code	Subject	Teaching Scheme (Hrs/Week)			Examination Scheme (Marks)				Total (Marks)

RULES FOR CONDUCTING TESTS

Mode of the test

In each semester for each subject three tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.

Each test shall carry 20 marks.

University examination pattern has given weightage of 20 marks for the tests.

To calculate these marks following procedure is followed:

- i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
- ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
- iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
- iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
- v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; These marks will be final marks obtained by the student. No scaling up is permitted.
- vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.

Paper Pattern for Tests

- i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

- ii) There will not be any sub-questions.

For granting the term it is mandatory to appear for all the three tests conducted in each semester.

Roll numbers allotted to the students shall be the examination numbers for the tests.

SEMESTER - III

TEACHING SCHEME

Lectures : 04 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks
Duration : 03 Hours
Unit Test : 20 Marks

Unit-I

(08 Hours)

Differential Equations:

Solution Of Linear Differential Equation Of Nth Order With Constant Coefficients, Method Of Variation Of Parameters, Cauchy's and Legendre's Linear Equation, Simultaneous Linear Differential Equations, Total Differential Equations, Symmetrical Simultaneous Differential Equations. Applications to Electrical Circuits.

Unit-II

(09 Hours)

Complex Variables:

Function Of Complex Variables, Analytic Function, Cauchy-Riemann Equations. Conformal Mapping, Bilinear Transformation, Residue theorem, Cauchy's Integral Theorem and Cauchy's Integral Formula.

Unit-III

(09 Hours)

Transforms:

Fourier transforms: Fourier Integral Theorem, Fourier Sine And Cosine Integrals. Fourier Transform, Fourier Sine And Cosine Transforms, Inverse Fourier Transforms, Discrete Fourier Transform And Its Applications.

Z - Transform: Definition, Properties, Inverse Z- Transform. Applications to difference equation, Relationship between Z- Transform and Fourier Transform.

Unit-IV

(09 Hours)

Laplace Transform:

Definition, Properties and Theorems, Inverse Laplace Transform, Methods of Finding Inverse Laplace Transforms, Laplace Transform of Unit-step Function. Dirac-Delta Functions, Periodic Functions, Ramp Functions, Error Function, First order Bessel's function, $Si(t)$, $Ci(t)$, $Ei(t)$.

Applications to Solution of Linear Differential Equations.

Unit-V

(09 Hours)

Vector Differentiation:

Vector Differentiation, Gradient, Divergence and Curl, Directional Derivative, Vector Identities, Irrotational and Solenoidal Vector Fields.

Unit-VI

(09 Hours)

Vector Integration:

Line Integral, Surface Integral and Volume integral, Workdone, Gauss-Divergence Theorem, Stoke's theorem and Green's Lemma, Applications to Electromagnetic fields.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K30202: ALGORITHMS AND DATA STRUCTURES

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit -I

(06 Hours)

Introduction To Data Structures:

Concept Of Data, Data types, Data Object, Data Structure, Abstract Data Type and Realization of ADT in C. (Class Concept Only).

Unit-II

(10 Hours)

Stacks:

Fundamental Concept of Stacks and Queues, ADT of Stack and Queues. Data Structure, Basic Operations on Stacks and Queues, Disadvantages and Applications, Implementation of Stacks, Linear Queue, Circular Queue using Sequential Organization.

Application of Stack: Polish Notation (Infix, Postfix, Prefix), Evaluation of Prefix and Postfix Expression, Inter Conversion of Infix, Prefix and Postfix Expression. Use of Stack by Function Call and Recursive Function Call, Parenthesis Matching, Towers of Hanoi, Application Of Queues.

(08 Hours)

Unit-III

Linear Data Structures Using Sequential Organization:

Concept of Sequential Organization, Concept of Linear and Non Linear Data Structures, Arrays as ADT, Storage Representations, Concept of Ordered List and Polynomial Representation Using Arrays.

Representation of Sparse Matrix Using Arrays And Using Linked list, Algorithm for Sparse Matrix Addition, Transpose, Time And Space Complexity Analysis for Simple and Fast Transpose for Sparse Matrix.

(08 Hours)

Unit-IV

Linear Data Structures Using Linked Organization:

Concept of Linked Organization, Single Linked List, Double Linked List, Circular Linked List, Insertion, Deletion and Traversal on Above Data

Structures. Representation and Manipulations of Polynomials using Linked Lists. Representation of Polynomial Using Generalized Linked List.

(10 Hours)

Unit-V

Algorithm Analysis: Definition and Characteristics of an Algorithm, Running Time of a Program (Frequency Count), Time and Space Complexity, Big O Notation, Graphical Representation of Time Complexities.

Searching: Algorithmic Notation, Importance of Searching, Sequential Search, Efficiency Of Sequential Searching, Searching an Ordered Table, Indexed Sequential Search Binary Search, Analysis for the Algorithm.

(06 Hours)

Unit-VI

Sorting:

Bubble Sort, Selection Sort, Quick Sort, Heap Sort, Shell Sort, Insertion Sort, Merge Sort, Radix Sort, Analysis for Best, Worst Cases And Average Case.

PRACTICAL ASSIGNMENTS SCHEME

ALGORITHMS AND DATA STRUCTURES

Concerned staff member is directed to frame 2 To 3 assignments on each Unit

Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K50203: DIGITAL LOGIC TECHNIQUES

TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit -I

(09 Hours)

Number Systems, Algebra Of Logical Variables:

Number Systems: Number Systems, Binary, Octal, Hexadecimal, Conversion Methods, Binary Addition and Subtraction, 1's & 2's Complement Method.

Algebra Of Logical Variables: Review of Boolean Algebraic Theorems, Realization of Boolean Functions and Sufficiency of NAND/NOR for Implementation Standard SOP and POS Forms of Logical Functions, Minimization Techniques K-MAP and Quine McCluskey Method.

Unit -II

(09 Hours)

Logic Families and Design Of Combinational Logic Circuits:

Logic Families: Logic Families TTL NAND Gate, Specifications, Tristate TTL, Bus Organized Computer Principal, ECL, MOS, CMOS Families And their Interfacing In Details.

Combinational Logic Circuits: Half adders/subtractors. Full adder/subtractor, Unsigned and Signed Number Representation, N Bit Parallel Adder, subtractor With Look Ahead Carry, BCD Adder, Subtractor Using 7483, 74181 ALU, Code Converter, Binary, BCD, EXCESS 3, Gray, Parity Generator, Checker, MUX DEMUX Encoders, Implementation of Boolean Functions Using MUX, DEMUX BCD to 7 Segment Decoder Driver.

Unit-III

(06 Hours)

Flip Flops, Registers, Counters:

One Bit Latch Using NOR/NAND, S-R Flip-Flop, Clocked S-R FF, J-K FF Race Around Condition M/S J-K FF, D FF, Shift Registers SISO, SIPO, PIPO, PISO, Applications of Shift Registers, Ripple Counters, Synchronous Counter ICS like 7490, 7492, 74161, 74191, Functional Block Diagram of Frequency Counter.

Unit-IV

(08 Hours)

Memories:

Random Access Memory, TTL RAM Cell, Parameters, Read/Write Cycles, ROM Types, EPROM Structure and Programming, MOS Static RAM Cell, Dynamic Cell, Refreshing, Memory Cycles.

Unit-V

(08 Hours)

Sequential Circuits:

Block Diagram, State Variables and Excitation Variables, State Diagram Representation, Moore and Mealy Circuits, Design of Sequence Generator And Sequence Detector, Elimination of Redundant States, Avoiding Lockouts, Fundamental Mode Sequential Circuits Elimination of Critical Races, Hazards, Pulse Mode Sequential Circuits.

Unit-VI

(09 Hours)

Algorithmic State Machines: ASM Charts Notations, Design of Simple Controller, Multiplexed Controller Method, RTL Notations, and Implementation.

Programmable Logic Devices: Programmable Logic Elements And Array Logic, Implementation of Combinational and Sequential Logic Design using PLA, PAL, Introduction to FPGA.

List of Practicals

Implementation of Boolean functions using logic gates.

Study of characteristics of typical 74 TTL / 74 CMOS Family like: fan in, fan out standard load, noise margin & interfacing with other families.

Half, Full Adder and subtractor using gates and IC's.

Code conversion using digital IC's.

2 bit digital computer and ALU verification.

Function implementation using Multiplexer and Demultiplexer.

Sequence generator using MSJK flip flop IC's.

Study of counters: Ripple, Synchronous, Ring, Johnson, Up-down counter and its application.

Study of shift registers: Shift left, Shift right, parallel loading and Pulse Train generator.

BCD Adder / Subtractor with Decoder driver and 7 segment display.

Study of typical RAM IC.

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit -I

(08 Hours)

Fundamental Structures And Basic Logic:

Sets, Venn Diagram, Completeness, Cartesian Product, Power Sets, Pigeonhole Principle, Cardinality and Count-ability. Propositional Logic, Logical Connectives, Truth Tables, Normal Forms, Validity, Predicate Logic, Limitations of Predicate Logic, Universal and Existential Quantification, MODUS Ponens and Modus Tollens.

Unit -II

(08 Hours)

Functions and Relations:

Subjective, Injective, Bijective and Inverse Functions, Composition of Function. Reflexivity, Symmetry, Transitivity, and Equivalence Relations, Poset & Recurrence Relation.

Unit-III

(08 Hours)

Proof Techniques:

Notions of implication, Converse, Inverse, Contra-positive, Negation and Contradiction, Structure of Formal Proofs, Directs Proofs, Proof by Counter Example, Proof By Contradiction, Mathematical Induction, Strong Induction, Recursive Mathematical definitions, Well orderings.

Unit-IV

(09 Hours)

Graph Theory:

Basic Terminology, Multi Graphs and Weighted Graphs, Paths and Circuits, Shortest Path Problems, Euler and Hamiltonian Paths, Representation of Graph, Factors of Graph, Isomorphic Graphs, Planar Graphs, Directed graphs.

Unit-V

(06 Hours)

Trees :

Trees, Rooted Trees, Path Length in Rooted Tree, Binary Search Trees, Spanning Trees and Cut set, Minimal Spanning Trees, Kruskal's and Prim's Algorithms for Minimal Spanning Tree.

Unit-VI

(06 Hours)

Algebraic Systems:

Algebraic Systems, Groups, Semi Group, Monoid, Subgroup , Isomorphism and Homomorphism, Rings and Fields, Lattices, Boolean lattices and Boolean Algebra, Group Codes.

K30205: INTERNET PROGRAMMING

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit -I

(09 Hours)

Introduction:

Computer Networks, ARPANET, History of Internet, WWW, Cyberspace, Working of Internet. Internet Technologies: HTML, DHTML, Java Script, PHP, Perl, My SQL, Linux and Internet: Role of Linux on Internet, Role as a server on Internet.

Unit -II

(08 Hours)

HTML:

basics,

Introduction, Anatomy of HTML document, Web typography, Text Rules, Images and Multimedia: Horizontal rule, Using image in document, Background audio, animAted text, Links, Frames, Tables.

Unit-III

(09 Hours)

DHTML:

Dynamic document, Netscape layout extensions. Basic DHTML page building.

Unit-IV

(08 Hours)

Java Script:

History, Introduction, role on Internet, String handling, Numbers and dates, Arrays and objects, Variables and functions, Browser feature detection, Dynamic forms.

Unit-V

(09 Hours)

Web Databases:

Introduction, Technologies, different databases available and their use. MySQL: Introduction, Installation and configuration, database system concept, SQL overview, Introduction to Apache web server.

