Reference Books

1. Dave Ulrich, *Human Resource Management*, Mc Graw Hill Publication

List of Activities

Further, the topic for class discussion will be mentioned beforehand. Students are required to meet in groups before coming to class and prepare for the topic to be discussed. Instructor may ask the student groups to present their analysis and findings to the class. Few topics are mentioned below as examples. Instructor can add or change any topic as per requirement.

1. Topic: Understanding the issues and challenges involved in managing a diverse workforce
2. Topic: Is The Only Purpose of a Corporation to Maximize Profit?
3. Topic: Similarities and Differences in Manufacturing and Service Sector - Impact on HR Practices

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Course Overview

The course teaches cognitive Sciences.

Prerequisite:

Knowledge of Neural Networks and Artificial Intelligence.

Course Outcomes: On completion of the course, students will have the ability to:

1. Know Introduction to Cognitive Science, Psychology, Nervous system and brain
2. Understand Brain and sensory motor information, Representation of sensory information
3. Analyse From Sensation to Cognition; Roots of Cognitive Science
4. Develop Language and Embodiment
5. Implement Affordances in biological and artificial systems, Cognitive Development
6. Make Attention, Learning, Memory, Reasoning, Social Cognition.

Unit I

06 Hours

Introduction to the study of cognitive sciences. What is language? Affordances, Categories and concepts; Concept learning, Introduction to the study of cognitive sciences. Neural Network Models ,Linguistic knowledge: Syntax, semantics, (and pragmatics), Direct perception, Machine learning. History of cognitive science, Processing of sensory information in the brain, Ecological Psychology, Constructing memories, Methodological concerns in philosophy, Discretization and generating concept hierarchies, Installing Weka 3 Data Mining System, Generative linguistic, Affordance learning in robotics, Explicit vs. implicit memory

Unit II

06 Hours

Cognitive Science and its methodology concerns in philosophy, Written materials needed to get a CogNeuro research study with human subjects off the ground: Runsheets, SOPs, questionnaires, informed consent forms, Perform stemming operation in python using NLTK, Writing and running Robot programs – Activity of PICK and Place of an object, Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.

Unit III

06 Hours

Artificial intelligence and psychology, Brain Imaging, Brain and language, Affordance learning in robotics, Information processing (three-boxes) model of memory, Structure and constituents of the brain, fMRI, MEG, Language disorders,

Development, Brief history of neuroscience, PET, EEG, Lateralization, Child and robotic development, Sensory memory; Short term memory, Mathematical models, Multisensory integration in cortex, Lateralization, Attention and related concepts, Long term memory, Rationality.

Unit IV

06 Hours

Experimental approach to studying the working human brain and body. How to use Brain Voyager Brain Tutor. How to use the BESA dipole simulator? Introduction to EEG recordings. Theory, physiology, practical aspects of recording and analyzing scalp recorded brain potentials. Perform lemmatization in python using NLTK. Make simulation model using Rockwell ARENA 11.0 to show the functions / predictions for a manufacturing work cell. Evaluating ML algorithm with balanced and unbalanced datasets Comparison of Machine Learning algorithms.

Unit V

06 Hours

Mathematical models, Information fusion, The great past tense debate, Human visual attention, Bounded rationality; Prospect theory ; Heuristics and biases, Looking at brain signals, From sensation to cognition, The great past tense debate, Computational models of attention, Reasoning in computers. Looking at brain signals, Cybernetics, Cognitivist and emergent stand points, Computational models of attention, Key points in social cognition.

Unit VI

06 Hours

Processing of sensory information in the brain. From physics to meaning, Analog vs. Digital: Code duality. A robotic perspective, Applications of computational models of attentional, Context and social judgment; Schemas; Social signals, Experimental approach to processing sensory information in the brain using python. EEG analysis: How to get from the raw recording to specific brain waves. An example analysis. Perform parts of speech tagging in python using NLTK, Simulation modeling of four machine system using Rockwell ARENA 11.0., Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.

Practical: 02 Hours/Week	Continuous Assessment: 40 Marks		
Tutorials: NIL	TW & Practical: -- Marks	TW & Practical:	NA
	TW & Oral: 50 Marks	TW & Oral:	01
	Term Work -- Marks	Term Work	
	TotalMarks: 150	Work	
		TotalCredits: 04	

Course Overview

This course covers the development of Internet of Things (IoT) products and services—including devices for sensing, actuation, processing, and communication—to help the learners to develop skills and experiences which they can employ in designing novel systems.

Prerequisite:

1. Basic principles of Electronics
2. Basic Programming Skills

Course Outcomes: On completion of the course, students will have the ability to:

1. Understand basic principles and concepts of Internet-of-Things use cases, applications, architecture and technologies
2. Get an overview of an end-to-end IoT system encompassing the edge, cloud and application tier
3. Architect a complete IoT application on their own
4. Build upon the foundations created in the pre-requisite courses
5. Think innovatively to come up with a hardware solution to a given problem
6. Understand various industrial IoT applications as well as IIoT

Unit I Introduction to IoT and Use cases

Understanding basic concepts of IoT, Consumer IoT vs Industrial Internet, **06 Hours**
Fundamental building blocks, Use Cases of IoT in various industry domains,

Unit II Architecture

IoT reference architectures, Industrial Internet Reference Architecture, Edge **06 Hours**
Computing, IoT Gateways, Data Ingestion and Data Processing Pipelines, Data Stream Processing

Unit III Sensors and Industrial Systems

Introduction to sensors and transducers, integrating sensors to sensor processing **06 Hours**
boards, introduction to industrial data acquisition systems, industrial control systems and their functions

Unit IV Networking for IoT

Recap of OSI 7 layer architecture and mapping to IoT architecture, Introduction to proximity networking technologies (ZigBee, Bluetooth, Serial Communication), Industrial network protocols (Modbus, CANbus), **06 Hours**

Unit V Communication for IoT

Communicating with cloud applications (web services, REST, TCP/IP and UDP/IP sockets, MQTT, WebSockets, protocols. Message encoding (JSON, Protocol Buffers) **06 Hours**

Unit VI IoT Data Processing and Storage

Time Series Data and their characteristics, time series databases, basic time series analytics, data summarization and sketching, dealing with noisy and missing data, anomaly and outlier detection, **06 Hours**

3. 50 Sensor Applications for a Smarter World - http://www.libelium.com/resources/top_50_iot_sensor_applications_ranking/
4. Visualizing Data-Exploring and Explaining Data with the Processing Environment, By Ben Fry, Publisher: O'Reilly Media
5. Raspberry Pi Computer Architecture Essentials, by Andrew K Dennis
6. Getting Started with Arduino, M. Banzai, O'Reilly Media
7. GSMA IoT Security Guidelines & Assessment - <https://www.gsma.com/iot/future-iot-networks/iot-security-guidelines/>

List of Assignments

1. Setting up the Arduino Development Environment, connecting analog sensors to an Arduino Boarding and reading analog sensor data.
2. Digital Input and Output reading using and Arduino board and Arduino Development Environment.
3. Integrate an Arduino Board to a Raspberry Pi computer and send sensor data from Arduino to the R Pi

4. Setup Python on the R Pi and run sample R Pi programs on the R Pi. Read the data from Arduino using Python language
5. Connect a R Pi Camera module to the Raspberry Pi and using Python programming capture still images and video
6. Set up TCP/IP socket server on a PC. Send a message from the R Pi to the PC using socket communication
7. Set up a MQTT broker on the PC. Send data from R Pi to PC using MQTT protocol. Receive data from PC to R Pi using MQTT protocol
8. Connect LED lights to an Arduino. Connect the Arduino to the R Pi. Send Message from PC to R Pi via MQTT protocol. On receipt of the message , toggle the LED lights on the Arduino
9. Connect LED lights to an Arduino. Connect the Arduino to the R Pi. Send Message from PC to R Pi via MQTT protocol. On receipt of the message , toggle the LED lights on the Arduino
10. Set up an account in a cloud service (such as Google / AWS or Azure). Set up a simple Http server using a language of your choice. Push the image captured from the R Pi camera to this web service. On receiving the image, store the image in a database or file
11. Develop a mobile application to view the images captured by the R Pi camera

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Elective III c) Cryptology

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>
Lecture: 3Hours/Week	End Semester Examination: 60Marks	Theory 3
Practical: 2 Hours/Week	Continuous Assessment: 40 Marks	
Tutorials: Hours/Week	TW & Practical: Marks	TW & Practical: NA
	TW & Oral: 50 Marks	TW & Oral: 1
	Term Work NA	Term Work
	TotalMarks: 150	TotalCredits: 04

Course Overview

To highlight the features of different technologies involved in Cryptology.

Prerequisite:

- Basic knowledge in Discrete Mathematics, logarithms and set theory.
- Basic knowledge in networking concepts of presentation layer and application layer.

Course Outcomes: On completion of the course, students will have the ability to:

1. An overview of basic cryptographic concepts and methods
2. A good knowledge of some commonly used cryptographic primitives and protocols
3. A sound understanding of theory and implementation, as well as limitations and vulnerabilities
4. An appreciation of the engineering difficulties involved in employing cryptographic tools to build secure systems

Unit I 06 Hours

Introduction to Cryptography: Elementary number theory, Pseudo-random bit generation, Elementary Cryptosystems.

Unit II 06 Hours

Basic security services: confidentiality, integrity, availability, non-repudiation, privacy

Unit III 06 Hours

Symmetric key cryptosystems:Stream Cipher: Basic Ideas, Hardware and Software Implementations, Examples with some prominent ciphers: A5/1, Grain family, RC4, Salsa and ChaCha, HC128, SNOW family, ZUC; Block Ciphers: DES, AES, Modes of Operation; Hash Functions; Authentication

Unit IV 06 Hours

Public Key Cryptosystems:RSA, ECC; Digital signatures

Unit V 06 Hours

Security Applications (Selected Topics):Electronic commerce (anonymous cash, micro-payments), Key management, Zero-knowledge protocols, Cryptology in Contact Tracing Applications, Issues related to Quantum Cryptanalysis

Unit VI

06 Hours

Introductory topics in Post-Quantum Cryptography: Refer to <https://csrc.nist.gov/projects/post-quantum-cryptography>. May discuss any two ciphers from this list.

Textbooks

	TW & Oral: 50 Marks	TW & Oral:	--
	Term Work NA	Term Work	1
Total 150	Total 4		

Course Overview

This is an introductory course on quantum computing from perspective of computer science. This course will introduce the students to the postulates of quantum computing, formalisms like density matrices, effects of measurement. It will cover the quantum Turing machine and quantum circuit models of computation, and discuss Shor's factoring and Grover's search algorithms in this model.

Prerequisite: Linear Algebra, Probability, Analysis and Design of Algorithms

Course Outcomes: On completion of the course, students will have the ability to:

1. To understand principles of quantum computing
2. To understand different quantum models of computation
3. To implement important quantum algorithms
4. To understand random number generation exploiting quantum physics
5. To learn quantum key distribution protocols
6. To apply quantum computing to different computational areas like cryptography

Unit I **06 hours**

Quantum Mechanics: Hilbert space, Unitary and stochastic dynamics, Probabilities and measurements, Entanglement, Density operators and correlations.

Unit II **06 Hours**

Introduction to Quantum Information: States, Operators, Measurements, Quantum Entanglement: Quantum Teleportation, Super-dense coding, CHSH Game, Quantum gates and circuits

Unit III **06 Hours**

Quantum Algorithms: Deutsch-Jozsa, Simon, Grover, Shor, Implication of Grover's and Simon's algorithms towards classical symmetric key cryptosystems, Implication of Shor's algorithm towards factorization and Discrete Logarithm based classical public key cryptosystems

Unit IV **06 Hours**

Quantum True Random Number Generators (QTRNG): Detailed design and issues of quantumness, Commercial products and applications

Unit V **06 Hours**
Quantum key distribution (QKD):BB84, Ekert, Semi-Quantum QKD protocols and their variations, Issues of Device Independence, Commercial products

Unit VI **06 Hours**
Refer to <https://csrc.nist.gov/projects/post-quantum-cryptography>. May discuss any two ciphers from this list. Quantum key distribution, entropic uncertainty relations

Note: If any student also opts for Cryptology course, in that case the ciphers discussed in this course must differ from the ciphers that will be discussed in Cryptology course.

Textbooks

5. Quantum Algorithms for Cryptographically Significant Boolean Functions - An IBMQ Experience. SAPV Tharmashastha, D. Bera, A. Maitra and S. Maitra, Springer 2020.
6. Quantum Algorithm Zoo. <https://quantumalgorithmzoo.org/>
7. Handbook of Applied Cryptography. A. J. Menezes, P. C. van Oorschot, and S. A. Vanstone. CRC Press

List of Assignments-

Will be provided by Course Coordinator. 1 or 2 assignments on each unit.

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Elective IV b) Advanced Social, Text and Media Analytics

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>	Credits
Lecture: 3Hours/Week	End Semester Examination: 60Marks	Theory	3
Practical: 2Hours/Week	Continuous Assessment: 40 Marks		
Tutorials: 0Hours/Week	TW &Practical: NA	TW & Practical:	
	TW &Oral: 50Marks	TW & Oral:	
	Term Work NA	Term Work	1
	TotalMarks: 150	TotalCredits: 04	

Course Overview Students will be able to hone their skills even further by embracing the newer techniques in our data-driven world. Understanding how Web & Data Analytics, Artificial Intelligence & Machine Learning can be applied to Social Media and Digital Marketing will be the prime objective of this content rich program.

Prerequisite: Machine Learning ,Database and Data mining

Course Outcomes: On completion of the course, students will have the ability to:

1. To be able to use various tools for Text Mining and carry out Pattern Discovery, Predictive Modeling.
2. Explore the use of social network analysis to understand the growing connectivity and complexity in the world around us on different scales ranging from small groups to the World Wide Web.
3. Perform social network analysis to identify important social actors, subgroups (i.e., clusters), and network properties in social media sites such as Twitter, Facebook, and YouTube.
4. Summarize knowledge on extraction and analyzing of social web
5. Describe Association rule mining algorithms
6. Recognize the evolution of social networks

Unit I **06 Hours**

Text Mining: Introduction, Core text mining operations, Preprocessing techniques, Categorization, Clustering, Information extraction, Probabilistic models for information extraction, Text mining applications

Unit II **06 Hours**

Methods & Approaches: Content Analysis; Natural Language Processing; Clustering & Topic Detection; Simple Predictive Modeling; Sentiment Analysis; Sentiment Prediction

Unit III **06 Hours**

Text Extraction:Text Extraction: Introduction, Rapid automatic keyword extraction: candidate keywords, keyword scores, adjoining keywords, extracted keywords, Benchmark evaluation: precision and recall, efficiency, stoplist

generation, Evaluation on new articles.

Unit IV

06 Hours

Web Analytics: Web analytics tools, Clickstream analysis, A/B testing, online surveys; Web search and retrieval, Search engine optimization, Web crawling and Indexing, Ranking algorithms, Web traffic models

Unit V

06 Hours

Social Media Analytics: Social network and web data and methods. Graphs and Matrices. Basic measures for individuals and networks. Information visualization; Making connections: Link analysis. Random graphs and network evolution. Social contexts: Affiliation and identity; Social network analysis

Unit VI

06 Hours

Extracting And Analyzing Web Social Networks:

Extracting Evolution of Web Community from a Series of Web Archive, Temporal Analysis on Semantic Graphusing Three-Way Tensor, Decomposition, Analysis of Communities and Their Evolutions in DynamicNetworks.

Textbooks

- 1 Peter Mika, "Social networks and the Semantic Web", Springer, 2007. 2.
2. GuandongXu,Yanchun Zhang, and Lin Li, "Web Mining and Social Networking Techniques and Applications", Springer

Reference Books

- 1Borko Furht, "Handbook of Social Network Technologies and Applications", 1st Edition, Springer, 2010.
- 2.Guandong Xu ,Yanchun Zhang and Lin Li, "Web Mining and Social Networking – Techniques and applications", First Edition Springer, 2011.
- 3.Max Chevalier, Christine Julien and Chantal Soulé-Dupuy, "Collaborative and Social InformationRetrieval and Access: Techniques for Improved user Modelling", IGI Global Snippet, 2009.
- 4.Charu C. Aggarwal, "Social Network Data Analytics", Springer, 2011.

List of Assignments

- 1.Review two case studies of applying social media analytics using both textand network analysis available.
- 2.Students will select two companies/organizations/groups to conduct acomparative analysis of social networks by examining social mediaactivity.
- 3.Identify 2 relevant social media platforms used by both entities and use Netlytic to collect publicly available social media data (e.g., Twitter messages, Facebook page posts, etc.).
- 4.Conduct text and network analysis of each platforms used by theorganizations. Students will end up with a set of interactive visualizationsto investigate the similarities and differences between the contentdiscussed and social networks developed among each organization.

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Elective IV c) Mobile Computing

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDIT SCHEME</u>	
Lecture:	03 Hours/Week	End Semester Examination: 60Marks		Theory	Credits 03
Practical:	02 Hours/Week	Continuous Assessment: 40 Marks			
Tutorials:	00 Hours/Week	TW & Practical: 00 Marks		TW & Practical:	00
Total	05 Hours/Week	TW & Oral:	50 Marks	TW & Oral:	01
		Term Work	00 Marks	Term Work	00
Total	150	Total	04		

Course Overview

Course covers Mobile structure, communication technologies.

Prerequisite: Basic understanding of networking is required

Course Outcomes: On completion of the course, students will have the ability to:

1. Study Mobile Infrastructure
2. Understand Location Management of Mobile.
3. Understand the Multiple Access Control
4. Use wireless Network
5. Understand Cognitive radio network
6. Use 5G technology.

Unit I

06 Hours

Introduction: Overview of wireless and mobile infrastructure; Preliminary concepts on cellular architecture; Design objectives and performance issues; Radio resource management and interface; Propagation and path loss models; Channel interference and frequency reuse; Cell splitting; Channel assignment strategies; Overview of generations:- 1G to 5G.

Unit II

06 Hours

Location and handoff management: Introduction to location management (HLR and VLR); Mobility models characterizing individual node movement (Random walk, Fluid flow, Markovian, Activity based); Mobility models characterizing the movement of groups of nodes (Reference point based group mobility model, Community based group mobility model); Static (Always vs. Never update, Reporting Cells, Location Areas) and Dynamic location management schemes (Time, Movement, Distance, Profile Based); Terminal Paging (Simultaneous paging, Sequential paging); Location management and Mobile IP; Overview of handoff process; Factors affecting handoffs and performance evaluation metrics; Handoff strategies; Different types of handoffs (soft, hard, horizontal, vertical).

Unit III **06 Hours**

Wireless transmission fundamentals: Introduction to narrow and wideband systems; Spread spectrum; Frequency hopping; Introduction to MIMO; MIMO Channel Capacity and diversity gain; Introduction to OFDM; MIMO-OFDM system; Multiple access control (FDMA, TDMA, CDMA, SDMA); Wireless local area network; Wireless personal area network (Bluetooth and zigbee).

Unit IV **06 Hours**

Mobile Ad-hoc networks: Characteristics and applications; Coverage and connectivity problems; Routing in MANETs.

Wireless sensor networks: Concepts, basic architecture, design objectives and applications; Sensing and communication range; Coverage and connectivity; Sensor placement; Data relaying and aggregation; Energy consumption; Clustering of sensors; Energy efficient Routing (LEACH).

Unit V **06 Hours**

Cognitive radio networks: Fixed and dynamic spectrum access; Direct and indirect spectrum sensing; Spectrum sharing; Interoperability and co-existence issues; Applications of cognitive radio networks.

Unit VI **06 Hours**

D2D communications in 5G cellular networks: Introduction to D2D communications; High level requirements for 5G architecture; Introduction to the radio resource management, power control and mode selection problems; Millimetre wave communication in 5G.

Textbooks

1. *Mobile Communications*. Jochen Schiller, Pearson Education.
2. *Wireless Communications*. Andrea Goldsmith, Cambridge University Press.
3. *Wireless Communications: Principles and Practice*. Theodore Rappaport, Pearson Education.
4. *Wireless Communications*. Ezio Biglieri, MIMO, Cambridge University Press.
5. *Handbook of Wireless Networking and Mobile Computing*. Ivan Stojmenovic, Wiley.

Reference Books

- 1 *Dynamic Location Management in Heterogeneous Cellular Networks*. James Cowling,

2 *Wireless Device-to- Device Communications and Networks*.Lingyang Song, Dusit Niyato, Zhu Han, and Ekram Hossain, Cambridge University Press.

List of Assignments

- 1 Understand the cell splitting in crowded region.
- 2 Study the evolution from 1G to 5G
- 3 Use handoff approach for switching of network
- 4 Explain various mobility models in detail.
- 5 Use frequency hopping approaches in detail.
- 6 Exemplify the compatibility issues.
- 7 Explain energy efficient routing.
- 8 Explain dynamic spectrum access in detail
- 9 List out issues in D2D communication.
- 10 Analyse the changes required in architecture for 5G

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

		TW &Oral: NA	TW & Oral:	NA
Total	06 Hours/Week	Total : 150 Marks	Total	5

Course Overview

Introduction to service, its nature, operations, development, design, quality relationships and Innovation.

Prerequisite:

Fundamentals of Management, Operations Research

Course Outcomes: On completion of the course, students will have the ability to:

5. Understand concepts about Services and distinguish it from Goods.
6. Able to identify characteristics and nature of Services.
7. Comprehend ways to design Services and evaluate those using Service qualities.
8. Understand how various methods can be used to operate and manage Service businesses.
9. Understand how innovation can be approached from Services point of view.
10. Understand the need of Services Innovation.

Unit I

06 Hours

Introduction: Introduction to the course, Introduction to service operations, Role of service in economy and society, Introduction to Indian service sector.

Nature of Services and Service Encounters: Differences between services and operations, Service package, characteristics, various frameworks to design service operation system, Kind of service encounter, importance of encounters.

Unit II

06 Hours

Service-Dominant Logic: From Goods-Dominant logic to Service-Dominant logic, Value Co-creation. **Service Strategy and Competitiveness:** Development of Strategic Service Vision (SSV), Data Envelopment Analysis.

New Service Development: NSD cycle, Service Blueprinting, Elements of service delivery system.

Service Design: Customer Journey and Service Design, Design Thinking methods to aid Service Design.

Unit III

06 Hours

Locating facilities and designing their layout: models of facility locations (Huff's retail model), Role of service-scape in layout design.

Service Quality: SERVQUAL, Walk through Audit, Dimensions of Service quality & other quality tools.

Service Guarantee & Service Recovery: How to provide Service guarantee?

How to recover from Service failure?

Unit IV

06 Hours

Forecasting Demand for Services: A review of different types of forecasting methods for demand forecasting.

Managing Capacity and Demand: Strategies for matching capacity and demand, Psychology of waiting, Application of various tools used in managing waiting line in services.

Managing Facilitating Goods: Review of inventory models, Role of inventory in services.

Unit V

06 Hours

Managing service supply relationship: Understanding the supply chain/hub of service, Strategies for managing suppliers of service.

Vehicle Routing Problem: Managing after sales service, Understanding services that involve transportation of people and vehicle, Techniques for optimizing vehicle routes.

Unit VI

06 Hours

Service Innovation: Services Productivity, Need for Services Innovation.

Student Project:

Option 1: Choose any service organization around and present it from the perspective of: nature of service, classification of service, blueprint or service design analysis, service quality, and any additional perspective you would like to add.

Option 2: Choose any latest research paper in services and explain your understanding and feedback on the same.

Textbooks

1. Fitzsimmons & Fitzsimmons, *Service Management: Operations, Strategy, Information Technology*, McGraw Hill publications (7th edition).

Course Overview

Course provides an in depth understanding of project management principles and industry perspective software project management practices

Prerequisite:

Knowledge of Software Engineering Principles.

Course Outcomes: On completion of the course, students will have the ability to:

1. Learn the techniques to effectively plan
2. Perform the Project Scheduling, tracking, Quality management and Project Cost estimation using different techniques
3. Develop strategies to calculate risk factors involved in IT projects.
4. decide an effective project management strategy by assessing the project's business background and scope
5. understand responsibility as a professional practitioner of project management
6. Use project management and monitoring tools.

Unit I

06 Hours

Project Overview and Feasibility Studies: Identification, Market and Demand Analysis, Project Cost Estimate, Financial Appraisal.

Unit II

06 Hours

Project Scheduling: Project Scheduling, Introduction to PERT and CPM, Critical Path Calculation, Precedence Relationship, Difference between PERT and CPM, Float Calculation and its importance, Cost reduction by Crashing of activity.

Unit III

06 Hours

Cost Control and Scheduling: Project Cost Control (PERT/Cost), Resource Scheduling & Resource Levelling

Unit IV

06 Hours

Project Management Features: Risk Analysis, Project Control, Project Audit and Project Termination.

Agile Project Management: Introduction, Agile Principles, Agile methodologies:
Agile Methodologies: XP, FDD, DSDM, Crystal.

Unit V

06 Hours

Scrum: Various terminologies used in Scrum (Sprint, product backlog, sprint backlog, sprint review, retro perspective), various roles (Roles in Scrum), Best practices of Scrum. Relationship between Agile Scrum and Lean.

Unit VI

06 Hours

DevOps: Overview and its Components, Containerization Using Docker, Managing Source Code and Automating Builds, Automated Testing and Test Driven Development, Continuous Integration, Configuration Management, Continuous Deployment, Automated Monitoring.

Textbooks

1. Mike Cohn, Succeeding with Agile: Software Development Using Scrum
2. Notes to be distributed by the course instructor on various topics

Reference Books

3. Roman Pichler, *Agile Product Management with Scrum*
4. Ken Schwaber, *Agile Project Management with Scrum (Microsoft Professional)*

List of Assignments

Case studies will be distributed to students beforehand and students should prepare and try to solve these cases before coming to class. Students will be asked submit and present their understanding of the cases and solutions before the class.

Note: Workshops will be conducted as a part of this course which is mandatory for students to attend. The primary objective of the workshops is to teach the students the agile project management including Scrum and DevOps through group activities.

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Marketing Research & Marketing Management

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>		<u>CREDIT SCHEME</u>	
Lecture:	3 Hours/Week	End Semester Examination:	60Marks	Theory	Credits 3
Practical:	NA	Continuous Assessment:	40 Marks		
Tutorials:	NA	TW & Practical:	NA	TW & Practical:	NA
		TW & Oral:	NA	TW & Oral:	NA
		Term Work:	NA	Term Work	NA
Total	3 Hours/Week	Total:	100 Marks	Total	3

Course Overview:

Course includes concepts of Marketing, Product Management, Business Marketing and marketing management.

Prerequisite:

Students should have basic knowledge about marketing skills.

Course Outcomes: On completion of the course, students will have the ability to:

1. Understand the basic marketing concepts.
2. Comprehend the concept of Product Life cycle and Product development.
3. Understand the basics of Pricing, Promotion and Distribution Strategy.
4. Comprehend the dynamics of marketing and analyze how its various components interact with each other in the real world.
5. Leverage marketing concepts for effective Internet Marketing.
6. Understand basic concepts and application of statistical tools in Marketing research.

Unit I

06 Hours

Marketing Concepts and Applications: Introduction to Marketing & Core Concepts, Marketing of Services, Importance of marketing in service sector.

Marketing Planning & Environment: Elements of Marketing Mix, Analyzing needs & trends in Environment - Macro, Economic, Political, Technical & Social.

Understanding the consumer: Determinants of consumer behaviour, Factors influencing consumer behaviour.

Market Segmentation: Meaning & Concept, Basis of segmentation, selection of segments, Market Segmentation strategies, Target Marketing, Product Positioning.

Unit II

06 Hours

Product Management: Product Life cycle concept, New Product development & strategy, Stages in New Product development, Product decision and strategies, Branding & packaging

Unit III

06 Hours

Pricing, Promotion and Distribution Strategy: Policies & Practices – Pricing Methods & Price determination Policies. Marketing Communication – The promotion mix, Advertising & Publicity, 5 M's of Advertising Management. Marketing Channels, Retailing, Marketing Communication, Advertising.

Unit IV

06 Hours

Marketing Research: Introduction, Type of Market Research, Scope, Objectives & Limitations, Marketing Research Techniques, Survey Questionnaire design & drafting, Pricing Research, Media Research, Qualitative Research

Data Analysis: Use of various statistical tools – Descriptive & Inference Statistics, Statistical Hypothesis Testing, Multivariate Analysis - Discriminant Analysis, Cluster Analysis, Segmenting and Positioning, Factor Analysis.

Unit V

06 Hours

Internet Marketing: Introduction to Internet Marketing. Mapping fundamental concepts of Marketing (7Ps, STP); Strategy and Planning for Internet Marketing.

Unit VI

06 Hours

Business to Business Marketing: Fundamental of business markets. Organizational buying process. Business buyer needs. Market and sales potential. Product in business markets. Price in business markets. Place in business markets. Promotion in business markets. Relationship, networks and customer relationship management. Business to Business marketing strategy.

Textbooks

1. Marketing Management (Analysis, Planning, Implementation & Control) – Philip Kotler
2. Fundamentals of Marketing – William J. Stanton & Others
3. Marketing Research – Rajendra Nargundkar
4. Marketing Management – V.S. Ramaswamy and S. Namakumari
5. Market Research – G.C. Beri
6. Market Research, Concepts, & Cases – Cooper Schindler

Reference Books

1. Marketing Management – Rajan Saxena
2. Marketing Management – S.A. Sherlekar
3. Service Marketing – S.M. Zha
4. Journals – The IUP Journal of Marketing Management, Harvard Business Review
5. Research for Marketing Decisions by Paul Green, Donald, Tull
6. Business Statistics, A First Course, David M Levine at al, Pearson Publication

List of Assignments

1. Case study on various marketing management, Product Management, Data Analysis, Internet Marketing
2. Field visit & live project covering steps involved in formulating Market Research Project
3. Measuring Internet Marketing Effectiveness: Metrics and Website Analytics

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Elective V a) Behavioral Economics

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>	
Lecture:	3 Hours/Week	End Semester Examination:60 Marks	Theory	Credits 3
Practical:	2 Hours/Week	Continuous Assessment: 40 Marks		
Tutorials:	NA	TW & Practical:50 Marks	TW & Practical:	1
		TW & Oral:NA	TW & Oral:	NA
		Term Work :NA	Term Work	NA
Total	5 Hours/Week	Total:150 Marks	Total	4

Course Overview: : To impart knowledge on current ideas and concepts regarding decision making in Economics, particularly from a behavioral science perspective, which can affect choices and behavior of firms, households and other economics entities

Prerequisite: Knowledge of Mathematics

Course Outcomes: On completion of the course, students will have the ability to:

1. various concepts in understand and apply traditional and modern Microeconomics, focusing on decision making, and
2. develop a holistic understanding of these concepts and their interconnections

Unit I **06 Hours**

Introduction The neoclassical/standard model and behavioral economics in contrast; historical background; behavioral economics and other social sciences; theory and evidence in the social sciences and in behavioral economics; losses, money illusion, charitable donation.

Unit II **06 Hours**

Basics of choice theory Revisiting the neoclassical model; utility in economics and psychology; models of rationality; connections with evolutionary biology and cognitive neuroscience; policy analysis – consumption and addiction, environmental protection, retail therapy; applications – pricing, valuation, public goods, choice anomalies

Unit III **06 Hours**

Beliefs, heuristics and biases Revisiting rationality; causal aspects of irrationality; different kinds of biases and beliefs; self-evaluation and self-projection; inconsistent and biased beliefs; probability estimation; trading applications – trade in counterfeit goods, financial trading behavior, trade in memorabilia

Unit IV **06 Hours**

Choice under uncertainty Background and expected utility theory; prospect theory and other theories; weighting; applications – reference points; loss

aversion; marginal utility; decision and performance and probability ownership and trade consumption, income, in sports.

Unit V **06 Hours**

Intertemporal choice Geometric discounting; preferences over time,

of inter-temporal decisions; hyperbolic; discounting instantaneous; utility alternative concepts – future projection, mental accounts, heterogeneous selves, procedural choice; policy analysis – mobile calls, credit cards, organization of government; applications – consumption and savings clubs and membership, consumption planning

Unit VI

06 Hours

Strategic Choice

1. Review of game theory and Nash equilibrium – strategies, information, equilibrium in pure and mixed strategies, iterated games, bargaining, signaling, learning; applications – competitive sports, bargaining and negotiation, monopoly and market entry

2. Individual preferences; choice anomalies and inconsistencies; social preferences; altruism; fairness; reciprocity; trust; learning; communication; intention; demographic and cultural aspects; social norms; compliance and punishment; inequity aversion; policy analysis – norms and markets, labor markets, market clearing, public goods; applications – logic and knowledge, voluntary contribution, compensation design

Textbooks

1 An Introduction to Behavioral Economics, by N. Wilkinson and M. Klaes

Reference Books

1 Colin Cramer, George Loewenstein, Mathew Rabin Advances in Behavioral Economics, Princeton University Press

List of Assignments

2 -3 Assignment on Each Unit

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Elective V b) Computational Finance and Modelling

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>	
Lecture:	3 Hours/Week	End Semester Examination:60 Marks	Theory	Credits 3
Practical:	2Hours/Week	Continuous Assessment: 40 Marks		
Tutorials	NIL	TW & Practical: NIL	TW & Practical:	1
		TW & Oral: 50 Marks	TW & Oral:	
		Term Work:	Term Work	
Total	5 Hours/Week	Total: 150 Marks	Total	4

Course Overview

Computational finance emphasizes practical numerical methods rather than mathematical proofs and focuses on techniques that apply directly to economic analyses

Prerequisite:

Numerical Methods, Probability, Statistics, ordinary and partial differential equations, linear algebra and analysis.

Course Outcomes: On completion of the course, students will have the ability to:

1. Understand existing financial models in a quantitative and mathematical way.
2. Apply these quantitative tools to solve complex problems in the areas of portfolio management, risk management and financial engineering.
3. Explain the approaches required to calculate the price of options.
4. Identify the methods required to analyse information from financial data and trading systems.
5. Understanding Statistical Analysis
6. Understanding Incomplete Markets and Electronic Trading

Unit I

06 Hours

Numerical methods relevant to integration, differentiation and solving the partial differential equations of mathematical finance: examples of exact solutions including Black Scholes and its relatives, finite difference methods including algorithms and question of stability and convergence, treatment of near and far boundary conditions, the connection with binomial models, interest rate models, early exercise, and the corresponding free boundary problems, and a brief introduction to numerical methods for solving multi-factor models.

Unit II

06 Hours

Black-Scholes framework: Black-Scholes PDE: simple European calls and puts; put-call parity. The PDE for pricing commodity and currency options. Discontinuous payoffs - Binary and Digital options. The Greeks: theta, delta, gamma, vega & rho and their role in hedging. The mathematics of early exercise - American options: perpetual calls and puts; optimal exercise strategy and the smooth pasting condition. Volatility considerations - actual, historical, and implied volatility; local vol and volatility surfaces.

Simulation including random variable generation, variance reduction methods and statistical analysis of simulation output. Pseudo random numbers, Linear congruential generator, Mersenne twister RNG. The use of Monte Carlo simulation in solving applied problems on derivative pricing discussed in the current finance literature. The technical topics addressed include importance sampling, Monte Carlo

integration, Simulation of Random walk and approximations to diffusion processes, martingale control variables, stratification, and the estimation of the “Greeks. ”

Unit III

06 Hours

Financial Products and Markets: Introduction to the financial markets and the products which are traded in them: Equities, indices, foreign exchange, and commodities. Options contracts and strategies for speculation and hedging.

Unit IV

06 Hours

Application areas include the pricing of American options, pricing interest rate dependent claims, and credit risk. The use of importance sampling for Monte Carlo simulation of VaR for portfolios of options.

Unit V

06 Hours

Statistical Analysis of Financial Returns: Fat-tailed and skewed distributions, outliers, stylized facts of volatility, implied volatility surface, and volatility estimation using high frequency data.

Unit VI

06 Hours

Copulas, Hedging in incomplete markets, American Options, Exotic options, Electronic trading, Jump Diffusion Processes, High-dimensional covariance matrices, Extreme value theory, Statistical Arbitrage.

Textbooks

List of Assignments

- 1 Implement different Numerical methods
- 2 Implement variance reduction methods
- 3 Study Financial Markets
- 4 Implement Monte Carlo Method

- 5 Analyze frequency data.
- 6 Study High Dimensional Covariance Matrix

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Elective V c) PSYCHOLOGY

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>	
Lecture:	03 Hours/Week	End Semester Examination: 60Marks	Theory	Credits 03
Practical:	02 Hours/Week	Continuous Assessment: 40 Marks		
Tutorials:	00 Hours/Week	TW & Practical: 00 Marks	TW & Practical:	
		TW & Oral: 50 Marks	TW & Oral:	01
		Term Work: 00 Marks	Term Work	
Total	05 Hours/Week	Total: 150 Marks	Total	04

Course Overview

Introduces students to the content areas of industrial psychology and the application of psychological theory to organizational issues. Topics include employment law, job analysis, recruitment and selection, training, performance appraisal and discipline, employee motivation, and workplace safety. Using an applied approach, this course will help prepare students for their roles as employees and managers.

Prerequisite:

Statistics courses are a must for any psychology major. Statistics offers a core background for understanding how psychologists investigate human behaviour.

Course Outcomes: On completion of the course, students will have the ability to:

1. Become conversant about the major content areas of Industrial Psychology (i.e., job analysis, recruitment, selection, employment law, training, performance management, and health/well-being issues in the workplace).
2. Gain further comfort with statistical concepts in the context of making personnel decisions to reinforce content learned in PSY203 or an equivalent introductory statistics course.
3. Gain practical experience by completing a series of hands-on projects involving job analysis, selection decisions, training programs, and employee well-being.
4. Deepen your understanding of tests and measurements so that you can collect accurate information and make sound data-based decisions.
5. Prepare for other focused seminar courses in Industrial/Organizational Psychology or Human Resource Management.
6. To allow the students to observe and interpret individual differences in behaviour in the light of sound theoretical systems of personality.

Unit I

06 Hours

What is I/O Psychology? Research Methods, Statistics, and Evidence-based Practice, Introduction & Legal Context of Industrial Psychology, Job Analysis & Competency Modeling, Job Evaluation & Compensation, Job Design & Employee Well-Being, Recruitment.

Unit II

06 Hours

Identifying Criteria & Validating Tests and Measures, Screening Methods, Intensive Methods.

Unit III

06 Hours

Performance Goals and Feedback, Performance Coaching and Evaluation,

Evaluating Employee Performance

Unit IV **06 Hours**
Employee Motivation, Satisfaction and Commitment, Fairness and Diversity

Unit V **06 Hours**
Leadership, Organizational Climate, Culture, and Development, Teams in Organizations, The Organization of Work Behaviour

Unit VI **06 Hours**
Stress Management: Demands of Life and Work

Textbooks

- 1 Landy, F. J. and Conte, J. M. (2013). Work in the 21st Century (4th Edition). Oxford: Blackwell Publishing
- 2 Introduction to Psychology, University of Minnesota Libraries Publishing, ISBN 13: 9781946135131
- 3 Introduction to Psychology, Manoj Kr Singh, Anmol Publications Pvt. Ltd.

Reference Books

- 1 Encyclopedia of Psychology (English, Hardcover, unknown), Oxford University Press Inc
ISBN: 9781557981875, 9781557981875, Edition: 2000

List of Assignments

- 1 Case study on Legal Context of Industrial Psychology
- 2 How to get Employee Motivation, Satisfaction and Commitment in working environment?
- 3 How to reducing the stress for compromising demands of life?
- 4 Case Study on Evaluating Employee Performance

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Elective VI a) Enterprise Systems

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>	Credits
Lecture: 3 Hours/Week	End Semester Examination: 60Marks	Theory	03
Practical: 2 Hours/Week	Continuous Assessment: 40 Marks		
Tutorials: NA	TW & Practical: NA	TW & Practical:	
	TW & Oral: 50 Marks	TW & Oral:	01
	Term Work NA	Term Work	
	Total 150 Marks	Total	04

Course Overview

The course deals with Enterprise Systems, Service Oriented Architecture.

Prerequisite:

Have the knowledge of Databases and Networks.

Course Outcomes: On completion of the course, students will have the ability to:

- Design and deploy Simple Web Applications using MVC
- Design SOA and ERP models
- Design of CRM models
- Design interactive network and application
- Manage, Maintain and configuration of Networking
- Learn how to use the user interface using ERP Tools and Technologies.

Unit I

06 Hours

Overview of: Database Management Systems. Overview of Model - View - Control (MVC),Control (MVC) method of software development in a 3 tier environment

Tools and Technologies: overview of the following : Java server pages , Related Java Technologies, Microsoft .NET framework, PHP, Ruby on Rails, Javascript, Ajax.

Unit II

06 Hours

Service Oriented Architecture (SOA): Principles of loose coupling, encapsulation Inter-operatibility ,Web Services as the implementation vehicle protocols, usage
Enterprise Resource Planning (ERP): systems and their architecture, Overview of SAP and Oracle Applications, Generic ERP Modules: Finance, HR, Materials Management, Investment, etc , Examples of Domain Specific Modules .

Unit III

06 Hours

Electronic Data Exchange, Customer Relationship Management (CRM), Supplier Relationship Management (SRM)

Security Issues - Authentication, Authorisation, Access control, Roles; single-sign-on, Directory servers, Audit trails; Digital signatures; Encryption: review of IPsec, SSL and other technologies; Simple Applications Demo .

Unit IV

06 Hours

Network management in ERP: Overview of : MPLS, Virtual Private Networks (VPN),

Firewalls, Network monitoring and enforcement of policies.

Unit V

06 Hours

ERP Software Acquisition Process: Tendering; conditions of contract, Commercial off the shelf software (COTS) versus Bespoke Implementations; Total cost of ownership, Issues on using Open source software or free software, Licensed software.

Unit VI

06 Hours

Hardware Architectures for Enterprise Systems : Servers ,Clustering, Storage area networks, Storage units,Back-up strategies, Local Area Network (LAN) technologies and products, Data Centres.

Disaster recovery site design and implementation issues, Hardware Acquisition Issues.

Textbooks

1. Enterprise Resource Planning - Alexis Leon, Tata McGraw Hill.
2. Enterprise Resource Planning – Diversified by Alexis Leon, TMH.
3. Enterprise Resource Planning - Ravi Shankar & S. Jaiswal , Galgotia

Reference Books

1. E-Business Network Resource planning using SAP R/3 Baan and Peoplesoft : A Practical Roadmap For Success By Dr. Ravi Kalakota

List of Assignments

1. Create a Movie Database Application using MVC
2. Creating an ASP.NET MVC Web Application Project.
3. Explore the client/server architecture of SAP. Learn how to use the user interface
4. Create vendor, material master data for purchasing. Execute the Purchasing process in SAP
5. A model of customer relationship management and business intelligence systems for catalogue and online retailers.
6. Firewalls configuration
7. COTS configuration and Implementation
8. A model of customer relationship management and business intelligence systems for catalogue and online retailers

Syllabus for Unit Tests:

Unit Test -1

Unit – I, Unit – II, Unit - III

Unit Test -2

Unit – IV, Unit – V, Unit - VI

Elective VI b) Advance Finance

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>	Credits
Lecture: 3Hours/Week	End Semester Examination: 60Marks	Theory	3
Practical: 2Hours/Week	Continuous Assessment: 40 Marks	TW & Practical:	NIL
Tutorials: NA	TW & Practical: NA	TW & Oral:	1
	TW & Oral: 25 Marks	Term Work	
	Term Work 25 Marks		
Total 150 Marks	Total 4		

Course Overview: This course focuses on advanced financial decisions of corporate managers. The course uses case studies to illustrate the application of theoretical concepts to real-life.

Prerequisite: Basics of Financial accounting

Course Outcomes: On completion of the course, students will have the ability to:

1. Imbibe knowledge about the decisions and decision variables involved with financial activities of the firm.
2. Develop skills for interpretation business information and application of financial theory in corporate investment decisions, with special emphasis on working capital management.
3. Familiarizing the students with the corporate and financial restructuring.
4. Explain optionality and its application to financial management and financial decisions
5. Present ideas and advocate for decisions using effective finance arguments, models and frameworks
6. Analyse how organisations can effectively manage risk in today's uncertain economy

Unit I : Sources of Funds (including regulatory framework) 06 Hours

- Types of securities
- Issuing the capital in market
- Pricing of issue
- Valuation of Stocks and bonds

Unit II: Dividend Decisions: Traditional Approach, Dividend Relevance Model, 06 Hours
Miller and Modigliani Model, Stability of Dividends, Forms of Dividends, Issue of bonus shares, Stock Split.

Unit III: Evaluation of Lease Contracts, 06 Hours
Corporate Restructuring

- Mergers and Acquisitions- Types of Mergers, Evaluation of Merger Proposal
- Take-over
- Amalgamation
- Leverage buy-out
- Management buy-out
- Corporate Failure and Liquidation

Unit IV : Financial Restructuring

06 Hours

- Share Split
- Consolidation
- Cancellation of Paid-up Capital
- Other Mechanisms

Unit V: Working Capital Management:

06 Hours

- Working Capital Planning
- Monitoring and Control of Working Capital
- Working Capital Financing
- Managing the Components of Working Capital
 - Cash Management
 - Receivable Management
 - Inventory Management

Unit VI: Introduction to derivatives

06 Hours

- Basics of Futures, Forwards, Options, Swaps
- Interest rate Payoff Diagrams, Pricing of Futures, Put Call Parity, Option Pricing using Binomial Model and Black Scholes Model
- Use of Derivatives for Risk-Return Management- Credit Default Swaps

Textbooks

1. Brealey, Myers and Allen, *Principles of Corporate Finance*
2. Case Study Materials: To be distributed for class discussion

List of Assignments

Case study materials book will be given to students. Students are required to meet in groups before coming to class and prepare on the case for the day. Instructor may ask the student groups to present their analysis and findings to the class.

Further, the topic for class discussion will be mentioned beforehand and students should be prepared to discuss these topics in class. Few topics are mentioned below as examples. Instructor can add or change any topic as per requirement.

1. Topic: Historical perspectives of markets like major boom and busts, bull and bear cycles, major market crashes, bubbles
2. Topic: Major scams in the market, e.g. Satyam case

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Elective VI c) Image Processing and Pattern Recognition

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	<u>CREDIT SCHEME</u>	<u>Credits</u>
Lecture:	3 Hours/Week	End Semester Examination:60 Marks	Theory	3
Practical:	2 Hours/Week	Continuous Assessment: 40 Marks		
		TW & Oral: 50 Marks	TW & Oral:	1
Total	150	MarksTotal		4

Course Overview

It emphasizes general principles of image processing, rather than specific applications. This course includes foundations of pattern recognition algorithms and machines, including statistical and structural methods.

Prerequisite:

Fundamental knowledge of computer graphics algorithms, probability theory and transform operations in mathematics.

Course Outcomes: On completion of the course, students will have the ability to:

The major **emphasis** of the course will be on creating a learning system through which management students can enhance their innovation and creative thinking skills, acquaint themselves with the special challenges of starting new ventures and use IPR as an effective tool to protect their innovations and intangible assets from exploitation.

1. Understand Basics of Image formation and transformation using sampling and quantization
2. Understand different types of signal processing techniques used for image sharpening and smoothing
3. Perform and apply compression and coding techniques used for image data
4. Understand the nature and inherent difficulties of the pattern recognition problems
5. Understand concepts, trade-offs, and appropriateness of the different feature types and classification techniques.
6. Understand and select a suitable classification process, features, and proper classifier to address a desired pattern recognition problem.

Unit I: Introduction to Image Processing

06 Hours

Image formation, image geometry perspective and other transformation, stereo imaging elements of visual perception. Digital Image-sampling and quantization serial & parallel Image processing.

Unit II: Image Restoration

06 Hours

Image Restoration-Constrained and unconstrained restoration Wiener filter , motion blur remover, geometric and radiometric correction Image data compression-Huffman and other codes transform compression, predictive compression two tone Image compression, block coding, run length coding, and contour coding.

Unit III: Segmentation Techniques

06 Hours

Segmentation Techniques-thresh holding approaches, region growing, relaxation, line and edge detection approaches, edge linking, supervised and unsupervised classification techniques, remotely sensed image analysis and applications, Shape Analysis – Gestalt principles, shape number, moment Fourier and other shape

descriptors, Skelton detection, Hough trans-form, topological and texture analysis, shape matching.

Unit IV: Pattern Recognition

06 Hours

Basics of pattern recognition, Design principles of pattern recognition system, Learning and adaptation, Pattern recognition approaches, Mathematical foundations – Linear algebra, Probability Theory, Expectation, mean and covariance, Normal distribution, multivariate normal densities, Chi squared test.

Unit V: Statistical Patten Recognition

06 Hours

Bayesian Decision Theory, Classifiers, Normal density and discriminant functions, Parameter estimation methods: Maximum-Likelihood estimation, Bayesian Parameter estimation.

Unit VIDimension reduction methods

06 Hours

Principal Component Analysis (PCA), Hough Transform, Fisher Linear discriminant analysis, Expectation-maximization (EM), Hidden Markov Models (HMM),Gaussian mixture models.

Textbooks

1. Digital Image Processing – Ganzalez and Wood, Addison Wesley.
2. Fundamental of Image Processing – Anil K.Jain, Prentice Hall of India.
3. Pattern Classification – R.O. Duda, P.E. Hart and D.G. Stork, John Wiley.

Reference Books

1. Digital Picture Processing – Rosenfeld and Kak, vol.I & vol.II, Academic.
2. Computer Vision – Ballard and Brown, Prentice Hall.
3. Pattern Recognition and Machine Learning – C. M. Bishop, Springer.
4. Pattern Recognition – S. Theodoridis and K. Koutroubas, 4th Edition, Academic Press.

List of Assignments

1. Implement the noise reduction for the noisy image.
2. Implement various transformation methods
3. Implement the histogram equalization for two images
4. Implemented Hough Transform for circles from scratch.

Syllabus for Unit Tests:

Unit Test -1
Unit Test -2

Unit – I, Unit – II, Unit - III
Unit – IV, Unit – V, Unit - VI

Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering .

(08 Hours)

Unit II

COMPLEX NUMBERS AND APPLICATIONS

Definition, Cartesian, Polar and Exponential Forms ,Argand's Diagram, De'Moivre's theorem and its application to find roots of algebraic equations., Hyperbolic Functions, Logarithm of Complex Numbers, Separation into Real and Imaginary parts, Application to problems in Engineering.

(08 Hours)

Unit III

DIFFERENTIAL CALCULUS

Successive Differentiation, nth Derivatives of Standard Functions, Leibnitz's Theorem.

EXPANSION OF FUNCTIONS

Taylor's Series and Maclaurin's Series.

(08 Hours)

Unit IV

DIFFERENTIAL CALCULUS

Indeterminate Forms, L' Hospital's Rule, Evaluation of Limits.

INFINITE SERIES

Infinite Sequences, Infinite Series, Alternating Series, Tests for Convergence, Absolute and Conditional Convergence, Power series, Range of Convergence.

(08 Hours)

Unit V

PARTIAL DIFFERENTIATION AND APPLICATIONS

Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables. Errors and Approximations.

(08 Hours)

Unit VI

JACOBIAN

Jacobians and their applications, Chain Rule, Functional Dependence.

MAXIMA AND MINIMA

Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.

(08 Hours)

Assignments

1. Rank ,System of Linear Equations.
2. Complex Numbers.
3. Differential Calculus and Expansion of Functions.
4. Indeterminate Forms and Infinite Series.
5. Partial Derivatives, Euler's Theorem on Homogeneous Functions.
6. Jacobians, Maxima and Minima of Functions of two variables.

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

02: Fundamentals of Civil Engineering

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:		
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits		
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks				
		Term Work: 25 Marks		01 Credit		
Course Pre-requisites:						
The Students should have						
1.	Concepts of units and conversions of units.					
2.	Basic knowledge of Chemistry					
3.	Basic knowledge of geography, concept of latitude and longitude.					
Course Objectives:						
	To make student understand the scope and application of Civil Engineering					
Course Outcomes:						
Students will be able to understand						
1.	Different building components and material					
2.	Classification of surveying					
3.	Levelling of the ground					
4.	Planning of building					
5.	Methods of irrigation and water supply					
6.	Different methods of transportation					
UNIT - I						
UNIT - I	Civil Engineering Scope And Applications.				(06 Hours)	
	Civil Engineering scope, importance and applications to other disciplines of Engineering; Civil Engineering construction process and role of Civil engineer; Government authorities related to Civil Engineering; Types of structures based on loading, material and configuration; Building components and their functions; Civil Engineering materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood, glass and aluminum.					
UNIT - II						
UNIT - II	Surveying				(06 Hours)	
	Objectives, Principles and Classification of Surveying; Linear, angular, Vertical and area Measurements and related instruments.					
UNIT - III						
UNIT - III	Building Planning And Bye Laws				(06 Hours)	
	Site selection for residential building; Principles of building planning; Building bye laws- necessity, Floor Space Index, Heights, open space requirements, set back distance, ventilation and lighting, concept of carpet and built up area, minimum areas and sizes for residential buildings; Concept of Eco friendly structures and Intelligent buildings.					
UNIT - IV						
UNIT - IV	Foundations and Earthquakes				(06 Hours)	
	Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation. Earthquakes causes, effects and guidelines for earthquake resistant design, earthquake zones.					

UNIT - V	Irrigation And Water Supply	(06 Hours)
	Rainfall measurement and its use in design of dams; Types of dams, canals, methods of irrigation and their merits and demerits; hydropower structures ;Water supply, drinking water requirements and its quality, water and sewage treatment flow chart.	
UNIT - VI	Infrastructure	(06 Hours)
	Roads- types of roads and their suitability, cross section of roads, meaning of terms ; width of roads, super elevation, camber, gradient ,sight distance, materials used for construction of roads. Railways- Types of gauges, section of railway track, components of railway track, advantages. Bridges: Components - Foundation, Piers, Bearings, Deck. Airways- Components -Runway, Taxiway and Hangers.	
Term Work:		
(Term work shall consist of any eight exercises from the list given below.)		
1.	Study and use of prismatic compass and measurement of bearings.	
2.	Study and use of Dumpy level and reduction of levels by collimation plane method.	
3.	Area measurement by Digital Planimeter.	
4.	Drawing plan and elevation of a residential bungalow.	
5.	Study of features of topographical maps.	
6.	Assignment on collection of information on Civil Engineering materials.	
7.	Assignment on types of foundations.	
8.	Assignment problem on irrigation and hydropower structures.	
9.	Assignment on study of flow chart of water and sewage treatment.	
10.	Assignments on types of transportation systems.	
Text Books:		
1.	“ Surveying- Vol I “ - S.K. Duggal , Tata McGraw Hill Publication.	
2.	“Built Environment” – Shah , Kale, Patki, , Tata McGraw Hill Publication	
3.	“Building Construction” – Dr. B.C. Punmia , Laxmi Publication	
4.	“Irrigation and water Power Engineering “- Dr. P.N. Modi,Standard Publishers ,New Delhi	
5.	“Text book of Transportation Engineering “- Arora, Charotar Publishers.	
6.	Water supply and sanitary engineering-Rangawala, Charotar Publishers.	
7.	“Basic Civil engineering”- M.S. Palanichamy- Tata McGraw Hill Publication	
Reference Books:		
1.	“Surveying –Theory and Practice”-James Anderson- Tata McGraw Hill Publication	

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

ENGINEERING GRAPHICS

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -04 Hours / Week	End Semester Examination: - 60Marks	<u>05</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

Unit I	<p>Lines and Dimensioning in Engineering Drawing Different types of lines used in drawing practice, Dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.</p> <p>Curves used in Engineering Practice Ellipse by Directrix-Focus method, Arcs of Circle method, Concentric circle method and Oblong method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone, Loci of points- Slider Crank mechanisms.</p>	(6)
Unit II	<p>Orthographic Projection Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections.</p>	(6)
Unit III	<p>Isometric Projections Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, and Sphere.</p>	(6)
Unit IV	<p>Projections of Points and Lines and planes Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines, Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP</p>	(6)
Unit V	<p>Projection of Solids Projection of prism, pyramid, cone and cylinder by rotation method.</p>	(6)
Unit VI	<p>Section of Solids Types of section planes, projections of solids cut by different sections of prism, pyramid, cone and cylinder.</p>	(6)

Term work

Term work shall consist of five half-imperial size or A2 size (594 mm x 420 mm) sheets. Assignment 05 Problems on each unit in A3 size Drawing Book

SHEETS

1. Types of lines, Dimensioning practice, Free hand lettering, 1st and 3rd angle methods symbol.
2. Curves and loci of points
3. Projections of Points and Lines and planes

4. Orthographic Projections
5. Isometric views
6. Projection of Solids

Text Books

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India,
2. "Text Book on Engineering Drawing", K.L.Narayana & P.Kannaiah, Scitech Publications, Chennai.
3. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi ,
4. "Engineering Drawing and Graphics", Venugopal K., New Age International Publishers.
5. M. B. Shah and B. C. Rana, "Engineering Drawing", 1st Ed, Pearson Education, 2005
6. P. S. Gill, "Engineering Drawing (Geometrical Drawing)", 10 Edition, S. K. Kataria and Sons, 2005
7. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 Edition, 1988

ENGINEERING CHEMISTRY

Teaching Scheme:
Lectures: 4Hrs/Week
Practical: 2Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory: 04
Practical: 01
Term Work: 25marks

Unit I

WATER

Introduction, Hardness of water, Effect of hard water on boilers and heat exchangers: a) boiler corrosion b) caustic embrittlement c) scales and sludges d) priming and foaming
Water softening methods for industrial purposes :a) Zeolite process b) Phosphate conditioning Numerical based on the zeolite process

(08 Hours)

Unit II

MATERIAL CHEMISTRY

Crystallography : Unit cell, Laws of crystallography, Weiss indices and Miller indices, Crystal defects (point and line defects), X-ray diffraction – Bragg's Law and numerical.

Cement : Introduction of cement, Hydraulic/ Non-hydraulic cementing materials, classification of cement, chemistry of portland cement, chemical composition and compound constituents of portland cement, properties of cement and its applications.

(08 Hours)

Unit III

FUELS

Introduction, classification of fuels, calorific value of fuels, NCV and GCV, Determination of calorific values using Bomb calorimeter and Boys' gas calorimeter.

Theoretical calculation of calorific value of a fuel, Analysis of coal a) Proximate b) Ultimate analysis of coal, Numericals based on NCV, GCV.

(08 Hours)

Unit IV

CORROSION AND ITS PREVENTION

Corrosion: - Definition, atmospheric corrosion-mechanism, Wet corrosion-mechanism, Electrochemical and galvanic series, Factors affecting corrosion-nature of metal, nature of environment.

Methods of prevention of corrosion- Cathodic and Anodic protection, Metallic coatings, Electroplating, Hot dipping.

(08 Hours)

Unit V

ELECTROCHEMISTRY

Introduction, Arrhenius Ionic theory, Kohlrausch's law of independent migration of ions

Laws of electrolysis: Faradays Laws, Ostwald's dilution law, Acids and Bases, concept of pH and pOH, Buffer solutions, Solubility Product, Redox Reactions.

Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Overvoltage, Conductometric Titrations, Fuel cells, Lead Acid Storage Cell and numericals based on the above articles.

(08 Hours)

Unit VI

STEREOCHEMISTRY

Introduction, chirality, optical activity, Enantiomers, Diastereomers, projection formula of tetrahedral carbon- Newman projection, Wedge projection, Fischer projection, Geometrical isomerism :- cis and trans isomerism, E and Z isomers

Optical isomerism :- Mesoform, the number of optical isomers for chiral molecules,

Conformations :- conformations of ethane, conformations of n-butane

(08 Hours)

TERM WORK

Experiments

Any Ten experiments from the following:

1. Estimation of hardness of water by EDTA method.
2. Estimation of chlorine by Mohr's method.
3. Determination of percentage of Ca in given cement sample
4. Determination of coefficient of viscosity by Ostwald's viscometer
5. Study of Bomb calorimeter for determination of calorific value.
6. Determination of calorific value of gas fuel by using Boy's gas calorimeter.
7. Determination of dissolved oxygen in a water sample.
8. To determine the Molecular Weight of polymer
9. Estimation of Copper from brass sample solution by Iodometrically
10. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
11. To standardize NaOH solution and hence find out the strength of given hydrochloric Acid solution
12. To determine Surface Tension of given liquid by Stalagmometer
13. Study of corrosion of metals in medium of different pH.
14. To set up Daniel cell
15. To determine pH of soil
16. To determine Acidity of soil

Assignments

7. Effect of hard water on boilers and heat exchangers
8. Hydraulic/ Non-hydraulic cementing materials
9. Analysis of coal a) Proximate b) ultimate analysis of coal
10. Wet corrosion-mechanism, Electroplating, Hot dipping
11. Geometrical isomerism :- cis and trans isomerism, E and Z isomers
12. Fuel cells

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

Course: ELEMENTS OF ELECTRONICS ENGINEERING

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDITS</u>
Lectures : 03 Hrs/week Practicals : 02 Hrs/week	End semester exam : 60 Marks Continuous Assessment : 40 Marks Term work : 25 Marks	03 01

Course Prerequisite:

Students have completed a course in Physics and have the knowledge of laws of Dynamics

Course Objective:

This course will introduce the concepts of electronic engineering . By the end of the course, student will be familiar with electronic components, semiconductor devices and their applications. The course emphasizes on Electronic devices, ICs and Digital systems.

Course Outcomes:

At the end of the course, a student will be able to

- 1 understand the basic semiconductor physics and semiconductor devices.
- 2 understand transport phenomenon of semiconductor devices through energy band diagrams.
3. to identify electronic components like, resistors, capacitors, inductors and to study characteristics of semiconductor devices.
4. apply the knowledge of diodes to the rectifier and filter circuits.
5. to represent numerical values in various number systems and perform number conversions between different number system and study applications of logic gates.

Unit-I

(08 Hours)

Electron Dynamics:

Motion of electron in electric, magnetic and combined electric and magnetic fields. Detection and focusing system of Oscilloscope tube-Television picture tube- LCD and Flat panel displays.

Unit-II

(08 Hours)

Transport phenomenon in semiconductor:

Mobility and conductivity - Drift and Diffusion currents – Continuity Equation – Minority carrier injection and recombination in Homogeneous semiconductor – Thermistors – Piezo Resistors – Hall Effect – Thermoelectric effect

Unit-III

(08 Hours)

Electronic components:

Resistors -Inductors and Capacitors and their types – Construction and characteristics of PN junction diode – Zener Diode – Tunnel diode - Bipolar junction transistors – CB,CC,CE circuits, Field Effect transistors .

Unit-IV

(08 Hours)

Electronic Devices and Linear ICs:

Rectifiers: Half wave, Full wave and Bridge rectifiers - capacitor filter-wave forms-ripple factor regulation characteristics. Special semiconductor devices: FET - SCR - LED - VI characteristics – applications. Introduction to Op-Amp and Timers.

Unit-V**(08 Hours)****Digital system:**

Number system: Binary system, Decimal to Binary, Octal system, Hexadecimal system, binary –addition, subtraction, multiplication and division.

Logic gates: OR, AND, NOT, Exclusive-OR, NOR, NAND gates, Logic networks, Gate Standardization, Introduction to Logic Circuits –Combinational and Sequential Circuits.

(08 Hours)**Unit-VI****Consumer Electronics:**

Basic study of various products such as radio receivers , television sets , MP3 players, video recorders , DVD players , digital cameras , microwaves , personal computers , video game consoles , telephones and mobile phones , laptops and palmtops and fax machines

Term work: For term work assessment the students will have to perform minimum of eight practicals.

- 1) To study various electronics components: Resistors, Inductors, Capacitors, diodes and transistors.
- 2) To study CRO and different modes of operation and some application.
- 3) To plot V-I characteristics of PN junction diode.
- 4) To plot regulation characteristics of half wave rectifier with and without capacitor filter.
- 5) To plot regulation characteristics of Full wave rectifier with and without capacitor filter.
- 6) To plot input-output characteristics of CE configuration of BJT.
- 7) To study basic logic gates: AND, OR, NOT, NAND, NOR, Ex-OR, Ex-NOR.
- 8) To realize the Boolean expression using basic gates.
- 9) To verify the De-Morgan's theorem.
- 10) To fabricate at least 5 electronics component on a PCB.

TEXT BOOKS

1. Mottershed Allen, Electronic Devices & Circuits, PHI
2. R. P. Jain, Modern Digital Electronics, Mc Graw Hill

REFERENCE BOOKS

1. Thomas L. Floyd, Electronic Devices, Pearson Education (Sixth edition)
2. Millman & Halkis, Electronic Devices & Circuits, PHI
3. Malvino Leach, Digital Principles & Applications, Mc Graw Hill
4. Millman & Halkis, Integrated Electronics, MGH

Syllabus for Unit Test :

Unit Test 1	Unit I ,II & III
Unit Test 2	Unit IV, V &VI

Workshop Technology

TEACHING SCHEME:

Theory: -
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: -
Continuous Assessment: -
Term Work: 50 Marks

CREDITS ALLOTTED:

01 Credit

Course Pre-requisites: Basic knowledge of hand tools used in day to day life.

Course Objectives: Make the students familiar with basic manufacturing processes

Course Outcomes: students should be able to understand

1. basic Manufacturing Processes used in the industry,
2. importance of safety

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the following topics.

Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances
Term work includes one job involving joint and woodturning.

Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.
Term work to include one job involving fitting to size, male-female fitting with drilling and tapping.

Sheet Metal Practice Introduction to primary technology processes involving bending, punching and drawing various sheet metal joints, development of joints.

Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.
Term work includes one job involving various joining processes like riveting, joining of plastics, welding, brazing, etc.

Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.

Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.

Plumbing (Demonstration Common for Electrical & Non electrical Group)

Types of pipe joints, threading dies, Pipe fittings.

ENGINEERING MATHEMATICS-II

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment:40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

DIFFERENTIAL EQUATIONS (DE)

Definition, Order and Degree of DE, Formation of DE. Solutions of Variable Separable DE, Exact DE, Linear DE and reducible to these types.

(08 Hours)

Unit II

APPLICATIONS OF DIFFERENTIAL EQUATIONS

Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchoff's Law of Electrical Circuits, Motion under Gravity, Rectilinear Motion, Simple Harmonic Motion, One-Dimensional Conduction of Heat, Chemical engineering problems.

(08 Hours)

Unit III

FOURIER SERIES

Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis.

INTEGRAL CALCULUS

Reduction formulae, Beta and Gamma functions.

(08 Hours)

Unit IV

INTEGRAL CALCULUS

Differentiation Under the Integral Sign, Error functions.

CURVE TRACING

Tracing of Curves, Cartesian, Polar and Parametric Curves. Rectification of Curves.

(08 Hours)

Unit V

SOLID GEOMETRY

Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder.

(08 Hours)

Unit VI

MULTIPLE INTEGRALS AND THEIR APPLICATIONS

Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.

(08 Hours)

Assignments

1. Differential Equations.
2. Application of DE.
3. Fourier Series and Integral Calculus.
4. DUIS and Curve Tracing.
5. Solid Geometry.
6. Double and Triple integrations, area and volume.

Syllabus for Unit Test:

Unit Test I :- Unit I, II, III

Unit Test II :- Unit IV, V, VI

FUNDAMENTALS OF MECHANICAL ENGINEERING

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -03Hours / Week	End Semester Examination: - 60Marks	<u>04</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

UNIT-I	<p>Thermodynamics- Heat, work and Internal Energy, Thermodynamic State, Process, Cycle, Thermodynamic System, First Law of Thermodynamics, Application of First Law to steady Flow and Non Flow processes, Limitations of First Law, PMM of first kind (Numerical Treatment), Second Law of Thermodynamics – Statements, Carnot Engine and Carnot Refrigerator, PMM of Second Kind (Elementary treatment only)</p>	(08)
UNIT-II	<p>Introduction to I.C. Engines and turbines- Two stroke, Four Stroke Cycles, Construction and Working of C.I. and S.I. Engines, Hydraulic turbines, steam turbines, gas turbines.(Theoretical study using schematic diagrams)</p> <p>Introduction to refrigeration, compressors & pumps- Vapor compression and vapor absorption system, house hold refrigerator, window air conditioner. Reciprocating and rotary compressor, Reciprocating and centrifugal pump. (Theoretical study using schematic diagrams)</p>	(08)
UNIT-III	<p>Energy Sources - Renewable and nonrenewable, solar flat plate collector, Wind, Geothermal, Wave, Tidal, Hydro power, Bio-gas, Bio-Diesel, Nuclear power.</p> <p>Heat transfer- Statement and explanation of Fourier’s law of heat conduction, Newton’s law of cooling, Stefan Boltzmann’s law. Conducting and insulating materials and their properties, types of heat exchangers and their applications.</p>	(08)

UNIT-IV	<p>Properties of fluids- Introduction, Units of measurements, mass density, specific weight, specific volume and relative density, viscosity, pressure, compressibility and elasticity, gas laws, vapor pressure, surface tension and capillarity, regimes in fluid mechanics, fluid properties and analysis of fluid flow.</p> <p>Properties of Materials and their Applications- Metals – Ferrous and Non-Ferrous, Nonmetallic materials, smart materials, Material selection criteria.</p>	(08)
UNIT-V	<p>Mechanical devices - Types of Belts and belt drives, Chain drive, Types of gears, Types of Couplings, friction clutch (cone and plate), brakes, Power transmission shafts, axles, keys, bush and ball bearings.</p> <p>Mechanisms- Slider crank mechanism, Four bar chain mechanism, List of various inversions of Four bar chain mechanism, Geneva mechanism, Ratchet and Paul mechanism</p>	(08)
UNIT-VI	<p>Machine Tools- Lathe Machine – Centre Lathe, Drilling Machine – Study of Pillar drilling machine, Introduction to NC and CNC machines, Grinding machine, Power saw, Milling Machine.</p> <p>Introduction to manufacturing processes and Their Applications- Casting, Sheet metal forming, Sheet metal cutting, Forging, Fabrication, Metal joining processes.</p>	(08)

List of experiments-

The Term Work shall consist of **any Eight** experiments of following list

1	Measurement of viscosity using Redwood viscometer.
2	Assembly and working of 4-bar, 6-bar, 8-bar planer mechanisms
3	Finding relation between input angle and output angle for various link lengths.
4	Study of domestic refrigerator & window air-conditioner

5	Demonstration of operations of centre lathe
6	Demonstration of operations on drilling machines
7	Demonstration of Two stroke and four stroke engine
8	Study of power transmitting elements: Coupling, Gears and bearings
9	Demonstration of pumps and compressor
10	Study and demonstration of different types of clutches.

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the following topics.

Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances
Term work includes one job involving joint and woodturning.

Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.
Term work to include one job involving fitting to size, male-female fitting with drilling and tapping.

Sheet Metal Practice Introduction to primary technology processes involving bending, punching and drawing various sheet metal joints, development of joints.

Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.
Term work includes one job involving various joining processes like riveting, joining of plastics, welding, brazing, etc.

Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.

Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.

Plumbing (Demonstration Common for Electrical & Non electrical Group)

Types of pipe joints, threading dies, Pipe fittings.

10: Engineering Mechanics

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week		End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		Term Work: 25 Marks	01 Credit
Course Pre-requisites:			
The Students should have knowledge of			
1.	Scalar and Vector		
2.	Newton's law of motion		
3.	Law of friction		
4.	Concept of physical quantities, their units and conversion of units		
5.	Concept of differentiation and integration		
Course Objectives:			
	To develop and apply the concept of resultant and equilibrium for various static and dynamic engineering problems.		
Course Outcomes:			
The student should be able to			
1.	calculate resultant and apply conditions of equilibrium.		
2.	analyze the truss and calculate friction force.		
3.	calculate centroid and moment of inertia.		
4.	solve problem on rectilinear motion.		
5.	solve problems on curvilinear motion.		
6.	use D'Alembert's principle, Work Energy principle and Impulse Momentum principle for particle.		
UNIT - I	Resultant and Equilibrium	(06 Hours)	
	Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach.. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point.		
UNIT - II	Truss and Friction	(06 Hours)	
	Coefficient of Static Friction, Impending motion of Blocks, Ladders and Belts. Analysis of Perfect Trusses - Method of Joint, Method of Section and Graphical Method.		
UNIT - III	Centroid and Moment of Inertia	(06 Hours)	
	Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia.		

UNIT - IV	Kinematics of Rectilinear motion of a Particle	(06 Hours)
	Equations of motion, Constant and variable acceleration, Motion Curves, Relative motion, Dependent motion.	
UNIT - V	Kinematics of Curvilinear motion of a Particle	(06 Hours)
	Motion of a Projectile, Cartesian components, Normal and Tangential components of a curvilinear motion.	
UNIT - VI	Kinetics of a Particle	(06 Hours)
	D'Alemberts Principle, Work-Energy Principle and Impulse-Momentum Principle, Coefficient of Restitution, Direct Central Impact.	
Term Work:		
A) The term-work shall consist of minimum Five experiments from list below.		
1. Determination of reactions of Simple and Compound beam.		
2. Study of equilibrium of concurrent force system in a plane.		
3. Determination of coefficient of friction for Flat Belt.		
4. Determination of coefficient of friction for Rope.		
5. Study of Curvilinear motion.		
6. Determination of Coefficient of Restitution.		
B) The term-work shall also consist of minimum Five graphical solutions of the problems on different topics.		
Text Books:		
1) "Engineering Mechanics (Statics and Dynamics)", Hibbeler R.C., McMillan Publication.		
2) "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.		
3) "Engineering Mechanics", Bhavikatti S.S. and Rajashekarappa K.G., New Age International (P) Ltd.		
Reference Books:		
1. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.		
2. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication.		
3. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.		
4. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.		
5. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.		
6. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I to III	
Unit Test -2	UNIT – IV to VI	

ENGINEERING PHYSICS

Teaching Scheme:	Examination scheme:	Credits Allotted:
Lectures: 4Hrs/Week	End Semester Examination: 60 marks	Theory: 04
Practical: 2Hr/Week	Continuous Assessment: 40 marks	Practical: 01
	Term Work: 25marks	

UNIT – I

MODERN PHYSICS

Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focussing, Wavelength and resolution, Specimen limitation, Depth of field and focus, Electron microscope, Positive rays, Separation of isotopes by Bainbridge mass spectrograph.

NUCLEAR PHYSICS

Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium, Fission energy, Critical mass and size, Reproduction factor, Chain reaction and four factor formula, Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions, Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron,

(08hours)

UNIT – II

SOLID STATE PHYSICS

Band theory of solids, Free electron theory, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.

SUPERCONDUCTIVITY

Introduction, Properties of a super conductor, Meissner's effect, Critical field, Types of superconductors, BCS theory, High temperature superconductors, Application of superconductors.

(08hours)

UNIT – III

THERMODYNAMICS

Zeroth law of thermodynamics, first law of thermodynamics, determination of J by Joule's method, Applications of first law, heat engines, Carnot's cycle and Carnot's engine, second law of thermodynamics, entropy, change in entropy in reversible and irreversible processes, third law of thermodynamics.

NANOSCIENCE

Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles (Physical and chemical), synthesis of colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications.

(08hours)

UNIT-IV

OPTICS - I

INTERFERENCE

Interference of waves, Visibility of fringes, interference due to thin film of uniform and non-uniform thickness, Newton's rings, Engineering applications of interference (optical flatness, interference filter, non-reflecting coatings, multi-layer ARC).

DIFFRACTION

Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Diffraction at a circular aperture (Result only), Plane diffraction grating, Conditions for principal maxima and minima, Rayleigh's criterion for resolution, Resolving power of grating and telescope.

(08 hours)

UNIT-V

OPTICS - II

POLARISATION

Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism, Polaroids, Elliptical and circular polarisation, Quarter and half wave plates, Production of polarised light, Analysis of polarised light, half shade polarimeter, LCD.

LASERS

Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Properties of lasers, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.

(08 Hours)

UNIT-VI

ARCHITECTURAL ACOUSTICS

Elementary acoustics, Limits of audibility, Reverberation and reverberation time, Sabine's formula, Intensity level, Sound intensity level, Sound absorption, Sound absorption coefficient, different types of noise and their remedies, Sound absorption materials, basic requirement for acoustically good hall, factors affecting the architectural acoustics and their remedies.

QUANTUM MECHANICS

Electron diffraction, Davisson and Germer's experiment, Wave nature of matter, De-Broglie waves, Wavelength of matter waves, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box and non rigid box.

(08hours)

TERM WORK

Experiments

Any ten experiments from the following:

1. Determination of band gap of semi-conductor.
2. Solar cell characteristics.
3. e/m by Thomson's method.
4. Uses of CRO for measurement of phase difference and Lissajous figures.
5. Hall effect and Hall coefficient.
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode, Photo diode, LED, Ge/Si diode).
8. Planck's constant by photodiode.
9. Wavelength by diffraction grating.
10. Newton's rings.
11. Ultrasonic interferometer.
12. Sound intensity level measurement.
13. Wavelength of laser by diffraction.
14. Determination of refractive index for O-ray and E-ray.
15. Brewster's law.

Assignments

1. Recent advances in Nanotechnology
2. Nuclear radiation detectors.
3. Atomic force microscope (AFM).
4. Advanced opto-electronic devices.
5. Laser in Industry.
6. Different spectroscopic methods – a comparison (Raman, IR, UVR, etc.).

Unit Tests:

Unit Test I : Unit I, II, III

Unit Test II: Unit IV, V, VI

Reference Books:

1. Physics for Engineers – Srinivasan M.R.
2. A text Book of Engineering Physics- M.N. Avadhanulu, P.G. Kshirsagar
3. Engineering Physics- K. Rajagopal
4. Electronics Principles – A.P.Molvino
5. Fundamentals of Optics – Jenkins and White
6. A Textbook of Sound – Wood
7. Engineering Physics – Sen, Gaur and Gupta

02: Fundamentals of Electrical Engineering

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit

Course Pre-requisites:

The Students should have

1. Mathematics
2. Physics

Course Objectives:

The course introduces fundamental concepts of DC and AC circuits, electromagnetism, transformer and measuring instruments and electronic components to all first year engineering students.

Course Outcomes:

1. Understand and apply knowledge of basic concepts of work ,power ,energy for electrical, mechanical and thermal systems
2. Understand and apply knowledge of Kirchoff's laws and network theorems to solve electrical networks
3. Describe construction, principle of operation, specifications and applications of capacitors and batteries
4. Describe and apply fundamental concepts of magnetic and electromagnetic circuits for operation of single phase transformer
5. Define basic terms of single phase and three phase ac circuits and supply systems
6. Know and use electrical safety rules

UNIT - I	Basic concepts	(06 Hours)
	Concept of EMF, Potential Difference, current, resistance, Ohms law, resistance temperature coefficient, SI units of Work, power, energy. Conversion of energy from one form to another in electrical, mechanical and thermal systems	
UNIT - II	Network Theorems	(06 Hours)
	Voltage source and current sources, ideal and practical, Kirchoff's laws and applications to network solutions using mesh analysis, Simplifications of networks using series- parallel, Star/Delta transformation. Superposition theorem, Thevenin's theorem, Max Power Transfer theorem.	
UNIT - III	Electrostatics	(06 Hours)
	Electrostatic field, electric field intensity, electric field strength, absolute	

	permittivity, relative permittivity, capacitor composite, dielectric capacitors, capacitors in series & parallel, energy stored in capacitors, charging and discharging of capacitors, Batteries-Types, Construction & working.	
UNIT - IV	Magnetic Circuit & Transformer	(06 Hours)
	Magnetic effect of electric current, cross and dot convention, right hand thumb rule, concept of flux, flux linkages, Flux Density, Magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability, B-H curve, hysteresis loop, series-parallel magnetic circuit, composite magnetic circuit, Comparison of electrical and magnetic circuit Farady's law of electromagnetic induction, statically and dynamically induced emf, self inductance, mutual inductance, coefficient of coupling, Single phase transformer construction, principle of operation, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Determination of Efficiency & Regulation by direct load test.	
UNIT - V	AC Fundamentals & AC Circuits	(06 Hours)
	AC waveform definitions, form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar & rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3-ph AC Circuits.	
UNIT - VI	Electrical Wiring and Illumination system	(06 Hours)
	Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED), Study of Electricity bill.	

Term Work:

The term work shall consist of record of minimum eight exercises / experiments.

1. Determination of resistance temperature coefficient
2. Verification of Superposition Theorem
3. Verification of Thevenin's Theorem
4. Verification of Kirchoff's Laws
5. Verification of Maximum power transfer Theorem
6. Time response of RC circuit
7. Study of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$ & $X_L = X_C$
8. Verification of current relations in three phase balanced star and delta connected loads.
9. Direct loading test on Single phase transformer
 - a) Voltage and current ratios.
 - b) Efficiency and regulations .
10. Study of a Residential (L.T.) Bill

Text Books:	
1) B.L.Theraja- “A Textbook of Electrical Technology” Volume- I, S.Chand and Company Ltd.,New Delhi	
2) V. K. Mehta, - “Basic Electrical Engineering”, S. Chand and Company Ltd., New Delhi	
3) I. J. Nagrath and Kothari – “Theory and problems of Basic Electrical Engineering”, Prentice Hall of India Pvt. Ltd	
Reference Books:	
1. Edward Hughes – “Electrical Technology”- Seventh Edition, Pearson Education Publication	
2. H. Cotton – “Elements of Electrical Technology”, C.B.S. Publications	
3. John Omalley Shawn – “Basic circuits analysis” Mc Graw Hill Publications	
4. Vincent Del Toro – “Principles of Electrical Engineering”, PHI Publications	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

FUNDAMENTALS OF COMPUTING

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDITS</u>
Practical: 2 Hours/Week	Term Work: 50 Marks	01

Course Prerequisite:

Students must possess knowledge about basic fundamentals of computer and professional Microsoft office development tools.

Course Objective:

This course will introduce the concepts of C language software development and compiling tool. By the end of the course, student will be familiar with various fundamentals of C- language, software file system, computer graphics and its various multimedia applications.

Course Outcomes: At the end of the course, a student will be able to

1. Write C programs using conditional statements and loops.
 2. Execute the logic using Arrays and strings and perform matrix operation using them.
 3. Perform logic operations using Structures & Unions and use them with pointers.
 4. Write C program for File manipulations and Dynamic memory allocation
 5. Understand the concept and application of Graphics & Multimedia.
-

Unit –I

(08 Hours)

Introduction: Computer systems, Hardware & software concepts.

Algorithm / pseudo code, flowchart, program development steps, Computer Languages: machine, symbolic, and high-level languages, Creating and running programs: Writing, editing, compiling, linking, and executing.

Basic of C: Structure of a C program, identifiers, basic data types and sizes. Constants, variables, arithmetic, relational and logical operators, increment and decrement operators, conditional operator, assignment operators, bit-wise Operators expressions, type conversions, conditional expressions, precedence and order of evaluation, Managing input and output operations, Sample programs.

Conditional Statements and Loops: Decision making within a program, conditions, if statement, if-else statement, loops: while loop, do while, for loop. Nested loops, infinite loops, switch statement, sample programs

Unit-II

(08 Hours)

Arrays & Strings

Arrays - concepts, declaration, definition, accessing elements, storing elements, Strings and string manipulations, 1-D arrays, 2-D arrays and character arrays, string manipulations, Multidimensional arrays , Array applications: Matrix Operations

Unit –III

(08 Hours)

Function & Pointers

FUNCTIONS: basics, parameter passing, storage classes- extern, auto, register, static, scope rules, user defined functions, standard library functions, recursive functions, Recursive solutions for Fibonacci series, Towers of Hanoi, header files, example c programs. Passing arrays & strings to functions.

Pointers: concepts, initialization of pointer variables, pointers and function arguments, passing by address, address arithmetic, Character pointers and functions, pointers to pointers, pointers and multidimensional arrays.

Unit-IV

(08 Hours)

Structures & Unions

Derived types- structures- declaration, definition and initialization of structures, accessing structures, nested structures, arrays of structures, structures and functions, pointers to structures, self referential structures, unions, typedef, bit-fields, program applications.

Unit-V

(08 Hours)

Files and Dynamic Memory Allocation

Input and output – concept of a file, text files and binary files, Formatted I/o, file I/o operations, example programs.

Dynamic memory allocation, malloc, calloc, realloc ,free. Concepts of linked lists, Sample programs

Unit-VI

(08 Hours)

Graphics and Multimedia

Introduction to Computer Graphics: Overview of Computer Graphics, Computer Graphics Application, Description of graphics devices, Input Devices for Operator Interaction

Introduction to Multimedia:History, elements of multimedia – text, audio, video, image, animation, Multimedia applications different areas

TEXT BOOKS

1. Programming in ANSI C – E Balagurusamy (5th Edition-TMH)
2. Computer Graphics: Principles and Practices in C – Andrea Von Dam, Steven K Fiener, F Hughes John [2nd Edition- Pearson]

REFERENCE BOOKS

1. Let Us C- Yashwant Kanitkar
2. D. Hearn, M. Baker, "Computer Graphics - C Version", 2nd Edition, Pearson Education, 2002, ISBN 81 - 7808 - 794 – 4
3. Ralf Steinmetz, Klara Nahrstedt, "Multimedia: Computing, Communication and Applications"
4. Judith Jeffcoate, " Multimedia Technique"

Term work will consist of minimum of ten assignments based on C programming language.

List of Practicals

1. a. Write a C program to take user Input and print it on the screen.
b. Write a C program to perform addition or subtraction of two numbers.
c. Write a C program to find whether the number is Odd or Even.
2. a. Write a C program to find out Prime numbers.
b. Write a C program to find out Fibonacci series.
3. Write C programs to print different patterns
4. a. Write a C program to do factorial using recursion.
b. Write a C program to find out Armstrong number.
5. Write a C program to sort the array in Ascending & Descending order.
6. Write C programs to perform operations on 2-D arrays
7. Write a C program to perform different operations on strings.
8. Use of Pointers
 - a. Write a C program to swap numbers using pointers
 - b. Write a C program to show the use of pointers in arrays.
 - c. Write a C program to use functions using pointers.
9. a. Write a C program to create student mark sheet using structures
b. Write a C program to show the use of structure using pointers
10. Write a C program to perform different operations on Files.
11. Write a C program to create single Linked List.
- 12.** Application of Graphics and Multimedia

B.Tech.(Electronics) Sem-III

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem:- III

SUBJECT: - Engineering Mathematics-III

Teaching Scheme

Lecture: 3 Hours/week

Tutorial: 1 Hours/week

Examination Scheme

End semester exam: 60 Marks

Continuous Assessment: 40 Marks

Credits: 04

Course prerequisites:

Students should have basic knowledge of:

- Differential calculus
- Integral calculus
- Complex numbers
- Vector algebra

Course objective:

To develop ability to use the mathematical techniques, skills, and tools necessary for engineering practice.

Course Outcomes: On successful completion of this course, students will be able to

1. Form mathematical modeling of systems using differential equations and ability to solve linear differential equations with constant coefficient.
2. Apply basics of analytic functions and the basics in complex integration which is used to evaluate complicated real integrals.
3. Apply theorems to compute the Laplace transform, inverse Laplace transforms.
4. Solve difference equation by Z-transform.
5. Calculate the gradients and directional derivatives of functions of several variables.
6. Use Green's theorem to evaluate line integrals along simple closed contours on the plane.

Contents:

Unit-I

Linear Differential Equations (LDE) (06Hours)

Solution of nth order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy's & Legendre's DE, Solution of Simultaneous & Symmetric Simultaneous DE, Modeling of Electrical Circuits.

Unit-II

Complex Variables (06Hours)

Functions of Complex Variables, Analytic Functions, C-R Equations, Conformal Mapping, Bilinear Transformation, Cauchy's Theorem, Cauchy's Integral Formula, Laurent's Series, Residue Theorem

Unit-III

Transforms (06Hours)

Fourier Transform (FT): Complex Exponential Form of Fourier Series, Fourier Integral Theorem, Sine & Cosine Integrals, Fourier Transform, Fourier Sine and Cosine Transform and their Inverses. Introductory Z-Transform (ZT): Definition, Standard Properties, ZT of Standard Sequences and their Inverses. Solution of Simple Difference Equations.

Unit-IV

Laplace Transform (LT) (06Hours)

Definition of LT, Inverse LT. Properties & theorems. LT of standard functions. LT of some special functions viz., Periodic, Unit Step, Unit Impulse, ramp, jump, . Problems on finding LT & inverse LT. Applications of LT and Inverse LT for solving ordinary differential equations.

Unit -V

Vector Differential Calculus (06Hours)

Physical Interpretation of Vector Differentiation, Vector Differential Operator, Gradient, Divergence and Curl, Directional Derivative, Solenoidal, Irrotational and Conservative Fields, Scalar Potential, Vector Identities.

Unit-VI

Vector Integral Calculus

(06Hours)

Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence Theorem, Stoke's Theorem, Applications to Problems in Electro-Magnetic Fields.

Assignments:

1. Solve the problem based on Linear Differential Equations
2. Solve the problem based on Complex Variables
3. Solve the problem based on Fourier and Z -Transforms
4. Solve the problem based on Laplace Transform
5. Solve the problem based on Vector Differential Calculus
6. Solve the problem based on Vector Integral Calculus

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. Advanced Engineering Mathematics by Peter V. O'Neil (Cengage Learning).
2. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.).

Reference Books:

1. Engineering Mathematics by B.V. Raman (Tata McGraw-Hill).
2. Advanced Engineering Mathematics, 2e, by M. D. Greenberg (Pearson Education).
3. Advanced Engineering Mathematics, Wylie C.R. & Barrett L.C. (McGraw-Hill, Inc.)
4. Higher Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi).
5. Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar (Pune Vidyarthi Griha Prakashan, Pune).

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem:- III

SUBJECT: - Analog Electronics

Teaching Scheme:	Examination Scheme	
Lecture: 4 Hours/week	End Semester Exam:	60 Marks
Practical: 2 Hours/week	Continuous Assessment:	40 Marks
	TW & PR.:	50 Marks
	Credits:	05

Course prerequisites:

- Knowledge of Electronic Components
- Fundamentals of P-N diode.
- Knowledge of BJT and its configuration

Course objective:

1. To make student understand working of bipolar junction transistor and field effect transistor with different biasing techniques
2. To make student understand a practical approach of design and analysis of waveshaping circuits using diode and multivibrator using transistors
3. To make student understand working of FET and MOSFET and its applications
4. To make student understand working of optoelectronic devices and its applications.
5. To make student understand the fabrication process of PCB

Course Outcomes: On successful completion of this course, students will be able to

1. Demonstrate knowledge of working and applications of diode.
2. Demonstrate knowledge of working of BJT with different biasing techniques.
3. Analyze applications of BJT as an amplifier and multivibrator.
4. Explain working of FET and MOSFET and its applications.
5. Demonstrate knowledge of working of optoelectronic devices.

6. Design, built and test any small electronic circuit on PCB.

Contents:

Unit-I

Transistor Biasing (08Hours)

Need of biasing, DC load line analysis, operating point, Thermal runaway. Requirements of a biasing circuit, Different biasing circuits: fixed bias, collector to base bias & voltage divider bias. Stability factor, General expression for stability factor, stability factor for all biasing circuits, Design of biasing circuits, Transistor as an amplifier.

Unit-II

BJT Amplifiers (08Hours)

Two port device and Hybrid model , transistor Hybrid model, h- parameters, Simplified CE Hybrid Model, Analysis of amplifiers using Approximate Model(CE, CC, CB), BJT Single Stage Amplifiers, Small Signal Analysis of Single Stage BJT Amplifiers, Distortion in Amplifiers.

Unit-III

Field Effect Transistor (FET) (08Hours)

Types of FET viz. JFET, MOSFET, JFET -construction, VI characteristics, transfer characteristics, Characteristics Parameters of JFET, FET Biasing(Self Bias, Fixed Bias, Current Source Bias), JFET amplifiers-CS, CD and CG amplifiers, Application of FET.

Unit-IV

MOSFETs (08Hours)

Types of MOSFET viz. D-MOSFET, E-MOSFET, n-MOS, p-MOS and CMOS devices, DMOSFET and EMOSFET characteristics and parameters, non-ideal V-I characteristics viz. finite output resistance, body effect, subthreshold conduction ,breakdown effects and temperature effects, MOSFET as VLSI device

Unit -V

Wave shaping and Multivibrator Circuits (08Hours)

Diode as clipper- series and parallel forms of clipper circuits, biased clipper, their operations, Diode as a clamper, voltage multiplier circuits-voltage doubler, tripler and quadrupler configuration, Multivibrator circuits-astable and monostable multivibrator circuit using BJT.

Unit-VI

Optoelectronic devices and PCB design

(08Hours)

Construction ,V-I characteristics and applications of LED, LDR, Photodiode, Phototransistor, Photoconductive cell, Photovoltaic cell, optocoupler.

PCB: types of PCB, PCB design rules, layout design, artwork design, fabrication process of single sided PCB, different copper clad laminates, composition of solder metal.

List of Experiments:

1. Biasing techniques of BJT- to find stability factor of self bias, collector to base bias, fixed bias
2. To plot frequency response of single stage CE amplifier and find its bandwidth
3. To plot frequency response of single stage FET amplifier (CS/CD configuration) and find its bandwidth.
4. To study different types of Clipper circuits
5. To study different types Clamper circuits
6. To plot transfer characteristics of Optocoupler
7. To plot V-I and optical characteristics of LED and LDR
8. To plot V-I and optical characteristics of Photodiode and phototransistor

Assignments:

1. Simulation of BJT amplifier using Multisim.
2. Define h-parameters for CE, CB, CC configuration and describe how these parameters are determined from BJT characteristics.
3. Describe fabrication process of MOSFET and any two real time applications of MOSFETs
4. Real time applications of optoelectronics devices such as LED, Optoisolator
5. To design, built and test given electronic circuits (Group activity)
6. Obtain industry exposure based on product design industry and prepare report for the same.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. “Electronic Devices and Circuits” by S. salivahanan,Suresh kumar- Mc Graw Hill Publication
2. “Integrated Electronics”, by Millman J and Halkias .C., TMH publication
3. “Electronic Devices and Circuits “ by Millman ,Halkies,TMH publication

Reference Books:

1. “Electronic Devices and Circuits” by Allen Mottershed- PHI Publication
2. “Electronic Devices and Circuits” by J.B. Gupta-Katson educational series
3. “Microelectronics “by Jacob Millman, Arvin Garbel- Mc Graw Hill Publication
4. “Printed Circuits Handbook “ by Clyde F. Coombs - McGraw Hill Handbooks
5. “Microelectronic Circuits Theory and applications “by Adel S. Sedra , Kenneth C. Smith- Oxford

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem:- III

SUBJECT: - Signals and Systems

Teaching Scheme:

Lecture: 3 Hours/week

Tutorial: 1Hour/week

Examination Scheme

End Semester Exam: 60 Marks

Continuous Assessment: 40 Marks

TW & OR.: 50 Marks

Credits: 04

Course prerequisites:

Before proceeding with this tutorial, you must have a basic understanding of differential and integral calculus, limits and adequate knowledge of mathematics.

Course objective:

The course aims to develop good understanding about signals, systems and their classification and analysis tools in the time and frequency domain. It also provides knowledge of correlation function and sampling.

Course Outcomes: On successful completion of this course, students will be able to

1. Represent & classify signals, Systems & identify LTI systems
2. Analyze the systems in time domain using convolution.
3. Apply Fourier transform, Laplace transform and Z-Transform for analysis of LTI systems.
4. Conceptualize the effects of sampling on signal and describe the auto correlation and cross correlation between signals.

Contents:

Unit-I

Introduction to signals

(06 Hours)

Definition of signals, classification of signals: continuous time signals & discrete time signals, even & odd signals, periodic & non-periodic, deterministic & non-deterministic, energy & power, elementary signals: unit impulse, unit step, unit ramp, exponential & sinusoidal, basic operations on signals.

Unit-II

Classification of Discrete time systems (06 Hours)

Definition, Classification of System, System Interconnections, state space analysis, Linear & non-linear, Time-Invariant & Time variant, causal & non-causal, static & dynamic, stable & unstable systems, stability & impulse response of systems to standard signals.

LTI system Analysis: Introduction to LTI systems. Block Diagram, Linear Convolution-Convolution Integral, Impulse response, Methods of Convolution. Properties of convolution

Unit-III

Continuous Time system Analysis: (06 Hours)

Response of LTI Systems to exponential signals, periodic signals. Fourier series, Fourier Transforms, properties, applications of Fourier series & Fourier transforms to the system analysis.

Unit-IV

System Analysis in Laplace Transform (06 Hours)

Laplace Transform: Definition and its properties, ROC and pole zero concept. Applications of Laplace transforms to the LTI system analysis. Inversion using duality, numerical based on properties.

Unit-V

System Analysis in Z-Transform (06 Hours)

Z-Transform: Definition and its properties, Region of Convergence for the Z-Transform, the Inverse z-Transform, Applications of Z-Transform to the LTI system analysis

Unit VI:

Correlation and Spectral Density (06 Hours)

Definition of Correlation and Spectral Density, correlogram, analogy between correlation, covariance and convolution, conceptual basis, auto-correlation, cross correlation, energy/power spectral density, properties of correlation and spectral density, inter relation

between correlation and spectral density, Sampling theorem & its proof, aliasing, reconstruction of sampled signals, interpolation.

Assignments:

Perform the following assignments using MATLAB (any three) and Virtual Lab (any three)

1. Generation of Signals
2. Linear convolution of any two signals
3. Fourier transform of given signal
4. Laplace Transform of given signal
5. Z-transform of given signal
6. Sampling Theorem & aliasing effect.

Content Delivery Methods: Chalk & talk, Power point presentation, Quiz

Assessment Methods:

1. Continuous Assessment (Attendance, Assignments/Tutorials, Unit Test)
2. End term Examination

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

**Class: B.Tech (Electronics) SEM: - III
SUBJECT: - Digital Logic Circuits**

Teaching Scheme:	Examination Scheme	
Lecture: 3 Hours/week	End Semester Exam:	60 Marks
Practical: 2 Hours/week	Continuous Assessment:	40 Marks
	TW & PR.:	50 Marks
	Credits:	04

Course Prerequisite:

1. Fundamentals of Number Systems.

Course Objective:

1. To understand principles, characteristics & operations of combinational & sequential logic circuits.
2. To design combinational circuits by using logic gates, MSI circuits, PLDs.
3. To design, implement analyze, asynchronous & synchronous sequential circuits using flip flops.

Course Outcomes: On successful completion of this course, students will be able to

1. Demonstrate the knowledge of Boolean algebra including simplification techniques.
2. Describe the characteristics of Logic families TTL, CMOS, ECL & explain the fundamentals of semiconductor memories.
3. Analyze & design digital combinational circuits such as of multiplexers, Demultiplexer, encoder, decoder and arithmetic circuits.
4. Demonstrate the knowledge of operations of basic types of flip-flops, registers, counters & the design of Finite State Machine.
5. Describe the characteristics of PLDs, Semiconductor memories and their applications.

Contents:

Unit –I

Number Systems, Codes & reduction techniques: (6 Hours)

Review of Binary number system: Binary addition and subtraction using 1's, 2's complement method, sign magnitude representation. BCD codes, 8421, Excess –3, Grey code, codes with more than four bits, ASCII code.

Fundamental theorems of Boolean algebra, Canonical and standard forms (SOP and POS), minimization of logic functions, Karnaugh maps up to 4 variables, Don't care conditions, Quine Mc-Cluskey method.

Unit-II

Combinational Logic Modules and their Applications (6 Hours)

Adder, subtractor, carry look ahead adder, BCD adder, magnitude comparator, Excess-3 Adder, series and parallel adder, ALU.

Code conversion, Multiplexer, Demultiplexer, Encoder, Decoder and their applications. Parity generator and checker.

Unit-III

Logic Families (6 Hours)

Parameter definitions - Noise margin, power dissipation, voltage and current parameters, propagation delay. Typical values for TTL, CMOS & ECL. Two input TTL NAND gate, TTL logic families standard, Totem – pole, open collector, tri-state (concept & application). TTL-CMOS/CMOS-TTL interfacing, comparison of TTL & CMOS ECL.

Unit-IV

Sequential Logic Modules (7 Hours)

Basic sequential circuits-latches and flip-flops: SR-latch, D-latch, D flip-flop, JK flip-flop, MS J-K flip flop, T flip-flop.

Definition of state machines, Moore and Mealy machine, Design of state machines: state table, state assignment, transition/excitation table, excitation maps and equations, logic realization.

Unit-V

Shift Registers & Counters

(5 Hours)

Registers, Shift registers, Counters (ring counters, twisted ring counters), Sequence Generators, ripple counters, up/down counters, synchronous counters, lock out, Clock Skew, Clock jitter.

Unit-VI

PLDs & Memories

(6 Hours)

Study of PROM, PAL, PLAs. Designing combinational circuits using PLDs.

Classification and characteristics of memory, different types of RAMs, ROMs and their applications, Double Data Rate RAMs.

List of Experiments:

1. Implementation of Boolean functions using logic gates
2. Study of characteristics of typical 74 TTL / 74 CMOS family like: fan in, fan out standard load , noise margin & interfacing with other families
3. Half, Full Adder and subtractor using gates and IC's
4. Code conversion using digital IC's
5. 1 & 2 bit digital comparator and ALU verification
6. Function implementation using Multiplexer and Demultiplexer
7. Sequence generator using MSJK flip flop IC's
8. Study of counters : Ripple , Synchronous , Ring , Johnson , Up-down counter and its application
9. Study of shift registers : Shift left , Shift right , parallel loading and Pulse Train generator
10. BCD Adder/Subtractor with Decoder driver and 7 segment display

Assignments:

1. Implement a multiplexer using Virtual laboratory
2. Design example based on combinational circuit
3. Design for e.g. digital clock, digital event counter,timers,and various multi-vibrator circuits, small processor ports or scrolling display
4. Implementation of combinational logic using PLAs
5. Design a pulse train generator using shift register

6. Design example based on state machine

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Attendance, Assignments/Tutorials, Unit Test)
2. End term Examination

Text Books:

1. R.P. Jain , “Modern digital electronics” , 3rd edition , 12th reprint TMH Publication, 2007.

Class: B.Tech (Electronics) SEM: - III
SUBJECT: - Circuit Theory

Teaching Scheme:	Examination Scheme	
Lecture: 3 Hours/week	End Semester Exam:	60 Marks
Practical: 2 Hours/week	Continuous Assessment:	40 Marks
	TW & PR.:	50 Marks
	Credits:	04

Course prerequisites:

- Knowledge of KCL and KVL Laws from Basic Electrical Engineering
- Knowledge of Linear Differential Equations and Systems of Linear Equations from Engineering Mathematics - I and II.

Course objective:

The objective of the course is to enable the student to perform any of the network analysis task required in the subsequent courses. The student is exposed to some concepts in graph theory for providing a good foundation for the methods of Mesh Analysis and Node Analysis. The transient analysis using Laplace Transforms is also included. The series and parallel resonance circuits which occur quite frequently in electronics are analyzed. The topic of constant K filter is included as it finds many applications in electronic design. The two port network parameters which are of fundamental importance in many courses on electronic devices are included in the last unit.

Course Outcomes: On successful completion of this course, students will be able to:

1. To find voltages and currents in a given network using Mesh Analysis or Node Analysis or Network Theorems.
2. To find voltages and currents in a given network by formulating network equilibrium equations from graph theory.
3. To find the transient response in a given network consisting of series or a parallel combination of resistance, capacitance and inductance.
4. To find all the parameters relating to a given series or a parallel resonant circuit.

5. To design a constant K prototype low pass, high pass, band pass or a band stop passive filter
6. To find any of the two port parameters of a given two port network.

Contents:

Unit I

Fundamentals Of Network (6 Hours)

KCL, KVL, Source Transformation, Source Shifting, Mesh Analysis, Node Analysis, Super Mesh, Super Node, Mesh and Node Analysis in Sinusoidal Steady State
Network Theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem, Reciprocity Theorem.

Unit II

Application Of Graph Theory (6 Hours)

Network Graph, tree, cotree & loops, Incidence Matrix, tie set matrix, cut-set matrix, Formulation of equilibrium equations in matrix form, Solution of resistive networks, Principle of Duality

Unit III

Transient Analysis (6 Hours)

Initial Conditions in networks. A procedure for evaluating initial conditions. Solution of step response in RC, RL, RLC circuits using classical method, Analogous equivalence of mechanical system.

Unit IV

Resonance (6 Hours)

Resonant condition, Definition of Quality factor. Finding resonant frequency, impedance at resonance, voltage and current variation with frequency, bandwidth, selectivity, magnification factor for series and parallel resonant circuits. General case of resistance present in both branches of parallel resonant circuit. Comparison of series and parallel resonant circuits, Applications of resonant circuits

Unit V

Passive Filters

(6 Hours)

Filter Fundamentals, Image impedance, Characteristic impedance, Propagation constant. Constant K prototype for LPF, HPF, BPF and BSF, m-derived LPF, HPF, Terminating half sections, Composite filters

Unit VI

Two Port Networks

(6 Hours)

Network Functions, Two port network parameters, Z, Y, H, ABCD and other parameters, Relationships between two-port network parameters, Interconnections of two-ports, Reciprocity and Symmetry conditions

List of Experiments:

1. To verify Thevenin's and Norton's Theorem.
2. To verify Superposition and Reciprocity Theorem.
3. To find resonant frequencies of series and parallel circuit.
4. To plot frequency response of frequency selective network (Twin T or Wein Bridge).
5. To plot frequency response & cut-off frequency of constant-k LPF and HPF.
6. To plot frequency response & cut-off frequency of constant-k BPF and BSF.
7. To find Z and Y parameters of given two port network.
8. To find H and ABCD parameters of given two port network.

Assignments:

1. Analyze the circuit using mesh and node analysis.
2. Apply graph theory for circuit.
3. Describe any two real time applications of passive filters.
4. Simulation of series and parallel resonance circuit using Multisim.
5. Transient response of RC, RL and RLC circuit using Multisim.
6. Obtain industry exposure based on product design industry and prepare report for the same.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books :

1. D. Roy Choudhury, 'Network and Systems', New Age International Publishers, Second Edition.
2. Franklin F. Kuo, 'Network Analysis and Synthesis', John Wiley & Sons (Second Edition)

References Books:

1. M. E. Van Valkenburg, 'Network Analysis', PHI (3rd Edition)
2. John D. Ryder, 'Networks, Lines and Fields', PHI Learning Pvt. Ltd., Second Edition

B.Tech.(Electronics) Sem-IV

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem: - IV

SUBJECT: - Analog Integrated Circuits

Teaching Scheme:	Examination Scheme	
Lecture: 3 Hours/week	End Semester Exam:	60 Marks
Practical: 2 Hours/week	Continuous Assessment:	40 Marks
	TW & PR.:	50 Marks
	Credits:	04

Course prerequisites:

- Knowledge of KCL and KVL Law
- Basic knowledge of Op-Amp and its configurations

Course objective:

This course provides in depth knowledge on the Op-Amp. Also it introduces the design of PLL, Waveform generators, Timer IC's and Converters.

Course Outcomes: On successful completion of this course, students will be able to

1. Design linear and nonlinear applications of Op-Amp.
2. Design of first and second order active filters.
3. Analyze and design Waveform Generators.
4. Demonstrate knowledge of Phase Locked Loop IC 565 and Converters.
5. Design of multivibrators using Timer IC 555

Contents:

Unit-I

Fundamentals of Operational Amplifier

(06 hours)

Block diagram representation of a typical op-amp, Schematic symbol for op-amp, Definition of integrated circuits, Types of Integrated Circuits, Manufacturers, Designation for IC, IC package types, PIN identification & temp ranges, Ordering information, Characteristics of an op-amp, Internal & external offset voltage compensation, Frequency Response of an op-amp.

Unit-II

Operational Amplifier – Linear circuits

(06 hours)

Inverting amplifier, Non-inverting amplifier, Voltage Follower, Adder, Subtractor, Scaling averaging amplifier, Integrator, Differentiator, Instrumentation amplifier using 1, 2 and 3 op-amps, Instrumentation amplifier using transducer bridge, Peaking amplifier

Unit-III

Operational Amplifier - Non-linear circuits

(06 hours)

Precision half wave rectifier & full wave rectifier, comparator, Schmitt trigger, window detector, log-antilog amplifier and its temperature compensation techniques, log ratio, sample and hold circuit.

Unit-IV

Active filters and waveform generators

(06 hours)

First and second order low pass Butterworth filters, first and second order high pass Butterworth filter, Band pass filter, Band reject filter, All-pass filter, notch filter, Square wave, Triangular wave, Sawtooth wave generator and study of function generator or IC 8038

Unit-V

Special function IC's

(06 hours)

IC 555- as Monostable and Astable Multivibrators and its applications.

IC 565- operating principle of Phase Locked Loop IC 565, Applications like Frequency multiplier, FSK and FM detector

Unit-VI

Interfacing circuits

(06 hours)

V to I & I to V converter, D to A converter- Binary weighted resistors and R & 2R resistors, A to D Converter- Counter-ramp type, Successive approximation and Dual Slope.

List of Experiments:

1. To design and build Integrator and draw frequency response
2. To design and build Differentiator and draw frequency response
3. To design and build precision rectifier

4. To design and build schmitt trigger and find threshold levels
5. To design and build first order Butterworth low pass filter
6. To design and build first order Butterworth high pass filter
7. To design and build triangular waveform generator using IC 741
8. To design and build Function generator using IC 8038
9. To design and build Astable multivibrator using timer IC 555.

Assignments:

1. Find out any three ICs of op-amp other than IC 741 and compare the characteristics with IC 741.
2. List out any two linear applications of op-amp which are not specified in syllabus and explain the working along with circuit diagrams.
3. List out any two non-linear applications of op-amp which are not specified in syllabus and explain the working along with circuit diagrams.
4. Design sinusoidal generators using op-amp for a given frequency.
5. Real time applications of IC555/ IC565.
6. Obtain industry exposure based on product design and prepare report for the same.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. Ramakant A.Gayakwad, OP-AMP and Linear ICs, Prentice Hall of India, 4th Edition, 2010.
2. K. R. Botkar, Integrated Circuits, khanna Publishers, 10th edition, 2010

References Books:

1. David A. Bell, “Operational Amplifiers and Linear ICs”, Oxford publication, 3rd edition, 2011
2. Sergio Franco, “Design with Operational Amplifiers and Analog Integrated Circuits”, Tata McGraw Hill, 3rd edition, 2008
3. D.Roy Choudhry, Shail Jain, Linear Integrated Circuits, New Age International Pvt. Ltd., 4th edition, 2010.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem:- IV

SUBJECT: - Electronic Circuits and applications

Teaching Scheme:	Examination Scheme	
Lecture: 4 Hours/week	End Semester Exam:	60 Marks
Practical: 2 Hours/week	Continuous Assessment:	40 Marks
	TW & PR.:	50 Marks
	Credits:	05

Course prerequisites:

- Knowledge of linear circuit theory
 - Basic concept of BJT
-

Course objective:

1. To make student understand analysis of multistage transistor amplifier.
 2. To make student understand a practical approach of design and analysis of feedback amplifiers ,power amplifiers and oscillators
 3. To make student understand analysis and design of voltage regulators.
 4. To make student understand the behavior of high frequency BJT amplifiers
-

Course Outcomes: On successful completion of this course, students will be able to

1. Analyze multistage amplifier.
2. Analyze and design feedback amplifier and power amplifier and oscillators
3. Analyze and design voltage regulators.
4. Characterize behavior of high frequency BJT amplifiers.

Contents:

Unit-I

Multistage amplifiers

(08hours)

Need of Multistage amplifiers, Parameter evaluation such as R_i , R_o , A_v , A_i & Bandwidth for general multi stage amplifier, Analysis & design at low frequency & mid frequency of direct

coupled, RC coupled, transformer coupled (Two stage) amplifier, Darlington amplifier, cascode amplifier

Unit-II

Feedback amplifiers (08 hours)

Concept of feedback, classification of amplifiers, Negative feedback topologies with their block diagram representation, Effect of negative feedback on Input impedance, Output impedance, Gain and Bandwidth with derivation, method of analysis of feedback amplifier, analysis of all feedback topologies.

Unit-III

Power amplifiers (08 hours)

classification of power amplifiers - Class A, Class B, Class C, and Class AB. Operation of - Class A with resistive load; Transformer coupled class A Amplifier; Class B Push – pull amplifier ; Class B Complementary symmetry amplifier. Efficiency analysis for Class A transformer coupled amplifier and Class B push – pull amplifier, cross over distortion in power amplifiers, harmonic analysis

Unit-IV

Oscillators (08 hours)

Positive feedback, Barkhausen criterion, Classification of oscillators, derivation and analysis of RC oscillators, Wien bridge Oscillators, LC Oscillators for frequency of oscillation, Tuned collector oscillator, Piezo-electric effect in crystals and Crystal Oscillator

Unit- V

Regulators (08 hours)

Block schematic of linear regulators, Performance parameters – Load and Line regulations, Ripple rejection, Output resistance Emitter follower regulator, Transistor series regulator, shunt regulator Study and design of regulators using IC's :78XX,79XX,723,LM317, Method of boosting output current using external series pass transistor. Protection circuits – Reverse polarity protection, over circuit, fold back current limiting, over voltage protection.

Unit-VI

High frequency amplifiers

(08hours)

High frequency T model. Common base short circuit current frequency response, alpha cut-off frequency, CE short circuit current frequency response, high frequency hybrid π CE model, Amplifier response taking into account source and load resistances.

List of Experiments:

1. Study of CE two-stage amplifier with capacitive coupling
2. Study of Voltage series and current series feedback amplifiers
3. Study of Voltage shunt and current shunt feedback amplifiers
4. Study of Class B/AB push – pull/ Complementary Symmetry power amplifier.
5. Study of RC Oscillators - phase shift and wien bridge oscillators
6. Study of LC oscillators – Hartley, Colpitt oscillators
7. Study of Linear voltage regulators – series regulator using series pass transistor, shunt regulator using zener diode
8. Study of Fold back current limiting using IC 723

Assignments:

1. Analyze given feedback amplifier.
2. Describe any two real time applications of power amplifier.
3. Simulation of oscillator using Multisim.
4. Describe any two real time applications of regulator.
5. To design, built and test given electronic circuits(Group activity)
6. Obtain industry exposure based on electronic product design and prepare report for the same.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. “Electronic devices and circuits” by S. Salivahanan, Suresh Kumar Vallavaraj, Mc Graw Hill Publication

2. "Electronic devices and circuits "by Millaman Halkies ,TMH publication
3. "Integrated Electronics", by Millman J and Halkias .C., TMH publication

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem:- IV

SUBJECT: - Instrumentation & Control System

Teaching Scheme:	Examination Scheme	
Lecture: 3 Hours/week	End Semester Exam:	60 Marks
Tutorial: 1Hour/week	Continuous Assessment:	40 Marks
	Credits:	04

Course prerequisites:

- Basic knowledge of signals.
- Basic mathematical tools like Laplace transform.
- Basic knowledge of software like MATLAB.

Course objective:

This course provides in depth knowledge of the various control systems. Also it introduces the stability of system, transducers, controllers etc.

Course Outcomes: On successful completion of this course, students will be able to

1. Identify various control systems and determine the 'Transfer Function' of a system using block diagram reduction technique and signal flow graph.
2. Measure various Non-electric quantities such as displacement, temperature, angular speed, acceleration etc using suitable transducer.
3. Determine the error in various control systems.
4. Evaluate the stability of a system using Routh's Stability Criterion, root locus and different graphical methods like Bode plot and polar plot.
5. Compare various control actions such as Proportional (P), Integral (I), Derivative (D), PI, PID.

Contents:

Unit I

Control System (06 Hours)

Introduction to Control System, control problems, Feedback and Non-feedback Systems, Transfer Function, Analysis of T.F. using Block diagram and signal flow graph.

Unit II

Transducers and Controller Components (06 Hours)

Classification of Transducers and its Characteristics. RTD, Thermocouple, Thermister, capacitive transducer, LVDT, strain gauge and Electromagnetic flow-meter. Linear Approximation of Nonlinear Systems, synchros, dc and ac servomotors, tacho-generators, electro hydraulic valves, electro pneumatic valves.

Unit III

Time Response Analysis (06 Hours)

Standard Test Signals, Time Response of First order system and second order system, steady state error (e_{ss}) and error constants (K_p , K_v , K_a), performance indices.

Unit IV

Stability (06 Hours)

Concept of stability, necessary conditions for stability, Hurwitz and Routh stability criteria, stability of system modeled in state variable form, root locus technique.

Unit V

Frequency Response Analysis (06 Hours)

Relationship between time & frequency response, Polar plots, Bode plot, stability in frequency domain, Nyquist stability criterion.

Unit VI

Controllers (06 Hours)

Control actions – On/Off, P, PI, PD, PID. PLC Architecture, Introduction to Ladder Diagram

List of Practicals:

1. Unit Step and Impulse response of the Transfer function using MATLAB.
2. To draw Root Locus theoretically and verify it using MATLAB.
3. To draw Bode plot theoretically and verify it using MATLAB.
4. Magnitude and phase plot of Lead network.
5. Magnitude and phase plot of Lag network.
6. To Study characteristics of temperature transducer.
7. To Study characteristics of LVDT for displacement measurement.
8. Study of Strain gauge.

Assignments:

1. Transfer function of closed loop system.
2. Transient response specifications of second order system.
3. Describe characteristics of temperature transducers..
4. Effect of addition of poles and zeros.
5. Describe architecture of PLC.
6. Simulation of Controller using Virtual Lab and LabVIEW.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books /Reference Books:

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

**Class: B.Tech (Electronics) Sem:- IV
SUBJECT: - Analog Communication**

Teaching Scheme:	Examination Scheme	
Lecture: 3 Hours/week	End Semester Exam:	60 Marks
Practical: 2 Hours/week	Continuous Assessment:	40 Marks
	TW & OR.:	50 Marks
	Credits:	04

Course prerequisites:

- Basic knowledge of signals and systems.
- Basic mathematical tools like fourier series & transform

Course objective:

1. To introduce to student essential components of communication system and emphasize need of modulation.
2. To make student recognize concept of noise and its effects.
3. To make student understand amplitude & frequency modulation and demodulation and its mathematical background.
4. To make student understand working of radio receivers.

Course Outcomes: On successful completion of this course, students will be able to

- 1.Describes basic components of communication system and explains need of modulation.
- 2.Describes concept of noise and also recognizes its effects.
- 3.Describes amplitude and frequency modulation and demodulation and can do analysis in time and frequency domain.
- 4.Describes components of communication receiver system.

Contents:

Unit-I

Introduction to Communication Systems

(6 Hours)

Review of signals and systems, Frequency domain of signals, Block schematic of communication system, types of communication channels, base band signals, RF bands, Necessity of modulation.

Unit-II

Noise

(6 Hours)

Types of noise, External noise, Internal Noise, Noise calculations, signal to noise ratio, noise figure, and noise temperature.

Unit-III

Amplitude Modulation

(6 Hours)

Amplitude Modulation, low level and high level transmitters, Frequency spectrum of AM wave, Representation of AM, power relations in AM, Generation of AM, DSB suppressed carrier (DSBSC)-modulator, Single Side Band (SSB):-Principle, Filter method, phase shift method and third method, Independent sideband (ISB) and Vestigial Side Band (VSB) principles and transmitters, Diode detector, practical diode detector, and square law detector. Demodulation of DSBSC, Demodulation of SSBSC.

Unit-IV

Angle Modulation

(6 Hours)

Basic concept, mathematical analysis, frequency spectrum of FM wave, sensitivity, phase deviation and modulation index, frequency deviation and percent modulated waves, bandwidth requirement, deviation ratio, Narrow Band FM, and Wide Band FM. Varactor diode modulator, FET reactance modulator, stabilized reactance modulator- AFC, Direct FM transmitter, indirect FM Transmitter, pre-emphasis and de-emphasis. Amplitude limiting, FM demodulators

Unit-V

Radio Receivers

(6 Hours)

Block diagram of AM and FM Receivers, TRF receiver, Super heterodyne Receiver, Performance characteristics: Sensitivity, Selectivity, Fidelity, Image Frequency Rejection. IF Amplifiers. Tracking, AGC, Mixers.

Unit -VI

Pulse Analog Modulation

(6 Hours)

Pulse modulation. Sampling process, Sampling Theorem for low pass and band pass signals, Nyquist criteria , Sampling techniques, aliasing error, and aperture effect. PAM, PWM, PPM generation and detection. TDM and FDM.

List of Experiments (Minimum 08):

1. Study of Amplitude Modulation and Demodulation.
2. Study of Frequency Modulation and Demodulation
3. Study of SSB Modulation & Demodulation.
4. Analysis of standard signals (square and triangular) and Modulated signals (all types of AM, FM) using spectrum analyzer.
5. Sampling And Reconstruction.
6. Study of Pulse Amplitude Modulation (PAM.)
7. Study of Pulse Width Modulation.(PWM)
8. Study of Pulse Position Modulation.(PPM)
9. Study of PAM-TDM.
10. Study of Super heterodyne (AM) Receiver.

Assignments

1. Design of circuit for noise and noise figure analysis using Multisim.
2. Simulation of AM modulation and demodulation using MATLAB.
3. Simulation of FM modulation and demodulation using MATLAB.
4. Design and simulation of AM Receiver using MATLAB. Simulink.

5. Design of PWM modulator using Multisim.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Book:-

B.P.Lathi 'Modern Digital and analog Communication System' Oxford University press.

Reference Books:-

1. George Kennedy 'Electronics Communication System'- IV th Edition-Tata McGraw Hill Publication.
2. Taub & Schilling: Principles of Communication Systems, Tata McGraw-Hill.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem:- IV

SUBJECT: - Data structures and Files

Teaching Scheme:	Examination Scheme	
Lecture: 3 Hours/week	End Semester Exam:	60 Marks
Practical: 2 Hours/week	Continuous Assessment:	40 Marks
	TW & OR.:	50 Marks
	Credits:	04

Course prerequisites:

- Basic Knowledge of C language.

Course objective:

This course provides in depth knowledge of the various types of data structures and various algorithms. Also it introduces the concept of linked list, stack, queues, graph and tree.

Course Outcomes: On successful completion of this course, students will be able to

1. Write a program involving pointers and structures.
2. Write a program involving search and sorting techniques.
3. Write a program using linked and double linked lists.
4. Implement stacks and queues involving linked list.
5. Perform operations on a tree using linked lists.
6. Find the shortest path in a given graph.

Contents:

Unit-I

C Programming Revision

(5 Hours)

Pointers, Arrays, Single and Multi-Dimensional arrays, Row major and Column Major, Arrays and polynomials, Structures , Call by Value ,Call by Reference , Passing arrays
Passing a function to function, Pointer to function ,Pointers.

Unit-II

Data Structure and Analysis of algorithms. (4 Hours)

Introduction to data structure, Data representation, Abstract Data types, Primitive data types, Data structure and data types, Differences between data types. Algorithms and different approaches to designing an algorithm, Complexity, Big O notation, algorithm analysis .Recursion. Sorting: Bubble sort, Selection sort, Quick sort, Merge sort, Insertion sort.

Unit-III

Linked Lists (4 Hours)

Definition, operations on linked list, Reversing the links, Merging of linked lists, Circular Linked list, Recursive operation on linked list, Doubly linked list, Linked list and Polynomials,

Unit-IV

Stack and Queues (3 Hours)

Operation on stacks, Stack as an array, Stack as a linked list, Application of stack, Infix to prefix conversion, Infix to postfix conversion, Postfix to prefix conversion, Postfix to infix conversion.

Representation of Queue as an array, Queue as a linked list, Circular Queue, Priority queue

Unit-V

Tree (3 Hours)

Binary tree, Linked and array representation of Binary tree, Binary search tree, Operation: Searching of a Node in a Binary tree, Insertion of a node in binary tree, deletion from a binary tree. Threaded binary tree. AVL trees

Unit-VI

Graphs (3 hours)

Definition ,Adjacent vertices and Incident edges, graph representation, depth first search ,breadth first search, Spanning tree, Kruskal.s Algorithm, Shortest path algorithm, Dijkstra.s algorithm.

List of Experiments:

1. Program to create & manipulate database using structure.
2. Program to add two polynomial using array of structure.
3. Program to implement primitive operation on Sequential file.
4. Program to search for record from a given list of records stored in array using
 - i) Linear search
 - ii) Binary search
5. Program to sort an array of names using
 - i) Bubble sort
 - ii) Insertion sort
 - iii) Quick sort
6. (a) Program to implement following operation on singly linked list:
 - i) Create
 - ii) Delete
 - iii) Insert
 - iv) Display
 - v) Search(b) Program to add two polynomials using linked list.
7. (a) Program to implement stack using:
 - i) Array
 - ii) Linked list(b) Program to convert an infix expression to postfix expression & evaluate the resultant expression.
8. Program to Implement Queue using: (i) Array (ii) linked list
9. Program to create a Binary search tree & Perform following primitive operation on it:
 - i) Search
 - ii) Delete
 - iii) Traversals (inorder, pre-order, post-order -recursive)
 - iv) Non-recursive in order traversal
10. Program to create a graph using adjacency list & traverse it using BFS & DFS methods

Assignments:

1. State various types of data types and create a database of students in a class using structures.
2. Write a C code to create a digital clock, rainbow etc.
3. Case study on any real time application.

Example :

- i. Whatsapp, Hike, Wechat, Line social communication software
 - ii. Cars lined up at a car wash.
 - iii. Customers at a grocery store check out.
 - iv. Airplane taking off and landing on a runway, etc
4. Comparison between various types of programming languages.
 5. Write a c program to construct tower of Hanoi.
 6. Write a c program to sort structures on the basis of structure elements.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. "Data structure using C" ISRD group, TMH.
2. "Data Structure through C" ,Yashwant kanetkar,BPB Puplication.

Reference Books:

1. "Data structure using C" AM Tanenbaum, Y Langsam and MJ Augustein, Prentice Hall India.
2. "Data structure and Algorithm Analysis in C" Weiss, Mark Allen Addison Wesley.
3. "Data structure – A Pseudocode Approach with C", Richard F Gilberg Behrouz A. Forouzan, Thomson
4. "Let us C" .Yashwant Kanetkar.BPB Publication.

Total Credits Sem – VI : 25

Grand total : 50

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem:- V

SUBJECT: - Microprocessors & Microcontrollers

Teaching Scheme

Lecture: 4 Hours/week

Practical: 2 Hours/week

Examination Scheme

End semester exam: 60 Marks

Continuous Assessment: 40 Marks

TW & PR: 50 Marks

Credits: 05

Course Prerequisites: Students should have basic knowledge of:

- Hexadecimal Number System
 - Concept of Encoder Decoder & Multiplexer Demultiplexer
-

Course Objectives:

- To understand the architecture, instruction sets and various techniques to interface them with different real world I/O devices to accomplish certain tasks.
 - To study the architecture of microcontrollers like 8051 and PIC and the instruction set and programming concepts.
 - To know the techniques of interfacing them to the real world peripheral devices.
 - To impart practical knowledge of 8051, and PIC Microcontroller.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Identify the different block of microprocessor and microcontroller
2. Study the architecture and instruction set of 8051 and PIC microcontrollers.
3. Use the knowledge of instruction set to perform practical for 8051 and PIC Microcontrollers.
4. Interface peripheral devices with 8051 microcontroller for different applications.

Contents:

Unit I

(08 Hours)

Introduction to Microprocessors

Evolution of Microprocessors, comparison of Microprocessor & Micro controller. Difference between RISC & CISC microcontrollers, Harvard & Von Neumann Architectures Internal architecture of 8 bit Microprocessor 8085, concept of fetch –decode and execute, Stack and Subroutines, concept of Memory mapped I/O, I/O mapped I/O

Unit-II

8051 Micro Controllers

(08 Hours)

Architecture, Pin configuration, 8051 timers, counter and related SFR's, Internal RAM structure, 8051 addressing modes.8051 Interrupts Interrupt Priority in the 8051 concept of RESET. Introduction to 8051 assembly language programming: JUMP, LOOP and CALL instructions, Arithmetic instructions, Logic and Compare instructions, and I/O PORT Single bit instruction programming, single bit operations with CY.

Unit-III

8051 Serial Communication &Interfacing of 8051(08 Hours)

Serial Communication of 8051: Basics, SBUF register, SCON and PCON registers, Modes of operation Simple program of serial communication.

Interfacing of 8051 with devices: LED, LCD, keyboard, LM35 temperature sensor & A/D converter

Unit-IV

Communication Protocols

(08 Hours)

Use of communication protocols, need of communication interface in embedded system

Serial communication protocols: I2C, CAN, USB, UART, Serial peripheral interface(SPI),synchronous serial protocol(SSP).

Parallel communication protocol: PCI,PCI-X

RS232C, RS485/422.

Unit -V

PIC18F Family

(08 Hours)

PIC18F programming model, instruction set Data copy, arithmetic, branch, logical, bit manipulation and multiply-divide operations, Stacks, subroutines and macros, Role of Assembler.

Unit-VI

Interrupts, Timers & Serial I/O in PIC18F

(08 Hours)

Concepts of Interrupts and Timers, Interrupts and their implementation in PIC18, The PIC18 timers, Use of Interrupts in applications. Concept of serial I/O, SPI protocol

List of Experiments:

Any 8 experiments should be conducted

1. Study of 8051 μ c using Keil software:
 - (a) Block transfer without memory overlapping
 - (b) Block transfer without memory overlapping
2. (a) To convert BCD no. to Hex no.
 - (b) To convert Hex no. to BCD no.
3. To perform: (a) BCD up Counter
 - (b) BCD down Counter
4. To generate a square wave of 5ms delay
5. To interface stepper motor with 8051 μ c
6. To interface LED with 8051 μ c
7. To interface Keyboard with 8051 μ c
8. To interface ADC/DAC with 8051 μ c
9. To perform 8/16-bit addition & subtraction using PIC microcontroller.
10. Serial communication by PIC microcontroller

List of Assignments:

1. Explain a Boolean processor of microcontroller 8051 with two examples
2. Mention a real time application of microcontroller 8051.
3. Mention a real time application of PIC microcontroller.
4. Design a microcontroller (8051) based interfacing system with memory.
5. What is memory address decoding? Explain the different types of decoding.
6. An overview on PIC families.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. Muhammad Ali Mazidi, Janice Gillespie Mazidi, “The 8051 Microcontroller and Embedded System” Pearson Education.
2. Muhammad Ali Mazidi, Rolin D. McKinlay, Danny Causey,” PIC Microcontroller and Embedded Systems”3rd Edition ,Pearson Education
3. Ramesh Gaonkar “Fundamentals of Microcontrollers and Applications in Embedded Systems” (with the PIC18 Microcontroller Family) 2007 Edition, Penram international

Reference Books:

1. John B Peatman “Designing with PIC Microcontrollers” 2004 Pearson Education.
2. Ajay V. Deshmukh, “Micro-controllers - Theory and Applications”, Tata McGraw Hill.
3. Kenneth J. Ayala, “The 8051 Micro-controller – Architecture, Programming & Applications”, Second Edition Penram International & Thomson Asia,

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B. Tech. (Electronics) Sem: - V

SUBJECT: - Electronic Instruments and Measurement System

Teaching Scheme

Lecture: 3 Hours/week

Practical: 2 Hours/week

Examination Scheme

End semester exam: 60 Marks

Continuous Assessment: 40 Marks

TW &OR : 50 Marks

Credits: 04

Course Prerequisites:

- Knowledge of process instrumentation.
- Knowledge of Integrated circuits.

Course Objectives:

- To help the students to have knowledge of the basic of instrumentation.
- To study the principles of working of various signal generators and wave analyzers
- To study the principle of working of CRO is specifications, applications in detail and study the working of various advanced CRO's and their applications.

Course Outcomes: On successful completion of this course, students will be able to:

1. Describe specifications, features and capabilities of electronic instruments
2. Use the electronic instruments like signal generators, wave analyzers, and various oscilloscopes by knowing their specifications for electronic measurements.
3. Make the required measurement using various instruments

Contents:

Unit-I

Fundamentals of Instrumentation & Measurement: (06 Hours)

Necessity of Electronic Measurements, Block diagram of electronic measuring system, Concepts of Accuracy, Precision, Linearity, Sensitivity, Resolution, Hysteresis, Calibration etc. Measurement Errors, Voltage, Current, Resistance measurement using DMM- 4 ½ & 6 ½, Auto zeroing, Auto ranging.

Unit-II

Measuring Instruments (06 Hours)

Voltage, current and impedance measurement, VTVM, TVM, DVMs, AC voltmeters true RMS meters, vector voltmeter, vector impedance meter, direct current probes, alternating current probes, LCR-Q meter.

Unit-III

Signal Generators & counters (06 Hours)

standard signal generators, swept frequency generator, random noise generator, Audio frequency signal generation, RF generator, Pulse generator (block diagram), Function generator Time, Frequency, Ratio, Time interval, Period & Multiple Period averaging using digital universal frequency counter.

Unit-IV

Oscilloscopes: (06 Hours)

Overview of analog CRO, dual/ Multi-trace CRO, Various CRO probes & its applications. Digital Storage Oscilloscope - Sampling speed & Memory depth of DSO, Design considerations, Attachments to DSO for enhancing the functionality, Measurements such as FFT, Math Functions, Curve Tracer, and Power scope.

Unit-V

Communication Measurements: (06 Hours)

Communication measurements, Measurements on transmitter and receiver: sensitivity, selectivity, phase jitter, S/N ratio, co-channel interference, SINAD test etc. Network analyzer-system elements, measurement accuracy, scalar network analyzer, vector network analyzer, S-parameter measurement using network analyzer, EMI/EMC standards.

Unit-VI

Signal Analyzers & computer aided measurements:

(06 Hours)

Harmonic and Wave analyzer, Distortion factor meter, Spectrum analyzer -FFT analyzer, tracking generator, Logic analyzer, logic timing analyzer, logic state analyzer, FFT analyzer, Mixed signal oscilloscope, IEEE 488, VXI based instruments, Introduction of Lab view software.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

List of Experiments:

1. Peak, average and r.m.s. measurement using rectifier circuit.
2. Measurement using spectrum analyzer and tracking generator. Observing spectrum of AM and FM waveforms for different modulation indices
3. Measurements on DSO:
 - i) FFT analysis of LF signal
 - ii) Capturing transients
 - iii) Storing and retrieving number of different signals
 - iv) Study of various operations like add, subtract, integrate, differentiate.
4. Measurement and timing analysis of digital signals using Logic Analyzer.
5. Measurement of Total harmonic distortion using distortion factor meter.
6. Measurements on L-C-R Q meter.
7. Measurements with Universal counter (Frequency, Period, frequency ratio, Period Averaging and Time interval).

8. Study of characteristics of Diode, Transistors using Curve Tracer.

List of Assignments:

1. Calibration of DVM for any one range: e.g. 200V dc, 200Vac, 200mA dc, using standard calibrator or standard 6½ DMM.
2. Presentation on LCR-Q meter.
3. Describe any one real time applications of random noise generator.
4. Mathematical operations using Lab view software.
5. Seminar on network analyzer.
6. Describe any one real time applications of power scope.

Text Books:

1. Oliver-Cage, “Electronic Measurements and Instrumentation”, TATA McGraw Hill, 1975.
2. M.M.S. Anand, “Electronics Instruments and Instrumentation Technology”, Prentice Hall India, New Delhi, 2009.
3. Albert D. Helfrick and William D. Cooper, “Modern Electronic Instrumentation and Measurement Techniques”, Prentice Hall of India, 2010.

Reference Books:

2. J.J. Carr, “Elements of Electronic Instrumentation and Measurement”, Pearson Education India, New Delhi, 2011.
3. A. J. Bouwens, “Digital Instrumentation”, TATA McGraw Hill, 1997.
4. H.S. Kalsi, “Electronic Instrumentation”, Tata McGraw Hill, New Delhi, 2010

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

**Class: B.Tech (Electronics) Sem :- V
SUBJECT :- Digital Communication Systems**

Teaching Scheme

Lecture: 3 Hours/week

Practical: 2 Hours/week

Examination Scheme

End semester exam: 60 Marks

Continuous Assessment: 40 Marks

TW &OR : 50 Marks

Credits: 04

Course Prerequisites:

- Understanding of continuous and discrete linear systems.
- Knowledge of probabilities and random variables.
- Understanding of Fourier Transform.

Course Objectives:

- To understand the building blocks of digital communication system.
- To prepare mathematical background for communication signal analysis.
- To understand the basics of baseband and pass band digital communication systems.
- To analyze error performance of a digital communication systems.
- To acquire the knowledge of spread spectrum communication systems.

Course Outcomes: At the end of the course, a student will be able to

1. Solve and analyze problems related to Probability theory & random processes.
2. Identify and describe different modulation & detection techniques in digital communication & compare their performance.
3. Characterize error-control coding techniques

4. Analyze Performance of spread spectrum communication systems.

Contents:

Unit –I

(06 Hours)

Overview of Probability Theory and Random Variables:

Sample space, events, Conditional probability, Joint probability, Baye's rule, random variables. Continuous and discrete random variables, Cumulative distribution Function, probability distribution function, Statistical averages, Random Processes, Time average, Ergodicity.

Unit -II

Digital transmission of analog signals

(06 Hours)

Introduction to Digital Communication System, Sampling Process, Quantization–Uniform, Non-Uniform, Companding, A-Law, μ Law, Pulse code modulation Delta Modulation, Adaptive Delta Modulation, Delta Sigma Modulation, Differential Pulse Code Modulation.

Unit –III :

(06 Hours)

Baseband Transmission and Reception:

Line codes: Unipolar, Bipolar, NRZ, RZ, RZ-AMI, Manchester, Properties & their spectra, M-ary Signaling, ISI, scrambler, Unscramble. Optimum Receivers-Matched Filters, Correlation receivers.

Unit-IV

(06 Hours)

Bandpass Modulation Techniques:

ASK, PSK, FSK, Binary Phase shift keying, Differential Phase shift keying, Differential encoded PSK, Quadrature PSK, M-ary PSK, Quadrature Amplitude shift keying (QASK), Binary frequency shift keying, Minimum shift keying (MSK) , signal space representation, Performance evaluation of modulation techniques in terms of probability of error (No derivations)

Unit-V

Error Control Coding:

(06 Hours)

Types of Errors & codes, Linear block codes, error detection & correction, Hamming codes. Cyclic codes: Encoding and syndrome decoding. Convolutional codes, Introduction to turbo codes.

Unit-VI

(06 Hours)

Spread Spectrum Techniques:

Introduction, Generation of PN Sequences and its properties, Direct Sequence Spread Spectrum Signals, Frequency Hopped Spread Spectrum Signals, Introduction to Multiple Access Techniques: CDMA, TDMA, FDMA.

List of Experiments:

Minimum 8 experiments should be conducted.

1. To verify the sampling theorem.
2. To study Pulse Code Modulation System (PCM) System.
3. To analyze a Delta modulation system and interpret the modulated and demodulated waveforms.
4. To perform ASK (Amplitude Shift Keying) System.
5. To study PSK (Phase Shift Keying) System.
6. To study FSK (Frequency Shift Keying) System.
7. To study of Quadrature Phase Shift Keying (QPSK).
8. To study of Spread Spectrum techniques.
9. To simulate any digital modulation scheme using MATLAB.
10. To perform different Data Formats
11. To study of Hamming codes.

List of Assignments:

Any six assignments can be completed

1. Study of sampling theorem using Virtual Labs
2. Study of ASK/FSK/PSK system using Virtual Labs.
3. Study of hamming code.
4. Experiments on random signals using MATLAB
5. Simulation of communication system using MATLAB.
6. Study of Eye Diagram using oscilloscope
7. Presentation on any communications topic relevant to the course.

8. Industrial Visit

- **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.
- **Assessment Methods:**
 1. Unit Test
 2. Assignments
 3. Continuous Assessment
 4. End term Examination

Text books:

1. Sklar, Bernard, "Digital Communications, Fundamentals & Applications," Second Edition, Prentice-Hall Inc.,2001.
2. Leon W. Couch, "Digital and Analog Communication Systems", Sixth Edition, Pearson Education, 2001.
3. Lathi B P, and Ding Z "Modern Digital and Analog Communication Systems," Fourth Edition ,Oxford University Press.

Reference Books:

4. Haykin Simon, "Digital Communication Systems," Forth Edition,John Wiley and Sons, New Delhi.
5. Taub, D. Schilling, and G. Saha, "Principles of Communication Systems," Third Edition, Tata McGraw Hill.
6. John G. Proakis , "Digital Communication" ,Fifth Edition, Pearson Education.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

**Class: B.Tech (Electronics) Sem:-V
SUBJECT: - Power Devices & Machines**

Teaching Scheme

Lecture: 3 Hours/week

Practical: 2 Hours/week

Examination Scheme

End semester exam: 60 Marks

Continuous Assessment: 40 Marks

TW &OR : 50 Marks

Credits: 04

Course Prerequisites:

- Knowledge of the principals and applications of electronic devices including semiconductor diodes, bipolar-junction and field-effect transistors.
- Understanding of transformers and magnetically coupled circuits

Course Objectives:

- To understand and acquire knowledge about various power semiconductor devices.
- To understand the operation, characteristics and performance parameters of controlled rectifiers.

Course Outcomes: On successful completion of this course, students will be able to

1. Compare various power devices with their driver circuits & protection circuits
2. Comprehend the principle operation and models of different types of power electronic converters AC-DC, DC-AC and DC-DC converter systems.
3. Describe the basic principles of HVDC, UPS, motors, etc.

Contents:

UNIT I :

Power devices

(06 Hours)

Power Diodes: Construction, Switching characteristics; Power BJT, PBJT: Construction, Operation, switching characteristics, Power MOSFET: PMOSFET, Construction, Operation, Static characteristics, switching characteristics, safe Operating Area, IGBT: Construction, Operation, Switching characteristics, Safe operating area.

Thyristor: Construction, Operation, transistor analogy, static characteristics, switching characteristics, thyristor turn-on, thyristor turn-off. DIAC / TRIAC – construction and operating Principle, Applications. GTO: Construction, Operation, Turn off mechanism, Applications, driver, protection and snubber circuits for power devices

UNIT II.

(07 Hours)

Single phase AC-DC converters

Concept of line commutation, Single phase half controlled and fully controlled converters- Circuit diagram, operation and waveforms for resistive and highly inductive loads, Analysis of output voltage and supply current including following performance parameters: average and RMS output voltage, Fourier series expressions for supply current, power factor improvement, performance factors of line commuted converters, effect of source impedance.

UNIT III

(05 Hours)

Three phase AC-DC converters

Three phase half controlled and fully controlled converters- Circuit diagram, operation and waveforms for resistive and highly inductive loads, Analysis of output voltage and supply current including following performance parameters: average and RMS output voltage.

UNIT IV

(06 Hours)

Inverters

Single & Three-phase Inverters:

Circuit diagram, operation & waveforms for single phase full bridge & Push pull inverters. Switching techniques for obtaining square, quasi-square & sinusoidal PWM o/p waveforms. Use of Pulse width modulated IC's for Inverter control. Fourier analysis of quasi-square waveform & harmonic load currents for R & RL loads. Circuit diagram, operation & waveforms for three phase voltage source bridge inverters for 120 degree & 180 degree conduction for balanced star resistive load.

UNIT V.

(06 Hours)

Switched & resonant DC/DC converters

Control of DC/ DC converters. Circuit diagram, Waveforms & operation (o/p voltage calculation) of step down chopper (Buck converter), Step up chopper (Boost converter) & 2-

quadrant type C chopper. Circuit diagram, waveforms, operation & design of Fly back converter (SMPS)

Need for resonant converters:

Circuit diagram, waveforms & operation of SLR half bridge DC/DC converter in low frequency (discontinuous conduction) mode.

UNIT VI

(06 Hours)

Introduction to Motors and Power converter applications

Motors: DC motors, AC Motors, Special Purpose Motors, Induction Motor, Universal Motor, Stepper Motor, Servomotors etc. (Qualitative analysis only)

Applications: UPS, HVDC transmission, electronic ballast

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End term Examination

List of Experiments:

1. Study of characteristics of SCR
2. Study of Triggering circuits
3. Study of characteristics of IGBT
4. Study of characteristics of TRIAC
5. Study of single phase half controlled converter
6. Study of single phase fully controlled converter
7. Study of three phase half controlled converter
8. Study of TRIAC based AC motor control
9. Study of three phase VSI inverter
10. Study of first quadrant chopper
11. Study of UPS
12. Study of light dimmer

List of Assignments:

1. Real life applications of inverters.
2. Real life applications of PV cells.

3. Applications of single phase converter.
4. Different types of cyclo converters.
5. Describe AC Voltage regulators.
6. Real life applications of power devices.

Text Books:

2. N. Mohan, T. M. Undeland & W. P. Robbins, "Power Electronics, Converters Applications And Design", John Willey and sons, 3rd edition, Singapore
3. V. R. Moorthi, "Power Electronics, Devices, Circuits & Industrial Applications", Oxford University Press, New Delhi, 2005.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B. Tech (Electronics) Sem:-V

SUBJECT: - Electromagnetic Engineering

Teaching Scheme

Lecture: 3 Hours/week

Tutorial: 1 Hour/week

Examination Scheme

End semester exam: 60 Marks

Continuous Assessment: 40 Marks

Credits: 04

Course Prerequisites:

Fundamentals of integration, differentiations, partial diffraction.

Course Objectives:

- Provide fundamentals of Static Electromagnetic Fields.
- Explain basics of the vector Differential, Integral operators to Electromagnetic theory & Electrostatic & Electromagnetic fields.
- Define and derive different laws in Electrostatic & Electromagnetic fields.
- Explain Maxwell's equations and concepts of transmission lines.
- Analyze techniques for formulating and solving problems in Electrostatic & Electromagnetic fields.
- Develop mathematical skills related with differential, integral and vector calculus.

Course Outcomes: On successful completion of this course, students will be able to

4. Comprehend the fundamentals of Electrostatic and Electromagnetic fields..
5. Apply Gauss' law, Ampere's Law, Biot-Savart law, Faraday's law and laws related with steady magnetic field while solving problems in Electrostatic and Electromagnetic fields.
6. Develop field equations from understanding of Maxwell's Equations.

7. Extend the knowledge of basic properties of transmission lines to analyze electromagnetic wave propagation in generic transmission line geometries.
8. Demonstrate mathematical skills related with differential, integral and vector calculus.

Contents:

Unit I

Co-ordinate Systems

(5 Hours)

Vector Algebra, product of vectors, Co-ordinate systems, Curl, Divergence & Gradient, Stoke's Theorem, Poisson's and Laplace Equations, Coulomb's law, line, Surface & Volume Charge distribution.

Unit II

Electrostatic Fields

(7 Hours)

Electric Field Intensity, Electric Field due to infinite line and surface charges, Electric Flux Density, Gauss law (differential and integral form) and its applications, Divergence Theorem, Electric Potential and gradient, Work done, Energy Density, Electric Dipole and moment. Polarization in Dielectrics, Boundary conditions for Dielectric and Dielectric, boundary conditions for Conductor and Dielectric, boundary conditions for Conductor and free space. Method of Images for point and line charge, Capacitance – parallel, co-axial and spherical, Continuity equation.

Unit III

Magnetostatic Fields

(6 Hours)

Biot - Savart law, Magnetic Field Intensity due to infinite and finite line. Ampere's Circuital Law in integral and differential form, Applications of Amperes Circuital law, Magnetic flux density, vector magnetic potential, Magnetic Torque, moment and dipole, nature of magnetic material, magnetization, Magnetic boundary conditions

Unit IV

Time Varying Fields & Wave Propagation

(7 Hours)

Faradays law of induced emf, displacement current, Maxwell's Equations in point form & Integral form for various fields, Wave equations, wave propagation through different medium,

skin depth, Poynting theorem, wave polarization, Reflection of plane wave from conducting medium, perfect dielectric.

Unit V

Transmission Lines

(6 Hours)

Physical Description of Transmission line propagation, Transmission Line equations, Characteristic equation of infinite Transmission Line, Complex analysis of sinusoidal waves, Transmission lines equations & their solutions in phasor form, Uniform terminated Transmission Line, Input impedance, Phase velocity and group velocity, Short circuited and open circuited line, Reflection coefficient VSWR, smith chart (Numerical expected) and applications.

Unit VI

Waveguides & Electromagnetic radiation

(5 Hours)

Plane wave analysis of parallel-plate waveguide, rectangular waveguides, TE and TM modes, wave impedance, wave velocities, attenuation in waveguide, EMI/EMC concepts, basic radiation principles, Hertzian dipole, magnetic dipole, thin wire antennas, antenna specifications, antenna arrays.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

4. Unit Test
5. Continuous Assessment
6. End term Examination

List of Assignments:

1. Analyze Coulombs law, Gauss Law, Divergence theorem with different problems on Scilab / MATLAB (Refer www.scilab.in-resources/completd book and Hayt& Buck, Engineering Electromagnetics, 7th Edition Tata McGraw-Hill).
2. Analyze Maxwell's equations for different fields on Scilab / MATLAB
3. Experimental study on antenna trainer kit & study different antenna specifications.
4. Analyze experimentally waveguides on Microwave test bench.
5. Analyze uniform plane wave for different media on Scilab / MATLAB

6. Analytical problems on transmission lines.

List of Tutorials: The main objective of this tutorial is to focus on the outcomes defined in the theory syllabus by solving the following problems based on paper work.

1. Find the Electric field intensity and electric flux density at a given point due to following charge distributions. (In all coordinate systems)

- Point charges
- Line charges (finite and infinite)
- Surface charges (finite and infinite)
- Mixed charges (Point charge, Line charge, Surface charge)

2. Application of Gauss's law

- Given ρ_v (volume charge density) in a particular region, find \bar{D} (electric flux density) using Law at the given location.
- Given ρ_s (surface charge density), find \bar{D} (electric flux density) using Gauss's Law at the given location.
- Given \bar{D} (electric flux density), find total charge enclosed by the surface (Q), ρ_v (volume charge density) using Gauss's Law.(In all coordinate systems).

3. Find the electrostatic fields (Tangential and Normal) at the boundary between,

- Free space and dielectric medium
- Free space and conductor
- Dielectric medium and conductor
- Two dielectric media.
- Two dielectric media when boundary is defined by a equation of plane.

4. Find \bar{H} (Magnetic field intensity) and \bar{B} (Magnetic flux density) at a given point due to,

- Infinitely long current carrying conductor
- Finite current carrying conductor
- Infinite conducting surface
- Finite conducting surface

- Different current carrying configurations (i.e. thin conductor, surface all together)
5. For the following current carrying configurations, find the \vec{H} (Magnetic field intensity) in a given region (or point) using Ampere's circuital law.
 - Infinitely long current carrying conductor
 - Infinite cylindrical surfaces of different radii all centered at the same axis.
 - Spherical surfaces of different radii all centered at a given point.
 6. Given the (Magnetic field intensity) of a particular region, find current (I), current density (J), enclosed by the given surface. (In all coordinate systems).
 7. Given \vec{H} (or \vec{E}) and the region properties (like ϵ , μ , σ etc.), find \vec{B} , \vec{D} and \vec{E} (or \vec{H}) using Maxwell's equations. (In all coordinate systems).
 8. Given the primary constants (R, L, G, C) along with the generator specifications and termination, find secondary constants (α , β , γ , Z_0) and other parameters like Velocity, wavelength, received voltage, received power, reflection coefficient etc.
 9. Problems on Transmission Line Analysis.
 10. Problems on Impedance matching and design of stub matching using Smith Chart.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B. Tech (Electronics) Sem:-VI

SUBJECT: - Digital Signal Processing

Teaching Scheme

Lecture: 4 Hours/week

Practical: 2 Hours/week

Examination Scheme

End semester exam: 60 Marks

Continuous Assessment: 40 Marks

TW& OR: 50 Marks

Credits: 05

Course Prerequisites:

- Knowledge of mathematics
- Knowledge of signals and systems

Course Objectives:

- To introduce the concept of discrete Fourier transform.
- To learn the algorithm of fast computation.
- To design the finite impulse response filter & infinite impulse response filter.
- To learn the finite word length effect of filter.
- To understand the architecture & programming of DSP processor.

Course Outcomes: On successful completion of this course, students will be able to

1. Compute the Discrete Fourier transform & Fast Fourier transform.
2. Design FIR and IIR filters.
3. Understand the finite word length effect in digital filters.
4. Implement the various applications on DSP processor.

Contents:

Unit –I

(07 Hours)

Discrete Fourier Transform:

Definition, periodicity concept, relationship with Z transform and Fourier series, properties, circular convolution, applications like linear filtering, overlap save, overlap add method, frequency analysis etc.

Unit-II

(09 Hours)

Fast Fourier Transform Algorithm:

Direct computation of D.F.T., its computational complexity, FFT algorithms, their classification, radix 2 FFT algorithms, DIT – FFT, DIF –FFT, Inverse radix 2 algorithms, FFT algorithms for composite value of N, Goertzel algorithm, Chirp Z transform algorithm, Quantization effects, applications.

Unit-III

(08 Hours)

Design of FIR Filters

Realization of FIR filters, Symmetric and anti symmetric FIR filters, design of linear phase FIR filters using different windows, frequency sampling method, FIR differentiators, Hilbert transformers, and Optimum equiripple linear FIR filters.

Unit-IV

(08 Hours)

Design of IIR Filters:

Realization of IIR filters, Butterworth and Chebyshev approximations, frequency transformations, design of IIR filters from analog filters using Approximation of derivatives, impulse invariance, Bilinear transform, design of IIR filters from pole zero plots.

Unit-V

(08 Hours)

Finite Word Length Effects in Digital Filters

Number representation, fixed point, sign-magnitude, one's complement, two's complement forms, floating point numbers, Quantization, truncation, rounding, effects due to truncation and rounding, Input quantization error, Product quantization error, co-efficient quantization error, zero-input limit cycle oscillations, overflow limit cycle oscillations, scaling, Quantization in Floating Point realization IIR digital filters, finite word length effects in FIR digital filters, quantization effects in the computation of the DFT- quantization errors in FFT algorithms.

Unit-VI

(08 Hours)

Introduction to DSP Processors

Introduction to fixed point and floating point DSP processor, multiplier and multiplier accumulator (MAC), modified bus structures and memory access schemes in DSPs, multiple access memory, multiport memory, VLIW architecture, pipelining, special addressing modes, on-chip peripherals .

Features of TMS 320C67xx DSP processor, architecture of TMS 320c67xx DSP processor, architecture features: computational units, bus architecture memory, data addressing, address generation unit, program control, program sequencer, pipelining, interrupts, features of external interfacing, Speech Processing: Speech analysis, digital processing of audio signals.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

7. Unit Test
8. Continuous Assessment
9. End term Examination

List of Experiments:

Minimum 10 experiments should be conducted using MATLAB & at least one using hardware.

1. To find DTFS for periodic and DTFT for non periodic signal.
2. To find DFT IDFT of DT signal.
3. To find the response of DT system using convolution.
4. To find the stability of DT system using the concept of convolution.
5. To perform convolution using overlap and add method.
- 6 To perform circular convolution.
7. To plot pole zero plot of Z-domain using transfer function.
8. To solve the difference equation and find the system response using Z transform.
9. To find the impulse invariance IIR digital filter to realize the first order analog Butterworth filter.
10. To design IIR filter for first order analog Butterworth approximation using bilinear transformation.
11. To find and plot the frequency response for the rectangular and Hamming window.
12. To Design FIR filter using frequency sampling method.
- 13.To plot spectrogram of speech signal.
- 14.To implement convolution sum using DSP processor.
15. To implement Speech processing applications using DSP processors.

List of Assignments:**Assignments should be conducted using SCILAB**

- 1.Linear and circular convolution
- 2.DFT and IDFT
- 3.FFT & IFFT
- 4.Realization of filters
- 5..Design of FIR filter
- 6.Design of IIR filter

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B. Tech (Electronics) SEM:-VI

SUBJECT: - Embedded Systems

Teaching Scheme

Lecture: 3 Hours/week

Practical: 2 Hours/week

Examination Scheme

End semester exam: 60 Marks

Continuous Assessment: 40 Marks

TW& OR: 50 Marks

Credits: 04

Course Prerequisites:

- Fundamentals of Computer, Digital Logic Circuits, Computer Organization and Architecture.

Course Objectives:

- To understand need and application of ARM Microcontroller in embedded system.
- To study the architecture of ARM series microcontroller
- To understand architecture and features of typical ARM7& ARM CORTEX-M3 Microcontroller.
- To learn interfacing of real world input and output devices

Course Outcomes: On successful completion of this course, students will be able to

1. Develop Firmware Embedded Systems.
2. Interface the advanced peripherals to microcontrollers.
3. Design embedded system with available resources.

Contents:

Unit 1: Introduction to Embedded Systems

(4 Hours)

Definition of Embedded System, Embedded Systems Vs General Computing Systems, Classification, Characteristics of Embedded Systems, Hardware and Software components of an Embedded System, Introduction to IDEs. Major Application Areas.

Unit 2: Introduction to embedded programming & RTOS**(8 Hours)**

Introduction to embedded data types in embedded C, addressing memory & I/O, I/O functions of embedded C. Examples on Embedded C.

RTOS: Architecture of kernel, Task and Task scheduler, Interrupt service routines, Semaphores, Mutex, Mailboxes, Message queues, Event registers, Pipes, Signals, Timers, Memory management, Priority inversion problem.

Unit 3: ARM7 Based Microcontroller**(8 Hours)**

Introduction to ARM processors and its versions: ARM7, ARM9 & ARM11 features, ARM7 data flow model, programmer's model, modes of Operations, Overview of Instruction set.

ARM7 Based Microcontroller LPC2148: Features, Architecture (Block Diagram and Its Description), System Control Block (PLL and VPB divider), Memory Map, GPIO, Pin Connect Block, timer.

Unit 4: Interfacing with ARM7**(6 Hours)**

Interfacing the peripherals with LPC2148: LED, LCD, GLCD, KEYPAD, GSM and GPS using UART, on-chip ADC using interrupt (VIC), EEPROM using I2C, SDCARD using SPI, on-chip DAC for waveform generation.

Unit 5: ARM CORTEX Processors**(6 Hours)**

Introduction to ARM CORTEX series, improvement over classical series. CORTEX A, CORTEX M, CORTEX R processors series, versions, features and applications.

ARM-CM3 Based Microcontroller LPC1768: Features, Architecture (Block Diagram & Its Description), System Control, Clock & Power Control, GPIO and Pin Connect Block.

Unit 6: Interfacing with ARM CORTEX M3**(4 Hours)**

Interfacing peripherals with LPC1768: RGB LED, Seven Segment, TFT Display, Motor control using PWM.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

3. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
4. End term Examination

List of Experiments: Minimum 8 experiments should be conducted.

1. Interfacing LPC2148 with LCD/GLCD
2. UART Interfacing LPC2148 in embedded system (GSM/GPS)
3. Interfacing LPC2148 for internal ADC on interrupt basis
4. Interfacing SD card with LPC2148
5. Interfacing EEPROM with LPC2148 using SPI protocol
6. SRAM interfacing with LPC2148/LPC1768.
7. Interfacing LPC1768 to Seven Segment / RGB LED
8. Generation of PWM signal for motor control using LPC1768
9. Interfacing TFT display to LPC1768
10. Implementing CAN protocol using LPC1768
11. Implementing ETHERNET protocol using LPC1768.
12. Semaphore as signaling and synchronizing in ARM7.
13. Mailbox implementation for message passing in ARM7.

List of Assignments:

1. Case study of any one of the latest ARM processors and Power point presentation of the same in class.
2. Survey of CORTEX M3 based controllers, its features and comparison.
3. Design of Firmware Embedded system using LPC 2148 (Simulation only).
4. Design of Firmware Embedded system using LLPC1768 (Simulation only).
5. Case study of any one of the RTOS with examples.

Text Books:

College of Engineering, Pune**

**Class: B.Tech (Electronics) Sem:-VI
SUBJECT: - VLSI Design**

Teaching Scheme

Lecture: 3 Hours/week

Practical: 2 Hours/week

Examination Scheme

End semester exam: 60 Marks

Continuous Assessment: 40 Marks

TW& PR: 50 Marks

Credits: 04

Course Prerequisites:

- Analog Electronics
- Digital Electronics

Course Objectives:

- To introduce the VLSI Design Flow and design styles
- To introduce the VHDL Hardware Description Language (HDL) that shall help in describing a circuit to the tools for simulation and further processing of the same towards implementation.
- To introduce MOSFET physics and CMOS logic gates.

Course Outcomes: On successful completion of this course, students will be able to

1. Design and simulate digital system using structural, Behavioral, dataflow or mixed style of Modeling.
2. Apply concepts of Finite State Machine On sequential circuits.
3. Realize digital hardware system utilizing PLDs.
4. Identify MOSFET Physics and CMOS structures.
5. Implement CMOS combinational logic Design.

Contents:

UNIT I:

(07 Hours)

HDL Modeling and Design Flow

Introduction to VLSI design flow (with reference to an EDA tool), sequential, data flow and structural modeling, functions, procedures, attributes, test benches, synthesizable and non synthesizable statements, packages and configurations, VHDL modeling.

UNIT II:

(05 Hours)

FSM and sequential logic Principles

Sequential circuits, Meta stability synchronization, design of finite state machines and state minimization, Modeling of FSM-Mealy and Moore machines, FSM case studies- traffic light control, lift control, UART.

UNIT III:

(05 Hours)

Programmable logic devices

CPLD: Introduction, study of architecture. FPGA: Introduction, study of architecture, PLAs, PALs, function implementation using PLDs.

UNIT IV:

(07 Hours)

MOS Device Physics

MOSFET structure, MOS I/V characteristics, body effect, Scaling of MOS circuits, MOSFET capacitances, MOS small signal model, MOS amplifiers.

UNIT V:

(06 Hours)

CMOS VLSI

CMOS parasites, equivalent circuit, CMOS inverter characteristics, power dissipation, power delay product, Layout design rules, introduction to CMOS layout, CMOS logic structures, concept of regularity, modularity and locality.

UNIT VI:

(06 Hours)

CMOS Logic Circuits:

CMOS logic gates – NOR & NAND gate, Complex Logic circuits design – Realizing Boolean expressions using CMOS gates , W/L calculations of CMOS, CMOS transmission gates, Designing with Transmission gates.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End term Examination

List of Experiments:

1. To model 8:1mux, 1:8 demux, 3:8line decoder, 8:3 encoder using VHDL
2. To model adder and subtractor
3. To model synchronous and asynchronous D FF
4. To model 4- bit universal shift register
5. To model 4-bit counter
6. To model bidirectional buffer
7. To model parity generator and checker
8. Study of RAM/FIFO
9. Study of Temperature sensing using ADC
10. Study of real time moving generator chip CMOS

List of Assignments:

1. Simulate TLC
2. Simulate UART
3. Simulate LIFT controller
4. Design Barrel shifter.
5. Design a Mealy and Moore Sequence Detector
6. Real life applications of FPGA/CPLD

Text Books:

1. Neil IL E. Weste and Kamran Eshraghain,"Principles of CMOS VLSI Deign", Pearson Education Publication.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

**Class: B. Tech (Electronics) Sem:-VI
SUBJECT: - Project Management & Finance**

Teaching Scheme

Lecture: 3 Hours/week

Examination Scheme

**End semester exam: 60 Marks
Continuous Assessment: 40 Marks
Credits: 03**

Course Prerequisite:

- Understanding the various forms of Math, Economics and Statistics.

Course Objectives:

- To understand basic principles/concepts of project management and finance.
- To describe the most well-known theories and perspectives on project managements.

Course Outcomes: At the end of the course, a student will be able to

1. Describes the Characteristics, objectives and Stages of Project management.
2. Explain importance of time and work estimation in Project management.
3. Analyze Management Concepts for Developing Project Plan.
4. Analyze and Understand Financial & Project Management.
5. Demonstrate Scope, Objectives and Importance of Financial Management.
6. Identify and understand the main responsibilities and tasks of Securities and Exchange Board of India (SEBI) in money market and capital Market.

Unit -I**(06 Hours)****Introduction to Project management:**

Characteristics of projects, Definition and objectives of Project Management, Stages of Project Management, Project Planning Process, Establishing Project organization.

Unit –II**(06 Hours)****Work Definition:**

Defining work content, Time Estimation Method, Project Cost Estimation and budgeting, Project Documentation Introduction to CMM, Project Risk Management, Project scheduling and Planning Tools: Work Breakdown structure, LRC, Gantt charts, ,CPM/PERT Networks

Unit-III**(06 Hours)****Management Concepts:**

Developing Project Plan (Baseline) , Project cash flow analysis, Project scheduling with resource constraints: Resource Levelling and Resource Allocation. Time Cost Trade off: Crashing Heuristic.

Unit-IV**(06 Hours)****Project Implementation:**

Project Monitoring and Control with PERT/Cost, Computers applications in Project Management, Contract Management, Project Procurement Management.

Unit-V**(06 Hours)****Financial Management:**

Introduction of Finance, Types of Finance, Financial Management, Scope & Objectives of Financial Management, function of finance manager, Importance of Financial Management, Sources of finance, Security Finance.

Unit-VI**(06 Hours)****Working Capital Management:**

Capital Structure, Fixed & working capital, Role of Securities and Exchange Board of India (SEBI), function of money market and capital Market, sources of finance. Introduction to capital budgeting, Techniques of capital budgeting. Break even analysis - assumptions, importance, Cost-Benefit analysis, CVP graph.

List of Assignments:

1. Explain the nature and purpose of financial management
2. Discuss the relationship between financial objectives, corporate objectives and corporate strategy.
3. Identify the nature and role of money and capital markets, both nationally and internationally.
4. Write in brief on Concepts & Importance of organization.
5. Critically evaluate various approaches to the financial management
6. Explain the functions of a stock market and a corporate bond market..

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. Shtub, Bard and Globerson, "Project Management: Engineering, Technology, and Implementation", Prentice Hall, India
2. C. Paramasivan and T. Subramanian, "Financial Management", New age international publishers.
3. John M Nicholas, "Project Management for Business and Technology: Principles and Practice", Prentice Hall, India, 2002.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B. Tech (Electronics) Sem:-VI

SUBJECT: - Electronics Circuit Design

Teaching Scheme

Lecture: 4 Hours/week

Practical: 2 Hours/week

Examination Scheme

End semester exam: 60 Marks

Continuous Assessment: 40 Marks

TW& OR: 50 Marks

Credits: 05

Course Prerequisites:

- Knowledge of basic electronics components and its functions.
- Knowledge of rectifiers, amplifiers, filters etc.
- Knowledge of basic Data acquisition systems.

Course Objectives:

- To introduce the basic concepts needed for Circuit design.
- To introduce the techniques such as signal amplification, filtering, audio power amplification etc
- To emphasize the understanding and practical implementations of the electronics circuits.

Course Outcomes: At the end of the course, a student will be able to

1. Choose proper electronic component for designing circuits.
2. Design basic electronics circuits like rectifiers, filters, voltage regulators, amplifiers, etc.
3. Distinguish between linear power supply and SMPS.
4. Implement Data Acquisition Systems.

Contents:

Unit-I

Electronic Components Selection:

(08 Hours)

Passive and active components, types of resistors, capacitors and Inductors. Transformers types: power transformer, audio frequency transformer and intermediate frequency transformer. Integrated Circuits (ICs), wire/cable selection, shielding and grounding techniques.

Unit-II

Design of Analog Filter: (08 Hours)

Low pass filter and high pass filter. Design of Inductor Filter, Capacitor filter, LC- filter, RC- Filter and π section Filter.

Unit-III

Design of Linear power supply: (08 Hours)

Block Schematic, Types of voltage regulators, Design of Zener diode shunt regulator, Transistor shunt regulator and transistor series voltage regulator. Short circuit protection, fold back current limiting. Discrete components & IC based design for linear power supply e.g. Three terminal regulators (LM317, LM78XX).

Unit-IV

(08 Hours)

Switched Mode Power Supply:

Topology of SMPS. Comparison between Linear Power Supply and SMPS. IC based design for switch mode power supply with latest SMPS ICs.

Unit-V

Design of Data Acquisition System: (08 Hours)

Circuit level design of DAS, Design should include signal sensing, isolation, and signal conditioning ADC storage & display systems.

Unit-VI

(08 Hours)

Audio Power Amplifier:

Design of Audio Power Amplifier: Design using ICs like TBA810, Design of signal conditioner, Design of pre amplifier, Design should include various controls, Parameters optimization & protection circuits.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

10. Unit Test
11. Continuous Assessment
12. End term Examination.

Mini Project & Assignments:

Mini-project should be from small systems required in laboratory or real life, project to be designed, tested on bread board, fabricated on manual or CAD based PCBs with due consideration to mechanical aspects for enclosure & control panel design. Complete documentation in the form of project report is to be submitted. Due consideration should be given to Mini Project while assessing students for term work.

Five assignments must be completed. Out of five assignments four should be corresponding to complete design of analog and digital system. Fifth assignment should be corresponding to the software simulation of system.

Use of softwares like MULTISIM / PROTEUSis expected.

List of Assignments:

1. Design of low pass filter.
2. Design of linear power supply using discrete components.
3. SMPS Topology.
4. Data acquisition system.
5. Design of audio power amplifier.

Text Books:

1. P.M.Chirliyal, "Analysis & Design of Integrated Electronic Circuits", Wiley Eastern.
2. Hayt&Nudeck, "Electronic Circuit Analysis & Design ", Jaico Publishing House.

Teaching Scheme

Lecture: 03 Hours/week

Practical: 02 Hours/week

Examination Scheme

End Semester Exam: 60 marks

Unit Test: 20 marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 marks

Credits: 04

Course Prerequisites:

Analog communication, Digital communication systems.

Course Objectives:

1. To introduce various topologies and types of computer networks.
 2. To introduce network hardware & OSI layers.
 3. To know how of congestion control mechanism.
 4. To familiarize the TCP/IP protocol.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Identify the types of computer networks and topologies.
2. Identify the functions of network connectors, Hubs, Switches, Routers, Bridges, NIC & network layers.
3. Implement various algorithms used in computer networks.
4. Use TCP/IP protocol.
5. Apply the various Network security techniques.

Contents:

Unit I

[06 Hours]

Introduction to computer networks

Networks definition & requirements, Networks topologies, Types of networks, network software issues, reference models- OSI TCP/IP and Hybrid.

Unit II

[06 Hours]

Physical layer

Transmission media Guided media-twisted pair, coaxial cable, optical fiber, unguided media-RF allocation, terrestrial microwave, satellite communication, cellular telephone, EIA 232 D interface standard, modem-types, block schematic & standards network device: network connectors, Hubs, Switches, Routers, Bridges, NIC, Fast Ethernet, Gigabit Ethernet.

Unit III

[06 Hours]

Data Link Layer

Design issues, error detection and correction, elementary data link protocols, sliding window protocols, HDLC-types of stations, modes of operation, HDLC frame formats, additional features, Medium access sub layer – channel allocation problem, multiple access protocols, IEEE 802 standards for LANS & WANS.

Unit IV

[06 Hours]

Network Layer

Design issues, Routing algorithms – shortest path, distance vector routing, link state routing, flow based routing, routing for mobile hosts, Congestion control – congestion prevention policies-leaky bucket algorithm, token bucket algorithm, congestion control in virtual circuit subnet and choke packets, RSVP.

Unit V

[06 Hours]

TCP/IP Protocol suit overview

TCP/IP and internet, IP protocol and it's header format, addressing, subnetting, other networks layer protocol – ARP, RARP, ICMP, IGMP, TCP, UDP, DHCP, Domain name system (DNS), Email, HTTP, IPV 6.

Unit VI

[06 Hours]

Network security

Cryptography Algorithms and Trust Models, Ciphers vs Codes, Symmetric-key algorithms (DES, AES), Public- key algorithms – RSA, Digital signatures, IPSec, Firewall, Managements of publics keys, communications security, Authentication Protocols.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Experiments

1. Study of Networking.
2. Introductions to Network Simulation.
3. Study of LAN.
4. Study of Installation of Windows 2003 Server & introduction to DHCP.
5. i) Character transfer using Simplex method
ii) Character transfer using Full-Duplex method
6. Simulation and implementation of bit stuffing Simulation and implementation of CRC
7. Study of Medium Access sub layer protocols and simulate using Network Simulator.
8. Simulation and implementation of
i) Stop-and Wait protocol
ii) Go-Back-N protocol
iii) Selective repeat Protocol
9. Simulation and implementation of i) Distance Vector Routing Algorithm ii) Link State Routing algorithm
10. Study of Token Bucket Algorithm.
11. Study of TCP/IP Protocol Suite and Simulation Address resolution protocols.