Unit-VI

(09 Hours)

PHP:

History, Introduction, Role on Internet, basic rules of PHP program, Working with Text and Numbers, Making Decisions, Working with arrays, Functions, Web forms.

NOTE:

Staff member should conduct extra practical sessions on above units.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 02 Hrs/week
Practical : 02 Hrs/week
Tutorials : 02 Hrs/week

EXAMINATION SCHEME

Duration : 03 Hours
T. W. & Or. : 50 Marks
T. W. & Pr. : 50 Marks

Unit -I

(06 Hours)

Functions:

Need Function Definition, Prototype, Function, Parameter, Recursion, Scope of in the Function, Library Functions, Passing Array to Function, Pointer to Function
Pointers - Fundaments, Declaration, Advantage, Pointers to Different Data Types, Array And Pointers, Array to Pointers, Operations on Pointers.

Unit -II

(08 Hours)

Structure:

Definition, Declaration, Array to Structures, Structures Within Structures, Structures, and Function, Structures and Pointers, self Referential Structures User Defined data types - typedef Union - Need definition, Operation, Bit Fields, Difference Between Structure and Union. File Handling - Structure of file, File types, File Operations Macros - Substitution, File Inclusion, Compiler, Controlled Directives.

Unit-III

(10 Hours)

Introduction to Object Oriented Programming :

Need of Object Oriented Programming: A look at Procedure Oriented Programming, Object Oriented Programming Paradigm Basic Concept of OOP - Objects, classes, Data Abstraction, Encapsulation, Inheritance, Polymorphism, Data hiding, and Message Passing. Benefits of OOP, Application of OOP. Beginning with C++: Introduction to C++, Structure of C++ Program, A simple C++ program, comments, output using Cout, input using Cin, declaration of variables, Reference variables, Token, Keywords, Identifier, Constant, Basic data types, Derived data types. Control structures - Control Structures: If statement, switch statement, Do while statement, while statement and for statement.

Unit-IV

(10 Hours)

Java Script:

Classes and objects: Specifying a Class, Defining Member function, A C++ program with class, Nesting of member function, Private member function, Array within a class, memory allocation for objects, Static Data member, Static member function, Array of Objects, Objects as function argument, Friend function, Returning objects.

Constructor and destructor : Constructor Parameterized Constructor, Multiple Constructor in a class, and Constructor with default argument, Dynamic Initialization of Objects, Copy Constructor, Destructor

Unit-V

(06 Hours)

Functions and Operator overloading :

Function in C++: The main function, Function prototype, Call by value, Call by reference, Return by reference, Inline Function, Default Argument, Function Overloading, Operator - Operator in C++, Scope Resolution Operator, Operator Precedence Operator Overloading - Defining Operator overloading, Overloading Unary and Binary operator, Overloading binary operator using friend, Rules for operator overloading, Type conversion Inheritance - Virtual function and Polymorphism, Inheritance: Introduction, Defining Derived classes, Types of inheritance, Virtual base classes, Abstract classes, Constructor in derived class.

Pointer, Virtual Function and Polymorphism: Introduction, Pointer to Object, this pointer, Pointer to Derived classes, Virtual function.

Unit-VI

(10 Hours)

Managing Console I/O operation and File Operation :

Managing Console I/O operation: C++ Stream, C++ Stream Classes, Unformatted I/O Operation, Formatted Console I/O operation, Managing Output with manipulators

Working with files: Classes for File Stream Operations, Opening and Closing a File, Detecting End Of File ,More about Open() : File Modes, File Pointer and their manipulator, Sequential Input and Output Operations, Updating a

File: Random Access. Error handling during file operation,

Template: Function template, Class Template

List of Practicals

PROGRAMMING LAB - I

1. Term work should include minimum 12 experiments from the above Units.
2. The programs can be developed with Integrated Development Environment (IDE) like Borland C++ or any suitable Compiler with emphasis on step by step development and debugging.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

SEMESTER - IV

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit -I

(09 Hours)

Management and Organization:

Conceptual difference between terms ; Management, Administration and Organization, Evolution of Management Science up to Modern times, Contributions of Taylor, Fayol, Gilbreth, Management as an Art, Science, Profession. Functions and Principles of Management, Levels of Management. Factors deciding selection of type of business organization, sole proprietorship, partnership, Joint stock company, Cooperative enterprise, Public sector undertakings (PSU's). Organization structures - Line, Functional, Line and staff, Committee, Matrix and Project.

Unit -II

(08 Hours)

Plant Location and Economics:

Factors governing plant location, Process of plant locations, Plant layouts - Types, Principles of good plant layout, Cellular. Basic economic concepts- Human wants, economic goods, utility, Value, price, cost, profit revenue. Laws of demand and supply, exceptions to these laws, Concept of elasticity of demand, Scales of production, National and International Trade.

Unit-III

(09 Hours)

Materials Management and Quality Concepts:

Inventory, Types of inventory, Inventory Control objectives and function, Selective Inventory Control techniques - Costs related to Inventory, EOQ concept, Purchase Procedure (Cycle), Quality related concepts; Inspection, Quality Control, Quality Assurance (ISO 9000), Total Quality management (TQM), Quality Circles.

Unit-IV

(09 Hours)

Financial Management:

Definition, Scope and Objective of financial management. Capital, Types of capital, Sources of industrial finance, Elements of cost, Types of overheads. Financial Accounting – definitions, Scope, Objectives. Breakeven analysis, Capital Budgeting Methods (Pay Back, Accounting rate of return (NPV). Types of budget, Financial statements, purpose, Interpretation. Credit Rating of software projects.

Unit-V

(09 Hours)

Marketing Management:

Evolution, Marketing and selling concepts, Definitions, Concept of Marketing Mix, Market Segmentation – Objectives, Bases, Benefits, Distribution channels, Advertising, Sales promotion, Sales forecasting. Marketing research, Service sector – growth, types of services, service tax, Service mix. Recent Trends in Retailing, Emerging changes in global marketing.

Unit-VI

(08 Hours)

Management Information System (MIS) and Research Methodology:

Meaning, definition, objectives, benefits, flow of Information in the organization with respect to MIS applications in different functional areas of management (Manufacturing, finance, marketing), Research Methodology – Definitions and types of Research – Research Process (Problem formulation, Literature survey, Research design, Sample design and techniques, Types of scales, Data collection, Data analysis and Interpretation-Findings/Suggestions, Preparation of report), E-Governance, E-Business, Patents, Copyright, Trade Marks. .

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

123

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit -I

(08 Hours)

Introduction:

Data, Signal, Information, Sampling Theorem, Natural and Flat-top Sampling. Pulse Amplitude Modulation. Time Division Multiplexing, Pulse Transmission Over Band Limited Channel, Cross talk, and Guard Time Inter Symbol Interference. Source Coding Techniques in Digital Communication: Pulse Code Modulation Encoder/Decoder, Multiple Channels frame Alignment for PCM-TDM, Simplex, duplex.

Unit -II

(08 Hours)

Amplitude and Angle Modulation:

Amplitude Modulation & Its Variations like DSB-FC, SSB-SC, Frequency Modulation, Phase Modulation, Principle of Super Heterodyne Radio Receiver (Block diagrams only). Application in brief for Above Modulation Techniques e.g. radio, T.V., Mobile Phone. Pulse Modulation: Delta modulation. Slope Overload and Adaptive Delta Modulation, Applications Of Above Source Coding Techniques as Data Compression Tools e.g. Linear Predictive Coders, Voice Coders, DMA.

Unit-III

(08 Hours)

Communication:

Measure of Information, Entropy, Information Rate, Shannon's Theorems on Channel Capacity, Codes For Error Detection And Correction such as Parity, Vertical Redundancy Check, Longitudinal Redundancy Check, Checksum, Block Check Character, Block codes - Hamming Code, Cyclic Redundancy Check Codes. Line Codes Such As Bipolar, Uni-polar, RZ, NRZ, Manchester, AMI and Handshaking Techniques like FEC, ARQ, Channel Throughput and Efficiency Calculations.

Unit-IV

(10 Hours)

Modems:

Digital Continuous Wave Modulation Techniques For Modem Such As ASK, PSK, FSK, Block Diagram of Modem And Interface Control For Typical Modem, Modem Standards. Network Protocols: International Standards Organization - Open System Interconnection (ISO-OSI) Architecture, Seven layer models, Physical layer protocol, RS232, RS-422, RS-449, 4 to 20 mA Current interfaces. Data link level Protocol HDLC, SDLC, X-25, LAN, WAN, ISDN. Telephone Network: Wire telephony, Subscriber loop, Trunk circuits. Four wire terminating set. Public switch telephone networks, Frame Relay.

Unit-V

(06 Hours)

Satellite Communication:

Orbital aspects. Geostationary satellite, Station keeping, Frequency plans and polarization, Transponders, Multiple access methods. Fiber optic communication: Principle of light transmission in Fiber, types and modes of fiber, losses in Fiber. Dispersion, light sources and detectors, fiber optic communication link, Physical Layer of Wireless Media.

Unit-VI

(08 Hours)

Cellular Mobile Communication System:

Cell structure, Frequency reuse, Roaming, transmitter, Receiver, Special services provided by cellular phone, IEEE 802.11, WI-FI, Bluetooth, GSM, GPRS.

Text Books / References

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit -I

(08 Hours)

Non Linear Data Structures:

Trees and Binary trees – Concept and Terminology. Properties, Height of Binary Trees, Balance, Complete Binary Trees, Data structures for Binary Trees. Binary Tree Traversal - Depth-First Traversals, Preorder Traversal, Inorder Traversal, Postorder Traversal, Breadth First Traversal. Algorithm for Tree Traversals (Recursive and Non Recursive). General Trees- Conversion of General Tree to Binary Tree. Insertion into General Trees FIFO Insertion, LIFO Insertion. General Tree Deletion, Expression Tree.

Unit -II

(08 Hours)

Threaded Binary Trees:

Concept and Terminology, Insertion and deletion of nodes in Inorder threaded binary tree. Preorder, Inorder and Post order traversals of Inorder Threaded Binary tree, Optional Binary Search Tree and AVL tree, Red Black Tree.

AVL Trees: AVL Balance Factor, Balancing Trees, AVL Node Structure, AVL Insert Algorithm, AVL Delete Algorithm, Delete Right Balance, Adjusting the Balance Factors.

AVL Abstract Data Types: Create AVL Tree, Insert, Delete, Tree Data Processing, AVL Utility Functions- Empty Tree, Full Tree and Count.

Unit-III

(06 Hours)

Graphs:

Concept and Terminology, Operations, Graph Storage structures- adjacency matrix, Adjacency list, Graph Algorithms - Depth First Traversal and Breadth First Traversal algorithms. Minimum Spanning Tree, Dijkstra's Algorithm for Shortest path, Prim's Algorithm, Kruskal's Algorithm.

Unit-IV

(06 Hours)

Symbol Tables :

Notion of symbol table, Binary search trees, static and dynamic trees, height balanced weight balanced binary trees, hashing techniques
Indexed Structures, M-way search trees, B-Trees searching, Overview of B*- trees and B+ Trees.

Unit-V

(08 Hours)

File Structures:

Concept of record, File Operations- Create, Update and delete, File system organization- Sequential, Relative, Indexed and Random access mode, Sequential Organization and Access, Relative File Organization, Addressing Techniques. Direct Mapping Techniques, Concept of Index.

Unit-VI

(08 Hours)

Introduction to Dynamic programming:

The General Method, Multistage Graphs, All Pair Shortest Path, Single Source Shortest Path- General Weights, Optimal Binary Search Trees, 0/1- Knapsack, The Traveling Salesperson Problem, Divide & Conquer problem, Backtracking, Graph coloring problem

List of Practicals

ADVANCED DATA STRUCTURES

Concerned staff member is directed to frame 2 To 3 assignments on each Unit

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K30210: DIGITAL SIGNAL PROCESSING TECHNOLOGY

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit -I

(12 Hours)

Signals and Systems:

Basic concepts of signals as array of values, standard signals, linearity, shift invariance, stability and causality, Linear Shift Invariant (LSI) systems, I/O mapping and difference equations. Linear convolution, properties of linear convolution, computation of linear convolution, A/D conversion process as sampling, quantization, encoding, sampling theorem and anti-aliasing filter, Circular convolution, Properties of Circular convolution, Computation of Circular convolution

Unit -II

(12 Hours)

Analysis of Signals:

Fourier transform, Fourier transform of standard signals, properties of Fourier transform, inverse Fourier transform, computation of Fourier transform. Discrete Fourier Transform (DFT), DFT of standard signals, properties of DFT, computation of DFT, Fast Fourier Transform (FFT) using Goertzel, Decimation In Time (DIT) and Decimation In Frequency (DIF) computation of Goertzel, DIT/DIF FFTs, Inverse DFT and computation of IDFT using the FFT algorithms. Magnitude phase transfer functions using Fourier transform, computation for transfer function.

Unit-III

(08 Hours)

Analysis of LSI Systems:

Region Of Convergence (ROC) using pole-zero plot and stability analysis, Z transform, Z transforms of standard signals, properties of Z transform, inverse Z transform, computation of Z transform. System functions from Z transform and pole-zero plots, computation of poles and zeros. Geometric constructs for transfer function.

Unit-IV

(08 Hours)

Digital Filters:

Implementation of general difference equation, cascade and parallel forms of computation. Finite Impulse Response (FIR) and Infinite Impulse Response (IIR: filters from difference equations, FIR filter design using inverse Fourier transform and Windowing Gibb's phenomenon, computation of windows, IIR filter design using impulse invariance and bilinear transform computation of system function for given design parameters

Unit-V

(08 Hours)

DSP Processors:

DSP processors and their desirable features ADSP-21 XX and ADSP-210XX series of DSI processors and their architectural features implementing filters and FFTs on DSP processors

Unit-VI

(04 Hours)

Applications of DSP:

A brief overview of applications of DSP in speech and image processing.

List of Practical

Check the performance of a general difference equation LSI system using suitable software package. Write a C function to implement a general difference equation based array mapping and compare the results.

Write C programs to generate samples of Cosine, Sine, and Square, Saw Tooth, exponential and random noise signals at specified sampling frequencies and compare the results with that of a standard software package

Check the performance of a Linear Convolution operation using suitable software package. Write a C function to implement the linear convolution operation and compare the results

Write a C function to compute the Fourier transform of a sequence at a given frequency and using the function, compute the transfer function of a few LSI systems

Write a C function to compute the Z transform of a sequence at a given value of Z and using the function, compute the system function of a few LSI systems at

points on the unit circle and X- Y axes.

Write a C program to accept the coefficients of a difference equation and plot the corresponding poles and zeros against unit circle and compare the results with that of a standard software package.

Write a C program to accept the coefficients of a difference equation generate the magnitude and the phase transfer function plots for the same and compare the results with that of a standard software package.

Write a C program to accept the pole-zero locations for LSI system and convert the same to the coefficients of a difference equation and compare the results with that of a standard software package.

Write a C program to implement a notch band-pass filter at a given frequency using a zero-pole-zero combination.

Write an assembly language routine on a DSP - Processor simulator and test it on a kit with ADC and DAC to perform AD-DA looping, AD-DA looping with inversion & AD-DA looping with half wave rectification.

Write an assembly language routine on an DSP-Processor simulator and test it on a kit with ADC and DAC to perform difference equation implementation with given coefficients. Compare your results with the standard software with the kit.

Write a C program to design low-pass, high-pass FIR filters with given cut-off frequency, given no. Of coefficients and given smoothing window. After generating the filter coefficients use the earlier difference equation function to check the response of the filter at different frequencies.

Write a C program to design Butterworth filters of given order and cut-off frequency using the bilinear transform method. Compare your results with the standard software package.

Write an assembly language routine to implement Goertzel algorithm for DFT at a given k on a DSP-Processor simulator and test it on a kit with ADC and DAC to perform difference equation implementation with given coefficients. Compare your results with the standard software with the kit.

Write a C function to implement DIT FFT of a given length. Compare test it on a kit with ADC and DAC so that the kit may be used as a spectrum analyser.

To implement a harmonic distortion analyser on the DSP Processor kit and test

the result for sinusoidal, square and saw tooth inputs.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K30211: TECHNIQUES OF MICROPROCESSOR PROGRAMING

TEACHING SCHEME

Lectures : 04Hrs/week

Practical : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit -I

Introduction To Microprocessor:

Introduction to 16 bit processor- 8086/8088 architecture, minimum and maximum mode configurations, supporting chips 8284, 8286, 8288, Addressing Modes of 8086, Segmentation in 8086.

Unit -II

Programmers Model:

Instruction encoding format, Instruction set, Addressing modes, Assembler directives, 8086 assembly language programming, String operations, file I/o processing, Far & near procedures, Macros, timing & delay routines.

Unit-III

8086 Interrupt Structure:

Interrupt Service Routine, Interrupt Vector Table (IVT) - location of IVT in the memory, contents of IVT, Hardware interrupts and Software interrupts - INTR, NMI and INT n. Interrupt response, Execution of an ISR, priority of 8086 interrupts. 8259A priority interrupt controller.

Unit-IV

I/O Interface:

Serial communication interface Asynchronous & Synchronous communication, Physical communication standards, RS 232, 8251A PCI, Parallel communication, 8255A PPI, interfacing and programming, 4x4 Key matrix interfacing, Seven Segment display interfacing .8257 /8237 DMA Controller. 8253/8254 Programmable Timer.

Unit-V

Multiprocessor Configurations:

Queue status & LOCK facilities, 8086/8088 based multiprocessing systems, Co-processor configurations, closely & loosely coupled configuration, Microcomputer networks, 8087 NDP coprocessor, Processor Architecture, 8089 I/O processor, IOP architecture, Communication between IOP & CPU.

Unit-VI

DOS:

Internals of DOS, DOS loading ,DOS Memory map , Internal & external commands ,command interpreter POST Sequence ,PSP Structure,.Exe & com file structures and conversion ,use of BIOS and DOS calls. INT 10H calls, DOS Calls, INT 21H calls. Difference between DOS & BIOS, TSRS: Types, structures, Details of TSR Types, Structures, writing TSRS in Assembly language.

List of Practicals

Write 8086 Assembly language program (ALP) to add array of N numbers stored in the memory.

Write 8086 ALP to perform non-overlapped and overlapped block transfer.

Write 8086 ALP to find and count negative numbers from the array of signed numbers stored in memory.

Program to check whether the entered password is correct or not.

Write 8086 ALP for the following operations on the string entered by the user.

Calculate Length of the string

Reverse the string

Check whether the string is palindrome or not.

Write 8086 ALP to perform string manipulation. The strings to be accepted from the user is to be stored in code segment Module_1 and write FAR PROCEDURES in code segment Module_2 for following operations on the string:

Concatenation of two strings

Compare two strings

Number of occurrences of a sub-string in the given string

Find number of words, characters, number of lines and number of capital letters from the given text in the data segment

Note: Use PUBLIC and EXTERN directive. Create .OBJ files of both the modules and link them to create an EXE file.

Program for 32 bit hex multiplication.

Write a program to arrange given set of numbers in Ascending/Descending order.

Write assembly language program for BCD to Hex conversion.

Write assembly language program for computing factorial of a number between 0 to 9.

Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 02 Hrs/week
Practical : 02 Hrs/week
Tutorial : 02 Hrs/week

EXAMINATION SCHEME

Duration : 03 Hours
T. W. & Or. : 50 Marks
T. W. & Pr. : 50 Marks

Unit -I

An Introduction to Java:

History, Features of Java language, Object oriented features of Java, Benefits of using OOP, Applications of OOP, Virtual Machine and Java Programming Environment, Fundamental Programming Structures in Java. Java and Internet, Hardware and Software requirement, JDK, JRE, JVM Architecture, Byte Code, Byte Code Execution.

Unit -II

Constant, Variables, Data types: Declaration of variable, Scope of variable, Symbolic constant, Type Casting Operators and Expressions: Arithmetic, Relational, Logical, Assignment, Increment, Decrement, Conditional, Bitwise, Special operator, Dot.

Operator Expressions: Arithmetic, Evaluation of expressions, Type conversion in expressions.

Unit-III

Decision making, branching, looping:

Branching: Introduction, If statement, If...Else statement, Nesting of If...Else statement, The Else If ladder, The Switch statement, The ? : operator. Looping: The while statement, The do statement, The for statement, Jumps in Loop, Labeled Loop.

Unit-IV

Classes, Objects and Methods:

Introduction, Defining a Class, Methods, Objects, Accessing class members, Constructors, Methods overloading, Static members, Nesting of methods, Inheritance: Extending a class, Defining a subclass, Multilevel and hierarchical Inheritance. Overriding methods, Final variables, methods, Final Classes, Abstract methods and classes.

Visibility and control.

Unit-V

Arrays, Strings and Vectors:

One dimensional arrays, Two-dimensional arrays, Strings: Strings arrays, String methods. Vectors, Wrapper classes.

Unit-VI

Interfaces:

Introduction, Defining interfaces, Extending Interfaces, Implementing Interfaces, Accessing interface available.

List of Practicals

PROGRAMMING LABORATORY - II

Concern Staff Should Frame 2-3 Assignments on Each Unit.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

RULES REGARDING ATKT, CONTINUOUS ASSESSMENT AND AWARD OF CLASS

A. T. K. T.

A candidate who is granted term for B.Tech. Semester-I will be allowed to keep term for his/her B.Tech. Semester-II examination even if he/she appears and fails or does not appear at B.Tech. Semester-I examination.

A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B.Tech. Semester-IV examination even if he/she appears and fails or does not appear at B.Tech. Semester-III examination.

A candidate who is granted term for B.Tech. Semester-V will be allowed to keep term for his/her B.Tech. Semester-VI examination if he/she appear and fails or does not appear at B.Tech. Semester-V examination.

A candidate who is granted term for B.Tech. Semester-VII will be allowed to keep term for his/her B.Tech. Semester-VIII examination if he/she appears and fails or does not appear at B.Tech. Semester-VII examination.

A student shall be allowed to keep term for the B.Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B.Tch. Semester-I & II taken together.

A student shall be allowed to keep term for the B.Tech. Semester-V of respective course if he/she has no backlog of B.Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.

A student shall be allowed to keep term for the B.Tech. Semester-VII course if he/she has no backlog of B.Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

In respect of Term work at B.Tech. Semester-I & II, B.Tech. Semester- III & IV and B.Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.

For B.Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or marks but less than 66%	First Class
C	Aggregate 55% or more marks but less than 60%	Higher Second Class
D	Aggregate 50% or more marks but less than 55%	Second Class
E	Aggregate 40% or more marks but less than 50%	Pass Class

FIELD WORK

CLASS WORK

COURSE STRUCTURE & SYLLABUS

BHARATI VIDYAPEETH UNIVERSITY, PUNE

B. Tech. (ELECTRICAL) (Sem. III & IV)

HIGHLIGHTS

Bharati Vidyapeeth University College of Engineering (BVUCOE) is the largest Engineering College in Maharashtra with an intake of 700 students in each academic year. Imparting quality technical education from Under Graduate to Doctorate Level, BVUCOE is probably the only Engineering College in India with an accreditation from both NAAC as well as NBA. The faculty at BVUCOE boasts of highly qualified academicians, a quality that is further emphasized by the fact that 15 of them are presently pursuing their Ph.D. degree.