List of Assignments:

1. Study of types of Networks and topologies.
2. Study of Network Hardware.
3. Study of TCP/IP Architecture
4. Study of Physical Layer
5. Study of Data Link Layer.
6. Describe the various Encoding techniques.
7. Study of Network Layer.
8. Study of Congestion control Mechanism.
9. Study of Session layer.
10. Study of Presentation layer.
11. Study of Application layer.
12. Study of Network security Mechanism.

Text Books

1. Andrew Tanenbaum, "Computer networks", Prentice Hall.
2. B. A. Forouzan, "Data Communications and Networking", Tata McGraw Hill, 4th Edition

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Class: B. Tech (Electronics) Sem: -VII

SUBJECT: - Programmable Logic Controllers and Applications

Teaching Scheme

Lecture: 03 Hours/week

Practical: 02 Hours/week

Examination Scheme

End semester Exam: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW &Pr: 50 marks

Credits: 04

Course prerequisites:

Digital Electronics, Embedded systems, Power Electronics

Course objective:

1. To make the student aware of automation in industries.
 2. To introduce the student to the programmable logic controllers.
 3. To give the know-how of NC, CNC machines & their role in manufacturing industries.
 4. To impart the knowledge of protocols & networking of PLCs
-

Course Outcomes: On successful completion of this course, students will be able to

1. Write the ladder logic for applications using logical & mathematical instructions.
2. Write the ladder logic for applications using program & data flow instructions.
3. Interface digital & analog input/output to the PLC
4. Identify NC, CNC machines and networking of PLCs.
5. Identify the components of SCADA and HMI.

Contents

Unit I

Process Control & Automation [06 Hours]

Definition of Process control, PID Controller, Cascade control, Analog control, Digital control, Types of Automation, Advantages and limitations of Automation, controllers & actuators. Introduction to PLC, architecture, working of PLC, functions of PLC, selection of PLC, ladder programming

Unit II

Transmitters and Signal Conditioning [06 Hours]

Need of transmitters, 2-Wire & 3-Wire transmitters, Standardization of signals, Current, Voltage and Pneumatic signal standards, Necessity of Analog input, output interface to PLC. Analog and Digital signal conditioning for various parameters, Smart and Intelligent transmitters.

Unit III

Input and Output modules [06 Hours]

Various functions of PLC like mathematical, logical, dataflow, special functions. Interfacing of Input and Output devices with PLC. Sourcing & sinking, Classification of input & output modules, discrete & analog modules.

Unit IV

PLC and Human Machine Interface (HMI) [06Hours]

PLC based automated systems. High frequency inputs. PLC programming standard IEC61131, Soft PLC techniques. IT Interfaces required: for ERP, MIS, MES. Supporting Applications interfaces: RFID, Barcode, Vision Systems. HMI: Block Diagram, Types, Advantages, Applications.

Unit V

SCADA & Distributed control system [06Hours]

Elements of SCADA, Features of SCADA, MTU- functions of MTU, RTU- Functions of RTU, Applications of SCADA, Communications in SCADA- types & methods used, Introduction to DCS, Architecture of DCS, Input and output modules, communication module, Specifications of DCS

Unit VI

Automation and CNC (Computer Numeric Control) Machines

[06 Hours]

Introduction of NC and CNC Machines: Need of CNC machines, Applications of CNC machines in manufacturing, Advantages of CNC machines.

Networking of PLCs - Network topology, industrial network, bus network, Device bus network, Process bus network, Modbus protocol Device net, Controlnet, AS-I interface, Foundation field bus, Profibus

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Practicals:

1. Application examples based on timers & counters.
2. Design & implement ON-OFF controller circuit
3. Application examples based on data flow instructions.
4. Application examples based on mathematical instructions.
5. Application examples using One shot rising instruction.
6. Application examples using advanced instructions.
7. Examples based on Industrial applications
8. Interfacing of analog inputs to PLC.

List of Assignments:

1. Conduct survey for different types of PLC programming.
2. Selection of PLC for a application with specifications.
3. Classify the timers & Counters with applications.
4. Design of signal conditioning circuit for any one analog application.
5. Identify sinking & sourcing PLC input output module.
6. Interface switch & sensor to PLC as input.
7. Communication between PLC HMI using Modbus protocol
8. Identify the applications of soft PLC.
9. Study of DCS in any industrial plant.

10. Practical examples where SCADA has played important role.
11. Identify different types of CNC machines (with applications) in industries.
12. Justify the need of networking of PLCs.

Text Books:

1. John W. Webb, Ronold A Reis, “Programmable Logic Controllers, Principles and Applications”; 5th Edition, Prentice Hall of India Pvt. Ltd
2. MadhuchhandaMitra, SamarjitSen Gupta, “Programmable Logic controllers and Industrial Automation”; Penram International Publishing India Pvt. Ltd

Reference Books:

2. Kilian, “Modern control technology: components & systems, Delmar 2nd edition.
3. Bela G Liptak, Process software and digital networks, 3rd edition, 2002.
4. Pollack. Herman, W & Robinson., T. “Computer Numerical Control”, Prentice Hall. NJ.
5. Pabla, B.S. & Adithan, M. “CNC Machines”, New Age Publishers, New Delhi
6. Stuart A. Boyer, SCADA supervisory control and data acquisition, ISA Publication Reference Books

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

**Bharati Vidyapeeth Deemed University
College of Engineering, Pune**

**Class: B. Tech (Electronics) Sem: -VII
SUBJECT: - Electronic System Design**

Teaching Scheme

Lecture: 03 Hours/week

Practical: 00Hours/week

Examination Scheme

End semester Exam: 60 marks

Unit Test: 20 marks

Attendance: 10 marks

Assignments: 10 marks

Credits: 03

Course Pre-requisites:

Analog Electronics, Digital Electronics, Microprocessors & Microcontrollers, VLSI Design.

Course Objectives:

1. To introduce analog and digital interfacing techniques
 2. To create awareness of EDA tools and techniques for testing and fault diagnosis
 3. To imbibe the importance of international standards for electronic systems and packaging techniques
 4. To enable the students to design electronic systems compliant with EMI specifications
-

Course Outcomes: On successful completion of this course, students will be able to

1. Address interfacing issues in analog and digital circuits.
 2. Use EDA tools and Laboratory Instruments for testing and fault diagnosis.
 3. Identify various international standards, specifications for electronic systems.
 4. Use grounding and shielding techniques for safety in electronic systems and PCB designing.
-

Contents:

Unit I

Hardware Design- Analog

[06 Hours]

Analog Signal Conditioning: Factors affecting choice of Op-Amps in signal conditioning, applications, Need for Instrumentation Amplifiers- Case study. Error budget analysis with Case study. ADCs: Interpretation of ADC specifications from design view point, considerations in selecting references (V_{ref} for ADC). DACs: Interpretation of DAC specifications.

Unit II

Hardware Design- Digital

[06 Hours]

Interface examples for LED, HB LED, LCD, Keyboard, Relays (Electromagnetic and Solid State). Microcontrollers: Comparative study of different Microcontroller architectures, Factors affecting choice of Microcontroller for different applications with case study. Introduction to buses and protocols used in Electronic products- I2C, SPI, CAN, Lin, Flexray.

Unit III

EDA Tools and Standards

[06 Hours]

Different approaches to development of application software for Electronic Product. Debugging tools and techniques for software- Features of EDA, CAD, Simulators, Assemblers, ICE, and IDE. Documentation practices and templates for above software. Introduction to various international standards like IEEE, FCC, IEC, BS & ISO standards.

Unit IV

Testing and Fault Diagnosis

[06 Hours]

Analyses- DC/ Operating Point Analysis, AC (Frequency Response), Transient, Sensitivity, Monte Carlo. Debugging/ Fault finding- Features and limitations of Analog CRO, DSO, Logic Analyzer and Mixed Signal Oscilloscopes in finding hardware/software faults.

Unit V

ESD and Packaging

[06 Hours]

Packaging & Enclosures of Electronic System: Need for Environmental Testing, Effect of environmental factors on electronic systems: Temperature, Humidity, Vibration and Shock tests, nature of environment and safety measures. Packaging's influence and its factors. Cooling in/of Electronic System: Heat transfer, approach to thermal management, mechanisms for cooling, operating range, basic thermal calculations, cooling choices, heat sink selection.

Unit VI

PCB Design and EMC

[06 Hours]

PCB Design practices for Analog and Mixed signal circuits, High speed digital circuits, Precision circuits, Grounding of Electronic Systems: Safety grounds, signal grounds, single-point ground systems, multipoint-point ground systems, hybrid grounds, functional ground layout, practical low frequency grounding, hardware grounds, grounding of cable shields, ground loops, shield grounding at high frequencies.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Assignments:

1. State factors affecting choice of Op-Amps in signal conditioning.
2. State the need for Instrumentation Amplifier with an example.
3. State the need for signal conditioning circuits with an example
4. State selection criteria of Microcontroller for application with case study of one application.
5. Explain in details the I2C protocol for interfacing peripherals
6. Explain in details the SPI protocol for interfacing peripherals
7. Explain following International standards in detail
 - a. IEEE standards.
 - b. FCC standards.
 - c. IEC standards.
 - d. BS standards.
 - e. ISO standards.
8. List the different Layout design & Tools available in market and write the specifications in detail.
9. State need for Environmental Testing. Temperature, Humidity, Vibration and Shock tests etc.
10. State the need of Cooling in an Electronic system.
11. Explain the PCB design practices for Analog and Mixed signal circuits, High speed digital circuits, Precision circuits.
12. State the need for Grounding of Electronic Systems.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

**Bharati Vidyapeeth Deemed University
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem: - VII

SUBJECT: - Advanced Communication System

Teaching Scheme

Lectures: 02 Hours/week

Practical: 00Hours/week

Examination scheme

End Semester Exam:60 Marks

Unit Test: 20 marks

Attendance: 10 marks

Assignment: 10 marks

Credits: 02

Course Prerequisite:

Analog Communication, Digital Communication Systems

Course Objectives:

1. To introduce radar & satellite communication system with its working principle and implementation techniques.
2. To enable student to integrate communication technologies in multidisciplinary applications.
3. To make the student aware of advanced communication techniques.

Course Outcomes: On successful completion of this course, students will be able to

1. Compare radio frequency and microwave frequency communication with respect to its working principle and its applications.
2. Describe satellite subsystem and analyze link budget for satellite.
3. Identify the fundamentals of orbital mechanics, the characteristics of common orbits used in satellite communications
4. Explore the concept of cognitive radio communication.
5. Apply different modulation techniques and access techniques for wireless communications.

Contents:

Unit I

[04 Hours]

Introduction to microwave techniques

Introduction to microwave fundamentals, microwave frequencies and microwave devices, microwave transmission lines- reflection coefficient and transmission coefficient, standing waves , wave guides, rectangular wave guides, TE mode wave, power transmission in wave guide, power losses, excitation of modes in wave guide

Unit II [04 Hours] **Satellite communication**

Basic transmission theory, system noise temperature and G/T ratio, orbital mechanics, look angle determination, satellite subsystem.

Unit III [04 Hours] **Satellite link design**

Design of downlink, link budget, design of uplink, modulation techniques, multiplex techniques, earth station, application overview-Radio and satellite navigation, GPS position location.

Unit IV [04 Hours] **Radar**

Radar fundamentals, radar principle, radar range equation, types of radar pulsed radar system, MTI, radar beacons, FMCW radar, Doppler radar, phased array radar, plane array radar.

Unit V [04 Hours] **Cognitive radio**

Cognitive Radio Architecture, Dynamic Access Spectrum, Spectrum Efficiency, Spectrum Efficiency gain in SDR and CR, Spectrum Usage, OFDM as PHY layer , OFDM Modulator, OFDM Demodulator

Unit VI [04 Hours] **Mobile Communication**

Mobile telephone service, Transmission protocols, Introduction to GSM, GPRS, CDMA switching techniques, Quality of service (QOS).

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End semester Examination

List of Assignments:

1. Study of microwave components and equipments
2. Study of measurement of microwave frequency
3. Simulation of microwave building blocks
4. Study of Radar communication
5. Study of Satellite communication
6. Simulation of radar building blocks
7. Simulation of satellite communications building blocks

8. Visit to Mobile Telephone Switching Office (MTSO).
9. Compare GSM, GPRS and CDMA switching techniques.
10. Explain in detail the concept of cognitive radio
11. Analysis of 3G and 4G systems using any appropriate simulation tool.
12. Study of Transmission of Audio signal over satellite link.

Text books:

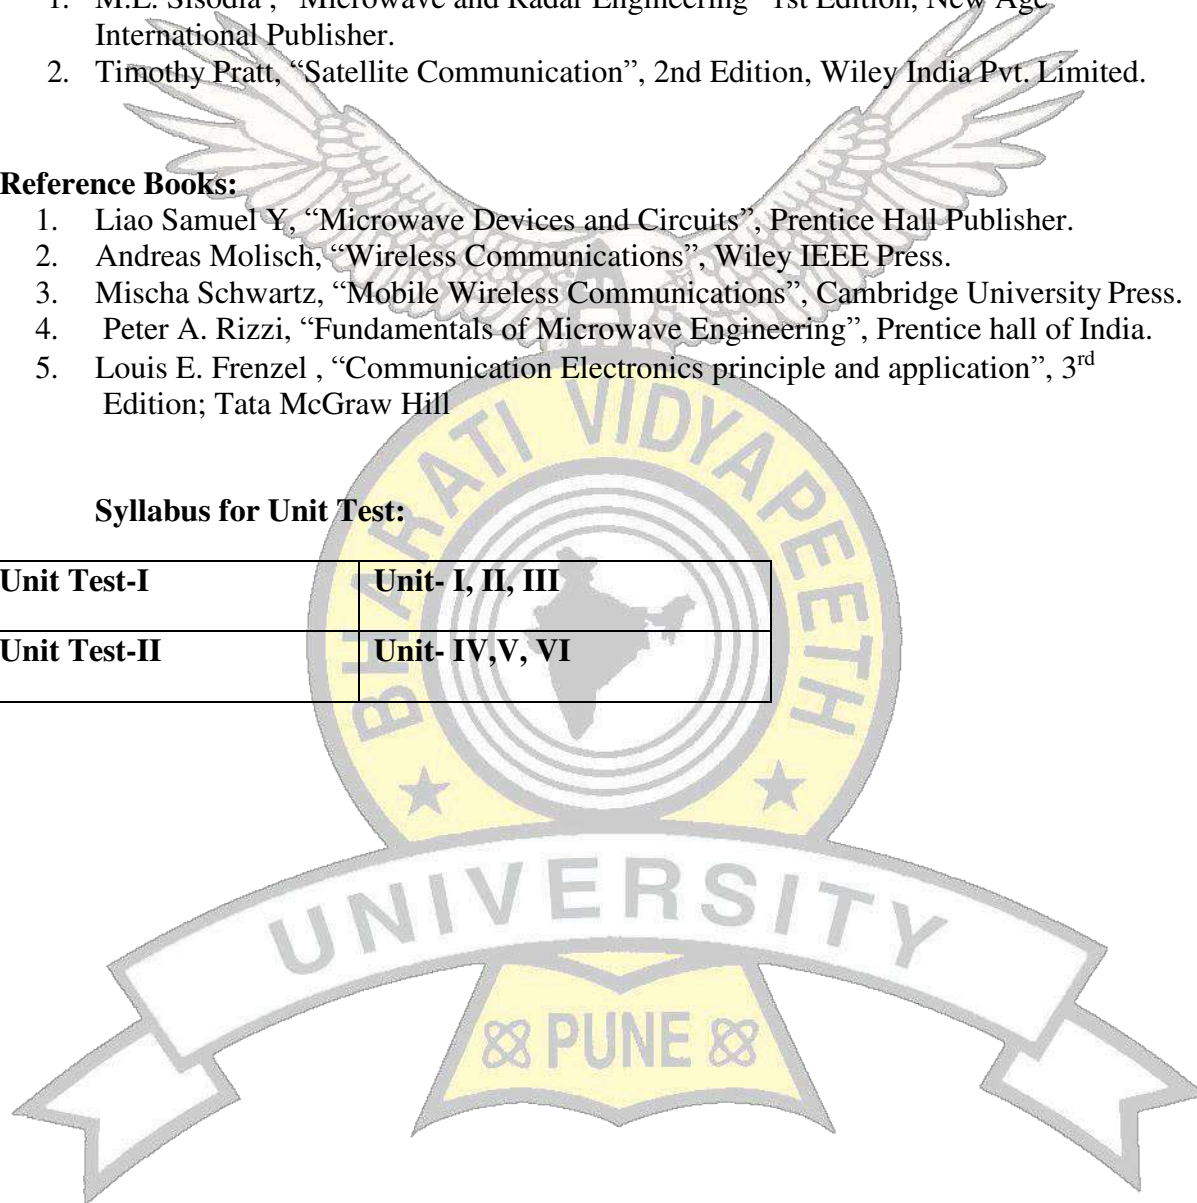

1. M.L. Sisodia , “Microwave and Radar Engineering” 1st Edition, New Age International Publisher.
2. Timothy Pratt, “Satellite Communication”, 2nd Edition, Wiley India Pvt. Limited.

Reference Books:

1. Liao Samuel Y, “Microwave Devices and Circuits”, Prentice Hall Publisher.
2. Andreas Molisch, “Wireless Communications”, Wiley IEEE Press.
3. Mischa Schwartz, “Mobile Wireless Communications”, Cambridge University Press.
4. Peter A. Rizzi, “Fundamentals of Microwave Engineering”, Prentice hall of India.
5. Louis E. Frenzel , “Communication Electronics principle and application”, 3rd Edition; Tata McGraw Hill

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Bharati Vidyapeeth Deemed University

College of Engineering, Pune

Class: B. Tech (Electronics) Sem:-VII

SUBJECT: - Elective-I Mobile and Broadband Communication

Teaching Scheme

Lecture: 3 Hours/week

Tutorial: 01 Hour/week

Examination scheme

End semester Exam: 60 Marks

Unit Test: 20 marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 marks

Credits: 04

Course Prerequisites:

Analog Communication, Digital Communication

Course Objectives:

1. To make students familiar with fundamentals of mobile communication systems
 2. To make students familiar with GSM and CDMA technologies.
 3. To make students familiar with B-ISDN, services of B-ISDN, ATM networks.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Develop mobile communication systems (cellular theory) and the characteristics of different multiple access techniques in mobile communication
2. Analyze the different inter-networking challenges and solutions in wireless mobile Networks and Transport Layers.
3. Develop applications that are mobile-device specific and demonstrate current practice in mobile communication contexts.

Contents:

Unit I

Mobile and Personal Communication

[05 Hours]

Past, Present, and Future, The Cellular Concept, Multiple Access Technologies for Cellular System, Cellular System Operation and Planning: General Principles, Initial Implementations of the Cellular Concept: Analog Cellular Systems

Unit II

Digital Cellular Mobile Systems

[07 Hours]

GSM Standardization and Service Aspects, GSM Reference Architecture and Function Partitioning, GSM Radio Aspects, Security Aspects, GSM Protocol Model, IS-95: The North American CDMA Digital Cellular Standard, Introduction, Service Aspects, Network Reference Model and Security Aspects, 4G Systems: Introduction to OFDM and MC-CDMA

Unit III

Mobile Network & Transport Layer

[06 Hours]

Mobile IP, DHCP (Dynamic Host Control Protocol), Mobile adhoc networks, Mobile Transport Layer, Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP, Fast and Selective retransmission and recovery, Transaction oriented TCP, TCP over 2.5/3G wireless networks, Support for Mobility, File systems, Wireless application protocol, i-mode, SyncML, WAP 2.0.

Unit IV

ISDN

[05 Hours]

Switching Techniques, Principles of ISDN, Architecture, ISDN standards, I-series Recommendations, Transmission structure, User network interface, ISDN protocol architecture, ISDN connections, Addressing, Interworking,

Unit V

B-ISDN architecture and standards, B-ISDN Services

[06 Hours]

Conversational, Messaging, Retrieval, Distribution, Business and Residential requirements, B-ISDN protocols, User plane, Control plane, Physical layer, Line coding, Transmission structure, SONET Requirement, Signal Hierarchy, System Hierarchy.

Unit VI

ATM

[07 Hours]

Overview, Virtual channels, Virtual paths, VP and VC switching, ATM cells, Header format, Generic flow control, Header error control, Transmission of ATM cells, Adaptation layer, AAL services and protocols, ATM switching, ATM cell processing in a switch, Matrix type switch, Input, Output buffering, Central buffering, ATM Traffic and congestion Control, Requirements for ATM Traffic and Congestion Control, Cell-Delay Variation, ATM Service Categories.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End semester Examination

List of Tutorials/Experiments:

1. Analyze Cellular Concept & cellular hierarchy.
2. Study of Cellular system operation & planning.
3. Analyze GSM architecture & GSM service aspects.
4. Study of CDMA Digital cellular standards.
5. Study of design principles of Mobile IP, mobile transport layer.
6. Analyze and study of architecture of ISDN standards and addressing.
7. Study of B-ISDN Protocols.
8. Analyze design principles of ATM cells, AAL services, protocols and ATM switching.

List of Assignments:

1. Visit mobile station/telephone switching & prepare visit report.
2. To carryout telephone signal switching system using EPBX trainer.
3. To carry out AT commands mobile communication using GSM trainer.
4. To transfer data between two computers using ISDN terminal adapter modem.
5. To understand CDMA trainer using DSSS technology.
6. Analyze digital & analog cellular systems.
7. To study Mobile IP & Mobile Transport Layer
8. Analyze ISDN protocol architecture, ISDN connections, Addressing, Interworking.
9. To study B-ISDN protocols, User plane, Control plane, Physical layer & Line coding.

10. Analyze handoff management in mobile communication by virtual lab.
11. To study AAL services and protocols and ATM switching.
12. Analyze ATM Traffic and congestion Control.

Text Books:

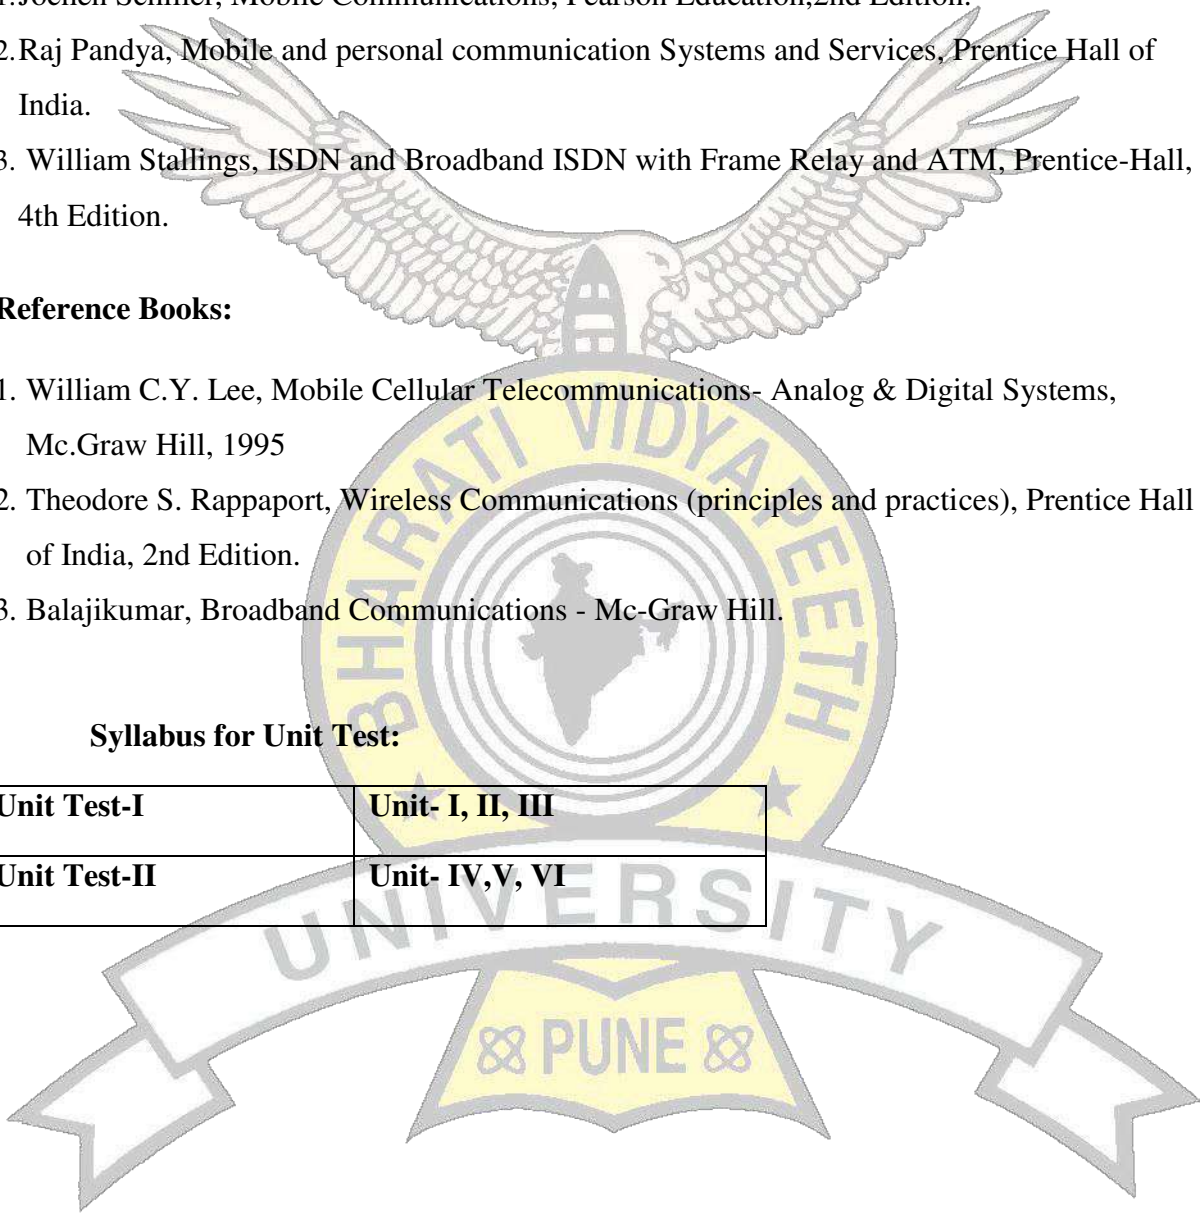

1. Jochen Schiller, Mobile Communications, Pearson Education, 2nd Edition.
2. Raj Pandya, Mobile and personal communication Systems and Services, Prentice Hall of India.
3. William Stallings, ISDN and Broadband ISDN with Frame Relay and ATM, Prentice-Hall, 4th Edition.

Reference Books:

1. William C.Y. Lee, Mobile Cellular Telecommunications- Analog & Digital Systems, Mc.Graw Hill, 1995
2. Theodore S. Rappaport, Wireless Communications (principles and practices), Prentice Hall of India, 2nd Edition.
3. Balajikumar, Broadband Communications - Mc-Graw Hill.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

**Bharati Vidyapeeth Deemed University
College of Engineering, Pune**

Class: B.Tech (Electronics) SEM:- VII

SUBJECT:- Elective - I Digital Image Processing

Teaching Scheme

Lecture: 3 Hours/week

Tutorial: 01 Hour/week

Examination Scheme

End Semester Exam: 60 Marks

Unit Test: 20 marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 Marks

Credits: 04

Course prerequisites:

Signals and Systems, Digital Signal Processing.

Course objective:

- 1 To introduce the image fundamentals and enhancement techniques.
 - 2 To introduce the image segmentation and representation techniques.
 - 3 To familiarize various morphological operations on image.
 - 4 To introduce the concepts of image registration and image fusion.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Demonstrate the fundamentals of digital image processing.
2. Design the image enhancement filters.
3. Analyze morphological operations and its effects on image.
4. To perform various morphological operations on image.
5. Determine features of various images by using segmentation method.

Contents:

Unit I

Fundamentals Digital Image Processing

[06 Hours]

Introduction, Fundamental steps in digital image processing and components, Elements of visual perception, Image sensing and acquisition, sampling and quantization, An Introduction to the mathematical tools used in digital image processing, Digital image representation, Relationships between pixels, Color models, Noises in color images.

Unit II

Image Enhancement

[06 Hours]

Spatial domain, Gray level transformations, Intensity transformation functions, Histogram processing, Basics of spatial filtering, Smoothing and sharpening spatial filtering, Frequency domain, Introduction to Fourier Transform, One-Dimensional Fourier Transform and Inverse of Fourier Transform, Smoothing and sharpening frequency domain filters, Ideal, Butterworth and Gaussian filters.

Unit III

Multi Resolution Analysis and Compressions

[06 Hours]

Multi resolution analysis, Image pyramids, Multi resolution expansion, Wavelet Transforms, Image compression, Fundamentals Models, Elements of Information Theory, Error free Compression, Lossy Compression, Compression Standards.

Unit IV

Morphological Operations in Image Processing

[06 Hours]

Dilation and erosion, Opening and Closing, Hit or Miss transformation, Morphological algorithms, Extensions to grey scale images, Image Watermarking.

Unit V

Image Segmentation and Feature Extraction

[06 Hours]

Thresholding, Region based segmentation, Region growing, Region splitting and Merging, Segmentation by morphological watersheds, First and second order edge detection operators, Hough transform, Types of Hough transform, shape features, Boundary descriptors, Localized feature extraction detecting image curvature.

Unit VI

Applications of Digital Image Processing

[06 Hours]

Image Classification, Image Recognition, Image Understanding, Working principle of Video Motion Analysis (GIF), Introduction to Iris Recognition, Difference between 2D and 3D image Sources of 3D Data sets, Image processing in 3D, Measurements on 3D images..

Content Delivery Methods:

Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit test
2. Continuous Assessment
3. End Semester Examination

List of Tutorials/Experiments:

1. Study of Reading and Displaying Image in different File Format.
2. Study of Simple Binary and Gray Level Transformation.
3. Study of Histogram and Histogram Equalization of Image
4. Study of Smoothing of Image in Special Domain using Averaging and Median Method.
5. Study of Edge Detection of Image using First and Second Order.
6. Study of Morphological Operations.
7. Study of Segmentation using Thresholding.
8. Study of Image Compression using DCT.
9. Study of Hough transforms.
10. Study of Feature Detection and Feature Identification.
11. Study of Image Sources in 2D and 3D.
12. Study of Iris Recognition.

List of Assignments:

1. Discuss Digital image representation and Color Model.
2. Study of Fundamental steps in digital image processing and components.
3. Study of Spatial domain, Gray level transformations and Intensity transformation functions.
4. Discuss Histogram processing, Fourier Transform, Gaussian filters.
5. Perform various Morphological Operations on image.
6. Study of Dilation and erosion, Opening and Closing, Image Watermarking.
7. Analysis of resolutions of Image and color intensity.
8. Study Wavelet Transforms, Image compression and Compression.
9. Study image Segmentation and Thresholding, Hough transform.
10. Study of Boundary descriptors, Localized feature detection and extraction.
11. Discuss Video Motion Analysis.
12. Study of applications of Digital Image Processing in 2D and 3D.

Text Books:-

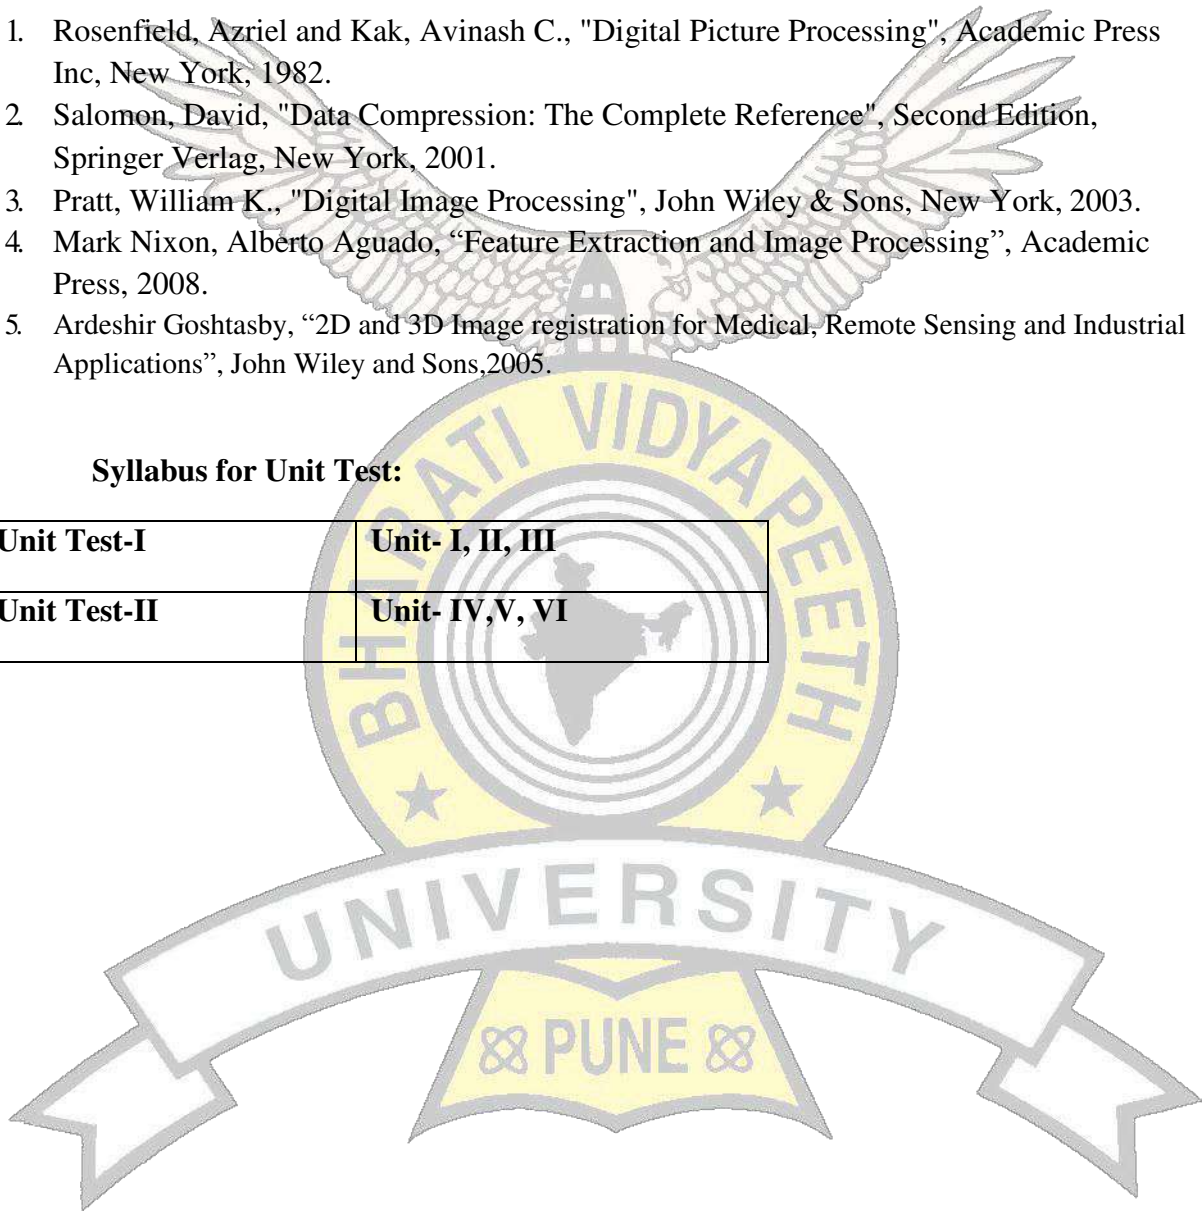

1. Gonzalez, Rafael C. and Woods, Richard E., "Digital Image Processing", Second Edition, Prentice Hall, 2006.
2. Jain, Anil K., "Fundamentals of Digital Image Processing", Prentice Hall of India, New Delhi.

Reference Books:-

1. Rosenfield, Azriel and Kak, Avinash C., "Digital Picture Processing", Academic Press Inc, New York, 1982.
2. Salomon, David, "Data Compression: The Complete Reference", Second Edition, Springer Verlag, New York, 2001.
3. Pratt, William K., "Digital Image Processing", John Wiley & Sons, New York, 2003.
4. Mark Nixon, Alberto Aguado, "Feature Extraction and Image Processing", Academic Press, 2008.
5. Ardeshir Goshtasby, "2D and 3D Image registration for Medical, Remote Sensing and Industrial Applications", John Wiley and Sons, 2005.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

**Bharati Vidyapeeth Deemed University
College of Engineering, Pune**

Class: B. Tech (Electronics) Sem :- VII

SUBJECT: - Elective-I Advanced Digital Signal Processing

Teaching Scheme

Lecture: 3 Hours/week

Tutorial: 1 Hour/week

Examination Scheme

End semester exam: 60 Marks

Unit Test: 20 marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 Marks

Credits: 04

Course Prerequisites:

Signals & systems, Digital Signal Processing

Course Objectives:

1. To make student familiar with basic principles of spectral estimation methods.
 2. To introduce the advanced concepts and techniques of digital signal processing.
 3. To create awareness about the practical applications in the field of Digital Signal Processing.
 4. To introduce DSP processor architecture.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Apply parametric and non-parametric techniques for estimating the power spectral density.
 2. Design and implement multistage sampling rate converter.
 3. Design appropriate adaptive filter in communication applications.
 4. Perform multi-resolution analysis using wavelet transform.
 5. To implement the signal processing application using DSP processor.
-

Contents:

**Unit I
DSP Processor Characteristics**

[06 Hours]

Features of DSP Processors, Harvard and modified Harvard Architecture, Multiply-Accumulate operation, Single Cycle Execution, Multiple on chip buses, ALU, MAC, Shifter Processing Units, Address Generation units, Modulo addressing, Bit reversed addressing, Efficient Looping Mechanisms, Examples of DSP Processors, Applications of DSP Processors

Unit II [06 Hours]

Linear Prediction

Random Processes, Stationary Random Process, Ergodic Random Process, AR process, MA process and ARMA process, AR lattice and ARMA lattice Ladder Filters, Forward and backward linear prediction, Solution of Normal Equations, Levinson-Durbin Algorithm, Properties of Linear Prediction Error Filters.

Unit III [06 Hours]

Power Spectrum Estimation

Estimate definition, Nonparametric methods-Periodogram, modified periodogram, Bartlett's method, Blackman-Tukey Method, Performance Comparisons of nonparametric methods, Parametric methods, Methods for estimating parameters of AR, MA and ARMA models

Unit IV [06 Hours]

Multirate DSP fundamentals

Need for Multi-rate DSP, Decimation by factor D , Interpolation by factor I , Sampling rate conversion by rational factor I/D , software implementation of sampling rate converters (Decimators and Interpolators), sample rate conversion using poly-phase filter structures

Unit V [06 Hours]

Adaptive filters

FIR adaptive filters – the MMSE criterion and LMS and RLS algorithms, Adaptive Lattice-Ladder Filters - Recursive Least Squares Lattice Ladder Algorithms, Applications of Adaptive Filters

Unit-VI [06 Hours]

Time Frequency Representation of signals

Time Frequency description of signals, Concept of Instantaneous frequency and Complex signal, Uncertainty principle, need for joint time frequency representation, tiling diagrams. Short Time Fourier Transform, Wigner Ville distribution, Continuous Wavelet Transform, Discretization of STFT & CWT, Spectrogram.

Content Delivery Methods:Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit test
2. Continuous Assessment
3. End Semester Examination

List of Tutorials/Experiments:

1. Study of various addressing modes of DSP.
2. Describe the power spectrum estimation using Blackman and Tukey method.
3. Describe the role of Adaptive filters in Communication.
4. A brief survey of DSP applications in speech processing.
5. Implementation of Multi-rate application in digital audio processing.
6. Implementation of sub band coding for speech signal.
7. Discuss in detail various applications of wavelet transforms.
8. Explain the process of digital FM stereo signal generation.
9. Demonstration of Hardware and Software utilities for DSP starter kits.

List of Assignments:

1. Present a comparative study of DSP processors based on their features and applications.
2. Plot the Periodogram of a Noisy Signal and estimate PSD using Periodogram and Modified Periodogram methods.
3. Estimation of PSD of two sinusoids plus noise using Welch method
4. Find linear prediction coefficients and reflection coefficients using Levinson Durbin Algorithm .
5. Implement program to convert CD data into DVD data
6. Implement LMS algorithm using MATLAB.
7. Record a speech file in your own voice. Find pitch period for a voiced part of the segment.
8. Perform continuous and discrete wavelet analysis of a signal.
9. Implementation of Linear / Circular convolution on DSP processor.
10. Implementation of FIR filter using DSP processor
11. Design an Adaptive filter using LMS algorithm.
12. Mini-project based on the Matlab/Scilab.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

**Bharati Vidyapeeth Deemed University
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem:- VII

SUBJECT: - Elective-II Advanced Computer Programming

Teaching scheme

Lecture: 03 Hours/week

Tutorial: 01 Hour/week

Examination scheme

End Semester Exam: 60 marks

Unit Test: 20 marks

Attendance: 10 marks

Assignment: 10 marks

TW & Oral: 50 marks

Credits: 04

Course prerequisites:

Fundamentals of computing

Course objective:

1. To introduce object oriented programming concepts.
 2. To develop programming ability by learning advanced coding techniques.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Demonstrate basic knowledge of object oriented programming concepts.
 2. Write simple programs in Java.
 3. Apply Java for HTML and Applet applications.
 4. Use SQL for database manipulation
-

Contents

Unit I

[06 Hours]

Object Oriented Programming:

Programming fundamentals, Basic Concepts, Different Programming Paradigms, Evolution of Different Programming Languages and their Characteristics, Object-Oriented Paradigm, Objects and Classes, Data Abstraction and Encapsulation,

Inheritance, Polymorphism, DynamicBinding, Message Communication, Benefits of OOP, Applications of OOP, Java Language as an OOP Language.

Unit II [06 Hours]

Introduction to Java:

Introduction to Java, Different Characteristics of Java, C++ and Java:Feature Comparisons, Improvements, Detailed Overview, Constants,Variables and Data Types, Operators and Expressions, Decision Making and Branching and Decision Making and Looping, Classes Objects and Methods, Arrays, Strings and Vectors, Interfaces.

Unit III [06 Hours]

Threads:

Packages in Java, Multithreaded Programming concepts and applications, Managing Errors and Exceptions, Managing Input/Output Files in JAVA.

Unit IV [06 Hours]

HTML and Java Applets:

History, W3C Standards, Standard HTML Tags for Image and TextFormatting, Tables, Lists, Frames. Introduction to dynamic HTML. JavaApplets: History, Introduction, HTML and Java Applet. Basic Applet programming, Applets on Web. Applet applications for Web.

Unit V [06 Hours]

SQL and Java:

Introduction to databases, Data Models, Concepts, Schema, RelationalQuery. Detailed Overview of SQL Language, Basic SELECT Query, WHERE Clause, ORDER BY Clause, Merging Data from MultipleTables: INNER JOIN, INSERT Statement, UPDATE Statement, DELETESStatement, and Installation of MySQL or PL SQL. Setting MySQL / PL SQLUser Account.

Unit VI [06 Hours]

Database Connectivity:

Introduction to JDBC, JDBC Architecture, Types of JDBC drivers, ResultSet, Metadata, Stored Procedure, Callable Procedure, Connection Procedure.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End semester Examination

List of Tutorials/Experiments:

1. Write a Java program to implement Class and Inheritance Concept.
2. Write a Java program to differentiate between method overloading and method overriding.
3. Write a Java program to understand the use of String class and string buffer class
4. Write a Java program to implement the concept of Package.
5. Write a Java program to implement concept of Exception Handling.
6. Write a program to implement Frame and different graphics objects.
7. Write a program to implement Java Applet.
8. Write a SQL Program for implementation of DDL, DML, and DCL.

List of Assignments:

1. Write a C++ or Java Program to demonstrate the use of OOP features.
2. Write a Java Program to display pattern (Triangle, Pyramid) using different loops.
3. Implementation of different string functions by using switch case.
4. Write a Java Program implement multiple inheritances by using Interface.
5. Write a Java Program to perform different file operations.
6. Write a program to implement multithreading.
7. Design a College website containing detailed information using HTML Tags.
8. Write a program to implement a Java Applet.
9. Write a Java program to demonstrate JDBC connectivity.
10. Comparison of different database
11. Justify the role of SQL for database manipulation
12. A mini project on Java and SQL.

Text Books:

1. Programming with Java: A Primer, 3E by E Balagurusamy, Tata McGraw Hill Publishing Company.
2. Database System Concepts, Sixth Edition by Henry Korth, McGraw Hill Publishing Company
3. Java Complete Reference, Herbert Schildt, McGraw Hill Publishing Company

4. Java: How to Program by Deitel and Deitel

Reference Books:

1. Ivan Bayross, “Web Enabled Commercial Applications Development Using HTML, DHTML, JavaScript, Perl – CGI”, BPB Publication.
2. Korth, “Database System Concepts”, MGH Publication.
3. Ivan Bayross, “Programming with SQL”, Sybase Publication.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Bharati Vidyapeeth Deemed University

College of Engineering, Pune

Class: B.Tech (Electronics) Sem:- VII

SUBJECT: - Project stage - I

Teaching scheme

Practical: 04 Hours/week

Examination scheme

TW & Oral: 50 marks

Total Credits: 04

Course objective:

1. To familiarize the students with the product development cycle
 2. To impart the importance of working as a team.
 3. To introduce the student to literature survey and documentation process.
 4. To encourage the students to visualize and formulate a viable solution to practical engineering problems.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Identify the problem for practical Engineering application
2. Formulate and design appropriate solution
3. Write specifications and identify constraints
4. Work as an effective team member
5. Effectively plan the financial budget for the project.

Project Stage –I includes various steps such as:

1. Problem Identification
2. Information gathering
3. Feasibility study
4. Synopsis
5. System analysis
6. Requirement analysis

**Bharati Vidyapeeth Deemed University
College of Engineering, Pune**

Class: B. Tech (Electronics) Sem:-VII

SUBJECT: - In-plant Training

Teaching scheme

-

Examination scheme

TW & OR: 50 marks

Credits: 04

Course Objectives:

1. To familiarize the students to industrial work processes.
2. To work as an effective team member.
3. To develop the communication and presentation skills.
4. To introduce the student to work ethics in industry.

Course Outcomes: On successful completion of this course, students will be able to

1. Work effectively in an industrial environment.
2. Effectively communicate and present himself/herself.
3. Identify the various sections in the industry.
4. Work in a team.

In-plant Training:

Every student has to undergo training on site or in office of some company in June & July for one and half month to get the exposure and practical experience. He has to submit the detailed report of training, on the basis of which the term work and oral marks should be awarded.

Note: - Student should complete in-plant industrial training after semester-VI for a period of six weeks. Evaluation will be done in semester-VII.

Bharati Vidyapeeth Deemed University

College of Engineering, Pune

Class: B.Tech (Electronics) Sem:- VIII

SUBJECT: - Optical Fiber Communication

Teaching Scheme

Lecture: 03 Hours/week

Practical: 02 Hours/week

Examination Scheme

End Semester Exam: 60 marks

Unit Test: 20 marks

Attendance: 10 marks

Assignments: 10 marks

TW & PR: 50 marks

Total credits: 04

Course prerequisites:

Analog Electronics, Analog Communication

Course objective:

1. To lay down the foundation for optical communication engineering.
 2. To introduce the working of optical transmitter and receiver.
 3. To familiarize the students to optical devices and concepts of various modulation techniques.
 4. To introduce the students to Optical Fiber measurement techniques.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Demonstrate the advantages and applications of optical fiber communication.
2. Identify different optical Sources/detectors with their operating principle.
3. Choose the multiplexing technique and optical amplifier for optical communication.
4. Select the connectors /couplers in Optical fiber link and explain measurement technique for the optical fiber losses.

Contents:

Unit I

[06 Hours]

Introduction:

Advantages of optical fiber communication over other communication systems, Ray theory transmission, Electromagnetic mode theory for optical propagation, types of fibers, transmission characteristics of optical fibers-attenuation, scattering losses, fiber bend loss, dispersion, polarization, preparation of optical fibers.

Unit II

[06 Hours]

Optical transmitter

Optical sources: Basic Concepts, Light Emitting Diodes, Semiconductor Laser, Laser Diodes, Line Coding, Laser Characteristics, Different modulation schemes.

Optical transmitters: LED drive circuits for digital and analog transmission.

Unit III

[06 Hours]

Optical Receivers and Optical links:

Optical receiver: Detector responsivity, Rise time and Bandwidth, P-N Photo Diode, P-I-N Photo Diode, Avalanche Photo Diode, Receiver Noise, Receiver Sensitivity.

Point to point Links: System design considerations, Link Power budget, Rise Time budget, Multichannel transmission techniques.

Unit IV

[06 Hours]

WDM concept and Optical Amplifier:

WDM Concept, WDM Light wave Systems, WDM Components, System Performance Issues, Time Division Multiplexing, Sub Carrier Multiplexing, Code Division Multiplexing. Types of Optical Amplifier and its applications, Amplifier Noise, Optical SNR, Raman Amplifier.

Unit V

[06 Hours]

Optical Components and Optical Networks:

Power launching & Coupling: Fiber optic splices, connectors & couplers & Coupling losses. Optical couplers, Isolators and Circulators. Network Concepts, network Topology, SONET/SDH.

Unit VI

[06 Hours]

Optical Fiber measurements and application.

Fiber attenuation measurements, Fiber dispersion measurements, fiber numerical aperture measurement, reflectance and return loss measurements. OTDR. Application in military, industrial applications and applications in local area network.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of practicals:

1. Optical Source Characteristics: Aim: To plot the electrical and optical characteristics of different light sources.
2. Numerical Aperture of fiber: Aim: To estimate the numerical aperture of given fiber.
3. To measure the attenuation of given MMSI and SMSI fibers.
4. To measure the attenuation variation in length of optical cable.
5. To measure the attenuation due to bending of optical fiber.
4. Optical Detector Characteristics: Aim: To plot the frequency response of detectors with different values of load resistor.
5. Fiber Bandwidth/Data rate: Aim: To estimate the bandwidth of given fiber.
6. Transmission of analog signal using a simple fiber optic link.
7. Transmission of Digital signal using a simple fiber optic link.
8. To perform Frequency modulation using optical fiber.
9. To perform PWM using optical fiber
10. To find the optical power using "Optical Power Meter".
11. To find the optical response using "OTDR".
12. Determination of input, output and transfer characteristics of Optocoupler.

List of Assignments:

1. Explain different types of optical fibers.
2. Study of Electromagnetic mode theory of optical propagation.
3. Classify the types of optical connectors and couplers.
4. Study of the fiber optic analog and digital lab using Virtual Lab.
5. Study of the fiber optic bidirectional communication using Virtual Lab
6. Study of bending losses in optical fiber using virtual lab.
7. Study of LED and Detector characteristics using Virtual Lab
8. Study of attenuation loss in optical fiber using Virtual Lab
9. Numerical based on acceptance angle, N.A. and Number of guided modes.
10. To find power efficiency, optical power in LEDs.
11. Calculation of optical power budget.
12. Measurement of attenuation in optical fiber.

Text Books

1. Gerd Keiser, "Optical Fiber Communications", Tata McGraw Hill, Fourth Edition.
2. John M. Senior, Optical Fiber Communications-Principles and Practice, Prentice Hall of India, second Editio

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Bharati Vidyapeeth Deemed University

College of Engineering, Pune

Class: B. Tech (Electronics) Sem: - VIII

SUBJECT: - Biomedical Engineering

Teaching Scheme

Lecture: 3 Hours/week

Practical: 2 Hours/week

Examination Scheme

End Semester Exam: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & OR: 50 marks

Credits: 04

Course prerequisites:

Analog Electronics, Instrumentation and control system.

Course objectives:

1. To introduce various biopotentials, their measurements, and interpretations associated with human body.
 2. To familiarize the student with medical equipments.
 3. To expose the students to clinical laboratory equipments.
 4. To imbibe the importance of patient's safety.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Classify systems in a human body and Identify bio-potentials
2. To acquire and analyze ECG, EMG, EEG signals.
3. Correlate the parameters like B.P., ECG and PCG with the functioning of heart.
4. Categorize life saving equipments such as cardiac and respiratory equipments according to their applications.
5. Identify the equipments present in ICU/NICU and clinical laboratory.

6. Recognize physiotherapy equipments used for pain relief and describe various electrodes and techniques used for surgery.

Contents:

Unit I **[06 Hours]**

Human body & Origin of Bio-potentials

Human body: cell structure, overview of different systems in the body: cardiovascular system, respiratory system, nervous system, musculoskeletal system, gastrointestinal system, endocrine system and lymphatic system, Origin of Bio-potentials: action potential and muscle contraction, bio-potentials such as ECG, EEG, EMG.

Unit II **[06 Hours]**

Electrocardiograph, Phonocardiograph and Blood pressure measurements

Electrocardiography: ECG lead system, typical set up for ECG, electrodes used for ECG, Phonocardiograph: heart sounds and heart murmurs, microphones used in Phonocardiograph (PCG), recording set up of PCG, Blood pressure measurement techniques: direct and indirect methods, relationship between ECG, PCG and Blood pressure as a function of time.

Unit III **[06 Hours]**

Cardiac and Respiratory Equipments

Types of defibrillator, defibrillator electrodes, types of pacemaker, pacemaker leads and batteries, ventilator and Modes of ventilator.

Unit IV **[06 Hours]**

ICU and NICU-Architecture and monitoring systems

Architecture of ICU and NICU, patient monitoring system, central monitoring system, ambulatory monitoring system, Baby incubator and Phototherapy unit

Unit V **[06 Hours]**

Clinical Laboratory Instruments

Colorimeter, spectrophotometer, flame-photometer, blood cell counter, auto analyzer and pH/blood gas monitoring.

Unit VI

[06 Hours]

Physiotherapy & surgical diathermy instruments and Patient Safety

Short wave diathermy machine, microwave diathermy machine, surgical diathermy unit, types of electrodes used for electro-surgery, Patient safety: grounding, shielding and effect of electrical current on human body.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End semester Examination

List of Experiments:

1. Study of Blood Pressure measuring techniques (Analog & Digital).
2. Study of ECG waveform & Heart Rate measurement using ECG system.
3. Study of Phonocardiograph.
4. Detection of Apnea and Tachypnea using respiration rate monitor and Respiration Simulator.
5. Study of DC Defibrillator.
6. Study of External Pacemaker.
7. Study of Spectrophotometer.
8. Study of Surgical Diathermy Unit.

List of Assignments:

1. State in your own words; Human body systems and their functions.
2. Choose any two Bio-potentials and state the vital role with the help of diagrammatic representation.
3. Differentiate between heart sounds and heart murmurs. Where and why they originate?
4. Association between ECG and B. P as a function of time.
5. Elaborate concepts of cardiac equipments.
6. Importance of Ventilator as a life supporting instrument.

7. Sketch ICU and NICU Architecture. Categorize and locate ICU and NICU equipments and their significance.
8. Describe central monitoring system for 8 bedded ICU.
9. Categorize blood tests and give importance of various clinical laboratory equipments.
10. By applying acquired knowledge select appropriate physiotherapy equipment for pain relief and explain.
11. Identify the equipment used for surgery in O.T. and describe.
12. Visit to the hospital/industry to understand the concepts of biomedical instruments.

Text Books

1. R. S. Khandpur, "Hand book of Biomedical Instrumentation", Tata McGraw Hill Publishing Company limited, New Delhi.
2. Leslie Cromwell, Fred J. Weibel, Erich A. Pfeiffer, "Biomedical Instrumentation and Measurements", Second Edition, PHI.

Reference Books:

3. Richard Aston, "Principles of Biomedical Instrumentation and Measurement", Merrill Macmillan Publishing Company, New York.
4. Dr. M. Arumugam, "Biomedical Instrumentation", Anuradha Agencies.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Bharati Vidyapeeth Deemed University

College of Engineering, Pune

Class: B. Tech (Electronics) Sem:-VIII

Subject: - Wireless Networks

Teaching Scheme

Lecture: 03Hours/week

Tutorial: 01 Hour/week

Examination Scheme

End Semester Exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

Credits: 04

Course Prerequisites:

Digital Communication

Course Objectives:

1. To familiarize the students with fundamentals of wireless communication systems
 2. To introduce the concepts and techniques associated with Wireless Cellular Communication systems.
 3. To familiarize with state of art standards used in wireless cellular systems.
 4. To introduce new technologies in wireless systems
-

Course Outcomes: On successful completion of this course, students will be able to

1. Identify the types of wireless communication systems.
2. Analyze the radio channel characteristics.
3. Analyze improved data services in cellular communication.
4. Work with GSM/CDMA/UWB technologies.

Contents:

Unit I

Introduction

[06 Hours]

Wireless network generations, evolution of next-generation networks, Systems and Design Fundamentals, Propagation Models Description of cellular system, Frequency Reuse, Co channel and Adjacent channel interference, Propagation Models for Wireless Networks, Multipath Effects in Mobile Communication, Models for Multipath Reception.

Unit II

Cellular Communications

[06 Hours]

Introduction to Cellular Communications, cellular terminology, cell structure and cluster, Frequency reuse, Multiple Access Technologies, Cellular Processes-Call Setup, Handover etc, Teletraffic Theory, Capacity Building, Blocking Probability

Unit III

GSM

[06 Hours]

GSM: Architecture and Protocols - Air Interface, GSM Multiple Access Scheme, GSM Channel Organization, Traffic Channel multiframe, Control (Signaling) Channel Multiframe, Frames, Multi- frames, Super-frames and Hyper-frames, GSM Call Set up Procedure, GSM Protocols and Signaling, Location Update Procedure, Routing of a call to a Mobile Subscriber.

Unit IV

CDMA

[06 Hours]

Introduction to CDMA, Spread spectrum, CDMA call processing, Walsh codes, Variable tree OVSF, PN Sequences, Multipath diversity, RAKE Receiver, CDMA Receiver Synchronization, power control in CDMA.

Unit V

3G and 4G Wireless Standards/UWB

[06 Hours]

GPRS, EDGE technology, IMT-2000 standards, UMTS technology, WCDMA, LTE, 4G Technologies, Multicarrier Modulation, OFDM-MIMO Systems, WiMAX, UWB Definition and Features, UWB Wireless Channels, Bit-Error Rate Performance of UWB.

Unit VI

Emerging Wireless Network Technologies

[06 Hours]

WLAN technology, HIPERLAN, WPAN, WMAN, Mobile Ad-hoc network(MANET), Mobile IP and mobility management, Mobile TCP, Wireless sensor networks, RFID technology, WATM, Wireless application protocol, Home RF.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Tutorials/Experiments:

1. Comparison of different wireless network generations.
2. Study of design principles of propagation models of cellular system.
3. Analyze the concept of frequency reuse, interference and multipath effects.
4. Study of design principles of cellular structure.
5. Study of multiple access technologies.
6. Analyze different methods of capacity expansion in cellular system.
7. Study of GSM architecture, channels and call setup procedure.
8. Study of CDMA calls processing.
9. Study of LTE & 4G network design issues.
10. Study of HIPERLAN standards & MANET.
11. Study of wireless sensor networks and WATM.
12. Study of WAP standards & Home RF.

List of Assignments:

1. Visit mobile station/telephone switching & prepare visit report.
2. To carry out AT commands mobile communication using GSM trainer.
3. To understand CDMA trainer using DSSS technology.
4. Analyze Radio Propagation and Propagation Path Loss Models on Scilab.
5. Analyze principles of cellular communication on Scilab (Refer Wireless Communications by T. L. Singal).
6. Analyze capacity of CDMA, calculate processing gain, number of users per cell, bandwidth efficiency, open loop power control in CDMA on Scilab. (Refer Scilab

Textbook Companion for Wireless Communications and Networking by V. Garg)

7. Prepare Ad-hoc network at your premises using mobile terminals/ laptops etc and analyze parameters like capacity, flexibility, complexity etc.
8. Comparison of HIPERLAN, WATM .
9. Understand about Wi-Fi network and its' different standards, protocols and requirements for connecting a Wi-Fi network on Virtual LAB. (Refer VLAB IIT Kharagpur, Advanced network Technologies Lab)
10. Simulating WiMAX network on Virtual LAB.(Refer VLAB IIT Kharagpur, Advanced network Technologies Lab)
11. Study the basics of Mobile and Adhoc network, various standards and different routing protocols including proactive and reactive on virtual lab.
12. Analyze Wireless Sensor Network Data Acquisition, Transmission, and Aggregation on virtual lab.

Text Books:

1. T L Singal, Wireless Communications, McGraw Hill Education India, 2014.
2. Kaveh Pahlavan, Prashant Krishnamurthy, Principles of Wireless Networks, Pearson Education Publication.

Reference Books:

1. William C.Y. Lee, Mobile Cellular Telecommunications- Analog & Digital Systems, Mc.Graw Hill, 1995
2. Wireless Communications (principles and practices) -(2nd Edition)-Theodore S. Rappaport (Prentice Hall of India).
3. Vijay Garg, Wireless Communication & Networking, Morgan Kaufmann Series

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Bharati Vidyapeeth Deemed University

College of Engineering, Pune

Class: B. Tech (Electronics) Sem:-VIII

SUBJECT: - Elective II Agricultural Electronics

Teaching Scheme

Lecture: 3 Hours/week

Tutorial: 1Hours/Week

Examination Scheme

End Semester Exam: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 marks

Credits: 04

Course Prerequisites:

Basic Electronics, Instrumentation & control systems.

Course Objectives:

1. To inculcate the ability to recognize environmental problems and to provide solutions to agricultural sector.
 2. To give overview of technology of advanced topics like DAS, SCADA and Virtual Instrumentation.
 3. To enable students to select practices needed to develop and implement the Engineering Automation for Agricultural sector.
 4. To introduce Greenhouse Technology & Role of Electronics Governance.
-

Course Outcomes: After successfully completing the course students will be able to

1. Describe the role of computers & virtual instrumentation.
2. Provide communication solution for interpreting environmental parameters with Electronics systems.
3. Describe Instrument technology used in agriculture & apply knowledge of Electronics in Agriculture.

4. Describe Greenhouse Technology & Role of Electronics Governance

Contents

Unit I

Review of computers & Virtual instrumentation [06Hours]

Data loggers, Data acquisitions systems (DAS), Supervisory control and data acquisition (SCADA), Basics of PLC, Functional block diagram of computer control system, alarms, interrupts. Virtual Instrumentation: Historical Perspective, advantages, Block diagram and architecture of virtual instrument, data flow techniques, graphical programming in data flow, comparison with conventional programming.

Unit II

Communication Systems [06Hours]

Use of field buses, functions, international standards, field bus advantages and disadvantages, Instrumentation network: sensor networks, Open networks-advantages and limitations, HART Network, Foundation field bus network. Profibus PA: Basics, architecture, model, network design. Foundation field bus segments: General consideration, network design

Unit III

Instrument technology for agriculture [06Hours]

Instrument for measurement of pH, Electrical conductivity, gas analysis, humidity, leaf area, chlorophyll content, and soil moisture & temperature.

Unit IV

Precision Farming [06Hours]

An introduction to precision farming. GIS/GPS positioning system for precision farming, Yield monitoring and mapping, soil sampling and analysis. Computers and Geographic information systems. Precision farming- Issues and conditions. Role of electronics in farm machinery for precision farming.

Unit V

Electronics in Agriculture [06Hours]

Instrument for crop monitoring – moisture measurement – capacitive, infrared reflectance and resistance. Monitoring soil and weather – measurement of soil properties and meteorological parameters – irrigation control systems. Instruments for crop establishment monitoring. Crop spraying – selective crop spraying – flow control. Yield monitoring. Technology for precision farming. Instruments for protected cultivation – green house environment control – transducers and control system. Instruments and systems for crop handling processing and storage.

Unit VI

Applications & Electronics Governance

[06Hours]

Greenhouse: History of modeling and control of Greenhouse, Identification of control and manipulation variables for Greenhouse. Crop Preservation : Importance of Preservation of various commodities and parts of plants, Drying process for preservation, Variable identification for drying process, Electronic control system for grape drying process. Agriculture & Electronics Governance: Governance products & services in agriculture sector, Role of Electronics Governance in Agricultural sector.

Content Delivery Methods: Chalk & talk, Power point presentation NPTEL videos.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Tutorials/Experiments

1. Case study of PLC for irrigation system.
2. Case study of Latest irrigation system.
3. Study of Profibus protocol for networking.
4. Role of GIS/GPS positioning system for precision farming.
5. Study of Computers and Geographic information systems for precision farming.
6. Concept of crop preservation.

List of Assignments:

1. Study of Data Acquisition Systems (DAS).
2. Study of Data logger.
3. Study of basics of PLC and applications in Agriculture electronics.
4. Study of Communication systems used in Agriculture electronics.
5. Study of Transducers and control systems.
6. Study of electronics systems for PH, gas, humidity, conductivity and temperature measurement.
7. Study of selective crop spraying, flow control, yield monitoring, green house environment control.
8. Study of Electronics Governance in Agricultural sector.
9. Describe GIS/GPS positioning system for precision farming.
10. Describe advantages and disadvantages of field bus and Open networks.
11. Write a note on HART Network.
12. Write a note on Greenhouse.

Text Books

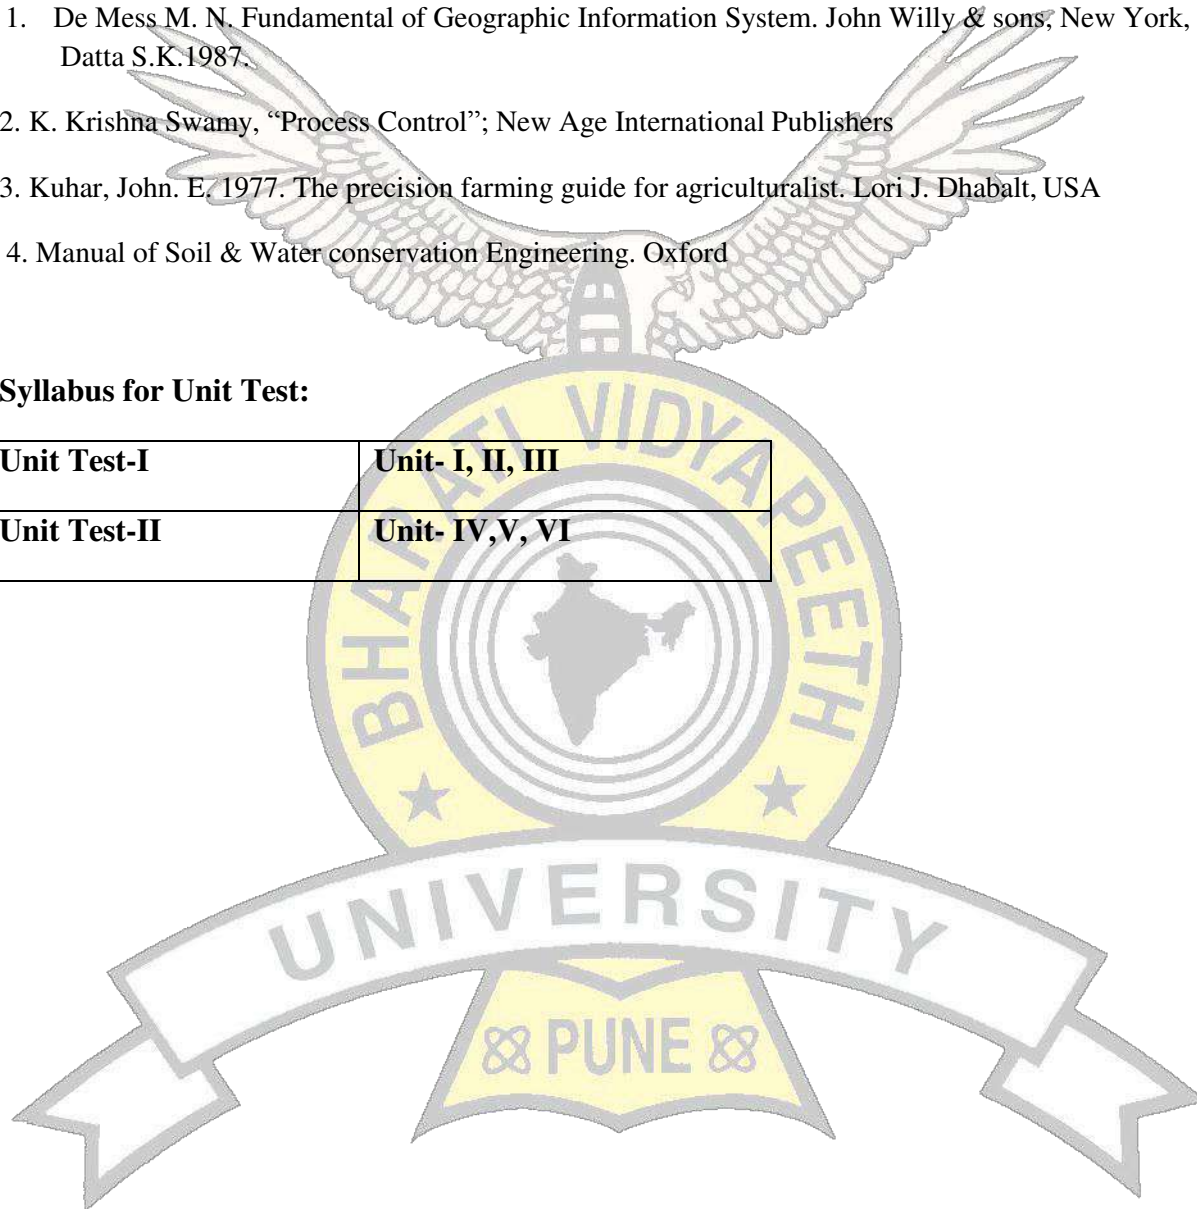

1. Curtis Johnson, “Process Control Instrumentation Technology”; 8th Edition, Pearson Education
2. Stuart A. Boyer, SCADA supervisory control and data acquisition, ISA Publication

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

Class: B.Tech (Electronics) SEM: -VIII
SUBJECT: - Elective-II System on Chip

Teaching Scheme

Lecture: 3 Hours/week

Tutorial: 1Hour/week

Examination Scheme

End Semester Exam: 60 Marks

Unit Test: 20 marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 Marks

Credits: 4

Course Prerequisites: Digital Electronics, VLSI Design

Course objective:

- 1) To make students familiar with fundamentals of SOC design methodology.
- 2) To categorize requirements of SOC design.
- 3) To recognize essentials of SOC design.
- 4) To comprehend applications of SOC.

Course Outcomes: On successful completion of this course, students will be able to

- 1) Conceptualize SOC design methodology
- 2) Understand SOC design flow
- 3) Design complex SOC
- 4) Intellectualize future trends in SOC design

UNIT-I

SOC Design Methodology

(06 Hours)

The age of Megagate SOC's, The fundamental trends of SOC design, An improved design methodology for SOC design.

UNIT -II

SOC Design

(06 Hours)

Hardware System Structure, Software trends, Current SOC Design Flow, Six Major Issues in SOC Design.

UNIT -III

SOC Architecture (06 Hours)

The basics of Processor-Centric SOC architecture, Accelerating Processors for Traditional Software Tasks, System Design with Multiple Processors, New Essentials of SOC Design Methodology

UNIT -IV

System-Level Design of Complex SOCs (06 Hours)

Complex SOC System Architecture Opportunities, Major Decisions in Processor-Centric SOC Organization, Communication Design = Software Mode + Hardware Interconnect, Hardware Interconnect Mechanisms, The SOC Design Flow

UNIT -V

Advanced Topics in SOC Design (06 Hours)

Pipelining for Processor Performance, Inside Processor Pipeline Stalls, Optimizing Processors to Match Hardware, Multiple Processor Debug and Trace, Issues in Memory Systems

UNIT -VI

Scope of SOC (06 Hours)

The designer's dilemma in SOC design, The SOC design transition, future of SOC design, Future applications of complex SOC.

List of Tutorials/Experiments:

- 1) Study of SOC Components
- 2) Study of Integration Technology in SOC with standard CMOS process.
- 3) Study of Technology challenges in SOC design.
- 4) Study of SOC design requirements
- 5) Study of SOC architecture
- 6) Study of SOC test methodology
- 7) Application of SOC in Communication
- 8) Application of SOC in Computer
- 9) Application of SOC in Consumer
- 10) Case study: Complex SOC

List of Assignments:

- 1) What are the challenges in SOC design? Describe in brief.
- 2) List various design elements, tools and methodologies playing an important role in SOC Design.
- 3) Using diagram, explain SOC design flow.

- 4) Which are the important issues in SOC design? Explain in detail.
- 5) Discuss the basics of processor -centric SOC design.
- 6) Write essentials of SOC design methodology.
- 7) Define complex SOC system architecture opportunities.
- 8) Explain major decisions in processor-centric SOC organizations.
- 9) Discuss pipelining and exceptions.
- 10) Explain issues in memory system.
- 11) Describe designer's dilemma wrt SOC.
- 12) List future applications of complex SOC.

Content Delivery Methods: Chalk & talk, Power point presentation NPTEL videos.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

Text book:

1. Chris Rowen, Engineering the Complex SOC, Prentice Hall, 2004.

Bharati Vidyapeeth Deemed University

College of Engineering, Pune

Class: B.Tech (Electronics) Sem: - VIII

SUBJECT: - Elective-II Speech Processing

Teaching scheme

Lecture: 3 Hours/Week

Tutorial: 1 Hour/Week

Examination scheme

End Semester Exam: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW& Oral: 50 Marks

Credits 04

Course Prerequisite:

Engineering Mathematics-III, Signals and Systems, Digital Signal processing

Course Objective:

1. To introduce acoustic theory and time domain models for speech processing.
 2. To give overview of sampling, quantization and different modulation techniques.
 3. To enable students to apply STFT analysis and speech synthesis
 4. To introduce linear predictive coding as well as different techniques to enhance speech quality
-

Course Outcomes: At the end of the course, a student will be able to

1. Describe the mechanisms of human speech production and articulation mode of different classes of speech sounds determine their acoustic characteristics.
2. Represent the speech signal in time domain and frequency domain.
3. Describe and implement methods & systems for efficient quantization and coding of speech signals.
4. Analyze and synthesize speech using different methods.

5. Distinguish between different speech recognition modes.

Contents

Unit I [06 Hours]

Speech Production and Hearing

Anatomy & physiology of speech organs, articulatory, acoustic phonetics, acoustic theory of speech production, prosody, Anatomy & physiology of ear, sound perception, speech perception, vowel perception, consonant perception.

Unit II [06 Hours]

Speech Analysis

Short time speech analysis, time domain parameters, frequency domain parameters, LPC analysis, cepstral analysis, pitches estimation.

Unit III [06 Hours]

Coding of Speech Signals

Quantization, redundancies, Time domain, waveform coding Linear delta modulation, Adaptive delta modulation, adaptive differential pulse code modulation, Linear prediction based vocoders, phase vocoders channel vocoders and cepstral vocoders.

Unit IV [06 Hours]

Speech Synthesis

Principles of speech synthesis, synthesis methods, text to speech synthesis, Synthesis by rule, applications.

Unit V [06 Hours]

Speech Enhancement

Introduction, nature of interfering sounds speech enhancement techniques spectral subtraction & filtering, harmonic filtering, spectral subtraction, Adaptive noise cancellation.

Unit VI [06 Hours]

Automatic Speech Recognition

Parametric representation of speech, evaluation of similarity of speech patterns, various modes of speech recognition like MFCC, DTW, HMM Application.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination.

List Tutorials/Experiments:

1. To study spectral analysis of a noisy signal using MATLAB.
2. To obtain LPC coefficients.

3. To study the spectrogram of an audio signal using MATLAB.
4. To study VQ for speech.
5. To perform text to speech synthesis using MATLAB.
6. Estimation of fundamental frequency using Cepstrum.
7. To find Cepstral pitch period using method of autocorrelation.
8. To plot Welch power spectral density estimates for vowels 'a' 'e'.
9. To find Cepstral coefficients of voiced signal.
10. Speech classification on basis of frequency.

List of Assignments:

1. List out different speech processing applications.
2. Implement a Non-stationary nature of speech signal using Virtual laboratory.
3. Write a MATLAB program to find the envelope of the sound for the flute (Bansuri).
4. Describe any two speech recognition models.
5. Discuss different speech features like LPC, Cepstrum, MFCC, and Pitch.
6. Classify the different coders on the basis of waveform, parametric & transform domain coding of speech.
7. List out different applications of speech synthesis.
8. Different classifiers used in speech recognition.
9. Mention a real time application of speech technology.
10. Describe different types of software's used for speech processing.
11. Discuss different speech enhancement techniques.
12. Classify the different Audio File formats.

Text Books

1. Douglas O Shaughnessy "Speech Communication". Human and Machines Second Edition University Press.
2. Dr.Shaila D. Apte "Speech and Audio Processing," Wiley.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Bharati Vidyapeeth Deemed University
College of Engineering, Pune

Class: B. Tech (Electronics) Sem:-VIII

Subject: - Elective-II Fuzzy Logic & Neural Network

Teaching Scheme

Lecture: 03 Hours/week

Tutorial: 01 Hour/week

Examination Scheme

End semester exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Oral: 50 Marks

Credits: 04

Course Prerequisites:

Engineering Mathematics-II, Engineering Mathematics-III, Signals & Systems.

Course Objectives:

1. Introduce a relatively new computing paradigm for creating intelligent machines useful for solving complex real world problems.
 2. Insight into the tools that make up the soft computing technique: fuzzy logic, artificial neural networks and hybrid systems Techniques.
 3. To create awareness of the application areas of neural network technique
 4. Provide alternative solutions to the conventional problem solving techniques in image/signal processing, pattern recognition/classification, control system.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Design fuzzy system for Electronics applications.
2. Describe the fundamentals of Crisp sets, Fuzzy sets, Fuzzy Relations and Fuzzy Logic Controller.
3. Describe the various architectures of building an ANN and its applications.
4. Design and implement neural network systems to solve real-world problems

5. Develop models for different applications using fuzzy system.

Contents:

Unit I

Fuzzy Logic -I

[05 Hours]

Concept of Fuzzy number, fuzzy set theory (continuous, discrete), Operations on fuzzy sets, Fuzzy membership functions (core, boundary, support), primary and composite linguistic terms, Concept of fuzzy relation, composition operation (T-norm, T-conorm), Fuzzy if-then rules.

Unit II

Fuzzy Logic -II

[07 Hours]

Fuzzification, Membership Value Assignment techniques, De-fuzzification (Max membership principle, Centroid method, Weighted average method), Concept of fuzzy inference, Implication rules- Dienes-Rescher Implication, Mamdani Implication, Zadeh Implication, Fuzzy Inference systems -Mamdani fuzzy model, Sugeno fuzzy model, Tsukamoto fuzzy model, Implementation of a simple two-input single output FIS employing Mamdani model Computing.

Unit III

Fuzzy Control Systems

[06 Hours]

Assumptions in a Fuzzy Control System Design, Fuzzy Logic Controllers, Comparison with traditional PID control, advantages of FLC, Architecture of a FLC: Mamdani Type, Example Aircraft landing control problem, washing machine and vacuum cleaner.

Unit IV

Artificial Neural Network -I

[05 Hours]

Biological neuron, Artificial neuron model, concept of bias and threshold, Mc Culloch-Pits Neuron Model, implementation of logical AND, OR, XOR functions Soft Topologies of neural networks, learning paradigms: supervised, unsupervised, reinforcement, Linear neuron model : concept of error energy, gradient descent algorithm and application of linear neuron for linear regression, Activation functions : binary, bipolar (linear, signum, log sigmoid, tan-sigmoid) Learning mechanisms: Hebbian, Delta Rule or Perceptron and its limitations
Draft.

Unit V

Artificial Neural Network -II

[07 Hours]

Multilayer perceptron (MLP) and back propagation algorithm, Application of MLP for classification and regression, Self-organizing Feature Maps, k-means clustering, Learning vector quantization Radial Basis Function networks: Cover's theorem, mapping functions (Gaussian, Multiquadrics, Inverse multi quadrics), Application of RBFN for classification and regression, Hopfield network, associative memories.

Unit VI

Adaptive Neuro-Fuzzy Inference Systems (ANFIS)

[06 Hours]

ANFIS architecture, Hybrid Learning Algorithm, Advantages and Limitations of ANFIS Application of ANFIS/CANFIS for regression

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination.

List of Tutorials/Experiments:

1. Study of Fuzzy sets and operations.
2. Study of concepts of fuzzy sets core, support, alpha cuts..
3. Study of fuzzy relation, Max-min composition.
4. Analyze t-norms and t-conorms.
5. Analyze Fuzzy Inference systems -Mamdani fuzzy model, Sugeno fuzzy model, Tsukamoto fuzzy model.
6. Analyze architecture of a FLC: Mamdani Type with Example Aircraft landing control problem, washing machine and vacuum cleaner.
7. Study of learning mechanisms, approaches and activation functions in ANN.
8. Study of Multilayer perceptron (MLP) and back propagation algorithm.
9. Study of Radial Basis Function networks.
10. Study of ANFIS architecture and Hybrid Learning Algorithm.

List of Assignments:

1. Implement simple logic network using MP neuron model
2. Implement a simple linear regressor with a single neuron model.
3. Implement and test MLP trained with backpropagation algorithm
4. Implement and test RBF network.
5. Implement SOFM for character recognition.
6. Perform fuzzy sets operations.
7. Implement fuzzy membership functions (triangular, trapezoidal, gbell, PI, Gamma, Gaussian).
8. Implement defuzzification (Max-membership principle, Centroid method, Weighted average method)
9. Implement FIS with Mamdani inferencing mechanism.
10. Implement Simulink model for Vacuum cleaner, washing machine using Fuzzy Logic tools
11. Implement Fuzzy Logic Controller.
12. Implement perceptron learning, multilayer feed forward neural networks.

Text Books:

1. Fundamentals of Neural Networks: Architectures, Algorithms and Applications, Laurene Fausett, Pearson Education, Inc, 2008.
2. Fuzzy Logic with Engineering Applications, Third Edition Thomas, Timothy Ross, John Wiley & Sons, 2010.
3. Neuro- Fuzzy and Soft Computing, J.S. Jang, C.T. Sun, E. Mizutani, PHI Learning Private Limited.
4. Principles of Soft Computing , S. N. Sivanandam, S. N. Deepa, John Wiley & Sons, 2007

Reference Books:

1. Introduction to the theory of neural computation, John Hertz, Anders Krogh, Richard Palmer, Addison –Wesley Publishing Company, 1991
2. Neural Networks A comprehensive foundation,, Simon Haykin, Prentice Hall International Inc- 1999.
3. Neural and Adaptive Systems: Fundamentals through Simulations, José C. Principe Neil R. Euliano , W. Curt Lefebvre, John-Wiley & Sons, 2000
4. Pattern Classification, Peter E. Hart, David G. Stork Richard O.Duda, Second Edition, 2000

5. Pattern Recognition, SergiosTheodoridis , Konstantinos Koutroumbas, Fourth Edition, Academic Press, 2008
6. A First Course in Fuzzy Logic, Third Edition, Hung T. Nguyen, Elbert A. Walker, Taylor & Francis Group, LLC, 2008
7. Introduction to Fuzzy Logic using MATLAB, S. N. Sivanandam ,S.Sumathi, S. N. Deepa, Springer Verlag, 2007

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Bharati Vidyapeeth Deemed University

College of Engineering, Pune

Class: B.Tech (Electronics) Sem:- VII

SUBJECT: - Seminar

Teaching Scheme

Practical: 02 Hours/week

Examination Scheme

TW & Oral: 50 marks

Total Credits: 01

Course objective:

1. To develop ability of thinking and motivation for seminar
2. To expose the students to the state of the art
3. To develop ability to perform literature survey
4. To develop Seminar presentation and Technical Communication Skills

Course Outcomes: On successful completion of this course, students will be able to

1. Effectively communicate his technical idea or project
2. Learn master survey and literature survey techniques
3. Write Motivational Statement
4. Present the topic

Seminar Documentation should include

Cover Title page, plagiarism assessment, report Certificate from Guide, Abstract, list of Figures, List of Tables, Abstract, Presentation Slide using Microsoft power point including bibliography/references in IEEE standard format.

The student shall submit the seminar report in standard format, duly certified for satisfactory completion of the work by the concerned Guide and head of the department.

**Bharati Vidyapeeth Deemed University
College of Engineering, Pune**

Class: B.Tech (Electronics) Sem:- VIII

SUBJECT: - Project stage - II

Teaching Scheme

Practical: 08 Hours/week

Examination Scheme

TW & Oral: 150 marks

Total Credits: 08

Course prerequisites:

Project Stage -I

Course objective:

1. To familiarize the students with the product development cycle.
 2. To impart the importance of working as a team.
 3. To introduce the student to literature survey and documentation process.
 4. To encourage the students to visualize and formulate a viable solution to practical engineering problems.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Implement solution for an Engineering problem.
 2. Test and troubleshoot the implemented design.
 3. Execute the project implementation & financial budget in a timely manner.
 4. Student will be able to contribute and work effectively as team member.
 5. Generate project report and present it effectively.
-

Project Stage –II includes various steps such as:

1. System design
2. Testing
3. System documentation
4. Project report

B. Tech. (Electronics & Telecommunication) – 2014 Course

ENGINEERING MATHEMATICS-I

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

MATRICES

Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering .

(08 Hours)

Unit II

COMPLEX NUMBERS AND APPLICATIONS

Definition, Cartesian, Polar and Exponential Forms ,Argand's Diagram, De'Moivre's theorem and its application to find roots of algebraic equations., Hyperbolic Functions, Logarithm of Complex Numbers, Separation into Real and Imaginary parts, Application to problems in Engineering.

(08 Hours)

Unit III

DIFFERENTIAL CALCULUS

Successive Differentiation, nth Derivatives of Standard Functions, Leibnitz's Theorem.

EXPANSION OF FUNCTIONS

Taylor's Series and Maclaurin's Series.

(08 Hours)

Unit IV

DIFFERENTIAL CALCULUS

Indeterminate Forms, L' Hospital's Rule, Evaluation of Limits.

INFINITE SERIES

Infinite Sequences, Infinite Series, Alternating Series, Tests for Convergence, Absolute and Conditional Convergence, Power series, Range of Convergence.

(08 Hours)

Unit V

PARTIAL DIFFERENTIATION AND APPLICATIONS

Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables. Errors and Approximations.

(08 Hours)

Unit VI

JACOBIAN

Jacobians and their applications, Chain Rule, Functional Dependence.

MAXIMA AND MINIMA

Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.

(08 Hours)

Assignments

1. Rank ,System of Linear Equations.
2. Complex Numbers.
3. Differential Calculus and Expansion of Functions.
4. Indeterminate Forms and Infinite Series.
5. Partial Derivatives, Euler's Theorem on Homogeneous Functions.
6. Jacobians, Maxima and Minima of Functions of two variables.

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

02: Fundamentals of Civil Engineering

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 25 Marks		01 Credit	
Course Pre-requisites:					
The Students should have					
1.	Concepts of units and conversions of units.				
2.	Basic knowledge of Chemistry				
3.	Basic knowledge of geography, concept of latitude and longitude.				
Course Objectives:					
To make student understand the scope and application of Civil Engineering					
Course Outcomes:					
Students will be able to understand					
1.	Different building components and material				
2.	Classification of surveying				
3.	Levelling of the ground				
4.	Planning of building				
5.	Methods of irrigation and water supply				
6.	Different methods of transportation				
UNIT - I					
Civil Engineering Scope And Applications.				(06 Hours)	
Civil Engineering scope, importance and applications to other disciplines of Engineering; Civil Engineering construction process and role of Civil engineer; Government authorities related to Civil Engineering; Types of structures based on loading, material and configuration; Building components and their functions; Civil Engineering materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood, glass and aluminum.					
UNIT - II					
Surveying				(06 Hours)	
Objectives, Principles and Classification of Surveying; Linear, angular, Vertical and area Measurements and related instruments.					
UNIT - III					
Building Planning And Bye Laws				(06 Hours)	
Site selection for residential building; Principles of building planning; Building bye laws- necessity, Floor Space Index, Heights, open space requirements, set back distance, ventilation and lighting, concept of carpet and built up area, minimum areas and sizes for residential buildings; Concept of Eco friendly structures and Intelligent buildings.					
UNIT - IV					
Foundations and Earthquakes				(06 Hours)	
Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation. Earthquakes causes, effects and guidelines for earthquake resistant design, earthquake zones.					

UNIT - V	Irrigation And Water Supply	(06 Hours)
	Rainfall measurement and its use in design of dams; Types of dams, canals, methods of irrigation and their merits and demerits; hydropower structures ;Water supply, drinking water requirements and its quality, water and sewage treatment flow chart.	
UNIT - VI	Infrastructure	(06 Hours)
	Roads- types of roads and their suitability, cross section of roads, meaning of terms ; width of roads, super elevation, camber, gradient ,sight distance, materials used for construction of roads. Railways- Types of gauges, section of railway track, components of railway track, advantages. Bridges: Components - Foundation, Piers, Bearings, Deck. Airways- Components -Runway, Taxiway and Hangers.	
Term Work:		
(Term work shall consist of any eight exercises from the list given below.)		
1.	Study and use of prismatic compass and measurement of bearings.	
2.	Study and use of Dumpy level and reduction of levels by collimation plane method.	
3.	Area measurement by Digital Planimeter.	
4.	Drawing plan and elevation of a residential bungalow.	
5.	Study of features of topographical maps.	
6.	Assignment on collection of information on Civil Engineering materials.	
7.	Assignment on types of foundations.	
8.	Assignment problem on irrigation and hydropower structures.	
9.	Assignment on study of flow chart of water and sewage treatment.	
10.	Assignments on types of transportation systems.	
Text Books:		
1.	“ Surveying- Vol I “ - S.K. Duggal , Tata McGraw Hill Publication.	
2.	“Built Environment” – Shah , Kale, Patki, , Tata McGraw Hill Publication	
3.	“Building Construction” – Dr. B.C. Punmia , Laxmi Publication	
4.	“Irrigation and water Power Engineering “- Dr. P.N. Modi,Standard Publishers ,New Delhi	
5.	“Text book of Transportation Engineering “- Arora, Charotar Publishers.	
6.	Water supply and sanitary engineering-Rangawala, Charotar Publishers.	
7.	“Basic Civil engineering”- M.S. Palanichamy- Tata McGraw Hill Publication	
Reference Books:		
1.	“Surveying –Theory and Practice”-James Anderson- Tata McGraw Hill Publication	

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

ENGINEERING GRAPHICS

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -04 Hours / Week	End Semester Examination: - 60Marks	<u>05</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

Unit I	<p>Lines and Dimensioning in Engineering Drawing Different types of lines used in drawing practice, Dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.</p> <p>Curves used in Engineering Practice Ellipse by Directrix-Focus method, Arcs of Circle method, Concentric circle method and Oblong method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone, Loci of points- Slider Crank mechanisms.</p>	(6)
Unit II	<p>Orthographic Projection Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections.</p>	(6)
Unit III	<p>Isometric Projections Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, and Sphere.</p>	(6)
Unit IV	<p>Projections of Points and Lines and planes Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines, Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP</p>	(6)
Unit V	<p>Projection of Solids Projection of prism, pyramid, cone and cylinder by rotation method.</p>	(6)
Unit VI	<p>Section of Solids Types of section planes, projections of solids cut by different sections of prism, pyramid, cone and cylinder.</p>	(6)

Term work

Term work shall consist of five half-imperial size or A2 size (594 mm x 420 mm) sheets. Assignment 05 Problems on each unit in A3 size Drawing Book

SHEETS

1. Types of lines, Dimensioning practice, Free hand lettering, 1st and 3rd angle methods symbol.
2. Curves and loci of points
3. Projections of Points and Lines and planes

4. Orthographic Projections
5. Isometric views
6. Projection of Solids

Text Books

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India,
2. "Text Book on Engineering Drawing", K.L.Narayana & P.Kannaiah, Scitech Publications, Chennai.
3. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi ,
4. "Engineering Drawing and Graphics", Venugopal K., New Age International Publishers.
5. M. B. Shah and B. C. Rana, "Engineering Drawing", 1st Ed, Pearson Education, 2005
6. P. S. Gill, "Engineering Drawing (Geometrical Drawing)", 10 Edition, S. K. Kataria and Sons, 2005
7. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 Edition, 1988

ENGINEERING CHEMISTRY

Teaching Scheme:
Lectures: 4Hrs/Week
Practical: 2Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory: 04
Practical: 01
Term Work: 25marks

Unit I

WATER

Introduction, Hardness of water, Effect of hard water on boilers and heat exchangers: a) boiler corrosion b) caustic embrittlement c) scales and sludges d) priming and foaming
Water softening methods for industrial purposes :a) Zeolite process b) Phosphate conditioning Numerical based on the zeolite process

(08 Hours)

Unit II

MATERIAL CHEMISTRY

Crystallography : Unit cell, Laws of crystallography, Weiss indices and Miller indices, Crystal defects (point and line defects), X-ray diffraction – Bragg's Law and numerical.

Cement : Introduction of cement, Hydraulic/ Non-hydraulic cementing materials, classification of cement, chemistry of portland cement, chemical composition and compound constituents of portland cement, properties of cement and its applications.

(08 Hours)

Unit III

FUELS

Introduction, classification of fuels, calorific value of fuels, NCV and GCV, Determination of calorific values using Bomb calorimeter and Boys' gas calorimeter.

Theoretical calculation of calorific value of a fuel, Analysis of coal a) Proximate b) Ultimate analysis of coal, Numericals based on NCV, GCV.

(08 Hours)

Unit IV

CORROSION AND ITS PREVENTION

Corrosion: - Definition, atmospheric corrosion-mechanism, Wet corrosion-mechanism, Electrochemical and galvanic series, Factors affecting corrosion-nature of metal, nature of environment.

Methods of prevention of corrosion- Cathodic and Anodic protection, Metallic coatings, Electroplating, Hot dipping.

(08 Hours)

Unit V

ELECTROCHEMISTRY

Introduction, Arrhenius Ionic theory, Kohlrausch's law of independent migration of ions

Laws of electrolysis: Faradays Laws, Ostwald's dilution law, Acids and Bases, concept of pH and pOH, Buffer solutions, Solubility Product, Redox Reactions.

Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Overvoltage, Conductometric Titrations, Fuel cells, Lead Acid Storage Cell and numericals based on the above articles.

(08 Hours)

Unit VI

STEREOCHEMISTRY

Introduction, chirality, optical activity, Enantiomers, Diastereomers, projection formula of tetrahedral carbon- Newman projection, Wedge projection, Fischer projection, Geometrical isomerism :- cis and trans isomerism, E and Z isomers

Optical isomerism :- Mesoform, the number of optical isomers for chiral molecules,

Conformations :- conformations of ethane, conformations of n-butane

(08 Hours)

TERM WORK

Experiments

Any Ten experiments from the following:

1. Estimation of hardness of water by EDTA method.
2. Estimation of chlorine by Mohr's method.
3. Determination of percentage of Ca in given cement sample
4. Determination of coefficient of viscosity by Ostwald's viscometer
5. Study of Bomb calorimeter for determination of calorific value.
6. Determination of calorific value of gas fuel by using Boy's gas calorimeter.
7. Determination of dissolved oxygen in a water sample.
8. To determine the Molecular Weight of polymer
9. Estimation of Copper from brass sample solution by Iodometrically
10. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
11. To standardize NaOH solution and hence find out the strength of given hydrochloric Acid solution
12. To determine Surface Tension of given liquid by Stalagmometer
13. Study of corrosion of metals in medium of different pH.
14. To set up Daniel cell
15. To determine pH of soil
16. To determine Acidity of soil

Assignments

7. Effect of hard water on boilers and heat exchangers
8. Hydraulic/ Non-hydraulic cementing materials
9. Analysis of coal a) Proximate b) ultimate analysis of coal
10. Wet corrosion-mechanism, Electroplating, Hot dipping
11. Geometrical isomerism :- cis and trans isomerism, E and Z isomers
12. Fuel cells

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

Course: ELEMENTS OF ELECTRONICS ENGINEERING

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDITS</u>
Lectures : 03 Hrs/week Practicals : 02 Hrs/week	End semester exam : 60 Marks Continuous Assessment : 40 Marks Term work : 25 Marks	03 01

Course Prerequisite:

Students have completed a course in Physics and have the knowledge of laws of Dynamics

Course Objective:

This course will introduce the concepts of electronic engineering . By the end of the course, student will be familiar with electronic components, semiconductor devices and their applications. The course emphasizes on Electronic devices, ICs and Digital systems.

Course Outcomes:

At the end of the course, a student will be able to

- 1 understand the basic semiconductor physics and semiconductor devices.
- 2 understand transport phenomenon of semiconductor devices through energy band diagrams.
3. to identify electronic components like, resistors, capacitors, inductors and to study characteristics of semiconductor devices.
4. apply the knowledge of diodes to the rectifier and filter circuits.
5. to represent numerical values in various number systems and perform number conversions between different number system and study applications of logic gates.

Unit-I

(08 Hours)

Electron Dynamics:

Motion of electron in electric, magnetic and combined electric and magnetic fields. Detection and focusing system of Oscilloscope tube-Television picture tube- LCD and Flat panel displays.

Unit-II

(08 Hours)

Transport phenomenon in semiconductor:

Mobility and conductivity - Drift and Diffusion currents – Continuity Equation – Minority carrier injection and recombination in Homogeneous semiconductor – Thermistors – Piezo Resistors – Hall Effect – Thermoelectric effect

Unit-III

(08 Hours)

Electronic components:

Resistors -Inductors and Capacitors and their types – Construction and characteristics of PN junction diode – Zener Diode – Tunnel diode - Bipolar junction transistors – CB,CC,CE circuits, Field Effect transistors .

Unit-IV

(08 Hours)

Electronic Devices and Linear ICs:

Rectifiers: Half wave, Full wave and Bridge rectifiers - capacitor filter-wave forms-ripple factor regulation characteristics. Special semiconductor devices: FET - SCR - LED - VI characteristics – applications. Introduction to Op-Amp and Timers.

Unit-V**(08 Hours)****Digital system:**

Number system: Binary system, Decimal to Binary, Octal system, Hexadecimal system, binary –addition, subtraction, multiplication and division.

Logic gates: OR, AND, NOT, Exclusive-OR, NOR, NAND gates, Logic networks, Gate Standardization, Introduction to Logic Circuits –Combinational and Sequential Circuits.

(08 Hours)**Unit-VI****Consumer Electronics:**

Basic study of various products such as radio receivers , television sets , MP3 players, video recorders , DVD players , digital cameras , microwaves , personal computers , video game consoles , telephones and mobile phones , laptops and palmtops and fax machines

Term work: For term work assessment the students will have to perform minimum of eight practicals.

- 1) To study various electronics components: Resistors, Inductors, Capacitors, diodes and transistors.
- 2) To study CRO and different modes of operation and some application.
- 3) To plot V-I characteristics of PN junction diode.
- 4) To plot regulation characteristics of half wave rectifier with and without capacitor filter.
- 5) To plot regulation characteristics of Full wave rectifier with and without capacitor filter.
- 6) To plot input-output characteristics of CE configuration of BJT.
- 7) To study basic logic gates: AND, OR, NOT, NAND, NOR, Ex-OR, Ex-NOR.
- 8) To realize the Boolean expression using basic gates.
- 9) To verify the De-Morgan's theorem.
- 10) To fabricate at least 5 electronics component on a PCB.

TEXT BOOKS

1. Mottershed Allen, Electronic Devices & Circuits, PHI
2. R. P. Jain, Modern Digital Electronics, Mc Graw Hill

REFERENCE BOOKS

1. Thomas L. Floyd, Electronic Devices, Pearson Education (Sixth edition)
2. Millman & Halkis, Electronic Devices & Circuits, PHI
3. Malvino Leach, Digital Principles & Applications, Mc Graw Hill
4. Millman & Halkis, Integrated Electronics, MGH

Syllabus for Unit Test :

Unit Test 1	Unit I ,II & III
Unit Test 2	Unit IV, V &VI

Workshop Technology

TEACHING SCHEME:

Theory: -
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: -
Continuous Assessment: -
Term Work: 50 Marks

CREDITS ALLOTTED:

01 Credit

Course Pre-requisites: Basic knowledge of hand tools used in day to day life.

Course Objectives: Make the students familiar with basic manufacturing processes

Course Outcomes: students should be able to understand

1. basic Manufacturing Processes used in the industry,
2. importance of safety

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the following topics.

Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances
Term work includes one job involving joint and woodturning.

Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.
Term work to include one job involving fitting to size, male-female fitting with drilling and tapping.

Sheet Metal Practice Introduction to primary technology processes involving bending, punching and drawing various sheet metal joints, development of joints.

Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.
Term work includes one job involving various joining processes like riveting, joining of plastics, welding, brazing, etc.

Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.

Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.

Plumbing (Demonstration Common for Electrical & Non electrical Group)

Types of pipe joints, threading dies, Pipe fittings.

ENGINEERING MATHEMATICS-II

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment:40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

DIFFERENTIAL EQUATIONS (DE)

Definition, Order and Degree of DE, Formation of DE. Solutions of Variable Separable DE, Exact DE, Linear DE and reducible to these types.

(08 Hours)

Unit II

APPLICATIONS OF DIFFERENTIAL EQUATIONS

Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchoff's Law of Electrical Circuits, Motion under Gravity, Rectilinear Motion, Simple Harmonic Motion, One-Dimensional Conduction of Heat, Chemical engineering problems.

(08 Hours)

Unit III

FOURIER SERIES

Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis.

INTEGRAL CALCULUS

Reduction formulae, Beta and Gamma functions.

(08 Hours)

Unit IV

INTEGRAL CALCULUS

Differentiation Under the Integral Sign, Error functions.

CURVE TRACING

Tracing of Curves, Cartesian, Polar and Parametric Curves. Rectification of Curves.

(08 Hours)

Unit V

SOLID GEOMETRY

Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder.

(08 Hours)

Unit VI

MULTIPLE INTEGRALS AND THEIR APPLICATIONS

Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.

(08 Hours)

Assignments

1. Differential Equations.
2. Application of DE.
3. Fourier Series and Integral Calculus.
4. DUIS and Curve Tracing.
5. Solid Geometry.
6. Double and Triple integrations, area and volume.

Syllabus for Unit Test:

Unit Test I :- Unit I, II, III

Unit Test II :- Unit IV, V, VI

FUNDAMENTALS OF MECHANICAL ENGINEERING

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -03Hours / Week	End Semester Examination: - 60Marks	<u>04</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

UNIT-I	<p>Thermodynamics- Heat, work and Internal Energy, Thermodynamic State, Process, Cycle, Thermodynamic System, First Law of Thermodynamics, Application of First Law to steady Flow and Non Flow processes, Limitations of First Law, PMM of first kind (Numerical Treatment), Second Law of Thermodynamics – Statements, Carnot Engine and Carnot Refrigerator, PMM of Second Kind (Elementary treatment only)</p>	(08)
UNIT-II	<p>Introduction to I.C. Engines and turbines- Two stroke, Four Stroke Cycles, Construction and Working of C.I. and S.I. Engines, Hydraulic turbines, steam turbines, gas turbines.(Theoretical study using schematic diagrams)</p> <p>Introduction to refrigeration, compressors & pumps- Vapor compression and vapor absorption system, house hold refrigerator, window air conditioner. Reciprocating and rotary compressor, Reciprocating and centrifugal pump. (Theoretical study using schematic diagrams)</p>	(08)
UNIT-III	<p>Energy Sources - Renewable and nonrenewable, solar flat plate collector, Wind, Geothermal, Wave, Tidal, Hydro power, Bio-gas, Bio-Diesel, Nuclear power.</p> <p>Heat transfer- Statement and explanation of Fourier’s law of heat conduction, Newton’s law of cooling, Stefan Boltzmann’s law. Conducting and insulating materials and their properties, types of heat exchangers and their applications.</p>	(08)

UNIT-IV	<p>Properties of fluids- Introduction, Units of measurements, mass density, specific weight, specific volume and relative density, viscosity, pressure, compressibility and elasticity, gas laws, vapor pressure, surface tension and capillarity, regimes in fluid mechanics, fluid properties and analysis of fluid flow.</p> <p>Properties of Materials and their Applications- Metals – Ferrous and Non-Ferrous, Nonmetallic materials, smart materials, Material selection criteria.</p>	(08)
UNIT-V	<p>Mechanical devices - Types of Belts and belt drives, Chain drive, Types of gears, Types of Couplings, friction clutch (cone and plate), brakes, Power transmission shafts, axles, keys, bush and ball bearings.</p> <p>Mechanisms- Slider crank mechanism, Four bar chain mechanism, List of various inversions of Four bar chain mechanism, Geneva mechanism, Ratchet and Paul mechanism</p>	(08)
UNIT-VI	<p>Machine Tools- Lathe Machine – Centre Lathe, Drilling Machine – Study of Pillar drilling machine, Introduction to NC and CNC machines, Grinding machine, Power saw, Milling Machine.</p> <p>Introduction to manufacturing processes and Their Applications- Casting, Sheet metal forming, Sheet metal cutting, Forging, Fabrication, Metal joining processes.</p>	(08)

List of experiments-

The Term Work shall consist of **any Eight** experiments of following list

1	Measurement of viscosity using Redwood viscometer.
2	Assembly and working of 4-bar, 6-bar, 8-bar planer mechanisms
3	Finding relation between input angle and output angle for various link lengths.
4	Study of domestic refrigerator & window air-conditioner

5	Demonstration of operations of centre lathe
6	Demonstration of operations on drilling machines
7	Demonstration of Two stroke and four stroke engine
8	Study of power transmitting elements: Coupling, Gears and bearings
9	Demonstration of pumps and compressor
10	Study and demonstration of different types of clutches.

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the following topics.

Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances
Term work includes one job involving joint and woodturning.

Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.
Term work to include one job involving fitting to size, male-female fitting with drilling and tapping.

Sheet Metal Practice Introduction to primary technology processes involving bending, punching and drawing various sheet metal joints, development of joints.

Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.
Term work includes one job involving various joining processes like riveting, joining of plastics, welding, brazing, etc.

Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.

Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.

Plumbing (Demonstration Common for Electrical & Non electrical Group)

Types of pipe joints, threading dies, Pipe fittings.

10: Engineering Mechanics

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week		End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		Term Work: 25 Marks	01 Credit
Course Pre-requisites:			
The Students should have knowledge of			
1.	Scalar and Vector		
2.	Newton's law of motion		
3.	Law of friction		
4.	Concept of physical quantities, their units and conversion of units		
5.	Concept of differentiation and integration		
Course Objectives:			
	To develop and apply the concept of resultant and equilibrium for various static and dynamic engineering problems.		
Course Outcomes:			
The student should be able to			
1.	calculate resultant and apply conditions of equilibrium.		
2.	analyze the truss and calculate friction force.		
3.	calculate centroid and moment of inertia.		
4.	solve problem on rectilinear motion.		
5.	solve problems on curvilinear motion.		
6.	use D'Alembert's principle, Work Energy principle and Impulse Momentum principle for particle.		
UNIT - I	Resultant and Equilibrium		(06 Hours)
	Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point.		
UNIT - II	Truss and Friction		(06 Hours)
	Coefficient of Static Friction, Impending motion of Blocks, Ladders and Belts. Analysis of Perfect Trusses - Method of Joint, Method of Section and Graphical Method.		
UNIT - III	Centroid and Moment of Inertia		(06 Hours)
	Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia.		

UNIT - IV	Kinematics of Rectilinear motion of a Particle	(06 Hours)
	Equations of motion, Constant and variable acceleration, Motion Curves, Relative motion, Dependent motion.	
UNIT - V	Kinematics of Curvilinear motion of a Particle	(06 Hours)
	Motion of a Projectile, Cartesian components, Normal and Tangential components of a curvilinear motion.	
UNIT - VI	Kinetics of a Particle	(06 Hours)
	D'Alemberts Principle, Work-Energy Principle and Impulse-Momentum Principle, Coefficient of Restitution, Direct Central Impact.	
Term Work:		
A) The term-work shall consist of minimum Five experiments from list below.		
1. Determination of reactions of Simple and Compound beam.		
2. Study of equilibrium of concurrent force system in a plane.		
3. Determination of coefficient of friction for Flat Belt.		
4. Determination of coefficient of friction for Rope.		
5. Study of Curvilinear motion.		
6. Determination of Coefficient of Restitution.		
B) The term-work shall also consist of minimum Five graphical solutions of the problems on different topics.		
Text Books:		
1) "Engineering Mechanics (Statics and Dynamics)", Hibbeler R.C., McMillan Publication.		
2) "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.		
3) "Engineering Mechanics", Bhavikatti S.S. and Rajashekarappa K.G., New Age International (P) Ltd.		
Reference Books:		
1. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.		
2. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication.		
3. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.		
4. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.		
5. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.		
6. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.		
Syllabus for Unit Test:		
Unit Test -1	UNIT – I to III	
Unit Test -2	UNIT – IV to VI	

ENGINEERING PHYSICS

Teaching Scheme:	Examination scheme:	Credits Allotted:
Lectures: 4Hrs/Week	End Semester Examination: 60 marks	Theory: 04
Practical: 2Hr/Week	Continuous Assessment: 40 marks	Practical: 01
	Term Work: 25marks	

UNIT – I

MODERN PHYSICS

Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focussing, Wavelength and resolution, Specimen limitation, Depth of field and focus, Electron microscope, Positive rays, Separation of isotopes by Bainbridge mass spectrograph.

NUCLEAR PHYSICS

Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium, Fission energy, Critical mass and size, Reproduction factor, Chain reaction and four factor formula, Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions, Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron,

(08hours)

UNIT – II

SOLID STATE PHYSICS

Band theory of solids, Free electron theory, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.

SUPERCONDUCTIVITY

Introduction, Properties of a super conductor, Meissner's effect, Critical field, Types of superconductors, BCS theory, High temperature superconductors, Application of superconductors.

(08hours)

UNIT – III

THERMODYNAMICS

Zeroth law of thermodynamics, first law of thermodynamics, determination of J by Joule's method, Applications of first law, heat engines, Carnot's cycle and Carnot's engine, second law of thermodynamics, entropy, change in entropy in reversible and irreversible processes, third law of thermodynamics.

NANOSCIENCE

Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles (Physical and chemical), synthesis of colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications.

(08hours)

UNIT-IV

OPTICS - I

INTERFERENCE

Interference of waves, Visibility of fringes, interference due to thin film of uniform and non-uniform thickness, Newton's rings, Engineering applications of interference (optical flatness, interference filter, non-reflecting coatings, multi-layer ARC).

DIFFRACTION

Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Diffraction at a circular aperture (Result only), Plane diffraction grating, Conditions for principal maxima and minima, Rayleigh's criterion for resolution, Resolving power of grating and telescope.

(08 hours)

UNIT-V

OPTICS - II

POLARISATION

Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism, Polaroids, Elliptical and circular polarisation, Quarter and half wave plates, Production of polarised light, Analysis of polarised light, half shade polarimeter, LCD.

LASERS

Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Properties of lasers, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.

(08 Hours)

UNIT-VI

ARCHITECTURAL ACOUSTICS

Elementary acoustics, Limits of audibility, Reverberation and reverberation time, Sabine's formula, Intensity level, Sound intensity level, Sound absorption, Sound absorption coefficient, different types of noise and their remedies, Sound absorption materials, basic requirement for acoustically good hall, factors affecting the architectural acoustics and their remedies.

QUANTUM MECHANICS

Electron diffraction, Davisson and Germer's experiment, Wave nature of matter, De-Broglie waves, Wavelength of matter waves, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box and non rigid box.

(08hours)

TERM WORK

Experiments

Any ten experiments from the following:

1. Determination of band gap of semi-conductor.
2. Solar cell characteristics.
3. e/m by Thomson's method.
4. Uses of CRO for measurement of phase difference and Lissajous figures.
5. Hall effect and Hall coefficient.
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode, Photo diode, LED, Ge/Si diode).
8. Planck's constant by photodiode.
9. Wavelength by diffraction grating.
10. Newton's rings.
11. Ultrasonic interferometer.
12. Sound intensity level measurement.
13. Wavelength of laser by diffraction.
14. Determination of refractive index for O-ray and E-ray.
15. Brewster's law.

Assignments

1. Recent advances in Nanotechnology
2. Nuclear radiation detectors.
3. Atomic force microscope (AFM).
4. Advanced opto-electronic devices.
5. Laser in Industry.
6. Different spectroscopic methods – a comparison (Raman, IR, UVR, etc.).

Unit Tests:

Unit Test I : Unit I, II, III

Unit Test II: Unit IV, V, VI

Reference Books:

1. Physics for Engineers – Srinivasan M.R.
2. A text Book of Engineering Physics- M.N. Avadhanulu, P.G. Kshirsagar
3. Engineering Physics- K. Rajagopal
4. Electronics Principles – A.P.Molvino
5. Fundamentals of Optics – Jenkins and White
6. A Textbook of Sound – Wood
7. Engineering Physics – Sen, Gaur and Gupta

02: Fundamentals of Electrical Engineering

TEACHING SCHEME:		EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week		End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		Term Work: 25 Marks	01 Credit
Course Pre-requisites:			
The Students should have			
1.	Mathematics		
2.	Physics		
Course Objectives:			
	The course introduces fundamental concepts of DC and AC circuits, electromagnetism, transformer and measuring instruments and electronic components to all first year engineering students.		
Course Outcomes:			
1.	Understand and apply knowledge of basic concepts of work ,power ,energy for electrical, mechanical and thermal systems		
2.	Understand and apply knowledge of Kirchoff's laws and network theorems to solve electrical networks		
3.	Describe construction, principle of operation, specifications and applications of capacitors and batteries		
4.	Describe and apply fundamental concepts of magnetic and electromagnetic circuits for operation of single phase transformer		
5.	Define basic terms of single phase and three phase ac circuits and supply systems		
6.	Know and use electrical safety rules		
UNIT - I	Basic concepts	.	(06 Hours)
	Concept of EMF, Potential Difference, current, resistance, Ohms law, resistance temperature coefficient, SI units of Work, power, energy. Conversion of energy from one form to another in electrical, mechanical and thermal systems		
UNIT - II	Network Theorems		(06 Hours)
	Voltage source and current sources, ideal and practical, Kirchoff's laws and applications to network solutions using mesh analysis, Simplifications of networks using series- parallel, Star/Delta transformation. Superposition theorem, Thevenin's theorem, Max Power Transfer theorem.		
UNIT - III	Electrostatics		(06 Hours)
	Electrostatic field, electric field intensity, electric field strength, absolute		

	permittivity, relative permittivity, capacitor composite, dielectric capacitors, capacitors in series & parallel, energy stored in capacitors, charging and discharging of capacitors, Batteries-Types, Construction & working.	
UNIT - IV	Magnetic Circuit & Transformer	(06 Hours)
	Magnetic effect of electric current, cross and dot convention, right hand thumb rule, concept of flux, flux linkages, Flux Density, Magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability, B-H curve, hysteresis loop, series-parallel magnetic circuit, composite magnetic circuit, Comparison of electrical and magnetic circuit Farady's law of electromagnetic induction, statically and dynamically induced emf, self inductance, mutual inductance, coefficient of coupling, Single phase transformer construction, principle of operation, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Determination of Efficiency & Regulation by direct load test.	
UNIT - V	AC Fundamentals & AC Circuits	(06 Hours)
	AC waveform definitions, form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar & rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3-ph AC Circuits.	
UNIT - VI	Electrical Wiring and Illumination system	(06 Hours)
	Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED), Study of Electricity bill.	

Term Work:

The term work shall consist of record of minimum eight exercises / experiments.

1. Determination of resistance temperature coefficient
2. Verification of Superposition Theorem
3. Verification of Thevenin's Theorem
4. Verification of Kirchoff's Laws
5. Verification of Maximum power transfer Theorem
6. Time response of RC circuit
7. Study of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$ & $X_L = X_C$
8. Verification of current relations in three phase balanced star and delta connected loads.
9. Direct loading test on Single phase transformer
 - a) Voltage and current ratios.
 - b) Efficiency and regulations .
10. Study of a Residential (L.T.) Bill

Text Books:	
1) B.L.Theraja- “A Textbook of Electrical Technology” Volume- I, S.Chand and Company Ltd.,New Delhi

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

FUNDAMENTALS OF COMPUTING

<u>TEACHING SCHEME</u>	<u>EXAMINATION SCHEME</u>	<u>CREDITS</u>
Practical: 2 Hours/Week	Term Work: 50 Marks	01

Course Prerequisite:

Students must possess knowledge about basic fundamentals of computer and professional Microsoft office development tools.

Course Objective:

This course will introduce the concepts of C language software development and compiling tool. By the end of the course, student will be familiar with various fundamentals of C- language, software file system, computer graphics and its various multimedia applications.

Course Outcomes: At the end of the course, a student will be able to

1. Write C programs using conditional statements and loops.
 2. Execute the logic using Arrays and strings and perform matrix operation using them.
 3. Perform logic operations using Structures & Unions and use them with pointers.
 4. Write C program for File manipulations and Dynamic memory allocation
 5. Understand the concept and application of Graphics & Multimedia.
-

Unit –I

(08 Hours)

Introduction: Computer systems, Hardware & software concepts.

Algorithm / pseudo code, flowchart, program development steps, Computer Languages: machine, symbolic, and high-level languages, Creating and running programs: Writing, editing, compiling, linking, and executing.

Basic of C: Structure of a C program, identifiers, basic data types and sizes. Constants, variables, arithmetic, relational and logical operators, increment and decrement operators, conditional operator, assignment operators, bit-wise Operators expressions, type conversions, conditional expressions, precedence and order of evaluation, Managing input and output operations, Sample programs.

Conditional Statements and Loops: Decision making within a program, conditions, if statement, if-else statement, loops: while loop, do while, for loop. Nested loops, infinite loops, switch statement, sample programs

Unit-II

(08 Hours)

Arrays & Strings

Arrays - concepts, declaration, definition, accessing elements, storing elements, Strings and string manipulations, 1-D arrays, 2-D arrays and character arrays, string manipulations, Multidimensional arrays , Array applications: Matrix Operations

Unit –III

(08 Hours)

Function & Pointers

FUNCTIONS: basics, parameter passing, storage classes- extern, auto, register, static, scope rules, user defined functions, standard library functions, recursive functions, Recursive solutions for Fibonacci series, Towers of Hanoi, header files, example c programs. Passing arrays & strings to functions.

Pointers: concepts, initialization of pointer variables, pointers and function arguments, passing by address, address arithmetic, Character pointers and functions, pointers to pointers, pointers and multidimensional arrays.

Unit-IV

(08 Hours)

Structures & Unions

Derived types- structures- declaration, definition and initialization of structures, accessing structures, nested structures, arrays of structures, structures and functions, pointers to structures, self referential structures, unions, typedef, bit-fields, program applications.

Unit-V

(08 Hours)

Files and Dynamic Memory Allocation

Input and output – concept of a file, text files and binary files, Formatted I/o, file I/o operations, example programs.

Dynamic memory allocation, malloc, calloc, realloc ,free. Concepts of linked lists, Sample programs

Unit-VI

(08 Hours)

Graphics and Multimedia

Introduction to Computer Graphics: Overview of Computer Graphics, Computer Graphics Application, Description of graphics devices, Input Devices for Operator Interaction

Introduction to Multimedia:History, elements of multimedia – text, audio, video, image, animation, Multimedia applications different areas

TEXT BOOKS

1. Programming in ANSI C – E Balagurusamy (5th Edition-TMH)
2. Computer Graphics: Principles and Practices in C – Andrea Von Dam, Steven K Fiener, F Hughes John [2nd Edition- Pearson]

REFERENCE BOOKS

1. Let Us C- Yashwant Kanitkar
2. D. Hearn, M. Baker, "Computer Graphics - C Version", 2nd Edition, Pearson Education, 2002, ISBN 81 - 7808 - 794 – 4
3. Ralf Steinmetz, Klara Nahrstedt, "Multimedia: Computing, Communication and Applications"
4. Judith Jeffcoate, " Multimedia Technique"

Term work will consist of minimum of ten assignments based on C programming language.

List of Practicals

1. a. Write a C program to take user Input and print it on the screen.
b. Write a C program to perform addition or subtraction of two numbers.
c. Write a C program to find whether the number is Odd or Even.
2. a. Write a C program to find out Prime numbers.
b. Write a C program to find out Fibonacci series.
3. Write C programs to print different patterns
4. a. Write a C program to do factorial using recursion.
b. Write a C program to find out Armstrong number.
5. Write a C program to sort the array in Ascending & Descending order.
6. Write C programs to perform operations on 2-D arrays
7. Write a C program to perform different operations on strings.
8. Use of Pointers
 - a. Write a C program to swap numbers using pointers
 - b. Write a C program to show the use of pointers in arrays.
 - c. Write a C program to use functions using pointers.
9. a. Write a C program to create student mark sheet using structures
b. Write a C program to show the use of structure using pointers
10. Write a C program to perform different operations on Files.
11. Write a C program to create single Linked List.

B.Tech.(E&TC) Sem-III

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

Class: B. Tech (E & TC) Sem:- III

SUBJECT: - Engineering Mathematics-III

Lecture: 3 hours/week

Tutorial: 1 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

Course prerequisites:

Students should have basic knowledge of:

- Differential calculus
- Integral calculus
- Complex numbers
- Vector algebra

Course objective:

To develop ability to use the mathematical techniques, skills, and tools necessary for engineering practice.

Course Outcomes: On successful completion of this course, students will be able to

1. Form mathematical modeling of systems using differential equations and ability to solve linear differential equations with constant coefficient.
2. Apply basics of analytic functions and the basics in complex integration which is used to evaluate complicated real integrals.
3. Apply theorems to compute the Laplace transform, inverse Laplace transforms.
4. Solve difference equation by Z-transform.
5. Calculate the gradients and directional derivatives of functions of several variables.
6. Use Green's theorem to evaluate line integrals along simple closed contours on the plane.

Contents:

Unit-I

Linear Differential Equations (LDE) (08Hours)

Solution of nth order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy's & Legendre's DE, Solution of Simultaneous & Symmetric Simultaneous DE, Modeling of Electrical Circuits.

Unit-II

Complex Variables (08Hours)

Functions of Complex Variables, Analytic Functions, C-R Equations, Conformal Mapping, Bilinear Transformation, Cauchy's Theorem, Cauchy's Integral Formula, Laurent's Series, Residue Theorem

Unit-III

Transforms (08Hours)

Fourier Transform (FT): Complex Exponential Form of Fourier Series, Fourier Integral Theorem, Sine & Cosine Integrals, Fourier Transform, Fourier Sine and Cosine Transform and their Inverses. Introductory Z-Transform (ZT): Definition, Standard Properties, ZT of Standard Sequences and their Inverses. Solution of Simple Difference Equations.

Unit-IV

Laplace Transform (LT) (08Hours)

Definition of LT, Inverse LT. Properties & theorems. LT of standard functions. LT of some special functions viz., Periodic, Unit Step, Unit Impulse, ramp, jump, . Problems on finding LT & inverse LT. Applications of LT and Inverse LT for solving ordinary differential equations.

Unit -V

Vector Differential Calculus (08Hours)

Physical Interpretation of Vector Differentiation, Vector Differential Operator, Gradient, Divergence and Curl, Directional Derivative, Solenoidal, Irrotational and Conservative Fields, Scalar Potential, Vector Identities.

Unit-VI

Vector Integral Calculus

(08Hours)

Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence Theorem, Stoke's Theorem, Applications to Problems in Electro-Magnetic Fields.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Assignments:

1. Linear Differential Equations
2. Complex Variables
3. Transforms
4. Laplace Transform
5. Vector Differential Calculus
6. Vector Integral Calculus

Text Books:

1. Advanced Engineering Mathematics by Peter V. O'Neil (Cengage Learning).
2. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.).

Reference Books:

1. Engineering Mathematics by B.V. Raman (Tata McGraw-Hill).
2. Advanced Engineering Mathematics, 2e, by M. D. Greenberg (Pearson Education).
3. Advanced Engineering Mathematics, Wylie C.R. & Barrett L.C. (McGraw-Hill, Inc.)
4. Higher Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi).
5. Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar
(Pune Vidyarthi Griha Prakashan, Pune).

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

Class: B.Tech (E & TC) Sem:- III

**SUBJECT: - Electronic Devices and Applications
Alternative Name
(Electronic Devices & Applications)**

Lecture: 4 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Practical.: 50 marks

Course prerequisites:

- Knowledge of EEE.

Course objective:

1. To make student understand working of bipolar junction transistor and field effect transistor with different biasing techniques
2. To make student understand a practical approach of design and analysis of waveshaping circuits using diode and multivibrator using transistors
3. To make student understand working of FET and MOSFET and its applications
4. To make student understand working of optoelectronic devices and its applications.
5. To make student understand the fabrication process of PCB

Course Outcomes: On successful completion of this course, students will be able to

1. Demonstrate knowledge of working and applications of diode.
2. Demonstrate knowledge of working of BJT with different biasing techniques.
3. Analyze applications of BJT as an amplifier and multivibrator.
4. Explain working of FET and MOSFET and its applications.
5. Demonstrate knowledge of working of optoelectronic devices.
6. Design, built and test any small electronic circuit on PCB.

Contents:

Unit-I

Transistor Biasing (08Hours)

Need of biasing, DC load line analysis, operating point, Thermal runaway. Different biasing circuits: fixed bias, collector to base bias & voltage divider bias. Stability factor, General expression for stability factor, stability factor for all biasing circuits, Design of biasing circuits, Compensation techniques: Thermistor and diode compensation, Thermal Resistance

Unit-II

BJT Amplifiers (08Hours)

Two port device and Hybrid model , transistor Hybrid model, h- parameters, Simplified CE Hybrid Model, Analysis of amplifiers using Approximate Model(CE, CC, CB), BJT Single Stage Amplifiers, Small Signal Analysis of Single Stage BJT Amplifiers, Distortion in Amplifiers, Application of Transistor as a Switch

Unit-III

Field Effect Transistor (FET) (08Hours)

Types of FET viz. JFET, MOSFET, JFET -construction, VI characteristics, transfer characteristics, Characteristics Parameters of JFET, FET Biasing(Self Bias, Fixed Bias, Current Source Bias), JFET amplifiers-CS, CD and CG amplifiers, Application of FET.

Unit-IV

MOSFETs (08Hours)

Types of MOSFET viz. DMOSFET, EMOSFET, n-MOS, p-MOS and CMOS devices, DMOSFET and EMOSFET characteristics and parameters, non-ideal V-I characteristics viz. finite output resistance, body effect, subthreshold conduction , breakdown effects and temperature effects, MOSFET biasing, MOSFET as VLSI device

Unit -V

Wave shaping and Multivibrator Circuits (08Hours)

Diode as clipper- series and parallel forms of clipper circuits, biased clipper, their operations and transfer characteristics, Diode as a clamper, voltage multiplier circuits-voltage doubler,

tripler and quadruple configuration , Multivibrator circuits-astable and monostable multivibrator circuits using BJT

Unit-VI

Optoelectronics devices and PCB design

(08Hours)

Construction, V-I characteristics and applications of LED, LDR, Photodiode, Phototransistor, Photoconductive cell, Photovoltaic cell, optocoupler

PCB: types of PCB, PCB design rules, layout design, artwork design, fabrication process of single sided PCB, different copper clad laminates, composition of solder metal

List of Experiments:

1. Biasing techniques of BJT- to find stability factor of self bias, collector to base bias, fixed bias
2. To plot frequency response of single stage CE amplifier and find its bandwidth
3. To plot frequency response of single stage FET amplifier (CS/CD configuration)and find its bandwidth
4. To study different types of Clipper circuits
5. To study different types Clamper circuits
6. To study Astable multivibrator using BJT
7. To study monostable multivibrator using BJT
8. To plot transfer characteristics of Optocoupler
9. To plot V-I and optical characteristics of LED and LDR
10. To plot V-I and optical characteristics of Photodiode and phototransistor
11. To design, built and test any electronic circuit based on above syllabus.

Assignments:

1. Distinguish Biasing techniques of BJT- self bias, collector to base bias, fixed bias
2. Derive the equations for A_v , A_{vS} , A_c , A_{cS} , Z_i , Z_o for CE, CB and CC configurations of n-p-n transistor.
3. Draw the construction of JFET and explain operation of JFET in Fixed bias, Self bias and voltage divider bias.
4. Draw the construction of D-MOSFET, E-MOSFET and explain input, Output, transfer Characteristics
5. Draw the circuits for clipper, clamper, and voltage multiplier and explain their operations.

6. Design and test BJT amplifier/FET amplifier/Voltage multiplier/Multivibrators circuit on PCB
7. Visit to local Electronics Market

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

3. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
4. End term Examination

Text Books:

1. "Electronic Devices and Circuits" by S. salivahanan,Suresh kumar- Mc Graw Hill Publication
2. "Integrated Electronics", by Millman J and Halkias .C., TMH publication
3. "Electronic Devices and Circuits " by Millman ,Halkies,TMH publication

Reference Books:

4. "Electronic Devices and Circuits" by Allen Mottershed- PHI Publication
5. "Electronic Devices and Circuits" by J.B. Gupta-Katson educational series
6. "Microelectronics "by Jacob Millman, Arvin Garbel- Mc Graw Hill Publication
7. "Printed Circuits Handbook " by Clyde F. Coombs - McGraw Hill Handbooks
8. "Microelectronic Circuits Theory and applications "by Adel S. Sedra , Kenneth C. Smith- Oxford

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

Class: B.Tech (E&TC) Sem:- III

SUBJECT: - Signals and Systems

Lecture: 3 Hrs/week

Tutorial: 01 Hrs/Week

Theory: 60 marks

Unit Test: 20 Marks

Attendance: 10Marks

Assignments: 10Marks

TW & Oral: 50Marks

Course prerequisites:

Knowledge of Engineering Mathematics-I, Engineering Mathematics-II and Engineering Mathematics-III course.

Course objective:

The course aims to introduce the basic concepts of signals and systems analysis and their tools in the time and frequency domain. It also provides knowledge of correlation function and sampling.

Course Outcomes: On successful completion of this course, students will be able to

1. Characterize and analyze the properties of signals.
2. Classify the systems and analyze in time domain using convolution.
3. Apply Fourier transform, Laplace transform and Z-Transform for analysis of LTI systems.
4. Conceptualize the effects of sampling on signal and describe the auto correlation and cross correlation between signals.

Contents:

Unit-I

Introduction to signals

(06 Hours)

Definition of signals, classification of signals: continuous time signals & discrete time signals, even & odd signals, periodic & non-periodic, deterministic & non-deterministic, energy & power, elementary signals: unit impulse, unit step, unit ramp, exponential & sinusoidal, basic operations on signals.

Unit-II

Classification of Discrete time systems (06 Hours)

Definition, Classification of System, System Interconnections, state space analysis, Linear & non-linear, Time-Invariant & Time variant, causal & non-causal, static & dynamic, stable & unstable systems, stability & impulse response of systems to standard signals.

LTI system Analysis: Introduction to LTI systems. Block Diagram, Linear Convolution-Convolution Integral, Impulse response, Methods of Convolution. Properties of convolution

Unit-III

Continuous Time system Analysis: (06 Hours)

Response of LTI Systems to exponential signals, periodic signals. Fourier series, Fourier Transforms, properties, application of Fourier series & Fourier transforms to the system analysis.

Unit-IV

Laplace Transform and Applications (06 Hours)

Laplace Transform: Definition and its properties, ROC and pole zero concept. Application of Laplace transforms to the LTI system analysis. Inversion using duality, numerical based on properties.

Unit-V

Z-Transform and Applications (06 Hours)

Z-Transform: Definition and its properties, The Region of Convergence for the Z-Transform, the Inverse z-Transform, Application of Z-Transform to the LTI system analysis

Unit VI:

Correlation and Spectral Density (06 Hours)

Definition of Correlation and Spectral Density, correlogram, analogy between correlation, covariance and convolution, conceptual basis, auto-correlation, cross correlation,

energy/power spectral density, properties of correlation and spectral density, inter relation between correlation and spectral density, Sampling theorem & its proof, aliasing, reconstruction of sampled signals, interpolation.

Assignments:

1. Classify and explain any 5 signals that occur physical world.
2. Explain LTI system by giving a real world example.
3. Find the Fourier Transform using MATLAB.
4. Find the Laplace Transform using MATLAB.
5. Find the Z-Transform using MATLAB.
6. Find the autocorrelation of sine sequence $x[n]$ with frequency 50Hz and sampling frequency 200Hz, using MATLAB. If the given signal $x[n]$ is affected by noise signal $z[n]$, such that $y[n] = x[n] + z[n]$, find the cross correlation between $x[n]$ and $y[n]$, using MATLAB.

Content Delivery Methods: Chalk & talk, Power point presentation, MATLAB

Assessment Methods:

1. Continuous Assessment (Attendance, Assignments/Tutorials, Unit Test)
2. End term Examination

Text Books:

1. Roberts M. J., Signals & Systems, TMH
2. Oppenheim, Wilsely & Nawab, Signals & Systems, MGH

Reference Books:

1. B.P.Lathi, Signal Processing & Linear Systems, Berkeley Cambridge, 1998 Edition

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

**Class: B.Tech (E & TC) SEM: - III
SUBJECT: - Digital Circuits and Applications**

Lecture: 3 Hours/Week

Practical: 2 Hours/Week

Theory: 60 marks

Unit Test: 20 Marks

Attendance: 10Marks

Assignments: 10Marks

TW& Practical: 50 Marks

Course Prerequisite:

1. Fundamentals of Number Systems.

Course Objective:

1. To understand principles, characteristics & operations of combinational & sequential logic circuits.
2. To design combinational circuits by using logic gates, MSI circuits, PLDs.
3. To design, implement analyze, asynchronous & synchronous sequential circuits using flip flops.

Course Outcomes: On successful completion of this course, students will be able to

1. Demonstrate the knowledge of Boolean algebra including simplification techniques.
2. Describe the characteristics of Logic families TTL, CMOS, ECL & explain the fundamentals of semiconductor memories.
3. Analyze & design digital combinational circuits such as of multiplexers, demultiplexers, encoder, decoder and arithmetic circuits.

4. Demonstrate the knowledge of operations of basic types of flip-flops, registers, counters & the design of FSM.
5. Describe the characteristics of PLDs, Semiconductor memories and their applications.

Contents:

Unit –I

Binary Number Systems & Coding (6 Hours)

Review of Binary number system: Binary addition and subtraction using 1's, 2's complement method, sign magnitude representation. BCD codes, 8421, Excess –3, Grey code, codes with more than four bits, ASCII code.

Principles of combinational logic

Fundamental theorems of Boolean algebra, Canonical and standard forms (SOP and POS), minimization of logic functions, Karnaugh maps up to 4 variables, Don't care conditions, Quine Mc-Cluskey method.

Unit-II

Arithmetic modules (6 Hours)

Adder, subtractor, carry look ahead adder, BCD adder, magnitude comparator, Excess-3 Adder, series and parallel adder, ALU.

Combinational Logic modules

Code conversion, Multiplexer, Demultiplexer, Encoder, Decoder and their applications. Parity generator and checker.

Unit-III

Logic Families (6 Hours)

Parameter definitions - Noise margin, power dissipation, voltage and current parameters, propagation delay. Typical values for TTL, CMOS & ECL. Two input TTL NAND gate, TTL logic families standard, Totem – pole, open collector, tri-state (concept & application). TTL-CMOS/CMOS-TTL interfacing, comparison of TTL & CMOS ECL.

Unit-IV

Sequential Logic systems (7 Hours)

Basic sequential circuits-latches and flip-flops: SR-latch, D-latch, D flip-flop, JK flip-flop, MS J-K flip flop, T flip-flop.

Definition of state machines, Moore and Mealy machine, state machine as a sequential controller. Design of state machines: state table, state assignment, transition/excitation table, excitation maps and equations, logic realization. Designing state machine using ASM charts, using state diagram, sequence detector and design examples.

Unit-V

(5 Hours)

Application of Flip flops

Registers, Shift registers, Counters (ring counters, twisted ring counters), Sequence Generators, ripple counters, up/down counters, synchronous counters, lock out, Clock Skew, Clock jitter.

Unit-VI

(6 Hours)

PLDs & Semiconductor Memories: Programmable logic devices

Study of PROM, PAL, PLAs. Designing combinational circuits using PLDs.

Semiconductor memories

Classification and characteristics of memory, different types of RAMs, ROMs and their applications, Double Data Rate RAMs.

List of Experiments:

Hardware Experiments:

1. Implementation of Boolean functions using logic gates
2. Study of characteristics of typical 74 TTL / 74 CMOS family like: fan in, fan out standard load , noise margin & interfacing with other families
3. Half, Full Adder and subtractor using gates and IC's
4. Code conversion using digital IC's
5. Function implementation using Multiplexer and Demultiplexer
6. Sequence generator using MSJK flip flop IC's
7. Study of counters : Ripple , Synchronous , Ring , Johnson , Up-down counter and its application
8. Study of shift registers : Shift left , Shift right , parallel loading and Pulse Train generator
9. BCD Adder/Subtractor with Decoder driver and 7 segment display

Software Experiments:

Perform following experiments using Xilinx ISE simulator

1. Full Adder using half adder
2. 2 bit comparator

Assignments:

1. Solve four examples of Boolean expressions using K-maps, Quine-McClusky method using both minterms and maxterms.
2. Design carry look Ahead adder for adding two 4-bit numbers.
3. Design sequence detector using FSM and implement using suitable flip flops.
4. Design 4-bit/ 5-bit ripple counters, synchronous counters for positive edge/ negative edge triggered flip flops.
5. Study any CPLD/ FPGA board and make a report on the features of the board.
6. Study ISE of any platform(Xilinx, Quartus, Libero etc.) and make a report on working of the platform.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Attendance, Assignments/Tutorials, Unit Test)
2. End term Examination

Text Books:

1. R.P. Jain , “Modern digital electronics” , 3rd edition , 12th reprint TMH Publication, 2007.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

**Department of Electronics & Telecommunication
Engineering**

Class: B.Tech (E&TC) Sem:- III

SUBJECT: - Network Theory

Lecture: 3 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Practical: 50 marks

Course prerequisites:

- Knowledge of KCL and KVL Laws from Basic Electrical Engineering
- Knowledge of Linear Differential Equations and Systems of Linear Equations from Engineering Mathematics - I and II.

Course objective:

The objective of the course is to enable the student to perform any of the network analysis task required in the subsequent courses. The student is exposed to some concepts in graph theory for providing a good foundation for the methods of Mesh Analysis and Node Analysis. The transient analysis using Laplace Transforms is also included. The series and parallel resonance circuits which occur quite frequently in electronics are analyzed. The topic of constant K filter is included as it finds many applications in electronic design. The two port network parameters which are of fundamental importance in many courses on electronic devices are included in the last unit.

Course Outcomes: On successful completion of this course, students will be able to:

1. To find voltages and currents in a given network using Mesh Analysis or Node Analysis or Network Theorems.
2. To find voltages and currents in a given network by formulating network equilibrium equations from graph theory.

3. To find the transient response in a given network consisting of series or a parallel combination of resistance, capacitance and inductance.
4. To find all the parameters relating to a given series or a parallel resonant circuit.
5. To design a constant K prototype low pass, high pass, band pass or a band stop passive filter
6. To find any of the two port parameters of a given two port network.

Contents:

Unit I

Basic Circuit Analysis and Simplification Techniques (6 Hours)

KCL, KVL, Source Transformation, Source Shifting, Mesh Analysis, Node Analysis, Super Mesh, Super Node, Mesh and Node Analysis in Sinusoidal Steady State
 Network Theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem, Reciprocity Theorem.

Unit II

Graph Theory (6 Hours)

Network Graph, tree, cotree & loops, Incidence Matrix, tie set matrix, cut-set matrix, Formulation of equilibrium equations in matrix form, Solution of resistive and non resistive networks, Principle of Duality

Unit III

Transient Analysis of Basic RC, RL, & RLC Circuits (6 Hours)

Initial Conditions in networks. A procedure for evaluating initial conditions. Solution of step response in RC, RL, RLC circuits using classical method and using Laplace Transform.

Unit IV

Resonance (6 Hours)

Resonant condition, Definition of Quality factor. Finding resonant frequency, impedance at resonance, voltage and current variation with frequency, bandwidth, selectivity, magnification factor for series and parallel resonant circuits. General case of resistance present in both branches of parallel resonant circuit. Comparison of series and parallel

resonant circuits, Applications of resonant circuits, Analysis of some circuits in communication electronics.

Unit V

Passive Filters

(6 Hours)

Filter Fundamentals, Image impedance, Characteristic impedance, Propagation constant. Constant K prototype for LPF, HPF, BPF and BSF, m-derived LPF, HPF, Terminating half sections, Composite filters, Applications of passive filters.

Unit VI

Two Port Networks

(6 Hours)

Network Functions, Two port network parameters, Z, Y, H, ABCD and other parameters, Relationships between two-port network parameters, Interconnections of two-ports, Reciprocity and Symmetry conditions, Analysis of some circuits using two port network parameter theory.

Assignments:

- i. Determine the currents, voltages and power absorbed in the given branches in any given network by applying mesh and node analysis.
- ii. Determine the currents, voltages and power absorbed in the given branches in any given network using the concepts of graph theory.
- iii. Carry out transient analysis and determine the voltage and current expressions for a given network containing R, L and C with non zero initial conditions.
- iv. Search for circuits which involve series and parallel resonant circuits in the literature on communication electronics and perform resonant circuit analysis.
- v. Design a passive LC filter circuit for use in a DC power supply.
- vi. Search for circuits involving electronic devices where theory of two port network parameters can be applied and carry out the analysis.

List of Experiments:

1. To verify Thevenin's and Norton's Theorem.
2. To verify Superposition and Reciprocity Theorem.
3. To find resonant frequencies of series and parallel circuit.
4. To plot frequency response of frequency selective network (Twin T or Wein Bridge).
5. To plot frequency response & cut-off frequency of constant-k LPF and HPF.

6. To plot frequency response & cut-off frequency of constant-k BPF and BSF.
7. To find Z and Y parameters of given two port network.
8. To find H and ABCD parameters of given two port network.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. D. Roy Choudhury, 'Network and Systems', New Age International Publishers, Second Edition.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

Class: B.Tech (E& TC) Sem:- III

SUBJECT: - Energy Studies

Lecture: 3 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

Course prerequisites:

- Basic knowledge of types of sources.
- Basic knowledge of consumption, energy conservation & economic development

Course objective:

This course provides in depth knowledge of energy sector and role of energy sector in nation development.

Course Outcomes: On successful completion of this course, students will be able to

1. Identify potential use of energy sources and justify energy conservation.
2. Evaluate global and Indian energy scenarios.
3. Evaluate energy polices framework.

Contents:

Unit-I

Energy Sources

(06 hours)

Fossil fuels, nuclear fuels, hydel, solar, wind and bio fuels in India, Energy conservation, Nuclear energy through fission and fusion processes.

Unit-II

Energy Conversion

(06 hours)

Energy Conversion- Energy conversion from source to utility, Solar, Nuclear, Geothermal, Tide and Wind Energies.

Unit-III

Global Energy Scenario

(06 hours)

Role of energy in economic development and social transformation, Overall energy demand, availability and consumption, Depletion of energy resources and its impact on economy, Non proliferation of nuclear energy. International energy policies of G-8, G-20, OPEC and European Union countries.

Unit-IV

Indian Energy Scenario

(06 hours)

Commercial and noncommercial forms of energy, Utilization pattern in the past, present and also future prediction and Sector wise energy consumption.

Unit-V

Energy Policy

(06 hours)

Energy policy issues at global level, national level and state level, Energy conservation act 2001, Electricity act 2003, Energy pricing and its impact on global variations. Energy policies and development – Case studies on the effect of Central and State policies on the consumption and wastage of energy – Critical analysis – Need for renewable energy policies in India.

Unit-VI

Energy and environment

(06 hours)

Green house effect – Global warming – Global scenario – Indian Environmental degradation – environmental laws– Water (prevention & control of pollution) Act 1974 – The environmental protection act 1986 – Effluent standards and ambient air quality standards – Latest development in climate change policies & CDM.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. Jose Goldenberg, Thomas Johanson, and Reddy, A.K.N., Energy for Sustainable World, Wiley Eastern, 2005.
2. Charles E. Brown, World Energy Resources, Springer Publication, New York, 2002.
3. Culp, A.W., Principles of Energy Conversion, McGraw Hill New York, 2004.

Reference Books:

1. Bukhortsow, B., Energy Policy and Planning, Prentice Hall of India, New Delhi, 2003.
2. TEDDY Year Book, The Energy Research Institute (TERI), 2011.
3. International Energy Outlook, EIA Annual Publication, 2011.

B.Tech.(E&TC) Sem-IV

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

Class: B.Tech (E & TC) Sem:- IV

SUBJECT: - Linear Integrated Circuits

Lecture: 3 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Oral: 50 marks

Course prerequisites:

- Knowledge of KCL and KVL Law
- Basic knowledge of Op-Amp and its configurations

Course objective:

This course provides in depth knowledge on the Op-Amp. Also it introduces the design of PLL, Waveform generators, Timer IC's and Converters.

Course Outcomes: On successful completion of this course, students will be able to

1. Design linear and nonlinear applications of Op-Amp.
2. Design of first and second order active filters.
3. Analyze and design Waveform Generators.
4. Demonstrate knowledge of Phase Locked Loop IC 565 and Converters.
5. Design of multivibrators using Timer IC 555

Contents:

Unit-I

Introduction to op-amp

(06 hours)

Block diagram representation of a typical op-amp, Schematic symbol for op-amp, Definition of integrated circuits, Types of Integrated Circuits, Manufacturers, Designation for IC, IC package types, PIN identification & temp ranges, Ordering information, Characteristics of an op-amp, Internal & external offset voltage compensation, Frequency Response of an op-amp.

Unit-II

Linear applications of op-amp

(06 hours)

Inverting amplifier, Non-inverting amplifier, Voltage Follower, Adder, Subtractor, Scaling averaging amplifier, Integrator, Differentiator, Instrumentation amplifier using 1, 2 and 3 op-amps, Instrumentation amplifier using transducer bridge, Peaking amplifier

Unit-III

Non-linear applications of op-amp

(06 hours)

Precision half wave rectifier & full wave rectifier, comparator, Schmitt trigger, window detector, log-antilog amplifier and its temperature compensation techniques, log ratio, sample and hold circuit.

Unit-IV

Active filters and waveform generators

(06 hours)

First and second order low pass Butterworth filters, first and second order high pass Butterworth filter, Band pass filter, Band reject filter, All-pass filter, notch filter, Square wave, Triangular wave, Sawtooth wave generator and study of function generator or IC 8038. *Design and analysis of RF filters.*

Unit-V

Timer IC 555 and PLL IC 565

(06 hours)

IC 555- as Monostable and Astable Multivibrators and its applications.

IC 565- operating principle of Phase Locked Loop IC 565, Applications like Frequency multiplier, FSK and FM detector

Communication applications of PLL: Locking and tracking of frequency, Co-channel and adjacent channel rejection.

Unit-VI

Converters

(06 hours)

V to I & I to V converter, D to A converter- Binary weighted resistors and R & 2R resistors, A to D Converter- Counter-ramp type, Successive approximation and Dual Slope.

List of Experiments:

1. To design and build Integrator and draw frequency response
2. To design and build Differentiator and draw frequency response
3. To design and build precision rectifier

4. To design and build schmitt trigger and find threshold levels
5. To design and build first order Butterworth low pass filter
6. To design and build first order Butterworth high pass filter
7. To design and build triangular waveform generator using IC 741
8. To design and build Function generator using IC 8038
9. To design and build Astable multivibrator using timer IC 555.

Assignments:

1. Design of integrator for given frequency and its practical implementation using IC741.
2. Design of Differentiator for given frequency and its practical implementation using IC741.
3. Design of Schmitt Trigger for given frequency and its practical implementation using IC741.
4. Design of LPF and HPF for given cutoff frequency and its practical implementation using IC741.
5. Design of Astable Multivibrator for given frequency and its practical implementation using IC555.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books: References Books:

1. Ramakant Gayakwad, Op Amp & IC's, PHI
2. D. Roy Choudhari, Liner Integrated Circuits, PHI

References Books:

1. K. R. Botkar, Integrated Circuits, khanna Publishers.
2. Clayton, Integrated Circuits, MGH

Note: Topics added in Unit –IV and V and shown in Italian font

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

Class: B.Tech (E&TC) Sem:- IV

SUBJECT: - Applied Electronic Circuits

Lecture: 4 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW &Practical.: 50

marks

Course prerequisites:

- Knowledge of linear circuit theory
 - Basic concept of BJT
-

Course objective:

1. To make student understand analysis of multistage transistor amplifier.
 2. To make student understand a practical approach of design and analysis of feedback amplifiers ,power amplifiers and oscillators
 3. To make student understand analysis and design of voltage regulators.
 4. To make student understand the behavior of high frequency BJT amplifiers
-

Course Outcomes: On successful completion of this course, students will be able to

1. Analyze multistage amplifier.
2. Analyze and design feedback amplifier and power amplifier and oscillators
3. Analyze and design voltage regulators.
4. Characterize behavior of high frequency BJT amplifiers.

Contents:

Unit-I

Cascade amplifiers

(08hours)

Need of Multistage amplifiers, Parameter evaluation such as R_i , R_o , A_v , A_i & Bandwidth for general multi stage amplifier, Analysis & design at low frequency & mid frequency of direct coupled, RC coupled, transformer coupled (Two stage) amplifier, Darlington amplifier, cascode amplifier

Unit-II

Negative Feedback amplifiers

(08 hours)

Concept of feedback, classification of amplifiers, Negative feedback topologies with their block diagram representation, Effect of negative feedback on Input impedance, Output impedance, Gain and Bandwidth with derivation, method of analysis of feedback amplifier, analysis of all feedback topologies.

Unit-III

Power amplifiers

(08 hours)

classification of power amplifiers - Class A, Class B, Class C, and Class AB. Operation of - Class A with resistive load; Transformer coupled class A Amplifier; Class B Push – pull amplifier ; Class B Complementary symmetry amplifier. Efficiency analysis for Class A transformer coupled amplifier and Class B push – pull amplifier, cross over distortion in power amplifiers, harmonic analysis

Unit-IV

Oscillators

(08 hours)

Positive feedback, Barkhausen criterion, Classification of oscillators, derivation and analysis of RC oscillators, Wien bridge Oscillators, LC Oscillators for frequency of oscillation, Tuned collector oscillator, Piezo-electric effect in crystals and Crystal Oscillator

Unit-V

Regulators

(08 hours)

Block schematic of linear regulators, Performance parameters – Load and Line regulations, Ripple rejection, Output resistance Emitter follower regulator, Transistor series regulator,

shunt regulator Study and design of regulators using IC's :78XX,79XX,723,LM317, Method of boosting output current using external series pass transistor. Protection circuits – Reverse polarity protection, over circuit, fold back current limiting, over voltage protection.

Unit-VI

High frequency amplifiers

(08hours)

High frequency T model. Common base short circuit current frequency response ,alpha cut-off frequency ,CE short circuit current frequency response, high frequency hybrid π CE model, Amplifier response taking into account source and load resistances.

List of Experiments:

1. CE two-stage amplifier with capacitive coupling
2. Voltage series and current series feedback amplifiers
3. Voltage shunt and current shunt feedback amplifiers
4. Class A,B,C power amplifiers.
5. Class B/AB push – pull/ Complementary Symmetry power amplifier.
6. Class A transformer coupled amplifier
7. RC Oscillators - phase shift and wien bridge
8. LC oscillators – Hartley, Colpitt
9. Linear voltage regulators – series regulator using series pass transistor, shunt regulator using zener diode
10. Fix voltage regulators using IC 78XX &79XX, Adjustable voltage regulators using IC LM317

Assignments:

1. Artwork & layout preparation for any one circuit from above mentioned experiment list.
2. Simulation of the same circuit using Multisim.
3. Design & assemble simulated circuit on the Cu clad PCB.
4. Physical verification of the performance parameters for the designed PCB.
5. Presentation based on comparative analysis of the simulated results and physically verified results for the same circuit.
6. Report submission on the same kit with special components datasheets.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. “Electronic devices and circuits” by S. Salivahanan, Suresh Kumar Vallavaraj, Mc Graw Hill Publication
2. “Electronic devices and circuits “by Millaman Halkies ,TMH publication
3. “Integrated Electronics”, by Millman J and Halkias .C., TMH publication

4. “Microelectronics “by Jacob Millman, Arvin Garbel- Mc Graw Hill Publication
5. Electronic Principles by Albert Malvino and David J Bates, 7 edition, Tata McGraw Hill
6. Basic Electronics by Zbar, Malvino and Miller, 7 edition, Tata McGraw Hill

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

Class: B.Tech (E&TC) Sem:- IV

SUBJECT: - Control System Engineering

Lecture: 3 hours/week

Practical: 2 hours/week

Tutorial : 1 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

Course prerequisites:

- Basic knowledge of signals.
- Basic mathematical tools like Laplace transform.
- Basic knowledge of software like MATLAB.

Course objective:

This course provides in depth knowledge of the various control systems. Also it introduces the stability of system, transducers, controllers etc.

Course Outcomes: On successful completion of this course, students will be able to

1. Identify various control systems and determine the 'Transfer Function' of a system using block diagram reduction technique and signal flow graph.
2. Measure various Non-electric quantities such as displacement, temperature, angular speed, acceleration etc using suitable transducer.
3. Determine the error in various control systems.
4. Evaluate the stability of a system using Routh's Stability Criterion, root locus and different graphical methods like Bode plot and polar plot.
5. Compare various control actions such as Proportional (P), Integral (I), Derivative (D), PI, PID.

Unit I

Introduction to Control System

(06 Hours)

Classification of Control System, control problem, Feedback and Non-feedback Systems, Transfer Function, Block diagram and signal flow graph analysis, Mathematical models of physical system- Electrical & Mechanical System.

Unit II

Transducers

(06 Hours)

Characteristics, types of transducers, RTD, Thermocouple, Thermister, capacitive transducer, LVDT, strain gauge, flow-meters and level measuring instruments.

Unit III

Time Domain Analysis

(06 Hours)

Time response of first order & second order system using standard test signal, steady state errors and error constants, Root locus techniques- Basic concept, rules of root locus, application of root locus techniques for control system

Unit IV

Stability

(06 Hours)

Concept of stability, necessary conditions for stability, Hurwitz and Routh stability criteria, and stability of system modeled in state variable form, root locus techniques Effect of Poles and Zeros on the System Stability.

Unit V

Frequency Domain Analysis

(06 Hours)

Relationship between time & frequency response, Polar plots, Bode plot, stability in frequency domain, Nyquist stability criterion.

Unit VI

Controllers and Compensators

(06 Hours)

Control actions – On/Off, P, PI, PD, PID. PLC Architecture, Introduction to Ladder Diagram, Types of Compensators, Lead, Lag, Lead-Lag Compensators

List of Experiments:

1. Unit Step and Impulse response of the Transfer function using MATLAB.
2. Transient response of second order system
3. To draw Root Locus theoretically and verify it using MATLAB.
4. To draw Bode plot theoretically and verify it using MATLAB.
5. Magnitude and phase plot of Lead network.
6. Magnitude and phase plot of Lag network.
7. To Study characteristics of temperature transducer.
8. To Study characteristics of LVDT for displacement measurement.
9. Study of Strain gauge.
10. To study architecture of PLC.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. I.J. Nagrath, M.Gopal “Control Systems Engineering”, 5th Edition, New Age International Publication
2. Schaum’s Series book “Feed back Control Systems”.
3. Les Fenical “Control Systems”, 1st Edition, Cengage Learning India.

4. R. Anandanatarajan, P. Ramesh Babu , “Control Systems Engineering”, Scitech Publications

Reference Books:

1. Norman S. Nise “Control Systems Engineering”, 4th edition, Wiley edition.
2. Samarjeet Ghosh, “Control Systems Theory & Applications”, 1st edition, Pearson education.
3. S.K. Bhattacharya, “Control Systems Engineering”, 1st edition, Pearson education.
4. Hackworth, “Programmable Logic Controller”, 1st edition, Pearson education.

Assignments:

- Collaboration and discussion is encouraged on home works.
- The submitted MATLAB projects and all take-home quizzes must be individual work.
- Late take-home quizzes/assignments will be accepted, but will be penalized. Some homework problems for each chapter will be assigned but not graded.
- Take-home quizzes, when assigned, will generally be handed out on given date.
- Questions can be directed to the instructor during the tutorial or during office hours.
- In total, some take-home quizzes and a few MATLAB assignments will be assigned.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

Class: B.Tech (E&TC) SEM:- IV

SUBJECT: - Analog Communication System

Lecture: 3 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Oral: 50 marks

Course prerequisites:

- Basic knowledge of signals and systems.
- Basic mathematical tools like fourier series & transform

Course objective:

- 1.To introduce to student essential components of communication system and emphasize need of modulation.
- 2.To make student recognize concept of noise and its effects.
- 3.To make student understand amplitude & frequency modulation and demodulation and its mathematical background.
- 4.To make student understand working of radio receivers.

Course Outcomes:On successful completion of this course, students will be able to

1. Describes basic components of communication system and explains need of modulation.
2. Describes concept of noise and also recognizes its effects.
3. Describes amplitude and frequency modulation and demodulation and can do analysis in Time and frequency domain.
4. Describes components of communication receiver system.

Contents:

Unit-I

Introduction to Communication Systems (4 Hours)

Review of signals and systems, Frequency domain of signals, Block schematic of communication system, types of communication channels, base band signals, RF bands, Necessity of modulation.

Unit-II

Noise (6 Hours)

Types of noise, External noise, Internal Noise, Noise calculations, signal to noise ratio, noise figure, and noise temperature.

Unit-III

Amplitude Modulation (8 Hours)

Amplitude Modulation, low level and high level transmitters, Frequency spectrum of AM wave, Representation of AM, power relations in AM, Generation of AM, DSB suppressed carrier (DSBSC)-modulator, Single Side Band (SSB):-Principle, Filter method, phase shift method and third method, Independent sideband (ISB) and Vestigial Side Band (VSB) principles and transmitters, Diode detector, practical diode detector, and square law detector. Demodulation of DSBSC, Demodulation of SSBSC.

Unit-IV

Angle Modulation (6 Hours)

Basic concept, mathematical analysis, frequency spectrum of FM wave, sensitivity, phase deviation and modulation index, frequency deviation and percent modulated waves, bandwidth requirement, deviation ratio, Narrow Band FM, and Wide Band FM. Varactor diode modulator, FET reactance modulator, stabilized reactance modulator- AFC, Direct FM transmitter, indirect FM Transmitter, pre-emphasis and de-emphasis. Amplitude limiting, FM demodulators.

Unit-V

TRF and Super Heterodyne Radio Receiver

(6 Hours)

Block diagram of AM and FM Receivers, TRF receiver, Super heterodyne Receiver, Performance characteristics: Sensitivity, Selectivity, Fidelity, Image Frequency Rejection. IF Amplifiers. Tracking, AGC, Mixers.

Unit -VI

Pulse Analog Modulation

(6 Hours)

Pulse modulation. Sampling process, Sampling Theorem for low pass and band pass signals, Nyquist criteria ,

Sampling techniques, aliasing error, and aperture effect. PAM, PWM, PPM generation and detection. TDM and FDM.

List of Experiments (Minimum 08):

1. Study of Amplitude Modulation and Demodulation.
2. Study of Frequency Modulation and Demodulation
3. Study of SSB Modulation & Demodulation.
4. Analysis of standard signals (square and triangular) and Modulated signals (all types of AM, FM) using spectrum analyzer.
5. Sampling And Reconstruction.
6. Study of Pulse Amplitude Modulation (PAM.)
7. Study of Pulse Width Modulation.(PWM)
8. Study of Pulse Position Modulation.(PPM)
9. Study of PAM-TDM.
10. Study of Super heterodyne (AM) Receiver.

Assignments:

1. Discussion is encouraged on home works of Analog Signal Transmission.
2. Design PCB of Modulation and Detection KIT.
3. SSB, DSBSC & VSB Modulation and Detection using Hardware.
4. AM, FM & Superhetrodyne Receivers.
5. PAM, PWM, PPM Modulation and Detection.
6. Visit to Radio station.

(Late take-home quizzes/assignments will be accepted, but will be penalized.)

Content Delivery Methods:Chalk & talk, Power point presentation.

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:-

1. George Kennedy 'Electronics Communication System'- IVth Edition-Tata McGraw Hill Publication.
2. B.P.Lathi 'Modern Digital and analog Communication System' Oxford University press.

Reference Books:-

1. Taub & Schilling: Principles of Communication Systems, Tata McGraw-Hill.
2. Dennis Roddy, John Coolen.'Electronics Communications 'IVth Edition- Pearson Education

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

Class: B.Tech (E&TC) Sem:- IV

SUBJECT: - Data structures and Files

Lecture: 2 hours/week

Practical: 2 hours/week

Theory: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Oral: 50 marks

Course prerequisites:

- Basic Knowledge in C programming.

Course objective:

This course provides in depth knowledge of the various types of data structures and various algorithms. Also it introduces the concept of linked list, stack, queues, graph and tree.

Course Outcomes: On successful completion of this course, students will be able to

1. Write a program involving pointers and structures.
2. Write a program involving search and sorting techniques.
3. Write a program using linked and double linked lists.
4. Implement stacks and queues involving linked list.
5. Perform operations on a tree using linked lists.
6. Find the shortest path in a given graph.

Contents:

Unit-I

C Programming Revision (5 Hours)

Pointers, Arrays, Single and Multi-Dimensional arrays, Row major and Column Major, Arrays and polynomials, Structures ,Unions, Call by Value ,Call by Reference , Passing arrays ,Passing a function to function, Pointer to function ,Pointers and Structures.

Unit-II

Data Structure and Analysis of algorithms. (4 Hours)

Introduction to data structure, Data representation, Abstract Data types, Primitive data types, Data structure and data types, Differences between data types. Program design. Algorithms and different approaches to designing an algorithm, Complexity, Big O notation, algorithm analysis .Recursion. Sorting Bubble sort, Selection sort, Quick sort, Merge sort, Insertion sort.

Unit-III

Linked Lists (4 Hours)

Definition, operations on linked list, Reversing the links, Merging of linked lists, Sorting the linked list, Circular Linked list, Recursive operation on linked list, Doubly linked list, Linked list and Polynomials,

Unit-IV

Stack and Queues (3 Hours)

Operation on stacks, Stack as an array, Stack as a linked list, Application of stack, Infix to prefix conversion, Infix to postfix conversion, Postfix to prefix conversion, Postfix to infix conversion.

Representation of Queue as an array, Queue as an linked list, Circular Queue, Priority queue

Unit-V

Tree

(3 Hours)

Binary tree, Linked and array representation of Binary tree, Binary search tree, Operation: Searching of a Node in a Binary tree, Insertion of a node in binary tree, deletion from a binary tree. Threaded binary tree, Forest. AVL trees

Unit-VI

Graphs

(3 hours)

Definition ,Adjacent vertices and Incident edges, graph representation, adjacency list, depth first search ,breadth first search, Spanning tree, Kruskal.s Algorithm, Shortest path algorithm, Dijkstra.s algorithm.

List of Experiments:

1. Program to create & manipulate database using structure.
2. Program to add two polynomial using array of structure.
3. Program to implement primitive operation on Sequential file.
4. Program to search for record from a given list of records stored in array using
 - i) Linear search
 - ii) Binary search
5. Program to sort an array of names using
 - i) Bubble sort
 - ii) Insertion sort
 - iii) Quick sort
6. (a) Program to implement following operation on singly linked list:
 - i) Create
 - ii) Delete
 - iii) Insert
 - iv) Display
 - v) Search(b) Program to add two polynomials using linked list.
7. (a) Program to implement stack using:
 - i) Array

- ii) Linked list
 - (b) Program to convert an infix expression to postfix expression & evaluate the resultant expression.
8. Program to Implement Queue using: (i) Array (ii) linked list
9. Program to create a Binary search tree & Perform following primitive operation on it:
- i) Search
 - ii) Delete
 - iii) Traversals (inorder, pre-order, post-order -recursive)
 - iv) Non-recursive in order traversal
10. Program to create a graph using adjacency list & traverse it using BFS & DFS methods

Assignments:*

1. write a c program to print a 100 year calendar.
2. Write a c program to find color code of a resistor.
3. case study of following topics
 - a> Chatting Applications (WhatsApp and true Caller)
 - b> Origin of programming languages
4. library assignments: Comparison of Object oriented programming.
5. Any of the lab experiments.
6. PPT presentation by students.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Continuous Assessment (Unit Test, Tutorials/ Assignments, Attendance)
2. End term Examination

Text Books:

1. "Data structure using C" ISRD group, TMH.
2. "Data Structure through C", Yashwant Kanetkar, BPB Publication.

Reference Books:

1. "Data structure using C" AM Tanenbaum, Y Langsam and MJ Augustein, Prentice Hall India.
2. "Data structure and Algorithm Analysis in C" Weiss, Mark Allen Addison Wesley.
3. "Data structure – A Pseudocode Approach with C", Richard F Gilberg Behrouz A. Forouzan, Thomson
4. "Let us C", Yashwant Kanetkar, BPB Publication.

Examination Scheme

End Semester Exam: 60

Continuous Assessment: 40

TW & OR: 50

Credits: 04

Course Prerequisites:

- Fundamentals of instrumentation
- Signal conditioning units such amplifier, attenuator.

Course Objectives:

- Electronic Instruments and measurements include all type of instruments which will help direct measurement of electronic, electrical, and communication parameters.
- It is also useful for virtual implementation of electronic, electrical, and communication parameters using LABVIEW software. So the subject is useful for test and measurement industries to verify quality of product.

Course Outcomes: On successful completion of this course, students will be able to

1. Describe fundamentals of instrumentation and measurements.
2. Classify different electronic instruments according to its usage.
3. Analyze Universal Counter for the measurement of time, frequency, ratio and period with high frequency measurement techniques.
4. Describe various types of Oscilloscope & their functions.
5. Specify and perform communication measurements using various analyzers.

6. Specify functioning, specifications, and applications of different signal analyzing instruments.
7. Describe the operations involved in computer controlled test measurement techniques.

UNIT I

Fundamentals Of Instrumentation And Measurements (6 Hours)

Necessity of Electronic Measurements, Block diagram of Electronic Measurement system, Concept of static and dynamic properties of measurements, Types of errors, Voltage, current, resistance measurement using DMM, Units and Standards, Calibration, Auto zeroing, Auto ranging.

UNIT II

Basic Instruments (6 Hours)

Working principle, types, methods & applications of following Instruments: True RMS Meter, Vector voltmeter, Vector impedance meter, LCR-Q meter with important specifications.

UNIT III

Frequency Generation And Measurements (6 Hours)

Standard frequency generators, Types of frequency generators, Frequency, Ratio, Time interval, Period & Multiple Period Averaging using digital universal frequency counter, High frequency measurements and its techniques.

UNIT IV

Oscilloscope (6 Hours)

Overview of analog CRO, Dual/Multi-trace CRO, Various CRO probes & its applications; Digital Storage Oscilloscope, DSO Design considerations and specifications, DSO functionalities / Measurements such as FFT; Math Functions; Automatic Measurements, Curve Tracer.

UNIT V

Communication Measurements (6 Hours)

Basics of Communication measurements at transmitter – receiver, sensitivity, selectivity, phase jitter, S/N ratio, co-channel interference, SINAD test etc; Network analyzer- system element, measurement accuracy, Types of network analyzers, S-parameter measurement using network analyzer, EMI measurements and suppression techniques.

UNIT VI

Signal Analyzers And Computer Controlled Test Measurements (6 Hours)

Harmonic and wave analyzer, Distortion factor meter, Spectrum analyzer -FFT analyzer, Logic analyzer, Protocol analyzer, Computer controlled test measurements, Virtual measurements and its applications, IEEE 488, PCI/PCI express, buses, Introduction of Lab view software.

List of Experiments: (Any 8 experiments should be conducted from following list.)

1. Voltage /current Measurements using CRO and DMM.
2. Voltage /current measurement of rectifier circuit using True RMS meter.
3. Measurement of resistance, inductance, capacitance and quality factor for any RLC circuit using LCR-Q Meter
4. Frequency, Period and frequency Ratio measurements using Digital Universal Frequency Counter.
5. Measurement and analysis of digital signals using Logic Analyzer.
6. Basic usage of Spectrum Analyzer for RF spectrum generation of sin, square and triangular wave.
7. Measurement of total harmonic distortion using Distortion Factor Meter.
8. Verification of diode and transistor characteristic using Curve Tracer.
9. Digital Storage Oscilloscope Measurements for FFT analysis, capturing transients, storing and retrieving different signals, and various operations like add, subtract and math functions.
10. Measurement of S parameters of transmitter and receiver using Network analyzers.

List of Assignments:

1. Preparation of basic block schematic of any instrument with design considerations and their justification. (Paper design)
2. Select any sensor or transducer. Find its important specifications. Select instrument for the measurement of those important specifications. (Case Study)
3. How quality or standard of any instrument is specified? Which are the important global parameters that can affect quality of measurement? (Presentation)
4. Search and enlist various testing methodologies, instruments and their important aspects. (Case Study)
5. Design any measurement system on Multisim, LABVIEW Software. (Report with design and result)
6. Design a code in C or C++ for any kind of electronic system. (Program with outcome)

• **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.

• **Assessment Methods:**

- | | |
|--------------------------|-------------------------|
| 1. Unit Test | 2. Assignments |
| 3. Continuous Assessment | 4. End term Examination |

Lecture: 3 Hours/week

Marks

Practical: 2 Hours/week

Marks

Marks

Examination Scheme

End Semester Exam: 60

Continuous Assessment: 40

TW & OR: 50

Credits: 04

Course Prerequisites:

- Basic knowledge of signals and systems.
- Basic mathematical tools like fourier series, fourier transform probability theory

Course Objectives:

- To understand the building blocks of digital communication system.
- To prepare mathematical background for communication signal analysis.
- To understand and analyze the signal flow in a digital communication system.
- To analyze error performance of a digital communication system in presence of noise and other interferences.
- To understand concept of spread spectrum communication system.

Course Outcomes: On successful completion of this course, students will be able to

1. Classify analog to digital conversion techniques in communication system.
2. Apply mathematics knowledge to solve problems based on probability theory for Random Signals.

3. Understand bandwidth utilization schemes in digital communication systems.
4. study performance of communication system in presence of noise
5. Understand different multiplexing techniques.
6. understand detection and performance analysis of digital signals

UNIT-I

Analog To Digital Conversion

(6 Hours)

Pulse Modulation-Sampling process, Quantization, Pulse Code Modulation (PCM), Companding, Noise considerations in PCM Systems-Delta modulation, linear prediction, differential pulse code modulation, Adaptive Delta Modulation, LPC Speech synthesis.

UNIT-II

Random Processes

(6 Hours)

Introduction to Random Variables, Mathematical definition of a random process, Stationary processes, Mean, Correlation & Covariance function, Ergodic processes, Transmission of a random process through a LTI filter, Power spectral density, Gaussian process, noise, Narrow band noise, Representation of narrowband noise in terms of in phase & quadrature components

UNIT-III

Line Coding And Digital Multiplexing

(6 Hours)

Line Coding & its properties. NRZ & RZ types, signaling format for unipolar, Polar, bipolar (AMI) & Manchester coding and their power spectra. Digital Multiplexing: Multiplexers and hierarchies, Data Multiplexers, synchronization: Bit Synchronization, Scramblers, Frame Synchronization. Inter-symbol interference, Eye Patterns, Equalization.

UNIT-IV

Digital Carrier Modulation & Demodulation Techniques

(6 Hours)

Introduction, Amplitude Shift Keying (ASK), ASK Spectrum, ASK Modulator, Coherent ASK Detector, Noncoherent ASK Detector, Frequency Shift Keying (FSK), Frequency Spectrum of FSK, FSK Transmitter, Non-coherent FSK Detector, Coherent FSK Detector, Binary Phase Shift Keying, Binary PSK Spectrum, BPSK Transmitter, Coherent PSK Detection, Quadrature Phase Shift Keying (QPSK), QPSK Demodulator, M-Ary PSK, Quadrature Amplitude Modulation (QAM); MQAM transmitters and receivers, Band Width efficiency, Carrier Recovery; Differential PSK, DPSK transmitter and receiver, Minimum Shift Keying (MSK)

UNIT-V

Data Transmission

(6 Hours)

Base band signal receiver, probability of error, the optimum filter, and white noise-the matched filter, probability of error of the matched filter, coherent reception: correlation, application of coherent reception in PSK and FSK. Correlation receiver for QPSK.

UNIT-VI

Spread Spectrum System

(6 Hours)

Spread Spectrum Modulation- Pseudo- noise sequences, a notion of spread spectrum, Direct sequence spread spectrum with coherent binary phase shift keying, Signal space Dimensionality and processing gain , Probability of error , Frequency –hop spread spectrum ,Maximum length and Gold codes,TDMA,FDMA,CDMA.