BVUCOE has been ranked 29th amongst the Top 50 Technical Schools of India in survey conducted by DATAQUEST-IDC. We have enjoyed a ranking in this list for the last 4 years. Research is of utmost importance in all our programs. A total of 113 research papers were published in the academic year 2007-2008.

Currently we have 12 ongoing research projects. The infrastructure of BVUCOE is state-of-the-art with 62 classrooms, 59 laboratories and a well-stocked library that currently holds 27,130 titles. The college has an international presence with MoUs signed with the North Carolina A&T State University (Greensboro, USA), University of Venice (Italy), Actel Corporation (USA). Corporate interaction is also inculcated in our programs through our association with Oracle India Ltd., Infosys Ltd. and Tata Consultancy Services.

SALIENT FEATURES

Electrical Branch and the Electrical Engineering Department was established in the year 1987 with the permission of AICTE New Delhi with an intake capacity of 60 students. The college and the course were affiliated to the University of Pune. The University Grants Commission and the Ministry of Human Resource Development, Govt. of India awarded the Deemed University status to the Institution and the Department in the year 2000.

The specious infrastructure, well equipped laboratories, meritorious students and academically qualified and enthusiastic faculty being the salient features of the Department. Electrical Department runs U.G., P.G. & Ph.D. courses and imparts education of very high standard and has created its own impression in the society. The students are admitted to B.E. & M.E. course through Common Entrance Examination conducted on All India Basis.

More than 900 students have acquired B.E. (Electrical) degree and most of them have attained high positions in the organizations of repute. Some students continued their studies abroad and some have their own business. This shows the versatility of the knowledge they acquired in the department.

The department, apart from routine academic Curriculum takes keen interest in several other academic activities like conducting seminars, workshops, conferences, expert lectures etc. and updates the practical aspects through industry -institute interaction. The department maintains good culture and discipline by having close association with each student through 'Teacher Guardian Scheme'. One of the main achievements of the department is that in last 3 years BE Electrical students were placed 100 % in top ranking companies in India and abroad.

Infra structure of the Department

The total space available is 785 sq. mts. and has Four class rooms, and following **Laboratories:**

Electrical Machines Labs [A &B], Electrical Measurements and Instrumentation Lab, Switch gear protection and HV Lab, Network Analysis and Microprocessor Lab, Industrial Drives and Control and Basic Electrical Lab, Computer and Software Center / Lab, Power System Lab, Control System Lab

DEPARTMENTAL LIBRARY

The Departmental Library, organized by ASEE, is having good number of titles of Text Books, Reference books. Technical Journals U G and P G Seminar and Dissertation Reports, Audio Video CDs on Technical Topics.

MAJOR GROUPS/AREAS IN THE DEPARTMENT

Electrical Power System, SCADA and Automation, Computer Applications in Power Systems, Electrical Control Systems, Electrical Machines, Electrical Drives and Control, Electrical Measurements, High Voltage Engineering, Microprocessors and controllers

EXPERTISE IN RESEARCH AND CONSULTANCY

The department is actively engaged in number of research projects, which are sponsored, by A.I.C.T.E., U.G.C. & other funding agencies.

MAJOR EQUIPMENTS

Synchronous Induction Motor, Linear Induction Motor, Microprocessor Kits, Relay Testing Kit, HV transformer with Sphere gap arrangement, Alternator Protection scheme, Switchgear Testing Kits

SOFTWARES

PSCAD, ETAP, Electro-2D/3D, Magneto-2D/3D, ORSTEAD, MATLAB, All other Licensed Windows, Antivirus [Quick Heal]

Students Placements:

Recruitment of the Electrical students through Campus Interview

The students are selected in various Companies Like TCS, CTS, Infosys, Wipro, Kanbay, Accenture, Tech Mahindra , HSBC, ICICI Bank ABB, AREVA T&D, Siemens, Rockwell Automation, JSW, L&T, CG, NDPL, Tata Power, Bhatiya Group of Companies- Power Machines Ltd. Dubai, US Technology & many more.

In 2004-05 Placement of the Electrical students was 100 % [57 Out of all 57 Eligible students]

In 2005-06 Placement of the Electrical students is 100 % [58 Out of 58 Eligible Students].

In 2006-07 Placement of the Electrical students is 100 % [60 Out of 60 Eligible Students].

STRUCTURE & EXAMINATION PATTERN

B. Tech. - Electrical Engineering

Semester III									Total Duration : 31 Hrs/Week
									Total Marks : 750
Subject Code	Subject	Teaching Scheme			Examination Scheme (Marks)				Total (Marks)
		L	P	D	Theory	Unit Test	TW & Pr	TW & Or	
K70201	Engineering Mathematics - III	04	-	-	80	20	-	-	100
K40202	DC Machines Theory & Design	04	02	02	80	20	50	50	200

RULES FOR CONDUCTING TESTS

Mode of the test

In each semester for each subject three tests shall be conducted. The Schedule for the same will be declared at the commencement of academic year in the academic calendar.

Each test shall carry 20 marks.

University examination pattern has given weightage of 20 marks for the tests.

To calculate these marks following procedure is followed:

- i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
- ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
- iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
- iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
- v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; These marks will be final marks obtained by the student. No scaling up is permitted.
- vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.

Paper Pattern for Tests

- i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

- ii) There will not be any sub-questions.

For granting the term it is mandatory to appear for all the three tests conducted in each semester.

Roll numbers allotted to the students shall be the examination numbers for the tests.

SEMESTER - III

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(09 Hours)

Differential Equations:

Solution of Linear differential equation of nth order with constant coefficients, Method of variation of parameters, Cauchy's and Legendre's linear equations, Simultaneous linear differential equations, Total differential equations, Symmetrical simultaneous differential equations. Applications to Electrical circuits.

Unit-II

(08 Hours)

Complex Variables:

Function of complex variables, Analytic function, Cauchy-Riemann equations, conformal mapping, bilinear transformation, Residue theorem, Cauchy's Integral theorem and Cauchy's Integral formula.

Unit III

(09 Hours)

Transforms:

Fourier transforms: Fourier integral theorem, Fourier sine and cosine integrals, Fourier transform, Fourier sine and cosine transforms, Inverse Fourier transforms, Discrete Fourier transform and its applications.
Z -Transform: Definition, Properties, Inverse Z-Transform, Applications to difference equation, Relationship between Z-Transform and Fourier Transform.

Unit-IV

(09 Hours)

Laplace Transform:

Definition, Properties and Theorems, Inverse Laplace transform, Methods of finding Inverse Laplace transforms, Laplace transform of Unit-step function, Dirac-delta functions, Periodic functions, Ramp functions, Error function, First order Bessel's function, $Si(t)$, $Ci(t)$, $Ei(t)$ Applications to solution of linear differential equations.

Unit-V

(09 Hours)

Vector Differentiation:

Vector Differentiation, Gradient, Divergence and Curl, Directional derivative, Vector identities, Irrotational and Solenoidal vector fields.

Unit-VI

(08 Hours)

Vector Integration:

Line integral, Surface integral and Volume integral, Work done, Gauss-Divergence theorem, Stoke's theorem and Green's lemma, Applications to Electromagnetic fields.

Syllabus for Unit Test

Unit Test 1	Unit I & IV
Unit Test 2	Unit II & V
Unit Test 3	Unit III & VI

K40202: DC MACHINE THEORY & DESIGN

TEACHING SCHEME

Lectures : 04 Hrs/week
Practical : 02 Hrs/week
Drawing : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks
Duration : 03 Hours
Unit Test : 20 Marks
T.W. & Or. : 50 Marks
T.W. & Pr. : 50 Marks

Unit-I

(08 Hours)

DC Generator:

Basic principle of working, E.M.F. equation, Types, characteristics and applications of different types of D.C. generators.

Armature reaction in d.c. generators & its effects. Remedies to overcome armature reaction. Process of commutation & types, causes of bad commutation and remedies, interpoles, compensating windings.

Unit-II

(08 Hours)

DC Motors:

Basic principle of working, Significance of Back e.m.f., Torque equation, Types, characteristics and applications of different types of d.c. motors, Starting, reversing and armature voltage and field control method of speed control, Starters. Armature reaction in dc motors. Study and working principle, control and performance and applications of brushless DC motor & permanent magnet motors.

Unit-III

(08 Hours)

Testing of DC Machines:

Losses, efficiency, condition for maximum efficiency and maximum power output, effect of saturation and armature reaction on losses.

Insulation resistance, Brake Test, Swinburne's test, Regenerative test on shunt motors, Separation of various losses, retardation test, type and routine tests according to ISI specifications.

Unit-IV

(08 Hours)

Design of DC Machines

Choice of specific electric and specific magnetic loading. Determination of

main dimensions using output equation. Design of field system and interpoles. Design of armature. Design of commutator and brushes.

Unit-V

(08 Hours)

Estimation from Design:

Estimation of machine performance in respect of losses, temperature rise and efficiency.

Design of heating coil, motor resistance starter, regulators, lifting magnets.

Unit-VI

(08 Hours)

Heating, Cooling and Ventilation

Study of different modes of heat generation, temperature rise, heat dissipation, heating and cooling curves, heating time constants, cooling time constants, their estimation, dependence and application.

List of Practical

Determination of magnetization, external and internal characteristics of D. C. generator

Speed control of D. C. Shunt motor by Armature and Field control

Study of three point and four point starters

Load test on D. C. Shunt motor

Retardation test on D. C. machine

Hopkinson's test on D. C. machine

Swinburne's test on D. C. machine

Note

The term work shall consist of the record of minimum five experiments based on the course outline above.

In design a report of design of dc machine is prepared for a typical dc machine which will contain the entire design procedure and calculations and sketches with dimensions calculated on 1/8 size drawing paper.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Transistor Theory:

Transistor circuits- C E ,C B, C C, Cathod follower –comparison Biasing, Temp stabilization, Low frequency analysis usingh-parameters [for C E only], Methods and effects of cascading, frequency response

Unit-II

(08 Hours)

A F power Amplifiers:

Types and class of operation, efficiency of operation considerations. Feedback amplifiers, Types, negative feedback identification of different topologies.

Unit-III

(08 Hours)

Special Devices:

Principles, Characteristics, applications of - FET, UJT, PUT, DIAC, Opto electrical Devices, opto couplers, opt isolators, Optical Decoders, Display Devices such as LED, LCD

Unit-IV

(08 Hours)

Digital Circuit:

Multivibrators, Free running, Mono, Bi-stable, Schmitt trigger, Logic Gates, Types, combinations, applications, truth tables, Single bit comparators, adder, subtractor circuits, Various types of flip-flops- SR, D, JK.

Unit-V

(08 Hours)

Shift Registers and counters:

Types applications and operations of counters – synchronous and asyn, Decade BCD, N-Modulo, Ring, Johnson, Study of Ics-7495, 7490, 7492-93 shift registers, Pulse train generators.

Study and operation of RAM, NVRAM, SRAM, DRAM, ROM, EPROM, PLA, FPLA.