List of experiments (Any 8 experiments should be conducted from following list.)

1. To perform Sampling and reconstruction of signal.
2. To perform Pulse Code Modulation (PCM).
3. To observe Delta modulated signal with staircase approximation.
4. To compare Delta Modulation (DM) System and Adaptive Delta Modulation (ADM) system
5. To perform Differential Pulse Code Modulation (DPCM).
6. To draw and observe practically Different Data Formats
7. To perform Amplitude Shift Keying (ASK) modulation and demodulation.
8. To perform Binary Phase Shift Keying (BPSK) modulation and demodulation.
9. To perform Binary frequency Shift Keying (BFSK) modulation and demodulation
10. To perform Quadrature Phase Shift Keying (QPSK) modulation and demodulation.
11. MATLAB simulation of digital modulation techniques.

List of Assignments

1. To solve problems on statistical parameters of random variables
2. To study Pulse digital modulation techniques
3. To draw different Line coding formats for given data
4. To study Digital carrier modulation
5. Derive Probability of error
6. To study Spread spectrum techniques

- **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.
- **Assessment Methods:**
 2. Unit Test
 2. Assignments
 3. Continuous Assessment
 4. End term Examination

SUBJECT: Microprocessors and Microcontrollers

Teaching Scheme

Lecture: 4 Hours/week

Practical: 2 Hours/week

Examination Scheme

End Semester Exam: 60 Marks

Continuous Assessment: 40 Marks

TW & PR: 50 Marks

Credits: 05

Course Prerequisites:

- Students should have basic knowledge of 'Digital Electronics'.
-

Course Objectives:

- To make students familiar with the basic blocks of microprocessor and microcontroller devices in general.
- To familiarize students with architecture and features of typical Microcontrollers.
- To learn interfacing of real world input and output devices and use assembly and high level languages to interface the microcontrollers to various applications

Course Outcomes: On successful completion of this course, students will be able to

1. Differentiate features of microprocessors and microcontrollers.
2. Use Hardware and software tools for microcontrollers.
3. Develop interfacing of microcontrollers with real world devices.

UNIT 1

Introduction To Microprocessors

(8 Hours)

Evolution of Microprocessors, comparison of Microprocessor & Micro controller. Difference between RISC & CISC microcontrollers, Harvard & Von Neumann architectures. Internal architecture of 8 bit Microprocessor 8085, Overview of instruction set, Addressing modes, instruction cycle, Stack and Subroutines, interrupts.

UNIT 2

8051 Microcontroller

(8 Hours)

MCS-51 architecture, family devices & its derivatives. Ports, registers, memory organization, Overview of Instruction set, Addressing modes, Machine cycles and bus timings, timers and its modes, Interrupt structure.

.

UNIT 3

Peripheral Interfacing With 8051

(8 Hours)

Serial Communication with RS232, 8051 based system design – Address decoding data memory space Interfacing & Applications –LED, LCD, Stepper motor, DAC/ADC, Sensors, Keyboard. Programming in Embedded C.

UNIT 4

Pic Microcontroller

(7

Hours)

Comparison of Features of different PIC series, PIC 18F architecture, registers, memory Organization, oscillator options, BOD, power down modes and configuration bit settings, Overview of instruction set, Addressing modes.

UNIT 5

Peripheral Interfacing With Pic-I

(8 Hours)

Port structure, interrupts & timers of PIC18F. Interfacing of PIC18F with LED, Seven segment display, LCD and Keypad. Use of timers with interrupts, PWM generation. All programs in embedded C.

UNIT 6

Peripheral Interfacing With Pic-Ii

(9 Hours)

MSSP structure, CCP and ECCP, Study of UART, SPI, I2C, ADC. Interfacing serial port, ADC, RTC with I2C and EEPROM with SPI. Motor Control using PIC. All programs in embedded C.

List of experiments: Any 8 of below given list.

1. Find Largest/ Smallest number in an array in 8085.
2. Multiplication/ Division of 8-bit numbers in 8085.
3. Generate BCD up/ down counter in 8051.
4. Square wave generation using timers in 8051.
5. Serial Communication using 8051.
6. LCD interfacing with 8051.
7. Stepper motor interfacing with 8051.
8. Keyboard interfacing with 8051.
9. ADC/DAC interfacing with 8051.
10. Serial Communication using PIC.
11. LCD interfacing with PIC.
12. Stepper motor interfacing with PIC.
13. Keyboard interfacing with PIC.
14. Seven segment display interfacing with PIC.

List of Assignments:

1. Case study of any one of the latest processors.
2. Mini project using 8051/PIC microcontroller on topics such as design of Digital Multimeter, design of DAS system, DC Motor control using PWM, Frequency counter etc.(Simulation only)

- **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.
- **Assessment Methods:**
 3. Unit Test
 2. Assignments
 3. Continuous Assessment
 4. End term Examination

Department of Electronics and Telecommunication

SUBJECT: - Electromagnetic Engineering

Teaching Scheme

Lecture: 3 Hours/Week

Marks

Tutorials: 1 Hour/Week

Examination Scheme

End Semester Exam: 60

Continuous Assessment: 40 Marks

Credits: 04

Course Objectives

- To provide the basic skills required to understand, develop, and design various engineering applications involving electromagnetic fields.
- To lay the foundations of electromagnetism and its practice in modern communications such as wireless, guided wave principles such as fiber optics and electronic electromagnetic structures.

--

Course Outcomes

After the successful completion of the course student should be able to:

1. Apply vector calculus to static electric-magnetic fields in different engineering situations.
2. Analyze Maxwell's equation in different forms (differential and integral) and apply them to diverse engineering problems.
3. Examine the phenomena of wave propagation in different media and its interfaces and in applications of microwave engineering.

4. Analyze the nature of electromagnetic wave propagation in guided medium which are used in microwave applications.

5.

UNIT 1

Vector Analysis (06 Hours)

Introduction and significance of electromagnetic fields, introductory vector analysis and coordinate systems, concepts of gradient, divergence, curl,

UNIT 2

Electrostatic Field (06 Hours)

coulomb's law & electric field, field due to distributed charges, flux density, gauss's law , divergence theorem, electrostatic potential, potential gradient, electric dipole, electrostatic energy density, boundary conditions for electrostatic field.

UNIT 3

Steady Magnetic Field (06 Hours)

Biot-Savart's law, Ampere's circuital law, Stroke's Theorem, Magnetic flux density & Vector magnetic potential, Current carrying conductors in magnetic fields, Torque on loop, Energy stored in magnetic field, Boundary conditions for magneto static field.

UNIT 4

Time Varying Fields and Maxwell's Equations (06 Hours)

Continuity equations for static conditions, displacement current, Faraday's law, Inconsistency of Ampere's law, Maxwell's equations, Comparison of field & circuit theory. Energy stored in Electric and magnetic field time varying fields.

UNIT 5

Propagation of Electromagnetic Waves (06 Hours)

Wave propagation in dielectric & conducting media, wave equations for sinusoidal time variations, Characteristics of plane wave in pure dielectric media and conducting media. Reflection of electromagnetic wave for normal incidence, Polarization, Pointing theorem, Skin depth, phase velocity and group velocity, Boundary conditions

UNIT 6

Transmission Lines and waves theory (06 Hours)

Types of Transmission lines, Transmission line equation, Transmission line parameters, the terminated uniform transmission line, Reflection coefficient, VSWR, group velocity, phase velocity. Smith chart and impedance matching Technique, attenuation of waves, EMI- EMC.

List of Assignments:

1. Coordinate Systems.
2. Case Study of Electromagnetic fields.

3. Application note on- Electrostatic Discharge
4. Application note on- Electromagnetic interference and Compatibility
5. Analysis of transmission lines using Smith Chart.

List of Tutorials

1. Vectors & coordinate systems
2. Application of Stoke's theorem.
3. Application of Gauss's law.
4. Energy stored in capacitor.
5. Application of Poission's and Laplace's equations.
6. Applications of Ampere's law
7. Boundary conditions for electrostatic fields.
8. Boundary conditions for magnetic fields.
9. Poynting theorem and their applications.
10. Applications of Smith Chart.

- **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.
- **Assessment Methods:**

4. Unit Test	2. Assignments
3. Continuous Assessment	4. End term Examination

Examination Scheme

End Semester Exam: 60

Continuous Assessment: 40

TW & OR: 50

Credits: 04

Course Prerequisites:

- Basic knowledge of electronic devices, electrical technology.
- Basic mathematical tools like Integration and Derivatives, Partial Derivatives Fourier series.

Course Objectives:

- To introduce to students the theory and applications of power electronics systems for high efficiency, renewable and energy saving conversion systems,
- To prepare students to know the characteristics of different power electronics switches and selection of components for different applications.
- To develop students with an understanding of the switching behavior and design of power electronics circuits such as AC-DC, AC-AC and DC-DC converters.

Course Outcomes:

After successfully completing the course students will be able to:

1. Explain construction, switching characteristics and justify the selection of power devices and thyristors.

2. Explain operating principle and suggest protection circuit for power devices and thyristors.
3. Explain construction and operating principle of DC machines and AC machines (1 ϕ and 3 ϕ).
4. Learn the role of Power Electronics in utility-related applications which are becoming extremely important.
5. Understand, simulate and design single-phase and three-phase thyristors converters.

UNIT I:

Power Diodes And Transistors

(6 Hours)

Power Diodes: Construction, Switching characteristics, Line frequency diodes.

Power BJT: Construction, Operation, Steady state characteristics, switching characteristics. Switching limits, Break down voltages, Second breakdown, Thermal runaway.

Power MOSFET: Construction, Operation, Static characteristics, Switching characteristics, Forward and reverse bias Safe Operating Area, Parallel operation.

IGBT: Construction, Operation, Steady state characteristics, Switching characteristics, Safe operating area.

Gate drive circuits for Power BJT, MOSFET & IGBT.

UNIT II:

Thyristors

(6 Hours)

SCR: Construction, Operation, Transistor analogy, Static characteristics, Switching characteristics. SCR ratings, Gate Characteristics, Triggering requirements, Triggering techniques, Isolation techniques.

TRIAC: Construction, Operation, Steady state characteristics, triggering modes.

GTO: Construction, Operation, Turn off mechanism, Applications.

UNIT III:

Power Converters – I

(6

Hours)

Controlled Rectifiers (AC – DC converters): Concept of line & forced commutation Single phase Semi & Full converters for R & R-L loads, Effect of free-wheeling diode,

Three phase Semi & Full converters for R load.

AC – AC converters: Single phase AC voltage controller for R & R-L loads, three phase AC voltage controller for R load.

(Qualitative analysis only)

UNIT IV:

Power Converters – II

(6 Hours)

DC - DC converters: DC Chopper: - Working principle of step down chopper, control strategies, step down chopper for R-L load, step up chopper; SMPS.

DC- AC converters: Inverter: - Working principle of single phase, Bridge inverter for R & R-L load, three phase bridge inverter for R load, Harmonic reduction using PWM technique.

(Qualitative analysis only)

UNIT V:

Introduction to Motors

(6 Hours)

DC motors, AC Motors, Special Purpose Motors,

Induction Motor, Universal Motor, Stepper Motor, Servomotors etc.

(Qualitative analysis only)

UNIT VI:

Industrial Applications

(6 Hours)

Introduction to drives, speed control techniques, illumination and lighting control protocol, Electric Heating, Electric Welding, High Voltage DC transmission, UPS- On line and off line, LED drives, Solar PV.

List of Experiments: Minimum 6 experiments to be performed from the following List.

1. SCR/TRIAC/ MOSFET/IGBT Characteristics.
2. Triggering circuits and phase control circuits for SCRs/MOSFET Driver Circuits
3. Single phase FW bridge converter feeding DC motor.
4. Three Phase Converter (HW and FW Bridge)
5. Single phase AC Voltage Regulator
6. Chopper (Step up and Step down)
7. Single phase / three phase Inverter with Resistive/Induction Motor load.
8. Simulation of Converter / Chopper using MATLAB/ Lab View/ Multisim.
9. Simulation of PWM Inverter using MATLAB/ Lab View/ Multisim.

List of Assignments:

1. Study of 1- phase AC to DC controlled converter (half controlled and full controlled).
2. Study of 3- phase AC to DC full controlled converter.
3. Study of Thyristor based dc to dc converter (dc chopper).
4. Study of a 3- phase PWM inverter with fixed (50Hz) output frequency and study of a non-PWM type inverter with 120-degree conduction of switches.
5. MOSFET based dc to dc converter (buck, boost and buck-boost types with non-isolated output voltage.)
6. Study of an industrial type fly-back dc to dc converter with isolated and regulated output voltage.
7. Case study of the real time application of electrical systems.

- **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.

- **Assessment Methods:**

Teaching Scheme

Lecture: 4 Hours/week

Practical: 2 Hours/week

Marks

Examination Scheme

End Semester Exam: 60 Marks

Continuous Assessment: 40

TW & OR: 50 Marks

Credits: 05

Course Prerequisite:

- Signals and System

Course Objective:

- To introduce the student to a very broad and advanced topic of Digital Signal Processing (DSP) which is one of the core subjects in the curriculum.
- To teach the student the basic concepts and tools in the field of DSP
- To enable the student to apply knowledge of Digital Signal Processing (DSP) in the fields of Signal Processing, Communication, Speech Processing, Instrumentation, Medical Electronics and research

Course Outcomes: After the successful completion of the course the student will be able to

1. To enumerate the advantages of DSP over processing in analog domain.
2. To be able to find Discrete Fourier Transform of a digital signal.
3. To design a Finite Impulse Response (FIR) Filter given the specifications.
4. To design a Infinite Impulse Response (IIR) Filter given the specifications.
5. To quantify the finite word length effects in the field of DSP.
6. To enumerate the features of a DSP Processor.

UNIT 1:

Introduction

(7 Hours)

Basic elements of DSP and its requirement, Advantages of digital over analog signal processing, z-Transform and its application to the analysis of LTI systems, Discrete

Complex exponentials and their properties, Frequency domain analysis of LTI systems, Frequency response of LTI systems, LTI systems as Frequency selective filters

UNIT 2:

Discrete Fourier Transform

(9 Hours)

Overview of Frequency Analysis of signals, Discrete Time Fourier Transform(DTFT), Discrete Fourier Transform as Sampled DTFT, Properties of DFT, Linear filtering methods based on DFT and IDFT, Goertzel Algorithm, Frequency analysis using DFT. FFT algorithms, Saving in computation achieved by FFT algorithm, Decimation in time and decimation in frequency FFT algorithms, Butterfly computation.

UNIT 3:

FIR Filter Design

(9 Hours)

Advantages and overview of FIR filters, Symmetric & Anti-symmetric FIR filters, Design of FIR filters using windows, Frequency sampling method, Equiripple optimum Chebyshev FIR filter design, Alternation theorem, Design of some special FIR filters: FIR differentiators, Hilbert Transformers and Raised Cosine Filters. FIR filter structures - Direct form, Cascade form and Frequency-Sampling structures.

UNIT 4:

IIR Filter Design

(9 Hours)

Advantages and overview of IIR Filters, IIR Filter design methods - Approximation of derivatives, Impulse invariance, Bilinear transformation. Limitations of the design methods, Designing of Butterworth and Chebyshev Filters, Frequency transformations in analog and digital domain, IIR filter structures - Direct form, Cascade Form, Parallel form structures and Lattice & Lattice-ladder structures

UNIT 5:

Finite Word Length Effects

(7 Hours)

Overview of Finite Word Length Effects, Quantization process and errors, Coefficient quantization effects, Arithmetic round-off errors, Dynamic range scaling, Limit cycles in IIR digital filters, Round-off errors in FFT algorithms, Minimizing the Finite Word Length Effects

UNIT 6:

DSP Processors And Applications Of DSP

(7 Hours)

Need for special purpose DSP Processors, Features of DSP Processors: Harvard and Modified Harvard Architectures, Bus structure, Addressing Modes, Processing Units, Address Generators, Single Cycle Execution. Case study of TMS320C67x DSP processor. Major applications of DSP: DTMF, Spectral Analysis, Musical Sound Processing, Transmultiplexers, Oversampling A/D and D/A converters

List of Experiments

Assignments to be carried out using software such as MATLAB

1) To plot magnitude and phase Spectra of DFT of a given sequence.

- 2) To verify properties of DFT
- 3) To implement filter using overlap add and overlap save method
- 4) To design FIR Filter for given specifications.
- 5) To design IIR Filter for given specifications.
- 6) To observe Finite Word Length Effect in any one application in DSP
- 7) To do Spectral Analysis of a real signal
- 8) To implement Dual Tone Multi Frequency signal generation and detection.
- 9) To implement an FIR Filter on a DSP Processor

List of Assignments

- 1) Write down what changes were brought due to the transition from analog processing to digital processing in any one field such as telephone system or a audio playback system.
- 2) Write down the significance of the contribution by Cooley and Tookey to the field of DSP.
- 3) Justify the need of window function in the design of FIR filter by windowing method.
- 4) What are the limitations of each of the IIR Filter design method?
- 5) Compare the structures used to implement digital filters with respect to Finite word length effects.
- 6) Write down the features of any one commercially available DSP Processor.

- **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.
- **Assessment Methods:**

6. Unit Test	2. Assignments
3. Continuous Assessment	4. End term Examination

Examination Scheme

End Semester Exam: 60 Marks

Continuous Assessment: 40 Marks

TW & OR: 50 Marks

Credits: 04

Course Prerequisites:

Fundamentals of Computer, Digital Logic Circuits, Computer Organization and Architecture.

Course Objectives:

- To understand need and application of ARM Microcontroller in embedded system.
 - To study the architecture of ARM series microcontroller
 - To understand architecture and features of typical ARM7 & ARM CORTEX-M3 Microcontroller.
 - To learn interfacing of real world input and output devices
-

Course Outcomes: On successful completion of this course, students will be able to

1. Develop Firmware Embedded Systems.
2. Interface the advanced peripherals to microcontrollers.
3. Design embedded system with available resources.

UNIT 1

Introduction to Embedded Systems (4 Hours)

Definition of Embedded System, Embedded Systems Vs General Computing Systems, Classification, Characteristics of Embedded Systems, Hardware and Software components of an Embedded System, Introduction to IDEs. Major Application Areas.

UNIT 2

Introduction to embedded programming & RTOS (8 Hours)

Introduction to embedded data types in embedded C, addressing memory & I/O, I/O functions of embedded C. Examples on Embedded C.

RTOS: Architecture of kernel, Task and Task scheduler, Interrupt service routines, Semaphores, Mutex, Mailboxes, Message queues, Event registers, Pipes, Signals, Timers, Memory management, Priority inversion problem.

UNIT 3

ARM7 Based Microcontroller

(8 Hours)

Introduction to ARM processors and its versions: ARM7, ARM9 & ARM11 features, ARM7 data flow model, programmer's model, modes of Operations, Overview of Instruction set.

ARM7 Based Microcontroller LPC2148: Features, Architecture (Block Diagram and Its Description), System Control Block (PLL and VPB divider) , Memory Map, GPIO, Pin Connect Block, timer.

UNIT 4

Interfacing with ARM7

(6 Hours)

Interfacing the peripherals with LPC2148: LED, LCD, GLCD, KEYPAD, GSM and GPS using UART, on-chip ADC using interrupt (VIC), EEPROM using I2C, SDCARD using SPI, on-chip DAC for waveform generation.

UNIT 5

ARM CORTEX Processors

(6 Hours)

Introduction to ARM CORTEX series, improvement over classical series. CORTEX A, CORTEX M, CORTEX R processors series, versions, features and applications.

ARM-CM3 Based Microcontroller LPC1768: Features, Architecture (Block Diagram & Its Description), System Control, Clock & Power Control, GPIO and Pin Connect Block.

UNIT 6

Interfacing with ARM CORTEX M3

(4 Hours)

Interfacing peripherals with LPC1768: RGB LED, Seven Segment, TFT Display, MOTOR control using PWM.

List of experiments: Any 8 of below given experiments.

1. Interfacing LPC2148 with LCD/GLCD
2. UART Interfacing LPC2148 in embedded system (GSM/GPS)
3. Interfacing LPC2148 for internal ADC on interrupt basis
4. Interfacing SD card with LPC2148
5. Interfacing EEPROM with LPC2148 using SPI protocol
6. SRAM interfacing with LPC2148/LPC1768.
7. Interfacing LPC1768 to Seven Segment / RGB LED
8. Generation of PWM signal for motor control using LPC1768

9. Interfacing TFT display to LPC1768
10. Implementing CAN protocol using LPC1768
11. Implementing ETHERNET protocol using LPC1768.
12. Semaphore as signaling and synchronizing in ARM7.
13. Mailbox implementation for message passing in ARM7

List of Assignments:

1. Case study of any one of the latest ARM processors and Power point presentation of the same in class.
2. Survey of CORTEX M3 based controllers, its features and comparison.
3. Design of Firmware Embedded system using LPC 2148 (Simulation only).
4. Design of Firmware Embedded system using LLPC1768 (Simulation only).
5. Case study of any one of the RTOS with examples.

- **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.

Marks

04

Examination Scheme

End Semester Exam: 60

Continuous Assessment: 40

TW& PR: 50

Credits:

Course Prerequisite

Analog Electronics, Digital Electronics and Semiconductor Physics

Course objectives:

To introduce students to VLSI Design, Fabrication and Testability techniques.

Course Outcomes:

- Ability to design analog and digital VLSI circuits.
- Ability to study fabrication theory and to implement stick diagrams.
- Ability to design and simulate digital circuits using VHDL.
- Ability to learn low power CMOS VLSI design.
- Ability to understand the concepts of Design for Testability.

Unit-I

(06 Hours)

Introduction to VLSI Design– Introduction to VLSI, VLSI Design Flow, Design Hierarchy, Concepts of Regularity, Modularity & Locality.

Fabrication of MOSFETs-Introduction, Fabrication Process flow: Basic steps, C-MOS n-Well Process, Layout Design rules, Stick Diagram of NAND, NOR, Inverter

UNIT-II

(06 Hours)

MOS Transistor- The Metal Oxide Semiconductor (MOS) structure, The MOS System under external bias, Operation of MOS transistor, MOSFET Current-Voltage characteristics, MOSFET scaling & small-geometry effects, MOSFET capacitances.

MOS Inverters – CMOS Inverter Characteristics, Delay – Time Definitions, Calculation of Delay Times, and Inverter Design with Delay Constraints.

UNIT-III

Digital VLSI Design-1

(06 Hours)

VHDL Entity-Architecture Concepts, Introduction to various modeling styles of VHDL (Behavioral, Dataflow and Structural), VHDL Basic Elements (Data types, Data objects and Operator), Dataflow Modeling: Example based on dataflow modeling, When-Else and With Select Statement, Structural modeling: Concept of Component .

UNIT-IV

Digital VLSI Design-2

(06 Hours)

Behavioral modeling for digital design, If-else, Loop, Case and Wait Statements. Moore and Mealy FSM Design using VHDL, Overview of PLDs, CPLD and FPGA architecture overview, Modes of configuration.

UNIT- V

Low – Power CMOS Logic Circuits

(06 Hours)

Introduction, Overview of Power Consumption, Low Power Design through Voltage scaling, Estimation and Optimization of switching activity, Reduction of Switched Capacitance and Adiabatic Logic Circuits.

UNIT- VI

Design for Testability

(06 Hours)

Introduction, Fault Types and Models, Controllability and Observability, Ad Hoc Testable design Techniques, Scan Based and BIST Techniques

List of experiments:

1. Introduction to Xilinx tools and design of various Gates.
2. Dataflow Modeling -1
 - A) Design Full-adder using dataflow modeling.
 - B) Design 3x8 Decoder using dataflow modeling.
3. Dataflow Modeling-2
 - A) Design 8x3 encoder using when else statement.
 - B) Design 4x1 Multiplexer using with select statement.
4. Structural Modeling-1
 - A) Design a Half adder using Structural modeling.
 - B) Design a 4bit adder using Full adder as component.
5. Structural Modeling-2
Design 8-bit odd parity detector using Structural Modeling. Assume 2i/p X-OR as component.
6. Behavioral Modeling-1
 - A) Implementation of Positive edge triggered D-FF.
- B) Implementation of Positive edge triggered T-FF.
7. Behavioral Modeling-2
 - A) Design a 4bit buffer register.
 - B) Design a 4bit Ring counter using wait statement.
8. FSM Design-1
Design a BCD counter using Moore FSM
9. FSM Design-2
Implement sequence detector 1010 using Mealy machine.
10. Layout Design-1
Introduction to Microwind and design of Inverter.
11. Layout Design-2
Using Microwind, Design NAND and NOR.

List of Assignments:

1. Any one complex Digital VLSI Design Example using VHDL
2. Presentation based on any advanced topics of VLSI Design.
3. Layout design of Ring Oscillator using Microwind

- **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.

- **Assessment Methods:**

Class: B. Tech (E & TC) SEM:-VI

SUBJECT: - Microwave Theory and Antennas

Teaching Scheme

Lecture: 3 Hours/Week

Marks

Practical: 2 Hours/Week

Marks

Marks

Examination Scheme

End Semester Exam: 60

Continuous Assessment: 40

TW& OR: 25

Credits: 04

Course Prerequisites:

Students should have basic knowledge of:

- Electromagnetic engineering

Course objective:

- To develop ability to design antenna and understanding of Microwave communication.

Course Outcomes: On successful completion of this course, students will be able

1. To perform wave propagation on a line and Use Smith chart.
2. To understand concepts of Modes and Calculate network parameters.
3. To understand Microwave devices and use them.
4. To calculate antenna parameters.
5. To design different Antenna arrays.
6. To Design Microstrip Antenna.

UNIT 1

Introduction and Transmission Line Theory (6 Hours)

Applications of Microwave Engineering, A Short History of Microwave Engineering, Wave Propagation on a Transmission Line, The Lossless Line, Transmission Line Parameters, Propagation Constant, Group Velocity, Power Flow for the Lossless Coaxial Line, The Combined Impedance–Admittance Smith Chart, The Quarter-Wave Transformer, Load Matched to Line, Conjugate Matching, The Terminated Lossy Line, Single-Stub Tuning, Shunt Stubs Series Stubs, Double-Stub Tuning, Smith Chart Solution

UNIT 2

Waveguides and Network Parameters (6 Hours)

Concept of Mode, Characteristics of TEM, TE and TM Modes, Losses associated with microwave transmission Concept of Impedance in Microwave transmission, Coaxial Line. Rectangular Waveguide, Circular waveguide, Equivalent Voltages and currents for non-TEM lines. Network parameters for microwave Circuits, Scattering Parameters

UNIT 3

Microwave Devices(6 Hours)

Microwave Passive components: Directional Coupler, Power Divider, Microwave Passive components: Magic Tee, attenuator, resonator, Microwave Active components: Diodes, Transistors, Microwave Active components: oscillators, mixers, Microwave Semiconductor Devices: Gunn Diodes, Schottky Barrier diodes, PIN diodes, Microwave tubes: Klystron, TWT, Magnetron, klystron Amplifier

UNIT 4

Antenna parameters (6 Hours)

Introduction ,Types of Antennas ,Radiation Mechanism ,Radiation Pattern ,Radiation Power Density ,Radiation Intensity ,Beam width , Directivity, Numerical Techniques, Antenna Efficiency ,Gain , Beam Efficiency , Bandwidth, Polarization ,Input Impedance , Antenna Radiation Efficiency ,Antenna Vector Effective Length and Equivalent Areas ,Maximum Directivity and Maximum Effective Area , Friis Transmission Equation and Radar Range Equation , Antenna Temperature , Far-Field Radiation

UNIT 5

Antennas and its array (6 Hours)

Small Dipole, Finite Length Dipole, Half-Wavelength Dipole, Cylindrical Dipole, Folded Dipole ,Loop antennas, Circular Loop of Constant Current, Two-Element Array, N-Element Linear Array: Uniform Amplitude and Spacing, N-Element Linear Array: Uniform Spacing,

Non uniform Amplitude, Circular Array , Traveling Wave Antennas, Broadband Antennas, Log-Periodic Antennas, Fractal Antennas

UNIT 6

Microstrip and Other antennas

(6 Hours)

Field Equivalence Principle: Huygens' Principle, Babinet's Principle, Microstrip Antennas , Rectangular Patch, Circular Patch, Quality Factor, Bandwidth, and Efficiency, Input Impedance, Coupling, Arrays and Feed Networks, Horn Antennas, Conical Horn, Parabolic Reflector Antennas, Smart-Antenna, Signal Propagation in Smart antennas , Mobile Ad hoc Networks, Smart-Antenna System Design.

List of Experiments: Any of the 8 below Experiments.

1. Frequency & Wavelength measurement of Klystron tube.
2. Determination of VSWR & reflection Coefficient
3. I-V characteristics of Gunn diode.
4. Frequency & Wavelength Measurement
5. Study of Magic tree
6. Design of Microstrip antenna using Ansys HFSS
7. Design of Horn antenna using Ansys HFSS
8. Design of parabolic antenna using Ansys HFSS
9. Design of antenna with array using Ansys HFSS
10. Study of Smart antennas

List of Assignments:

1. Case study of Research paper on Antenna.
2. Design and research Paper publication.
3. Advance applications in Microwave and Antenna.
4. PPT presentation on Subject Topic

- **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.

- **Assessment Methods:**

9. Unit Test
2. Assignments
3. Continuous Assessment
4. End term Examination

Text Books:

1. Microwave Engineering by David M Pozzar (John willy& sons).
2. Antenna theory and Design C.A Balanis (John willy& sons.).

Reference Books:

1. R. E. Collin, "Antennas and Radio Wave Propagation", McGraw-Hill.,
2. F. B. Gross, "Smart Antennas for Wireless Communications", McGraw-Hill., 2005
3. W. L. Stutzman, and G. A. Thiele, "Antenna Theory and Design", 2nd Ed., John Wiley & Sons. 1998.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Department of Electronics and Telecommunication

Class: B. Tech (E & TC) SEM:-VI

SUBJECT: - Information Theory & Coding

Teaching Scheme**Lecture: 3 Hours/week****Marks****Marks****Examination Scheme****End Semester Exam: 60****Continuous Assessment: 40****Credits: 03**

Course Prerequisites:

- Digital Communication
- Analog Communication
- Signals and Systems

Course Objectives:

- To introduce the student to the field of Information Theory.
- To introduce the student to the fundamental concepts in information theory
- To enable the students to apply the algorithms of source coding and channel coding.

Course Outcomes: On successful completion of this course, students will be able to

1. To find a source code for a given information source and calculate its efficiency.
2. To find the mutual information for a given source and a channel.
3. To find the channel capacity for a given channel
4. To find the error correcting capacity for a given linear block code
5. To find the encoding and decoding circuit for a given cyclic code.
6. To apply Viterbi decoding algorithm for a given received sequence

UNIT - I**Source Coding****(6 Hours)**

Introduction, Historical Perspective of Information Theory, Information: Definition and physical significance, Properties of Information, Information Source, Discrete Memoryless Source, Binary Source, Entropy, Properties of Entropy, Some Source Coding Algorithms: Huffman Coding, Shannon-Fano Coding. Average Code length, Efficiency, Source Coding Theorem, Lempel-Ziv Coding.

UNIT – II

Mutual Information And Channel Coding Theorem (6 Hours)

Discrete Memoryless Channel, Channel Matrix, Mutual information, Conditional Entropy, Joint Entropy. Physical Significance of Mutual Information, Properties of Mutual Information, Channel Capacity, Channel Coding Theorem, Error Free Communication, Verification of Channel Coding Theorem for Binary Symmetric Channel.

UNIT - III

Channal Capacity Theorem (6 Hours)

Differential entropy and mutual information for continuous ensembles, Differential entropy for Gaussian distribution, Channel Capacity Theorem, Sphere Packing Problem, Implications of Channel Capacity Theorem, Rate Distortion Theory.

UNIT - IV

Linear Block Codes (6 Hours)

Introduction: Need of Error Control Coding, Classification of Error Correcting Codes, Error Detection and Error Correction Techniques, Systematic and nonsystematic Codes, Code rate. Linear Block Codes, Generator and Parity Check Matrices, Hamming Codes, Syndrome: definition and properties, Syndrome decoding, Hamming Bound, Perfect Code.

UNIT -V

Cyclic Codes

(6 Hours)

Cyclic Codes: Properties and significance, Generator Polynomial and its properties, Parity Check Polynomial, Syndrome Polynomial and its properties, Encoding and Decoding of Cyclic Codes using shift register. Overview of BCH Codes, RS codes, Golay codes, Burst error correcting codes.

UNIT-

VI

Convolutional Codes

(6 Hours)

Introduction, Encoding of Convolutional Codes, Code Tree, State diagram and Trellis Diagram, Transform Domain Approach, Maximum Likelihood Decoding-Viterbi Algorithm, Sequential Decoding, Overview of Turbo Codes.

List of Assignments:

1. To find Huffman code, average code length, coding efficiency for a given source.
2. To find mutual information for a given source and channel.
3. To find the channel capacity of a practical channel such as telephone line.
4. To find minimum distance for a given linear block code.
5. To find generator matrix representation for a given generator polynomial.
6. To decode a given received sequence of bits for a given convolutional code using Viterbi Algorithm

- **Content Delivery Methods:** The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes.

- **Assessment Methods:**

- | | |
|--------------------------|-------------------------|
| 10. Unit Test | 2. Assignments |
| 3. Continuous Assessment | 4. End term Examination |

CLASS: B.TECH (E&TC) SEM. - VI

SUBJECT: - Electronic Circuit Design & Practices

Teaching Scheme

Examination Scheme

**Practical: 2 Hours/Week
marks**

TW & OR: 25

Credits: 01

Course prerequisites:

- Knowledge of basic electronics components
-

Course objective:

The aim is to enable the student to undertake an independent survey into a relevant area. This course is to familiarize the student with the analysis and design of Electronics circuits.

Course Outcomes: On successful completion of this course, students will be able to

- Design and implementation of small electronics systems
- Model and quantitatively analyze circuits with transistors and other nonlinear devices;
- Construct and test electronic circuits in the laboratory;
- Use software tools to simulate the behavior of electronic circuits

Contents:

- Tutorial and Laboratory work should consists of design and implementation of small electronics systems based on OP-AMP, Timer 555 IC, encoders, decoders, multiplexers, demultiplexers, switching regulators, PLL etc.
- A group consists of two students, who will work on one system for entire semester.
- The work includes design, implementation, validation and report writing of the system.

Note: Microcontroller based systems are strictly not allowed.

List of Experiments:

- Minimum 8 Experiments based on syllabus using simulation software.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. End term oral performance

Text Books:

- Millman J. and Halkias .C "Integrated Electronics ", 2nd Edition, Tata McGraw-Hill, 2001.

End Semester Exam: 60 marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

TW& OR: 50 marks

Credits: 04

Course Prerequisites:

Analog and Digital Communications, Basic Embedded Systems, Probability Theory.

Course Objectives:

1. To introduce various topologies and types of networks.
 2. To introduce the concepts of network architecture & network design
 3. To give know how of congestion control mechanism.
 4. Familiarize with Networking Protocols & Layers
 5. Introduce network security aspects.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Identify the types of computer networks and topologies.
2. Identify the functions of network connectors, Hubs, Switches, Routers, Bridges, NIC& network layers.
3. Implement various algorithms used in computer networks.
4. Use TCP/IP protocol.
5. Apply the various Network security techniques.

Contents

Unit I

[06Hours]

Introduction to Computer Networks and Internet

Understanding of network hardware, network software and Internet, the network edge, the network core, understanding of Delay, loss and recovery in the circuit and packet switching network, TCP/IP Protocol Suite: The OSI Model, Comparison of the OSI and TCP/IP reference model.

Unit II

[06Hours]

Physical Layer

Guided transmission media, wireless transmission media, EIA 232 D interface standard, Circuit, Packet and Message Switching in Computer Network, High Speed Digital Access, Multi Access Protocols – ALOHA and CSMA, Collision free protocols, Ethernet, Gigabit Ethernet, Ethernet Mac Sub layer, data link layer switching & use of bridges, learning bridges, spanning tree bridges, repeaters, API, hubs, bridges, switches, routers, modems and gateways.

Unit III

[06Hours]

Data Link Layer – LLC, MAC, CRC codes, Elementary Data Link Layer Protocols, sliding window protocol, HDLC, modes of operation.

Transport Layer – Multiplexing and Demultiplexing, Connection less transport (UDP), Principles of reliable data transfer, Medium access sub layer – channel allocation problem, multiple access protocols, IEEE 802 standards for LANS & WANS.

Unit IV

[06Hours]

Network Layer

Introduction, Virtual and Datagram networks, IP protocol and addressing in the Internet Routing algorithms Broadcast and Multicast routing Network Layer Design issues Network Layer Design issues, store and forward packet switching connection less and connection oriented networks-routing algorithms-optimality principle, shortest path, flooding, Hierarchical Routing, Congestion generation and control algorithms, policies-leaky bucket algorithm, token bucket algorithm, virtual circuit subnet and choke packets, Resource Reservation Protocol.

Unit V

[06Hours]

TCP/IP Protocol suit – RPC, Real Time Transport Protocols, The Internet Transport Protocols-The TCP Service Model, The Connection Establishment and in Release in TCP, The TCP Connection Management Modeling, TCP Congestion Control and Flow control.

Application Layer- Introduction, Applications layer paradigms, Client server model, Client-server application-HTTP, FTP, electronic mail, TELNET, DNS, SSH, Protocols - PPP, ARP / RARP, ICMP, IGMP, UDP, IP, DHCP, DNS, EMAIL, Web and HTTP, IPV.4, IPV.6.

Unit VI

[06Hours]

Network security – Cryptography Algorithms and Trust Models, Ciphers vs Codes, Symmetric-key algorithms (DES, AES), Public-key algorithms – RSA, Digital signatures, IPSec, Firewall, Managements of public keys, communications security, Authentication Protocols

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End semester Examination

List of Experiments: Min 8 experiments to be performed

1. Study of Networking
2. Implementation of bus topology using Network Simulator
3. Implementation of star topology using Network Simulator
4. Connecting two computers using RJ45
5. Establish a Ethernet LAN between computers
6. Telephone switching circuit using EPBX
7. Carry networking between two or more computers
8. Configuring different network topologies using MATLAB & introduction to DHCP
9. i) Character transfer using Simplex method
ii) Character transfer using Full-Duplex method
10. Simulation and implementation of bit stuffing
11. Simulation and implementation of CRC
12. Stop-and Wait protocol using MATLAB
13. Go-Back-N protocol using MATLAB
14. Selective repeat Protocol using MATLAB
15. Distance Vector Routing Algorithm using MATLAB
16. Link State Routing algorithm using MATLAB

List of Assignments:

1. Explain different types of Networks and topologies.
2. Describe functions of OSI layers and its architecture.
3. What is TCP / IP protocol model.
4. Explain the connections of Physical Layer using different mediums
5. Explain the functionalities of Data Link Layer and error control
6. Describe techniques of encoding and decoding
7. Explain Network Layer and Data Recovery Methods
8. Describe congestion control mechanism and routing mechanism
9. Explain session layer, addressing and subnetting in OSI reference model.
10. Explain cryptography, symmetric-key algorithms.
11. Explain the concepts if IPSec, Firewall Design
12. Explain different network security mechanisms.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Bharati Vidyapeeth Deemed University
College of Engineering, Pune

Class: B. Tech (Electronics & Telecommunications) Sem: -VII

SUBJECT: - Project Management & Finance

Teaching Scheme

Lecture: 03 Hours/week

Examination Scheme

End Semester Exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

Credits: 03

Course Prerequisite:

Mathematics, Economics, and Statistics.

Course Objectives:

1. To realize basic principles/concepts of project management and finance.
 2. To describe the most well-known theories and perspectives on project managements.
-

Course Outcomes: At the end of the course, a student will be able to

1. Define the Characteristics, Objectives, and Stages of Project management.
2. Conceptualize the importance of time and work estimation in Project management.
3. Analyze Management Concepts for Developing Project Plan.
4. Analyze and Understand Financial & Project Management.
5. Demonstrate Scope, Objectives and Importance of Financial Management.
6. Identify and understand the main responsibilities and tasks of Securities and Exchange Board of India (SEBI) in money market and capital Market.

Contents

Unit I

[06 Hours]

Introduction to Project management:

Characteristics of projects, Definition and objectives of Project Management, Stages of Project Management, Project Planning Process, Establishing Project organization.

Unit II **[06 Hours]**

Work Definition:

Defining work content, Time Estimation Method, Project Cost Estimation and budgeting, Project Documentation Introduction to CMM, Project Risk Management, Project scheduling and Planning Tools: Work Breakdown structure, LRC, Gantt charts, ,CPM/PERT Networks

Unit III **[06 Hours]**

Management Concepts:

Developing Project Plan (Baseline) , Project cash flow analysis, Project scheduling with resource constraints: Resource Levelling and Resource Allocation. Time Cost Trade off: Crashing Heuristic.

Unit IV **[06 Hours]**

Project Implementation:

Project Monitoring and Control with PERT/Cost, Computers applications in Project Management, Contract Management, Project Procurement Management.

Unit V **[06 Hours]**

Financial Management:

Introduction of Finance, Types of Finance, Financial Management, Scope & Objectives of Financial Management, function of finance manager, Importance of Financial Management, Sources of finance, Security Finance.

Unit VI **[06 Hours]**

Working Capital Management:

Capital Structure, Fixed & working capital, Role of Securities and Exchange Board of India (SEBI), function of money market and capital Market, sources of finance. Introduction to capital budgeting, Techniques of capital budgeting. Break even analysis - assumptions, importance, Cost-Benefit analysis, CVP graph.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Assignments:

1. Write characteristics of projects.
2. Define objectives of project management.
3. Discuss the relationship between financial objectives, corporate objectives and corporate strategy.
4. State the differences between PERT and CPM.
5. Discuss in brief: Project scheduling.
6. Explain project monitoring & control using PERT/Cost
7. Identify the nature and role of money and capital markets, both nationally and internationally.
8. Write in brief: Concepts & Importance of organization.
9. Discuss functions of finance manager.
10. Critically evaluate various approaches to the financial management
11. Discuss sources of finance.
12. Explain the functions of a stock market and a corporate bond market.

1. Horald Kerzner, "Project Management: A Systemic Approach to Planning, Scheduling and Controlling", CBS Publishers, 2002.
2. S. Choudhury, "Project Scheduling and Monitoring in Practice".
3. P. K. Joy, "Total Project Management: The Indian Context", Macmillan India Ltd.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

**Bharati Vidyapeeth Deemed University
College of Engineering, Pune**

Class: B.Tech (Electronics & Telecommunications) Sem:-VII

SUBJECT: - Mobile & Broadband Communication

Teaching Scheme

Lecture: 03 Hours/week

Practical: 02 Hours/week

Examination Scheme

End Semester Exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

TW & PR: 50 Marks

Credits: 04

Course prerequisites:

Analog Communication System, Digital Communication System, Information Theory & Coding

Course objectives:

1. To make students familiar with fundamentals of mobile communication systems
 2. To choose system (TDMA/FDMA/CDMA) according to the complexity, installation cost, speed of transmission, channel properties etc.
 3. To identify the requirements of mobile communication as compared to static communication
 4. To understand the three primary components of a fiber-optic communication system.
 5. To understand the system design issues and the role of WDM components in advanced light wave systems.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Understand with various generations of mobile communications
2. Understand the concept of cellular communication
3. Understand the basics of wireless communication
4. Carry out Link power budget and Rise Time Budget by proper selection of components and check its viability.
5. Carry out Satellite Link design for Up Link and Down Link

Contents

Unit I

Introduction to Mobile Communication

[06 Hours]

Mobile and Personal Communication, mobile and wireless devices, Specialized packet and mobile radio networks, circuit switched data services on cellular networks, packet switched data services on cellular networks

Unit II

Wireless LAN

[06 Hours]

Introduction, Infrared radio transmission infrastructure and adhoc networks, Detailed study of IEEE 802.11, HIPER LAN, Bluetooth, Wireless ATM

Unit III

Mobile Network Layer & Transport Layer

[06 Hours]

Mobile IP, DHCP (Dynamic Host Control Protocol), Mobile adhoc networks, Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP, Fast and Selective retransmission and recovery

Unit IV

ISDN

[06 Hours]

Switching Techniques, Principles of ISDN, Architecture, ISDN standards, I-series Recommendations, Transmission structure, User network interface, ISDN protocol architecture, ISDN connections, Addressing, Interworking,

Unit V

B-ISDN architecture and standards, B-ISDN Services

[06 Hours]

Conversational, Messaging, Retrieval, Distribution, Business and Residential requirements.

Unit VI

B-ISDN protocols

[06 Hours]

User plane, Control plane, Physical layer, Line coding, Transmission structure, SONET Requirement, Signal Hierarchy, System Hierarchy.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End semester Examination

List of Experiments:

1. To understand and carryout fault finding of Pulse & Tone DTMF Telephone Trainer.
2. To Carryout telephone signal switching system using EPBX Trainer.
3. To install and configure PSTN switch configuration using T/S/T Switch.
4. To install and understand ISDN EPBX system.
5. To transfer voice between two computers using ISDN terminal Adaptors.
6. To transfer data between two computers using ISDN terminal adaptor modem.
7. To transfer video between two computers using ISDN system.
8. To study hardware section and carryout fault finding of Mobile handset trainer.
9. To carryout AT commands mobile communication using GSM trainer.
10. To carryout GPRS Internet data transfer using GPRS trainer.
11. To understand two user CDMA trainer using DSSS technology.
12. To carryout internet data transfer using CDMA trainer.
13. To send and receive DTMF signal using DTMF encoder and decoder circuit.
14. To carryout Voice Packet signal switching system using IP Protocol Trainer
15. To carryout Data Packet signal switching system using IP Protocol Trainer
16. To carryout Video Packet signal switching system using IP Protocol Trainer

List of Assignments:

1. How the Mobile and Personal Communication can works?
2. Distinguish Circuit Switching and Packet Switching with diagrams
3. Explain in detail of IEEE 802.11.
4. Write down the important features of HIPER LAN with its applications.
5. Write short note on DHCP (Dynamic Host Control Protocol)
6. What are prerequisites of Mobile ad hoc networks?
7. List the ISDN standards & explain any one of them.
8. What is mean by Interworking? Explain in detail.

9. List out the Business and Residential requirements. Explain in detail.
10. What are the services provided under B-ISDN?
11. Write a note on SONET.
12. List all the ISDN protocols, and explain the importance of them.

Text Books:

1. J. E. Flood , “Telecommunications Switching, Traffic and Networks”, Pearson Education
2. Krzysztof Wesolowski, “Mobile Communication Systems”, Wiley Student Edition.
3. Balaji Kumar,” A professional guide to ATM, Frame relay, SMDS, SONET,B-ISDN”, Tata McGraw-Hill Publications.
4. Robert Newman,” Broadband Communication”, PHI Publications.

Reference Books

1. Mobile Communications: Jachen Schiller (Addison Westy)
2. Wireless Networks by P. Nicopolitidis, M. S. Obaidat, G. I. Papadimitriou, A. S. Pomportsis ; Wiley Pub.
3. ISDN and Broadband ISDN with Frame Relay and ATM William Stallings, Prentice-Hall, 4th edition
- 4.Govind P. Agrawal, Fiber-Optic Communication Systems, Wiley, 3rd edition.
5. Dennis Roody, “Satellite Communications”, McGraw Hill

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Bharati Vidyapeeth Deemed University
College of Engineering, Pune

Class: B. Tech (Electronics & Telecommunications) Sem:-VII

SUBJECT: Radio Frequency Engineering

Teaching Scheme

Lecture: 02 Hours/Week

Examination Scheme

End Semester Exam: 60 Marks

Unit Test: 20 marks

Attendance: 10 marks

Assignment: 10 marks

Credits: 02

Course Prerequisites:

Electromagnetic Engineering, Microwave Theory and Antennas

Course objectives:

1. To introduce RF issues related to active and passive components.
 2. To introduce RF circuit design.
 3. To introduce modeling of RF circuits.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Understand behavior of passive components at high frequency and modeling of HF circuit.
 2. Design HF amplifiers with gain bandwidth parameters.
 3. Identify Mixer types and their characteristics.
 4. Gain the knowledge of PLLs and Oscillators with respect to circuit topologies.
-

Contents

Unit I

RF Behavior of Passive Components

[04 Hours]

HF Resistors, HF Capacitors, HF Inductors, Chip Components. Circuit Board Considerations: Chip Resistors, Chip Capacitors, Surface Mounted Inductors.

Unit II

RF Measurement & Bandwidth Estimation

[04Hours]

Network Analyzer, Spectrum Analyzer and RF Generator. Open Circuit Time Constant Method: Observations & Interpretations, Accuracy of OCts, Considerations, Short Circuit Time Constant Method.

Unit III

High Frequency Amplifier Design

[04 Hours]

Shunt Peaked Amplifier, Shunt Series peak Amplifier, Two port bandwidth enhancement, Design example. Bandwidth enhancement techniques. Tuned Amplifier: Common Source Amplifier with Single Tuned Load.

Unit IV

Low Noise Amplifier Design

[04 Hours]

MOSFET two port noise parameters, LNA topologies, Power-constrained noise optimization. Design examples: Thermal Noise, Shot Noise, Signal to Noise Ratio and Noise Figure.

Unit V

RF Oscillators

[04 Hours]

Oscillators Using a Common Emitter BJT, Oscillators Using a Common Gate FET, Crystal Oscillators. Colpitts Oscillator: Describing Function Model and Start-up Model of Colpitts Oscillator.

Unit VI

Mixers

[04 Hours]

Mixer fundamentals, Significant Characteristics of Mixer: Single-Ended Diode Mixer, Single-Ended FET Mixer, Balanced Mixer, Image Reject Mixer.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End semester Examination

List of Assignments:

- 1) To study of Frequency measurement of Klystron tube.
- 2) Design a lumped element 'LC' network for matching $Z_L = 10 + j10 \Omega$ to a 50Ω transmission line at 1 GHz.

- 3) To plot the resonant frequency behavior of parallel LC circuit, as a function of resistance.
- 4) To determine stability regions of the device and sketch them in the Smith Chart. Assume suitable parameters.
- 5) Determination of VSWR & reflection coefficient Smart antennas using HFSS.
- 6) With neat diagram, explain the working principle of Gunn diode.
- 7) Explain characteristics of Gunn diode.
- 8) Derive the equation for the scattering matrix of magic Tee.
- 9) Study of Smart antennas using HFSS.
- 10) Explain difference between RF circulator and isolator.
- 11) Design of any one type oscillator.
- 12) Design of Single-Ended Diode Mixer.

Text Books:

1. Reinhold Ludwig, Pavel Bretchko, “RF Circuit Design Theory and Applications”, Pearson Education.
2. Thomas H. Lee, “The Design of CMOS Radio-Frequency Integrated Circuits”, Second Edition, Cambridge Publications.
3. David M. Pozar, “Microwave Engineering”, Fourth Edition John Wiley & Sons, Inc.

Reference Books:

1. T. Yettrdal, Yunhg Cheng, “Devices modeling for analog and RF COMS circuits design”, John Wiley publication.
2. Calvin Plett, “Radio frequency Integrated Circuits Design”, Artech house

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

**Bharati Vidyapeeth Deemed University
College of Engineering, Pune**

Class: B.Tech (Electronics & Telecommunications) Sem:-VII

SUBJECT: Elective-I Wireless Sensor Network

Teaching Scheme

Lecture: 03 Hours/week

Tutorial: 01 Hour/week

Examination Scheme

End semester exam: 60 Marks

Unit Test: 20 marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 Marks

Credits: 04

Course Prerequisites:

Engineering Mathematics I, Engineering Mathematics II, Engineering Mathematics III,
Analog communication and digital communication

Course objectives:

1. To introduce the concept of sensor network establishment, tasking- control and analysis of sensors using wireless medium.
 2. To provide knowledge of mathematical functions associated with sensor network.
 3. Familiarize the student with various routing algorithms
 4. Introduce the idea of Internet of Things and its future scope.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Define, characterize and analyze concept and need of wireless sensor network.
2. Design theoretical localization and tracking algorithms of wireless sensor network.
3. Analyze the effects of various types of routing in wireless sensor network.

4. Apply Mathematical tools to wireless sensor network establishment.
5. Define wireless sensor network tasking and controlling to fulfill the requirement of application area.
6. Categorize the databases of sensor networks and understand design challenges and handling of the huge database.

Contents

Unit I

Introduction [03 Hours]

Unique constraints & challenges, Advantages of sensor networks, Sensor network application, Collaborative processing, Key definitions of sensor network

Unit II

Localization & Tracking [03 Hours]

A tracking scenario, Problem formulation, distributed representation and interface of states, tracking multiple objects, sensor models, Performance, Comparison & Matrices

Unit III

Networking Sensors [03 Hours]

Key assumption, Medium access control, General issues, Geographic & Energy-aware routing, Attribute-based routing, IDSQR, Directed diffusion, Rumor routing.

Unit IV

Infrastructure Establishment [03 Hours]

Topology control, Clustering, Time Synchronization, Interval Methods, Reference broadcasts, Localization services, Ranging Techniques, Range Based localization algorithms

Unit V

Sensor Tasking and Control [03 Hours]

Task driven sensing, Roles of sensor nodes & utilities, Information-based sensor tasking, cluster leader based, Joint routing & Information aggregation, moving center of aggregation sensor GROUP MANAGEMENT

Unit VI

Sensor Network Databases and introduction of IOT [03 Hours]

Sensor database challenges, Querslater forces, Cougar sensor database, Abstract data types, In-Network aggregation, Tiny DB Query Processing, data indices & range queries, Temporal data, ,IOT, Cloud computing

Content Delivery Methods: The course will be delivered through lectures, class room interaction, group discussion, exercises and quizzes

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End semester Examination

List of Tutorials/Experiments:

1. Implement geographic routing for the application of human body health parameters using MATLAB.
2. To transmit and receive Weather parameters using energy aware routing in MATLAB.
3. To transmit and receive Raining water data using Rumor routing.
4. Write programme for automate Home or Industrial day to day needs using collaborative processing.
5. To direct power source controller using wireless sensor network in MATLAB establish its evaluation metric.
6. To control movement of unmanned vehicle using attribute routing in MATLAB.
7. To localize stationaryspot using wireless sensor network.
8. To trackand do time synchronization of high alert areas using wireless sensor network.
9. To monitor and control traffic on high intensity city-road.
10. To track and control greenhouse using wireless sensor network.
11. To control movement of unmanned vehicle using wireless sensor network in NS2 OR NS3.
12. To direct power controller using wireless sensor network in NS2 OR NS3.

List of Assignments:

1. Compare traditional telemetry and wireless sensor network.
2. Enlist and study various basic terminologies of wireless sensor network.
3. Case study of research papers on wireless sensor network for any application.
4. Write a survey paper based on assignment no.3.

5. Choose any wireless sensor application and for that enlist requirements of devices.
6. For the assignment no.5, count total number sensors and define functioning of each.
7. For the assignment no.5, decide priority of parameters such as response time, sensitivity, accuracy and cost of establishment.
8. For the assignment no.5, select best routing algorithm and do its MATLAB simulation or NS3 simulation.
9. Write programme using MATLAB to show failure detection in any wireless sensor application.
10. Enlist various control systems used with wireless sensor network.
11. Explain future applications of wireless sensor network with IOTs.
12. Enlist various disadvantages of wireless sensor network and write solutions to resolve them.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Bharati Vidyapeeth Deemed University
College of Engineering, Pune

Class: B. Tech (Electronics & Telecommunications) Sem:-VII

SUBJECT: - Elective I Advanced Digital Signal Processing

Teaching Scheme

Lecture: 03 Hours/week

Tutorial: 01 Hour/week

Examination Scheme

End Semester Exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 Marks

Credits: 04

Course Prerequisites:

Signals & systems, Digital Signal Processing

Course Objectives:

1. To make student familiar with basic principles of spectral estimation methods.
2. To introduce the advanced concepts and techniques of digital signal processing.
3. To create awareness about the practical applications in the field of Digital Signal Processing.
4. To introduce DSP processor architecture.

Course Outcomes: On successful completion of this course, students will be able to

1. Apply parametric and non-parametric techniques for estimating the power spectral density.
2. Design and implement multistage sampling rate converter.
3. Design appropriate adaptive filter in communication applications.
4. Perform multi-resolution analysis using wavelet transform.
5. To implement the signal processing application using DSP processor.

Contents

Unit I

[06 Hours]

DSP Processor Characteristics

Features of DSP Processors, Harvard and modified Harvard Architecture, Multiply-Accumulate operation, Single Cycle Execution, Multiple on chip buses, ALU, MAC, Shifter Processing Units, Address Generation units, Modulo addressing, Bit reversed addressing, Efficient Looping Mechanisms, Examples of DSP Processors, Applications of DSP Processors

Unit II

[06 Hours]

Linear Prediction

Random Processes, Stationary Random Process, Ergodic Random Process, AR process, MA process and ARMA process, AR lattice and ARMA lattice Ladder Filters, Forward and backward linear prediction, Solution of Normal Equations, Levinson-Durbin Algorithm, Properties of Linear Prediction Error Filters.

Unit III

[06 Hours]

Power Spectrum Estimation

Estimate definition, Nonparametric methods-Periodogram, modified periodogram, Bartlett's method, Blackman-Tukey Method, Performance Comparisons of nonparametric methods, Parametric methods, Methods for estimating parameters of AR, MA and ARMA models

Unit IV

[06 Hours]

Multirate DSP fundamentals

Need for Multi-rate DSP, Decimation by factor D , Interpolation by factor I , Sampling rate conversion by rational factor I/D , software implementation of sampling rate converters (Decimators and Interpolators), sample rate conversion using poly-phase filter structures

Unit V

[06 Hours]

Adaptive filters

FIR adaptive filters – the MMSE criterion and LMS and RLS algorithms, Adaptive Lattice-Ladder Filters - Recursive Least Squares Lattice Ladder Algorithms, Applications of Adaptive Filters

Unit VI

[06 Hours]

Time Frequency Representation of signals

Time Frequency description of signals, Concept of Instantaneous frequency and Complex signal, Uncertainty principle, need for joint time frequency representation, tiling diagrams. Short Time Fourier Transform, Wigner Ville distribution, Continuous Wavelet Transform, Discretization of STFT & CWT, Spectrogram.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Unit Test
2. Continuous assessment
3. End semester Examination

List of Tutorials/Experiments:

1. Study of various addressing modes of DSP.
2. Describe the power spectrum estimation using Blackman and Tukey method.
3. Describe the role of Adaptive filters in Communication.
4. A brief survey of DSP applications in speech processing.
5. Implementation of Multi-rate application in digital audio processing.
6. Implementation of sub band coding for speech signal.
7. Discuss in detail various applications of wavelet transforms.
8. Explain the process of digital FM stereo signal generation.
9. Demonstration of Hardware and Software utilities for DSP starter kits.

List of Assignments:

1. Present a comparative study of DSP processors based on their features and applications.
2. Plot the Periodogram of a Noisy Signal and estimate PSD using Periodogram and Modified Periodogram methods.
3. Estimation of PSD of two sinusoids plus noise using Welch method
4. Find linear prediction coefficients and reflection coefficients using Levinson Durbin Algorithm.
5. Implement program to convert CD data into DVD data
6. Implement LMS algorithm using MATLAB.
7. Record a speech file in your own voice. Find pitch period for a voiced part of the segment.
8. Perform continuous and discrete wavelet analysis of a signal.
9. Implementation of Linear / Circular convolution on DSP processor.
10. Implementation of FIR filter using DSP processor
11. Design an Adaptive filter using LMS algorithm.
12. Mini-project based on the Matlab/Scilab.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Class: B. Tech (Electronics & Telecommunications) Sem:-VII

SUBJECT: Elective-I Digital Image Processing

Teaching Scheme

Lecture: 03 Hours/week

Tutorial: 01 Hour/week

Examination Scheme

End Semester Exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 Marks

Credits: 04

Course prerequisites:

Signals and System

Course objectives:

1. To understand the image fundamentals and mathematical transforms for image processing.
 2. To analyze the image enhancement techniques
 3. To introduce the concepts of image registration and image fusion.
 4. To identify different features of image by using segmentation.
 5. To perform measurement operations on extracted features of image.
 6. To analyze 3D Image Processing and Visualization
-

Course Outcomes: On successful completion of this course, students will be able to

1. To introduce fundamentals of digital image processing and Color transformation.
2. Design image enhancement and filters.
3. Analyze morphological operations and its effects on image.
4. Image resolution and compression method for image.
5. Determine features of various images by using segmentation method.

6. To learn different applications and gain experience in applying image processing algorithms to real problems.

Contents

Unit I

Fundamentals Digital Image Processing [06 Hours]

Introduction, Fundamental steps in digital image processing and components, Elements of visual perception, Image sensing and acquisition, sampling and quantization, An Introduction to the mathematical tools used in digital image processing, Digital image representation, Color models, Noise in color images, Image conversion – RGB to Gray, RGB to Binary.

Unit II

Image Enhancement [06 Hours]

Spatial domain, Gray level transformations, Intensity transformation functions, Histogram processing, Basics of spatial filtering, Smoothing and sharpening spatial filtering, Frequency domain, Introduction to Fourier Transform, One-Dimensional Fourier Transform and Inverse of Fourier Transform, Smoothing and sharpening frequency domain filters, Ideal, Butterworth and Gaussian filters.

Unit III

Multi Resolution Analysis and Compressions [06 Hours]

Wavelet Transforms , Multi resolution analysis, Image pyramids, Multi resolution expansion, Image compression, Image compression Model, Shannon's Theorem, Elements of Information Theory, Error free Compression, Lossy Compression, Image format - TIFF, BMP,GIF, PNG, JPEG, JPEG-2000,H.264, Compression Methods – Huffman Coding, Arithmetic Coding, Run length Coding, Bit-plan coding and predictive coding.

Unit IV

Morphological Operations in Image Processing [06 Hours]

Dilation and erosion, Opening and Closing, Hit or Miss Transformation, Morphological algorithms, Extensions to grey scale images, Image Watermarking.

Unit V

Image Segmentation and Feature Extraction [06 Hours]

Thresholding, Region based segmentation, Region growing, Region splitting and Merging, Segmentation by morphological watersheds, First and second order edge detection operators, Hough transform, Types of Hough transform, shape features, Boundary descriptors, Localized feature extraction detecting image curvature.

Unit VI

Applications of Digital Image Processing [06 Hours]

Image Classification, Image Recognition, Image Understanding, Working principle of Video Motion Analysis (GIF), Introduction to Iris Recognition, Difference between 2D and 3D image,

Sources of 3D Data sets, 3D Image Processing and Visualization, Measurements on 3D images.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End semester Examination

List of Tutorials/ Experiments:

1. Displaying Image in different File Format in MATLAB.
2. Transformation of Simple Binary and Gray Level.
3. Explain Histogram effects in image.
4. Perform Histogram Equalization on Image.
5. Study of Smoothing of Image in Special Domain using Averaging.
6. Study of Smoothing of Image in Special Domain using Medium Method.
7. Analyze Edge Detection Techniques.
8. Study of Morphological Operations.
9. How to perform Segmentation using Thresholding.
10. Study operation of Hough transforms and Feature Detection.

List of Assignments:

1. Discuss Digital image representation.
2. Discuss Color Model.
3. Explain Gray level transformations and Intensity transformation functions.
4. Show working of Butterworth and Gaussian filters.
5. Explain and differentiate Image format
6. Write different Image compression Techniques.
7. Discuss in detail Image Watermarking
8. Write role of Dilation and erosion in image processing
9. What are different types of Edge detection
10. How Hough transform works for detecting varies shapes
11. What is Image Recognition
12. Explain Working principle of Video Motion Analysis (GIF).

Text Books:

1. Gonzalez, Rafael C. and Woods, Richard E., "Digital Image Processing", Second Edition, Prentice Hall, 2006.
2. Ardeshir Goshtasby, "2D and 3D Image registration for Medical, Remote Sensing and Industrial Applications", John Wiley and Sons, 2005.

4. Jain, Anil K., "Fundamentals of Digital Image Processing", Prentice Hall of India, New Delhi.
5. Mark Nixon, Alberto Aguado, "Feature Extraction and Image Processing", Academic Press, 2008.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Class: B.Tech (Electronics & Telecommunications) Sem:- VII

SUBJECT: Elective-I Advanced Computer Programming

Teaching scheme

Lecture: 03 Hours/week

Tutorial: 01 Hour/week

Examination scheme

End Semester Exam: 60 marks

Unit Test: 20 marks

Attendance: 10 marks

Assignment: 10 marks

TW & Oral: 50 marks

Credits: 04

Course prerequisites:

Fundamentals of computing

Course objective:

1. To introduce object oriented programming concepts.
 2. To develop programming ability by learning advanced coding techniques.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Demonstrate basic knowledge of object oriented programming concepts.
2. Write simple programs in Java.
3. Apply Java for HTML and Applet applications.
4. Use SQL for database manipulation

Contents

Unit I

[06 Hours]

Object Oriented Programming:

Programming fundamentals, Basic Concepts, Different Programming Paradigms, Evolution of Different Programming Languages and their Characteristics, Object-Oriented Paradigm,

Objects and Classes, Data Abstraction and Encapsulation, Inheritance, Polymorphism, Dynamic Binding, Message Communication, Benefits of OOP, Applications of OOP, Java Language as an OOP Language.

Unit II

[06 Hours]

Introduction to Java:

Introduction to Java, Different Characteristics of Java, C++ and Java: Feature Comparisons, Improvements, Detailed Overview, Constants, Variables and Data Types, Operators and Expressions, Decision Making and Branching and Decision Making and Looping, Classes Objects and Methods, Arrays, Strings and Vectors, Interfaces.

Unit III

[06 Hours]

Threads:

Packages in Java, Multithreaded Programming concepts and applications, Managing Errors and Exceptions, Managing Input/Output Files in JAVA.

Unit IV

[06 Hours]

HTML and Java Applets:

History, W3C Standards, Standard HTML Tags for Image and Text Formatting, Tables, Lists, Frames. Introduction to dynamic HTML. Java Applets: History, Introduction, HTML and Java Applet. Basic Applet programming, Applets on Web. Applet applications for Web.

Unit V

[06 Hours]

SQL and Java:

Introduction to databases, Data Models, Concepts, Schema, Relational Query. Detailed Overview of SQL Language, Basic SELECT Query, WHERE Clause, ORDER BY Clause, Merging Data from Multiple Tables: INNER JOIN, INSERT Statement, UPDATE Statement, DELETE Statement, and Installation of MySQL or PL SQL. Setting MySQL / PL SQL User Account.

Unit VI

[06 Hours]

Database Connectivity:

Introduction to JDBC, JDBC Architecture, Types of JDBC drivers, Result Set, Metadata, Stored Procedure, Callable Procedure, Connection Procedure.

Content Delivery Methods: Chalk & talk, Power point presentation

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End semester Examination

List of Tutorials/Experiments

1. Write a Java program to implement Class and Inheritance Concept.
2. Write a Java program to differentiate between method overloading and method overriding.
3. Write a Java program to understand the use of String class and string buffer class
4. Write a Java program to implement the concept of Package.
5. Write a Java program to implement concept of Exception Handling.
6. Write a program to implement Frame and different graphics objects.
7. Write a program to implement Java Applet.
8. Write a SQL Program for implementation of DDL, DML, and DCL.

List of Assignments:

1. Write a C++ or Java Program to demonstrate the use of OOP features.
2. Write a Java Program to display pattern (Triangle, Pyramid) using different loops.
3. Implementation of different string functions by using switch case.
4. Write a Java Program implement multiple inheritances by using Interface.
5. Write a Java Program to perform different file operations.
6. Write a program to implement multithreading.
7. Design a College website containing detailed information using HTML Tags.
8. Write a program to implement a Java Applet.
9. Write a Java program to demonstrate JDBC connectivity.
10. Comparison of different database
11. Justify the role of SQL for database manipulation
12. A mini project on Java and SQL.

Text Books:

Text Books:

1. Programming with Java: A Primer, 3E by E Balagurusamy, Tata McGraw Hill Publishing Company.
2. Database System Concepts, Sixth Edition by Henry Korth, McGraw Hill Publishing Company
3. Java Complete Reference, Herbert Schildt, McGraw Hill Publishing Company
4. Java: How to Program by Deitel and Deitel

Reference Books:

1. Ivan Bayross, “Web Enabled Commercial Applications Development Using HTML, DHTML, JavaScript, Perl – CGI”, BPB Publication.
2. Korth, “Database System Concepts”, MGH Publication.
3. Ivan Bayross, “Programming with SQL”, Sybase Publication.

Syllabus for Unit Test:

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV,V, VI

Class: B.Tech (Electronics & Telecommunications) Sem:- VII

SUBJECT: Project stage –I

Teaching Scheme

Practical: 04 Hours/week

Examination scheme

TW & Oral: 50 marks

Total Credits: 04

Course objective:

1. To familiarize the students with the product development cycle
2. To impart the importance of working as a team.
3. To introduce the student to literature survey and documentation process.
4. To encourage the students to visualize and formulate a viable solution to practical engineering problems.

Course Outcomes: On successful completion of this course, students will be able to

1. Identify the problem for practical Engineering application
2. Formulate and design appropriate solution
3. Write specifications and identify constraints
4. Work as an effective team member
5. Effectively plan the financial budget for the project.

Project Stage –I includes various steps such as :

1. Problem Identification
2. Information gathering
3. Feasibility study
4. Synopsis
5. System analysis
6. Requirement analysis

**Bharati Vidyapeeth Deemed University
College of Engineering, Pune**

Class: B. Tech (Electronics & Telecommunications) Sem:-VII

SUBJECT: - In-plant Training

Teaching Scheme

Examination Scheme

TW& OR: 50 marks

Credits: 04

Course Objectives:

1. To familiarize the students to industrial work processes.
2. To work as an effective team member.
3. To develop the communication and presentation skills.
4. To introduce the student to work ethics in industry.

Course Outcomes: On successful completion of this course, students will be able to

1. Work effectively in an industrial environment.
2. Effectively communicate and present himself/herself.
3. Identify the various sections in the industry.
4. Work in a team.

In-plant Training:

Every student has to undergo training on site or in office of some company in June & July for one and half month to get the exposure and practical experience. He has to submit the detailed report of training, on the basis of which the term work and oral marks should be awarded.

Note: Student should complete in-plant industrial training after semester-VI for a period of six weeks. Evaluation will be done in semester-VII.

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B. Tech (Electronics & Telecommunications) Sem: -VIII

SUBJECT: - Optical Fiber Communication

Teaching Scheme

Lecture: 3 Hours/week

Practical: 2 Hours/week

Examination Scheme

End semester exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

TW & PR: 50 Marks

Total Credits:04

Course Prerequisites:

- Electromagnetic Engineering
- Analog Communication System

Course Objectives:

1. To introduce optical fiber modes and signal degradations associated with optical fiber.
2. To introduce optical sources, optical detectors and their use in the optical communication system.
3. To expose the student to digital transmission and its associated parameters on system performance.

Course Outcomes: On successful completion of this course, students will be able to

1. Analyze the basic elements of optical fiber, fiber modes configurations and structures.
2. Design optimization of SM fibers, RI profile and cut-off wave length.
3. Analyze the different kind of losses, signal distortion in optical wave guides and other signal degradation factors Also to analyze the fiber splicing and connectors

4. Analyze the various optical source materials, LED structures, quantum efficiency, Laser diodes and different fiber amplifiers. To analyze about different Detectors, PIN and APD and their noise performance.
5. Design the receiver operation and configuration. noise effects on system performance
6. Analyze the SONET, WDM optical networks
7. Analyze the operational principles WDM, solitons and optical CDMA

Contents:

UNIT-I

Introduction

[6 Hrs]

Introduction to Ray theory transmission: Total internal reflection; Acceptance angle; Numerical aperture, Types of Fiber, Electromagnetic mode theory of optical propagation: modes in planar guide, phase and group velocity, modes in cylindrical fibers.

UNIT-II

[6 Hrs]

Sources and Detectors

Optical sources: Light Emitting Diodes; LED structures ; internal quantum efficiency; injection laser diode structures ; comparison of LED and ILD, Optical Detectors: PIN Photo detectors, Avalanche photo diodes, construction, characteristics and properties, Comparison of performance, Photo detector noise –Noise sources , Signal to Noise ratio , Detector response time.

UNIT-III

[6 Hrs]

Transmission Characteristics of Optical Fiber

Attenuation: Absorption, Scattering; Fiber Bend losses; Dispersion, Optical fiber connectors, Fiber alignment and Joint Losses, Fiber Splices, Fiber connectors and Couplers.

UNIT-IV

[6 Hrs]

Fiber Optic Receiver and Measurements

Fundamental receiver operation, Pre amplifiers, Error sources, Receiver Configuration, Probability of Error, Quantum limit, Fiber Attenuation measurements, Dispersion measurements, Fiber Refractive index profile measurements , Fiber cut- off Wave length Measurements, Fiber numerical Aperture Measurements, Fiber diameter measurements, OTDR

UNIT-V

[6 Hrs]

Optical Networks

Basic Networks, SONET / SDH, Broadcast and select WDM Networks, Wavelength Routed Networks, Non-linear effects on Network performance.

UNIT-VI

Advance Optical Communication

[6 Hrs]

Performance of WDM with EDFA system, Solitons, Optical CDMA, Ultra High Capacity Networks.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Experiments:

1. Study the characteristics of optical source LED, Laser Diode.
2. Determination of Numerical Aperture of optical fiber.
3. Determination propagation loss and bending loss in optical fiber.
4. Design the analog/digital link using fiber optic cable.
5. Simulation of power budget presentation for basic optical network using optisystem software.
6. Simulation of 16 channel WDM system design.
7. Design and Simulation the channel switching based on MEMS.

8. Design and Simulation a ring switch using optispice software.
9. Setting of Fiber optic voice link using AM, FM& PWM.
10. Characteristics of photodetector.

List of Assignments

1. Classification of types of fibers and study of basic principle of optical fiber and its parameters.
2. Study of Electromagnetic mode theory of optical propagation.
3. Discuss the degradation of optical fiber.
4. Classify the types of optical connectors and couplers.
5. Study of characteristics of optical source like LED, LASER.
6. Study of characteristics of optical detector like PIN, APD.
7. Measurement of different parameters of optical fiber.
8. Study of receiver configuration, probability of error, quantum limit of optical receiver.
9. Study of SONET / SDH, Broadcast and WDM networks.
10. Discuss the non-linear effects on network performance.
11. Study of performance of WDM with EDFA system, Solitons.
12. Study of Optical CDMA, Ultra High Capacity Networks.

Text Books:

1. Optical Fiber Communication – John M. Senior – Pearson Education – Second Edition. 2007
2. Optical Fiber Communication – Gerd Keiser – Mc Graw Hill – Third Edition. 2000

3. Rajiv Ramaswami, “Optical Networks “, Second Edition, Elsevier, 2004.
4. Govind P. Agrawal, “Fiber-optic communication systems”, third edition, John Wiley & sons, 2004

Bharati Vidyapeeth Deemed University

College of Engineering, Pune

Class: B. Tech (E & TC) Sem:-VIII

SUBJECT: - Satellite Communication

Teaching Scheme

Lecture: 3 Hours/week

Practical: 2 Hours/week

Examination Scheme

End semester exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

TW & PR: 50 Marks

Credits: 04

Course Prerequisite: Analog Communication, Digital Communication

Course Objectives

- 1 To introduce the fundamental concept in the field of satellite communication.
- 2 To enable the student to understand how to place satellite in orbit.
- 3 To teach the concept of space subsystem.
- 4 To introduce design, analysis & evaluation of satellite communication subsystem.

Course Outcomes:On successful completion of this course, students will be able to

- 1 Understand Orbital aspects involved in satellite communication.
- 2 Calculate Power budget.
- 3 Identify Satellite system and services provided.
- 4 Analyze the performance of satellite communication system.

UNIT 1: Introduction of Satellite Communication

[6Hrs]

Introduction, basic concept of satellite communication, Orbital Mechanics, Look angle determination, Orbital perturbation, Orbital determination, Launchers and Launch vehicles, Orbital effects in communication system performance.

UNIT 2: Satellite subsystem **[6Hrs]**

Satellite Subsystem, Attitude and control system(AOCS), Telemetry, Tracking, Command and Monitoring, Power systems, Communication subsystem, Satellite antennas, Equipment reliability and space qualification.

UNIT 3: Satellite Link Design **[6Hrs]**

Introduction, Basic transmission Theory, System Noise Temperature and G/T Ration, Design of Downlinks, Satellite System using Small Earth Stations, Uplink Design, Design of specified C/N : Combining C/N and C/I values in Satellite Links.

UNIT 4: Satellite Networks **[6Hrs]**

Reference architecture for satellite networks, basic characteristics of satellite networks, Onboard connectivity with transparent processing, analogue transparent switching, Frame organization, Window organization, On board connectivity with beam scanning.

UNIT 5: Low Earth Orbit and Non Geo-Stationary satellite system **[6Hrs]**

Introduction, Orbit considerations, Coverage and Frequency Consideration, Delay and Throughput Consideration, Operational NGSO constellation design: Iridium, Teledesic.

UNIT 6: Satellite Radio and GPS **[6Hrs]**

C-Band and Ku- Band Home satellite TV, Digital DBS TV, Satellite Radio Broadcasting, Radio and Satellite Navigation, GPS Position Location Principles, GPS Receivers and codes.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment

3. End Semester Examination

List of Experiments:

1. To study Direct satellite broadcasting receiver
2. To study Low Noise Block converter
3. To study SAW filter
4. To study Ceramic filter
5. To study Satellite antenna
6. To study Microstrip patch antenna
7. To study Satellite transponder
8. To study Video IF amplifier
9. To study video power amplifier
10. To study Communication receiver

Text Books:

1. Satellite Communications-Timothy Pratt, Charles Bostian, Jeremy Allnut John Wiley & Sons (II Edition)
2. Satellite Communications-Anil k. Maine and Varsha Agaraval, Wiley Publications

Reference Books:

1. Satellite Communications, by Dennis Roddy(Fourth edition),McGraw Hill.
2. Satellite Communication Systems Engineering, by Wilbur L. Pritchard, Henri G. Suyderhoud, Robert A. Nelson (Second Edition), Pearson
3. Satellite Communication, by Timothy Pratt, Charles Bostian, Jeremy Allnutt(Second Edition), John Wiley & Sons.
4. Satellite Technology, Principles and Applications, by Anil K. Maini, Varsha Agarwal (Second Edition), Wiley.

List of Assignments

1. Explain in detail introduction to satellite communication
2. Explain Kepler's first, second and third law in detail
3. Explain in detail satellite antenna.
4. Write about radio wave propagation.
5. Explain in detail various layers existing in radio propagation
6. Explain in detail various polarisation existing in satellite antenna
7. Describe telemetry, tracking and orbital control existing in satellite communication.
8. Explain in detail multiplexer and demultiplexes existing in satellite communication
9. Explain working of satellite transponder
- 10 Explain working of satellite receiver

Bharati Vidyapeeth Deemed University
College of Engineering, Pune

Class: B. Tech (Electronics & Telecommunications) Sem:-VIII
SUBJECT: - Software Defined Radio

Teaching Scheme

Lecture: 3 Hours/week

Tutorial: 1 Hours/week

Examination Scheme

End semester exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

Credits:04

Course Prerequisites:

- Digital Communication, RF Engineering, DSP, Microwave and Antenna theory

Course objective:

1. To provide the student with solid fundamental tools used for Software defined radio.
2. To introduce the design of antenna systems to accommodate the need of a software defined radio (i.e. smart antenna algorithms)
3. To develop ability to understand and implement structure of Software defined radio.
4. To provide understanding of analog and digital technologies used for software-defined radio.

Course Outcomes: On successful completion of this course, students will be able to

1. Understand the basic concepts of SDR.
2. To design algorithms for smart antenna.
3. Use DSP concepts for SDR.
4. Understand the architecture of SDR.
5. Understand different Applications of SDR and smart antennas.

Contents:

Unit 1

Introduction to Software Defined Radio

[6 Hrs]

Introduction to Software Defined Radio, Software Radio Applications, A Traditional Hardware Radio Architecture, An Ideal Software Defined Radio Architecture, Signal Processing Hardware History, Software Defined Radio Project Complexity, Radio Architectures, Hybrid Radio Architecture, Basic Software Defined Radio Block Diagram, System-Level Functional Partitioning, Digital Frequency Conversion Partitioning

Unit 2

RF design for SDR devices

[7 Hrs]

3G RF Performance Requirements, Receiver Requirements 3G Transmitter Requirements, ,14-Bit Software Radio ADC, DACs ,DAC Noise Budget ,ADC Noise Budget , Decimation, Interpolation, and Multirate Processing, Cascading Digital Converters and Digital, Frequency Converters

Unit 3

Signal Processing Hardware Components

[5 Hrs]

SDR Requirements for Processing Power, DSPs, DSP Devices, DSP Performance Summary, DSP Compilers, Reconfigurable Processors, Chameleon Reconfigurable Communications Processor (RCP), Adaptive Computing Machine FPGAs, Symbol Rate and Chip-Rate Partitioning

Unit 4

Software Architecture and Components

[6 Hrs]

Introduction Major Software Architectural Choices, Hardware-Specific Software Architecture, Abstracted Open Software Architecture, Software Standards for Software Radio, JTRS Software Communications Architecture Specification, SDRF Distributed Object Computing

Software Radio Architecture, The OMG, Software Design Patterns, Component Choices

Unit 5

Application & Smart antennas

[6 Hrs]

Software Defined Radio Examples Frameworks and Platforms, 3G SDR Testbeds, Applying Software Radio Principles to Smart Antenna Systems, Smart Antenna Architectures Switched Beam Array, A Software Radio Smart Antenna Architecture, Smart Antenna Performance,

Unit 6

Low-Cost Experimental Software Radio Platform

[6 Hrs]

Platform Requirements, System Architecture, Analog RF Interface, TMS320C62x EVM Daughterboard Interface, PCI Interface, Line-Level Audio Output Interface, System Design, DSP Clock Frequency, ADC Clock Source, Matching Sampling Rate, Functional Design, Low-Level Implementation Details, THS12082 Hardware, THS12082 Software, DSP BIOS Configuration, Potential Applications

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Tutorials/ Experiments.

1. Implement SDR transmission/Modulation using MATLAB.
2. Implement SDR reception/Demodulation using MATLAB.
3. Parameter estimation for adaptation of wireless communication systems (learning environment and other factors)

4. Incorporate cognitive features in the upcoming standards (like 802.16m, LTE advanced, 802.11n, adaptive frequency hopping in Bluetooth) and in the 3G (2.5G) standards.
5. List down the Challenges and issues regarding the implementation of SDR?
6. Implement SDR in LabVIEW.
7. Implementing Software-Defined Radio: 4-QAM Modem in LabVIEW
8. Develop a model of a Software Defined Radio using SIMULINK tool to implement the IEEE 802.11 standard and the Bluetooth standard.
9. Implementing Single tone in NI-USRP using LabVIEW.
10. Implementing audio file modulation in NI-USRP using LabVIEW.

List of Assignments:

1. Draw hybrid radio architecture and explain each of its block.
2. Define Interpolation and Decimation & their Importance in digital communication?
3. List the advance applications in SDR?
4. Explain Symbol Rate and Chip-Rate Partitioning with examples?
5. Cognitive radio is related to SDR. Explain
6. List down the different FPGAs and differentiate between them.
7. List down the Software Standards for Software Radio.
8. Explain the salient features of Texas T1 DSP processors
9. Define Smart antennas and its importance.
10. Explain 3G SDR Testbeds.
11. List down the requirements of low level implementation of SDR
12. Differentiate between 3G,4G &5G

Text Books:

1. Software defined Radio for 3G by Joe Burns (Artech house).
2. Software defined radio by Walter Tuttlebee (Wiley.).

Reference Books:

1. Huseyinarslan, "Cognitive Radio, Software Defined Radio, and Adaptive Wireless Systems ", Springer 2007
2. F. B. Gross, "Smart Antennas for Wireless Communications", McGraw-Hill., 2005

Bharati Vidyapeeth Deemed University

College of Engineering, Pune

Class: B. Tech (Electronics and Telecommunication) Sem: - VIII

SUBJECT: - Elective - II Speech & Audio Processing

Teaching Scheme

Lecture: 3 Hours/week

Tutorial: 1 Hour/week

Examination Scheme

End Semester Exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 Marks

Credits:04

Course prerequisites:

Engineering Mathematics-III , Signals and Systems, Digital Signal processing

Course objective:

- 1.To introduce speech & audio processing theory and time domain models
 2. To introduce the coding techniques for speech & audio signals.
 3. To enable students to apply STFT analysis and speech synthesis
 4. To introduce linear predictive coding as well as different techniques to enhance speech quality
-

Course Outcomes: On successful completion of this course, students will be able to

1. Qualitatively describe the mechanisms of human speech production and how the articulation mode of different classes of speech sounds determines their acoustic characteristics.
2. Apply programming tools (such as MATLAB, Lab VIEW) to analyze speech and audio signals in time and frequency domains, and in terms of the parameters of a source-filter production model and harmonic models.

3. Critically analyze, compare, and implement methods and systems for coding of speech and audio signals, and finally engineer efficient coding solutions.
4. Analyze, compare, and implement methods and systems for enhancement of speech and audio signals in environmental noisy conditions.

Contents:

Unit-I

[6 Hrs]

Fundamentals of Speech

The Human Speech Production Mechanism, LTI Model for Speech Production, Nature of the Speech Signal, Linear Time-Varying Model, Phonetics, Types of Speech, Voiced and Unvoiced Decision Making, Audio File Formats: Nature of the WAV File.

Unit-II

[6 Hrs]

Parameters of Speech: Pitch and Formants

Fundamental Frequency or Pitch Frequency, Parallel Processing Approach for Calculation of Pitch Frequency, Pitch Period Measurement Using Spectral Domain, Cepstral Domain, Formants and Their Relation With LPC, Evaluation of Formants Using Cepstrum, Evaluation of Formants Using Log Spectrum, Evaluation of Formants Using Power Spectral Density Estimate, Estimation of Formants: Other Methods.

Unit-III

[6 Hrs]

Spectral Parameters of Speech

Homomorphic Processing, Cepstral Analysis of Speech: Cepstral Coefficients, The Auditory System as a Filter Bank, Mel Frequency Cepstral Coefficients (MFCCs), Perceptual Linear Prediction (PLP), Log Frequency Power Coefficients (LFPCs), Relative Spectral Perceptual Linear Prediction (Rasta-PLP): Strategies for Robustness, Short-Time Spectral Analysis of Speech: Short-Time Fourier Transform (STFT), Wavelet Transform Analysis of Speech

Unit-IV

[6Hrs]

Linear Prediction of Speech

Lattice Structure Realization, Forward Linear Prediction, Autocorrelation Method, Covariance Method, Lattice Methods, Selection of Order of the Predictor, Line Spectral Frequencies/Line Spectral Pair Frequencies.

Unit -V

[6 Hrs]

Speech Quantization and Coding

Uniform and Non-Uniform Quantizers and Coder, Companded Quantizers, Uniform Quantization of Non-Uniform Sources: Adaptive Quantizers, Waveform Coding of Speech, Comparison of Different Waveform Coding Techniques, Parametric Speech Coding Techniques, Sinusoidal Speech Coding Techniques, Mixed Excitation Linear Prediction Coder, Multi-Mode Speech Coding (Hybrid Coder), Transform Domain Coding of Speech

Unit-VI

[6 Hrs]

Speech Processing Applications

Speech Recognition Systems, Architecture of a Large Vocabulary Continuous Speech Recognition System, Deterministic Sequence Recognition for ASR, Statistical Sequence Recognition for ASR, Statistical Pattern Recognition and Parameter Estimation, VQ-HMM-Based Speech Recognition, Discriminant Acoustic Probability Estimation, Word Spotting/Keyword Spotting, Speech Recognition and Understanding, Speaker Recognition, Distortion Measures: Mathematical and Perceptual, Speech Enhancement, Adaptive Echo Cancellation.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Tutorials/Practicals:

1. Record speech signal and find Energy and ZCR for different frame rates and comment on the result.

2. Record different vowels as /a/, /e/, /i/, /o/ etc. and extract the pitch as well as first three formant frequencies. Perform similar analysis for different types of unvoiced sounds and comment on the result.
3. Write a program to identify voiced, unvoiced and silence regions of the speech signal.
4. Record a speech signal and perform the spectrographic analysis of the signal using wideband and narrowband spectrogram. Comment on narrowband and wide band spectrogram.
5. Write a program for extracting pitch period for a voiced part of the speech signal using autocorrelation.
6. Write a program to design a Mel filter bank and using this filter bank write a program to extract MFCC features.
7. Write a program to perform the cepstral analysis of speech signal and detect the pitch from the voiced part using cepstrum analysis.
8. Write a program to find LPC coefficients using Levinson Durbin algorithm.
9. Write a program to enhance the noisy speech signal using spectral subtraction method.
10. Write a program to extract frequency domain audio features like SC, SF and Spectral roll off.

List of Assignments:

1. Provide the details of human speech production mechanism
2. Explain Types of Speech
3. Explain voiced and unvoiced signal decision making techniques
4. Describe Pitch and Formants of speech signal
5. Explain linear predictive coding (LPC).
6. Write a note on 'Autocorrelation Method for speech processing'
7. Explain Mel Frequency Cepstral Coefficients (MFCCs).
8. Study of Line Spectral Frequencies/Line Spectral Pair Frequencies.
9. Write a note on 'Speech Recognition Systems'
10. Compare VQ and HMM based Speech Recognition on various parameters
11. Study of Uniform and Non-Uniform Quantizers and Coder
12. Study of Log Frequency Power Coefficients (LFPCs)

BharatiVidyapeeth Deemed University

College of Engineering, Pune

Class: B. Tech (Electronics & Telecommunications) Sem:-VIII

SUBJECT: - Elective - II Artificial Intelligence and Robotics

Teaching Scheme

Lecture: 3 Hours/week

Tutorial: 1 Hours/week

Examination Scheme

End Semester Exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignment: 10 marks

TW & OR: 50 Marks

Credits: 4

Course Prerequisites:

- Programming languages, Microcontrollers.

Course Objectives:

1. To introduce basic concepts of Artificial Intelligence.
2. To familiarize the students with methods of solving problems using Artificial Intelligence.
3. To introduce the basic configuration of Robotics and various types of Robots.

Course Outcomes: On successful completion of this course, students will be able to

1. Identify problems that are amenable to solution by AI methods.
2. Identify appropriate AI methods to solve a given problem.
3. Formalize a given problem in the language/framework of different AI methods.
4. Implement basic AI algorithms in design of Robots

Content

UNIT 1

Scope of AI**[6 Hrs]**

Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems, AI techniques- search knowledge, abstraction.

UNIT 2**Problem solving****[6 Hrs]**

State space search; Production systems, search space control: depth-first, breadth-first search, heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis.

UNIT 3**Knowledge Representation****[6 Hrs]**

Predicate Logic: Unification, modus ponens, resolution, dependency directed backtracking. Rule based Systems: Forward reasoning, conflict resolution, backward reasoning, use of no backtrack. Structured Knowledge Representation: Semantic Nets, slots, exceptions and default frames, conceptual dependency, scripts.

UNIT 4**Handling uncertainty and learning****[6 Hrs]**

Non-Monotonic Reasoning, Probabilistic reasoning, use of certainty factors, fuzzy logic. Concept of learning, learning automation, genetic algorithm, learning by inductions, neural nets.

UNIT 5**Robotics****[6 Hrs]**

Automation and Robotics, Definition, Basic Structure of Robots, Robot Classification, Robot Specification, notation, Present trends and future trends in robotics, Overview of robot subsystems.

UNIT 6**Direct and Inverse Kinematics****[6 Hrs]**

Co-ordinates Frames, Rotations, Homogeneous Coordinates, Arm Equation of four Axis SCARA Robot, TCV, Inverse Kinematics of Four Axis SCARA Robot.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Tutorials / Experiments:

1. Program to find truth and probability in evolutionary game.
2. Program for optimal search and graph heuristics
3. Forward and backward Chaining.
4. K-nearest neighbors.
5. Implement Predicate logic
6. Write a program for face detection.
7. Implement knowledge representation
8. Constraint satisfaction problems
9. Breadth-first search
10. Hill climbing algorithm
11. Depth-first search

List of Assignments:

1. Write a note on different AI techniques.
2. Explain Optimal search and graph heuristics.
3. What are problem solving, search and control strategies?
4. Define Mean-end analysis.
5. Discuss Forward chaining and backward chaining with an example.
6. Explain modus ponens with formal notation
7. Write a note on artificial neural network.

8. Explain fuzzy logic with examples.
9. Define basic structure of robot and its classification.
10. Write the Present trends and future trends in robotics
11. Discuss SCARA ROBOT with neat diagram.
12. Explain Inverse Kinematics of Four Axis SCARA Robot

Text Books:

1. E. Rich and K. Knight, “Artificial intelligence”, TMH, 2nd ed., 1992.
2. Robin R Murphy, Introduction to AI Robotics PHI Publication, 2000

Credits: 4

Course Prerequisites: Processor Design, Digital Electronics

Course objective:

- 1) To make students familiar with fundamentals of SOC design methodology.
- 2) To categorize requirements of SOC design.
- 3) To recognize essentials of SOC design.
- 4) To comprehend applications of SOC.

Course Outcomes: On successful completion of this course, students will be able to

- 1) Conceptualize SOC design methodology
- 2) Understand SOC design flow
- 3) Design complex SOC
- 4) Intellectualize future trends in SOC design

Unit-I

The Case for a New SOC Design Methodology

[6 Hrs]

The age of Megagate SOCs, The fundamental trends of SOC design, An improved design methodology for SOC design.

Unit-II

SOC Design Today

[6 Hrs]

Hardware System Structure, Software trends, Current SOC Design Flow, Six Major Issues in SOC Design.

Unit-III

A New Look at SOC Design

[6 Hrs]

The basics of Processor-Centric SOC architecture, Accelerating Processors for Traditional Software Tasks, System Design with Multiple Processors, New Essentials of SOC Design Methodology

Unit-IV

System-Level Design of Complex SOCs

[6 Hrs]

Complex SOC System Architecture Opportunities, Major Decisions in Processor-Centric SOC Organization, Communication Design = Software Mode + Hardware Interconnect, Hardware Interconnect Mechanisms, The SOC Design Flow

Unit -V

Advanced Topics in SOC Design

[6 Hrs]

Pipelining for Processor Performance, Inside Processor Pipeline Stalls, Optimizing Processors to Match Hardware, Multiple Processor Debug and Trace, Issues in Memory Systems

Unit-VI

The future of SOC Design

[6 Hrs]

What's happening to SOC design, The designer's dilemma, The SOC design transition, Looking into future of SOC design, Future applications of complex SOC.

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination

List of Tutorials/Experiments:

- 1) Study of SOC Components
- 2) Study of Integration Technology in SOC with standard CMOS process.
- 3) Study of Technology challenges in SOC design.
- 4) Study of SOC design requirements
- 5) Study of SOC architecture
- 6) Study of SOC test methodology
- 7) Application of SOC in Communication
- 8) Application of SOC in Computer
- 9) Application of SOC in Consumer
- 10) Case study: Complex SOC

List of Assignments:

- 1) What are the challenges in SOC design? Describe in brief.
- 2) List various design elements, tools and methodologies playing an important role in SOC Design.
- 3) Using diagram, explain SOC design flow.
- 4) Which are the important issues in SOC design? Explain in detail.
- 5) Discuss the basics of processor -centric SOC design.
- 6) Write essentials of SOC design methodology.
- 7) Define complex SOC system architecture opportunities.

- 8) Explain major decisions in processor-centric SOC organizations.
- 9) Discuss pipelining and exceptions.
- 10) Explain issues in memory system.
- 11) Describe designer's dilemma wrt SOC.
- 12) List future applications of complex SOC.

Text book:

- 1) Chris Rowen, Engineering the Complex SOC, Prentice Hall, 2004.

Teaching Scheme

Lecture: 03 Hours/week

Tutorial: 01 Hour/week

Examination Scheme

End semester exam: 60 Marks

Unit Test: 20marks

Attendance: 10 marks

Assignments: 10 marks

TW & Oral: 50 Marks

Credits: 04

Course Prerequisites:

Engineering Mathematics-II, Engineering Mathematics-III, Signals & Systems.

Course Objectives:

1. Introduce a relatively new computing paradigm for creating intelligent machines useful for solving complex real world problems.
 2. Insight into the tools that make up the soft computing technique: fuzzy logic, artificial neural networks and hybrid systems Techniques.
 3. To create awareness of the application areas of neural network technique
 4. Provide alternative solutions to the conventional problem solving techniques in image/signal processing, pattern recognition/classification, control system.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Design fuzzy system for Electronics applications.
2. Describe the fundamentals of Crisp sets, Fuzzy sets, Fuzzy Relations and Fuzzy Logic Controller.

3. Describe the various architectures of building an ANN and its applications.
4. Design and implement neural network systems to solve real-world problems
5. Develop models for different applications using fuzzy system.

Contents:

Unit I

Fuzzy Logic -I

[05 Hours]

Concept of Fuzzy number, fuzzy set theory (continuous, discrete), Operations on fuzzy sets, Fuzzy membership functions (core, boundary, support), primary and composite linguistic terms, Concept of fuzzy relation, composition operation (T-norm, T-conorm), Fuzzy if-then rules.

Unit II

Fuzzy Logic -II

[07 Hours]

Fuzzification, Membership Value Assignment techniques, De-fuzzification (Max membership principle, Centroid method, Weighted average method), Concept of fuzzy inference, Implication rules- Dienes-Rescher Implication, Mamdani Implication, Zadeh Implication, Fuzzy Inference systems -Mamdani fuzzy model, Sugeno fuzzy model, Tsukamoto fuzzy model, Implementation of a simple two-input single output FIS employing Mamdani model Computing.

Unit III

Fuzzy Control Systems

[06 Hours]

Assumptions in a Fuzzy Control System Design, Fuzzy Logic Controllers, Comparison with traditional PID control, advantages of FLC, Architecture of a FLC: Mamdani Type, Example Aircraft landing control problem, washing machine and vacuum cleaner.

Unit IV

Artificial Neural Network -I

[05 Hours]

Biological neuron, Artificial neuron model, concept of bias and threshold , Mc Culloch-Pits Neuron Model, implementation of logical AND, OR, XOR functions Soft Topologies of neural networks, learning paradigms: supervised, unsupervised, reinforcement, Linear neuron model : concept of error energy , gradient descent algorithm and application of linear neuron for linear

regression, Activation functions : binary , bipolar (linear, signum, log sigmoid, tan-sigmoid)
Learning mechanisms: Hebbian, Delta Rule o Perceptron and its limitations Draft.

Unit V

Artificial Neural Network -II

[07 Hours]

Multilayer perceptron (MLP) and back propagation algorithm, Application of MLP for classification and regression, Self-organizing Feature Maps, k-means clustering, Learning vector quantization Radial Basis Function networks: Cover's theorem, mapping functions (Gaussian, Multiquadrics, Inverse multi quadrics), Application of RBFN for classification and regression, Hopfield network, associative memories.

Unit VI

Adaptive Neuro-Fuzzy Inference Systems (ANFIS)

[06 Hours]

ANFIS architecture, Hybrid Learning Algorithm, Advantages and Limitations of ANFIS
Application of ANFIS/CANFIS for regression

Content Delivery Methods: Chalk & talk, Power point presentation.

Assessment Methods:

1. Unit Test
2. Continuous Assessment
3. End Semester Examination.

List of Tutorials/Experiments:

1. Study of Fuzzy sets and operations.
2. Study of concepts of fuzzy sets core, support, alpha cuts..
3. Study of fuzzy relation, Max-min composition.
4. Analyze t-norms and t-conorms.
5. Analyze Fuzzy Inference systems -Mamdani fuzzy model, Sugeno fuzzy model, Tsukamoto fuzzy model.
6. Analyze architecture of a FLC: Mamdani Type with Example Aircraft landing control problem, washing machine and vacuum cleaner.
7. Study of learning mechanisms, approaches and activation functions in ANN.
8. Study of Multilayer perceptron (MLP) and back propagation algorithm.

9. Study of Radial Basis Function networks.
10. Study of ANFIS architecture and Hybrid Learning Algorithm.

List of Assignments:

1. Implement simple logic network using MP neuron model
2. Implement a simple linear regressor with a single neuron model.
3. Implement and test MLP trained with backpropagation algorithm
4. Implement and test RBF network.
5. Implement SOFM for character recognition.
6. Perform fuzzy sets operations.
7. Implement fuzzy membership functions (triangular, trapezoidal, gbell, PI, Gamma, Gaussian).
8. Implement defuzzification (Max-membership principle, Centroid method, Weighted average method)
9. Implement FIS with Mamdani inferencing mechanism.
10. Implement Simulink model for Vacuum cleaner, washing machine using Fuzzy Logic tools
11. Implement Fuzzy Logic Controller.
12. Implement perceptron learning, multilayer feed forward neural networks.

Text Books:

1. Fundamentals of Neural Networks: Architectures, Algorithms and Applications, Laurene Fausett, Pearson Education, Inc, 2008.
2. Fuzzy Logic with Engineering Applications, Third Edition Thomas, Timothy Ross, John Wiley & Sons, 2010.
3. Neuro- Fuzzy and Soft Computing, J.S. Jang, C.T. Sun, E. Mizutani, PHI Learning Private Limited.
4. Principles of Soft Computing , S. N. Sivanandam, S. N. Deepa, John Wiley & Sons, 2007

Reference Books:

1. Introduction to the theory of neural computation, John Hertz, Anders Krogh, Richard Palmer, Addison –Wesley Publishing Company, 1991

2. Neural Networks A comprehensive foundation,, Simon Haykin,Prentice Hall International Inc- 1999.
3. Neural and Adaptive Systems: Fundamentals through Simulations, José C. Principe Neil R. Euliano , W. Curt Lefebvre, John-Wiley & Sons, 2000
4. Pattern Classification, Peter E. Hart, David G. Stork Richard O.Duda,Second Edition,2000
5. Pattern Recognition, SergiosTheodoridis , Konstantinos Koutroumbas, Fourth Edition, Academic Press, 2008
6. A First Course in Fuzzy Logic, Third Edition, Hung T. Nguyen, Elbert A. Walker, Taylor & Francis Group, LLC, 2008
7. Introduction to Fuzzy Logic using MATLAB, S. N. Sivanandam ,S.Sumathi, S. N. Deepa, Springer Verlag, 2007

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Electronics& Telecommunications) Sem:- VIII

SUBJECT: - Project stage - II

Teaching Scheme

Practical: 08 Hours/week

Examination Scheme

TW & Oral: 150 marks

Total Credits: 08

Course prerequisites:

Project Stage -I

Course objective:

1. To familiarize the students with the product development cycle
 2. To impart the importance of working as a team.
 3. To introduce the student to literature survey and documentation process.
 4. To encourage the students to visualize and formulate a viable solution to practical engineering problems.
-

Course Outcomes: On successful completion of this course, students will be able to

1. Implement solution for an Engineering problem.
2. Test and troubleshoot the implemented design.
3. Execute the project implementation & financial budget in a timely manner.
4. Student will be able to contribute and work effectively as team member.
5. Generate project report and present it effectively.

Project Stage –II includes various steps such as:

1. System design
2. Testing
3. System documentation
4. Project report

**Bharati Vidyapeeth Deemed University,
College of Engineering, Pune**

Class: B.Tech (Electronics& Telecommunications) Sem:- VII

SUBJECT: - Seminar

Teaching Scheme

Practical: 02 Hours/week

Examination Scheme

TW & Oral: 50 marks

Total Credits: 01

Course prerequisites: Electronics Engineering, Telecommunication Engineering

Course objective:

1. To develop ability of thinking and motivation for seminar
 2. To expose the students to the state of the art
 3. To develop ability to perform literature survey
 4. To develop Seminar presentation and Technical Communication Skills
-

Course Outcomes: On successful completion of this course, students will be able to

- Effectively communicate his technical idea or project
- Learn master survey and literature survey techniques
- Write Motivational Statement
- Present the topic

Seminar Documentation should include

Cover Title page, plagiarism assessment, report Certificate from Guide, Abstract, list of Figures, List of Tables, Abstract, Presentation Slide using Microsoft power point including bibliography/references in IEEE standard format.

The student shall submit the seminar report in standard format, duly certified for satisfactory completion of the work by the concerned Guide and head of the department.

Examination scheme:
Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

MATRICES

Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering .

(08 Hours)

Unit II

COMPLEX NUMBERS AND APPLICATIONS

Definition, Cartesian, Polar and Exponential Forms ,Argand's Diagram, De'Moivre's theorem and its application to find roots of algebraic equations., Hyperbolic Functions, Logarithm of Complex Numbers, Separation into Real and Imaginary parts, Application to problems in Engineering.

(08 Hours)

Unit III

DIFFERENTIAL CALCULUS

Successive Differentiation, nth Derivatives of Standard Functions, Leibnitz's Theorem.

EXPANSION OF FUNCTIONS

Taylor's Series and Maclaurin's Series.

(08 Hours)

Unit IV

DIFFERENTIAL CALCULUS

Indeterminate Forms, L' Hospital's Rule, Evaluation of Limits.

INFINITE SERIES

Infinite Sequences, Infinite Series, Alternating Series, Tests for Convergence, Absolute and Conditional Convergence, Power series, Range of Convergence. **(08 Hours)**

Unit V

PARTIAL DIFFERENTIATION AND APPLICATIONS

Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables. Errors and Approximations.

(08 Hours)

Unit VI

JACOBIAN

Jacobians and their applications, Chain Rule, Functional Dependence.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

MAXIMA AND MINIMA

Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.

(08 Hours)

Assignments

1. Rank ,System of Linear Equations.
2. Complex Numbers.
3. Differential Calculus and Expansion of Functions.
4. Indeterminate Forms and Infinite Series.
5. Partial Derivatives, Euler's Theorem on Homogeneous Functions.
6. Jacobians, Maxima and Minima of Functions of two variables.

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Fundamentals of Civil Engineering

TEACHING SCHEME:		EXAMINATION SCHEME:		CREDITS ALLOTTED:	
Theory: 03 Hours / Week		End Semester Examination: 60 Marks		03 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 25 Marks		01 Credit	
Course Pre-requisites:					
The Students should have					
1.	Concepts of units and conversions of units.				
2.	Basic knowledge of Chemistry				
3.	Basic knowledge of geography, concept of latitude and longitude.				
Course Objectives:					
	To make student understand the scope and application of Civil Engineering				
Course Outcomes:					
Students will be able to understand					
1.	Different building components and material				
2.	Classification of surveying				
3.	Levelling of the ground				
4.	Planning of building				
5.	Methods of irrigation and water supply				
6.	Different methods of transportation				
UNIT - I	Civil Engineering Scope And Applications.				(06 Hours)
	Civil Engineering scope, importance and applications to other disciplines of Engineering; Civil Engineering construction process and role of Civil engineer; Government authorities related to Civil Engineering; Types of structures based on loading, material and configuration; Building components and their functions; Civil Engineering materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood, glass and aluminum.				
UNIT - II	Surveying				(06 Hours)
	Objectives, Principles and Classification of Surveying; Linear, angular, Vertical and area Measurements and related instruments.				
UNIT - III	Building Planning And Bye Laws				(06 Hours)
	Site selection for residential building; Principles of building planning; Building bye laws- necessity, Floor Space Index, Heights, open space requirements, set back distance, ventilation and lighting, concept of carpet and built up area, minimum areas and sizes for residential buildings; Concept of Eco friendly structures and Intelligent buildings.				
UNIT - IV	Foundations and Earthquakes				(06 Hours)
	Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation. Earthquakes causes, effects and guidelines for earthquake resistant design, earthquake zones.				
UNIT - V	Irrigation And Water Supply				(06 Hours)
	Rainfall measurement and its use in design of dams; Types of dams, canals, methods of irrigation and their merits and demerits; hydropower structures; Water supply, drinking water requirements and its quality, water and sewage treatment flow chart.				
UNIT - VI	Infrastructure				(06 Hours)
	Roads- types of roads and their suitability, cross section of roads, meaning of				

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	<p>terms ; width of roads, super elevation, camber, gradient ,sight distance, materials used for construction of roads.</p> <p>Railways- Types of gauges, section of railway track, components of railway track, advantages.</p> <p>Bridges: Components - Foundation, Piers, Bearings, Deck.</p> <p>Airways- Components -Runway, Taxiway and Hangers.</p>	
Term Work:		
(Term work shall consist of any eight exercises from the list given below.)		
1.	Study and use of prismatic compass and measurement of bearings.	
2.	Study and use of Dumpy level and reduction of levels by collimation plane method.	
3.	Area measurement by Digital Planimeter.	
4.	Drawing plan and elevation of a residential bungalow.	
5.	Study of features of topographical maps.	
6.	Assignment on collection of information on Civil Engineering materials.	
7.	Assignment on types of foundations.	
8.	Assignment problem on irrigation and hydropower structures.	
9.	Assignment on study of flow chart of water and sewage treatment.	
10.	Assignments on types of transportation systems.	
Text Books:		
1.	“ Surveying- Vol I “ - S.K. Duggal , Tata McGraw Hill Publication.	
2.	“Built Environment” – Shah , Kale, Patki, , Tata McGraw Hill Publication	
3.	“Building Construction” – Dr. B.C. Punmia , Laxmi Publication	
4.	“Irrigation and water Power Engineering “- Dr. P.N. Modi,Standard Publishers ,New Delhi	
5.	“Text book of Transportation Engineering “- Arora, Charotar Publishers.	
6.	Water supply and sanitary engineering-Rangawala, Charotar Publishers.	
7.	“Basic Civil engineering”- M.S. Palanichamy- Tata McGraw Hill Publication	
Reference Books:		
1.	“Surveying –Theory and Practice”-James Anderson- Tata McGraw Hill Publication	
Syllabus for Unit Test:		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

ENGINEERING GRAPHICS

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -04 Hours / Week	End Semester Examination: - 60Marks	<u>05</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

Unit I	<p>Lines and Dimensioning in Engineering Drawing Different types of lines used in drawing practice, Dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.</p> <p>Curves used in Engineering Practice Ellipse by Directrix-Focus method, Arcs of Circle method, Concentric circle method and Oblong method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone, Loci of points- Slider Crank mechanisms.</p>	(6)
Unit II	<p>Orthographic Projection Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections.</p>	(6)
Unit III	<p>Isometric Projections Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, and Sphere.</p>	(6)
Unit IV	<p>Projections of Points and Lines and planes Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines, Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP</p>	(6)
Unit V	<p>Projection of Solids Projection of prism, pyramid, cone and cylinder by rotation method.</p>	(6)
Unit VI	<p>Section of Solids Types of section planes, projections of solids cut by different sections of prism, pyramid, cone and cylinder.</p>	(6)

Term work

Term work shall consist of five half-imperial size or A2 size (594 mm x 420 mm) sheets. Assignment 05 Problems on each unit in A3 size Drawing Book

SHEETS

1. Types of lines, Dimensioning practice, Free hand lettering, 1st and 3rd angle methods symbol.
2. Curves and loci of points
3. Projections of Points and Lines and planes
4. Orthographic Projections
5. Isometric views

6. Projection of Solids

Text Books

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India,
2. "Text Book on Engineering Drawing", K.L.Narayana & P.Kannaiah, Scitech Publications, Chennai.
3. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India,
New Delhi ,
4. "Engineering Drawing and Graphics", Venugopal K., New Age International
Publishers.
5. M. B. Shah and B. C. Rana, "Engineering Drawing", 1st Ed, Pearson Education, 2005
6. P. S. Gill, "Engineering Drawing (Geometrical Drawing)", 10 Edition, S. K. Kataria
and Sons, 2005
7. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 Edition, 1988

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

ENGINEERING CHEMISTRY

Teaching Scheme:
Lectures: 4Hrs/Week
Practical: 2Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory: 04
Practical: 01
Term Work: 25marks

Unit I

WATER

Introduction, Hardness of water, Effect of hard water on boilers and heat exchangers: a) boiler corrosion b) caustic embrittlement c) scales and sludges d) priming and foaming
Water softening methods for industrial purposes :a) Zeolite process b) Phosphate conditioning Numerical based on the zeolite process
(08 Hours)

Unit II

MATERIAL CHEMISTRY

Crystallography : Unit cell, Laws of crystallography, Weiss indices and Miller indices, Crystal defects (point and line defects), X-ray diffraction – Bragg's Law and numerical.

Cement : Introduction of cement, Hydraulic/ Non-hydraulic cementing materials, classification of cement, chemistry of portland cement, chemical composition and compound constituents of portland cement, properties of cement and its applications.
(08 Hours)

Unit III

FUELS

Introduction, classification of fuels, calorific value of fuels, NCV and GCV, Determination of calorific values using Bomb calorimeter and Boys' gas calorimeter.
Theoretical calculation of calorific value of a fuel, Analysis of coal a) Proximate b) Ultimate analysis of coal, Numericals based on NCV, GCV.
(08 Hours)

Unit IV

CORROSION AND ITS PREVENTION

Corrosion: - Definition, atmospheric corrosion-mechanism, Wet corrosion-mechanism, Electrochemical and galvanic series, Factors affecting corrosion-nature of metal, nature of environment.
Methods of prevention of corrosion- Cathodic and Anodic protection, Metallic coatings, Electroplating, Hot dipping.
(08 Hours)

Unit V

ELECTROCHEMISTRY

Introduction, Arrhenius Ionic theory, Kohlrausch's law of independent migration of ions
Laws of electrolysis: Faradays Laws, Ostwald's dilution law, Acids and Bases, concept of pH and pOH, Buffer solutions, Solubility Product, Redox Reactions.
Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Overvoltage, Conductometric Titrations, Fuel cells, Lead Acid Storage Cell and numericals based on the above articles.
(08 Hours)

Unit VI

STEREOCHEMISTRY

Introduction, chirality, optical activity, Enantiomers, Diastereomers, projection formula of tetrahedral carbon- Newman projection, Wedge projection, Fischer projection, Geometrical isomerism :- cis and trans isomerism, E and Z isomers
Optical isomerism :- Mesoform, the number of optical isomers for chiral molecules,
Conformations :- conformations of ethane, conformations of n-butane
(08 Hours)

TERM WORK

Experiments

Any Ten experiments from the following:

1. Estimation of hardness of water by EDTA method.
2. Estimation of chlorine by Mohr's method.
3. Determination of percentage of Ca in given cement sample
4. Determination of coefficient of viscosity by Ostwald's viscometer
5. Study of Bomb calorimeter for determination of calorific value.
6. Determination of calorific value of gas fuel by using Boy's gas calorimeter.
7. Determination of dissolved oxygen in a water sample.
8. To determine the Molecular Weight of polymer
9. Estimation of Copper from brass sample solution by Iodometrically
10. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
11. To standardize NaOH solution and hence find out the strength of given hydrochloric Acid solution
12. To determine Surface Tension of given liquid by Stalagmometer
13. Study of corrosion of metals in medium of different pH.
14. To set up Daniel cell
15. To determine pH of soil
16. To determine Acidity of soil

Assignments

7. Effect of hard water on boilers and heat exchangers
8. Hydraulic/ Non-hydraulic cementing materials
9. Analysis of coal a) Proximate b) ultimate analysis of coal
10. Wet corrosion-mechanism, Electroplating, Hot dipping
11. Geometrical isomerism :- cis and trans isomerism, E and Z isomers
12. Fuel cells

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Fundamentals of Electrical Engineering		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Mathematics	
2.	Physics	
Course Objectives:		
	The course introduces fundamental concepts of DC and AC circuits, electromagnetism, transformer and measuring instruments and electronic components to all first year engineering students.	
Course Outcomes:		
1.	Understand and apply knowledge of basic concepts of work ,power ,energy for electrical, mechanical and thermal systems	
2.	Understand and apply knowledge of Kirchoff's laws and network theorems to solve electrical networks	
3.	Describe construction, principle of operation, specifications and applications of capacitors and batteries	
4.	Describe and apply fundamental concepts of magnetic and electromagnetic circuits for operation of single phase transformer	
5.	Define basic terms of single phase and three phase ac circuits and supply systems	
6.	Know and use electrical safety rules	
UNIT - I	Basic concepts	(06 Hours)
	Concept of EMF, Potential Difference, current, resistance, Ohms law, resistance temperature coefficient, SI units of Work, power, energy. Conversion of energy from one form to another in electrical, mechanical and thermal systems	
UNIT - II	Network Theorems	(06 Hours)
	Voltage source and current sources, ideal and practical, Kirchoff's laws and applications to network solutions using mesh analysis, Simplifications of networks using series- parallel, Star/Delta transformation. Superposition theorem, Thevenin's theorem, Max Power Transfer theorem.	
UNIT - III	Electrostatics	(06 Hours)
	Electrostatic field, electric field intensity, electric field strength, absolute permittivity, relative permittivity, capacitor composite, dielectric capacitors, capacitors in series & parallel, energy stored in capacitors, charging and discharging of capacitors, Batteries-Types, Construction & working.	
UNIT - IV	Magnetic Circuit & Transformer	(06 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	<p>Magnetic effect of electric current, cross and dot convention, right hand thumb rule, concept of flux, flux linkages, Flux Density, Magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability, B-H curve, hysteresis loop, series-parallel magnetic circuit, composite magnetic circuit, Comparison of electrical and magnetic circuit</p> <p>Farady's law of electromagnetic induction, statically and dynamically induced emf, self inductance, mutual inductance, coefficient of coupling, Single phase transformer construction, principle of operation, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Determination of Efficiency & Regulation by direct load test.</p>	
UNIT - V	AC Fundamentals & AC Circuits	(06 Hours)
	AC waveform definitions , form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar & rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3-ph AC Circuits.	
UNIT - VI	Electrical Wiring and Illumination system	(06 Hours)
	Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED), Study of Electricity bill.	

Term Work:

The term work shall consist of record of minimum eight exercises / experiments.

1. Determination of resistance temperature coefficient
2. Verification of Superposition Theorem
3. Verification of Thevenin's Theorem
4. Verification of Kirchoff's Laws
5. Verification of Maximum power transfer Theorem
6. Time response of RC circuit
7. Study of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$ & $X_L = X_C$
8. Verification of current relations in three phase balanced star and delta connected loads.
9. Direct loading test on Single phase transformer
 - a) Voltage and current ratios.
 - b) Efficiency and regulations .
10. Study of a Residential (L.T.) Bill

Text Books:

- 1) B.L.Theraja- "A Textbook of Electrical Technology" Volume- I, S.Chand and Company Ltd.,New Delhi
- 2) V. K. Mehta, - "Basic Electrical Engineering", S. Chand and Company Ltd., New Delhi
- 3) I. J. Nagrath and Kothari – "Theory and problems of Basic Electrical Engineering", Prentice Hall of India Pvt. Ltd

Reference Books:

1. Edward Hughes – "Electrical Technology"- Seventh Edition, Pearson Education Publication
2. H. Cotton – "Elements of Electrical Technology", C.B.S. Publications
3. John Omalley Shawn – "Basic circuits analysis" Mc Graw Hill Publications

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

4. Vincent Del Toro – “Principles of Electrical Engineering”, PHI Publications	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

ENGINEERING MATHEMATICS-II

Teaching Scheme:
Lectures: 3Hrs/Week
Tutorials: 1Hr/Week

Examination scheme:
End Semester Examination: 60 marks
Continuous Assessment: 40 marks

Credits Allotted:
Theory : 03
Tutorial : 01

Unit I

DIFFERENTIAL EQUATIONS (DE)

Definition, Order and Degree of DE, Formation of DE. Solutions of Variable Separable DE, Exact DE, Linear DE and reducible to these types.

(08 Hours)

Unit II

APPLICATIONS OF DIFFERENTIAL EQUATIONS

Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchoff's Law of Electrical Circuits, Motion under Gravity, Rectilinear Motion, Simple Harmonic Motion, One-Dimensional Conduction of Heat, Chemical engineering problems.

(08 Hours)

Unit III

FOURIER SERIES

Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis.

INTEGRAL CALCULUS

Reduction formulae, Beta and Gamma functions.

(08 Hours)

Unit IV

INTEGRAL CALCULUS

Differentiation Under the Integral Sign, Error functions.

CURVE TRACING

Tracing of Curves, Cartesian, Polar and Parametric Curves. Rectification of Curves.

(08 Hours)

Unit V

SOLID GEOMETRY

Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder.

(08 Hours)

Unit VI

MULTIPLE INTEGRALS AND THEIR APPLICATIONS

Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Assignments

1. Differential Equations.
2. Application of DE.
3. Fourier Series and Integral Calculus.
4. DUIS and Curve Tracing.
5. Solid Geometry.
6. Double and Triple integrations, area and volume.

References / Text Books :

4. Higher Engineering Mathematics by B. S. Grewal, Khanna Publication, Delhi, 42th edition (2012).
5. Advanced Engineering Mathematics, 7e, by Peter V. O'Neil, Thomson Learning, 6th edition (2007).
6. Advanced Engineering Mathematics, 2e, by M. D. Greenberg, Pearson Education, 2nd edition (2002).

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

FUNDAMENTALS OF MECHANICAL ENGINEERING

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -03Hours / Week	End Semester Examination: - 60Marks	<u>04</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

UNIT-I	<p>Thermodynamics- Heat, work and Internal Energy, Thermodynamic State, Process, Cycle, Thermodynamic System, First Law of Thermodynamics, Application of First Law to steady Flow and Non Flow processes, Limitations of First Law, PMM of first kind (Numerical Treatment), Second Law of Thermodynamics – Statements, Carnot Engine and Carnot Refrigerator, PMM of Second Kind (Elementary treatment only)</p>	(08)
UNIT-II	<p>Introduction to I.C. Engines and turbines- Two stroke, Four Stroke Cycles, Construction and Working of C.I. and S.I. Engines, Hydraulic turbines, steam turbines, gas turbines.(Theoretical study using schematic diagrams)</p> <p>Introduction to refrigeration, compressors & pumps- Vapor compression and vapor absorption system, house hold refrigerator, window air conditioner. Reciprocating and rotary compressor, Reciprocating and centrifugal pump. (Theoretical study using schematic diagrams)</p>	(08)
UNIT-III	<p>Energy Sources - Renewable and nonrenewable, solar flat plate collector, Wind, Geothermal, Wave, Tidal, Hydro power, Bio-gas, Bio-Diesel, Nuclear power.</p> <p>Heat transfer- Statement and explanation of Fourier’s law of heat conduction, Newton’s law of cooling, Stefan Boltzmann’s law. Conducting and insulating materials and their properties, types of heat exchangers and their applications.</p>	(08)
UNIT-IV	<p>Properties of fluids- Introduction, Units of measurements, mass density, specific weight, specific volume and relative density, viscosity, pressure, compressibility and elasticity, gas laws, vapor pressure, surface tension and capillarity, regimes in fluid mechanics, fluid properties and analysis of fluid flow.</p> <p>Properties of Materials and their Applications- Metals – Ferrous and Non-Ferrous, Nonmetallic materials, smart materials, Material selection criteria.</p>	(08)
UNIT-V	<p>Mechanical devices - Types of Belts and belt drives, Chain drive, Types of gears, Types of Couplings, friction clutch (cone and plate), brakes, Power transmission shafts, axles, keys, bush and ball bearings.</p>	(08)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	<p>Mechanisms- Slider crank mechanism, Four bar chain mechanism, List of various inversions of Four bar chain mechanism, Geneva mechanism, Ratchet and Paul mechanism</p>	
UNIT-VI	<p>Machine Tools- Lathe Machine – Centre Lathe, Drilling Machine – Study of Pillar drilling machine, Introduction to NC and CNC machines, Grinding machine, Power saw, Milling Machine.</p> <p>Introduction to manufacturing processes and Their Applications- Casting, Sheet metal forming, Sheet metal cutting, Forging, Fabrication, Metal joining processes.</p>	(08)

List of experiments-

The Term Work shall consist of **any Eight** experiments of following list

1	Measurement of viscosity using Redwood viscometer.
2	Assembly and working of 4-bar, 6-bar, 8-bar planer mechanisms
3	Finding relation between input angle and output angle for various link lengths.
4	Study of domestic refrigerator & window air-conditioner
5	Demonstration of operations of centre lathe
6	Demonstration of operations on drilling machines
7	Demonstration of Two stroke and four stroke engine
8	Study of power transmitting elements: Coupling, Gears and bearings
9	Demonstration of pumps and compressor
10	Study and demonstration of different types of clutches.

10: Engineering Mechanics

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit

Course Pre-requisites:

The Students should have knowledge of

1. Scalar and Vector
2. Newton's law of motion
3. Law of friction
4. Concept of physical quantities, their units and conversion of units
5. Concept of differentiation and integration

Course Objectives:

To develop and apply the concept of resultant and equilibrium for various static and dynamic engineering problems.

Course Outcomes:

The student should be able to

1. calculate resultant and apply conditions of equilibrium.
2. analyze the truss and calculate friction force.
3. calculate centroid and moment of inertia.
4. solve problem on rectilinear motion.
5. solve problems on curvilinear motion.
6. use D'Alembert's principle, Work Energy principle and Impulse Momentum principle for particle.

UNIT - I	Resultant and Equilibrium	(06 Hours)
	Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach.. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point.	
UNIT - II	Truss and Friction	(06 Hours)
	Coefficient of Static Friction, Impending motion of Blocks, Ladders and Belts. Analysis of Perfect Trusses - Method of Joint, Method of Section and Graphical Method.	
UNIT - III	Centroid and Moment of Inertia	(06 Hours)
	Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia.	
UNIT - IV	Kinematics of Rectilinear motion of a Particle	(06 Hours)
	Equations of motion, Constant and variable acceleration, Motion Curves, Relative motion, Dependent motion.	
UNIT - V	Kinematics of Curvilinear motion of a Particle	(06 Hours)
	Motion of a Projectile, Cartesian components, Normal and Tangential components of a curvilinear motion.	
UNIT - VI	Kinetics of a Particle	(06 Hours)
	D'Alemberts Principle, Work-Energy Principle and Impulse-Momentum	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Principle, Coefficient of Restitution, Direct Central Impact.	
Term Work:	
A) The term-work shall consist of minimum Five experiments from list below.	
1. Determination of reactions of Simple and Compound beam.	
2. Study of equilibrium of concurrent force system in a plane.	
3. Determination of coefficient of friction for Flat Belt.	
4. Determination of coefficient of friction for Rope.	
5. Study of Curvilinear motion.	
6. Determination of Coefficient of Restitution.	
B) The term-work shall also consist of minimum Five graphical solutions of the problems on different topics.	
Text Books:	
1) "Engineering Mechanics (Statics and Dynamics)", Hibbeler R.C., McMillan Publication.	
2) "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.	
3) "Engineering Mechanics", Bhavikatti S.S. and Rajashekarappa K.G., New Age International (P) Ltd.	
Reference Books:	
1. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.	
2. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication.	
3. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.	
4. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.	
5. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.	
6. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.	
Syllabus for Unit Test:	
Unit Test -1	UNIT – I to III
Unit Test -2	UNIT – IV to VI

ENGINEERING PHYSICS

Teaching Scheme:	Examination scheme:	Credits Allotted:
Lectures: 4Hrs/Week	End Semester Examination: 60 marks	Theory: 04
Practical: 2Hr/Week	Continuous Assessment: 40 marks	Practical: 01
	Term Work: 25marks	

UNIT – I

MODERN PHYSICS

Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focussing, Wavelength and resolution, Specimen limitation, Depth of field and focus, Electron microscope, Positive rays, Separation of isotopes by Bainbridge mass spectrograph.

NUCLEAR PHYSICS

Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium, Fission energy, Critical mass and size, Reproduction factor, Chain reaction and four factor formula, Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions, Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron,

(08hours)

UNIT – II

SOLID STATE PHYSICS

Band theory of solids, Free electron theory, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.

SUPERCONDUCTIVITY

Introduction, Properties of a super conductor, Meissner's effect, Critical field, Types of superconductors, BCS theory, High temperature superconductors, Application of superconductors.

(08hours)

UNIT – III

THERMODYNAMICS

Zeroth law of thermodynamics, first law of thermodynamics, determination of J by Joule's method, Applications of first law, heat engines, Carnot's cycle and Carnot's engine, second law of thermodynamics, entropy, change in entropy in reversible and irreversible processes, third law of thermodynamics.

NANOSCIENCE

Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles (Physical and chemical), synthesis of colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications.

(08hours)

UNIT-IV

OPTICS - I

INTERFERENCE

Interference of waves, Visibility of fringes, interference due to thin film of uniform and non-uniform thickness, Newton's rings, Engineering applications of interference (optical flatness, interference filter, non-reflecting coatings, multi-layer ARC).

DIFFRACTION

Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Diffraction at a circular aperture (Result only), Plane diffraction grating, Conditions for principal maxima and minima, Rayleigh's criterion for resolution, Resolving power of grating and telescope.

(08 hours)

UNIT-V

OPTICS - II

POLARISATION

Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism, Polaroids, Elliptical and circular polarisation, Quarter and half wave plates, Production of polarised light, Analysis of polarised light, half shade polarimeter, LCD.

LASERS

Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Properties of lasers, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.

(08 Hours)

UNIT-VI

ARCHITECTURAL ACOUSTICS

Elementary acoustics, Limits of audibility, Reverberation and reverberation time, Sabine's formula, Intensity level, Sound intensity level, Sound absorption, Sound absorption coefficient, different types of noise and their remedies, Sound absorption materials, basic requirement for acoustically good hall, factors affecting the architectural acoustics and their remedies.

QUANTUM MECHANICS

Electron diffraction, Davisson and Germer's experiment, Wave nature of matter, De-Broglie waves, Wavelength of matter waves, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box and non rigid box.

(08hours)

TERM WORK

Experiments

Any ten experiments from the following:

1. Determination of band gap of semi-conductor.
2. Solar cell characteristics.
3. e/m by Thomson's method.
4. Uses of CRO for measurement of phase difference and Lissajos figures.
5. Hall effect and Hall coefficient.
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode, Photo diode, LED, Ge/Si diode).
8. Plank's constant by photodiode.
9. Wavelength by diffraction grating.
10. Newton's rings.
11. Ultrasonic interferometer.
12. Sound intensity level measurement.
13. Wavelength of laser by diffraction.
14. Determination of refractive index for O-ray and E-ray.
15. Brewster's law.

Assignments

1. Recent advances in Nanotechnology
2. Nuclear radiation detectors.
3. Atomic force microscope (AFM).
4. Advanced opto-electronic devices.
5. Laser in Industry.
6. Different spectroscopic methods – a comparison (Raman, IR, UVR, etc.).

Unit Tests:

Unit Test I : Unit I, II, III

Unit Test II: Unit IV, V, VI

Reference Books:

1. Physics for Engineers – Srinivasan M.R.
2. A text Book of Engineering Physics- M.N. Avadhanulu, P.G. Kshirsagar
3. Engineering Physics- K. Rajagopal
4. Electronics Principles – A.P.Molvino
5. Fundamentals of Optics – Jenkins and White
6. A Textbook of Sound – Wood
7. Engineering Physics – Sen, Gaur and Gupta

Object-Oriented Programming in 'C++'

TEACHING SCHEME

Lectures : 2 Hrs/week

Practicals : 2 Hrs/week

EXAMINATION SCHEME

ESE (End Semester Examination) : 60 Marks

Continuous Assessment: 40 Marks

Term Work : 25 Marks

Credits : 3 Credits

Course Pre-requisite:

Programming Principles and Paradigms, "C" programming language.

Course Objectives:

- To familiarize with the universal concepts of computer programming.
- To present the syntax and semantics of the "C++" language as well as basic data types offered by the language
- To discuss the principles of the object-oriented model and its implementation in the "C++" language
- To demonstrate the means useful in resolving typical implementation problems with the help of standard "C++" language libraries

Course Outcomes:

At the end of this course students will able to :

- Understand basic concepts of Object Oriented Programming and applications of OOP.
- Use basic, user-defined and derived data types, Operator precedence.
- Apply Decision Structure, Loops and Functions
- Write, Debug and Compile Programs of C++
- Implement OOP concepts like – Inheritance using C++ programming.

UNIT I

(3 Hours)

Principles of Object Oriented Programming:

Object Oriented Programming Paradigm, Basic concepts of Object Oriented Programming, Benefits of OOP, Object Oriented Languages, Applications of OOP.

UNIT II

(5 Hours)

Beginning with C++:

Overview of C++, Sample C++ Program, C++ statements, Structure of C++ program, Creating source file , compiling and Linking, Tokens, Keywords , Identifiers and Constants, Basic data types, User-defined data types, Derived data types, Declaration of variables, Dynamic initialization of variables, Scope Resolution Operator, Operator Overloading, Operator precedence, Control Structures.

UNIT III

(5Hours)

Functions in C++:

The Main Function, Function Prototyping, Call by Reference, Inline functions, Default arguments, Function Overloading , Friend and Virtual Functions .

Classes and Objects:

Class specification , Class Objects , Scope resolution operator, Accessspecifiers- Public, Private, Protected, Defining member Functions, Nesting of Member Functions, Private Member Functions, Static Data Members , Static Member Functions, Data hiding.

UNIT IV

(6 Hours)

Inheritance: Extending Classes:

Defining Derived Classes, Single Inheritance, Making a Private member inheritable, Multilevel Inheritance, Multiple Inheritance, Hierarchical Inheritance, Hybrid Inheritance, Virtual Base Class, Abstract class. Inheritance and protected members, Protected base class inheritance, Inheriting multiple base classes, Constructors, Destructors , Passing parameters to base class constructors, virtual base classes. STL: An overview, containers, vectors, lists, maps.

UNIT V

(6 Hours)

Constructors and Destructors:

Constructors, Parameterized constructors, Default Constructors, Copy constructor, Dynamic Initialization of Objects, Destructors.

Polymorphism:

Base class, Virtual Functions, Pure Virtual Functions, Calling a virtual function through a base class reference, Early and Late Binding.

UNIT VI

(3 Hours)

Managing Console I/O operations:

C++ Stream Classes, Unformatted I/O Operations, Working with Files, Opening and Closing a file, Formatted I/O.

Text Books/References:

- *Herbert Schildt, "The Complete Reference C++", 4th Edition, Mc Graw Hill, 2003.*
- *Stanley.B.Lippmann, Josee Lajoie, Barbara.E.Moo, "C++ Primer", 5th Edition, Pearson Education, 2013.*

Syllabus for Unit Test

Unit Test 1	Unit I & II
Unit Test 2	Unit III & IV
Unit Test 3	Unit V & VI

Workshop Technology

TEACHING SCHEME:

Theory: -
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: -
Continuous Assessment: -
Term Work: 50 Marks

CREDITS ALLOTTED:

01 Credit

Course Pre-requisites: Basic knowledge of hand tools used in day to day life.

Course Objectives: Make the students familiar with basic manufacturing processes

Course Outcomes: students should be able to understand

1. basic Manufacturing Processes used in the industry,
2. importance of safety

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the following topics.

Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances
Term work includes one job involving joint and woodturning.

Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.
Term work to include one job involving fitting to size, male-female fitting with drilling and tapping.

Sheet Metal Practice Introduction to primary technology processes involving bending, punching and drawing various sheet metal joints, development of joints.

Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.
Term work includes one job involving various joining processes like riveting, joining of plastics, welding, brazing, etc.

Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.

Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.

Plumbing (Demonstration Common for Electrical & Non electrical Group)

Types of pipe joints, threading dies, Pipe fittings.

Fundamentals of Software Engineering

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3Hrs/Week	End Semester Examination : 60 Marks	Theory : 3
Tutorial : 1Hr/Week	Continuous assessment : 40 Marks	

Course Objectives:

To enable students to work in teams and use the latest software technologies to develop and implement creative solutions to complex problems.

Course Prerequisites:

Students should have knowledge of

- 1) Developing well-structured, modular programs
- 2) Mathematical knowledge of computer science, including discrete structures, algorithms design and analysis.

Course Outcome:

Students will be able to:

- 1) learn appropriateness of software development model for given software system.
- 2) document user requirement using different communication techniques.
- 3) create the analysis model of the system under consideration .
- 4) gain knowledge of data, control and function design concepts
- 5) understand software quality concepts
- 6) Formulate a testing strategy for a software system,

UNIT-I Introduction to Software Engineering : (6 Hours)

Definition of Software Engineering, Software characteristics, Applications, Software myths, Software Development Process models: The Waterfall model, Incremental process models, Evolutionary Process models, Component based development process model, The Formal Method Model, Aspect–Oriented software Development, Unified Process, Agile Processes Models.

UNIT-II System Engineering Practices: (6 Hours)

Analysis Modeling Principles, Design Modeling Principles, Coding Principles, Testing Principles, Computer based system, System Modeling, System Simulation, System Modeling
Requirement Engineering: Requirements Engineering Tasks, Initiating Requirement engineering Process, Eliciting requirement, Introduction to SRS format, creating SRS.

UNIT-III **Analysis and modeling:** Elements of Analysis Model, Analysis modeling approaches: Data modeling, Scenario based modeling, Flow oriented modeling. **(6 Hours)**

UNIT-IV **Design Engineering:** **(6 Hours)**
System Design: Design Concepts, The Design model architecture, cohesion and coupling, Data Design, Architectural Styles and Patterns, Architectural Design, Mapping Data flow into Software Architecture ,User Interface design.
Coding: TOP-DOWN and BOTTOM-UP structure programming, Information Hiding, Programming Style.

UNIT-V **Software Change Management :** **(6 Hours)**
Software configuration management (SCM), Elements of SCM, Base lines, Software configuration items, SCM Repository, SCM process: Version Control, Change Control, Configuration Audit, Status Reporting.

UNIT-VI **Testing Strategies:** **(6 Hours)**
Levels of Testing, Functional Testing, Structural Testing, Test Plan, Test Case Specification, Test case design, A strategic approach to software Testing: Verification and Validation Testing, Organizing for software Testing, Software Testing Strategy for conventional Architecture: Unit Testing Integration Testing, Validation Testing, System Testing, Debugging, White-box, Black-box testing, Basis path Testing, Control structure testing.

Assignments: Implement Study assignments assigned by course faculty .

Text Books:

- 1) Roger S. Pressman, Software Engineering: A Practitioner's Approach (6/e.) McGraw Hill, 2011.

- 2) James F. Peter, Software Engineering - An Engineering Approach, John Wiley (2004).
- 3) Pankaj Jalote, Software Engineering: A Precise Approach , Wiley India, 2010.
- 4) Ian Sommerville, Software Engineering, Addison-Wesley Publishing Company, (2006) 8th ed.

Reference Books:

- 1) *A Shalloway and J Trott, Design Patterns Explained: A new perspective on object oriented design (2/e), Pearson, 2004.*
- 2) *Rajib Mall, Fundamentals Of Software Engineering ,PHI Learning Pvt. Ltd 2009*

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III
Unit Test -2 Unit IV, V and VI

Discrete Mathematics

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 3
Practical : 2 Hrs/Week	Continuous Assessment : 40 Marks	Tw & Pr : 1
	Term Work and Practical (Tw & Pr) : 50 Marks	

Course Objectives:

1. To apply and relate knowledge of mathematics in computer science.

2. To learn proof theory with propositional calculus and induction.
3. To map and express network problem with trees and graphs

Course Prerequisites: Students should have fundamental mathematical knowledge.

Course Outcome:

Students will be able to:

1. Formulate real world problems into statement forms using sets and relations which can be solved or proved mathematically using set theory and logic.
2. Find and map relation between mathematical statements.
3. Design mathematical model from theoretical statements.
4. Find optimum solution using theory of probability.
5. Apply knowledge graphs to solve network problems.
6. Design searching algorithm efficiently by applying tree and tree traversal logic.

UNIT-I	Propositional Logic and Proof Theory Sets, Set operations, Finite and Infinite sets, Venn diagram, Principle of inclusion and exclusion, Multisets. Propositions, Conditional Propositions, Logical Connectivity, Propositional calculus, Universal and Existential Quantifiers, Normal forms, methods of proofs.	(06 Hours)
UNIT-II	Relations and Functions Properties of Binary Relations, Closure of relations, Warshall's algorithm, Equivalence, Relations and partitions, Partial ordering relations and lattices, Chains and Anti chains. Functions, Composition of functions, Invertible functions, Pigeonhole Principle.	(06 Hours)
UNIT-III	Induction and Recurrence Relations Mathematical Induction, Linear Recurrence Relations with constant Coefficients, Homogeneous Solutions, Total solutions, Solutions by the method of generating functions	(06 Hours)
UNIT-IV	Probability Basics of permutations and combinations, Discrete Probability, Conditional Probability, Probability distribution: normal, binomial, Poisson , Bernoulli distribution .	(06 Hours)
UNIT-V	Graphs Basic terminology, multi graphs and weighted graphs, paths and circuits, shortest path in weighted graph, Hamiltonian and Euler paths and circuits, factors of a graph, planer graph and Travelling salesman problem.	(06 Hours)

UNIT-VI**Trees****(06 Hours)**

Trees, rooted trees, path length in rooted trees, prefix codes, binary search trees, spanning trees and cut set, minimal spanning trees, Kruskal's and Prim's algorithms for minimal Spanning tree.

Assignment List:

1. Write a program to implement following set operations.
 - i) Union
 - ii) Intersection
 - iii) Cartesian product
 - iv) Power set
2. Write a program to implement Warshall's algorithm.
3. Write a program to calculate value of polynomial for variable x.
4. Write a program to find fogoh, where $g(x)$ and $h(x)$ is taken from user.
5. Write a program to check whether Eulerian circuit is present in the given graph.
6. Write a program to find shortest path between the vertices in given graph.
7. Write a program to create binary search tree for the values taken from user.
8. Write a program to implement various tree traversals.
9. Write a program to implement Kruskal's algorithm.
10. Write a program to implement Prim's algorithm.

Text Books:

- 1) Kenneth H. Rosen, Discrete Mathematics and its Applications, 7th Edition, McGraw Hill.
- 2) Seymour Lipschutz, M.Lipson, Discrete Mathematics, 3rd Edition, McGraw Hill.

Reference Books:

- 1) C. L. Liu, D. P. Mohapatra, Elements of Discrete Mathematics: A Computer Oriented Approach, 4th Edition, McGraw Hill.
- 2) J.P.Tremblay, R. Manohar, Discrete Mathematical Structures With Applications to Computer Science, McGraw Hill.

Syllabus for Unit Test:**Unit Test -1 Unit I ,II and III****Unit Test -2 Unit IV, V and VI**

Software Project Management

Teaching Scheme
Theory : 3Hrs/Week

Examination Scheme
End Semester Examination: 60 Marks
Continuous assessment : 40 Marks

Credit Allotted
Theory: 3

Course Objectives:

- 1) To help the students gain understanding of the functions and responsibilities of the manager, and enable them to analyze and understand the environment of the organization.
- 2) To introduce them with techniques used in the performance of managerial job
- 3) Enable them to analyze and understand the environment of an IT organization

Course Prerequisites: N/ A

Course Outcome:

Students will be able to:

- 1) Understand basic concepts of management functions
- 2) Understand the process of IT project initiation
- 3) Understand the IT project planning process
- 4) Understand the team dynamics of a project team
- 5) Understand the concepts of quality and process improvement for IT projects
- 6) Introduce modern concepts in IT management

UNIT-I	Conceptual difference between terms Management, Administration and Organization, Functions and Principles of Management, Levels of Management, Type of business organization , Organization structures.	(06 Hours)
UNIT-II	Defining Project management life cycle, Gathering and establishing project requirements, Defining the project goals and Scope management, Risk management, Budgeting a project, Creating a work breakdown structure.	(06 Hours)
UNIT-III	Building project plan, Preparing and implementing the project plan, Project schedule, Project network diagram creation and analysis, Project constraints, Tracking project progress and financial obligations, Revising the project plan, Establishing change control, Coping with project delays	(06Hours)
UNIT-IV	Recruitment and selection, Training, Creating roles and responsibilities, Team Management: Leading, Mechanics, Meetings, Maintaining, Motivating, Conflict Management, Job evaluation and merit rating	(06 Hours)
UNIT-V	Metric Frameworks for software projects, Metrics for process and product quality, Quality of deliverables, Quality assurance and standards, Quality planning and control, Process: Classification, measurement, analysis and modeling, Process change, Six sigma, CMM, CMMI, PCMM, ISO standards.	(06 Hours)
UNIT-VI	Knowledge management: Definition, needs, techniques and architecture. Learning Organizations, Knowledge management system life cycle, Knowledge workers and knowledge audits, Supply chain management, Change management, Stress management, Credit rating of software projects, Intellectual property rights and Cyber laws	(06 Hours)

Assignment List: N/ A

Text Books:

- 1) Joseph Phillips, "IT Project Management", Tata McGraw-Hill 2003 Edition
- 2) Pankaj Jalote, "Software Project Management", Addison-Wesley, 2002

Reference Books:

- 1) Kathy Schwalbe, "Information Technology Project Management", Cengage Learning, 7th Edition
- 2) Rajib Mall, "Fundamentals of Software Engineering", PHI Learning, 2009, 3rd Edition
- 3) Ian Sommerville, "Software Engineering", Pearson Education India
- 4) Roger S. Pressman, "Software Engineering: A Practitioner's Approach", Palgrave Macmillan
- 5) Elias M. Awad Hassan M. Ghaziri, "Knowledge Management", Pearson Education
- 6) By Harold R. Kerzner, "Project Management: A Systems Approach to Planning, Scheduling, and Controlling", John Wiley & Sons Inc., 10th Edition
- 7) Debora J. Halbert, "Resisting Intellectual Property", Taylor and Francis Group, Routledge-2007

Syllabus for Unit Test:

Unit Test -1 Unit I,II and III
Unit Test -2 Unit IV,V and VI

Data Structures and Files

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 3
Practical : 2 Hrs/Week	Continuous Assessment : 40 Marks	Tw & Pr : 1
	Term Work and Practical (Tw & Pr) : 50 Marks	

Course Objectives:

1. To study fundamentals of data structures
2. To implement linear sequential and linked organization data structures
3. To study fundamentals of Files and hashing

Course Prerequisites:**Students should have knowledge of**

- 1) 'C' programming
- 2) Basics of OOP

Course Outcome:**Students will be able to:**

- 1) Understand the fundamentals of data structure.
- 2) Implement linear sequential data structures.
- 3) Implement linear linked organization data structures.
- 4) Implement non-linear linked organization data structures.
- 5) Implement searching, sorting techniques.
- 6) Understand Hashing terms and techniques.

UNIT-I Review of 'C' programming (06 Hours)

Arrays, Pointers, Structure, Functions, Recursive Function

Introduction to Data Structures:

Concept of Data object, Data structure, Abstract Data Types (ADT), realization of ADT in 'C'. Types of data structures. Algorithm Analysis: Definition and Characteristics of Algorithm, Analyzing Programs, Time and Space Complexity, Big 'O' Notation, Graphical Representation of Time Complexity, best, Average and Worst Case of Complexity

UNIT-II Linear Data Structures using Sequential Organization: (06 Hours)

Concept of sequential organization, arrays as ADT, sparse matrix, Polynomial representation using array.

Stack: Concepts, Operations on Stacks, Multi-stack, Application of Stack: Polish notation (infix, prefix, postfix expressions), Conversion and Evaluation of expressions

Queue: Concept, Operations on Queue, Circular Queue, Priority Queue, Double Ended Queue, Applications of Queue

UNIT-III Linear Data Structure Using Linked Organization: (06 Hours)

Linear Data Structures using Linked Organization, Limitations of static memory allocation, Dynamic memory allocation in C. Single Linked List, Double Linked List, Circular Linked List, Generalized Linked List, Application of DLL in dynamic storage management, garbage collection and compaction

UNIT-IV Non-Linear Data Structure: (06 Hours)

Trees: Basic terminology, Binary Trees, representation and operations of binary tree, Binary tree traversal (Inorder, Postorder, Preorder), Threaded Binary Tree, Binary Search Tree (Weighted BST), AVL Tree

Graphs: Basic terminology, Representation of Graph using adjacency Matrix, List and Multilist, Graph Traversal (DFS & BFS), Spanning Tree. Kruskal's and Prim's Algorithm for MST, Dijkstra's algorithm for shortest Path.

UNIT-V Sorting and Searching Techniques: (06 Hours)

Sorting: Need of Sorting and Searching, Internal & External sorting. Bubble sort, Selection sort, Insertion sort, Shell sort, Radix sort, Quick sort, Heap sort, Merge sort. Analysis of sorting techniques,
Searching: Sequential search, Binary search, Fibonacci search

UNIT-VI File Organization and Hashing: (6 Hours)

Introduction to files, File Structure: Concepts of fields, records and files, Sequential, Indexed and Relative/Random access files, File Organization, Indexing

Hashing: symbol table, Hash tables, Hashing Functions, Overflow Handling and Collision Resolution strategies

Assignment List:

1. Write a Program to implement fibonacci series, factorial of no and checking for prime no.
2. Write a Program to implement functions for Stack, Queue and Circular Queue data structure.
3. Write a Program to convert expression from
 1. Infix to Prefix
 2. Infix to Postfix
4. Write a Program to implement polynomial operations
5. Write a Program to implement Sparse Matrix operations

6. Write a menu driven program to implement Singly Linked List for basic operations
7. Write a menu driven program that implements Doubly Linked List for basic operations
8. Write a Program to implement Binary Search Tree and Traversal in BST(Inorder, Preorder, Postorder)
9. Write a Program to implement Threaded Binary Tree and its Traversals.
10. Write a Program to implement Breadth First search and Depth First Search in graph.
11. Write a C Program to implement Linear and Binary Search
12. Write a Program to implement sorting methods. (Bubble sort, Selection sort, Insertion sort, Quick sort)

Text Books:

1. S. Lipschutz, “Data Structures”, McGraw Hill Pub.
2. Y. Langsm, M. Augentin, A. Tanenbaum, “Data Structure Using C and C++”, Pearson Education
3. R. Gilberg, B. Forozon, “Data Structure: A pseudo code approach with C”

Reference Books:

1. Ellis Horowitz, Sartaj Sahni , “Data Structures,Algorithms&Applications Inc++, University Press”, 2nd Edition
2. Trembley Jean Paul, Sorn Soon Paul G, “An Introducton to Data Structures with Applications”, Tata McGraw-Hill Publishing Company, 2008

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III
Unit Test -2 Unit IV, V and VI

Platform Independent Programming Paradigm

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/ Week	End Semester Examination : 60 Marks	Theory : 3
Practical : 2 Hrs/ week	Continuous assessment : 40 Marks	Tw & Or :1
	Term Work and Oral (Tw & Or) : 50 Marks	

Course Objectives:

- 1) To provide an understanding of Platform Independent Programming
- 2) To instill basics of Ruby, Python and Web-applications

Course Prerequisites:

Students should have knowledge of

- 1) C, C++
- 2) Basic Knowledge of Computing terminologies

Course Outcome:

Students will be able to:

- 1) Convey basic concepts of cross platform software development.
- 2) Analyze programs in Ruby and Python.
- 3) Demonstrate JAVA concepts in terms of OOP.
- 4) Analyze the concepts of HTML and CSS for creating webpages.
- 5) Analyze the applications of Cross Platform Programming.
- 6) Describe the architecture of JUCE.

UNIT-I	Introduction Cross platform software development, Software Platforms, Operating Systems – introduction and its relevance to application software, Scripting, Compilers and Interpreters.	(06 Hours)
UNIT-II	Ruby Programming Language Semantics, Syntax, data types – strings & collections, conditional statements and loops, Implementation of Class.	(06 Hours)
UNIT-III	Java Architecture, JVM, Byte code, data types, conditional statements and loops, functions.	(06 Hours)
UNIT-IV	Python Semantics, Syntax, data types, statements, methods.	(06 Hours)
UNIT-V	Internet Web servers, Browsers, Webpages, Introduction to Scripting languages, Basics of HTML and CSS.	(06 Hours)
UNIT-VI	Applications Cross platform development & challenges, Cross platform mobile development, HTML5. JUCE Introduction, JUCE Module Format, Introjucer, Data Structure, Working with Media Files.	(06 Hours)

Assignment List: (Term work shall consist of Six assignments from above syllabus.)

- 1) Demonstrate the programming model of Ruby using a simple example.
- 2) Discuss OOP features available in JAVA.
- 3) Summarize atleast 10 Methods of Python.
- 4) Write a Case Study of JUCE Module Format.
- 5) Explain the various types of CSS with suitable example.
- 6) Compare HTML webpage with HTML5 webpage.

Text Books:

- 1) “System Software and Operating System” – D M Dhamdhare (Tata McGraw Hill)
- 2) “The Ruby Programming Language” - David Flanagan & Yukihiro Matsumoto (O’Reilly Media)

- 3) “Java - The Complete Reference” - Herbert Schildt(McGraw Hill)
- 4) “Think Python” - [Allen Downey](#) (O’Reilly)
- 5) “Web Technologies” – Black Book (Dreamtech Press)
- 6) “Getting started with JUCE” - Martin Robinson (PACKT Publishing)

Reference Books:

- 1) “Professional Cross-Platform Mobile Development” - Scott Olson, John Hunter(Wrox Publication)

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV,V and VI

ITL - I

Teaching Scheme	Examination Scheme	Credit Allotted
Practical : 4 Hrs/Week	Practical and Term Work : 50 Marks	Tw & Pr : 2

Course Objectives: To

- 1) Apply concepts of programming language to meet the requirements specified.
- 2) Sketch an outline of a website with GUI.
- 3) Solve various problems during development of website.
- 4) Analyze the given requirement to design the pages for a website.
- 5) Test the functionalities required.
- 6) Design web application on an internet.

Course Prerequisites:

Students should have knowledge of

- 1) Programming language
- 2) Presentation layer, properties

Course Outcome:

Students will be able to:

- 1) Design the layout of a website
- 2) Maintain the presentation logic and business logic
- 3) Solve customers’ requirement by designing web pages
- 4) Understand principals of GUI
- 5) Validate the component’s role and functionalities associated with it

6) Design website using various client side and server side scripting.

- UNIT-I** **Introduction to an Internet:** Introduction to internet and its applications, E- mail, telnet, FTP, e-commerce, video conferencing, e-business. Internet service providers, domain name server, World Wide Web and its evolution, uniform resource locator (URL), browsers - internet explorer, netscape navigator, opera, firefox, chrome, mozilla. Search engine, web saver - apache, IIS, proxy server, HTTP protocol. **(06 Hours)**
- UNIT-II** **HTML :** HTML Tag Reference, Global Attributes, Event Handlers, Document Structure Tags, Formatting Tags, Text Level formatting, Block Level formatting, List Tags, Hyperlink tags, Image and Image maps, Table tags, Form Tags, Frame Tags, Executable content tags. Imagemaps : What are Imagemaps Client-side Imagemaps, Server-side Imagemaps, Using Server-side and Client-side Imagemaps together, alternative text for Imagemaps, Tables : Introduction to HTML tables and their structure, The table tags, Alignment, Aligning Entire Table, Alignment within a row, Alignment within a cell, Attributes, Content Summary, Background color, Adding a Caption, Setting the width, Adding a border, Spacing within a cell, Spacing between the cells, spanning multiple rows or columns, Elements that can be placed in a table. Passing form data Style Sheets : What are style sheets, Why are style sheets valuable Different approaches to style sheets, Using Multiple approaches, Linking to style information in s separate file, Setting up style information, Using the tag, embedded style information. **(06 Hours)**
- UNIT-III** **JavaScript:** Introduction, Client-Side JavaScript, Server-Side JavaScript, JavaScript Objects, JavaScript Security, Operators : Assignment Operators, Comparison Operators Defining Event Handlers, event, onAbort, onBlur, onChange, onClick, onDbClick, onDragDrop, onError, onFocus, onKeyDown, onKeyPress, onKeyUp, onLoad, onMouseDown, onMouseMove, onMouseOut, onMouseOver, onMouseUp, onMove, onReset, onResize, onSelect, onSubmit, onUnload. **(06 Hours)**
- UNIT-IV** **XML :** Introduction to XML, Anatomy of an XML, document, Creating XML Documents, Creating XML DTDs, XML Schemas, **(06 Hours)**

XSL.

UNIT-V **PHP** : Why PHP and MySQL?, Server-side web scripting, **(06 Hours)**
Installing PHP, Adding PHP to HTML, Syntax and Variables,
Passing information between pages, Strings, Arrays and Array
Functions, Numbers, Basic PHP errors / problems.

UNIT-VI **Advanced PHP and MySQL** : PHP/MySQL Functions, **(06 Hours)**
Displaying queries in tables, Building Forms from queries, Basic
CRUD functionalities using PHP, Cookies and HTTP, Type and
Type Conversions, E-Mail.

Assignment List:

- 1) Design a web page for Department of Information Technology, BVUCOE, Pune.
- 2) Develop a website using CSS alignment.
- 3) Simulate e-album of images using Imagemap.
- 4) Maintain database of student using XML and publish the data on a web.
- 5) Using Java Script design a web page that prints factorial / Fibonacci series / any given series.
- 6) Design a form and validate all the controls placed on the form using Java Script.
- 7) Design a DTD, corresponding XML document and display it in browser using CSS.
- 8) Develop MIS for student, faculty, lab and syllabus.
- 9) Simulate cookies using PHP.
- 10) Implement CRUD operation on MySQL

Text Book:

- 1) Web Design The complete Reference, Thomas Powell, Tata McGrawHill
- 2) PHP : The Complete Reference By Steven Holzner, Tata McGrawHill

Reference Books:

- 2) HTML and XHTML The complete Reference, Thomas Powell, Tata McGrawHill
- 3) JavaScript 2.0 : The Complete Reference, Second Edition by Thomas Powell and Fritz Schneider

Advanced Data Structure

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 3
Practical : 2 Hrs/Week	Continuous assessment : 40 Marks	Tw & Pr : 1

Term Work and Practical (Tw & Pr) : 50 Marks

Course Objectives:

- 1) Apply important algorithmic design paradigms and methods of analysis
- 2) Analyze the Complexity of Algorithms

Course Prerequisites:

Students should have knowledge of basic data structures with their operations.

Course Outcome:

Students will be able to:

- 1) Understand the analysis of algorithms, Concept of Complexity of Algorithms
- 2) Understand and analyze threaded binary trees.
- 3) Understand graph algorithms
- 4) Understand pattern matching algorithms
- 5) Understand queues and its types.
- 6) Understand dynamic programming

UNIT-I Analysis of Algorithms : (06 Hours)

Algorithms, Designing Algorithms, Analyzing Algorithms, frequency count and its importance in analysis of an algorithm, Analysis of algorithm efficiency- asymptotic notations and its properties. Performance analysis: Time complexity and Space complexity. Analyzing Recursive Programs.

UNIT-II Threaded Trees : (06 Hours)

Properties of Threaded trees, Insertion, deletion and traversal AVL Trees, Properties of AVL trees, rotations, insertion and deletion, Red-Black Trees, Properties of Red-Black Trees, rotations, insertion and deletion, B-Trees, Definition of B-Trees, Basic operations on B-Tree, Deleting a key from B tree.

UNIT-III Graphs: (06 Hours)

Elementary Graph Algorithms: Representations of Graphs – Breadth-First Search – Depth-First Search – Topological Sort – Strongly Connected Components- Minimum Spanning Trees: Growing a Minimum Spanning Tree – Kruskal and Prim- Single-Source Shortest Paths: The Bellman-Ford algorithm – Single-Source Shortest paths in Directed Acyclic Graphs – Dijkstra's Algorithm; All-

Pairs Shortest Paths: Shortest Paths and Matrix Multiplication – The Floyd-Warshall Algorithm.

UNIT-IV Strings : (06 Hours)

String Matching: The Native String-Matching Algorithm – Brute force, Rabin-Karp and Knuth-Morris-Pratt Algorithms, Boyer-Moore algorithm, String matching with automata.

UNIT-V Priority Queues : (06 Hours)

Definition, ADT, Realizing a Priority Queue using Heaps, Definition, insertion, Deletion, External sorting Model, Multiway merge, Polyphase merge.

UNIT-VI Dynamic Programming : (06 Hours)

Concept of Dynamic Programming, Dynamic Programming basic strategy, General Method of Dynamic Programming, Limitations of Dynamic Programming, traveling salesman problem ,0/1 Knapsack Problem.

Assignment List:

- 1) To analyze the algorithm of anagram detection by writing a Boolean function that will take two strings and return whether they are anagrams.
- 2) Given a list of numbers in random order, write an algorithm that works in $O(n\log(n))$ to find the kth smallest number in the list.
- 3) Implement the non-recursive pre-order tree traversal algorithm.
- 4) Construct AVL tree for the list {J,F,M,A,N,K,L,A,S,O,P,D}?
- 5) To implement the Floyd Warshall algorithm to find the shortest path.
- 6) Given two strings – a text and a pattern, determine whether the pattern appears in the text using Rabin-Karp and Knuth-Morris-Pratt Algorithms.
- 7) Write a C program to implement queue ADT using Arrays.
- 8) Write a C program to implement queue ADT using Linked List.
- 9) To generate the sets $S^i \cdot 0 \leq i \leq 3$ for the following knapsack instance: $n = 3$, $(w_1, w_2, w_3) = (2, 3, 4), (p_1, p_2, p_3) = (1, 2, 5)$ and $M = 6$. In addition find an optimal solution.

Text Books:

- 1) Anany Levitin-“Introduction to design and analysis of algorithms”, Third Edition, Pearson Education, 2012
- 2) Aho Hopcroft Ullman —Data Structures and Algorithms, Pearson Education, 2002.
- 3) “Fundamentals of Computer Algorithms”, Horowitz, Sahani, Rajsekharan, Galgotia Publications.

Reference Books:

1)

Tanenbaum A.S, Langram Y, Augustine M.J., Data Structures using C & C++||, Prentice

Hall of India, 2002.

2)

Mark Allen Weiss, —Data Structures and Algorithm Analysis in C++||, Pearson Education,

2002.

3) Data structures and Algorithms in C++, Michael T.Goodrich, R.Tamassia and Mount, Wiley student edition, John Wiley and Sons.

4) Thomas H.Corman,Charles E.Leiserson,Ronald L.Rivest and Clifford Stein, ”Introduction to algorithms”Third Edition ,PHI Learning Private Limited,2012.

5) Fundamentals of DATA STRUCTURES in C: 2nd ed, Horowitz, Sahni, Anderson-freed, Universities Press.

6) Advanced Data Structures :A.A.Puntambekar,Technical Publications

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Digital Electronics and Logic Design

Teaching Scheme	Examination Scheme	Credit Allotted
Theory :3 Hrs/Week	End Semester Examination : 60 Marks	Theory :3
	Continuous assessment : 40 Marks	

Course Objectives:

- 1) To introduce number systems and codes.
- 2) To outline the formal procedures for the analysis and design of combinational circuits and sequential circuits.
- 3) To introduce the concept of memories, programmable logic devices and digital ICs.
- 4) Give students the basic tools for the design and implementation of digital modules and subsystems.

- 5) Give students the concept of digital logic design.
- 6) Reinforce theory and techniques taught in the classroom through project assignments.

Course Prerequisites:

Students should have knowledge of

- 1) Basic electronics

Course Outcome:

Students will be able to:

- 1) Understand various logic families, number systems and different theorems in Boolean Algebra.
- 2) Understand various combinational circuits and reduction of Boolean expressions using different techniques.
- 3) Understand various sequential circuits and solve design problems using this circuits.
- 4) Understand concept of state machines.
- 5) Understand different types of memories, working of cache and different advanced DRAMs.
- 6) Understand the concept and writing programs in VHDL.

UNIT-I Classification of logic families, Characteristics of digital ICs-Speed of operation, power dissipation, figure of merit, fan in, fan out, current and voltage parameters, noise immunity, operating temperatures and power supply requirements.TTL logic. Operation of TTL NAND gate, active pull up, wired AND, open collector output, unconnected inputs. Tri-State logic. CMOS logic – CMOS inverter, NAND, NOR gates, unconnected inputs, wired logic , open drain output. Interfacing CMOS and TTL. Comparison table of Characteristics of TTL, CMOS, ECL, RTL, I²L, DCTL.
Boolean Algebra : Number System : Binary, Hexadecimal numbers, octal numbers and number conversion. Signed Binary number representation: Signed Magnitude, 1's complement and 2's complement representation, Binary, Octal, Hexadecimal Arithmetic: 2's complement arithmetic.Algebra for logic circuits: Logic variables, Logic functions -NOT, AND, NOR, XOR, OR, XNOR, NAND.

UNIT-II Standard representations for logic functions, k map representation of logic functions (SOP m POS forms), minimization of logical functions for min-terms and max-terms (upto 4 variables), don't care conditions,

Design Examples: Arithmetic Circuits, BCD - to - 7 segment decoder, Code converters. Adders and their use as subtractions, look ahead carry, ALU, Digital Comparator, Parity generators/checkers, Multiplexers and their use in combinational logic designs, multiplexer trees, Demultiplexers and their use in combinational logic designs, Decoders, demultiplexer trees. Introduction to Quine McCluskey method.

- UNIT-III** 1 Bit Memory Cell, Clocked SR, JK, MS J-K flip flop, D and T flip-flops. Use of preset and clear terminals, Excitation Table for flip flops. Conversion of flip flops. Application of Flip flops: Registers, Shift registers, Counters (ring counters, twisted ring counters), Sequence Generators, ripple counters, up/down counters, synchronous counters, lock out, Clock Skew, Clock jitter. Effect on synchronous designs. **(06 Hours)**
- UNIT-IV** Basic design steps- State diagram, State table, State reduction, State assignment, Mealy and Moore machines representation, Implementation, finite state machine implementation, Sequence detector. **(06 Hours)**
- UNIT-V** Semiconductor memories: memory organization and operation, expanding memory size, Classification and characteristics of memories, RAM, ROM, EPROM, EEPROM, NVRAM, SRAM, DRAM, expanding memory size, Synchronous DRAM (SDRAM), Double Data Rate SDRAM, Synchronous SRAM, DDR and QDR SRAM, Content Addressable Memory. **(06 Hours)**
- UNIT-VI** Algorithmic State Machines: ASM charts, notations, design of simple controller, multiplexer controller method: **(06 Hours)**
Introduction to HDL, VHDL: Library, Entity, Architecture, Modeling styles, Data objects, Concurrent and sequential statements, Design examples using VHDL for basic combinational and sequential circuits.

Text Books:

- 1) Morris Mano, Digital Design, Prentice Hall of India, 2002.
- 2) R.P. Jain, "Modern Digital Electronics", 3rd Edition, Tata McGraw-Hill, 2003, ISBN 0 –

07 – 049492 – 4

- 3) Malvino, D. Leach “ Digital Principles and Applications”, 5th edition, Tata McGraw Hill

Reference Books:

- 1) John M. Yarbrough, ‘Digital Logic, Application & Design’, Thomson, 2002
- 2) Thomson, 2002. 2. Thomas L. Floyd, “Digital Fundamentals”, PHI, 2003.
- 3) J. Bhaskar, “VHDL Primer” 3rd Edition. PHI Publication

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

Database Management System

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3Hrs/Week	Semester Examination : 60 Marks	Theory : 3
Practical : 2Hrs/Week	Continuous assessment : 40 Marks	Tw & Or : 1
	Term Work and Oral (Tw & Or) : 50 Marks	

Course Objectives:

- 1) Identify various techniques to communicate with database.
- 2) Relate relevant data for effective processing of data.
- 3) Construct a database to maintain data adroitly.
- 4) Study various queries and tools to deal with the data.
- 5) Understand the relation between data set and respective means to access it.
- 6) Understand influence of data in the effective development of software.

Course Prerequisites:

Students should have knowledge of

- 1) Basic understanding of data and data structure
- 2) Basic understanding of programming language

Course Outcome:

Students will be able to:

- 1) Design database to store data related with application.
- 2) Identify technique to deal with data.
- 3) Extend power of SQL by adding programming paradigm.
- 4) Predict suitable environment for data processing as per type data.
- 5) Apply knowledge of dbms to process the software efficiently.

UNIT-I Introduction to DBMS: What is database management system, Use of database system, view of data, relational databases, database architecture, transaction management, Data Models The importance of data models, Basic building blocks, Business rules, The evolution of data models, Degrees of data abstraction. Design of Database, ER-Diagram Database design. ER Model: overview of ER-Model, Constraints, ER-Diagrams, Extended ER Diagrams. **(06 Hours)**

- UNIT-II Relational database model:** Logical view of data, keys, integrity rules. Design of Relational Database: features of good relational database design, Normalization (1NF, 2NF, 3NF, BCNF). Relational Algebra and Calculus Relational algebra: introduction, Selection and projection, set operations, renaming, Joins, Division, syntax, semantics. Operators, grouping and ungrouping, relational comparison. Calculus: Tuple relational calculus, Domain relational Calculus, calculus vs algebra, computational capabilities. **(06 Hours)**
- UNIT-III Integrity Constraints:** What are constraints, types of constrains, Integrity constraints, Views: Introduction to views, data independence, security, updates on views, comparison between tables and views Introduction to SQL: data definition, aggregate function, Null Values, nested sub queries, Joined relations. Triggers. **(06 Hours)**
- UNIT-IV PL/SQL:** Introduction ,Declaring Variables , Writing Executable Statements , Interacting with Oracle Server , Writing Control Structures , Working with Composite Data Types , Writing Explicit Cursors , Writing Implicit Cursors , Handling Exceptions , Creating Procedures , Creating Functions , Managing Subprograms , Creating Packages , More Package concepts , Oracle supplied Packages, Manipulating Large Objects , Creating Database Triggers. **(06 Hours)**
- UNIT-V Transaction management:** ACID properties, serializability and concurrency control, Lock based concurrency control (2PL, Deadlocks), Time stamping methods, optimistic methods, database recovery management. **(06 Hours)**
- UNIT-VI Data Intensive Computing:** Introduction to big data, unstructured data processing using Hadoop , NoSQL database using MangoDB. **(06 Hours)**

Assignment List:

- 1) Draw an ER Diagram to maintain database of Bank
- 2) Normalize the database of Library, upto BCNF
- 3) Perform the following operation for demonstrating the insertion , updation and deletion using the referential integrity constraints
- 4) Calculate turnover of a banks in pune using group by query
- 5) WAP to implement autorollback option on deletion using trigger.
- 6) WAP to implement Procedure to calculate square of a number.

- 7) Implement implicit cursor using PL/SQL.
- 8) Simulate two phase locking protocol on the database of Movie.
- 9) Perform document processing using MangoDB,.
- 10) Solve word count problem using Hadoop.

Text Books:

- 1) A Silberschatz, H Korth, S Sudarshan, “Database System and Concepts”, Sixth Edition McGraw-Hill
- 2) Oracle SQL and PL/SQL Guide Till 10gR2
- 3) Ramkrishna R., Gehrke J., Database Management Systems, 3rd Edition, McGraw-Hill

Reference Books :

- 1) Rob, Coronel, “Database Systems”, Seventh Edition, Cengage Learning.
- 2) Bipin Desai, Introduction to Database Management Systems.
- 3) Groff James R., Paul Weinberg, LAN times guide to SQL.

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III
Unit Test -2 Unit IV, V and VI

Engineering Mathematics-III

Teaching Scheme:

Theory : 3 Hrs / Week

Tutorial : 1 Hrs/Week

Examination Scheme:

End Semester Examination: 60 Marks

Continuous Assessment : 40 Marks

Credits Allotted:

Theory : 4

Course Pre-requisites:

Students should have basic knowledge of:

1. Differential calculus
2. Integral calculus
3. Complex numbers
4. Vector algebra

Course Objectives:

To develop ability to use the mathematical techniques, skills, and tools necessary for

engineering practice.

Course Outcomes:

At the end of the course , a student will be able to:

1. Form mathematical modeling of systems using differential equations and ability to solve linear differential equations with constant coefficient.
2. Apply basics of analytic functions and the basics in complex integration which is used to evaluate complicated real integrals.
3. Apply theorems to compute the Laplace transform, inverse Laplace transforms.
4. Solve difference equation by Z-transform.
5. Calculate the gradients and directional derivatives of functions of several variables.
6. Use Green's theorem to evaluate line integrals along simple closed contours on the plane.

UNIT - I Linear Differential Equations (LDE) (06 Hours)

Solution of nth order LDE with Constant Coefficients, Method of Variation of Parameters, Cauchy's & Legendre's DE, Solution of Simultaneous & Symmetric Simultaneous DE, Modeling of Electrical Circuits.

UNIT - II Complex Variables (06 Hours)

Functions of Complex Variables, Analytic Functions, C-R Equations, Conformal Mapping, Bilinear Transformation, Cauchy's Theorem, Cauchy's Integral Formula, Laurent's Series, Residue Theorem

UNIT - III Transforms (06 Hours)

Fourier Transform (FT): Complex Exponential Form of Fourier Series, Fourier Integral Theorem, Sine & Cosine Integrals, Fourier Transform, Fourier Sine and Cosine Transform and their Inverses. Introductory Z-Transform (ZT): Definition, Standard Properties, ZT of Standard Sequences and their Inverses. Solution of Simple Difference Equations.