Unit-VI

(08 Hours)

Regulated power supplies:

Discrete, series, shunt regulators, Protection circuits, study of IC regulators- 723, 317, 7805, with applications

List of Practicals

Transistor : Biasing and Stabilization

Multistage Amplifiers : Effect of cascading on gain and frequency response

Characteristics and performance of Single Stage FET Amplifier

Audio Frequency Power Amplifier Performance

Feedback Amplifiers : Current series / shunt feedback, effect of negative feedback on Input impedance, output impedance, gain and bandwidth

OR

Voltage series / shunt feedback, effect of negative feedback on input impedance, output Impedance, gain and bandwidth

Regulated Power Supplies : Discrete Regulators – shunt and series regulators circuits

OR

IC 723 (low voltage / high voltage) line, load regulation and performance calculations

Characteristics and applications of optoelectronic devices (viz. photodiode, Phototransistor, LDR, Photovoltaic cell)

Applications of Op-Amp : Inverting, Non-Inverting, Voltage follower, summer, Subtractor

OR

Integrator, Differentiator, Multiplication and Division (Using log, antilog), comparator

Applications of Logic Gates : Study of single bit comparator, BCD Adder or Subtractor (using IC 7483)

OR

Verification of truth tables of SR, D and JK flip-flops and use of flip-flops as counters

Note

The term work shall consist of the record of minimum 8 experiments based on the course outlined above.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K40204: NUMERICAL METHODS & COMPUTER PROGRAMMING

TEACHING SCHEME

Lectures : 05 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Introduction to Numerical Computations:

Basic Principle of numerical methods and necessity of computers for high speed calculations. Mathematical Preliminaries: Rolle's Theorem, Generalized Rolle's Theorem, Intermediate Value Theorem, Mean-Value Theorem for Derivatives. Errors and their Computation: Absolute, Relative and Percentage Errors.

Unit-II

(08 Hours)

Transcendental and Polynomial Equations:

Roots of an equation and methods to find the same. Methods to solve equations like Bisection, Secant, Regula-Falsi, Newton-Raphson methods, Single Variable, Multivariable Newton-Raphson Technique. Linear Algebraic Simultaneous Equation: Methods like Gauss elimination method and Gauss Jordan method. Iterative method like Gauss-Siedel method, accelerated Gauss-Siedel method and Jacobi's method.

Unit-III

(08 Hours)

Interpolation:

Introduction to Interpolation and calculus of finite differences. Polynomial interpolation methods- Lagranges, Newton's forward, backward and central difference methods, Sterling and Bessel's interpolation.

Unit-IV

(08 Hours)

Differentiation and Integration:

Numerical differentiation using simple interpolation techniques like Lagrangian and Newton Gregory method. Numerical integration using Trapezoidal, Simpsons rule as a special case of Newton cote quadrature techniques. Solution of ordinary differential equation using Euler's, Modified Euler's, Taylor series methods, Runge-kutta second and fourth order techniques using Hune's and polygon method.

Unit-V

(08 Hours)

C++ Programming:

Object Oriented Programming (OOPS) concepts, Class and objects, Abstraction, Encapsulation, Inheritance, and Polymorphism, Attributes of class, Functions in C++- Parameter passing Mechanism, Function overloading, Default values, Inline Functions, Virtual functions, Friend Functions, Static Members and Functions, Inheritance- Types of Inheritance Defining derived class, Access Control, Public - Protected and Private derivation, Derived class constructors, Destructors, Overloading Member functions, Object as a class member, Polymorphism- What is polymorphism, static polymorphism, overloaded Functions, overloaded operators, Operator overloading, L'nary operators Overloading, Dynamic polymorphism.

Unit-VI

(08 Hours)

Object-oriented software development with C++:

Evolution of the software development processes, stream and files-stream classes, stream errors, use case modeling and the programming problem, from use case to classes.

Term work of NMCP

LIST OF PROGRAMS using C++

Newton-Raphson method

Gauss elimination method

Lagranges Interpolation method
Newton's divided difference interpolation method
Trapezoidal method
Euler's method
Runge Kutta 4th order method
C++ program on Inheritance
C++ program on Polymorphism
C++ program on derived class constructor and destructor

Note

The term work shall consist of the record minimum 8 Experiments of the above.

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K40205: ELECTRICAL MEASUREMENTS & MEASURING INSTRUMENTS

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Introduction:

Significance of measurement, classification of instruments, mechanical, electrical, electronic instruments, deflection and null type, applications of measurement system.

Units:

Absolute units, Fundamental and derived units, international system of units. Dimensions of mechanical, electrical quantities. Absolute measurement of current and resistance. Standards and their classification. Electrical standards of emf, current, resistance

Measuring instruments:

Static characteristics of an instrument, Accuracy, linearity, sensitivity, reproducibility, resolution, Types of errors, necessity of different torques in indicating instruments, recording instrument integrating instrument.

Measurement of current and voltage:

Construction, Principle of operation, torque equation and sources of errors in PMMC, Moving Iron instrument, dynamometer type instrument, Extension of ranges using shunts and multipliers.

Galvanometer:

Construction, principle of operation of D'Arsonval, vibration and ballistic galvanometer

Unit II

(08 Hours)

Instrument Transformers:

Advantages of instrument transformers over shunts and multipliers, use of instrument transformers, expression for ratio and phase angle errors in case of C.T. and P.T. (No derivation), precaution in using instrument transformers. Clip on ammeter.

Unit -III

(08 Hours)

Measurement of resistance :

Classification of resistances, measurement of Medium resistance, ammeter voltmeter method, Wheatstone bridge, sensitivity of Wheatstone bridge, limitations of the method, measurement of low resistance. D.C. Potentiometer- Calibration of ammeter and voltmeter application, Kelvin bridge, Ohmmeter , measurement of high resistance, difficulties in measurement, use of guard circuit, direct deflection method, loss of charge method, earth tester and measurement of earth resistance, megger.

A.C. Bridges :

Generalized equation of balance, Difference between Dc Bridge and Ac Bridge, Measurement of inductance using Maxwell's Bridge, Anderson bridge, Measurement of capacitance using Schering bridge, (No derivation, only numericals based on balance Equations)

Unit-IV

(08 Hours)

Measurement of power:

Construction, principle of operation of Electro-dynamometer type wattmeter, low power factor wattmeter, Errors and their compensation. Measurement of power in three phase circuit for balanced and unbalanced load by one wattmeter and two wattmeter method. Effect of power factor variation on wattmeter reading in two wattmeter method, Measurement of reactive power in three phase balanced load by one wattmeter method. Measurement of power using CT and PT, Three phase wattmeter.

Unit-V

(08 Hours)

Measurement of energy:

Construction, principle of operation and torque equation of induction type energymeter, errors and adjustments. Calibration of energymeter, three phase three wires, and three phase four wire energy meter, electronic energy meter

Other measuring instruments:

Power factor meter (electrodynamometer type only), frequency meter (Vibration, Weston type only), synchroscope, Phase sequence indicator, tri-vector meter, maximum demand indicator.

Unit-VI

(08 Hours)

Digital equipment:

comparison between analog and digital instruments, difference amplifier type electronic voltmeter, rectifier type, peak reading instruments .block diagram and principle of operation of digital multimeter, Function generator block diagram and working, digital storage oscilloscope, Harmonic distortion analyzer block diagram and working.

List of Practical

To observe construction and identify parts of PMMC, MI voltmeter, ammeter Electro-dynamometer wattmeter, energymeter and write down symbols and Specifications

To measure power in three phase balanced load by one wattmeter method

To measure power in three phase balanced/ unbalanced load by two wattmeter method

To measure reactive power in three phase circuit by one wattmeter method.

To extend range of wattmeter by use of CT and PT

To calibrate single phase energymeter at

- i) Unity power factor
- ii) 0.5 lagging power factor
- iii) 0.5 leading power factor

Calibration of ammeter and voltmeter with the help of potentiometer

To measure low resistance with Kelvin double bridge

To measure earth resistance by earth tester

To measure unknown inductance by Anderson bridge

Note

The term work shall consist of the record of minimum 8 experiments out of the above.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

SEMESTER - IV

K40206: LINEAR & DIGITAL INTEGRATED CIRCUITS

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(08 Hours)

Basic circuits for Analog ICs :

Current sources -Widlar, Wilson, and MOSFET voltage sources active level shifters, single supply operation and biasing, external offset, and its compensation. The characteristics of the Operational Amplifiers, open loop and closed loop operations, thermal drift, Important Parameters- Power supply rejection Ratio, Slew rate, gain etc

Unit-II

(08 Hours)

Applications of Operational Amplifier :

AC amplifiers, Norton Amplifier, Instrumentation amplifier, Isolation amplifier with strain gauge and thermister with signal conditioning circuits. Precision full wave and half wave rectifiers, comparators and Schmitt trigger, peak detector clipper and clamper circuits.

Unit-III

(08 Hours)

Other applications :

Basic applications -multipliers, deviders, square root, Adder, sub tractor etc. Waveform generators-Multi vibrators, sine, square, triangular generators, Study of ICs- 8038, 555, 556, LM 324, 741, LM380

Unit-IV

(08 Hours)

Digital Electronics :

Number systems- Binary, Octal, Hexadecimal, conversion methods, Binary addition and subtraction method, 1's and 2's compliment method.

Concept of coding, BCD codes, 8421, Excess-3, Gray code, codes more than 4-bits, ASCII code

Unit-V

(08 Hours)

Logic Circuits:

Logic families: TTL Nand gate, specifications, tri state TTL, ECL, MOS, CMOS families, and their interfacing.

Unit-VI

(08 Hours)

Combinational Logic:

Code conversion, arithmetic circuits, Half and full adder, Subtractor, Binary serial and parallel Adder, IC 7483, BCD Adder, Excess-3 Adder, Digital comparator.

Multiplexer, Demultiplexer, Encoder, Decoder and their applications, Design of ALU.

List of Practical

Study of characteristics of typical 74 TTL / 74 CMOS family like : fan in, fan out Standard load, noise margin & interfacing with other families

Half, Full Adder and Subtractor using gates and Ics

code conversion using digital IC'S

Function implementation using Multiplexer and Demultiplexer

Sequence generator using MSJK flip flop IC'S

Study of shift registers : Shift left, Shift right, parallel loading, and pulse train generator

Testing precision full and half wave rectifier

Waveform generator Ics and their circuits

Testing of circuit s using IC 555, Astable and Monostable mode.

Study of characteristics of ICs- 8030, 556

Some of the Following experiments should be implemented using PSPICE or MATLAB

- i) Schmitt trigger
- ii) Integrator and differtiator
- iii) Precision rectifier
- iv) PLL/Log antilog/555 circuits

Note

The term work shall consist atleast 8 experiment out of the experiments given above.

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K40207: TRANSFORMER THEORY & DESIGN

TEACHING SCHEME

Lectures : 05Hrs/week
Practical : 02Hrs/week
Drawing : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks
Duration : 03 Hours
Unit Test : 20 Marks
T. W. & Or. : 50Marks
T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Single Phase Transformers:

Working Principle, construction, Types of Transformer, E.M.F. equation and transformer ratio, Transformer on No load, Transformer on load, Equivalent resistance, Magnetic leakage, Transformer with resistance & magnetic leakage, Equivalent circuit of Transformer. Open circuit and Short circuit tests on single phase Transformer, Efficiency of a Transformer, Condition for maximum efficiency, Kapp regulation diagram, Back to back test, All day efficiency of Transformer, Parallel operation of single phase Transformer.

Unit-II

(08 Hours)

Pholyphase Transformers:

Connecting a bank of three single identical single phase transformers. Construction of three phase shell and core type transformer. Comparison between single three phase unit and three single phase units, standard connections for three phase transformer, their voltage phasor diagrams, phasor groups, Floating neutral, parallel operation of three phase transformers, Three winding transformers, Tertiary winding and use of it in three phase transformers. Tap changer: types- construction & working.

Unit-III

(08 Hours)

Testing & Maintenance of Transformers:

Concept of polarity of transformer windings, standard practice of marking transformer winding terminals, polarity test using ac supply and voltmeter, open circuit and short circuit tests, methods of carrying out tests and information obtained from these. Sumpner's test (Back to back). I.S. Specifications of transformers. Concept of routine and type tests.

Testing of transformers as per I.S. specifications.

Transformer oil maintenance, transformer oil testing as per I.S.

Unit-IV

(08 Hours)

Design of Transformers:

Design of distribution and power transformers, specifications, design of main dimensions, core, yoke, winding, tank and cooling tube radiators

Unit-V

(08 Hours)

Performance Evaluation:

Estimation of leakage reactance for equal heights for HV and LV windings. Resistance of windings, Calculations of no load current and losses. Voltage regulation and efficiency. Calculation of mechanical forces during short circuits, remedies to overcome them.

Unit-VI

(08 Hours)

AC windings:

Single and double layer single phase AC winding with integral and fractional slots. Single and double layer integral and fractional slots in case of 3 phase AC winding.

List of Practicals

Open circuit and short circuit tests on a single phase transformer.

Polarity test on single phase and three phase transformers

i) Using ac supply and voltmeter

ii) Using battery, tap-key and dc galvanometer.

Study of standard connections for three phase transformers, line to line voltage ratios and phasor groups.

Sumpner's test on two identical single phase transformers.

T-connection of two single phase transformers on no load and at balanced load

V-connection of two single phase transformers on no load and at balanced load

Note

The term work shall consist of the record of all five experiments based on the course outline above.

In design, a report of design of transformer is prepared which will contain the entire design procedure, calculations and sketches with dimensions calculated on 1/8 size drawing paper.

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(08 Hours)

Network Theorems:

Introduction, Thevenin's theorem, Norton theorem, Superposition theorem, Maximum power transfer theorem, Millman's, Reciprocity, Substitution, Compensation, Tellegen's Theorem.

Unit-II

(08 Hours)

Transient Response of Passive Circuits:

Introduction, transient response of series R-L and R-C circuit having DC excitation, Transient response in RL and RC circuit with sinusoidal excitation. Transient response in RLC circuit with DC and sinusoidal excitation

Unit-III

(08 Hours)

Laplace Transformation and its application:

Laplace transform of a derivative and integration. Laplace transform of common forcing functions, Initial and final value theorem, Time displacement theorem, Convolution theorem, Impulse response of R-L and R-C Circuit, Application of Laplace transformation technique in electric circuit analysis.

Unit-IV

(08 Hours)

Two Port Networks:

Short circuit admittance, open circuit impedance, transmission and inverse transmission, hybrid and inverse hybrid parameters. Relation between parameter sets, T, Ladder, lattice, twin T networks. Input and out put impedance in terms of two port parameters. Interconnection of networks, Symmetry and reciprocity.

Unit-V

Network Functions:

Network function for one port and two port networks, ladder networks, general network, poles and zeros of network functions, Restriction on poles and zeros for driving point functions and transfer functions.

Unit-VI

Fourier Analysis:

Exponential form of Fourier series, trigonometric form of Fourier series, symmetry in Fourier series, Frequency spectrum, properties of Fourier analysis, shifting of function, applications in circuit analysis.

List of Practical

Determination of time-response of R-C circuit to a step DC voltage input (charging and discharging of a capacitor through a resistor)

Determination of time-response of R-L circuit to a step DC voltage input (Rise and decay of current in an inductive circuit)

Determination of frequency-response of an R-C series circuit.

Verification of Superposition and Thevenin's Theorem.

Verification of Reciprocity Theorem.

Determination of step-response of a second order (R-L-C Series circuit) with variable damping.

Determination of parameters of a two-port network.

Harmonic Analysis of No-Load current of a power transformer.

Determination of parameters of Coupled circuits.

Determination of Resonance, Bandwidth and Q-Factor of an R-L-C Series circuit.

Note

The term work shall consist of atleast 8 experiments out of the experiments given above.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

**TEACHING SCHEME**

Lectures : 04 Hrs/week

Practical : 02Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or. : 50 Marks

Unit-I

(07 Hours)

Introduction:

Definitions of Instrumentation, Measurements, with general block diagram, Transducers-types, applications, special features, comparison and selection factors, Error analysis-types, sources, limiting and minimizing techniques

Unit-II

(07 Hours)

Measurement of displacement:

Potentiometer, Linear-Strain gauge, types, gauge factor, circuits, temperature compensation, calibration, load cell, application for other measurements. LVDT characteristics, uses, circuits, applications for other variables. Angular velocity measurement, electrical tachometers, photo electric tachometers, stroboscope relative Comparison in different methods

Unit-III

(07 Hours)

Measurement of Pressure and vibration:

Definitions, ranges & units, Types, Mechanical instruments - Bourden tube, diaphragm, bellows, use of electrical transducer, Measurement of Vacuum Thermocouple gauges, Pirani gauges, and Ionization type vacuum gauges. Measurement of vibration, seismic accelerometers, types

Unit-IV

(07 Hours)

Measurement of temperature:

Definition, Effects and its use for measurements, Mechanical transducers- all types of thermometers, electrical transducers, resistance thermometers types circuits, thermistors, thermocouples with circuitry, thermopiles Pyrometer- principles, types, applications, comparison. Use of strain gauge.

Unit-V

(07 Hours)

Measurement of flow and level:

Use of nozzles, orifice, Ventury. Turbine meters, electromagnetic flow meters, Use of thermister, Ultrasonic flow meters, variable area meters, Pitot tube Measurement of liquid level-electric transducers using Resistance, Inductance, Capacitance, Mechanical methods-use of float, pressure gauges. Level measurement in closed tank.

Unit-VI

(07 Hours)

Recorders and Special topics:

Display and recording devices, Analog and digital meters, Recorders-types, working, applications
Methods of data transmission, Telemetry system-types, RF telemetry, FM telemetry.

List of Practical

Measurement of capacitance and loss angle by Schering bridge
Strain measurement using strain gauge
Study of LVDT
Temperature measurement by RTD, thermistor and thermocouple
Study of pressure transducers
Study of Recorders
Speed measurement by magnetic pick-up, photoelectric method
Study of C.R.O.s of different types and their applications
Step response of a meters
Measurement of systematic errors of wattmeters
Study of op-amp parameters
Study of op-amp applications

Note

The term work shall consists of atleast 8 experiments out of experiments given above.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(08 Hours)

Hydro Power Station & Thermal Power Stations:

Introduction: Importance of electrical energy sources of energy – growth of power system in India.

Hydro Power Station: Selection of site – classification of Hydro Power Station – general arrangements and operations of Hydro Power Station – functions of each component – water hammering effect – turbines – hydro electric generators – list of Hydro Power Station in India with capacity.

Thermal Power Station: General lay out – operation - site selection – Fuels used – Types – analysis of coal – classification – liquid fuels – gaseous fuels – Boilers – turbines – condensers – cooling towers – major Thermal Power Station in India.

Unit -II

(08 Hours)

Nuclear – Diesel and Gas Power station:

Nuclear Power Station: Advantages – selection of site – elements of Nuclear Power Station – chain reaction – nuclear materials – moderators – coolants – control rods – main part of reactor- functions – different type of reactors.

Diesel Power Station: Field of use, outline – types of engine – different systems – advantages & disadvantages of diesel power station over Thermal Power Station – present trends in research.

Gas Power Station: Basics – classification - components – governing system – comparison of gas, diesel, & thermal power plant.

Major Electrical equipments in power stations

Unit-III

(08 Hours)

Solar and Wind Power Plant:

Solar: Photo Voltiac cell – solar to electric conversion – VI characteristics

- wattage efficiency – spectral response – solar module – solar array – solar PV technologies & systems for rural areas – solar diesel hybrid plant – solar power plant for space craft – economics of solar PV system.

Wind Power Station: introduction – schematic arrangement - vertical axis, horizontal axis – choice of electrical generator – energy storage – grid connection – hybrid solutions : Wind Tidal –diesel, Wind Tidal - solar etc. –wind farms in India / world.

Unit-IV

(08 Hours)

Biogas & Geo-Thermal Plants:

Biogas: biogas anaerobic fermentation process – raw materials – small, medium & large plants – Types: single stage & two stage, dome type – ocean biomass to biogas.

Geothermal: classification – types : vapour dominated, liquid dominated flashed system, double flashed system , binary cycle liquid dominated, Hyber binary cycle, liquid dominated total flow.

Unit-V

(08 Hours)

Tidal Energy conversion & Fuel Cells:

Tidal: tidal range – types : single basin, modulated single basin, double basin – main equipments – energy storage – projects in the world – prospectus – economic factors – disadvantages.

Fuel Cells: concepts- types – schematic of H₂ – O₂ cells – working – fuels – solid oxide fuel cells – fuel cells with permeable ion – exchange membrane.

Unit-VI

(08 Hours)

Load Curves and Economic Aspects :

Load Curves: load curve – base load station and peak load station - demand factor – maximum demand – average demand – diversity of load- load factor – diversity factor – significance of high Load Factor & diversity factor- plant factor – capacity factor – connected load - load duration curve – integrated load duration curve – selection of units.

Economic Aspects: cost of generating stations – tariff – types of tariff – factors influencing the rate of tariff designing.

123

RULES REGARDING ATKT, CONTINUOUS ASSESSMENT and AWARD of CLASS

A. T. K. T.

A candidate who is granted term for B.Tech. Semester-I will be allowed to keep term for his/her B.Tech. Semester-II examination even if he/she appears and fails or does not appear at B.Tech. Semester-I examination.

A candidate who is granted term for B. Tech. Semester - III will be allowed to keep term for his/her B.Tech. Semester-IV examination even if he/she appears and fails or does not appear at B.Tech. Semester-III examination.

A candidate who is granted term for B.Tech. Semester-V will be allowed to keep term for his/her B.Tech. Semester-VI examination if he/she appear and fails or does not appear at B.Tech. Semester-V examination.

A candidate who is granted term for B.Tech. Semester-VII will be allowed to keep term for his/her B.Tech. Semester-VIII examination if he/she appears and fails or does not appear at B.Tech. Semester-VII examination.

A student shall be allowed to keep term for the B.Tech. Semester-III course if he/she has a backlog of not more than 3 Heads of passing out of total number of Heads of passing in theory examination at B.Tch. Semester-I & II taken together.

A student shall be allowed to keep term for the B.Tech. Semester-V of respective course if he/she has no backlog of B.Tech Semester-I & II and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 heads of passing in termwork and practical examination or termwork and oral examination.

A student shall be allowed to keep term for the B.Tech. Semester-VII course if he/she has no backlog of B.Tech. Semester-III & IV and he/she has a backlog of not more than 3 Heads of passing in theory examination and not more than 3 Heads of passing in termwork and practical examination or termwork and oral examination.

CONTINUOUS ASSESSMENT

In respect of Term work at B.Tech. Semester-I & II, B.Tech. Semester-III & IV and B.Tech. Semester-V & VI, target date shall be fixed for the completion of each job, project experiment or assignment as prescribed in the syllabus and the same shall be collected on the target date and assessed immediately at an affiliated college by at least one pair of the concerned teachers for the subject and the marks shall be submitted at the end of each term to the Principal of the college.