UNIT – V Laplace Transform (LT) (06 Hours)

Definition of LT, Inverse LT. Properties & theorems. LT of standard functions. LT of some special functions viz., Periodic, Unit Step, Unit

Impulse, ramp, jump, . Problems on finding LT & inverse LT.
Applications of LT and Inverse LT for solving ordinary differential equations.

UNIT - V Vector Differential Calculus (06Hours)

Physical Interpretation of Vector Differentiation, Vector Differential Operator, Gradient, Divergence and Curl, Directional Derivative, Solenoidal, Irrotational and Conservative Fields, Scalar Potential, Vector Identities.

UNIT - VI Vector Integral Calculus (06 Hours)

Line, Surface and Volume integrals, Work-done, Green's Lemma, Gauss's Divergence Theorem, Stoke's Theorem, Applications to Problems in Electro-Magnetic Fields.

Assignments:

1. Linear Differential Equations
2. Complex Variables
3. Transforms
4. Laplace Transform
5. Vector Differential Calculus
6. Vector Integral Calculus

Text Books:

1. Advanced Engineering Mathematics by Peter V. O'Neil (Cengage Learning).
2. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.).

Reference Books:

1. Engineering Mathematics by B.V. Raman (Tata McGraw-Hill).
2. Advanced Engineering Mathematics, 2e, by M. D. Greenberg (Pearson Education).
3. Advanced Engineering Mathematics, Wylie C.R. & Barrett L.C. (McGraw-Hill, Inc.)
4. Higher Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi).
5. Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar (Pune Vidyarthi Griha Prakashan, Pune).

Syllabus for Unit Test:

Unit Test -1 UNIT – I, UNIT – II, UNIT - III
Unit Test -2 UNIT – IV, UNIT – V, UNIT - VI

Computer Graphics

Teaching Scheme

Examination Scheme

Credit Allotted

Theory : 3Hrs/Week End Semester Examination : 60 Marks Theory : 3
Practical : 2Hrs/Week Continuous assessment : 40 Marks Tw &Pr : 1
Term Work and Practical(Tw & Pr) : 50 Marks

Course Objectives:

- 1) learn basic and fundamental computer graphics techniques;
- 2) learn image synthesis techniques
- 3) examine applications of modeling, design and visualization

Course Prerequisites:

Students should have knowledge of

- 1)C / C++ programming
- 2)Data structures and files

Course Outcome:

Students will be able to:

- 1) Understand history and evolution of computer graphics, both hardware and software and use a current graphics API (OpenGL).
- 2) Implement algorithms including: line drawing, polygon filling, clipping, and transformations.
- 3) Write programs that demonstrate geometrical 2 D transformations
- 4) Write programs that demonstrate geometrical 3 D transformations
- 5) Understand illumination and shading concepts
- 6) Implement Fractals.

UNIT-I Introduction to Computer Graphics (06 Hours)

Overview of Computer Graphics, , Description of graphics devices, Input Devices, Graphics Devices, Display Technologies, Raster Refresh (Raster-Scan) Graphics Displays, Scan Basics, Video Basics, The Video Controller, Random-Scan, Display Processor, LCD displays, display file and structure, display processor, Graphics file formatComputer Graphics Application and Software Introduction to OPENGL, Applications of Computer graphics, Animation.

UNIT-II Scan conversion – lines, circles and Ellipses; Filling polygons and clipping algorithms (06 Hours)

Line and circle drawing: DDA, Bresenham's, algorithms, Thick line segment, Aliasing, Anti aliasing , Polygons Filling algorithms, edge data structure, Line Clipping algorithms– Cyrus-Beck, Cohen-Sutherland, Polygon Clipping algorithms: Sutherland Hodgeman, Color models.

UNIT-III Transformations: **(06 Hours)**

Matrix Representation of 2D Transformations: Rotation, Reflection, Scaling, Combined Transformation, Translations and Homogeneous Coordinate system, Transformation of Points, Transformation of the Unit Square, Solid Body Transformations, Rotation About an Arbitrary Point, Reflection through an Arbitrary Line, A Geometric Interpretation of Homogeneous Coordinates, Window-to-Viewport Transformations. Introduction, Matrix Representation of 3D Transformations: Scaling, Shearing, Rotation, Reflection, Translation, Multiple Transformation, Rotation about an Arbitrary Axis in Space, Reflection through an Arbitrary Plane, Composition of 3D Transformations.

UNIT-IV Projections: **(06 Hours)**

Affine and Perspective Geometry, Perspective Transformations, Techniques for Generating Perspective Views, Vanishing Points, the Perspective Geometry and camera models, Orthographic Projections, Axonometric Projections, Oblique Projections, View volumes for projections. Stages in 3D viewing, Canonical View Volume (CVV), Specifying an Arbitrary 3D View, Examples of 3D Viewing, viewing, Coordinate Systems and matrices, camera model and viewing pyramid.

UNIT-V Hidden Surface Determination: **(06 Hours)**

Techniques for efficient Visible-Surface Algorithms, Categories of algorithms, Back face removal, The z-Buffer Algorithm, Scan-line method, Painter's algorithms, Area sub-division method, BSP trees, Visible-Surface Ray Tracing, comparison of the methods.

Illumination and Shading

Illumination and Shading Models for Polygons, Reflectance properties of surfaces, Ambient, Specular and Diffuse reflections, Atmospheric attenuation, Phong's model, Gouraud shading, some examples.

UNIT-VI Curves and fractals: **(06 Hours)**

Curve Representation, Nonparametric Curves, Parametric Curves, The General Conic Equation, Representation of Space Curves, Cubic Splines, Bezier Curves, B-spline Curves, B-spline Curve Subdivision,

Parametric Cubic Curves, Quadric Surfaces. Bezier Surfaces, fractals and fractal surfaces, Hilbert's curve, Koch curve.

Assignment List:

- 1) Laboratory exercises will normally be conducted using the currently available computer graphics API such as OpenGL
- 2) Implement Cohen Sutherland/DDA line drawing algorithm.
- 3) Implement Cohen Sutherland/DDA circle drawing algorithm.
- 4) Write a program to implement polygon filling algorithm.
- 5) Implement Cohen Sutherland Line clipping algorithm
- 6) Implement following 2D Transformations:
 - i) Translation
 - ii) Rotation
 - iii) Scaling
 - iv) Shearing
- 7) Implement 3D Transformations
 - i) Translation
 - ii) Rotation
 - iii) Scaling
 - iv) Shearing
 - v) Shearing
- 8) Write a program to draw fractals
- 9) Write a program to draw Koch curve
- 10) Write a program to draw Hilbert's curve
- 11) Using OPENGL libraries create an animation.

Text Books:

- 1) S. Harrington, "Computer Graphics", 2nd Edition, McGraw-Hill Publications, 1987, ISBN 0 – 07 – 100472 – 6. 2.
- 2) D. Rogers, "Procedural Elements for Computer Graphics", 2nd Edition, Tata McGraw-Hill Publication, 2001, ISBN 0 – 07 – 047371– 4.

Reference Books:

- 1) J. D. Foley, A. Van Dam, S. K. Feiner and J. F. Hughes, Computer Graphics - Principles and Practice, Second Edition in C, Pearson Education, 2003.
- 2) D. Hearn and M. Pauline Baker, Computer Graphics (C Version), Pearson Education, 2nd Edition, 2004.

- 3) D. F. Rogers and J. A. Adams, Mathematical Elements for Computer Graphics, 2nd Edition, McGraw-Hill International Edition, 1990.
- 4) F. S. Hill Jr., Computer Graphics using OpenGL, Pearson Education, 2003

Syllabus for Unit Test:

Unit Test -1 Unit I,II and III

Unit Test -2 Unit IV, V and VI

IT Lab – II

Teaching Scheme	Examination Scheme	Credit Allotted
------------------------	---------------------------	------------------------

Practical :4 Hrs/Week	Term work and Practical (Tw & Pr) : 50 Marks	Tw & Pr : 2
------------------------------	---	------------------------

Course Objectives: To

- 1) Compute time and space complexity for given program.
- 2) Demonstrate concepts OOPS using java
- 3) Solve specified requirement
- 4) Infer various approach to decide efficiency of given approach.
- 5) Formulate given problem by providing the proof of behavior of given model.
- 6) Design an application using platform independent approach.

Course Prerequisites:

Students should have knowledge of

- 1) Object Oriented Programming language
- 2) Logic to solve given problem

Course Outcome:

Students will be able to:

- 1) Design simple application meeting the requirements.
- 2) Develop their logical skill through various assignments and practicals.
- 3) Breakdown complex problem into subpart and then handle every part to achieve the goal.
- 4) Model a solution to any real world problem
- 5) Analyze significance of platform independency.

6) Design application using object oriented norms.

UNIT-I	Introduction to Java : Java Fundamentals, Features of Java OOPs concepts Java virtual machine Reflection byte codes Byte code interpretation Data types, variable, arrays, expressions, operators, and control structures Objects and classes .	(06 Hours)
UNIT-II	Classes and objects : Java Classes, Abstract classes Static classes Inner classes Packages Wrapper classes Interfaces This Super Access control, embedded style information Exception handling Exception as objects Exception handling mechanism: Try catch finally Throw, throws.	(06 Hours)
UNIT-III	Object oriented Properties: Inheritance, Encapsulation, Polymorphism, Data Binding, data abstraction. Implementation of these concepts using various statements like if, switch and loops like for,do – while, while.	(06 Hours)
UNIT-IV	IO mechanism: IO package Input streams Output streams Object serialization Deserialization Sample programs on IO files Filter and pipe streams	(06 Hours)
UNIT-V	Threading and Multithreading: Lifecycle of Thread, Basic functions of thread, multithreading, synchronization.	(06 Hours)
UNIT-VI	Collections and Generics: Introduction to collection framework, List, Set, Maps, utility class, Reflection API.	(06 Hours)

Assignment List:

- 1) WAP to create array of an object to maintain data of an employee.
- 2) WAP to design user defined exception to reject negative numbers
- 3) Count the number of objects created for a class using static member function.
- 4) Write programs on interfaces.
- 5) Write programs on packages.
- 6) Write programs to copy contents of file into other file using all possible alternatives.
- 7) WAP to simulate traffic signal using multithreading
- 8) WAP to Maintain the record of student using collection API.

- 9) WAP to map roll and name to maintain data of students.
- 10) WAP to maintain record of an employee using List.

Text Books:

- 1) Programming with Java A Primer, E. Balaguruswamy Tata Mc-Graw Hill Companies.
- 2) SCJP 1.6 – Khalid Mughal
- 3) SCJP 1.6 – Kathy Sierra

Reference Books

- 1) Herbert Schildt, Java 2 Complete Reference – 5th Edition, Tata Mc-Gra Hill
- 2) Dietel & Dietel, Java How to Program

Theory of Automata and Formal Languages

Teaching Scheme	Examination Scheme	Credit Allotted
Theory :3Hrs/Week	End Semester Examination : 60 Marks	Theory : 4
Tutorials :1Hr/Week	Continuous assessment : 40 Marks	

Course Objectives:

Students will learn about a variety of issues in the mathematical development of computer science theory, particularly finite representations for languages and machines, as well as gain a more formal understanding of algorithms and procedures.

Course Prerequisites: Students should have knowledge of set theory and state transition diagrams.

Course Outcome:

Students will be able to:

- 1) Design automata machines for strings given.
- 2) Write regular expression for the given string and find set of strings if regular expression is given.
- 3) Write grammar rules for the strings given.
- 4) Design push down automata for the string and grammar.
- 5) Design Turing machine and apply the same to solve algorithmic problems.
- 6) Apply knowledge of TAFL in compiler construction.

UNIT-I **State Machines:** **(06 Hours)**

Abstract Machine, Acceptance of language by machine. Finite Automata (FA) - Definition, Types of FA, NFA and DFA, Language accepted by NFA and DFA, Designing of finite state machines.

Equivalence and difference between DFA and NFA, Inter-conversion between NFA and DFA, Machines with output- Moore and Mealy machines, Designing, Inter-conversion between Moore and Mealy machine.

UNIT-II Regular Expression (R.E.): (06 Hours)

Operators of RE, Building RE, Precedence of operators, Algebraic laws for RE, Arden's theorem, FA and RE: DFA to RE, RE to DFA, Properties of Regular Languages: Pumping lemma for Regular Languages, Closure and decision properties of regular languages, Equivalence and minimization of automata.

UNIT-III Grammars: (06 Hours)

Definition, Production rules, Derivation trees, Ambiguous Grammar, Removal of ambiguity, Regular Grammar, Inter-conversion between RE and Grammar, Reduced form of grammar- Removal of unit production, Removal of useless symbols, Removal of epsilon symbol. Linear grammar: left & right linear grammar, Inter-conversion. Chomsky hierarchy of languages, Context Free Grammar- Definition, Context free language (CFL. Normal Forms- Chomsky Normal Form(CNF), Griebach Normal Form(GNF).

UNIT-IV Push Down Automata (PDA): (06 Hours)

Limitations of FA, PDA: Definition, Uses, Equivalence between FA and PDA, Designing of PDA, Deterministic Push Down Automata and Non-Deterministic Push Down Automata- Definition, Language accepted by PDA, Properties of CFL, Pumping Lemma for CFL. Limitations of PDA, Applications of PDA.

UNIT-V Turing Machine(TM): (06 Hours)

Definition, Model, Comparison of TM, FSM, PDA, Design of TM, Examples of TM- Combinational TM, Iterative TM, Recursive TM, Universal TM, TM as a language acceptor, Some Problems that cannot be solved by Turing Machines, Language accepted by TM, Recursive sets, Partially recursive functions. Church's Turing hypothesis, Multitask TM, TM limitations, Halting problem.

UNIT-VI Applications: (06 Hours)

Comparison between FA, PDA, TM. Application of RE: Regular expressions in Unix, GREP utilities of Unix, Lexical analysis and finding patterns in text, Application of CFG: Parser, Markup languages, XML and Document Type Definitions. Applications of PDA and TM.

Assignment List:

1. Solve problems on designing of finite automata.
2. Design and inter-convert Moore and Mealy Machine for same problems.

3. Form grammar rules for language or set of regular expression or strings given.
4. Design Push Down Automata for grammar or given string.
5. Construct Turing Machine to solve given problem.
6. Compile all the applications of RE, Grammar, TM.
7. Study Assignment on Complexity Theory.

Text Books:

- 1) John Martin. Introduction to Languages and Theory of Computation. McGrawHill.
- 2) Michael Sipser. Introduction to The Theory of Computation . ISE.
- 3) Vivek Kulkarni. Theory of Computation. Oxford University Press.

Reference Books:

- 1) John E. Hopcroft, Rajeev Motwani, Jeffrey D-Ullman. Introduction to Automata Theory Languages And Computation. Addison-Wesley.
- 2) Sanjeev Arora, Boaz Barak. Computational Complexity: A Modern Approach. Cambridge University Press
- 3) Mishra K.L.P., Chandrasekaran N. Theory of Computer Science: Automata, Languages and Computation. Prentice Hall India.
- 4) Christos H. Papadimitriou. Computational Complexity. Pearson Education.
- 5) Cristopher Moore, Stephan Mertens. The Nature of Computation. Oxford University Press

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Subject Code: Data Communication and Networks.		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 03 Hrs/Week	End Semester Examination : 60 Marks	Theory :03
Practical : 02 Hrs/Week	Continuous assessment : 40 Marks	Term Work :01
	Term Work : 50 Marks	
Course Objectives:		
1) Build an understanding of the fundamental concepts of computer networking		
2) Familiarize the student with the basic taxonomy and terminology of the computer Networking area.		
3) Introduce the student to advanced networking concepts, preparing the student for entry Advanced courses in computer networking.		
4) Gain expertise in some specific areas of networking such as the design and maintenance of individual networks.		
Course Prerequisites:		
Students should have knowledge of		
1) how computer networks operate and the fundamentals of data communication		
2) Concepts and fundamental design principles of modern computer networking in a top-down approach, focusing on the Internet's architecture and protocols.		
Course Outcome:		
Students will be able to:		
1) describe network architecture		
2) understand basic computer network technology		
3) analysis including error detection, error control and flow control.		
4) recognize the different types of network topologies and protocols		
5) analyze the different types of network devices and their functions within a network		
6) familiarity with the basic protocols of computer networks, and how they can be used to assist in network design and implementation		
UNIT-I	Fundamentals of digital communications :	(06 Hours)
	Introduction to digital communications. Definitions of terms. Signal propagation. Signal types: Sine waves, Square waves. Signal parameters: Amplitude, Frequency, and Phase. Channel effects on transmission: Attenuation, Effects of limited bandwidth. Analog and Digital, Periodic Analog Signals, Digital Signals, Transmission impairment, Data Rate Limits, Performance. Digital Transmission: Analog-to-Digital Conversion, Digital-to-Digital Conversion. Analog Transmission: Digital-to-analog Conversion (ASK, FSK, PSK, QAM), Analog-to- Analog Conversion.	
UNIT-II	Transmission Media and Technologies:	(06 Hours)

	<p>Transmission Media: Guided Media: Twisted pair cables, Co-axial cables, Fiber optic cables. Unguided Media: Radio waves, Microwave, Infrared. Wireless Transmission Medium.</p> <p>Introduction to switching: – Switching, Circuit-Switched Networks, Datagram networks, Concept of Virtual circuit networks, Structure of circuit and packet switch. Types of services: Connection oriented services (Virtual circuits) Connectionless services (Datagrams).</p>	
UNIT-III	Data transmission mechanisms:	(06 Hours)
	<p>Communication modes: Simplex, Half-duplex, Full – duplex. Transmission modes: Serial transmission, Parallel transmission.</p> <p>Synchronization: Asynchronous transmission, Synchronous transmission.</p> <p>Multiplexing: Frequency division multiplexing, Synchronous time division multiplexing, Statistical time division multiplexing. (Time slots & frames, interleaving, data rate management). Spread Spectrum – FHSS, DSSS.</p>	
UNIT-IV	Introduction to computer networks :	(06 Hours)
	<p>Introduction to computer networks, Network Topologies: Bus, Star, Ring. Types of networks: Local area networks (LAN), Wide area networks (WAN), Metropolitan Area networks (MAN), Personal area networks (PAN). Layered network model: OSI model, TCP/ IP model.</p> <p>Connecting Devices Repeaters, Hubs, Bridges, Two & Three layer Switches Routers, Gateways, Backbone networks, Concept of VLAN.</p> <p>Data Link Layer – Error correction & detection. Types of errors. Block Coding, Cyclic Codes, Checksum, Data Link control, Framing, Flow and Error Control.</p>	
UNIT-V	NETWORK LAYER :	(06 Hours)
	<p>Internetworking, IPv4 & IPv4 protocol packet format, IPv6 Protocol & Packet format, IPv4 VS IPv6, Transition from IPv4 to IPv6,</p> <p>Address Resolution protocols (ARP, RARP), BOOTP, DHCP. Address Mapping ICMP, IGMP, ICMPv6.</p> <p>Routing Protocols – Delivery, forwarding, routing, types of routing, routing tables, Unicast Routing, Unicast Routing protocols, RIP, Concepts of OSPF, and BGP & Multicast Routing, Multicast routing protocols.</p>	
UNIT-VI	TRANSPORT LAYER :	(06 Hours)
	<p>Process-Process Delivery: UDP, TCP and SCTP, Process-to-Process Delivery, User Datagram Protocol (UDP), Congestion Control and Quality of service : Data Traffic, Congestion, Congestion Control (Open Loop, Closed Loop & Congestion control in TCP), Quality Services (QoS), Techniques to improve QoS, Integrated services, Differentiated Services and Flow Characteristics.</p> <p>Introduction to Application Layer – DNS, Remote Logging (Telnet), SMTP, FTP, WWW, HTTP.</p>	
Assignment List:		
1)	Socket programming - TCP and UDP.	
2)	Socket programming Client Server using RPC.	
3)	Study and demonstration of CISCO packet tracer with data transmission. (Windows/Linux)	
4)	Study and demonstration of CISCO packet tracer with data loss. (Windows/Linux)	
5)	Study and execution of Network commands.	

6)	What are the responsibilities of physical layer, data link layer, network layer?
7)	Explain the differences in the impact on performance of : a) TCP packet being lost or dropped. b) UDP packet being lost or dropped.
8)	Implementation of CRC.
9)	Explain IP 4& IP 6 .Identify the class and default subnet mask of the IP address 217.65.10.7.
10)	Demonstration of Setting Firewall, Enabling /Disabling Ports.

Text Books:

1)	Data Communications and Networking, Fourth Edition by Behrouza A. Forouzan, TMH.
2)	Computer Networks, A.S.Tanenbaum, 4th edition, Pearson education.
3)	Wayne Tomasi, "Introduction to Data Communication and Networking", 1/e, Pearson Education.

Reference Books:

1)	Introduction to Data communications and Networking, W.Tomasi, Pearson education.
2)	Data and Computer Communications, G.S.Hura and M.Singhal, CRC Press, Taylor and Francis Group.
3)	An Engineering Approach to Computer Networks-S.Keshav, 2nd Edition, Pearson Education.
4)	Understanding communications and Networks, 3rd Edition, W.A.Shay, Cengage Learning.
5)	William Stallings, "Data and Computer Communication", Eighth Edition, Pearson Education, 2000.

Syllabus for Unit Test:

Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

System Programming

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 3
Practical: 2Hrs/Week	Continuous assessment : 40 Marks	Tw & Pr : 1
	Term Work and Practical (Tw & Pr) : 50 Marks	

Course Objectives:

- 1) To learn & understand fundamentals of system software program as Assembler, Linkers, and loaders.
- 2) To study phases of compiler in detail.
- 3) To learn how to design system programs.

Course Prerequisites:

Students should have knowledge of

- 1) Data Structures
- 2) Computer Organization
- 3) Microprocessor
- 4) Basic Searching & Sorting Algorithms

Course Outcome:

Students will be able to:

- 1) Understand operating system user view point, fundamentals of Language processing
- 2) Understand general machine structure and instruction formats.
- 3) Design & implement low level programming using TASM, software for programming development
- 4) Design & implement System Programs as Macroprocessor
- 5) Understand various loader schemes and Design of absolute and direct linking loaders
- 6) Understand Compiler phase
- 7) use tool Lex for generation of Lexical Analyzer
- 8) use tool YACC for generation of Syntax Analyzer.

UNIT-I Introduction: (06 Hours)

Evolution Of the Components of Programming System, Evolution Of Operating System

Operating system User Viewpoint : Functions , Operating System

User Viewpoint : Batch Control Language , Operating System

User Viewpoint : Facilities

Language Processing Activities, Fundamentals of Language

Processing, Language processor development t tools

UNIT-II Machine Structure, Machine Language And Assembly Language (06 Hours)

General Machine Structure :General Approach to a new Machine,
Machine Structure : 360 and 370

Machine Language: Long Way, No Looping, Address Modification
Using Instructions as Data, Address Modification Using Instructions
Using Index Registers, Looping

Assembly Language : An Assembly Language Program, Example
using Literals

UNIT-III Assemblers : (06 Hours)

General Design Procedure, Design Of Assembler,

Table Processing :

Searching: Linear Search, Binary Search

Sorting : Interchange Sort, Shell Sort, Bucket Sort, Radix Exchange
Sort, Address Calculation Sort, Comparison of Sorts

UNIT-IV MACRO Language And The MACROPROCESSOR : (06 Hours)

Macro Instructions, Features of Macro Facility, Implementation Of
Restricted Facility : A Two pass Algorithm

UNIT-V Loaders : (06Hours)

Loader Schemes : Compile-And-Go Loaders, General Loader
Scheme, Absolute Loaders, Subroutine Linkages, Relocating
Loaders, Direct Linking Loaders,, Other Loader Schemes,

Linkers:

Relocation and linking concepts, Design of linker, self relocating
programs, Static and dynamic linking

Design of Absolute and Direct-Linking Loaders

UNIT-VI Compilers : (06 Hours)

Basics of Compiler:

Recognizing Basic Elements

Recognizing Syntactic Units and Interpreting Meaning

Storage Allocation

Code Generation

Phases Of Compiler :

Lexical Phase, Syntax Phase, Interpretation Phase, Optimization,
Storage Assignment, code Generation ,Assembly phase

- 3) R.K. Maurya Wiley-dreamtech , “System Programming and Compiler Construction”
- 4) Srimanta Pal ,” System Programming “ OXFORD Publication
- 5) Richard Anthony,” **Systems Programming: Designing and Developing Distributed Applications**” 1st Editio

Assignment List:

- 1 To Study Fundamentals of language processing.
- 2 Write an assembly language program using Literals.
- 3 Write an assembly language program for table processing.(Searching & sorting)
- 4 To study the design of two pass Macroprocessor.
- 5 To study the phases of compilers.
- 6 To study the design of Absolute and Direct-Linking Loaders
- 7 Use of tool Lex for generation of Lexical Analyzer.
- 8 Use of tool YACC for generation of Syntax Analyzer.

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Microprocessor Architecture and Programming

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 3
Practical : 2 Hrs/Week	Continuous assessment : 40 Marks	Tw & Pr : 1
	Term Work and Practical (Tw & Pr) : 50 Marks	

Course Objectives:

- 1) To study 8-bit Microcontroller
- 2) To study Advanced Computer Architectures
- 3) To study 16-bit Microprocessor and Peripherals

Course Prerequisites:

Students should have knowledge of

- 1) Basic Electronics Engineering

Course Outcome:

Students will be able to:

- 1) Understand basics of microprocessors, 16-bit microprocessor architecture
- 2) Understand various microprocessor peripherals and their interfacing with 8086
- 3) Understand assembly language programming concepts
- 4) Understand advanced computer architectures
- 5) Understand 8-Bit Microcontroller architecture, Programming and Interfacing
- 6) Understand multiprocessor and multicore architecture.

UNIT-I	16-Bit Microprocessor Architecture: Basic microprocessor architecture, Bus concept, Intel 8086 microprocessor: Features, Block diagram and pin configuration, Max/min mode, Instruction cycles, Read Write cycles. Memory segmentation, 8086 Memory organization, , Instruction pipelining, Instruction set, 8086 Interrupt structure	(06 Hours)
UNIT-II	8086 Assembly Language Programming: Programmers model of 8086, 8086 addressing modes, Assembler directives, DOS and BIOS interrupts, Function calls, Procedures and Macros, EXTRN and PUBLIC directives, FAR procedure, Turbo debugger, Writing programs in C using int86, int86x, intdos, intdosx functions.	(06 Hours)
UNIT-III	NDP and Peripherals : 8087 Architecture, Communication and Interfacing with 8086, Writing basic programs using 8087, Architecture, Modes and Interfacing of following peripherals with 8086 : 8255 Programmer Peripheral Interface, 8259 Programmable Interrupt Controller, 8253 Programmable Interval Timer, 8237 DMA Controller, Designing 8086 based applications using above peripherals	(06 Hours)

- UNIT-IV Advanced Processor Architectures :** (06 Hours)
Multiprocessor Architectures : Closely coupled and Loosely coupled, RISC and CISC Architectures, SPARC, Superscalar Architecture, Multicore Architecture, Intel i3, i5 and i7 architectures
- UNIT-V 8-bit Microcontroller-I** (06 Hours)
Microcontroller 8051 Architecture, On-Chip data memory and program memory organization, Programming of 8051 : Register set, Register bank, SFRs, Instruction format & addressing modes. Instruction set. External data memory and program memory & its interfacing, I/O ports programming.
- UNIT-VI 8-bit Microcontroller-II** (06 Hours)
Interrupts structure and Response. Timers/counters and their programming, Serial port and programming, Interrupt programming, Design of minimum system using 8051 micro-controller for various applications, Software & hardware tools for development of microcontroller based system such as assembler, compiler, IDE, Emulators, debugger, programmer, development board, DSO, Logic Analyzer.

Text Books:

- 1) Microprocessor Architecture and Interfacing : Ramesh Gaonkar
- 2) Microprocessor and Interfacing : Douglas V.Hall
- 3) 8086 Microprocessor: Programming and Interfacing, Keneth Ayala
- 4) Microprocessors and Microcontrollers : N.Senthil Kumar
- 5) 8051 microcontroller & embedded system, Mazidi
- 6) IBM PC Assembly Language Programming, Peter Abel

Reference Books:

- 1) Liu, Gibson, "Microcomputer Systems: The 8086/88 Family", 2nd Edition, PHI,2005
- 2) Ray Dunkon, "Advanced MSDOS Programming", 2nd Edition, BPB Publication.
- 3) Kip Irvine, "Assembly language for IBM PC", PHI, 2nd Edition, 1993
- 4) Intel Microprocessor and peripheral Handbook: Volume 1
- 5) Yashwant Kanitkar, "TSR through C", BPB Publication, 1995, ISBN 81- 7029-520-3.

List of Assignments :

- 1) Programs based on numerical computing, code conversion
- 2) Programs based on string processing
- 3) Programs using EXTRN, PUBLIC directives
- 4) Creating library of macros and using it in programs.
- 5) Programs in C using int86, int86x, intdos, intdosx functions
- 6) Simple 8051 programs based on 8085 development board
- 7) Program on Timer programming: ISR based

- 8) Program with interfacing : a) A/D Converter
b) D/A Converter
c) Stepper motor

Syllabus for Unit Test:

Unit Test -1 Unit I,II and III

Unit Test -2 Unit IV, V and VI

Elective-I : Software Testing and Quality Assurance

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 3
	Continuous assessment : 40 Marks	

Course Objectives:

This course equips the students with a solid understanding of:

- 1) Practices that support the production of quality software
- 2) Software testing life cycle and activities
- 3) Software Quality Assurance and Models

Course Prerequisites:

Students should have knowledge of

Software Engineering, Software development life cycles, methodologies

Course Outcome:

Students will be able to:

- 1) Understand the concepts of software testing
- 2) Learn techniques of dynamic black box testing
- 3) Learn techniques of dynamic white box testing
- 4) Learn techniques of static black and white box testing
- 5) Understand special Software Testing Activities

- 6) Study software quality assurance, models

UNIT-I	Introduction to Software Testing	(06 Hours)
	Basics of Software Testing, Software quality, Need of software testing, Testing principles, Goals, Software Testing Life Cycle(STLC), Error, Fault, Failure, Defect Life Cycle, Testing terms and definitions: Precision and Accuracy, Verification and Validation, Quality and Reliability, Testing and Quality Assurance, Software test plan (IEEE format), Software Failure Case Studies	
UNIT-II	Dynamic Testing: Black Box Testing	(06 Hours)
	Need of Black Box Testing, Black box testing concept, Requirement analysis, Test case design criteria, Testing methods, requirement based testing, positive & negative testing, boundary value analysis, equivalence class testing, state based testing, cause effect graph based testing, error guessing, design of test cases	

UNIT-III Dynamic Testing: White Box Testing (06 Hours)

Need of white box testing, White box testing concept, Logic coverage criteria, Structure- Control flow testing, Cyclomatic complexity, Loop Testing, Data flow testing, Slice based testing, Mutation Testing, Design of test cases, Challenges in White box testing.

UNIT-IV Static Testing: (06 Hours)

Static Black Box Testing: testing the specification, performing a high level review of the specification, low- level specification test techniques
Static White Box Testing: examining the design and code, Formal reviews: peer reviews, walkthroughs, inspections, coding standards and guide lines, generic code review checklist.

UNIT-V Software Testing Activities: (06 Hours)

Levels of testing: Unit testing, Integration testing, system testing, Acceptance Testing
Special tests: GUI testing, compatibility testing, configuration testing, recovery testing, stress testing, load testing, recovery testing, regression testing, usability testing, documentation testing, website testing
Debugging process and tools, Software testing tools: Static and Dynamic testing tools, Automation testing and tools

UNIT-VI Software Quality Assurance: (06 Hours)

Software quality, Quality cost, Quality attribute, Quality assurance, Quality control & assurance, Quality management, Quality management and project management, Methods of quality management, SQA models: ISO 9126, Capability Maturity Model(CMM), Software Total Quality Management, Six Sigma.

Text Books:

- 1) Software Testing Principles and Practices By Naresh Chavan Oxford Publication
- 2) Software Testing Principles and Tools By M.G. Limaye TMG Hill Publication
- 3) Software Testing, Second Edition By: Ron Patton, Pearson Education

Reference Books:

- 1) Metric and Model in Software Quality Engineering, Stephen H Kan, Pearson Education
- 2) Effective methods for software testing by William Perry , Willey Publication
- 3) Foundation of software testing by Dorothy Graham, Erik Van Veenendaal, CENGAGE learning
- 4) Introducing to Software Testing, Louis Tamres, Addison Wesley Publications
- 5) Software Quality Assurance, Daniel Galin, Pearson Education.

Syllabus for Unit Test:

Unit Test -1 Unit I,II and III

Unit Test -2 Unit IV, V and VI

Elective-I : Management of Information System

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory :3
	Continuous assessment : 40 Marks	

Course Objectives: To

- 1) Understand significance management of information.
- 2) Use technology and resources for effective usage of information.

Course Prerequisites:

Students should have knowledge of

- 1) Introduction to computer
- 2) Significance of Information needed for business

Course Outcome:

Students will be able to:

- 1) Understand necessity of information.
- 2) Use effective technique to maintain the data.
- 3) Analyze information using tools and techniques to increase the business.
- 4) Use huge data available due to social networking site and internet.
- 5) Apply information analysis for decision making.
- 6) Apply adequate tool for MIS

UNIT-I	Introduction of MIS Architecture of MIS, data storage, processing and formatting. Need of MIS, pre requisites for MIS.	(06Hours)
UNIT-II	Transaction processing System Information Technology, Information extraction, Information retrieval, Approach and algorithms used to store and manage data.	(06 Hours)
UNIT-III	Information Filtration and analysis: Information extraction, representation of useful information, derives various forms of information, reporting useful for business.	(06 Hours)
UNIT-IV	Social Engineering: Effective use of social engineering sites, use of internet to increase the reach, Extract the information and deliver the necessary things in adequate form at social network.	(06 Hours)
UNIT-V	Decision Support System: Data Analytics, business intelligence, chart and report generation , logical conclusion to ease the process of decision making	(06 Hours)

(06 Hours)

UNIT-VI

Applications of MIS

ERP, CRM, SCM, KMS, case study of SAP, openbiz

Assignment List:

- 1) Analyze different forms of information required for particular business domain.
- 2) Use technology to collect the information.
- 3) Design expert system to manage the information for business.
- 4) Use information extraction approaches and algorithms.
- 5) Analyze valuable information by representing it in suitable format.
- 6) Use social engineering in decision making.
- 7) Use google analytics to create complete history of user, needed for decision making.
- 8) Apply various filtration techniques using OLAP for decision making.
- 9) Understand working of SAP – case study.
- 10) Understand working of moodle– case study.

Text Books:

- 1) Management Information Systems, Laudon and Laudon, 7th Edition, Pearson Education Asia.
- 2) Management Information Systems, Jawadekar, Tata McGraw Hill.
- 3) Management Information Systems, Davis and Olson, Tata McGraw Hill.

Reference Books:

- 1) Decision Support Systems and Intelligent Systems, Turban and Aronson, Pearson Education Asia .
- 2) Management Information Systems, Schulthesis, Tata McGraw Hill.
- 3) Management Information Systems - Sadagopan, Prentice Hall.
- 4) Management Information Systems - Jayant Oke.
- 5) MIS: Managing Information Systems in Business, Government and Society , Rahul De.

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Elective-I : Human Computer Interaction

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 3
	Continuous assessment : 40 Marks	

Course Objectives:

To build interaction between human and computer using Graphical User Interface, Design processes, software tools and various interaction devices

Course Prerequisites:

Students should have knowledge of

1) Analysis and design of software

Course Outcome:

Students will be able to:

- 1) Understand User interface design
- 2) Understand Graphical user interface and its characteristics
- 3) Identify various design processes
- 4) Understand screen designing
- 5) Understand Windows, Components and Software Tools
- 6) Identify various interaction devices

UNIT-I Introduction: (06 Hours)

Importance of user interface, Importance of good design, Benefits of good design, A brief history of screen design.

UNIT-II The Graphical User Interface: (06 Hours)

Popularity of Graphics, The concept of direct manipulation, Graphical system, Characteristics, Web user-Interface popularity, characteristics- Principles of user interface.

UNIT-III Design process: (06 Hours)

Human interaction with computers, importance of human characteristics, Human consideration, Human interaction speeds and understanding business junctions.

UNIT-IV Screen Designing: (06 Hours)

Design goals-Screen planning and purpose, organizing screen elements, ordering of screen data and content-screen navigation and flow, information retrieval on web-statistical graphics-Technological

consideration in interface design

UNIT-V Windows,Components and Software Tools: (06 Hours)

Windows: New and navigation schemes,selection of window,selection of devices based and screen based controls.

Components:Text and messages,Icons,Multimedia,colors

Software Tools:Specification methods,interface-Building Tools.

UNIT-VI Interaction Devices (06 Hours)

Keyboard and function keys-Pointing devices-speech recognition digitization and generation-image and video displays-drivers.

Assignment List:

- 1) A Case study on Graphical User Interface
- 2) A Case study on Design process
- 3) A Case study on Screen Designing
- 4) A Case study on Windows and Components
- 5) A Case study on Software Tools
- 6) A Case study on Interaction Devices

Text Books:

- 1) Designing the user interface,Third edition,Ben Shneiderman,Pearson Education Asia
- 2) The essential guide to user interface design,Wilbert O Galitz,Wiley Drdeam Tech

Reference Books:

- 1) User Interface Design,soren Lauesen,Pearson Education
- 2) Human Computer Interaction,Alan Dix,janet Fincay,Gregoryd,Abowd,Russell Bealg,Pearson Education

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Elective-I : Information Theory & Coding

Teaching Scheme	Examination Scheme	Credit Allotted
Theory :3Hrs/Week	End Semester Examination: 60 Marks	Theory:3
	Continuous assessment : 40 Marks	

Course Objectives:

- 1) To deeply understand the mathematics of Information Theory and its physical meaning
- 2) To understand various channel coding techniques
- 3) Students will be introduced to convolution and block codes, decoding techniques, and automatic repeat request

Course Prerequisites:

Students should have knowledge of

- 1) Student should have knowledge of Communications Systems or equivalent.
- 2) Knowledge of calculus, algebra, and probability

Course Outcome:

Students will be able to:

- 1) This course covers the fundamental concepts of information theory and error control coding.
- 2) Students will be introduced to the basic notions of information and channel capacity.
- 3) Students will be understood how error control coding techniques are applied in communication systems.
- 4) Design a data compression scheme using suitable source coding technique.
- 5) Design a convolution coding scheme for a communication system.
- 6) Evaluate performance of a communication system

UNIT-I Introduction: Introduction to Information Theory, uncertainty and information, number theory, group theory average mutual information and entropy, average information content of symbols in long independent sequences, Average information content of symbols in long dependent sequence, Mark-off statistical model for information source, source coding theorem. **(06 Hours)**

UNIT-II Channel Capacity: Channel models, channel capacity, Encoding of the source output, Shannon's encoding algorithm. Communication Channels, Discrete communication channels, Continuous channels. information capacity theorem, Entropy and information rate of mark-off source, random selection of codes. **(06 Hours)**

UNIT-III Coding: Error control coding: linear block codes and their properties, decoding of linear block code, perfect codes, Shannon-Fano coding, Huffman coding, Arithmetic coding, Lempel-Ziv algorithm, run- **(06 Hours)**

length encoding and rate distortion function hamming codes, and optimal linear codes and MDS codes .

UNIT-IV Cyclic Codes: Polynomials, division algorithm for polynomials, a method for generating cyclic codes, matrix description of cyclic codes, burst error correction, fire codes, golay codes, CRC codes, circuit implementation of cyclic codes. BCH codes: minimal polynomials, generator polynomial for BCH codes, decoding of BCH codes, Reed-Solomon codes and nested codes. **(06 Hours)**

UNIT-V Convolution Codes: Tee codes and trellis codes, polynomial description of convolution codes, distance notions for convolution codes, generation function, matrix description of convolution codes, viterbi decoding of convolution codes, distance bounds for convolution codes, turbo codes and turbo decoding. **(06 Hours)**

UNIT-VI Trellis Coded Modulation: Concept of coded modulation, mapping by set partitioning, Ungerboeck's TCM design rules, TCM decoder, Performance evaluation for Additive White Gaussian Noise (AWGN) channel, TCM for fading channels, applications and use cases of ITCT, applications of coding technique in cryptography, cryptosystem like ECC(Ellyptical curve cryptography). **(06 Hours)**

Assignment List:

- 1) A code is composed of dots and dashes. Assume that the dash is 3 times as long as the dot and has one-third the probability of occurrence. (i) Calculate the information in dot and that in a dash; (ii) Calculate the average information in dot-dash code; and (iii) Assume that a dot lasts for 10 ms and this same time interval is allowed between symbols. Calculate the average rate of information transmission.
- 2) State Shannon-Hartley's law. Derive an equation showing the efficiency of a system in terms of the information rate per Unit bandwidth. How is the efficiency of the system related to B/W?
- 3) Consider a source with 8 alphabets and respective probabilities as shown: A B C D E F G H 0.20 0.18 0.15 0.10 0.08 0.05 0.02 0.01 Construct the binary Huffman code for this. Construct the quaternary Huffman and code and show that the efficiency of this code is worse than that of binary code
- 4) If C_i and C_j are two code vectors in a (n,k) linear block code, show that their sum is also a code vector and Show $CHT = 0$ for a linear block code.
- 5) A) Write short notes on BCH codes B) Draw the general block diagram of encoding circuit using $(n-k)$ bit shift register and explain its operation.

- 6) What are convolutional codes? How is it different from block codes? Implement a convolutional code with a viterbi (trellis) and a sequential decoder.
- 7) Write a program to ensure to ensure integrity of packet transfer using coding technique similar top CRC
- 8) Analysis and study of crypt tool.

Text Books:

- 1) Ranjan Bose, “Information Theory, Coding and Cryptography”, Tata McGraw- Hill, 2002.
- 2) K. Sam Shanmugam, John Wiley “Digital and analog communication systems”, 1996

Reference Books:

- 1) Viterbi, “Information Theory and Coding”, McGraw-Hill, 1982.
- 2) John G. Proakis, “Digital Communications”, McGraw-Hill, New edition, 2000.
- 3) Gareth A. Jones and J. Mary Jones, “Information and Coding Theory”, Springer Undergraduate Mathematics Series, 2000. 104
- 4) Glover and Grant; “Digital Communications”, Pearson Ed. 2nd Ed 2008

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

IT Lab-III

Teaching Scheme	Examination Scheme	Credit Allotted
Practical : 4Hrs/Week	Term Work and Practical (Tw & Pr) : 50Marks	Tw & Pr :2

Course Objectives: To

- 1) Understand web environment for building the application.
- 2) Implement web application.
- 3) Implement server side programming.
- 4) Analyze life cycle servlet.
- 5) Analyze life cycle JSP.

Course Prerequisites:

Students should have knowledge of

- 1) Core Java
- 2) Scripting languages

Course Outcome:

Students will be able to:

- 1) Understand the lifecycle of web application
- 2) Understand flow of request and data in web application.
- 3) Implement relevant technology based on the functionalities involved in the respective web application.
- 4) Design a competitive web application which will work real web environment.
- 5) Implement server side technology.
- 6) Apply server side programming to implement web application.

UNIT-I JDBC: (06 Hours)

Introduction to JDBC, JDBC Drivers & Architecture, CURD operation Using JDBC, Connecting to non-conventional Databases

UNIT-II Servlet Basics: (06 Hours)

Web Application Basics, Architecture and challenges of Web, application. Introduction to servlet, Servlet life cycle, Developing and Deploying Servlets, Exploring Deployment Descriptor (web.xml). Handling Request and Response Initializing a Servlet, Accessing Database, Servlet Chaining, Session Tracking & Management, Dealing with cookies.

UNIT-III Servlet Advanced: (06 Hours)

Transferring Request, Accessing Web Context, Passing INIT and CONTEXT Parameter, Sharing information using scope object Controlling concurrent access User Authentication, Filtering Request and Response, Programming Filter, Filter Mapping, Servlet Listeners

UNIT-IV Java Server Pages : Standard approach: (06 Hours)

Basic JSP Architecture, Life Cycle of JSP (Translation, compilation), JSP Tags and Expressions, Role of JSP in MVC-2, JSP with Database, JSP Implicit Objects.

UNIT-V Java Server Pages : Customized approach: (06 Hours)

Tag Libraries, JSP Expression Language (EL), Using Custom Tag, JSP Capabilities Exception Handling Session Management Directives JSP with Java. Case study of struts and spring framework.

UNIT-VI RMI (Remote Method Invocation) & EJB (Enterprise java Beans): (06 Hours)

Bean RMI overview, RMI architecture, concept of stub and skeleton, Example demonstrating RMI ,Introduction to EJB , Types of enterprise beans Advantages of enterprise beans, The Life Cycles of Enterprise Beans, Types of EJB.

Assignment List:

- 1) Maintain record of students and perform CRUD functionality.
- 2) Write a program to redirect a request using a dynamic approach.
- 3) Write a program to pass the data using session
- 4) Write a servlet to remove spam.
- 5) Maintain the record of faculty member using jsp action tags and directives.
- 6) Design a tag to perform the necessary editing in a given report.
- 7) Design reusable components of the form using taglib.
- 8) Perform multiplication of two numbers using RMI.
- 9) Implement submission of assignment and evaluation of the same using EJB.
- 10) Understand working of framework – struts, spring- case study

Text Books:

- 1) SCWCD Exam Study Kit: Java Web Component Developer Certification
Hanumant Deshmukh, Jignesh Malavia, Manning Publication
- 2) Head First Servlets and JSP , by Bryan Basham (Author), Kathy Sierra (Author), Bert Bates, Head First Publication
- 3) J2EE: The complete Reference, Jim Keogh (Author)

Reference Books:

- 1) OCEJWCD Study Companion: Certified Expert Java EE 6 Web Component Developer (oracle Exam 1Z0-899), by Charles E. Lyons (Author), Garner Press.
- 2) JDBC, Servlets and JSP Black Book Paperback , by Santosh Kumar K. (Author), Kogent Solutions Inc.
- 3) Java Server Programming Java EE7 (J2EE 1.7): Black Book

- Kogent Learning Solutions Inc
- 4) Sun Certified Enterprise Architect for Java EE Study Guide(Second edition) Mark Cade (Author)
 - 5) Sun Certified Enterprise Architecture for J2EE Technology Study Mark Cade (Author), Simon Roberts (Author)

Operating System

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 3
Practical : 2 Hrs/Week	Continuous assessment : 40 Marks	Tw & Or : 1
	Term Work and Oral (Tw & Or) : 50 Marks	

Course Objectives:

- 1) To Introduce basic concepts and functions of modern operating systems
- 2) To Understand the concept of process, and thread management
- 3) To Understand how the resources are scheduled and managed
- 4) To Understand the concepts of process synchronization and deadlock
- 5) To know the concept of I/O and File management
- 6) To Understand various Memory management techniques
- 7) To be aware of latest trends in Operating Systems

Course Prerequisites:

Students should have knowledge of

- 1) Computer Organization
- 2) Data Structure

Course Outcome:

Students will be able to:

- 1) Possess knowledge of the role of Operating Systems and their types.
- 2) Apply the concept of a process, thread and scheduling algorithms.
- 3) Apply the concepts of process synchronization and how it is achieved.
- 4) Realize the concept of deadlock and different ways to handle it.
- 5) Realize various memory management techniques, concept of I/O management and File system.
- 6) Realize latest trends and techniques in various operating systems

UNIT-I Operating System Overview (06 Hours)

Operating System Objectives and Functions, The Evolution of Operating Systems, Developments Leading to Modern Operating Systems, Virtual Machines, OS Design Considerations for Multiprocessor and Multicore architectures, Microsoft Windows Overview, Modern UNIX Systems, Linux, Android. Booting Process of all the above operating systems.

UNIT-II Process Description and Control (06 Hours)

Process: Concept of a Process, Process States, Process Description, Process Control (Process creation, Waiting for the process/processes, Loading programs into processes and Process Termination), Execution of the Operating System.

Threads: Processes and Threads, Concept of Multithreading, Types of Threads, Thread programming Using pthreads, Multicore processors and threads, Linux Process and Thread Management,

Android Process and Thread Management.

Scheduling: Uniprocessor Scheduling Types of Scheduling, Scheduling Algorithms, and Thread Scheduling, An introduction to Multiprocessor and RealTime Scheduling, Traditional UNIX Scheduling, Linux Scheduling.

UNIT-III Concurrency: Mutual Exclusion and Synchronization (06 Hours)

Concurrency: Process/thread Synchronization and Mutual Exclusion Principles of Concurrency, Requirements for Mutual Exclusion, Mutual Exclusion: Hardware Support, Operating System Support (Semaphores and Mutex), Programming Language Support (Monitors),

Classical synchronization problems: Readers/Writers Problem, Producer and Consumer problem.

Concurrency: Deadlock and Starvation Principles of Deadlock, Deadlock Prevention, Deadlock Avoidance, Deadlock detection, An Integrated Deadlock Strategy, Example: Dining Philosophers Problem, Linux interprocess communication and concurrency mechanisms, Android Interprocess communication mechanisms and concurrency mechanisms

UNIT-IV Memory Management (06 Hours)

Memory Management: Memory Management Requirements, Memory Partitioning: Fixed Partitioning, Dynamic Partitioning, Buddy System, Relocation, Paging, Segmentation.

Virtual Memory: Hardware and Control Structures, Operating System Software, Linux Memory Management, Windows Memory Management, Android Memory Management

UNIT-V Input/Output And Files (06 Hours)

I/O Management and Disk Scheduling: I/O Devices, Organization of the I/O Function, Operating System Design Issues, I/O Buffering, Disk Scheduling, Disk Cache, Linux I/O.

File Management: Overview, File Organization and Access, File Directories, File Sharing, Record Blocking, Secondary Storage Management, Linux Virtual File System, Android File Management.

UNIT-VI Recent And Future Trends In OS (06 Hours)

Linux Kernel Module Programming, Embedded Operating Systems: Characteristics of Embedded Systems, Embedded Linux, and Application specific OS. Basic services of NACH Operating System. Introduction to Service Oriented Operating System (SOOS), Introduction to Ubuntu EDGE OS, etc.

Assignment List:

- 1) Study of hardware and software requirements of different operating systems (UNIX,

- LINUX, WINDOWS XP, WINDOWS 7/8/10)
- 2) Implement CPU scheduling policies a) SJF (b) Priority (c) FCFS (d) Multi-level queue
 - 3) Implement file storage allocation techniques: (a) Contiguous (using array) (b) Linked –list (using linked list) (c) Indirect allocation (indexing)
 - 4) Implementation of Contiguous allocation techniques: (a) Worst-Fit (b) Best-Fit (c) First-Fit
 - 5) Calculation of external and internal fragmentation.
 - 6) Implementation of Compaction for the continually changing memory layout and calculate total movement of data.
 - 7) Implementation of resource allocation graph (RAG).
 - 8) Conversion of resource allocation graph (RAG) to wait-for-graph (WFG) for each type of method used for storing graph.
 - 9) Write a program where parent process counts number of vowels in the given sentence and child process will count number of words in the same sentence. Use FORK and JOIN construct.
 - 10) Implement the solution for Bounded Buffer (Producer-Consumer) problem using inter process communication technique – Semaphores.
 - 11) Study latest trends in various operating systems.

Text Books:

- 1) William Stallings, Operating System: Internals and Design Principles, Prentice Hall, 8th Edition, 2014, ISBN10: 0133805913 • ISBN13: 9780133805918
- 2) Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, Operating System Concepts, John Wiley & Sons ,Inc., 9th Edition,2012, ISBN 9781118063330
- 3) Maurice J. Bach, “Design of UNIX Operating System”, PHI

Reference Books:

- 1) Tom Adelstein and Bill Lubanovic, Linux System Administration, O'Reilly Media, Inc., 1st Edition, 2007.ISBN10: 0596009526 | ISBN13: 9780596009526
- 2) Harvey M. Deitel, Operating Systems, Prentice Hall, 3rd Edition,2003, ISBN10: 0131828274 | ISBN13: 9780131828278
- 3) Andrew S. Tanenbaum, Modern Operating System, Prentice Hall, 3rd Edition, 2007,ISBN10: 0136006639 | ISBN13: 9780136006633
- 4) Operating System in depth by Thomson

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III
Unit Test -2 Unit IV, V and VI

Advanced Database Management Systems

Teaching Scheme	Examination Scheme	Credit Allotted
Theory :3Hrs/Week	End Semester Examination : 60 Marks	Theory :3
Practical :2Hrs/Week	Continuous assessment : 40 Marks	Tw &Pr :1
	Term Work and Practical (Tw & Pr) : 50 Marks	

Course Objectives:

Exploring the working of large scale and emerging database management systems
Study and analysis of query processing and query optimization

Course Prerequisites:

Student should be well aware of database management systems, analysis of data structure and algorithms and sufficient programming experience

Course Outcome:

Students will be able to:

- 1) Understand the concepts of Object Oriented Database Management Systems
- 2) Understand various system architectures
- 3) Understand the processes of query processing and optimization
- 4) Understand Data warehousing concepts
- 5) Understand Data mining concepts
- 6) Familiarize with emerging database applications

UNIT-I Object-Oriented and Object Relational Databases (06 Hours)

Overview of Object-Oriented Concepts, Object Identity, Object Structure, and Type Constructors, Encapsulation of Operations, Methods, and Persistence, Type and Class Hierarchies and Inheritance,

Complex Objects, Overview of the Object Model of ODMG, The Object Definition Language, The Object Query Language, Object Database Conceptual Design, Other Objected-Oriented Concepts

Database design for an ORDBMS–Nested relations and collections, Implementation and Related Issues for Extended Type Systems, The Nested Relational Model, Extended ER diagram, Comparison of OODBMS, ORDBMS and RDBMS.

UNIT-II Database-System Architectures (06 Hours)

Centralized and Client –Server Architectures, Server System Architectures

Parallel Databases: Introduction to Parallel Systems , I/O Parallelism, Interquery Parallelism, Intraquery Parallelism, Intraoperation Parallelism, Interoperation Parallelism, Design of Parallel Systems.

Distributed Databases: Introduction to Distributed Systems, Homogeneous and Heterogeneous Databases, Distributed Data Storage, Availability, Heterogeneous Distributed Databases.

UNIT-III Query Processing and Query Optimization (06 Hours)

Query Processing : Overview, Measures of Query Cost, Algorithms for Selection, Sorting and Join Operation, Evaluation of Expressions.

Query Optimization : Overview, Transformation of Relational Expressions, Estimating Statistics of Expression, Results, Choice of Evaluation Plans, Semantic Query Optimization, Materialized Views, Introduction to dynamic query evaluation.

UNIT-IV Data Warehousing and OLAP (06 Hours)

Characteristics of Data warehouse, Data marts, Building data warehouse, Architectural strategies and organizational issues, Design considerations, Data Content, Metadata, Distribution of data, Tools for Data Warehousing, Applications of Data warehousing.

OLAP and OLTP, Data Modeling- Star and snowflake schema.

UNIT-V Data Mining and information retrieval (06 Hours)

Overview of data mining, Steps of data mining, Association Rules, Classification, Clustering, Applications of data mining

Decision support systems, Information retrieval systems, Web search engines, Directories.

UNIT-VI Emerging Database Technologies and Applications (06 Hours)

Time in Databases, Spatial and Geographic Data, Geographic Information Systems, Genome Data Management, Multimedia Databases, Mobility and Personal Databases, Mobile Databases.

Performance Tuning, Performance Benchmarks, Standardization, Application Migration, Transaction-Processing Monitors.

Assignment List:

1. Study and implementation of nested relations using SQL.
2. Study and implementation of Object types and collection in SQL .
3. Study and design of Extended ER diagram for any given DBMS.

4. Study (and implementation if possible) of web search engine (Lucene).
5. Study and implementation of selection, sorting and join operations.
6. Study and implementation of semantic queries.
7. Study, implementation and comparison of Views and Materialised views.
8. Study, implementation and comparison of Snowflake and Star schema
9. Study and demonstrating of OLAP operations in SQL.
10. Implementation of triggers in PL/SQL (Performance statistics and diagnostics)

Text Books:

- 1) Fundamentals of Database Systems, Sixth Edition, Ramez Elmasri, Shamkant B. Navathe, Pearson Education
- 2) Database System Concepts, Seventh Edition, Avi Silberschatz, Henry F. Korth, S. Sudarshan, McGraw-Hill
- 3) Data Warehousing: Concepts, Techniques, Products and Applications, 3rd Edition, C.S.R. PRABHU, PHI Learning Pvt. Ltd.,

Reference Books:

- 1) Database Management Systems, 3rd Edition, Raghu Ramakrishnan and Johannes Gehrke, Mcgraw Hill Education
- 2) An Introduction to Database Systems, 8th Edition, C.J. Date, Pearson
- 3) Database Systems: A Practical Approach to Design, Implementation, and Management, Third Edition, Thomas Connolly, Carolyn Begg, Pearson

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Design and Analysis of Algorithms

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 4
Tutorials : 1Hr/Week	Continuous assessment : 40 Marks	

Course Objectives:

Students will be able to find a best suited algorithmic approach as a solution for given problem.

Course Prerequisites:

Students should have knowledge advanced data structures, graph theory and algorithmic steps in problem solving.

Course Outcome:

Students will be able to:

- 1) Understand fundamental data structures and with the manner in which these data structures can best be implemented.
- 2) Learn how to analyze algorithms and estimate their worst-case and average-case behavior.
- 3) Ability to analyze and design algorithms divide and conquer approach.
- 4) Ability to understand and design algorithms using greedy strategy and dynamic programming
- 5) Learn fundamental knowledge of computational complexity, approximation and randomized algorithms.
- 6) Apply subject knowledge in various scenarios .

UNIT-I Introduction: (06 Hours)

Elementary data structures: Linear data structures, Graphs, Trees.
Algorithm: Understanding problem, Designing, Analyzing, and Coding.
Mathematical analysis of algorithms, Standard and Asymptotic Notations.

UNIT-II Brute Force and Exhaustive Search: (06 Hours)

Selection Sort and Bubble Sort, Sequential Search and Brute-Force String Matching, Closest-Pair and Convex-Hull Problems by Brute Force, Exhaustive Search: Traveling Salesman Problem, Knapsack Problem. Depth-First Search and Breadth-First Search

UNIT-III Divide and Conquer: (06 Hours)

Merge sort, Quick sort, Binary Tree Traversals and Related Properties, Multiplication of Large Integers and Strassen's Matrix Multiplication,

Multiplication of Large Integers, Strassen's Matrix Multiplication, The Closest-Pair and Convex-Hull Problems by Divide-and-Conquer, The Closest-Pair Problem, Convex-Hull Problem. Heaps and Heap sort.

UNIT-IV Dynamic Programming and Greedy Techniques: (06 Hours)

The Knapsack Problem and Memory Functions, Optimal Binary Search Trees, Warshall's and Floyd's Algorithms, Greedy Techniques: Prim's Algorithm, Kruskal's Algorithms, Dijkstra's Algorithm, Huffman Trees and Codes.

UNIT-V Backtracking and Complexity Theory: (06 Hours)

Lower-Bound Arguments, Problem Reduction, Decision Trees, Decision Trees for Sorting, Decision Trees for Searching a Sorted Array, P, NP and NP-Complete, Coping with the Limitations of Algorithm Power, Backtracking: n-Queens Problem, Hamiltonian Circuit Problem, Subset-Sum Problem, Branch-and-Bound, Knapsack Problem, Traveling Salesman Problem.

UNIT-VI Applications: (06 Hours)

Case Studies of Algorithmic Designs & Applications, Deadlock detection and avoidance implementation. Resource allocation algorithm with deadlock avoidance, Heuristic search algorithm. Recent advances in the subject.

Assignment:

Concerned course faculty can arrange classroom tutorials, MCQ tests and students presentations on each unit. Discuss recent advances in the subject.

Text Books:

- 1) Anany Levitin. *Introduction to Design and Analysis of Algorithms*. Pearson Education.
- 2) Horowitz E, Sahni S, Rajasekaran S. *Fundamentals of Computer Algorithms*. University Press.
- 3) Thomas H. Cormen. *Introduction to Algorithms*. MIT Press.

Reference Books:

- 1) Jon Kleinberg. *Algorithm Design*. Pearson Education.
- 2) Gilles Brassard, Paul Bratley. *Fundamentals of Algorithms*. Pearson Education.
- 3) Donald E. Knuth. *Art of Computer Programming*. Dorling Kindersley Pvt Ltd.
- 4) Steven S Skiena, *The Algorithm Design Manual*. Springer.
- 5) Michael T. Goodrich. *Algorithm Design*. Wiley.

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Computer Organization and Architecture

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 3
Practicals : 2 Hrs/Week	Continuous assessment : 40 Marks	Tw & Pr : 1
	Term Work and Practical (Tw & Pr) : 50 Marks	

Course Objectives:

- 1) To study various advanced computer architectures.
- 2) To study 32-bit/64-bit processor architecture
- 3) To study latest technology

Course Prerequisites:

Students should have knowledge of

- 1) Basic Microprocessors and Microcontrollers

Course Outcome:

Students will be able to:

- 1) Learn 32-bit as well as 64-bit processor architectures.
- 2) Learn latest computer architectures
- 3) Learn design of the control unit
- 4) Learn various latest memory and bus technologies
- 5) Learn parallel processing concepts

UNIT-I **80386DX Features:** Functional Block Diagram, PIN Description, (06 Hours)

Register set, Flags, Physical address space, Data types
80386Dx descriptor Tables GDT, LDT, IDT, descriptor cache, Code, data and stack descriptors, system descriptors, privilege levels, Segmentation in 80386DX, comparison of segmentation with 8086, paging, TSS, Nested Tasks, Operating in Real Mode, Protected Mode, Virtual 86 mode, Virtual addressing, 80386DX instruction set, setting protected mode, setting v86 mode, Real mode programming, Memory Management, Protection Mechanism.

UNIT-II **Memory Organizations:** Flash memory, SDRAM, DDR3, DDR4, (6Hours)

Advanced DRAMs, Memristors, PRAM (Phase change RAM / PCM – Phase Change Memory) by IBM, Magneto-resistive RAM (MRAM), Resistive RAM (RRAM), Spin Transfer Torque RAM (STT-RAM), Ferro-electric RAM (FRAM), MLC NAND Flash, 3-D NAND, , 3 -D XPoint Technology by Intel and Micron, Intelligent RAM (IRAM) , NUMA and UMA, Memory allocation policies, Cache memory: Concept, architecture (L1, L2, L3), mapping Techniques, Replacement algorithms, Cache coherency, Interleaved and Associative memory. Virtual Memory: Concept, Segmentation and Paging, Page replacement policies.
Secondary Storage: RAID, Blue Ray Disk, Solid State Drives

(SSD), Cloud storage

Bus design considerations, Bus types : PCI, ISA, AGP, SCSI, GPIB, USB, Bus arbitration

UNIT-III Single Bus Organization, Micro operations and Register Transfers (6Hours)

Hardwired Control Design methods, Typical Example - Multiplier Control unit, Micro-programmed Control: Basic concepts, Microprogram, Microinstruction sequencing, micro-program sequencing, A complete microprogram, Applications of microprogramming

UNIT-IV Intel Pentium Processor (6Hours)

Features, Block Diagram, Pin grouping according to function, Modes, Programmer's model, Superscalar Operation, Integer & Floating Point Pipeline Stages, Branch Prediction, Cache Organization, Cache coherence, MESI. Study of features of Pentium Pro, Pentium 2, Pentium 3 and Pentium 4 Processors.

UNIT-V Advanced Processor Architectures : (6Hours)

Multiprocessor Architectures : Closely coupled and Loosely coupled, UMA, NUMA, COMA, RISC and CISC Architectures, Basics of ARM processor, Superscalar Architecture, SuperSPARC, Nehalem micro-architecture, Intel Haswell micro-architecture Multicore Architecture, Hyper Threading Technology (HTT), Intel 64bit Architecture: Block Diagram, Intel Core i3, i5 and i7 architectures, Supercomputer architectures : CDAC PARAM, IBM Blue Gene

UNIT-VI Introduction to parallel processing systems: (6Hours)

Introduction to parallel processing concepts, Architectural classification of parallel processors, pipeline processing, instruction pipelining, pipeline stages (Intel Pentium pipelining), pipeline hazards, Performance evaluation of pipeline, Data dependency analysis, concurrency analysis, Bernstein's conditions, Message passing libraries like PVM, MPI, CUDA : Parallel Programming Model, Vector processing concepts, NVIDIA GPU Computing

Text Books:

- 1) C. Hamacher, V. Zvonko, S. Zaky, "Computer Organization", McGraw Hill, 2002, 5th edition.
- 2) J. Hays, "Computer Architecture and Organization", 2nd Edition, McGraw-Hill, 1988 ISBN 0-07-100479-3
- 3) 2. Stallings William, "Computer Organization and Architecture: Principles of structure and function", 2nd Ed, Maxwell Macmillan Editions, 1990 ISBN 0 - 02 -946297 - 5.
- 4) 80386 Microprocessor Handbook, Chris H. Pappas, William H. Murray

- 5) Pentium Processor System Architecture: Tom Shanley & Don Anderson, Addison-Wesley.
- 6) Advanced Computer Architecture: Parallelism, Scalability and Programmability-Kai Hwang

Reference Books:

- 1) B. Govindarajulu, "Computer Architecture and Organization: Design Principles and Applications", Second Edition, Tata McGraw-Hill.
- 2) Dr. M. Usha, T. S. Srikanth, "Computer System Architecture and Organization", First Edition, Wiley- India.
- 3) John L. Hennessey and David A. Patterson, "Computer Architecture – A Quantitative Approach", Morgan Kaufmann / Elsevier Publishers, Fifth Edition, 2012.
- 4) The 80386DX Microprocessor: Hardware, Software and Interfacing: Walter A Triebel, Prentice Hall.

List of Assignments :

- 1) A program for
 - a) LRU page replacement algorithm.
 - b) FIFO page replacement algorithm.
- 2) A program to simulate the mapping techniques of Cache memory.
 - a) Direct Mapped cache
 - b) Associative Mapped cache
 - c) Set Associative Mapped cache
- 3) A program to simulate memory allocation policies.
 - a) First-fit algorithm
 - b) Best-fit algorithm
- 4) A program to implement serial communication (PC - PC communication).
- 5) A program to implement parallel communication. (PC - Printer communication).
- 6) A program for printer simulation.
- 7) A program for keyboard simulation.
- 8) Write ALP using to read and display the table content pointed by GDTR/LDTR and IDTR.

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Elective-II : Multimedia Techniques

Teaching Scheme	Examination Scheme	Credit Allotted
Theory :3 Hrs/Week	End Semester Examination : 60 Marks	Theory: 3
	Continuous assessment : 40 Marks	

Course Objectives:

- 1) To enable the students to develop synchronization concepts and mechanisms across the whole multimedia system architecture.
- 2) To study the basic concepts for multimedia transmission at the physical, Medium access control layers presenting the past and existing network technologies

Course Prerequisites:

Students should have knowledge of

- 1) Student have knowledge of Computer Graphics and GUI Programming
- 2) Student should have knowledge of Computer programming with C and C++

Course Outcome:

Students will be able to:

- 1) Understand the concepts of Multimedia architecture, elements, applications and interface standards.
- 2) Learn the different types of compression techniques and different types of data file Format used in multimedia systems.
- 3) Understand Different types of audio and video file formats.
- 4) Develop an interactive multimedia application to display their ability to use multimedia tools including multimedia authoring.
- 5) Have an insight into how the quality of multimedia systems is perceived and how this relates to the design of multimedia input, output and editing systems.
- 6) Student will able develop any academic or commercial application.

UNIT-I

Introduction to Multimedia and Graphic Devices:

Types of media, Introduction to Multimedia, Multimedia (06 hours)
Information, Multimedia Objects, Multimedia in business and work.
Convergence of Computer, Multimedia Elements, Color Schemes,
Picture representation, display devices, display adapters.

UNIT-II

Data Compression

Huffman Coding, Shannon Fano Algorithm, Huffman Algorithms, (06 hours)
Adaptive Coding, Arithmetic Coding Higher Order Modelling. Finite
Context Modelling, Dictionary based Compression, Sliding Window
Compression, LZ77, LZW compression, Compression, Compression

ratio loss less & lossy compression

UNIT-III

Audio and Video

Basic sound concept, Multimedia system sound, MIDI versus digital audio, Audio file formats, National interchange file formats, Digital Audio software's. Types of Video, Video broadcasting standards, Video Quality, Digital Video Software's, Video file formats (for web), Video Compression, Video codec's. **(06 hours)**

UNIT-IV

Image/Graphics and Animation

Still images, Types of Image, Image Quality, Image Compression, Graphics Software's, Image file formats (for web) Principals of animation, Methods of Animation, Animation Software's, Animation file formats (for web) (JPEG, & MPEG standards). **(06 hours)**

UNIT-V

Multimedia Storage Devices

Magnetic media, optical media, file systems (traditional, multimedia), Communication devices, Multimedia software's, presentation tools, CD, DVD construction details, recording and reproducing data from CD & DVD. CDROM, COMBO DRIVE, DVD Writer technologies. **(06 hours)**

UNIT-VI

Multimedia Applications:

Media preparation, communication, entertainment using commercial tools, Interactive television, Video-on-demand, Video Conferencing, Educational Applications, Industrial Applications, Multimedia archives and digital libraries, media editors. **(06 hours)**

Assignment List:

- 1) Explain Types of Multimedia? Multimedia Objects
- 2) An audio clip has duration of 8 minutes. The highest frequency in the sound wave is 15 kHz. This is to be sampled using 8 bits per sample and in stereo mode. Calculate the file size. Mention any assumptions made?
- 3) Sound capturing & editing using tools like SOUNDFORGE
- 4) An MPEG-1 video has a frame sequence: IBBPBBPBBPBBI. Determine the size of GOP. Derive the transmission sequence of the frames?
- 5) Creating/editing motion video/animation clips (using tools like Flash / Adobe Premier)
- 6) Consider a TV camera where the maximum intensity of a color signal is represented by 1 volt. An unsaturated magenta signal is formed by mixing 70% R, 20% G and 60% B. What is the luminance output voltage for the signal? What would this value be if the magenta color is saturated?

7) A CD-ROM contains 333000 blocks to be played back in 74 minutes. Calculate the data rate and capacity of the CD-ROM when operating in (a) Mode 1 (b) Mode 2 333000 blocks are played back in 74 minutes?

8) Prepare case study on Educational application Or Industrial application

Text Books:

- 1) Multimedia – Making it work 5th edition by Tag Vaughan (TMGH)
- 2) Multimedia Communication – Pearson Education Fred Halsall.
- 3 Mark Nelson “Data Compression Book” BPB

Reference Books:

- 1) David Hillman “Multimedia technology and Applications” Galgotia Publications.
- 2) Rosch “Multimedia Bible” Sams Publishing.
- 3) Sleinreitz “Multimedia System” Addison Wesley.
- 4) James E Skuman “Multimedia in Action” Vikas.
- 5) J. Jeffcoate , Multimedia in Practice: Technology and Application , PHI.

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Elective-II : Embedded System

Teaching Scheme	Examination Scheme	Credit Allotted
Theory :3 Hrs/Week	End Semester Examination : 60 Marks	Theory :3
	Continuous assessment : 40 Marks	

Course Objectives:

- 1) To enable the students to gain a fair knowledge on characteristics and applications of Embedded systems
- 2) To introduce students to the design issue of embedded system
- 3) To understanding and experience of state-of-the-practice industrial embedded systems and intelligent embedded system development

Course Prerequisites:

Students should have knowledge of

- 1)) Students have knowledge about the basic functions of embedded systems Outcomes
- 2) Digital hardware, introductory electrical circuits concepts, computer architecture, programming & systems programming

Course Outcome:

Students will be able to:

- 1) Identify the unique characteristics of real-time systems,
- 2) Explain the general structure of a real-time system,
- 3) Define the unique design problems and challenges of real-time systems,
- 4) Apply real-time systems design techniques to various software programs
- 5) Understand the basics of an embedded system,
- 6) Program an embedded system,
- 7) Design, implement and test an embedded system

UNIT-I INTRODUCTION:- (06 Hours)

Introduction to embedded systems ,Classification, Characteristics and requirements, Embedded Operating system, Design parameters of an embedded system and its significance, design life cycle, tools introduction, hardware and software partitioning and co-design, Concept of Real time Systems, Challenges in Embedded System Design, Design Process Requirements, Specifications, Architecture Design, Designing of Components and System Integration,.

UNIT-II EMBEDDED SYSTEM ARCHITECTURE:- (06 Hours)

Instruction Set Architecture-CISC architecture [8051] and RISC instruction set architecture [ARM processors], DSP Processors, Coprocessors and Hardware Accelerators, Processor Performance Enhancement Pipelining, Super-scalar Execution, CPU Power Consumption, Memory System Architecture-, Caches, Virtual Memory,

- Memory management unit and address Translation.
- UNIT-III DESIGNING EMBEDDED COMPUTING PLATFORM: - (06 Hours)**
 Designing with Processors System Architecture, Hardware Design, Implementation Development Environment, Debugging Techniques, Manufacturing and Testing. Design Using CPU Bus: Bus Protocols, Bus Organization, I/O Device Interfacing, Interfacing Protocols-GPIB, FIREWIRE, USB, Watchdog Timers.
- UNIT-IV OPERATING SYSTEMS:- (06 Hours)**
 Kernel Features: Real-time Kernels, Polled Loops System, Co-routines, Interrupt driven System, Multi-rate System, Processes and Threads, Context Switching, Cooperative Multi-tasking, Pre-emptive Multi-tasking, Scheduling-Rate, Monotonic Scheduling, Earliest-Deadline First Scheduling, Task Assignment, Fault-Tolerant Scheduling. Inter-process Communication-Real-time Memory Management: Stack Management, Dynamic Allocation-Evaluating and Optimizing Operating System Performance-Response.
- UNIT-V RTOS- (06 Hours)**
 Tasks, states, Data, Semaphores and shared data, Operating system services, Message queues, Mailboxes. 8. Advanced Processor-(only architectures) 80386, 80486 and ARM (References)
- UNIT-VI EMBEDDED CONTROL APPLICATIONS: - (06 Hours)**
 Open-loop and Closed Loop Control Systems-Application Examples- Washing Machine, Automotive Systems, Auto-focusing digital camera, Air-conditioner, Elevator Control System, ATM System.

Assignment List:

Concerned course faculty can arrange classroom tutorials, MCQ tests and students presentations on each unit. Discuss recent advances in the subject.

Text Books:

- 1) Raj Kamal, "Embedded Systems", TMH, first edition, 2004
- 2) David E. Simon, "An Embedded Software Primer", Pearson Education, 1999.
- 3) Microcontroller (Theory and Applications) Ajay V Deshmukh, Tata McGraw- Hill@2005

Reference Books:

- 1) Wayne wolf, "Computers as components", Morgan Kaufmann publishers, 2nd Edition, 2008.
- 2) Ayala. K.J. "The 8051 Microcontroller", Penram International, 1991.
- 3) Dr. Prasad, "Embedded Real Time System", Wiley Dreamtech, 2004.
- 4) Jean J.Labrosse, "Embedded system building blocks", CMP books, 2nd Edition, 1999.
- 5) Arnold berger, "Embedded system design", CMP books, 1st Edition, 2001.
- 6) Narayan and gong, "Specifications and design of embedded systems", Pearson education, 2nd Edition, 1999.

Syllabus for Unit Test:

Unit Test -1 Unit I,II and III
Unit Test -2 Unit IV, V and VI

Elective-II : Geographical Information System

Teaching Scheme	Examination Scheme	Credit Allotted
Theory :3Hrs/Week	End Semester Examination : 60 Marks	Theory :3
	Continuous assessment : 40 Marks	

Course Objectives:

To understand use of GIS data and systems in various applications that we can use in our life.

To understand use of GIS data and systems to analyze geographical resources and its management

Course Prerequisites:

Students should have knowledge of

- 1) Basic graphical elements and Maps
- 2) Basic computer operating skills

Course Outcome:

Students will be able to:

- 1) Understand Maps and its use in GIS.
- 2) Understand GIS data Acquisition and Management.
- 3) Understand GIS data Processing and Visualization.
- 4) Understand Terrain Mapping, Geocoding.
- 5) Understand role of Remote Sensing in GIS.
- 6) Understand GIS Project and Trends .

UNIT-I Fundamentals of GIS: (06 Hours)

Introduction, Definition of GIS, Evolution of GIS, Roots of GIS , Definition, GIS Architecture, Models of GIS, Framework for GIS, GIS Categories, Map as a Model, Spatial Referencing System, Map Projections, Commonly Used Map Projections, Grid Systems, Cartographic Symbolization, Types of Maps, Typography, Map Design, Map Productions, Map Applications.

UNIT-II Data Management, Models and Quality Issues: (06 Hours)

Conceptual Models, Geographical Data Models, Data Primitives, Data Types - Raster and Vector Approach, Digital Terrain Modeling , Approaches to digital terrain data modeling , Acquisition of digital terrain data, Data Modeling and Spatial Analysis, Sources of Geographical Data, Data Collectors and Providers, Creating Digital Data Sets, Data Presentation, Data Updating, Data Storage, Spatial Data Costs, Quality of GIS Output, Sources of Errors in Spatial Data, Factors affecting Reliability of Spatial Data, Faults from Assumptions, spatial autocorrelation, Quadrat counts and Nearest. Neighbour analysis, Trend surface analysis, Gravity models.

UNIT-III GIS Data Processing, Analysis and Visualization: (06 Hours)

Raster based GIS data processing, Vector based GIS data processing, Human computer interaction and GIS, Visualization of geographic information, principles of cartographic design in GIS, Generation of information product, Image Classification and GIS, Visual Image Interpretation, Types of Pictorial Data Products, Image Interpretation Strategy, Image Interpretation Process, Overview of Image Interpretation Equipments.

UNIT-IV Terrain Mapping, Geocoding and Segmentation: (06 Hours)

Interpolation, Visualization of Continuous Surfaces, Data Sources for Interpolations, Methods for Interpolations, Global Interpolation, Local Deterministic Methods, Comparison of Global and Local Method, Optimal Interpolation Using Geo Statistics. Kriging, Variogram, Geocoding, Applications of Geocoding, Dynamic Segmentation, Applications of Dynamic Segmentation.

UNIT-V Remote Sensing Fundamentals: (06 Hours)

Remote Sensing - Basic Principles, Electromagnetic Remote Sensing, Energy Sources, Energy Interactions with Earth's Surface Materials, Microwave Remote Sensing, The Radar Principle, Factors Affecting Microwave Measurements, Radar Wavebands, SLAR Systems, Sar, Interpreting Sar Images, Geometrical Characteristics, Remote Sensing, Platform and Sensors, Satellite System Parameters, Sensor Parameters, Imaging Sensor Systems, Earth Resources Satellites, Meteorological Satellites.

UNIT-VI GIS Project Design and Management: (06 Hours)

Software engineering as applied to GIS, GIS project planning, System analysis and study of user requirement, Geographic database design methodology, GIS application software design methodology, system implementation, system maintenance and support.

Issues and Applications in GIS: Changes in Technology, Data Supply and Users, Role of Satellite Imagery and Data Sets, Trends in GIS, GIS users, Urban and Municipal Applications, Other Applications.

Assignment List:

- 1) Analyze google Maps for geographical area of any city
- 2) Analyze data from google Maps for any city's geographical structure
- 3) Study data resource sources for any GIS system
- 4) Analyze Google Map with Geocoded Address
- 5) Study various remote sensing application
- 6) Analyze any GIS Project with tools and techniques used.

Text Books:

- 1) M. Anji Reddi ,” Remote Sensing and Geographical Information Systems” B. S.

- Publications, Second Edition
- 2) George B Korte, .The GIS Book., Onword press, Thomson Learning, 5th Edition, 2003.
 - 3) Ian Heywood, Sarah Cornelius & etal., .An Introduction to Geographical Information Systems., 2nd Edition, Pearson Education

Reference Books:

- 1) Tor Bernhardsen, .Geographic Information Systems. An Introduction., 3rd edition,Wiley.
- 2) Peter A Burrough and McDonell, .Principles of Geographical Information Systems, Oxford University Press, 1998
- 3) M. N. DeMers, .Fundamentals of Geographic Information Systems., 3rd edition, Wiley.

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Elective – II : Cyber Law and Security Policies

Teaching Scheme	Examination Scheme	Credit Allotted
Theory :3 Hrs/Week	End Semester Examination: 60 Marks	Theory:3
	Continuous assessment : 40 Marks	

Course Objectives: To

- 1) Understand significance of cyber security and its effect on Individual and society at large.
- 2) Use of IT ACT 2000 for its possible implementation.

Course Prerequisites:

Students should have knowledge of

- 1) Working of the Internet
- 2) Basic security related issues.

Course Outcome:

Students will be able to:

- 1) Understand security policies
- 2) Use effective technique to maintain the data.
- 3) Analyze information using tools and techniques to increase the business.
- 4) Use huge data available due to social networking site and internet.
- 5) Apply information analysis for decision making.
- 6) Apply adequate tool for MIS

UNIT-I	Introduction to Computer Security: Definition, Threats to security, Government requirements, Information Protection and Access Controls, Computer security efforts, Standards, Computer Security mandates and legislation, Privacy considerations, International security activity.	(06 Hours)
UNIT-II	Secure System Planning and administration: Introduction to the orange book, Security policy requirements, accountability, assurance and documentation requirements, Network Security, The Red book and Government network evaluations.	(06 Hours)
UNIT-III	Information security policies and procedures: Corporate policies- Tier 1, Tier 2 and Tier3 policies - process management-planning and preparation-developing policies-asset classification policy-developing standards.	(06 Hours)
UNIT-IV	Information security:	(06 Hours)

fundamentals-Employee responsibilities- information classification-Information handling- Tools of information security- Information processing-secure program administration.

UNIT-V Organizational and Human Security: (06 Hours)

Adoption of Information Security Management Standards, Human Factors in Security- Role of information security professionals.

UNIT-VI Indian IT Act 2000 and 2008: (06 Hours)

Introduction, Definitions in Act, Electronic signature, certifying authority,

Assignment List:

Text Books:

- 1) Debby Russell and Sr. G.T Gangemi, "Computer Security Basics (Paperback)", 2nd Edition, O' Reilly Media
- 2) Thomas R. Peltier, "Information Security policies and procedures: A Practitioner's Reference", 2nd Edition Prentice Hall
- 3) Kenneth J. Knapp, "Cyber Security and Global Information Assurance: Threat Analysis and Response Solutions", IGI Global

Reference Books:

- 1) Thomas R Peltier, Justin Peltier and John blackley, "Information Security Fundamentals", 2nd Edition, Prentice Hall
- 2) Jonathan Rosenoer, "Cyber law: the Law of the Internet", Springer-verlag
- 3) Matt Bishop, "Computer Security: Art and Science", Addison-Wesley Professional
- 4) Joseph M.Kizza, "Computer Network security", Springer
- 5) Thomas R.Peltier, "Information Security Risk Analysis", CRC Press

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

IT Lab-IV

Teaching Scheme	Examination Scheme	Credit Allotted
Practical :4	Term Work and Practical (Tw & Pr) : 50 Marks	Tw & Pr :2

Course Objectives:

- 1) Describe the basic features of the Linux operating system.
- 2) Effectively use software development tools including libraries, preprocessors, compilers, linkers, and make files.
- 3) Discuss correct synchronization techniques for both application programs and kernel code running on uniprocessor as well as multiprocessor (SMM) platforms.
- 4) Use UNIX/Linux utilities to create and manage simple file processing operations, organize directory structures with appropriate security, and develop shell scripts to perform more complex tasks.
- 5) Apply the UNIX/Linux system to accomplish typical personal, office, technical, and software development tasks.
- 6) Ability to use Linux environment and write programs.

Course Prerequisites:

Students should have knowledge of

- 1) Prior exposure to a computer running an operating system such as Apple or Windows.
- 2) A Unix editor, understands files and directory structures, shell mechanisms.
- 3) Basic fundamentals of shell programming.

Course Outcome:

Students will be able to:

- 1) Understand the open source software movement and the advantages and disadvantages of open source software.
- 2) Acquire knowledge of script programming basics.
- 3) Acquire a fundamental knowledge of operating system file systems.
- 4) Use modern operating system calls such as Linux process and synchronization libraries.
- 5) Understand process management, concurrent processes and threads, memory management, virtual memory concepts, deadlocks.

UNIT-I Introduction : (06 Hours)

Linux Utilities-File handling utilities, Security by file permissions, Process utilities, Disk utilities, Networking commands, Filters, Text processing utilities and Backup utilities, sed – scripts, operation, addresses, commands, applications, awk – execution, fields and records, scripts, operation, patterns, actions, functions, using system commands in awk.

UNIT-II Working with the Bourne again shell(bash): (06 Hours)

Introduction, shell responsibilities, pipes and input Redirection, output redirection, here documents, running a shell script, the shell

as a programming language, shell meta characters, file name substitution, shell variables, command substitution, shell commands, the environment, quoting, test command, control structures, arithmetic in shell, shell script examples, interrupt processing, functions, debugging shell scripts.

UNIT-III **Files:** **(06 Hours)**

File Concept, File System Structure, Inodes, File Attributes, File types, Library functions, the standard I/O and formatted I/O in C, stream errors, kernel support for files, System calls, file descriptors, low level file access – File structure related system calls(File APIs), file and record locking, file and directory management – Directory file APIs, Symbolic links & hard links.

UNIT-IV **Process :** **(06 Hours)**

– Process concept, Kernel support for process, process attributes, process control - process creation, waiting for a process, process termination, zombie process, orphan process, Process APIs. Signals– Introduction to signals, Signal generation and handling, Kernel support for signals, Signal function, unreliable signals, reliable signals, kill, raise, alarm, pause, abort, sleep functions.

Interposes Communication: Introduction to IPC, Pipes, FIFOs, Introduction to three types of IPC-message queues, semaphores and shared memory. Message Queues- Kernel support for messages, Unix system V APIs for messages, client/server example.

UNIT-V **Multithreaded Programming:** **(06 Hours)**

Differences between threads and processes, Thread structure and uses, Threads and Lightweight Processes, POSIX Thread APIs, Creating Threads, Thread Attributes, Thread Synchronization with semaphores and with Mutexes, Example programs.

UNIT-VI **Sockets:** **(06 Hours)**

Introduction to Sockets, Socket Addresses, Socket system calls for connection oriented protocol and connectionless protocol, example-client/server programs

Assignment List:

- 1) Installation of Unix/Linux operating system
- 2) Study of logging/logout details.
- 3) Study of Unix/Linux general purpose utility command list obtained from (man, who, cat, cd, cp, ps, ls, mv, rm, mkdir, rmdir, echo, more, date, time, kill, history, chmod, chown, finger, pwd, cal, logout, shutdown) commands.

- 4) Write a shell script program to display the process attributes.
- 5) Write a shell script program to check variable attributes of file and processes.
- 6) Study of Bash shell, Bourne shell and C shell in Unix/Linux operating system.
- 7) Study of Unix/Linux files system (tree structure).
- 8) Study of .bashrc, /etc/bashrc and Environment variables.
- 9) Shell script program to copy contents of one file to another.
- 10) Create directory, write contents on that and Copy to a suitable location in your home directory.

Text Books:

- 1) Unix System Programming using C++, T.Chan, PHI.(UNIT III to UNIT VIII)
- 2) Unix Concepts and Applications, 4th Edition, Sumitabha Das, TMH.
- 3) Beginning Linux Programming, 4th Edition, N.Matthew, R.Stones,Wrox, Wiley India Edition.

Reference Books:

- 1) Linux System Programming, Robert Love, O'Reilly, SPD.
- 2) Advanced Programming in the Unix environment, 2nd Edition, W.R.Stevens, Pearson Education.
- 3) Unix Network Programming, W.R.Stevens,PHI.
- 4) Unix for programmers and users, 3rd Edition, Graham Glass, King Ables, Pearson Education.

Semester-VII

Compiler Construction and Design

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 4 Hrs/Week	End Semester Examination: 60 Marks	Theory:04
Practical : 2 Hrs/Week	Internal Assessment:40 Marks	Term Work:01
	Oral and Term Work: 50 Marks	

Course Objectives:

- 1) Students will understand concepts of compiler phases and design.
- 2) Students will get deeper insights into the more advanced semantic aspects of programming language and compilers.

Course Prerequisites:

Students should have knowledge of

- 1) Basic Programming Skills
- 2) Data Structure Fundamentals.
- 3) Theory of Automata and Formal Languages

Course Outcome:

Students will be able to:

- 4) Learn about different phases of a compiler and their functioning.
- 5) Implement a program to exhibit basic functionalities of compiler.
- 6) Understand how compilers generate source code to machine code and manages memory during runtime.
- 7) Acquaint with techniques for simple code optimizations.
- 8) Use compiler construction tools and softwares like LEX, YACC and FOSS.
- 9) Know functioning of advanced compilers and advancements in the field.

UNIT-I Lexical Analysis: (06 Hours)

Language Processor: Preprocessor, compiler, assembler, interpreters, Translation Process, Phases of Compiler, Compiler construction: Design issues, Tools. Lexical Analysis: Role, Regular expressions, Specification and recognition of tokens, LEX, Construction of lexical analyzer using LEX.

UNIT-II Syntax Analysis: (06 Hours)

Context free grammar, writing a grammar, Top down parsing, Bottom up parsing, LR parsers: LR parsing algorithm, Constructing SLR parsing tables, Constructing canonical LR parsing tables, Constructing LALR parsing tables, Using ambiguous grammars, YACC. Symbol tables: use and need of symbol tables.

UNIT-III Syntax Translation: (06 Hours)

Syntax directed definition and analysis, Syntax tree construction, Bottom up evaluation, S and L attribute definitions, Top down translation, Space allocation at compile time, Type checking, Type

conversion.

UNIT-IV Run Time Environment and Intermediate Code Generation: (06 Hours)

Runtime Environment: Storage organization, Stack allocation, Access to non-local data, Heap management, Parameter passing mechanisms, Garbage collection, Dynamic storage allocation techniques.

Intermediate Code Generation: Declaration, Assignment statement, Boolean expression, Case statement, Backpatching, Procedure calls.

UNIT-V Code Generation: (06 Hours)

Issues in Code generation, Basic Code generation techniques, run time storage management, Basic blocks and Flow graphs, Next-use information, A simple Code generator, DAG representation of Basic blocks, Peephole optimization, Generating code from dags, Code generation algorithms.

UNIT-VI Code Optimization and Applications: (06 Hours)

Code optimization techniques, Principal Sources of Optimization, Optimization of basic Blocks, Global Data Flow Analysis, Runtime Environments, Source and Target Language issues, Dynamic compilation, Cross compilers, Decompiler, Tools: FOSS, C Compiler, GCC, javac, JIT, Interpreters (JVM/Dalvik).

Assignment List:

- 1) Analyze source program compilation with respect to compilation phases.
- 2) Explain the role of lexical analysis in compilation process.
- 3) Explain in brief i) Top down parsing ii) Bottom up parsing.
- 4) Write a short note on necessity of type checking and type conversion.
- 5) Write a procedure to insert an item into a linked list by passing a pointer to the head of the list. Under what parameter passing mechanisms does this procedure work?
- 6) Discuss dynamic storage allocation techniques.
- 7) Explain DAG representation of basic blocks with suitable example.
- 8) Briefly explain runtime storage management in code generation phase.
- 9) Write a short note on code optimization technique.
- 10) Enlist and explain advanced compiler tools.

Term Work Assignment List:

- 1) Understand basic syntax of LEX specifications, built-in functions and variables.
- 2) Implement a preprocessor for C program.
- 3) Implement a lexical analyzer for subset of C language.
- 4) Implement a parser for an expression grammar using YACC and LEX.
- 5) Write a program to simulate symbol table generator.
- 6) Implement operations of semantic analysis like type checking, verification of function parameters, variable declarations and coercions etc.

- 7) Simulation and Demo: Compiler and interpreter using LEX and YACC.
- 8) Implement intermediate code generator for the Boolean expression in three Address code format.
- 9) Implement the front end of a compiler that generates the three-address code for a simple language.
- 10) Generate an appropriate Target Code from the given intermediate code assuming suitable processor details.

Text Books:

- 1) Alfred V. Aho, Monica S. Lam, Ravi Sethi, Jeffrey D. Ullman, "Compilers: Principles, Techniques and Tools", Pearson Education Edition.
- 2) J. R. Levin, T. Mason, D. Brown, "Lex and Yacc", O'Reilly.

Reference Books:

- 1) *Kenneth C. Loudon., "Compiler Construction Principles and Practice", Cengage Learning India.*
- 2) *Andrew Appel and Jens Palsberg., "Modern Compiler Implementation in ML: Basic Techniques", Cambridge University Press.*
- 3) *Anthony J. Dos Reis, "Compiler Construction Using Java, JavaCC and Yacc", Wiley.*
- 4) *Keith D. Cooper, Linda Torczon, "Engineering a Compiler", Elsevier.*
- 5) *Axel T. Schreiner, H. George Friedman Jc, "Introduction to Compiler Construction with Unix", Prentice Hall.*

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Computer Forensics and Cyber Laws

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3Hrs/Week	End Semester Examination : 60Marks	Theory : 03
Practical : 2 Hrs/Week	Internal Assessment : 40 Marks	Term Work : 01
	Practical and Term Work : 50 Marks	

Course Objective:

To maintain an appropriate level of awareness, knowledge and skill required to minimize the occurrence and severity of incidents related to forensics and cyber law.

Course Prerequisites:

Students should have knowledge of

- 1) Basics of data communication.
- 2) Aware about security issues with digital world.

Course Outcome:

Students will be able to:

- 1) Understand how to analyze evidences and its use in investigation.
- 2) Demonstrate data recovery in computer forensic.
- 3) Analyze hardware and operating systems in cyber security.
- 4) Demonstrate Computer Forensic tools and Disaster Recovery.
- 5) Understand Network Forensic and Mobile Network Forensic.
- 6) Discuss cyber laws.

UNIT-I Introduction to Computer Forensics: (06 Hours)

computer crimes, evidence, extraction, preservation

Overview: Concept of Computer Forensic, Types of Forensic Science, Storage device, Storage device characteristics, types of storage device. Forensic Investigator: Role of Computer Forensic Investigator, line of investigation, investigation steps, responsibilities of Computer Forensic Investigator.

Evidence: Definition of evidence, life cycle of evidence, types of evidence, rules for evidence, evidence.

Storage and its Security Incident Response: Introduction, Investigations, Pre-Incident Preparations, Formation of Incident Response Team, Role of Incident Response Team.

UNIT-II Data recovery: (06 Hours)

Computer crime and Legal issues: Intellectual property, privacy issues, Criminal Justice system for forensic, audit/investigative situations and digital crime scene, investigative procedure/standards for extraction, preservation, and deposition of legal evidence in a court

of law.**Data Recovery:** Definition of data recovery, Identifying hidden data, Encryption/Decryption, Steganography, recovering deleted files.data recovery mechanism, tools used for recovery.**Digital evidence controls:** uncovering attacks that evade detection by Event Viewer, Task Manager, and other Windows GUI tools, data acquisition, disk imaging, recovering swap files, temporary & cache files

UNIT-III Hardware and Operating Systems: (06 Hours)

Overview of hardware and operating systems: structure of storage media/devices; windows/Macintosh/ Linux -- registry, boot process, file systems, file metadata.**Investigating Logs:** Audit logs and security, system log, remote logging, configuring Windows, logging, setting up remote logging in Windows, event reporter and Application Logs.**Software Reverse Engineering:** defend against software targets for viruses, worms and other malware, improving third-party software library, identifying hostile codes-buffer overflow, provision of unexpected inputs, etc.

UNIT-IV Computer Forensic tools and Disaster Recovery: (06 Hours)

Computer Forensic tools: X-Ways, Index.dat Analyzer, Data Doctor ,Encase, Helix, FTK, Autopsy, Sleuth kit Forensic Browser, FIRE, Found stone Forensic ToolKit, WinHex, Linux dd and other open source tools. **Disaster Recovery:** Preparing for disaster recovery, backing up data, scheduling backup jobs, restoring data, recovering from server failure, selecting disaster recovery methods.

UNIT-V Network Forensic and Mobile Network Forensic: (06 Hours)

Network Forensic: Collecting and analyzing network-based evidence, reconstructing web browsing, email activity, and windows registry changes, intrusion detection, tracking offenders, etc. **Mobile Network Forensic:** Introduction, Mobile Network Technology, Investigations, Collecting Evidence, Where to seek Digital Data for further Investigations, Interpretation of Digital Evidence on Mobile Network.

UNIT-VI Cyber Law: (06 Hours)

Battling Cyber Squatters and Copyright Protection in the Cyber World : Concept of domain name and reply to cyber squatters, meta-tagging, legislative and other innovative moves against cyber squatting, freedom and control on the internet, works in which copyright subsists and meaning of copyright, copyright ownership and assignment, license of copyright, copyright term and respect for foreign works, copyright infringement, offences and remedies, copyright protection and content on the internet, copyright notice, disclaimer and

acknowledgment, downloading for viewing contents, hyper-linking and framing, liability of ISPs for copyright, violation in the cyber world, legal developments in the US, Napster and its cousins, computer software piracy. Licenses and versions of GPL, Trademark, Patent. Digital Signature, Certifying Authorities and E-Governance : Digital signature, digital signature certificate, certifying authorities and liabilities, digital signature Governance in India

Term Work Assignment List:

1. Explain role of Computer Forensic Investigator and investigation steps.
2. Explain life cycle of evidence and its types.
3. Demonstrate deleted data recovery by using suitable tools.
4. Demonstrate setting up remote logging in Windows.
5. Use Computer Forensic tools.
6. Demonstrate backing up data and restoring data.
7. Implement collecting and analyzing network-based evidence.
8. Implement interpretation of digital evidence on mobile network.
9. Design copyright protection in the cyber world.
10. Implement digital signature.

Assignment List:

1. Discuss types of Forensic Science
2. Discuss Intellectual property.
3. Demonstrate data recovery mechanism
4. Demonstrate event reporter and Application Logs
5. Discuss selecting disaster recovery methods
6. Demonstrate computer Forensic tool X-Ways
7. Discuss Collecting and analyzing network-based evidence
8. Demonstrate intrusion detection
9. Demonstrate digital signature certificate heads.
10. Differentiate between Copyright, Patent and Trademark.

Text Books:

- 1) Jay A. Siegel "Forensic Science: The Basics ", CRC Press.
- 2) Anthony J. Bertino, "Forensic Science: Fundamentals and Investigations", Cengage Learning.
- 3) Joe Nickell and John F. Fischer, "Crime Science: Methods of Forensic Detection", Kentuckypress.
- 4) Sherri Davidoff, Jonathan Ham, " Network Forensics: Tracking Hackers Through Cyberspace", Prentice Hall, 2012.

Reference Books:

- 1) *Stuart H. James and Ph. D., Jon J. Nordby, "Forensic Science: An Introduction to Scientific and Investigative Techniques", 2nd edition.*
- 2) *Andy Jones and Debi Ashenden, "Risk Management for Computer Security: Protecting Your*

- Network & Information Assets*".
- 3) Colin Evans, *"The Casebook of Forensic Detection: How Science Solved 100 of the World's Most Baffling Crimes"*.
 - 4) Edward Amoroso, *"Cyber Security, Computer Network Security and Cyber Ethics"*, 2nd edition by Joseph Migga Kizza.
 - 5) Robert McCrie, *"Security Operations Management"*, Second Edition.

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

Software Testing

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 03
Practical : 2 Hrs/Week	Internal Assessment : 40 Marks	Term Work: 01
	Practical and Term Work : 50 Marks	

Course Objectives:

- 1) Students will learn the advanced techniques that underlie the practice of software testing.
- 2) Course will provide deeper insights into quality assurance of developed softwares.

Course Prerequisites:

Students should have knowledge of

Software Development and Software Engineering concepts.

Course Outcome:

Students will be able to:

- 1) Classify measurement models and software metrics.
- 2) Perform unit and integration tests by determining test design and test automation.
- 3) Apply suitable higher order testing techniques and methods in order to achieve verified and validated software by following best testing practices.
- 4) Understand the methods of software quality measurement.
- 5) Understand various test processes, fault models and methods of test generation.
- 6) Acquaint with software automation tools and applications.

UNIT-I Principles of Testing: (06 Hours)

Purpose of Software Testing, Testing Principles, Goals of Testing, Software components, characteristics, architecture, Software testing life cycle, Testing aspects: Requirements, Test Scenarios, Test cases, Test scripts/procedures. Strategies for Software Testing, Testing Activities, Mistakes, Faults & Failures, Planning Verification and Validation, Software Inspections, Automated Static Analysis, Verification and Formal Methods, Levels of Testing, White-Box Testing, Black-Box Testing.

UNIT-II Functional Testing: (06 Hours)

Test Plan, Test Management, Test Execution and Reporting, Test Specialist Skills, Tester's Workbench and Tool Categories, Test Maturity Model and Test Process Assessment, Functionality Matrix (FM), Debugging & Root Cause Analysis, Software Items, Component & Units, Test Bed, Traceability and Testability, Attributes of Testable Requirements, Test Matrix, Types of Testing, Creating Test Cases from Requirements and Use cases, Software Defects: Origins, Classes, cycle, attributes, Need for Testing.

UNIT-III Higher Order Testing: (06 Hours)

Object Oriented Testing, Specification Based Testing, Performance Testing, Ad-hoc Testing, Usability and Accessibility Testing, Risk-based Testing, Exploratory Testing, Scenario-based Testing, Random Testing Compatibility Testing, User Documentation Testing, Client–Server System Testing, RAD Testing, Configuration Testing, Testing internal Controls, Multiplatform Environment Testing, Security Testing, Web-based System Testing. IEEE Standards Related to Testing.

UNIT-IV Software Measurement: (06 Hours)

Objectives, Measurement and Models, Measurement Scales, Classification of Software Measures, Measurement Framework, Software measurement validation, Measuring Internal Product Attributes: Size, structure, Halstead’s Software Science, Product Quality Metrics, In-Process Quality Metrics, Software Reliability: Measurement and Prediction, The Rayleigh Model, Exponential Distribution and Reliability Growth Models, SRE process.

UNIT-V Software Quality Assurance and Test metrics: (06 Hours)

Software Quality Concepts, Planning for SQA, Six Sigma Principles, Malcolm Baldrige Assessment, Edward Deming’s Principles, Ishikawa’s Seven Basic Tools, Software Maintenance, Software inspection concepts, Software Benchmarks and Baselines, Identifying Software Best and Worst Practices.
Test metrics: Types of metrics, project metrics, Progress metrics, Test Defect metrics, Development defect metrics, Productivity metrics, Release metrics.

UNIT-VI Automation and Applications: (06 Hours)

Software test automation: Introduction, Scope. Design and architecture for automation: External modules, test cases and test framework modules, tools and result modules, report generator, process model for automation, challenges. Manual testing, Automated Testing Tools & Case studies, Study of Testing tools: QTP, Rational Robot, Winrunner, Loadrunner, Bugzilla, Selenium.

Assignment List:

- 1) Explain in detail the difference between Software Product and Software Project.
- 2) Explain the need of Software Testing in software development.
- 3) Explain software defects with reference to origins, classes and defect repository.
- 4) What is minimization and prioritization of Test Cases for Regression Testing? Explain with suitable example.
- 5) Write a short note on ‘Quality Standards’ of testing.
- 6) Explain in detail ‘Software Reliability’.
- 7) Enlist different software reliability models, briefly explain each.

- 8) Explain Defect cycle and Bug execution.
- 9) Write a short note on tools and models to measure Software Quality.
- 10) What is the need of regression testing? Which test cases are executed in regression testing?

Term Work Assignment List:

- 1) Describe architecture, components, characteristics, type, category, types of users and user expectations for given software application.
- 2) State and describe software development life cycle (SDLC) and software testing life cycle (STLC) phases.
- 3) Create Functionality Matrix (FM) for any software application.
- 4) Write down test scenario and test cases on mobile application.
- 5) Construct Requirement Traceability Matrix (RTM) for software application.
- 6) Perform following testing for E-commerce application,
 - a) Functional Testing
 - b) Performance Testing
 - c) UI testing
 - d) Security testing.
- 7) Installation and Demo of open source testing tool (Selenium, Bugzilla etc.)
- 8) Test your project as a software application using any software testing tool.
- 9) Study different Defect Tracking Tool, and Create Defect report using Bugzilla.
- 10) Study assignment: Explain Quality attributes of Software Application and differentiate between QA, QC, and QMS.

Text Books:

- 1) Fenton, Pfleeger, "Software Metrics: A Rigorous and practical Approach", CRC Press.
- 2) Desikan, Ramesh, "Software Testing: principles and Practices", Pearson Education.

Reference Books:

- 1) *Burnstein, "Practical Software Testing", Springer International Edition.*
- 2) *William E. Perry, "Effective Methods for Software Testing", John Wiley and Sons.*
- 3) *Yogesh Singh, "Software Testing", Cambridge University Press.*
- 4) *Ronald Radice, "Software Inspections", Tata McGraw Hill.*
- 5) *Capers Jones, "Software Assessments, Benchmarks, and Best Practices", Addison-Wesley.*
- 6) *Paul C. Jorgensen, "Software Testing: A Craftsman's Approach", CRC Press.*

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

Elective-III: 1) Web Services

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 3 Hrs/Week	End Semester Examination : 60 Marks	Theory : 03
Practical : 2 Hrs/Week	Internal Assessment : 40 Marks	Term Work : 01
	Oral and Term Work : 50 Marks	

Course Objectives:

This course will cover the practical aspects web services in detail. The goal of this course is to introduce the students to the basics of distributed application development. We will introduce the students to Web Services, Applications of Web Services.

Course Prerequisites:

Students should have knowledge of:

- 1) Understanding the working of Network with TCP / IP.
- 2) Basic idea of how the Internet Works.
- 3) .Net and Java Framework Knowledge.

Course Outcome:

Students will be able to:

- 1) To understand the details of web services technologies like WSDL, UDDI, SOAP.
- 2) To learn how to implement and deploy web service client and server.
- 3) To explore interoperability between different frameworks.

UNIT-I Introduction: (06 Hours)

Evolution and Emergence of Web Services – Evolution of distributed computing, Core distributed computing technologies — client/server, CORBA, JAVA RMI, Microsoft DCOM, MOM, Challenges in Distributed Computing, role of J2EE and XML in distributed computing, emergence of Web Services and Service Oriented Architecture (SOA). Introduction to Web Services — The definition of web services, basic operational model of web services, tools and technologies enabling web services, benefits and challenges of using web services. Web Services Architecture — Web services Architecture and its characteristics, core building blocks of web services, standards and technologies available for implementing web services, web services communication models, basic steps of implementing web services.

UNIT-II SOAP: (06 Hours)

Fundamentals of SOAP — SOAP Message Structure, SOAP encoding, Encoding of different data types, SOAP message exchange models, SOAP communication and messaging, Java and Axis, limitations of SOAP.

UNIT-III WSDL: (06 Hours)

Describing Web Services — WSDL — WSDL in the world of Web Services, Web Services life cycle, anatomy of WSDL definition document, WSDL bindings, WSDL Tools, limitations of WSDL.

UNIT-IV Web Service Discovery: (06 Hours)

Discovering Web Services — Service discovery, role of service discovery in a SQA, service discovery mechanisms, UDDI — UDDI registries, uses of UDDI Registry, Programming with UDDI, UDDI data structures, Publishing API, Publishing, searching and deleting information in a UDDI Registry, limitations of UDDI.

UNIT-V Web Services Interoperability: (06 Hours)

Web Services Interoperability — Means of ensuring Interoperability, Overview of .NET, Creating a .NET client for an Axis Web Service, creating Java client for a Web service, Challenges in Web Services Interoperability. Web Services Security — XML security frames work, Goals of Cryptography, Digital signature, Digital Certificate, XML Encryption.

UNIT-VI Designing Web service: (06 Hours)

Java, and .Net Frame Work. Case Studies with Java and .Net.

Term Work Assignment List:

- 1) Compare different distributed computing technologies like CORBA, JAVA RMI, Microsoft DCOM, MOM.
- 2) Implement a simple web service of checking the status of client.
- 3) Implement SOAP in Java with simple messaging.
- 4) Identify limitations of SOAP. Suggest the solutions.
- 5) Study WSDL in detail with respect to WWW.
- 6) Implement a simple program for discovery.
- 7) Write a Java program to verify digital signatures.
- 8) Write a Java program to verify digital certificates.
- 9) Case Study: Use of Java for Web Services.
- 10) Case Study: Use of .NET for Web Services.

Text Books:

- 1) R. Nagappan, R. Skoczylas, R.P. Sriganesh, “Developing Java Web Services”, Wiley India.

Reference Books:

- 1) James McGovern, Sameer Tyagi et al., “Java Web Service Architecture”, Elsevier
- 2) S. Graham and others “Building Web Services with Java”, 2 Edition, Pearson Edn.

- 3) *D.A. Chappell & T. Jewell, "Java Web Service"s, O'Reilly,SPD.*
- 4) *G. Alonso, F. Casati, "Web Service's, Springer.Outcomes*

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

Elective III: 2) Natural Language Processing

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 2 Hrs/Week	End Semester Examination : 60 Marks	Theory : 02
Tutorial : 2 Hrs/Week	Internal Assessment : 40 Marks	Term Work : 02
	Oral and Term Work : 50 Marks	

Course Objectives:

- 1) To understand the concepts of morphology, syntax, semantics and pragmatics of the language.
- 2) To give introduction of knowledge acquisition, information retrieval and machine translation.

Course Prerequisites:

Students should have knowledge of

- 1) Probabilities and statistics.
- 2) Algorithms and programming experience.

Course Outcome:

Students will be able to:

- 1) Understand the models, methods, and algorithms of statistical Natural Language Processing (NLP).
- 2) Understand the basic NLP techniques, including syntactic parsing, semantic interpretation, lexical and morphological analysis.
- 3) Understand machine learning techniques used in NLP, including hidden Markov models and probabilistic context-free grammars.
- 4) Choose appropriate solutions for solving typical NLP sub problems (tokenizing, tagging, parsing)
- 5) Understand basics of knowledge representation.
- 6) Understand resources of natural language data – corpora.

UNIT-I Language Modeling: (06 Hours)

NLP-Language and Grammar-Processing:Origins and challenges, Language models: Uni-gram, N-gram –Statistical Language Model, NLP Applications.

UNIT-II Natural Language and Formal Language: (06 Hours)

Text Preprocessing, Regular Expressions and Finite State Automata word recognition, lexicon. Phrases and idioms, word order, agreement, tense, aspect and mood and agreement, Context Free Grammar, spoken language syntax.

UNIT-III Part of Speech Tagging and Hidden Markov Models: (06 Hours)

The concept of parts-of-speech, Tagging, Tagsets, and Morphology, The Penn Treebank and Brown Corpus. Probabilistic (weighted) finite state automata. Hidden Markov models (HMMs). The Viterbi Algorithms.

UNIT-IV Grammars & Parsing Algorithms: (06 Hours)

Context-free Grammars, Parsing Regular Grammars, Parsing Context Free Grammars, Example Toy NL Grammar, Shift-Reduce Parsers, Probabilistic Parsing: Introduction.

UNIT-V Information Extraction: (06 Hours)

Vector space model, term weighting, homonymy, polysemy, synonymy, Improving user queries. Machine Translation– Overview, Applications of NLP- Spell-checking, Summarization.

UNIT-VI Linguistics resources: (06 Hours)

Introduction to corpus, elements in balanced corpus, TreeBank, PropBank, WordNet, VerbNet etc. Resource management with XML, Management of linguistic data with the help of GATE, The Semantic Web technologies, ontologies, OWL, NLTK.

Assignment List:

- 1) Write note on word normalization and stemming. Explain case folding with suitable example.
- 2) What is significance of decision tree in sentence segmentation also give implementation of decision tree for suitable example.
- 3) Discuss challenges of Machine translation. What are classical approaches of machine translation?
- 4) Case study on IBM translation model.
- 5) Case study on WordVET and VerbNet
- 6) Study of Hidden Markov Model and POS tagging.
- 7) Study assignment on Python—Analyzing Text with the Natural Language.
- 8) Research paper reading, analyzing and demonstrating.
- 9) Describe various Natural Language representation methods.
- 10) Describe different techniques for removal of ambiguity.

Term Work Assignment List:

- 1) Implement bottom up parser for any given grammar.
- 2) Analysis of natural language using lexical analysis.
- 3) Case study of any parsing algorithm.
- 4) Study of clustering algorithm in NLP.
- 5) Case study: NLP in web mining or text mining.
- 6) Case study of Viterbi Algorithm.
- 7) Study of Python features used in NLP.
- 8) Study assignment of information retrieval techniques.
- 9) Installation of NLTK Toolkit.
- 10) Implement program in Python to calculate frequency distribution.

Text Books:

- 1) Allen, J. “Natural Language Understanding”, The Benajmins/Cummings Publishing Company, Inc. 1994. ISBN 0-8053-0334-0.
- 2) Daniel Jurafsky and James H Martin. “Speech and Language Processing”, 2e, Pearson Education,

2009.

Reference Books:

- 1) James A".*Natural language Understanding*"2e, Pearson Education, 1994
- 2) Bharati A., Sangal R., Chaitanya V. "*Natural language processing: a Paninian perspective*", PHI, 2000.
- 3) Siddiqui T., Tiwary U. S. "*Natural language processing and Information retrieval*", OUP, 2008
- 4) NLTK – *Natural Language Tool Kit* - <http://www.nltk.org/>
- 5) *Journals : Computational Linguistics, Natural Language Engineering, Machine Learning, Machine Translation, Artificial Intelligence.*

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Elective III :3) Network Modeling & Designing

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 02 Hrs/Week	End Semester Examination : 60 Marks	Theory : 02
Tutorial : 02 Hrs/Week	Internal Assessment : 40 Marks	Term Work : 02
	Oraland Term Work : 50 Marks	

Course Objectives:

- 1) Build an understanding of the fundamental concepts of networking.
- 2) Familiarize the student with the basic taxonomy and terminology of the networking Design & Modeling.
- 3) Introduce the student to advanced networking concepts preparing the student for entry Advanced courses in computer networking.
- 4) Allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.

Course Prerequisites:

Students should have knowledge of

The fundamental concepts of computer networking.

Course Outcome:

Students will be able to:

- 1) Understand basic network technology.
- 2) Understand and building the skills of network traffic.
- 3) Design a network topology.
- 4) Design a network algorithm.
- 5) Understand internals of main protocols such as SNMP v1,v2,v3, RMON1, RMON2.
- 6) Understand the organization of Network Administration.

UNIT-I Requirements Planning and Choosing Technology: (06 Hours)

User Requirements, documentation and planning, traffic sizing, tuning data size across the network, traffic characteristics, time and delay consideration

UNIT-II Traffic Engineering and Capacity Planning: (06 Hours)

Poisson Arrivals, Markov processes, Voice traffic modeling, Queuing system models, Markovian queuing system models M/D/1, M/M/1, Bernoulli process, Erlang formulas and M/M/c/e system priority queue system, LAN Traffic Modeling, Availability and Reliability.

UNIT-III Network Design: (06 Hours)

Designing the network topology and solutions-Top down Approach – Network Design Layers--Application Layer, Premises Architecture or Local Enterprise, Architecture Layer, Access Layer, Backbone Layer, Access Layer Design, Backbone Network Design.

UNIT-IV Network Design Problem definition: (06 Hours)

Network Design Problem definition : Multipoint line layout heuristics, CMST algorithm, ESAUWilliam's algorithm, Sharma's algorithm, Unified algorithm, Bin packing, Terminal assignments, Concentrator location.

UNIT-V Network Management Protocols: (06 Hours)

Network Management Protocols: SNMP v1,v2,v3, RMON1, RMON2, Netflow, Syslog. Network Management Standards, ASN.1, encoding structure, Macros, Functional Model.

UNIT-VI Network Administration: (06 Hours)

Functions and responsibilities, Network planning and implementation, Sub-netting, Bandwidth management, security issues, Tools for BW and security management, modifying network implementation.

Assignment List:

- 1) Explain in detail 'Requirement paling Traffic sizing of network'.
- 2) Discuss Various characteristics with time & delay consideration for better network design.
- 3) List and explain 'Markovian Queen system models'.
- 4) Discuss LAN traffic modeling with its average and Reliability.
- 5) Demonstrate Various design approach with respect to design layers for networking.
- 6) Describe backbone network design.
- 7) Summarize network design problem definition with various algorithm (CMST, Sharma's, Unified).
- 8) Justify network management protocol SNMPv1,v2,v3.
- 9) Draw and explain functions model of network management standard.
- 10) State various functions and responsibility of network administration.

Term Work Assignment List:

- 1) Study assignment: Network topology.
- 2) Simulate Markovian queuing system models.
- 3) Design LAN traffic model assuming suitable model.
- 4) Design network of your college considering layers present.
- 5) Implement CMST algorithm.
- 6) Implement Bin packing algorithm assuming suitable parameters.
- 7) Study assignment: Network management protocols.
- 8) Analyze traffic using traffic monitor analyzer.
- 9) Demonstrate tools used for network management.
- 10) Case study: Tools for Security Management.

Text Books:

- 1) Keshav S., "An Engineering Approach to Computer Networking," AddisonWesley.

Reference Books:

- 1) *Darren L. Spohn, "Data Network Design", Tata McGraw Hill Edition.*
- 2) *Mani Subramanian, "Network Management Principles and Practice", Pearson Education.*
- 3) *James D, "Network Analysis, Architecture, and Design", Morgan Kaufman.*
- 4) *Robert S Kahn, "Wide Area Network Design", Morgan Kaufman.*

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

Elective III: 4) Neural Network

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 2 Hrs/Week	End Semester Examination : 60 Marks	Theory : 02
Tutorial : 2 Hrs/Week	Internal Assessment : 40 Marks	Term Work : 02
	Oral and Term Work : 50 Marks	

Course Objectives:

- 1) To understand the basics concept of biological Neural Network.
- 2) To learn the basics concept of artificial Neural Network
- 3) To analyze applications of ANN
- 4) To study different pattern recognition application using ANN.
- 5) To use the practical approach of artificial neural networks in various technical, organizational and economic applications.
- 6) To learn basic learning algorithms: the delta learning rule, the back-propagation algorithm, self-organized learning, etc.

Course Prerequisites:

Students should have knowledge of

- 1) Algorithms and programming, data structures.
- 2) Probability theory, calculus etc.

Course Outcome:

Students will be able to:

- 1) Analyze the role of neural networks in engineering, artificial intelligence, and cognitive modelling.
- 2) Understand the differences between for supervised and unsupervised learning.
- 3) Designing of single and multi-layer feed-forward neural networks.
- 4) Understand the concept of generalization and function approximation.
- 5) Understand the concepts and techniques of neural networks through the study of the most important neural network models.
- 6) Analyze the sufficient theoretical background to be able to reason about the behavior of neural networks.
- 7) Develop an application of neural network, and to know what steps to take to improve performance.

UNIT-I Introduction and Basics of Artificial Neural Networks: (06 Hours)

Introduction to Neural Networks, Features of ANN, Structure of Biological Neural Network, Comparison of BNN and ANN, Characteristics of neural network, Artificial Neural Model: McCulloch – Pitts model, Perceptron, Adaline model, Learning process: Error Correction Learning, Memory Based Learning, Hebbian Learning, Competitive Learning, Supervised and Unsupervised Learning,, Topology of neural network architecture.

- UNIT-II Architectures of Neural Networks: (06 Hours)**
Architecture of Feedforward and Feedback network, Single layer ANN, Multilayer perceptron, Perceptron Learning Algorithm, Perceptron Coverage Theorem, Backpropagation Learning, input - hidden and output layer computation, Backpropagation algorithm, applications, Selection of tuning parameters in BPN, Limitation of Backpropagation Algorithm.
- UNIT-III Associative Memories, Activation & Synaptic Dynamics: (06 Hours)**
Basic Concepts, Linear Associator, Basic Concepts of Recurrent Autoassociative Memory: Retrieval Algorithm, Storage Algorithm, Performance Considerations, Performance Analysis of Recurrent Autoassociative Memory, Bidirectional Associative Memory: Memory Architecture, Association Encoding and Decoding, Stability Considerations, Memory Example and Performance Evaluation, Improved Coding of Memories, Multidirectional Associative Memory, Associative Memory of Spatio-temporal Patterns, Introduction To Activation, Activation Dynamics models, Basics of Synaptic Dynamics models, Stability and Convergence.
- UNIT-IV Basic functional units of ANN: (06 Hours)**
Basic feedforward, Basic feedback, and basic competitive learning neural network, Feedforward neural networks: Linear responsibility X-OR problem and solution, Analysis of pattern mapping networks summary of basic gradient search methods, Feedback neural networks Pattern storage networks, stochastic networks and simulated annealing, Boltzmann machine and Boltzmann learning.
- UNIT-V Competitive learning, Matching and Self-Organizing Networks: (06 Hours)**
Components of CL network pattern clustering and feature mapping network, Hamming Net and MAXNET, Unsupervised Learning of Clusters: Clustering and Similarity Measures, Winner-Take-All Learning, Recall Mode, Initialization of Weights, Separability Limitations, Counter propagation Network, Feature Mapping, Self-organizing Feature Maps, ART networks, Features of ART models, character recognition using ART network, Cluster Discovery Network (ART1).
- UNIT-VI Applications of ANN: (06 Hours)**
Linear Programming Modeling Network, Robot Control, Pattern association, Pattern classification and pattern mapping tasks, Pattern classification – Recognition of Olympic games symbols, Recognition of printed Characters, Recognition of handwritten characters,

Connectionist Expert Systems for Medical Diagnosis

NET Talk: to convert English text to speech. Recognition of consonant vowel (CV) segments, texture classification and segmentation

Assignment List:

- 1) Draw and Explain structure and working of Biological Neural Network
- 2) Write note on:
 - a) Mc Culloch – Pitts model
 - b) Adaline model
- 3) Explain when, where and why it is sensible to use the sigmoid (logistic) function as the activation function in a Back-Propagation network.
- 4) Describe how the basic Back-Propagation Learning Algorithm for Multi-Layer Perceptron (MLP) networks is related to gradient descent learning.
- 5) Explain the significance of each of the following theorems: (a) Cohen-Grossberg theorem (b) Cohen-Grossberg-Kosko theorem (c) Adaptive bidirectional associative memory theorem
- 6) Consider a stochastic unit with a bipolar I-1, 11 output function. The probability distribution for the unit is given by $P(s = 1 | x) = 1/(1 + \exp(-2 \lambda x))$ If the learning of the stochastic unit is based on gradient descent on the error between the desired and the average output, show that the resulting learning law is the same as the learning law obtained using delta learning for a deterministic unit with hyperbolic tangent as the output function.
- 7) How to perform the following tasks by a Boltzmann machine? (a) Pattern completion (b) Pattern association (c) Pattern recall from noisy input.
- 8) What is meant by full free energy and clamped free energy in a Boltzmann machine? How do you interpret the Boltzmann learning in terms of full free energy and clamped free energy?
- 9) Explain the Components of CL network pattern clustering and feature mapping network.
- 10) Explain the process of character recognition using ART network.
- 11) What is the significance of neural networks in the NETtalk application?
- 12) Explain how a constraint satisfaction model can be exploited for improving the recognition accuracy for. CV units.

Term Work Assignment List:

- 1) Consider the Neural Network of McCulloch-Pitts neurons shown in Figure. Each neuron (other than the input neuron N_1 and N_2) has a threshold of 2.
 - a) Define the purpose of neuron N_5 at time t in terms of the activations of the input neurons, N_1 and N_2 , at the appropriate time.
 - b) Show the activation of each neuron that results from the input signal of $N_1=1, N_2=0$ at $t=0$

- 2) What is Learning Process of Neural Network? Explain in Detail the types of Learning in NN.
- 3) Write and Explain Perceptron Learning algorithm and Perceptron Coverage Theorem.
- 4) Write a program implementing the error back-propagation training algorithm (EBPTA) for user-selectable I, J, and K values for a single hidden layer network. Learning constant η should be user-selectable; no momentum term is needed. The initial weights for the network should be selected at random. Provisions for specification of input pattern(s) and the desired response(s) should be made in order to initiate and carry out the training. Use bipolar continuous perceptrons
- 5) Assume that a linear associator has been designed using the crosscorrelation matrix for heteroassociative association of p orthonormal patterns. Subsequently, another orthonormal pattern $s^{(p+1)}$ associated with $f^{(p+1)}$ must be stored. An incremental change in the weight matrix needs to be performed using the cross-correlation concept. Prove that the association $s^{(p+1)} \rightarrow f^{(p+1)}$ results in no noise term present at the output
- 6) The weight matrix of the temporal associative memory is known as

$$W = \begin{bmatrix} -1 & 3 & -1 & -1 & -1 \\ -1 & -1 & -1 & -1 & 3 \\ -1 & -1 & 3 & -1 & -1 \\ -1 & 3 & -1 & -1 & -1 \\ 3 & -1 & -1 & 3 & 1 \end{bmatrix}$$

Knowing that a vector $s^{(1)} = [-1 \ 1 \ -1 \ -1 \ 1]^t$ belongs to a sequence, find the remaining vectors of the sequence. Having found the full sequence, verify that encoding it actually yields the weight matrix W as specified in the problem. Calculate the noise term vectors generated at each recall step and determine that they are suppressed during the thresholding operation.

- 7) Explain the Concept of Feed Forward and Feed back NN with suitable Example.
- 8) Consider the ART1 neural net with four F1 units and three F2 units. After some training, the weights are as follows:

Bottom-up weights b_{ij}

$$\begin{bmatrix} 0.67 & 0.0 & 0.2 \\ 0.0 & 0.0 & 0.2 \\ 0.0 & 0.0 & 0.2 \\ 0.0 & 0.67 & 0.2 \end{bmatrix}$$

Top-down weights t_{ji}

$$\begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 1 \\ 1 & 1 & 1 & 1 \end{bmatrix}$$

Determine the new weight matrices after the vector $(0,0,1,1)$ is presented if

- a) the vigilance parameter is 0.3.
- b) the vigilance parameter is 0.7.
- 9) The MAXNET with four output nodes, $p = 4$, receives the input vector

$$y^0 = [0.5 \ 0.6 \ 0.7 \ 0.8]^t$$

- (a) Find the ϵ value that would be required to suppress the output of the weakest node exactly to the zero value after the first cycle.
- (b) Find subsequent responses of the network, y^1 and y^2 , for the computed value of ϵ .

- 10) Develop a multilayer feedforward character classifier for five printed digits shown as 5 X 5 black-white pixel maps on Figure. Devise a suitable network architecture for a local representation classifier. Prepare the set of five input/output binary training vector pairs. Train the network for zero decision errors. Perform the recall of nondistorted digits by reusing the training input data. Perform the evaluation of the classifier by recalling digits distorted by the center pixel (pixel 13) of the 5 X 5 field being white rather than black. Evaluate the classifier by recalling digits distorted by reversal of input pixels 12, 13, and 14.

Figure. Pixel maps for digit recognition network in problem.

Syllabus for Unit Test:

Unit Test -1 Unit I ,II and III

Unit Test -2 Unit IV, V and VI

Seminar I

Teaching Scheme
Practical: 02Hrs/Week

Examination Scheme
Oral and Term Work: 50 Marks

Credit Allotted
Term Work: 04

Course Objectives:

- 1) To improvise presentation, technical documentation and communication skills.
- 2) To learn recent technologies and understand its functioning.

Course Prerequisites:

Students should have knowledge of

- 1) Source of good research articles.
- 2) Basic knowledge of mathematical modeling.

Course Outcome:

Students will be able to:

- 1) Learn documentation of the seminar report.
- 2) Learn to communicate effectively.
- 3) Analyze the recent technologies.
- 4) Present their idea and convey the concepts.
- 5) Use the research material in the project.
- 6) Understand to draft research paper.

Guidelines for the project:

- 1) Refer quality research article from IEEE, Springer, Elsevier and ACM
- 2) Select a domain of interest and use of it in developing the project.
- 3) Check the demand and future scope of that topic to utilize it for research or startup.
- 4) Check the feasibility of research considering technology, timeline, available resources.
- 5) Propose novel approach to deal with the future scope mentioned in the paper.
- 6) Check plagiarism and quality of contents.
- 7) Prepare a presentation and documentation of your seminar.

Exam

Parameter	Marks
Novelty	10
Understanding of Mathematical Model	05
Presentation Skills	05
Publication or Demonstration	05

Project Stage - I

Teaching Scheme
Practical : 02 Hrs/Week

Examination Scheme
Oral and Term Work : 50 Marks

Credit Allotted
Term Work : 04

Course Objectives:

- 1) To apply concepts mathematics and basic science while doing literature survey.
- 2) To plan the project by assigning tasks per user.
- 3) To coordinate the project with project partners.

Course Prerequisites:

Students should have knowledge of

- 1) Logic used in programming language.
- 2) Basic concepts of database.

Course Outcome:

Students will be able to:

- 1) Identify the problem in the existing system.
- 2) Learn various approaches to deal with problem.
- 3) Decide best solution for optimization to solve the problem.
- 4) Learn management of project.
- 5) Propose novel approach to solve a problem.
- 6) Apply skills that they have acquired.

Guidelines for the project:

- 1) Prepare plan by following standards of project planning.
- 2) Select domain by using quality research papers like IEEE, Springer, Elsevier, ACM.
- 3) Analyze every approach by doing literature survey (preferably transaction journal of current year).
- 4) Identify the problem in the existing system.
- 5) Design solution by using mathematical model and prove it hypothetically.
- 6) Check the feasibility for implementation.
- 7) Select tools and technologies suitable for the implementation.
- 8) Prepare presentation, report and research paper on literature survey (To be submitted in IEEE transaction for critical analysis and uniqueness in contents and approaches).

Examination

Parameter	Marks
Selection of problem for betterment of a life	2.5
Analysis of Literature survey	05
Finalizing problem statement	2.5
Design of project plan	05
Mathematical Modeling	05
Review of paper by publishing agency – like IEEE, Springer, ACM, Elsevier, EOS, Scopus Indexed journals only	05

Industrial Training

Examination Scheme
Oral and Term Work: 50 Marks

Credit Allotted
Term Work: 03

Course Objectives:

- 1) To apply industry standards and technologies.
- 2) To learn to be good team player to coordinate tasks assigned at industry during the training.

Course Prerequisites:

Students should have knowledge of

Knowledge of Programming, Database Management, Software Engineering.

Course Outcome:

Students will be able to:

- 1) Learn to implement knowledge gained.
- 2) Learn to be a good team player.
- 3) Understand of work culture at industry.
- 4) Design efficient tools and techniques.
- 5) Apply the techniques and tools learnt.
- 6) Bridge the gap between industry and institute.

Guidelines for the Industrial Training:

- 1) Submit acceptance letter issued from organization before undergoing for the training.
- 2) Undergo for industrial training for 45 days in industries preferably government organization and NASSCOM listed organizations.
- 3) Apply the techniques and tools learnt during the curriculum.
- 4) Understand the new technologies for accomplishing the tasks.
- 5) Prepare Presentation and Reports based on the work completed at industry.
- 6) Maintain Log book and prepare day to day activity chart and get it authorized by concerned person from industry.
- 7) Work sincerely to grab opportunities for sponsored projects as well as job.

Exam

Parameter	Marks
Presentation	10
Log Book	10
Demonstration of skills acquired	05

Web Engineering

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 2Hrs/Week	End Semester Examination : 60 Marks	Theory: 03
Tutorial : 1Hr/Week	Internal Assessment : 40 Marks	Term Work: 01
Practical : 2Hrs/Week	Practical and Term Work : 50 Marks	

Course Objectives:

- 1) Learn web application architectures.
- 2) Learn to model web applications.
- 3) Understand testing techniques for web applications.

Course Prerequisites:

Students should have knowledge of

- 1) Basic concepts of Software engineering.
- 2) Basic concepts of HTML, XML, CSS.

Course Outcome:

Students will be able to:

- 1) Understand categories and characteristics of web applications.
- 2) Understand client and server side technologies.
- 3) Understand Web Application Architectures.
- 4) Design model for Web Applications.
- 5) Design various Web Applications.
- 6) Test various Web Applications.

UNIT-I Introduction to web engineering: (06 Hours)

Motivation, Evolution and need for web engineering, Categories of web applications, Characteristics of web applications: Product related, Usage related, Development related.

Requirements Engineering

Introduction, Fundamentals, Requirements engineering activities, Requirements engineering specifics in web engineering, Adapting requirements engineering methods to web application development, Principles for requirements engineering of web applications, Requirement types, Tools.

UNIT-II Technologies for Web Applications: (06 Hours)

Client Side Technologies:HTML, HTML basic concepts, Static and Dynamic HTML, DHTML, XML, XSL,JavaScript.Server Side Technologies:Servlet, URI handlers, Middlewares, Web services.

UNIT-III Web Application Architectures: (06 Hours)

Introduction, Specifics of web application architecture, Layered

architectures(2-layer,N-layer),Database centric architectures, Data aspect architectures, Architectures for web document management, Components of generic web application architecture.

UNIT-IV Modeling Web Applications: (06 Hours)

Introduction, Modeling specifics in web applications, Modeling requirements, Hypertext modeling, Content modeling, Access modeling concepts, Customization modeling, Presentation modeling

UNIT-V Web Application Design: (06 Hours)

Web design from an evolutionary perspective, Software design, Information design, Problems in integrated web design, Presentation design, Device independent development, Interaction design, Navigation design, Designing link internals, Functional design.

UNIT-VI Testing Web Applications: (06 Hours)

Objectives of testing, Levels of testing, Test approaches, Test schemes, Test methods and techniques, Test automation, Test driven development, Test tools, Advantages and Disadvantages of automated test.

Web Project Management:

Understanding scope, defining framework activities, Web team building, Risk management, Schedule development, Quality management, Change management, Project tracking

Assignment List:

- 1) Explain evolution and need of web engineering
- 2) Describe requirement engineering methods for web application development
- 3) Explain in detail client side technologies for web applications
- 4) Explain in detail server side technologies for web applications
- 5) Describe various web application architectures
- 6) Explain in detail components of generic web application architecture
- 7) Explain various modeling techniques of web applications.
- 8) Describe various designing methods of web applications
- 9) Study of latest testing techniques of web applications
- 10) A case study on designing and testing websites

Term Work Assignment List:

- 1) A case study on any static websites like wikipedia, college websites, etc
- 2) A case study on any dynamic websites like E-commerce, social networking sites,etc
- 3) Design a client-side form validation webpage using javascript
- 4) Create a web application for student database

- 5) Design and develop IT department website
- 6) Design and develop E-commerce website
- 7) A case study on methodology, techniques and tools used in designing websites
- 8) A case study on latest testing techniques of web applications
- 9) Create a mini project using html, css and javascript
- 10) Test mini project using any testing methodology

Text Books:

- 1) Roger S.Pressman,DavidLowe,“Web Engineering”,TataMcGraw Hill Publication,2007
- 2) GertiKappel, Birgit Proll, “Web Engineering”, John Wiley and Sons Ltd, 2006
- 3) GertiKappel, Birgit Proll, Siegried Reich, Werner Retschitzegger,“Web Engineering: The Discipline of Systematic Development of Web Applications”,Wiley,2006

Reference Books:

- 2) *Moller, “An Introduction to XML and Web Technologies” , Pearson Education New Delhi, 2009*
- 3) *“Web Engineering: Principles and Techniques”,Woojong Suh,Idea Group Inc.,2005*
- 4) *“Web Engineering:Managing Diversity and complexity of web application development”,Springer,2001*

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

Component Engineering

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 02 Hrs/Week	End Semester Examination : 60 Marks	Theory : 03
Practical : 02 Hrs/Week	Internal Assessment : 40 Marks	Term Work : 01
Tutorial : 01 Hr/Week	Oral and Term Work : 50 Marks	

Course Objectives:

- 1) To learn evolution of distributed computing.
- 2) To provide students with fundamental knowledge needed to design and implement object-oriented client-server applications.
- 3) To understand the object models
- 4) To design a framework to bridge the gap. In this framework, inter-component communication is separated from the components and handled by ports and links which deal with infrastructure level middleware and protocols, including CORBA

Course Prerequisites:

Students should have knowledge of

- 1) Object Oriented Programming.
- 2) Distributed System.
- 3) Java Programming and Applications.

Course Outcome:

Students will be able to:

- 1) Learn objectifying enterprise system.
- 2) Understand the component architecture.
- 3) Use CORBA Technology and the Java™ Platform Standard Edition.
- 4) Learn the issues regarding the designing of distributed objects.
- 5) Understand Object Reuse.
- 6) Analyze Java component technologies.

UNIT-I Object Technology: (06 Hours)

A typical OO system, Object Oriented concepts, Advantages of the client model, integrating object technology with Enterprise systems: Objectifying individual Modules, Objectifying Conventional Architecture model, Using OO language in an OO architecture Model, Objectifying enterprise system.

UNIT-II Component Technology: (06 Hours)

Component concepts, characteristics Of components, component and Objects, Modules, callbacks, fundamental properties of Component technology ,component Architecture, Interfaces – specification, Component Models objects, components and middleware ,Components and Object-Oriented Implementations, Bridging the Gap: Framework and Composition

- UNIT-III CORBA Component Technologies:** (06 Hours)
Introduction to Java and CORBA, Object Request Broker, System object model, CORBA's Objective and design criteria CORBA services-overview, information management services Model driven architecture
- UNIT-IV Distributed Object Technology:** (06 Hours)
Evolution Of Distributed Systems, Characteristics of Distributed Systems, Study of Distributed Objects, Characteristics of distributed Objects, Methods in distribution, Issues in designing of distributed objects, Need of multitier architecture, Evolution of multitier Architecture
- UNIT-V Interfaces in COM and DCOM:** (06 Hours)
Introduction to COM, OLE/ActiveX, DCOM and .NET, Introduction to interfaces, Interface definition Language, (IDL), COM – interface and versioning and object reuse
COM services: Dispatch interface, connectable objects
- UNIT-VI Java Based Component Models:** (06 Hours)
Introduction to Java Component Technologies EJB and Java Bean, Threads Introduction, Threads-state transition diagram, example
Enterprise Java Beans: EJB architecture, Enterprise JavaBeans and JavaBeans.
Types of Beans : Session beans- Stateful and stateless session beans, Entity beans and Message driven beans
Distributed Object Model : Introduction RMI, RMI Architecture ,RMI Service.

Assignments List:

- 1) Implement polynomial as an object in C++.
- 2) Create an RMI Application.
- 3) Explain CORBA component model.
- 4) Explain information management services.
- 5) Sketch simple components and define their interface.
- 6) Explain of evolution of multitier Architecture.
- 7) Discuss interfaces in COM and DCOM.
- 8) Write simple banking application program using CORBA IDL.
- 9) Write java component technologies EJB and Java Bean.
- 10) Create a Java Bean connecting to Google API.

Term Work Assignments List:

- 1) Describe Integrating object technology with Enterprise systems.
- 2) Explain the software architecture in object oriented programming.
- 3) Enlist and describe characteristics of components.

- 4) Explain object request broker.
- 5) Elaborate Evolution of Distributed Systems.
- 6) What is the Need of multitier architecture? Elaborate evolution of multitier Architecture.
- 7) Describe Interfaces in COM and DCOM.
- 8) Describe Component Technologies EJB and Java Bean.
- 9) Describe Enterprise Java Beans.
- 10) Describe RMI Architecture and RMI Service.

Text Books:

- 1) G. Sudha Sadasivam, "Component Based Technology", Wiley India Edition
- 2) Paul Allen, Stuart Frost, "Component-Based Development for Enterprise Systems: Applying the SELECT Enterprise", Cambridge University Press
- 3) Clemens Szyperski, "Component Software: Beyond Object-Oriented Programming", Pearson Education publishers, 2003

Reference Books:

- 1) Ed Roman, "Mastering Enterprise Java Beans", John Wiley & Sons Inc., 1999.
- 2) Mowbray, "Inside CORBA", Pearson Education, 2003.
- 3) Freeze, "Visual Basic Development Guide for COM & COM+", BPB Publication, 2001.
- 4) Hortsamann, Cornell, "CORE JAVA Vol-II" Sun Press, 2002.

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

Mobile Computing

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 02 Hrs/Week	End Semester Examination : 60 Marks	Theory : 03
Tutorial : 01 Hr/Week	Internal Assessment : 40 Marks	

Course Objectives:

- 1) To study wireless network for clear understanding of Mobile Network.
- 2) To understand important terms of data communication required for mobile computing.
- 3) To apply knowledge of mobile computing for understanding of applications on operating systems used for mobile.

Course Prerequisites:

Students should have knowledge of

- 1) Operating system.
- 2) Network communication.

Course Outcome:

Students will be able to:

- 1) Understand mobile network.
- 2) Learn mobile communication technologies.
- 3) Understand GSM.
- 4) Analyze OS used in Mobile.
- 5) Design application on Android platform.
- 6) Design application on ios platform.

UNIT-I Introduction to Mobile Computing: (06 Hours)

Introduction to wireless Network, Concept of Mobile Computing, principles of Mobile Computing, usage of MAC in Mobile computing, types of Sharing of wireless channels: FDMA, TDMA, CDMA. MAC layer, issues in wireless communication.

UNIT-II Mobile Network: (06 Hours)

Introduction to IP, static and dynamic IP, usage of TCP/IP for communication, IPV6, acknowledgment, wireless network: allocation of channel, interferences, concept of handoffs and management of location, LAN, PAN, Bluetooth, ZigBee

UNIT-III Architecture of GSM: (06 Hours)

GSM Architectures, Radio Interfaces, PLMN Interface, Protocols Localization, Calling, SMS service, Modulation, Multiplexing, controlling the medium access, spread spectrum, methods of coding, CDMA, IMT 2000, WCDMA and CDMA 2000, 4G Networks, introduction to 5G, concept of GPRS.

UNIT-IV Mobile Data communication: (06 Hours)

Communication Asymmetry, classification of data delivery mechanism, data dissemination Broadcast models, selective tuning and indexing techniques, synchronization, synchronization software for mobile devices, synchronization protocols.

UNIT-V Mobile Operating System: (06 Hours)

Functions of operating system in mobile, Concept of kernel, interfacing between O.S. used in mobile and hardware, Mobile Computing Environment, protocols used, security in mobile operating system.

UNIT-VI Mobile Application Development: (06 Hours)

Android App development, Android SDK, publishing play store, ios app development, Windows phone app development, publicizing and monetization of App.

Assignment List:

- 1) Draw and explain wireless architecture.
- 2) Explain mobile communication in detail.
- 3) Explain different layers in mobile network.
- 4) Explain synchronization protocol.
- 5) Explain MANET in detail.
- 6) Explain characteristics of mobile OS.
- 7) Write a complete process of GSM tracking of a mobile.
- 8) Case study on mobile agents.
- 9) Implement login system using android sdk.
- 10) Implement login system using ios.

Text Books:

- 1) Jochen Schiller, "Mobile communications", Addison wisely, Pearson Education
- 2) Dr. Sunil kumar S. Manavi, Mahabaleshwar S. Kakkasageri, Wireless and Mobile Networks, concepts and protocols, Wiley, India.

Reference Books:

- 1) *T. Rappaport, "Wireless Communication: Principles and Practice", Pearson Education.*
- 2) *Reza B'Far (Ed), "Mobile Computing Principles", Cambridge University Press.*
- 3) *Andrew Tanenbaum, Modern Operating System, 3rd/e, Pearson Education International, ISBN 0-13-1BMST-L.*
- 4) *Digital Content: iOS Technology Overview: IOSTechOverview.pdf, Apple Inc. Copyright 2014.*

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

Distributed Computing

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 2 Hrs/Week	End Semester Examination : 60 Marks	Theory :03
Tutorial : 1 Hr/Week	Internal Assessment : 40 Marks	

Course Objectives:

The course is aimed to provide an understanding of key concepts underlying the function of distributed computing systems along with issues in its design and implementation.

Course Prerequisites:

Students should have knowledge of

1) Fundamentals of Data Structures, Operating Systems, Networking concepts.

Course Outcome:

Students will be able to:

- 1) Understand the fundamentals of distributed computing environment.
- 2) Implement inter process communication.
- 3) Learn of process and threads and implement threads.
- 4) Understand the concepts of clock synchronization and distributed transaction.
- 5) Learn distributed file system and distributed shared memory.
- 6) Understand the concepts of distributed system security.

UNIT-I Fundamentals: (06 Hours)

Definition and evolution of Distributed Computing System, Models and Types of Distributed Computing Systems, Issues and Goals in designing Distributed System, Distributed Computing Environment, Peer to peer systems and its middleware, Routing overlays, Mobile and Ubiquitous computing.

UNIT-II Communication: (06 Hours)

Inter process communication (IPC): Introduction and need
Message Passing system: Desirable features of good message passing system, Issues in IPC, Group and multicast communication,
Remote Procedure Calls (RPC): The RPC Model, Implementation of RPC mechanisms (Stubs and marshalling)
Java RMI: Architecture, Implementation (Stubs and Skeletons)
Web services and SOAP.

UNIT-III Processes and Threads: (06 Hours)

Process Migration: Introduction, Features, Mechanisms, Advantages, use in heterogeneous systems.
Threads: Concept, Motivation, Models, Issues, Synchronization, Scheduling, Implementing.

UNIT-IV Synchronization and Distributed Transactions: (06 Hours)

Clock synchronization: Drifting, Issues, Algorithms, Event Ordering
Deadlock: Conditions, Modeling, Handling, Avoidance, Prevention, Detection, Election Algorithms
Distributed Transaction: Introduction, Locks, Optimistic Concurrency Control, Timestamp Ordering

UNIT-V Distributed File system and Distributed Shared memory: (06 Hours)

Distributed Files Systems: Advantages, Features, Models, Caching, Replication, Fault Tolerance
Distributed Shared Memory: Architecture, Design and Implementation Issues, Advantages, Granularity, Structure of Shared Space, Consistency Models, Replacement Strategy, Thrashing

UNIT-VI Distributed System Security: (06 Hours)

Distributed System Security: Goals, Design Principles, Attacks, Confinement Problem, Cryptography, Authentication, Access control, Digital Signatures.

Assignment List:

- 1) Study the details of IPC mechanism used by Sun RPC for DCE
- 2) Implement Java RMI client and server programs using stub and skeleton.
- 3) Elaborate the life cycle of process and threads.
- 4) Implement Threads in java and explain each step of its life cycle.
- 5) Compare the various algorithms available for clock synchronization.
- 6) Study any one journal paper which has proposed/ implemented any new mechanism for concurrency control.
- 7) Case study of Open Software Foundation's distributed file service.
- 8) Study of any one journal paper which has implemented/ proposed any one mechanism related to any issue of distributed shared memory.
- 9) Consider any one security mechanism you know and discuss how it achieves the goals and design principles of distributed system security.
- 10) Study any real-time security attack and propose alternate strategies that could have been used to counteract those.

Text Books:

- 1) Pradeep K. Sinha, "Distributed Operating Systems: Concepts and Design", Wiley-IEEE Press.
- 2) Andrew S. Tanenbaum, Maarten van Steen, "Distributed Systems: Principles and Paradigms", Prentice Hall India Learning Private Limited, Second edition
- 3) George Coulouris, Jean Dollimore, Tim Kindberg, Gordon Blair, "Distributed Systems: Concepts and Design", Pearson Education India; 5th edition

Reference Books:

- 1) *Ajay D. Kshemkalyani, Mukesh Singhal, “Distributed Computing: Principles, Algorithms, and Systems”, Cambridge University Press- South Asian edition*
- 2) *Abraham Silberschatz, Peter B. Galvin, Greg Gagne , “Operating System Concepts”, Wiley, 8th Edition*
- 3) *Andrew S. Tanenbaum, “Distributed Operating Systems”, Pearson, 2nd edition*
- 4) *Cay Horstmann and Gary Cornell, Core Java, Volume II - Advanced Features, Prentice Hall, 7 edition.*

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III
Unit Test -2 Unit IV, V and VI

Elective-IV : 1) Advance TCP/IP

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 2 Hrs/ Week	End Semester Examination : 60 Marks	Theory : 02
	Internal Assessment : 40 Marks	

Course Objectives:

The course is headed for afford theoretical and practical understanding regarding the TCP/IP networking. Concepts similar to multiplexing, switching, addressing, naming, quality of service, routing, flow and congestion control are explored all the way through their implementation in TCP/IP protocol suite.

Course Prerequisites:

Students should have knowledge of

- 1) A preliminary TCP/IP course or else has equivalent knowledge.
- 2) TCP/IP and it's configuration in addition to a operational knowledge of LAN plus WAN networking.
- 3) An admiration of the TCP/IP suit of protocols in addition to protocol stacks.

Course Outcome:

Students will be able to:

- 1) Enumerate layers of the OSI model as well as TCP/IP.
- 2) Describe the functioning of Internet Protocol.
- 3) Demonstration IP Address of allocation methods.
- 4) Understand and building the skills of routing mechanisms and sub netting.
- 5) Explain the Transmission Control Protocol concepts.
- 6) Understand the basic structure of IP Version 6.

UNIT-I Introduction: (06 Hours)
History of TCP/IP :The Internet, TCP/IP Architecture, The TCP/IP Suite. Standards Bodies – ISO, Open System Interconnection. ISO- OSI 7 - layer model, Layered Protocols Model, TCP/IPwithProtocol Encapsulation.

UNIT-II Internet Protocol (IP): (06 Hours)
What is Internet Protocol, IPv4 Address Classes, Classful IPv4 Address Ranges, Internet Protocol Addressing, Multicast Addresses, IPv4 Reserved Addresses.IPv4 Address Assignment, IPv4 Private Network Addressing, Internet Protocol Routing, The IPv4 Header, Protocol Numbers, IP Fragmentation.
IP Precedence (Type Of Service), Differentiated Services – DiffServ, Per Hop Behavior (PHB), Commonly Used DSCP's.

UNIT-III Address Resolution and Address Allocation (06 Hours)
Address Allocation :
Dynamic IP Address Allocation – RARP, BOOTP, BOOTP Message

format, Operations. Dynamic IP Address Allocation – DHCP, The DHCP Server, DHCP Address Acquisition States, DHCP Operations, DHCP Relay, Windows DHCP Commands.

Address Resolution:

Address Resolution Protocol (ARP), Default Gateway, Connecting Hosts – Similar Network, Connecting Hosts – Dissimilar Network, ARP Message Format, Network Protocol Analyzers.

UNIT-IV Internet Protocol Routing: (06 Hours)

Introduction to Routers and Routing, Structure of a Basic Router, Types of Routing -Static Routing, Dynamic Routing, Distance-Vector, Link State, Hop Count, Metrics and Costs. Routing Protocols, Protocols of Dynamic Routing, Protocol Comparison. The Default Route.

UNIT-V Host to Host Communication and IP Address Translation: (06 Hours)

Transmission Control Protocol (TCP) Concepts, Simple Reliability, TCP Segment, Port Numbers (TCP), Connection Set-up (TCP), Connection Closure (TCP), Protocol of Sliding Windows, User Datagram Protocol (UDP), UDP Segment, UDP vs. TCP.

IP Address Translation :

Network Address Translation, Configuring NAT, Port Address Translation with NAT, Dynamic NAT with Port Address Translation.

UNIT-VI IP Version 6: (06 Hours)

Introduction: What is IPv6? , Comparison of IPv4 VS IPv6, IPv6 Header. Address Representation, Address Types of IPv6, Unicast IPv6, Anycast IPv6, IPv6 extension headers. DNS enhancements for IPv6.

Assignment List:

- 1) Define following 1) Talk 2) Echo 3) Ping Network Commands.
- 2) Describe (RCE) Remote Command Execution.
- 3) Discuss simulating of ARP /RARP.
- 4) Relate how HTTP used for web page upload as well as Download.
- 5) Define TCP module Implementation. (TCP services).
- 6) Define how File Transfer within client-server architecture by subsequent methods.
(a) TCP/IP (b) USING RS232C.
- 7) Illustrate Remote Method Invocation (RMI).
- 8) Explain IPv6 with header format.
- 9) Outline Case study regarding the different routing algorithms to choose the network path by its best possible and economical during data transfer. • Shortest path routing • Flooding • Distance vector.
- 10) Write Case study of building a firewall for BVDUCOEP campus network.

Text Books:

- 1) Douglas E.Comer, “Internetworking with TCP/IP–Principles, Protocols & Architecture”, Pearson education, 4th Edition, 2000.
- 2) Behrouz A. Forouzan, TCP/IP Protocol Suite, Tata McGraw Hill, 4th Edition 2010.

Reference Books:

- 1) *Douglas E.Comer, Internetworking with TCP/IP, 5th Edition Pearson Education Asia 2005.*
- 2) *Behrouz Forouzan, “TCP/IP protocol suite”,Tata Mc Grawhill, Fourth Edition,2012.*
- 3) *Richard Stevens, — TCP/IP Illustrated, Vol 1,2,3 Pearson education India, 1st edition,2001.*
- 4) *Behrouz A. Forouzan, “Data communication and Networking”, Tata McGraw-Hill, 2004.*

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

Elective IV: 2) Genetic Algorithm

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 2 Hrs/Week	End Semester Examination : 60 Marks	Theory : 02
	Internal Assessment : 40 Marks	

Course Objectives:

- 1) Learn basics of Evolutionary Computation and Genetic Algorithm.
- 2) Understand terminologies and operators of GA.
- 3) Understand Advanced operators and techniques in Genetic Algorithm.
- 4) classify of GA Algorithms.
- 5) Implement Genetic Programming.
- 6) Understand practical approach of Genetic Algorithm Optimization Problems.

Course Prerequisites:

Students should have knowledge of

- 1) A programming language.
- 2) Linear algebra, probability and calculus.

Course Outcome:

Students will be able to:

- 1) Analyze the concept of evolutionary computation.
- 2) Understand the basic concepts of genetic algorithms.
- 3) Understand the result of applying various genetic operators.
- 4) Develop GA problem using different GA operators.
- 5) Understand about the way GA is used and the domain of application.
- 6) Develop a different application using GA Optimization problem.

UNIT-I Evolutionary Computation and Introduction to Genetic Algorithms: (06 Hours)

Introduction to Evolutionary Computation, Historical Development of EC, Features of Evolutionary Computation, Applications of Evolutionary Computation, Introduction to Genetic Algorithm: Biological Background, What is Genetic Algorithm? Conventional Optimization and Search, A Simple Genetic Algorithm, Comparison of Genetic Algorithm with Other Optimization Techniques, Advantages and Limitations of Genetic Algorithm, Applications of Genetic Algorithm. Theoretical Analysis of Evolutionary Algorithms: Schema theorems, convergence of the algorithms, computational time complexity of the algorithms, no free lunch theorem, Evolutionary applications to medicine and public health, Applications of evolutionary biology for veterinarians.

UNIT-II Terminologies and Operators of GA: (06 Hours)

Introduction, Key Elements, Genes, Populations, Data, Search Strategies, Encoding, Breeding, Search Termination (Convergence Criteria), Why do Genetic Algorithms Work?, Solution Evaluation, Search Refinement, Constraints, Fitness Scaling, Example Problems: Maximizing a function, Travelling Salesman Problem.

UNIT-III Advanced Operators and Techniques in Genetic Algorithm: (06 Hours)

Introduction, Diploidy, Dominance and Abeyance, Multiploid, Inversion and Reordering, Niche and Speciation, Few Micro-operator, Non-binary Representation, Multi-Objective Optimization, Combinatorial Optimizations, Knowledge Based Techniques.

UNIT-IV Classification of Genetic Algorithm: (06 Hours)

Introduction, Simple Genetic Algorithm (SGA), Parallel and Distributed Genetic Algorithm (PGA and DGA), Hybrid Genetic Algorithm (HGA), Adaptive Genetic Algorithm (AGA), Fast Messy Genetic Algorithm (Fm GA), Independent Sampling Genetic Algorithm (ISGA).

UNIT-V Genetic Programming: (06 Hours)

Introduction, Comparison of GP with Other Approaches, Primitives of Genetic Programming, Attributes in Genetic Programming, Steps of Genetic Programming, Characteristics of Genetic Programming, Application of Genetic Programming, Haploid Genetic Programming with Dominance.

UNIT-VI Genetic Algorithm Optimization Problems: (06 Hours)

Introduction, Fuzzy Optimization Problems: Fuzzy Multi objective Optimization, Interactive Fuzzy Optimization Method, Genetic Fuzzy Systems. Multi objective Reliability Design: Network Reliability Design, Bicriteria Reliability Design. Combinational Optimization problem: Linear Integral Model, Applications of Combinatorial Optimization Methods. Scheduling Problems: Genetic Algorithm for Job Shop Scheduling Problems (JSSP). Transportation Problems: Genetic Algorithm in Solving Transportation, Location-Allocation Problems with Euclidean Distances. Network Design and Routing Problems: Planning of Passive Optical Networks, Planning of Packet Switched Networks, Optimal Topological Design of All Terminal Networks, Learning with Genetic Fuzzy Systems: An Application, Pittsburgh Approach

Assignment List:

- 1) Define Evolutionary computation? State three fundamental features of biological evolutionary computation.
- 2) Explain difference between Genetic algorithm and Genetic Programming. Describe how evolutionary computation is applied to engineering applications.
- 3) Give a suitable example for the Genetic Algorithm principle “Survival of the fittest”.
- 4) What is Search space? Describe various conventional optimization and search techniques.
- 5) How genetic algorithms work? Explain the building block hypothesis and schema theorem.
- 6) Find the safe light combinations for 8 traffic lights, four of which are vehicle lights having four possible colors (red, yellow/red, yellow and green) and the other four pedestrian lights having only two colors (red and green).
- 7) Describe the various knowledge-based techniques that improve the efficiency of simple genetic algorithm.
- 8) Implement Travelling Salesman Problem using advanced operators and techniques.
- 9) Discuss the operations involved in the Fast messy Genetic Algorithm.
- 10) Build a C program to implement simple genetic algorithm for a multi objective optimization problem.
- 11) Discuss the crossover and mutation operation of GP. Explain with suitable examples, the characteristics of GP.
- 12) Write a computer program to implement GP for a function optimization problem.

Text Books:

- 1) Mitchell Melanie, “An Introduction to Genetic Algorithms”, MIT publications.
- 2) S.Rajasekaran, G.A.Vijayalakshmi Pai, “Neural Networks, Fuzzy Logic and Genetic Algorithms”, PHI.

Reference Books:

- 1) *S.N.Sivanandam, S.N.Deepa, “Introduction to Genetic Algorithms”, Springer Publications.*
- 2) *David A, “An Introduction to Genetic Algorithms for Scientists and Engineers”, World Scientific Publishing.*
- 3) *David E. Gold Berg, “Genetic Algorithms in Search, Optimization & Machine Learning”, Pearson Education.*
- 4) *L. D. Davis, Evolutionary algorithms, Springer-Verlag, 1999.*
- 5) *K. Deb, Multi-Objective Optimization Using Evolutionary Algorithms, Wiley and Sons, 2009.*

Syllabus for Unit Test:**Unit Test -1 Unit I, II and III****Unit Test -2 Unit IV, V and VI**

Elective-IV :3) Network Security and Cryptography

Teaching Scheme	Examination Scheme	Credit Allotted
Theory: 02 Hrs/Week	End Semester Examination : 60 Marks	Theory: 02
	Internal Assessment : 40 Marks	

Course Objectives:

- 1) To know the main beliefs of encryption algorithms, public key cryptography.
- 2) To Depth knowledge regarding authentication.
- 3) To understand the application level security mechanisms.
- 4) To be familiar with the network security tools in addition to applications.

Course Prerequisites:

Students should have knowledge of

- 1) Computer Networks & Security associated issues.
- 2) Some understanding of linear algebra as well as statistics.

Course Outcome:

Students will be able to:

- 1) Recognize the methods of conventional encryption.
- 2) Understand the concepts of number theory and public key encryption.
- 3) Learn Hash functions and authentication.
- 4) Understand stream cipher models and various block cipher.
- 5) Learn the system level security used.
- 6) Distinguish the network security tools along with applications.

UNIT-I Introduction to Mathematical Foundation: (06 Hours)

Introduction to Security trends, Attacks along with services, Classical Crypto systems, Types of ciphers – LFSR sequences. Overview on Modern Cryptography. Finite Fields and Number Theory: Groups, Rings, Fields-Modular arithmetic-Euclids algorithm-Finite fields- Polynomial Arithmetic – Prime numbers-Fermats and Eulers theorem-Testing for primality. The Chinese remainder theorem- Discrete logarithms.

UNIT-II Network Security Model: (06 Hours)

The OSI security architecture, Network security Model, Model for CNSS Security, Access and Information Security, Approaches toward Information Security Implementation, The Security Systems Development Life Cycle. Model for Symmetric cipher, techniques of Substitution, Techniques of Transposition, Rotor machines, Steganography, Simplified DES, Principles of Block cipher.

UNIT-III Public Key Cryptography&Block Ciphers: (06 Hours)

Data Encryption Standard (DES) – Principals of Block cipher, Modes of operation for Block cipher. Advanced Encryption Standard (AES), Triple DES, Algorithm for Blowfish-RC5.
Public key cryptography: Public key cryptosystems Principle's, The RSA algorithm, Key management, Diffie Hellman Key exchange, Elliptic curve cryptography, Elliptic curve arithmetic,
Other attacks on RSA and Semantic Security of RSA. Primarily test, Cayley Purser algorithm, Factoring Technique, Probabilistic public key encryption.

UNIT-IV Hash Functions and Authentication: (06 Hours)

Requirements of Authentication, Functions of Authentication. Message Authentication Codes (MAC) - Hash Functions, Security of hash function and MAC, MD5, SHA, HMAC, CMAC, RIPEMD.
Digital signature: Protocols for Authentication, Digital Signature Standard (DSA), Digital signatures -RSA, SecureID, ElGamal, DSA
Quantum Cryptography-Okamoto to Uchiyama cryptosystem.

UNIT-V System Security and Security Practice: (06 Hours)

Introduction to Applications for Authentication, Kerberos – X.509 Authentication services, Internet Firewalls for Trusted System: Roles of Firewalls, Terminology related to Firewall. Types of Firewalls, Secure Electronic Transaction (SET) for E-Commerce Transactions.
Intruder: Intrusion detection system, Virus furthermore related threats, Countermeasures, Principle's of Firewalls design. Trusted systems – Realistic implementation of cryptography along with security.

UNIT-VI Network Security: (06 Hours)

Introduction to Security Services intended for E-mail-attacks possible through E-mail, Establishing privacy of keys, source authentication, Integrity of Message -Non-Repudiation-Pretty Good Privacy (PGP), S/MIME.
Internet Protocol (IP) Security: Abstract of IPSec, IPv4 and IPv6, Authentication Header, Encapsulation Security Payload (ESP), Internet Key Exchange (Phases of IKE, ISAKMP/IKE Encoding).
Web Security: SSL/TLS Essential Protocol-computing the keys, authentication of client, PKI as deployed by SSL Attacks fixed in v3.

Assignment List:

- 1) Explain Port Scanning via virtual network environment accessible through a VPN connection.
- 2) Extend Network Intrusion Detection via virtual network environment accessible throughout a VPN connection.

- 4) Describe Public Key Security Experimenting with RSA, Encryption as well as Decryption.
- 5) Explain Host - Based Intrusion Detection with virtual network environment accessible through a VPN connection.
- 6) Summarize Man-in-the-Middle Attacks with example.
- 7) Define Remote buffer overflow attack.
- 8) Explain Logic-based Authentication and Authorization.
- 9) State Android security auditing with Genymotion virtual machine and Burp Suite proxy.
- 10) Illustrate Capturing and monitoring android network traffic.

Text Books:

- 1) Atul Kahate, "Cryptography and Network Security", Tata McGraw-Hill, 2003.
- 2) William Stallings, Cryptography and Network Security, 6th Edition, Pearson Education, March 2013.
- 3) Wade Trappe, Lawrence C Washington, " Introduction to Cryptography with coding theory", 2nd ed, Pearson, 2007.

Reference Books:

- 1) *Charlie Kaufman, Radia Perlman and Mike Speciner, "Network Security", Prentice Hall of India, 2002.*
- 2) *Behrouz A. Ferouzan, "Cryptography & Network Security", Tata Mc Graw Hill, 2007.*
- 3) *Charlie Kaufman and Radia Perlman, Mike Speciner, "Network Security, Second Edition, Private Communication in Public World", PHI 2002.*
- 4) *Bruce Schneier and Neils Ferguson, "Practical Cryptography", First Edition, Wiley Dreamtech India Pvt Ltd, 2003.*
- 5) *Man, Young Rhee, "Internet Security: Cryptographic Principles", "Algorithms and Protocols", Wiley Publications, 2003.*

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

Elective: 4) Semantic Web Mining

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 02 Hrs/Week	End Semester Examination : 60 Marks	Theory: 02
	Internal Assessment : 40 Marks	

Course Objectives:

- 1) Understand a detailed overview of the data mining process and techniques, specifically those that are relevant to Web mining.
- 2) Understand the basics of Information retrieval and Web search with special emphasis on web crawling.
- 3) Apply the use of machine learning approaches for Web Content Mining.
- 4) Understand the role of hyper links in web structure mining.
- 5) Learn the various aspects of web usage mining.

Course Prerequisites:

Students should have knowledge of

- 1) Concepts of data mining.
- 2) Concepts of Web Technology/Web Engineering.

Course Outcome:

Students will be able to:

- 1) Build a sample search engine using available open source tools.
- 2) Identify the different components of a web page that can be used for mining.
- 3) Apply machine learning concepts to web content mining.
- 4) Implement Page Ranking algorithm and modify the algorithm for mining information.
- 5) Design a system to harvest information available on the web to build recommender systems.
- 6) Analyze social media data using appropriate data/web mining techniques and modify an existing search engine to make it personalized.

UNIT-I Introduction: (06 Hours)

Introduction – Web Mining – Theoretical background –Algorithms and techniques – Association rule mining – Sequential Pattern Mining -Information retrieval and Web search – Information retrieval Models-Relevance Feedback- Text and Web page Pre-processing – Inverted Index – Latent Semantic Indexing – Web Search – Meta-Search – Web Spamming. The Syntactic and the Semantic Web, Logics of the Semantic Web. The world of the semantic web-WWW-Meta data-Search engine-Search engine for traditional web-Semantic web-Search engine for semantic web-Traditional web to semantic web.

UNIT-II Semantic Web Technology : (06 Hours)

RDF,- Elements of RDF, Basic Syntax and Fundamental rules of RDF-Aggregation-Distributed information-RDFS-core elements of

RDFS-Ontology-Taxonomy-Inferencing based on RDF schema.
OWL: OWL syntax, OWL and RDF semantics, OWL document, Using OWL to define classes-Set operators-Enumerations-Define propertiesontologymatching-Three faces of OWL-Validate OWL.
Swoogle : FOAF-Semantic markup-Issues-prototype system-Design of Semanticweb search engine-Discovery and indexation-prototype system-case study.

UNIT-III Web Content Mining & Semantic Web Services; (06 Hours)

Web Content Mining – Supervised Learning – Decision tree - Naïve Bayesian Text Classification -Support Vector Machines - Ensemble of Classifiers. Unsupervised Learning - K-means Clustering - Hierarchical Clustering –Partially Supervised Learning – Markov Models - Probability-BasedClustering - Evaluating Classification and Clustering – Vector Space Model – Latent semanticIndexing – Automatic Topic Extraction - Opinion Mining and Sentiment Analysis – Document Sentiment Classification. Introduction to web services- SOA, Limitations of web services. Semantic web services- OWL-S-Upper ontology-WSDL-S,OWL-S to UDDImapping ,Design of the search engine,implementations.

UNIT-IV Web Link Mining : (06 Hours)

Link mining, common link mining tasks, link-based object ranking
Web Link Mining – Hyperlink based Ranking – Introduction -Social Networks Analysis- Co-Citation and Bibliographic Coupling - Page Rank -Authorities and Hubs -Link-Based Similarity Search - Enhanced Techniques for Page Ranking - Community Discovery – Web Crawling -A Basic Crawler Algorithm- Implementation Issues- Universal Crawlers- Focused Crawlers- Topical Crawlers- Evaluation - Crawler Ethics and Conflicts - New Developments

UNIT-V Structured Data Extraction: (06 Hours)

Structured Data Extraction: Wrapper Generation – Preliminaries- Wrapper Induction- Instance-Based Wrapper Learning - Automatic Wrapper Generation: Problems - String Matching and Tree Matching - Multiple Alignment - Building DOM Trees - Extraction Based on a Single List Page and Multiple pages- Introduction to Schema Matching - Schema-Level Match -Domain and Instance-Level Matching – Extracting and Analyzing Web Social Networks.

UNIT-VI Web Usage Mining & Semantic Web Applications: (06 Hours)

Web Usage Mining - Click stream Analysis -Web Server Log Files - Data Collection and Pre-Processing - Cleaning and Filtering- Data Modeling for Web Usage Mining - The BIRCH Clustering Algorithm -Affinity Analysis and the A Priori Algorithm – Binning. Discovery and Analysis of Web Usage Patterns – Modeling user interests –

Probabilistic Latent Semantic Analysis – Latent Dirichlet Allocation Model– Applications- Collaborative Filtering- Recommender Systems – Web Recommender systems based on User and Item – PLSA and LDA Models . Semantic Web applications and services, Semantic Search, e-learning, Semantic Bioinformatics, Knowledge Base ,XML Based Web Services, Creating an OWL-S Ontology for Web Services, Semantic Search Technology, Web Search Agents and Semantic Methods.

Assignment List:

- 1) Discuss the Meta-Search and Web Spamming concepts in detail.
- 2) Determine the location of a resource with the help of ontologies and reasoning using router.
- 3) What are various steps in designing a search engine? Take a case study of designing your own search engine.
- 4) Design a crawler program to list out the URL's on the page, modify the program for again crawl those founded URL's to find more URL's using High speed computer (Hint : call the **crawl_site** function to **crawl** a **URL**.).
- 5) Write a Script/ program to perform Analysis of User's Browsing Behavior and Their Categorization Using Markov Chain Model.
- 6) What are various applications of semantic web? What are web search agents? Explain in detail.

Text Books:

- 1) Bing Liu, “ Web Data Mining: Exploring Hyperlinks, Contents, and Usage Data (Data-Centric Systems and Applications)”, Springer; 2nd Edition 2009.
- 2) Guandong Xu ,Yanchun Zhang, Lin Li, “Web Mining and Social Networking: Techniques and Applications”, Springer; 1st Edition.2010.
- 3) “Thinking on the Web” - Berners Lee, Godel and Turing, Wiley inter science, 2008.
- 4) “Social Networks and the Semantic Web”, Peter Mika, Springer, 2007.

Reference Books:

- 1) *Zdravko Markov, Daniel T. Larose, “Data Mining the Web: Uncovering Patterns in Web Content, Structure, and Usage”, John Wiley & Sons, Inc., 2007.*
- 2) *Soumen Chakrabarti, “Mining the Web: Discovering Knowledge from Hypertext Data”, Morgan Kaufmann; edition 2002.*
- 3) *Adam Schenker, “Graph-Theoretic Techniques for Web Content Mining”, World Scientific Pub Co Inc , 2005.*
- 4) *Min Song, Yi Fang and Brook Wu, “Handbook of research on Text and Web mining technologies”, IGI global, information Science Reference – imprint of :IGI publishing, 2008.*

Syllabus for Unit Test:

Unit Test -1 Unit I, II and III

Unit Test -2 Unit IV, V and VI

ITL-V

Teaching Scheme	Examination Scheme	Credit Allotted
Practical : 02 Hrs/Week	Practical and Term Work: 50 Marks	Term Work: 01

Course Objectives:

- 1) Understand emerging Web technologies concepts and tools.
- 2) Understand client side and server side scripting languages and validation techniques.
- 3) Learn database access technologies and state management techniques.
- 4) Develop real life Web applications using ASP.NET and PHP.

Course Prerequisites:

Students should have knowledge of

- 1) Knowledge of programming language C, C++.
- 2) Knowledge of application development tool.

Course Outcome:

Students will be able to:

- 1) Design web applications using ASP.NET.
- 2) Use ASP.NET controls in web applications.
- 3) Implement ASP.NET web applications.
- 4) Design database driven ASP.NET web applications and web services.
- 5) Implement Object handling using Collections and Generics.
- 6) Implement Database Connectivity using LINQ and ADO.NET.