- Termwork and performance of Practical/Oral examination shall be assessed on the basis of the depth of understanding of the principles involved, correctness of results and not on ornamental or colorful presentation.
- For B.Tech. Semester-VII & VIII, termwork assessment will be done by external and internal examiners jointly during the examination schedule declared by the university. The record of continuous assessment shall be made available to the examiners during Term work and practical and Term work and oral examinations. Examiner shall use this record for overall assessment of the performance of the student. Every practical/termwork assignment shall be assessed on the scale of 20 marks and weightage of 20 marks shall be distributed as follows:

Sr. No.	Activity	Marks
1	Timely Submission	04
2	Presentation	06
3	Understanding	10

Marks obtained out of 20 for all assignments together will be converted on scale of marks assigned to term work of respective subject in the structure of the course.

CLASS

- The class should be awarded to the student on the basis of aggregate marks obtained together in both the semesters of the respective year by him. The award of class shall be as follows.

A	Aggregate 66% or more marks	First Class with Distinction
B	Aggregate 60% or marks but less than 66%	First Class
C	Aggregate 55% or more marks but less than 60%	Higher Second Class
D	Aggregate 50% or more marks but less than 55%	Second Class
E	Aggregate 40% or more marks but less than 50%	Pass Class

**B. Tech. (ELECTRONICS)
(Sem. III & IV)**

COURSE STRUCTURE & SYLLABUS

BHARATI VIDYAPEETH UNIVERSITY, PUNE

B. Tech. (ELECTRONICS) (Sem. III & IV)

HIGHLIGHTS

Bharati Vidyapeeth University College of Engineering (BVUCOE) is the largest Engineering College in Maharashtra with an intake of 700 students in each academic year. Imparting quality technical education from Under Graduate to Doctorate Level, BVUCOE is probably the only Engineering College in India with an accreditation from both NAAC as well as NBA. The faculty at BVUCOE boasts of highly qualified academicians, a quality that is further emphasized by the fact that 15 of them are presently pursuing their Ph.D. degree.

BVUCOE has been ranked 29th amongst the Top 50 Technical Schools of India in survey conducted by DATAQUEST-IDC. We have enjoyed a ranking in this list for the last 4 years. Research is of utmost importance in all our programs. A total of 113 research papers were published in the academic year 2007-2008.

Currently we have 12 ongoing research projects. The infrastructure of BVUCOE is state-of-the-art with 62 classrooms, 59 laboratories and a well-stocked library that currently holds 27,130 titles. The college has an international presence with MoUs signed with the North Carolina A&T State University (Greensboro, USA), University of Venice (Italy), Actel Corporation (USA). Corporate interaction is also inculcated in our programs through our association with Oracle India Ltd., Infosys Ltd. and Tata Consultancy Services.

SALIENT FEATURES

India is the fourth largest telecom market in Asia. The Indian telecom market is eighth largest in the world and second largest among emerging economies. The industry has witnessed an explosive growth in the field of electronics in the recent years. India has institutions that are deeply rooted in the principles of democracy and Justice. This ensures a transparent, predictable and secure environment for development of electronics field.

The National Telecom policy 1999 (NT 99) targets tele-density at 15 per cent by 2010. The Indian market presents a unique opportunity as compared to developed countries, hence increasing the attractiveness of the Indian market.

In the engineering field, electronics branch is one of the most significant as it reflects today's changing technology. It has become a must-know field as it forms the base for all other engineering branches.

To comply with the present day requirements & keep pace with the recent technology, the course is designed to provide the students with technical know-how. The department therefore aims to ensure that the students excel in hardware as well as software technologies. The department has started post-graduate course leading to M.E. Electronics (VLSI) which focuses on the theory, design, implementation and application of this upcoming technology in technical context.

The department has received a grant of Rs. 45.5 Lakhs from UGC under their innovative program scheme to start the Biomedical Engineering course with the intake capacity of 40 students.

College has established collaboration with ACTEL Corporation, USA. Under this collaboration an advanced VLSI laboratory is established jointly. For this laboratory, ACTEL Corporation has provided software and hardware worth \$3, 56,000 (Approx. 1.5 Crores)

The department has well-qualified and experienced staff with 6 Professors, 2 Assistant-Professors and 11 lecturers. Most of them have completed post-graduation and some are pursuing.

MAJOR GROUPS / AREAS

Image Processing, Digital Signal Processing, Very Large Scale Integration, Biomedical Engineering, Fiber optic sensors

EXPERTISE IN RESEARCH AND CONSULTANCY

Electronics engineering department received a grant of 6.5 lakhs from All India Council for Technical Education (AICTE), New Delhi for development of DSP laboratory under MODROB scheme. Research has been carried out in the field of signal

processing, control and communication with credit of five research papers published at national level. Three staff members are pursuing PhD work in the field of signal processing and communication. The department has received the grant of Rs. 70, 000 from Institute of Engineers, Pune for various research projects undertaken by students.

MAJOR EQUIPMENT

Mixed Signal Oscilloscope, Vector Voltmeter, Digital Storage Oscilloscope, Wobbuloscope, Powerscope, Allen-Bradley PLC with RSLogix500 software, Ratio Control Unit Trainer, ICAP 4, DSP Processor Training Boards & EVMs, X-ray machine (Demo type), Ultrasound scanner (Demo type), Blood cell counter, EEG hardware and software, Spectrophotometer (Demo type), Gas chromatography system (Demo type), ECG stress test software with thread mill

SOFTWARE

ORCAD, XLINX 3.1, Altera, MATLAB, LabView, ALDEC, Code Composer Studio, Libero

LABORATORIES

ACTEL-VLSI Lab, Microelectronics Laboratory, Digital Electronics Laboratory, Network and Lines Laboratory, Electric Circuit Design and Project Laboratory, Communication Laboratory, Microprocessor and Microcontroller Laboratory, Computer Networking Laboratory, DSP and Image Processing Laboratory, Electronic Instrumentation and Measurements, Power Electronics Laboratory, Instrumentation and Control Laboratory, Biomedical Laboratory, Computer Lab

STRUCTURE & EXAMINATION PATTERN

B. Tech. - Electronics Engineering

Semester III				Total Duration : 28 hours/week				Total Marks : 750

RULES FOR CONDUCTING TESTS

Mode of the test

In each semester for each subject three tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.

Each test shall carry 20 marks.

University examination pattern has given weightage of 20 marks for the tests.

To calculate these marks following procedure is followed:

- i) Out of the three tests conducted during the semester, the marks of only two tests in which the candidate has shown his/her best performance shall be considered, to decide the provisional marks in each subject.
- ii) Average marks obtained in two tests in which students have performed well, shall be considered as provisional marks obtained by the student in the tests.
- iii) If the candidate appears only for two tests conducted during the semester, he/ she will not be given benefit of the best performance in the tests.
- iv) If the candidate appears only for one test conducted during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other tests.
- v) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; These marks will be final marks obtained by the student. No scaling up is permitted.
- vi) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.

Paper Pattern for Tests

- i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks

- ii) There will not be any sub-questions.

For granting the term it is mandatory to appear for all the three tests conducted in each semester.

Roll numbers allotted to the students shall be the examination numbers for the tests.

SEMESTER - III

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr : 50 Marks

T. W. & Or : 50 Marks

Unit-I

(08 Hours)

Study Of Electronic Materials & Components:

Classification of materials based on band gaps; Semiconductors materials Si, Ge. Types of Resistors : 1. Fixed 2. Variable 3. Precision etc.

Like carbon film, metal film, wire wound, their standard values, specifications and applications. Classification of capacitors based on dielectrics, standard values, specifications & applications of capacitors, types of capacitors – electrolytic ceramic, paper, mica, tantalum, plastic film etc. Study of different core materials depending on range of frequencies - for inductors & transformers.

Unit-II

(09 Hours)

Semiconductor Diode Characteristics:

Diffusion phenomenon, concentration gradient, Einstein relation, volt equivalent of temperature, total current (drift & diffusion), potential variation within continuous and step graded semiconductor p-n junction. Current components in forward biased/reverse biased p-n junction diode, cut in voltage, reverse saturation current. Characteristics (Logarithmic) equation of diode temperature dependence of diode characteristics concepts and significance & expressions of transition and diffusion capacitance, junction diode switching times.

Unit-III

(08 Hours)

Application Of Semiconductor Diode:

Diode as rectifier, half wave, full wave and bridge rectifier with and without capacitor & filter, different types of filters-L-section and Π section input Parameters like ripple factor efficiency, TUF, PIV, I_{max} , I_{surge} , etc. Derivation of ripple factor for L, C and L section filter, Π section. bleeder resistor. Diode as a wave shaping element in clipping and clamping circuits, voltage multipliers.

Unit-IV

(09 Hours)

BJT (Bipolar Junction Transistor):

(07 Hours)

(07 Hours)

Millman & Halkias, Integrated Electronics, Mc Graw Hill

Millman & Halkias, Electronic Devices & Circuits, Mc Graw Hill

Syllabus for Unit Test

Unit -I

Error Analysis & Roots Of Polynomial:

Sources , types, analysis . Bisection method , Regula falsi method , Newton Raphson, Secant , iterative , convergence tests.

Unit -II

Interpolation/Optimization:

Finite difference operators , interpolation techniques based on finite differences, Newton's forward, backward, divided . Lagrange's, spline, least squares.

Unit-III

Linear Equations & Numerical Integration:

Gauss Jordan, Gauss Elimination , Jacobis , Gauss Siedel, LU decomposition, analysis of methods
Trapezoidal, Simson's 1/3 & 3/8 rules .

Unit-IV

Differential Equations & Monte Carlo Techniques:

Taylor's series, Euler's method, Runge Kutta 4th order, predictor corrector & stability analysis . Simulation for integration , pseudo random nos.

Unit-V

Searching & Sorting:

Sorting: Bubble, Quick , Insertion , Selection , Shell , Merge , Radix , analysis. Searching: Sequential , Binary , Hashing.

Unit-VI

Data Structures:

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

Unit-I

(09 Hours)

Network Techniques & Theorem:

Network definition, mesh & node analysis, principle of duality, source transformation, Simplification of networks. T & it conversion. Twin T & Wienbridge networks. Super position theorem, Thevenins theorem, Norton's theorem, Reciprocity theorem , Millman's theorem, Maximum power transfer theorem.

Unit-II

(09 Hours)

Transients & Resonance:

Undriven & driven RC, RL, RLC circuit. initial conditions.

Figure of merit, conditions for resonance, various properties of series & parallel resonance.

Unit-III

(08 Hours)

Two Port Network:

Various types of four terminal network, definition of characteristic impedance (Z_0), propagation constant, image impedance , iterative impedance, calculation of above parameter.

Unit-IV

(08 Hours)

Filters (Passive):

Filter fundamentals , LPF , HPF , BPF , BSF , prototype(constant k) & m - derived filters , composite filters.

Unit-V

(07 Hours)

Network Functions:

Terminals & terminal pairs , network function, poles & zeros and its significance.

Z, Y, H, A B C D parameters, Equivalent circuit, inter relationship between parameters, interconnection of two port network, Study of ideal transformer.

Unit-VI

(07 Hours)

Network Synthesis:

Positive real function, properties of LC, RL, R driving point function. Realization of positive real function in four canonical form for one port network.

List of Practicals

Network Theorems -I: Thevenin's & reciprocity theorem.

Network Theorem-II: Superposition & maximum power transfer theorem.

Filter-I: Low pass filter & High pass filter.