UNIT-I	Introduction of .NET: Evolution of .NET, Benefits of .NET framework, Introduction to Visual Studio, Introducing C#, Namespaces, Classes, Objects and Struts, Object-Oriented Programming, Pointers, Delegates and Events	(06 Hours)
UNIT-II	Data Access with ADO.NET and Working with LINQ: Understanding Databases, Understanding SQL, Understanding ADO.NET, Data Reader, Creating Command Object, Working with DataAdapter, Defining LINQ Queries, Exploring standard Query Operators, Introducing LINQ to Objects, Introducing LINQ to ADO.NET	(06 Hours)
UNIT-III	Collections and Generics: System.Collections.Concurrent namespace, SortedSet<T> class, Understanding Collections, Collection classes in .NET, Understanding Generics, Generic Collection Classes in .NET, Creating your own Generic Classes	(06 Hours)

UNIT-IV Threading: (06 Hours)
The Thread Class, Difference between Processes and Threads, Working with Thread, Multithreading, Thread Priorities, Thread States, Thread Synchronization, Joining Threads

UNIT-V Web Applications: (06 Hours)
Developing a Web Application, Application Structure and State, Web Forms: Standard Controls, Navigation Controls: Tree View, Menu and Site Map Path, Validation Controls, Introducing Web Parts Controls, Working with Database Controls.

UNIT-VI Managing Web Applications: (06 Hours)
Managing Web Applications: The ASP.NET Configuration File, The process model Configuration, Configuring ASP.NET Applications in IIS
Working with Login Controls: The Login Control, The LoginView Control, The Login Status Control, The LoginName Control,
Working with User Profiles: Understanding ProfileProvider Class, Creating Authenticated Profiles, Creating Custom Profile Provider

Assignment List:

- 1) Accepting and validating user entered data using ASP.NET.
- 2) Accepting and validating book catalog information using validating controls.
- 3) Write a program to demonstrate session management in ASP.Net.
- 4) Display database contents from SQL server or Oracle database using SQL Command class from ASP.NET.
- 5) Display parameterized data using SqlDataReader and GridView in ASP.NET.
- 6) Database access using DataSet in ASP.NET.
- 7) Displaying data using DataView in ASP.NET.
- 8) Write a program to read, add, update and delete record from database using ADO.Net control SqlDataSource.
- 9) Create a login page in your web application. Login page must have user name and password fields. If user enters correct ID, Password, he must be redirected to the homepage of your website.
- 10) Create a webpage, that allows user to add a new username if user doesn't exist in the database. Also, create a forgot password link, to redirect user to set up his new password on authentication.

Text Books:

- 1) .NET 4.5 Programming 6-in-1, Black Book, *Kogent Learning Solutions Inc.*

Reference Books:

- 1) *ASP.NET 4.5, Covers C# and VB Codes, Black Book; Kogent Learning Solutions Inc.*
- 2) *C# 2012 Programming Black Book Covers .NET 4.5; Kogent Learning Solutions Inc.*
- 3) *Professional ASP.NET 4.5 in C# and VB; Jason N. Gaylord, Christian Wenz, Pranav Rastogi, Todd Miranda, Scott Hanselman, Scott Hunter; Web Platform Team, Microsoft*
- 4) *Beginning ASP.NET for Visual Studio 2015 Paperback – 18 Apr 2016 by William Penberthy*

Project Stage - II

Teaching Scheme	Examination Scheme	Credit Allotted
Practical : 04 Hrs/Week	Oral and Term Work : 50 Marks	Term Work : 08
	Practical and Term Work : 50 Marks	

Course Objectives:

- 1) To choose the hardware, software needed according to the proposed in the design.
- 2) To check the quality of work and adherence to the requirements by rigorous testing.
- 3) To implement requirements mentioned in the design.

Course Prerequisites:

Students should have knowledge of

- 1) Platform, programming languages.
- 2) Hardware, drivers and tools required at various phases of SDLC.

Course Outcome:

Students will be able to:

- 1) Implement solution for the given problem.
- 2) Learn various ways to tackle the new problem faced during the development of project.
- 3) Implement the code to minimize time and space required by setting new benchmarks.
- 4) Coordinate with project mates to solve the problem.
- 5) Apply integration of software and/or hardware components, APIs, modules.
- 6) Apply concepts learn in Seminar, In-plant training, Project Stage –I to effectively implement the project.

Guidelines for the project

- 1) Divide the work according to the plan.
- 2) Focus on the solution to excel the research or startup in respective domain.
- 3) Apply deadline, quality checks for every phase of project development.
- 4) Identify novel component to draft patent and copyright accordingly.
- 5) Present the implementation work in research journals and conferences.
- 6) Target to prepare a research proposal to acquire a grant for the institute.

Exam

Parameter	Marks
Implementation of project according to the work and quality.	10
Validation of Results	10
Contribution in terms of novelty	10
Comments received from journals like IEEE, Springer, Elsevier, ACM, WOS and Scopus indexed journals.	10
Patent, copyright, Application for grant.	10

Bharati Vidyapeeth Deemed University
College of Engineering, Pune- 411043
The Structure of the Curriculum: 2014 Course
Choice Based Credit System (CBCS)

B. TECH. MECHANICAL: SEMESTER- I & II

Bharati Vidyapeeth University
College of Engineering, Pune
Department of Mechanical Engineering

Vision: To provide mechanical engineers capable of dealing with global challenges

Mission: Social transformation through dynamic education

Programme Educational Objectives (PEOs):

Graduates will be able,

- To fulfill need of industry with theoretical and practical knowledge
- To engage in lifelong learning and continued professional development
- To fulfill social responsibilities

Programme Outcomes (POs):

- a. To apply knowledge of mathematics, science and engineering fundamentals for solving engineering problems
- b. To identify the need, plan and conduct experiments, analyze data for improving the mechanical processes
- c. To design and develop mechanical systems considering social and environmental constraints.
- d. To design and develop a complex mechanical system using advanced mathematical and statistical tools and techniques
- e. Use of information technology (IT) tools for prediction and modeling of routine activities to enhance the work performance
- f. To know social responsibilities while doing professional engineering practice.
- g. To become familiar with eco-friendly, sustainable and safe work environment.
- h. To take into account professional ethics while designing engineering systems.
- i. Able to work efficiently as a group leader as well as an individual.
- j. To communicate in written and verbal form with subordinates and supervisors
- k. To apply project and finance management techniques in multidisciplinary environments.
- l. To create interest for higher education and updating the knowledge.

B. TECH. MECHANICAL: SEMESTER- I (2014 Course)

S.N.	Course	Teaching Scheme (Contact Hrs./ week)			Examination Scheme (Marks)						Total Credits

Total Credits Sem. II -25

Grand Total -50

Rules for Conducting Tests

Mode of the test

- In each semester for each subject two tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.
- Each test shall carry 20 marks.
- University examination pattern has given weightage of 20 marks for the tests.
- To calculate these marks following procedure is followed:
 - i) Average marks obtained in two tests shall be considered as provisional marks obtained by the student in the tests.
 - ii) If the candidate appears only for one test during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other test.
 - iii) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; these marks will be final marks obtained by the student. No scaling up is permitted.
 - iv) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.
- Paper pattern for tests
 - i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks
 - ii) There will not be any sub-questions.
- For granting the term it is mandatory to appear for both tests conducted in each semester.
- Roll nos. allotted to students shall be the examination nos. for the tests.

Department of Mechanical Engineering

Syllabus: Semester I

ENGINEERING MATHEMATICS-I

Designation of Course	Engineering Mathematics-I		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 3 Hours/ Week	End Semester Examination	60 Marks	Theory: 03 Tutorial: 01
Tutorial : 01 Hours/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	-- Marks	
	Total	100 Marks	4

Course Prerequisites:-	Student should have Basic Knowledge of Algebra
Course Outcomes:-	<ol style="list-style-type: none"> 1. Solve the consistency of any type of systems. 2. Find the roots of equations using DeMoivre's theorem and to locate imaginary points using argand diagram. 3. Apply Leibnitz's rule to find n^{th} derivative. 4. Test convergence and divergence of infinite series. 5. Compute total derivative. 6. Compute maxima and minima of any function of two variables.

Course Contents

Unit 1	Matrices	(8 Hrs.)
Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley - Hamilton Theorem. Application to problems in Engineering.		
Unit 2	Complex Numbers And Applications	(8 Hrs.)
Definition, Cartesian, Polar and Exponential Forms, Argand's Diagram, De'Moivre's theorem and its application to find roots of algebraic equations., Hyperbolic Functions, Logarithm of Complex Numbers, Separation into Real and Imaginary parts, Application to problems in Engineering.		
Unit 3	Differential Calculus and Expansion Of Functions	(8 Hrs.)
Successive Differentiation, n^{th} Derivatives of Standard Functions, Leibnitz's Theorem. Taylor's Series and Maclaurin's Series.		
Unit 4	Differential Calculus and Infinite Series	(8 Hrs.)
Indeterminate Forms, L' Hospital's Rule, Evaluation of Limits. Infinite Sequences, Infinite Series, Alternating Series, Tests for Convergence, Absolute and Conditional Convergence, Power series, Range of Convergence.		
Unit 5	Partial Differentiation And Applications	(8 Hrs.)

Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables. Errors and Approximations.		
Unit 6	Jacobian and Maxima And Minima	(8 Hrs.)
Jacobians and their applications, Chain Rule, Functional Dependence. Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.		

Text Books/ Reference Books

1. Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar, Pune Vidyarthi Griha Prakashan, Pune, 7th edition (1988).
2. Higher Engineering Mathematics by B. S. Grewal, Khanna Publication, Delhi, 42th edition (2012).
3. Higher Engineering Mathematics by B.V. Ramana, Tata McGraw-Hill (2008).
4. Advanced Engineering Mathematics by Erwin Kreyszig, Wiley Eastern Ltd, 8th edition (1999).
5. Advanced Engineering Mathematics, 7e, by Peter V. O'Neil, Thomson Learning, 6th edition (2007).
6. Advanced Engineering Mathematics, 2e, by M. D. Greenberg, Pearson Education, 2nd edition (2002).

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

FUNDAMENTALS OF CIVIL ENGINEERING

Designation of Course	Fundamentals of Civil Engineering		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory: 03 Practical: 01
Practical:- 02 Hours/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	25 Marks	
	Total	125 Marks	4

Course Prerequisites:-	Basics of Science, measurements and Mathematics
Course Outcomes:-	<ol style="list-style-type: none"> 1. Different building components and material 2. Classification of surveying 3. Leveling of the ground 4. Planning of building 5. Methods of irrigation and water supply 6. Different methods of transportation

Course Contents

Unit 1	Civil Engineering Scope And Applications.	(6 Hrs.)
Civil Engineering scope, importance and applications to other disciplines of Engineering; Civil Engineering construction process and role of Civil engineer; Government authorities related to Civil Engineering; Types of structures based on loading , material and configuration; Building components and their functions; Civil Engineering materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood , glass and aluminum.		
Unit 2	Surveying	(6 Hrs.)
Objectives, Principles and Classification of Surveying; Linear, angular, Vertical and area Measurements and related instruments.		
Unit 3	Building Planning And Bye Laws	(6 Hrs.)
Site selection for residential building; Principles of building planning; Building bye laws- necessity, Floor Space Index, Heights , open space requirements, set back distance , ventilation and lighting, concept of carpet and built up area, minimum areas and sizes for residential buildings ; Concept of Eco friendly structures and Intelligent buildings.		
Unit 4	Foundations and Earthquakes	(6 Hrs.)
Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation. Earthquakes causes, effects and guidelines for earthquake resistant design, earthquake zones.		
Unit 5	Irrigation And Water Supply	(6 Hrs.)
Rainfall measurement and its use in design of dams; Types of dams, canals, methods of irrigation and their merits and demerits; hydropower structures ;Water supply, drinking water requirements and its quality, water and sewage treatment flow chart.		
Unit 6	Infrastructure	(6 Hrs.)
Roads- types of roads and their suitability, cross section of roads, meaning of terms ; width of roads, super elevation, camber, gradient ,sight distance, materials used for construction of roads. Railways- Types of gauges, section of		

railway track, components of railway track, advantages. Bridges: Components - Foundation, Piers, Bearings, Deck. Airways- Components -Runway, Taxiway and Hangers.

Term Work

Experiments

Any ten experiments from the following:

1. Study and use of prismatic compass and measurement of bearings.
2. Study and use of Dumpy level and reduction of levels by collimation plane method.
3. Area measurement by Digital Planimeter.
4. Drawing plan and elevation of a residential bungalow.
5. Study of features of topographical maps.
6. Assignment on collection of information on Civil Engineering materials.
7. Assignment on types of foundations.
8. Assignment problem on irrigation and hydropower structures.
9. Assignment on study of flow chart of water and sewage treatment.
- 10 Assignments on types of transportation systems.

Text Books/ Reference Books

1. "Surveying- Vol I" - S.K. Duggal, Tata McGraw Hill Publication.
2. "Built Environment" – Shah, Kale, Patki, , Tata McGraw Hill Publication
3. "Building Construction" – Dr. B.C. Punmia , Laxmi Publication
4. "Irrigation and water Power Engineering" - Dr. P.N. Modi, Standard Publishers, New Delhi
5. "Text book of Transportation Engineering "- Arora, Charotar Publishers.
6. Water supply and sanitary engineering-Rangawala, Charotar Publishers.
7. Basic Civil engineering"- M.S. Palanichamy- Tata McGraw Hill Publication

Unit Tests-

Unit Test-I	Unit-I,II, III
Unit Test-II	Unit-IV, V, VI

ENGINEERING GRAPHICS

Designation of Course	Engineering Graphics		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 04 Hours/ Week	End Semester Examination	60 Marks	Theory: 04 Practical: 01
Practical:- 02 Hours/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work/ Oral	50 Marks	
	Total	150 Marks	05

Course Prerequisites:-	Basic fundamentals of Mathematics
Course Outcomes:-	Different engineering curves and dimensioning. Differentiate I st angle and III rd angle projection Method in orthographic. To interpret views of the object and to draw by using Isometric projection method. Projection of Lines and its traces. Projection of different planes. Projection of solids and its sections.

Course Contents

Unit 1	Lines and Dimensioning in Engineering Drawing and Engineering Curves	(08 Hrs.)
Different types of lines used in drawing practice, Dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension. Ellipse by Directrix-Focus method, Arcs of Circle method, Concentric circle method and Oblong method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone, Loci of points- Slider Crank mechanisms.		
Unit 2	Orthographic Projection	(08 Hrs.)
Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections.		
Unit 3	Isometric Projections	(08 Hrs.)
Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, and Sphere.		
Unit 4	Projections of Points and Lines	(08 Hrs.)
Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines,		
Unit 5	Projections of planes	(08 Hrs.)
Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP		
Unit 6	Projection of Solids and Section of Solids	(08 Hrs.)
Projection of prism, pyramid, cone and cylinder by rotation method. Types of section planes, projections of solids cut by different sections of prism, pyramid, cone and cylinder.		

Term work

Term work shall consist of five half-imperial size or A2 size (594 mm x 420 mm) sheets. Assignment 05 Problems on each unit in A3 size Drawing Book

Sheets

1. Types of lines, Dimensioning practice, Free hand lettering, 1st and 3rd angle methods symbol.
2. Curves and loci of points.
3. Projections of Points and Lines and planes.
4. Orthographic Projections.
5. Isometric views.
6. Projection of Solids.

Text Books/ Reference Books

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India.
2. "Text Book on Engineering Drawing", K.L.Narayana & P.Kannaiah, Scitech Publications, Chennai.
3. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi.
4. "Engineering Drawing and Graphics", Venugopal K., New Age International publishers.
5. M. B. Shah and B. C. Rana, "Engineering Drawing", 1st Ed, Pearson Education, 2005.
6. P. S. Gill, "Engineering Drawing (Geometrical Drawing)", 10 Edition, S. K. Kataria and Sons, 2005.
7. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 Edition, 1988.

Unit Tests-

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

ENGINEERING PHYSICS

Designation of Course	Engineering Physics		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory: 04 Practical: 01
Practical:- 02 Hours/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work/ Oral	25 Marks	
	Total	125 Marks	5

Course Prerequisites:-	Basics knowledge of Science and fundamentals Laws
Course Outcomes:-	<ol style="list-style-type: none"> 1. Interpret the properties of charged particles to develop modern instruments and express the mechanism of fusion and fission. 2. Interpret the basics of semiconductors and its uses to develop devices such as diode. 3. Express knowledge of nanoscience to develop new electronic devices. 4. Express the concept of transverse waves. Associate the wave nature of light and apply it to measure stress, pressure and dimension etc. 5. Analyze the problems associated with architectural acoustics and give their remedies and use ultrasonic as a tool in industry for Non Destructive Testing. 6. Define behavior of quantum particles in different types of potentials.

Course Contents

Unit 1	Modern Physics and Nuclear Physics	(08 Hrs.)
Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focussing, Wavelength and resolution, Specimen limitation, Depth of field and focus, Electron microscope, Positive rays, Separation of isotopes by Bainbridge mass spectrograph. Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium, Fission energy, Critical mass and size, Reproduction factor, Chain reaction and four factor formula, Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions, Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron.		
Unit 2	Solid State Physics and Superconductivity	(08 Hrs.)
Band theory of solids, Free electron theory, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics. Introduction, Properties of a super conductor, Meissner's effect, Critical field, Types of superconductors, BCS theory, High temperature superconductors, Application of superconductors.		
Unit 3	Thermodynamics And Nanoscience	(08 Hrs.)
Zeroth law of thermodynamics, first law of thermodynamics, determination of J by Joule's method, Applications of first law, heat engines, Carnot's cycle and Carnot's engine, second law of thermodynamics, entropy, change in entropy in reversible and irreversible processes, third law of thermodynamics. Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles(Physical and chemical), synthesis of		

colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications.		
Unit 4	Optics – I, Interference, Diffraction	(08 Hrs.)
Interference of waves, Visibility of fringes, interference due to thin film of uniform and non-uniform thickness, Newton's rings, Engineering applications of interference (optical flatness, interference filter, non-reflecting coatings, multi-layer ARC. Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Diffraction at a circular aperture (Result only), Plane diffraction grating, Conditions for principal maxima and minima, Rayleigh's criterion for resolution, Resolving power of grating and telescope.		
Unit 5	Optics – II, Polarization, Lasers	(08 Hrs.)
Introduction, Double refraction and Huygens's theory, Positive and negative crystals, Nicol prism, Dichroism, Polaroids, Elliptical and circular polarisation, Quarter and half wave plates, Production of polarised light, Analysis of polarised light, half shade polarimeter, LCD. Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Properties of lasers, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.		
Unit 6	Architectural Acoustics, Quantum Mechanics	(08 Hrs.)
Elementary acoustics, Limits of audibility, Reverberation and reverberation time, Sabine's formula, Intensity level, Sound intensity level, Sound absorption, Sound absorption coefficient, different types of noise and their remedies, Sound absorption materials, basic requirement for acoustically good hall, factors affecting the architectural acoustics and their remedies. Electron diffraction, Davisson and Germer's experiment, Wave nature of matter, De-Broglie waves, Wavelength of matter waves, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box and non-rigid box.		

Term Work

Experiments

Any ten experiments from the following:

1. Determination of band gap of semi-conductor.
2. Solar cell characteristics.
3. e/m by Thomson's method.
4. Uses of CRO for measurement of phase difference and Lissajous figures.
5. Hall effect and Hall coefficient.
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode, Photo diode, LED, Ge/Si diode).
8. Planck's constant by photodiode.
9. Wavelength by diffraction grating.
10. Newton's rings.
11. Ultrasonic interferometer.
12. Sound intensity level measurement.
13. Wavelength of laser by diffraction.
14. Determination of refractive index for O-ray and E-ray.
15. Brewster's law.

Assignments

1. Recent advances in Nanotechnology
2. Nuclear radiation detectors.
3. Atomic force microscope (AFM).
4. Advanced opto-electronic devices.
5. Laser in Industry.
6. Different spectroscopic methods – a comparison (Raman, IR, UVR, etc.).

Text Books/ Reference Books

1. Physics for Engineers – Srinivasan M.R.
2. A text Book of Engineering Physics- M.N. Avadhanulu, P.G. Kshirsagar
3. Engineering Physics- K. Rajagopal
4. Electronics Principles – A.P.Molvino
5. Fundamentals of Optics – Jenkins and White
6. A Textbook of Sound – Wood
7. Engineering Physics – Sen, Gaur and Gupta

Unit Test-II	Unit-IV, V, VI

FUNDAMENTALS OF ELECTRICAL ENGINEERING

Designation of Course	Fundamentals of Electrical Engineering		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory: 03 Practical: 01
Practical:- 02 Hours/Week Tutorials: -- Hours/ Week	Unit Test Assignments Internal Evaluation	20 Marks 10 Marks 10 Marks	
	Term Work / Oral	25 Marks	
	Total	125 Marks	04

Course Prerequisites:-	Students should have knowledge of Physics and Mathematics.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Understand and apply knowledge of basic concepts of work, power, and energy for electrical, mechanical and thermal systems. 2. Understand and apply knowledge of Kirchhoff's laws and network theorems to solve electrical networks. 3. Describe construction, principle of operation, specifications and 4. Applications of capacitors and batteries. 5. Describe and apply fundamental concepts of magnetic and electromagnetic circuits for operation of single phase transformer. 6. Define basic terms of single phase and three phase ac circuits and supply systems. 7. Know and use electrical safety rules.

Course Contents

Unit 1	Basic concepts	(06 Hrs.)
Concept of EMF, Potential Difference, current, resistance, Ohms law, resistance temperature coefficient, SI units of Work, power, energy. Conversion of energy from one form to another in electrical, mechanical and thermal systems.		
Unit 2	Network Theorems:	(06 Hrs.)
Voltage source and current sources, ideal and practical, Kirchhoff's laws and applications to network solutions using mesh analysis, Simplifications of networks using series- parallel, Star/Delta transformation. Superposition theorem, Thevenin's theorem, Max Power Transfer theorem.		
Unit 3	Electrostatics	(06 Hrs.)
Electrostatic field, electric field intensity, electric field strength, absolute permittivity, relative permittivity, capacitor composite, dielectric capacitors, capacitors in series & parallel, energy stored in capacitors, charging and discharging of capacitors, Batteries-Types, Construction & working.		
	Magnetic Circuit & Transformer	(06 Hrs.)
Magnetic effect of electric current, cross and dot convention, right hand thumb rule, concept of flux, flux linkages, Flux Density, Magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability, B-H curve, hysteresis loop, series-parallel magnetic circuit, composite magnetic circuit, Comparison of electrical and magnetic circuit Faraday's law of electromagnetic induction, statically and dynamically induced emf, self-inductance, mutual inductance, coefficient of coupling, Single phase transformer construction, principle of operation, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Determination of Efficiency & Regulation by direct load test.		
Unit 5	AC Fundamentals & AC Circuits	(06 Hrs.)

AC waveform definitions , form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar & rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3-ph AC Circuits.

Unit 6	Electrical Wiring and Illumination system	(06 Hrs.)
---------------	--	------------------

Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED), Study of Electricity bill.

Term Work:

The term work shall consist of record of minimum eight exercises / experiments

1. Determination of resistance temperature coefficient.
2. Verification of Superposition Theorem.
3. Verification of Thevenin's Theorem.
4. Verification of Kirchhoff's Laws.
5. Verification of Maximum power transfer Theorem.
6. Time response of RC circuit.
7. Study of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$ & $X_L = X_C$.
8. Verification of current relations in three phase balanced star and delta connected loads.
9. Direct loading test on Single phase transformer.
10. a) Voltage and current ratios
11. b) Efficiency and regulations
12. Study of a Residential (L.T.) Bill.

	Internal Evaluation	-- Marks	
	Term Work	50 Marks	
	Total	50 Marks	01

Course Prerequisites:-	Basic knowledge of hand tools used in day to day life.
Course Outcomes:-	Students should be able to understand 1. Basic Manufacturing Processes used in the industry. 2. Importance of safety.

Course Contents

<p>Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances</p> <p>Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.</p> <p>Sheet Metal Practice -Introduction to primary technology processes involving bending punching and drawing various sheet metal joints, development of joints.</p> <p>Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.</p> <p>Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.</p> <p>Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.</p> <p>Plumbing- (Demonstration Common for Electrical & Non electrical Group) Types of pipe joints, threading dies, Pipe fittings.</p>
--

Term Work

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the above topics.

PROFESSIONAL SKILLS DEVELOPMENT-I

Designation of Course	Workshop Technology		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 2 Hours/ Week	End Semester Examination	50 Marks	Theory: 02 Practical: 00
Practical:- -- Hours/ Week	Unit Test	-- Marks	
	Assignments	-- Marks	
	Internal Evaluation	-- Marks	
	Term Work	-- Marks	
	Total	50 Marks	02

Course Pre-requisites	
The Students should have knowledge of	
1.	Basic communication in tenses (past, present, future).
2.	Awareness of common words (adjectives used in daily verbal communication).
3.	Basic idea of sentence formation and thereby paragraph building and writing.
4.	Communication according to daily and varied contextual scenarios.
5.	Basic communication model/channel (sender, receiver and feedback), Active and passive listening skills.
6.	Basic social etiquettes and knowledge of group work and communication that will enhance their professional growth.
Course Objectives	
	The Professional Skills Development course aims to augment students overall communication and interpersonal skills by engaging them in group activities and thus aid in helping them to emerge as professionals. The English language topics for this semester focus on the development of basic fluency in English, usage of words and also introduce them to the concept and importance of interpersonal skills so as to effectively present their personalities.
Course Outcomes	
The student should be able to	
1.	Speak fluently in English without errors in tenses and hence present themselves as effective English communicators. They will be able to learn the 12 tenses and use them appropriately.
2.	Differentiate between active and passive vocabulary and be able to use the 60 words discussed in class for their daily conversation and 40 words also given as assignments.
3.	The ability to process their ideas and thoughts(verbal communication) into written communication in an effective, coherent and logical manner within a stipulated time and specific word limit of 100-150 words for paragraph writing.
4.	Present them in a certain manner by using the 50-55 phrases discussed in class appropriately for group discussions, personal interviews during the campus recruitment process/competitive exams.
5.	Enhance their communication skills by acquainting with the 2 important aspects of communication and helping them to overcome the 10 most common barriers of communication. Learn the 7 different types of listening skills; differentiate effective listening skills and understand the importance of it through 5 activities held in class and implement them in professional life.
6.	Understand the importance of team work, team motivation and effective team communication for further implementation in the corporate life. They should also be able to identify concretely between team and group dynamics.

Course Contents		
Unit I	Essential Grammar – I	(4 Hrs.)
	<ul style="list-style-type: none"> • Application of Tenses: Usage of past, present and future according to context. • Activities/games for tenses 	
Unit II	Vocabulary – I	(4 Hrs.)
	<ul style="list-style-type: none"> • Vocabulary building <ul style="list-style-type: none"> ▪ Adjectives- physical attributes, Intellectual qualities, ▪ Words describing vacations. • Application of the vocabularies. • Activities: Story telling/ Poem building (Using those words) 	
Unit III	Written Communication - I	(4 Hrs.)
	<ul style="list-style-type: none"> • Paragraph writing: <ul style="list-style-type: none"> ▪ Structure of paragraphs, ▪ Mnemonics to build Paragraph, ▪ Coherence and Unity of paragraphs. 	
Unit IV	Situational Conversation – I	(4 Hrs.)
	<ul style="list-style-type: none"> • Application of grammar according to context. • Situation based conversation • Activities: Conversation based on context(personal and professional) 	
Unit V	Fundamental Communication Skills - I	(4 Hrs.)
	<ul style="list-style-type: none"> • Importance of effective communication. • Types of communication. • Verbal, Non-verbal communication. • Barriers of communication. • Activities: Extempore • Listening Skills • Importance of listening skills. • Types of listening skills. • Difference between hearing and listening. • Activities: Word ball Game. Chinese Whisper 	
Unit VI	Interpersonal Skills – I	(4 Hrs.)
	<ul style="list-style-type: none"> • Introduction to Interpersonal skills. • Group Dynamics. • Introduction to Team work. • Difference between a group and a team. • Importance of group/team in an organization. • Activities on team and group dynamics. 	
Text Books		
1.APAART: Speak Well 1 (English language and communication)		
2.APAART: Speak Well 2 (Soft Skills)		
Reference Books		
1.English vocabulary in use – Alan Mc’Carthy and O’dell		
2.Business Communication – Dr. Saroj Hiremath		

Department of Mechanical Engineering

Syllabus: Semester II

ENGINEERING MATHEMATICS-II

Designation of Course	Engineering Mathematics-II		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory: 03 Tutorial: 01
Tutorials: 01Hour/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	-- Marks	
	Total	100 Marks	04

Course Prerequisites:-	Student must have basic knowledge of calculus.
Course Outcomes:-	<ol style="list-style-type: none"> 1. To develop an ability to solve differential equations of first order and first degree. 2. To develop an ability to form mathematical model of rectilinear motion, electric circuit, Fourier heat conduction, Newton's law of cooling. 3. To develop an ability to transform the Cartesian co-ordinates into spherical polar and cylindrical coordinate systems. 4. To develop an ability to represent periodic function as Fourier Series. 5. To develop an ability to evaluate definite integral by DUIS rules and to trace Cartesian and polar curves. 6. To develop an ability to apply methods to find area and volume by double and triple integration.

Course Contents

Unit 1	Differential Equations (DE)	(08 Hrs.)
Definition, Order and Degree of DE, Formation of DE. Solutions of Variable Separable DE, Exact DE, Linear DE and reducible to these types.		
Unit 2	Applications Of Differential Equations	(08 Hrs.)
Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchhoff's Law of Electrical Circuits, Motion under Gravity, Rectilinear Motion, Simple Harmonic Motion, One-Dimensional Conduction of Heat, Chemical engineering problems.		
Unit 3	Fourier Series And Integral Calculus	(08 Hrs.)
Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis. Reduction formulae, Beta and Gamma functions.		
Unit 4	Integral Calculus And Curve Tracing	(08 Hrs.)
Differentiation Under the Integral Sign, Error functions. Tracing of Curves, Cartesian, Pola and Parametric Curves. Rectification of Curves.		

Unit 5	Solid Geometry	(08 Hrs.)
Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder.		
Unit 6	Multiple Integrals And Their Applications	(08 Hrs.)
Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.		

Assignments

1. Differential Equations.
2. Application of DE.
3. Fourier's Series and Integral Calculus.
4. DUIS and Curve Tracing.
5. Solid Geometry.
6. Double and Triple integrations, area and volume.

Text Books/ Reference Books

1. Advanced Engineering Mathematics by Erwin Kreyszig, Wiley Eastern Ltd, 8th edition (1999).
2. Higher Engineering Mathematics by B.V. Ramana, Tata McGraw-Hill (2008)
3. Applied Mathematics (Volumes I and II) by P. N. Wartikar & J. N. Wartikar, Pune Vidyarthi Griha Prakashan, Pune, 7th edition (1988).
4. Higher Engineering Mathematics by B. S. Grewal, Khanna Publication, Delhi, 42th edition (2012).
5. Advanced Engineering Mathematics, by Peter V. O'Neil, Thomson Learning, 6th edition (2007).
6. Advanced Engineering Mathematics, by M. D. Greenberg, Pearson Education, 2nd edition (2002).

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

FUNDAMENTALS OF MECHANICAL ENGINEERING

Designation of Course	Fundamentals of Mechanical Engineering		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory: 03 Practical: 01
Practical:- 02 Hours/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	25 Marks	
	Total	125 Marks	4

Course Prerequisites:-	Students should have the basic knowledge of thermodynamics.
Course Outcomes:-	<p>Able to understand-</p> <ol style="list-style-type: none"> 1. The fundamentals of thermal engineering. 2. Working of power producing and absorbing devices. 3. Different energy sources and fundamental laws of heat transfer. 4. The basic properties of fluid and materials. 5. The different mechanical devices and mechanisms. 6. Machine tools and manufacturing processes.

Course Contents

Unit 1	Thermodynamics:	(06 Hrs.)
Heat, work and Internal Energy, Thermodynamic State, Process, Cycle, Thermodynamic System, First Law of Thermodynamics, Application of First Law to steady Flow and Non Flow processes, Limitations of First Law, PMM of first kind (Numerical Treatment), Second Law of Thermodynamics – Statements, Carnot Engine and Carnot Refrigerator, PMM of Second Kind (Elementary treatment only)		
Unit 2	Introduction to I.C. Engines, turbines, refrigeration, compressors & pumps:	(06 Hrs.)
Two stroke, Four Stroke Cycles, Construction and Working of C.I. and S.I. Engines, Hydraulic turbines, Steam turbines, gas turbines. (Theoretical study using schematic diagrams) Vapor compression and vapor absorption system, house hold refrigerator, window air conditioner. Reciprocating and rotary compressor, Reciprocating and centrifugal pump.(Theoretical study using schematic diagrams)		
Unit 3	Energy Sources & Heat transfer:	(06 Hrs.)
Renewable and nonrenewable, solar flat plate collector, Wind, Geothermal, Wave, Tidal, Hydro power, Bio-gas, Bio-Diesel, Nuclear power. (Theoretical study using schematic diagrams) Statement and explanation of Fourier's law of heat conduction, Newton's law of cooling, Stefan Boltzmann's law. Conducting and insulating materials and their properties, types of heat exchangers and their applications.		
Unit 4	Properties of fluids & Properties of Materials and their Applications:	(06 Hrs.)
Introduction, Units of measurements, mass density, specific weight, specific volume and relative density, viscosity, pressure, compressibility and elasticity, gas laws, vapor pressure, surface tension and capillarity, Regimes in fluid mechanics. Metals – Ferrous and Non-Ferrous, Nonmetallic materials, smart materials, Material selection criteria.		
Unit 5	Mechanical devices & Mechanisms:	(06 Hrs.)
Types of Belts and belt drives, Chain drive, Types of gears, Types of Couplings, types of friction clutch,		

Power transmission shafts, axles, keys, bush and ball bearings. Slider crank mechanism, Four bar chain mechanism, inversions of single slider crank chain mechanism, Geneva mechanism, Ratchet and Paul mechanism.		
Unit 6	Machine Tools, Introduction to manufacturing processes and Their Applications:	(06 Hrs.)
Lathe Machine – Centre Lathe, Drilling Machine – Study of Pillar drilling machine, Introduction to NC and CNC machines, Grinding machine, Power saw, Milling Machine. Casting, Sheet metal forming, Sheet metal cutting, Forging, Metal joining processes.

Unit Tests

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit- IV, V, VI

ENGINEERING MECHANICS

Designation of Course	Engineering Mechanics		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 04 Hours/ Week	End Semester Examination	60 Marks	Theory: 04 Practical: 01
Practical: 02 Hours/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	25 Marks	
	Total	125 Marks	05

Course Prerequisites:-	<p>The Students should have knowledge of</p> <ol style="list-style-type: none"> 1. Scalar and Vector 2. Newton's law of motion 3. Law of friction 4. Concept of physical quantities, their units and conversion of units 5. Concept of differentiation and integration
Course Outcomes:-	<ol style="list-style-type: none"> 1. Calculate resultant and apply conditions of equilibrium. 2. Analyze the truss and calculate friction force. 3. Calculate centroid and moment of inertia. 4. Solve problem on rectilinear motion. 5. Solve problems on curvilinear motion. 6. Use D'alembert's principle, Work Energy principle and Impulse Momentum principle for particle.

Course Contents

Unit 1	Resultant and Equilibrium	(06 Hrs.)
Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point.		
Unit 2	Truss and Friction	(06 Hrs.)
Coefficient of Static Friction, Impending motion of Blocks, Ladders and Belts. Analysis of Perfect Trusses - Method of Joint, Method of Section and Graphical Method.		
Unit 3	Centroid and Moment of Inertia	(06 Hrs.)
Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia.		
Unit 4	Kinematics of Rectilinear motion of a Particle	(06 Hrs.)
Equations of motion, Constant and variable acceleration, Motion Curves, Relative motion, Dependent motion.		
Unit 5	Kinematics of Curvilinear motion of a Particle	(06 Hrs.)
Motion of a Projectile, Cartesian components, Normal and Tangential components of a curvilinear motion.		
Unit 6	Kinetics of a Particle	(06 Hrs.)
D'alembert's Principle, Work-Energy Principle and Impulse-Momentum Principle, Coefficient of Restitution, Direct Central Impact.		

Term Work:

A) The term-work shall consist of minimum five experiments from list below.

1. Determination of reactions of Simple and Compound beam.
2. Study of equilibrium of concurrent force system in a plane.
3. Determination of coefficient of friction for Flat Belt.
4. Determination of coefficient of friction for Rope.
5. Study of Curvilinear motion.
6. Determination of Coefficient of Restitution.

B) The term-work shall also consist of minimum five graphical solutions of the problems on topics.

Unit Tests-

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

ENGINEERING CHEMISTRY

Designation of Course	Engineering Chemistry		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 4 Hours/ Week	End Semester Examination	60 Marks	Theory: 04 Practical: 01
Practical - 2 Hours/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work/ Oral	25 Marks	
	Total	125 Marks	05

Course Prerequisites:-	The Students should have Basics knowledge of Science and fundamentals Laws.
Course Outcomes:-	<p>At the end of the course, a student will be able to,</p> <ol style="list-style-type: none"> Analyze the methods involved in improving quality of water for domestic and industrial purposes. Express the crystal structure through X-ray diffraction technique to examine the internal structure of crystal. Demonstrate the properties and applications of fossil fuels and derived fuels. Define the fundamental principles of corrosion and methods used for minimizing corrosion. Interpret the basic concepts of electrochemical techniques and its applications in society. Develop the skills for correct stereo chemical assignment and interpretation in complex organic molecules.

Course Content

Unit 1	Water	(06 Hrs.)
Introduction, Hardness of water, Effect of hard water on boilers and heat exchangers: a) boiler corrosion b) caustic embrittlement c) scales and sludges d) priming and foaming Water softening methods for industrial purposes :a) Zeolite process b) Phosphate conditioning Numerical based on the zeolite process		
Unit 2	Material Chemistry	(06 Hrs.)
Crystallography: Unit cell, Laws of crystallography, Weiss indices and Miller indices, Crystal defects (point and line defects), X-ray diffraction – Bragg's Law and numerical. Cement: Introduction of cement, Hydraulic/ Non-hydraulic cementing materials, classification of cement, chemistry of portland cement, chemical composition and compound constituents of portland cement, properties of cement and its applications.		
Unit 3	Fuels	(06 Hrs.)
Introduction, classification of fuels, calorific value of fuels, NCV and GCV, Determination of calorific values using Bomb calorimeter and Boys' gas calorimeter. Theoretical calculation of calorific value of a fuel, Analysis of coal a) Proximate b) Ultimate analysis of coal, Numericals based on NCV, GCV.		
Unit 4	Corrosion And Its Prevention	(06 Hrs.)
Corrosion: - Definition, atmospheric corrosion-mechanism, Wet corrosion-mechanism, Electrochemical and galvanic series, Factors affecting corrosion-nature of metal, nature of environment. Methods of prevention of corrosion- Cathodic and Anodic protection, Metallic coatings, Electroplating, Hot dipping.		

Unit 5	Electrochemistry	(06 Hrs.)
Introduction, Arrhenius Ionic theory, Kohlrausch's law of independent migration of ions Laws of electrolysis: Faradays Laws, Ostwald's dilution law, Acids and Bases, concept of pH and pOH, Buffer solutions, Solubility Product, Redox Reactions. Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Overvoltage, Conductometric Titrations, Fuel cells, Lead Acid Storage Cell and numericals based on the above articles.		
Unit 6	Stereochemistry	(06 Hrs.)
Introduction, chirality, optical activity, Enantiomers, Diastereomers, projection formula of tetrahedral carbon- Newman projection, Wedge projection, Fischer projection, Geometrical isomerism :- cis and trans isomerism, E and Z isomers Optical isomerism :- Mesoform, the number of optical isomers for chiral molecules, Conformations :- conformations of ethane, conformations of n-butane		

Term Work

Experiments

Any Ten experiments from the following:

1. Estimation of hardness of water by EDTA method.
2. Estimation of chlorine by Mohr's method.
3. Determination of percentage of Ca in given cement sample
4. Determination of coefficient of viscosity by Ostwald's viscometer
5. Study of Bomb calorimeter for determination of calorific value.
6. Determination of calorific value of gas fuel by using Boy's gas calorimeter.
7. Determination of dissolved oxygen in a water sample.
8. To determine the Molecular Weight of polymer
9. Estimation of Copper from brass sample solution by Iodometrically
10. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
11. To standardize NaOH solution and hence find out the strength of given hydrochloric Acid solution
12. To determine Surface Tension of given liquid by Stalagmometer
13. Study of corrosion of metals in medium of different pH.
14. To set up Daniel cell
15. To determine pH of soil
16. To determine Acidity of soil

Assignments

7. Effect of hard water on boilers and heat exchangers
8. Hydraulic/ Non-hydraulic cementing materials
9. Analysis of coal a) Proximate b) ultimate analysis of coal
10. Wet corrosion-mechanism, Electroplating, Hot dipping
11. Geometrical isomerism:- cis and trans isomerism, E and Z isomers
12. Fuel cells

MECHANICAL ENGINEERING DRAWING

Designation of Course	Mechanical Engineering Drawing		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 02 Hours/ Week	End Semester Examination	60 Marks	Theory: 02 Practical: 02
Practical - 04 Hours/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	40 Marks	
	Term Work/ Oral	25 Marks	
	Total	125Marks	4

Course Prerequisites:-	Students should have the basic knowledge of engineering graphics.
Course Outcomes:-	<ol style="list-style-type: none"> 1. To draw different free hand sketches in machine parts. 2. Representation of dimensions of machine components. 3. Different Auto CAD commands. 4. Orthographic projection using Auto CAD. 5. Isometric projection using Auto CAD. 6. Development of different solids using AutoCAD.

Course Contents

Unit 1	Freehand Sketching	(06 Hrs.)
Free hand sketching -- FV and TV of standard machine parts – Hexagonal headed nut and bolt, foundation bolts, shafts, keys, couplings, springs, screw thread forms, welded joints, riveted joints.		
Unit 2	Dimensioning Practice	(06 Hrs.)
Terms and Notations, Leader, Extension Lines, Terminations and Origin indication, Functional dimension, Non-functional dimension, Datum dimension, Redundant and auxiliary dimension, Chain dimensioning, Running dimensioning, Co-ordinate dimensioning, Symmetrical or equidistant dimensioning, Methods of dimensioning Common features: Diameters, Radii, Hole sizes, chamfers, Screw threads, Chords, Arcs, Angles, Spheres, Cylinders, Squares. Conventional Representation of Machine Components As per SP-46 (1988)		
Unit 3	Introduction to Computer Aided Drafting	(06 Hrs.)
Working Interface of AutoCAD, Drawing Limits, Creating 2-D Drawing in AutoCAD, AutoCAD commands, Editing commands in AutoCAD, Dimensioning in AutoCAD, Creating text in Auto CAD, Changing object properties Scale, Object Snap Mode, Display control in AutoCAD, Layer		
Unit 4	Orthographic Projections [By Using AutoCAD]	(06 Hrs.)
Reference planes, types of orthographic projections – First angle projections, Third angle projections, methods of obtaining orthographic views by First angle method, Sectional orthographic projections – full section, half section, offset section.		
Unit 5	Isometric Projections [By Using AutoCAD]	(06 Hrs.)
Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, and Sphere.		
Unit 6	Development of Lateral Surfaces (DLS) of Solids. [By Using AutoCAD]	(06 Hrs.)
Applications of DLS, method of development, development of lateral surface of above solids, development of lateral surface of cut solids.		

Term Work

1. Sheet (Half Imperial 4sheets)
2. Dimensioning Practices no. of sheets -2
3. Free Hand sketch no. of sheets-2
4. Four AutoCAD Printout
5. Introduction to AutoCAD commands
6. Orthographic by using AutoCAD
7. Isometric Projections by using AutoCAD
8. Development of Lateral surface by using AutoCAD

Professional Skills Development-II

Designation of Course	Workshop Technology		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 2 Hours/ Week	End Semester Examination	50 Marks	Theory: 02 Practical: 00
Practical:- -- Hours/ Week	Unit Test	-- Marks	
	Assignments	-- Marks	
	Internal Evaluation	-- Marks	
	Term Work	-- Marks	
	Total	50 Marks	02

Course Pre-requisites		
The Students should have knowledge of		
1.	Basic knowledge of the parts of speech in English.	
2.	Vocabulary covered in the previous semester along with basic knowledge of verbs & adverbs.	
3.	Basic awareness of the need of speaking skills within social circle.	
4.	The elements of team dynamics done during the previous semester with proper application.	
5.	Basic awareness of the concepts of feedback, criticism.	
6.	The various common conflicts that may arise at varied situations.	
Course Objectives		
	The Professional Skills Development course aims to augment students overall communication and interpersonal skills by engaging them in group activities and thus aid in helping them to emerge as professionals. The soft skills topics for this semester are intended to develop student's expertise on public speaking skills and to deal positively with criticism and so as to effectively present their personalities.	
Course Outcomes		
The student should be able to		
1.	Speak fluently in English without errors in the sentence construction and hence present themselves as effective English communicators. They will be able to learn 20-25 common errors made in parts of speech and also use 10 modal verbs efficiently during professional communication.	
2.	Differentiate between vocabulary used as adjectives, verbs and adverbs and be able to use the 60-70 words for their daily conversation.	
3.	Overcome the fear of speaking and will be aware of the 3 types of public speaking necessary according to the contemporary requirements. They would be able to deliver a public speech according to the need of the audience and also be aware of positive body language to be manifested during a speech.	
4.	Deal with the deeper parameters of working in teams like team motivation, multicultural team activity and team conflict resolution.	
5.	Analyze themselves relating to their hobbies and strengths and hence set realistic goals in terms of personal and professional growth. They will be able to identify at least 5-7 strengths and a couple of goals to be achieved that will enable their lives to be directed appropriately.	
6.	Apply 5-6 positive strategies to resolve conflicts arising during team work	
Course Contents		
Unit I	Essential Grammar – II	(4 Hrs.)
	<ul style="list-style-type: none"> • Auxiliaries • Importance of auxiliary verb in formal communication. • Group Activities 	

	<ul style="list-style-type: none"> Parts of Speech 	
Unit II	Vocabulary- II	(4 Hrs.)
	<ul style="list-style-type: none"> Vocabulary related to Adjectives Vocabulary related to verbs and adverbs Adjectives, verbs, Adverbial vocabulary –Usage Application of the above taught vocabulary through activities 	
Unit III	Fundamental Communication Skills – II	(4 Hrs.)
	<ul style="list-style-type: none"> Public speaking skills Effective public speaking skills Types of public speaking Overcoming stage fear Do's& Don't's of public speaking Importance of Body language in Public speaking Importance of the audience in Public speaking Activity – Extempore Speaking, Manuscript speech 	
Unit IV	Interpersonal skills-II	(4 Hrs.)
	<ul style="list-style-type: none"> Team Work Team communication. Factors which ensure effective & smooth team communication Team conflict resolution-ways & methods Case studies/activities 	
Unit V	Self-Awareness	(4 Hrs.)
	<ul style="list-style-type: none"> Perceptions, beliefs Analyzing achievements, goals, hobbies Handling criticism Developing positive attitudes 	
Unit VI	Conflict Resolution	(4 Hrs.)
	<ul style="list-style-type: none"> Various conflicts that could be encountered in a work scenario. Causes of conflicts in work scenario. Ways and methods for conflict resolution. Do's and Don'ts for conflict resolution.

PRODUCTION PRACTICE-I

Designation of Course	Production Practice-I		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- -- Hours/ Week	End Semester Examination	-- Marks	Practical: 01
Practical:- 2 Hours/ Week	Unit Test	-- Marks	
	Assignments	-- Marks	
	Internal Evaluation	-- Marks	
	Term Work	50 Marks	
	Total	50 Marks	1

Course Prerequisites:-	Basic knowledge of various machine tools.
Course Outcomes:-	<p>Students should be able to understand</p> <ol style="list-style-type: none"> 1. Understand machine tools, mechanism and accessories used in various production processes 2. Make the job of turning & taper turning operation using lathe 3. Perform Forging and grinding of lathe tool with one knife and other end vee 4. Prepare simple solid pattern involving wood turning 5. Perform Welding using gas/arc welding process 6. Understand Sand Casting process

Course Contents

Each candidate shall be required to complete and submit the following term work:

A. Jobs:

Plain and Taper turning – one job

Forging and grinding of lathe tool with one knife and other end vee – one job

Making a simple solid pattern involving wood turning – one job

Welding (gas or arc) – one job

Sand Molding – one job

B. Journal & Demonstration:

Assignments on machine tools will be in the form of a journal based on demonstrations on machine tools. This should include sketches and relevant descriptions as given below:

1) Block Diagrams (Any Two)

- a) Lathe
- b) Universal milling machine
- c) Radial drilling machine
- d) Cylindrical grinder.

2) Mechanisms (Any Two)

- a) All geared headstock of a center lathe.
- b) Spindle arbor (assembly) drive of milling machine
- c) Crank and slotted lever quick return drive of shaping machine.
- d) Spindle assembly in a drilling machine.

3) Accessories (Any Two)

- a) Taper turning attachment for a center lathe.
- b) Universal dividing head.
- c) Milling cutters.

Rules regarding ATKT, Continuous Assessment and award of Class Standards for Passing

- For all courses, both in UE (University Evaluation) and IA (Internal Assessment) there are constitute separate heads-of-passing (HoP).
 - The student must obtain a minimum grade point of 5.0 (40% marks) at UE as well as at IA.
OR
 - The student failed in IA can also pass in the course provided he/ she obtains minimum of 25% marks in IA, and GPA (Grade Point Average) for the course is at least 6.0 (50% aggregate). The GPA for the course will be calculated only if the student passes in UE.
- The student who fails at UE in a course has to reapply only at UE as a backlog candidate and clear the HoP. Similarly, a student who fails in a course at IA has to reappear only at IA as backlog candidate and clear the HoP.

Rules of ATKT

- A student is allowed to carry backlog of courses prescribed for B. Tech. Sem. I, III, V, VII to B. Tech. Sem. II, IV, VI, VIII respectively.
- A student is allowed to keep term of Sem. III, if he/ she has failed in any number of courses in B. Tech. Sem. I and II.
- A student is allowed to keep term of Sem. V, if he/ she has failed in any number of courses in B. Tech. Sem. III and IV but passed in all courses in Sem. I and II.
- A student is allowed to keep term of Sem. VII, if he/ she has failed in any number of courses in B. Tech. Sem. V and VI but passed in all courses in Sem. III and IV.

Award of Class for the Degree Considering CGPA

A student who has completed the minimum credits specified for the program shall be declared to have passed in the program. The final result will be in terms of letter grade only and is based on the CGPA of all courses studied and passed. The criteria for the award of the honors at the end of the program are as given below:

Range of the CGPA	Final Grade	Performance Descriptor	Equivalent range of marks (%)
$9.50 \leq 10.00$	O	Outstanding	$80 \leq 100$
$9.00 \leq 9.49$	A ⁺	Excellent	$70 \leq 79$
$8.00 \leq 8.99$	A	Very Good	$60 \leq 69$
$7.00 \leq 7.99$	B ⁺	Good	$55 \leq 59$
$6.00 \leq 6.99$	B	Average	$50 \leq 54$
$5.00 \leq 5.99$	C	Satisfactory	$40 \leq 49$
Below 5.00	F	Fail	Below 40

Bharati Vidyapeeth Deemed University
College of Engineering, Pune- 411043
The Structure of the Curriculum: 2014 Course
Choice Based Credit System (CBCS)

B. TECH. MECHANICAL: SEMESTER- III & IV

Bharati Vidyapeeth University
College of Engineering, Pune
Department of Mechanical Engineering

Vision: To provide mechanical engineers capable of dealing with global challenges

Mission: Social transformation through dynamic education

Programme Educational Objectives (PEOs):

Graduates will be able,

- To fulfill need of industry with theoretical and practical knowledge
- To engage in lifelong learning and continued professional development
- To fulfill social responsibilities

Programme Outcomes (POs):

- a. To apply knowledge of mathematics, science and engineering fundamentals for solving engineering problems
- b. To identify the need, plan and conduct experiments, analyze data for improving the mechanical processes
- c. To design and develop mechanical systems considering social and environmental constraints.
- d. To design and develop a complex mechanical system using advanced mathematical and statistical tools and techniques
- e. Use of information technology (IT) tools for prediction and modeling of routine activities to enhance the work performance
- f. To know social responsibilities while doing professional engineering practice.
- g. To become familiar with eco-friendly, sustainable and safe work environment.
- h. To take into account professional ethics while designing engineering systems.
- i. Able to work efficiently as a group leader as well as an individual.
- j. To communicate in written and verbal form with subordinates and supervisors
- k. To apply project and finance management techniques in multidisciplinary environments.
- l. To create interest for higher education and updating the knowledge.

B. TECH. MECHANICAL: SEMESTER- III (2014 Course)

Grand Total - 50

Rules for Conducting Tests

Mode of the test

- In each semester for each subject two tests shall be conducted. The schedule for the same will be declared at the commencement of academic year in the academic calendar.
- Each test shall carry 20 marks.
- University examination pattern has given weightage of 20 marks for the tests.
- To calculate these marks following procedure is followed:
 - i) Average marks obtained in two tests shall be considered as provisional marks obtained by the student in the tests.
 - ii) If the candidate appears only for one test during the semester, to calculate the marks obtained in the tests it will be considered that the candidate has got 0 (zero) marks in other test.
 - iii) The provisional marks obtained by the candidate in class tests should reflect as proportional to theory marks. In cases of disparity of more than 15% it will be scaled down accordingly; these marks will be final marks obtained by the student. No scaling up is permitted.
 - iv) If the candidate is absent for theory examination or fails in theory examination his final marks for tests of that subject will not be declared. After the candidate clears the theory, the provisional marks will be finalized as above.
- Paper pattern for tests
 - i) All questions will be compulsory with weightage as following

Question 1	-	7 marks
Question 2	-	7 marks
Question 3	-	6 Marks
 - ii) There will not be any sub-questions.
- For granting the term it is mandatory to appear for both tests conducted in each semester.
- Roll nos. allotted to students shall be the examination nos. for the tests.

Department of Mechanical Engineering

Syllabus: Semester III

SOLID MECHANICS

Designation of Course	Solid Mechanics		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 04 Hours/ Week	End Semester Examination	60 Marks	Theory:- 04 Practical:- 01
Practical:- 02 Hours/Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work/ Oral	00 Marks	
	Total	100 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Mathematics 2. Engineering Mechanics 3. Engineering Science
Course Outcomes:-	<ol style="list-style-type: none"> 1. Stresses and strains in different materials. 2. Shear force and bending movement of loading elements. 3. Principal stresses and strain. 4. Torsional, bending and axial force on the shaft. 5. Bending stresses and shear stresses in the machine elements. 6. Design of simple machine components.

Course Contents

Unit 1	Simple stresses & strains	(08 Hrs.)
Revision of Concept of stresses & strains (linear, lateral, shear, thermal & volumetric). Hooke's law, Poisson's ratio, Modulus of Elasticity, Modulus of Rigidity, Bulk Modulus. Stress-strain diagrams for ductile & brittle materials. Various strengths of material- Yield strength, Ultimate tensile strength etc, Concept of 3D stress state. Interrelation between elastic constants, Proof stress & True stress & strain. Axial force diagrams, stresses and strains in determinate & indeterminate homogeneous & composite bars under concentrated loads & self-weight. Temperature stresses in simple & composite members. Strain energy due to axial load (gradual, sudden & impact), strain energy due to self-weight.		
Unit 2	Principal stresses & strains	(08 Hrs.)
Normal & shear stresses on any oblique plane. Concept of principal planes derivation of expression for principal stresses & maximum shear stress, position of principal planes & planes of maximum shear, graphical solution using Mohr's circle of stresses, combined effect of axial force, bending moment & torsional moment on circular shafts (solid as well as hollow) Theories of elastic failure: Maximum principal stress theory, maximum shear stress theory, maximum distortion energy theory, maximum strain theory – their applications & limitations.		
Unit 3	Shear Force & Bending Moment Diagrams	(08 Hrs.)
Shear forces & bending moments of determinate beams due to concentrated loads, uniformly distributed loads, uniformly varying loads & couples, relation between SF & BM diagrams for cantilevers, Simply supported beam. Maximum bending movement & positions of points of contra flexure, construction of loading diagrams & BMD from SFD & construction of loading Diagram & SFD from BMD. Slope & deflection of beams - relation between		

BM & slope, slope & deflection of determinate beams, double integration method (Macaulay's method), derivation of formula for slope & deflection for standard cases		
Unit 4	Torsion and Buckling of columns	(08 Hrs.)
Stresses, strain & deformations in determinate shafts of solid & hollow, homogeneous & composite circular cross section subjected to twisting moment, derivation of torsion equation, stresses due to combined torsion, bending & axial force on shafts. Concept of buckling of columns, derivation of Euler's formula for buckling load for column with hinged ends, concept of equivalent length for various end conditions. Limitations of Euler's formula, Rankine's formula, safe load on columns		
Unit 5	Stresses in Machine Elements	(08 Hrs.)
Bending stresses : Theory of simple bending, assumptions, derivation of flexural formula, second moment of area of common cross sections(rectangular, I,T,C) with respective centroidal & parallel axes, bending stress distribution diagrams, moment of resistance & section modulus calculations. Shear stresses : Concept, derivation of shear stress distribution formula, shear stress distribution diagrams for common symmetrical sections, maximum and average shears stresses, shear connection between flange & web		
Unit 6	Design Process	(08 Hrs.)
Machine Design, Traditional design methods, Basic procedure of Machine Design, Forming Design specifications, Design for: 1) functional requirement, 2) customer orientation 3) Safety requirement & 4) Analysis for use. Requisites of design engineer, Design of machine elements, Sources of Design data, Use of Design data book, Use of standards in design, Selection of preferred sizes, Design Synthesis, Creativity in design. Use of internet for gathering information & Consideration of energy requirement, product life cycle & design for environment. Design of Simple Machine parts: Factor of safety, Service factor, Design of simple machine parts - Cotter joint, Knuckle joint and Levers, Eccentric loading , Stresses in curved beams (for circular cross-section only).

Unit Tests

Unit Test-I	Unit-I,II, III
Unit Test-II	Unit-IV, V, VI

FLUID MECHANICS

Designation of Course	Fluid Mechanics		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory:- 03 Practical:- 01
Practical:- 02 Hours/Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	50 Marks	
	Total	150 Marks	04

Course Prerequisites:-	Student should have knowledge of <ol style="list-style-type: none"> 1. Fundamentals of Mechanical engineering. 2. Analysis of forces and moments. 3. Laws of motion, kinetics and kinematics.
Course Outcomes:-	Able to understand- <ol style="list-style-type: none"> 1. Behaviour of fluids. 2. Use of appropriate pressure measuring devices. 3. Application of Bernoulli's energy equation. 4. Difference between laminar and turbulent flow. 5. Calculate losses in the piping system. 6. Dimensional analysis results and boundary layer theory.

Course Contents

Unit 1	Fluid Kinematics:	(06 Hrs.)
Types of flow- steady, unsteady, uniform, non-uniform, laminar, turbulent, One, Two and Three dimensional, compressible, incompressible, rotational, Irrotational. Stream lines, path lines, streak lines, velocity components, convective and local acceleration, velocity potential, stream function, continuity equation in Cartesian co-ordinates, flow net.		
Unit 2	Fluid Statics:	(06 Hrs.)
H Hydrostatic law, Pascal's law, Pressure at a point, Total Pressure, Centre of pressure, Liquid pressure on a plane(Horizontal, Vertical, Inclined) & Curved surfaces, Archimedes Principle, Buoyancy and stability of floating and submerged bodies, Metacentric height.		
Unit 3	Fluid Dynamics:	(06 Hrs.)
Introduction to Navier-Stoke's Equation, Euler equation of motion along a stream line, Bernoulli's equation, application of Bernoulli's equation to Pitot tube, Venturimeter, Orifices, Orifice meter, Triangular Notch & Rectangular Notch .(Without considering Velocity of Approach)		
Unit 4	Laminar Flow & Flow around Immersed Bodies:	(06 Hrs.)
Definition, relation between pressure and shear stresses, laminar flow through round pipe, fixed parallel plates. Introduction to CFD Methodology (Elementary Treatment).Lift and Drag, Classification of Drag, Flow around circular cylinder and Aerofoil, Development of lift on Aerofoil.		
Unit 5	Flow Through Pipes:	(06 Hrs.)
TEL, HGL , Energy losses through pipe, Darcy-Weisbach equation, Moody diagram, Minor losses in pipes, pipes in series and parallel, Syphon, Transmission of power, Water hammer in pipes ,		
Unit 6	Turbulent Flow, Boundary Layer & Dimensional Analysis:	(06 Hrs.)

Turbulent Flow, Velocity Distribution, Development of Boundary Layer on a flat plate, Laminar and Turbulent Boundary Layers, Laminar sub layer, Separation of Boundary Layer and Methods of Controlling. Dimensions of physical quantities, dimensional homogeneity, Buckingham pi Theorem, Important dimensionless numbers, Model analysis (Reynolds, Froude and Mach).

Unit Tests-

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit- IV, V, VI

ENGINEERING THERMODYNAMICS

Designation of Course	Engineering Thermodynamics		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory:03 Practicals:01
Practical: 02 Hours/Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	50 Marks	
	Total	150 Marks	04

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Knowledge of basic concept of thermodynamics 2. Knowledge of basic gas laws 3. Knowledge of pumps and compressors
Course Outcomes:-	<p>Able to understand-</p> <ol style="list-style-type: none"> 1. The concepts of Carnot theorem to applications such as heat pump and refrigerator. 2. The important phenomenon of heat and work. 3. Various performance parameters and their estimations in respect to trials on Boiler. 4. The knowledge about the phenomenon of steam generation and properties of steam. 5. Basic concepts of thermodynamics and their application to energy conversion device like Compressors. 6. Knowledge of fuels and combustion and availability.

Course Contents

Unit 1	Second Law of Thermodynamic and Entropy:	(06 Hrs.)
<p>Second Law of Thermodynamics: Limitations of first law of thermodynamics, heat engine, refrigerator and heat pump, Kelvin-Planck's statement & Clausius statement, equivalence of Kelvin-Planck's and Clausius statements, perpetual motion machine of second kind, Carnot cycle & Carnot heat engine. Entropy: Entropy as a property, second law analysis for entropy, Clausius inequality, principle of increase of entropy, irreversibility</p>		
Unit 2	Steam Generators:	(06 Hrs.)
<p>Classification, constructional details of process and power boiler, boiler mountings and accessories, equivalent evaporation, boiler efficiency, energy balance, boiler controls, boiler draught.</p>		
Unit 3	Ideal Gas and Properties of Steam and Vapour Power Cycle:	(06 Hrs.)
<p>Ideal Gas definition, Gas Laws: Boyle's law, Charle's law, Avagadro's Law, Equation of State, Specific Gas constant and Universal Gas constant, Ideal gas processes- on P-V and T-S diagrams, Formation of steam, Phase changes, Properties of steam, Use of Steam Tables, Study of P-V, T-S and Mollier diagram for steam., Non flow and steady flow vapor processes, work transfer & heat transfer, use of P-V, T-S, H-S diagrams for steam, determination of dryness fraction, and study of calorimeters. Vapour Power Cycle: Carnot cycle using steam, ideal Rankine cycle, calculation of thermal efficiency, specific steam consumption, work ratio, comparison of Carnot and Rankine cycle, and effect of superheat.</p>		
Unit 4	Single Stage and Multi stage Reciprocating Air Compressor:	(06 Hrs.)

Uses of compressed air, classification, constructional details of single stage compressor, computation of work done, isothermal work done, isothermal efficiency, effect of clearance, volumetric efficiency, FAD, theoretical and actual indicator diagrams, method of improving volumetric efficiency. Need of multi staging, multi stage compressor, work done, volumetric efficiency, condition for maximum efficiency, intercooling, actual indicator diagram.		
Unit 5	Rotary Compressor:	(06 Hrs.)
Introduction, classification and working principles of different types of compressors, comparison between reciprocating and rotary compressors, positive displacement and rotodynamic compressors, static and total head, work done efficiencies, surging, and choking, stalling, characteristics curves for rotodynamic compressors. Selection of compressors for various applications.		
Unit 6	Fuels and Combustion and Availability:	(06 Hrs.)
Mass fraction, mole fraction, combustion equation, theoretical air , excess and deficient air, stoichiometric and actual air to fuel ratio, analysis of products of combustion, gravimetric and volumetric analysis and their conversions, method to determine flue gas analysis - CO, CO ₂ , O ₂ , HC, NO _x , smoke. Availability: High and low grade energy, available and unavailable energy, loss of available energy due to heat transfer through a finite temperature difference.		

Term work

1. Determination of calorific value using bomb calorimeter.
2. Demonstration of exhaust gas analysis by using any commercially available test rig.
3. Test on reciprocating air compressor to determine volumetric efficiency, isothermal efficiency and FAD.
4. Determination of dryness fraction using any commercial available test rig.
5. Study of boiler mounting and accessories
6. Study of package boiler / modern boiler
7. Report on visit to any process industry, which uses boiler.
8. Performance test on rotary air compressor/ blower.
9. Trial on boiler to determine boiler efficiency, equivalent evaporation and energy balance sheet.
10. Study of rotary type positive displacement compressor.

Unit Test-I	Unit-I,II ,III
Unit Test-II	Unit-IV,V, VI

ENGINEERING MATHEMATICS –III

Designation of Course	Engineering Mathematics -III		
Teaching Scheme:	Examination Scheme:	Credits Allotted	
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory : 03
Practical:- -- Hours/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	--- Marks	
	Total	100 Marks	03

Course Prerequisites:-	Students should have basic knowledge of: <ol style="list-style-type: none"> 1. Differential calculus 2. Integral calculus 3. Basics of statistics 4. Basics of Probability
Course Outcomes:-	Able to understand- <ol style="list-style-type: none"> 1. Form mathematical modeling of systems using differential equations and ability to solve linear differential equations with constant coefficient. 2. Apply theorems to compute the Laplace transform, inverse Laplace transforms. Form mathematical modeling of systems using PDE. 3. Apply statistical methods to numerical data. 4. Calculate Correlation and Regression coefficient. 5. Use basics of probability to solve problems.

Course Contents

Unit 1	Linear Differential Equations (LDE)	(06 Hrs.)
LDE with constant coefficients, Method of variation of parameters, Homogeneous Equations, Cauchy's and Legendre's DE. Simultaneous & Symmetric Simultaneous DE. Application to mechanical systems		
Unit 2	Laplace Transform (LT)	(06 Hrs.)
LT of standard functions, properties and theorems, Inverse LT, method of finding Inverse LT , Application of LT to solve LDE. Fourier Transform (FT): Fourier Integral theorem, Fourier transform Fourier Sine & Cosine transform, Inverse Fourier Transform		
Unit 3	Partial Differential Equations (PDE)	(06 Hrs.)
Basic concepts, modeling: Vibrating String, Wave equation. Method of separation of variables, Use of Fourier series, Heat equation: one and two dimensional heat flow equations, Solution by Fourier Transforms, modeling Membrane two dimensional wave equation		
Unit 4	Measures of central value	(06 Hrs.)
Arithmetic mean, median and mode, geometric mean and harmonic mean. Measure of central tendency, dispersion, mean deviation, standard deviation, skewness, Moments and qurtosis.		
Unit 5	Correlation and Regression	(06 Hrs.)
Significance of the study of correlation, types of correlation, coefficient of correlation, difference between correlation and regression. Regression equations, standard error of estimate.		

Unit 6	Probability and Distribution	(06 Hrs.)
Basics of probability, conditional probability, bayes theorem, mathematical expectations, random variable and probability distribution, Poisson, normal distribution. Testing of hypothesis- Z test, chi square test and goodness of fit, F test.		

Term work-

1. Linear Differential Equations
2. Transforms
3. Partial Differential Equations
4. Measures of central value
5. Correlation and Regression
6. Probability and Distribution

Assignments

Assignment based on each unit

Text Books

1. Advanced Engineering Mathematics by Peter V. O'Neil (Cengage Learning).
2. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.).

COMPUTER PROGRAMMING & SIMULATION

Designation of Course	Computer Programming & Simulation		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory : 03 Practical:-01
Practical:- 02 Hours/ Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	50 Marks	
	Total	150 Marks	04

Course Prerequisites:-	Basic knowledge of statistics and probability MATLAB basics
Course Outcomes:-	Able to understand- <ol style="list-style-type: none"> 1. Concept of model 2. Simulation basics 3. Probability concepts 4. Simulation of mechanical engineering problems 5. Discrete Simulation 6. Simulation Experimentation.

Course Contents

Unit 1		(06 Hrs.)
	Physical model, Mathematical model, Types of mathematical model, Dynamic Versus Static Models, Continuous-Time Versus Discrete-Time, Dynamic Models, Quantitative Versus Qualitative Models, Mechanical system modeling examples.	
Unit 2		(06 Hrs.)
	Simulation Basics, When Simulation Is the Appropriate Tool, when Simulation Is Not Appropriate, Advantages and Disadvantages of Simulation, Areas of Application, Steps in a Simulation Study Simulation and analytical methods, Basic nature of simulation, The simulation process, Types of system simulation, Generation of random numbers .Monte Carlo Simulation.	
Unit 3		(06 Hrs.)
	Basic Probability Concepts, Discrete Random Variable, Expected Value and Variance of a Discrete Random Variable, Measure of Probability Function, Continuous Random Variable, Exponential Distribution, Mean and Variance of Continuous Distribution, Normal Distribution.	
Unit 4		(06 Hrs.)
	Introduction, Simulation of Pure pursuit problem, exponential growth model, simulation of water reservoir system, Trajectory simulation, suspension system, simulation of pendulum.	
Unit 5		(06 Hrs.)
	Discrete Simulation, Continuous System Simulation. Simulation of Queuing Systems, Inventory Control Models	
Unit 6		(06 Hrs.)
	Introduction, development of simulation experiments, principles of verification, validation and accreditation, Simulation experimentation, classical experimental design, validation of simulation experiments, evaluation of simulation experiments.	

Term work

Following assignment using MATLAB

1. Creating a One-Dimensional Array (Row / Column Vector) Creating a Two-Dimensional Array
2. Performing matrix manipulations – Concatenating, Indexing, and Sorting Normal Distribution
3. Simulation of water reservoir system
4. Trajectory simulation
5. Suspension system
6. Simulation of pendulum
7. Simulation of any one Discrete Simulation, Continuous System Simulation, Simulation of Queuing Systems, Inventory Control Models.

Unit Tests-

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

PROFESSIONAL SKILLS DEVELOPMENT-III

Designation of Course	Workshop Technology		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 4 Hours/ Week	End Semester Examination	100 Marks	Theory: 04 Practical: 00
Practical:- -- Hours/ Week	Unit Test	-- Marks	
	Assignments	-- Marks	
	Internal Evaluation	-- Marks	
	Term Work	-- Marks	
	Total	100 Marks	04

Course Pre-requisites	
The Students should have knowledge of	
1.	Basic math's and reasoning, the rules of English and comprehensive ability
2.	Basic awareness of phrasal verbs used in spoken communication and knowledge of verbs and other words used in professional life.
3.	Basic writing techniques taught to them in the first semester.
4.	The strengths and achievements analyzed during self-awareness session taught in the second semester. They should also be able to identify their long term and short term goals.
5.	Basic knowledge and idea about leaders and leadership qualities.
6.	Basic awareness of PowerPoint presentation and paper presentation and also should be fluent in English.
Course Objectives	
The Professional Skills Development course which is a combination of aptitude and soft skills aims to augment students to face the campus recruitment test and train them on applying short techniques/ tricks to solve questions of Maths, reasoning and English in very less amount of time. The English and soft skills section focuses on the higher aspects of soft skills such as grooming them on leadership, presentation, business communication which would enable them to project themselves as professionals in the corporate sector and/or otherwise.	
Course Outcomes	
The student should be able to	
1.	Solve the aptitude test in the recruitment exam and competitive exam by applying short techniques and solve the question in less amount of time. They would be able to handle around 15-20 topics of math's and reasoning and 50 rules of parts of speech.
2.	Present themselves with finesse by using around 25-20 idioms and phrases relevant to corporate communication as well as spoken English. They will also learn 50-60 words and other words that are specifically used in meetings, group discussions, presentation and other corporate events.
3.	Process their ideas and thoughts (verbal communication) into written communication in an effective, coherent and logical manner within a stipulated time and specific word limit of 500-750 words for essay writing along with limited words for technical writing and report writing.
4.	Identify themselves in terms of their strengths. Weaknesses and opportunities available to them for the career growth. They would also learn to overcome their weakness and convert into strengths and also make utilization of the opportunity vis-à-vis their strength. They would also learn to set realistic short/long term goals relevant to them through the SMART goal mnemonic.
5.	Differentiate between the different types of leaders and groom themselves to be potential leaders. Based on their qualities and strengths they would learn 5 types of leadership styles and mould themselves according to that. They would also learn 10-15 leadership traits.

6.	Prepare PowerPoint presentation and paper presentation effectively by focusing on body language, tone of communication and audiences' needs. They would also learn to handle the questions in an effective and smart way.
Course Contents	
Unit I	Aptitude (Maths, Logical Reasoning, English) (18 Hours)
	<ul style="list-style-type: none"> • Maths <ul style="list-style-type: none"> ▪ Enjoy maths + Number system ▪ Number system ▪ Percentage, profit and loss • Logical Reasoning <ul style="list-style-type: none"> ▪ Coding, Decoding, Number series, ▪ Blood relation Directions, cubes & dices • English <ul style="list-style-type: none"> ▪ Vocabulary-1 ▪ Confusing words-1(Homonyms)
Unit II	Essential Grammar - III (6 Hours)
	<ul style="list-style-type: none"> • Idioms and phrases • Usage of Idioms & phrases in daily conversation • Activities • Academic word list- Words to be used in business communication
Unit III	Written Communication- II (4 Hours)
	<ul style="list-style-type: none"> • Essay writing • Mnemonics to develop ideas and write essays • Structure of essays • Technical writing • Report writing
Unit IV	SWOT Analysis (6 Hours)
	<ul style="list-style-type: none"> • Introduction to SWOT • Importance to SWOT • Individual & Organizational SWOT Analysis • Identifying strengths, weaknesses, threats & opportunities • Short term goals& Long term goals, Career planning
Unit V	Interpersonal Skills - III (4 Hours)
	<ul style="list-style-type: none"> • Introduction to leadership skills • Importance of leadership skills • Types of leadership skills • Are leaders born or made?
Unit VI	Presentation Skills (4 Hours)
	<ul style="list-style-type: none"> • Introduction to PowerPoint presentation • Structure & flow of presentation • Importance of body language • Presentation by students-evaluation& feedback by trainers
Text Books	
1. APAART: Verbal Ability	
2. APAART: Logical Reasoning	
3. APAART: Quantitative Aptitude	
4. APAART: Speak Well 1 (English Language and Communication)	

5. APAART: Speak Well 2 (Soft Skills)

1. APAART: Verbal Ability

PRODUCTION PRACTICE-II

Designation of Course	Production Practice-II		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- -- Hours/ Week	End Semester Examination	-- Marks	Practical:- 01
	Unit Test	-- Marks	
	Assignments	-- Marks	
	Internal Evaluation	-- Marks	
Practical:- 4 Hours/ Week	Term Work	50 Marks	
	Total	50 Marks	01

Course Prerequisites:-	Should have knowledge Production Practice-I
Course Outcomes:-	Students should able to understand <ol style="list-style-type: none"> 1) Welding Techniques, 2) Pattern Making 3) Mould Making

Course Contents

<p>Each candidate shall be required to complete and submit the following jobs:</p> <ol style="list-style-type: none"> 1. Welding-TIG / MIG OR Arc Welding (One Job) 2. Pattern making: <ul style="list-style-type: none"> A solid pattern consisting of wood turning or a core box. (One Job) It should follow the colour code in pattern making 3. Sand Testing.(Any Two) 3. Sand Moulding (One Job) <p>Note Practical examination of 3 hours duration based on above term work will be Conducted at the end of semester.</p>
--

Department of Mechanical Engineering

Syllabus: Semester IV

MECHANISMS OF MACHINES

Designation of Course	Mechanisms OF Machines		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 04 Hours/ Week	End Semester Examination	60 Marks	Theory: 04 Practical: 01
Practical:- 02 Hours/Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work/ Oral	50 Marks	
	Total	150 Marks	05

Course Prerequisites:-	<ol style="list-style-type: none"> 1. Engineering Mathematics 2. Engineering Mechanics
Course Outcomes:-	Learners can - Define various components of mechanisms. <ol style="list-style-type: none"> 1. Construct/Compose mechanisms to provide specific motion. 2. Draw velocity and acceleration diagrams of various mechanisms 3. Carry out force analysis of engine mechanism. 4. Synthesize the mechanism. 5. Analyze engine mechanism for static and dynamic force analysis.

Course Contents

Unit 1	Basic Kinematics:	(08 Hrs.)
	Kinematic link, Types of links, Kinematic pair, Types of constrained motions, Types of Kinematic pairs, Kinematic chain, Mechanism, Machine, Degree of freedom (Mobility), Kutzbach criterion, Grubler's criterion. Four bar chain and its inversions, Grashoff's law, Slider crank chain and its inversions, Double slider crank chain and its inversions. Pantograph, Steering gear mechanisms: Condition for correct steering, Davis steering gear mechanism, Ackermann steering gear mechanism.	
Unit 2	Velocity and Acceleration Analysis of Mechanisms: Graphical Methods-I	(08 Hrs.)
	Relative velocity method: Relative velocity of a point on a link, Angular velocity of a link, Sliding velocity, Velocity polygons for simple mechanisms. Relative acceleration method: Relative acceleration of a point on a link, Angular acceleration of a link, Acceleration polygons for simple mechanisms. Instantaneous center of rotation (ICR) method: Definition of ICR, Types of ICRs, Methods of locating ICRs, Kennedy's Theorem, Body and space centrode.	
Unit 3	Velocity and Acceleration Analysis of Mechanisms: Graphical Methods-II	(08 Hrs.)
	Velocity and acceleration diagrams for the mechanisms involving Coriolis component of acceleration. Klein's construction	
Unit 4	Kinematic Analysis of Mechanisms : Analytical Methods	(08 Hrs.)
	Analytical method for displacement, velocity and acceleration analysis of slider cranks mechanism. Position analysis of links with vector and complex algebra methods, Loop closure equation, Chace solution, Velocity and acceleration analysis of four bar and slider crank mechanisms using vector and complex algebra methods. Hooke's joint, Double Hooke's joint.	

Unit 5	Introduction to Synthesis of Linkages	(08 Hrs.)
Steps in synthesis process: Type, number and dimensional synthesis. Tasks of Kinematic synthesis: Path, function and motion generation (Body guidance). Precision Positions, Chebychev spacing, Mechanical and structural errors, Branch defect and order defect, Crank Rocker mechanisms. Graphical synthesis: Two and three position synthesis using relative pole method and inversion method for single slider crank and four bar mechanism, three position motion synthesis of four bar Mechanism. Analytical synthesis: Derivation of Freudenstein's equation, three position function generation using Freudenstein's equation.		
Unit 6	Static and Dynamic Force Analysis	(08 Hrs.)
Theory and analysis of Compound Pendulum, Concept of equivalent length of simple pendulum, bifilar suspension, Trifilar suspension. Dynamics of reciprocating engines: Two mass statically and dynamically equivalent system, correction couple, static and dynamic force analysis of reciprocating engine mechanism (analytical method only), Crank shaft torque, Introduction to T- θ diagram.		

Term work

Any two of the following experiments shall be performed

1. To determine the mass moment of inertia of a connecting rod using a compound pendulum method.
2. To determine the mass moment of inertia of a flat bar using bifilar suspension method.
3. To determine the angular displacements of input and output shafts of single Hooke's joint for different shaft angles and verification of the results using computer programme.

Drawing Assignments (4 sheets of ½ imperial size)

1. To study and draw (any four) mechanisms for practical applications such as: Straight line mechanisms like Peaucellier Mechanism, Hart's Mechanism, Watt's Mechanism and Grasshopper Mechanism etc., for various link positions.
2. Two problems on velocity and acceleration analysis using Graphical methods i.e., polygons or ICR (Based on Unit 2).
3. Two problems on velocity and acceleration analysis using Graphical methods i.e., polygons involving Coriolis component or Klein's construction (Based on Unit 3).
4. Two problems based on graphical three position function generation, using either relative pole method or inversion method.

Assignments

The following two assignments shall be completed and record to be submitted in the form of journal.

1. Computer programming for velocity and acceleration analysis of slider cranks mechanism.
2. One problem on velocity and acceleration analysis using:
3. Vector algebra and Complex algebra and comparison of results

Unit Tests-

Unit Test-I	Unit-I,II, III
Unit Test-II	Unit-IV, V, VI

MANUFACTURING PROCESSES

Designation of Course	Manufacturing Processes		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60Marks	Theory: 03
	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	-- Marks	
	Total	100 Marks	03

Course Prerequisites:-	1.Basic knowledge of manufacturing Processes 2.Basic Knowledge of Joining and Castings 3.Basic knowledge of Materials
Course Outcomes:-	1. Understand the pattern, mould, and casting and choose the best casting process for a specific product. 2.Understand the different Hot and Cold working process 3. Choose the proper process for different joining cases. 4.Perform different operations on turning and boring machines 5. Understand and Perform different operations on the drilling and milling machines. 6.Specify and select suitable grinding process for required application

Course Contents

Unit 1	Expendable mould and permanent mould casting processes:	(08 Hrs.)
Sand casting, Types of pattern materials, pattern making allowances, core prints, Moulding sand- properties and testing, Hand and machine moulding, core, core making melting and pouring, Melting furnaces- Cupola, fuel fired, electric arc, Induction furnaces, Defects in casting, lost foam process, Shell moulding, Investment casting. Die casting low pressure permeant mould castings hot and cold chamber processes, Centrifugal casting, Semi-centrifugal casting. Centrifuging, Continuous casting		
Unit 2	Hot working processes, Cold working processes	(08 Hrs.)
A) Hot working processes: Principle, rolling, forging - drops, press, upset. Rolling, forging- extrusion, drawing, spinning, effect of hot working. B) Cold working processes Cold rolling, swaging, forging extrusion- forward backward impact. Roll forging, tube drawing, wire drawing, spinning, shot peening, high energy rate forming, sheet metal, working- types of press, drives, different operations, and types of dies.		
Unit 3	Joining process:	(08 Hrs.)
a) welding process- i) Arc welding – theory SMAW, GTAW, GMAW, FCAW, Submerged arc welding stud welding. ii) Resistance welding- Theory, spot, seam, projection welding processes. iii) Gas welding iv) Friction welding, ultrasonic welding, thermit welding, electron beam and laser welding.		

b) Use of adhesives for joining.		
Classification of adhesives, types of adhesives and their applications, surface preparation and various joints		
Unit 4	Turning , boring related process	(08 Hrs.)
Introduction, function, types, construction accessories operations, thread cutting, single and multi-start thread cutting, different tools, tool materials, Tool Geometry, concept of speed, feed, depth of cut, Introduction to boring machines general arrangement and nature of work done.		
Unit 5	Drilling ,milling machines	(08 Hrs.)
A) Drilling :		
Fundamentals of drilling process, twist drill geometry, tool holders, Types of drilling machines, drilling operations. Types of drills, reaming process.		
B) milling machines:		
Fundamentals of milling process, cutters-types and geometry, Operations performed on milling machines. Dividing head, methods of indexing. Gear train calculations for helical and cam milling		
Unit 6	Abrasive machining processes, Plastics & Plastic Moulding	(08 Hrs.)
A) Abrasive machining processes:		
Abrasive machining, abrasives -types, size and geometry, Grinding, grinding wheels, wheel marking, wheel selection. Wheel mounting. Types of grinding machines, Grinding faults, Honing, lapping, super finishing, buffing, burnishing process.		
B) Plastics & Plastic Moulding:		
Moulding characteristics of plastic, Moulding process- compression, transfer, and injection blow moulding. Mould design- Materials and construction, bulk factor, shrinkage, moulding parameters, moulding machines, extruders

Unit Tests-

Unit Test-I	Unit- I, II, III
Unit Test-II	Unit- IV, V, VI

MATERIAL SCIENCE

Designation of Course	Material Science		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory:03 Practical:01
Practical:- 02 Hours/Week	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	50 Marks	
	Total	150 Marks	04

Course Prerequisites:-	<ol style="list-style-type: none"> 1.Knowledge of basic concept of Physics and chemistry 2. Basic information of engineering materials. 3. Basic knowledge of manufacturing processes.
Course Outcomes:-	<ol style="list-style-type: none"> 1. basics of crystal structure, Mechanism of plastic deformation and Annealing and re- crystallization 2.how to measure different types of mechanical properties 3. Use of equilibrium diagrams in selections of alloys for different applications. 4.details about steels and cast irons its properties and applications 5.how to select nonferrous materials for different components 6.basics of corrosion and Prevention of corrosion by different methods

Course Contents

Unit 1	Study of Engineering materials and Plastic Deformation:	(08 Hrs.)
classification of Engineering materials , Introduction to Nonmetallic materials, Study of crystal structure, Indexing of planes and directions, Imperfections in crystals, Mechanism of plastic deformation, Polycrystalline metals, , Work Hardening ,Cold and hot working, Annealing and re -crystallization.		
Unit 2	Mechanical Testing of Metals:	(08 Hrs.)
Study of destructive testing, Tensile test , Engineering stress and true stress strain, Numerical based on Evolution of properties, Hardness testing such as Brinell, Rockwell, Vickers and Micro hardness test, Impact test, Fatigue test, Creep test, Cupping test, Non Destructive testing such as Liquid dye penetrate test, Magnaflux test, Eddy current test , Ultrasonic testing and Radiography testing		
Unit 3	Study of Equilibrium Diagrams	(08 Hrs.)
Related terms and their definitions, Hume Ruther’s rule of solid solubility, Allotropy and polymorphism, Solidification, Dendritic growth, Cooling curves, Plotting of Equilibrium diagrams, Lever rule, Coring, Eutectic system, Partial eutectic and eutectoid system, Non Equilibrium cooling and its effects		
Unit 4	Study of Steel and Cast Irons.	(08 Hrs.)
Production of steel and cast Irons, Allotropy of Iron, Iron and Iron Carbide Equilibrium Diagram, Classification of Steels, Specifications of steels, Plain Carbon steel, Applications and microstructure of steels, Study of cast iron, Classification and applications of cast irons, Properties and manufacturing methods, Effect of alloying elements, Alloy cast irons etc.		
Unit 5	Study of Non Ferrous Materials	(08 Hrs.)
Introduction, Copper and it’s alloy, Alpha and alpha beta brasses, Zinc Equivalent , Copper Nickel alloy, Bronzes,		

Aluminum and its alloy, Precipitation and age hardening, Dispersion strengthening, Nickel and its alloy, Metals at High and Low Temperature, Bearing Materials etc.		
Unit 6	Corrosion and Prevention:	(08 Hrs.)
Introduction, Types of corrosion, Oxide film growth laws, Action of hydrogen, Polarization, Stress corrosion, Season Cracking, Prevention of corrosion, Design of component, Modification of environment, Cathodic Protection, Deposition and coating, Ion Implantation, PVD, CVD, Powder coating etc.		

Term work

List of Experiments: (Any Eight)

1. Tensile test to determine strength and other mechanical properties.
2. Hardness test Brinell and Vickers.
3. Rockwell and Poldi hardness test.
4. Study of Microstructure of plain carbon steel.
5. Study of Microstructure of cast irons.
6. Magnetic Particle test.
7. Liquid penetrate test.
8. Ultrasonic Test.
9. Eddy Current test
10. Visual inspection of casting and welded components.
11. Study of nonferrous material and alloys.

Practical Examinations:

Term work and Practical Examinations will be based on above syllabus.

Assignments

1. Density calculations on crystal structure and miller indices for crystal structure.
2. Draw different types of curves such as, Tensile stress strain, S N curves, Creep curves, brittle transient temperature curves.
3. Draw the equilibrium diagram from given data. Find out the different types of phases.
4. Draw the Fe-Fe₃C equilibrium diagram and microstructure of steels specimens.
5. Draw the microstructures of brasses and bronzes. Give list of some applications of non-ferrous materials.
6. Collect different type of old components and study the corrosion on it also study the prevention processes also.

Text Books

1. "Material Science and Physical Metallurgy", Dr. V. D Kodgere, Everest Publication, Pune.
2. "Physical Metallurgy", S H Avner, McGraw Hill Publication.
3. "Material science and metallurgy", O P Khanna, Khanna Publication, Delhi.
4. "Material Science and Engineering", R K Rajput S K Kataria and Sons Publication, Delhi.

Unit Tests-

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

Turbo Machinery

Designation of Course	Turbo Machinery		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week	End Semester Examination	60 Marks	Theory: 03
	Unit Test	20 Marks	
	Assignments	10 Marks	
	Internal Evaluation	10 Marks	
	Term Work / Oral	-- Marks	
	Total	100 Marks	03

Course Prerequisites:-	The Students should have 1.Basic knowledge of pumps 2.Basic knowledge of Turbines 3.Knowledge of energy conversion devices
Course Outcomes:-	Able to understand- 1 Introduction of Turbo Machinery and Impulse Water Turbines 2 Reaction Water Turbines 3 Steam Turbines 4 Centrifugal Pumps 5 Centrifugal Compressor 6 Axial Compressor

Course Contents

Unit 1	Introduction of Turbo Machinery	(08 Hrs.)
Impulse-momentum principle ,fixed and moving flat plates, curved vanes , with jet striking at the centre of vane and jet striking tangentially on to the vane, Impact of jet on hinged plates ,Impact of jets on series of flat plates and vanes, water wheels, velocity triangles and their analysis, work done and efficiency calculations. Impulse Water Turbines: Main components and constructional features of Pelton wheel, Concept of centrifugal head, general energy equation for turbine, Velocity diagrams and analysis, Important non-dimensional parameters such as speed ratio, jet ratio, flow ratio, Condition for maximum hydraulic efficiency.		
Unit 2	Reaction Water Turbines	(08 Hrs.)
Classifications, Francis, Propeller, Kaplan Turbines, construction features, velocity diagrams and analysis, DOR, draft tubes- types and analysis, cavitations causes and remedies, specific speed, performance characteristics and governing of reaction turbines, selection of turbines.		
Unit 3	Steam Turbines	(08 Hrs.)
Steam nozzles: types and applications, Equation for velocity and mass flow rate [Elementary treatment only] Steam Turbines: Classifications (Axial and Radial), construction details, compounding of steam turbines, velocity diagrams and analysis of Impulse and reaction turbines (single & multi stage), governing, performance characteristics, selection of turbines.		
Unit 4	Centrifugal Pumps	(08 Hrs.)
Classification, components of centrifugal pump, various terms associated with centrifugal pump, various heads, velocity triangle and their analysis, effect of outlet blade angle, capitation, NPSH, Thomas Cavitations factor,		

priming of pumps, installation, specific speed, Performance characteristics of centrifugal pump, Axial thrust, maintenance, trouble and remedies, series and parallel operation of pumps, system resistance curve, water hammer problem in pumping system, selection of pumps.		
Unit 5	Centrifugal Compressor	(08 Hrs.)
Classification of rotodynamic compressors, blowers, fans. Centrifugal compressor: Construction, flow process on T-S Diagram, velocity diagram and Euler's work, slip factor and its effect on work input, actual work input, dimension parameters, pre-whirl losses, surging, choking, stalling characteristics		
Unit 6	Axial Compressor	(08 Hrs.)
Construction, stage velocity triangles and its analysis, enthalpy entropy diagram, dimensionless parameters, flow through the blade rows, pressure rise across the stage, stage losses and efficiencies, performance characteristics		

Term Work

1. Study and trial on a Pelton wheel and plotting of main / operating characteristics.
2. Study and trial on a Francis turbine and plotting of main / operating characteristics.
3. Study and trial on a Kaplan turbine and plotting of main / operating characteristics
4. Study and trial on a Centrifugal pump and plotting of operating / and variable speed characteristics.
5. Study of different types of nozzles
6. Study of axial flow compressors/ centrifugal air blower
7. Study of multi-staging of steam turbines
8. Trial on centrifugal air compressor
9. Design of a complete pumping system installation using standard tables, charts supplied by pump manufacturers.
10. Visit to Hydroelectric power stations and writing a report based on the visit.
11. Visit to water pumping station and writing a report based on visit.

Assignments

Assignments Six Assignments based on above syllabus

Text Books

- 1 P. N. Modi and Dr. S. M. Seth, "Hydraulics and Fluid Mechanics", Standard Book House, New Delhi.
- 2 R. K. Rajput, "Hydraulic Machines", S.Chand Publishers, New Delhi.
- 3 Turbines, Compressors & Fans, S.M. Yahya, Tata-McGraw Hill.
- 4 Turbomachines, B. U. Pai, Wiley India.
- 5 Fluid Mechanics & Hydraulic Machines S.C. Gupta 1e Pearson Education.
- 6 Thermal Turbo machines, Dr. Onkar Singh, Wiley India.
- 7 Fluid Mechanics and Hydraulic Machines by R.K.Bansal.
- 8 Basic concepts in Turbo machinery by Grant Ingram.

Unit Tests-

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-IV, V, VI

NUMERICAL METHODS AND OPTIMIZATION TECHNIQUES

Designation of Course		Numerical Methods and Optimization Techniques		
Teaching Scheme:		Examination Scheme:		Credits Allotted
Theory:- 03 Hours/ Week		End Semester Examination	60 Marks	Theory: 03 Practical:01 Tutorial:01
Practical:- 02 Hours/ Week		Unit Test	20 Marks	
		Assignments	10 Marks	
		Internal Evaluation	10 Marks	
Tutorials:- 01 Hours/ Week		Term Work/ Oral	50 Marks	
		Total	150 Marks	05

Course Prerequisites:-	Students should have basic knowledge of: <ol style="list-style-type: none"> 1. Basics of statistics 2. Basics of Probability
Course Outcomes:-	Able to understand- <ol style="list-style-type: none"> 1. Form mathematical modeling of systems using differential equations 2. Ability to solve linear differential equations with constant coefficient. 3. Apply statistical methods to numerical data. 4. Calculate Correlation and Regression coefficient. 5. Able to do optimization of engineering problems. 6. Able to complete Multivariate Variable Optimization for any problem

Course Contents

Unit 1	Roots of Equations:	(08 Hrs.)
Significant figures, Accuracy and Precision, Error definition, Round-Off errors, Truncation error, Total numerical error. Bracketing methods-Bisection and False position method. Open methods, Newton Raphson method		
Unit 2	Linear Algebraic Equation:	(08 Hrs.)
Navie Gauss elimination, pitfalls of Gauss Elimination, techniques of improving solutions, complex numbers.		
Unit 3	Curve Fitting and Interpolation:	(08 Hrs.)
Least-Square Regression-Linear regression,. Interpolation-Newton's divided difference interpolating polynomial. Lagrange's interpolating polynomial		
Unit 4	Numerical differentiation and Integration:	(08 Hrs.)
Trapezoidal rule, Simson's rules, integration with unequal segment, multiple integral, derivatives of unequally spaced data. Engineering Applications. Ordinary Differential Equations: Euler's method, improvement of Euler's method, Runge-Kutta method, system of equations		
Unit 5	Single Variable Optimization	(08 Hrs.)
Optimum problem formulation, Engineering optimization problem, Optimality Criteria, Bracketing methods, region-Elimination method, Point Estimate Method, Gradient Based method		
Unit 6	Multivariate Variable Optimization	(08 Hrs.)
Optimality criteria, Unidirectional search, Direct search method- Evolutionary optimization, simplex search, Gradient Based Methods- Steepest Descent method, Newton's method.		

Term work

Minimum six program on from each unit using Matlab.

Text Books/ Reference Books

1. Optimization for Engineering Design: Algorithms and Examples By Kalyanmoy Deb, Prentice-Hall of India Private Limited, New Delhi.
2. Introduction to Optimum Design, Jasbir S Arora, Elsevier Academic Press.
3. Numerical Methods for Engineers, Steven Chaptra and Raymond Canale, McGraw Hill.
4. Numerical Methods for Scientific and Engineering Computations, M. K. Jain, S.R.K. Ayengar and R. K. Jain.

Unit Tests-

Unit Test-I	Unit-I, II, III
Unit Test-II	Unit-III, IV, VI

PROFESSIONAL SKILLS DEVELOPMENT-IV

Designation of Course	Workshop Technology		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 4 Hours/ Week	End Semester Examination	100 Marks	Theory: 04 Practical: 00
Practical:- -- Hours/ Week	Unit Test	-- Marks	
	Assignments	-- Marks	
	Internal Evaluation	-- Marks	
	Term Work	-- Marks	
	Total	100 Marks	04

Course Pre-requisites	
The Students should have knowledge of	
1.	Basic concepts of Maths, Logical reasoning and English Grammar taught in the last semester.
2.	An overall idea about the difference in personal and professional communication in terms of vocabulary used.
3.	Knowledge of writing skills, importance of professionalism in emails and letters.
4.	They should be aware of concepts of self-esteem, self-assessment and its importance in setting long term and short term goals.
5.	Awareness of the interpersonal skills like team work and introduction to Leadership taught during the last semester.
6.	Body language and importance of non-verbal communication to maintain professionalism.
Course Objectives	
	The Professional Skills Development 4 is an extension of PSD- 3 with focus on the remaining topics of Maths and Logical reasoning. The further complex concepts of Aptitude and Grammar aims to acquaint them with the level of complexity presented in recruitment tests and also provide them techniques to solve such question with tricks/methods in a very short period. The English communication and soft skills section of PSD-4 focuses on the higher aspects of soft skills such as grooming them on corporate etiquettes and various formats of email/ letter writing so that can present themselves as professionals further both in oral and written communication.
Course Outcomes	
The student should be able to	
1.	Learn further concepts of Maths, Logical reasoning and English grammar and apply short cuts/ tricks to solve questions in less time. Learn remaining 25-30 rules of grammar relevant from the recruitment point of view.
2.	Use appropriate words in the right context both academically and professionally. Students would have approximately around 80-100 words from the academic word list prescribed in the syllabus.
3.	Understand the importance of email etiquettes and distinguish between the format of formal and informal emails/letters. They would be able to draft professional mails and letters like job application letters, cover letters, and apology emails with proper structure and words which are necessary in the corporate life.
4.	Apply various strategies of conflict resolution through amicable way to settle team conflicts/disputes. They would learn to handle criticism and feedback in a positive way as an individual as well as a team.
5.	Understand the major concepts of leadership like coaching, mentoring. They would learn effective time management strategies- Pareto principle (the 80-20 rule of time management) and apply them in the corporate life.
6.	Understand the importance of grooming, body language and etiquettes in the corporate sector. They would be able to conduct themselves in a professional and impressive way by conducting themselves according to situations in the professional sector. They would also learn various strategies and conversational techniques to handle telephonic interviews confidently.

Course Contents		
Unit I	Aptitude (Maths, Logical Reasoning, English)	(18 Hours)
	<ul style="list-style-type: none"> • Maths <ul style="list-style-type: none"> ▪ Simple Interest and Compound Interest ▪ Ratio, Proportion and Average ▪ Mixture and Allegation • Logical Reasoning <ul style="list-style-type: none"> ▪ Data Interpretation ▪ Data Sufficiency • English <ul style="list-style-type: none"> ▪ Grammar I ▪ Vocabulary - Analogies 	
Unit II	Essential Grammar - IV	(4 Hours)
	<ul style="list-style-type: none"> • Vocabulary – Academic word List 	
Unit III	Written Communication- III	(6 Hours)
	<ul style="list-style-type: none"> • Email writing and etiquettes – formal and informal email writing, format of various types of email, do’s and don’ts of email writing • Letter writing – formal letters, job application letter, and cover letter. • Essay writing – mnemonics top develop ideas and write essays, structure of essays 	
Unit IV	Self-Awareness and Conflict Resolution	(4 Hours)
	<ul style="list-style-type: none"> • Self-assessment & Perception & attitudes. • Analyzing skills & weaknesses and habits. • Developing positive attitude & handling criticism positively • Handling conflicts in the personal and corporate sector • Causes of conflicts in work scenario. • Ways and methods for conflict resolution 	
Unit V	Interpersonal Skills - III	(6 Hours)
	<ul style="list-style-type: none"> • Mentoring, Difference between Leadership and Management • Leading with examples • Time management -The Time Management Matrix, Pareto Principle 	
Unit VI	Aptitude (Maths, Logical Reasoning, English)	(4 Hours)
	<ul style="list-style-type: none"> • Maths <ul style="list-style-type: none"> ▪ Simple Interest and Compound Interest ▪ Ratio, Proportion and Average ▪ Mixture and Allegation • Logical Reasoning <ul style="list-style-type: none"> ▪ Data Interpretation ▪ Data Sufficiency • English <ul style="list-style-type: none"> ▪ Grammar I ▪ Vocabulary - Analogies

1. APAART: Verbal Ability		

PRODUCTION PRACTICE-III

Designation of Course	Production Practice-III		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- -- Hours/ Week	End Semester Examination	-- Marks	Practical: 01
	Unit Test	-- Marks	
	Assignments	-- Marks	
	Internal Evaluation	-- Marks	
Practical:- 2 Hours/ Week	Term Work	50 Marks	
	Total	50 Marks	01

Course Prerequisites:-	Student should have basic knowledge of welding, soldering, Lathe Machine.
Course Outcomes:-	<ol style="list-style-type: none"> 1. Able to perform different Gear Cutting operations 2. Able to perform different operations on automatic lathe machine. 3. Able to do machining of components covering all operations on Lathe 4. Able to perform CNC Turning

Course Contents

<p>Each Candidate shall be required to complete and submit the following jobs (Any Two)</p> <ol style="list-style-type: none"> 1. One Composite job consisting of 3 to 4 pieces as below Machining of components covering all operations on Lathe (Including Internal and external threading, Taper Matching, Knurling)One Job Grinding operation on Above (Turning) Job 2. Gear Cutting One Job 3. One job on CNC Machine. (Turning). 4. One job on Single Spindle Automate Lathe <p>Note Write a journal/term book based on above syllabus.</p>
--

Rules regarding ATKT, Continuous Assessment and award of Class

Standards for Passing

- For all courses, both in UE (University Evaluation) and IA (Internal Assessment) there are constitute separate heads-of-passing (HoP).
 - The student must obtain a minimum grade point of 5.0 (40% marks) at UE as well as at IA.
 - OR
 - The student failed in IA can also pass in the course provided he/ she obtains minimum of 25% marks in IA, and GPA (Grade Point Average) for the course is at least 6.0 (50% aggregate). The GPA for the course will be calculated only if the student passes in UE.
- The student who fails at UE in a course has to reapply only at UE as a backlog candidate and clear the HoP. Similarly, a student who fails in a course at IA has to reappear only at IA as backlog candidate and clear the HoP.

Rules of ATKT

- A student is allowed to carry backlog of courses prescribed for B. Tech. Sem. I, III, V, VII to B. Tech. Sem. II, IV, VI, VIII respectively.
- A student is allowed to keep term of Sem. III, if he/ she has failed in any number of courses in B. Tech. Sem. I and II.
- A student is allowed to keep term of Sem. V, if he/ she has failed in any number of courses in B. Tech. Sem. III and IV but passed in all courses in Sem. I and II.
- A student is allowed to keep term of Sem. VII, if he/ she has failed in any number of courses in B. Tech. Sem. V and VI but passed in all courses in Sem. III and IV.

Award of Class for the Degree Considering CGPA

A student who has completed the minimum credits specified for the program shall be declared to have passed in the program. The final result will be in terms of letter grade only and is based on the CGPA of all courses studied and passed. The criteria for the award of the honors at the end of the program are as given below:

Range of the CGPA	Final Grade	Performance Descriptor	Equivalent range of marks (%)
$9.50 \leq 10.00$	O	Outstanding	$80 \leq 100$
$9.00 \leq 9.49$	A ⁺	Excellent	$70 \leq 79$
$8.00 \leq 8.99$	A	Very Good	$60 \leq 69$
$7.00 \leq 7.99$	B ⁺	Good	$55 \leq 59$
$6.00 \leq 6.99$	B	Average	$50 \leq 54$
$5.00 \leq 5.99$	C	Satisfactory	$40 \leq 49$
Below 5.00	F	Fail	Below 40

Bharati Vidyapeeth Deemed University
College of Engineering, Pune- 411043
The Structure of the Curriculum: 2014 Course
Choice Based Credit System (CBCS)

B. TECH. MECHANICAL: SEMESTER- V & VI

Bharati Vidyapeeth University
College of Engineering, Pune
Department of Mechanical Engineering

Vision: To provide mechanical engineers capable of dealing with global challenges

Mission: Social transformation through dynamic education

Programme Educational Objectives (PEOs):

Graduates will be able,

- To fulfill need of industry with theoretical and practical knowledge
- To engage in lifelong learning and continued professional development
- To fulfill social responsibilities

Programme Outcomes (POs):

- a. To apply knowledge of mathematics, science and engineering fundamentals for solving engineering problems
- b. To identify the need, plan and conduct experiments, analyze data for improving the mechanical processes
- c. To design and develop mechanical systems considering social and environmental constraints.
- d. To design and develop a complex mechanical system using advanced mathematical and statistical tools and techniques
- e. Use of information technology (IT) tools for prediction and modeling of routine activities to enhance the work performance
- f. To know social responsibilities while doing professional engineering practice.
- g. To become familiar with eco-friendly, sustainable and safe work environment.
- h. To take into account professional ethics while designing engineering systems.
- i. Able to work efficiently as a group leader as well as an individual.
- j. To communicate in written and verbal form with subordinates and supervisors
- k. To apply project and finance management techniques in multidisciplinary environments.
- l. To create interest for higher education and updating the knowledge.

B. TECH. MECHANICAL: SEMESTER- V (2014 Course)

S. N.	Course	Teaching Scheme (Contact Hrs. /week)			Examination Scheme (Marks)							Total Credits		
		L	P/ D	T	End Sem. Exam.	Continuous Assessment					Total	TH	TW	Total
						Unit Test	Attendance	Assignments	TW/ OR	TW/ PR				
1.	Machine Design –I*	3	2	-	60*	20	10	10	50	--	150	3	1	4
2	Theory of Machines	4	2	-	60	20	10	10	50	--	150	4	1	5
3.	Advanced Computer Graphics & Solid Modelling	3	2	-	60	20	10	10	--	50	150	3	1	4
4.	Heat and Mass Transfer	4	2	-	60	20	10	10	50	--	150	4	1	5
5.	Advanced Manufacturing Processes	3	--	-	60	20	10	10	--	--	100	3	--	3

* End Semester examination of duration 4 Hours.

Total Credits Sem. V – 25

Total Credits Sem. VI – 25

Grand Total - 50

Elective-I

- 1) Machine Tool Design
- 2) Energy Audit and Management
- 3) Reliability Engineering
- 4) Design of Pumps, Blowers and Compressors
- 5) Management Information System

MACHINE DESIGN-I

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours / Week	End Semester Examination	60 Marks	03
Practical:- 02 Hours / Week	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Oral	50 Marks	01
	Total	150 Marks	04

Course Prerequisite:- Student should have knowledge of

1. Fundamentals of engineering Drawing
2. Analysis of forces
3. Utilizing the principles of drafting and strength of materials.

Course Objective:-

1. Ability to analyze the stress and strain of mechanical components and understand, identify and quantify failure modes for mechanical part.
2. Ability to decide optimum design parameters for mechanical systems.
3. Enhancement in proficiency of CAD software for designing Mechanical systems and to generate production drawing.
4. Ability to understand basics of fluctuating load.

Course Outcomes:- Learner will able to-

1. understand the basics of machine design
2. design of shafts, keys and couplings
3. design of power screws
4. design of springs
5. design of welded and riveted joints
6. understand basics of fluctuating load for static and dynamic loading

Unit 1	Basic Concept of Machine Design	(06 Hrs.)
---------------	--	------------------

Traditional types of design methods, basic procedure of machine design, introduction to use of standards in design, selection of preferred series, introduction to aesthetic and ergonomic consideration in design. Engineering materials- properties, designation, and selection of material. Weighted point method. Castiglione's theorem.

Unit 2	Design of Shafts, Keys & Couplings	(06 Hrs.)
---------------	---	------------------

Shaft design on strength basis, shaft design on torsional rigidity basis, ASME code of shaft design, keys – saddle, sunk, feather, woodruff, square, flat, Kennedy key, key design, design of splines, types of couplings, muff coupling, flange coupling, flexible bush pin type coupling.

Unit 3	Design of Power Screws	(06 Hrs.)
---------------	-------------------------------	------------------

Forms of threads, differential & compound screw, design of square & trapezoidal threads, self-locking screw, design of power screws, screw jack, recirculating ball screw, design of bolted joint.

Unit 4 Design of Springs (06 Hrs.)

Types, materials, stress & deflection equations for helical, tension & compression spring, torsional and multi leaf springs, styles of ends, nipping of leaf spring, shot peening, spring in series & parallel, concentric springs,

Unit 5 Design of Welded & Riveted Joints (06 Hrs.)

Design of welded joint: advantages, limitations, butt & fillet welds, parallel & transverse fillet welds, axially loaded unsymmetrical welded joint, eccentric loading in plane of weld, welded joint subjected to bending & torsional moment, basic types of riveted joints, different parameters of a riveted joints, uses of riveted joints, failure of riveting joint, strength of riveting joint and efficiency of riveting joints.

Unit 6 Design for Fluctuating Load (06 Hrs.)

Stress concentration - causes & remedies, fluctuating stresses, fatigue failures, S-N curve, endurance limit, notch sensitivity, endurance strength modifying factors, design for finite and infinite life, cumulative damage in fatigue failure, Soderberg, Gerber, Goodman, modified Goodman diagrams, fatigue design of components under combined stresses.

Term Work

Term work shall consist of two design projects by using AutoCAD/manually. Design projects should be in the form of system design comprising of machine elements studied in syllabus. Design data book should be used extensively. Four assignments on remaining topics.

Text Books

- 1) Shigley J. E. and Mischke C. R., "Mechanical Engineering Design", McGraw Hill Publication Co. Ltd.
- 2) Spotts M. F. and Shoup T.E., "Design of Machine Elements", Prentice Hall International
- 3) Bhandari V. B., "Design of Machine Elements", Tata McGraw Hill Publication Co. Ltd.
- 4) Juvinal R. C., "Fundamentals of Machine Components Design", John Wiley and Sons.

Reference Books

- 1) Black P.H. and O. Eugene Adams, "Machine Design", McGraw Hill Book Co. Inc.
- 2) Willium C. Orthwein, "Machine Components Design", West Publishing Co. and Jaico Publications House.
- 3) Hall A. S., Holowenko A. R. and Laughlin H. G., "Theory and Problems of Machine Design", Schaum's Outline Series.
- 4) Sharma C. S. and Purohit Kamlesh, "Design of Machine Elements", PHI Learning Pvt. Ltd.
- 5) D. K. Aggarwal & Sharma P. C., "Machine Design", S.K Kataria and Sons
- 6) Gope P. C., "Machine Design: Fundamentals and Applications", PHI Learning Pvt. Ltd.
- 7) "Design Data- P. S. G." College of Technology, Coimbatore.

8) Bhandari, V. B. "Machine Design data book", Tata McGraw Hill Publication Co. Ltd.

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

THEORY OF MACHINES

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 04 Hours / Week	End Semester Examination	60 Marks	04
Practical:- 02 Hours / Week	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisite:- Student should have knowledge of

1. Fundamentals of engineering mechanics
2. Analysis of forces and moments
3. Kinematics
4. Algebra and trigonometry

Course Objective:-

1. To acquaint with working principles of clutches and its constructional details.
2. To study working and types of brakes and dynamometers.
3. To acquaint with working principles and applications of gyroscope and governors.
4. To demonstrate different types of gear trains and its applications.

Course Outcomes:- Learner will able to-

1. analyze gears.
2. select gears
3. analyze and select gear trains.
4. apply the working principles of clutches and its constructional details and analyze working of brakes and dynamometers.
5. can decide the shape of cam profile
6. demonstrate working mechanism of different types of governors and analyze gyroscopic effect on various applications

Unit 1 Kinematics of Spur Gears (08 Hrs.)

Classification and applications of gears, terminology of gearing, law of gearing, velocity of sliding, conjugate action, forms of teeth, path of contact, arc of contact, interference, undercutting, methods to avoid interference and undercutting, effect of centre distance variation, friction between gear teeth, involutometry.

Unit 2 Kinematics of Helical, Bevel and Worm Gears (08Hrs.)

Helical gears: Terminology, virtual number of teeth, torque transmitted,

Spiral gears: terminology and efficiency.

Worm gears & bevel gears: Terminology, geometrical relationships, tooth forces, torque transmitted.

Unit 3 Inertia of Geared Systems and Gear Trains**(08Hrs.)**

Inertia of gear systems, types of gear trains - simple, compound, reverted and epicyclic gear trains, analysis of epicyclic gear trains, torque on sun and planet gears, compound epicyclic gear trains, bevel epicyclic gear trains.

Unit 4 Friction, Clutches, Brakes & Dynamometers**(08Hrs.)****Friction:**

Friction and types of friction, laws of friction, Friction in turning pairs, Friction circle, Friction axis, Friction in 4 bars and single slider crank mechanism.

Friction clutches:

Pivot and collar friction, plate clutches, cone clutch, centrifugal clutch, torque transmitting capacity.

Brakes & dynamometers:

Different types of brakes, Shoe brakes, External and internal shoe brakes, Block brakes, Band brakes, Band and block brakes, Braking torques, Different types of absorption and transmission type dynamometers.

Unit 5 Cams & Followers**(08 Hrs.)**

Types of cams and followers, analysis follower, of standard motions to the for a determination of cam profiles analysis of cams given follower motions, circular arc with specified contours- cam, tangent cam,

Eccentric cam, methods of control: pressure angle, radius of curvature and undercutting, kinematically equivalent system, jump phenomenon. Introduction to advanced cam curves.

Unit 6 Gyroscopes and Introduction to Governors**(08Hrs.)**

Gyroscopes, concept of gyroscopic action, gyroscopic couple, effect of gyroscopic couple on ship, airplanes, and vehicles. Introduction to Governors, Types centrifugal governor (Watt, Porter, and Hartnell governor only), controlling force, governor effort and governor power with numerical treatment, sensitivity, stability, isochronism and hunting, friction, insensitiveness. (No Numerical Treatment)

Term Work:

The term work shall consist of the following experiments:

1. To draw conjugate profile for any general type of gear tooth.
2. To generate involute gear tooth profile and to study the effect of undercutting and rack shift using model.
3. To study various types of gearboxes such as: Industrial gear box, Synchromesh gearbox, Differential gearbox, or PIV gearbox.
4. To measure transmitted torque and holding torque of an epicyclic gear train.
5. To study the slip in belt drives.
6. To draw cam profiles for various types of follower motions.
7. To verify gyroscopic couple.
8. To determine the characteristic curves for centrifugal governor and to find its coefficient of insensitiveness and stability.

Text Books

1. Ratan S. S., "Theory of Machines", Tata McGraw Hill
2. Beven T, " Theory of Machines", Longman Publication
3. Ballaney P. L. "Theory of Machines", Khanna Publications

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV,V and VI

ADVANCED COMPUTER GRAPHICS & SOLID MODELLING

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours / Week	End Semester Examination	60 Marks	03
Practical:- 02 Hours / Week	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Pract..	50 Marks	01
	Total	150 Marks	04

- Course Prerequisite:-**
1. Knowledge of basic concept of Engineering Graphics.
 2. Basic knowledge of Mechanical Engineering drawing.
 3. Basic knowledge of Computer Hardware and AutoCAD Software.

- Course Objective:-**
1. To introduce new and exciting field of Intelligent CAD with particular focus on engineering product design.
 2. To develop a holistic view of initial competency in engineering design by modern computational methods.
 3. To expose the student to contemporary computer design tools for mechanical engineers.
 4. To prepare the student to be an effective user of a CAD system.
 5. Model the 3-D geometric information of machine components including assemblies, and automatically generate 2-D production drawings.
 6. Understand the basic analytical fundamentals that are used to create and manipulate geometric models in a computer program.

- Course Outcomes:-** Able to understand-
1. Algorithms to generate, points, lines, circles ellipse and different polygons
 2. Basic transformations in 2D modelling
 3. Different transformations in 3D modelling
 4. Geometric modelling of curves
 5. Parametric representation of analytic and synthetic surfaces
 6. Basics of solid modelling and data exchange in CAD/CAM

Unit 1	Output primitives	(06 Hrs.)
---------------	--------------------------	------------------

Points and Lines, Line Drawing Algorithms-DDA Algorithm, Bresenham's Line Drawing Algorithms, Thick Line Segments. Circle and Ellipse Generation Algorithm. Polygon-Polygon Filling, Flood Fill, Boundary Fill, Scan Line Fill.

Unit 2	Two Dimensional Transformations	(06 Hrs.)
---------------	--	------------------

Basic Transformation – Translation, Rotation, Scaling, Reflection, Shear, Matrix Representation and Homogeneous Co-Ordinates. Composite Transformations.

Unit 3	Three-Dimensional Transformations	(06 Hrs.)
---------------	--	------------------

Introduction to 3D, Translation, Rotation, Scaling, Reflection, Shear, Affine and Perspective Geometry. Orthographic, Axonometric, Oblique Projection.

Unit 4 Geometrical Modeling (06 Hrs.)

Mathematical Representation of Curves, Wire Frame Model, Wire Frame Entities.
Parametric Representation of Analytic Curves- Lines, Circles, Ellipses. Parametric Representation of Synthetic Curves- Hermit, Cubic-Splines, Bezier Curve, B-Spline Curve.
Curve Manipulation: Displaying, Evaluating Points on Curve, Blending Segmentation.
Surface Manipulation: Displaying, Evaluating Points & Curve on Surfaces, Segmentation, Trimming, Intersection, Projection and Transformations.

Unit 5 Surface Modeling (06 Hrs.)

Surface Models, Surface Entities, Surface Representation.
Parametric Representation of Analytic Surfaces- Plan Surfaces, Ruled Surfaces, Surface of Revolution, Tabulated Cylinder.
Parametric Representation of Synthetic Surfaces- Hermit, Bi-cubic Surfaces, Bezier Surfaces, B-spline Surfaces.

Unit 6 Solid Modeling (06 Hrs.)

Solid Models, Solid Entities, Solid Representation, Fundamentals of Solid Modeling, Boundary Representation, Constructive Solid Geometry, Sweep Representation.
CAD/CAM Data Exchange: Evaluation of data exchange formation, IGES data representation & Structure, PDES Data representation, STEP Architecture.

Term Work:

The term work shall consist of record of eight experiments from the following:

1. DDA Line Drawing Algorithm.
2. 2 D Transformation.
3. 3D Transformation.
4. Assignment on 2-D sketching with geometrical and dimensional constraints using any commercially used solid modeling software.
5. Assignment on parametric solid modeling of a machine component using various commands and features of the software.
6. Assignment on solid modeling of the parts of a machine (min. 5 components).
7. Assignment on assembly modeling of the parts modeled in assignment 6 using proper mating conditions and generation of exploded view.
8. Generation of production drawings of the parts and assembly with appropriate tolerancing.

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

HEAT AND MASS TRANSFER

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 04 Hours / Week	End Semester Examination	60 Marks	04
Practical:- 02 Hours / Week	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Oral	50 Marks	01
	Total	150 Marks	05

- Course Prerequisite:-**
1. Knowledge of basic concepts in Physics.
 2. Basic information of Thermodynamics.
 3. Basic knowledge of Fluid Mechanics

- Course Objective:-**
1. The student should understand the scope, objective and application of heat and mass transfer and its applications.
 2. They will also learn the three major modes of heat transfer *viz.*, conduction, convection, and radiation. In addition to these three main modes of heat transfer, students will also learn the phenomena of heat transfer during phase change

- Course Outcomes:-**
- Able to understand-
1. Formulate basic equations for heat transfer problems.
 2. Concept of thermal insulation in one dimensional steady state heat conduction
 3. Analysis of extended surfaces and concept of unsteady heat conduction
 4. Concept of heat transfer by forced and natural convection
 5. Various laws related to thermal radiation and concepts of condensation and boiling
 6. Preliminary analysis of heat exchangers and concept of mass transfer

Unit 1 Introduction and Basic Concepts

(08 Hrs.)

Overview of subject, Modes of heat transfer, Applications of heat transfer in different fields of engineering, Fourier's law of conduction, Newton's law of cooling, Stefan-Boltzmann's law of radiation, Isotropic and anisotropic

materials, Three dimensional heat conduction equation in Cartesian coordinate for anisotropic material for steady state condition, and reduction to Fourier equation, Laplace equation and Poisson's equation, Three dimensional heat conduction equation in cylindrical and spherical coordinates (no derivation), Thermal diffusivity.

One dimensional steady state heat conduction:

One dimensional steady state heat conduction through a plane wall, cylindrical wall and sphere, Analogy between heat flow and electricity, heat conduction through a composite slab, cylinder and sphere, Overall heat transfer coefficient, Concept of thermal resistance and conductance.

Unit 2 Thermal Insulation (08 Hrs.)

Purpose of insulation, critical radius of Insulation, Economic thickness of Insulation, Thermal contact resistance, thermal conductivity and its variation with temperature for metals, non-metallic solids, gases and liquids, one dimensional problems of variable thermal conductivity.

One Dimensional Steady State Heat Conduction with Internal Heat Generation:

Symmetrical boundary condition in plane wall, conduction in solid, hollow cylinder and sphere, practical problems of heat generation.

Unit 3 Extended Surfaces (08 Hrs.)

Heat transfer through extended surfaces, Classification of fins, Derivation of differential equation for fins with constant cross sectional area with insulated tip boundary conditions, Effectiveness and efficiency of a fin, design of thermo well.

Unsteady state heat conduction :

System with negligible internal resistance, Biot & Fourier numbers, Criteria for neglecting internal temperature gradient, Concept of time constant

Unit 4 Convection (08 Hrs.)

Introduction to hydrodynamic and thermal boundary layer, Laminar & turbulent flow over & closed conducts, convection heat transfer coefficients & order of magnitude, Dimensional analysis of free & forced convection, physical significance of the dimensionless parameters, Nusselt's number, Reynold's number, Prandtl's number, Grashoff's number, Stanton number, Rayleigh number.

Forced Convection

Empirical correlations for heat transfer in laminar and turbulent flow over a flat plate and in a circular pipe, Concept of hydraulic diameter, reference temperature.

Natural Convection

Flow patterns, Empirical correlations for free convection, heat transfer over horizontal, vertical plate.

Unit 5 Thermal Radiation (08 Hrs.)

Fundamental concepts, Black body radiation, Kirchoff's law, Planck's distribution law, Wein's displacement law, Stefan Boltzmann law, Surface emission, relative properties of a surface, Grey, black and real surface, solid angle and intensity of radiation, Lambert's Cosine law, Heat exchange by radiation between two finite black surfaces, Radiation shape factor, use of shape factor charts, Irradiation, radiosity, Electrical network, Heat exchange between two infinitely parallel planes and cylinders, Radiation shields.

Condensation and Boiling

Film and drop-wise condensation, heat transfer coefficient for laminar film condensation on vertical and inclined plate (descriptive treatment), Correlations for condensation on and inside tubes, modes of pool boiling, critical heat flux, pool boiling.

Unit 6 Heat Exchangers (08 Hrs.)

Classification, Applications of heat exchangers, Heat exchanger analysis, Logarithmic Mean Temperature Difference for parallel and counter flow heat exchangers, LMTD correction factors, fouling factor. The effectiveness: NTD method for parallel and counter flow heat exchangers, design considerations for heat exchangers

Mass Transfer:

Introduction, modes of mass transfer, analogy between heat and mass transfer, mass diffusion (mass and mole basis), Fick’s law of diffusion

Term Work:

Term work shall consist of any eight experiments

1. Determination of thermal conductivity of insulating powder.
2. Determination of thermal conductivity of metal rod.
3. Determination of thermal conductivity of different materials in composite wall.
4. Temperature distribution along a length of a fin and determination of fin effectiveness and fin efficiencies.
5. Determination of film heat transfer coefficient on a hollow vertical tube heated from inside.
6. Determination of film heat transfer coefficient for turbulent flow inside a pipe.
7. Determination of emissivity of a non-black surface.
8. Determination of Stefan-Boltzmann constant.
9. Performance of a parallel flow and counter flow heat exchanger.
10. Calibration of thermocouple.
11. Demonstration of a heat pipe.
12. CFD simulation of conduction or convection problem.

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

ADVANCED MANUFACTURING PROCESSES

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours / Week	End Semester Examination	60 Marks	03
	Unit Test	20 Marks	
	Assignments Internal	10 Marks	
	Evaluation	10 Marks	
	Total	100 Marks	03

Course Prerequisite:- Student should have knowledge of

1. Conventional manufacturing Processes
2. Engineering Drawings and design
3. Engineering materials and its properties

Course Objective:- Provide knowledge of sheet metal working, non-conventional processes, NC/CNC machine, robotics and processing of materials.

Course Outcomes:- Learner will be able to understand

1. Various concepts related to sheet metal working
2. Design of jigs and fixtures
3. Various non-conventional machining processes
4. Concepts of CNC programming and robotic applications in manufacturing industries
5. Concept of various heat treatment processes for altering the mechanical properties of steels and alloys
6. Different methods of manufacturing of components by power metallurgy and composite materials

Unit 1 Sheet Metal Working (06 Hrs.)

Study of various press tools and presses, Study of various processes like Piercing, Notching forming, drawing, coining *etc.* Elements of dies and punches. Types of dies – simple, compound, combination and progressive dies and punches for various press working operations such as punching, blanking, drawing, bending, forming, coining *etc.* Calculations of clearances, centre of pressure, forces, press tonnage, blank size, number of draws, strip layout, sheet utilization, ratio. Methods of reducing forces. Design of simple blanking die, Progressive die, & Deep Drawing die.

Unit 2 Jigs and Fixtures (06 Hrs.)

Definitions, elements, Basic principles and guide lines for design. Location, types of locators and their selection. Clamping, basic principles, types and their selection, indexing methods. Design of drilling jigs. Design of milling & Turning fixtures.

Unit 3 Non-Conventional Machining (06 Hrs.)

Concept of non-conventional machining. Study of processes like, Electrochemical Machining, Electro Discharge Machining, Abrasive Jet Machining, Plasma Machining, LASER Machining, and Ion beam Machining, Ultrasonic Machining, Electron Beam Machining with reference to process capabilities, working principle, Material removal rate, Advantages and limitations.

Unit 4 C. N. C. Machine Tools & Robotics

(06 Hrs.)

Principle of operation of CNC, Types, Features, Direct numerical control (DNC) and its applications. NC part programming, axes nomenclature of CNC machines. Manual part programming using. Computer aided part programming using APT. Types of Robots, construction and operation of robots, robot axes and configuration, robot applications, robot selection and economic justification. FMS, FMC and Adaptive Control.

Unit 5 Heat Treatment of Steels and Alloys

(06 Hrs.)

Iron and Iron Carbide Equilibrium Diagram, Transformation product of Austenite, Martensitic transformation, Time- Temperature. Transformation curve, Heat treatment of steels, Annealing, Normalizing, Hardening and tempering, Hard ability, Jominy End quench test, Surface hardening heat treatments, Carburizing, Nitriding, Carbonitriding, Induction and flame hardening, Tool steels, Classification, Properties and application of tool steels, Heat treatment of tool steels.

Unit 6 Powder Metallurgy , Ceramics and Composite Manufacturing

(06 Hrs.)

Important characteristics and methods of powder production, different techniques - pressing, extruding, isostatic moulding, fiber metal process, sintering and hot pressing.

Introduction to composite materials, basic concepts, constituent materials for composites, advantages, limitations of composites and application of composites. Manufacturing of Composites: Introduction, molding process for polymer matrix composites, metal matrix composites, ceramic matrix composites.

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

PROFESSIONAL SKILLS DEVELOPMENT-V

Designation of Course	Workshop Technology		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 4 Hours/ Week	End Semester Examination	100 Marks	Theory: 04 Practical: 00
Practical:- -- Hours/ Week	Unit Test	-- Marks	
	Assignments	-- Marks	
	Internal Evaluation	-- Marks	
	Term Work	-- Marks	
	Total	100 Marks	04

Course Pre-requisites

The Students should have knowledge of

1. Basic concepts of Maths, Logical reasoning and English Grammar taught in the last semester.
2. An overall idea about vocabulary, Public speaking skills taught in the last semester
3. Knowledge of writing skills, importance of professionalism in emails and letters.
4. Knowledge on handling criticism and the concept of conflicts.
5. Awareness of the interpersonal skills like team work and its importance in the corporate sector.

Course Objectives

The Professional Skills Development 5 is an extension of PSD- 4 with focus on the remaining topics of Aptitude, Reasoning and Grammar. The further complex concepts of Aptitude and Grammar aims to acquaint them with the topics and also provide them techniques to solve the question with tricks/methods in a very short period. The English communication and soft skills section of PSD-5 focuses on the higher aspects of soft skills training students on how to handle Group Discussions during placement process and other topics such as grooming them on how to handle conflicts effectively in the corporate scenario and also the correct attitude/approach to solve problems collectively from a team's perspective and also individually.

Course Outcomes

The student should be able to

1. Learn further concepts of Maths, Logical reasoning and English grammar and apply short cuts/ tricks to solve questions in less time. Learn remaining 25-30 rules of grammar topics of tenses and Sub- verb agreement relevant from the recruitment point of view.
2. Use Mnemonics, and learn appropriate strategies to handle complex topics in GDs and ways to handle them. Students would learn the appropriate ways of stating opinions, disagreeing or communicating during the Group Discussion Process.
3. Apply various strategies of conflict resolution through amicable way to settle team conflicts/disputes. They would learn to handle criticism and feedback in a positive way as an individual as well as a team.
4. Students would learn effective time management strategies- Pareto principle (the 80-20 rule of time management) and apply them in the corporate life. It would be a continuation of the topic covered during the previous semester PSD-4
5. Learn to handle Case studies effectively and incorporate the right approach towards Case Studies asked during the recruitment process.
6. Apply 5-6 positive strategies to resolve conflicts arising during team work

Course Contents

Unit I	Aptitude (Maths, Logical Reasoning, English)	(24 Hrs.)
	<ul style="list-style-type: none"> • Maths <ul style="list-style-type: none"> ▪ Time, Speed & Distance ▪ Time & Work ▪ Simple Interest & Compound Interest in continuation ▪ Maths Revision • Logical Reasoning <ul style="list-style-type: none"> ▪ Data Interpretation ▪ Data Sufficiency ▪ Set Theory & Syllogisms ▪ Reasoning Revision 	

	<ul style="list-style-type: none"> • English <ul style="list-style-type: none"> ▪ Grammar – II – (Adjective, Verb, Sub- Verb Agreement) ▪ Grammar- (Tenses) ▪ Vocabulary ▪ Verbal Ability- Revision 	
Unit II	Soft Skills & English Communication	(24 Hrs.)
	<ul style="list-style-type: none"> • Situational Conversation • Situational Writing • GD Orientation • Mock GD-1 • Mock GD-2 • Mock GD-3 • Conflict Resolution • Problem Solving Skills • Time- Management Skills • Handling Case Studies • Management Games • Business Meeting Etiquettes 	
Text Books		
1. APAART: Verbal Ability		
2. APAART: Logical Reasoning		
3. APAART: Quantitative Aptitude		
4. APAART: Speak Well 1 (English Language and Communication)		
5. APAART: Speak Well 2 (Soft Skills)		

Department of Mechanical Engineering

Syllabus: Semester VI

MACHINE DESIGN-II

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 04 Hours / Week	End Semester Examination	60 Marks	04
Practical:- 02 Hours / Week	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Oral	50 Marks	01
	Total	150 Marks	05

Course Prerequisite:-

Student should have knowledge of

1. Fundamentals of engineering Drawing
2. Analysis of forces
3. Utilizing the principles of drafting and strength of materials.
4. Basics of kinematics of gears in transmission system

Course Objective:-

1. Reinforce the philosophy that real engineering design problems are open-ended
2. Give practice in longer open-ended problems using design methodology
3. Enable students to apply engineering tools/techniques to product design
4. Broaden skills in team work, critical thinking, communication, planning and scheduling through design projects
5. Enable students to consider safety, ethical, legal, and other societal constraints in execution of their design projects
6. Enable students to attain the basic knowledge required to understand, analyze, design and select machine elements

Course Outcomes:-

Learner will able to-

1. understand the concept of design for various manufacturing processes in Mechanical Engineering
2. understand the various concepts related to design of spur gears
3. understand the various concepts related to design of helical gears
4. the procedure for selection of different types of rolling contact bearings for different applications
5. understand the various concepts related to sliding contact bearings
6. technical details about belts, ropes and chain drives

Unit 1 Design For Manufacture

(08 Hrs.)

General principles of design for manufacture & assembly (DFM & DFME), Principles of design of casting & forging, Design for machining, Design for powder metallurgy, Design for welding.

Unit 2 Design of Spur Gears

(08 Hrs.)

Gear drives, Classification of gears, Selection of types of gears, Standard system of gear tooth.

Spur Gears: Number of teeth & face width, Types of gear tooth failure, Desirable properties & selection of gear materials, Force analysis, Beam strength, Velocity factor, Service factor, Load concentration factor, Effective load on gear, Wear strength, Estimation of module based on beam

& wear strength, Gear design for maximum power capacity, Estimation of dynamic tooth load by velocity factor, Spott's equation, Buckingham's equation, Methods of gear lubrication. Introduction to Gear design standards like AGMA, IS.

Unit 3 Design of Helical Gears (08 Hrs.)

Transverse & normal module, virtual number of teeth, Force analysis, Beam & wear strength, Effective load on gear tooth, Estimation of dynamic load by velocity factor, Spott's equation, Buckingham's equation.

Unit 4 Rolling Contact Bearing (08 Hrs.)

Equivalent bearing load, Load life relationship, Selection of bearing life, Selection from manufacturer's catalog, Taper roller bearing, Design for cyclic load & speed, Bearing with probability of survival other than 90%, Lubrication & mounting construction materials, Selection of oil seals & gaskets, Pre loading, Types of failure of bearings and its remedies.

Unit 5 Sliding Contact Bearing (08 Hrs.)

Basic modes for lubrication, Viscosity. Effect of temperature on viscosity, Viscosity index, Additives, Greases, Selection of lubricants. Viscous flow through rectangular slot, Load carrying capacity & flow requirement of hydrostatic step bearing, Energy losses, Hydrodynamic lubrication, Reynolds equation, Sommerfield number, Raimondi & Boyd's method, Temperature rise in hydrodynamic bearings, Parameters of bearing design, Length to diameter ratio, Unit bearing pressure, Radial clearance,

Minimum oil film thickness, Constructional details of bearings, Bearing materials & their selection, Sintered metal bearings, Comparison of rolling & sliding contact bearing.

Unit 6 Belts, Ropes and Chain Drives (08 Hrs.)

Materials and construction of flat and V belts, geometric relationships for length of belt, power rating of belts, concept of slip & creep, initial tension, effect of centrifugal tension, maximum power condition, selection of flat and V belts from manufacturer's catalogue, belt tensioning methods, relative advantages and limitations of flat and V belts, construction and applications of timing belts .Wire Ropes (Theoretical Treatment Only): Construction of wire ropes, lay of wire ropes, stresses in wire rope, selection of wire ropes, rope drum construction and design. Chain Drives (Theoretical Treatment Only): Types of power transmission chains, Geometry of chain Polygonal effect of chain, Modes of failure for chain, Lubrication of chains

Term Work:

1. Term work shall consist of two design projects by using Autocad/manually. Design projects should be in the form of system design comprising of machine elements studied in syllabus. Design data book should be used extensively.
2. Four assignments- based on remaining topics.
3. Report- Industrial visit to gear manufacturing unit.

Text Books

1. Shigley J. E. and Mischke C.R., "Mechanical Engineering Design", McGraw Hill

Publication Co. Ltd.

2. Spotts M. F. and Shoup T. E., "Design of Machine Elements", Prentice Hall International
3. Bhandari V. B., "Design of Machine Elements", Tata McGraw Hill Publication Co. Ltd.
4. Juvinal R. C., "Fundamentals of Machine Components Design", John Wiley and Sons.

Reference Books

1. Black P. H. and O. Eugene Adams, "Machine Design", McGraw Hill Book Co. Inc.
2. William C. Orthwein, "Machine Components Design", West Publishing Co. and Jaico Publications House.
3. Hall A.S., Holowenko A. R. and Laughlin H.G., "Theory and Problems of Machine Design", Schaum's Outline Series.

9. Mahadevan K., Balveera Reddy K., "Design Data Handbook for Mechanical Engineers", CBS Publishers

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

REFRIGERATION AND AIR CONDITIONING

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours / Week	End Semester Examination	60 Marks	03
Practical:- 02 Hours / Week	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Oral	50 Marks	01
	Total	150 Marks	04

Course Prerequisite:-

1. Knowledge of basic concepts in heat transfer.
2. Basic information of thermodynamics.
3. Basic knowledge of fluid mechanics.

Course Objective:-

1. To study fundamental principles and different methods of refrigeration and air conditioning.
2. Study of various refrigeration cycles and evaluate performance using Mollier charts and/ or Refrigerant property tables.
3. Comparative study of different refrigerants with respect to properties, applications and Environmental issues.
4. Understand the basic air conditioning processes on psychometric charts, calculate cooling load for its applications in comfort and industrial air conditioning.
5. Study of the various equipment-operating principles, operating and safety controls employed in refrigeration air conditioning systems.

Course Outcomes:-

Able to understand-

1. Different methods of refrigeration systems.
2. Simple vapour compression system and different multi-pressure systems
3. Vapour absorption system and different types of refrigerants
4. Various psychometric processes used in air conditioning
5. Different components of refrigeration and air conditioning systems
6. Details of ducts for air conditioning system

Unit 1 Methods of Refrigeration

(06 Hrs.)

Ice refrigeration, evaporative refrigeration, refrigeration by expansion of air, refrigeration by throttling of gas, vapour refrigeration system, steam jet refrigeration system, refrigeration by using liquid gases, Thermoelectric and ultrasound refrigeration.

Air refrigeration system: Definition, refrigeration load, unit of refrigeration, Reverse Carnot cycle, Bell Coleman cycle, Methods of air refrigeration systems, simple air cooling system, boot strap system, reduced ambient system, regenerative system.

Unit 2 Simple Vapour Compression System

(06 Hrs.)

Limitations of air refrigeration system, development of vapour compressor cycle, effect of operating parameters on VCC, use of P-H charts, actual vapour compression cycle.

Multi Pressure Systems Introduction to multistage compression, two stage compression with flash gas removal, with liquid intercooler, Cascade systems.

Unit 3 Vapour Absorption System

(06 Hrs.)

Introduction, Simple Vapour absorption system, practical vapour absorption system, COP of an ideal vapour absorption system, Water ammonia system, Electrolux refrigerator, Lithium-Bromide absorption System, Comparison between VCC and VAC (no mathematical treatment).

Refrigerants: Desirable properties of refrigerants, classification of refrigerants, secondary refrigerants, alternative refrigerants for CFC's, HCFC'S, ozone depletion potential (ODP), Global warming Potential (GWP).

Unit 4 Psychrometry

(06 Hrs.)

Introduction, Psychrometric terms, Use of Psychrometric charts, Psychrometric processes, adiabatic saturation temperature, evaporative cooling, by pass factor of coil, efficiency of coil, adiabatic mixing of two air streams, Air washers, Thermodynamics of human body with environment effective temperature, comfort chart, factors influencing human comfort.

Unit 5 Air Conditioning Systems

(06 Hrs.)

Definition, factors, equipment used, classification, all air system, all water system, air water system, unitary and central air conditioning, in filtration and ventilation loads, concepts of SHF, RSHF, ERSHF, ADP.

Components of Refrigeration and Air Conditioning System:

Compressors, condensers, evaporators, expansion devices such as capillary tubes, automatic expansion valves, thermostatic expansion valves and controls such as thermostats, humidistat, Solenoid, Installation, charging, testing and maintenance, study of modern trends in RAC

Unit 6 Ducts

(06 Hrs.)

Introduction, classification of ducts, duct material, pressure in ducts, flow through duct, pressure losses in duct, friction losses, dynamic losses, air flow through simple duct system, equivalent diameter, for determination of duct size.

Food Preservation: Cold storage, control and modified atmosphere (CAMA) storages, mobile refrigeration and air conditioning, refrigerant piping selection, pressure drop, valves, fitting, insulating materials.

Term Work:

The term work shall consist of record of any eight experiments from the following:

1. Test on vapour compression test rig.
2. Test on air conditioning test rig.
3. Test on ice plant test rig.
4. Study of non-conventional refrigeration system.
5. Determination of cooling load of air conditioning system (case study).
6. Determination of refrigeration load in cold storage (case study / visit).
7. Study of installation /operation/maintenance practices for refrigeration system.
8. Visit to any refrigeration or air conditioning plant.
9. Trial on heat pump test rig
10. Test on vapour absorption test rig.

11. Market survey of various refrigerating & air conditioning systems which include the equipments with related specifications, manufacturer, cost. (minimum 3 to 4 equipments)
12. Determination of energy efficiency of refrigeration or air conditioning system.

Text Books/ Reference Books

1. Arora C. P., “Refrigeration and Air Conditioning”, Tata McGraw Hill
2. Arora S. C., Domkundwar S., “Refrigeration and Air Conditioning”, Dhanpat Rai and Company

4. Manohar Prasad, “Refrigeration and Air Conditioning”, Wiley Eastern Limited
5. Khurmi R. S. and Gupta J. K., “Refrigeration and Air Conditioning”, Eurasia Publication House (P) Ltd. New Delhi
6. Stocker W. F. and Jones J. W., “Refrigeration and Air Conditioning”, McGraw Hill International Editions

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

INTERNAL COMBUSTION ENGINES

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours / Week	End Semester Examination	60 Marks	03
Practical:- 02 Hours / Week	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Pract.	50 Marks	01
	Total	150 Marks	04

Course Prerequisite:-

1. Knowledge of basic concept heat transfer.
2. Basic information of thermodynamics.

Course Objective:- The student should understand the scope, objective and application of internal combustion engines.

Course Outcomes:- Able to -

1. Know constructional Features of I. C. Engine.
2. Understand fuel supply systems of C. I. and S. I. engines.
3. Acquire knowledge of different systems required for running of I.C. engines
4. Test the thermal and emission performance of I. C. Engines
5. Understand the phenomena of combustion in S. I. and C. I. engines
6. Understand norms for measurement of emissions from I. C. engines

Unit 1	Constructional Features of Reciprocating I. C. Engine	(06 Hrs.)
---------------	--	------------------

Engine components, Engine classification

Cycle Analysis of I. C. Engines:

Fuel air cycle analysis, Comparison of P-V diagram of air standard cycles, Fuel air cycle & actual cycle

Unit 2	Fuel Supply Systems	(06 Hrs.)
---------------	----------------------------	------------------

S. I. Engines:

Carburetion, Mixture requirements, Essential parts of modern carburetor, Carburetors used on automobiles, Calculation of A/F ratio, M.P.F.I. system for modern automobile engines.

C. I. Engines:

Functional requirements of an injection system, Typical arrangement of solid injection system, Types of fuel injection system, Fuel pump & fuel injectors, Quantity of fuel & size of nozzle orifice.

Unit 3 I. C. Engine Systems (06 Hrs.)**Ignition System:**

Battery & coil ignition system, Magneto ignition system, Electronic ignition system, Advantage over mechanical contact breaker point system.

Engine Cooling System:

Air cooling, Water cooling, Thermostatic radiators

Lubrication System:

Dry sump lubrication, Wet sump lubrication – Fully pressurized, Oil filters

Governing System:

Quality governing, Quantity governing, Hit & miss governing

Unit 4 Testing & Performance of I. C. Engine (06 Hrs.)

Determination of brake power, Indicated power, Friction power, Determination of brake thermal efficiency, Mechanical efficiency, Volumetric efficiency, Energy balance, Performance characteristics.

Supercharging:

Objects of supercharging, Effects on performance, Limits, Methods of supercharging & turbocharging, Limitation of turbocharging.

Unit 5 Combustion in S. I. Engines (06 Hrs.)

Stages of combustion, Effect of engine variables on ignition lag & flame propagation, Abnormal combustion: Theories, Effects & Controlling measures, Combustion chambers for S. I. engines.

Combustion in C. I. Engines:

Stages of combustion, Ignition delay & factors influencing delay period, Diesel knock & its control, Combustion chambers for C. I. engines.

Unit 6 Emissions & Pollution Control (06 Hrs.)

Emissions from S. I. and C. I. engines & their harmful effects, Catalytic converters, Contemporary & proposed emission norms, BHARAT STAGE- I to IV emission norms, EGR system.

Fuels:

Types of fuels for I. C. engines, Rating of S. I. & C. I. engine fuels, Alternative fuels for I. C. engines & future trends, Hybrid vehicles.

Term Work:

1. Study of carburetor / MPFI system
2. Study of fuel pump & injector.
3. Trial on multi cylinder petrol engine – Morse Test.
4. Trial on diesel engine to determine energy balance & variable load performance.
5. Variable speed trial on petrol / diesel engine.
6. Trial on computerized I. C. engine to plot P – è diagram.
7. Trial / demonstration of smoke meter & exhaust gas analyzer.
8. Study of battery, magneto & electronic ignition system.
9. Study of superchargers & turbochargers.
10. Study of combustion chambers in S. I. & C. I. engines.
11. Study of recent hybrid cars in market

Reference Books

1. Ganesan V., Internal Combustion Engines, Tata McGraw Hill Publishing House
2. M. L. Mathur & R. P. Sharma, A Course in I. C. Engines, Dhanpat Rai & Sons
3. V. M. Domkundwar, A Course in I. C. Engines, Dhanpat Rai & Co.
4. Shrinivasan, Automobile Engines, Tata McGraw Hill Publishing House – CBS Publication

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

MECHANICAL MEASUREMENT & METROLOGY

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 04 Hours / Week	End Semester Examination	60 Marks	04
Practical:- 02 Hours / Week	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Pract.	50 Marks	01
	Total	150 Marks	05

Course Prerequisite:-	<p>Student should have knowledge of</p> <ol style="list-style-type: none"> 1. Students should have Basic knowledge of Mechanical terms Force, Pressure, Temperature, and Electronics terms like as Voltage, Resistance and Current. 2. Students should have Basic knowledge of Measuring Units, Mathematics, and Various Measurement terms.
Course Objective:-	<p>Student should be able to</p> <ol style="list-style-type: none"> 1. Use various precision measuring instruments <i>viz.</i> Vernier caliper, micrometer <i>etc.</i> 2. Acquire knowledge of different sensors and transducers 3. Acquire knowledge of tolerances, gauges and measurement of surface finish
Course Outcomes:-	<p>Learner will be able to...</p> <ol style="list-style-type: none"> 1. Understand static and dynamic characteristics of measurement systems 2. Know different devices used for linear and angular measurement 3. Measure temperature, pressure, strain and fluid flow using different sensors for various applications 4. Using of concepts like limits, fits and tolerances for designing the limit gauges. 5. Use displacement, velocity, position, force, torque, level sensors for specific applications 6. Measure various screw thread or gear tooth parameters using specific equipment.

Unit 1 Introduction to Measurement systems

(08 Hrs.)

Significance of Measurements, Mechanical Measurements, Classification of Measuring Instruments, Generalized Measurements Systems.

Static Characteristics of Measurement Systems: Sensitivity, Calibration, Accuracy, Linearity, Static Error, Precision, Reproducibility, Threshold, Resolution, Hysteresis, Drift, Span, Range.

Dynamic Characteristics of Measurement Systems: Speed of response and measuring lag, fidelity and dynamic error, overshoot, dead time and dead zone. Standard test inputs: Step, Ramp, Impulse and Sinusoidal Inputs.

Errors in Measurements: Types & Sources of Errors and Uncertainty Analysis in Measurements. Probable Errors.

Unit 2 Introduction to Metrology (08 Hrs.)

Meaning of metrology & its Importance.

Linear Measurement :

Standards - line standard, end standard, wave length standard, classification of standards, precision, and non-precision measuring instrument, slip gauges, Different types of Vernier, Micrometer, Dial Gauges. Concept of Magnification.

Angular Measurement:

Sine bar, Sine center, Uses of sine bar, angle gauge, Auto Collimator, Angle Dekkor, angle slip gauges, Constant Deviation Prism.

Unit 3 Sensors and Transducers (08 Hrs.)

Concept of sensors and transducers. Significance of Transducers in Measurement and Instrumentation System. Classification and Selection Parameters of Transducers. Basic components of DAQ, Concept of signal conditioning.

Strain Measurement: Theory & Classification of Strain gauges, Gauge Factor, Temperature compensation, Wheatstone Bridge Circuit.

Temperature measurement: Resistance Temperature Detector(RTD), Thermocouples & Laws of thermocouples, Resistance Thermometers & Thermistors, Optical Pyrometers

Pressure measurement: Diaphragm Pressure Gauge, Bourdon Tube, Bellows, McLeod Gauge, Piezoelectric Sensor, Tactile Sensor

Flow measurement: Hot Wire anemometer, Thermal flow meters, Electromagnetic flow meter, Ultrasonic Flow meter, Turbine Meter

Unit 4 Tolerances and Gauging (08 Hrs.)

Limits, Fits, Tolerances:

Meaning of limit, Fits and Tolerance, Cost-Tolerance relationship, concept of Interchangeability, Indian Standard System (ISS).

Design of Limits Gauges:

Types, Uses, Taylor's principle, Design of limit gauges. Inspection of geometric parameters: Straightness, Parallelism, Concentricity, Squareness and circularity.

Comparators

Uses, types, advantages and disadvantages of various types of comparators.

Advances in Metrology: Introduction of CMM, Types of CMM

Unit 5: Measurement of Velocity, Displacement, Force, Torque, Level and Acceleration (8 Hrs.)

Displacement, Velocity and Position Sensors: Potentiometer, LVDT, Hall Effect Sensor, optical encoders, Proximity Sensors, Tacho-generator.

Force and Torque Measurement: Load Cell and its different types, Torque measurement using strain gauges, Torsion Meter.

Acceleration Sensors: Displacement Seismic Accelerometer, Strain gauge

Accelerometer, Piezoelectric Accelerometer, Potentiometric Accelerometer

Level measurement & Thickness Measurement: Electrical Methods (Resistive & Capacitive), Laser Level Sensor, Ultrasonic Liquid Level Detector. Thickness measurement using contact and non-contact type

devices.

Unit 6 Measurement of Surface finish, Screw Thread, Gear Metrology (08 Hrs.)

Surface Finish Measurement:

Surface texture, Meaning of RMS and CLA values, Tomlinson's Surface meter, Taylor-Hobson surface meter, grades of roughness, specifications

Screw Thread Metrology:

External screw threads terminologies, floating carriage instruments, pitch and flank measurement of external screw thread, application of Tool Makers Microscope, use of profile projector.

Gear Metrology:

Spur gear parameters, gear tooth thickness measurement, gear tooth Vernier caliper, constant chord method, span micrometer, base tangent comparator.

Interferometry:

Introduction, flatness testing by interferometry, NPL flatness interferometer. Study of measuring machines, recent trends in engineering metrology.

Term Work:

1. Study & Calibration of Thermocouples (J & K-Type)/RTD(PT-100)
2. Study & Calibration of Pressure Measurement, & Vacuum Measurement
3. Measurement of Load/Force using Load Cells
4. Displacement & Angle measurement using LVDT & Encoder Sensor
5. Study of Different Switches & Relays
6. Vibration Measurement using Accelerometer.
7. Level Measurement using Capacitive Transducer.
8. Study of Data Acquisition System and Interfacing of sensors with computer using DAQ Cards (NI DAQ Card)
9. Study of Linear and Non Linear Measuring Instruments.
 - i) Measurement of the surface roughness.
 - ii) Measurement of angle by sine bar/sine center.
 - iii) Measurement of optical surface using Interferometer.
 - iv) Measurements of screw tread parameters using Floating Carriage Micrometer.
 - v) Measurement of gear tooth thickness using gear tooth vernier caliper and span micrometer
 - vi) Study and experiment on profile projector/Tool makers microscope
 - vii) Industrial visit to Automation Company and Inspection & Quality control division of any Industry with detail report.

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

MACHINE TOOL DESIGN

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours / Week	End Semester Examination	60 Marks	03
	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Oral	-- Marks	
	Total	100 Marks	03

- Course Prerequisite:-**
1. Basic knowledge of Mechanisms and Mechanical elements.
 2. Well conversant with different types of Machine Tools.
 3. Basic knowledge of Materials.

Course Objective:- To be able to design the various elements of machine tools.

- Course Outcomes:-**
1. Understand the fundamentals of machine tool design.
 2. Select the type of gear box for applications in machine tool and design the sliding cluster gear box.
 3. Understand the design considerations for machine tool structures
 4. Select the guide ways and design the power screws.
 5. Design the spindle, select the spindle bearings and use acceptance test.
 6. Design of cams for single spindle automate and maintenance and repair of machine tool.

Unit 1 Introduction to Machine Tool Drives and Mechanisms (06 Hrs.)

General Principles of Machine Tool Design: Working and Auxiliary Motions in Machine Tools. Parameters Defining. Working Motions of a Machine Tool. Machine Tool Drives. Hydraulic Transmission and its Elements. Mechanical Transmission and its Elements. Techno-Economical Prerequisites for Undertaking the Design of New Machine Tool. General Requirements of Machine Tool Design. Engineering Design Process Applied to Machine Tools. Layout of Machine Tools, Modular Concept of Machine tool design.

Unit 2 Regulation of Speed and Feed Rates (06 Hrs.)

Aim of speed and feed rate regulation. Stepped regulation of Speed: Design of speed box – Design of Feed Box – Machine Tool Drives using Multiple

Speed Motions–Special Cases of Gear Box Design–General Recommendations for Developing the Gearing Diagram–Step less Regulation of Speed and Feed Rates, VFD and VVFD drives-Design Considerations. Motors: three phase induction motors-stepper motor, servo motor and universal motor.

Unit 3 Design of Machine Tool Structures (06 Hrs.)

Functions of Machine Tool Structures and their requirements – Design criteria for machine tool structures – Materials of machines Tools structures
 – Static and Dynamic stiffness – Profiles of machine tool structures – Basic Design procedure of machine tool structures – Design of Beds – Design of Columns – Design of Housings – Design of Bases and Tables – Design of Cross Rails, Arms, Saddles and carriages – Design of Rams.

Unit 4 Design of Guide-ways and Power Screws (06 Hrs.)

Functions and types of Guide-ways – Design of Slide-ways – Design criteria and calculations for slide-ways – Guide-ways operative under liquid friction conditions. Design of Anti-Friction Guide-ways – Combination Guide ways –Protecting devices for slide-ways

Design of power screws (Sliding & Rolling friction), Preloading of power screws.
 Design with reference to advanced machine tools.

Unit 5 Design of Spindles and Spindle Supports (06 Hrs.)

Functions of Spindle Unit and requirements – Materials of Spindles – Effect of machine tool compliance on machining accuracy- Design calculations of spindles
 Anti-friction bearing – Sliding bearings. Preloading of bearings. Bearings selection for machine tools.

Acceptance tests for Machine Tools:

Acceptance tests: Object and Procedure for acceptance test, Instruments required, sequence of acceptance test, standard acceptance test chart.ISO 230-1: 1996, ISO-2:2014.

Unit 6 Automatic Drives for Machine Tools (06 Hrs.)

Principles of automation. Automatic lathes with mechanical control. Design of cams for automatic screw cutting machines. Automatic loading and feeding of work pieces. Transfer devices in automatic machine tool systems. Modular design and unit heads for machine tools. Automatic in- process gauging.

Maintenance and repair of Machine Tools:

Types of Maintenance, Break down and preventive Maintenance, Organization of Maintenance department, Economic aspects of Preventive Maintenance, Restoration techniques.

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

ENERGY AUDIT AND MANAGEMENT

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours / Week	End Semester Examination	60 Marks	03
	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Total	150 Marks	03

Course Prerequisite:- Student should have knowledge of

1. Basic Physics
2. Basic Electrical Engineering
3. Basic Thermal Engineering
4. Mathematics

Course Objective:-

1. Understand basic energy conversion, conservation and management principles
2. Identify sources of energy loss and target savings
3. Understand design of waste heat recovery systems, efficient power cycles and power generation systems
4. To enable students in carrying out life cycle cost analysis and budgeting

Course Outcomes:-

1. To understand the need for energy conservation and its management
2. To know procedure for balance of energy and material in different processes
3. To conduct economic analysis of energy conservation measures
4. To understand a system of electrical energy management
5. To understand a system of thermal energy management
6. Conduct energy audits and formulate & implement energy conservation strategies

Unit 1 Energy Conservation: (06 Hrs.)

Energy Conservation and its Importance; Energy Strategy for the Future; The Energy Conservation Act, 2001 and its Features

Energy Management:

Definition & Objectives of Energy Management; Importance; Indian need of Energy Management; Duties and responsibilities of energy managers.

Unit 2 Material and Energy Balance (06 Hrs.)

Basic Principles, Sankey diagrams, Material balances for different processes, Energy balances, heat balances, Methods for preparing process flow chart, Procedure to carry out the material and energy balance in different processes.

Unit 3 Economic Analysis of Energy Conservation Measures (06 Hrs.)

Retrofit: Power plant retrofit, Home energy retrofit.

Economics: Fundamentals: Cash flows, Inflation Rates, Time Points and Periods, Discount Rates, Cost of Capital, Present value, Taxes, Uncertainty and Risk Economic Measures: Net Present Value, Total Life-Cycle Cost, Revenue Requirements, Internal Rate of Return, Modified Internal Rate of Return, Simple Payback Period, Discounted Payback Period, Benefit-to-Cost Ratios, Savings-to-Investment Ratios, Profitability index estimation

Unit 4 Electrical Energy Management (06 Hrs.)

Supply side: Methods to minimize supply-demand gap, renovation and modernization of power plants, reactive power management, HVDC, and FACTS. Demand side: conservation in motors, pumps and fan systems; energy efficient motors. Case Studies on Electrical Energy Management

Unit 5 Thermal energy Management (06 Hrs.)

Energy conservation in boilers, steam turbines and industrial heating systems; Application of FBC; Cogeneration and waste heat recovery; Thermal insulation; Heat exchangers and heat pumps; Building Energy Management. Case Studies on Thermal Energy Management

Unit 6 Energy Audit (06 Hrs.)

Energy Audit: Types and Methodology; Scope of Energy Audit , Energy Audit Reporting Format; Understanding Energy Costs; Benchmarking and Energy Performance; Matching Energy Usage to Requirement; Maximizing System Efficiency; Fuel and Energy Substitution; Energy Audit Instruments; Duties and responsibilities of energy auditors. Energy Management of Buildings and Energy Audit of Buildings. - Energy management matrix monitoring and targeting Case Studies

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

RELIABILITY ENGINEERING

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours / Week	End Semester Examination	60 Marks	03
	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Oral	-- Marks	
	Total	100 Marks	03

Course Prerequisite:- Student should have knowledge of-
Engineering Mathematics, Probability, Statistics

Course Objective:-

1. Understanding of basic principles of Reliability for ensuring sustainable product design.
2. Application to system requirements, design, manufacturing and testing, with real world examples
3. Understand in detail Asset Management, Maintenance, Quality and Productiveness,

Course Outcomes:- Student should be able to

1. Understand different measures of reliability
2. Know different probability methods used in reliability engineering
3. Calculate MTTF, MTBF, failure rate and hazard rate.
4. To acquire knowledge of methods for evaluation of reliability of different systems.
5. Understand the concepts of maintainability and availability in reliability engineering
6. Understand the reliability design procedure
7. Know different methods to test reliability of the system.

Unit 1 Fundamental Concepts of Reliability and Reliability Measures (06 Hrs.)

Brief history, concepts, terms and definitions, applications, the life cycle of a system, concept of failure, typical engineering failures and their causes

Reliability Measures: Reliability function– $R(t)$, cumulative distribution function (CDF)– $F(t)$, probability density function (PDF) – $f(t)$, hazard rate function– $\lambda(t)$, Mean time to failure (MTTF) and Mean time between failures (MTBF), typical forms of hazard rate function, bathtub curve

Unit 2 Probability Concepts and Failure Data Analysis (06 Hrs.)

Theory of probability, rules of probability, Introduction to independence, mutually exclusive, conditional probability random variables, discrete and continuous probability distributions. Binomial, normal Comparison of probability distributions - , lognormal, Weibull, exponential, Standard deviation, variance, mean, mode and Central Limit Theorem.

Failure Data Analysis: Data collection and empirical methods, estimation of performance measures for ungrouped complete data, grouped complete data, analysis of censored data, fitting probability distributions graphically (Exponential and Weibull) and estimation of distribution parameters.

Unit 3	Reliability Evaluation of Systems	(06 Hrs.)
	Reliability Improvement Redundancy, element redundancy, unit redundancy, standby redundancy -types of stand by redundancy, parallel components single redundancy, multiple redundancies, cut and tie set approach for reliability evaluation. Star and delta method, matrix method (Numerical).	
Unit 4	Maintainability and Availability	(06 Hrs.)
	Concept of maintainability, measures of maintainability, mean time to repair (MTTR), analysis of downtime, repair time distributions, stochastic point processes, maintenance concept and procedures, availability concepts and definitions, important availability measures.	
	Introduction to Reliability allocation or apportionment, reliability apportionment techniques- equal apportionment, AGREE, ARINC, Minimum effort method (Numerical)	
Unit 5	Design for Reliability and Maintainability	(06 Hrs.)
	Reliability design process and design methods, reliability allocation, failure modes, effects and criticality analysis (FMECA), fault tree and success tree methods, symbols used, maintainability design process, quantifiable measures of maintainability, repair versus replacement.	
Unit 6	Reliability Testing	(06 Hrs.)
	Introduction to reliability testing, Stress strength interaction, Introduction to Markov model, Testing for Reliability and Durability - Accelerated Life Testing and Highly Accelerated Life Testing (HALT), highly accelerated stress Screening (HASS)

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

DESIGN OF PUMPS, BLOWERS AND COMPRESSORS

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours / Week	End Semester Examination	60 Marks	03
	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Oral	-- Marks	
	Total	100 Marks	03

Course Prerequisite:-	Student should have knowledge of <ol style="list-style-type: none"> 1. Fundamentals of fluid mechanics 2. Fundamentals of turbo machinery 3. Fundamentals of thermodynamics
Course Objective:-	To provide basic concept of design of rotary machines <i>viz.</i> pumps, lowers and compressors.
Course Outcomes:-	Student must be able to understand- <ol style="list-style-type: none"> 1. Efficiency, losses, power requirement and operating characteristics of pumps 2. Theoretical concepts related to pumps 3. Thermal and hydraulic design of pumps 4. Theoretical concepts related to fans and blowers 5. Design principles of fans and blowers 6. Design principles of centrifugal and axial compressors
Unit 1	Review of Principles of Fluid Machinery (06 Hrs.)
	<ul style="list-style-type: none"> • Basic equations of energy transfer between fluid and rotor. • Performance characteristics. • Dimensionless parameters, specific speed, stage velocity triangles, work and efficiency.
Unit 2	Theory of Centrifugal Pumps (06 Hrs.)
	<ul style="list-style-type: none"> • Calculation of tangential and axial thrust methods to minimize axial thrust. Impellers, casings, volutes, vane velocity vector diagrams, work done and head developed by pumps. • Efficiency and losses in pumps (mechanical, hydraulic etc.), specific speed. • Calculation of power requirement, NPSH for pump selection, effects of cavitation on pump performance, operating characteristics.
Unit 3	Design of Pumps (06 Hrs.)
	<ul style="list-style-type: none"> • Introduction to design procedure of pumps. • Thermal design- selection of materials for high temperature and corrosive fluids. • Hydraulic design- selection of impeller and casing dimension using industrial manuals.
Unit 4	Theory of Fans and Blowers (06 Hrs.)

	<ul style="list-style-type: none"> • Classification of blowers, basics of stationary and moving air, Euler's characteristics, velocity triangles and operating pressure conditions. • Equations for blowers, losses and hydraulic efficiency, flow through impeller casing inlet nozzle, volute, diffusers, and mechanical losses. • Rotor design, airfoil theory, vortex theory, cascade effects, degree of reaction. • Blade twist stage design, surge and stall, stator and casing, mixed flow impellers, applications of blowers and fans. 	
Unit 5	Design of Fans and Blowers	(06 Hrs.)
	<ul style="list-style-type: none"> • Design procedure for selection of blowers, stage pressure rise, stage parameters and design parameters. • Design of impeller and casing dimension in aerodynamic design. 	
Unit 6	Theory and Design of Compressors	(06 Hrs.)
	<ul style="list-style-type: none"> • Basic theory, classification and application, working with enthalpy- entropy diagram, construction and approximate calculation of centrifugal compressors. • Impeller flow losses, slip factor, diffuser analysis, performance curves of centrifugal compressors. • Basic design features of axial flow compressors; velocity triangles, enthalpy-entropy diagrams, stage losses and efficiency, work done factor, simple stage of axial flow compressors, applications of compressors.

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV,V and VI

MANAGEMENT INFORMATION SYSTEM

Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 03 Hours / Week	End Semester Examination	60 Marks	03
	Unit Test	20 Marks	
	Assignments Internal Evaluation	10 Marks 10 Marks	
	Term Work / Oral	-- Marks	
	Total	100 Marks	03

Course Prerequisite:-	<ol style="list-style-type: none"> 1. A student should be familiar in computer programming. 2. A student should be familiar with concept of database. 3. A student should be familiar with manufacturing sectors- personnel management, financial management, production management, material management, marketing management.
Course Objective:-	<p>Student is able to understand</p> <ol style="list-style-type: none"> 1. Operations management. 2. Role of computers in information systems. Management Information System (MIS) 3. Data management-concept and its need. 4. Application in Manufacturing sectors
Course Outcomes:-	<p>The theory should be taught in such a manner that students are able to acquire different learning outcomes in cognitive, psychomotor and affective domain to demonstrate following course outcomes.</p> <ol style="list-style-type: none"> 1. To understand various basic concepts related to operations management and information system 2. To understand computer aided information system and the concept of information communication 3. To know the role of decision making in MIS. 4. To acquire knowledge of data base management system 5. To know the applications of MIS in different departments of an industry 6. To use different software for implementation of MIS in industries

Unit 1 Introduction (06 Hrs.)

Operations management: concept, meaning, definition, scope and functions. Optimization: concept, meaning, definition, need and scope. Types of production, their merits and demerits. Types of operations layouts: features, applications. Types of resources (7M). Data-meaning and types. Information-meaning and types.

Information system: need, concept, definition, features, objectives and examples. Need to integrate information systems and optimum utilization of 7M resources.

Unit 2 Information Systems (06 Hrs.)

Role of computers in information systems. Management Information System (MIS); concept, definition, need & applications.

Computer aided information systems: (such as inventory records, operation schedule, consumables issues, tools issues, inspection and quality control reports, failure frequencies with reasons, efficiency and utility reports, maintenance records, produced power units per day, temperature at certain interval, etc.) need, importance, design considerations, software selection criteria, examples.

Information communication: Communication process; computer networks and its types, structures, need and applications, protocols - types, features, applications.

Unit 3 Decision Making (06 Hrs.)

Concept, process behavioral decision making, organizational decision making, MIS and decision making. Building blocks of information system-Input, output, models, technology, database and control blocks. System development life cycle (SDLC) and its approach.

Unit 4 Data Base Management System (06 Hrs.)

Data management-concept, need, basic terminology used.

Data base: definition, meaning, importance, approach and architecture. Objectives of database organizations.

Data models: meaning, relationship and association, drawing schema, bubble chart & tree structure for suitable mechanical engineering application. Data Base Management System (DBMS) - definition, scope, importance, awareness about current software packages & their features, Relational Data Base Management System. (RDBMS) - concept, definition, features and applications. Preparation steps/ procedure for creating, storing, editing & retrieval of database on latest available database management software package.

Unit 5 Applications in Manufacturing Sectors (06 Hrs.)

Application in Manufacturing sectors- Personnel management, financial management, production management, material management, marketing management, supply chain management.

Unit 6 System implementation (06 Hrs.)

Modern software design techniques, verification and validation, methods, performance of software systems, software matrix and models, software standards, introduction to Capability maturity model (CMM), and quality management in software organization.

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

PROFESSIONAL SKILLS DEVELOPMENT-VI

Designation of Course	Workshop Technology		
Teaching Scheme:	Examination Scheme:		Credits Allotted
Theory:- 4 Hours/ Week	End Semester Examination	100 Marks	Theory: 04 Practical: 00
Practical:- -- Hours/ Week	Unit Test	-- Marks	
	Assignments	-- Marks	
	Internal Evaluation	-- Marks	
	Term Work	-- Marks	
	Total	100 Marks	04

Course Pre-requisites

The Students should have knowledge of

1. Concepts of Maths, Logical reasoning and English Grammar taught in the last semester.
2. A basic knowledge of Group Discussion, DO's and Don'ts done in the previous sem.
3. Basic knowledge of writing skills, importance of professionalism in emails and letters.
4. Knowledge on the concepts of criticism, feedback and conflicts.
5. Awareness of the interpersonal skills like team work and introduction to Leadership taught during the last semester.
6. Brief idea about professional and business meeting etiquettes.

Course Objectives

The Professional Skills Development 6 is an extension of PSD- 5 with focus on the remaining topics of Aptitude and Grammar. The further complex concepts of Permutation and Combination, Probability and grammatical topics such as prepositions etc. would be dealt with. The objective here is to acquaint them with the level of complexity presented in recruitment tests and also provide them techniques to solve such question with tricks/methods in a very short period. The English communication and soft skills section of PSD-6 focuses on the other important aspects of soft skills training students such as techniques of effectively handling Personal Interviews during placement process and understand the dynamics of structured Resume and PIs.

Course Outcomes

The student should be able to

1. Learn further concepts of Maths, Logical reasoning and English grammar and apply short cuts/ tricks to solve questions in less time. Learn remaining 25-30 rules of grammar topics such as prepositions, conjunctions etc relevant from the recruitment point of view.
2. Learn to handle vocabulary questions such as synonyms and analogies in recruitment test and other competitive exams
3. Understand and Learn techniques/Strategies of how to handle Personal interviews during recruitment process. Through Mock PIs students would be taught the appropriate ways of answering tricky questions in Interview and would learn the correct body language etc. to be demonstrated in an interview process.
4. They would be acquainted with the differences between CV, Bio- Data and Resume and they would learn the correct format of a Résumé along with methods and styles to make their Resumes interesting.
5. Students would learn to incorporate various rules of written communication in business writing scenario with the appropriate tone and words.
6. Understand the importance of grooming, body language and etiquettes in the corporate sector. They would be able to conduct themselves in a professional and impressive way by conducting themselves according to situations in the professional sector.

Course Contents

Unit I	Aptitude (Maths, Logical Reasoning, English)	(24 Hrs.)
	<ul style="list-style-type: none"> • Maths <ul style="list-style-type: none"> ▪ Permutation & Combination ▪ Probability ▪ Maths Revision -1 ▪ Maths Revision - 2 • Logical Reasoning <ul style="list-style-type: none"> ▪ Matching, Selection & Arrangement ▪ Clocks & Calendars, Visual Reasoning 	

	<ul style="list-style-type: none"> ▪ Input, Output & Flow Chart. ▪ Reasoning Revision- 1 ▪ Reasoning Revision-2 • English <ul style="list-style-type: none"> ▪ Grammar – III– (Prepositions& Conjunctions) ▪ Grammar- (Articles & Parallelism) ▪ Verbal Ability Revision- I 	
Unit II	Soft Skills & English Communication	(24 Hrs.)
	<ul style="list-style-type: none"> • Resume-I • Resume- II • Mock GD • Mock GD • Personal Interviews-I • Personal Interviews-II • Mock PI • Mock PI • Extempore Speeches, Group Interviews • Written Skills- Revision • Stress Management • Business Writing Tones. 	
Text Books		
1. APAART: Verbal Ability		
2. APAART: Logical Reasoning		
3. APAART: Quantitative Aptitude		
4. APAART: Speak Well 1 (English Language and Communication)		
5. APAART: Speak Well 2 (Soft Skills)		

Rules regarding ATKT, Continuous Assessment and award of Class

Standards for Passing

- For all courses, both in UE (University Evaluation) and IA (Internal Assessment) there are constitute separate heads-of-passing (HoP).
 - The student must obtain a minimum grade point of 5.0 (40% marks) at UE as well as at IA.
- OR
- The student failed in IA can also pass in the course provided he/ she obtains minimum of 25% marks in IA, and GPA (Grade Point Average) for the course is at least 6.0 (50% aggregate). The GPA for the course will be calculated only if the student passes in UE.
- The student who fails at UE in a course has to reapply only at UE as a backlog candidate and clear the HoP. Similarly, a student who fails in a course at IA has to reappear only at IA as backlog candidate and clear the HoP.

Rules of ATKT

- A student is allowed to carry backlog of courses prescribed for B. Tech. Sem. I, III, V, VII to B. Tech. Sem. II, IV, VI, VIII respectively.
- A student is allowed to keep term of Sem. III, if he/ she has failed in any number of courses in B. Tech. Sem. I and II.
- A student is allowed to keep term of Sem. V, if he/ she has failed in any number of courses in B. Tech. Sem. III and IV but passed in all courses in Sem. I and II.
- A student is allowed to keep term of Sem. VII, if he/ she has failed in any number of courses in B. Tech. Sem. V and VI but passed in all courses in Sem. III and IV.

Award of Class for the Degree Considering CGPA

A student who has completed the minimum credits specified for the program shall be declared to have passed in the program. The final result will be in terms of letter grade only and is based on the CGPA of all courses studied and passed. The criteria for the award of the honors at the end of the program are as given below:

Range of the CGPA	Final Grade	Performance Descriptor	Equivalent range of marks (%)
$9.50 \leq 10.00$	O	Outstanding	$80 \leq 100$
$9.00 \leq 9.49$	A ⁺	Excellent	$70 \leq 79$
$8.00 \leq 8.99$	A	Very Good	$60 \leq 69$
$7.00 \leq 7.99$	B ⁺	Good	$55 \leq 59$
$6.00 \leq 6.99$	B	Average	$50 \leq 54$
$5.00 \leq 5.99$	C	Satisfactory	$40 \leq 49$
Below 5.00	F	Fail	Below 40

e) Finite Element Analysis

1. MECHANICAL VIBRATION

1. MECHANICAL VIBRATION		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week Practical: 02 Hours / Week	End Semester Examination: 60 Marks	Theory: 03 Practical: 01
	Continuous Assessment: 40 Marks	Total: 04
	Term Work/ Oral: 50 Marks	
Course Pre-requisites:		
1.	Student should have knowledge of Fundamentals of Engineering Mechanics	
2.	Student should have knowledge of Engineering Mathematics	
3.	Student should have knowledge of Machine Design and Computer Aided Drafting	
4.	Student should have knowledge of Machine Design –I & II	
5.	Student should have knowledge of Theory of Machine	
Course Objectives:		
1.	To study basic concepts of vibration analysis	
2.	To acquaint with the principles of vibration measuring instruments	
3.	To study balancing of mechanical systems	
Course Outcomes:		
Students will be able to understand		
1.	Develop mathematical model to represent dynamic system	
2.	Estimate natural frequency of mechanical element/system	
3.	Analyze vibratory response of mechanical element/system	
4.	Estimate the parameters of vibration isolation system	
UNIT - I	Basic Concepts of Vibration Vibration and oscillation, causes and effects of vibrations, Vibration parameters –spring, mass, damper, Damper models, Motion – periodic, non-periodic, harmonic, non- harmonic, Degree of freedom, static equilibrium position, Vibration classification, Steps involved in vibration analysis.	(06 Hours)
UNIT - II	Free Undamped Single Degree of Freedom Vibration System Longitudinal, transverse, torsion vibration system, Methods for formulation of differential equations by Newton, Energy, Lagrangian and Rayleigh’s Method.	(06 Hours)
UNIT - III	3.1 Free Damped Single Degree of Freedom Vibration System Viscous damped system – under damped, critically damped, over damped; Logarithmic decrement; Coulomb’s damping; Combined	(06 Hours)

	viscous and coulomb's damping. 3.2 Equivalent Single Degree of Freedom Vibration System Conversion of multi-springs, multi masses, multi – dampers into a single spring and damper with linear or rotational co-ordinate system	
UNIT - IV	4.1 Forced Single Degree of Freedom Vibratory System Analysis of linear and torsional systems subjected to harmonic force excitation and harmonic motion excitation (excluding elastic damper) 4.2 Vibration Isolation and Transmissibility Force Transmissibility, Motion Transmissibility Typical isolators& Mounts 4.3 Rotor Dynamics: Critical speed of single rotor, undamped and damped	(06 Hours)
UNIT - V	5.1 Free Undamped Multi Degree of Freedom Vibration System Eigen values and Eigen vectors for linear system and torsional two degree of freedom; Holzer method for linear and torsional unbranched system; Two rotors, Three rotors and geared system; Dunkerley's and Rayleigh's method for transverse vibratory system	(06 Hours)
UNIT - VI	Vibration Measurement -Introduction -Vibration measuring parameters- Displacement, Velocity and acceleration -Vibration measuring devices: Accelerometers, Vibration exciters, FFT analyzer, -Introduction to signal analysis: Time domain & Frequency domain analysis of signals. - Noise measurement	(06 Hours)
Term Work/Practicals:		
1. To determine the natural frequency of damped vibration of single degree freedom system and to find it's damping coefficient		
2. To obtain frequency response curves of single degree freedom system of vibration for different amount of damping.		
3. Free vibration of simply supported beam		
4. Free Vibration of a Two-DOF System		
5. Forced vibration of SDOF system		
6. To determine critical speed of shaft with single rotor.		

7. To verify natural frequency of torsional vibration of two rotor system and position of node.	
8. Noise measurement and analysis using vibration Analyzer	
9. To determine natural frequency of vibration of beam using vibration analyzer.	
10. Vibration analysis of mechanical system using MATLAB	
Assignments:	
1. Use and study MATLAB Code for fundamentals of vibration.	
2. Use MATLAB program for vibration analysis with suitable example.	
3. Longitudinal, transverse, torsion vibration system program in MATLAB.	
4. MATLAB Program for Vibration calculations by Using of differential equations in MATLAB.	
5. Study of Free Damped Single Degree of Freedom Vibration System.	
6. Study of Equivalent Single Degree of Freedom Vibration System.	
7. Study of Forced Single Degree of Freedom Vibratory System	
8. Study of Vibration Isolation and Transmissibility	
9. Finding of Eigen values and Eigen vectors for linear system and torsional two degree of freedom by MATLAB program.	
10. Use FFT Analyzer for lathe machine vibration analysis	
11. Study of Noise measurement	
12. Theoretical study of vibration signal analysis.	
Text Books/Reference Books:

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

2. AUTOMATIC CONTROL SYSTEM

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	Theory: 03
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	Practical: 01
	Term Work/ Oral: 50 Marks	Total : 04

Course Pre-requisites:

The Students should have

1.	Knowledge of Mathematics & Science
2.	Knowledge of Basic Electrical Engineering.
3.	Knowledge of Sensors and Measurement System.

Course Objectives:

1.	Familiarization with Control System Principles and Applications of Control System.
2.	Calculate and Estimate the Stability Measures, Time Response Measures from the Analysis of Mathematical Models of Some Simple Engineering Systems.
3.	Develop Ladder Diagrams using PLC and Apply It for Industrial Automation.

Course Outcomes:

Students should be able to,

1.	Determine the (absolute) stability of a closed-loop control system using Routh-Hurwitz's stability criterion.
2.	Obtain an overall transfer function of control system by using block diagram algebra methods.
3.	Determine the time response specifications of a control system.
4.	Use analog and digital signal processing for mechatronics applications.
5.	Use Fundamentals of control systems, mechatronics system and able to improve an existing system's performance by using controller action such as PID controllers.
6.	Develop ladder diagram and select PLCs for industrial applications.

Course Contents

UNIT I	Frequency Domain Modelling and Analysis	(06 Hrs)
	Transfer Function based modeling of Mechanical, Thermal and Fluid System; Concept of Poles & Zeros; Absolute vs Relative Stability; Stability Analysis using Routh Hurwitz Criterion; Mapping of Pole Zero Plot with Damping Factor, Natural Frequency and Unit Step Response.	
UNIT II	Block Diagram Algebra	(06 Hrs)
	Block Diagram Fundamentals, Canonical Form, Rules for Block Diagram Reduction, Reduction of Block Diagram, Reducing to Unity Feedback Systems, Examples on Block Diagram Reduction.	
UNIT - III	System Response	(06 Hrs)
	Introduction of Time Response of Control System, Standard Test Signals, Input-Output Model Equation, Instantaneous, Lagging and Delay Response, Transient Specifications for Unit Step Response,	

	Concept of State, State Variable, State Vector, State Space and State Model.	
UNIT - IV	Signal Conditioning	(06 Hrs)
	Necessity of Signal Conditioning, Passive Circuits, Analog Signal Processing: Operational Amplifiers, Inverting and Non-inverting, Summing, Subtractor, Instrumentation. Digital Signal Processing: Timing Diagrams, Sequential Logic, Flip-Flops, Successive Approximation (SAR) type ADC and R-2R ladder DAC.	
UNIT V	Automatic Control System	(06 Hrs)
	Concept of Automatic Control Systems, Mechatronics System & Its Examples, Mechatronics System Components, Open Loop and Closed Loop System, Effects of Feedback and Basic Characteristic of Feedback Control Systems. Applications of Feedback and Feed-Forward Control System. Basic Control Action and Controllers:-On-Off Control, Proportional, Integral, Derivative and PID.	
UNIT VI	Programmable Logic Controller	(06 Hrs)
	Introduction to PLCs, Basic Structure of a PLC, Principles of Operation, PLC Programming Languages, Ladder diagram, Latching and internal relays, Timers and Counters, Selection of a PLCs for Control System, Application of PLCs for Automatic Control System. Concept of SCADA and its Applications.	

Term Work:

Term work shall consist record of minimum 8 experiments from the following; Out of which Experiment no. 1, Experiment no. 3 and Experiment no. 9 are compulsory.

1. Analysis of following control system parameters using software like MATLAB/SIMULINK
 - a. Plot the pole-zero configuration in s-plane for the given transfer function
 - b. Stability analysis of given control system using Routh-Hurwitz's criterion
 - c. Determine the transfer function for given closed loop system in block diagram representation.
 - d. Plot unit step response of given transfer function and find peak overshoot, peak time, rise time and delay time.
2. Study of applications of Op-Amp Circuits.
3. Study of P, P+I, P+D, P+I+D control actions using any trainer kit / simulation software.
4. Study of XY position control systems.
5. Stabilizing Inverted Pendulum.
6. Study of A/D and D/A Converters.
7. Study the functions and applications of variable frequency drive(VFD).
8. To study AC servomotor and plot its Torque Speed characteristics.
9. Development of applications by using following instructions of the PLC
 - a. Latching
 - b. Timers

c. Counters d. Logic Gates 10. Sequencing of pick and place robot using PLC programming. 11. Identification of different control system components in PLC based mini assembly cell. 12. Development of applications using SCADA system for any automation application.	
Assignments:	
Assignments will be based on above syllabus	
Unit I	1. Numerical based on finding stability of control systems.
	2. Explain the Transfer function based modeling of Mechanical System
	3. Explain the Transfer function based modeling of Thermal System
	4. Explain the Transfer function based modeling of Fluid System
	5. Explain concept of poles and zeros and its importance in stability analysis.
	6. MATLAB based assignments on Routh-Hurwitz's stability criterion
Unit II	1. At least five questions on finding an overall transfer function of control system by using block diagram algebra method.
Unit III	1. What is the meaning of system response?
	2. What do you understand by input-output model equation?
	3. Define instantaneous response, lagging response and delayed response.
	4. Write notes on transient response specifications.
	5. What types of test signals are usually considered for testing a system response.
	6. Define state, state variable, state vector, state space and state model.
Unit IV	1. Why signal conditioning elements are necessary? Explain. What are the applications of signal conditioning elements?
	2. Define an op-amp. Explain with a neat block diagram. List the characteristics of an ideal op-amp.
	3. Write short notes on Inverting and Non-Inverting amplifier.
	4. Describe the significance of an instrumentation amplifier. Explain the operation of an instrumentation amplifier with the help of a circuit diagram.
	5. Define terms timing diagram, sequential logic and flip-flop
	6. Describe the operations of J-K FF with truth table.
	7. Explain working of SAR type ADC
	8. Explain working of R-2R ladder type DAC
Unit V	1. Define mechatronics and appreciate its relevance to contemporary engineering design
	2. Identify five mechatronic systems and its primary elements
	3. Describe the various forms and elements of open-loop and closed-loop control system
	4. Differentiate between feedback and feedforward control system
	5. Explain working of control actions- P, PI, PD and PID
	6. MATLAB based assignments on PID Controller
Unit VI	1. Draw block diagram of PLC and explain working of each block in brief.
	2. What is mean by ladder diagram? State difference between ladder and relay logic
	3. With the help suitable example explain working of latch

	4. Explain working of timer and counter with ladder diagram.
	5. State the criteria for selection of PLCs.
	6. Write five ladder logics for industrial applications.
	7. Write a short note on SCADA System & its use in automation
	8. Mini project based on PLC Programming.

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

3. AUTOMOBILE ENGINEERING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	TH: 03 Credits
	Continuous Assessment: 40 Marks	Total : 03 Credits
	Term Work/ Oral: -- Marks	
Course Pre-requisites:		
The Students should have basic knowledge of		
1.	The Students should have basic knowledge of Elements of Mechanical engineering	
2.	The Students should have basic knowledge of Machine Tools	
3.	The Students should have basic knowledge of Internal Combustion Engine	
4.	The Students should have basic knowledge of Theory of Machine	
Course Objectives:		
	1. Study basic principles of actual automobile systems 2. Study important systems in an automobile 3. Study recent and modern trends in automobile sector	
Course Outcomes:		
Students will be able to understand		
1.	various systems in an automobile	
2.	Importance and features of different systems like steering axle, differential.	
3.	Importance and features of different systems like Transmission, braking System	
4.	Importance and features tyres, wheel and balancing etc.	
5.	Importance of electrical, starting and generating system etc.	
6.	Principle of operation, construction and applications of various sensors used in modern automobile	
UNIT - I		
Classification of Automobiles	Broad classification of Automobiles, Major components & their functions, Types of vehicle layouts, Types of bodies, Body construction & materials, All wheel drive, Types of chassis & their construction.	(06 Hours)

UNIT - II	<p>Steering System Function of steering, Steering system layout, Automotive steering mechanism Ackerman & Davis, Types of steering gear boxes, Condition for true rolling, Steering geometry Camber, Caster, King pin inclination, included angle, Toe-in & Toe-out, Wheel alignment, Under steer & Over steer, Types & working of power steering.</p> <p>Transmissions: Necessity of gear box, Sliding mesh, Constant mesh, Synchromesh and epicyclic gear box, Overdrives and hydrodynamic torque converter, Trouble shooting and remedies.</p> <p>Live axle and differential: Final drive, spiral, bevel, Hypoid and worm drives, Types of live axles, semi, three quarter and full floating axles. Necessity of differential, Conventional and non-slip differential, Trouble shooting and remedies.</p>	(06 Hours)
UNIT - III	<p>Clutch Braking System Requirement of clutch, Types & functions, Single plate, Multiplate, Centrifugal, Cone clutch, Electromagnetic & Fluid clutches, Troubleshooting & automobile clutch.</p> <p>Braking System Function of automotive brake system, Types of braking mechanism Internal, Expanding & Disc brake, Mechanical, Hydraulic & Air brake system, Servo & power brakes, Antiskid braking, Calculation of braking force required, Stopping distance & dynamic weight transfer.</p>	(06 Hours)
UNIT - IV	<p>Suspension Object of suspension, Basic requirement, Air suspension and its features, Independent suspension, Spring & unspring mass, Types of spring, Shock absorber, Torsion bars, Air suspension, Hydro pneumatic suspension, Pitching, rolling and bouncing.</p> <p>Wheels and Tyres Requirements of wheels and tyres, Constructional features, Types of tyres, Types of rim , Inflation Pressure and its importance, Application to ride and stability, Trouble shooting and remedies.</p>	(06 Hours)
UNIT - V	<p>Electrical system Battery: Types of battery, Lead-Acid, Alkaline, ZEBRA, Sodium Sulphur and Swing, Ratings, charging, Maintenance and testing of Lead-Acid battery.</p> <p>Starting system: Requirements, Various torque terms used, Starter motor drives; Bendix, Follo through, Barrel, Rubber compression, Compression Spring, Friction Clutch, Overrunning Clutch, Dyer.</p>	(06 Hours)

	Starter motor solenoids and switches, Glow plugs. Alternator: Principle of operation, Construction, Working, Rectification from AC to DC.	
UNIT - VI	Recent trends in Automobiles Electronic Control module (ECM), operating modes of ECM (closed loop and open loop) Inputs required and output signals from ECM, Electronic Spark control, Air Management system, Idle speed control. Construction, working & application of temperature sensors, inductive sensors, Position sensors (rotary, linear). Hot wire and thin film air flow sensors, vortex flow/turbine fluid sensors, Optical sensor, Oxygen sensors, Light sensors, methanol sensors ,Rain sensor, New developments in the sensor technology.	(06 Hours)
Any Six Assignments from the following:		
1. Study of types of bodies and chassis of automobile.		
2. Report on dismantling and assembly of steering mechanisms.		
3. Report on dismantling and assembly of brakes.		
4. Report on dismantling and assembly of rear axle and differential.		
5. Report on dismantling and assembly of suspension systems.		
6. Study of types of tyres and rims.		
7. Report on battery charging and starting systems.		
8. Study and understanding of different types of sensors used in automobile.		
9. Report on industrial visit to any automobile Manufacturer.		
10. Report on industrial visit to any Two wheeler/ Four Wheeler service station		
Text Books/Reference Books:

10	Automobile Engineering, Vol I & II, R.K. Mohanty, Standard Book House	
Syllabus for Unit Test:		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

4. INDUSTRIAL FLUID POWER

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -03Hours/ Week	End Semester Examination: 60 Marks	Theory: 03
	Continuous Assessment: 40 Marks	Total :03
	Term Work/ Oral: -- Marks	

Course Prerequisites: -	<p>The Students should have</p> <ol style="list-style-type: none"> 1. Knowledge of fluid mechanics, turbomachinery. 2. Knowledge of mechanical measurement. 3. Knowledge of Theory of Machine
Course Objective: -	<ol style="list-style-type: none"> 1. Familiarization with fluid power principles and the fluid power industry. 2. To analyse specific problems, design solutions and evaluate fluid power systems in industrial applications. 3. To instil within students a positive safety attitude with regard to the design, construction, operation, and maintenance of fluid power systems. 4. To provide students with knowledge of the applications of fluid power systems in process, construction, robotics and manufacturing industries. 5. To develop within each student a measurable degree of competence in the design, construction, operation and maintenance of fluid power systems. 6. To provide students with an understanding of the properties of hydraulic and pneumatic fluids, as well as components utilized in industrial fluid power systems.
Course Outcomes: -	<p>Students should be able to</p> <ol style="list-style-type: none"> 1. Identify fluid power system and its basic components for practical applications. 2. Select suitable pump, reservoir and accumulators for various industrial applications. 3. Use specific pressure, flow and direction control valves based on applications. 4. Select actuator and develop a simple hydraulic circuit to accomplish the task. 5. Understand basic components of the pneumatic & electro-pneumatic systems and develop pneumatic circuits for industrial automation. 6. Design hydraulic & pneumatic circuit for industrial applications.

Course Contents

Unit 1	Introduction to Fluid Power	(06Hrs)
<p>Fluid power system: Components of fluid power system, advantages and limitations. Difference between electrical, pneumatic and fluid power systems. Applications in the fields of machine tools, material handling, aerospace, mobile and stationary machines, clamping devices and more applications of fluid power.</p> <p>Types of hydraulic fluids, Seals, Conductors: Petroleum based, synthetic and water based. Properties of fluids, Pascal's Law, selection of fluids, additives, effect of temperature and pressure on hydraulic fluid. Seals, sealing materials. Types of pipes, hoses, material. Fluid conditioning through filters, strainers, sources of contamination and contamination control.</p>		
Unit 2	Source of Power	(06 Hrs)
<p>Pumps: Types, classification, principle of working and constructional details of gear pumps, vane pump, piston pump, power and efficiency calculations, characteristics curves, selection of pumps for hydraulic power transmission (Numerical Treatment).</p> <p>Power units and accessories: Types of power units, reservoir assembly, sizing of reservoirs, constructional details, pressure switches, temperature switches. Accumulators: Types, selection procedure, applications of accumulators. ISO symbols for hydraulic and pneumatic Components</p>		
Unit 3	Fluid Power Control	(06 Hrs)
<p>Control of fluid power: Necessity of fluid control through pressure control, directional control and flow control valves.</p> <p>Control valves: i) Principle of pressure control valves, direct operated and pilot operated pressure relief valves, pressure reducing valve, sequence valve. ii) Principle of flow control valves, pressure compensated and non-compensated flow control valves.iii) Principle of directional control valves, types of directional control valves, two-way, three-way, four-way valves, check valve and shuttle valve. Open centre, close centre, tandem centre valves. Actuating devices- manually operated, mechanically operated, solenoid operated, pilot operated, lever operated.</p>		
Unit 4	Actuators and Industrial Circuits	(06 Hrs)
<p>Actuators: (i) Linear and Rotary actuators (ii) Types of cylinders and mountings, Design considerations for cylinders (iii) Types of hydraulic motors- gear, vane & piston. (iv) Methods of control of acceleration, deceleration. (v) Calculation of piston velocity, thrust under static and dynamic applications, considering friction, inertia loads (Numerical Treatment).</p> <p>Industrial circuits: Simple reciprocating, Regenerative, Speed control (Meter in, meter out & bleed off), Sequencing, Synchronization, transverse & feed, automatic reciprocating, fail safe circuit, counter balance circuit, actuator locking, circuit for hydraulic press, unloading circuit, motor breaking circuit.</p>		
Unit 5	Pneumatics	(06 Hrs)
<p>Principle of Pneumatics: (i) Laws of compression, types of compressors, selection of compressors. Pneumatic actuators-rotary, reciprocating (ii) Comparison of pneumatics with hydraulic power transmissions. (iii) Types of filters, regulators, lubricators, mufflers, dryers. (iv) Pressure regulating valves, (v) Direction control valves (vi) Speed regulating methods</p>		

used in Pneumatics.(vii)Basic pneumatic circuits (viii) Introduction to electro-pneumatics. Application of pneumatics in industrial automation.

Introduction to vacuum: Vacuum measurement, vacuum pumps, introduction to vacuum sensors and valves. Industrial applications of vacuum.

Unit 6	System Design	(06 Hrs)
---------------	----------------------	-----------------

Design of hydraulic/ pneumatic circuit for practical application, Selection of different components such as reservoir, various valves, actuators, filters, pumps based on design. (Students are advised to refer manufacturer's catalogues.)

Term work

Term work shall consist record of minimum 10 experiments from following; Out of which Experiment no.7, Experiment no. 9 and Experiment no. 13 are compulsory.

1. Study of ISO/JIC Symbols for hydraulic and pneumatic systems.
2. Study of positive displacement pumps and determination of performance characteristics.
3. Study of filters and determination of filtration ratings.
4. Study of pressure control valves and circuits.
5. Study of flow control valves (Meter in, Meter out Circuits).
6. Study of direction control valves and circuits.
7. Following experiments to be done on pneumatic trainer:
 - a) Automatic reciprocating circuit.
 - b) Speed control circuit.
 - c) Pneumatic circuit involving shuttle valve/quick exhaust valve.
 - d) Sequencing circuit.
 - e) Circuits by using logic gates.
8. Following experiments to be done on hydraulic trainer:
 - a) Regenerative circuit.
 - b) Speed control circuit.
 - c) Sequencing circuit.
 - e) Transverse and feed circuit.
9. Design of circuits by using fluid simulation software's such as LVSIM®-HYD & PNEU, AUTOMATION STUDIO.
10. Study of Logic for DELAY Circuit using signal Input device unit & Indicator unit.
11. Design of compressed air distribution in pneumatic systems.
12. Design of simple hydraulic systems used in practice such as hydraulic clamp, jacks, dumper, forklift etc.
13. Industrial visits for applications of hydraulic and pneumatic system and their reports.
14. Study of accumulators/actuators/intensifiers/hydraulic and pneumatic power brakes.

Assignments

Assignments will be based on above syllabus

1. Theory questions based on hydraulic fluids, seal, strainer, conductor and filters.
2. At least five numerical/theory questions on sources of power.
3. Theory questions based on selection of pressure control, flow control and directional control valve for specific application.
4. Develop at least five hydraulic circuits using simulation software like Automation Studio.
5. Develop at least five pneumatic circuits for low cost industrial automation using simulation software like Automation Studio, Fluid SIM®.
6. Design of at least five hydraulic/pneumatic systems which includes components such as reservoir, various valves, actuators, filters, pumps based on design.
7. Theory questions based on sources of contamination, and its control.
8. Theory questions based on fluid power control.
9. Theory questions based on pneumatics and its applications
10. Identify at least five fluid power applications and enlist the fluid power components used in each of these applications.
11. Design of hydraulic/pneumatic circuit for practical application and selection of fluid power components.

Unit Tests-

Unit Test-I	Unit-I,II, III
Unit Test-II	Unit-IV, V, VI

Elective II: 5.1 COMPUTATIONAL FLUID DYNAMICS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	TH:03 Credits
Practical: - Hours / Week	Continuous Assessment: 40 Marks	Total:03 Credits
	Term Work/ Oral: -- Marks	
Course Pre-requisites:		
The Students should have		
1.	Knowledge of Mathematics & Science	
2.	Knowledge of fluid mechanics and heat transfer	
Course Objectives:		
1.	To introduce Governing Equations of vicious fluid flows	
2.	To introduce numerical modeling and its role in the field of fluid flow and heat transfer	
3.	To enable the students to understand the various discretization methods	
Course Outcomes:		
Students will be able to understand		
1.	Student should able to understand types of flow	
2.	Student should able to understand CFD Analysis	
3.	Student should able to understand numerical methods used in CFD	
4.	Student should able to understand Generate mesh	
5.	Student should able to understand conjugate heat transfer	
6.	Student should able to understand turbulence modeling	
Course Contents		
UNIT - I	Introduction to fluid Dynamics	(06 Hrs)
	Concepts of Fluid Flow, Pressure distribution in fluids, Reynolds transport theorem, Integral form of conservation equations, Differential form of conservation equations, Different Types of Flows, Euler and	

	Navier Stokes equations, Properties of supersonic and subsonic flows, Flow characteristics over various bodies.	
UNIT - II	Mesh Generation	(06 Hrs)
	Surface mesh generation Surface mesh repair, Volume grid generation, Volume mesh improvement, mesh smoothing algorithms, grid clustering and quality checks for volume mesh. Adaptive, Moving and Hybrid Grids, Need for adaptive and, moving grids, Tet, pyramid, prism, and hex grids, using various elements in combination	
UNIT - III	Basic Discretization Techniques	(06 Hrs)
	Need to discretization the domain and governing equations, Finite difference approximation using Taylor series, for first order (Forward Difference Approximation, Backward Difference Approximation, Central difference Approximation) and second order (based on 3 node, 4 node and 5 node points), explicit and Implicit approaches applied to 1D transient conduction equation, Couette flow equation using FTCS and Crank Nicholson's Method, Stability Criteria concept and physical interpretation, Thomas Tri-diagonal matrix solver.	
UNIT - IV	Two Dimensional Steady and unsteady heat conduction	(06 Hrs)
	Solution of two dimensional steady and unsteady heat conduction equation with Dirichlet, Neumann, robbins and mixed boundary condition – solution by Explicit and Alternating Direction Implicit method (ADI Method), Approach for irregular boundary for 2D heat conduction problems	
UNIT - V	Application of Numerical Methods to Convection – Diffusion System	(06 Hrs)
	Convection: first order wave equation solution with upwind, Lax–Wendroff, Mac Cormack scheme, Stability Criteria concept and physical interpretation Convection –Diffusion: 1D and 2D steady Convection Diffusion system – Central difference approach, Peclet Number, stability criteria, upwind difference approach, 1 D transient convection-diffusion system	
UNIT - VI	CFD as Practical Approach	(06 Hrs)
	Introduction to any CFD tool, steps in pre-processing, geometry creation, mesh generation, selection of physics and material properties, specifying boundary condition, Physical Boundary condition types such as no slip, free slip, rotating wall, symmetry and periodic, wall roughness, initialising and solution control for the solver, Residuals, analysing the plots of various parameters (Scalar and Vector contours such as streamlines, velocity vector plots and animation). Introduction to turbulence models. Reynolds Averaged Navier-Stokes equations (RANS), $k-\epsilon$, $k-\omega$. Simple problems like flow inside a 2-D square lid driven cavity flow through the nozzle	
Assignments:		

Assignments will be based on above syllabus	
1.	Reynolds transport theorem, Integral form of conservation equations
2.	Differential form of conservation equations, Different Types of Flows, Euler and Navier Stokes equations
3.	Surface mesh generation Surface mesh repair, Volume grid generation, Volume mesh improvement, mesh smoothing algorithms
4.	Grid clustering and quality checks for volume mesh. Adaptive, Moving and Hybrid Grids
5.	Finite difference approximation using Taylor series, for first order
6.	Explicit and Implicit approaches applied to 1D transient conduction equation, Couette flow equation using FTCS and Crank Nicholson's Method
7.	Solution of two dimensional steady and unsteady heat conduction equation with Dirichlet, Neumann,
8.	Robbins and mixed boundary condition – solution by Explicit and Alternating Direction Implicit method (ADI Method), Approach for irregular boundary for 2D heat conduction problems
9.	Convection: first order wave equation solution with upwind, Lax–Wendroff, Mac Cormack scheme, Stability Criteria concept
10.	Selection of physics and material properties, specifying boundary condition, Physical Boundary condition types such as no slip, free slip, rotating wall, symmetry and periodic, wall roughness

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Elective II: 5.2 INDUSTRIAL ENGINEERING & MANAGEMENT		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	TH:03 Credits
Tutorial: 00 Hours / Week	Continuous Assessment: 40 Marks	Total: 03 Credits
	Term Work/ Oral: -- Marks	
Course Pre-requisites:		
The Students should have		
1.	Knowledge of basic concept of Management	
2.	Basic information of Industrial engineering.	
3.	Basic knowledge of human considerations in manufacturing.	
Course Objectives:		
	The student should understand the scope, objective and application of industrial engineering tools and management practices in manufacturing.	
Course Outcomes:		
Students will be able to understand		
1.	Definition, principles and functions of management.	
2.	Types and selection of business organizations.	
3.	Functioning of Personnel, Marketing and Finance Department.	
4.	Method Study tool for standardizing the method.	
5.	Work Measurement tool for standardizing the time.	
6.	Ergonomically accepts in manufacturing.	
UNIT - I	Management-An Introduction: Management- Meaning and Definitions, Management, Administration, and Organization concepts, Management as an Art and Science and a profession, contribution of various thinkers to management thought, Types and Functions of Management. Different approaches to management – scientific, operational, human and system approach.	(06 Hours)
UNIT - II	Organization: Different forms of business Organization –Individual proprietorship, Partnership, Joint stock company, Co-Operative enterprise, Public Sector, Undertakings, organizational structures in Industries, Line,	(06 Hours)

	Functional ,Line and functional , Project, Matrix Organization and Committees	
UNIT - III	<p>Financial, Marketing and Personnel Management:</p> <p>Personnel Management-Definitions Recruitment, Selection and training of the employees, Job valuation and Merit rating, wage administration different methods of wage payments, incentives.</p> <p>Marketing Management-Definitions, Marketing and Selling concept, market segmentation, distribution channels, Market Research, Advertising and sales promotion and Sales forecasting.</p> <p>Financial Management-Capital structure, Fixed capital, working capital, sources of finance, cost analysis, Break even analysis, Depreciation and Financial statement.</p>	(06 Hours)
UNIT - IV	<p>Method Study:</p> <p>Steps in method study, tools and techniques used, process chart symbols, flow diagrams, two handed chart, multiple activity chart, use of motion pictures and its analysis. SIMO charts, chorno & cycle graph, developing, presentation, installation and maintenance of improved methods.</p>	(06 Hours)
UNIT - V	<p>Work Measurement :</p> <p>Time Study: Aim and objectives , terminology and tools, use of stop watch procedure in making a time study, elements, selection of operations time study forms, handling of foreign elements. Performance rating. Allowances: Personal, Fatigue and other allowances. Analysis and calculation of Standard Time. Determination of number of cycles time study for indirect functions such as Maintenance , Marketing etc., MOST Technique.</p> <p>Works Sampling: Definition, Objectives, theory of Work Sampling. Other applications of work sampling, errors in work sampling study.</p> <p>Synthetic and Standard data Methods: Concepts, introduction to PMTS, MTM-1, WF, Basic motion time, MTM-2, and other second – generation methods timing of group operations.</p>	(06 Hours)
UNIT - VI	<p>Ergonomics and Industrial Safety:</p> <p>Definitions, importance in industry, basic anatomy of human body, anthropometrics, measurement of physical work and its techniques, work and rest cycles, bio mechanical factors environment effects.</p> <p>Importance of safety, planning, training, safety precautions, safety</p>	(06 Hours)

	Equipments, Government regulations on safety.	
Assignments:		
1.	Management: Types, Functions, Principles	
2.	Study of organization Structure	
3.	Study of Business organizations	
4.	Study of Financial, Marketing and Management	
5.	Study of Personnel Management	
6.	Study of Method Study methods and procedure	
7.	Study of Method Study charts	
8.	Study of Work Measurement methods and procedure	
9.	Study of Time study procedure and problems	
10.	Study of Work sampling and problems	
11.	Study of Ergonomics	
12.	Study of Industrial Safety	
Text Books/		
1.	O. P. Khanna, Industrial Engineering & Management, Dhanapat Rai & Sons.	
2.	M. C. Shukla, Business Organization and Management, S. Chand & Co. Ltd, New Delhi.

4.	M. N. Mishra, Organizational Behavior, Vikas publishing New Delhi.	
5.	Dale Yoder, Personnel Management.	
6.	Work Study, ILO.	
7.	S. S. Patil, Industrial Engineering & Management, Electro tech Publication.	
8.	Mansoor Ali & Dalela, Industrial Engineering & Management System, Standard Publisher distributions.	
9.	R. M. Currie, Work Study, ELBS.	
10.	Management by James A. F. Stoner, R. Edward Freeman, PHI	
11.	Management Today: Principles and Practice by Gene Burton and Manab Thakur, TMH	
12.	Organizational Behavior by Keith Davis, TMH	
13.	Management (Tasks, responsibilities and Practices) by Peter Drucker, Harper Business	
14.	Production Management by Lockyer, ELBS	
15.	Modern Production Management by E. S. Buffa (John Wiley)	
16.	Financial Management by Vanhorne, PHI	
17.	Financial Management (Theory and Practice) by Prasanna Chandra, TMH	
18.	Marketing Management by Philip Kotler, Pearson Edition	

19.	Marketing Management by Rajan Saxena, TMH
20.	Personnel Management by Edward Flippo, TMH
21.	Industrial Engineering and PPC” by A.K Bewwor and V.A.Kulkarni.
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV,V and VI

ELECTIVE II: 5.3 NANOTECHNOLOGY

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	TH: 03 Credits
Practical: 00 Hours / Week	Continuous Assessment: 40 Marks	Total: 03 Credits
	Term Work/ Oral: -- Marks	
Course Pre-requisites:		
The Students should have		
1.	Material Science	
2.	Physical properties of Material	
3.	Chemical properties of Material	
Course Objectives:		
	To know the history, synthesis, characterization and application of Nanotechnology	
Course Outcomes:		
Students will be able to understand		
1.	The basic of nano science and nanotechnology	
2.	Properties of nanomaterials	
3.	Synthesis process of the nanomaterials	
4.	Characterization tools of nanomaterial	
5.	Applications of nano science e and nanotechnology	
6.	Safety parameters while implementing nanotechnology	
UNIT - I	Basics of Nanoscience	(06 Hours)
	Introduction, length scale of different structures, definition of nanoscience and nanotechnology, fullerenes, CNTs, graphenes and inorganic nanostructures, the evolution of Nanoscience, quantum dots and electronic structure of various nanophase materials.	
UNIT - II	Properties of Nano materials	(06 Hours)

	Mechanical, Thermal, Electrical, Optical, Magnetic and Structural properties. Carbon nanostructures -Fabrication, structure, electrical properties and mechanical properties	
UNIT - III	Synthesis of Nonmaterial's	(06 Hours)
	Bottom up-Ball Milling, Melt mixing, Physical vapour deposition, Ionized cluster beam deposition, Laser pyrolysis, Sputter deposition, Electric arc deposition, Gas evaporation. Chemical methods: Hydrothermal combustion, bath deposition with capping techniques and top down, Chemical vapour deposition, Synthesis of metal & semiconductor nanoparticles by colloidal route, Microemulsions, Sol-gel method, Combustion method, Wet chemical method	
UNIT - IV	Nanomaterials characterization	(06 Hours)
	Nanomaterials characterization XRD, UV-VIS spectroscopy, X-ray fluorescence, X-ray photon emission spectroscopy, Scanning electron microscopy, Transmission electron microscopy, Scanning tunneling microscopy, Atomic force microscopy, Nuclear magnetic resonance spectroscopy, Electron spin resonance spectroscopy, Raman spectroscopy	
UNIT - V	Applications of Nanotechnology	(06 Hours)
	Industrial applications of nanomaterials, in the areas of electronics, photonics, biology, nano biomaterials, health and environment, medicine, defence, chemicals, catalysts, textiles, etc. Application of nanotechnology in remediation of pollution, photocatalysis and other nanocatalysts, greenhouse gases, global warming. Monitoring nanoparticles at work place and sensors used for this.	
UNIT - VI	Nanotechnology and Safety	(06 Hours)
	Assessment of human health risks associated with the use of nanotechnologies and nanomaterials in the food and agriculture sectors, safety, current risk assessment approaches used by FAO/WHO, environmental, ethical, policy and regulatory issues. Toxicity of nanoparticles, exposure to nanoparticles and CNTs and influence on respiratory systems.	
Term Work/Practical's:		
1. Study of nanoscience and nanotechnology structures		
2. Synthesis of nanofibers by electrospinning processes		
3. Synthesis of nonmaterial's by sol gel process		

4. Study of Atomic Force Microscope	
5. Study of nano particle analyzer	
6. Study of Electrospinning Process	
7. Study of FTIR	
Assignments:	
1. Study of nano science and nanotechnology structures	
2. Properties :Mechanical, Thermal, Electrical, Optical, Magnetic and Structural	
3. Properties: Carbon nanostructures	
4. Synthesis of Nonmaterial's: Bottom up	
5. Synthesis of Nonmaterial's: Chemical methods	
6. Surface electron microscopy, Transmission electron microscopy, Scanning tunneling microscopy	
7. UV-VIS spectroscopy, X-ray fluorescence, Atomic force Microscope, Raman spectroscopy	
8. Applications in electronics, photonics, biology, health and environment, medicine, defence, chemicals, catalysts, textiles	
9. Application of nanotechnology in remediation of pollution, photocatalysis and other nanocatalysts, greenhouse gases, global warming	
10. Nanotechnology and Safety

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Elective II: 5.4 PRODUCTION PLANING AND CONTROL		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	TH: 03 Credits
Practical: - Hours / Week	Continuous Assessment: 40 Marks	Total: 03 Credits
	Term Work/ Oral: -- Marks	
Course Pre-requisites:		
The Students should have		
1.	Knowledge of basic concept of Industrial Engineering & Management	
2.	Knowledge of statistics.	
3.	Basic knowledge of resources of production Man, Machine Material.	
Course Objectives:		
1.	The student should understand the scope, objective and application of Production Planning And Control manufacturing Industries.	
Course Outcomes:		
Students will be able to understand		
1.	The importance of PPC in industry.	
2.	The Forecasting by using different techniques.	
3.	Different ideas and concept to improve PPC in industry.	
4.	Different techniques for material requirement planning	
5.	Different techniques used for PPC in industry.	
6.	Computer Aided Process Planning.	

Course Contents		
UNIT I	Introduction to PPC : Role and stages of PPC, PPC as an integrated function, Product Life Cycle Analysis, Types of Production systems.	(06 Hrs)

UNIT II	Forecasting Techniques: Use and types of forecasting, Methods of forecasting and comparison, Verification and control.(Numerical Treatment)	(06 Hrs)
UNIT - III	Techniques And Production Control: Process sheet, Routing, Scheduling- Gantt Chart, Machine Loading Chart, Line of Balance, Line Balancing, Dispatching rules, Sequencing - Johnson's rule, Loading, Follow- up, Evaluation, PERT, CPM. .(Numerical Treatment)	
		(06 Hrs)
UNIT - IV	Materials Planning And Purchasing: Scope and requirement of MRP, MRP I and MRP II, Master Production Schedule, Bill of Materials, Capacity Requirement Planning, Introduction to ERP, Purchasing - Documentation, Make or Buy decisions, Vendor Development.	
		(06 Hrs)
UNIT - V	a) Inventory Control: Types of Inventory Cost of Inventory, EOQ, Selective Inventory Control, Replenishment Systems. b) Stores Management: Types of stores, Storage layout and storage systems, Stores Documentations, Stores Control and Control of Wastage and surplus, JIT, KANBAN, KAIZEN, Value Stream Mapping	
UNIT - VI	Computer aided production planning and control applied to : a) Machine capacity planning and utilization. b) Productivity measurement. c) Material Requirement Planning. d) Scheduling Techniques. Hands on experience of Computer aided Production Planning and Control. Case studies from Industries.	(06 Hrs)
Assignments:		
1.	Introduction of PPC	
2.	Techniques of Forecasting used in PPC	
3.	Different Techniques used in PPC to improve the production and to reduce the cost of production	
4.	Use and application applications of material planning and purchasing	
5.	Use of inventory control	

6.	Computer aided production planning and control (CAPP)

11	A.K. Bewoor and V.A. Kulkarni "Production planning and Control"
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Elective II: 5.5 Experimental Methods in Mechanical Engineering

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory:-03 Hours / Week	End Semester Examination: 60 Marks	TH: 03 Credits
Practical:--- Hours / Week	Continuous Assessment: 40 Marks	PR: -- Credits
	Term Work/ Oral: -- Marks	Total: 03 Credits

Course Prerequisite:-	Student should have knowledge of: <ol style="list-style-type: none"> 1. Basic concepts in core courses in Mechanical Engineering. 2. Basic concepts in Engineering Mathematics. 3. Mechanical Measurements.
Course Objective:-	The student must be able to: <ol style="list-style-type: none"> 1. Understand the concepts of probability and statistics. 2. Understand application of curve fitting techniques in engineering. 3. Understand methods of design of experiments. 4. Understand need of uncertainty analysis 5. Understand advanced measurement techniques. 6. Select a data acquisition system for a given application.
Course Outcomes:-	Learner will be able to- <ol style="list-style-type: none"> 1. Understand characteristics of measurement system 2. Apply various techniques of curve fitting. 3. Apply basic concepts of design of experiments. 4. Use techniques of uncertainty analysis. 5. Use advanced measurement techniques in experimentation 6. Use data acquisition system (DAS) in experimentation.

Course Contents

Unit 1	Introduction to Experimental methods	(06 Hrs.)
<p>Probability and Statistics: Statistical Measurement Theory, Mean Value and Uncertainty, Probability-Density Function, Histogram-Frequency distribution, Mean value and Variance, Infinite Statistics, Normal-Gaussian distribution, Normal-Gaussian distribution,</p> <p>Characteristics of measurement systems: Dynamic characteristics of first order (liquid in glass thermometer) and second order instruments (U tube manometer). Response of first order and second order systems.</p>		
Unit 2	Curve Fitting	(06 Hrs.)
<p>Engineering application of curve fitting. Least squares approach, Polynomial curve fitting, Overfit and underfit. Multivariable regression analysis. Correlation coefficient. Power law and exponential curve fitting. Numericals based on practical engineering problems.</p>		

Unit 3	Planning of Experiments	(06 Hrs.)
Planning of experiments, various stages in experimental investigations; preliminary, intermediate and final, steady state and transient techniques, Need for design of experiments (DOE). Guidelines for performing DOE. Factorial design: Full factorial design and Fractional factorial design. 2^K factorial design. Taguchi method. Response surface methodology.		
Unit 4	Uncertainty in Measurements	(06 Hrs.)
Errors in instruments, Analysis of experimental data and determination of overall uncertainties in experimental investigation, uncertainties in measurement of parameters like pressure, temperature, flow etc. under various conditions. Estimation of uncertainty by Partial Differentiation Method (PDM), Combining uncertainty components. Student's t-test method.		
Unit 5	Advanced Measurement Techniques	(06 Hrs.)
Shadowgraph, Schlieren, Interferometer, Laser Doppler Anemometer, Telemetry in measurement, Orsat apparatus, Gas Analyzers, Smoke meters, gas chromatography, spectrometry, FFT analyzer.		
Unit 6	Data Acquisition System (DAS)	(06 Hrs.)
Data Acquisition Systems: Basic and automated versions of DAS. Characteristics of DAS: analogous input, sample speed, accuracy, linearity and resolution. A/D and D/A converters, Signal conditioning equipments. Case studies on selection of DAS for different experimentations. Introduction to data acquisition softwares.

5. Beckwith T. G., Marangoni R. D., Lienhard J. H., Mechanical Engineering Measurements, Pearson Prentice Hall, 2007

Assignments-

1. Problems on uncertainty analysis
2. Theory questions on introduction to experimental methods
3. Problems on practical engineering based on curve fitting
4. Theory questions on curve fitting
5. Theory questions on design of experiments
6. Practical engineering problems based on design of experiments
7. Questions based on transducers, sensors and actuators

8. Questions based on static and dynamic characteristics of instruments
9. Questions based on data acquisition system
10. Two practical oriented problems using any coding language.

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

6. INPLANT TRAINING

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: -- Hrs. / Week	End Semester Examination: -- Marks	TH: -- Credits
Practical: -- Hrs. / Week	Continuous Assessment: -- Marks	TW/OR: 04 Credits
	Term Work/ Oral: 50 Marks	Total: 04 Credits

Course Prerequisites:-	1. Students should have basic idea about engineering fundamentals
Course Objective: -	<ol style="list-style-type: none"> 1. Able to understand company organization and products manufactured. 2. Able to understand economic considerations for a specific product 3. Able to understand safe working environment in the company. 4. Able to communicate with workers and supervisors. 5. Able to understand various aspects of industrial practices and ethics. 6. Able to understand exposure for real life work and internships, carrier options with different work environments.
Course Outcomes: -	<ol style="list-style-type: none"> 1. Factory layout and workflow 2. List of in-house manufactured and bought out parts and the economic considerations for a specific product. 3. Component wise product manufacturing process chart. 4. Your training learning, deficiencies and lapses and suggestions for improvements

In plant training for 45 days:

Before the VII semester, students are required go through in-plant training for 45 days in a manufacturing company. The students will show their interest of training to the faculty coordinator who will arrange their training. In case a student wishes to undergo training in a specific company, he will indicate the same to the training coordinator who after ensuring the suitability of the company will take suitable action. During the training period student will be required to strictly follow the company rules and regulations about timings and other matters will work on the assigned project. During training period the students are required to go the company daily. Their attendance record verified by the factory training in charge of the factory will be part of their project report.

Report:

On completion of training, students are required to write a technical report about their training. In general the report should not exceed 50 pages of typed material. The report should cover following: Introduction-organization, its short history, products manufactured, competitors and organization's position in the market and its growth potential, production planning & control, material management, delivery of orders, off loading of work to third party cost saving or energy saving proposals, qualitative feedback from expert, study of tool room .

7. PROJECT STAGE -I

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 00 Hrs. / Week	End Semester Examination: -- Marks	TH: -- Credits
Practical: 02 Hrs. / Week	Continuous Assessment: -- Marks	TW/OR: 04 Credits
	Term Work/ Oral: 100 Marks	Total: 04 Credits

Course Pre-requisites:

The Students should have

1.	Knowledge of Mathematics & Science
2.	Knowledge of basic concepts in heat transfer.
3	Basic information of thermodynamics.
4	Basic knowledge of design
5	Knowledge of basic concepts in mechanical engineering.

Course Objectives:

1.	To identify problem for a specific need of an organization
2.	To review literature on specific research topic
3.	To make feasible, sustainable design
4.	To work sincerely as a member of a team
5.	.To communicate ideas to supervisors as well as subordinates
6.	To develop new equipment or make modifications in existing one

Course Contents

1	The formation of a project team with members having similar interest.
2	Discuss the ideas within the team members and choosing a faculty member interested in similar activity with the consent of the HOD. The projects can be on new equipment development, on industry sponsored problems or on research oriented subjects.
3	Discuss the project with the Faculty with the idea that projects selected are suitable for design and fabrication with the available resources.
4	<p>First presentation must include following points:</p> <ul style="list-style-type: none"> • Project Aim • Feasible design and alternatives considered • Estimation of approximate cost of the project • Activities bar chart • Internal Lab resources required <p>External resources required and their availability.</p>
5	<p>Second presentation consists of:</p> <ul style="list-style-type: none"> • Collection of reference material and • Design of the equipment with working drawings

	Stage of work completed through activities bar chart.
6	Third presentation includes complete work with suggested modifications.

8. Power Plant Engineering

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory:-04 Hrs. / Week	End Semester Examination: 60 Marks	TH: 04 Credits
Practical:- 02 Hrs. / Week	Continuous Assessment: 40 Marks	PR: 01 Credit
	Term Work/ Oral: 50 Marks	Total : 05 Credits

Course Prerequisite:-	Student should have knowledge of: <ol style="list-style-type: none"> 1. Basic concepts in Fluid Mechanics, Engineering Thermodynamics and Turbo-machinery. 2. Basic concepts in Engineering Mathematics.
Course Objective:-	The student must be able to: <ol style="list-style-type: none"> 1. Understand present status of power generation in India. 2. Understand various aspects of steam power plant. 3. Understand details of steam condensers, cooling towers and noozels. 4. Understand details of renewable and hybrid power systems. 5. Perform analysis of power plant for specific application 6. Understand various energy storage techniques.
Course Outcomes:-	Learner will be able to understand- <ol style="list-style-type: none"> 1. Brief overview of different types of power plants 2. Details of non-renewable power systems. 3. Performance of condensers, cooling towers and nozzles. 4. Performance of renewable and hybrid power systems. 5. Economics of power generation. 6. Procedures for safe operation and maintenance of power plants.

Course Contents

Unit 1	Introduction to Power Engineering	(08 Hrs.)
Different types of power plants–Thermal, Hydro, IC Engine, Gas Turbine, Nuclear and their characteristics, Combined Cycle, Pumped storage, Compressed air storage power plants and their characteristics. Comparison of Power plants with respect to various parameters. Issues in Power plants. Resources and development of power in India, NTPC, NHPC and their role in Power development in India. Power generation in Private sector, Power distribution, National Grid, Indian Electricity Grid Code. Regulation Structure of IEGC, Operating Policies and Procedures, Present Power position in India.		

Unit 2	Non-Renewable Power Systems	(08 Hrs.)
<p>High pressure and Super Critical Boilers – Fluidised bed boilers.</p> <p>Steam power cycles- Rankin cycle with reheat, regeneration. Numerical based on different combinations. Performance of boilers.</p> <p>Fuel and ash handling, Combustion equipment for burning coal, Mechanical Stokers. Pulveriser, Electrostatic Precipitator, Draught- Different types</p> <p>Gas Turbine Power Plants: Fuels, Gas turbine material, open and closed cycles, reheating, Regeneration and intercooling, combined cycle. Turbojet, Ramjet, Turboprop, Rocket engine.</p> <p>Diesel Power Plants: Types of diesel plants, components, Selection of Engine type, applications.</p> <p>Nuclear Power Plants: Nuclear reactors-PWR, BWR, CANDU, Sodium graphite, fast breeder, homogeneous; gas cooled. Advantages and limitations, nuclear power station, waste disposal.</p>		
Unit 3	Condensers, Cooling Towers and Steam Nozzles	(08 Hrs.)
<p>Steam Condensers: Function of condenser in thermal power plant, Classification of condensers: Jet, Surface and Evaporative. Air leakage in condenser: sources and its effects. Condenser vacuum, Estimation of quantity of cooling water, Dalton’s law of partial pressure, Vacuum efficiency, Condenser efficiency.</p> <p>Cooling Towers: Cooling water system, types of cooling towers. Performance assessment of cooling towers, Energy saving opportunities.</p> <p>Steam nozzles: General forms of nozzles, Flow through steam nozzles, Velocity of steam leaving nozzle. Mass of steam discharged, Critical pressure ratio, Areas of throat and exit for maximum discharge, Length of nozzle. Efficiency of a nozzle. Effect of friction in a nozzle.</p>		
Unit 4	Renewable and Hybrid Power Systems	(08 Hrs.)
<p>Solar Power System: Types of Solar Collectors, Collection efficiency, Testing of Solar collectors – IS code, Applications of solar energy. Solar Pond, Solar Energy storage and types. Photovoltaic and fuel cells.</p> <p>Wind power: Power from wind, Site selection, Wind energy conversion systems and their classification, construction and working of typical wind mill, Design considerations for wind mills, present status.</p> <p>Biomass power: Energy plantation, Combustion and fermentation, Anaerobic digester, Biomass gasification, Pyrolysis, various applications of Biomass energy, Bio-fuel – Relevance, types, and applications.</p> <p>Hybrid Power Systems: Need for Hybrid systems, Range and type of hybrid systems, Case studies of Diesel-PV, Wind-PV, Micro-hydel-PV, Biomass-Diesel systems, hybrid electric vehicles, etc.</p>		
Unit 5	Analysis of Power Plants	(08 Hrs.)

Load Curves, Load duration curves, Performance and operational characteristics of power plants, Peak load, Intermediate load and Base load plants and their characteristics, Input output characteristics of power plants, Economic division of between Base load plant and peak load plants. Cost of energy generation, Tariff methods. Economics of load sharing, comparison of various power plants. Numericals based on the syllabus contents.		
Unit 6	Energy Storage Technologies, Plant Safety and Maintenance	(08 Hrs.)
<p>Energy Storage Technologies: Pumped Hydroelectric Storage, Compressed Air Energy Storage, Battery Technologies - Traditional and Advanced, Flow Batteries, Flywheels, Superconducting Magnetic Energy Storage, Super-capacitors/Ultra-capacitors, Energy Storage Technology Comparisons, Functional Comparison, Cost Comparison.</p> <p>Plant Safety and Maintenance: Operation and Maintenance procedures of power plants, Operator training, Safety during selection of power plant equipment –safety in commissioning of thermal power plant equipments, hydrostatic and air leakage test, acid and alkali cleaning, safety in auxiliary plants. Cooling water system, Safety in maintenance of power plants.</p>

Assignments-

1. Theory questions on different types of power plants.
2. Problems on performance of steam power plant based on Rankin cycle
3. Theory questions on components of steam power plant.
4. Theory questions on gas turbine, diesel and solar power systems.
5. Theory questions on wind, biomass and hybrid power systems.
6. Practical engineering problems based on analysis of power plants.
7. Questions based on various terms related to economics of power generation.

8. Questions based on energy storage technologies.
9. Case study on electricity terrify calculation both for industry as well as household purpose.
10. Questions based on plant safety and maintenance.

Term Work (Any EIGHT experiments from the list below)

1. Study of National & International Grid, Indian Electricity Grid Code
2. Study of combined cycle gas based and coal based Power plant.
3. To perform analysis of a thermal power plant.
4. To perform analysis of gas turbine/ diesel/ solar power system.
5. To perform analysis of wind/ biomass power system.
6. Study of Power plant Instrumentation.
7. Visit to a thermal power plant.
8. Study of Heat Exchangers used in Power Plant
9. To study different energy storage technologies.
10. To study different types of hybrid power plants.

Unit Tests-

Unit Test-I	Unit-I, II and III
Unit Test-II	Unit-IV, V and VI

9. INDUSTRIAL PRODUCT DESIGN

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	TH: 03 Credits
Practical: 2 Hours / Week	Continuous Assessment: 40 Marks	PR: 01 Credit
	Term Work/ Oral: 50 Marks	Total: 04 Credits
Course Pre-requisites:		
The Students should have knowledge of:		
1.	Machine Drawing	
2.	Machine Design	
3.	CAD software viz. CATIA/ ProE/ SolidWorks/ UniGraphics	
Course Objectives:		
Students should be able to understand		
1.	Various aspects of product design and development	
2.	Concept generation and selection	
3.	Aesthetic and Ergonomic considerations in product design	
Course Outcomes:		
Students should be able to		
1.	Understand characteristics of successful product development.	
2.	Understand different product design methods	
3.	Estimate manufacturing cost, assembly and support costs.	
4.	Understand the concept of prototyping	
5.	Understand steps to establish the product specifications & concept generation,	
6.	Understand ergonomic considerations in product design	
Course Contents		
UNIT - I	Introduction to Product Design and Development	(06 Hrs.)
	Market survey. Identify customer needs and product planning processes. Product architecture: Implication of architecture, establishing the architecture, related system level design issue. Overview of industrial design, Successful product, development of quality aspect of product design; Challenges of product development.	
UNIT - II	Product Design Methods	(06 Hrs.)
	Creative and rational, clarifying objectives - the objective tree method, establishing functions- the function analysis method, setting requirements–the performance specification method, determining characteristics–the QFD method, generating alternatives – morphological chart method, evaluating alternatives – the weighted objective method, improving details – the value engineering method and	

	design strategies.	
UNIT - III	Product Specifications and Concept Generation	(06 Hrs.)
	Product specification, steps to establish the target specifications, Concept generation, five step concept generation method, concept selection, concept screening, concept testing, product architecture	
UNIT - IV	Industrial Design and Prototyping	(06 Hrs.)
	Its need, impact and quality, industrial design process and its management, legal issues in product design, design resources, economics and management of product development projects. Prototyping: Basics and principles of prototyping, Rapid prototyping technologies, planning for prototypes.	
UNIT - V	Ergonomics and Industrial Safety	(06 Hrs.)
	Introduction-General approach to the man-machine relationship-workstation design working position and posture. An approach to industrial design - elements of design structure for industrial design in engineering applications in manufacturing systems. Environmental Application of ergonomics in industry for safety, health and environment control. Safety and ISO 14000 Systems.	
UNIT - VI	Design for Manufacture	(06 Hrs.)
	Estimating manufacturing cost, reducing component, assembly and support costs, design for assembly, design for disassembly, design for environment, design for graphics and packaging, effective prototyping-principle and planning. Product data management. Innovation and creativity in product design. Product costing, value engineering, aesthetic concepts.	
Assignments:		
1.	At least FIVE questions on market survey, concept generation and product architecture	
2.	At least FIVE questions on various product design methods	
3.	At least FIVE questions on various concepts related to design for manufacture	
4.	At least FIVE questions on industrial design and prototyping	
5.	At least FIVE questions on product specifications	
6.	At least FIVE questions on ergonomic considerations in product design	
7.	At least FIVE questions on safety considerations in product design	
8.	At least FIVE questions on concept generation	
Term Work: Use of different CAD software viz. CATIA/ ProE/ SolidWorks/ UniGraphics while doing following case studies:		

1.	A case study on market study to identify costumer needs
2.	A case study on use of morphological analysis
3.	A case study on Quality Function Development (QFD)
4.	A case study of one aesthetic considerations in product design
5.	Failure Modes and Effects Analysis (FMEA) in product design
6.	A case study on Design for Manufacturing
7.	A case study on Product Lifecycle Management (PLM)
8.	A case study of one ergonomic considerations in product design
9.	A case study of one industrial safety considerations in product design
Text Books/Reference Books:	
1.	Product Design and Development: Karl T. Ulrich, Steven G. Eppinger; Irwin McGraw Hill
2.	Product design and Manufacture: A.C. Chitale and R.C. Gupta; PHI Chitale & Gupta, "Product Development", Tata McGraw Hill
3.	New Product Development: Tim Jones, Butterworth, Heinemann, Oxford, 1997.
4.	Product Design for Manufacture and Assembly: Geoffrey Boothroyd, Peter Dewhurst and Winston Knight.
5.	Product Design : Otto and Wood; Pearson education.
6.	Industrial Design for Engineers: Mayall W.H, London, Hiffee books Ltd, 1988
7.	Introduction to ergonomics – R.C. Bridger, McGraw Hill Pub.
8.	Product Design – Kevin Otto, Kristin Wood Pierson Education
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

10. OPTIMUM DESIGN

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04 Hrs. / Week	End Semester Examination: 60 Marks	TH: 04 Credits
Practical: -02 Hrs. / Week	Continuous Assessment: 40 Marks	PR: 01Credits
	Term Work/ Oral: 50 Marks	Total: 05 Credits

Course Pre-requisites:

The Students should have basic knowledge of

- | | |
|-----------|---|
| 1. | Student should have knowledge of Fundamentals of Engineering Mechanics |
| 2. | Student should have knowledge of Machine Design and Computer Aided Drafting |
| 3. | Student should have knowledge of Machine Design –I & II |
| 4 | Student should have knowledge of Theory of Machine |

Course Objectives:

To develop competency for system visualization and design.

To enable student to design pressure vessels and to use IS code.

To enable student, select materials and to design internal engine components.

To introduce student to optimum design and use optimization methods to design mechanical components.

To enable student to design machine tool gearbox.

Ability to apply the statistical considerations in design and analyze the defects and failure modes in components

Course Outcomes:

Students will be able to understand

- | | |
|-----------|--|
| 1. | The student will understand the difference between component level design and system level design. |
| 2. | Ability to design various mechanical systems like pressure vessels, machine tool gearboxes, etc. |
| 3. | Ability to learn optimum design principles and apply it to mechanical components. |

4.	Ability to handle system level projects from concept to product	
UNIT - I	<p>Design of Bevel Gear and Worm gears</p> <p>Introduction, classification of bevel gears, terms used in bevel gears, formative or equivalent number of teeth for bevel gears, forces acting on a bevel gear, strength of bevel gears</p> <p>worm and worm wheel: Introduction, terms used in worm gearing, forces acting on worm gears, strength of worm gear teeth, wear tooth load for worm gear, efficiency of worm gearing, thermal rating of worm gearing</p>	(06 Hours)
UNIT - II	<p>Design of Machine Tool Gearbox</p> <p>Introduction to machine tool gear boxes, design and its applications, basic considerations in design of drives, determination of variable speed range, graphical representation of speed and structure diagram, ray diagram, selection of optimum ray diagram, deviation diagram, difference between numbers of teeth of successive gears in a change gear box.</p>	(06 Hours)
UNIT - III	<p>Statistical Considerations in Design.</p> <p>Frequency Distribution-Histogram and frequency polygon, normal distribution-units of central tendency and dispersion – standard deviation- population combinations – design for natural tolerances – design for assembly- statistical analysis of tolerances, mechanical reliability and factor of safety.</p>	(06 Hours)
UNIT - IV	<p>Pressure Vessels</p> <p>Introduction, Classification of Pressure Vessels, Stresses in a Thin Cylindrical Shell due to an Internal Pressure, Circumferential or Hoop Stress, Longitudinal Stress, Thin Spherical Shells Subjected to an Internal, Thick Cylindrical Shell Subjected to an Internal Pressure, Compound Cylindrical Shells, Stresses in Compound Cylindrical Shells, Cylinder Heads and Cover Plates, Autofrettage.</p>	
UNIT - V	<p>Optimum Design</p> <p>Objectives of optimum design, adequate and optimum design, Johnson's Method of optimum design, primary design equations,</p>	(06 Hours)

	subsidiary design equations and limit equations, optimum design with normal specifications of simple machine elements- tension bar, transmission shaft and helical spring, Pressure vessel. Introduction to redundant specifications (Theoretical treatment).	
UNIT - VI	<p>Product Design Processes and Design Economics</p> <p>Technological innovation, product and process cycles, designing to codes and standards, design for manufacture and assembly, importance of economic decision making, value engineering, legal and ethical issues in design. Introduction to Design of Experiment.</p> <p>Mathematics of time value of money, cost comparison, depreciation, profitability of investments, benefit-cost analysis</p>	(06 Hours)
Term Work/Practical's:		
Assignments:		
<p>1. One design project</p> <p>The design project shall consist of two imperial size sheets (Preferably drawn with 3D/2D CAD software)-one involving assembly drawing with a part list and overall dimensions and the other sheet involving drawings of individual components, manufacturing tolerances, surface finish symbols and geometric tolerances must be specified so as to make it working drawing. A design report giving all necessary calculations of the design of components and assembly should be submitted. Projects shall be in the form of design of mechanical systems including pressure vessel, multispeed gear box, etc.</p>		
<p>2. Collect information about gear manufacturer along with catalog and identify designation, standards.</p>		
<p>3. Write a brief note on Statistical Considerations in Design with reference to any case study.</p>		
<p>4. Collect detailed information about pressure vessels types, uses, advantages, disadvantages with photos.</p>		
<p>5. Discuss different modern software tools used for design optimization.</p>		
<p>6. Write assignment on Digital Manufacturing.</p>

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Elective III: 11.1. INDUSTRIAL AUTOMATION AND ROBOTICS		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	TH: 03 Credits
Practical: - Hours / Week	Continuous Assessment: 40 Marks	PR: -- Credits
	Term Work/ Oral: -- Marks	Total: 03 Credits
Course Pre-requisites:		
The Students should have		
1.	Knowledge of Mathematics & Theory of Machines	
2.	Knowledge of Automatic Control Systems	
3.	Knowledge of Sensors and Transducers	
Course Objectives:		
1.	To inculcate the basic concepts, parts of robots and types of robots	
2.	To make the student familiar with the various drive systems for robot, sensors and their applications in robots and programming languages of robots	
3.	To create manpower for working on robot	
Course Outcomes:		
After the successful completion of this course, the student will be able,		
1.	To identify potential areas for automation and justify need for automation.	
2.	To do line balancing of an automation system.	
3.	To explain the basic principles of robotic technology, configurations, control and programming of robots.	
4.	To select suitable sensor & design robotic gripper for different applications.	
5.	To analyze robots through kinematic and dynamic study.	
6.	To explain the basic principles of robot programming language and Identify typical robot applications.	
Course Contents		
UNIT I	Introduction to Industrial Automation	(06 Hrs.)

	Automation and Robotics, Historical Development, Basic concept of automation, Building Blocks of Automation Systems- Sensors, Analyzers, Actuators, Drives. Types of automation: fixed, flexible and programmable and their comparative study. Concept of Mechanization of Parts Handling.	
UNIT II	High Volume Manufacturing System	(06 Hrs.)
	Transfer Lines, Detroit type automation-Design and fabrication considerations. Analysis of automated flow lines- technology, analysis of transfer lines without storage, partial automation and automated flow lines with storage buffers, computer simulation of automated flow lines. Assembly system and line balancing- computerized line balancing methods.	
UNIT III	Fundamentals of Robot Technology	(06 Hrs.)
	<p>Fundamentals of Robotics: Robot Definitions, Laws of Robotics, Basic Structure of Robots, links and Joints, types of Joints, types of links, types of end effectors, Wrist configuration: concept of: yaw, pitch and roll. Robot Anatomy, work volume, work envelope, robot manipulator. Specifications of robot: degrees of freedom (DOF), accuracy, repeatability, spatial resolution, compliance, loads carrying capacity, speed of response.</p> <p>Classification of Robots- 1) Co-ordinate system: Cartesian, cylindrical, spherical, SCARA, articulated 2) Control Method: Servo controlled and non-servo controlled, their comparative study 3) Form of motion: P-T-P (point to point), C-P (continuous path), pick and place etc. and their comparative study 4) Drive Technology: Hydraulic, Pneumatic, Electric (stepper motor, D.C. servo motor) in detail with selection criteria. Motion conversion: Rotary to rotary, rotary to linear and vice versa.</p>	
UNIT IV	Sensors and End-Effectors in Robotics	(06 Hrs.)
	Sensors and Transducers in Robotics: Uses of Sensors in Robotics, type of sensors in robot systems, non-optical and optical position sensors, Touch Sensors-Tactile sensor, Pressure sensors, colour sensor, gas sensor and flexible force sensor, Torque sensors, Light sensors, Voice Communication.	

	End-Effectors in Robotics: Classification of End Effectors, Drive system for end effectors, Mechanical Grippers, Magnetic Grippers, Vacuum Grippers, adhesive Grippers, Hooks, Scoops, Tools as end effectors. Gripper force analysis and gripper design- Simple problems, Active and Passive Grippers.	
UNIT V	Robot Kinematics and Dynamics	(06 Hrs.)
	Introduction to manipulator kinematics, position representation, forward and reverse transformation of two degree of freedom robot arm, four degree of freedom manipulator in three dimensions. Robot Dynamics, D Alembert's Equations of Motion.	
UNIT VI	Robot Programming Languages and Industrial Applications	(06 Hrs.)
	Robot Programming Languages: Concept of on-line and off line programming, concept of teach pendant. Methods of robot programming- Lead through methods, Textual robot languages and their Features. Applications of Robots: Robot applications based on surveillance system, machining, material handling, house hold and service sector. Applications of Telechiric robots.	
Assignments:		
1.	At least five theory questions based on identifying the industrial applications of robotics & automation.	
2.	At least five theory questions on identifying the industrial applications of automation with building blocks.	
3.	At least five theory questions on identifying the fixed, flexible and programmable automation.	
4.	At least five theory questions on high volume manufacturing system.	
5.	At least five theory questions on study of line balancing of an automation system.	
6.	At least five PLC programs based on pick and place robot.	
7.	At least five theory questions based on fundamentals of robotics.	
8.	At least five theory questions based on selection of sensors.	
9.	At least five theory /numerical questions based on selection of end effectors of robot.	

10.	At least five theory /numerical questions based on robot kinematics and dynamics.
11.	At least five theory questions based on robot programming language and robot applications.
12.	At least five theory questions on identifying the industrial applications of robots.
Text Books/Reference Books:	
1.	“Industrial Robotics”, Groover, Weiss, Nagel, McGraw Hill International
2.	Automation, Production Systems and Computer Integrated Manufacturing M.P.Groover, Pearson Education.5th edition, 2009
3.	Introduction to Robotics- John J. Craig, Addison Wesley Publishing, 3rd edition, 2010
4.	Robotics Technology and Flexible Automation, Second Edition, 2010 McGraw Hill Education (India) Private Limited
5.	P.A. Janaki Raman, Robotics and Image Processing an Introduction, Tata McGraw Hill Publishing company Ltd., 1995.
6.	Stuart A Boyer: SCADA supervisory control and data acquisition, International Society of Automation, 2010.
7.	A Robot Engineering Textbook “– Mohsen Shahinpoor – Harper & Row publishers, New York
8.	“Anatomy of Automation”- Amber G.H & P. S. Amber, Prentice Hall. Principles of CIM by Vajpayee, PHI.
9.	R. K. Mittal, I. J. Nagrath, "Robotics and Control", Tata McGraw Hill Publishing Company Ltd., New Delhi.

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Elective III: 11.2 CRYOGENICS

Elective III: 11.2 CRYOGENICS		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	TH: 03 Credits
Practical: - Hours / Week	Continuous Assessment: 40 Marks	Total: 03 Credits
	Term Work/ Oral: -- Marks	
Course Pre-requisites:		
The Students should have		
1.	Knowledge of heat transfer.	
2.	Knowledge of refrigeration and air conditioning.	
Course Objectives:		
1.	To introduce Governing Equations of vicious fluid flows	
2.	To introduce numerical modeling and its role in the field of fluid flow and heat transfer	
3.	To enable the students to understand the various discretization methods	
Course Outcomes:		
Students will be able to understand		
1.	Student should able to understand cryogenic systems	
2.	Student should able to understand Behavior of materials at low temperature	
3.	Student should able to understand Gas Liquification Systems	
4.	Student should able to understand Gas Separation And Purification Systems	
5.	Student should able to understand Measurement Systems For Low Temperatures , Fluid Storage And Transfer Systems	
6.	Student should able to understand Application Of Cryogenic Systems	
Course Contents		
UNIT - I	Introduction to Cryogenic and properties of materials	(06 Hrs.)
	History and development it's importance, cryogenic temperature scale. Low temperature properties of materials, Mechanical properties Thermal properties, electric and magnetic properties, Properties of cryogenics& fluids.	
UNIT - II	Gas Liquification Systems	(06 Hrs.)
	Introduction- production of low temperature , Liquefaction systems for N ₂ , Neon, Hydrogen, He etc.(Numerical Treatment)	
UNIT - III	Cryocoolers	(06 Hrs.)
	Regenerative systems – Overview of regenerative coolers, Introduction to Pulse Tube Coolers, Stirling Coolers, G-M Coolers, J-T Coolers, Cryocooler applications.	

UNIT - IV	Gas Separation And Purification Systems	(06 Hrs.)
	Thermodynamically ideal separation systems- properties of mixtures , principles of gas separation Rectification column- Linde single and double column system of air separation.	
UNIT - V	Fluid Storage And Transfer Systems	(06 Hrs.)
	Dewar vessel, insulation types and importance. Components of transfer system with importance. Importance of vacuum and it's measurement.	
UNIT - VI	Application Of Cryogenic Systems	(06 Hrs.)
	Applications in mechanical, electrical, food preservation, biological and medical, space technology etc.	
Assignments:		
Assignments will be based on above syllabus		
1.	History and development it's importance, cryogenic temperature scale.	
2.	Low temperature properties of materials, Mechanical properties Thermal properties, electric and magnetic properties	
3.	Introduction- production of low temperature , Liquefaction systems for N2	
4.	Liquefaction systems for Neon, Hydrogen, He	
5.	Regenerative systems – Overview of regenerative coolers, Introduction to Pulse Tube.	
6.	Stirling Coolers, G-M Coolers, J-T Coolers, Cryocooler applications.	
7.	Thermodynamically ideal separation systems- properties of mixtures , principles of gas separation Rectification column- Linde single	
8.	Dewar vessel, insulation types and importance.	
9.	Components of transfer system with importance. Importance of vacuum and it's measurement	
10.	Applications in mechanical, electrical, food preservation, biological.	
Text Books/Reference Books:		
1.	Cryogenics systems – Randall Barron – Mc Graw Hill Book Co	
2.	Cryogenic Engineering – R. B. Scott – Van Nosfrand Co.	
3.	Cryogenic Engineering –J. H. Bell – Prentice Hall	
4.	Cryogenic Engineering – R. W. Vance – John Welley	
5.	Cryocoolers - Walkers – Prentice Hill Publication	
Syllabus for Unit Test:		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

Elective III: 11.3 PROJECT MANAGEMENT & ETHICS		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	TH: 03 Credits
	Continuous Assessment: 40 Marks	
	Term Work/ Oral: -- Marks	Total: 03 Credits
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of general management.	
2.	Basic knowledge of statistics	
3.	Basic knowledge of industrial management	
Course Objectives:		
	The objective of the course is to create awareness of the concept of project management and its components to students	
Course Outcomes:		
Students will be able to understand		
1.	Project management and its importance.	
2.	Various techniques used to analyze a project.	
3.	Methods for cost estimation of a project.	
4.	Methods for planning and scheduling of a project.	
5.	Methods for monitoring and control of projects.	
6.	Project management and business ethics.	
UNIT - I		
Introduction to Project Management		(06 Hours)
	Project, Project Management, Management by projects, Project Management Associations, Benefits of Project Management, Project management Process, Role of Project Manager. Project Lifecycle	

UNIT - II	Project Management Techniques and Risk Management	(06 Hours)
	<p>Feasibility Studies, Numerical Models (Payback Period, Return on Investment, Net Present Value, Internal rate of Return), Scoring Models, Break Even Analysis</p> <p>Project Risk Management: Introduction, Risk, Risk Management, Role of Risk Management in Overall Project Management, Steps in Risk Management, Risk Identification, Risk Analysis, Reducing Risks.</p> <p>Use of excel and MS project for feasibility studies and risk management.</p>	
UNIT - III	Project Cost Estimating	(06 Hours)
	<p>Estimating terminology, Project Costs, Estimating Methods (Jobbing, Factoring, Inflation, Economies of Sales, Unit Rates, Day Work), Analogous Estimating, Parametric Estimating, Bottom-Up Estimating, Three-Point Estimates, Monte Carlo Simulation, Project Budgeting, Resource Allocation, Cost Forecasts</p> <p>Use of excel and MS project for project cost estimating</p>	
UNIT - IV	Project Planning and Scheduling	(06 Hours)
	<p>Project Planning: Introduction, Need of Project Planning, Project Life Cycle, Roles, Responsibility and Team Work, Project Planning Process, Work Breakdown Structure (WBS)</p> <p>Scheduling: Introduction, Development of Project Network, Time Estimation, Determination of the Critical Path, PERT Model, Measures of variability, CPM Model, Network Cost System</p> <p>Use of MS project Project Planning and Scheduling</p>	
UNIT - V	Project Monitoring and Control	(06 Hours)
	<p>Project Execution and Control: Introduction, Project Execution, Project Control Process, Purpose of Project Execution and Control</p> <p>Project Management Information System: Introduction, Project Management Information System (PMIS), Planning of PMIS, Design of PMIS</p> <p>Project Performance Measurement and Evaluation: Introduction, Performance Measurement, Productivity, Project Performance Evaluation, Benefits and Challenges of Performance Measurement</p>	

	and Evaluation, Controlling the Projects	
UNIT - VI	Professional Responsibility (Ethics)	(06 Hours)
	Ensuring Integrity and Professionalism, Project Management Knowledge Base, Enhancing Individual Competence, Balancing Stakeholder Interests, Interactions with Team Members and Stakeholders, Templates, Tools and Techniques	
Assignments:		
1.	At least five questions based on the introduction to project management	
2.	Case study involving various aspects of project.	
3.	Case study involving various techniques used for project selection.	
4.	At least five Numericals on various techniques used for project selection.	
5.	Case study of project cost estimation	
6.	At least five Numericals on project cost estimation	
7.	Case study of project scheduling	
8.	At least five Numericals on project scheduling	
9.	Case study based on project scheduling	
10.	At least five questions based on project monitoring	
11.	At least five questions based on ethics	
12.	Industrial case study of project ethics

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Elective III: 11.4. TOTAL QUALITY MANAGEMENT		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	TH: 03 Credits
	Continuous Assessment: 40 Marks	Total: 03 Credits
	Term Work/ Oral: -- Marks	
Course Pre-requisites:		
The Students should have		
1.	Basics of Quality Control	
2.	Basics of Measurements and measuring Instruments	
3.	Knowledge of Statistics.	
Course Objectives:		
To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management and to understand the statistical approach for quality control.		
Course Outcomes:		
1.	Implement the principles of total quality management.	
2.	Apply six sigma concepts and increase the quality of product.	
3.	Make use of TQM techniques	
4.	They will be able to implement TQM Tools.	
5.	Execute Quality standards in companies	
6.	Make use of Advanced Techniques of Total Quality Management like Design of experiments, Failure mode effect analysis, Taguchi method Taguchi's quality engineering	
UNIT-I: Quality & Total Quality Management		(06 Hrs)
Quality, Definitions of Quality, New philosophy of quality, Product quality, & its prospects. Overview of TQM : Concept & definition, Fundamentals, Principles of TQM, Elements of TQM, Approaches of TQM, Models of TQM, Zero defect concept, Benefits of TQM. Customer satisfaction - Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement - Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits,		
UNIT-II: Quality Assurance		(06 Hrs)
Basic concepts, Quality assurance input – process – output. Significance of feedback for Quality assurance, Process capability analysis, Concept of Six Sigma. Internal customer approach, Customer – Satisfaction, data collection & complaint, Redressal mechanism.		
UNIT-III: TQM Tools		(06 Hrs)

Continuous Process Improvement - Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership - Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures - Basic Concepts, Strategy, Performance Measure, Just – in- Time, Quality Function Deployment (QFD) - House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) - Concept, Improvement Needs, FMEA - Stages of FMEA., FMEA, TPM.	
UNIT-IV: TOYOTA Production System and Lean Manufacturing	(06 Hrs)
History of TPS. History, Scope, What is lean production? – Introduction, background, and lean thinking. Lean production preparation – System assessment, process and value-stream mapping – Sources of waste. Lean production processes, approaches and techniques. —Importance of focusing upon flow. Tools include: a. Workplace organization – 5S. b. Stability. c. Just-In-Time – One piece flow – Pull. d. Cellular systems. e. Quick change and set-up reduction methods. f. Total productive maintenance. g. Poka-Yoke – mistake proofing, quality improvement. h. Standards. i. Leveling. j. Visual management. Employee involvement – Teams – Training – Supporting and encouraging involvement – Involving people in the change process -- communication -- Importance of culture	
UNIT-V: Quality Systems	(06 Hrs)
Policy & objectives, Quality standards, Concept of quality system standards, Relevance & origin of ISO 9000–2000 standard & certification, Benefits. Elements of ISO 9001, 9002, 9003 series–Clauses, contents, interpretations & implementation. TS - 16949, QS-9000, ISO 14000, OHSAS	
UNIT-VI: Advanced Techniques of Total Quality Management	(06 Hrs)
Design of experiments, Failure mode effect analysis, Taguchi method Taguchi's quality engineering –Loss function, orthogonal arrays, Signal to noise ratio, parameter design & tolerance design. Total Quality in service sector. S. S. Technique, Kanban (Little's Law for KANBAN system)	
Term work: Detail Study and Presentations on Above topics to be submitted.	
Assignments	
<ol style="list-style-type: none"> 1. Assignment on TQM 2. Assignment on Six sigma concept. 3. Assignment on TQM principles. 4. Assignment on TQM tools. 5. Assignment on Quality Systems 6. Assignment on Advanced Techniques of Total Quality Management

Unit Test

Unit Test 1	Units I, II and III
Unit Test 2	Units IV, V, VI

Elective III: 11.5. FINITE ELEMENT ANALYSIS

Teaching Scheme:	Examination Scheme:	Credits Allotted:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	TH: 03 Credits
	Continuous Assessment: 40 Marks	Total :03 Credits
	Term Work/ Oral: -- Marks	

Course Pre-requisites: Students should have knowledge of Engineering Mathematics-I, Strength of Machine Elements, Numerical Methods, Machine Design and Heat Transfer.

Course Objectives:

- To develop the finite element formulation for a model one-dimensional problem like axially loaded bar for the case of simplest approximation (i.e., linear approximation).
- Develop the Shape Functions for Various Elements.
- To discuss the possible refinements of the simplest approximation.
- To develop the frame work of a finite element code to solve the one-dimensional problem.
- To extend the finite element formulation to other one-dimensional problems like the beam problem.
- To develop the two-dimensional finite element formulation for a model 2-D problem like 2-D steady-state heat conduction problem.

Course Outcomes:

- Students will be able to understand Formulation of Finite Element Method.
- Students will able to solve 1 D Problems.
- Students will be able to solve 2 D Structural and Thermal Problems.
- Students will be able to analyze Mechanical Engineering real life problems.
- Students will be able to solve Mechanical Engineering Problems subjected to Heat Transfer.
- Students will be able to solve Mechanical Engineering Problems subjected to Mechanical Vibration.

UNIT – I (6 Hrs.)	Introduction Basic Steps in FEM Formulation, Error Analysis P & h formulation; Stress Equilibrium equation; Strain displacement equation; Stress-Strain equation; Introduction to Solvers; Variational Approach, Ritz Method. Derivation of Elemental Equations, Assembly, Imposition of Boundary Conditions, Solution of the Equations. Computer implementation: Pre-processor, Processor, Post-processor.
UNIT – II (6 Hrs.)	One Dimensional Problem 1 -D Elements, Relationship between Global and Natural coordinate system; Formulation of Element Stiffness Matrix and Load Vector by Potential Energy approach; Shape Functions using LAGRANGE Polynomials for Two noded Bar Element, Rectangular Element, hexahedron Brick Element; Convergence Criteria, Temperature effect.
UNIT – III (6 Hrs.)	Two Dimensional Problem Plain Stress , Plain Strain; Types of 2 D Element, Formulation of Element Stiffness matrix and Load Vector for Constant Strain Triangles, Formulation of Element Stiffness matrix and Load Vector for 2D Trusses; Introduction to Higher Order Elements.
UNIT – IV (6 Hrs.)	Axisymmetric Formulation: Stress calculation and Temperature effect on Flywheel using Galerkin Approach; Isoparametric Elements; Element Quality Criterion; Full and Reduced integration; Sub Modelling and Sub Structuring.
UNIT – V (6 Hrs.)	1D Steady State Heat Transfer: Governing Differential Equation; Steady State Heat transfer Formulation of 1 D Element for Conduction and Convection; Boundary Conditions and Solving for Temperature Distribution; 1D Heat Transfer Steps involved in Processing Steps.
UNIT – VI (6 Hrs.)	Dynamic Analysis: Lumped mass and Consistent Mass Matrices; Free Vibration Problems, Formulation of Eigen Value and Eigen Vector Problem by Power Method, Step wise solution of Problems on Vibration in Bar Element; FEM Formulation. Time-dependent Problems.
Term Work/Practicals:	
1. Structural Analysis of Corner Bracket, Truss Structure and Spring.	
2. Static and Dynamic Analysis of Cantilever Beam.	
3. Modal analysis of Simple Pendulum.	
4. Steady State Heat Transfer through a Plate with Hole.	
5. Analysis of Connecting Rod.	

6. Analysis of Composite Leaf Spring.	
7. Analysis of Piston.	
8. Analysis of Burnished Components.	
9. Analysis of Knuckle Joint.	
10. Analysis of Screw Jack.	
Assignments:	
1. Introduction to Finite Element method.	
2. Derivations and Numerical on Variational Approach and Ritz Method.	
3. Derivations and Numerical on Potential Energy Approach.	
4. Determination of Shape Functions for Various Elements.	
5. Derivations and Numerical on CST Elements.	
6. Derivations and Numerical on Trusses.	
7. Stress calculation and Temperature effect on Flywheel using Galerkin Approach.	
8. Isoparametric Elements: Full and Reduced integration methods Numerical.	
9. Derivation and Numerical on Steady State Heat transfer Formulation of 1 D Element for Conduction and Convection by Differential Equation.	
10. Analysis of any one Mechanical Component subjected to Heat transfer.	
11. Determination of Eigen value and Eigen vector for any Mechanical component.	
12. Analysis of Time Dependent problem.	
Text Books/Reference Books:

2	Sagarlind L. J, Applied Finite Element Analysis, John Wiley, 1984
3	Chandrupatla & Belegundu, Introduction to Finite Elements in Engineering, Prentice Hall, 1999
4	Reddy. J.N, An Introduction to Finite Element Methods, Tata McGraw Hill, 1997
5	Cook, Robert, Davis Etal, Concept & Applications of Finite Element Analysis, John Wiley & Sons, 1999

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

12. PROJECT STAGE -II

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 00 Hours / Week	End Semester Examination: -- Marks	TH: -- Credits
Practical: - 04 Hours / Week	Continuous Assessment: -- Marks	TW/OR: 08 Credits
	Term Work/ Oral: 200 Marks	Total: 08 Credits

Course Pre-requisites:

The Students should have

1	Knowledge of basic concepts in heat transfer.
2	Basic information of thermodynamics
3	Basic knowledge of fluid mechanics.
4	Knowledge of basic concepts in mechanical engineering
5	Basic knowledge of design

Course Objectives:

1.	To fabricate the designed equipments
2.	To conduct laboratory and field testing of the new equipment
3.	To analyze performance of the equipment with different performance parameters
4.	To make changes in design if necessary based on the performance analysis
5.	To prepare project report and deliver presentation
6.	To work sincerely as a member of team

Course Contents

The project taken in the First semester will be continued as far as possible. In case after the training, the students wish to change their project, the same may be allowed after discussion with the faculty. The new project should be based on the training taken and should utilize the training experience.

In Semester II concentration will be on

1. Hard ware fabrication
2. Testing of equipment
3. Preparing a project report

The work will be evaluated through three presentations with aim of watching the progress and suggesting modifications for completing the project.

ENGINEERING MATHEMATICS-I

Teaching Scheme:

Lectures: 3Hrs/Week

Tutorials: 1Hr/Week

Examination scheme:

Semester Examination: 60 marks

Continuous Assessment: 40 marks

Credits Allotted:

Theory : 03

Tutorial : 01

Unit I

MATRICES

Rank, Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations. Eigen values, Eigen Vectors, Cayley – Hamilton Theorem. Application to problems in Engineering .

(08 Hours)

Unit II

COMPLEX NUMBERS AND APPLICATIONS

Definition, Cartesian, Polar and Exponential Forms ,Argand's Diagram, De'Moivre's theorem and its application to find roots of algebraic equations., Hyperbolic Functions, Logarithm of Complex Numbers, Separation into Real and Imaginary parts, Application to problems in Engineering.

(08 Hours)

Unit III

DIFFERENTIAL CALCULUS

Successive Differentiation, nth Derivatives of Standard Functions, Leibnitz's Theorem.

EXPANSION OF FUNCTIONS

Taylor's Series and Maclaurin's Series.

(08 Hours)

Unit IV

DIFFERENTIAL CALCULUS

Indeterminate Forms, L' Hospital's Rule, Evaluation of Limits.

INFINITE SERIES

Infinite Sequences, Infinite Series, Alternating Series, Tests for Convergence, Absolute and Conditional Convergence, Power series, Range of Convergence.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Unit V

PARTIAL DIFFERENTIATION AND APPLICATIONS

Partial Derivatives, Euler's Theorem on Homogeneous Functions, Implicit functions, Total Derivatives, Change of Independent Variables. Errors and Approximations.

(08 Hours)

Unit VI

JACOBIAN

Jacobians and their applications, Chain Rule, Functional Dependence.

MAXIMA AND MINIMA

Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.

(08 Hours)

Assignments

1. Rank ,System of Linear Equations.
2. Complex Numbers.
3. Differential Calculus and Expansion of Functions.
4. Indeterminate Forms and Infinite Series.
5. Partial Derivatives, Euler's Theorem on Homogeneous Functions.
6. Jacobians, Maxima and Minima of Functions of two variables.

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

02: Fundamentals of Civil Engineering		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Concepts of units and conversions of units.	
2.	Basic knowledge of Chemistry	
3.	Basic knowledge of geography, concept of latitude and longitude.	
Course Objectives:		
	To make student understand the scope and application of Civil Engineering	
Course Outcomes:		
Students will be able to understand		
1.	Different building components and material	
2.	Classification of surveying	
3.	Levelling of the ground	
4.	Planning of building	
5.	Methods of irrigation and water supply	
6.	Different methods of transportation	
UNIT - I	Civil Engineering Scope And Applications.	(06 Hours)
	Civil Engineering scope, importance and applications to other disciplines of Engineering; Civil Engineering construction process and role of Civil engineer; Government authorities related to Civil Engineering; Types of structures based on loading , material and configuration; Building components and their functions; Civil Engineering materials: concrete, construction steel, bricks, flooring material and tiles, paints, plywood , glass and aluminum.	
UNIT - II	Surveying	(06 Hours)
	Objectives, Principles and Classification of Surveying; Linear, angular, Vertical and area Measurements and related instruments.	
UNIT - III	Building Planning And Bye Laws	(06 Hours)
	Site selection for residential building; Principles of building planning; Building bye laws- necessity, Floor Space Index, Heights , open space requirements, set back distance , ventilation and lighting, concept of carpet and built up area, minimum areas and sizes for residential buildings ; Concept of Eco friendly structures	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

	and Intelligent buildings.	
UNIT - IV	Foundations and Earthquakes	(06 Hours)
	Function of foundation, concept of bearing capacity and its estimation, types of foundation and its suitability, causes of failure of foundation. Earthquakes causes, effects and guidelines for earthquake resistant design, earthquake zones.	
UNIT - V	Irrigation And Water Supply	(06 Hours)
	Rainfall measurement and its use in design of dams; Types of dams, canals, methods of irrigation and their merits and demerits; hydropower structures ;Water supply, drinking water requirements and its quality, water and sewage treatment flow chart.	
UNIT - VI	Infrastructure	(06 Hours)
	Roads- types of roads and their suitability, cross section of roads, meaning of terms ; width of roads, super elevation, camber, gradient ,sight distance, materials used for construction of roads. Railways- Types of gauges, section of railway track, components of railway track, advantages. Bridges: Components - Foundation, Piers, Bearings, Deck. Airways- Components -Runway, Taxiway and Hangers.	
<u>Term Work:</u>		
(Term work shall consist of any eight exercises from the list given below.)		
1.	Study and use of prismatic compass and measurement of bearings.	
2.	Study and use of Dumpy level and reduction of levels by collimation plane method.	
3.	Area measurement by Digital Planimeter.	
4.	Drawing plan and elevation of a residential bungalow.	
5.	Study of features of topographical maps.	
6.	Assignment on collection of information on Civil Engineering materials.	
7.	Assignment on types of foundations.	
8.	Assignment problem on irrigation and hydropower structures.	
9.	Assignment on study of flow chart of water and sewage treatment.	
10.	Assignments on types of transportation systems.	
Text Books:		

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

1.	“ Surveying- Vol I “ - S.K. Duggal , Tata McGraw Hill Publication.
2.	“Built Environment” – Shah , Kale, Patki, , Tata McGraw Hill Publication
3.	“Building Construction” – Dr. B.C. Punmia , Laxmi Publication
4.	“Irrigation and water Power Engineering “- Dr. P.N. Modi,Standard Publishers ,New Delhi
5.	“Text book of Transportation Engineering “- Arora, Charotar Publishers.
6.	Water supply and sanitary engineering-Rangawala, Charotar Publishers.
7.	“Basic Civil engineering”- M.S. Palanichamy- Tata McGraw Hill Publication
Reference Books:	
1.	“Surveying –Theory and Practice”-James Anderson- Tata McGraw Hill Publication
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

ENGINEERING GRAPHICS

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -04 Hours / Week	End Semester Examination: - 60Marks	<u>05</u>
Practical: 02 Hours / Week	Continuous Assessment: - 40Marks	
	Term Work: 25 Marks	

Unit I	<p>Lines and Dimensioning in Engineering Drawing Different types of lines used in drawing practice, Dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.</p> <p>Curves used in Engineering Practice Ellipse by Directrix-Focus method, Arcs of Circle method, Concentric circle method and Oblong method. Involute of a circle, Cycloid, Archimedean Spiral, Helix on cone, Loci of points- Slider Crank mechanisms.</p>	(6)
Unit II	<p>Orthographic Projection Basic principles of orthographic projection (First and Third angle method). Orthographic projection of objects by first angle projection method only. Procedure for preparing scaled drawing, sectional views and types of cutting planes and their representation, hatching of sections.</p>	(6)
Unit III	<p>Isometric Projections Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, and construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, and Sphere.</p>	(6)
Unit IV	<p>Projections of Points and Lines and planes Projections of points, projections of lines, lines inclined to one reference plane, Lines inclined to both reference planes. (Lines in First Quadrant Only) Traces of lines, Projections of Planes, Angle between two planes, Distance of a point from a given plane, Inclination of the plane with HP, VP</p>	(6)
Unit V	<p>Projection of Solids Projection of prism, pyramid, cone and cylinder by rotation method.</p>	(6)
Unit VI	<p>Section of Solids Types of section planes, projections of solids cut by different sections of prism, pyramid, cone and cylinder.</p>	(6)

Term work

Term work shall consist of five half-imperial size or A2 size (594 mm x 420 mm) sheets.
Assignment 05 Problems on each unit in A3 size Drawing Book

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

SHEETS

1. Types of lines, Dimensioning practice, Free hand lettering, 1st and 3rd angle methods symbol.
2. Curves and loci of points
3. Projections of Points and Lines and planes
4. Orthographic Projections
5. Isometric views
6. Projection of Solids

Text Books

1. "Elementary Engineering Drawing", N.D. Bhatt, Charotar Publishing house, Anand India,
2. "Text Book on Engineering Drawing", K.L.Narayana & P.Kannaiah, Scitech Publications, Chennai.
3. "Fundamentals of Engineering Drawing", Warren J. Luzzader, Prentice Hall of India, New Delhi ,
4. "Engineering Drawing and Graphics", Venugopal K., New Age International Publishers.
5. M. B. Shah and B. C. Rana, "Engineering Drawing", 1st Ed, Pearson Education, 2005
6. P. S. Gill, "Engineering Drawing (Geometrical Drawing)", 10 Edition, S. K. Kataria and Sons, 2005
7. P. J. Shah, "Engineering Drawing", C. Jamnadas and Co., 1 Edition, 1988

ENGINEERING PHYSICS

Teaching Scheme:	Examination scheme:	Credits Allotted:
Lectures: 4Hrs/Week	End Semester Examination: 60 marks	Theory: 04
Practical: 2Hr/Week	Continuous Assessment: 40 marks	Practical: 01
	Term Work: 25marks	

UNIT – I

MODERN PHYSICS

Motion of a charged particle in electric and magnetic fields, Electrostatic and Magnetostatic focussing, Wavelength and resolution, Specimen limitation, Depth of field and focus, Electron microscope, Positive rays, Separation of isotopes by Bainbridge mass spectrograph.

NUCLEAR PHYSICS

Nuclear fission, Liquid drop model of nucleus, Nuclear fission in natural uranium, Fission energy, Critical mass and size, Reproduction factor, Chain reaction and four factor formula, Nuclear fuel and power reactor, Nuclear fusion and thermonuclear reactions, Merits and demerits of nuclear energy, Particle accelerators, Cyclotron, Betatron,

(08hours)

UNIT – II

SOLID STATE PHYSICS

Band theory of solids, Free electron theory, Fermi-Dirac probability function and position of Fermi level in intrinsic semi-conductors (with derivation) and in extrinsic semi-conductors, Band structure of p-n junction diode under forward and reverse biasing, Conductivity in conductor and semi-conductor, Hall effect and Hall coefficient, Photovoltaic effect, Solar cell and its characteristics.

SUPERCONDUCTIVITY

Introduction, Properties of a super conductor, Meissner's effect, Critical field, Types of superconductors, BCS theory, High temperature superconductors, Application of superconductors.

(08hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT – III

THERMODYNAMICS

Zeroth law of thermodynamics, first law of thermodynamics, determination of J by Joule's method, Applications of first law, heat engines, Carnot's cycle and Carnot's engine, second law of thermodynamics, entropy, change in entropy in reversible and irreversible processes, third law of thermodynamics.

NANOSCIENCE

Introductions of nanoparticles, properties of nanoparticles (Optical, electrical, Magnetic, structural, mechanical), synthesis of nanoparticles (Physical and chemical), synthesis of colloids, growth of nanoparticles, synthesis of nanoparticles by colloidal route, applications.

(08 hours)

UNIT-IV

OPTICS - I

INTERFERENCE

Interference of waves, Visibility of fringes, interference due to thin film of uniform and non-uniform thickness, Newton's rings, Engineering applications of interference (optical flatness, interference filter, non-reflecting coatings, multi-layer ARC).

DIFFRACTION

Classes of diffraction, Diffraction at a single slit (Geometrical method), Conditions for maximum and minimum, Diffraction at a circular aperture (Result only), Plane diffraction grating, Conditions for principal maxima and minima, Rayleigh's criterion for resolution, Resolving power of grating and telescope.

(08 hours)

UNIT-V

OPTICS - II

POLARISATION

Introduction, Double refraction and Huygen's theory, Positive and negative crystals, Nicol prism, Dichroism, Polaroids, Elliptical and circular polarisation, Quarter and half wave plates, Production of polarised light, Analysis of polarised light, half shade polarimeter, LCD.

LASERS

Spontaneous and stimulated emission, Population inversion, Ruby laser, Helium-Neon laser, Semiconductor laser, Properties of lasers, Applications of lasers (Engineering/ industry, medicine, communication, Computers), Holography.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT-VI

ARCHITECTURAL ACOUSTICS

Elementary acoustics, Limits of audibility, Reverberation and reverberation time, Sabine's formula, Intensity level, Sound intensity level, Sound absorption, Sound absorption coefficient, different types of noise and their remedies, Sound absorption materials, basic requirement for acoustically good hall, factors affecting the architectural acoustics and their remedies.

QUANTUM MECHANICS

Electron diffraction, Davisson and Germer's experiment, Wave nature of matter, De-Broglie waves, Wavelength of matter waves, Physical significance of wave function, Schrodinger's time dependant and time independent wave equation, Application of Schrodinger's time independent wave equation to the problems of Particle in a rigid box and non rigid box.

(08hours)

TERM WORK

Experiments

Any ten experiments from the following:

1. Determination of band gap of semi-conductor.
2. Solar cell characteristics.
3. e/m by Thomson's method.
4. Uses of CRO for measurement of phase difference and Lissajos figures.
5. Hall effect and Hall coefficient.
6. Conductivity by four probe method.
7. Diode characteristics (Zener diode, Photo diode, LED, Ge/Si diode).
8. Plank's constant by photodiode.
9. Wavelength by diffraction grating.
10. Newton's rings.
11. Ultrasonic interferometer.
12. Sound intensity level measurement.
13. Wavelength of laser by diffraction.
14. Determination of refractive index for O-ray and E-ray.
15. Brewster's law.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Assignments

1. Recent advances in Nanotechnology
2. Nuclear radiation detectors.
3. Atomic force microscope (AFM).
4. Advanced opto-electronic devices.
5. Laser in Industry.
6. Different spectroscopic methods – a comparison (Raman, IR, UVR, etc.).

Unit Tests:

Unit Test I : Unit I, II, III

Unit Test II: Unit IV, V, VI

Reference Books:

02: Fundamentals of Electrical Engineering		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Mathematics	
2.	Physics	
Course Objectives:		
	The course introduces fundamental concepts of DC and AC circuits, electromagnetism, transformer and measuring instruments and electronic components to all first year engineering students.	
Course Outcomes:		
1.	Understand and apply knowledge of basic concepts of work ,power ,energy for electrical, mechanical and thermal systems	
2.	Understand and apply knowledge of Kirchoff's laws and network theorems to solve electrical networks	
3.	Describe construction, principle of operation, specifications and applications of capacitors and batteries	
4.	Describe and apply fundamental concepts of magnetic and electromagnetic circuits for operation of single phase transformer	
5.	Define basic terms of single phase and three phase ac circuits and supply systems	
6.	Know and use electrical safety rules	
UNIT - I	Basic concepts	(06 Hours)
	Concept of EMF, Potential Difference, current, resistance, Ohms law, resistance temperature coefficient, SI units of Work, power, energy. Conversion of energy from one form to another in electrical, mechanical and thermal systems	
UNIT - II	Network Theorems	(06 Hours)
	Voltage source and current sources, ideal and practical, Kirchoff's laws and applications to network solutions using mesh analysis, Simplifications of networks using series- parallel, Star/Delta transformation. Superposition theorem, Thevenin's theorem, Max Power Transfer theorem.	
UNIT - III	Electrostatics	(06 Hours)
	Electrostatic field, electric field intensity, electric field strength, absolute permittivity, relative permittivity, capacitor composite, dielectric capacitors, capacitors in series& parallel, energy stored in capacitors, charging and discharging of capacitors, Batteries-Types, Construction& working.	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT - IV	Magnetic Circuit & Transformer	(06 Hours)
	<p>Magnetic effect of electric current, cross and dot convention, right hand thumb rule, concept of flux, flux linkages, Flux Density, Magnetic field, magnetic field strength, magnetic field intensity, absolute permeability, relative permeability, B-H curve, hysteresis loop, series-parallel magnetic circuit, composite magnetic circuit, Comparison of electrical and magnetic circuit</p> <p>Farady's law of electromagnetic induction, statically and dynamically induced emf, self inductance, mutual inductance, coefficient of coupling, Single phase transformer construction, principle of operation, EMF equation, voltage ratio, current ratio, kVA rating, losses in transformer, Determination of Efficiency & Regulation by direct load test.</p>	
UNIT - V	AC Fundamentals & AC Circuits	(06 Hours)
	AC waveform definitions , form factor, peak factor, study of R-L, R-C, RLC series circuit, R-L-C parallel circuit, phasor representation in polar & rectangular form, concept of impedance, admittance, active, reactive, apparent and complex power, power factor, 3-ph AC Circuits.	
UNIT - VI	Electrical Wiring and Illumination system	(06 Hours)
	Basic layout of distribution system, Types of Wiring System & Wiring Accessories, Necessity of earthing, Types of earthing, Different types of lamps (Incandescent, Fluorescent, Sodium Vapour, Mercury Vapour, Metal Halide, CFL, LED), Study of Electricity bill.	

Term Work:

The term work shall consist of record of minimum eight exercises / experiments.

1. Determination of resistance temperature coefficient
2. Verification of Superposition Theorem
3. Verification of Thevenin's Theorem
4. Verification of Kirchoff's Laws
5. Verification of Maximum power transfer Theorem
6. Time response of RC circuit
7. Study of R-L-C series circuits for $X_L > X_C$, $X_L < X_C$ & $X_L = X_C$
8. Verification of current relations in three phase balanced star and delta connected loads.
9. Direct loading test on Single phase transformer
 - a) Voltage and current ratios.
 - b) Efficiency and regulations .
10. Study of a Residential (L.T.) Bill

Text Books:

Workshop Technology

TEACHING SCHEME:

Theory: -
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: -
Continuous Assessment: -
Term Work: 50 Marks

CREDITS ALLOTTED:

01 Credit

Course Pre-requisites: Basic knowledge of hand tools used in day to day life.

Course Objectives: Make the students familiar with basic manufacturing processes

Course Outcomes: students should be able to understand

1. basic Manufacturing Processes used in the industry,
2. importance of safety

Term work shall consist of any three jobs, demonstrations on rest of the trades and journal consisting of six assignments one on each of the following topics.

Carpentry- Introduction to wood working, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns, contraction, draft & machining allowances
Term work includes one job involving joint and woodturning.

Fitting- Types of Fits, concepts of interchangeability, datum selection, location layout, marking, cutting, shearing, chipping, sizing of metals, drilling and tapping.
Term work to include one job involving fitting to size, male-female fitting with drilling and tapping.

Sheet Metal Practice Introduction to primary technology processes involving bending, punching and drawing various sheet metal joints, development of joints.

Joining- Includes making temporary and permanent joints between similar and dissimilar material by processes of chemical bonding, mechanical fasteners and fusion technologies.
Term work includes one job involving various joining processes like riveting, joining of plastics, welding, brazing, etc.

Forging -Hot working, cold working processes, forging materials, hand tools & appliances, Hand forging, Power Forging.

Moulding -Principles of moulding, methods, core & core boxes, preparation of foundry sand, casting, Plastic moulding.

Plumbing (Demonstration Common for Electrical & Non electrical Group)

Types of pipe joints, threading dies, Pipe fittings.

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

ENGINEERING MATHEMATICS-II

Teaching Scheme:

Lectures: 3Hrs/Week

Tutorials: 1Hr/Week

Examination scheme:

End Semester Examination: 60 marks

Continuous Assessment: 40 marks

Credits Allotted:

Theory : 03

Tutorial : 01

Unit I

DIFFERENTIAL EQUATIONS (DE)

Definition, Order and Degree of DE, Formation of DE. Solutions of Variable Separable DE, Exact DE, Linear DE and reducible to these types.

(08 Hours)

Unit II

APPLICATIONS OF DIFFERENTIAL EQUATIONS

Applications of DE to Orthogonal Trajectories, Newton's Law of Cooling, Kirchoff's Law of Electrical Circuits, Motion under Gravity, Rectilinear Motion, Simple Harmonic Motion, One-Dimensional Conduction of Heat, Chemical engineering problems.

(08 Hours)

Unit III

FOURIER SERIES

Definition, Dirichlet's conditions, Fourier Series and Half Range Fourier Series, Harmonic Analysis.

INTEGRAL CALCULUS

Reduction formulae, Beta and Gamma functions.

(08 Hours)

Unit IV

INTEGRAL CALCULUS

Differentiation Under the Integral Sign, Error functions.

CURVE TRACING

Tracing of Curves, Cartesian, Polar and Parametric Curves. Rectification of Curves.

(08 Hours)

Unit V

SOLID GEOMETRY

Cartesian, Spherical Polar and Cylindrical Coordinate Systems. Sphere, Cone and Cylinder.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Unit VI

MULTIPLE INTEGRALS AND THEIR APPLICATIONS

Double and Triple integrations, Applications to Area, Volume, Mean and Root Mean Square Values.

(08 Hours)

Assignments

1. Differential Equations.
2. Application of DE.
3. Fourier Series and Integral Calculus.
4. DUIS and Curve Tracing.
5. Solid Geometry.
6. Double and Triple integrations, area and volume.

Syllabus for Unit Test:

Unit Test I :- Unit I, II, III

Unit Test II :- Unit IV, V, VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

FUNDAMENTALS OF MECHANICAL ENGINEERING

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -03Hours / Week	End Semester Examination: - 60Marks	<u>04</u>
Practical: 02 Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

UNIT-I	<p>Thermodynamics- Heat, work and Internal Energy, Thermodynamic State, Process, Cycle, Thermodynamic System, First Law of Thermodynamics, Application of First Law to steady Flow and Non Flow processes, Limitations of First Law, PMM of first kind (Numerical Treatment), Second Law of Thermodynamics – Statements, Carnot Engine and Carnot Refrigerator, PMM of Second Kind (Elementary treatment only)</p>	(08)
UNIT-II	<p>Introduction to I.C. Engines and turbines- Two stroke, Four Stroke Cycles, Construction and Working of C.I. and S.I. Engines, Hydraulic turbines, steam turbines, gas turbines.(Theoretical study using schematic diagrams)</p> <p>Introduction to refrigeration, compressors & pumps- Vapor compression and vapor absorption system, house hold refrigerator, window air conditioner. Reciprocating and rotary compressor, Reciprocating and centrifugal pump. (Theoretical study using schematic diagrams)</p>	(08)
UNIT-III	<p>Energy Sources - Renewable and nonrenewable, solar flat plate collector, Wind, Geothermal, Wave, Tidal, Hydro power, Bio-gas, Bio-Diesel, Nuclear power.</p> <p>Heat transfer- Statement and explanation of Fourier’s law of heat conduction, Newton’s law of cooling, Stefan Boltzmann’s law. Conducting and insulating materials and their properties, types of heat exchangers and their applications.</p>	(08)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT-IV	<p>Properties of fluids- Introduction, Units of measurements, mass density, specific weight, specific volume and relative density, viscosity, pressure, compressibility and elasticity, gas laws, vapor pressure, surface tension and capillarity, regimes in fluid mechanics, fluid properties and analysis of fluid flow.</p> <p>Properties of Materials and their Applications- Metals – Ferrous and Non-Ferrous, Nonmetallic materials, smart materials, Material selection criteria.</p>	(08)
UNIT-V	<p>Mechanical devices - Types of Belts and belt drives, Chain drive, Types of gears, Types of Couplings, friction clutch (cone and plate), brakes, Power transmission shafts, axles, keys, bush and ball bearings.</p> <p>Mechanisms- Slider crank mechanism, Four bar chain mechanism, List of various inversions of Four bar chain mechanism, Geneva mechanism, Ratchet and Paul mechanism</p>	(08)
UNIT-VI	<p>Machine Tools- Lathe Machine – Centre Lathe, Drilling Machine – Study of Pillar drilling machine, Introduction to NC and CNC machines, Grinding machine, Power saw, Milling Machine.</p> <p>Introduction to manufacturing processes and Their Applications- Casting, Sheet metal forming, Sheet metal cutting, Forging, Fabrication, Metal joining processes.</p>	(08)

List of experiments-

The Term Work shall consist of **any Eight** experiments of following list

1	Measurement of viscosity using Redwood viscometer.
2	Assembly and working of 4-bar, 6-bar, 8-bar planer mechanisms
3	Finding relation between input angle and output angle for various link lengths.
4	Study of domestic refrigerator & window air-conditioner
5	Demonstration of operations of centre lathe
6	Demonstration of operations on drilling machines

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

7	Demonstration of Two stroke and four stroke engine
8	Study of power transmitting elements: Coupling, Gears and bearings
9	Demonstration of pumps and compressor
10	Study and demonstration of different types of clutches.

DEEMED UNIVERSITY, PUNE**

10: Engineering Mechanics		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
Course Pre-requisites:		
The Students should have knowledge of		
1.	Scalar and Vector	
2.	Newton's law of motion	
3.	Law of friction	
4.	Concept of physical quantities, their units and conversion of units	
5.	Concept of differentiation and integration	
Course Objectives:		
	To develop and apply the concept of resultant and equilibrium for various static and dynamic engineering problems.	
Course Outcomes:		
The student should be able to		
1.	calculate resultant and apply conditions of equilibrium.	
2.	analyze the truss and calculate friction force.	
3.	calculate centroid and moment of inertia.	
4.	solve problem on rectilinear motion.	
5.	solve problems on curvilinear motion.	
6.	use D'Alembert's principle, Work Energy principle and Impulse Momentum principle for particle.	
UNIT - I	Resultant and Equilibrium	(06 Hours)
	Types and Resolution of forces, Moment and Couple, Free Body Diagram, Types of Supports, Classification and Resultant of a force system in a Plane - Analytical and Graphical approach.. Equilibrant, Conditions of Equilibrium, Equilibrium of a force system in a Plane, Force and Couple system about a point.	
UNIT - II	Truss and Friction	(06 Hours)
	Coefficient of Static Friction, Impending motion of Blocks, Ladders and Belts. Analysis of Perfect Trusses - Method of Joint, Method of Section and Graphical Method.	
UNIT - III	Centroid and Moment of Inertia	(06 Hours)
	Centroid of line and plane areas, Moment of Inertia of plane areas, parallel and perpendicular axis theorem, radius of gyration, least moment of inertia.	

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT - IV	Kinematics of Rectilinear motion of a Particle	(06 Hours)
	Equations of motion, Constant and variable acceleration, Motion Curves, Relative motion, Dependent motion.	
UNIT - V	Kinematics of Curvilinear motion of a Particle	(06 Hours)
	Motion of a Projectile, Cartesian components, Normal and Tangential components of a curvilinear motion.	
UNIT - VI	Kinetics of a Particle	(06 Hours)
	D'Alemberts Principle, Work-Energy Principle and Impulse-Momentum Principle, Coefficient of Restitution, Direct Central Impact.	
Term Work:		
A) The term-work shall consist of minimum Five experiments from list below.		
1. Determination of reactions of Simple and Compound beam.		
2. Study of equilibrium of concurrent force system in a plane.		
3. Determination of coefficient of friction for Flat Belt.		
4. Determination of coefficient of friction for Rope.		
5. Study of Curvilinear motion.		
6. Determination of Coefficient of Restitution.		
B) The term-work shall also consist of minimum Five graphical solutions of the problems on different topics.		
Text Books:		
1) "Engineering Mechanics (Statics and Dynamics)", Hibbeler R.C., McMillan Publication.		
2) "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.		
3) "Engineering Mechanics", Bhavikatti S.S. and Rajashekarappa K.G., New Age International (P) Ltd.		
Reference Books:		
1. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.		
2. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication.		
3. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.		
4. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.		
5. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.		
6. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.		
Syllabus for Unit Test:		

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Unit Test -1	UNIT – I to III
Unit Test -2	UNIT – IV to VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

ENGINEERING CHEMISTRY

Teaching Scheme:

Lectures: 4Hrs/Week

Practical: 2Hr/Week

Examination scheme:

End Semester Examination: 60 marks

Continuous Assessment: 40 marks

Term Work: 25marks

Credits Allotted:

Theory: 04

Practical: 01

Unit I

WATER

Introduction, Hardness of water, Effect of hard water on boilers and heat exchangers: a) boiler corrosion b) caustic embrittlement c) scales and sludges d) priming and foaming
Water softening methods for industrial purposes :a) Zeolite process b) Phosphate conditioning Numerical based on the zeolite process

(08 Hours)

Unit II

MATERIAL CHEMISTRY

Crystallography : Unit cell, Laws of crystallography, Weiss indices and Miller indices, Crystal defects (point and line defects), X-ray diffraction – Bragg's Law and numerical.

Cement : Introduction of cement, Hydraulic/ Non-hydraulic cementing materials, classification of cement, chemistry of portland cement, chemical composition and compound constituents of portland cement, properties of cement and its applications.

(08 Hours)

Unit III

FUELS

Introduction, classification of fuels, calorific value of fuels, NCV and GCV, Determination of calorific values using Bomb calorimeter and Boys' gas calorimeter.

Theoretical calculation of calorific value of a fuel, Analysis of coal a) Proximate b) Ultimate analysis of coal, Numericals based on NCV, GCV.

(08 Hours)

Unit IV

CORROSION AND ITS PREVENTION

Corrosion: - Definition, atmospheric corrosion-mechanism, Wet corrosion-mechanism, Electrochemical and galvanic series, Factors affecting corrosion-nature of metal, nature of environment.

Methods of prevention of corrosion- Cathodic and Anodic protection, Metallic coatings, Electroplating, Hot dipping.

(08 Hours)

Unit V

ELECTROCHEMISTRY

Introduction, Arrhenius Ionic theory, Kohlrausch's law of independent migration of ions
Laws of electrolysis: Faradays Laws, Ostwald's dilution law, Acids and Bases, concept of pH and pOH, Buffer solutions, Solubility Product, Redox Reactions.

Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Overvoltage, Conductometric Titrations, Fuel cells, Lead Acid Storage Cell and numericals based on the above articles.

(08 Hours)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

Unit VI

STEREOCHEMISTRY

Introduction, chirality, optical activity, Enantiomers, Diastereomers, projection formula of tetrahedral carbon- Newman projection, Wedge projection, Fischer projection, Geometrical isomerism :- cis and trans isomerism, E and Z isomers

Optical isomerism :- Mesoform, the number of optical isomers for chiral molecules,

Conformations :- conformations of ethane, conformations of n-butane

(08 Hours)

TERM WORK

Experiments

Any Ten experiments from the following:

1. Estimation of hardness of water by EDTA method.
2. Estimation of chlorine by Mohr's method.
3. Determination of percentage of Ca in given cement sample
4. Determination of coefficient of viscosity by Ostwald's viscometer
5. Study of Bomb calorimeter for determination of calorific value.
6. Determination of calorific value of gas fuel by using Boy's gas calorimeter.
7. Determination of dissolved oxygen in a water sample.
8. To determine the Molecular Weight of polymer
9. Estimation of Copper from brass sample solution by Iodometrically
10. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
11. To standardize NaOH solution and hence find out the strength of given hydrochloric Acid solution
12. To determine Surface Tension of given liquid by Stalagmometer
13. Study of corrosion of metals in medium of different pH.
14. To set up Daniel cell
15. To determine pH of soil
16. To determine Acidity of soil

Assignments

7. Effect of hard water on boilers and heat exchangers
8. Hydraulic/ Non-hydraulic cementing materials
9. Analysis of coal a) Proximate b) ultimate analysis of coal
10. Wet corrosion-mechanism, Electroplating, Hot dipping
11. Geometrical isomerism :- cis and trans isomerism, E and Z isomers
12. Fuel cells

Syllabus for Unit Test:

Unit Test I :- Unit I,II,III

Unit Test II :- Unit IV,V,VI

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

MECHANICAL ENGINEERING DRAWING

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -02Hours / Week	End Semester Examination: - 60Marks	<u>04</u>
Practical: 04Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

UNIT-I	<p>Introduction to Computer Aided Drafting: Working Interface of AutoCAD, Drawing Limits, Creating 2-D Drawing in AutoCAD, AutoCAD commands, Editing commands in AutoCAD, Dimensioning in AutoCAD, Creating text in Auto CAD, Changing object properties Scale, Object Snap Mode, Display control in AutoCAD, Layer</p>	(06)
UNIT-II	<p>Dimensioning Practices: Terms and Notations, Leader, Extension Lines, Terminations and Origin indication, Functional dimension, Non-functional dimension, Datum dimension, Redundant and auxiliary dimension, Chain dimensioning, Running dimensioning, Co-ordinate dimensioning, Symmetrical or equidistant dimensioning, Methods of dimensioning Common features: Diameters, Radii, Hole sizes, chamfers, Screw threads, Chords, Arcs, Angles, Spheres, Cylinders, Squares. Conventional Representation of Machine Components As per SP-46 (1988)</p>	(06)
UNIT-III	<p>Orthographic Projections [By Using AutoCAD] Reference planes, types of orthographic projections – First angle projections, Third angle projections, methods of obtaining orthographic views by First angle method, Sectional orthographic projections – full section, half section, offset section.</p>	(06)
UNIT-IV	<p>Isometric Projections [By Using AutoCAD] Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, Sphere.</p>	(06)
UNIT-V	<p>Development of Lateral Surfaces (DLS) of Solids. [By Using AutoCAD] Applications of DLS, method of development, development of lateral surface of above solids, development of lateral surface of cut solids.</p>	(06)

**BHARATI VIDYAPEETH
DEEMED UNIVERSITY, PUNE**

UNIT-VI	Freehand Sketching Free hand sketching -- FV and TV of standard machine parts – Hexagonal headed nut and bolt, foundation bolts, shafts, keys, couplings, springs, screw thread forms, welded joints, riveted joints.	(06)
---------	---	------

Term Work

First sheet based on dimensioning practice, convention and symbols in machine drawing

Second sheet based on free hand sketches.

Four AutoCAD drawing assignments

Text Book/ Reference Books :

N.D. Bhatt, Elementary Engineering Drawing, Chartor Publishing house, Anand, India.

PRODUCTION PRACTICE I

TEACHING SCHEME:

Theory: -
Practical: 02 Hours / Week

EXAMINATION SCHEME:

End Semester Examination: -
Continuous Assessment: -
Term Work: 50 Marks

CREDITS ALLOTTED:

01 Credit

Course Pre-requisites: Basic knowledge of various machine tools.

Course Objectives: Make the students familiar with basic manufacturing processes

Course Outcomes: students should be able to understand

1. Understand machine tools, mechanism and accessories used in various production processes
2. Make the job of turning & taper turning operation using lathe
3. Perform Forging and grinding of lathe tool with one knife and other end vee
4. Prepare simple solid pattern involving wood turning
5. Perform Welding using gas/arc welding process
6. Understand Sand Casting process

Each candidate shall be required to complete and submit the following term work:

A. Jobs:

Plain and Taper turning – one job

Forging and grinding of lathe tool with one knife and other end vee – one job

Making a simple solid pattern involving wood turning – one job

Welding (gas or arc) – one job

Sand Molding – one job

B. Journal & Demonstration:

Assignments on machine tools will be in the form of a journal based on demonstrations on machine tools. This should include sketches and relevant descriptions as given below:

1) Block Diagrams (Any Two)

- a) Lathe
- b) Universal milling machine
- c) Radial drilling machine
- d) Cylindrical grinder.

2) Mechanisms (Any Two) a) All geared headstock of a center lathe.

- b) Spindle arbor (assembly) drive of milling machine
- c) Crank and slotted lever quick return drive of shaping machine.
- d) Spindle assembly in a drilling machine.

3) Accessories (Any Two)

- a) Taper turning attachment for a center lathe.
- b) Universal dividing head.
- c) Milling cutters.

WELDING AND FOUNDRY TECHNOLOGY		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of Manufacturing Processes	
2.	Basic knowledge of Joining.	
3.	Basic knowledge of Casting.	
Course Objectives:		
The student should understand the scope, objective and application of welding and foundry technology		
Course Outcomes:		
Students will be able to understand		
1.	Describe the advantages and disadvantages of the different classes of manufacturing processes.	
2.	Understand the different casting process	
3.	Know the pattern making and mold making	
4.	Choose the best casting process for a specific product.	
5.	Understand the different Welding process	
6.	Choose the proper process for different joining cases	
UNIT-I	Introduction Of Welding Processes Classification of welding processes. Advantages and disadvantages of welding processes Arc welding processes-Carbon arc, Submerged arc, Tungsten inert gas (TIG), Metal inert gas (MIT), Plasma arc, Stud welding and related arc welding processes –Theory, Comparison on merits, limitation and applications, Fluxes used in arc welding. Gas welding – Processes and equipment used, Types of flames, Gas cutting– Merits, demerits and applications	(06)
UNIT-II	Resistance Welding Resistance welding –, Spot, Seam, Projection, Butt, Percussion welding, Tube	(06)

	welding, Electric resistance welding process, its merits, demerits and application. Solid-State Welding Solid-State Welding- Pressure, Diffusion, Ultrasonic, Explosive, Friction, Forge, Principle, Equipment used, Flux used, Merits demerits and application of the above process.	
UNIT-III	Other Welding Processes ThermitWelding,Laser beam welding, Electron beam welding, Braze welding, Welding of dissimilar metals, Welding of polymers, Welding of Cast Iron, Welding of Tool Steel, Welding of Aluminium and its Alloys, Welding inspection, Welding defects and their Classification. Welding Symbols.Importance of ASME codes, ISO standards on joiningprocesses.	(06)
UNIT-IV	Pattern And Mould Making Foundry Layout, Foundry departments and sections, Pattern and pattern making, Design and allowances for patterns, Colour codes for patterns, Storage of patterns, Moulding sand and core sands, Sand control Test, Core and core making – Introduction, Core making Procedure, Types of cores, Core print, Core boxes. Mould and mould making-Moulding Methods, Moulding processes, Gating System, Software available	(06)
UNIT-V	Melting And Pouring Practice: Melting furnaces and their selection, Cupola and its operation, Advantages and limitations, applications, Induction melting furnaces, Advantages, Limitations, applications, Pouring practice and equipments, Ladle technology, Solidification of castings, Strike out, Fettling, Cleaning and Surface preparation of castings, Inspection and testing of castings, Defects in castings.	(06)
UNIT-VI	Die Casting Process: Pressure and gravity die casting, Shell mould casting, Investment casting, Continuous casting, centrifugal casting, Applications, Merits and limitations of all, Use of robots in foundry, Production of iron Casting, Copper alloy foundry practice, Aluminium alloy foundry practice, Export potentials for cast products in Indian context.	(06)

<p>Term work: List of Experiments:</p> <ul style="list-style-type: none"> • Mechanical test on weldment (weld) - Tension bend, drop weight, tear test. • Moulding and core sand testing (Clay content test, moisture content test etc). • Fluidity test using fluidity spiral pattern • Permeability test. • Green strength mould and Green strength core. • Mould and core hardness test. 					
<p>Assignments:</p> <ul style="list-style-type: none"> • Six Assignments based on above syllabus & Industrial visit <p>Oral/Practical Term work and oral will be based on above syllabus</p> <p>Text Books / References</p> <ul style="list-style-type: none"> • O. P. Khanna, A text book of Welding Technology, Dhanpat Rai and Sons • O. P. Khanna, A text book of Foundry Technology, Dhanpat Rai and Sons • P. N. BASIC ELECTRONICS AND COMMUNICATION ENGINEERING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students have completed a course in Physics and have the knowledge of laws of Dynamics		
Course Objectives:		
Students will get basic knowledge of electronic components, devices, microcontroller, digital electronics and communication.		
Course Outcomes:		
Students will be able to understand		
1.	The basic components of electronics	
2.	Working of rectifiers.	
3.	Basic of Microprocessor.	
4.	Basics of Digital electronics	
5.	Basics of analog communication.	
6.	Basics of digital communication.	
UNIT - I	Electronic components: Resistors, Inductors and Capacitors and their types, Construction and characteristics of PN junction diode Zener Diode Tunnel diode Bipolar junction transistors CB,CC,CE circuits Field Effect transistors	(06)
UNIT - II	Electronic Devices and Linear ICs: Rectifiers: Half wave, Full wave and Bridge rectifiers capacitor filter wave forms, ripple factor regulation characteristics. Special semiconductor devices: FET SCR LED VI characteristics, applications. Introduction to Op -Amp and Timers.	(06)
UNIT - III	Digital electronics: Number system: Binary system, Decimal to Binary, Octal system, Hexadecimal system, binary addition, subtraction, multiplication and division. Logic gates: OR, AND, NOT, Exclusive OR, NOR, NAND gates, Logic	(06)

	networks, Gate Standardization, Introduction to Logic Circuit Combinational and Sequential Circuits	
UNIT - IV	Analog Communication: Communication System diagram, need of modulation, amplitude modulation, frequency modulation, phase modulation.	(06)
UNIT - V	Digital Communication: Sampling process, pulse code modulation, delta modulation adaptive delta modulation.	(06)
UNIT - VI	Microprocessor: Architecture, Block Diagram, Instruction set, Interrupts, Timing Diagrams, Stacks, Subroutines, Serial I/O. Memory Design Concepts: Decoding, Memory Types, Design of Microprocessor based system, Interfacing Techniques; (I/O Mapping & Memory Mapping) with eg. of 8255 IC.	(06)
Assignment: Assignment based on above syllabus.		
Any 8 practical's should be conducted from the following list: <ol style="list-style-type: none"> 1. To study various electronics components: Resistors, Inductors, Capacitors, diodes and transistors. 2. Binary - BCD & BCD – Binary conversion 3. Study of CRO and Different modes of operation. 4. To plot VI characteristics of PN junction diode. 5. To plot regulation characteristics of half wave rectifier with and without capacitor filter. 6. To plot regulation characteristics of Full wave rectifier with and without capacitor filter. 7. To plot input-output characteristics of CE configuration of BJT. 8. To study basic logic gates: AND, OR, NOT, NAND, NOR, Ex-OR, Ex-NOR. 9. To realize the Boolean expression using basic gates. 10. Study of amplitude & frequency modulation. 11. Pulse code modulation. 		
Text Books/Reference Books:		
1	Mottershed Allen, Electronic Devices & Circuits, PHI	
2	R. P. Jain, Modern Digital Electronics, Mc Graw Hill	
3	Thomas L. Floyd, Electronic Devices, Pearson Education (Sixth edition)	
4	Millman&Halkis, Electronic Devices & Circuits, PHI	
5	Malvino Leach, Digital Principles & Applications, Mc Graw Hill	
6	Millman&Halkis, Integrated Electronics, MGH	
7.	John Keneddy"Electronics communication System" Mc Graw Hill	
8.	TaubSchilling"Digital Communication System" Mc Graw Hill	
Syllabus for Unit Test:		
Unit Test -1	Unit I, II and III	
Unit Test -2	Unit IV, V and VI	

INDUSTRIAL ENGINEERING & MANAGEMENT		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Tutorial: 01 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Knowledge of basic concept of Management	
2.	Basic information of Industrial engineering.	
3.	Basic knowledge of human considerations in manufacturing.	
Course Objectives:		
	The student should understand the scope, objective and application of industrial engineering tools and management practices in manufacturing.	
Course Outcomes:		
Students will be able to understand		
1.	Definition, principles and functions of management.	
2.	Types and selection of business organizations.	
3.	Functioning of Personnel, Marketing and Finance Department.	
4.	Method Study tool for standardizing the method.	
5.	Work Measurement tool for standardizing the time.	
6.	Ergonomically accepts in manufacturing.	
UNIT - I	Management-An Introduction: Management- Meaning and Definitions, Management, Administration, and Organization concepts, Management as an Art and Science and a profession, contribution of various thinkers to management thought, Types and Functions of Management. Different approaches to management – scientific, operational, human and system approach.	(06)
UNIT - II	Organization: Different forms of business Organization –Individual proprietorship, Partnership, Joint stock company, Co-Operative enterprise, Public Sector, Undertakings, organizational structures in Industries, Line, Functional ,Line and functional , Project, Matrix Organization and Committees	(06)

UNIT - III	<p>Financial, Marketing and Personnel Management: Personnel Management-Definitions Recruitment, Selection and training of the employees, Job valuation and Merit rating, wage administration different methods of wage payments, incentives.</p> <p>Marketing Management-Definitions, Marketing and Selling concept, market segmentation, distribution channels, Market Research, Advertising and sales promotion and Sales forecasting.</p> <p>Financial Management-Capital structure, Fixed capital, working capital, sources of finance, cost analysis, Break even analysis, Depreciation and Financial statement.</p>	(06)
UNIT - IV	<p>Method Study: Steps in method study, tools and techniques used, process chart symbols, flow diagrams, two handed chart, multiple activity chart, use of motion pictures and its analysis. SIMO charts, chorno & cycle graph, developing, presentation, installation and maintenance of improved methods.</p>	(06)
UNIT - V	<p>Work Measurement : Time Study: Aim and objectives , terminology and tools, use of stop watch procedure in making a time study, elements, selection of operations time study forms, handling of foreign elements. Performance rating. Allowances: Personal, Fatigue and other allowances. Analysis and calculation of Standard Time. Determination of number of cycles time study for indirect functions such as Maintenance , Marketing etc., Most Technique.</p> <p>Works Sampling: Definition, Objectives, theory of Work Sampling. Other applications of work sampling, errors in work sampling study.</p> <p>Synthetic and Standard data Methods: Concepts, introduction to PMTS, MTM-1, WF, Basic motion time, MTM-2, and other second – generation methods timing of group operations.</p>	(06)
UNIT - VI	<p>Ergonomics and Industrial Safety: Definitions, importance in industry, basic anatomy of human body, anthropometrics, measurement of physical work and its techniques, work and rest cycles, bio mechanical factors environment effects.</p> <p>Importance of safety, planning, training, safety precautions, safety Equipments, Government regulations on safety.</p>	(06)
Assignments:		
Six Assignments based on above syllabus.		
Text Books/		

1.	O. P. Khanna, Industrial Engineering & Management, Dhanapat Rai & Sons.
2.	M. C. Shukla, Business Organization and Management, S. Chand & Co. Ltd, New Delhi.
3.	Harold Koontz & Heinz Enrich, Essentials of Management, McGraw Hill International.
4.	M. N. Mishra, Organizational Behavior, Vikas publishing New Delhi.
5.	Dale Yoder, Personnel Management.
6.	Work Study, ILO.
7.	S. S. Patil, Industrial Engineering & Management, Electro tech Publication.
8.	Mansoor Ali & Dalela, Industrial Engineering & Management System, Standard Publisher distributions.
9.	R. M. Currie, Work Study, ELBS.
10.	Management by James A. F. Stoner, R. Edward Freeman, PHI
11.	Management Today: Principles and Practice by Gene Burton and Manab Thakur, TMH
12.	Organizational Behavior by Keith Davis, TMH
13.	Management (Tasks, responsibilities and Practices) by Peter Drucker, Harper Business
14.	Production Management by Lockyer, ELBS
15.	Modern Production Management by E. S. Buffa (John Wiley)
16.	Financial Management by Vanhorne, PHI
17.	Financial Management (Theory and Practice) by Prasanna Chandra, TMH
18.	Marketing Management by Philip Kotler, Pearson Edition
19.	Marketing Management by Rajan Saxena, TMH
20.	Personnel Management by Edward Flippo, TMH
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

STRENGTH OF MACHINE ELEMENTS

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: -03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50Marks	
Course Pre-requisites:		
The Students should have		
1.	Fundamentals of engineering mechanics	
2.	Analysis of forces and moments	
3.	Laws of motion, kinetics, kinematics	
4.	Algebra and trigonometry	
Course Objectives:		
	To provide basic concepts of stresses and strains in machine elements.	
Course Outcomes:		
Students will be able to understand		
1.	Stresses and strains in different materials.	
2.	Shear force and bending movement of loading elements.	
3.	Principal stresses and strain.	
4.	Torsional, bending and axial force on the shaft.	
5.	Bending stresses and shear stresses in the machine elements.	
6.	Design of simple machine components.	
UNIT - I	Simple stresses & strains Revision of Concept of stresses & strains (linear, lateral, shear, thermal & volumetric). Hooke's law, Poisson's ratio, Modulus of Elasticity, Modulus of Rigidity, Bulk Modulus. Stress-strain diagrams for ductile & brittle materials.. Axial force diagrams, stresses and strains in determinate & indeterminate homogeneous & composite bars under concentrated loads & self weight. Strain energy due to axial load (gradual, sudden & impact), strain energy due to self weight Introduction to thermal stresses (Theory)	(06)

UNIT - II	<p>Principal stresses & strains Normal & shear stresses on any oblique plane. Concept of principal planes derivation of expression for principal stresses & maximum shear stress, position of principal planes & planes of maximum shear, graphical solution using Mohr's circle of stresses, combined effect of axial force, bending moment & torsional moment on circular shafts (solid as well as hollow)</p> <p>Theories of elastic failure: Maximum principal stress theory, maximum shear stress theory, Maximum distortion energy theory, maximum strain theory – their applications & limitations.</p>	(06)
UNIT - III	<p>Shear Force & Bending Moment Diagrams Shear forces & bending moments of determinate beams due to concentrated loads, uniformly distributed loads, uniformly varying loads & couples, relation between SF & BM diagrams for cantilevers, Simply supported beam. Maximum bending movement & positions of points of contra flexure, construction of loading diagrams & BMD from SFD & construction of loading Diagram & SFD from BMD.</p>	(06)
UNIT - IV	<p>Torsion Stresses, strain & deformations in determinate shafts of solid & hollow</p> <p>Slope & deflection of beams - relation between BM & slope, slope & deflection of determinate beams, double integration method (Macaulay's method), derivation of formula for slope & deflection for standard cases.</p>	(06)
UNIT - V	<p>Stresses in Machine Elements.</p> <p>Bending stresses : Theory of simple bending, assumptions, derivation of flexural formula, second moment of area of common cross sections(rectangular, I,T,C) with respective centroidal& parallel axes, bending stress distribution diagrams, moment of resistance & section modulus calculations.</p> <p>Shear stresses : Concept, derivation of shear stress distribution formula, shear stress distribution diagrams for common symmetrical sections, maximum and average shears stresses, shear connection between flange & web.</p>	(06)
UNIT - VI	<p>Design of Simple Machine parts: Machine Design, Traditional design methods, Basic procedure of Machine Design, Factor of safety, Service factor, Design of simple machine parts - Cotter joint, Knuckle joint and Levers, Eccentric loading , Stresses in curved beams.</p>	(06)

	<p>Term work: The Journal containing the record of following:</p> <ul style="list-style-type: none"> i) Experiment on Tension test on M.S. bar. ii) Experiment on Compression test on M.S. bar. iii) Experiment on Shear test on M.S. bar. iv) Experiment on Torsion test on M. S. bar. v) Experiment on Impact test. <p>Drawing file containing two half imperial sheets:</p> <ul style="list-style-type: none"> i) Drawing sheet of SFD – BMD of shafts using computer. ii) Drawing sheet of Mohr's circle. 	
	<p>Oral : Based on above term work.</p>	
<p>Assignments : Assignments based on each unit. (Each assignment consist of 5 problems)</p>		
<p>Text Books/</p>		
1.	Timoshenko & Young, Engineering Mechanics, Tata McGraw Hill Book Publishing Co. Ltd. 1981.	
2.	James Gere, Mechanics of Materials, Thomson Learning	
3.	S Ramamrutham, Strength of Materials	
4.	V. B. Bhandari, Design of Machine Elements, Tata McGraw Hill Publication	
5.	J. E. Shigley, Mechanical Engineering Design, McGraw Hill	
<p>Syllabus for Unit Test:</p>		
Unit Test -1	Unit I ,II and III	
Unit Test -2	Unit IV,V and VI	

APPLIED THERMODYNAMICS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
Course Pre-requisites:		
The Students should have		
1.	Knowledge of basic concept of thermodynamics	
2.	Knowledge of pumps and compressors	
3.	Basic knowledge of I.C.Engine	
Course Objectives:		
	The student should understand the scope and application of Applied Thermodynamics	
Course Outcomes:		
Students will be able to understand		
1.	to apply the concepts of Carnot theorem to applications such as heat pump and refrigerator	
2.	basic concepts of thermodynamics and their application to energy conversion device like Compressors	
3.	basic concept of refrigeration and air conditioning system	
4.	Concept of air standard cycle	
5.	Concept of Internal Combustion system	
6.	Heat Transfer performance	
UNIT - I	Second Law of Thermodynamics: Limitations of first law, Heat engine, refrigerator & heat pump, Kelvin-Planks and Clausius statement, Equivalence of Kelvin -Planks and Clausius statement, Perpetual motion machine of second kind, Carnot cycle & Carnot heat engine, Entropy. Steam Generators: Classification, Constructional details of Process & Power boilers, boilers mountings & accessories, equivalent evaporation, boiler efficiency, energy balance, boiler draught.	(06)
UNIT - II	Refrigeration Unit of refrigeration, reversed Carnot cycle, Bell Coleman cycle, Vapour compression cycle, C. O. P , TR Capacity, Use of p-h charts, Desirable properties of refrigerants, & alternative refrigerants Air conditing Factors affecting human comfort, Dalton's law, psychrometry, DBT,WBT, Specific humidity, relative humidity, degree of saturation, study of	(06)

	psychrometric chart, psychrometric process uchasensible heating, cooling, humidification & dehumidification, Different Air conditioning systems, Applications of air conditioning.	
UNIT - III	<p>Reciprocating Air Compressors: Introduction, Use of compressed air, construction & working of reciprocating air compressors, P-V diagrams of single stage air compressor, Effect of clearance, Volumetric efficiency , Power required to drive the compressor, Isothermal efficiency, Mechanical efficiency, Multi-staging of air compressor ,perfect inter cooling, Advantages of Multi-staging</p> <p>Rotary Compressor: Introduction, classification and working principles of different types of compressors, comparison between reciprocating and rotary compressors, positive displacement and roto dynamic compressors,</p>	(06)
UNIT - IV	<p>Air Standard Cycles Introduction to Air Standard cycle, assumptions,AirStandardottocycle,Diesecycle,Dualcombustioncycle,comparisonofabovecycles,Actualcycle</p>	(06)
UNIT - V	<p>Internal Combustion Engine Systems: Fuel Feeding Systems: Introduction of carburetor S.I. engines, Mixture requirements, Solex carburetor, Fuel injection systems in C.I. engines, Bosch fuel injection pump, fuel injectors, Type of nozzles. Ignition Systems: Battery ignition, magneto ignition, Electronic ignition systems. Cooling and Lubrication Systems: Necessity of cooling, Cooling systems, Types of cooling and lubrication system Engine Testing & Performance: Measurement of I.P, B.P, Rope brake dynamometer, Hydraulic dynamometer, Eddy current dynamometer ,Measurement of F.P, Willian's line method, Morse Test, Measurement of fuel & air, Measurement of speed, Heat balances heat.</p>	(06)
UNIT - VI	<p>Heat transfer and applications Extended surfaces: Heat Transfer through extended surfaces, derivation of differential equation for fins, Solution of differential equation for different boundary conditions having constant cross-section area, Effectiveness and efficiency of a fin.</p>	(06)

	Heat Exchangers: Classification, heat exchanger analysis, use of Log Mean Temperature Difference (LMTD) and effectiveness NTU method for parallel and counter flow heat exchangers.	
Assignment: Assignment based on above syllabus.		
Text Books/ Reference Books:		
	P.L.Ballany, “Thermal Engineering”, Khanna Publications	
	C.P.Arora, “Engineering Thermodynamics”, Tata Mc Graw Hill Publications	
	Ganesan V., “Internal Combustion Engine”, Tata McGraw Hill Publications

Syllabus for Unit Test:		
Unit Test -1	Unit I, II and III	
Unit Test -2	Unit IV, V and VI	

PRODUCTION PRACTICE - II		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: - Hours / Week		
Practical: 04 Hours / Week	Term Work and Practical Examination: 50 Marks	04 Credits
Course Pre-requisites:		
The Students should have		
1.	Basic Knowledge of Welding.	
2.	Basic Knowledge of engineering components.	
3.	Basic Knowledge of materials.	
Course Objectives:		
	The student should understand the processes in casting and welding..	
Course Outcomes:		
Students will be able to understand		
1.	Welding processes	
2.	Pattern making process.	
3.	Sand Testing methods	
4.	Sand Moulding techniques.	
5.	Casting process	
	<p>Term Work</p> <p>Each candidate shall be required to complete and submit the following jobs:</p> <ol style="list-style-type: none"> 1. Welding-TIG / MIG / Arc Welding (One Job) 2. Pattern making: A solid pattern consisting of wood turning or a core box. (One Job) 3. Sand Testing.(Five test) 4. Sand Moulding. (One Job) 5. Casting. 	

SEMESTER IV

MACHINING TECHNOLOGY		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of cutting tools	
2.	Basic knowledge of machining processes	
3.	Basic knowledge materials.	
Course Objectives:		
The student should understand the scope, objective and application of Machining Technology		
Course Outcomes:		
Students will be able to understand		
1.	To Suggest different cutting tool materials for different work piece materials according to their properties	
2.	Use dynamometer for measuring the cutting forces during various cutting operations.	
3.	Perform different operations on lathe machine	
4.	Perform different operations on Milling machine	
5.	Explain, analyzed, predict and prevent material failures in primary manufacturing processes	
6.	Indicate which types of manufacturing process are suited to producing different shapes of product.	
UNIT-I	Process of Metal Cutting Metal cutting - Introduction, principle, classification of cutting tools, Types of metal cutting process, Mechanism of chip formation, Types of chips, Concept of speed, feed & depth of cut, Cutting tool materials	(06)
UNIT-II	Theory of Metal Cutting Single point cutting tool, Tool geometry, Tool signature, selection of tools from catalogue. Systems of defining cutting angles of a single point cutting tool, Cutting forces in Orthogonal cutting, Merchant's circle of forces, Measurement of cutting forces, Tool failure - its classification, Tool wear & its types .Types of cutting Fluids.	(06)

UNIT-III	<p>Lathe Introduction, function, types, specification of lathe machines, construction accessories, attachments, operations. Difference between capstan and turret and engine lathe, Automatic Machines Automatic Lathes-Introduction, function, Classification of automatic machines.</p>	(06)
UNIT-IV	<p>Drilling machines Drilling-Introduction, Classifications of Drills. Twist drills. Types of drilling machines, operations, cutting speed, feed and depth of cut. Milling machines Milling- Introduction, Types of milling machines, operations, Milling cutters, Dividing head, methods of indexing.</p>	(06)
UNIT-V	<p>Abrasive Machining Processes Abrasive machining, abrasive-types, size and geometry. Specifications of Grinding, grinding wheels, wheel marking, wheel selection. Wheel mounting. Types of grinding machines, Grinding faults. Surface Finishing Processes Honing, lapping, super finishing, buffing, burnishing process. Electroplating, phosphating, metal spraying, anodizing, shot Peening. Effects of surface treatment processes.</p>	(06)
UNIT-VI	<p>Broaching Broaching-Introduction, broach geometry, Types of broaching machines, Broach design. Broaching applications. Numerical control and CNC Introduction to NC, basic principles of NC machine, classifications of NC system. Introduction to CNC, CNC controllers, Introduction to DNC machines, machining centers.</p>	(06)
Term Work:		
List of Experiments: (Any Five)		
<ul style="list-style-type: none"> • Effect of tool geometry on cutting speed, feed, depth of cut on cutting processes • Measurement of cutting forces in turning, drilling & milling with the help of tool dynamometers • Study and demonstration of Automate Lathe • Study of dividing indexing mechanism on milling machine. • Study and demonstration of Grinding Machines. • Study and demonstration of NC and CNC machine program. 		
Assignments		
<ul style="list-style-type: none"> • Six Assignments based on above syllabus & Industrial visit 		

Text Books / References		
<ul style="list-style-type: none"> • G.R.Nagpal, Tool Engineering and Design, Khanna Publishers • B.S.Raghuwanshi, Workshop Technology, Vol-II, Dhanpat Rai & Co. • P. N. Rao, Manufacturing Technology , Vol- II, McGraw Hill Education (India) Private Limited • HajraChaudhari, Workshop Technology, Vol.-II • Roy A. Lindberg, Process & Materials of Manufacture, PHI • P. C. Sharma, Production Engineering, S. Chand Publications • R. K. Jain, Production Technology, Khanna Publishers • E. P. DeGrmo, J. T. Black and A. Kosher, Material and processes in manufacturing, PHI • HMT Handbook, Production Technology, TMH 		
Syllabus for Unit Test		
Unit Test 1	Units I , II and III	
Unit Test 2	Units IV, V ,VI	

MATERIAL SCIENCE		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW and Oral: 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Knowledge of basic concept of Physics and chemistry	
2.	Basic information of engineering materials.	
3.	Basic knowledge of manufacturing processes.	
Course Objectives:		
	The student should understand the scope, objective and application of material, engineering properties, practices in material testing and selections of materials as per industrial requirements.	
Course Outcomes:		
Students will be able to understand		
1.	basics of crystal structure, Mechanism of plastic deformation and Annealing and re-crystallization	
2.	how to measure different types of mechanical properties	
3.	Use of equilibrium diagrams in selections of alloys for different applications..	
4.	Concept of powder metallurgy and manufacturing of components by powder metallurgy	
5.	How to manufacture composite components	
6.	Basics of corrosion and Prevention of corrosion by different methods	
UNIT - I	Study of Engineering materials and Plastic Deformation: Study of Engineering materials Study of crystal structure, Indexing of planes and directions, Imperfections in crystals, Mechanism of plastic deformation, Critical resolve shear stress, Deformation of single crystal and polycrystalline metals, Work Hardening , Cold and hot working, Annealing and re-crystallization	(06)
UNIT - II	Mechanical Testing of Metals; Study of destructive testing Tensile test, Engineering stress and true stress strain, evolution of properties, Numerical based Tensile test, Hardness testing such as Brinell, Rockwell, Vickers and Micro hardness test, Impact test, Fatigue test, Creep test, Cupping test, Non	(06)

	Destructive testing such as Liquid dye penetrate test, Magnaflux test, Eddy current test , Ultrasonic testing and Radiography testing.	
UNIT - III	Study of Equilibrium Diagrams: Related terms and their definitions, Hume Ruther’s rule of solid solubility, Allotropy and polymorphism, Solidification, Dendritic growth, Cooling curves, Plotting of Equilibrium diagrams, Lever rule, Coring, Isomorphs system, Eutectic system, Partial eutectic and eutectoid system, Non Equilibrium cooling and it’s effects	(06)
UNIT - IV	Processing of metal powder and ceramics: Introduction, Advantages and limitations of powder metallurgy, Production of metals powder, Characteristics of powder, Powder conditioning, Powder Compacting, Sintering and sintering furnaces, Ceramic, Properties and applications of ceramics. Manufacturing of ceramics Production of powder metallurgical parts such as self lubricating bearings, ferrites, electric contact materials, Carbide cutting tools etc.	(06)
UNIT - V	Study of Composite Materials: Introduction, Classification of composites, Types of composite, Properties, Metal matrix composite, Ceramic matrix composite, Fiber Reinforced plastic, Manufacturing methods, Applications in Different field.	(06)
UNIT - VI	Corrosion and Prevention: Introduction, Types of corrosion, Oxide film growth laws, Action of hydrogen, Polarization, Stress corrosion, Season Cracking, Prevention of corrosion, Design of component, Modification of environment, Cathodic Protection, Deposition and coating, Ion Implantation, PVD, CVD, Powder coating etc.	(06)
List of Experiments:		
	<ol style="list-style-type: none"> 1.Tensile test to determine strength and other mechanical properties 2.Hardness test Brinell and Vickers 3.Rocwell and Poldi hardness test 4.Micro-Hardness test 5.Erichsen Cupping test 6.Magnetic Particle test 7.Liquid penetrate test 8.Utrasonic Test 9. Visual inspection of casting and welded components. 	
	Assignments <ol style="list-style-type: none"> 1. Density calculations on crystal structure and miller indices for crystal structure . 2. Draw different types of curves such as , Tensile stress strain , S N curves , Creep curves , brittle transient temperature curves 3. Draw the equilibrium diagram from given data. Find out the different types of phases. 4. Collect list of components which are made from powder metallurgical technique 	

	and write flow chart for production processes.. 5. Find out ten different composite parts and its composite classifications. 6. Collect different type of old components and study the corrosion on it also study the prevision processes also
	Text Books/Reference Books:

"Material Science and Engineering", R K Rajput ,S K Kataria and Sons Publication, Delhi
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

DESIGN OF MACHINE ELEMENT		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Knowledge of basic concept of Design	
2.	Basic information of Mechanical Elements	
3.	Basic knowledge of design consideration into different Mechanical/Machine Elements	
Course Objectives:		
	The student should understand the scope, objective and application of Design of Machine Element.	
Course Outcomes:		
Students will be able to understand		
1.	Definition, principles and functions of Design	
2.	Design and selection of shafts, keys, splines and couplings	
3.	Working principal of brakes and clutches	
4.	Design and selection of bearings.	
5.	Design and selection of joints	
6.	Design and selection of power screws and springs	

UNIT - I	Introduction: Concept of machine design, general design considerations, design procedure; factor of safety for different types of loading its significance and selection; theories of failures, Selection of engineering materials for a component considering functionality, raw material generating process, strength, cost, quantity and aesthetics, use of IS codes	(06)
UNIT - II	Design of shafts, keys, splines and couplings: Design of solid and hollow shafts for strength and rigidity against pure torsion, pure bending, combined bending, torsion and axial loads; design of keys and splines; design of rigid and flexible couplings.	(06)
UNIT - III	Clutch & Brake: Types, classification, selection of different type of clutch Design of multiplate clutch. Introduction: different types of clutch(cone, centrifugal clutch).Energy absorbed by brake, Design consideration of block brake ,Introduction: internal expanding shoe brake, disk brake.	(06)
UNIT - IV	Rolling Contact Bearing: Types, static and dynamic load carrying capacities, stibek's equation used, Equivalent bearing load, load life relationship, selection of bearing life, selection of rolling contact bearing from manufacture's catalogue. Bearing with probability of survival other than 90%, lubrication and mounting of bearings	(06)
UNIT - V	Design of joints: Design of bolted joint subjected under transverse and eccentric loading, materials for bolts, initial tightening loads on bolts, effect of washer and gasket, uniform strength bolts. Adhesive joints	(06)
UNIT - VI	Power screw : Power Screws: Forms of threads, Torque analysis of power screw self locking screw, stresses in power screw, collar friction, Design of Screw Jack.	(06)
TERM WORK		
1) Study of Engineering Materials, their applications and selection as per different standards used in practice. 2) Design of Coupling and Detailed Working drawings with assembly. 3) Design of bolted, riveted and welded joints for transverse and eccentric loading. 4) Working drawing of shafts, keys, splines and couplings. 5) Design of spring and power screw. 6) Types of bearing. 7) Types of brakes and clutches.		
Text Books/Reference Books:		
1.Design of Machine Elements, V. B. Bhandari, (Tata McGraw-Hill Publishing		

Company Ltd.)

2. Elements of Machine Design, N. C. Pandya and C. S. Shaha, (Charotar Publishing House)
3. Mechanical Engineering design, J. E. Shigley, Mitchell, (McGraw-Hill Publishing Co. Ltd)
4. Machine Tool Design, N. K. Mehta, (Tata McGraw-Hill Publishing Company Ltd.)
5. Design of Machine Elements, Drobvalsky (MIR Publisher)
6. A Text Book of Machine Design, R. S. Khurmi, (S. Chand)
7. Design of Machine Elements by M. F. Spoots, T.E.Shoup (PHI)
8. Machine Design, R. K. Jain, (Khanna Publishers.)
9. Engg. Design, a Materials & Processing Approach, G. Dieter, (Tata McGraw-Hill Publishing Company Ltd.)
10. Computer Aided Analysis and Design of Machine Elements by Dukki Patti, Rao, Bhat , (New Age, Delhi)
11. CMTI Machine Tool Design Handbook (TMH)
12. Design of Machine Elements, An Integrated Approach by Robert and Norton, (Pearson)
13. Machine Design by Black and Adams (McGraw-Hill Publishing Company Ltd)

Syllabus for Unit Test:	
Unit Test -1	Unit I, II and III
Unit Test -2	Unit IV, V and VI

ENGINEERING MATHEMATICS - III		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Tutorial: 01 Hour / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of arithmetic calculations and engineering applications.	
2.	Knowledge of basic concept of statistics	
3.	Basic information of probability	
Course Objectives:		
	The student should understand the scope, objective and application of statistical tools	
Course Outcomes:		
Students will be able to understand		
1.	The use of statistical methodology and tools in the engineering problem solving process.	
2.	The use of different measures of central value	
3.	The use of correlation analysis	
4.	The use of regression analysis	
5.	The concept of probability, random variable and probability distribution.	
6.	The concept of testing of hypothesis and experimental design.	
UNIT - I	Introduction to Statistics- Origin and growth of statistics, statistical methods Vs experimental methods. Collection of data, primary and secondary data, sampling and sample designs, methods of sampling, merits and limitations of sampling, sampling and non-sampling errors. Diagrammatic and graphic presentation of data.	(06)
UNIT - II	Measures of central value- Arithmetic mean, median and mode, geometric mean and harmonic mean. Measures of dispersion, mean deviation, standard deviation, skewness moments and kurtosis.	(06)

UNIT - III	Correlation analysis Significance of the study of correlation, types of correlation, coefficient of correlation, coefficient of determination, rank correlation	(06)
UNIT - IV	Regression analysis- Uses of regression analysis, difference between correlation and regression analysis. Regression equations, standard error of estimate, limitations of regression analysis.	(06)
UNIT - V	Probability Basics of probability, conditional probability, bayes' theorem, mathematical expectations, random variable and probability distribution, binomial, Poisson, normal distribution.	(06)
UNIT - VI	Testing of hypothesis- Z test, chi square test and goodness of fit, F test and analysis of variance. Applications of Statistics- Experimental designs, SQC, business forecasting.	(06)
Assignments- 5 Assignments based on above syllabus These assignments may preferably completed and verified using software's.		
Text Books/Reference Books:		
<ol style="list-style-type: none"> 1. S. P. Gupta: Statistical methods – S Chand and sons 2. Bhat B. R.(1981) : Modern Probability Theory –IIIrd edition :New age international (P)limited, 3. Syllabus for Unit Test:		
Unit Test -1	Unit I, II and III	
Unit Test -2	Unit IV, V and VI	

PRODUCTION PLANNING AND CONTROL		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
Course Pre-requisites:		
The Students should have		
1.	Knowledge of basic concept of Industrial Engineering & Management	
2.	Knowledge of statistics.	
3.	Basic knowledge of resources of production Man, Machine Material..	
Course Objectives:		
	The student should understand the scope, objective and application of Production Planning And Control manufacturing Industries.	
Course Outcomes:		
Students will be able to understand		
1.	The importance of PPC in industry.	
2.	The Forecasting by using different techniques.	
3.	Different ideas and concept to improve PPC in industry.	
4.	Different techniques for material requirement planning	
5.	Different techniques used for PPC in industry.	
6.	Computer Aided Process Planning.	
UNIT - I	Introduction to PPC: Role and stages of PPC, PPC as an integrated function, Product Life Cycle Analysis, Types of Production systems.	(05)
UNIT - II	Forecasting Techniques: Use and types of forecasting, Methods of forecasting and comparison, Verification and control.	(05)
UNIT - III	Techniques and Production Control: Process sheet, Routing, Scheduling- Gantt Chart, Machine Loading Chart, Line Balancing, Dispatching rules, Sequencing - Johnson's rule, Loading, Follow- up, Evaluation, PERT, CPM.	(06)

UNIT - IV	Materials Planning and Purchasing: Scope and requirement of MRP, MRP I and MRP II, Master Production Schedule, Bill of Materials, Capacity Requirement Planning. Introduction to ERP, Purchasing - Documentation, Make or Buy decisions, Vendor Development.	(08)
UNIT - V	Inventory Control: Types of Inventory, Cost of Inventory, EOQ, Selective Inventory Control, Replenishment Systems. Stores Management: Types of stores, Storage layout and storage systems, Stores Documentations, Stores Control and Control of Wastage and surplus, JIT, KANBAN, KAIZEN, Value Stream Mapping.	(08)
UNIT - VI	Computer Aided Production Planning and Control: a) Machine capacity planning and utilization. b) Productivity measurement. c) Material Requirement Planning. d) Scheduling Techniques. Hands on experience of Computer aided Production Planning and Control	(04)
Assignments: Six Assignments based on above syllabus.		
Text Books/Reference Books:		
1	"Production Systems - Planning Analysis and Control, J. L. Riggs, " , JhonWiley& Sons.	
2	"Operations Management - Design, Planning & Control for Manufacturing and Services, J.B. Dilworth " , McGraw Hill	
3	"Production and Operation Management S N Charry " Tata McGraw Hill	
4	Elements of PPC, Samuel Elion " , Universal Book Company	
5	"Industrial Engineering and Production Management MartandTelsang " S. Chand and Co. Ltd.	
6	" Production Planning And Inventory Control" Mager and Boodman	
7	S. S. Patil, Industrial Engineering & Management, Electrotech Publication.	
8	. "Production Management " Martin Star,	
9	Process Engineering " Erry Johnson	
10	"Production Planning and Control, A. K. Bewoor, " Satya Publication	
11	"Production Planning and Cost Control Jain and Arrawal", Khanna Publisher	
Syllabus for Unit Test:		
Unit Test -1	Unit I,III & II	
Unit Test -2	Unit IV,V & IV	

PRODUCTION PRACTICE - III		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Lectures: NIL		
Practical: 04 Hours / Week	Term Work and Practical Examination: 50 Marks	04Credits
Course Pre-requisites:		
The Students should have		
1.	Basic Knowledge of manufacturing processes.	
2.	Basic Knowledge of engineering graphics.	
3.	Basic Knowledge of materials.	
Course Objectives:		
	The student should understand the machining processes by lathe milling and grinding.	
Course Outcomes:		
Students will be able to understand		
1.	Turning process.	
2.	Taper turning process.	
3.	Threading process.	
4.	Gear cutting process..	
5.	Milling process.	
6.	Grinding process.	
	<p>Term Work Each Candidate shall be required to complete and submit the following jobs: (Any Two) One assembled job consisting of 2 to 3 pieces as below</p> <ol style="list-style-type: none"> 1. Operations on lathe machine (3 assembled parts) 2. Operations on milling machine 3. Operations on grinding. machine 	

Syllabus
for
B.Tech.ProductionSem V
&VI

Programme: B. Tech. (Production) Sem. V – 2014 Course

S.N	Course	Teaching Scheme (Contact Hrs/week)			Examination Scheme (Marks)							Total Credits		
		L	P/D	T	End Sem Exam	Continuous Assessment					Total	TH	TW	Total
						Unit Test	Attendance	Assignments	TW/OR	TW/PR				
1.	Metal Forming	3	2	-	60	20	10	10	50	-	150	3	1	4
2.	Kinematics and Design of Manufacturing Machine	3		-	60	20	10	10		-	100	3		3
3.	Metrology & Quality Control	3	2	-	60	20	10	10	-	50	150	3	1	4
4.	Engineering Metallurgy	3	2	-	60	20	10	10	50	-	150	3	1	4
5.	Numerical Methods	3	2	1	60	20	10	10	-	-	100	3	2	5
6.	Professional skill Development – V	4	-	-	100	-	-	-	-	-	100	4	-	4
7.	Production Practice- IV	-	2	-	-	-	-	-	-	50	50	-	1	1
	Total	19	10	1	400	100	50	50	100	100	800	19	5	25

Programme: B. Tech. (Production) Sem. VI – 2014 Course

* End Semester examination of duration 4 Hours.

Total Credits Sem. I – 25

Total Credits Sem. II – 25

Grand Total - 50

Subject :METAL FORMING		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of conventional and non conventional manufacturing processes.	
2.	Knowledge of material science.	
3.	Knowledge engineering drawing.	
Course Objectives:		
	To study the metal forming processes i.e wire drawing, rolling, forging, extrusion, sheet metal working etc.	
Course Outcomes:		
Students will be able to understand		
1.	To select wire drawing machine and understand its defects and remedies.	
2.	To select proper forging process and understand its defects and remedies.	
3.	To select type of rolling mills and understand its defects and remedies.	
4.	To select various sheet metal working processes and advance sheet metal processes.	
5.	To design simple and progressive and deep drawing die.	
6.	To select extrusion die and extrusion proper process and understand its defects and remedies.	
UNIT - I	Fundamentals of Material Forming: Introduction of forming processes. Concept of Formability, formability limits and formability diagram. Wire and Tube Drawing: Introduction rod and wire drawing machines - construction and working. Preparation of stock for wire drawing. Wire drawing dies, material and design. Heat treatment, variables in wire drawing, Maximum reduction in wire in one pass, forces required in drawing. Multiple drawing, defects in drawing and remedies, work hardening, lubrication in wire drawing. Tube drawing: Methods, force calculations, stock penetration. Lubrication in tube drawing.	(06 Hours)
UNIT – II	Forging: Introduction, classification of forging processes. Forging equipment-	(06 Hours)

	Hammers, presses, furnaces etc. construction working capacities and selection of equipment. Basic forging operations such as drawing, fullering edging, blocking etc. Forgability tests, design of forging as a product, friction in forging. Forging defects and the remedies. New technologies: Liquid metal forging, Isothermal forging, No draft forging, P/M forging, Rotary swaging, Roll forging, lubrication in forging.	
UNIT - III	Rolling of Metals: Scope and importance of rolling. Effect of grain direction in rolling Types of Rolling Mills- construction and working. Deformation in rolling and determination forces required. Process variables, redundant Deformation, Roll bite and friction. Roll flattening, Roll camber - its effect on rolling process, mill spring. Defects in rolling. Automatic gauge control- Roll pass classification & design. Lubrication in rolling.	(06 Hours)
UNIT - IV	Sheet Metal Working: Sheet Metal properties, gauges and surface conditions. various cutting and forming operations, types of dies used, force requirement, theory of shear, methods of force reduction, defects, lubricants used. Miscellaneous sheet metal working operations: Metal spinning, fine blanking, coining, embossing, rubber forming, stretch forming. Coining Embossing, Curling, Spinning and fine blanking. Advanced Metal Forming Processes: Introduction to High velocity forming- principles, comparison of high velocity and conventional forming processes. Explosive forming, Magnetic pulse forming, Electro hydraulic forming. Stretch forming, , Flow forming advantages, limitations and application of the process.	(06 Hours)
UNIT - V	Design of Press Tools: General classification and components of press tools, types of dies simple, compound, combination dies, various press working operations such as punching, blanking, deep drawing, bending, forming etc. Design and calculations for above press working dies.	(06 Hours)
UNIT - VI	Extrusion: Types: Direct, reverse, impact, hydrostatic extrusion. Dies for extrusion, stock penetration. Extrusion ratio of force equipment (with and without friction), metal flow in extrusion, defects. Role of friction and lubricants. Manufacture of seam-less tubes.	(06 Hours)
Term Work/Practical's:		
1. Design & working drawing of simple blanking die.		
2. Design & working drawing of progressive/compound/combination die.		

3. Design & working drawing of a deep drawing die.	
4. A report on factory visit, comprising of product range, processes, plant layout, Auxillary equipment, process parameters etc.	
Assignments:	
1. Assignment based on each unit of syllabus.	
Text Books/Reference Books:	
1	Dieter, "Mechanical Metallurgy"
2	P. N. Rao, "Manufacturing Technology", Tata McGraw Hill
3	G.W. Rowe, "Principles of Industrial Metal Working Process", Edward Arnold
4	Dr. R. Narayanswamy, "Metal Forming Technology", Ahuja Book Co.
5	Surender Kumar, "Principles of Metal Working"
6	"ASM Metal hand book Vol: 4 forming"
7	P.C.Sharma, "Production Engineering", S. Chand
8	Masleror and Berkvasky, "Theory of Plastic Deformation and Metal Working", MIRPublications
9	J. N. Harris, "Mechanical Working of Metals", Pergmon Press
10	Aviter, "Fundamental of Metal Working", McGraw Hill Publisher
11	Schilles, "Press Working"
12	R.G.W. Pye; "Injection Moulding", EWP.
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Subject : KINEMATICS & DESIGN OF MANUFACTURING MACHINES		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 00 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	00 Credit
Course Pre-requisites:		
The Students should have		
1.	Students should have Basic knowledge of Measuring Units, Mathematics, and Various terms like as displacement, Velocity, Acceleration.	
2.	Students should have Basic knowledge of various Machine Structures and drives.	
3.	Students should have Basic knowledge of Design Tolerance, Allowance and other related terms	
Course Objectives:		
1	To study the kinematics design for various products, its aesthetics, ergonomics, statistical techniques and reliability.	
Course Outcomes:		
Students will be able to understand		
1.	The analytical ability of students in synthesis of mechanism.	
2.	The knowledge of gear design.	
3.	Element of product design.	
4.	To set familiarization of Aesthetic and Ergonomic consideration in design	
5.	Importance of statistical consideration in design.	
6.	Basic vibration modules, tribology of material.	
UNIT - I	Computer Aided Analysis and Synthesis of Mechanisms and Kinematics Structure of Machine Tools: Computer Aided Analysis and coupler curves for four bar mechanism and. Slider crank mechanism, dimensional synthesis of mechanisms, three position synthesis of slider crank mechanism, Over lay method, Bloch Synthesis, Least square technique, Machine tool motion and their Transmissions, Kinematic balancing equation for motion transmitting elements, Kinematic structure of machine tool.	(06 Hours)
UNIT - II	Spur Gears: Design considerations based on Beam Strength, tangential loading, gear standards, types of gear tooth failures, Calculations of modules, teeth number . Helical Gears: Normal Module, Virtual no. of teeth, force analysis, Beam and wear	(07 Hours)

	strength, Introduction to Design of Helical Gears.	
UNIT - III	<p>Design for Manufacture: General Principles for Design for Manufacture, Principles of design for casting, Forging, Machining, Welded Joints, etc., Design for Manufacturing & Assembly.</p> <p>Product Design: Aesthetics: Aim, basic forms of elements, contribution of factors like structure, elegance, rhythm, proportions, harmony, use of curves, joints, materials, surface finish & color. Ergonomics: Aim, man-machine relationship, use of anthropometrical data related with machine tool & control elements, design of controls & display.</p>	(05 Hours)
UNIT - IV	<p>Friction and Lubrication: Dry friction, friction between screw and nut, friction in turning pairs, friction circle and friction axis, friction in mechanism, principles of thick and thin film lubrication methods, principles of hydrodynamic and hydrostatic lubrication.</p>	(05 Hours)
UNIT - V	<p>Fundamentals of Vibration: a) Un-damped Free Vibration, Equilibrium method, Energy method, Rayleigh's method. b) Damped Free Vibrations of single degree freedom system, types of damping, free vibration with viscous damping, over damped system, critically damped system, under-damped system, logarithmic decrement, viscous dampers, dry friction or coulomb damping, frequency of damped Oscillations. c) Vibration measuring instrument, measurement of displacement, velocity, acceleration, frequency and damping of vibrating systems</p>	(07 Hours)
UNIT - VI	<p>Statistical considerations in Design and Optimum Design: Statistical Considerations in Design: Analysis of Tolerances, Design and Natural Tolerances, Factor of safety and reliability. Optimum Design: Objectives of Johnson's Method of optimum design, design for normal specification and redundant and incompatible specification.</p>	(06 Hours)
Assignments:		
1. Assignment based on above six units.		
Text Books/Reference Books:		
1	Bhandari V.B:” Design of Machine Elements”, Tata McGraw Hill Publication	
2	Shigly “Mechanical Engineering Design”, Tata McGraw Hill Publication	

3	M.F.Spott” Design of Machine Elements”, Prentice Hall
4	Thomas Bevan” Theory of Machines”, CBS Publisher & Distributors
5	J.E. Shigly” Theory of Machines & Mechanisms”, McGraw Hill
6	Bhargave. S.R.” Theory of Machines-II”, Technova Publishing House .
7	P.L.Ballany “Theory of machines”, Khanna Publishing, New Delhi
8	R.S.Khurmi, J. K. Gupta, “Theory of Machines”, E P H
9	G.K.Grover, Mechanical Vibrations
10	Sen and Bhattacharya, ”Machine Tool Design
11	Phakatkar, ”Theory of Machine-II”
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Subject :METROLOGY AND QUALITY CONTROL		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks	01 Credit
	Assignments : 10 Marks	
	Unit Test : 20 Marks	
	TW/PR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of Measuring Units, Mathematics, and Various terms like as displacement, Velocity, Acceleration.	
2.	Basic knowledge of Design Tolerance, Allowance and other related terms.	
3.	Familiarity with elements of mechanical components like gear, screw thread, bearings etc.	
Course Objectives:		
	To make students have the basic principles of measuring methods and, have hands on experience on Measuring equipments and quality theories.	
Course Outcomes:		
Students will be able to understand		
1.	Make use of equipment like sine bar, angle gauge, Autocollimator, and angle dekkor to carry out angular measurement	
2.	Use of concepts like limits, fits and tolerances for designing the limit gauges	
3.	Read the symbols on drawing for surface finish and measure surface finish by instruments like Tomlinson surface meter, surftester etc	
4.	Measure the various screw thread parameters by using equipments like floating carriage micrometer, tool makers microscope and profile projector	
5.	Measure the gear tooth parameters with equipment like gear tooth vernier calliper, constant cord method, span micrometer, base tangent comparator etc	
6.	Familiarity with various TQM models	
UNIT - I	Introduction: Meaning of metrology, precision, accuracy, errors in measurement, calibration. Linear Measurement: Standards- line standard, end standard, wave length standard, classification of standards, precision and non precision measuring instrument, slip gauges. Angular Measurement: Sine bar, Sine center, Uses of sin bar, angle gauges, Auto Collimator & Angle Dekkor, Constant Deviation Prism Interferometry: Introduction, flatness testing by interferometry, NPL flatness interferometer. Laser interferometry.	(04 Hours)
UNIT - II	Limits, Fits and Tolerances and Gauge design: Meaning of limit, Fits and Tolerance, Cost-Tolerance relationship, concept of Interchangeability, Indian Standard System (ISS). Design of limits gauges: Types, Uses, Taylors principle, Design of	(07Hours)

	<p>limit gauges.</p> <p>Inspection of geometric parameters: Flatness, Straightness, Parallelism, Concentricity, Squareness, circularity and Cylindricity.</p> <p>Comparators: Uses, types, advantages and disadvantages of various types of comparators.</p> <p>Recent trends in Metrology: Introduction to CMM, Measuring geometrical parameters with CMM. techniques for automated inspection – contact and non-contact inspection methods – in processes automated measuring methods-machine vision, optical inspection methods.</p>	
UNIT - III	<p>Surface finish measurement: Surface texture, Meaning of RMS and CLA values, Tomlinson's Surface meter, Taylor- hobson surface meter, grades of roughness, specifications.</p> <p>Screw Thread Metrology: External screw threads terminologies, floating carriage instruments, pitch and flank measurement of external screw thread, application of Tool Makers Microscope, use of profile projector.</p> <p>Gear Metrology: Spur gear parameters, gear tooth thickness measurement, gear tooth verniercaliper, constant chord method, span micrometer, base tangent comparator, lead and profile measurement.</p>	(07 Hours)
UNIT - IV	<p>Introduction to Quality: Meaning of quality, Approaches-Deming's Approach, Juran's Approach, quality of product, quality of service, cost of quality, value of quality, difference between inspection, quality control, quality circle, quality policy.</p> <p>Introduction to quality control: Meaning of Quality Control, 100% inspection and Sampling inspection, Statistics in selective inspection Introduction to statistical quality control: Control chart:- Attribute (P, np, C, U) and variable (X & R chart), sampling inspection, Operating Characteristic curves and sampling plans.</p>	(06 Hours)
UNIT - V	<p>Quality Assurance Systems: Total quality management (TQM): 7 tools of problem solving, cause and effect diagram, Pareto analysis etc, Quality Function Deployment (Q.F.D), Kaizen, Introduction to Six sigma, process capability index (Cp, Cpk) concept, methods of determining Cp and Cpk .</p> <p>Reliability, availability and maintainability; Distribution of failure and repair times; determination of MTBF and MTTR, reliability models; determination of system reliability; preventive maintenance and replacement. Design of Experiments</p>	(07 Hours)

	(DOE).	
UNIT - VI	Quality Management Systems: History and evaluation of ISO9000 series, importance and over view of ISO9000-1998 series standards, structure of ISO9000-2000 series standards, clauses of ISO9000 series standards and their interpretation and implementation, quality system documentation, BIS standards ,ISO/TS 16949 and audit ISO14000: Environmental management concept, and requirement of ISO14001, benefits of environmental management systems. OH and AS standards.	(05 Hours)
Term Work/Practical's:		
1. Measurement bearing Parameters by using Vernier Calliper and Micrometer Screwgauge		
2. Measurement of Ovality Using Johanson Mikrokator.		
3. Measurement of angle by sine bar/sine center.		
4. Measurement of optical surface using Interferometer.		
5. Study and experiment on profile projector / Tool makers microscope		
6. Measurement of screw thread parameters using Floating Carriage Micrometer		
7. Measurement of the surface roughness		
8. Measurement of gear tooth thickness using gear tooth vernier caliper and span micrometer		
9. Machine tool Alignment test on lathe/drilling/milling machine.		
10. Experiment to measure Process Capability using Statistical Process Control Or Minitab Software		
Assignments:		
1. Quality and Quality Control		
2. Quality Assurance syaytem and reliability		
3. ISO 9000		
Text Books/Reference Books:		
1	R. K. Jain, "Engineering Metrology", Khanna Publication	
2	I.C.Gupta, "A Text book of Engineering Metrology", Dhanpat Rai and Sons.	
3	K. J. Hume, "Engineering Metrology"	
4	K. W. B. Sharp, "Practical Engineering Metrology", Pitman Publication	
5	Grant, "Statistical Quality Control", McGraw Hill	
6	"Hand Book of Industrial Metrology", A.S.T.M.E. Prentice Hall	
7	J. M. Juran, "Hand Book of Quality Control", McGraw Hill Publication	
8	Kaoru Ishikawa, "Guide to Quality Control", Asian Productivity Organisation, Series,	
Syllabus for Unit Test:		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

Subject : ENGINEERING METALLURGY		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Student should have knowledge of material science and mechanical properties of materials	
2.	Student should know about study of equilibrium diagrams ,phase ,crystal structures and microstructures .	
3.	Student should know about forging ,rolling and some manufacturing processes such as casting , machining etc.	
Course Objectives:		
	Student will understand different heat treatment for steel and select the materials as per requirement of industries .	
Course Outcomes:		
Students will be able to understand		
1.	The manufacturing of steel and will be able to identify different steels as per classifications	
2.	Different heat treatment that is to be carried out for steel as per requirement	
3.	Surface and core heat treatment for different applications	
4.	Types of tool steels and alloy steels and able to suggest as per requirement	
5.	Types of cast irons and able to choose different cast irons as per applications	
6.	Non ferrous material and their applications .	
UNIT - I	Study of Metallography and steels. Study of metallography & microscopes, Etching methods, macroscopic examination methods. Brief idea about iron & steel making, blast furnace, sponge iron, cast irons, Wrought irons, pig iron, Study of Iron-Iron carbide equilibrium diagram, different types of reactions & phases, critical temperatures, cooling of different steels, Classification & specifications of steels, Structure – property relationship, microstructures of plain carbon steels, Measurement of grain size.	(06 Hours)
UNIT - II	Cast Irons : Classification of Cast irons, effect of cooling rate and alloying elements on cast irons , Types of cast irons, Manufacturing methods, Properties, applications of each cast irons, alloy cast irons , Comparison of steels & cast irons, Heat treatments of cast irons.	(06 Hours)
UNIT - III	Alloy Steels & Tool Steels : Classification of alloying elements, Effect of alloying elements on properties, Various alloy steels,	(06 Hours)

	Stainless steels – Classification, Applications & properties, Tool Steels – Classification, Applications & properties, heat treatment of tool steels, mold tool steel.	
UNIT - IV	Heat Treatment of steels : Transformation products of austenite, Martensite transformation & characteristics of martensite, Time – Temperature Transformation curve, Critical Cooling rate, Heat treatment of steels - Annealing, Normalizing, Hardening , Hardenability, Martempering, Austempering, Retained austenite, Tempering, Ausforming, Secondary hardening, Quench cracks,	(06 Hours)
UNIT - V	Surface treatments and furnaces : Necessity of surface hardening, Carburizing & its types, nitriding& its types, Carbonitriding, Tuffriding, Flame & Induction hardening, Heat treatment furnaces, Atmospheres used in heat treatment, Defects in heat treatments.	(06 Hours)
UNIT - VI	Study of Non-ferrous metals and its alloys: Study of copper and it's alloys, equilibrium diagram of Cu-Zn system, Brasses , Bronzes, Study of Aluminum and its alloys, Al-Si equilibrium diagram, applications and properties of non ferrous alloys, Nickel and magnesium alloys, Materials for Bearings. Recent developments in materials like smart materials, magnetostrictive materials etc.	(06 Hours)
Term Work/Practical's:		
<ol style="list-style-type: none"> 1. Study of metallurgical microscope and etching technique 2. Specimen preparation for metallography 3. Macroscopic examination tests. 4. Study of plain carbon steels and its microstructures. 5. Study of cast irons and its microstructures 6. Study of Non ferrous metals and its microstructures 7. Heat treatment for plain carbon steels. 8. Jominy End Quench test for hard ability measurements 9. Any one surface Hardening Heat treatment. 		
Assignments:		
1. Describe in briefly the manufacturing of steels from ore ,list out the steel manufacturing industries		
2. Collect the different component made from steels find out there heat treatment done on it describe in details and submit the component.		
3. Visit the industries that do heat treatment on component and submit the report		
4. Do collection of some tools write the chemical compositions ,manufacturing and supporting treatment etc. and submit the report		
5. take any one cast iron component and write the details about it that is chemical composition ,manufacturing methods and properties		
6. List out the nonferrous materials and its applications , properties and chemical composition.		
Text Books/Reference Books:		

1	“Material Science and Physical Metallurgy”, Dr.V.DKodgire , Everest Publication, Pune.
2	“Physical Metallurgy”, Vijendra Singh, Standard Publishers Distributors, Delhi.
3	“Physical Metallurgy”, S H Avner, Tata Micro hill Publication , Delhi
4	“Heat Treatments of Metals ” R K Rajput ,S K Kataria and Sons Publication, Delhi.
5	“Mechanical Metallurgy”, Ditter
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

NUMERICAL METHODS		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
Tutorial : 01 Hour/ Week		01 Credit
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of Mathematics	
2.	Basic knowledge of Differentiation and Integration	
3.	Basic knowledge of Interpolation	
Course Objectives:		
The student should recognize the difference between analytical and Numerical Methods and effectively use Numerical Techniques for solving complex Mechanical engineering Problems		
Course Outcomes:		
Students will be able to		
1.	Use appropriate Numerical Methods to solve complex mechanical engineering problems	
2.	Find the roots of equations by various methods.	
3.	Find the solutions to simultaneous equations by various methods	
4.	Use the appropriate method of curve fitting for the given data.	
5.	Use Numerical differentiation and Integration to solve the real time problems	
6.	Write the program on ordinary differential equations	
UNIT-I	Introduction MATLAB fundamentals, MATLAB graphics, simple matlab demonstration programs. Error Analysis Significant figures, Accuracy and Precision, Error definition, Round-Off errors, Truncation error, Total numerical error, Blunders, Formulation error and Data Uncertainty.	(06 Hours)
UNIT-II	Roots of Equation Bracketing methods-Bisection and False position method. Open methods-Simple fixed-point iteration, Newton Raphson method and Secant method. Engineering Applications.	(06 Hours)
UNIT-III	Solutions of Simultaneous Equations Navier Gauss elimination, pitfalls of Gauss Elimination, techniques of improving solutions, complex numbers. Gauss Jordan, Gauss seidal and LU Decomposition. Engineering application-spring mass system.	(06 Hours)
UNIT-IV	Curve Fitting Least-Square Regression-Linear regression, polynomial regression and multiple linear regressions. Interpolation -Newton's divided	(06 Hours)

	difference interpolating polynomial. Lagrange's interpolating polynomial, coefficients of interpolating polynomials. Inverse interpolation spline interpolation. Engineering Applications.	
UNIT-V	Numerical Differentiation and Integration Trapezoidal rule, Simson's rules, integration with unequal segment, multiple integral, romberg integration, Gauss Quadrature. Richardson Extrapolation, derivatives of unequally spaced data. Engineering Applications. Numerical Differentiation using Forward, backward and central difference.	(06 Hours)
UNIT-VI	Ordinary Differential Equations Euler's method, improvement of Euler's method, Runge-Kutta method, system of equations, Adaptive Runge Kutta method. Stiffness and multistep method. Engineering Applications.	(06 Hours)
<p>Term work: List of Experiments:</p> <ol style="list-style-type: none"> 1. Program on Roots of Equation (Validation by suitable solver) Bisection Method, False position Method, Newton Raphson method and Successive approximation method 2. Program on Simultaneous Equations (Validation by suitable solver) Gauss Elimination Method, Partial pivoting, Gauss-Seidal method, Gauss Jordan method 3. Program on Numerical Integration(Validation by suitable solver) <ol style="list-style-type: none"> a) Trapezoidal rule, b) Simpson`s Rules (1/3rd, 3/8th) 4. Program on Curve Fitting using Least square technique (Validation by suitable solver) 5. Program on Interpolation (Validation by suitable solver) 6. Program on Ordinary Differential Equations

Syllabus for Unit Test	
Unit Test 1	Units I, II and III
Unit Test 2	Units IV, V and VI

PRODUCTION PRACTICE – IV		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Practical: 04 Hours / Week		01 Credit
Course Pre-requisites:		
The Students should have		
1	Basic knowledge of handling the Lathe machine.	
2	Basic knowledge of handling the Milling machine.	
3	Basic knowledge of handling the Grinding machine.	
Course Objectives:		
The students should able to manufacture the job on lathe, Milling and Grinding Machine		
Course Outcomes:		
Students will be able to performed		
1	Different operations on lathe machine.	
2	Gear Cutting on Milling machine.	
3	Finishing operation on Cylindrical grinding machine and Surface grinding machine.	
Term Work		
Each Candidate shall be required to complete and submit the following jobs:		
1. One Composite job consisting of 3 to 4 pieces as below: Machining of components covering all operations on Lathe (Including Internal and external threading, Taper Matching, Knurling)		
Grinding operation on Above (Turning) Job		- One Job
2. Gear Cutting on milling machine.		-One Job
Note: Practical examination of 6 Hours duration shall be conducted at the end of Sem.-II based on the process and practical conducted in production practice-III		

B.Tech.Production

Sem-VI

Subject :JIG FIXTURE AND DIE DESIGN		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks	01 Credit
	Assignments : 10 Marks	
	Unit Test : 20 Marks	
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of conventional and non conventional manufacturing processes.	
2.	Knowledge of casting processes.	
3.	Knowledge plastic processes methods.	
Course Objectives: To design jig, fixtures and dies for manufacturing system.		
Course Outcomes:		
Students will be able to understand		
1.	To understand the concept of jigs and fixture and its principles.	
2.	To design jigs with use of standard components.	
3.	To design fixture with use of standard components.	
4.	To select plastic processes methods.	
5.	To understand the concept of injection moulding and able to design the injection molding die.	
6.	To design dies for the pressure die casting.	
UNIT - I	Fundamentals of Jigs And Fixtures: Significance and purpose of jigs and fixtures and their functions in manufacturing processes. Classifications of Jigs and Fixtures. Design features of main elements of Jigs and Fixtures such as locating, clamping and guiding elements and their integrations. Indexing, locking and auxiliary elements. Bodies and bases or frames of Jigs and fixtures. Economics of Jigs and fixtures, Pneumatics & Hydraulics for Jig & Fixtures.	(06 Hours)
UNIT - II	Design of Jigs: General guidelines & procedures for design of Jigs. Design & selection of standard elements, Analysis of clamping force required & their magnitude, Design of drilling jigs.	(06 Hours)
UNIT - III	Design of Fixtures: General guidelines & procedures for design of fixtures. Design & selection of standard elements, Analysis of clamping force required & their magnitude, concept of modular fixtures & tool presetting fixtures. Design of milling, turning fixture and fixture for assembly. Economic analysis .	(06 Hours)

UNIT - IV	Plastics Processing: Materials used for plastic processing, Compression, transfer, injection & blow moulding processes - its working, construction, types & advantages and limitations.	(06 Hours)
UNIT - V	Design of Injection Molds: Specifications and elements of injection molding machine, Injection molding feed system: runner and gates, ejection methods, ejection force calculation, parting surface selection, cooling systems, Defects & remedies.	(06 Hours)
UNIT - VI	Design of Die Castings Dies: Die casting machines-Hot & cold chamber, metals for die casting, die locking methods, interlocks & safety devices, specific details of die constructions, casting, ejection, cores, slides, loose die pieces, types of cores, directional solidification, types of feeders, die venting, water cooling, classification of dies- single, combination, multi impression. General details of die design, Gating system, inserted impressions, die casting defects and remedies, die lubrication & rules for die lubrication.	(06 Hours)
Term Work/Practical's:		
1. Design & working drawing of one drilling jig.		
2. Design & working drawing of one fixture.		
3. Design & working drawing of a die casting die.		
4. Design & drawing of a injection molding die.		
Assignments:		
1. Six Assignment based on the syllabus.		
Text Books/Reference Books:		
1	Donaldson, Lecain&Goold, "Tool Design", Tata McGrw Hill	PRODUCTION
2	Doebler H. H., "Die Casting", McGraw Hill	
3	P. N. Rao, "Manufacturing Technology", Tata McGraw Hill	
4	Wilson, "Fundamentals of Tool Design", A. S. T. M. E.	
5	M. H. A. Kempster, "Introduction to Jigs and Fixtures Design"	
6	P. H. Joshi, "Press Tools", A.H. Wheeler	
7	P. C. Sharma, "Production Engineering", S. Chand	
8	Dr. Surender Kumar, "Production Engg. Design (Tool Design)", Satya Prakashan	
9	R. G. W. Pye, "Injection Mould Design", EWP	
10	A. S. Athalye, "Plastic Processing Handbook", Multitech	
11	Richard Kibbe, John E. Neely, Meyer, White, "Machine Tool Practices"

14	R. K. Jain, "Production Technology", Khanna Publishers	
15	Dr. Surender Kumar, "Production Engineering Design"	
16	"Metals Handbook", Vol II ASME	

17	"Toll and Die Design Handbook", McGraw Hill
18	Hiram and Grant, "Non Conventional Clamping Devices"
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Subject :PRODUCTION MANAGEMENT		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Knowledge of Industrial Engineering.	
2.	Knowledge of Industrial Management.	
3.	Knowledge of Production Planning and Control.	
Course Objectives:		
	The student should understand the scope, objective and application of Production Management tools and practices in manufacturing.	
Course Outcomes:		
Students will be able to understand		
1.	To understand the evolution of Production Management, its scope, operations, organization.	
2.	To understand the factors deciding location of plant, Layout of facility and objectives of material handling.	
3.	To understand manpower planning and capacity planning techniques based on technology and objective of material, handling.	
4.	To understand the organization and administration of maintenance function- it's types, principles, operations policies etc.	
5.	To understand the concept of World-Class-Manufacturing, it's elements, problems and various contributors to develop World-Class-Manufacturing.	
6.	To understand topics in Production Management such as Green/Agile and Lean manufacturing and energy conservation and energy efficiency manufacturing with knowledge based system (IT) application	
UNIT - I	Scope of Production Management The evolution of Production management / Operations Management. Different production eras - Mass, Batch, Job production customization. Relationship of Production/Operations Management with materials, maintenance, quality control, design production engineering and sales. Scope, Definition and its relationship with other management functions such as marketing, finance and personal management. Production organizations for single product, multi product, single location, multilocation. Product Design Product life cycle, Relationship between product design and product cost. Stage of Product Design & Development, Functional, Economic, manufacturing and marketing aspects in product design, Concept of Concurrent engineering, 3S, House of Quality.	(06 Hours)

UNIT - II	<p>Location Facility-location: Objectives, factors affecting site selection, , center of gravity method, profit volume rating and hub and scope model.</p> <p>Layout Layout types, material flow pattern.</p> <p>Material handling Material handling: Its relation with layout, Objectives, principles and types of material handling. AGV'. Unit load concept.</p>	(06 Hours)
UNIT - III	<p>Manpower Planning and Capacity Planning Manpower forecasting, manpower inventory, capacity and level strategies, aggregate capacity planning.</p> <p>Productivity Productivity : Factor productivity, Total productivity, Labor productivity, measurement of productivity, techniques of productivity Toyato Production System (TPS) ,Total Productivity Management(TPM) and Mangement Information System (MIS).</p>	(06 Hours)
UNIT - IV	<p>Industrial Maintenance Organization, Administration of maintenance function, types of maintenance, principles, operating policies, scope of maintenance management, budget and Total productive maintenance.</p>	(06 Hours)
UNIT - V	<p>World Class Management: Concept of World Class manufacturing, Emergence of information age, Manufacturing challenges of Information age, elements of business turbulent environment, Problems in manufacturing sector, Evolution of WCM, Contribution of Hall, Schoenberger, Gunn, Maskel, WCM practices in industries and WCM scenario in India.</p>	(06 Hours)
UNIT - VI	<p>Recent Techniques of Production Management Concept, implementation, applications, advantages and disadvantages of following tools and techniques: Energy conservation and Energy audit, Green Production, Waste heat treatment, Energy efficient manufacturing system, Lean and agile manufacturing, Knowledge Based System, Manufacturing Information System.</p>	(06 Hours)
Assignments:		
1.Six Assignment based on above syllabus.

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

COMPUTER AIDED DESIGN AND MANUFACTURING		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR: 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of drawing.	
2.	Basic knowledge of standards	
3.	Basic knowledge of manufacturing processes.	
Course Objectives:		
To understand the basics of CAD/CAM and to learn about the geometric issues concerned to the manufacturing and its related areas.		
Course Outcomes:		
Students will be able to		
1.	Understand the concepts of CAD and computer graphics system.	
2.	Understand the curves and the concept of geometric modeling.	
3.	Understand the concept of part families and cellular manufacturing	
4.	Understand the concept of CIM and its models.	
5.	Write the manual and APT part program for various machining operations	
6.	Understand the process of computer aided process planning and various approaches.	
UNIT-I	Introduction: Product Life Cycle, Design Process, Application of Computers for Design, Benefits of CAD, Computer configuration for CAD Applications, Grover's	(06)

	<p>Model of Product life Cycle for Selection of CAD/CAM.</p> <p>Configuration of graphics workstations, Fundamentals of 2D graphics, Menu design and Graphical, User Interface (GUI), Homogeneous coordinate systems, Geometric transformations, graphics standards.</p>	
UNIT-II	<p>Space Curve design -Analytical and Synthetic approaches, parametric equations, modeling of cubic spline, Bezier curve, B-spline curve and NURBS and their manipulation techniques.</p> <p>Geometric modeling techniques- Wireframes, B-Rep, CSG and Hybrid modelers, Feature based, Parametric and Variation modeling.</p>	(06)
UNIT-III	<p>Group Technology and FMS</p> <p>Group Technology: Part families, Part Classification and coding, Cellular manufacturing and composite part concept.</p> <p>Concept of manufacturing systems and automation, automation strategies, concept of machine cell and CMS, Building blocks of FMS Planning and implementations of FMS.</p>	(06)
UNIT-IV	<p>CIM:</p> <p>Introduction, ESPRIT - CIM OSA model, The NIST - AMRF Hierarchical Model, The siemens model of CIM, The CIM model of Digital Equipment Corporation, IBM concept of CIM, Present Scenario, Rapid product development and manufacture, Extended Enterprises.</p>	(06)
UNIT-V	<p>Advanced Manufacturing Techniques:</p> <p>Principles of Numerical control, Types of CNC Machine Tools, Features of CNC Systems, Direct numerical control (DNC), Elements of CNC viz. Ball screws, rolling guide ways, structure, drives and controls, standard controllers, Virtual machining. Machining Centers and Interpolators.</p> <p>CNC Programming: Types, Manual Part Programming, Canned Cycle, Offset, APT.</p> <p>Introduction to Rapid prototyping, introduction to additive manufacturing</p>	(06)

	techniques.	
UNIT-VI	<p>Computer Aided Process Planning:</p> <p>Process Planning and Production Planning, manual experience based planning, Decision table and decision trees, Process capability analysis, Variant and Generative process planning approach, Process planning systems like CAM-I, CAPP, MIPLAN, APPAS, AUTOPLAN and PRO,CPMP</p> <p>Introduction to total integrated process planning systems</p>	(06)
<p>Term work:</p> <p>List of Experiments:</p> <ol style="list-style-type: none"> 1. Manual part programming using G and M codes for Turning, Step turning, Taper turning, multiple turning, Facing, Multiple facing, thread cutting and radius turning on cylindrical components. 2. CNC Milling program involving linear motion and circular interpolation. 3. CNC Milling program involving contour motion and canned cycles. 4. CNC Milling program involving Pocket milling 5. CNC code generation using any CAM software. 6. Simulation of machining operations using any CAM software. 7. Route sheet generation using CAM software. 8. Study on Rapid Prototyping Technologies. 		
<p>Assignments:</p> <p>Six Assignments based on above syllabus.</p> <p>Oral/Practical</p> <p>Term work and oral will be based on above syllabus</p> <p>Text Books / References</p> <ul style="list-style-type: none"> • RadhaKrishnan P and Subramanyam, “CAD/CAM/CIM”, Wiley Eastern Ltd • M. Subject : FLUID MECHANICS AND MACHINE TOOL CONTROL SYSTEM		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
Tutorial : 01Hours / Week		01 Credit
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have knowledge of		
1.	Fluids and its properties	
2.	Fundamentals of engineering mechanics	
3.	Basics of electrical and electronics component	
Course Objectives:		
	The student should understand the scope, objective and application of industrial circuits in hydraulic and pneumatic.	
Course Outcomes:		
Students will be able to understand		
1.	Used for fluid mechanics fundamentals, including concepts of mass and momentum conservation.	
2.	An ability to apply the Bernoulli's equation to solve problems in fluid mechanics.	
3.	An ability to apply control volume analysis to problems in fluid mechanics.	
4.	Knowledge of laminar and turbulent boundary layer fundamentals.	
5.	An exposure to recent developments in fluid mechanics, with application to industries.	
6.	An ability to apply the concepts developed for fluid flow analysis to issues in industrial design.	
UNIT - I	Fluid Properties and Fluid Statics: Definition of fluid, Newtonian and non Newtonian fluids. properties of fluids, Types of fluids, Viscosity, specific gravity, Compressibility, Surface tension, Capillarity etc. effect of temperature and pressure on hydraulic fluid. Pressure at a point, Pascal's law, measurement of pressure, methods, manometers, liquid pressure – horizontal, vertical plane surface.	(06 Hours)
UNIT - II	Fluid Dynamics: Types of flow, steady and unsteady, uniform and non uniform, streamline flow, laminar and turbulent flow, Use of Reynolds's number in flow through pipes. Continuity equation, energy equation, momentum equation. Euler's equation of motion along a stream line, Bernoulli's equation, Application of Bernoulli's equation to pitot tube, Venturimeter, Orifices, Orifice Meter, Triangular & Rectangular notch. Calculations of flow, friction and work done by fluid under pressure	(06 Hours)

UNIT - III	<p>Fluid power: Introduction to fluid power: Classification, general feature and application in various fields, hydraulic and pneumatic ISO symbols in fluid power applications</p> <p>Fluids for hydraulic power: functions, properties and conditioning of hydraulic fluids.</p> <p>Sources of fluid power: classification, types and selection of pumps: positive displacement pumps and negative displacement pumps, types of compressors.</p> <p>Distribution of fluid power: selection of conductors for system considering various factors, sealing and packing devices</p>	(06 Hours)
UNIT - IV	<p>Control of fluid power: Pressure control valves- direct acting type, pilot operated, sequence, counter balancing, unloading, pressure reducing, construction and working:</p> <p>Direction control valves- types, construction and working, spool actuation methods, spool centre positions.</p> <p>Flow control valves- compensated and non compensated type, construction and working. Actuators: types, applications and selection</p>	(06 Hours)
UNIT - V	<p>System components and circuits: Study of various accumulators, intensifiers, hydraulic jack, power jack, etc. Linear and regenerative circuits with accumulators and intensifiers. Study of various hydraulic and pneumatic circuits for machine tools: components, working and applications. Performance of system (descriptive treatment only).</p> <p>Fluid power maintenance and safety.</p> <p>Introduction to fluidics, maintenance and study of simple logic gates, Use of hydraulics V/s Pneumatics in industry.</p>	(06 Hours)
UNIT - VI	<p>Pneumatic system Elements: Piping materials and pressure ratings, piping layout, calculation of pressure drop in pneumatic line; Air compressors, types, working, selection criteria; FRL unit, construction and working; pneumatic cylinders and air motors, construction and working; types, calculation of force and air consumption of air, hydraulic and electric motor</p> <p>Hydro pneumatic system: concept, working and applications (Descriptive treatment only).</p>	(06 Hours)
Term Work/Practical's:		
A journal containing record of any eight experiments of the following:		
1. Verification of modified Bernoulli's equation.		
2. flow through orifice/ Venturimeter		
3. At least two experiments on Hydraulic Trainer.		
4. Practical performance using Automation Studio Software		

Assignments:	
1. study of symbols used in fluid power	
2.) study of different types of valves used in fluid circuits	
3. Study of actuators / Intensifier/ Accumulators	
4. Design of control circuit for a machine tool.	
5. study of power pack unit	
6. Design of hydraulic and pneumatic circuits.	
Text Books/Reference Books:	
1	Modi, Seth: 'hydraulics and fluid mechanics': standard book house, Delhi
2	Dr. j. Lal: 'Fluid mechanics & hydraulics with computer application'. Metropolitan Book co. pvt. Ltd. Delhi

Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Subject :ELECTIVE I MARKETING MANAGEMENT		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic Management Concept.	
2.	Functions of Management.	
3.	Principles of Management.	
Course Objectives: The objective of this course is to facilitate understanding of the conceptual framework of marketing and its applications in decision making under various environmental constraints.		
Course Outcomes:		
Students will be able to understand		
1.	Structure, functions and strategies of Marketing department.	
2.	Design the product marketing and cost for the product marketing.	
3.	The distribution channels and their selection.	
4.	Importance of Market Segmentation.	
5.	Implementation of Marketing Information System & Marketing Research.	
6.	Advance tools in marketing and their implementation.	
UNIT - I	Marketing – Definition, Concepts Significance & functions of Marketing, Approaches to the study of Marketing, Relevance of Marketing in a developing economy. Role & functions of Marketing Manager Marketing mix; Strategic marketing planning – an overview. Introduction to 8P for marketing.	(06 Hours)
UNIT - II	Product Decisions: Concept of a product; Classification of products; Major product decisions; Product line and product mix; Branding; Packaging and labeling; Product life cycle – strategic implications; New product development and consumer adoption process. Pricing Decisions: Factors affecting price determination; Pricing policies and strategies; Discounts and rebates.	(06 Hours)
UNIT - III	Distribution Channels and Physical Distribution Decisions: Nature, functions, and types of distribution channels; Distribution channel intermediaries; Channel management decisions; Retailing and wholesaling.	(06 Hours)

	Factors influencing channels, Elements of Promotion Mix – Sales Promotion System. Recent Trends in Promotion Sale. Advertising – Role of Advertising, Advertising Media, B to B and online marketing.	
UNIT - IV	Market Segmentation Meaning, Definition, Different ways to Segmentation, Essential of effective Market Segmentation, Distinction between Differential Marketing & Concentrated Marketing.	(06 Hours)
UNIT - V	Marketing Information System & Marketing Research. Concept & components of a Marketing Information System – Marketing Research – Meaning & scope – marketing research procedure – types & techniques of Marketing Research – Managements use of Marketing Research.	(06 Hours)
UNIT - VI	Issues and Developments in Marketing: Social, ethical and legal aspects of marketing; Marketing of services; International marketing; Green marketing; Cyber marketing; Relationship marketing and other developments of marketing.	(06 Hours)
Assignments:		
1. Six Assignment based upon above syllabus		
Text Books/Reference Books:		
1	Kotlar, Philip, Marketing Management, Prentice Hall, New Delhi.	
2	Stanton, Etzel, Walker, Fundamentals of Marketing, Tata-McGraw Hill, New Delhi.	
3	Saxena, Rajan, Marketing Management, Tata-McGraw Hill, New Delhi.	
4	McCarthy, E.J., Basic Marketing: A managerial approach, Irwin, New York.	
5	John Fraun., Principles and practice of Marketing	
6	Kanuk , Consumer Behavior By Schiffman	
7	Davis – Olsan , Marketing Information System	
8	Gandhi , Marketing – A Managerial Introduction	
Syllabus for Unit Test:		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

Subject :ELECTIVE I DESIGN FOR MANUFACTURING AND ASSEMBLY		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic Knowledge of Manufacturing processes.	
2.	Knowledge of Materials and its properties.	
3.	Knowledge of Casting and metal extrusion.	
Course Objectives:		
	To make the student well conversant with the relations between design for manufacturing and design for assembly.	
Course Outcomes:		
Students will be able to understand		
1.	The steps in DFMA.	
2.	Carry out sand castings and manufacture powder metallurgy products.	
3.	The process of design for machining.	
4.	The process for metal extrusion and forging	
5.	The process for assembly	
6.	The use of CAD in DFMA	
UNIT - I	Introduction to DFMA: History of DFMA, Steps for applying DFMA during product design, Advantages of applying DFMA during product design, Reasons for not implementing DFMA, Introduction to Manufacturing Process: Classification of manufacturing process, Basic manufacturing processes, Mechanical properties of material: Tensile properties, Engineering stress-strain, True stress strain, Compression properties, Shear properties, Introduction to materials and material selection: Classification of engineering materials, Material selection for product design	(06 Hours)
UNIT - II	Sand casting: Introduction to sand casting, Typical characteristics of a sand cast part, Design recommendation for sand casting, Investment casting: Introduction, Steps in investment casting, Design consideration of Investment casting, Typical characteristics and applications, Die casting: Introduction to die casting, Advantages of the die casting process, Disadvantages of the die casting process, Applications, Suitable material consideration, General design consideration, Specific design recommendation, Injection moulding: Introduction	(06 Hours)

	to injection moulding, Typical characteristics of injection moulded parts, Effect of shrinkage, Suitable materials, Design recommendations, Design for powder metal processing: Introduction to powder metal processing, Typical characteristics and applications, Limitations, Design recommendations.	
UNIT - III	Design for machining: Introduction to machining, Recommended materials for machinability, Design recommendations, Design for tuning operation: Process description, Typical characteristics and applications, Suitable materials, Design recommendations, Design for machining round holes: Introduction, Suitable materials, Design recommendations, Recommended tolerances, Parts produced by milling: Process description, Characteristics and applications of parts produced on milling machines, Design recommendations for milling, Dimensional factors and tolerances, Parts produced by planning, shaping and slotting: Process description, Design recommendation planning, Design for broached parts: Process description, Typical characteristics of broached parts, Suitable materials for broaching, Design recommendations.	(06 Hours)
UNIT - IV	Metal Extrusion: Process, Suitable material for extrusion, Design recommendation for metal extrusion, Metal stamping: Process, Characteristics and application of metal stamping, Suitable materials for stamping, Design Recommendations for metal stamping, Fine blanked parts: Fine blanking process, Material suitable for fine blanked parts, Design recommendations for piece parts, Rolled formed section: Process, Design recommendations rolled section, Impact or cold extrusion: Process, Design recommendations for backward extrusion, Forward extrusion: Process, Design recommendations for forward extrusion, Design for Forging: Forging processes, Forging nomenclature, Suitable materials for forging, Design recommendations, Metal injection moulded parts: Process, Materials suitable, Design recommendations for metal injectionmolded parts.	(06 Hours)
UNIT - V	Introduction to Assembly: The assembly process, Characteristics and applications, Example of common assembly, Economic significance of assembly, General taxonomies of assembly operation and systems, Assembling a product, Design for Assembly: Introduction, Design consideration, Design for Fasteners: Introduction, Design recommendation for fasteners.	(06 Hours)
UNIT - VI	Introduction to CAD: Geometric Representation in CAD, Extraction of part feature	(06 Hours)

	information from CAD Model: Introduction, Feature recognition techniques, Free Form Features, Hybrid Techniques, Reference, Extraction of assembly feature information from CAD Model: Introduction, Assembly features, Definition of assembly feature attributes, Characterization of assembly feature, Examples of Assembly feature, Overview of procedure to extract assembly features from CAD model of Assembly, Description of steps in the assembly feature extraction procedure, Examples of assembly feature extraction: Aircraft wing and automotive chassis assembly.	
Term Work/Practical's:		
	1. Introduction to DFMA	
	2. Sand casting and Powder metallurgy	
	3. CAD	
Assignments:		
	1. Design for Machining	
	2. Metal Extrusion and Forging	
	3. Design for Assembly	
Text Books/Reference Books:		
1	A.K. Chitale and R.C. Gupta, (1999) Product design and Manufacturing, Prentice Hall of India, New Delhi.	
2	J. Lesko, (1999) Industrial Design, Materials and Manufacture Guide, John Willy and Sons, Inc	
3	George E. Dieter and Linda C. Schmidt (2009), Engineering Design, Fourth edition, McGraw-Hill companies, New York, USA	
4	Geoffrey Boothroyd, Peter Dewhurst and Winston Knight (2002) Product Design for Manufacture and Assembly, Second Edition, CRC press, Taylor & Francis, Florida, USA	
5	O. Molloy, S. Tilley and E.A. Warman (1998) Design for Manufacturing and assembly, First Edition, Chapman &Hall, London, UK.	
6	D. E. Whitney, (2004) Mechanical Assemblies: Their Design, Manufacture, and Role in Product Development, Oxford University Press, New York

8	James G. Bralla (1998) Design for Manufacturability Handbook, Second Edition, McGraw-Hill companies, New York, USA	
9	Geoffrey Boothroyd (2005) AssemblyAutomation and Product Design, Second Edition, CRC press, Taylor & Francis, Florida, USA	
10	G. Q. Huang (1996) Design for X, Concurrent Engineering Imperatives, First Edition, Chapman &Hall, London, UK A joint venture by IISc and IITs, funded by MHRD, Govt of India	
Syllabus for Unit Test:		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

Subject : ELECTIVE I NON TRADITIONAL MANUFACTURING		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks	01 Credit
	Assignments : 10 Marks	
	Unit Test : 20 Marks	
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Conventional manufacturing Processes	
2.	Engineering materials and its properties	
3.	Basics of electrical, thermal and chemical energy.	
Course Objectives:		
	To learn about various unconventional machining processes, the various process parameters and their influence on performance and their applications	
Course Outcomes:		
Students will be able to understand		
1.	Appreciate use of nonconventional machining methods	
2.	The working principles and working parameters of mechanical processes.	
3.	Electrochemical and electro chemical grinding processes.	
4.	Various techniques in chemical machining process	
5.	Terminology used in (EDM) nontraditional manufacturing industries.	
6.	Various techniques in laser beam machining.	
UNIT - I	INTRODUCTION: Non Traditional machining, Definitions of various processes. Classification of NCMP, Historical background of New - Technological processes.	(06 Hours)

UNIT - II	MECHANICAL PROCESSES: Processes principles, equipment process Parameters and applications. Examples of Abrasive jet machining, Ultrasonic machining, Abrasive flow machining, water jet machining, magnetic abrasive machining. Evaluation of material removal rate (MRR) in AJM	(06 Hours)
UNIT - III	ELECTRO CHEMICAL MACHINING (ECM): Background of ECM process, Classification of ECM processes introduction to ECD fundamental principles of ECM. Electrochemistry of ECM, Equipment required in ECM. Process capabilities processes parameters and application examples. Trouble shootings. Evaluation of MRR of pure metal in ECM. ELECTRO CHEMICAL GRINDING: Process principles, process parameters, Applications.	(08 Hours)
UNIT - IV	CHEMICAL MACHINING: Introduction, Fundamental principles, process parameters, classification and Selection of etchant resistant materials, Photo chemical machining	(04 Hours)
UNIT - V	ELECTRICAL DISCHARGE MACHINING (EDM): Fundamental principle of EDM, Equipments required for EDM process Parameters, process capabilities. Application example trouble shooting, Introduction to wire EDM, Process principle and parameters, process Capacities and its applications.	(06 Hours)
UNIT - VI	LASER BEAM MACHINING (LBM): Introduction, Background of laser action, production of photon cascade in solid optical laser. Machining applications of laser wire drilling, cutting, marking, welding, heat treating, cladding. Introduction and process principle of thermal energy method, EBM. PLASMA ARC CUTTING (PAC): Process principles, equipment, applications, and examples	(08 Hours)
Term Work/Practical's: List of Practical (Any Eight)		
1) study and demonstration of ECM		
2) Study and demonstration on EDM		
3) study and demonstration of ECDM		

4) study and demonstration of ECM with ultrasonic vibrations	
Assignments: - Six assignments based on above syllabus	
Text Books/Reference Books:	
1	Vijay.K. Jain “Advanced Machining Processes” Allied Publishers Pvt. Ltd., New Delhi, 2007
2	Benedict. G.F. “Nontraditional Manufacturing Processes” Marcel Dekker Inc., New York (1987).
3	Pandey P.C. and Shan H.S. “Modern Machining Processes” Tata McGraw-Hill, New Delhi (2007).
4	Mc Geough, “Advanced Methods of Machining” Chapman and Hall, London (1998).
5	Paul De Garmo, J.T.Black, and Ronald.A.Kohser, “Material and Processes in Manufacturing” Prentice Hall of India Pvt. Ltd., New Delhi ,8th Edition, 2001.
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

OPERATIONS RESEARCH		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: --	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	--
Tutorial : --		03 Credits
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of Mathematics.	
2.	Basic knowledge of inventory control.	
3.	Basic knowledge of project management.	
Course Objectives:		
The student should understand and apply the correct operation research model Engineering Problems to satisfy the objective function.		
Course Outcomes:		
Students will be able to		
1.	Identify and develop operational research models from the verbal description of the real system and solve optimization problems using linear programming.	
2.	Use the acquired knowledge to design a transportation and assignment model.	
3.	Use the acquired knowledge to select and apply the proper inventory control system for industry.	
4.	Apply the correct sequence for sequencing problems as well as identify the queuing system and analyze it from the given data.	
5.	Use the acquired knowledge to decide the replacement policy and solve the game theory problems for different cases.	
6.	Use the network technique (PERT/CPM) to find the project costing and its duration.	
UNIT-I	Introduction to Operation Research and Linear Programming: Basics definition, scope, objectives, phases, models, advantages, limitations and applications of Operations Research. Linear Programming Problem – Formulation of LPP, Graphical solution of LPP. Simplex Method, Big-M method, duality in linear programming problem.	(06 Hours)
UNIT-II	Transportation and Assignment Models: Transportation: Formulation, Finding initial basic feasible solution by different methods, Optimality test: MODI method, unbalanced Transportation problem. Assignment: Formulation, Hungarian method for optimal solution. Solving unbalanced problem, restrictions on assignments and Traveling salesman problem.	(06 Hours)
UNIT-III	Inventory Control:	(06 Hours)

	<p>Introduction to inventory, cost associated with inventory, stock out inventory models, probabilistic models, price-break models, inventory models under uncertainty and risk. Methods of selective inventory control.</p> <p>Introduction, application, Different problems solved by dynamic programming,</p>	
UNIT-IV	<p>Sequencing and Queuing Models:</p> <p>Sequencing models: Solution of Sequencing Problem – Processing n Jobs through 2 Machines, Processing n Jobs through 3 Machines, Processing 2 Jobs through m machines, Processing n Jobs through m Machines.</p> <p>Queuing Models: Operating characteristics, Poisson single and multi-channel queuing system (M/M/1): (∞/∞/FCFS), (M/M/1): (∞/∞/SIRO), (M/M/1): (N/∞/FCFS), (M/M/c): (N/∞/FCFS)</p>	(06 Hours)
UNIT-V	<p>Replacement models and Games Theory:</p> <p>Replacement models: Replacement of capital equipment that deteriorates with time, Time value of money. Cases in which time value of money remains same and changes with constant rates during period. Group and individual replacement.</p> <p>Games Theory: Introduction, Two -person zero sum game, Minimax and Maximin principle, Saddle point, Methods for solving game problems with mixed strategies.</p>	(06 Hours)
UNIT-VI	<p>Network Modelling:</p> <p>Fundamentals of CPM and PERT networks, CPM: Construction of networks, Critical paths, Forward and backward pass, Floats and their significance, crashing for optimum and/or minimum duration and the cost, PERT: Time estimates, Construction of networks, Probability of completing projects by given date.</p>	(06 Hours)
Term work: NA		
<p>Assignments:</p> <ol style="list-style-type: none"> 1. Assignment on formulation of LPP and its solution. 2. Assignment on formulation of transportation problem. 3. Assignment on Assignment model. 4. Assignment on inventory control. 5. Assignment on price break models. 6. Assignment on Sequencing models. 7. Assignment on queuing models. 8. Assignment on replacement models. 9. Assignment on game theory. 10. Assignment on calculation of the total cost and duration of the project. <p>The typical softwares are to be used for any of the 3 assignments.</p>

Syllabus for Unit Test

Unit Test 1	Units I , II and III
Unit Test 2	Units IV, V and VI

MACHINE TOOL DESIGN		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
Practical: 02 Hrs / Week	TW/OR : 50 Marks	01 Credits
Course Pre-requisites:		
1. Basic knowledge of conventional and non conventional Machines.		
2. Knowledge of material science.		
3. Knowledge of Strength of Material.		
Course Objectives:		
The students should be able to understand the design methodology of machine tools.		
Course Outcomes:		
Students will be able to		
1.	Understand the fundamentals of machine tool design.	
2.	Select the type of gear box for applications in machine tool and design the sliding cluster gear box.	
3.	Understand the design considerations for machine tool structures.	
4.	Select the guideways and design the power screws.	
5.	Select the spindle bearings	
6.	Design cams for single spindle automate.	
UNIT-I	Introductions to Machine Tools General Principles of Machine Tool Design: Working and Auxiliary Motions in Machine Tools. Parameters Defining Working Motions of a Machine Tool. Techno-Economical Prerequisites for Undertaking the Design of New Machine Tool. General Requirements of Machine Tool Design. Engineering Design Process Applied to Machine Tools. Layout of Machine Tools, Modular Concept of Machine tool design.	(06 Hrs)
UNIT-II	Drives: Design considerations for drives based on continuous and intermittent requirement of power, Types and selection of motor for the drive, Regulation and range of speed based on preferred number series, geometric progression. Design of speed gear box for spindle drive and feed	(06 Hrs)

	gear box. Stepless drives: Design considerations of Stepless drives, electromechanical system of regulation, friction, and Kopp variators, Toroidal and Reeves Mechanisms , PIV drive, Epicyclic drive, principle of self locking, VFD and VVFD drives-Design Considerations.	
UNIT-III	Design of Machine Tool Structures: Functions of Machine Tool Structures and their requirements – Design criteria for machine tool structures – Materials of machines Tools structures – Static and Dynamic stiffness – Profiles of machine tool structures – Basic Design procedure of machine tool structures Analysis of forces on machine tool structure, static & dynamic stiffness. Design of beds, columns, housings, bases and tables.	(06 Hrs)
UNIT-IV	Design of Guideways & Power Screws : Functions & types of guideways, design criteria & calculation for sideways, design of hydrodynamic ,hydrostatic and aerostatic slideways , Design of Anti-Friction Guideways – Combination Guideways –Protecting devices for slideways Stick-Slip motion in slideways. Design of power screws: Distribution of load & rigidity analysis.	(06 Hrs)
UNIT-V	Design of Spindles and Spindle Supports: Functions of Spindle Unit and requirements – Materials of Spindles – Effect of machine tool compliance on machining accuracy- Design calculations of spindles– Anti friction bearing – Sliding bearings. Preloading of bearings. Bearings selection for machine tools.	(06 Hrs)
UNIT-VI	Automatic Drives for Machine tools: Principles of automation. Automatic lathes with mechanical control.Design of cams for automatic screw cutting machines.Automatic loading and feeding of workpieces. Transfer devices in automatic machine tool systems. Modular design and unit heads for machine tools. Automatic in-process gauging.	(06 Hrs)
	Term work: Term work shall consist of record of assignments on following topics. 1. Design and working drawing of speed gear box 2. Design and working drawing of feed gear box 3. Study of stepless drives 4. Design of bed or column. 5. Design for spindle or power screw. 6. Design for guide ways and sideways. 7. Internet assignment based on any one of the topics above.	
	Assignments 1. Assignment on Introductions to Machine Tools	

<ol style="list-style-type: none"> 2. Assignment on Drives. 3. Assignment on Design of Machine Tool Structures. 4. Assignment on Design of Guideways & Power Screws 5. Assignment on Design of Spindles and Spindle Supports. 6. Assignment on Automatic Drives for Machine tools.

MECHATRONICS & MANUFACTURING AUTOMATION		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance: 10 Marks	01 Credits
	Assignments : 10 Marks	
	Unit Test : 20 Marks	
	TW/OR: 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of Mechatronics systems.	
2.	Basic knowledge of sensors and system response.	
3.	Basic knowledge of automation.	
Course Objectives:		
The student should understand the scope, objective and application of finite element analysis.		
Course Outcomes:		
Students will be able to understand		
1.	Identify the suitable sensor and actuator for a Mechatronics system	
2.	Develop the skill required for interfacing the electromechanical system.	
3.	Illustrate basic aspects of design and development of a Mechatronics system	
4.	Apply automation techniques to manufacturing set-ups.	
5.	Design and develop pneumatic and hydraulic control circuits of medium complexity.	
6.	Illustrate the use of PLC in control systems and Model the system and check the stability of a mechanical system.	
UNIT-I	Introduction to Mechatronics and Measurement Systems: Introduction, concepts of Mechatronics, Principles, Objectives and applications. Elements of Mechatronics System. Sensors: Position and speed Measurement: Proximity sensors and Switches, Potentiometer, LVDT, Digital optical Encoder. Stress and Strain Measurement: Electrical Resistance Strain Gauge, Measuring Resistance Changes With a Wheatstone Bridge, Measuring Different States of Stress With Strain Gauges, Force Measurement With Load Cells Temperature Measurement: Liquid –in Glass Thermometer, Bimetallic Strip, Electrical Resistance Thermometer, and Thermocouple. Vibration and Acceleration Measurement: Piezoelectric Acceleration, Pressure and Flow Measurement, Semiconductor Sensors & Microelectromechanical Devices.	(06 Hrs)
UNIT-II	System Response: Introduction, Amplitude linearity, Fourier Series representation of signals, Bandwidth and Frequency response, Phase linearity, Distortion of signals , Dynamic characteristics of systems, Zero order system, First order system:- Experimental testing of a first order system. Second order system, step response of a second order system, frequency response of a system, System modeling and analogies.	(06 Hrs)
UNIT-III	Signal Conditioning:	(06 Hrs)

	Introduction, The operational amplifier, Filtering, Wheatstone bridge, Digital signals, Multiplexers, Data acquisition, Digital signal processing, and Pulse modulation. Data Acquisition: Introduction, Quantizing theory, Analog to Digital conversion, Digital to Analog conversion, Virtual Instrumentation, Data acquisition and control.	
UNIT-IV	Basics of Automation: Definition, Automation in Production systems, Basic elements of automated systems, Types of Automation, Need, Advantage And Disadvantages of automation, Levels of Automation. Special purpose machine, High speed machines.	(06 Hrs)
UNIT-V	High Volume Manufacturing System: Transfer lines, Material handling systems, Manufacturing cell, Group technology, Cellular manufacturing, Flexible manufacturing systems, Automated quality control and inspection systems, Automated assembly systems and line balancing, Automated flow lines and its technology.	(06 Hrs)
UNIT-VI	Programmable Automation And Control Systems: Programmable logic controller, Ladder diagram, Microprocessor, PIC 16F84 OR 8085 Microprocessor, Logic gates and control, Electrical drives, Thermal relays, PID, Industrial control devices, Computer based industrial controls.	(06 Hrs)
<p>Term work: List of Experiments: (Any Five)</p> <ul style="list-style-type: none"> • Study of Switches and relays. • Study and experiment of different types of sensors. • Study and experiment of ADC and DAC. • Study and experiment of PLC • Study and experiment of 8085 Microprocessor • Study and experiment of PID. 		
<p>Assignments:</p> <ul style="list-style-type: none"> • Different types of Sensors and Transducers. • Assignment on system response of mechatronics systems. • Assignment on signal conditioning and data acquisition. • Basics of automation. • High volume automation. • PLC, PID, 8085 Microprocessor. • Industrial Visit. 		
<p>Oral/Practical Term work and oral will be based on above syllabus. Text Books / References</p> <ul style="list-style-type: none"> • Vickers manual on hydraulics.

Syllabus for Unit Test

Unit Test 1	Units I, II and III
Unit Test 2	Units IV, V ,VI

Elective II: Powder Metallurgy		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: N A	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of conventional manufacturing processes.	
2.	Knowledge of material science.	
3.	Knowledge of engineering Metallurgy.	
Course Objectives:		
	Student will understand the concepts of Powder Metallurgy and also able to understand Manufacturing of components by Powder metallurgy.	
Course Outcomes:		
Students will be able to understand		
1.	To select the manufacturing of metal powders by different methods .	
2.	To select proper process and understand characteristics of Metal powder .	
3.	To select different methods of compacting of metal powders .	
4.	To select various design of dies for compacting of metal powders.	
5.	Mechanism of Sintering .	
6.	To select advance processes and understand its defects and remedies in powder metallurgy.	
UNIT - I	Fundamentals of Metal Powder productions : Introduction of Powder Metallurgy processes. Advantages and limitations of processes, production of metal powder by Machining, milling, atomization, electrodeposition, reduction from oxide, carbonyl process, production of alloy powders, New development etc..	(06 Hours)
UNIT - II	Characteristics of metal powder: Particle size, shape and size distribution, Characteristics of powder mass such as apparent density, tap density, flow rate, friction conditions. Properties of green compact and sintered compact; Powder conditioning, Mixing and blending, processes details.	(06 Hours)
UNIT - III	Fundamentals of powder compaction; Types of compaction presses, compaction tooling and role of lubricants, Single and double die compaction, isostatic pressing,	(06 Hours)

	hot pressing, Powder rolling, powder forging, powder extrusion and explosive forming technique, pressure less compacting .	
UNIT - IV	Design of Press Tools in compacting: General classification and components of press tools, types of dies simple, compound, combination dies, various press working operations. Design and calculations for above press working dies. Extrusion ratio of force equipment (with and without friction), metal flow in extrusion, defects. Role of friction and lubricants, hot dies for compacting. Tooling materials	(06 Hours)
UNIT - V	Sintering Definition, Theories of sintering: Sintering mechanism, Roll of diffusion, Recrystallization, Pore-growth and coalescence. Liquid phase sintering and related processes. Effect of compacting pressure, sintering temperature and time on sintered properties stages, effect of variables, sintering atmospheres and furnaces, infiltration process.	(06 Hours)
UNIT - VI	Production Methods for typical components : Study of sintered bearings, cutting tools, and metallic filters, Study of friction and antifriction parts and electrical contact materials, hard metals, refractory metals, magnetic materials, structural parts, dispersion strengthened materials.	(06 Hours)
Assignments:		
1. Write the production of metal powder by carbonyl processes in details , Write the production of metal powder by Electrolysis method.		
2. Write different methods for measurement of particle size ,shape and size distributions.		
3. Explain in details advantages of Isostatic compacting , Slip casting ,and powder rolling .		
4. Design tooling system for powder compacting for given shape of components.		
5. Give the sintering temperatures and atmospheres used for different metallic components.		
6. Write complete Flow chart of productions of few components by powder metallurgy, such as Tungsten carbide tools. Clutch, etc.		
Text Books/Reference Books:		
1	Gopal S. Upadhayay. Powder Metallurgy “ Science ,Technology and Materials” -University press	
2	P. N. Rao, Manufacturing Technology, Tata McGraw Hill	
3	Powder Metallurgy ASM Metal hand book Vol: 7	
4	A K Shinna Powder Metallurgy ; Dhanpatrai Publications	

5	Gopal S. Upadhayay. Cemented Tungsten carbide Production, properties and testing- University press	
Syllabus for Unit Test:		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

Elective II: Materials Management		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: --	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	--
Tutorial : --		03 Credit
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of management	
2.	Basic knowledge of purchasing	
3.	Basic understanding for stores operations	
Course Objectives:		
The students should be able to apply different materials management techniques for the maximization of the profit and minimization of the production cost.		
Course Outcomes:		
Students will be able to		
1.	Understand various types of values and value analysis techniques.	
2.	Use the proper inventory control system for the industry	
3.	Take correct decision for make or buy for a situation.	
4.	Understand the various techniques of logistic management	
5.	Understand the various warehousing techniques	
6.	Understand and apply import export substitutions in given situation	
UNIT-I	Introduction to Materials Management Functions of Materials Management – Sourcing/Procurement, Inventory, Stores, Vendor Development, value analysis and value engineering. Classification and Costs of Inventories: Types, Objective of holding inventories, Different types of Inventories, Costs Associated with Inventory - Carrying cost, Procurement cost. EOQ - Concept, Assumptions of EOQ Model, Practical Constraints – Numerical Analysis, Quantity Discounts. EMQ Model - Carrying cost, Set up cost. EOQ Special Considerations – Spares, Bought-outs, etc. Organization of Materials Management Function	(06 Hours)
UNIT-II	Replenishment Systems and Inventory Management A. Replenishment Systems: Introduction, Concept of lead time and its effects on Inventory, Components of Lead Time - Internal and External. Variability in demand and lead time. Safety Stock Evaluation and ways to minimize lead time, Different types of replenishment systems like Fixed order quantity system, Fixed order interval system, Combination of fixed order interval and quantity system, Two Bin System. Forecasting - Methods of forecasting - Moving Average Method, Regression Analysis, Exponential Smoothing Method	(06 Hours)

	B. Probabilistic Replenishment System. Selective Inventory Control - VED analysis, HML analysis, SDE analysis, SOS analysis, FSN analysis, GOLF analysis.	
UNIT-III	<p>Procurement Management</p> <p>A. Procurement Management: Responsibilities of Purchase Department. Procurement Procedure, Documents in Procurement, Types of Buying, Methods of Buying, Legal Aspects of Buying, Vendor Selection, Vendor Development, Vendor Rating.</p> <p>B. Documentation – Bin Cards, Stores Ledger, Goods Receipt Note, Material Requisition, Purchase Order – Format, Terms & Conditions. Documentation in Imports</p>	(06 Hours)
UNIT-IV	<p>Logistics Management</p> <p>A. Definition, Logistics Function: Transportation – Significance, Modes of Transportation, Warehousing – Objectives, Warehousing Functions, Types of Warehouses, Inventory Management, Order Processing – Role of IT, Material Handling Transportation: Modes of Transportation – Rail, Road, Pipelines, Water Air – Advantages & Disadvantages, Concept of TL, LTL, FTL. Selections of Appropriate Modes of Transportation B. Modes of Transportation – Rail, Road, Pipelines, Water Air – Advantages & Disadvantages</p>	(06 Hours)
UNIT-V	<p>Stores Management and Warehouse Management</p> <p>A. Warehouse Management: Concept of SKUs, Warehousing Principles & Best Practices in Receiving, Shipping, Order Picking, Storage & Put away, Warehouse Activity Profiling, Warehouse Layout Planning. Stores Management: Functions of Stores, Stores Procedure – Documentation. Need of physical stock taking, method of stock taking like annual, continuous, reorder point stock taking, Inventory records. Surplus and Obsolete stocks: Introduction, Genesis of surplus materials. Disposal of surplus and obsolete materials</p> <p>B. Stores Documentation – Bin Cards, Stores Ledger. WMS Systems in Practice</p>	(06 Hours)
UNIT-VI	<p>Import Export and supply chain management:</p> <p>Factors affecting National and International markets, Import procedure and documents, current EXIM policies, import substitution, E-procurement.</p> <p>Supply chain management:</p> <p>Basic concepts of SCM, design considerations, role of safety inventory, planning and managing inventories, order processing, economic considerations.</p>	(06 Hours)
Term work: NA		
<p>Assignments:</p> <ol style="list-style-type: none"> 1. Assignment on materials management 2. Assignment on replenishment systems 3. Assignment on inventory control 4. Assignment on procurement and documentation 5. Assignment on logistic management 		

<ol style="list-style-type: none"> 6. Assignment on material handling 7. Assignment on stores management 8. Assignment on warehouse management 9. Assignment on import exports 10. Assignment on supply chain management <p>Students are required to present case studies on any two topics.</p>					
<p>Text Books / References</p> <ol style="list-style-type: none"> 1. K S Mennon, "Purchasing management and inventory control", Wheeler Publication, ISBN 81-85814-10-4. 2. Unit Test 1	Units I , II and III				
Unit Test 2	Units IV, V and VI				

Elective II: MANUFACTURING SYSTEM AND SIMULATION		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of Manufacturing System.	
2.	Basic knowledge of advance manufacturing system .	
3.	Basic knowledge of Simulation.	
Course Objectives:		
The student should understand the scope, objective and application of modeling, simulation and analysis of advanced manufacturing systems.		
Course Outcomes:		
Students will be able to understand		
1.	The basics of manufacturing system.	
2.	Discuss the information system about manufacturing machine tools.	
3.	The modeling and analysis of manufacturing system.	
4.	Describe the continuous path of simulation process.	
5.	The simulation and programming languages.	
6.	Develop the simulation process in industry.	
UNIT-I	Manufacturing Systems: Definition of systems, basic concepts and problems concerning systems. Systems design: Decision making procedures, Structural, Transformational and procedural aspects of manufacturing, Modes of production. Process systems for manufacturing, logistic systems, material flow & technological information flow. Management and information systems for manufacturing: Managerial information flow in manufacturing systems.	(06 Hrs)
UNIT-II	Information Systems: Fundamentals of information technology, information systems, information networking, and parts oriented production information systems, and computerized production scheduling, online production control systems. Computer based production management systems. Automation systems for manufacturing: Industrial automation, kinds of automation, principles of CIM, effectiveness of CIM, factory automation, automatic machine tools for mass production, NC machine tools, and computer controlled manufacturing systems, FMS, automated assembly, automatic material handling, automatic inspection and testing, computer integrated automation systems unmanned factory.	(06 Hrs)
UNIT-III	System Models: Concepts, continuous and discrete systems, systems modeling, type of models, subsystems, corporate model, and system study. System	(06 Hrs)

	simulation, Techniques, comparison of simulation and analytical methods, types of simulation, distributed log model, cobweb models.	
UNIT-IV	Continuous System Simulation: Numerical solution of differential equation, analog computers, hybrid computers, continuous system simulation languages CSMP, system dynamic growth models, logistic curves. Discrete systems simulation: Events generation of arrival patterns, simulation programming tasks, analysis of simulation output. Queuing theory: Arrival pattern distribution, service times, queuing disciplines, and measure of queues.	(06 Hrs)
UNIT-V	GPSS and SIMSCRIPT: General description of GPSS and SIMSCRIPT, programming in GPSS Simulation Programming Techniques: Data structures, implementation of activities, event and queues, event scanning, simulation algorithms in GPSS and SIMSCRIPT.	(06 Hrs)
UNIT-VI	Application of Simulation: Flow shop system, Job shop system, M/M/1 Queues with infinite and finite capacities, Simple fixed inventory system, Output data analysis, steady state analysis, Building of simulation validation.	(06 Hrs)

Assignments:

- Basic concepts of manufacturing system.
- Advanced manufacturing system.
- Modeling and simulation of any manufacturing system.
- Assignment on continuous simulation process used in manufacturing system.
- GPSS and SIMSCRIPT programming techniques.
- Application of simulation in automated industry.
- Industrial visit

Syllabus for Unit Test

Unit Test 1	Units I , II and III
Unit Test 2	Units IV, V ,VI

TOTAL QUALITY MANAGEMENT		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits *
	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basics of Quality Control	
2.	Basics of Measurements and measuring Instruments	
3.	Knowledge of Statistics.	
Course Objectives:		
To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management and to understand the statistical approach for quality control.		
Course Outcomes:		
1.	Implement the principles of total quality management.	
2.	Apply six sigma concepts and increase the quality of product.	
3.	Make use of Advanced Techniques	
4.	They will be able to implement TQM Tools.	
5.	Execute Quality standards in companies	
6.	Make use of Advanced Techniques of Total Quality Management like Design of experiments, Failure mode effect analysis, Taguchi method Taguchi's quality engineering	
UNIT-I	Quality & Total Quality Management: Quality, New philosophy of quality, Product quality, & its prospects. Overview of TQM: Concept & definition, Fundamentals, Principles of TQM, Elements of TQM, Approaches of TQM, Models of TQM, Zero defect concept, Benefits of TQM.	(06 Hrs)
UNIT-II	Quality Assurance: Basic concepts, Quality assurance input – process – output. Significance of feedback for Quality assurance, Process capability analysis, Concept of Six Sigma. Internal customer approach, Customer – Satisfaction, data collection & complaint, Redressal mechanism.	(06 Hrs)
UNIT-III	TQM PRINCIPLES:	(06 Hrs)

	Customer satisfaction - Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement - Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement - Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership - Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures - Basic Concepts, Strategy, Performance Measure, Just – in- Time.	
UNIT-IV	TQM TOOLS Benchmarking - Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) - House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) - Concept, Improvement Needs, FMEA - Stages of FMEA.	(06 Hrs)
UNIT-V	Quality Systems : Policy & objectives, Quality standards, Concept of quality system standards, Relevance & origin of ISO 9000–2000 standard & certification, Benefits. Elements of ISO 9001, 9002, 9003 series–Clauses, contents, interpretations & implementation. TS - 16949, QS-9000, ISO 14000, OHSAS	(06 Hrs)
UNIT-VI	Advanced Techniques of Total Quality Management: Design of experiments, Failure mode effect analysis, Taguchi method Taguchi's quality engineering –Loss function, orthogonal arrays, Signal to noise ratio, parameter design & tolerance design.Total Quality in service sector. S. S. Technique, Kaizen.	(06 Hrs)
Term work:	Detail Study and Presentations on Above topics to be submitted.	
Assignments		
	<ol style="list-style-type: none"> 1. Assignment on TQM 2. Assignment on Six sigma concept. 3. Assignment on TQM principles. 4. Assignment on TQM tools. 5. Assignment on Quality Systems 6. Assignment on Advanced Techniques of Total Quality Management

Syllabus for Unit Test

Unit Test 1	Units I , II and III
Unit Test 2	Units IV, V ,VI

Computer Aided Manufacturing		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory:	End Semester Examination: Nil	
Practical: -- 02 Hrs/Week	Internal evaluation: NIL Assignments : Nil Unit Test : NIL	01 Credit
Tutorial : --	TW/OR – 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of mechanical drawing	
2.	Knowledge of various symbols of dimensioning and tolerancing	
3.	Basic knowledge of process planning and programming	
Course Objectives:		
To provide proper interfacing between theoretical aspects and the practical aspects of computer aided manufacturing.		
Course Outcomes:		
Students will be able to		
1.	Students will describe basic concepts of CAM application and understand CAM wheel	
2.	Students will prepare CNC programs for manufacturing of different geometries on milling and lathe machines.	
3.	Students will classify different components using different techniques of group technology	
4.	Students will select layouts of FMS for industrial applications	
5.	Students will classify different components using different techniques of group technology	
6.	Students will prepare Process planning for different components	
Term Work		
	1. Cim Model For Any Industry: Term work assignment based on background theory of CIM System, actual visit to any industry to see and study the different aspects of CIM system	
	2. Simulation on CNC lathe and CNC mill enabling the learning of following points, 1. Simulation on CNC lathe -Description of codes, Description of codes, Directives, programs covering basics operations 2. Simulation on CNC Mill- Description of M codes, Description of codes, Directives, programs covering basics operations, Liner Interpolation, Circular Interpolation	
	3. Manual part programming on CNC lathe, milling And drilling enabling learning of a) NC technology, CNC components, Part programming techniques, Manual part programming technique, Interpretation of codes, Usage of codes, Formulation of part program, Compete sketch with Dimensions b) Execution of complete part program on CNC machine.	

	<p>4. Study and demonstration on robots:</p> <p>a. Term work assignment based on Introduction to Cybernetics, Robot Anatomy, Joints and Links, Common Robot configurations, Drive System, End Effectors, Types of sensors, Robot Economics, Robot applications in manufacturing</p> <p>b. Robot programming – actual execution of the programme on the robot</p>	
	<p>5. Computer aided process planning:</p> <p>a. Term work assignment based on Traditional Process plan, Introduction to Computer Aided Process Plan (CAPP), Types of CAPP, Algorithm for process planning software.</p> <p>b. One recent paper or Case Study of CAPP.</p>	
	<p>6. Exercise on group technology, part coding enabling learning of</p> <p>Introduction to GT, Concept of Part Family, Methods of grouping part into part family, Parts classification and Coding, Opitz classification and coding system, Two Examples on FORM code.</p>	
	<p>7. Computer aided quality control:</p> <p>a. Term work assignment based on Quality control, Concept of 100% inspection, Automated Inspection principles and methods, On Line inspection system, Off Line Inspection System.</p> <p>b. Actual measurement of any standard component on Coordinate Measuring Machine (CMM).</p>	
	<p>8. Introduction to CAM software:</p> <p>a. Term work assignment based on Fundamentals of CAM, applications.</p> <p>b. Use of CAM software for specific application.</p>	
	<p>9. Study of computer controlled business functions:</p> <p>Term work assignment based on Purchase order receiving, Sales and marketing, Job costing, Bill of Material, Financial control, Inventory management</p> <p>b. One recent paper or Case Study of computer controlled business functions.</p>	
	<p>10. Generation of any one simple model using Any CAM software:</p> <p>1) simulate the process</p> <p>2) tool path generation</p>	
Assignments: NA

Syllabus for Unit Test

NA

INPLANT TRAINING		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: -		
Practical: -	Term Work and Oral Examination: 50Marks	03 Credits
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of theoretical subjects of Production Engineering	
2.	Basic knowledge of Industrial Management	
3.	Basic knowledge of Manufacturing Processes	
Course Objectives:		
To help to correlate the lessons learnt in theory and actual practices followed in the industries, expose to an industrial environment, make aware of the psychology of the workers, their habits, attitudes and to prepare them to approach the problems.		
Course Outcomes:		
Students will be able to		
1.	Get an opportunity to apply their knowledge in problem solving and eventually develop that skill.	
2.	Demonstrate understanding of various constraints of time and cost within which goods are produced and services rendered in a specified quantum.	
3.	Get familiarized with various technological trends, approaches and applications along with managerial exposure.	
4.	Develop a positive attitude, which will bring in a visible change in their approach while dealing with technical and interpersonal issues.	
5.	Describe the scope, functions and job responsibilities in various departments of an organization.	
6.	Appreciate and realize the size and scale of operations in Industry.	
Training:		
The student shall undergo training programme prepared by the industry in following manufacturing and functional areas:		
<ol style="list-style-type: none"> 1. Industrial Engineering: Method Study, Work Measurement, Ergonomics and Productivity Improvement Technique. 2. Production Planning & Control, Quality Assurance. 3. Material Management: Inventory Control, Vendor Development, Vendor Rating, Raw Material and Finished Goods stores. 4. Plant Engineering: Plant Layout, Plant Maintenance, Housekeeping, Material Handling & safety. 5. Costing and Cost Control. 6. Management Information System (M.I.S.). 7. Incentive Schemes, Labour Laws. Factory Acts. 8. Import Export Procedures. 9. Incentive schemes, labour laws, factory laws. 		

10. Machine / Process Diagnosis.
11. Quality Assurance, Quality Improvement.
12. Improvement in tool layout, tool selection machine selection.
13. Maintenance of machines, housekeeping, safety precautions.
14. Computer based information study for stores, purchase wastage of material.

Term Work

Term work will consist of a comprehensive report based on his observation, training received and assignments completed during 45 Days of training. The report shall also include good drawing figure, process sheets, machine and product specifications.

Some instructions for Inplant Training Report:

Language	The report should be written in English
Printing	<ul style="list-style-type: none"> • Report must be printed single sided. • Printing must be of high quality. Text and figures must be clear and legible
Number of Copies	Final Report (3 copies)
Page Margin	Left, Right, Top, Bottom margins: 2.5 cm
Title / Paragraph Margin	<ul style="list-style-type: none"> • Chapter number and title should be centered. • Subsection number should align with the left margin • Subsection title should be indented 1.5 cm from the left margin. • The first paragraph in a subsection should align with left margin. • The subsequence paragraphs should be indented 1.27 cm from the left margin. • General alignment for texts in paragraph should be "justified".
Numbering the Chapters and Subsections	<p>All chapters and their subsections must be numbered and titled. Example:</p> <p>Chapter 2 Title of Chapter 2.1 Title of the subsection (second level) 2.1.1 Title of the sub-subsection (third level) 2.1.1.1 Title of the sub-sub-subsection (fourth level)</p>
Typesetting	<ul style="list-style-type: none"> • Font Type : Times New Roman • Font Size : 12 pt • Chapter Title : Uppercase, Bold, Centered • Chapter Sub-section : Title Case, Bold, Align left
Page Numbering	Page numbering should start from chapter-1 in number format (1,2,3,4 etc)
Report Submission	The report to be submitted within fifteen days from completion of the training.

Examination

Oral Examination shall be conducted after training by appointing one internal examiner and one external examiner from industry .45 Days Industrial Inplant Training successful completion certificate is essential for granting the term of student.

PROJECT STAGE-I		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical: 02 Hours / Week	TW/OR : 50 Marks	04 Credits
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of conventional and non-conventional Machines.	
2.	Knowledge of material science.	
3.	Knowledge of Strength of Material.	
Course Objectives:		
To prepare the students to carry out a comprehensive study of any design or process or phenomenon, to encourage the process of independent / creative thinking and working in groups and to expose them to industrial atmosphere of accountability.		
Course Outcomes:		
Students will be able to		
1.	Work in Team	
2.	Allocate work among students according to expertise in specific field	
3.	Break the Project into Tasks.	
4.	Develop Leadership quality	
5.	Carry out Purchasing activity	
6.	Carry out fabrication and assembly of components.	
Term Work		
<p>While selecting the projects preference should be given to industrial projects, social impact projects, productivity improvement and renewable energy resources or development of manufacturing technique. The students in a group of not more than FOUR will work under the guidance of the faculty member on the project work undertaken by them. The work started in Semester VII will be continued in the Semester VIII. There will be an end semester University Exam on work done in semester VII. Different tools should be used for Project Management like PERT technique or use of software for analysis of data etc. Three reviews will be conducted throughout the semester and the reference of these reviews will be considered during final assessment. An interim report of the work completed in Semester VII in the form of report and yellow card shall be submitted for the term work along with the synopsis. The report will be assessed by the Project Guide and External faculty member appointed by the Head of the Department / concerned responsible official of the sponsoring industry (Co-guide). The synopsis shall be endorsed by the Head of Department.</p> <p>The work to be completed in Semester VII shall include,</p> <ol style="list-style-type: none"> a) Literature Review b) Problem Identification/Definition c) Design and Methodology / CAD simulation of component or Mechanism d) Activity planning for the time frame and division of responsibility to each student. 		

The oral examination shall be based on the work planned and completed in Semester VII.

CERTIFICATE

This is to certify that Mr. /Ms

(Seat No.)..... has carried out a Project entitled ,..... (Project Stage –I) for partial fulfillment of the requirement of the B.Tech. Production Engineering Course during the academic Year

SEM VIII

Subject: Process Planning and Tool Design		
<u>EACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
Practical: 02 Hours / Week	TW/OR : 50 Marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Knowledge of Machines and Processes	
2.	Knowledge of Tooling's used in Machine shops	
3.	Knowledge of using Machining data.	
Course Objectives:		
	The students should be able to do Prepare process sheets.	
Course Outcomes:		
Students will be able to		
1.	Perform part print analysis for Establishing general characteristics of work piece, Auxiliary methods for visualizing part print, Functional surfaces, nature of Work piece, finishing and identifying operations, relating the part to assembly.	
2.	Perform dimensional and tolerance analysis	
3.	Identify operations for classification based on importance.	
4.	Carry out Selection of Equipment and toolings from manufacturers catalog	
5.	Select and plan the process and carryout process planning with holistic approach.	
UNIT - I	Product and Process Engineering General Manufacturing processes, Product Engineering, Process Engineering, communications, relation with other departments, classification of processes, manufacturing operations. Part Print analysis-Establishing general characteristics of work piece,Auxiliary methods for visualizing part print, Functional surfaces, nature of work piece, finishing and identifying operations, relating the part to assembly.	(06 Hours)
UNIT – II	Dimensional and tolerance analysis Types of dimensions, concept of straightness, squareness, roundness, and concentricity symmetry, surface quality and surface integrity, surface finish affecting product properties and product cost, base lines, direction of specific dimensions. Tolerance analysis-causes of work piece variations, to express limits and tolerance, tolerance stack, purpose of tolerance chart,	(06 Hours)

	balancing the Tolerance Chart, Rules for adding and subtracting tolerances , layout of tolerance chart.	
UNIT - III	Work piece Control & Classifying operations Work piece control theories, Causes of Work piece variation, shape of part affecting processing, Mechanical, Geometric and Dimensional Control Variables influencing Work piece control, Classifying operations: Basic process operations, principal process operations, major operations, qualifying and requalifying operations, auxiliary process operations.	(06 Hours)
UNIT - IV	Selection of Equipment and tooling's Process capability of Equipments, prime accuracies and producible accuracies of Equipments, Factors influencing make or buy decisions, relation between Process selection and Machine selection, sources for selection , General purpose, special purpose machines, factors in machine selection in terms of cost and design factors, cost analysis, operating cost, comparative cost analysis. Classification of tooling: Factors affecting selection of Tooling, sources of tooling, tool holders, work piece holders, jigs fixtures, moulds, pattern, core boxes, dies, templates, gauges.	(06 Hours)
UNIT - V	Selecting and planning the process Function, Economy and appearance, fundamental rules for manufacturing process, Engineering approach, basic design of product, influence of process engineering on product design, specifications, materials and its cost analysis, eliminating operations, combined operations, availability of equipment, effect of operations speed on performance of economy, Computer aided process planning	(06 Hours)
UNIT - VI	Process sheet design Determining manufacturing sequence, Factors affecting operation sequence, major process sequence, combining operations, Operation routing, routing uses routing description, process picture, process picture sheet, processing dimensions and views	(06 Hours)
Term Work/Practical's (All the assignments include time estimation of processes):		
1. Part print analysis of one industrial component drawing		
2..Process design of one component on GPM/CNC for batch production.		
3. Process design of one component for mass production		
4. Time estimation for one component on GPM / CNC for batch production		
Assignments:		
1. Assignment on Product and Process Engineering.		
2. Assignment on Dimensional and tolerance analysis		

3. Assignment on work piece control and classifying operations.
4. Assignment on Selection of equipment and toolings.
5. Assignment on selecting and planning the process
6. Assignment on process sheet

Text Books/Reference Books:

1	D.F.Eary, G.E.Johnson, "Process Engineering for Manufacturing", Prentice-Hall
2	P.W.Wang, J.Kelly, " Computer Aided Process Planning".
3	Nanua singh, "System Approach to Computer Integrated Design and Manufacturing"
4	H.W.Wage, "Manufacturing Engineering", McGraw hill
5	"Manufacturing catalogues for cutting tools and inspection equipments" P.Radhakrishnan, S.Subrmaniyum, V.Raju, "CAD\CAM\CIM", New Age Interanational Pvt. Ltd.
6	K.Hitomi , "Manufacturing Systems Engg", John Willey
7	Groover Mikell. P. "Fundamentals of Modern Manufacturing", Materials, Processes and Systems", 2nd edition, Willey 2002.
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

INDUSTRIAL ROBOTICS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credits
	TW/OR: 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of Industrial robotics	
2.	Basic knowledge of Sensors and Grippers and Vision system.	
3.	Basic knowledge of Programming.	
Course Objectives:		
The student should understand the scope, objective and application of industrial robotics.		
Course Outcomes:		
Students will be able to understand		
1.	The basic concepts of mechatronics and robots.	
2.	Develop skills in understanding various sensors, robot peripherals and their use & deployment in manufacturing system.	
3.	Acquire skills in understanding robot language and programming.	
4.	The concept of kinematics and dynamics equations.	
5.	Acquire skill in robot task planning for problem solving.	
6.	Develop skills in identifying areas in manufacturing where robotics can be deployed for enhancing productivity.	
UNIT-I	Basic concept in Robotics: Automation and robotics, robot anatomy, basic structure of robots, resolution, accuracy and repeatability. Classification and structure of robotics system Point to point and continuous path system control loops of robotics system, manipulators, wrist motions and grippers.	(06 Hrs)
UNIT-II	Drives Control Loops, Basic Control System Concepts & Models, Control System Analysis, Robot Activation & Feedback Components, Position & Velocity Sensors, Actuators and Power Transmission system. Robot & its Peripherals End Effectors: Type mechanical and other grippers, Tool as end effector. Sensors: Sensors in Robotics, Tactile Sensors, Proximity & Range Sensors, Sensor Based Systems, Vision systems and Equipment.	(06 Hrs)
UNIT-III	Machine vision Introduction, Low level & High level Vision, Sensing & Digitizing, Image Processing & analysis, Segmentation, Edge detection, Object Description & recognition, interpretation and Applications. Programming for Robots	(06 Hrs)

	Method, Robot Programme as a path in space, Motion interpolation, motion & task level Languages, Robot languages, Programming in suitable languages and characteristics of robot.	
UNIT-IV	Robot Kinematics and Dynamics Forward, reverse & Homogeneous Transformations, Manipulator Path control and Robot Dynamics. The direct kinematics problem, the inversion kinematics solution, Lagrangian –Euler formation, generalized D'Ambert equations of motion. Denavit Hartenberg convention and its application.	(06 Hrs)
UNIT-V	Root Intelligence & Task Planning Introduction, State space search, Problem reduction, use of predictive logic, Means. Ends Analysis, Problem solving, Robot learning and Robot task planning. Implementation Principles and Issues An Approach for implementing robotics, Safety, Training, Maintenance and Quality. And Social issues and The future of Robotics.	(06 Hrs)
UNIT-VI	Robot application in manufacturing Material transfer, machine loading & un loading, processing operation, Assembly & inspectors, robotic Cell design & control, Social issues & Economics of Robotics. Interfacing robot with PC, handshaking, hardware handshaking, RS232C serial interface.	(06 Hrs)

Term work:

List of Experiments: (Any Five)

- Study of elements of industrial robots.
- Study of model a work space for robot application.
- Design a robot gripper.
- Study of vision systems in industrial robots.
- Design a pick and place robot.
- Programming of pick and place robot.
- Make individual model of robot.

Assignments:

- Assignment on basic concepts of robots.
- Drives and control systems for robot application.
- Different types of sensors and grippers used in robots.
- Advances in robot programming
- Robot applications in manufacturing systems.
- Industrial visit

Oral/Practical

Term work and oral will be based on above syllabus

Syllabus for Unit Test

Unit Test 1	Units I , II and III
Unit Test 2	Units IV, V ,VI

FINANCIAL MANAGEMENT & COST CONTROL		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: --	Attendance: 10 Marks	01 Credit
Tutorial - 01 Hrs/Week	Assignments : 10 Marks Unit Test : 20 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of Mathematics.	
2.	Basic knowledge of Production Planning And Control	
3.	Basic knowledge of Manufacturing Process And Inventory Control	
Course Objectives:		
The student should understand the scope, objective and application of financial management & costing control		
Course Outcomes:		
Students will be able to understand		
1.	Function, scope, goals and tools used for financial management & costing control	
2.	Control of Capital Expenditure.	
3.	Concept and design of Working Capital.	
4.	Methods of costing and Depreciation cost.	
5.	Budgetary control and variance Analysis.	
6.	Concept, development & use of standard costing.	
UNIT-I	Financial Management Financial function, Scope, goals and tools. Sources of finance, corporate planning and financial management. Financial Statements: Balance sheet, profit and loss account. Ratio Analysis: Classification, Ratio Analysis and its limitations. Operating and Financial Leverage.	(06 Hrs)
UNIT-II	Capital Budgeting Control of Capital Expenditure, Evaluation Process-Payback approach, Accounting of Rate of Return, Present Value Method Vs Internal Rate of Return. Replacement cost and discounted cash flow.	(06 Hrs)
UNIT-III	Working Capital Management Concept and design of Working Capital, types of working capital, sources of working capital, time value of money, cost and capital, cost of capital. Funds Flow Analysis: Concepts, Objectives, and Techniques of Funds Flow Statement, cash flow statement.	(06 Hrs)
UNIT-IV	Costing And Cost Accounting Methods of costing and elements of cost. Type of cost, Material Cost: Different methods of pricing of issue of materials. Material losses - Wastage and its consideration. Labour Cost: Different methods wages and incentive plans. Principles of good remunerating system, labour turnover and its methods.	(06 Hrs)

	Job And Process Costing: Job costing, Factory job costing, Contract cost a) Unit costing:, output and operating cost b) Process costing; Normal and abnormal losses, abnormal gains, waste, scrap, by-products	
UNIT-V	Standard Costing And Marginal Costing: Standard Costing: Material, Labour, Overhead, Sales. Profit, Product-mix and Yield Variance. Capital cost control repetitive operating cost, standard costs, cost reporting and corrective action. Advantages and disadvantages. Marginal Costing: Concept ,Profit Volume relationship, Breakeven chart, contribution, breakeven point, Margin of Safety, Advantages and disadvantages	(06 Hrs)
UNIT-VI	Depreciation And Overheads: Depreciation: Concept, importance and different methods of depreciation. Estimation of material, machining and labour cost machining. Overheads: Classification, collection of overheads, Primary and Secondary apportionment of overheads, absorption of overheads. Machine hour and labour hour rate. Under and over absorption of overheads. Estimation of overheads	(06 Hrs)
Assignments:(Any six)		
<ul style="list-style-type: none"> • Assignment on Financial Management • Assignment on Capital Budgeting. • Assignment on Working Capital Management.. • Assignment on Costing Cost Accounting • Assignment on Standard Costing And Marginal Costing • Assignment on Depreciation And Overheads • Case Study 		
Text Books

5. Colin Drury, "Management and Cost Accounting", English Language Book Society, Chapman & Hall London.		
Syllabus for Unit Test		
Unit Test 1	Units I, II and III	
Unit Test 2	Units IV, V ,VI	

Elective III - Human Resource Management		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hrs/Week	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
Tutorial: --	TW/OR: 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of business management	
2.	Knowledge of employee welfare	
3.	Basic knowledge of factory acts and labour laws	
Course Objectives:		
The student should be able to understand and apply the principles of human resource management.		
Course Outcomes:		
Students will be able to		
1.	Understand the concept of human resource management	
2.	Use proper HR forecasting techniques for successful planning	
3.	Understand the concept of training and development	
4.	Understand the concept of performance appraisal and compensation	
5.	Use the various methods of job evaluation, analysis and design	
6.	Understand the grievance procedure and employee welfare	
UNIT-I	Introduction to Human Resource Management: Introduction, Concept of Human Resource Management, Scope of Human Resource Management, History of Human Resource Management, Function of Human Resource Management, Role of HR Executives Changing Role of Human Resource in India, Globalization, Its Impact on HR.	(06 Hours)
UNIT-II	Human Resource Planning: Process of Human Resource Planning, Need for Human Resource Planning, HR Forecasting Techniques, Successful Human Resource Planning Recruitment and Selection: Concept of Recruitment, Factors Affecting Recruitment, Sources of Recruitment, Recruitment Policy, Selection, Selection Process, Application Forms, Selection Test, Interviews, Evaluation, Placement, Induction	(06 Hours)
UNIT-III	Training and Management Development: Meaning of Training, Area of Training, Methods of Training, Concept of Management Development, Management Development Methods, Differences Between Training and Development, Evaluation of Training and Management Development	(06 Hours)

	Employee Career Planning and Growth: Concept of Employee Growth, Managing Career Planning, Elements of a Career Planning Programme, Succession Planning.	
UNIT-IV	Performance Appraisal: Concept and Need for Performance, Reviews, Overview of Performance Appraisal, Types of Appraisal Methods, 360 degree appraisal, Benefits Compensation Management: Wage and Salary Administration, Managing Wages, Concept of Rewards and Incentives, Managing Benefits in Organisations Labour Laws: introduction to labour laws and factory act.	(06 Hours)
UNIT-V	Job Evaluation: Concept of Job Evaluation, Objectives, Techniques, Advantages and Limitations, Introduction to Competency Job Analysis and Design: Concept of Job Analysis and Design, Process of Job Analysis, Methods of Job Analysis, Job Analysis Information, Concept of Job Design, Human Resource Information System: Introduction, Concept, Components, Types, Application, Implementation, Benefits, Impact,	(06 Hours)
UNIT-VI	Employee Welfare and Working Conditions: Concept of Employee Welfare, Welfare Measures, Types, Employee Welfare Responsibility, the Business Benefits of Employee Welfare Activities Grievance and Grievance Procedure: Concept of Grievance, Causes of Grievances, Forms and Effects of Grievance, the Grievance Handling Procedure, Need for Grievance Redressal Procedure Emerging Trends in HRM: Competency Mapping, Business Process Outsourcing, Right Sizing of Workforce, Flexi time, Talent Management, Employee Engagement	(06 Hours)
Term work:		
<ol style="list-style-type: none"> 1. Introduction to Human resource management 2. Exercise covering human resource planning, recruitment and selection. 3. Exercise on training and development 4. Assignment on employee career planning and growth 5. Exercise on career planning and compensation. 6. Exercise on job evaluation, analysis and design. 7. Assignment on employee welfare and working conditions. 8. Exercise on grievance procedure and emerging trends in HRM. 		
Assignments:		
<ol style="list-style-type: none"> 1. Assignment on cost effective recruitment 2. Assignment on use of portals for recruitment. 3. Assignment on training need analysis. 4. Assignment on compensation benchmarking. 5. Assignment on mandatory requirements of factories act. 6. Assignment on design of appraisal system. 7. Assignment on employee satisfaction survey.

Syllabus for Unit Test

Unit Test 1	Units I, II and III
Unit Test 2	Units IV, V and VI

Elective III: Manufacturing of Composite Materials		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credits
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of conventional manufacturing processes.	
2.	Knowledge of material science.	
3.	Knowledge of engineering Metallurgy.	
Course Objectives:		
	Student will understand the concepts of Composite and also able to understand the Manufacturing of Composite Materials .	
Course Outcomes:		
Students will be able to understand		
1.	Different types of composite and its classification .	
2.	To select proper process and understand characteristics of fibers .	
3.	To select different methods of reinforcement of materials .	
4.	To select various design of dies for manufacturing .	
5.	Mechanism of curing.	
6.	To select advance processes and understand its defects and remedies in Manufacturing of Composite Materials	
UNIT - I	Introduction: Definition of composite material, Classification based on matrix and topology, Constituents of composites, Interfaces and Interphases, Distribution of constituents, Nano-composites,	(06 Hours)
UNIT - II	Performance of Structural Composites: Combination effects Fabrication and processing of metal matrix (MM), polymer Matrix (PM) and ceramic matrix (CM) composites and their characterization; Fabrication of nano-composites; Secondary processing and joining of various composite materials for structural applications and their fracture behaviour and safety.	(06 Hours)
UNIT - III	Strengthening mechanisms, Stress distribution in fibre and the matrix (shear stress and axial tensile stress in the fibre along its length), critical length of fibre for full strengthening, Analysis of uniaxial tensile stress-strain curve of unidirectional continuous and short fibre composites, Estimation of the required minimum amount of fibre and critical amount of fibre to gain a composite strength, Analysis of strength of a composite during loading at an angle to the fibres,	(06 Hours)

UNIT - IV	Characterisation Composites :Control of particle/fibre and porosity content, particle/fibre distribution, Interfacial Reaction of matrix-reinforcing component, Coating of reinforcing component, Strength analysis Performance of Composite in Non-structural Applications :Composites in Electrical, Superconducting and Magnetic Applications, Nano-composite devices	(06 Hours)
UNIT - V	Fabrication Composites :Fabrication of Metal Matrix Composites: Commonly used Matrices, Basic Requirements in Selection of constituents, solidification processing of composites - XD process ,Spray processes - Osprey Process, Rapid solidification processing, Dispersion Processes - Stir-casting & Compocasting, Screw extrusion, Liquid- metal impregnation technique - Squeeze casting, Pressure infiltration, Lanxide process), Pinciple of molten alloy infiltration, rheological behaviour of melt -particle slurry, Synthesis of In situ Composites;	(06 Hours)
UNIT - VI	Fabrication of Polymer Matrix Composites - Commonly used Matrices Basic Requirements in selection of Constituents, Moulding method, Low pressure closed molding, pultrusion, Filament winding, Fabrication of ceramic matrix composites - Various techniques of vapour deposition, Liquid phase method and Hot pressing etc. Fracture & Safety of Composite : Fracture behavior of composites, Mechanics and Weakest link statistics,Griffith theory of brittle fracture and modification for structural materials, Basic fracture mechanics of composite	(06 Hours)
Term work:		
List of Experiments: (Any six)		
<ul style="list-style-type: none"> • Manufacturing of Fibres on Electrospin Machine • Study of different binders • Manufacturing of composite by Hand Lay up processes . • Manufacturing of composite by VARTUM • Study of MMC . • Study of CMC. • Study of different Matrix Materials and reinforced materials • Testing of composite component 		
Assignments:		
<ol style="list-style-type: none"> 1. Explain the different types of composite ,Interfaces and Interphases. 2. Discuss the Fabrication of nano-composites in details 3. Explain the Stress distribution in fiber and the matrix. 4. How the carbon and glass fiber are manufactured. 5. What is Liquid- metal impregnation technique? 6. Explain the basic requirements in selection of Constituents in composite . 		

Text Books/Reference Books:	
1	Composite materials, K.K. Chawala, 2nd ed., (1987) Springer-Verlag, New York. 2
2	Nanocomposite Science and Technology, P.M. Ajayan, L.S. Schadler, P. V. Braun, (2003), Wiley-VCH Verlag GmbH Co. KGaA, Weinheim.
3	Ceramic matrix composites, K.K. Chawala, 1sted., (1993) Chapman & Hall, London
4	Advances in composite materials, G. Piatti, (1978) Applied Science Publishers Ltd., London.
Syllabus for Unit Test:	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

Elective III: KNOWLEDGE BASED SYSTEMS		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic Knowledge of Information Technology	
2.	Introductory computer course.	
3.	Information systems course.	
Course Objectives:		
The basic purpose of the course is to discuss the application of artificial intelligence techniques and more specifically knowledge based systems, in information processing and information systems design. Discuss methodological and project management approaches to developing knowledge based systems.		
Course Outcomes:		
Students will be able to		
1.	Understand the knowledge-based systems representation.	
2.	Understand automatic reasoning.	
3.	Understand inductive and deductive learning.	
4.	Implement a small knowledge- based system.	
5.	Understand Methodologies for building knowledge based systems	
6.	Understand Organizational and Managerial Issues	
UNIT-I		(06 Hrs)
Artificial Intelligence and Information Systems:		
Fourth & fifth generation languages, Nonprocedural Paradigms, Data and Knowledge.AI, knowledge based systems, Expert Systems. Basic architecture of knowledge based systems		
UNIT-II		(06 Hrs)
Knowledge representation and the knowledge base:		
First-Order Logic, Production Rules, Horn Clauses, Frames, Semantic Networks, Objects. Metaknowledge, Conceptual modelling.		

UNIT-III	(06 Hrs)
Interfaces: User interface: explanation facilities, unknown values. Systems interface: language and database hooks. Developer interface: knowledge acquisition, testing & debugging	
UNIT-IV	(06 Hrs)
Methodologies for building knowledge based systems: Development lifecycle, structured development and prototyping. Knowledge acquisition techniques, protocol analysis, repertory grid. Integration with databases, data processing and information systems methodologies	
UNIT-V	(06 Hrs)
Expert system building tools: AI-Languages, Knowledge representation languages, E.S.-shells, products and environments .Knowledge base management systems	
UNIT-VI	(06 Hrs)
Organizational and Managerial Issues: Knowledge as a strategic asset in the organization, knowledge problems and management. Applications, pitfalls and successes.	
Term work: List of Experiments: (Any Five) <ol style="list-style-type: none"> 1. Study of Artificial Intelligence 2. Study of Basic architecture of knowledge based systems 3. Conceptual modelling. 4. Study of Developer interface. 5. Data processing and information systems methodologies. 6. Knowledge base management systems. 7. Study of knowledge problems and management. 	
Assignments: (Any Six) <ol style="list-style-type: none"> 1. Study of Expert Systems. 2. Knowledge based systems. 3. Study of Production Rules. 4. Study of Semantic Networks. 5. Study of Systems interface. 6. Study of protocol analysis. 	

<p>7. Study of AI-Languages. 8. Different Knowledge acquisition techniques. 9. Study of Knowledge representation languages. 10. Study of products and environments. 11. Knowledge as a strategic asset in the organization</p>					
<p>‡ Text Books / References</p> <ul style="list-style-type: none"> • VANTHIENEN J., Knowledge Based Systems (Wouters Bookstore) • HARMON, P., HALL, C., <i>Intelligent Software Systems Development</i> , Jojn Wiley & Sons, Inc., 1993, 472 pp. • LUGER, G., STUBBLEFIELD, W., <i>Artificial Intelligence</i> , Second edition, Benjamin/Cummings, 1993. • TURBAN, E., LIEBOWITZ, J. Unit Test 1	Units I , II and III				
Unit Test 2	Units IV, V ,VI				

Elective III: Design And Analysis of Experiments.

Elective III: Design And Analysis of Experiments.		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW &OR :50Marks	
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of Introduction to Statistics or a similar basic statistics course	
2.	Basic knowledge of Graphical Representation.	
3.	Basic knowledge of some Software's such as statease and Minitab.	
Course Objectives:		
This course provides an introduction to designing experiments and analyzing their results.		
Course Outcomes :		
Students will be able to understand		
1.	Design of Experiments	
2.	Selection of Levels and Parameters.	
3.	Factorial Design. The 2 ^k Factorial Design	
4.	Analysis of Variance (ANOVA)	
5.	Model building using the method of least squares.	
6.	Performing hypothesis tests,	
UNIT-I	Introduction to design of experiments: Strategy of Experiment, Basic Principles, Guide Lines for designing Experiment, Brief History of Stastical Design. Using Stastical Techniques in Experimentation. A typical application of Experimental Design.	(06 Hrs)
UNIT-II	Simple Comparative Experiments.: Introduction, Basic Stastical Concepts, Sampling and Sampling distributions, difference in means, hypothesis testing, choice of sample size, confidence intervals, comparing single mean to Specified value, difference in means, paired comparison designs.	(06 Hrs)
UNIT-III	Design of Experiments: Introduction to Factorial Designs. The 2 ^k Factorial Design, The 2 ² Factorial Design, The 2 ³ Factorial Design, General 2 ^k design, Single replicate of the 2 ^k design, Taguchi Method and addition of center points to the 2 ^k design.	(06 Hrs)
UNIT-IV	Analysis of Variance :(ANOVA)	(06 Hrs)

	Analysis of the fixed effects Model, decomposition of the Total Sum of Squares, Stastical Analysis, Estimation of the Model Parameters, Unbalanced Data.	
UNIT-V	Regression Analysis: Regression Model, Comparison among Means, Regression Approach to the Analysis of Variance Least Squares, Estimation of the Model Parameters, General Regression Significant Test,	(06 Hrs)
UNIT-VI	Result Analysis: Fitting Regression Models, Linear Regression Models, Estimation of the Model Parameters in Linear Regression Models, Hypothesis Testing in Multiple Regression, Test for Significance of Regression, Test on Individual Regression Coefficient and group of Coefficients, Confidence intervals on the individual Regression Coefficient, Confidence intervals on the Mean Response, Prediction the new response observation F-Test, Matching the Calculated value with standard value, Use of Software's, Statease, Systat, Minitab ,Predict analysis	(06 Hrs)
Term work: Students have to write the assignments as well as perform the experiment and prepare the journal for the same.		
Assignments: (Any Six) <ul style="list-style-type: none"> • Assignment on Introduction to design of experiments • Assignment on Simple Comparative Experiments • Assignment on Design of Experiments. • Assignment on Analysis of Variance (ANOVA) • Assignment on Regression Analysis • Assignment on Result Analysis. • Case Study (Perform the experiments by selecting at least 2 levels and 3 parameters.) 		
Oral/Practical Term work and oral will be based on above syllabus		
Text Books <ol style="list-style-type: none"> 1) George E. P. Box, William G. Hunter, J. Stuart Hunter, Statistics for Experimenters: An Introduction to Design, Data Analysis, and Model Building, Second Edition, John Wiley & Sons, New York, 2005 2) Douglas C. Montgomery, Design and Analysis of Experiments, Sixth Edition, John Wiley & Sons, New York, 2004. 		
Syllabus for Unit Test		
Unit Test 1	Units I , II , III	
Unit Test 2	Units IV, V ,VI	

Computer Aided Engineering		
TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: --	End Semester Examination: --	
Practical: -- 02 Hrs/Week	Internal evaluation: -- Assignments : -- Unit Test : --	01 Credit
Tutorial : --	TW/OR – 50 marks	01 Credit
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of computer aided design and analysis	
2.	Basic knowledge of manufacturing	
3.	Basic knowledge of numerical methods	
Course Objectives:		
The students should understand the scope, objectives and applications of Computer Aided Engineering.		
Course Outcomes:		
Students will be able to		
1.	Solve ordinary and partial differential equations using Galerkin method.	
2.	Analyse the 2D problems by using software.	
3.	Solve the problems related to heat transfer by using software.	
4.	Design and analyse the connecting rod.	
5.	Design and analyse the burnished components.	
6.	Analyse the screw jack.	
Term work:		
1.	Structural analysis of a corner bracket.	
2.	Structural analysis of Truss structure.	
3.	Modal analysis of Simple Pendulum.	
4.	Steady state heat transfer through a plate with hole.	
5.	Analysis of a connecting rod.	
6.	Analysis of Leaf spring	
7.	Analysis of burnished components	
8.	Analysis of piston	
9.	Analysis of camshaft	
10.	Analysis of Screw jack.	
Assignments: NA

PROJECT STAGE-II		
<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Practical: 04 Hours / Week	TW/OR :150 Marks	08 Credits
Course Pre-requisites:		
The Students should have		
1.	Basic knowledge of Machines.	
2.	Knowledge of material science.	
3.	Knowledge of Strength of Material.	
Course Objectives:		
To prepare the students to carry out a comprehensive study of any design or process or phenomenon, to encourage the process of independent / creative thinking and working in groups and to expose them to industrial atmosphere of accountability.		
Course Outcomes:		
Students will be able to		
1.	Work in Team	
2.	Allocate work among students according to expertise in specific field	
3.	Break the Project into Tasks.	
4.	Develop Leadership quality	
5.	Carry out Purchasing activity	

6.	Carry out fabrication and assembly of components.

Term Work

The students will complete their project work started in B.Tech. (Production Engineering) – Semester VII and will submit the report in a prescribed format as given below at the end of Semester VIII. The report will be assessed by the Project Guide and External faculty member appointed by the Head of the Department / concerned responsible official of the sponsoring industry (Co-guide). A publication of work in national conference or journal is compulsory. The report shall be submitted, typed on A4 size sheets and hard bound.(One copy for the department and one copy for each student). The contents of the report shall include the following in a broad sense.

Detailing may be done according to the problem undertaken.

- a) Problem identification and statement
 - b) Review of relevant literature / present practices regarding the problem
 - c) Methodology followed to carry out the work
 - d) Inputs for the project design
 - e) Processing / conversion of these inputs
 - f) Outputs testing / validation
 - g) Results, conclusion, future scope, references, acknowledgement
 - h) **Review of initial plan and deviations in it.**
- 1) Term work will be assessed by the project guide along with Co-guide from sponsoring industry **or** one more faculty member appointed by the Head of Department for in-house projects; based on the work done and the report submitted.
- 2) The students will be examined orally by the examiner appointed by the university and the project guide as the internal examiner.

Marks will be awarded on the basis of the work done and performance in the oral examination.

Format of the project report should be as follows:

1. Paper: The Project report should be typed/printed on white paper of A-4 size.
2. Typing: The typing shall be with one and half spacing and on one side of the paper.
3. Binding: The Industrial Implant Report should be submitted with front and back cover in black
Hard bound, with golden embossing.
4. Margins: Left - 1.25", Right - 1". Top and Bottom 1"

5. Sequence of Pages:
 1. Title page
 2. Certificate form Institute
 3. Completion Certificate form Industry, if sponsored.
 4. Acknowledgement
 5. Abstract
 6. Index
 7. Nomenclature and Symbols
 8. Actual Content
 9. Conclusion
 10. References.

6. Front cover: The front cover shall have the following details in block capitals
 - i. Title at the top.
 - ii. Name of the candidate in the centre, and
 - iii. Name of the Institute, Name of Industry, if sponsored and the year of submission on separate

lines, at the bottom.

CERTIFICATE

This is to certify that Mr. /Ms

(Seat No.)..... has carried out a Project entitled ,.....for partial fulfillment of the requirement of the B.Tech. Production Engineering Course during the academic Year

SYLLABUS OF AYURVEDACHARYA (BAMS) COURSE

INDEX

1ST PROFESSIONAL

1.1	PADARTHA VIGYAN AND AYURVED ITIHAS	2-6
1.2	SANSKRIT	7-8
1.3	KRIYA SHARIR	9-14
1.4	RACHANA SHARIR	15-18
1.5	MAULIK SIDDHANT AVUM ASHTANG HRIDAYA	19

1.1 PADARTHA VIGYAN EVUM AYURVEDA ITIHAS
(Philosophy and History of Ayurveda)

Theory- Two papers– 200 marks (100 each paper)
Total teaching hours: 150 hours

PAPER-I Padartha Vigyanam 100marks

PART A 50 marks

1. Ayurveda Nirupana

- 1.1 Lakshana of Ayu, composition of Ayu.
- 1.2 Lakshana of Ayurveda.
- 1.3 Lakshana and classification of Siddhanta.
- 1.4 Introduction to basic principles of Ayurveda and their significance.

2. Ayurveda Darshana Nirupana

- 2.1** Philosophical background of fundamentals of Ayurveda.
- 2.2** Etymological derivation of the word "Darshana". Classification and general introduction to schools of Indian Philosophy with an emphasis on: Nyaya, Vaisheshika, Sankhya and Yoga.
- 2.3** Ayurveda as unique and independent school of thought (philosophical individuality of Ayurveda).
- 2.4** Padartha: Lakshana, enumeration and classification, Bhava and Abhava padartha, Padartha according to Charaka (Karana-Padartha).

3. Dravya Vigyaniam

- 3.1 **Dravya:** Lakshana, classification and enumeration.
- 3.2 **Panchabhuta:** Various theories regarding the creation (theories of Taittiriyanopanishad, Nyaya-Vaisheshika, Sankhya-Yoga, Sankaracharya, Charaka and Susruta), Lakshana and qualities of each Bhoota.
- 3.3 **Kaala:** Etymological derivation, Lakshana and division / units, significance in Ayurveda.
- 3.4 **Dik:** Lakshana and division, significance in Ayurveda.
- 3.5 **Atma:** Lakshana, classification, seat, Gunas, Linga according to Charaka, the method / process of knowledge formation (*atmanah jnasya pravrittih*).
- 3.6 **Purusha:** as mentioned in Ayurveda - Ativahikapurusha/ Sukshmasharira/ Rashipurusha/ Chikitsapurusha/ Karmapurusha/ Shaddhatvatmakapurusha.
- 3.7 **Manas:** Lakshana, synonyms, qualities, objects, functions, dual nature of mind (*ubhayaatmakatvam*), as a substratum of diseases, penta-elemental nature (*panchabhutatmakatvam*).
- 3.8 Role of Panchamahabhuta and Triguna in Dehaprakriti and Manasaprakriti respectively.
- 3.9 Tamas as the tenth Dravya.
- 3.10 Practical study/application in Ayurveda.

PART B**50 marks****4. Gunavigyaniyam**

- 4.1 Etymological derivation, classification and enumeration according to Nyaya-Vaisheshika and Charaka, Artha, Gurvadiguna, Paradiguna, Adhyatmaguna.
- 4.2 Lakshana and classification of all the 41 gunas.
- 4.3 Practical / clinical application in Ayurveda.

5. Karma Vigyaniyam

- 5.1** Lakshana, classification in Nyaya.
- 5.2** Description according to Ayurveda.
- 5.3** Practical study/ application in Ayurveda.

6. Samanya Vigyaniyam

- 6.1 Lakshana, classification.
- 6.2 Practical study/ application with reference to Dravya, Guna and Karma.

7. Vishesha Vigyaniyam

- 7.1** Lakshana, classification.
- 7.2** Practical study/ application with reference to Dravya, Guna and Karma.
- 7.3** Significance of the statement "*Pravrittirubhayasya tu*".

8. Samavaya Vigyaniyam

- 8.1 Lakshana
- 8.2 Practical study /clinical application in Ayurveda.

9. Abhava Vigyaniyam

- 9.1 Lakshana, classification
- 9.2 Clinical significances in Ayurveda.

PAPER II**Padartha Vigyan and Ayurveda Itihas****100 marks****PART A - Pramana/ Pariksha- Vigyaniyam****75 marks****1. Pariksha**

- 1.1. Definition, significance, necessity and use of *Pariksha*.
- 1.2. Definition of *Prama*, *Prameya*, *Pramata*, *Pramana*.
- 1.3. Significance and importance of *Pramana*, Enumeration of *Pramana* according to different schools of philosophy.
- 1.4. Four types of methods for examination in *Ayurveda* (Chaturvidha-Parikshavidhi), *Pramana* in Ayurveda.
- 1.5. Subsudation of different *Pramanas* under three *Pramanas*.
- 1.6. Practical application of methods of examination (Parikshavidhi) in treatment (Chikitsa).

2. Aptopdesha Pariksha/ Pramana

- 2.1. Lakshana of Aptopadesha, Lakshana of Apta.
- 2.2. Lakshana of Shabda, and its types.
- 2.3. Shabdavritti-Abhidha, Lakshana, Vyanjana and Tatparyakhya. Shaktigrahahetu.
- 2.4. Vaakya: Characteristics, Vaakyarthagyanahetu- Aakanksha, Yogyata, Sannidhi.

3. Pratyaksha Pariksha/ Pramana

- 3.1. Lakshana of Pratyaksha, types of Pratyaksha- Nirvikalpaka- Savikalpaka with description, description of Laukika and Alaukika types and their further classification.
- 3.2. Indriya-prapyakaritvam, six types of Sannikarsha.
- 3.3. Indriyanam lakshanam, classification and enumeration of Indriya. Description of Panchapanchaka, Penta-elemental nature of Indriya by Panchamahabhuta (*Panchabhautikatwa* of Indriya) and similarity in sources (*Tulyayonitva*) of Indriya.
- 3.4. Trayodasha Karana, dominance of Antahkaran.
- 3.5. Hindrances in direct perception (*pratyaksha-anupalabdihikaaran*), enhancement of direct perception (Pratyaksha) by various instruments/ equipments, necessity of other Pramanas in addition to Pratyaksha.
- 3.6. Practical study/ application of Pratyaksha in physiological, diagnostic, therapeutics and research grounds.

4. Anumanapariksha/Pramana

- 4.1. Lakshana of Anumana. Introduction of Anumiti, Paramarsha, Vyapti, Hetu, Sadhya, Paksha, Drishtanta. Types of Anumana mentioned by Charaka and Nyayadarshana.
- 4.2. Characteristic and types of Vyapti.
- 4.3. Lakshana and types of Hetu, description of Ahetu and Hetwabhasa.
- 4.4. Characteristic and significance of Tarka.
- 4.5. Practical study/ application of Anumanapramana in physiological, diagnostic, therapeutics and research.

5. Yuktipariksha/ Pramana

- 5.1. Lakshana and discussion.
- 5.2. Importance in Ayurveda.
- 5.3. Practical study and utility in therapeutics and research.

6. Upamana Pramana

- 6.1 Lakshana.
- 6.2 Application in therapeutics and research.

7. Karya- Karana Siddhanta (Cause and Effect Theory)

- 7.1. Lakshana of Karya and Karana. Types of Karana.
- 7.2. Significance of Karya and Karana in Ayurveda.
- 7.3. Different opinions regarding the manifestation of Karya from Karana: Satkaryavada, Asatkaryavada, Parinamavada, Arambhavada, Paramanuvada, Vivartavada, Kshanabhangurvada, Swabhavavada, Pilupaka, Pitharpaka, Anekantavada, Swabhavoparamavada.

PART B - Ayurved Itihas

25 marks

1. Etymological derivation (Vyutpatti), syntactical derivation (Nirukti) and definition of the word Itihas, necessity of knowledge of history, its significance and utility, means and method of history, historical person (Vyakti), subject (Vishaya), time period (Kaal), happening (Ghatana) and their impact on Ayurveda.
2. Introduction to the authors of classical texts during Samhitakaal and their contribution: Atreya, Dhanwantari, Kashyapa, Agnivesha, Sushruta, Bhela, Harita, Charaka,

Dridhabala, Vagbhata, Nagarjuna, Jivaka.

3. Introduction to the commentators of classical Samhitas – Bhattaraharicchandra, Jējjata, Chakrapani, Dalhana, Nishchalakara, Vijayarakshita, Gayadas, Arunadutta, Hemadri, Gangadhara, Yogindranath Sen, Haranachandra, Indu.
4. Introduction to the authors of compendiums (Granthasamgrahakaala) – Bhavmishra, Sharngadhara, Vrinda, Madhavakara, Shodhala, Govinda Das (Author of Bhaishajyaratnawali), Basavraja.
5. Introduction to the authors of Modern era –Gana Nath Sen, Yamini Bhushan Rai, Shankar Dajishastri Pade, Swami Lakshmiram, Yadavji Tikramji, Dr. P. M. Mehta, Ghanekar, Damodar Sharma Gaur, Priyavrat Sharma.
6. Globalization of Ayurveda – Expansion of Ayurveda in Misra (Egypt), Sri Lanka, Nepal other nations.
7.
 - a) Developmental activities in Ayurveda in the post-independence period, development in educational trends.
 - b) Establishment of different committees, their recommendations.
 - c) Introduction to and activities of the following Organizations :- Department of AYUSH, Central Council of Indian Medicine, Central Council for Research in Ayurvedic Sciences, Ayurvedic Pharmacopeia commission, National Medicinal Plants Board, Traditional Knowledge Digital Library (TKDL)
 - d) Introduction to the following National Institutions :
 - National Institute of Ayurved, Jaipur.
 - IPGT&RA, Gujrat Ayurved University, Jamnagar.
 - Faculty of Ayurved, BHU, Varanasi.
 - Rashtriya Ayurveda Vidyapeetha, New Delhi.
 - e) Drug and Cosmetic Act.
8. Introduction to national & international popular journals of Ayurveda.
9. Introduction to activities of WHO in the promotion of Ayurved.

Reference Books:-

A). Padartha Vigyan:-

- | | |
|--|--------------------------------|
| 1. Padarthavigyan | Acharya Ramraksha Pathak |

**1.3 KRIYA SHARIR
(PHYSIOLOGY)**

**Theory-Two Papers-200 Marks (100 marks each)
Teaching hours-180 hours**

PAPER- I

100 marks

PART- A

50 marks

1. Conceptual study of fundamental principles of Ayurvediya Kriya Sharir e.g - Panchamahabhuta, Tridosha, Triguna, Loka-Purusha Samya, Samanya-Vishesha. Description of basics of Srotas.
2. Definition and synonyms of the term Sharir, definition and synonyms of term Kriya, description of Sharir Dosha and Manasa Dosha. Mutual relationship between Triguna-Tridosha & Panchmahabhuta. Difference between Shaarir and Sharir. Description of the components of Purusha and classification of Purusha, role of Shatdhatupurusha in Kriya Sharira and Chikitsa.
3. Dosha- General description of Tridosha. Inter relationship between Ritu-Dosha-Rasa-Guna. Biological rhythms of Tridosha on the basis of day-night-age-season and food intake. Role of Dosha in the formation of Prakriti of an individual and in maintaining of health. Prakrita and Vaikrita Dosha.
4. Vata Dosha: Vyutpatti (derivation), Nirukti (etymology) of the term Vata, general locations, general properties and general functions of Vata, five types of Vata (Prana, Udana, Samana, Vyana, Apana) with their specific locations, specific properties, and specific functions.
Respiratory Physiology in Ayurveda, Physiology of speech in Ayurveda.
5. Pitta Dosha: Vyutpatti, Nirukti of the term Pitta, general locations, general properties and general functions of Pitta, five types of Pitta (Pachaka, Ranjaka, Alochaka, Bhrajaka, Sadhaka) with their specific locations, specific properties, and specific functions. Similarities and differences between Agni and Pitta.
6. Kapha Dosha: Vyutpatti, Nirukti of the term Kapha, general locations, general properties and general functions of Kapha, five types of Kapha (Bodhaka, Avalambaka, Kledaka, Tarpaka, Śleshaka) with their specific locations, specific properties, and specific functions.
7. Etiological factors responsible for Dosha Vriddhi, Dosha Kshaya and their manifestations.
8. Concept of Kriyakala.
9. Prakriti:
 - a) Deha- Prakriti: Vyutpatti, Nirukti, various definitions and synonyms for the term 'Prakriti'. Intra-uterine and extra-uterine factors influencing Deha-Prakriti, classification and characteristic features of each kind of Deha-Prakriti.
 - b) Manasa- Prakriti: Introduction and types of Manasa- Prakriti.
10. Ahara: Definition, classification and significance of Ahara, Ahara-vidhi-vidhana, Ashta Aharavidhi Viseshayatana, Ahara Parinamkar Bhava.

11. Aharapaka (Process of digestion): Description of Annavaha Srotas and their Mula. Role of Grahani & Pittadhara Kala.
12. Description of Avasthapaka (Madhura, Amla and Katu). Description of Nishthapaka (Vipaka) and its classification. Separation of Sara and Kitta. Absorption of Sara. Genesis of Vata-Pitta-Kapha during Aharapaka process. Definition of the term Koshtha. Classification of Koshtha and the characteristics of each type of Koshtha.
13. Agni – Definition and importance, synonyms, classification, location, properties and functions of Agni and functions of Jatharagni, Bhutagni, and Dhatvagni.

PART- B

50 marks

Modern Physiology

- a) Definition and mechanisms of maintenance of homeostasis. Cell physiology. Membrane physiology. Transportation of various substances across cell membrane.
- b) Resting membrane potential and action potential.
- c) Physiology of respiratory system: functional anatomy of respiratory system. Definition of ventilation, mechanism of respiration, exchange and transport of gases, neural and chemical control of respiration, artificial respiration, asphyxia, hypoxia. Introduction to Pulmonary Function Tests.
- d) Physiology of Nervous System: General introduction to nervous system, neurons, mechanism of propagation of nerve impulse, physiology of CNS, PNS, ANS; physiology of sensory and motor nervous system, Functions of different parts of brain and physiology of special senses, intelligence, memory, learning and motivation. Physiology of sleep and dreams, EEG. Physiology of speech and articulation. Physiology of temperature regulation.
- e) Functional anatomy of gastro-intestinal tract, mechanism of secretion and composition of different digestive juices. Functions of salivary glands, stomach, liver, pancreas, small intestine and large intestine in the process of digestion and absorption. Movements of the gut (deglutition, peristalsis, defecation) and their control. Enteric nervous system.
- f) Acid-base balance, water and electrolyte balance. Study of basic components of food. Digestion and metabolism of proteins, fats and carbohydrates. Vitamins & Minerals- sources, daily requirement, functions, manifestations of hypo and hypervitaminosis.

PAPER- II

100 marks

PART- A

50 marks

1. Dhatu:

Etymology, derivation, definition, general introduction of term Dhatu, different theories related to Dhatuposhana (Dhatuposhana Nyaya)

2. Rasa Dhatu:

Etymology, derivation, location, properties, functions and Praman of Rasa-dhatu. Physiology of Rasavaha Srotas, Formation of Rasa Dhatu from Aahara Rasa, circulation of Rasa (Rasa-Samvahana), role of Vyana Vayu and Samana Vayu in Rasa Samvahana. Description of functioning of Hridaya. Ashtavidha Sara (8 types

of Sara), characteristics of Tvakasara Purusha, conceptual study of mutual interdependence (Aashraya-Aashrayi Bhaava) and its relation to Rasa and Kapha. Manifestations of Kshaya and Vriddhi of Rasa.

3. Rakta Dhatu:

Etymology, derivation, synonyms, location, properties, functions and Praman of Rakta Dhatu. Panchabhautikatva of Rakta Dhatu, physiology of Raktavaha Srotas, formation of Raktadhatu, Ranjana of Rasa by Ranjaka Pitta, features of Shuddha Rakta, specific functions of Rakta, characteristics of Raktasara Purusha, manifestations of Kshaya and Vriddhi of Raktadhatu, mutual interdependence of Rakta and Pitta.

4. Mamsa Dhatu :

Etymology, derivation, synonyms, location, properties and functions of Mamsa Dhatu, physiology of Mamsavaha Srotasa, formation of Mamsa Dhatu, characteristics of Mamsasara Purusha, manifestations of Kshaya and Vriddhi of Mamsa Dhatu .Concept of Peshi.

5. Meda Dhatu :

Etymology, derivation, location, properties, functions and Praman of Meda Dhatu, physiology of Medovaha Srotas, formation of Medo Dhatu, characteristics of Medasara Purusha and manifestations of Kshaya and Vriddhi of Meda.

6. Asthi Dhatu:

Etymology, derivation, synonyms, location, properties, functions of Asthi Dhatu. Number of Asthi. Physiology of Asthivaha Srotas and formation of Asthi Dhatu, characteristics of Asthisara Purusha, mutual interdependence of Vata and Asthi Dhatu, manifestations of Kshaya and Vriddhi of Asthi Dhatu.

7. Majja Dhatu :

Etymology, derivation, types, location, properties, functions and Praman of Majjaa Dhatu, physiology of Majjavaha Srotas, formation of Majja Dhatu, characteristics of Majja Sara Purusha, relation of Kapha, Pitta, Rakta and Majja, manifestations of Kshaya and Vriddhi of Majja Dhatu.

8. Shukra Dhatu:

Etymology, derivation, location, properties, functions and Praman of Shukra Dhatu, physiology of Shukraravaha Srotas and formation of Shukra Dhatu. Features of Shuddha Shukra, characteristics of Shukra-Sara Purusha, manifestations of Kshaya and Vriddhi of Shukra Dhatu.

9. Concept of **Ashraya-Ashrayi** bhava i.e. inter-relationship among Dosha, Dhatu Mala and Srotas.

10. Ojas: Etymological derivation, definition, formation, location, properties, Praman, classification and functions of Ojas. Description of Vyadhikshamatva. Bala Vriddhikara Bhava. Classification of Bala. Etiological factors and manifestations of Ojavisramsa, Vyapat and Kshaya.

- 11. Upadhatu:** General introduction, etymological derivation and definition of the term Upadhatu. Formation, nourishment, properties, location and functions of each Upadhatu.
- Stanya: Characteristic features and methods of assessing Shuddha and Dushita Stanya, manifestations of Vriddhi and Kshaya of Stanya.
 - Artava: Characteristic features of Shuddha and Dushita Artava. Differences between Raja and Artava, physiology of Artavavaha Srotas.
 - Tvak: classification, thickness of each layer and functions.
- 12. Mala:** Etymological derivation and definition of the term Mala. Aharamala: Enumeration and description of the process of formation of Aharamala.
- Purisha: Etymological derivation, definition, formation, properties, quantity and functions of Purisha. Physiology of Purishavaha Srotas, manifestations of Vriddhi and Kshaya of Purisha.
 - Mutra: Etymological derivation, definition, formation, properties, quantity and functions of Mutra. Physiology of Mutravaha Srotas, physiology of urine formation in Ayurveda, manifestations of Vriddhi and Kshaya of Mutra.
 - Sveda: Etymological derivation, definition, formation and functions of Sveda. Manifestations of Vriddhi and Kshaya of Sveda. Description of Svedvaha Srotas
 - Dhatumala: Brief description of each type of Dhatumala.
- 13. Panchagyanendriya:** Physiological description of Panchagyaanendriya and physiology of perception of Shabda, Sparsha, Rupa, Rasa and Gandha. Physiological description of Karmendriya.
- 14. Manas:** Etymological derivation, definition, synonyms, location, properties, functions and objects of Manas. Physiology of Manovaha Srotas.
- 15. Atma:** Etymological derivation, definition, properties of Atma. Difference between Paramatma and Jivatma; Characteristic features of existence of Atma in living body.
- 16. Nidra:** Nidrotpatti, types of Nidra, physiological and clinical significance of Nidra; Svapnotpatti and types of Svapna.

PART –B

50 marks

Modern Physiology

- Haemopoetic system – composition, functions of blood and blood cells, Haemopoiesis (stages and development of RBCs, and WBCs and platelets), composition and functions of bone marrow, structure, types and functions of haemoglobin, mechanism of blood clotting, anticoagulants, physiological basis of blood groups, plasma proteins, introduction to anaemia and jaundice.
- Immunity, classification of immunity: Innate, acquired and artificial. Different mechanisms involved in immunity: Humoral (B-cell mediated) and T-Cell mediated immunity. Hypersensitivity.
- Muscle physiology – comparison of physiology of skeletal muscles, cardiac muscles and smooth muscles. Physiology of muscle contraction.
- Physiology of cardio-vascular system: Functional anatomy of cardiovascular system. Cardiac cycle. Heart sounds. Regulation of cardiac output and venous

return. Physiological basis of ECG. Heart-rate and its regulation. Arterial pulse. Systemic arterial blood pressure and its control.

5. Adipose tissue, lipoproteins like VLDL, LDL and HDL triglycerides.
6. Functions of skin, sweat glands and sebaceous glands.
7. Physiology of male and female reproductive systems. Description of ovulation, spermatogenesis, oogenesis, menstrual cycle.
8. Physiology of Excretion – functional anatomy of urinary tract, functions of kidney. Mechanism of formation of urine, control of micturition. Formation of faeces and mechanism of defecation.
9. Endocrine glands – General introduction to endocrine system, classification and characteristics of hormones, physiology of all endocrine glands, their functions and their effects.

PRACTICAL

100 marks

Teaching hours-180

Ayurvedic practical

1. Assessment of Prakriti
2. Assessment of Dosha (Features of Vriddhi- Kshaya)
3. Assessment of Dhatu (Features of Vriddhi- Kshaya)
4. Assessment of Agni
5. Assessment of Koshtha
6. Assessment of Sara
7. Nadi pariksha

Modern physiology practical

1. Introduction to laboratory instruments- Simple & Compound Microscope, Scalp vein set, bulbs for blood collection, Sahli's Haemometer, Haemocytometer, pipettes, Urinometer, Albuminometer, Stethoscope, B.P. Apparatus, Harpenden's caliper, Clinical Hammer, Tuning Fork, Stop Watch, Thermometer, Centrifuge machine, ECG Machine
2. Collection of blood sample – prick, vene-puncture method, use of anticoagulants
3. Preparation of blood smear and staining
4. Estimation of Hemoglobin
5. Microscopic examination of blood
 - a. Total RBC count
 - b. Total WBC count
 - c. Differential leucocyte count
6. Packed cell volume (PCV) demonstration
7. ESR demonstration
8. Bleeding time, Clotting time
9. Blood grouping and Rh typing
10. Examination of Cardio-Vascular system
 - a. Pulse examination
 - b. Arterial blood pressure measurement
 - c. Examination of heart sounds
 - d. ECG demonstration
11. Examination of Respiratory system
 - a. Respiratory rate
 - b. Breath sounds
 - c. Spirometry
12. Examination of Nervous System- Sensory & Motor.

13. Urine examination –Physical examination, chemical examination. Test for normal constituents of urine. Detection of specific gravity and reaction of urine.

Distribution of Practical marks

1. Laboratory Practical	- 20
2. Human Experiment	- 15
3. Spotting	- 15
4. Prakriti Saradi pariksha	- 20
5. Practical Record	- 10
6. Viva- voce	- 20

1.4 RACHNA SHARIR (ANATOMY)

**Theory- Two Papers-200 Marks-(100 marks each)
Teaching Hours-180 hours**

PAPER-I

100 marks

PART-A

50 marks

1. Shariropkramaniya Shaarira

Sharira and shaarira vyakhya (definitions of sharira and shaarira), shadangatvam (six regions of the body), anga pratyanga vibhaga (sub divisions). Mrita sharir samshodhan. Shaarira shastra vibhaga, shaarira gyan prayojana . Constitution of purusha according to dhatubheda, panchabhautikatvam, trigunatmakatvam, tridoshamayatvam, karma purusha, and doshadhatumala-mulakatvam.

2. Paribhasha Shaarira

Kurcha, kandara, jala, asthisanghat, seemanta, seevani, rajju, snayu and lasika.

3. Garbha Shaarira

Garbha definitions, explanation of shukra, artava, garbhadhana. Role of tridosha and panchmahabhuta in the fetal development. Beeja, beejabhaga and beejabhagavayava, linga vinischaya, masanumasika garbha vriddhi-krama, garbhottpadakbhava, garbhavridhdikara bhava, garbha poshana, apara nirmana , nabhinadi nirmana. Aanga pratyanga utpatti.

4. Pramana Shaarira: Anguli pramana.

5. Asthi Shaarira

Asthi vyakhya, number, types, asthi swaroota, vasa, meda and majja.

6. Sandhi Shaarira

Sandhi vyakhya, numbers, types of asthi sandhi.

7. Sira, Dhamani, Srotas Shaarira

- Definition, types and number of sira and dhamani.
- Description of Hridaya.
- Srota shaarira: Definition, types of srotas and srotomula.

8. Peshi Shaarira

- Peshi vyakhya, structure, types, number and importance.
- Description of Peshi.

9. Koshtha Evam Ashaya Shaarira

- Definition of koshta and number of koshtanga.
- Types and description of ashaya.

10. Kalaa Shaarira

Kalaa: definition and types.

11. Uttamangiya Shaarira

Shatchakra, ida, pingala and sushumna nadi - brief description.

12. Marma Shaarira

Marma: definition, number, location, classification, clinical importance with viddha lakshana. Explanation of trimarmas. Detail description of marmas.

13. Indriya Shaarira

Definition of indriya, indriya artha and indriya adhisthan, their number and importance. Description of gyanendriya, karmendriya and ubhayendriya (manas).

PART-B

50 marks

1. Definition and branches of anatomy. Preservation methods of the cadaver.

2. Anatomical Terminologies

Anatomical position, Planes, and explanation of anatomical terms related to skin, fasciae, bones, joints and their movements, muscles, ligaments, tendons, blood vessels, nerves,.

3. Embryology

Definitions and branches of embryology. Embryo and fetus. Sperm and ovum, fertilization. Cleavage. Germ layers formation and their derivatives. Laws of heredity, Sex determination and differentiation, Month-wise development of embryo. Foetal circulation, placenta formation, Umbilical cord formation.

4. Osteology

Bone: Definition, ossification, structure and types. Description of bones with clinical anatomy.

5. Arthrology

Joints: Definition, structure types and movements. Description of joints of extremities, vertebral joints and temporomandibular joint with their clinical anatomy.

6. Cardiovascular system

- a. Definition, types and structure of arteries and veins.
- b. Description of heart and blood vessels with their course and branches.
- c. Pericardium with applied aspect.

7. Lymphatic system

Definition, types and structure of lymph vessels, lymph glands with their clinical aspect.

8. Myology

- a) Structure and types of muscles.
- b) Description of muscles; their origin, insertion, actions, nerve supply and clinical anatomy.

Paper II

100 marks

Part A

50 marks

1. Respiratory System

- a. Bronchial tree and lungs with their clinical aspects.
- b. Respiratory tract: nasal cavity, pharynx, larynx, trachea, bronchial tree.
- c. Pleura with its clinical aspects.
- d. Diaphragm.

2. Digestive system

- a. Organs of digestive tract (alimentary tract) with their clinical aspects.
- b. Digestive glands: liver, spleen and pancreas.
- c. Description of peritoneum with its clinical aspects.

3. Urinary System

Urinary tract: kidney, ureter, urinary bladder and urethra with their clinical aspects.

4. Reproductive system

- a. Male Reproductive system: reproductive organs, tract and glands (prostate and seminal vesicles) with their clinical aspects.
- b. Female reproductive system: reproductive organs, tract and glands with their clinical aspects.

5. Endocrinology

Definition, classification & description of endocrine glands (pituitary, thyroid, parathyroid, thymus and suprarenal glands) with clinical aspects.

PART B

50 marks

6. Nervous System

Nervous system: definition, classification and its importance. Description of brain and spinal cord.

Description of peripheral nervous system: cranial and spinal nerves, nerve plexuses, and autonomic nervous system, formation and circulation of cerebrospinal fluid and blood supply of brain and spinal cord.

7. Sensory organs

Description of structures of eye, ear, nose, tongue and skin with their clinical aspects.

8. Surface and radiological anatomy

- a. Study of radio-imaging of limbs, abdomen, pelvis and vertebral column with its clinical application.
- b. Surface anatomy of thoracic and abdominal viscera.

PRACTICAL

100 marks

Teaching hours: 180

Content of practical

1. Practical study of bones
2. Practical study of organs
3. Practical study of surface and radiological anatomy.
4. Shava vichhedana – detailed dissection of the whole body.
5. Practical study of location of marma
6. Demonstration of histology slides (10 slides)

Distribution of marks

- | | |
|--|----------|
| 1. Spotting - | 20 marks |
| 2. Dissected organs and histology slides - | 20 Marks |
| 3. Bones, joints, marma - | 20 Marks |
| 4. Surface & radiological anatomy - | 10 Marks |
| 5. Practical records - | 10 Marks |
| 6. Viva-Voce - | 20 Marks |

Total

100 Marks

1.5 Maulik Siddhant avum Ashtang Hridaya
(Basic Principles and Ashtang Hridaya- An ancient text of Ayurveda)

Theory- One Paper- 100 marks
Teaching Hours -120 hours

Part A **60 marks**

Ashtang Hridaya Sutrasthana Adhyaya 1 to 15

Part B **40 marks**

1. Ashtang Hridaya Sutrasthana Adhyaya 16 to 30
2. Description of Ashta Prakriti
3. Shastra Lakshan (Tantra), Tantraguna, Tantradosha, Tachitalya, Arthasraya, Kalpana

Reference Books:

1. Astang Hridaya : Hindi commentary by Lalchanda Vaidya
2. Astang Hridaya : Hindi commentary by Vd. B.L. Gaur

4. Astang Hridaya : English commentary by Dr. Vishwavasud Gaur
5. Astang Hridaya : Sanskrit commentary by Hemadri
6. Astang Hridaya : Sanskrit commentary by Arunadatta

CENTRAL COUNCIL OF INDIAN MEDICINE
NEW DELHI

SYLLABUS OF AYURVEDACHARYA (BAMS) COURSE

INDEX

2ND PROFESSIONAL

1.1	DRAVYAGUNA VIGHYAN	2-9
1.2	ROGA NIDAN	10-14
1.3	RASASHATRA	15-23
1.4	CHARAK SAMHITA	24

2.1 DRAVYAGUNA VIGYAN
(PHARMACOLOGY & MATERIA MEDICA)

Lectures: 200 Hrs.

Practicals: 200 Hrs.

Total Marks -400

Theory Two Papers– 100 Marks Each

Practical/Viva voce – 200 Marks

Paper I

100 Marks

Part A

50 Marks

1- Dravyaguna Shastra Paribhasa- Lakshana of Sapta Padartha of Dravyaguna Vijnana viz Dravya- Rasa-Guna- Virya- Vipaka- Prabhava and Karma.

2- Dravya:

Etymological derivation, definition, panchbhoutikatwa.

Classification of Dravya according to Samhitas and Nighantus Taxonomical classification.

3- Guna:

Etymological derivation, definition and Classification of Guna.

Detailed knowledge of Gurvadi Guna & Paradi gunas.

4- Rasa:

Etymological derivation, definition, Meaning of "Rasa" in various contexts. Shad Rasas (Madhura, Amla, Lavana, Katu, Tikta, and Kashaya), Panchabhautik constitution of Rasas, Nirvrittivisheshakrama (manifestation in general and particular), Ritu and shad rasa Rasanurasayoh bheda (Difference between rasa and anurasa), Lakshana (characteristics),Guna and Karma of shad Rasas, Kopana and Shamana of Dosha and dushya by Shad rasas. Effects of excess usage of Rasa. Rasopalabधि, Rasaskandha.

5- Vipaka:

Etymological derivation and definition, difference between Avasthapaka and Vipaka, Types of Vipaka, (Dvidha-Trividha,Panchavidha) Guna and karma of Vipaka.

Grades of Vipaka (taratamya), Vipakopalabधि hetu (Factors to determineVipaka).

6- Veerya:

Etymological derivation, definition and Swarupa of Virya, Number of Virya.

(Dvidha & Ashtavidha), Panchabhauthikatva

Virya karmani (Effects of Virya), General principles in determination of virya along with exceptions.

7- Prabhava:

Definition, Effects of Prabhava.

8- Interrelation of Rasa-Guna-Virya-Vipaka-Prabhava with respect to their strength (balabal nirupana). Samanapratyayarabdha and Vichitrapratyayarabdha dravyas.

9- Karma:

Lakshana, swarupa and bheda of karma (Definition, nature and types of action).

Explanation of the following Karmas with examples:

- | | | |
|-----------------|----------------|-----------------|
| 1. Deepana | 2. Pachana | 3. Samshodhana |
| 4. Samshamana | 5. Anulomana | 6. Sransana |
| 7. Bhedana | 8. Rechana | 9. Chhedana |
| 10. Lekhana | 11. Grahi | 12. Sthambhana |
| 13. Madakari | 14. Pramathi | 15. Abhishyandi |
| 16. Vyavayi | 17. Vikashi | 18. Rasayana |
| 19. Vajeekarana | 20. Jeevaneeya | 21. Balya |
| 22. Brimhana | 23. Langhana | 24. Medhya |

10. Brief information on Karmas of dashemani gana of Charak Samhita.

11- Mishraka Gana:

11a)- Audbhida Gana (Vegetable origin) Brihatpanchamoola, Laghupanchamoola, Vallipanchamoola, Kantakapanchamoola, Trinapanchamoola, Madhyamapanchamoola, Jeevaneeya panchamoola, Panchapallava, Panchavalakala, Triphala, Trikatu, Trimada, Chaturusana, Panchakola, Shadusana, Chaturbeeja, Jeevaniya gana, Ashtavarga, Trijataka, Chaturajataka, Katuchaturjataka Panchatikta, Amlapanchaka, Chaturbhadra, Trikarshika, Swalpatriphala, Madhuratriphala, Mahavisha, Upavisha, Agrya aushadh varga- Knowledge of Agrayaushadha Varga with example.

11 b)- Jangama Gana (Animal origin)- Ksheerashtaka, Mutrashtaka, Pitta panchaka.

11 c)- Parthiva Gana (Mineral origin) - Lavana Panchaka, Kshara dvaya, Kshara Ashtaka.

12- Basis of nomenclature:

Basis of nomenclature of dravya, Basis and Derivation of synonyms.

13. Bheashaja Pariksha vidhi (as described in Charaka samhita vimana sthana 8), Dravya Sangrahana (collection of dravya)- Ecology- Classification of desha (geographical area) and bhumi (soil), swarupa of sangrahaniya dravya of (Nature and quality of drug to be collected). Sangrahana vidhi (Method of collection) -Vegetable and Animal origin drugs according to part used. Period of collection according to virya, samrakshana vidhi (preservation of collected dravyas), bheshajagara (Storehouse), study on different prayojyanga (useful plant parts).

Part B**50 Marks****(I)****20 Marks**

14 a) Concept of dravya shodhan (purification of dravya).

14 b) Brief knowledge of Apamishran (adulterants)

14 c) Concept of Abhava pratinidhi dravya (substitutes)

15- Prashasta bhesaja (ideal drug), plant extracts. Concept of viruddha Dravya (incompatibility of the dravya).

16- Introduction to Nighantu Vigyan - Dhanwantari Nighantu, Bhavaprakashanighantu, Rajanighantu.

17- Brief knowledge of cultivation, conservation of medicinal plants and information about endangered species.

(II)**30 Marks**

18. - Introduction, Definition & scope of Pharmacology and Principles of general Pharmacology. Brief Knowledge about pharmacology of the following - Anaesthetics, CNS depressants, Sedatives, Hypnotics, Tranquilisers, Antipyretics, Analgesics, Antiepileptics, Antihypertensive, Antianginal, Antiplatelet, Hypolipidaemic, Haemopoetic, Coagulants, Bronchodilators, Aerosols/ Inhalants, Expectorants, Digestants, Carminatives, Antacids, Antiulcer, Laxatives, Antidiarrhoeals, Antiemetic, Hepatoprotective, Diuretic, Antidiuretic, Lithotriptic, Antiinflammatory, Hormonal therapy, Antiobesity, Antidiabetic, Antithyroid, Oxytocic. Galactagogues, Contraceptives, Styptics, Antihistamines, Antimicrobial, Antibiotics, Antimalarial, Amoebicidal, Antifilarial, Anthelmintic, Antifungal, Vitamins, Minerals, Water imbalance and IV fluids, Vaccines, antivenom, antirabies serum, Local anti septics, drugs in ophthalmic practice, Anti cancer drugs and immunomodulators.

Paper II**100 Marks****Part A****70 marks****1-Detailed Knowledge of Following Dravya –**

- 1- Detailed knowledge of following drugs with respect to Basonym of drug, Main Synonyms, Regional Name, Botanical Name, Family, Classification of Dravya (Gana) as described in Charak and Sushrut, External morphology, Useful parts, Important phytoconstituents, Rasa panchaka, Action on Dosha, Dhatu, Mala, Prayogarha vyadhi (therapeutic indications), Amayikaprayoga and Matra (Therapeutic administration and Dose), Vishishta yoga (names of important formulations), Vishakta Lakshan (adverse effects), Chikitsopachara (remedial measures) and Shodhana (as required)

[Alphabetical order and Botanical names to all the drugs are to be added]

Agaru	Guggulu	Pashanabheda
Agnimantha	Haridradvaya	Patala
Agnimantha	Haritaki	Pippali-Pippalimula
Ahiphena	Hingu	Prishniparni
Amalaki	Jambu	Punarnava
Apamarga	Jatamansi	Pushkarmoola
Aragvadha	Jatiphal	Rasna
Aragvadha	Jeerakadvaya	Rasona
Ardraka-Sunti	Jyotishmati	Rohitaka
Arjuna	Kalamegha	Saireyaka
Arjuna	Kampillaka	Sarivadvaya
Arkadvaya	Kanchanara	Sarpagandha
Ashvagandha	Kantakari	Shalaparni
Asoka	Kapikacchu	Shallaki
Ativisha	Karkatakshringi	Shalmali
Bakuchi	Karpura	Shankhapushpi
Baladvayam.	Katuki	Shatavari
Bhallataka	Khadira	Shigru
Bharangi	Kiratatikta	Shirisha
Bhrungaraj	Kumari	Shyonaka
Bibhitaka	Kumkum Kesara	Talisa Patra
Bijak/ Vijaysar	Kupilu	Tila
Bilva	Kushta	Trivrut
Brahmi	Kutaja	Tulasi
Bruhati	Lavanga	Tvak
Chandanadvaya,	Lodhra	Ushira
Chitraka	Madanaphala	Vacha
Dadima	Mandukaparni.	Varahi
Devadaru	Manjishtha	Varahi
Dhataki	Maricha	Varuna
Durva	Musta	Vasa
Eladvayam	Nagakeshara	Vatsanabha
Eranda	Nimba	Vidanga
Gambhari	Nirgundi	Vidari
Gokshura	Palasha	Yastimadhu
Guduchi	Parpata	Yavani

Part B-

II- Brief Knowledge of following dravyas with Respect to Sanskrit Name, Botanical Name, Family, Habit (Samanya Swarupa), Parts Used and Indications.

Agastya	Jati	Palandu
Ajamoda	Jayapala	Parasika Yavani
Akarkarabh	Jeevanti	Parijata
Amlavetasa	Kadali,	Parisha
Amra	Kadamba	Parnabija

Amragandhiharidra	Kaidarya	Parnayavani
Ankola	Kakamachi	Parpataka
Aparajita	Kamala	Parushaka
Ashvagol	Kankola	Patalagarudi
Ashvattha	Karanja	Patha
Asthishrunkhala	Karavellaka	Patola
Atasi	Karavira	Patranga
Avartaki	Karira	Pilu
Avartani	Karpasa	Plaksha
Babbula	Kasamarda	Prasarani
Badara	Kasha	Priyala
Bakula	Kasni	Priyangu
Bhumyamalki	Kataka	Puga
Bijapoor	Katphala	Putiha
Bola	Kebuka	Putranjivaka
Chakramarda	Kharjura	Rajika/Sarshapa
Champaka	Kitmari	Rohitaka
Chandrashura	Kokilaksha	Saptachakra
Changeri	Koshataki	Saptaparna
Chavya	Kulatha	Saral
Chirbilva	Kumuda	Sarja
Chopachini	Kusha	Shala
Danti	Kusmanda	Shara
Darbha	Lajjalu	Sharapunkha
Dattura	Langali	Shatahwa
Dhanvayasa	Latakaranja	Shati
Dhanyaka	Latakasturi	Snuhi
Draksha	Madayantika	Sringataka
Dronapushpi	Mahanimba	Svarnakshiri
Gandhaprasarini	Mandukaparni	Tagara .
Garjara	Markandika	Tailaparni
Gojihva,	Masha	Talmuli
Gorakshaganja	Mashaparni	Taruni
Gunja	Matulunga	Tavakshira
hinsapa	Mayaphala	Teja Patra
Hinstra	Meshashrungi	Tuvaraka
Hribera	Methika	Udumbara
Hrutpatri	Mudgaparni	urana
Ikshu	Mulaka	Vamsha
Indravaruni	Murva	Vata
Ingudi	Nagabala	Vatada
Irimesa	Nala	Vrudhadaru
Ishvaku	Narikela	Vrukshamla
Isvari	Nili	
Japa	Padmaka	

III .-Introduction, Guna, Karma and Uses of following Jantava Dravya (Drugs of Animal Origin).

1. Kasturi

2. Goroohana

3. Mrigasringa

IV- Introductory Knowledge of Following Annapana Varga:

- | | | |
|----------------|---------------------|----------------------|
| 1. Jala Varga | 2. Dugdha Varga | 3. Madhu Varga |
| 4. Taila Varga | 5. Sukadhanya Varga | 6. Shamidhanya Varga |
| 7. Phala Varga | 8. Shaka Varga | 9. Mamsa Varga |
| 10. Aharayogi | | |

PRACTICALS

1. A. Study of Macroscopic, Microscopic characters and Demonstration of organoleptic characteristics and grahya-agrahyatva of following plants and their useful parts.
 - i. Kanda (stem) - Guduchi or Ashtishrinkhala
 - ii. Patra (leaves) - Vasa or Kumari
 - iii. Pushpa (flower and Parts of flower)- Dhataki or Japa
 - iv. Phala (fruit) – Maricha or Madanaphala or Vidanga
 - v. Beeja (seeds) – Eranda or Kapikacchhu
 - vi. Twak (bark) – Kutaja or Arjuna or Ashwattha
 - vii. Moola(Root)- Punarnava or Chitraka
 - viii. Nirayasa (exudate) – Guggulu or Mocharasa
 - ix. Jangama dravya - Madhu or Ghrita.
2. Records of Herbarium sheets of 50 medicinal plants Compulsory study tour other state/s for field knowledge and procurement of plant species.

PRACTICAL MARKS DIVISION

1	Herbarium	20 Marks
2	Practical record	20 Marks
3	Drug identification- spotting –Raw/crude drugs	30 marks
4	Plant identification spotting –fresh	30 marks
5	Practical	40 marks
6.	Viva-Voce	60 Marks
Total		200 marks

2.2 ROGA NIDANA

Theory Two Papers – 100 Marks Each
Practical/Viva voce – 100 Marks

PAPER -1

100 Marks

Part A

50 Marks

I. Dosha Dushyadi Vigyan

1. Definition and importance of Roganidana.
2. Samanya Nidana and Samanya Lakshana of Dosha Vriddhi, Kshaya and Prakopa.
3. Dosha Dhatu Ashraya Ashrayi Bhava.
4. Dhatu Kshaya Vriddhi Lakshana.
6. Mala Kshaya Vriddhi Lakshana.
7. Hetu, Bheda and Lakshana of Agni Dushti.
8. Definitions and Samanya Lakshana of Ama.
9. Sama and nirama Dosha, Dushya Lakshana.
10. Dosha Paka and Dhatu Paka Lakshana.
11. Concept, classification, diagnosis and general complications of Avarana.
12. Doshagati and Rogmarga.
13. Detailed study of Srotomoola and Srotodushti Samanya and Vishishta Hetu Lakshana of all Srotas. Differences between Sroto Dushti and Kha Vaigunya.

II. Vyadhi Vigyan

1. Definition, synonyms and classification of Vyadhi & Vyadhi Ghatak.
2. Criteria for nomenclature of Diseases in Ayurveda (Vyadhinamakarana).
3. Bija, Bija Bhaga and Bija Bhaga Avayava Dushti.
4. Basic knowledge of Hereditary, Congenital, Acquired, Multifactorial, Traumatic and Environmental disorders.
5. Introduction to ICD Classification of Diseases of WHO and DSM classification.
6. Samanyaja and Nanatmaja Vikara. NidanarthakaraVyadhi, Hetu Sankara, Lingasankara, Vyadhisankara, Vyadhi Awastha.
7. Dhatu, Updhatu, Mala and Indriya Pradoshaj Vikara.
8. Concept of AshtaMahagada .
9. Introduction to Ashta Nindita.
10. Definition and classification of Vyadhikshamatva.
11. Ojas – types of Ojo Dushti- Visrimsa- Vyapad & Kshaya & It's Diseases.

III. Basic Pathology

1. Introduction to pathology and its sub-divisions.
2. Introduction to Cell Injury and Cellular adaptations.
3. Definition and brief description of inflammation – Healing/repair.
4. Definition and brief description of edema – shock – hemorrhage, Thrombosis , embolism, Ischemia and Infarction.
5. Types of Immunity – different types of immune responses in the body – Basic knowledge of auto immune diseases, Acquired immune deficiency disease and hypersensitivity.
6. Nomenclature and classification of tumors - difference between benign and malignant tumors.
7. Introduction to Nutritional disorders – disorders of macro and micro nutrients.
8. Introduction to infections.

9. Introduction and classification of microorganisms such as virus- bacteria-fungus.

Part B

50 Marks

IV. Nidana Panchaka Vigyana

1. Difference between Roga and Rogi Pariksha.
2. Importance of Nidan Panchaka.
3. Hetu - Definition, Synonyms and Classification.
4. Purva Rupa – Definition, Synonyms, Samanya and Vishishta Purvarupa.
5. Rupa - Definition, Synonyms, Samanya and Pratyatma Lakshana. Difference between Vyadhi and Lakshana.
6. Upashaya / Anupashaya– Definition, Types and its importance in diagnosis.
7. Samprapti – Definition, Synonyms and Type and Samprapti Ghataka.
8. Shat Kriyakaala. Relationship between Nidana Panchaka and Shat Kriyakaala.
9. Upadrava and Udarka.
10. ArishtaVigyan – Definition, Types and its importance.
11. Sadhyasadhyatwa – Types, their parameters and importance.
12. General diagnostic principles of AnuktaVyadhi (Ch. Vi. 4).

V. Pariksha Vigyana

1. Importance and knowledge of Aptopadeshadi & Darshanadi Trividha, Chaturvidha, and Shadvidha Pariksha.
2. Importance and Knowledge of Ashtasthana Pariksha.
3. Importance and Knowledge of Karanadi Dashavidha Parikshya Bhava.
4. Importance and Knowledge of Dashavidha Pariksha.
5. Basic knowledge of ECG, USG, X Ray, CT Scan, MRI.

Paper II

100 Marks

Part A

50 Marks

Systematic study of Nidana Panchaka of following diseases (Including Upadrava, Arishta and Sadhyasadhyata).

I. Diseases of Rasavaha Srotas

- 1(a) Jwara(Jwarabheda-Ama, Pachyamana and Nirama Jwara,Agantukajwara, Punaravartaka Jwara,Vishama Jwara, Dhatugata Jwara, Charakokta Sannipata Jwara.
- 1(b) General mechanism of Fever, Introduction to the Aetiopathogenesis of Malaria,Typhoid, Dengue fever, Influenza and Chikungunya.
- 2(a) Pandu, Amavata, Hridroga, Shotha.
- 2(b) Introduction to Anaemia & its Classification, Rheumatic fever, Rheumatoid Arthritis, Hypertension, Angina, Ischaemic Heart Disease, Myocardial Infarction and CCF.

II. Diseases of Raktavaha Srotas

1. Kamala - Raktapitta - Vatarakta – Kroshtuksheersha - Shitapitta – Maha Kushtha – Visarpa – Shwitra and Introduction to Kshudra Kushtha.
2. Introduction to Hepatomegaly, Spleenomegaly, Leukaemia, Thalessemia, Sickle cell Anaemia.
3. Introduction to Urticaria, Psoriasis, Eczema, Pemphigus.

III. Diseases of Mamsavaha Srotas

- (a) Galganda
- (b) Introduction to Thyroid disorders

IV. Diseases of Medovaha Srotas

1. Sthoulya - Karshya – Prameha.
2. Introduction to Obesity and Diabetes Mellitus.

V. Diseases of Asthi – Majjavaha Srotas

1. Vatavyadhi - Akshepaka - Apatanaka - Ardita - Pakshaghata – Gridhrasi –Vishwachi, Avabahuka, - Manyasthambha ,Katigraha,Pangutwa
2. Sandhigatavata, Asthi-Majjagata vata.
3. Introduction to Osteo- Arthritis, Osteoporosis.
4. Introduction to Parkinson’s disease, Stroke, Lumbago- Sciatica syndrome, Bell’s Palsy, Cervical- Lumber & Ankylosing Spondylitis.

VI. Diseases of Shukravaha Srotas

1. Introduction to Klaibya and Vandhyatva.
2. Introduction to male and female infertility.

Part B

50 Marks

VII. Diseases of Pranavaha Srotas

- 1(a). Kasa - Shwasa - Hikka – Urahkshata – Shosha – Rajayakshma.
- 1(b). Introduction to the aetiopathogenesis of Pneumonia, Pleural effusion, Bronchitis, Bronchiectasis, Bronchial Asthma.

VIII. Diseases of Annavaha- PureeshavahaSrotas

1. Agnimandya - Ajirna - Aruchi- Chhardi - Amlapitta- Shoola – Parinama Shoola – AnnadravaShoola- Atisara – Pravahika - Grahani –Gulma- Udara Roga.
2. Introduction to Anaha, Adhmana, Atopa, Visuchika Alasaka, Vilambika.
3. Introduction to Peptic Ulcer, Irritable Bowel Syndrome (IBS) Diarrhoea, Dysentery, Constipation, Inflammatory Bowel Diseases.

IX. Diseases of Udakavaha Srotas

- 1(a) Introduction to Trishna, Daha.
- 1(b) Introduction to water and electrolyte imbalance disorders.

X. Diseases of Mutravaha Srotas

- 1(a) Mutrakrichha – Mutraghata.
- 1(b) Introduction to Urinary Tract Infection, Nephropathies.

XI. Diseases of Swedavaha Srotas

- 1(a) Introduction to Khalitya, Palitya.

XII. Diseases of Manovaha Srotas

- 1(a) Apasmara, Unmada, Atatwabhinivesha-Vishada, Anidra, Mada, Murchha, Sanyasa.
- 1(b) Introduction to Epilepsy, Depression, Anxiety neurosis.

XIII. Upasargjanya Vyadhi (Communicable diseases)

- 1(a) Romantika – Masurika – Upadamsha – Phiranga.
- 1(b) Introduction to Measels, Chickenpox, Leprosy, Tuberculosis and AIDS.

XIV. Krimi Vigyana

- 1) Definition, classification of Krimi and features of Krimiroga
- 2) Snayuka, Shleepada.
- 3) Introduction of Filariasis and classification of common parasites.

PRACTICAL

(100 Marks)

i) Fundamental Principles of Laboratory Tests

Introduction to laboratory, Sterilization, glass wares, solutions reagents and safety procedures, Disposal of biomedical wastes.

ii) Haematology

- 1 Haemoglobin estimation.
- 2 Blood cells counting - WBC, RBC, platelets.
- 3 Hematocrit /Packed cell volume (PCV).
- 4 Erythrocyte indices - MCV, MCH, MCHC.
- 5 Peripheral blood smear, staining technique and differential leucocyte count.
- 6 Peripheral blood film examination in Anemia, Leukemia, Malaria, Filariasis (Demonstration).
- 7 ESR.
- 8 Screening test for bleeding disorders- bleeding time (BT), Clotting time (CT), Demonstration of Prothrombin time (PT).
- 9 Blood grouping - ABO system, Rh typing (Rhesus system).

iii) Urine Examination

1. Ayurveda anusara mutrapariksha.
2. Physical Examination - Volume, Reaction (Ph) & Specific Gravity.
3. Chemical Examination for - Proteins, Glucose, Phosphate, Ketone, Bile salts, Bile pigment.
4. Dipstick examination
5. Demonstration of Microscopic Examination.

iv) Stool Examination

- 1 Ayurveda anusara purishapariksha.
- 2 Physical examination, Sama-Nirama Pariksha.
- 3 Microscopic examination of ova & cyst (Demonstration)
- 4 Occult Blood Test.

v) Demonstration of Sputum Examination

- 1 Ayurveda anusara sthivanapariksha.
- 2 Physical, Chemical and Microscopic Examination of the sputum.
- 3 Sample collection and Demonstration of AFB.

vi) Demonstration of Semen examination

- 1 Ayurveda anusara Retaspariksha.
- 2 Semen examination.

vii) Biochemical Examination – (Demonstration)

Blood Glucose, Serum Bilirubin, Blood Urea, Lipid Profile, Serum Creatinine, Serum Uric acid etc.

viii) Demonstration of different staining techniques in microbiology.

ix) Demonstration of Sero-immunological Investigations: RA and Widal.

x) Laboratory record – maintenance of laboratory record book.

Bed side Practical (Clinical Methods)

1. Introduction and demonstration of clinical methods (General and Systemic Examination).
2. Practical demonstration of examination of Roga based on Pancha Nidana.
3. Demonstration of instruments used for clinical examination.
4. Practical records of clinical examination of at least 20 long cases in I.P.D including Aturbala-pramana pareeksha.
5. Practical records of clinical examination of at least 20 short Cases based on Ashta vidha pariksha in O.P.D.

6. Demonstration of ECG, USG and Radio imaging techniques.

Distribution of Marks for final Practical Examination

1. Daily Record -10 Marks
2. Identification of Instruments -10 Marks
3. Laboratory Experiments -20 Marks
4. Short Case -10 Marks
5. Long Case -20 Marks
6. Viva - Voce -30 Marks

Total 100 Marks

Reference Books

1. Madhava Nidana (Madhukosha Pt. Yadunandan Upadhyay Commentary) Part 1 – 2
2. Doshakaranatwa Mimamsa - Acharya P.V. Sharma
3. Nadi Darshan - Vd. Tara Shankar Mishra
4. Nadi Vigyana Vidyotini Hindi Tika
5. Nadi Vigyan- Shri Satya Dev Vashisht
6. Nadi Vigyan- Gangadhar Tika
7. Rogi Pariksha vidhi Acharya- Priyavrata Sharma
8. Ayurvediya Roga Vargikaran- Vd. Ramanath Dwivedi & Vd. Gurdip Singh.
9. Ayurvediya Nidan Evum Chikitsa Ke Siddhanta - Prof. Ram Harsh Singh.
10. Relevant portions of Charak Samhita, Sushrut Samhita and Vagbhata.
11. Text Book of Pathology- William Boyds.
12. Text Book of Pathology- Harsh Mohan.
13. Text Book of Pathology- Dey and Dey.
14. Text Book of Parasitology -Ramnik Sood.
15. Clinical Pathology and Bacteriology- S.P. Gupta.
16. Clinical methods in Ayurveda- K. R . S. Murthy.
17. Parameswarappa's Ayurvediya Vikriti Vigyan and Roga Vikriti Vigyan-Dr. P.S. Byadgi.
18. Oxford Handbook of Clinical Examination Oxford Handbooks and Practical Skills.
19. Advanced Clinical Evaluation System for Practical Assessment of Clinical Examination Skills.
20. Symptoms & Signs in Clinical Medicine - Chamberlains.
21. Clinical Methods- Hutchison's.
22. Bedside Clinics in Medicine Part- I & II-Kundu.
23. Common Medical Symptoms- Mehta.
24. Advances in Pathology & Lab Med- Weimstean, Gralem, Anderson, Cortan, Wick, Zumwelt.
25. Clinical Laboratory medicine Edited by Kenneth D Mc. Chately.
26. General Pathology- Walter & Israel Churchill Living stone.
27. A Comprehensive Dictionary of Pathology- Chris Newann.
28. Practical Pathology- Dr. K. Uma Chaturvedi.
29. Clinical examination- Douglas/Macleod's.
30. Pathology Practical book for Undergraduates- Harsh Mohan.
31. Medical Laboratory Technology - R. Sood.
32. Clinical Diagnosis and Management by Todd, Sanford and Davidson Laboratory methods
33. Clinical Hematology In Medical Practice- Degruchy's.
34. Robbins Basic Pathology- Kumar, Abbas, Fausto et al.

2.3. Rasashastra Evam Bhaishajyakalpana

(IATROCHEMISTRY AND AYURVEDIC PHARMACEUTICS)

Theory -Two Papers

Total Marks- 200

RASASHASTRA

Paper 1

100 Marks

Part A

50 Marks

1. Definition and etymology of Rasa, History of Rasashastra, Importance of Rasaushadhi, Concept of Rasa-Rasayana, Concept of Raseshwar Darshana. Concept of Rasashala and Rasamandap.
2. Brief Description and Application of Technical terminologies (Paribhasha): Avapa, Nirvapa, Dhalana, Bhavana, Jarana, Murchana, Shodhana, Marana, Amrutikarana, Lohitikarana, Mruta Loha, Satwa Patana, Druti, Apunarbhava, Niruttha, Rekhapurna, Varitara.
3. Dravya Varga: Amlavarga, Panchamrittika, Panchagavya, Panchamrita, Ksharashtaka, Dravakagana, Mitra panchaka, Rakta varga, Lavanapanchaka.
4. Brief description of Yantras and their application Ulukhala Yantra, Khalwa Yantra, Kachhapa Yantra, Damaru Yantra - Vidhyadhara Yantra- Urdhwapatan, Addhapatan & Tiryakpatana Yantra, Jaranartha Tulayantra, Dolayantra, Patalayantra, Palika Yantra, Baluka Yantra, Bhudhara Yantra, Sthali Yantra, Swedana Yantra.
5. Brief description & application of Musha (Crucible): Samanya Musha, Gostani musha, Vajra Musha, Maha musha, Yoga musha, Vrintaka Musha, Malla / Pakwa musha. Different types of crucibles e.g. Silica crucible, platinum crucible. Mudra and Sandhi Bandhana.
6. Brief description & applications of Chullika, Satwapatana Koshti, Patala Koshti, Gara Koshti, Angarakoshti and knowledge of various heating appliances viz. Gas stove, Hot plate, Heating mantle, Induction Stove, Hot Air Oven.
7. Concept, definition and types of Puta: Suryaputa, Chandraputa, Gomayaputa, Lawakaputa, Kukkutaputa, Kapotaputa, Varahaputa, Gajaputa, Mahaputa, Kumbhaputa, Valukaputa, Bhudharaputa, Applications of Electric muffle furnace and fuel (diesel) dependent furnace. Brief introduction to thermocouple and pyrometer.
8. Knowledge of Parada: Synonyms, Occurrence, natural and artificial sources of Parada, Hingulottha parada, Types of Parada, Parada Dosha: Naisargika, Yougika, Aupadhika

(Kanchuka). Grahya-Agrahya Parada, Parada gati, Parada bandha, Shodhana of Parada. Parada sanskara and brief description of Ashtasamskara.

9. Concept of Murchhana and Jarana of Parada, Preparation of Kajjali, Classification of Rasaushadhi: Khalvi rasa e.g. Tribhuvana Keerti Rasa, Parpati Rasa- Rasa Parpati, Kupipakva Rasa- Rasa sindur, Pottali rasa - Hemagarbha pottali. Rasa sevana vidhi and pathya and apathya.
10. Brief introduction of quality control , standardization and GMP of Rasaoushadhies.

Part B

50 Marks

Occurrence, Synonyms, Minerological identification, Sources, Types, Grahya and Agrahyata, Shodhana, Marana and other processing techniques. Properties, dose, anupan and therapeutic uses, pathya – apathya and ashuddha, apakwa and avidhee sevanyanya dosha and its management, important formulations of the following:

1. **Maharasa** –Abhraka (Biotite Mica), Vaikrantha, Makshika (Chalco-pyrite), Vimala (Iron Pyrite), Shilajatu, Sasyaka (Peacock ore), Chapala and Rasaka (Sphalerite).
2. **Uparasa** – Gandhaka (Sulfur), Gairika (Red Ochre), Kasisa (Green Vitriol), Kankshi (Alum), Haratala (Orpiment), Manahshila (Realgar), Anjana and Kankustha.
3. **Sadharana Rasa** – Kampillaka, Gauri pashana (Arsenic oxide), Navasadara (Ammonium chloride), Kaparda (Cowry), Agnijara, Giri Sindura (Red oxide of Hg), Hingula (Red Cinnabar) and Mriddara shringa (Litharge).
4. **Dhatu** -Swarna (Gold), Rajata (Silver), Tamra (Copper), Loha (Iron), Vanga (Tin), Naga (Lead), Yashada (Zinc), Kamsya (Bronze), Pittala (Brass), Vartaloha. Dhatu -graha sambandha.
5. **Ratna** - Manikya (Ruby), Mukta (Pearl), Pravala (Coral), Tarkshya (Emerald), Pushparaga (Topaz), Vajra (Diamond), Nilam (Sapphire), Gomeda (Zircon or Cinnamome stone), Vaidurya (Cats eye). Ratnapariksha, Ratnadosha, Ratna-graha sambandha.
6. **Uparatna**- Vaikranta (Tourmaline), Suryakanta (Sun stone), Chandrakanta (Moon stone), Rajavarta (Lapis lazuli), Perojaka (Turquoise), Sphatikamani (Quartz), Trinakanta, Palanka, Putika, Rudhir.
7. **Sudha varga** – Sudha (Lime stone), Kaparda (Cowries), Shukti (Oyster Shell) , Shankh (Conch Shell), Mriga shringa (Stag horn), Khatika, Godanti (Gypsum) and Samudraphena (Cattle Fish bone), Kukkutanda twak (Hen's Egg Shell).
8. **Sikata varga** - Sikata (Silica), Dugdhapashana (Talc), Nagapashana / Jaharmohara (Serpentine), Badarshama (silicate of lime), Vyomashma (Sangeyashab - Jade), Kousheyashma (Asbestos) and Akika (Agate).

9. Kshara varga - Sarja kshara (Sodium bicarbonate), Yava kshara, Tankana kshara (Borax), Surya Kshara (Potassium Nitrate).

10. Miscellaneous - Mandura, Bola, Dam-ul Akhawayan (Raktabandhini), Kasturi, Bhoonag, Mayurpiccha, Sarjarasa, Madhoochishta.

11. Visha and Upavisha-Introduction, collection and storage, classification, synonyms, shodhana, antidote, therapeutic and toxic doses, anupan, therapeutic uses, and formulations of following Visha and Upavisha-Vatsanabha, Kuchala, Jayapala, Dhattura, Bhanga, Bhallataka, Gunja, Arka, Snuhi. Langali, Karaveera, Ahiphena and Chitrakmool.

12. Aushadhi Yoga Gyanam- ingredients, manufacturing process, and bhesajprayogvidhi. Arogya Vardhini Gutika, Kasturibhairava Rasa, Kumara Kalyana Rasa, Garbhapala Rasa, Chandraprabha Vati, Chandramrita Rasa, Pratapalankeshwara Rasa, Pravalapanchamrita Rasa, Anandbhairava Rasa, Yogendra Rasa, Laxmivilas Rasa, Vasantakusumakara, Vasantamalati Rasa, Brihat Vata Chintamani Rasa, Shankha vati, Shwaskuthara Rasa, Hinguleswara Rasa, Hemagarbhapottali, Hridyarnava Rasa, Swarnavanga, Makaradhwaja, Putapakwavaisham Jwarantaka Loha, Vatvidhvamsan Rasa, Kamadugha Rasa, Laghusutshekhar Rasa, Navayasa Loha, Saptamrita Loha, Tamra Parpati, Panchamrita Parpati, Sveta Parpati.

13. Introduction to pharamcovigilance and its status in India, with reference to Ayurvedic drugs.

- A) Necessary to know - From part A and B : S. No. 1 to 9
B) Desired to know - From part B : S. No. 10

Practical

100 Marks

Minimum Twenty five practicals to be performed

- | | |
|-------------------------|---|
| 1. Rasa [Parada] | Samanya Shodhana of Parada
Kajjali
Mugdha rasa |
| 2 Maharasa varga | Shodhana of Abhraka
Dhanyabhraka nirmana
Shodhana of Makshika
Shodhana of Shilajatu
Shodhana of Sasyaka. |
| 3. Uparasa varga | Shodhana of Gandhaka
Shodhana of Gairika
Shodhana of Kasisa
Shodhana of Kankshi
Shodhana of Haratala
Rasa manikya nirman
Shodana of Manashila |

- | | |
|--------------------------------|---|
| 4. Sadharana rasa varga | Shodhana of Hingula
Shodhana of Navasadar |
| 5. Sudha Varga | Shodhana of Kapardika
Shodhana of Shankha
Shodhana of Shukti
Shodhana of Pravala mula
Shodhana of Godanti |
| 6. Dhatu varga | Samanya Shodhana of Lauha
Shodhana of Mandura
Samanya Shodhana of Tamra
Shodhana of Naga
Shodhana of Vanga
Shodhana of Yashada |
| 7. Kshara Varga | Shodhana of Tankana |
| 8. Parpati | Preparation of Rasaparpati, Bola
Parpati and Swetaparpati |
| 9. Visha varga | Shodhana of Vatsanabha,
Bhallataka, Kupilu, Dhattura beeja,
Jayapala, Gunja, Chitrakamoola. |

PRACTICAL FOR DEMONSTRATION / GROUP PRACTICALS

- 1.** Hingulad rasakrishti (Hingulottha Parada).
- 2.** Bhasma: 4 (One from each group)
 - i. Abhraka bhasma, Swarna Makshika bhasma, Tamra bhasma
 - ii. Vanga bhasma, Naga bhasma, Yashada bhasma
 - iii. Mandura bhasma, Kasisa bhasma
 - iv. Shankha bhasma, Kapardika bhasma, Godanti bhasma.
- 3.** Pishti : 1 Pravala pishti, Jaharmohara / Akika pishti,
Trina kantha mani pishti, Mukta pishti.
- 4.** Druti : 1 Gandhaka druti.
- 5.** Formulations 4 (one from each group)
 - i. Rasasindura, Swarna vanga, Sameer pannaga rasa
 - ii. Saptamruta lauha, Punarnava mandura, Navayasa lauha
 - iii. Agnitundi vati, Tribhuvana kirti rasa, Sootshekhara rasa,
Laghusutashekhara Rasa
 - iv. Arogyavardhini vati, Laghumalinivasanta rasa, Hinguleshwar rasa,
Anandbhairav rasa, Rajapravartini vati

BHAISHAJYAKALPANA

Paper II

100 Marks

Part A

50 Marks

- 1. History and Chronological (kramika vikasa) development** of Bhaishajyakalpana. Concept of Aushadha and Bhesaja.
- 2. Fundamental principles of Bhaishajya Kalpana.**
- 3. Study of Ancient and Contemporary systems of 'Maana' (Units of measurement), Shushka -ardra -drava- dravya grahan niyam** (Rules of measures of dry, fresh, liquid drugs); Grahyagrahyatva, Nava Puran dravya grahan niyam.
- 4. Guidelines and Methods of collection, storage, preservation of Aushadhi dravya.** Concept of Saviryatavadhi (shelf life) and stability in ancient and contemporary science.
- 5. Bhesajprayogavidhi : Aushadha Matra, Anupana and sahapan and Aushadh sevana kaala. (Posology).**
- 6. Panchavidha kashaya kalpana and Other kalpana :** Kashaya Yoni, Swarasa, Kalka, Kwatha, Hima and Phanta, Pramathya, Aushadha siddha paniya, Tandulodaka, Laksha rasa, Mantha, Panaka, Arka, Churna, Rasakriya, Ghana, Phanita, Avaleha, Prasha, Gudapaka, Sharkara, Syrups, Ksheerapaka, Satva, Guggulu kalpana, Vati, Gutti, Pinda, Modaka, Varti Preparation of Tablets, pills, capsule and Suppositories. Masi kalpana, Lavana kalpana, Kshara kalpana and Kshara sutra.
- 7. Introduction and general knowledge of useful instruments/ Equipments -** Disintegrator, Mixer, Grinder, End Runner, Edge Runner, Sieve-Shaker, Granulator, Tableting machine, Pill making machines, coating and polishing pan, capsule filling machine, sieves and mesh.
- 8. Sneha kalpana :** Sneha yoni, Types of Sneha, Sneha murchana vidhi, Sneha paka vidhi, patra paka, types and their use. Sneha siddhi lakshana, dose, Preparation and uses of Triphala Ghrita, Bramhighrita, Narayana taila, Anutaila.
- 9. Sandhana Kalpana and its types:** Madya Kalpana, Asava, Arishta, Sura (Prasanna - Kadambari - Medaka - Jagala - Bakkasa), Maireya, Surasava, Shukta, Kanjika, Sauvira, Tushodaka, Sidhu kalpana their methods of preparation, siddhi lakshana, properties, uses, doses. Takrarishta, Draksharishta, Ashokarishta, Dashamoolarishta, Kumaryasava, Chandanasava.

- 10. Kritanna and Aushadhisiddha anna Kalpana:** Definition of Kritanna, Concept of Pathya and Apathya, Yavagu –types of yavagu, Manda, Peya, Vilepi, Anna, Bhakta, Odan, Yush –types, Krishara, Mansa rasa, Vesavara, Khad Kamblika, Raga, Shadava, Dadhi and Takra Varga – Takra, Udasvita, Katvar, Mathita, Chhachika.

PART B

- 1. Bahyopacharartha kalpana (External Applications)-Lepa** -Types of Lepa, methods of preparation and mode of application. Udvertan and Avachurnan, Method of preparation of Siktha Taila, Malahara – Sarjarasa Malahara, Gandhak Malahara, Upanaha, Atasi upanaha, Shatadhouta and Sahastradhouta Ghrita. Brief introduction of semi solid dosage forms- Ointments, Creams, Emulsions, Gels, Lotions.
- 2. Principles and precautions for preparation of formulations for following:**
- 2.1 Netraupacharartha kalpana (Ophthalmic preparations)** – Seka, Drava, Pindi, Anjana - Ashchyotana - Tarpana - Putapaka and Vidalaka, Methods of preparation of eye drops, eye ointments.
- 2.2 Nasyopachararth Kalpana** - Classification of Nasya, Navana, Avapidana, Pradhaman, Marsha and Pratimarsha nasya.
- 2.3 Dhumapanarth kalpana** - Classification of dhumpaana, Method of preparation of dhumvarti and it's therapeutic uses. Dhupan: Vranadhupan, arshodhupan.
- 2.4 Mukhaprayogarth kalpana** - Gandoosha - Kavala - Pratisaran, Tooth paste, Tooth powders and Mouth wash.
- 2.5 Basti kalpana-** Classification, Method of preparation of Niruha and Anuvasana, Basti Therapeutic properties and uses of Basti.
- 3** Brief knowledge of Standardization of Ayurvedic formulations- Kastaushadhi.
- 4** Brief introduction of Drug and Cosmetics Act 1940 and Rules 1945.
- 5** Concept of, Aushadhi Nirmanshala, with respect to Good Manufacturing Practices (GMP) in accordance to Schedule T.

Practical Bhaishajya Kalpana

50 Marks

Following practicals to be performed- (Minimum one from each category)

Method of preparation, therapeutic uses, dose and anupana of the following

- 1.** Swarasa- Ardraka swarasa, Tulasi swarasa, Kumari Swarasa, Vasa putapaka swarasa
- 2.** Kalka- Nimba kalka, Rasona kalka.
- 3.** Kwatha- Punarnavasthaka kwatha, Rasna Saphthaka kwatha, Kulattha kwath.
- 4.** Hima- Dhanyaka hima, Sarivadi hima .
- 5.** Phanta- Panchakola phanta, Yastimadhu Phanta.

6. Pramathya- Mustadi pramathya
7. Mantha- Kharjuradi mantha
8. Aushadh siddha paniya- Shadanga paniya
9. Laksha Rasa.
10. Arka - Yavani arka, Gulab arka, Misreya arka
11. Panaka- Chinchā panaka, Chandan panaka.
12. Sharkara- Banapsha sharkara, Nimbu sarkara.
13. Churna- Sitopaladi Churna, Hinguwashtaka Churna.
14. Gutika- Chitrakadi Gutika, Sanjivani Vati.
15. Guggulu-Triphala Guggulu, Kaishora Guggulu.
16. Avaleha- Chyavanaprashavaleha, Vasavaleha, Vyaghri Haritaki avaleha, Manibadra avaleha.
17. Rasa kriya - Darvi Rasakriya, Guduchi Ghana, Kutaja Ghana.
18. Khanda- Haridra khanda, Narikela khanda, Sowbhagya shunti paka
19. Satva- Amruta satva,
20. Varti- Phala varti, Chandrodaya varthi
21. Lavana- Arka lavana, Narikela lavana
22. Masi- Triphala masi, Mayurpiccha Masi
23. Ksheerapaka- Arjuna ksheerapaka, Rasona ksheerapaka, Shunthi Ksheerpaka
24. Kshara- Apamarga kshara, Snuhi kshara, Ksharasutra. .
25. Manda, Peya, Vilepi, Yavagu, Krishra, Vesavara
26. Yusha - Mudga yusha, Saptamushtika yusha, Kulattha yusha
27. Aristha- Kutajarishta, Takrarishta .
28. Asava - Kumaryasava, Kanakasava
29. Sukta kalpana- Kanji
30. Udaka- Tandulodaka
31. Upanaha- Atasi Upanaha
32. Siktha Taila Nirmaan
33. Malahara- Sarjarasa malahara, Gandaka malahara, Cream, Emulsion. Sneha Kalpana
Sneha Murchhana - Ghrita Murchana, Taila Moorchhana, Ghrita kalpana: Jatyadi ghrita, Triphala ghrita, ksheerashatphala ghrita- Taila kalpana-Panchaguna taila, Arka taila, Bala taila, Jatyadi taila
35. Taila patana- Bhallataka taila patana, Jayapala taila patana
36. Shodhana- Guggulu, Hingu.

II. Visit of minimum three GMP approved Ayurvedic manufacturing units.

3.2 SWASTHAVRITTA

Theory- Two papers - 100 marks each

Practical / Viva voce -100 marks

Lectures –200 Hrs

Practicals and demonstration – 100 Hrs

Paper-I

PART A- VAIYAKTIKA SWASTHAVRITTA

50 marks

Introduction

Definition of swastha & swasthya and swasthavritta. Arogya lakshana, swasthavritta prayojanam, WHO definition of health.

Dimensions of health-Physical, Mental, Social.

Concept of wellbeing- objective, subjective, standard of living, quality of life.

Dinacharya

1. Definition of Dinacharya
2. Aims and importance of dinacharya
3. Brahma Muhurta evam Utthana
4. Usha Jalapana
5. Sharirachinta
6. Malatyaga
7. Mukha prakshalan
8. Dantadhavana and preparation of Ayurvedic tooth powder and paste
9. Jihvanirlekhanavidhi
10. Anjana
11. Pratimarsha Nasya
12. Gandusha and Kavala
13. Tambulasevana
14. Dhoomapana
15. Abhyanga
16. Udvartana
17. Utsadana
18. Vyayama
19. Chankramana
20. Snana
21. Anulepana
22. Vastra dharana
23. Danda dharana
24. Padatra dharana
25. Chatra dharana
26. Ushnisha dharana
27. Ratnabharana dharana
28. Madhyahna charya
29. Cosmetic effect of Dinacharya procedures

Rathricharya

1. Sandhya charya
2. Rathri bhojana vidhi
3. Shayanavidhi according to Bhavamishra

Ritucharya

1. Importance of ritucharya
2. Ritu presentation as per different acharyas
3. Adana kala & visarga kala
4. Sanchaya-Prakopa-Prashamana of Dosha according to ritu
5. Doshashodhana in Ritu Charya
6. Relation of Agni bala and Ritu
7. Pathya and Apathya Ahara and Vihara in different ritus
8. a) Ritusandhi
b) Yamadamsthra
c) Rituharitaki
d) Rituviparyaya

Sadvritta

Description of Sadvritta and Achara Rasayana their role in Prevention and control of diseases.

Trayopastambha

i) Ahara- Nirukti, Swarupa, Pramukhatva, Ahara dravya Vargikaranam, Aharavidhividhana, Dwadashashana pravicharana, Ashtaharvidhivisheshayatanani, Pathyahara, Apathyahara, Samashana, Adhyashana, Vishamashana, Ahara dushparinama & tajjanya vyadhaya, Santarpanajanya evam Apatarpanajanya vyadhi, Viruddhahara and its effects, Shadrasabhojanasya mahatwam.

Dietetic standards, Proximate principles of Food, Nutritional requirements, Sources and deficiency diseases of Protein, Carbohydrate, Fat, Vitamins and Minerals.

Concept of balanced diet in Ayurveda, Nitya sevaneeya dravya, Balanced diet for different sections of people in the society, Social aspects of nutrition.

Aharavarga - Dhanya varga(Cereals and millets), Shaka and Harita varga (Leafy and Non leafy vegetables), Kanda varga (roots and tubers), Phala varga (Fruits), Taila varga(Fats and Oils), Ikshu varga & Madhya varga(Alcoholic Beverages), Dugdha varga (Milk and Milk products), Masala and vyanjana dravyas (Spices & Condiments), Kritanna varga(Prepared Food), Mamsa varga (Meat types).

Food hygiene

Milk hygiene-Milk composition, Source of infection (for Milk), Milk borne diseases, Clean and Safe milk, Pasteurization of milk.

Meat hygiene-Meat inspection, Slaughter house, Freshness of fish and egg. Fruits and Vegetables hygiene

Consumption of Alcohol and its effects on personal and social health. Effects of pathya-apatya in life style disorders-Diabetes, Hypertension, Obesity and Coronary heart Disease.

ii) Nidra- Nirukti and Utpatti, Types , Nidra – Swasthya sambandha, Properties of Yukta Nidra, Effects of Ratri Jagarana, Diwaswapna, Anidra, Atinidra, Ahara and Vihara causing disturbed sleep , Ahara and Vihara Causing sound sleep. Duration of sleep according to age, Sleep in healthy and diseased persons.

iii) Brahmacharya – Brahmacharya and Abrahmacharya, Importance of Bharmacharya and Abrahmacharya, Vyavaya sambandhi niyama, Effects of Ativyavaya. Methods of Virya Raksha, Surataspriha(Libido) through Vajikarana, Viryanasa phala.

Roganutpadaniya- Concept of Vega- Adharaniya Vega and Dharaneeya Vega, Diseases due to vegadharana and their chikitsa, sharir shodhan.

Rasayana for Swastha-Nirukti, paribhasha(definition), classification and examples

Ashta nindita purusha

Menstrual hygiene

Part B (YOGA AND NISARGOPACHARA)

50 marks

YOGA

Introduction

Yoga shabda utpatti, definitions, Different schools of Yoga – Rajayoga, Hathayoga, Mantrayoga, Layayoga, Jnanayoga, Karmayoga, Bhaktiyoga.

Yoga prayojana

Ayurveda yoga sambandha, swasthya rakshane yogasya mahatvam

Yogabhyasa pratibhandhaka & siddhikara bhavas as per Hathayoga.

Mitahara and Pathyapathyani during Yogabhyasa.

Panchakosha Theory

Astanga yoga

Yama, Niyama

Asana and its importance

Standing Postures

Ardhakatichakrasana, Padahastasana, Ardhaachakrasana, Trikonasana.

Sitting postures

Swasthika, Gomukhasana, Padmasana, Vajrasana, Bhadrasana, Shashankasana, Ushtrasana, Pashchimottanasana, Suptavajrasana, ardhmatsyendrasana, Siddhasana.

Supine Postures

Pavanamuktasana, Sarvangasana, Matsyasana, Halasana, Chakrasana,

Shavasana, Setubandhasana.

Prone postures

Bhujangasana, Shalabhasana, Dhanurasana, Makarasana.

Suryanamaskara – procedure and benefits.

Pranayama

Benefits of pranayama, time of practice, avara-pravara-madhyama lakshana, yukta-ayukta lakshana

Nadishudhi Pranayama .

Kumbhakabheda – suryabhedana, ujjayi, sheetali, Sitkari, Bhastrika, Bhramari

Murcha, Plavini.

Nadishudhilakshana

Shatkarma

Dhauti, Basti, Neti, Trataka, Nauli, Kapalabhati

Bandhas and Mudras

Shad chakras, Ida-pingala-sushumna nadis.

Pratyahara, Dharana, Dhyana, Samadhi

Description of Yoga in Ayurveda

Moksha and Muktatma lakshana and upaya, Naishthiki chikitsa, Satyabuddhi, Tatvasmriti, Ashta Aishwarya, Ashta siddhis.

NISARGOPACHARA (Prakritika chikitsa)

Definition, history, aims and objectives

Theories as per Western school of Naturopathy

Indian school – Panchabhutopasana

Relation of Ayurveda and Naturopathy

Importance of Naturopathy in present era.

Jalachikitsa(hydrotherapy) – Hot water treatment, Cold water treatment, foot and arm bath, Spinal bath, hip bath, abdominal wet pack, Steam bath, enema and whirl pool bath.

Mrittika chikitsa (Mud therapy)

Types of soil, doctrine of mud selection, mud bath.

Suryakirana sevana (sun bath - heliotherapy)

Mardana (Massage) – different methods and effects.

Diet types – Soothing, Eliminative, Constructive, Positive and negative diet, Acidic and alkaline diet

Upavasa chikitsa(Fasting therapy) – Importance, types, therapeutic effects of fasting.

Visrama chikitsa upayoga

PAPER II – SAMAJIKA SWASTHAVRITTA

Part A

50 marks

Janapadodhwamsa

Causes, Manifestations and control measures, importance of Panchakarma and Rasayana.

Vayu (Air)

Vayu guna according to sushruta samhita, Properties of Vayu as per different directions, Vayu shudhi prakara – Ayurvedic aspect.

Composition of air.

Air of occupied room- Thermal discomfort and comfort zone, indices of thermal comfort.

Air pollution – health and social aspects, Prevention and control of air pollution ,Global warming.

Ventilation and its types.

Mountain air & High altitude – Health problems

Jala (Ayurvedic and modern aspects)

Importance of water , safe and wholesome water, water requirements, properties, types and sources of water,water pollution and health hazards, Methods of water purification.

Hardness of Water.
Examination, Tests and analysis of water.
Rain water harvesting and water recycling

Bhumi and nivasa sthana(Land and housing)

Types of soil, soil & health, Land pollution, Bhumi shodhana, Nivasa yogya bhoomi, Social goals of housing, Housing standards, Mahanasa (Kitchen) standards, Rural housing, Housing and health, Overcrowding.

Prakasha(lightning)

Requirement of good lighting, natural lighting, artificial lighting, biological effects of lighting.

Dhwani pradooshana(Noise pollution) -Noise, Sources, effects,& control

Vikirana(Radiation)- sources, effects and control

Apadravya Nirmulana (Disposal of solid waste)

Different types of solid waste
Storage and collection of refuse
Methods of disposal of solid waste (Rural & urban)
Bio-medical waste management

Malanishkasana Vyavastha (Excreta Disposal)

Methods for Unsewered area and Sewered area
Latrines for camps, fairs and festivals
Disposal of dead body – Burial, Burning, Electric cremation.

Meteorology (Ritu evam Vatavarana jnanam)

Definition of weather and climate, factors influencing weather and climate.

Disaster management

Definition, natural and man-made disasters, epidemiologic surveillance and disease control.

Occupational Health

Occupational Hazards, Occupational Diseases, Prevention of Occupational Diseases, Health & precautionary measures, ESI Act, Indian factories Act.
Offensive Trades- Effects on health and precautionary measures .

School health services

Health problems of school children, aspects of school health service, duties of school medical officers, Maintenance of healthy environment

Epidemiology

Concept of Epidemiology, Dynamics of disease transmission, concept of diseases, concept of causation, Epidemiological triad, natural history of disease, concept of control, concept of prevention, Risks factor, modes of intervention, incidence and prevalence. Susceptible host, host defenses, Immunizing Agents, Disease prevention and control, investigation of epidemic.

Disinfection – definition, types.

Ayurvedic concept of Vyadhikshamatva and sankramaka rogas.

Epidemiology of communicable Diseases

Chicken Pox, Measles, Diphtheria, Pertussis, Mumps, Tuberculosis, SARS, Influenza, Pneumonia, Cholera, Polio, Viral Hepatitis , Typhoid, Leptospirosis, Dengue Fever, Chikungunia, Malaria, Filariasis , Leprosy, Rabies , Tetanus, Emerging and re-emerging diseases

Kuprasangaja vyadhi (STDs)

AIDS, Syphilis, Gonorrhoea, Chanchroid

Non-communicable disease epidemiology

Diabetes, Obesity, Hypertension, Coronary Heart Diseases, Rheumatic Heart Disease, Cancer

Chikitsalaya Bhavana (Hospital Building)

Part B

50marks

Prathamika swasthya samrakshana(Primary Health Care)

Definition, principle, elements,levels of health care.

Structure at village, sub centre, PHC,CHC, Rural hospital levels.

Health insurance, Private agencies, Voluntary health agencies, NGOs and AYUSH sector.

Role of Ayurveda in Primary Health Care.

Parivara kalyana Yojana (Family welfare Programmes)– Demography, demographic cycle, life expectancy.

Family planning, methods of family planning.

Ante natal, intra natal, post natal, neo natal care. Child health problems and indicators of MCH care.

Preventive geriatrics–Problems of elderly,prevention and control measures.

World Health Organisation-Objectives,structure and functions.

International health agencies-United Nations agencies,Health work of bilateral agencies.

Alma Ata declaration

National Health Policy

Health statistics- Definition, Sources, uses Data collection, Classification, Presentation.

Vital statistics-Morbidity rates,Mortality rates ,Fertility rates.

Health survey

Swasthya prashasana(Health Administration) – Health administration at Central including AYUSH, state, district, village levels.

National health programmes

Tuberculosis(RNTCP), Leprosy(NLEP), AIDS (NACP), Blindness (NPCB), Polio(PPI),Diabetes (NDCP), Cancer (NCCP) , Guinea worm, Vector born disease control programme, NRHM, all the upcoming national health programmes, RCH programme, Universal Immunization Programme.

National Nutritional Programmes - IDD, Vitamin A prophylaxis, Mid day meal, anemia control programmes.

PRACTICALS

Demonstration of Dinacharya procedures- anjana, nasya, kavala, gandoosha dhoomapana, abhyanga, udvartana.

Parichaya of aharadravya, immunization agents, disinfectants and family planning devices

Practical demonstrations of Asanas mentioned in the syllabus
Pranayama (Suryabhedana, Ujjayi, Shitali, Sitkari, Bhastrika, Bhramari and Nadishuddhi) and Shad karmas(Jala dhauti, Jalaneti, Sutraneti, Trataka, Kapalabhati).

Preparing and delivering of a health educational talk on health related issues.
A short compilation on any topic on environmental health.

Educational Visits

Observe the functioning of the Milk Dairy, Water purification unit, Sewage treatment unit, MCH/Family welfare centre, Leprosy hospital and industrial unit.

Visit to Primary Health Centre for knowledge of actual implementation of National health programmes including knowledge of rural health.

Visit of rural Ayurvedic dispensary.

Visit to naturopathy centre to observe naturopathic treatment modalities.

Health survey- Minimum 5 families of rural and urban areas.

There should be 3 case sheets for Yoga Naturopathy & pathya apathya together and 3 case sheets for communicable diseases.

Proformas for Case sheets/practical records/survey/Dinacharya projects etc should be prepared by the respective universities.

Practical and Viva Voce examination

Marks distribution

	100 marks
1. Vaiyaktika Swasthavritta	20
2. Samajik swasthavritta	20
3. Demonstration of Yoga	10
4. Naturopathy	10
5. Journal and compilation work	10
6. Viva voce	30

Reference Books:

Relevant portions of Charaka, Sushruta, Vagbhata, Sarngadhara, Bhavaprakasha, Yogaratnakara, Madhavanidana and Bhelasamhita.

3.3 PRASUTI TANTRA & STRIROGA

Marks 200 (100marks each paper)
Practical-100 marks
HOURS Theory-200 Hrs
Practical-100 Hrs

PAPER-1 PRASUTI TANTRA

PART-A

INTRODUCTION TO SUBJECT

STRI SHARIRAVIJNAN

Etymological origin of the word Stri. Artava vaha and Stanyavaha strotamsi. Tryavarta yoni Stri Vishishta, Peshi Marmani.

Anatomy of female reproductive system.(External and internal genital organs) Soft & Bony Pelvis and its obstetrical importance.

DESIRABLE (non detail)

Vayobhedena Stri sangnya

RAJO VIGYANA

Description of Raja, Artava and Prathama Rajo Darshana, Rajasvala Charya. Ritumati Lakshana, Ritumaticharya, Ritukala

Menarche, Menstrual cycle and their regulation by endocrine glands,

Ovulation –Importance in conception

DESIRABLE (non detail)

Concept of Stri Sukra

GARBHA VIGYANA

- a) Garbhasya paribhasha, Garbhadhanavidhi, Garbhavakranti, Garbha Sambhava samagri, Garbhakara bhava, Panchabhautikatwa of Garbha, Masanumasika Vridhi of Garbha, Garbha Poshana , Garbhasayasthe Garbhasthiti

Foetal attitude, lie, position, presentation

- b) Apari, GarbhaNabhinadi, Jarayu, Ulba

Formation, Development, Function of Placenta, Umbilical cord, Amniotic fluid

Foetal membranes -Abnormalities of Placenta

DESIRABLE (non detail)

Garbhalingotpatti, Garbhasya Avayavotpatti, Garbha Varnotpatti, Garbha Vikriti

GARBHINI VIGYANA

- a) Lakshana of Sadhyograhita Garbha, Lakshana of Vyakta Garbha, Pumsavana vidhi
Diagnosis of Pregnancy
- b) Garbhini vyavastha: Garbhini Paricharya, Garbha Upaghatakara Bhava, Dauhrida
Ante Natal care-Examination, Investigation and Management
- c) Garbha Vyapada: Nidana, Samprapthy and Chikitsa Garbhasrava and Garbhapata-
Garbha shosha-Upavishtaka, Nagodara, Upashushka, Leena garbha,
Antarmrita garbha, Raktagulma, Bahugarbhatha
- d) Abortions, Rh-incompatability-
Causes, clinical features, complications and management.

Gestational trophoblastic neoplasias, Ectopic pregnancy, IUGR, Intrauterine foetal death, Multiple pregnancy

GARBHINI VYAPAD

- a) Hrillasa, Chardi, Aruchi, Atisara, Vibandha, Arsa, Udavarta, Sotha, Parikarthika, Vaivarnya, Kandu, Kikkisa, Pandu, and Kamala, makkala
- b) Common ailments of Pregnancy-High Risk Pregnancy, Emesis gravid arum, Gestational Anemia, Gestational Hypertension, Gestational Diabetes, Toxemias of Pregnancy, Jaundice, AIDS,

Ante Partum Hemorrhage causes, clinical features complications and Management

PART B

PRASAVA VIGYANA

- a) Prasava Paribhasha, Prasavahetu, Prasavkaala, Sutikagaranirman, Sangrahaniya Dravyani, Sutikagara pravesavidhi.
- b) Prasavavastha; Prajayani/ Upasthita Prasava/ Asannaprasava lakshana, Aavi. Prasavaparicharya, Jatamatraparicharya
- c) Normal Labour:-Definition of Labour, Physiology & Mechanism of Labour, Monitoring of Labour and management, Pictogram, Episiotomy, care and resuscitation of newborn.

PRASAVA VYAPAD

- a) Garbhasanga, Yonisamvarana, Aparasanga, Mudagarbha-defenition, Nidana, Types & Management
- b) Induction and augmentation of labour, Cervical dystocia, Cephalopelvic disproportion, Prolonged labour, Preterm labour, Post term labour, foetal distress, Assisted Labour, Caesarian
- c) Retention of Placenta, PPH - causes, clinical features and management, Genital tract Injuries during labour

DESIRABLE (non detail)

Uterine Inversion, Amniotic Fluid Embolism, Garbhashthithi parivarthan(Version), Forceps Delivery, Ventouse Delivery.

SUTIKA VIGYANA

- a) Sutika Paribhasha, Sutika Kaal, Sutika paricharya. Changes during sootika avastha(Sareerika&Manasika)
Normal and abnormal Puerperium and its Management
- b) Sutika Roga – Number of Sutika Roga, Sutika Jwara, Shotha and Makkala.
- c) Stanyavijnan- Sthanyadushti, Sthanyakshaya, Sthanyavidhi -their causes, clinical features and treatment
- d) Emergency care in obstetrics

DESIRABLE(non detail)Stana stanya –Pareeksha, Stanya sampat.

PART-2 STRI ROGA

PART-A

ARTAVA VYAPAD

- a) Artava-kshaya vridhi, Ashtartavadushti lakshana chikitsa
Asrigdara lakshana samprapti Chikitsa
- b) Menstrual disorders-Amenorrhoea, hypomenorrhoea, Oligomenorrhoea, Dysmenorrhoea, Abnormal uterine Bleeding

YONI VYAPAD

Sankhya, Nidana, Lakshana, Upadrava evam Chikitsa

Endometriosis, Fibroid uterus, Genital Prolapses, Retroverted Uterus, Pelvic infections, Cervical erosion, Pelvic Inflammatory Diseases

VANDHYATWA – Prakar, Nidana, Chikitsa

Infertility – Causes, Types, Investigations and Management.

Yoni Kanda, Yoni Arsa, Granthi, Arbud,

Pelvic Infections including Sexually Transmitted Infections, HIV, AIDS, Preventive measures.

MENOPAUSE-changes during menopause ,menopause syndrome, management.

DESIRABLE (non detail)

Congenital malformations of female genital tract.

Sukra vijnan –kshaya,vridhi, dushti hetu lakshana and chikitsa

Benign and Malignant tumours of Genital Tract

PART-B

STANA ROGA

- a) Stanakeela- nidana lakshana chikitsa, Stanagranthi, Stanavidradhi, Stanashoph Mastitis, Breast abscess, Galactocele -Etiopathology, clinicalfeatures, diagnosis, prognosis and complications
- b) Sthanik Chikitsa
Snehana, Swedana, Uttarabasti, Pichu, Varti, Lepana, Dhupana, Dhavana, Dahana, Ksharakarma -. Practical knowledge of all these procedures along with indications, complications and management.

Shastra Karma

Surgical procedures their Indications, Contraindications of cauterization of cervix, cervical dilatation and curettage, female surgical sterilization

Knowledge of indication and procedure of PAP smear. Endometrial biopsy and interpretation of the reports

Stri roga Sambandhita Pramukha Aushadhyai, Prasuti & Stri Roga Chikitsa Upayogi
Yantra Shastra Parichaya and Vyadhivinishchaya Upaya (Investigative and Diagnostic Aids)

Garbhanirodhaka Upaya.

Parivar Niyojana, Reproductive and Child Health Care, AIDS/HIV control Programme, MCH, PNDT Act, MTP Act, and importance of current National Programme

Knowledge of important Commonly used Ayurvedic and Allopathic drugs used in Prasutitantra and Streeroga. Pharmacotherapeutics of allopathic drugs in obstetrics and Gynaecology

Record keeping,ethical and medicolegal issues in Streeroga and prasutitantra

DESIRABLE (non detail)

Laprosopy, hysteroscopy, hysterosalpingography, USG, X-RAY, Colposcopy, Cervical Biopsy. Granthi evum Granthi nirharan samanyajnan (Myomectomy, hysterectomy)

CLINICAL TRAINING-OBSTETRIC SKILLS

To perform independently

1. History taking and examination of antenatal and gynaecological cases
2. Diagnosis of Pregnancy, assessing of gestational period, to diagnose onset of labour
3. To monitor labour progress, able to plot Partogram
4. Observation of 10 labours
5. To diagnose abnormalities of labour and decide about the referral of the patient
6. Able to provide first aid for obstetric emergencies
7. Recognition of post partum complications
8. Counselling and promoting of breast feeding
9. Record 5 antenatal cases, 5 intrapartum and 5 post partum cases

To observe/assist-D&C, D&E, Caesarean section, Repair operations, Resuscitation of new born.

GYNAECOLOGICAL SKILLS -To perform independently

1. History taking and examination of gynaecological cases
2. Recording 10 gynaecological cases, 5 gynaecological procedures
3. Taking vaginal smear, high vaginal swab
4. Practical knowledge of sthanika chikitsa
5. Observation and practical knowledge of minor gynaecological procedures
6. Observation of Surgical procedures
7. Identification, uses., Demonstration of surgical instruments
8. Observation of Method of sterilization, MTP, Surgical procedures Hysterectomy, Oophorectomy

DISTRIBUTION OF PRACTICAL MARKS

1. Case taking-2cases –one Gynec,one obstetric- 30marks

2.Instruments ,Drugs, &Models-	20 marks
3.General Viva-	40 marks
4.Record -2-(one Prasuti, one streerog)-	10 marks
Total	100 marks

3.4. Kaumarbhritya (Ayurvedic Pediatrics)

Theory One Paper – 100 Marks
Practical Viva Voce - 50 Marks

Paper I

100 Marks

Kaumarbhritya Parichaya Evum Balaka Paricharya (Introduction to Ayurvedic Pediatrics and Child Care)

Part A

50 Marks

1. General introduction and scope of Kaumarbhritya (Ayurvedic Pediatrics), Definitions and terminologies used in Kaumarbhritya.
2. Scientific contribution of Kashyapa Samhita in Kaumarbhritya.
3. Vayobheda (Classification of age): Garbha, Bala, Kumara; Kshirada, Kshirannada & Annada etc. and modern classification of childhood period.
4. Prana Pratyagamanam (Neonatal Resuscitation): Methodology; complications and their management (Ayurvedic and modern view). Assessment of gestational age.
5. Navajata Shishu Paricharya (Neonatal Care): Care of the Jatmatra (Newly born child) and the Sadyojata, Care of the Samaya-purvajata Shishu (Preterm), Purnakalika Shishu (Full term), and Samaya-Paschatjata Shishu (Post term neonate), Nabhinala Chhedana (Cutting of umbilical cord), Complications of improper cutting of umbilical cord and its treatment, Rakshoghna Karma (Protective measures- Ayurvedic and modern view).
6. Navajata Shishu Parikshana (Examination of newborn): Ayu-Parikshana, Modern approach to Neonatal Examination
7. Navajat Shishu Poshana (infant feeding): Specific feeding schedule as per Ayurvedic texts and modern concept; Stanya-Sampat (Properties of normal breast milk) Stanyotpatti (Physiology of lactation), Stanya Sangathana (Composition of breast milk), Stanya Parikshana (Examination of breast milk), Stanya-Piyusha (Colostrum); Stanya-Pana-Vidhi (Techniques of breast feeding), Stanyakshaya-Stanyanasha (Inadequate production and absence of breast milk), Dhatri (wet nurse)- Stanyabhava dugdh Vyavastha (alternative feeding in the absence of breast milk), Various other milk feeding methods.
8. Stanyadosha (Vitiation of Breast milk), Stanya Shodhana (Purification of breast milk), Stanya Janana and Vardhanopakrama (Methods to enhance breast milk formation).
9. Garbha Vridhi Vikasa Krama: Samanya Parichaya (brief monthwise development of

fetus), Milestones of development during infancy and childhood including concepts of various Samskaras.

10. Poshana (Nutrition): Normal requirements of nutrients and common food sources.
11. Dantotpatti evum Danta Raksha Vidhi (Dentition and dental care): Danta-sampat (Characteristics of healthy teeth), Danta Nisheka evum Dantodbheda (Eruption of teeth), Dantodbhedjanya Vikara (Dentition disorders).
12. Vyadhikshamatva: General concepts of Bala (Immunity) and methods of Bala Vriddhi.
13. Prashan & Lehana: Indications, contra-indications, different drugs used in lehana
14. Knowledge of National Programs related to Child Health Care: Reproductive and Child Health (RCH) Program, Community Child Health Programs, Nutritional Programs, National Immunization Program and other programs incorporated by Govt. of India from time to time

Part B

50 Marks

Samanya Chikitsa Siddhanta and Balaroga (General Principles of Treatment and Management of Pediatric Disorders)

1. Bala Pariksha-vidhi Evam Shishu Vedana Parigyan (Examination of sick child and Diagnostic methods-Ayurvedic and modern). Samanya Chikitsa Siddhanta (General principles of treatment in children).
2. General Aushadhi Matra Nirdharana - for Ayurvedic and modern drugs preparations (drug doses according to age, weight and drug contents)
3. Specific therapeutic panchakarma procedures in children with special emphases on snehan, swedan and basti.
4. Prasava Kaleena Abhighata (Birth injuries): Shwasavrodha (Asphyxia neonatorum), Ulvaka, Upashirshaka (Caput Succidanum and Cephalohaematoma), Facial Paralysis, Erb's Paralysis, Bhagna (fractures).
5. Brief description of Sahajavyadhi (Congenital disorders): Sahaja Hridaya Vikara (Congenital Cardiac Disorders) Jalashirshaka (Hydrocephalus), Khandaoushtha (cleft lip), Khanda-Talu (cleft palate) Sanniruddha Guda (Anal stricture / imperforated anus), Pada Vikriti (Talipes equinovarus and valgus), Spina bifida, Meningocele, Meningomyelocele.
6. Brief knowledge of genetic disorders): Down syndrome, Turner Syndrome, Muscular dystrophy, Sickle-Cell Anemia, Thalassaemia, Sahaja Madhumeha (Juvenile diabetes).
7. Prasavottara Vyadhi (Neonatal disorders): Navajata Kamala (Neonatal Jaundice), Navajata Netrabhishyanda (Neonatal conjunctivitis), Nabhiroga (Umbilical disorders), Navajatshishu-raktavishmayata (Neonatal Septicemia)
8. Dushta Stanyapanajanya Vyadhi (Disorders due to Vitiated Milk): Lactose intolerance, Kshiralasaka, Kukunaka, Ahiputana (Napkin Rashes)
9. Kuposhanajanya Vyadhi (Nutritional disorders): Karshya, Phakka, Balashosha and Parigarbhika (Protein Energy Malnutrition), Vitamin and Micro-nutrient deficiency

disorders, Hyper-vitaminosis, failure to thrive.

10. Aupasargika Vyadhi (Infectious Diseases): Karnamula Shotha (Mumps), Romantika (Measles), Rubella, Masurika (Chicken Pox), Rohini (Diphtheria), Kukkura-Kasa (Whooping Cough), Dhanurvata (Tetanus), Krimiroga (Worm Infestations), Antrika Jwara (Typhoid), Mastisakavarnashotha (Meningitis), AIDS, Dengue, Malaria, Rajajakshma (Tuberculosis), Jivanujanya Yakrit Shotha (Hepatitis)
1. Srotas Vikara:
 - a) Pranavaha Srotas: Pratishtyaya (common cold), Kasa (Cough), Shwasa (Respiratory distress syndrome), Tamaka Shwasa (Bronchial Asthma), Utphuliika, Swasanaka Jwara (Pneumonia/Pneumonitis, Bronchiolitis), Gala shotha (Pharyngitis, Laryngitis), Talukantaka (Tonsillitis)
 - b) Annavaha_ Srotas: Ajirna (Indigestion), Atisara (Diarrhoea), Chhardi (Vomiting), Vibandha (Constipation), Mukhapaka (Stomatitis), Gudapaka (Proctitis), Parikartika (Anal fissure), Udarshula (Infantile Colic), Pravahika (Dysentry), Gudabhransa (Rectal Prolapse). Ama and its disorders like Ama vata jwara (Rheumatic fever).
 - c) Rasavaha Srotas: Jwara (Fever), Pandu (Anemia), Mridbhakshanajanya Pandu (Anemia associated with clay eating/Pica).
 - d) Raktavaha Srotas: Kamala (Jaundice), Raktapitta (Haemorrhagic disorders), Yakritodara (Hepatomegaly).and Pieehodara (Splenomegaly)
 - e) Mamsa-Medovaha Srotas: Apachi (Lymphadenitis), Galaganda (Goitre), Gandamala (Cervical Lymphadenopathy).
 - f) Mutravaha Srotas: Shopha in Vrikka (Glomerulonephritis and Nephrotic syndrome)
2. Anya Bala Vikara (Miscellaneous Pediatric Disorders), Apasmara (Epilepsy), Akshepa (Convulsions), Nirudhaprakasha (Phimosis), Cerebral palsy.
3. Behavioral Disorders of Children, their management and counseling: Breath holding spell, Shayyamura (Bed wetting), Pica, Unmada, Autism, ADHD (Attention Deficit and Hyperactive Disorders), Jadatwa (Mental retardation).
4. Pran raksha vidhi (Life saving measures in children): Principles of management of Shock and Anaphylaxis, Poisoning, Foreign body in respiratory tract, Status epilepticus, Hemorrhage, Acute Renal Failure, Febrile Convulsion, Status Asthmaticus, Fluid and Electrolyte Management.
5. Balagraha: General description, classification, clinical features and management.

PRACTICAL

Content of Practical / demonstration

1. Clinical training of above mentioned disorders of children.
2. Exposure to -
 - a) Navajata Shishu Paricharya (Care of the newborn)
 - b) Pranapratyagamana Vidhi (Resuscitation procedure of new born)
 - c) Vaccination
 - d) Panchakarma Vidhi (Panchakarma procedures) especially Snehana, Swedana, Basti.
3. Knowledge of various equipments such as phototherapy unit, overhead radiant

- warmer, resuscitation equipments, Panchakarma equipments and their application
4. Knowledge of IV fluid administration, blood sampling
 5. Anthropometry measurements and their interpretation
 6. Various Ayurvedic & modern Procedures and investigations in pediatric practice

Distribution of Marks

Clinical work: Pediatric and neonatal case records [1.0 case sheets of each]	10 Marks
Patient Examination	20 Marks
Spotting	05 Marks

4.1 KAYACHIKITSA

Theory Two Papers – 100 Marks Each
Practical/Viva voce – 100 Marks

Paper I

100 Marks

Part - A

50 Marks

- 1 Derivation of the terms 'Kaya', 'Chikitsa' and their definitions and synonyms. Definition of 'Kayachikitsa, Definition of 'Bheshaja'. Types and detailed description of Bheshaja and Chikitsa, Knowledge about Chikitsa Chatushpada, Rogi Roga Pariksha Siddhantha, Astasthan Pariksha.
- 2 Importance of Kriya Kaala according to stages of Dosha and their management.
- 3 Chikitsa sutra and Management of vriddhi (increased) and kshaya (decreased) of Dosha, Dhatu and Mala, Ojo Vyapat (Kshaya, Visramsas and Vyapat) and its management. Chikitsasutra and Management of Sama-Nirama states, Roga-Anutpattikara Chikitsa, Roga Prashamana Chikitsa (Doshapratyanika, Vyadhipratyanika, Ubhayapratyanika), Doshopakrama, Chikitsa sutra and Management of Sthanantara Dosha (Ashayapakarsha, Anuloma/Pratiloma gati of Dosha, Vimarga gamana of Dosha), Knowledge of Lina Dosha & its management, Diagnosis, Chikitsa Sutra and Management of Avarana and of Dhatu Pradoshaja diseases, Importance of Dosha, Dushya, Bala, Kaala, Agni, Prakriti, Vaya, Sattva Satmya, Desha, Ahara and stage of diseases in treating them. Chikitsa Sutra and Management of 'Samanyaja and Nanatmaja' diseases.
- 4 Detailed description of Dvidividhopakrama (Santarpana and Apararpana) and Shadavidhopakrama (Rookshana, Snehana, Swedana, Sthambhana, Langhana and Brimhana). Detailed description of Shodhana, Shamana and Nidana Parivarjana. Knowledge of Aushadha matra, Sevan kaala and Anupana, Definition and Knowledge of Pathya-Apathya with examples of diseases of various systems.
- 5 Derivation of the term 'Manas', its sthana (place), Guna (qualities) and Karma (functions). Samanya Chikitsa Siddhanta of Manasa Roga.
- 6 Principles & Management of Nutritional deficiency disorders.
- 7 Management of Vardhakyajanita vikara, Indriyapradoshaja vikara, Alzhiemer's Disease, Sleep disorders, General debility.

- 8 General introduction and principles of Management of diseases produced by Genetic, Environmental and Iatrogenic factors. Disorders due to drug and Food allergy and their management and other allergic conditions.

Part B

50 Marks

1. Detailed description of Chikitsa Sutra and Management of Jwara and its types. Etiopathogenesis & relevant Ayurvedic and Modern management of following types of Fevers-Typhoid, Pneumonia, Pleurisy, Influenza, Mumps, Meningitis, Encephalitis, Tetanus, Yellow fever, Plague, Dengue Fever, Chikun Guniya, Leptospirosis, Viral Fever, Anthrax, Masurika (Small pox), Laghu Masurika (Chicken pox), Romantika (Measles).
1. Chikitsa sutra and Management of the diseases of Rasavaha Srotas such as – Pandu, Amavata, Madatyaya, Hridroga, Hridshoola, Hypotension, Hypertension, Anaemia, Rheumatoid arthritis.
2. Chikitsa sutra and Management of the diseases of Raktavaha Srotas such as - Raktapitta, Kamala, Kumbhakamala, Halimaka, Daha, Mada, Murcha, Sanyasa, Vatarakta, Plihadosha, Yakrut dosha, Haemolytic disorders, Hepatitis, Cirrhosis of Liver, Leukaemia, Kushta, Shvitra, Visarpa, Sheetapitta, Uarda, Kotha and Kshudra Roga.
3. Knowledge of National Health Programmes and the relevant Ayurvedic Management of the following diseases enlisted by World Health Organisation- Malaria, Filaria, Kala Azar, Leprosy, Tuberculosis, AIDS.
4. Introduction of general principles of maintenance of health and management of diseases of following systems of Medicine- Yoga, Naturopathy, Unani, Siddha, Physiotherapy and Rehabilitation.
5. Diseases of different Endocrine Glands- such as Thyroid, Parathyroid, Pituitary, Pancreas and Adrenal glands and their management.
6. General introduction, types and Management of diseases caused by Vyadhi Kshamatwa Hinata (Immuno deficiency disorders), Auto Immune Disorders.
7. Description and Management of following Emergency Conditions- Acute Haemorrhage, Hypertensive Emergencies, Acute abdominal pain (Renal colic, Biliary colic, Gastritis, Pancreatitis, Peritonitis and Appendicitis), Acute Abdomen, Anuria/ Oliguria, Congestive Heart Failure, Myocardial Infarction/Angina, Shock, Syncope, Convulsions, Hyperpyrexia, Hyperglycaemia, Hypoglycaemia, Status Asthmaticus, Acute Respiratory distress Syndrome, Drowning and Electric shock.

PAPER II

100 Marks

Part A

50 Marks

1. Chikitsa sutra and Management of the diseases of Pranavaha Srotas such as - Kasa, Shwasa, Hikka, Rajayakshma, Urakshata, Parshwashoola, Bronchitis, Bronchiectasis, Emphysema and COPDs.
2. Chikitsa sutra and Management of the diseases of Udakavaha Srotas such as- Shotha, Jalodara, Trishna, Water & Electrolyte Imbalance.
3. Chikitsa sutra and Management of the diseases of Annavaha Srotas such as – Agnimandya, Aruchi, Ajirna, Anaha, Atopa, Adhmana, Alasaka, Vilambika, Visuchika, Chardi, Grahani, Amlapitta, Gulma, Shoola, Bhasmaka, Acid peptic disorders.
4. Principles of treatment and management of Vata Vyadhi such as - Pakshavatha, Ekgavata, Sarvangavata, Ardita, Avbahuka, Kati Graha, Manyastambha, Gridhrasi, Vishwachi, Khalli, Khanja, Pangu, Padaharsha, Padadaha, Vatakantaka, Kroshtukashirsha, Udavarta, Kampavata, Dhatugata and Ashayagata Avarana Vata, other Vata Rogas, Parkinsonism.
5. Nidana and Chikitsa of Urusthambha, Gullian Barrie syndrome, Muscular Dystrophy, Myasthenia Gravis, Motor Neuron Diseases and Neuralgia.

Part B**50 Marks**

1. Chikitsa Sutra and Management of Mamsavaha Srotas and Medovaha Srotas such as- Gandamala, Galaganda, Mamsashosha, Arbuda, Apachi, Prameha, Sthaulya, Karshya, Diabetes Mellitus, Dyslipidaemia.
2. Chikitsa Sutra and Management of 'Asthi and Majjavaha Srotas such as Asthimajja Vidradhi, Asthisoushriya, Asthi kshaya, Sandhigata Vata, Osteo Arthritis, Osteomyelitis, Osteoporosis, Osteopenia.
3. Chikitsa sutra and management of Shukravaha srotas such as Klaibya, shukralpata, shukradosha, kshina shukra, dhvajabhanga.
4. Chikitsa Sutra and Management of diseases of Mutravaha Srotas such as -Mutrakricha, Mutraghata, Ashmari, Cystitis, Nephritis, Nephrotic Syndrome, BPH, Renal Failure.
5. Chikitsa Sutra and Management of diseases of Purishavaha Srotas such as - Atisara, Pravahika, Arsha, Purishaj Krimi, IBS and Ulcerative Colitis.
6. Chikitsa Sutra and Management of Sexually Transmitted Diseases such as - Phiranga, Puyameha, Upadamsha, lymphogranuloma inguinale, Syphilis, Gonorrhoea.
7. Introduction, Definition and Management of Kama, Krodha, Lobha, Moha, Mada, Matsarya, Shoka, Bhaya, Vishada, Dainya, Harsha and Pragyaparadha.
8. Manas and Manovahasrotas, Nidana and Chikitsa of the following disorders - Unmada- Apasmara-Atattvabhinivesha, Chittodvega, Vishada, Anxiety disorders, Depression, Somatoform and Mood disorders, Stress induced disorders, Psychosexual Disorders. Importance of Daivavyapashraya, Sattwavajaya, Adravyabhuta Chikitsa. Medhya Rasayana in the management of Manasa Roga. Bhuta Vidya diagnosis and management of graha disorders.
9. Derivation, definition and synonyms of Rasayana, importance of Rasayana and its benefits. Indications of Rasayana therapy. Classification of Rasayana. Kutipravesika and Vatatapika Rasayana. Indications of Vatatapika Rasayana. Knowledge of Kayakalpa, Achara Rasayana. Procedures of Kutipravesika, Poorvakarma and specific schedules to be followed after Kutipravesha, benefits of Kutipravesika Rasayana, duration of process, Rasayana yoga and directions for their use. Determination of dose of Rasayana according to age. Rules and regulation after Rasayana therapy, Importance of Immunomodulators and antioxidants in Rasayana therapy.
10. Vajikarana- Derivation, definition, synonyms, necessity, benefits, importance of fertility, Symptoms of Shûkra (Semen), Vajikaran Dravya and Aushadhi. Properties, doses, methods of administration, ingredients and methods of formation of Rasayana & Vajikarana formulation. Classification and importance of Vajikarana Dravya

13. Panchkarma Illustrated by Dr. G.Srinivasacharya.
14. Other relevant publications on subjects concerned

4.2. PANCHAKARMA

Theory One Paper – 100 Marks

Practical Viva-voce – 50 Marks

Hours of teaching Theory – 100

Clinical training: 3 months

I. Introduction

1. Introduction to Panchakarma, Panchakarma and Shodhana, its importance for promotion of health, prevention and treatment of diseases.
2. Trividha Karma- Purva, Pradhana and Pashchat Karma in relation to Shodhana and their importance.
3. Indications of Shodhana, Shodhana according to Ritu
4. General Principles of doshagati from Koshta to Shaka and vice versa
5. General precautions (Pariharya Vishaya) for Panchakarma
6. Specifications of Panchakarma theatre and necessary equipments
7. Importance of Koshta and Agni Parikshan

II. Snehana

1. Etymology and Definition of Sneha and Snehana
2. Snehayoni- Sthavara and Jangama: Properties of Sneha dravyas, Snehopag Dravyas
3. General knowledge of Ghrita, Taila, Vasa and Majja with their specific utility and actions ,Yamaka, Trivrit and Maha Sneha
4. Metabolism of fat
5. Achcha and Pravicharana of Sneha
6. Snehapaka and its importance in Panchakarma
7. **Types of Snehana:** i) Bahya and ii) Abhyantara Snehana

i) Bāhya Snehana :

Methods, indications and contraindications of the following types of Bahyasnehana; Mardana, Unmardana, Pādāghāta, Samvāhana, Karna Purana & Akshi Tarpan, Lepa, Talam,

Murdhni Taila: Siro-Abhyanga, Shiro Seka/dhārā, Siro Pichu and Siro-Basti

ii) Ābhyantara Snehana

Three Types of Ābhyantara Snehana: Shodhanārtha, Shamanārtha and Brimhanārtha Snehana, Indications and contraindications for Snehana

Shodhanārtha Snehana

- a. Importance and method of Deepan Pāchan and Rookshana in Shodhanārtha Snehana. Properties of Rookshana Dravya. Samyak Rookshana Lakshana
- b. Consideration of Agni and Koshtha in Snehana
- c. Indication of Different Matra, Various dose schedules for Shodhanārtha Snehana; Hraseeyasi, Hrasva, Madhyama and Uttama Mātrā, Ārohana Mātrā
- d. Methods of Shodhanārtha Snehana,
- e. Anupāna of Sneha

- f. Jeerna and Jeeryaman Lakshana
- g. Samyak Yoga, Ayoga and Atiyoga of Snehana, Sneha Vyāpat & their management according to Ayurveda & Modern Medicine
- h. Diet and regimen during Snehana

Sadyo Sneha: Method of administration, dose fixation and utility

Shamanārtha Snehana, Method of administration, dose fixation and utility

Bronhanarth Senhana: Method of administration, dose fixation and utility

Avapeedak Sneha: Method of administration, dose fixation and utility

8. Snehana Kārmukata (mode of action)

9. Special Procedures:

Takradhara, Udvartanam, Putpāka, Aschotana, Anjana, Gandusha, Kavala, Dhoompāna, Udvartana, Utsādana, Udgharshana, Talapothichil

III. Svedana

1. Etymology and Definition of Sveda and Svedana
2. Classifications of Sveda/Svedana
3. General Sweda dravya, Properties of Sweda dravyas, Swedaopag dravyas ,
4. Indications and contraindications of Svedana
5. Ten Types of Niragni Svedana
6. Knowledge of 13 types of Sagni Svedana and Chaturvidh Svedan
7. Detailed Knowledge with their Utility of the following Svedana procedures:
Sankara/Pinda Sveda-Ruksha and Snigdha Sveda
Patrapinda Sveda, Jambir Pinda Sveda, Vāluka Sveda, Churna Pinda Sveda, Kukkutand
Pinda Sveda, Shashtika Shalipinda Sveda, Nadi Sveda, Bashpa Sveda Ksheer
dhooma ,Ksheer Seka, Kwath Seka, Avagaha Sveda, Dhanymla Dhara
Parisheka Sveda, Pizichil, Upanaha Sveda, Annalepa
8. Local Basti such as Kati Basti, Janu Basti, Greeva Basti and Urobasti
9. General precautions during Sagni Svedana and Methods to protect vital during svedana
10. Samyak Yoga, Ayoga and Atiyoga of Svedana
11. Complications of Svedana and their Management according to Ayurveda & Modern Medicine
12. Diet and management during and after Svedana
13. Parihār Vishaya
14. Svedana Kārmukata (Mode of action)
15. General Knowledge about current Sudation techniques like Sauna bath, Steam bath

IV. Vamana Karma

1. Etymology, definition and importance of Vamana Karma
2. Utility of Vamana Karma in health and disease
3. Indications and Contraindications for Vamana
4. Knowledge of Koshta and Agni
5. General knowledge of Vamana and Vamanopaga drugs; properties, actions, preparations, preservation with special reference to Madanphala, Kutaj, Nimba, Yashti, Vacha
6. Purva Karma of Vamana: Deepan-Pāchana, Abhyantara Snehana and diet

7. Management of one gap day-Abhyanga & Svedana, diet, special Kapha increasing diet
8. Preparation of the patient on Morning of Vamana day
9. Vamaka Yoga, Anupana, fixation of dose and method of administration
10. Administration of Vamanopaga Dravya such as milk, sugarcane juice, Yashtimadhu decoction
11. Lakshana indicating Doshagati during the process
12. Management during Vamana Karma & observations
13. Symptoms of Samyak Yoga, Ayoga and Atiyoga of Vamana Karma
14. Post Vamana management
15. Types of Shuddhi-Hina, Madhya and Pravara
16. Peyadi Samsarjana Krama and Tarpanadi Kram with their specific indications
17. Complication of Vamana and their management with Ayurveda and modern drugs
18. Pariharya Vishaya
19. Vamana Karmukata (Mode of action).

V. Virechana Karma

1. Etymology, definition and importance of Virechana Karma
2. Utility of Virechana Karma in health and disease
3. Indications and Contraindications for Virechana
4. Knowledge of Koshta and Agni
5. Classification of Virechana Drugs, General properties of Virechana dravya
6. General knowledge of single and compound Virechana drugs; properties, actions, preparations, preservation with special reference to Trivrutta, Aragvadha, Eranda, Katuki, Jaipal
7. Purva Karma of Virechana: Deepan- Pachana, Abhyantara Snehana and diet
8. Management of 3 gap days-Abhyanga, Svedana & diet
9. Management on Morning of Virechana day
10. Preparation of Virechana Kalpa, Anupana, dose and method of its administration
11. Method of Virechana Karma and management during Virechana Karma & observations
12. Symptoms of Samyak Yoga, Ayoga and Atiyoga of Virechana Karma
13. Post Virechana management
14. Types of Shuddhi-Hina, Madhya and Pravara and accordingly Samsarjana Krama
15. Complications of Virechana and their management with Ayurveda and modern drugs
16. Pariharya Vishaya
17. Virechana Kārmukatā (Mode of action)

VI. Basti Karma

1. Etymology, definition and importance of Basti as Ardha-Chikitsa
2. Utility of Basti Karma in health and disease
3. Basti Yantra- Putaka & Netra, Detailed study of traditional Basti Yantra and their Doshas
Knowledge of alternative Basti Yantra-enema can, enema syringe, modified plastic/rubber bag for Putaka, modified plastic netra.
4. Classifications of Basti

5. Karma, Kāla and Yoga Basti schedules along with their utility.
6. **Niruha Basti:** Its etymology, synonyms, definition, classifications, sub-classifications & indications and contraindications.
 - a. Dose fixation of Niruha Basti according to age
 - b. Contents and Method of preparation of Niruha Basti dravya
 - c. Diet
 - d. Administration of Niruha Basti
 - e. Pratyāgamana Kāla, Post Niruha Basti management
 - f. Samyak Yoga, Ayoga and Atiyoga of Niruha.
 - g. Complication of Niruha Basti and its management according to Ayurved and Modern Medicines
 - h. Pariharya Vishaya and kala
7. **Anuvasana Basti:** Its etymology, synonyms, definition, classifications, sub-classifications & indications and contraindications.
 - a. Dose fixation of Anuvasan Basti according to age
 - b. Contents and Method of preparation of Anuvasan Basti dravya
 - c. Diet
 - d. Administration of Anuvasan Basti
 - e. Pratyāgamana Kāla, Post Anuvasan Basti management
 - f. Samyak Yoga, Ayoga and Atiyoga of Anuvasana.
 - g. Complication of Anuvasan and its management according to Ayurved and Modern Medicines
 - h. Pariharya Vishaya and kala
8. Basti Kārmukatā (Mode of action).
9. Knowledge of following types of Basti:

Madhutailika Basti, Erandmuladi Basti, Yāpana Basti, Pichchha Basti, Kshira Basti, Kshara Basti, Vaitarana Basti, Panchaprasutik Basti, Lekhan Basti, Krumighna Basti, Tiktashir Basti, Ardhamātrika Basti
10. **Uttara Basti:** its definition, indications and contraindications, Detailed study of traditional Basti Yantra and their Doshas Knowledge of alternative Basti Yantra
 - a. Preparation of patient,
 - b. Preparation of Trolley for Uttarbasti,
 - c. drug preparation and Fixation of dose,
 - d. method of administration in male and females,
 - e. observations,
 - f. complications and their management

VII. Nasya

1. Etymology, definition, Significance of Nasya Karma.
2. Classifications and sub-classifications
3. Knowledge of general Dravya used for Nasya Karma, Shirovirechan Gana, Shirovirechanopag dravyas
4. Indications and contraindications of Nasya
5. Time of administration of Nasya
6. Dose fixation of different types of Nasya
7. Diet and regimen before and after Nasya Karma
8. Administration of Marsha, Pratimarsha, Avapeedaka, Dhoomapana and Dhuma Nasya
9. Symptoms of Samyak-yoga of Nasya,

10. Complication of Nasya and their management
11. Parihār Vishaya
12. Nasya Karmukata (mode of action)

VIII. Raktamokshana

1. Definition, importance and Types of Raktamokshana
2. General Principles and rules of Raktamokshana
3. Classification of Raktamokshan
4. General Indication and Contra indication of Raktamokshan
5. **Jalaukavacharana:** Knowledge of different types of Jalauka (Leech) , Indications and contraindications of Jalaukavacharana, various types of Jalauka. Method of Application, Samyak Lakshan, Complication of Jalaukavacharana and their management with Ayurveda and Modern medicines.
6. **Pracchāna:** Indications and contraindications of Pracchana. Method of Application, Samyak Lakshan, Complication of Pracchana and their management with Ayurveda and Modern medicines
7. **Sirāvedha:** Indications and contraindications of Siravedha. Method of Application, Samyak Lakshan, Complication of Siravedha and their management with Ayurveda and Modern medicines
8. Knowledge of emergency management of complications such as water & electrolyte imbalance, shock, bleeding per rectal, hematemesis, epistaxis

IX. Physiotherapy

1. Definition, Utility and Importance of Physiotherapy.
2. Basic Knowledge of Static exercise, Infrared, Short wave diathermy, Electromagnetic therapy, Wax bath therapy, Ultrasonic therapy.

PRACTICALS / CLINICAL TRAINING –

Total Duration of 3 Months posting

OPD (for 1-Month): observation of OPD patients, selection of the patients, observation of OPD base Panchakarma procedures

IPD (Panchakarma) and Panchakarma Unit – Observation of different procedures of Panchakarma, Assistance to the procedure under guidance of Panchakarma specialist

Under clinical posting, each student has to study and write 15-long Cases and 10 short cases in prescribed format

Long case Paper- minimum 1 Vaman , 1 Virechan, 1Niruha & Anuvasan Basti, 1Nasya, 1 Raktamokshan

Short case paper –Minimum one each of Pinda sweda, Shirodhara, Abhyanga, Netra Tarpan, Bahya Basti, Nadi Sweda etc.

4.3 SHALYA TANTRA

Theory Two Papers – 100 Marks Each
Practical - Viva voce – 100 Marks

PAPER –I

100 Marks

Part – A

50 Marks

Definition of Shalya, Shalya Tantra and its importance. Introduction to Shalya Tantra: Historical background and progress made.

- **Target** - Fluency in textual reading and comprehension.
- Preferable targets - Know recent developments and controversies.

Description of Yantra, Shastra, Anushastra: Definition, number, types, uses, Dosh, Guna, Karma. Relevant modern instruments.

- Target - Basic understanding of the concepts of Yantra and Shastra. Acquaintance with commonly used surgical instruments. Knowledge of textual descriptions.
- Preferable targets - Knowledge about currently used surgical instruments, their specifications, procurement sources etc.

Nirjantukarana / Sterilization: Methods, types and its role in surgical practice.

- Target - Basic surgical discipline of maintaining asepsis.
- Preferable targets- Knowledge of recently developed chemicals, instruments for sterilization.

Sangyahan / Anaesthesia: Definition and Types.

- Local anaesthesia** – Drugs, Techniques, Indications, Contraindications, Complications and their Management.
- Regional and General anaesthesia**- Drugs, Techniques, Indications, Contraindications, Complications and their Management.
 - Target-Basic knowledge of the drugs and instruments of anaesthesia. To observe the process of induction, monitoring and recovery.
 - Preferable targets- Assisting and handling anaesthesia.

Trividha Karma – Purva Karma, Pradhana Karma and Paschat Karma.

- Target- Capability to identify conditions which can affect the outcome of surgery in pre, intra and post- operative period.
- Preferable targets- Experience of handling incidents.

Ashtavidha Shastra Karma - Surgical procedures.

- Targets- Appreciation and comprehension of concepts and indications of different procedures.
- Preferable targets –Hands on experience of surgical procedures.

Yogya - Experimental Surgery.

- Target –Appreciation and comprehension of concepts of Yogya. Idea of patient's safety in experimental training.
- Preferable targets- Hands on training on mannequins.

Marma: Nirukti, types, description and importance.

- Target –Clinical application of concepts of marma.
- Preferable targets- Study of relevance of marma in the light of current anatomical and surgical knowledge.

Kshara and Kshara Karma:

- Nirukti, Pradhanyata, Guna, Dosha, Karma, Prakara, Yogya, Ayogya, Procedure, Upadrava and Chikitsa.**
- Kshara nirmana vidhi, knowledge of Kshara Varti, Taila and Pichu.
- Kshara Sutra – Preparation, Indications, Contraindications and Method of application, Complications and their Management.**
 - Target – Capability to identify and practice the use of kshara, kshara sutra in common clinical conditions.
 - Preferable targets – Broader knowledge of current trends and ongoing researches in kshara application.

Agnikarma: Mahatva, Upakarana, Vidhi, Akrti bheda, Yogya, Ayogya and Upadrava Chikitsa.

Contemporary techniques and tools of Agnikarma.

- Target - Capability to appreciate the clinical indications and comprehend Agnikarma procedure.
- Preferable targets - Hands on experience of use of cautery in surgical practice.

Raktamokshana: Mahatva, Prakara - Siravyadha, Pracchanna, Shringa, Alabu, Jaloukavacharana – Yogya, Ayogya, Procedure, Upadrava and Chikitsa.

- Target- Capability to appreciate and comprehend clinical indications of Jaloukavacharana and other Raktamokshana procedures.
- Preferable targets - Uses of bloodletting in current therapy.

Bandha Vidhi – Prayojana, Dravya, Indications, Contraindications, Prakara, Upadrava, Pichu, Plota, Kavalika and Vikeshika.

- Target- Hands on experience of techniques of bandaging.
- Preferable targets - New generation of bandaging and splintage tools.

Pranasta Shalya and Nirharana Upaya.

- Target – Importance of concepts of Sushruta in the management of Shalya and concerns of patient safety. Identification and management of foreign bodies.
- Preferable targets - Current concepts and diagnostic tools of dealing with foreign bodies.

Fluid, Electrolyte, Acid Base Balance and Nutrition:

- i. Introduction of physiology of fluids and electrolytes.
- ii. Dehydration and over hydration.
- iii. Specific electrolyte loss, Acidosis, Alkalosis, Symptomatology and Management.
- iv. Electrolyte changes in specific diseases like pyloric stenosis, intestinal obstruction and anuria.
- v. Various replacement fluids in surgery, mode of administration and complications.
- vi. Nutrition.
 - Target – Capability to identify and manage fluid and electrolyte imbalance. Ability to administer parenteral fluid.
 - Preferable targets - Advanced techniques of fluid and electrolyte assessment and management.

Rakta Mahatwa, Raktasrava / Haemorrhage: Prakara and Lakshana.

- i. Raktastambhana – Haemostasis.
- ii. Blood Transfusion –Blood groups, Compatibility, Indications, Contraindications and Complications with Management.
- iii. Component therapy.
 - Target-Knowledge of achieving haemostasis in haemorrhage.
 - Preferable targets - Detailed knowledge of blood bank techniques.

Antibiotics, analgesics, anti-inflammatory and emergency drugs in surgical practice.

- Target – Working knowledge of commonly used drugs.
- Preferable targets - Advanced pharmacological study of the above drugs.

Diagnostic techniques – X-ray, Imaging techniques, Ultrasonography, CAT Scan, MRI, Biopsy / Cytological study.

- Target- Knowledge of proper indications for optimum investigational tools and their interpretation.
- Preferable targets - Capability to work independently in the field of diagnostic techniques.

Part - B**50 Marks****Shat Kriyakala in surgical practice.**

- Target- Clinical utility of the concepts.
- Preferable targets - Applied aspects of Kriyakalas in the light of current concepts of pathogenesis.

Nirukti, Nidana, Samprapti, Prakara, Lakshana, Sadhya-asadhyata, Upadrava and Chikitsa of the following disorders.

- i. Vranashotha - Inflammation
- ii. Vidhradi - Abscess
- iii. Pidika - Boils
- iv. Nadi Vrana - Sinus / Fistulae
- v. Vrana Granthi - Keloid / Hypertrophic scar

- vi. Marmagata - Shock
- vii. Kotha – Gangrene and Principles of Amputation.
- viii. Granthi - Cyst
- ix. Arbuda - Tumour
 - Target-Clinical application of the concepts.
 - Preferable targets - Hands on experience of management of different conditions.

Vrana – Nirukti and Prakara

- i. Nija Vrana – Nidana, Samprapti, Vrana Vasthu, Prakara, Lakshana, Vrana Pariksha – Sthana, Vrana Akrti, Srava, Gandha, Vedana. Vrana Avastha- Dustavrana, Shuddha Vrana, Ruhyamana Vrana, Samyak Roodha Vrana, Vrana Sadhya-asadhyatha and Vrana Upadrava.
- ii. Vrana Chikitsa – Pathya-apathya and Shashti Upakrama, Vranitagara and Rakshakarma.
- iii. Agantuja Vrana :
 - a. Sadyo Vrana - Traumatic wounds – Nidana, Prakara, Lakshana, Upadrava and Chikitsa.
 - b. Management of bites and stings.
- iv. Dagdha Vrana – Burns and scalds.
- v. Ulcer - Types and their management.
- vi. Wound healing stages and their management.
- vii. Pramehapidaka - Diabetic carbuncle and wounds.
 - Target - Clinical application of the concepts.
 - Preferable targets - Hands on experience of management of different conditions.

Twak Vikara - Nidana, Samprapti, Lakshana and Chikitsa of Chippa – Paronychia, Kadara – Corn and Kshudra rogas.

- Target - Clinical application of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Manya Vikara – Nidana, Samprapti, Lakshana and Chikitsa of Galaganda – Goitre, Gandamala, Apachi –Lymphadenitis, Pashanagardhabha – diseases of parotid gland.

- Target-Clinical application of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Sira Vikara - Venous disorders – Superficial and Deep venous thrombosis, Haemangioma, Varicose veins - Diagnosis and their Management.

- Target - Clinical application of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Dhamani Vikara - Arterial disorders – Nidana, Samprapti, Lakshana and Chikitsa of Aneurysm, Buerger’s disease, Atherosclerosis, Raynaud’s disease.

- Target - Clinical application of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Snayu Vikara - Diseases of tendons and ligaments – Tennis elbow, Ganglion and their Management.

- Target - Clinical application of the concepts.

- Preferable targets - Hands on experience of management of different conditions.

Care of AIDS - HIV and hepatitis infected patients.

- Target - *Knowledge of safety precautions.*

PAPER - II

100 Marks

Part - A

50 Marks

Bhagna – Skeletal injuries: Prakara including pathological fracture, Samanya Lakshana, Upadrava and Chikitsa.

Description of fracture of following bones with Clinical features, Diagnosis, Complications and Management – scapula, clavicle, humerus, radius, ulna, femur, patella, tibia and pelvis bones.

Sandimoksha - Dislocation: Dislocation of following joints with Clinical features, Diagnosis, Complications and Management of shoulder, elbow and hip.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of bone: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Congenital anomalies, Osteomyelitis, Cysts, Tumours and Tuberculosis.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Cranio-cerebral injuries: Mechanism, Pathology, Classification, Investigations, Complications and primary management.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Spine: Mechanism, Pathology, Classification, Investigations, Complications and primary management of Tuberculosis, Ankylosing Spondylitis and Disc prolapse.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of breast: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Sthana Vidradhi - Breast abscess and Sthana Arbuda - Breast tumours.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of chest: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Chest injury, Pleural effusion, Pleurisy and Tumours.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of esophagus: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Congenital anomalies, Oesophagitis, Varices, Ulcer and Tumours.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Gulma Roga - Nidana, Prakara, Lakshana, Upadrava and Chikitsa.

Shoola vyadhi - Nidana, Prakara, Lakshana, Upadrava and Chikitsa.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of acute abdomen.

Udara Roga: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Jalodara - Ascites, Chidrodara – Perforation, Peritonitis and Badhagudodara-Intestinal obstruction.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of stomach and duodenum: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Pyloric Stenosis, Peptic Ulcer and Tumours.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of small intestine: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Tuberculosis, Obstruction and Perforation.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of large intestine - Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Tuberculosis, Obstruction, Perforation, Tumours, Appendicitis, Crohn's disease and Ulcerative Colitis.

- Target - Clinical utility of the concept.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Rectum and Anal Canal – Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Congenital disorders, Arshas - Haemorrhoids, Parikartika - Fissure-in-ano, Bhagandara - Fistula-in-ano, Guda Vidradi - Anorectal abscesses, Gudabhramsa - Rectal prolapse, Sanniruddaguda - Anal stricture, Incontinence, Rectal Polyp and Tumours.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Abdominal injuries and their management.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Part – B

50 Marks

Diseases of Liver: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Yakrit Vidhradi - Abscess, Neoplasia, Portal hypertension and Yakritdalyodar –Hepatomegaly.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Gallbladder: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Cholecystitis, Cholelithiasis, Obstructive jaundice and Tumours.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Pancreas: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Pancreatitis, Cysts of Pancreas and Tumours.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Spleen – Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Pleehodara – Splenomegaly and Splenic rupture.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Kidney and Ureters - Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Congenital anomalies, Polycystic kidney, Injuries, Perinephric abscess, Calculus and Neoplasms.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Urinary bladder – Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Congenital anomalies, Injuries, Ashmari - Vesical Calculus, Cystitis and Neoplasms.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Mutraghata and Mutrkrichra - Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management. Retention of urine.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Prostate - Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Prostatitis, Prostatic abscess, Benign Enlargement of Prostate and Carcinoma of Prostate.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Urethra – Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Urethritis, Stricture and Rupture.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Penis: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Congenital anomalies, Niruddhaprakasha -Phimosis, Parivartika -Paraphimosis, Avapatika - Prepuceal ulcer, Arbuda- Tumours and Lingarsha - Penile Warts.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Diseases of Scrotum and Testis: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Epididymo-orchitis, Epididymal cyst, Scrotal filariasis, Shukrashmari - Seminal calculus, Torsion of testis, Ectopic testis, Undescended testis and Tumours.

Vridhhi Roga: Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Mutravridhhi – Hydrocele.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

Antra Vridhhi – Aetiopathogenesis, Classification, Clinical features, Diagnosis, Complications and Management of Hernia - Inguinal, Femoral, Epigastric, Umbilical, Incisional and rare forms of Hernia.

- Target - Clinical utility of the concepts.
- Preferable targets - Hands on experience of management of different conditions.

PRACTICALS

Content of Practicals:

1. Identification, uses, demonstration of surgical instruments and methods of sterilization.
2. Training of case taking, bed side clinicals and case presentation.
3. Demonstration and Practical training in Anaesthesia.
4. Training to develop skills in following Parasurgical and other procedures
 - i. Kshara Karma
 - ii. Agnikarma
 - iii. Kshara Sutra
 - iv. Raktamokshana
 - v. Application of bandages and splints
 - vi. Catheterization
 - vii. Wound management procedures like Parisheka and Patradana
 - viii. Ryle's tube aspiration
 - ix. Injections -Intramuscular / Intravenous / Subcutaneous / Intradermal
 - x. Incision and drainage of abscess
 - xi. Suturing of open wounds
5. **Observation of following procedures**

- i. Circumcision
- ii. Hydrocele
- iii. Hernial repair
- iv. Vasectomy
- v. Haemorrhoidectomy
- vi. Fistulectomy
- vii. Fissurectomy
- viii. Appendectomy
- ix. Cholecystectomy

6. Training of Surgical Emergencies and Management.

Clinical Training (Indoor and Outdoor)

- Shalya (Samanya)
- Shalya (Kshara and Anushastra Karma)
- Asthi and Sandhi Chikitsa (Orthopaedics and Trauma)
- Anaesthesia
- Radiology

4.4 SHALAKYA TANTRA

**Theory Two Papers – 100 Marks Each
Practical/Viva voce – 100 Marks**

NETRA ROGA VIGYAN

Paper I

Marks

100

I. Introduction

- Shalakyatantra nirukti, Parichayam, Ithihasam
- Netra rachana shariram (Mandala, Patala, Sandhi, Drushti Vichara) and Netra Kriya Sharira alongwith modern anatomy of Eye.
- Eye examination and knowledge of basic instruments/equipments required for examination of Eye.
- Netrarognanam – Samanya Hetu (Nija and agantuja), Purvarupa, Samprapti, Rupa and Chikitsa.
- Classification of Netraroga and its importance.

II. Netra Samanya and Vishishta Chikitsa - Kriya Kalpa

- Netra and Chakshu swasthya hitkara Dinacharya, Ritucharya, Aahara evam Vihara.
- Kriya-kalpa-Seka, Aschyotana, Pindi, Vidalaka, Tarpana, Putapaka, Anjana and importance of Panchkarma in Netra Chikitsa.
- Basic fundamentals of Netra Shastra Chikitsa e.g. Purva – Pradhana - Paschat karma, Ama-Pachyaman-Pakva Vrana shotha, Vranitopasana, Pranashashalya, & Vranbandhana. Methods and concepts of sterilization, asepsis and antisepsis as per ancient and modern point of view.
- Basic applied knowledge of Ashtavidha shastrakarma, agni, kshara, raktamokshana in Netra rogas.
- Essential diagnostic and therapeutic modern pharmacological agents required in Netra Chikitsa

III. Sandhigata Roga(Diseases of junctional areas of eye)

- Number of sandhigata rogas, detailed etiology, pathology, clinical features and management of Pooyalasa and Srava Rogas.
- Brief Study of krimi granthi, Parvani and Alaji Rogas.
- Study of Acute and Chronic Dacryocystitis, Epiphora, Blepharitis including their aetiology, pathology, signs & symptoms, differential diagnosis and medical & surgical management.

IV. Vartmagata Roga(Diseases of Lids)

- Number of vartmagata rogas, and detailed knowledge of etiology, pathology, clinical features and management of Anjananamika, Utsangini, Lagana, Vatahata vartma, Pakshma kopa, Sikta vartma, Pothaki, Klinna vartma, Krichhronmeelana and Kukunaka diseases of Vartma.
- Brief Knowledge of Vartmarbuda, Utklishta vartma, Nimesh, Pakshmashata, Vartmarsha
- Knowledge of Hordeolum, Ptosis, Trachoma, Trichiasis, Entropion, Ectropion including their Etiology, signs and symptoms differential diagnosis and medical & surgical management.

V. Shuklagata Roga(Diseases of sclera and conjunctiva)

- Number of Shuklagata rogas, detailed knowledge of etiology, pathology, clinical features

- and management of Arma, Arjuna and Shuktika
- b) Brief Knowledge of Sira pidika, Sira jala, Pishtaka, Balasgrathita.
 - c) Study of Pterygium, Scleritis, Episcleritis, Sub-Conjunctival Hemorrhage including their Etiology, signs and symptoms, differential diagnosis and medical & surgical management.

VI. Krishnagata Roga (Diseases of cornea and uvea)

- a) Number of krishnagata rogas, detailed knowledge of Etiology, Pathology, Clinical features, differential diagnosis, complications and Management of Savrana /kshata Shukla (Shukra), Avrana shukra (Shukla)
- b) Brief knowledge of Sira shukla, Akshipakatyaya and Ajakajata.
- c) Knowledge of Corneal ulcer, Corneal Opacity, Uveitis, Acute Iridocyclitis, Staphyloma, their aetiology, pathology, symptoms, differential diagnosis, complications and management.

VII. Sarvagata Roga (Diseases effecting all parts of eye)

- a) Number of Sarvagata rogas, detailed knowledge of etiology, pathology, clinical features, complications, differential diagnosis and Management of Abhishyanda, Adhimantha, Hatadhimantha and Shushkakshipaka.
- b) Brief Knowledge of Amloshit, Vata paryaya, Anyato vata, Sashopha & Ashophakshipaka- Pilla roga, Sirotpata and Siraharsha.
- c) Knowledge of Conjunctivitis, Glaucoma, Dry Eye Syndrome including their etiology, pathology, clinical features, differential diagnosis, complications and their management.

VIII. Drishtigata Roga (vision disorders)

- a) Number of Drishtigata rogas detailed knowledge of - etiology, pathology, clinical features, differential diagnosis and management of Timira, Kacha and Linga nasha.
- b) Brief Knowledge of Abhighataja lingnasha, sanimittaja & Annimittaja Lingnasha Doshandhya/Kaphavidagdha drishti, Naktandhya, Ushna vidagdha drishti, Pittavidagdha drishti, Dhumadarshi, Hriswajadya, Gambhirika, Nakulandhya, Nayanabhighata.
- c) Knowledge of Refractive errors, Cataract including their etiology, pathology, clinical features, differential diagnosis, complications and their management.
- d) Study of Eale's disease, Hypertensive & Diabetic Retinopathies, Age related Macular degeneration, Strabismus, Retinitis pigmentosa, Night blindness, Amblyopia, Central serous retinopathy, Optic Neuritis and Optic atrophy

IX. Miscellaneous Diseases

- a) Xerophthalmia and other malnutritional eye disorders.
- b) Knowledge of ocular trauma and their management.
- c) Introduction to Eye bank, Eye donation, Corneal Transplantation
- d) Preventive Ophthalmology and Community Ophthalmology

SHIRA - KARNA- NASA- MUKHA ROGAS

PAPER II

100 Marks

I Samanya Chikitsa

- a) Study of therapeutic procedures like Sveda, Kavala, Gandusa, Dhuma, Murdhni Taila, Nasya, Pratisarana, Karna Purana, karna prakshalana, nasa prakshalana Mukha Lepa.
- b) Ashtavidha shastrakarma and anushastrakarma used in the treatment of Shira, Karna, Nasa evam Mukha Rogas.

II Shiro Roga

- a) Importance and Superiority of Shira.
- b) Number, general etiology, pathology and cardinal features of shiro rogas and kapalgata rogas along with their common line of management/treatment.
- c) Detailed study of Vataja, Pittaja, Kaphaja shirashoola, Suryavarta, Ardhavabhedaka, Khalitya, Palitya.
- d) Brief Knowledge of Raktaja shiraha shoola, Krimija shiraha shoola, Kshayaja shiraha shoola & Sannipataja shiraha shoola, Ananta vata, Indralupta, Darunaka.
- e) Detailed study of Headache, Migraine its differential diagnosis and treatment.

III Karna Roga

- a) Detailed study of Rachana and Kriyasharir of Karna (Ear) & Shravanendriya as per Ayurvedic and modern view, Examination of Ear along with instruments/equipments required in Ear examination.
- b) Detailed study of etiology, pathology, classification, clinical features and management of diseases of Karna – karna shool, karna nada & shweda, Badhirya, karnastrava, karna pratinaha, pootikarna, karnagoothaka, karnavidradhi.
- c) Brief Knowledge of karna kandu, karnapaka, karnarsha, karnarbuda, krimikaran & karnapali rogas, Karna sandhana (Auroplasty), fundamentals, method and Vaikritpaham
- d) Detailed study of Otagia, ASOM, CSOM, Deafness, wax including their etiology, pathology, clinical features, differential diagnosis, complications and medical & surgical management
- e) Brief Knowledge of Otomycosis, Otosclerosis, Tinnitus, Vertigo, Foreign body in ear and Noise pollution.

IV Nasa Roga

- a) Detailed study of Rachana and Kriyasharir of Nasa (Nose and paranasal sinuses) & Ghranendriya as per Ayurvedic and modern view, Examination of Nose. along with instruments/equipments required in Nose examination.
- b) Detailed study of Pratishyaya, Dushta pratishyaya, Nasanaha, Kshavathu, Nasagata raktapitta & Nasarsha.
- c) Brief Knowledge of Putinasa, Bhranshathu, Peenasa, Apeenasa, Nasarbuda, Nasashotha, Dipta, Nasa Sandhana.
- d) Detailed study of Rhinitis & Sinusitis Epistaxis, Nasal Polyp, DNS, Foreign body including their Etiology, pathology, clinical features differential diagnosis and medical & surgical management.
- e) Brief Knowledge of Nasal trauma, Tumours of nose and Para nasal sinuses.

V Mukha Roga (Diseases of Oral Cavity)

- a) Detailed study of Rachana and Kriyasharir of Mukha Rogaadhithana- oshtha, dantamoola, danta, jivha, talu, gal, sarvasara (Oral cavity) as per Ayurvedic and modern view along with their Basic examination including instruments/equipments required for the examination
- b) Mukha and Danta Swasthya as per ancient and modern concepts including prevention of malignancy of oral cavity.
- c) Number and general aetiology, pathology, cardinal features of Mukha rogas along with their common line of management/treatment.

Oshtha Roga (Diseases of Lips)

- a) Detailed study of Etiology, pathology, classification, clinical features and management of - Oshtha prakopa, khandoshtha
- b) Brief Knowledge of Gandalaji, Jalarbuda, Kshataja Oshthaprakopa
- c) Knowledge of cleft lip.

Dant Mula Gata Roga (Diseases of Periodontia)

- a) Detailed study of Etiology, pathology, classification, clinical features and management of - Shitada, Dantaveshta, Upakush, Danta Nadi, Danta Vidradhi, Adhimansa
- b) Brief Knowledge of dantapupputaka, Saushira, Mahasaushira, Danta Vaidarbha , Paridara, Vardhana.
- c) Detailed study of Etiology, pathology, classification, clinical features and management of Gingivitis, Apical abscess, Periodontitis (Pyorrhoea).

Danta Roga (Dental Diseases)

- a) Detailed study of Etiology, pathology, classification, clinical features and management of Daalan, Krimidanta, Dantaharsha, Danta sharkara, Hanumoksha
- b) Brief Knowledge of karala, Bhanjanak , Kapalika, Shyava Danta, Danta bheda,
- c) Danta chaal, Adhidanta, Danta Utpatana including Jalandhar bandha method and Danta Purna.
- d) Knowledge of Dental Caries, Dental Tartar & Tooth extraction.

Jihwa Gata Roga (Diseases of Tongue)

- a) Detailed study of Etiology, pathology, classification, clinical features and management of - jivha kantaka (vataja, pittaja and kaphaja)
- b) Brief Knowledge of Upajihva, Adhijihva, Alasa.
- c) Knowledge of Glossitis, Tongue Tie, Ranula, Benign and Malignant Tumors of tongue.

Talu Roga (Diseases of Palate)

- a) Detailed study of Etiology, pathology, classification, clinical features and management of - Gala shundika, Talushosha, Talupaka
- b) Brief Knowledge of Talupupputa, Adhrusha, Kacchapa, Talvarbuda, Mamsasanghata.
- c) Knowledge of Cleft palate, palatitis, uvulitis and tumours of the palate.

Kantha and Gala gata Roga (Diseases of Pharynx & Larynx)

- a) Detailed study of Etiology, pathology, classification, clinical features and management of - Tundikeri, Kantha shaluka, Gilayu, Galaganda,

- Swrabhedha , Galavidradhi.
- Brief Knowledge of Rohini, Galashotha, Kantharbuda, Kanthavidradhi, Galarbuda Galaugham, Vrindam, Ekavrindam, Valaya, balasa , Shataghni, Swaraghna.
 - Detailed study of Etiology, pathology, classification, clinical features and management of - Pharyngitis, Laryngitis, Tonsillitis & Adenoiditis
 - Brief Knowledge of foreign body in the throat, Carcinoma of Larynx & Pharynx, Dysphagia Diphtheria & diseases of salivary glands.

Sarvasara Mukha Roga (Generalised mucosal affections of the oral cavity)

- Detailed study of Etiology, pathology, classification, clinical features and management of Sarvasar mukhapaka
- Brief Knowledge of urdhvaguda, putivaktrata, mukharbuda
- Detailed Knowledge of Stomatitis.

VI Miscellaneous Diseases

National Programme for Prevention and Control of Deafness.

PRACTICAL

Content of Practical

Identification, Uses, Demonstration of surgical/non-surgical equipment/ instruments, materials used in shalaky chikitsa. Method of sterilization. Training of case taking, bedside clinics and case presentation.

Training in para- surgical procedures-

- Kshara karma
- Agnikarma
- Raktamokshana
- Training of ward procedures. Application of bandages, wound management
- Training of minor procedures (ashtavidha)
- Observation of surgical procedures in Shalaky

Clinical Training	04 Months (OPD, IPD OT and kriya kalpa)

Shiv Nath Khanna
Dr. P.K.Shantha kumara
Prof. K. S. Dhiman

4.5 Research methodology and Medical statistics

Total Marks 50 (Part A-30 and Part B- 20)

PART – A –Research Methodology

1. Brief historical background of research in Ayurved and contemporary medical science
Evidences of researches in ayurvedic classics
2. Etymology, definitions and synonyms (Anveshana, Gaveshana, Prayeshana, Anusandhan and Shodha) of the word Research
3. Research in Ayurved - Scope, need, importance, utility
4. Types of Research (familiarization of the terms)
 - a) Pure and Applied
 - b) Qualitative , Quantitative and Mixed
Observational and interventional.
5. Research process (Importance of each steps in brief)
 - a. Selection of the topic
 - b. Review of the literature
 - c. Formulation of Hypothesis
 - d. Aims and Objectives
 - e. Materials and methods
 - f. Observations and results
 - g. Methods of communication of Research
6. Research tools – Role of the pramanas as research tools
7. The concept and importance of ethics in research
8. Concept of Evidence Based Medicine and Scientific Writing
9. Importance of IT in data mining and important research data portals concerned with Ayurved and contemporary medical science (DHARA , PubMed, Ayush Research Portal, Bioinformatics Center, Research Management Informatic System etc.)

Part – B Medical-Statistics

1. Definition, scope and importance of the Medical statistics
2. Common statistical terms and notations
 - a. Population
 - b. Sample
 - c. Data
 - d. Variable
 - e. Normal distribution
3. Collection and Presentation of data
 - a. Tabular
 - b. Graphical
 - c. Diagrammatical
4. Measures of location
 - a. Average
 - b. PercentileMeasures of Central Tendency
 - a. Arithmetic mean
 - b. Median

- c. Mode
- 5. Variability and its measurement
 - a. Range
 - b. Standard deviation
 - c. Standard error
- 6. Introduction to probability and test of significance
- 7. Parametric and non parametric tests
- 8. Introduction to commonly used statistical soft-wares.

AYURVEDIC PHARMACEUTICS
D. Rasa Shastra and Bhaishajya Kalpana
First year

Theory (Two papers) - Maximum Marks -100 (each)
Practical (one) - Maximum Marks-100

Paper – I
Raw Materials Science
Part-A

1. Definition and categories of raw materials from plant, animal, metallic and mineral origin.
2. Plant concentrates, extracts and exudates, resins, excipients, sweetening agents, volatile oils, perfumes, flavours and colours.
3. Collection, shelf-life and storage of raw materials.
4. Study of plant material derived from prioritized medicinal plants.
5. Study of nomenclature, synonyms, description-macro and micro, identification, purity and strength, constituents, assay, properties – pharmacological activity, important formulations, therapeutic uses and dose of raw materials as given in the pharmacopoeia as applicable for following plants.

109) Yavani	110) Devadaru	

Part-B

1. Short introduction to minerology - including the process of mineral origin and formation, classification of minerals, their geographical distribution, as well as their utilization. Physical, chemical and minerological properties, identification, classification, categorization, pharmacological properties and uses of minerals.
2. Brief introduction to metallurgy, including the physical and chemical behavior of metallic elements, extractive metallurgy, properties of metals, important common alloy systems, general principles of metal working process, various heat treatments and chemical properties of metals.
3. Definition, classification, scientific and classical nomenclature, synonyms, characteristic features, physico-chemical properties of Rasa, Maharasa, Uparasa, Sadharanrasa, Ratna-Uparatna, Vishopavisha, Dhatu and Upadhatu (Metals and mineral containing drugs) along with their properties, pharmacological activity, important formulations, therapeutic uses and dose.
4. Brief introduction to animal products used in therapeutics, their physical and chemical properties, pharmacological activity, therapeutic uses and dose.
5. Storage and shelf life of metal, mineral and animal origin raw materials.

Paper – II

Drug Standardization and Regulations

Part-A

1. Methods of drug standardization in relation to drugs prepared from plant, mineral, metal and animal products.
2. Concept of evaluation of Plant drugs as per WHO guidelines.
3. Review of general methods of evaluation of drugs and foods.
4. Morphological, Microscopical, Cytomorphological examination of finished products.
5. Determination of physical and chemical constituents and its extractive values.
6. Techniques of separation, identification, estimation and characterization of various chemical components of drug.
7. Determination of Physical, Chemical and Biological adulterants and contaminants.

Part-B

Indian Statutory Regulations applicable to Ayurvedic products

1. Good Manufacturing Practices related to Ayurvedic Drug Industry.
2. Laws Governing Pharmacy
 - a) Relevant regulatory provisions of Ayurvedic drugs in Drug and Cosmetic Act 1940 and Rules 1945
 - b) Laws pertaining to Drugs and Magic remedies (objectionable advertisement) Act-1954.
 - c) Prevention of Food Adulteration (PFA) Act.
 - d) Laws pertaining to Narcotics
 - e) Factory and Pharmacy Acts
 - f) Consumer Protection Act -1986
 - g) Standards of Weights and Measures (Enforcement) Act 1985
3. Regulatory Affairs related to International Trade and Practices of Ayurvedic Drugs.
4. Introduction to Ayurvedic Pharmacopeia of India, Ayurvedic Formulary of India.
5. Introduction to Indian Pharmacopeia, British and United States Pharmacopeia, Pharmacopeial Codex.
6. Introduction to Traditional Knowledge Digital Library.

Patent and product registration

1. Intellectual property, importance and types of intellectual property.
2. Paris convention, World Trade Organization and GATT.
3. The Indian Patents Act 1970 and Indian Patents (Amendments) Act 2005.
4. Concepts of patentability – issue of novelty, inventive steps and industrial application with special reference of differences in Indian, United States and European patents.
5. Knowledge of US FDA and statutory regulations as applicable to plant drugs in U.S.
6. Introduction to European Union. Traditional Health Medicinal Product Directive (THMPD) and other directives and regulations related to plant drugs, Nutraceuticals applicable in European Union.

7. Introduction to product registrations in many countries such as - Natural Health Products of Canada, Traditional Medicine Registration of Malaysia, EMEA's Human Herbal Medicines, etc.
8. New Drug Application (NDA) and Abbreviated New Drug Application (ANDA).

Second Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) – Maximum Marks -100

Paper - I

Pharmaceutical Technology of Kashtaushadhi

Part-A

1. Introduction to Pharmaceutical technology, standard operating and manufacturing procedures.
2. Dosage forms of drugs- liquids, semi-solids and solids.
3. Size reduction- disintegrator, hammer mill, ball mill, fluid energy edge runner, roller mill.
4. Size separation, mixing and homogenization.
5. Filtration- various devices and methods.
6. Extraction- percolation and maceration, infusion, decoction, soxhlet extraction.
7. Distillation- Double and triple distillation, fractional distillation (rectification), molecular distillation, vacuum distillation.
8. Heat processes- fusion, calcination, ignition, exsiccation, sublimation.
9. Drying process– knowledge of current and advanced technologies of drying.
10. Freeze drying (Lipholization).
11. Tablet making- types of tablets, binders, adhesives, lubricants, colorants etc., compression- single, multiple station machines, coating, polishing.
12. Capsules– types of capsules, hard and soft gelatin, granulation, capsule filling technology.
13. Introduction to Stability studies and use of preservatives, anti-oxidants and other material with reference to shelf life of drug material.
14. Syrups, elixirs, ointments, emulsion, pastes, dental and cosmetic preparations.
15. Packaging technology, strip packing, blister packing, aerosols, labeling.
16. Marketing of Pharmaceutical products

Part-B

1. Introduction to technical terminologies used in Bhaishajya Kalpana.
2. Definition, composition, method of preparation of following dosage forms:
 - a) Liquid dosage forms - Svarasa, Kvatha, Hima, Phanta, Taila, Asava-Arista and Basti kalpa, etc.
 - b) Semi Solid Dosage forms – Avaleha, Ghrita, Kalka, etc.
 - c) Solid dosage forms – Churna, Gutika, Vati, Varti, Guggulu, Kshara, Lavana, Tablet, Capsules, etc.
 - d) Pathya / Aahara kalpana- Krita- akrita and Aushadh Siddha.

- e) Topical dosage forms – Malahara, Upanaha, Lepa, Udvardana, Karnapurana, Anjan, Ascchyotanadi Netra Kalpa, Nasya Kalpa and Mukha Kalpa.
- f) Preparation of Ksharasutra.
- 3. Study of organoleptic and physico-chemical characteristics, determination of heavy metal content and microbial load in different formulations.
- 4. Study of therapeutic uses, dosage and method of applications of different dosage forms described in Bhaishajya Kalpana.
- 5. Introduction to methods of packing and storage of drugs.
- 6. Introduction to new dosage forms –
 - a) Neutraceuticals and food supplements.
 - b) Concept of Organic food and Genetically Modified Food
 - c) Cosmeceuticals / Cosmetics – Study of ingredients used in various cosmetic products such as creams, powders, lotions, hair oils, toiletries, etc.
 - d) Introduction to raw materials of plant origin like fixed oils, waxes, gums, hydrophilic colloids, colours, perfumes, protective agents, bleaching agents, preservatives, antioxidants and other ancillary agents.
 - e) Plant Products – Evaluation of plant products using physico-chemical studies in whole form and identification of chemical components.

Paper – II
Pharmaceutical Technology of Rasaushadhi

Part-A

1. Introduction to technical terminologies used in Rasashastra
2. Knowledge and application of yantra, puta, musha, chullika, koshthi etc. used in preparation of Rasaushadhis.
3. Introduction to current technology and equipments such as heating appliances like furnaces, boilers, drying chambers, heating mantles, hot plates, gas stoves, mixers, grinders, edge and end runners, mills, shifters, sieves used in pharmaceutical processing, manufacture and quality control of Rasaushadhi.
4. Concept of pharmaceutical engineering and instrumentation technology.

Part-B

1. Knowledge and application of processing techniques in Rasashastra.
 - a) Shodhana of raw materials like Rasa, Maharasa, Uparasa, Sadharanarasa, Ratna-Uparatna, Vishopavisha, Dhathu and Upadhatu. (Metals and mineral containing drugs).
 - b) Marana, Satvapatana, Amritikarana, Lohitikarana, Druti Nirmana of Rasa, Maharasa, Uparasa, Sadharanarasa, Ratna-Uparatna, Vishopavisha, Dhatu and Upadhatu.
2. Definition, composition, method of preparation of following dosage forms:
 - a) Pishti
 - b) Khalvi Rasa
 - c) Parpati Rasa
 - d) Kupipakva Rasa
 - e) Pottali Rasa

3. Study of organoleptic and physico-chemical characteristics
4. Determination of microbial load and heavy metal content (wherever relevant) in different formulations.
5. Study of therapeutic uses, dosage and method of applications of different dosage forms described in Rasashastra.
6. Introduction to methods of packing and storage of Rasaushadhi.

PRACTICALS

Contents of Practical

1. Preparation of minimum two formulation of each class (Total 50).
2. Work experience in every pharmaceutical process.
3. Visit to two GMP certified pharmacies.

Pattern of Practical Examination

1. Practical Records	10 marks
2. Practical (Rasa Shastra)	20 marks
3. Practical (Bhaishajya Kalpana)	20 marks
4. Project Work	20 marks
5. Viva - voce	30 marks
Total	100 marks

AYURVEDIC DIETETICS
[Diploma in Nutrition - Ay.] (D.N. (Ay.))

First Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) - Maximum Marks-100

Paper - I
Maulika Siddhanta
Part-A

Ahara (आहार)

1. Its व्युत्पत्ति (etymology), निरूक्ति एवम् परिभाषा।
2. History of the evolution of the Ahara Shastra from primitive times to today's era – From the use of raw food in the primitive times to the gradual change in the dietary habits according to time and invention of various Ahara Kalpana. The relevant references of Ahara Dravya and its kalpana in the ancient texts like Veda, Upanishada, etc.
3. Vaidyakiya Subhashita Sahityam (वैद्यकीय सुभाषित साहित्य)– Chapters 13, 14 and 36
4. Understanding the Ahara and Sharir relationship based on-
 - a) Loka-Purusha Samya Siddhanta (लोकपुरुषसाम्यसिद्धान्त)
 - b) Samanya Vishesha Siddhanta (सामान्यविशेषसिद्धान्त)with examples.
 - c) Panchamahabhuta Siddhanta (पंचमहाभूतसिद्धान्त)
 - d) Tridosha Siddhanta (त्रिदोष सिद्धान्त)
5. Classification of Ahara based on its Prabhava:
 - a) Sukhakar (सुखकर) – Dukhakar (दुःखकर) - Psychological concept
 - b) Satmya (सात्म्य) – Asatmya (असात्म्य) - Physiological concept
 - c) Pathya (पथ्य) – Apathya (अपथ्य) - Physio-pathological concept
 - d) Hitkara (हितकर) – Ahitkara (अहितकर) - (Ekantika Hitkar, Ekantika Ahitkar)
6. Role of Avastha-
7. Classification of Ahara according to its mode of intake- Bhakshya (भक्ष्य), Bhojya (भोज्य), Lehya (लेह्य), Chooshya (चूष्य), etc.
8. Classification of Ahara based on Source (Yoni) – Sthavara, Jangama, Khanija.
9. Classification of Ahara as Samisha (सामिष) and Niramisha (निरामिष) and their individual properties and effect on the body.
10. Understanding of this classification in context with social and health status, opinion of contemporary medicine for this classification.

Part-B

Ahara and Physiological Study (आहार और शारीर क्रिया)

1. Detailed understanding of Ahara Dravya on the basis of Shadrasa (6 tastes)
2. Effect of Desh on Ahara
3. Effect of Kaal on Ahara
4. Effect of Ahara on self (आहार विज्ञानम्)
5. Ahara and Sharir Sambandha: (आहार-शरीर संबन्ध)
 - a) The concept of Panchabhautikatva of Ahara as well as Sharir
 - b) Dosha, Dhatu, Mala and Oja vigyana. (Prakrita Sthana, Guna, Karma, Prakara, Vriddhi, Kshaya, Pradoshaja Vikar, Sama, Nirama and Dhatu Sara Lakshnanani)
 - c) Effect of Ahara Dravya on Tridosha and Triguna
 - d) Interrelation between Ahara and Agni.
 - e) Agni vinyan (अग्नि विज्ञान) – Types of Agni, Prakrit Agni (प्राकृत अग्नि) and Vikrit Agni (विकृत अग्नि).
 - f) Inter relation between Ahara and Srotas.
 - g) Srotasvinyan (स्रोतस् विज्ञान) – Description of the Srotas according to Charak and Sushrut Samhita and effect of Ahara Dravya on these Srotas.
6. Prakriti Vinyan (प्रकृति विज्ञान): Understanding of Prakritiyadi Dasha Pariksha Vidhi.
 - a) Body constitution, mental constitution, the dominant Guna and the status of Agni in different Prakriti and their importance in the selection of appropriate Ahara.
 - b) Understanding of the Manasik Prakriti of a person on the basis of the diet preferred by the person.
7. Pachanakriya and Dhatu Poshana:
 - a) Pachana Samsthana - A brief review of the organs which take part in the process of Ahara Pachana- Amashaya, Grahani, Pakwashaya, Yakrita, Agnyashaya, etc.
 - b) Trividha Awasthapaka (त्रिविध अवस्थापाक)
 - c) Aharaparinamakara Bhava (आहारपरिणामकरभाव)
 - d) Dhatu Poshankrama (धातु पोषणक्रम)- Trividha Nyaya (त्रिविधन्याय) - Kshiradadhinyaya (क्षीरदधिन्याय), Kedarikulyanyaya (केदारीकुल्यान्याय), Khalekapotanyaya (खलेकपोतन्याय)
 - e) Effect of Dravya, Matra and Kaal on Annapachana Kriya (अन्नपाचनक्रिया)
 - f) Role of Tridosha along with their subtypes in the process of Ahara Parinama or Pachana.
 - g) Sarakitta Vibhajana (सारकित्ट विभजन)
 - h) Samyaka Pachana Lakshnanani (सम्यक पचन लक्षणानि)
 - i) Dhatu Utpatti Krama (धातु उत्पत्ति क्रम)
 - j) Saarata Nirmana (सारता निर्माण)
 - k) Oja Utpatti (ओजोत्पत्ति)

Paper - II
Ahara- Dravya – Guna Kalpana Evam Sanskara Gyana
(आहार द्रव्यगुण कल्पना एवं संस्कार ज्ञान)

Part-A

1. Classification of the Ahara Dravya on the basis of Gurvadi (गुर्वादि) and Paradi (परादिगुण) Guna with Rasa panchaka and their utility particularly of Paradi Guna in the preparation and Gurvadi Guna in the selection and administration of Ahara Dravya.
2. Prakritisamasamaveta Dravya (प्रकृतिसमसमवेतद्रव्य), Vikritivishamasamaveta Dravya (विकृतिविषमसमवेतद्रव्य)
3. Samanapratyarabdha dravya (समानप्रत्यारब्धद्रव्य), Vichitrapratyarabdha Dravya (विचित्रप्रत्यारब्धद्रव्य)
4. Study of single dravya
5. Ahara Dravya– 14 Ahara Varga (आहार वर्ग)–
 - a) शूकधान्यवर्ग
 - b) शिंबीधान्यवर्ग
 - c) शाकवर्ग/पत्रशाक
 - d) हरितवर्ग
 - e) लवणवर्ग
 - f) गोरसवर्ग
 - g) मांसवर्ग
 - h) तैलवर्ग
 - i) फलवर्ग
 - j) इक्षुवर्ग
 - k) मधुवर्ग
 - l) मद्यवर्ग
 - m) जलवर्ग
 - n) आहार योगि वर्ग
6. All the classifications of Ahariya and Paniya Dravya in Brihatrayi (Varga Gyana)

Part-B

Ahara Kalpana (आहार कल्पना)

1. Introduction and Importance of Ahara kalpana.
2. Use of Paradi-Guna in Ahara kalpana, Methods of processing of various Ahara Dravya including water (both in the ancient times and present era) with respect to following Processes with examples-
3. Types of Samsakara (Processes)-
 - a) Roasting - भूनना / भर्जित
 - b) Boiling - उबालना
 - c) Baking
 - d) Fermenting - सन्धान
 - e) Mixing - मिश्रण
 - f) Wet Mixing - घोल
 - g) Dry Mixing - शुष्क मिश्रण
 - h) Churning - मंथन
 - i) Preserving / Pickling - संरक्षण उपाय/अचार

j)	Smoking	-	धूपन
k)	Frying	-	तलना
l)	Rubbing	-	घिसना / पीसना / मसलना
m)	Heating	-	गर्म करना
n)	Soaking	-	भिगोना
o)	Pounding / Crushing	-	कूटना
p)	Garnishing	-	प्रक्षेप
q)	Temperature regulation	-	ताप नियन्त्रण
r)	Washing	-	धोना
s)	Doughing	-	पीडन एवं पिण्डीकरण
t)	Chopping	-	काटना
u)	Sprouting	-	विरूढ

4. Understanding the action of samskara individually and also in combination.
5. Indications, contraindications and role of each samskara during preparation of recipe.
6. Alterations in Guna of Krita and Akrita Kalpana of Dravya with examples as Kritanna Varga – Manda, Peya, Vilepi, Yusha (Krita and Akrita), Yavagu, Odana, Siddhodana, Mantha, Khada, Kambalika, Kulmasha, Ladduka, Apupa, Modaka, Veshavara, Parpat, Dugdha vikriti, Payasam, Lapsika, Takra kalpana, Vatakam, Shadava, Saktu, Ghratapura, Phenika, Samyava (गुड़िया), Shulyadi mansa prakara alongwith other Sneha pravicharna, their use and effect on body.
7. Samisha and Niramisha Kalpana and their comparative effect on the body.
8. Guna of the Ahara Dravya traditionally used in day to day diet e.g. Roti of the various cereals available (Wheat, Maida, etc.), Dals, Vegetable preparations, Chutneys, Pickles, Papad, Salad, etc.
9. Food value of Virudha Ahara prevailing in the society traditionally.
10. Ahara Dravya and Kalpana commonly used in the present era. e.g. bread, pizzas, burgers, chats, cold drinks, coffee, tea, canned food, etc. and their effect on the body.
11. The Bhakshya, Lehya, Chushya and other Kalpana with their criteria of selection and effect on the body.
12. Ancient system and Contemporary Sanskara and effect of Ancient and Modern tools used for various Ahara Kalpana on Ahara Dravya e.g. kandookadi (तन्दूर), cookers, mixers, gas stoves, ovens, microwave, choolah, etc.
13. Preservation techniques of various Krita as well as Akrita Ahara Dravya (both ancient and modern kriya), their effect on Guna and Karma of Ahara Dravya.
14. Samyogkarna, Sayogvidhi Sayogakaal of Ahara Yogi Dravya.
15. The Dravya used as flavouring agents in the Ahara recipes. eg. Haridra, Sarshapa, Methika, Jeeraka, Hingu, Maricha, etc. Changes in the Guna of the Kalpana by their addition and manner and time of addition during the preparation of the Kalpana (e.g. addition of Haridra during the time of boiling of the uncooked Dal or after it is properly cooked changes the properties of the Kalpana) and their effect on the body.

16. Paryushita Ahara (पर्युषित आहार) –Definition, Guna and its effects on the body. The specific time after which the particular Kalpana can be called as Paryushita e.g. Mamsa, Odana, Dugdha, etc. Kalpana have shorter time span but pickles, fried or dried foods have a longer time span.
17. Savishakta Lakshanani (सविषाक्त लक्षणानि) - Garavisha Lakshanani (गरविष लक्षणानि) – The factors like nature of dravya, their specific samyoga with other substances, their Kalpanas, specific Patra, Kaal and Agni Samskar which add to Vishaktata of Ahara Dravya.
18. Siddha Annpariksha (सिद्धान्तपरीक्षा) - (पक्व अपक्व अन्न परीक्षा) Ancient methodology of cooked food.
19. Viruddha Ahara- 18 types.
20. Modern food analysis methods- Adulteration, Pesticides, Insecticide, Fertilizers and Soil therapy, understanding of organic and inorganic food items.
21. PFA (Prevention of Food Adulteration Act).

Second Year

Theory (Two papers) - Maximum Marks -100 (each)
Practical (one) – Maximum Marks-100

Paper – I

Health Promotive Dietetics

(स्वास्थ्यवर्धक आहार विहार)

Part-A

Swasthya (स्वास्थ्य)

1. Swastha – Paribhasha and Vyutpatti.
2. Trayopasthambha (त्रयोपस्तम्भ) – Ahara, Nidra and Brahmacharya.
3. The preventive and promotive aspect of Ahara. The same Ahara which is responsible for the Sharir Poshana, if used against the rules and regulations of Ahara Vidhi is the cause of Vyadhi.
4. Ahara and its selection according to the norms of Dinacharya, Ritucharya, Desh, Prakriti, Kaal, Vaya, Agni, etc.
5. Ahara Vidhivisheshayatanani (आहार विधिविशेषायतनानि), Aharamana Vikalpa Vishesha (Kashyapa- Khilasthana), Ahara vidhi vidhana (च.वि.1), Dwadasha Ashana Pravicharana.
6. Concept of Trividha Kukshi. (च.वि.2).
7. Concepts of Samashana, Adhyashana, Atyashana, Anashana, Vishamashana. Samkirna Bhojana and their effect on health.
8. Method of serving Ahara Dravya– Ancient and Modern methodology .

9. Ahara Vidhi (आहार विधि)- Bhojana Vidhi (प्रधानकर्म), Bhojana Purva (पूर्वकर्म) and Paschata Karma(पश्चातकर्म) e.g. use of Lavana and Ardraka before meal, walking of a hundred steps after meals (शतपदचंक्रमणं), sleeping on the left side (वामपार्श्व शयन) etc. after meals.
10. Tambula sevana and its utility and unhealthy aspect.
11. Changes in the Bhojana Vidhi in present era and its effects on the body.
12. Effect of disturbed meal and sleeping timings (working in shifts) on health and its dietary management.
13. Sahapana - Anupana (Use of liquids in the diet - analysis based on their quantity, quality and mode of administration).
14. The various types of vessels or utensils used for cooking, storing, serving and eating and their effects on the Ahara components - (ancient as well as modern aspect).

Part-B

Pathya

1. The definition of Pathya, Apathya, Upashaya and Anupashaya
2. Pathyapathya according to Prakriti, Desha, Kaal and Agni.
3. Ekantatah Ahita and Hita Ahara
4. Abhyasa Yogya Ahara Dravyaani, Abhyasa Ayogya Ahara Dravyani.
5. Concept of Satmya and Asatmya. Methodology of leaving Asatmya Ahara and adapting Satmya Ahara in one fourth parts of the total Ahara quantity. (पादांश परित्यागतः आहार त्याग विधि)
6. Study of Desh Satmya, Deha Satmya.
7. As per Ayurveda and Modern dietetics - signs and symptoms of optimum, under and over nutrition.
8. Balanced diet, food counseling and budgeting and meal planning.

Rasayan and Vajikaran (रसायन-वाजीकरण)

1. Nitya Hita Rasayan Ahara Dravya
2. Nitya Ahita Ahara Dravya
3. Importance of Ahara in Apunarbhava Chikitsa
4. Ahara Dravya and their Kalpana which aid in Vajikaran e.g. Dugdha, Masha, Modaka, Rasala, etc.

Modern approach

Concepts in Modern dietetics-

1. Classification of dietary products as carbohydrates, proteins, etc.
2. Daily dietary chart.
3. Rules and regulations followed during eating.

4. Nutrition Education
 - a) Nutrition and Health Status of Community
 - b) Learning and working with Community
 - c) Factors influencing Community Nutrition
 - d) Themes and messages in Nutrition Education
 - e) Method of communication in Nutrition Education
5. Nutrition Programme -
Past and Present Programme - ICDS (Integrated Child Development Services) etc.
6. Nutrition Education Programme - Planning, Implementation, Evaluation etc.

Paper - II
Therapeutic Dietetics
(रोगानुसार आहार)

Part-A

Ahara as a cause of disease

1. Ahara Dravya responsible for Agni dushti, Dosha dushti, Mano dushti, Indriya dushti, Dushya Daurbalyakar, Khavaigunya, Srotodushti, Amotpadaka and Ama Pradoshaja Vikar and Dhatu Pradoshaja Vikar
2. Ahara Kaal Diseases – Akaal Bhojana –Atitkaal Bhojana
3. Avidhi Bhojana – Disease due to not following the code and conduct of food like Dwadasha Anna Pravicharana
4. Manoabhighatkara Bhava and their effect on food intake, digestion and diseases
5. Nutrition related disorders- Santarpanajanya and Aptarpanajanya Diseases
6. Food borne diseases- Diseases due to sankramita, vishakta and paryushita ahara
7. Food, facts and misconceptions.

Part-B

Chikitsa

1. Ahara as Maha Aushadha.
2. Shadavidhopakrama Anuroopa Ahara (षडविधोपक्रमानुरूप आहार)
3. Importance of Pathyapathya in the treatment of following diseases-
 - a) प्राणवह स्रोतस – प्रतिश्याय, श्वास, कास, हिक्का, राजयक्ष्मा।
 - b) अन्नवह स्रोतस – अम्लपित्त, अजीर्ण, ग्रहणी।
 - c) उदकवह स्रोतस – उदर रोग, शोथ।
 - d) रसवह स्रोतस – हृद्रोग, ज्वर, पांडु।
 - e) रक्तवह स्रोतस – अर्श, कामला, रक्तपित्त, विसर्प।
 - f) मांसवह स्रोतस – अर्बुद, ग्रन्थि, अपतर्पणोत्थ विकार – काश्यादि।
 - g) मेदोवह स्रोतस – संतर्पणोत्थ विकार – स्थौल्य, प्रमेह।
 - h) अस्थिवह स्रोतस – संधिगतवात, वातव्याधि।
 - i) मज्जावह स्रोतस – भ्रम।
 - j) शुक्रवह स्रोतस – क्लैब्य, वंध्यत्व, गुह्यरोग।

- k) पुरीषवह स्रोतस - अतिसार, प्रवाहिका।
 l) मूत्रवह स्रोतस - अश्मरी, मूत्रकृच्छ्र।
 m) स्वेदवह स्रोतस - कुष्ठ।
 n) मनोवह स्रोतस - उन्माद, अपस्मार, अतत्वाभिनिवेश।
 o) संज्ञावह स्रोतस - सन्यास, मूर्च्छा, मदात्यय ।
4. Guidelines for dietary causativity (आहार कारणता) and dietary treatment (आहार चिकित्सा) of contemporary prevalent diseases - e.g. Hypertension, Angina, Diabetes Mellitus, Obesity, HIV , Cancer, Liver disorders, Stress, Musculo-skeletal disorders, Arthritis, Polio, Auto immune disorders, etc.
 5. Awastha Sapeksha Pathyapathya, importance of Ahara before, during and after Shodhana Karma, and surgical procedures.
 6. Use of liquids in Chikitsa as Anupana, their mode of action and specificity in relation to particular diseases with medicines and conditions where liquids are prohibited in diet e.g. Udararoga, Shotha, etc.
 7. Dietary Regimen according to Medicine and Rasayan.
 8. Ajirna Nashaka Gana (Bhaishajya Ratnavali and Yogaratnakara)

PRACTICALS

Contents of Practical

1. Selection of Ahara according to the occupation.
2. Selection of Ahara in specific conditions:
 - a) According to age – Bala (Infants, Preschool, School, Adolescent) Madhya evam Vriddhavastha
 - b) Pregnancy (Antenatal and Postnatal)
3. Effect of the changes in the method of Ahara intake in present era.
4. Case studies - 25 cases (Planning Dietary regimen for contemporary diseases mentioned in syllabus)

Pattern of practical

1. Case Record in respect to pathyapathya in various conditions of the diseases	10 Marks
2. Diet prescription for given cases	20 Marks
3. Spotting	20 Marks
4. Project Work	20 Marks
5. Viva-voce	30 Marks
Total	100 Marks

Text Books for Reference

1. Charak Samhita:
 - Sutrasthana – Chapter 1, 5, 6, 11, 13, 21, 22, 23, 25, 26, 27, 28 and 30;
 - Vimanasthana – Chapter 1, 2, 5 and 8;
 - Sharirsthana – Chapter 4 and 6;
 - Chikitsasthana – Chapter 1, 2, 15 and 23;
2. Sushrut Samhita:
 - Sutrasthana – Chapter 14, 15, 21, 40, 42, 45 and 46;
 - Sharirsthana – Chapter 1, 4 and 9;
 - Chikitsasthana – Chapter 26, 27 and 28;
 - Kalpasthana – Chapter 1;
 - Uttarasthana – Chapter 64;
3. Ashtanga Samgraha:
 - Sutrasthana – Chapter 3, 4, 6, 7, 8, 9 and 10
4. Ashtanga Hridaya:
 - Sutrasthana – Chapter 2, 3, 5, 6, 7, 8, 9, 10, 11, 13, 14 and 18;
 - Sharirsthana – Chapter 3;
 - Uttarasthana – Chapter 39 and 40;
5. Triskandha Kosh Especially : Tilak Ayurved Vidyapeeth, Pune, M.S.
Hetu and Chikitsa Kosha
6. Bhava Prakash
7. Kshemakutuhel : Indradeva Tripathi.
8. Yogaratnakar : Sadashiva Shastri
9. Chakradatta : Indradeva Tripathi
10. Siddha Bhaishajya Manimala
11. Bhojana Kutuhel : Raghunath Bhatta
12. Kaideva Nighantu : Acharya Priyavrat Sharma
13. Aartha Shastra (Food poisoning)
14. Nighantu Ratnakara : Panshikar
15. Pathya Apathya Adhikar : Shivadas

BALROGA

[Diploma in Paediatrics -Ay.] D.CH. (Ay.)

First Year

Theory (Two papers) - Maximum Marks -100 (each)

Practical (one) – Maximum Marks-100

Paper - I

Kaumarbhritya- Siddhanta (Fundamentals of Kaumarbhritya)

Part-A

Kaumarbhritya Paribhasha and Parichaya (Definition and Introduction), Pratishedha evam Samudayika Bal-Swasthya (Preventive and Community Paediatrics) and Bal-Panchkarma (Paediatric Panchkarma)

1. Definitions, Vaya vibhajan (classification of age), Raksha Karma, Lehan, Vyadhikshamatva and Vardhanopaya (concept of Immunity, Immunization), National Programme on child health care, role of Ayurveda in National Programme, Bheshaja and Bheshaja-Matra (Brief about the drugs and drugs dosages in children)
2. Bal-Panchkarma (Paediatric Panchkarma): Fundamentals of Purvakarma, Pradhan Karma and Paschata Karma in relation to Children. Panchkarma management of various paediatric disorders like Mashtishkaghat (Cerebral Palsy), Pakshaghat (Hemiplegia) Mamsagatvata (Muscular Dystrophy), Ardita (Facial Palsy), Ekangaghata (Monoplegia), Adharangaghat (Diplegia), Apasmara (Epilepsy), and Mastishka-shotha and Mastishkavarana-shotha janya updrava (Encephalitis and Post Meningitis Sequele) Aamvata (Rheumatoid Arthritis), Shwasgata Roga (Respiratory Disorders) and Twak Vikar (Skin Disorders)

Part-B

Balroga Nidan (Paediatrics Diagnostic Techniques) and Chikitsalaya Prabandhan (Hospital Management)

1. Vedanadhyaya, clinical examination of children, Roga and Rogi Pariksha Vidhi, common laboratory investigations including biochemical, haematological, urine and stool tests, use of X-ray, USG.
2. Chikitsalaya Prabandhan (Hospital Management) – Hospital function, staff pattern and their utilization, work load, maintenance of medical records, equipments and standards, evaluation of clinical services specific to paediatric hospital services and financial management in Hospital.

Paper - II
Kaumarbhritya-Samanya Vivechana (General Paediatrics)

Part-A

Vridhhi evam Vikasakram-Samanya evam Vikriti (Growth and Development along with related disorders), Poshana evam Kuposhanajanya Vyadhi (Nutrition and Nutritional disorders)

1. Important milestones in Infancy and early Childhood in the areas of gross motor, fine motor, language and personal-social development.
2. Anthropometry: Measurement and interpretation of weight, length/height, head circumference, mid arm circumference.
3. Dwarfism and other common genetic disorders related to growth and development.
4. Poshana evam Kuposhanajanya Vyadhi (Nutrition and Nutritional disorders)
5. Nutrition, nutritional requirements, nutritional disorders- Parigarbhika, Bal-Shosha, Karshya, Phakka.
6. Protein Energy Malnutrition: Definition, classification, clinical features of Marasmus and Kwashiorker. Etiology and management of PEM.
7. Vitamins-Diagnosis of vitamin deficiencies, hypervitaminosis and their management.

Part-B

Bal-Manovigyan evam Vyavaharajanya Vikar (Child psychology and behavioral disorders) and Atyayika Chikitsa (Emergency Management)

1. Mental development, ADHD, Pica, Nocturnal Enuresis, Learning Disability, Autism, etc.
2. Atyayika Chikitsa (Emergency Management), Visha-Chikitsa: Principles of Management of common poisons.
3. Anya Atyayika Avastha evam Chikitsa (Other emergency conditions and their management) - Status Asthmaticus, Status Epilepticus, Shock and Anaphylaxis in children, Fluid and Electrolyte management, Epistaxis, etc.
4. Different paediatric emergency procedures e.g. venepuncture, pleural tap, ascitic tap, blood transfusion and monitoring, lumbar puncture and blood sampling, etc.

Second Year

Theory (Two papers) - Maximum Marks -100 (each)
Practical (one) – Maximum Marks-100

Paper - I

Navjata Shishu Paricharya (Neonatal Care)

Part-A

Garbha Vigyaniya (Embryology) and Navjata Shishu Paricharya (Neonatal Care):

1. Garbha Vriddhi evam Vikasa (fetal growth and development), Garbha Poshana (fetal circulation, changes in fetal circulation after birth). Garbhopaghatakar Bhava (factors affecting fetal growth and development), Congenital Anomalies, Beejabhagavayava Vikriti (Genetic disorders)
2. Navjata Shishu Paricharya (Neonatal Care)
3. Sadyojat Shishu Paricharya: Definition – Live birth, neonate, neonatal period, classification according to weight and gestation, mortality rate, delivery room management, care of newborn, normal variations and clinical signs in the neonate, temperature regulation and transport of sick neonates.
4. Navjat Shishu Ahara (Neonatal feeding): Principles of feeding, Stanya (Breast milk) and their properties, Stanya Pariksha (examination of milk), Breast feeding, Problems in breast feeding.

Part-B

Navjata Shishu Vyadhi (Neonatal Disorders) and Navjata Shishu Kaksha Prabandhan (Nursery Management)

1. Pranapratyagaman (Neonatal resuscitation), Knowledge of traumatic disorders including perinatal injuries, Ulvaka (Aspiration pneumonia), Navjat Shvasavarodha (Asphyxia neonatorum): Clinical features, principles of management and prevention of Birth Asphyxia, Kamala (Neonatal Jaundice); Neonatal infections- Superficial infections, Sepsis, Hypoglycemia, Hypocalcaemia, Anemia, Necrotizing Enterocolitis, Akshepaka (Seizures), Raktavaishamyata (Rh and ABO Incompatibility), Sadhyojata Atyayaika Chikitsa (Management of Neonatal emergencies)- Diagnosis of life threatening conditions in neonates, management of common minor paediatric surgical disorders, hemorrhagic diseases of newborn.
2. Navjata Shishu Kaksha Prabandhan (Nursery Management) - Nursery plan, staff pattern, maintenance of medical records, Visanukramikarana (Sterilization), knowledge of equipments used in nursery such as resuscitation equipments, open care system, phototherapy, etc.

Paper - II
Balroga (Paediatric Disorders and their Management)
Part-A

1. Annavaha Srotasa Vikar (Gastrointestinal disorders)- Atisara (Diarrhoea), Assessment of dehydration, ORT/ ORS. Jirnatisara (Persistent/ Chronic Diarrhoea), etc.
2. Pranavaha Srotasa Vikar (Respiratory disorders)- Pratishyaya, Kasa (ARI), Pneumonia, Tamaka Swasa (Bronchial Asthma), etc.
3. Rasavaha and Raktavaha Srotovikar (Haemopoietic, Cardiovascular disorders)- Yakrita Shotha, Yakritodar (Hepatitis/Hepatomegaly), Pandu (Anemia), CHF, Thalassemia, etc.
4. Mutravaha Srotasa Vikar (Urinary disorders)- Acute post streptococcal glomerulonephritis, Nephrotic syndrome (Vrikka-shotha), Mutrakriccha (Dysuria), Mutraghata (Acute Renal Failure), etc.

Part-B

Aupsargika Roga, Krimi and Tvak Vikar (Infection, infestation and skin disorders) and Anya-Vikar (Miscellaneous Disorders)

1. Common bacterial, viral and parasitic infections with special reference to vaccine-preventable disease: Rajyakshma Roga (Tuberculosis), Rohini (Diphtheria), Kukkur Kasa (Whooping cough), Aptanaka (Tetanus including neonatal tetanus), Romantika (Measles, Mumps, Rubella and Chickenpox), Antrika Jwar (Typhoid and Viral hepatitis), Pravahika (Amoebiasis), Krimi Roga (Giardiasis and Intestinal helminthiasis); Vishama Jwar (Malaria, Kala Azar and Dengue Fever), Ahiputana (Napkin rashes), Shakuni (Impetigo), Sidhma, Pama, Vicharchika, Charmadal (Infantile atopic dermatitis).
2. Anya-Vikar (Miscellaneous Disorders): Jwar (Fever), rational management of PUO, clinical features, diagnosis, investigations, treatment and prevention of Aam-Vatik Jwara (Acute rheumatic fever), Basic concepts of Bal graha (specific syndromes).
3. Vata/Nadivaha Samsthan (CNS Disorders): Clinical diagnosis, investigations and treatment of pyogenic meningitis, encephalitis and tubercular meningitis. Apasmara (Seizural disorder) - causes and types of convulsion at different ages, diagnosis, categorization and management of epilepsy.
4. Antahsravi Granthi Vikar (Endocrinal disorders).

PRACTICALS

Contents of Practical

1. Kaumarbhritya- History taking, Clinical examination and complete record keeping – 10 cases
2. Navjata Shisu- History taking, Clinical examination and complete record keeping – 15 cases
3. Exposure of various Panchkarma Procedures in Balroga Practice – Minimum 50 procedures
4. Exposure to Neonatal Intensive Care Unit - The candidate should be posted in Neonatal Intensive Care Unit for atleast 150 hours per year.
5. Exposure to Pranapratyagaman Vidhi (Resuscitation Techniques) - The student should have exposure of Resuscitation Techniques on newborn “Mankin” and Live.
6. Exposure to use various instruments used in Neonatal Care Unit like Incubator, Radiant Warmer, Phototherapy, Bag and Mask etc.
7. Exposure to Immunization practices

Note: The Logbook and Case Record to be maintained and duly signed by teacher and Head of the department.

Pattern of Practical Examination:

1. Case Record	10 Marks
2. Case Taking	
a) Short Case	10 Marks
b) Long Case	20 Marks
3. Identification of instruments	10 Marks
4. Project Work	20 Marks
5. Viva-voce	30 Marks
Total	100 Marks

Text Books for Reference

1. Kashyap Samhita or Vridhajivakiya Tantra; with english translation and commentary : Prof. (Km.) P. V. Tewari with Dr. Neeraj Kumar, Dr. R. D. Sharma and Dr. Abhimanyu Kumar
2. Kashyapa Samhita (Hindi translation with commentary) : Nepal Raj Guru Pandita Hemaraja Sharma commentary by Shri Satyapal Bishagacharya
3. Charak Samhita : Pt. Kashi Nath Shastri, Dr. Gorakh Nath Pandey; Vishvabharti
4. Sushrut Samhita Commentary : Ambikadutta Shastri
5. Ayurvedic concepts of Human Embryology : Prof Abhimanyu Kumar
6. Ashtanga Samgraha (Part-I &II), Hindi commentary : Atrideva Vidyalankar
7. Madhava Nidan
8. Bhava Prakasha
9. Harita Samhita
10. Clinical Methods : Meharban Singh
11. Child Health Care in Ayurveda : Prof Abhimanyu Kumar

MANASIK SWASTHYA VIGYAN
[Diploma in Psychiatry - Ay.] D.P.M. (Ay.)
First Year

Theory (Two papers) - Maximum Marks -100 (each)
Practical (one) - Maximum Marks-100

Paper - I
Manovigyan
Part-A

1. A brief history of Manovigyan and Manasik Roga Vigyan from vedic period to modern psychology and psychiatry highlighting Ayurvedic contribution.
2. Synonyms, qualities, functions and Bhoutikatva and Ahankarikatva of Mana.
3. Satva and Sharir relationship, relationship between Tridosha and Mana.
4. Trigunatmakatva of mana.
5. Vata and Mana relationship - applied aspects.
6. Mana, Indriya and Oja relationship.
7. Jnanotpatti Prakriya- Sensory process and perception.
8. Atma and Mana relationship - applied aspects.
9. Knowledge and application of concept of Shatchakra.

Part-B

1. Manovaha srotas and its karma with sub classifications.
2. Psycho-anatomy and physiology of brain and related nervous system, psychoneuroendocrinology.
3. Behaviour, attitude and emotions.
4. Manas Prakriti – Personality.
5. Essential elements of Child psychology, Developmental psychology of child, adolescence and adult.
6. Assessment of Dhee, Dhriti and Smriti.
7. Assessment of cognition, intelligence and memory.

Paper - II
Manas Swasthya Vigyan
Part-A

1. Definition of Manas Swasthya.
2. Manasik Bhava, Satva assessment and examination of mind.
3. Nidra (sleep) – normal and abnormal.
4. Manovighatakara Bhavas.
5. Classification of Manasik Roga.
6. Etiology and patho-physiology of Manasik Vikar.
7. Psychiatric and psychometric tools for diagnosis.

Part-B

1. General line of treatment of Manasik Vikar.
2. Ayurvedic and modern principles of management of Manovikar
3. Preventive aspects of Manovikar – Achara Rasayan, Sadvritta, Shodhana, Rasayan
4. Oorjaskara and Manaskar Dravya
5. Psychological rehabilitation
6. Forensic psychiatry
7. Research and recent development in Manas Swasthya.

Second Year

Theory (Two papers) - Maximum Marks -100 (each)
Practical (one) - Maximum Marks -100

Paper – I

Manasik Roga Vigyan Part-A

1. Introduction to Bhutavidya and Graha Chikitsa.
2. General Etiopathogenesis of Unmada, classification and its modern correlation.
3. Nija Unmada and its management.
4. Agantuja Unmada and its management.
5. Chittodvega, Vishada, Atatvabhinivesha, Bhaya, Krodha, Kama, Lobha, Moha, Shoka, Maana, Dambha, etc. and their management.
6. Mood and effective disorders - Bipolar mood disorders, major depressive disorder, mania and their Ayurvedic correlation and management.

Part-B

1. Madatyaya (Alcoholism), other addictions related disorders and their management.
2. Substance abuse related disorders and their management.
3. Delusional disorders: Mano - Buddhi – Sangyajanana – Smriti Vibhrama and their management.
4. Sensorial disorders: Tandra – Murcha - Sanyasa and their management.
5. Apasmara (Epilepsy) and its management along with modern perspective.
6. Nidra vikar (Sleep disorders) and their management.
7. Sex related mental disorders and their management.
8. Altered life style and stress related disorders and their management.

Paper - II

Manas Swasthya Upakrama Vigyan Part-A

1. Childhood psychiatric disorders and their management (behavioural, learning and developmental disorders).
2. Jarajanya Manasik Vikar (senile psychiatric disorders) – Dementia, Alzheimer's disease and their management.
3. Importance of Panchkarma and allied procedures in the management of Manas Roga
4. Satvavajaya Chikitsa – Definition, relevance in manasik and manodaihika vikara.

5. Applied aspect of Ashtanga Yoga in Manovikar.
6. Daivavyapashraya and Adravya Bhuta Chikitsa in Manovikar.

Part-B

1. Schizophrenia and its Ayurvedic correlation and management
2. Somatoform and dissociative disorders and their Ayurvedic correlation and management
3. Importance and utility of Medhya Rasayan and Vajikaran drugs in Manas Swasthya.
4. Essentials of modern psychoneuropharmacology
5. A detailed study of Ayurvedic single and compound drugs for Manas Roga:
Single Drugs: Bramhi, Mandukaparni, Vacha, Sarpagandha, Shankhapushpi, Ashwagandha, Yashtimadhu, Guduchi, Jyotishmati, Kushtha, Tagara, Kooshmanda, Jatamansi, Swarna, Rajata, Pravala, Mukta and other useful medicines, etc.
Compound Drugs: Manasmitravati, Smritisagararasa, Unmadagajankhusharasa, Apatantrakarivati, Kumarakalyanarasa, Yogendrarasa, Kalyanakaghrita, Brahmighrita, Mahapaishachikaghrita, Panchagavyaghrita, Hingwadighrita, Kooshmandaghrita, Saraswatarishta, Ashwagandharishta, Himasagarataila, Brahmi Taila, Tungadrumadi Taila, Chandanadi Taila and other useful yoga, dhoopa, nasya and anjana yoga mentioned in the context of Apasmara and Unmada
6. Psychiatric Emergencies and their management

PRACTICALS

Contents of Practical

S.No.	Topic	No. of Cases	
1.	Hypnotherapy techniques	25	
2.	Case study-	a) Unmada	20
		b) Apasmara	20
		c) Atatvabhinivesh	10
		d) Chittodvega	20
		e) Vishada	20
		f) Madatyaya	20

NETRA ROGA VIGYAN
[Diploma in Ophthalmology-Ay.] D.O.(Ay.)
First Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) –Maximum Marks-100

Paper - I

Netra Chikitsa Vigyan – Maulika Siddhanta and Samanya Parichaya (Basic principles and General considerations in Ayurvedic Ophthalmology), Anusandhana evam anya Vishishta Vigyan (Research Methodology, Medical Statistics and Ethical Considerations)

Part-A

1. Etymological aspects- Shalakyia Tantra Nirukti, Parichaya and scope.
2. Historical considerations in Shalakyia Tantra (Itihasa, vikasa and contribution from ancient to modern era)
3. Importance of Shalakyia Tantra (Shalakyia Tantrasya Ayurveda Pradhanyam)
4. Importance of Head (Shiropadhanta) and organ of Vision (Sarvaendriyanam Nayanam Pradhanam)
5. Important texts of Shalakyia and contributors (Ancient ,medieval and modern period)
6. Netra Vyutpatti, Paryaya, Parichaya and Netra Panchabhautikata.
7. Netra Sharir Rachana and Embryological, anatomical considerations in Ophthalmology- basic and applied aspects

Part-B

1. Netra Sharira Kriya , Chakshurendriya Kriya and Physiological considerations in Ophthalmology- Basic and applied aspects
2. Shirogata Marma Vichara (Anatomical and clinical aspects of vital points of head and neck).
3. General methodologies of Research and Evaluation in Ayurveda and traditional medicine (drug development comprising of standardisation, quality control of drugs, pre clinical safety and toxicity and clinical evaluation, etc.)
4. Guidelines on Good Clinical Practices (GCP) and Good Laboratory practices (GLP)
5. Ethical considerations in clinical and biomedical research and practice alongwith medico legal aspect in Netra Chikitsa.
6. Current trends and Contemporary developments in Ophthalmology.

Paper - II

Netra roga Nidan evam Chikitsa Samanya Parichaya (General Principles of Clinical Diagnosis and Management in Ophthalmology)

Part-A

1. General examination of eye.
2. Subjective and objective examination and clinical methods in Ophthalmology.
3. Latest instruments, diagnostic tools, technology and its utility in diagnosis and evaluation.
4. Other advanced diagnostic techniques and imaging technology.
5. General aetiological considerations (Netra Roga Samanya Nidan).
6. Pathological considerations in Ophthalmology (Hetu, Samprapti).
7. General principles of management (Chikitsa Sutra)

Part-B

1. Preventive Ophthalmology (Preventive or Netrasanrakshanopaya)
2. Pathyapathya in Netra roga (Diet and practices in eye diseases)
3. Introduction to Ophthalmic surgical instruments and equipments (Netra sambandhi Yantra, Shastra Parichaya) and asepsis and sterilization methods - Ayurvedic and modern aspects
4. Classification of Eye diseases (Netra Roga Bheda) and its significance.
5. Community Ophthalmology.
6. Essential modern drugs and anaesthetic agents of diagnostic and surgical importance.

Second Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) - Maximum Marks-100

Paper - I

Clinical Ophthalmology (Sandhi, Vartma, Shukla, Krishna, Drishti, Sarvagata, Mandalagata Roga Vishesha Nidan evam Chikitsa)

Part-A

Sandhigata Roga, Vartmagata Roga, Shuklagata Roga

1. Introduction, aetiopathogenesis, clinical features and treatment.
2. Understanding and interpretations of diseases with a comparative study of contemporary knowledge of modern Ophthalmology.
3. Congenital, developmental, neoplastic and degenerative disorders, other ocular problems and their management.

Part-B

Krishnagata Roga, Drishtigata Roga and Sarvagata Roga

1. Introduction, aetiopathogenesis, clinical features and treatment.
2. Malnutritional ocular disorders.
3. Understanding and interpretations of diseases with a comparative study of contemporary knowledge of modern Ophthalmology and its management.
4. Eye donation, Eye Bank and Keratoplasty.
5. Basics of refraction and refractive errors.
6. Orthoptics and Neuro Ophthalmology.
7. National Programme for Control of Blindness.
8. Geriatric Ophthalmology(Jaravastha Janya Netra Vikar)
9. Ocular manifestation of systemic diseases
10. Ocular trauma and emergencies in Ophthalmology (Netra Abhighata and Atyayika chikitsa)
11. Congenital, developmental, neoplastic and degenerative disorders of Krishna, Drishti gata roga and other ocular problems.

Paper – II

Netra Kriya Kalpa, Netra Chikitsa Sambandhi Dravyaguna Evam Bhaishajya Kalpana Gyanam. Shastra, Anushastra and Other Vishishta Chikitsa Prayoga Gyanam

Part-A

Kriya Kalpa

1. Introduction, development of topical Ophthalmic therapeutic procedures (Netra rogeshu kriyakalpadi vishishtopakramascha parigyanam, vikas-krama cha)
2. Rational use and relevance of selection of Kriya Kalpas in the management of ocular diseases(based on inflammatory status of eye ,seat of origin of disease etc.)
3. Netra Kriya Kalpa procedures, Seka, Ashchytana, Pindi, Bidalaka, Tarpana, Putapaka, and Anjana and their practical aspects.
4. General introduction, types, indications, contraindications, dose, Kaal, Purva Karma, Pashchat Karma, Pradhan Karma, Complication, their management, drugs used for Seka, Ashchytana, Pindi,Bidalaka, Tarpana, Putapaka and Anjana.
5. Standard operative procedure in respect of application of Kriya Kalpa as well as preparation of the dosages used in the procedures.
6. Critical interpretation of Kriya Kalpa procedure based on the fundamentals of modern pharmacology viz. routes of administration, compliance, disposal , absorption, drug vehicles and bioavailability, duration and quantum of bioavailability and physical measures, Pharmaceutical dosage forms, etc.
7. Important Ayurvedic drugs/ formulations used in Ophthalmology (Netraroga chikitsa upayogi vishishtayoganam parigyanam).

Part-B

Lekhana, Chedhanadi Ashtavidh Shashtra Karma

1. Basic principles of Ophthalmic surgery (Shastra sadhya vyadhi parichaya)
2. Rational use and relevance of selection of surgical procedures in the management of ocular diseases
3. Modern ocular surgical techniques of the surgical diseases related to eye and its appendages.
4. General introduction, Poorva, Pradhan & Paschat karma, complications with management of Lekhana, Chedhana, Bhedhana, Vedhana, Eshana, Aaharana, Visravana and Seevana procedures with special Netra Roga Chikitsa.
5. Standard Operative Procedures to be adopted in above mentioned surgical procedures.

Raktamokshan (Therapeutic bloodletting)

1. Shuddha Raktalakshana, Dustarakta Lakshana
2. General introduction to Raktamokshan (Therapeutic blood letting), Jalaukavacharana (different types of Jalauka, collection and identification of Jalauka, Purva, Pradhan and Paschat Karma of Jalauka)
3. Procedure of Prachhanna (bloodletting by incision), Sira Vedha (bloodletting by venepuncture)
4. Complications and their management
5. Standard Operative Procedures

Agnikarma & Kshara Karma

1. Agnikarma and Kshara Karma applications in Netra Chikitsa and Utility of Lasers in Ophthalmology
2. Research and development (R&D) update on Ophthalmic drugs and surgical procedures

PRACTICALS

Contents of Practical

1. Application of Shadviddha parikshoupakrama in clinical Ophthalmology.
2. Clinical application of Asthaviddha shastrakarma and Ksharadi anushastra karma in Ophthalmic practice.
3. Retinoscopy followed by refractive corrections.

4. Diagnostic procedures
 - a) Anterior Segment – Gonioscopy, A scanning, B scanning, Pachymetry
 - b) Posterior Segment – Knowledge of Indirect Ophthalmoscopy and other aids for posterior segment examination
5. Therapeutic procedures
 - a) Observation, assistance and performance of parasurgical and kriyakalpa procedures.
 - b) Practical hands on modern Ophthalmic surgical procedures.
6. The candidate should fulfill the participation of compulsory regular In House Clinical postings at attached hospital of teaching institute, Postings at Exclusive Eye Hospitals, centres of excellence and other national and regional institutes of Ophthalmology supported by submission of Case Documentation throughout the two academic years.

Pattern of Practical Examination

1. Short case	10 Marks
2. Long Case	20 Marks
3. Procedures (Practical demonstration of Kriyakalpa/parasurgical/surgical procedures)	10 Marks
4. Project work	20 Marks
5. Viva-voce	40 Marks
Total	100 Marks

Text Books for Reference

1. Charak Samhita with commentaries
2. Sushrut Samhita with commentaries
3. Ashtanga Hridaya and Ashtanga Samgraha with commentaries
4. Madhava Nidan with commentaries
5. Bhavaprakasha with commentaries
6. Sarangadhara Samhita with commentaries
7. Sahashrayoga Samgraha
8. Chakradatta
9. Shalaky Tantra : Ramanath Dwivedi Chowkhambha Sanskrit Prathisthan, Delhi
10. Shalaky Tantra : R.C. Chaudhary, Chowkhambha Sanskrit Prathisthan, Delhi

PRASUTI TANTRA AND STRI ROGA
[Diploma in Obstetrics and Gynaecology-Ay.] D.G.O. (Ay.)

First Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) –Maximum Marks-100

Paper - I

Prasuti Tantra - Garbha Garbhini Prasava Vigyan

Part-A

1. Importance of Ayurvediya Prasuti Tantra evam Stri Roga in women health care
2. Epocs of woman's life
3. Stri vishishta sharir rachana (applied anatomy of female reproductive system, pelvis and pelvic floor)
4. **Garbha Vigyan**
 - a) Garbha paribhasha, Garbhadaana samskara (prenatal counselling), Garbhavakranti, Garbha Sambhava Samagri, Garbhasya Shadghatak, Garbhasya Panchabhautikatwa.
 - b) Garbhasya Masanumasika Vriddhi, Garbhasya Avayavotpatti, Garbhasya Poshana (Physiology of conception, implantation and embryology)
 - c) Jarayu, Apra, Nabhinala evam Garbhodak Nirmaan evam Karya (Formation and functioning of Placenta, Umbilical cord and Amniotic fluid)
5. **Garbhini Vigyan**
 - a) Sadyograhit Garbha Lakshan, Vyakt Garbha Lakshan, Pumsavan Vidhi, Garbhini Masanumasik Lakshan (Signs, symptoms, diagnosis and differential diagnosis of pregnancy)
 - b) Garbhini Paricharya (Anatomical and physiological changes during pregnancy, nutrition during pregnancy).

Part-B

1. Prasav Kaal, Sutikagaar, Prasav Paribhasha, Prasava Hetu, Prasav Kaleen Garbhashayantar Garbha Sthiti, Prasavasya Vividh Awastha, Aavi, Prasav Paricharya.
2. Intrapartum maternal and foetal monitoring, Partogram, CTG.
3. Prasav Purva Raktasrav (Ante partum haemorrhage)
4. Kritrim Prasav Arambh (Augmentation of Labour)
5. Sutika Vigyan, Sutikaki Paribhasha, Sutika Kaal, Sutika Paricharya, Sutika Kaleen Sarvadaihiik Parivartan
6. Stana, Stanya Sampat evam Stanya Dushti
7. Jatmatra Shishu Paricharya, Navjaat Shishu Paricharya.
8. Knowledge regarding writing research papers.

Paper - II
Stri Roga Vigyan
Part-A

1. Description of Raja, Artava and concept of Shukra in Stri Prathama Rajo Darshan (Menarche), Rituchakra (Menstrual cycle).
2. Ashta Artav Dushti, Shukra Dushti, Rajah Kshaya, Anartava including scanty menstruation and Amenorrhoea.
3. Asrigdar including abnormal uterine bleeding.
4. Rajo Nivritti (Menopause).

Part-B

1. Striroga vishishta sthanik chikitsa—Uttar Basti, Pichu, Yonidhavan, Dhoopan, etc.
2. Prasuti Tantra evam Stri Rogopayogi Aushadhasya Matra, Ghatak evam Upadeyata, (Pharmacology of selected Modern medicine used in Obstetrics and Gynaecology).
3. Stri evam Matru Kalyan Karyakram (National Programme related to Women Health Care), Parivar Niyojan evam Santati Nirodhasya Upaya evam Shalya Vidhi (Medical and Surgical methods of Female Contraception and Sterilisation)
4. Yogasya prasuti evam Stri Roga chikitsakeeya upayogita.
5. Chikitsiya upyogita of Rasayan in Prasuti evam Stri Roga.
6. Prasuti evam Stri Rogaya naidanikiya parikshana (Diagnostics in Obstetrics and Gynaecology)
7. Shock and its management, Raktadana, Fluid and Electrolyte imbalance, Fluid therapy.

Second Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) –Maximum Marks-100

Paper - I
Garbha Garbhini Evam Prasav Vyapad
Part-A

1. **Garbhavyapad** - Garbhasraav, Garbhapaat (Abortion), Garbhashosh, Upvishtak, Upashushka (IUGR), Leen Garbha, Mrit Garbha (IUD), Jarayu dosh (Abnormalities of Amniotic fluid, Placenta and Umbilical cord), Rakta Gulma Bahuapatyata (Multiple Pregnancy), Ectopic Pregnancy, Molar Pregnancy, Rh incompatibility.
2. **Garbhanga Vikriti** - Clinical aspects of genetics and teratology. Prenatal diagnosis of foetal abnormalities and its management.
3. **Garbhini Vyapad** - Kikkis, Makkal, Hrillas, Emesis and Hyperemesis gravidarum, Jwar, Pandu, Kamala, Garbha janya Vishmayata (Toxaemia in pregnancy), Infections during pregnancy, Hridroga, Prameha (Diabetes) etc.
4. High Risk Pregnancy, management of pregnancies complicated by medical, surgical or Gynaecological diseases.

Part-B

1. Kashta Prasav, Garbhasang, Vilambit Prasav, Distocia with its management, Garbha evam Matru Shroni Asamanjasya (CPD).
2. Malpresentations and their management
3. Aparasanga (Retention of Placenta and its management)
4. Prasavottar Raktasraav (PPH) and its management.
5. Complications during Labour and their management
6. Purva Kalik evam Kalateet Prasav (Preterm and post term labour)
7. Mudh Garbha (Obstructed Labour)
8. Sutika roga - Number, causes, clinical features, prognosis and treatment of Sutika Jwara, Shotha, Makkala and other complications.

Paper - II Part-A

1. Detailed study of Yoni Vyapad mentioned by different Acharya and their possible modern correlations
2. Yoni-Kand, Yoni-Arsha, Yoni-Arbud (Benign and malignant cysts and tumors of female genital organ) and PCOS
3. Stri Vandhyatva (Female infertility) and its management with Ayurvedic and Modern techniques.
4. Sexually transmitted disease AIDS, etc.
5. Stan Roga evam Chikitsa –Stan Vidradhi (Mastitis and Breast abscess).

Part-B

Shastra Karma

1. General principles of Gynaecological and Obstetric surgeries, analgesics and anesthesia in Gynaecology and Obstetrics, Nirjantukikaran (sterilisation), suturing materials and methods.
2. Muladhar Chhedan, Yantra Shastrena Garbhasya Aaharan, Udarpatan poorvak Garbha Nirharana.
3. Garbhashayamukh vistritikaran evam garbhashaya lekhan, Garbhashaya mukha samvritikaran, Garbhashayamukh dahan, Pap smear, Cervical biopsy, Swasthane garbhashaya sthapan, Yoni-arsh nirharan, Gulma Nirharan, Vidradhi Patan and Vrana Chikitsa.
4. Garbhashaya nirharana
5. Provision of safe abortion services.
6. Medico legal aspects in Prasuti Tantra including PNDT and MTP Act.
7. Record keeping of Gynaecological and Obstetrics cases.
8. Conditions and norms of referral cases in Gynaecology and Obstetrics.

PRACTICALS

Contents of Practical

A. Kriyatmaka

1. O.P.D and IPD duties	06 months
2. Labour Room duties	06 months
3. Ultrasound Unit	01 months
4. Casualty related to the subject	15 Days

B. Case records – Total 20 cases

1. Prasuti Tantra (Obstetrics)	10 cases
2. Stri Roga (Gynaecology)	10 cases

Pattern of Practical Examination

1. Case Record	10 Marks
2. Case Study	
a) Long Cases	20 Marks
b) Short Cases	10 Marks
3. Identification of Instrument	10 Marks
4. Project Work	20 Marks
5. Viva - voce	30 Marks
Total	100 Marks

Text Books for Reference

DRAVYAGUNA (PHARMACOGNOSY AND STANDARDIZATION)

D. Pharmacognosy (Ay.)

First Year

Theory (Two papers) - Maximum Marks -100 (each)

Practical (one) –Maximum Marks-100

Paper - I

Namaroopa Vigyan

Part-A

1. Historical background of Dravyaguna from Vedic era, Samhita and Nighantu periods till modern times.
2. Introduction to Pharmacognosy, methods of classification of crude drugs- morphological, microscopical, chemical, taxonomical, pharmacological, therapeutical, chemotaxonomical, etc.
3. Brief knowledge regarding nomenclature, identification and classification of drugs in Ayurveda based on Samhita and in various Nighantu.
4. Organized and unorganized drugs and their methods of evaluation.
5. Cultivation, collection, storage and preparation for the market of ASU Drugs. Introduction to Good Agricultural Practices (GAP), Good Field Collection Practices (G.F.C.P.) and Good Storage Practices (G.S.P.), etc.
6. Environmental (Desh, Kaal, Ritu, etc.), genetic and gender factors affecting qualities of crude drugs.

Part-B

1. Introduction of tissue culture techniques used for Ayurvedic Drugs.
2. Anukta dravya (extra Pharmacopeial Drugs).
3. Controversial aspects of Ayurvedic Drugs.
4. Adulteration and substitutes of crude drugs and methods for detection of adulterants.
5. Standardization of crude drugs as per Ayurvedic Pharmacopeia of India (API) and WHO guidelines.

Paper – II

Guna Karma Vigyan

Part-A

1. Fundamental principles of Dravyaguna
2. Detailed study on the Rasa, Guna, Virya, Vipaka, Prabhava and Karma with their applied aspects.
3. Evaluation of karmas (Deepana, Pachana, Grahi, Stambhana, Mutrala, Mutrasangrahaniya, Anulomana, Rechana, Jwaraghna, Vedanahara).
4. Introduction to general pharmacology.
5. Knowledge on procedure, equipments and instruments used in pharmacological evaluation.
6. Introduction to phytochemistry, chemical analysis and chromatography.

Part-B

1. Detail study of 50 Medicinal Plants and 25 Ahara Dravya according to therapeutic classification e.g. Rasayan Vajikaran, Medhya, Jvarahara, Kasahara, Shvasahara, Shothahara, Kushtghna, Krimighna, etc.
2. Biological Screening methods including animal experiments.
3. Safety evaluation of drugs (Toxicological evaluation) and their guidelines for evaluation for example OECD guidelines, WHO guidelines, etc.

Second Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) –Maximum Marks-100

Paper – I

Aushadha Prayoga Vigyan

Part-A

Aushadha prayoga marga (routes of drug administration) of Dravya, its Prayoga Vidhi, Matra-Anupana (Drug delivery regimen), etc.

1. Consideration of Samyoga-Virodha (Drug incompatibility).
2. Principles of Clinical pharmacology.
3. Introduction to Reverse pharmacology.
4. ADR in Ayurveda and conventional system of medicine.
5. IPR, Regulations pertaining to Import and Export of Drugs.

Part-B

1. Knowledge of Therapeutic Administration (Amayika prayoga) of plants mentioned as follows:

- | | | |
|-----------------------|----------------|-------------------|
| 1) Ahiphena | 2) Agnimantha | 3) Agar |
| 4) Amalaki | 5) Apamarga | 6) Aragvada |
| 7) Ardraka-Shunthi | 8) Arjuna | 9) Arka |
| 10) Ashvagandha | 11) Ashvagola | 12) Ashoka |
| 13) Ativisha | 14) Bakuchi | 15) Baladvayam |
| 16) Bharangi | 17) Bhallataka | 18) Bibhitaka |
| 19) Bijaka/Vijayasara | 20) Bilva | 21) Brahmi |
| 22) Bringaraj | 23) Brihati | 24) Chandanadvaya |
| 25) Chitraka | 26) Dadima | 27) Danti |
| 28) Daruharidra | 29) Dhanyak | 30) Dhatki |
| 31) Draksha | 32) Durva | 33) Ela |
| 34) Eranda | 35) Gambhari | 36) Gokshura |
| 37) Guduchi | 38) Guggulu | 39) Haridra |
| 40) Haritaki | 41) Hingu | 42) Jambu |

43) Jatamamsi	44) Jatiphal	45) Jeerakdvaya
46) Jyotishmati	47) Kalamegh	48) Kampillak
49) Kanchanara	50) Kankari	51) Kapikacchu
52) Karkatashringi	53) Karpur	54) Katuki
55) Khadira	56) Kiratatikta	57) Kumari
58) Kupilu	59) Kumkum/Keshara	60) Kushmanda
61) Lavang	62) Kutaja	63) Lodhra
64) Madanaphal	65) Manjishtha	66) Marich
67) Markandika	68) Mushali	69) Musta
70) Nagakeshar	71) Nimba	72) Nirgundi
73) Palasha	74) Palandu	75) Pashanabheda
76) Patala	77) Patola	78) Pippali-Pippalimula
79) Punarnava	80) Rasna	81) Rasona
82) Saireyaka	83) Shallaki	84) Saptaparna
85) Sarpagandha	86) Sariva	87) Shalparni
88) Shalmali	89) Shankhapushpi	90) Shatavari
91) Shatapushpa	92) Shigru	93) Shirish
94) Shyonaka	95) Talisa patra	96) Tila
97) Trivrit	98) Tulsi	99) Tvak
100) Ushira	101) Vacha	102) Varun
103) Vasa	104) Vata	105) Vatsanabha
106) Vidari	107) Vidanga	108) Yashtimadhu
109) Yavani	110) Devadaru	

2. Clinical trial- protocol designing, stages of Clinical Research and data management.
3. Bioethics in Clinical Research.
4. Introduction of Pharmaco epidemiology/observational study

Paper – II
Aushadha Yoga Vigyan
Part-A

Importance and principles of formulations as per Ayurveda

1. Introduction to relevant portions of Drugs and Cosmetic Act, Magic remedies Act, Intellectual Property Right (IPR), regulations pertaining import and export of drugs.
2. Good manufacturing practices (GMP).
3. Quality control procedures of formulations prescribed by Drug Regulatory Authorities.
4. General awareness about nutraceuticals, cosmoceutical, food additives, excipients, etc.

Part-B

1. Detail study of five formulations from each kalpana of Ayurvedic Formulary of India (AFI)
2. Knowledge about herbal extracts, colours, flavours and preservatives
3. Standardization of various Ayurvedic Kalpana, eg- Churna, Vati, Avaleha, Siddha Sneha, Asava, Arishta, etc.

PRACTICALS

Contents of Practical

1. Survey of Adverse Drug Reaction (ADR) in prescribed format of national pharmacovigilance programmes of ASU Drugs (Minimum 2)
2. Shodhana methods of Visha Dravya.
3. Preparation of two Yoga from each kalpana of Ayurvedic Formulary of India.
4. Microscopical evaluation of certain Churna formulation e.g. Sitopaladi, Hingvashtak, Trikatu, Triphala etc.
5. Chemical evaluation of Asava and Arishta.

Pattern of Practical Examination-

1. Herbarium File	10 Marks
2. Experiment related to Macroscopical, Microscopical, Organoleptic evaluation, Extraction and Phytochemical Evaluation	30 Marks
3. Spotting of Dravya	10 Marks
4. Project Work	20 Marks
5. Viva-voce	30 Marks
Total	100 Marks

Text Books for Reference

1. Abhinav Buti Darpan (Vol.1-2) : Vd. Roop Lal Vaishya

PANCHKARMA
D.Panchkarma
First Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) –Maximum Marks-100

Paper – I
Introduction to Snehana, Swedana, Vamana and Virechana Karma
Part-A

Introduction

1. Basic Principles of Ayurveda and Kayachikitsa.
2. Derivation, Definition, History, Origin and scope of Panchkarma.
3. Panchkarma in Ashtanga Ayurveda.
4. Indication for Shodhana and Shamana Therapy.
5. Qualities of Panchkarma Vaidya.

Snehana

1. Etymology and definition of Sneha and Snehana.
2. Introduction and General consideration about Snehana.
3. Snehashrayas.
4. Properties of Snehana Dravya.
5. Classification of Snehana.
6. Quality and utility of Uttama Sneha.
7. Snehapaka vidhi with their varieties and uses.
8. Indications and contraindications of Snehana.
9. Abhyantara Snehana – Acchapanas, Snehavicharana, Sadyasnehana and Avapidaka Sneha.

Swedana

1. Etymology and definition of Swedana.
2. General consideration about Swedana.
3. Properties of Swedana and Swedopaga Dravya.
4. Classification of Swedana therapy.
5. Indications and contraindications.

Upakalpana

1. Knowledge about the materials, equipments and instruments used in Panchkarma and physical medicine.
2. Knowledge of technical modification of equipments to be used in Panchkarma.
3. Knowledge of Ahara and Aushadhi Kalpana used in Panchkarma.

Part-B

Sharir Vivechana in relation with Panchkarma

1. Concept of Twacha, Kaal, Ashaya, Kostha, Shakha, Srotas, Nasa Sharir Pranayatana, Shatchakra, Nadi, Peshi, Snayu, Sandhi, Marma and their implication in the practice of bio-purificatory and rehabilitative procedures of Panchkarma.
2. Concept of 'Gut Brain', its relevance to Vata System and Basti Therapy.

Vamana Karma

1. Etymology and definition
2. General consideration
3. Properties of Vamaka and Vamanopaga Dravya.
4. Vamaka dravya according to various Samhita.
5. Vamana Yoga and their different ways of administration.
6. Sadyo Vamana and its utility.
7. Indications and contra-indications (general and specific) in various diseases and their stages.
8. Dose fixation- general and specific.

Virechana Karma

1. Etymology and definition
2. General consideration
3. Properties of Virechaka and Virechanopaga Dravya
4. Virechana Dravya according to various Samhita
5. Types of Virechana and administration method
6. Indications and contra-indications (general and specific) in various diseases and their stages
7. Dose fixation- general and specific.

Paper – II

Introduction to Basti, Nasya, Raktamokshan and Physiotherapy

Part-A

Basti Karma

1. Etymology and definition
2. General consideration and introduction
3. Classification of Basti
4. Drugs useful in Basti
5. Indications and contraindications (General and Specific) of Basti Kalpana in various diseases and their stages
6. Description of Basti Yantra - Basti Netra and Basti Putaka
7. Dose fixation of Niruha and Anuvasana Basti

Uttar Basti

1. Definition of Uttar Basti
2. Uttar Basti Netra and Basti Putaka
3. Dose of Uttar Basti both in Male and Female / Sneha and Kashaya Basti

Part-B

Nasya Karma

1. Etymology and definition
2. General consideration and introduction
3. Nasya Dravya according to various Samhita
4. Classification of Nasya
5. Indications and contraindications
6. Dose fixations of different Nasya
7. Detailed study of different Nasya formulations like Ksheerabala/Anutaila/Shadbindu, etc.

Raktamokshan

1. Definition
2. General principles of Raktamokshan
3. Classification of Raktamokshan
4. Indications and contra - indications
5. General and specific indications of different Raktamokshan techniques

Physiotherapy

1. Definition
2. Introduction to physiotherapy
3. Basic principles of physiotherapy
4. Utility of physiotherapy vis a vis Ayurveda
5. Indication and contra-indications of physiotherapy in various disorders.

Second Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) –Maximum Marks-100

Paper – I

Applied aspects of Snehana, Swedana, Vamana and Virechana Karma

Part –A

Snehana

1. Abhyantar Snehana
Poorva karma - Rogipariksha (Examination of Patient), Koshtapariksha, Agnipariksha (Fixation of dose Diet)
Pradhana karma - Administration of Sneha
Jeeryamana (observation) – Jeerna, Ajeerna, Asnigdha, Atisnigdha Lakshana-Samyak Yoga/ Ayoga/ Atiyoga Lakshanas, Sneha Vyapat and treatment.
Pashchat karma - Pariharavishaya (Planning of shodhana).
2. Bahya Snehana
Detailed description of Lepana, Samvahana, Udvartana, Mardana, Padaghata, Murdhni taila, Gandusha, Kavala, Abhyanga– Marma and massage, Karna poorana, Akshi tarpana, Taila dharana, Kati Basti (Tarpan), Janu Basti (Tarpan), Prishtha Basti (Tarpan), Hridaya Basti (Hridaya tarpan) etc.

3. Proper understanding of digestion and metabolism of fat.
4. Karmukatva of Snehana
5. Prescription of different Sneha Yoga in different disorders
6. Knowledge of new Sneha dravya used at present time like olive oil, groundnut oil, etc.

Swedana

1. Kerala specialities of Swedana like Churna, Pinda Sweda, Jambheera/Patrapottali/ Shastikashali Pinda Swedana/ Kayaseka/ Ksheera Bhaspa Sweda, etc.
2. Administration of Swedana chikitsa- Poorvakarma
3. Samyak Yoga/Ayoga/Atiyoga lakshana
4. Swedana complications and management.
5. Karmukatva of Swedana.

Part-B

Vamana Karma

Poorva karma –

1. Collection of medicine and materials
2. Examination of Patient
3. Preparation of patient

Pradhana karma –

1. Administration of vamana dravya
2. Observation of Samyakyoga/Ayoga/Atiyoga lakshana and their management.

Pashchat karma –

1. Dhumapana
2. Samsarjana and Santarpana karma
3. Parihara vishaya
4. Vyapat and its management

Physiology and pharmaco-dynamics of Vamana Karma.

Virechana Karma

Poorva karma-

1. Collection of medicines and materials
2. Examination of patient
3. Preparation of patient

Pradhana karma –

1. Administration of Virechana dravya
2. Observation of Samyakyoga/Ayoga/Atiyoga lakshana and treatment

Pashchat karma –

1. Samsarjana and Santarpana karma
2. Parihara vishaya
3. Planning of next shodhana
4. Vyapat and its management

Physiology and pharmaco-dynamics of Virechana Karma.

Paper – II
Applied aspects of Basti, Nasya Karma, Raktamokshan and Physiotherapy
Part-A

Basti Karma

Administration of Basti

Niruha Basti

Poorva karma-

1. Examination of the patient according to Dosha, Aushadha, Desh, Kaal etc.
2. Preparation of medicine
3. Preparation of patient

Pradhana karma-

1. Administration of Basti
2. Observation of expulsion
3. Samyakyoga /Ayoga/Atiyoga lakshana

Pashchat karma-

1. Follow up
2. Parihara vishaya, Kaal Diet
3. Vyapat and its management.

Anuvasana Basti

Poorva karma-

1. Preparation of medicine
2. Preparation of patient

Pradhana karma-

1. Administration of Basti
2. Samyakyoga /Ayoga/Atiyoga lakshana

Pashchat karma-

1. Basti pratyagamana
2. Diet
3. Vyapat and its management

Matra Basti

Detailed study of different Basti formulations like Ksheera Basti, Vaitarana Basti, Vrishya Basti, etc.

Uttar Basti

Administration of Uttar Basti-

- a) Poorva karma
- b) Pradhana karma
- c) Pashchat karma

Physiology, pharmaco-dynamics of Uttar Basti karma

Part-B

Nasya Karma

Administration of Nasya-

Poorva karma-

1. Collection of medicine and materials
2. Examination of patient
3. Preparation of patient

Pradhana karma -

1. Administration
2. Observation and follow up
3. Samyakyoga /Ayoga/Atiyoga lakshana
4. Vyapat and its management

Pashchat karma -

1. Immediate follow up
2. Dhumapana , kavala, gandusha
3. Diet
4. Parihara vishaya
5. Nasyottara karma

Physiology, pharmaco-dynamics of Nasya Karma

Raktamokshan

Administration of Raktamokshan-

Poorva karma- Collection of Jalauka (Leeches) and materials Examination of Patient, preparation of patient, preparation of Jalauka

Pradhana karma- Administration of Raktamokshana by different techniques
Observation of Samyakyoga/Ayoga/Atiyoga lakshana and Management

Pashchat karma- Management of patient
Parihara vishaya and Parihara kaal
Vyapat and its Management

Karmukatva of Raktamokshan (pharmacodynamics)

Physiotherapy

Knowledge and administration of below mentioned Physiotherapy techniques / instruments-

1. Ultrasound
2. Magneto therapy
3. Nerve conduction therapy
4. Diathermy
5. Laser therapy
6. Ultraviolet therapy
7. Wax therapy, etc

PRACTICALS

Contents of Practical

1. The student should undertake the responsibility in the management and treatment of patients independently through Panchkarma and Upadrava of Panchkarma.
2. Students should have to go through exposure to all the physiotherapy procedures.
3. Student should acquire self experience of the Panchkarma procedure according to the seasons.
4. Assesment of the Vega.
5. Knowledge of Samsarjana Krama.

Pattern of Practical Examination

1. Case record	10 marks
2. Upakarma (Minor procedures)	10 marks
3. Pradhan karma (Major procedures)	20 marks
4. Identification of drugs useful in Panchkarma	10 marks
5. Project work	20 marks
6. Viva-voce	30 marks
Total	100 Marks

Text Books for Reference

1. Charak Samhita with Ayurveda Dipika by Chakrapani and Jalpakalpataru by Gangadhara
2. Sushrut Samhita with Nibhandha Samgraha by Dalhana and Nyayachandrika by Gayadasa and Panjika by Swami Kumar
3. Ashtanga Hridaya with Sarvanga Sundara and Ayurveda Rasayan commentaries
4. Ayurvediya Panchkarma Chikitsa : Dr Mukundilal Dwivedi
5. Panchkarma Vigyan : Dr Haridas Shreedhar Kasture
6. Illustrated Panchkarma : Dr G Srinivasa Acharya
7. Clinical Panchkarma (English) : Dr P. Yadaiah
8. Prayogika Panchkarma (Hindi) : Dr P. Yadaiah
9. Vividha Vyadhiyome Panchkarma (Hindi) : Dr P. Yadaiah
10. The Panchkarma Treatment of Ayurveda with Kerala Specialities : Dr T.L. Devaraj
11. Panchkarma Therapy : Dr R.H. Singh
12. Principles and practice of Basti : Dr Vasudevan Namboodri, Dr. L. Mahadevan

SWASTHAVRITTA AND YOGA
[Diploma in Public Health-Ay.] D.P.H.(Ay.)

First Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) – Maximum Marks-100

Paper – I

Vaiyaktika and Samajika Swasthavritta

Part-A

Vyaktigata Swasthyam (Individual health)

1. Definition of Swastha, Swasthavritta and Health.
2. Swasthavritta Prayojana and Mahatwam.
3. Swasthapurusha lakshana - Signs of Health.
4. Introduction to Preventive Medicine and its Terminologies.
5. Detail knowledge of Dinacharya, measures such as Danta Dhavana, Jihva Nirlekhana, Gandusha-Kavala, Pratimarsha Nasya, Anjana, Vyayama, Abhyanga, Dhumapana, Udvardana, etc and their physiological effects in terms of modern knowledge.
6. Ritucharya and its importance in Swastha Paripalana
7. Importance of Vega and their role in Health & Disease.
8. Description of Sadvritta and Achara Rasayan and their role in Prevention of psychosomatic diseases. (Satvavajaya chikitsa)
9. Concept of Nindita & Anindita purusha.
10. Introduction to Trayopastambha- Ahara, Nidra and Brahmacharya and their role in maintenance of health and their clinical importance.
11. Role of Pragyaparadha in producing diseases and Sharir Rakshanatmaka Karya- Preventive measures - Roga anutpadaniya vigyan.
12. Concept of Vyadhikshamatwa – Sahaja, Kalaja and Yuktikrit.

Ahara Vichara (Food and Nutrition)

1. Nirukti, Vivechan of Ahara; Definition of food, diet and nutrition.
2. Aharasya Swaroopam, Shadrasatvam, Panchabhautikatvam and Chaturvidhatvam.
3. Ahara mahatvam (Importance of food).
4. Aharadravya Parichaya, Vargeekarana, advantages and disadvantages of Vegetarian and Non - Vegetarian food.
5. Ahara Vidhi Vishesha Ayatana.
6. Ahara Poshana (Nutrition) - Food proximate principles - Carbohydrates, Proteins, Fats, Vitamins etc., their functions, deficiency disorders and prevention. Diet in different types of diseases.
7. Balanced diet

Nidra (Sleep)

Definition, physiology, types, proper way of sleep and its relation to Health and Disease.

Brahmacharya (Celibacy)

1. Vyakhya, Lakshana (Characteristic)
2. Importance and Utility of Brahmacharya
3. Abrahmacharya Vyakhya
4. Vyavaya Sambandhi Niyama
5. Effect of Ativyavaya
6. Veeryotpatti
7. Veerya Naasha Phala
8. Veerya Rakshanopaya
9. Menstrual Hygiene (Stri Ritucharya)

Part-B**Samajika Swasthavritta (Social Hygiene)**

1. Concept of Health, Health for all (H.F.A.) (Sarvesham Krute Arogyam).
2. Concept of Disease
3. Concept of Prevention

Introduction to Public Health

1. Definition of Hygiene, Public Health, Sanitation etc.
2. Health systems and Health Services in India.

Environment and Health

1. Water
2. Air and ventilation
3. Soil and residential dwellings (Healthful Environment of Housing).
4. Light, sound and radiation
5. Disposal of waste products (solids and liquids) [sewerage system].
6. Hospital waste management (Biomedical waste management)
7. Sanitation of fairs, festivals and villages.
8. Methods of disposal of dead body
9. Medical entomology

Industrial Health

1. Ergonomics
2. Health hazards of Industries.
3. Prevention and controlled measures of occupational diseases.
4. Measures of health protection in Industries.
5. ESI Act
6. Indian Factory Act.

School Health

1. Construction of school/college building
2. Arrangement of light, ventilation, water supply

Aturalaya bhavan nirmana (Hospital building construction)

Paper – II

Janapadodhwamsa and Yoga – Nisargopachara

Part-A

Janapadodhwamsa (Epidemiology)

1. Janapadodhwamsa- causes, manifestation and measures of its control.
2. Introduction to Basic epidemiology
3. Selected definition of infectious disease epidemiology like - infection, contamination etc.
4. Epidemiological Triad - Agent, Host and Environment.
5. Dynamics of disease transmission.
6. Screening for disease.
7. Classification of infectious diseases.
8. Disease prevention and control- notification, isolation, quarantine, etc.

Disinfection/Visankramana - Definition and types

Immunity - Definition, types of Immunity, Immunizing agents, Immunization schedule and hazards of Immunization

Health Statistics / Vital Statistics

1. Definition of statistics/ health statistics
2. Sources and uses of health statistics
3. Collection, classification, presentation and interpretation of data
4. Mortality, morbidity and fertility rate

Part-B

Yoga – Nisargopachara

Yoga

1. Introduction to Yoga.
2. History, Nirukti, Vyutpatti and Paribhasha of Yoga.
3. Aims and Objectives of Yoga in relation to Ayurveda.
4. Different schools of Yoga.
5. Scriptural basis of Ashtanga Yoga according to Patanjali Yoga Sutra, Bhagavad Geeta and Yoga Vashishta.
6. Introduction to Meditation and its techniques
7. Introduction to Yogic diet and behaviour.
8. Description of Hatha Yoga and Shatkarma - Neti, Dhauti, Nauli, Trataka, Basti and Kapalabhati; Kundalini Yoga.
9. Description of Bandha, Mudra, Shatchakra, Panchakosha and Nadi.

Nisargopachara (Naturopathy)

1. Definition, history and basic principles of Naturopathy.
2. Concept of Naturopathy in disease manifestation and diagnosis
3. Aims and objectives of Nisargopachara
4. Relation of Ayurveda and Naturopathy
5. Schools of Naturopathy- Indian and Western
6. Importance of Naturopathy
7. Treatment modalities of Naturopathy.
8. Vishranti – Role of rest and relaxation.

Second Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) –Maximum Marks-100

Paper – I

Applied aspects of Vaiyaktika and Samajika Swasthavritta in Swasthya Rakshan Part-A

Vaiyaktika Swasthavrittam (personal hygiene)

1. Description and Applied aspects of regimens of Dinacharya, Ratricharya, Ritucharya with practical knowledge of preventive aspects.
2. Shodhana therapy in Swastha Purusha
3. Garbhini, Sutika Paricharya and Balopachara (preventive O.B.G and paediatrics)
4. Malnutrition and its preventive measures
 - a) Santarpana apatarpana janya vikar and its preventive measures
 - b) Assessment of nutritional status and Nutritional surveillance
 - c) Nutritional problems in public health.
 - d) National Nutritional Programmes.
 - e) Food Hygiene and food poisoning.
5. Concept of Rasayan/Jara (Preventive Geriatrics)

Part-B

Samajika Swasthavritta (Community Health Care)

1. Health Care Management
 - a) Health Administration at International, Central, State and Local level.
 - b) Health schemes programmes in India
 - c) National eradication and control programmes of declared communicable diseases
 - d) Community development programmes.
 - e) Health Education and communication.
 - f) Laws related to