Filter-II: Band pass filter & band stop filter.

Resonance: Series and Parallel.

Transient response of RLC circuit.

Z & Y Parameters.

h & ABCD Parameters.

Step and Impulse response of given network using MATLAB.

Any two assignments using PSPICE or any software. Experiment can be set on filters transient response or theorem.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K50203: FUNDAMENTALS OF INSTRUMENTATION & CONTROL

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or : 50 Marks

Instrumentation Control Devices:

(09 Hours)

Control actions: On/Off, P, PI, PD, PID. PLC: Architecture, comparison with relay logic. Ladder Diagrams for simple applications

List of Practicals

Unit step and ramp response of the transfer function system using MATLAB.

To draw Root locus and Bode plot using MATLAB.

Magnitude and phasor plot of lead network.

Magnitude and phasor plot of lag network.

Transient response of second order system.

To Study characteristic of temperature transducer

To Study the characteristics of LVDT for displacement measurement

Flow control using Proportional controller action.

Verification of ladder diagram using PLC

Study of I/P converter

(07 Hours)

(09 Hours)

Syllabus for Unit Test

Unit-I

Basics For Electronic Communication:

(08 Hours)

Properties of sound, Types of microphones and loudspeakers, enclosures,

Different methods of sound recording and reproduction (Analog &

digital sound) Monophony , Stereophony P.A. system & Hi-Fi system (07 Hours)
Types of noise, Noise calculation, Noise figure, Noise temperature.

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

K50204: COMPUTATIONAL TECHNIQUES

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Or : 50 Marks

Queues, Stacks, linked lists & Binary trees. (08 Hours)

List of Practical

Minimum of one assignment on each topic should be conducted in C. It will cover algorithm, error analysis and C program implementation.

(08 Hours)

Text Books/References

Gere J. M. & Timoshenko S. P., Numerical Methods for Scientific Engineering & Computation, New Age Int'l

Chapra & Canale, Numerical Methods for Engineers, Tata McGraw Hill (09 Hours)

William Press, Numerical Recipes in C, Oxford Press

Syllabus for Unit Test

Unit-I

Linear & Non-Linear Control System:

Introduction to linear & nonlinear control system, Elements of control systems, Open loop & closed loop, feedback & feed forward control systems. (Each control systems will be highlighted with real time applications). Transfer function using block diagram reduction techniques & signal flow graph using Mason's gain formula.

Unit-II

(07 Hours)

Transient Response:

Time domain Analysis of linear control systems. First order & second order system. Error constant, steady state error, transient response specifications. Stability of control system, Routh-Hurwitz criterion and Root locus technique.

(07 Hours)

Unit-III

Frequency Domain Analysis:

Frequency domain analysis frequency domain specification, Bode plot- Gain margin and phase margin, Mapping theorem and Nyquist Plot.

Unit-IV

Transducers:

Characteristics, types of transducers for temperature (RTD, Thermocouple, Thermistor), Capacitance type level, electromagnetic type flowmeter, pressure transducer, LVDT, Strain gauge, piezoelectric type accelerometer, photoelectric tachometer (Pick up)

Unit-V

Signal Conditioning:

Signal conditioning circuits, for above transducers, study of synchros.

Unit-VI

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

Unit-I

(09 Hours)

Differential Equations:

Solution of Linear differential equation of n^{th} order with constant coefficients, Method of variation of parameters, Cauchy's and Legendre's linear equations, Simultaneous linear differential equations, Total differential equations, Symmetrical simultaneous differential equations. Applications to Electrical circuits.

Unit-II

(08 Hours)

Complex Variables:

Function of complex variables, Analytic function, Cauchy-Riemann equations, Conformal mapping, Bilinear transformation, Residue theorem, Cauchy's Integral theorem and Cauchy's Integral formula.

Unit-III

(09 Hours)

Transforms:

Fourier Transform: Fourier integral theorem, Fourier sine and cosine integrals, Fourier transform, Fourier sine and cosine transforms, Inverse Fourier transforms, Discrete Fourier transform and its applications.
Z -Transform: Definition, Properties, Inverse Z-Transform, Applications to difference equation, Relationship between Z-Transform and Fourier Transform.

Unit-IV

(09 Hours)

Laplace Transform:

Definition, Properties and Theorems, Inverse Laplace transform, Methods of finding Inverse Laplace transforms, Laplace transform of Unit-step function, Dirac-delta functions, Periodic functions, Ramp functions, Error function, First order Bessel's function, $Si(t)$, $Ci(t)$, $Ei(t)$. Applications to solution of linear differential equations.

Unit-V

(09 Hours)

Vector Differentiation:

Vector Differentiation, Gradient, Divergence and Curl, Directional derivative, Vector identities, Irrotational and Solenoidal vector fields.

Unit-VI

(08 Hours)

Vector Integration:

Line integral, Surface integral and Volume integral, Work done, Gauss-Divergence theorem, Stoke's theorem and Green's lemma, Applications to Electromagnetic fields.

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

SEMESTER - IV

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr. : 50 Marks

T. W. & Or. : 50 Marks

(09 Hours)

Unit-VI

RF/HF Amplifiers:

Hybrid - small signal model of BJT, its relation with h-parameters, definitions of f_t , f_{β} , calculation of A_i , A_v , with finite load and source resistances for CE stage, Gain bandwidth product, Tuned load, loaded & unloaded Q, insertion loss, single tuned amplifiers, staggered tuning, cascade configuration for HF amplification.

List of Practicals

Analysis of multistage LF amplifier using BJT / FET, verification with theoretical values of A_{is} , A_{vs} , R_i , R_o (overall) with square wave testing and comment on the results. Compute the simulation of above circuits.

Input impedance improvement techniques for emitter follower.

Biasing analysis of BJT power amplifier in class A, B, AB, C.

Calculation of efficiency & measurement of total harmonic distortion of class B/AB complementary symmetry power amplifier, verify the results using simulation.

Analysis of LF amplifier with negative feedback in voltage & current series topology

Measurement of frequency of oscillation for op-amp based RC oscillators, BJT/FET based LC oscillators, crystal oscillators.

Linear applications of Op-Amp such as summing, difference, voltage follower, signal phase shifter.

Regulation characteristics of series & shunt regulators and calculation of S_v and R_o (Discrete)

IC 723 as basic high / low voltage regulator with simple / foldback current limiting

Design, build and test for given specification.

Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

EXAMINATION SCHEME

Theory : 80 Marks

Duration : 03 Hours

Unit Test : 20 Marks

T. W. & Pr : 50 Marks

Frensel, Fundamentals of Communication, TMH

(09 Hours)

R. G. Gupta, Audio video Engineering Systems, TMH

Syllabus for Unit Test

Unit-I

Number Systems And Coding:

Number systems, Binary, Octal, Hexadecimal, Conversion (08 Hours)
Binary addition and subtraction , 1's & 2's complement method. Concept of coding, BCD codes, 8421, Excess -3, Grey code , codes with more than four bits, ASCII code.

Unit-II

Design Methods:

(08 Hours)

De-Morgan's theorem, Canonical and standard forms, dependency notation, minimization of logic functions, Karnaugh map upto 4 variables, SOP and POS forms, Don't care conditions, Quine Mc-Clusky method, multiple output minimization.

Unit-III

Logic Families And Semiconductor Memories:

(07 Hours)

Logic Families TTL NAND gate, specifications, tristate TTL, bus organized computer principle, ECL, MOS, CMOS families and their interfacing in details. Semiconductor Memories: RAM, ROM, PROM, EPROM, EEPROM, NVRAM, SRAM, DRAM; Concept of PLA, PAD.

(09 Hours)

Unit-IV

Combinational Logic:

Code conversion , arithmetic circuits , Half and Full adder, subtractor, Binary Serial, Parallel Adder, IC 7483, BCD Adder, Excess-3 Adder,

Digital comparator.

Unit-V

Multiplexer And Demultiplexer:

Multiplexer, Demultiplexer, Encoder, Decoder and their applications,
Design of ALU. (07 Hours)

Unit-VI

Sequential Logic Circuits:

S-R, Clocked S-R, JK and Master Slave JK flip flops, Flip-flop conversion, edge triggered flip-flops, design of Algorithmic State Machines (ASM) for simple applications. Design of ripple and synchronous counters, shift registers and pulse train generators, Pseudo Random Binary Sequencing (PRBS) generator, Analysis of clocked sequential circuits.

List of Practicals

- Implementation of Boolean functions using logic gates
- Study of characteristics of typical 74 TTL / 74 CMOS family like: fan in, fan out standard load, noise margin & interfacing with other families
- Half, Full Adder and subtractor using gates and IC's
- Code conversion using digital IC's
- 2 bit digital comparator and ALU verification
- Function implementation using Multiplexer and Demultiplexer
- Sequence generator using MSJK flip flop IC's
- Study of counters: Ripple, Synchronous, Ring, Johnson, Up-down counter and its application
- Study of shift registers: Shift left, Shift right, parallel loading and Pulse Train generator
- BCD Adder/Subtractor with Decoder driver and 7 segment display
- Study of typical RAMIC.

(09 Hours)

Tocci, Digital Systems-Principles & Applications, PHI

Douglas Hall, Digital Circuits and Systems, McGraw Hill

Syllabus for Unit Test

(08 Hours)

Unit-I

Frequency Amplifiers (BJT/FET):

Necessity of cascading LF small signal amplifiers in various configuration, techniques for improving input impedance of CC stage (Darlington connection, Bootstrapping), CE-CE cascade, CE-CB cascade arrangement, effect of cascading on frequency response of single stage and cascaded amplifiers, square wave testing or step response of AF amplifier. (08 Hours)

Small signal LF- h parameter model in CE/CB/CC configuration: concept of A.C equivalent circuit of single stage amplifier, need of coupling and bypass capacitors; analysis CE/CB/CC amplifier for A_i , A_v , R_i , & R_o in terms of h- parameter. Simplified h-parameter model, effect of biasing and source resistance on performance of single stage amplifier, concept of frequency response. (07 Hours)

Unit-II

LF Amplifiers With Negative Feedback:

Block schematic of amplifier with negative feedback, gain with feedback, consequences of introducing negative feedback in small signal and multistage amplifier, classification of amplifiers in view of feedback concept i.e. A_i , A_v , G_m , R_m , types of sampling and mixing, ways of introducing negative feedback in amplifiers i.e. voltage series & shunt, (07 Hours)

current series & shunt and effect on R_i & R_o in all four types, Methodology of feedback amplifier analysis.

Unit-III

(09 Hours)

Operational Amplifiers:

Internal block schematic of monolithic op-amp IC, Analysis of transistorized difference amplifier stage, Methods of improving CMRR, Definitions and measurement of op-amp parameters like input offset voltage and current, bias current CMRR, PSRR, open loop gain, etc., concept of dc amplification, inability of op-amp to work as a linear small signal amplifier in open loop, op-amp with closed loop negative feedback, closed loop gain and frequency response of op-amp, Linear applications like inverting & non - inverting amplifier, summing, difference.

Unit-IV

Large Signal (Power) Amplifiers:

Classification of amplifiers in class A, B, C, etc., concept of large signal amplification total harmonic distortion, push-pull configuration, efficiency of power conversion, CE transformer coupled amplifier, complementary symmetry CC power amplifier in single & dual supply version, efficiency and distortion analysis of those configuration (Graphical techniques to calculate harmonic distortion), cross over distortion, SOA and its limits, secondary breakdown, Heat sinks: standard shapes & sizes, thermal calculations and resistances and its calculations.

Unit-V

Oscillators & Voltage Regulators:
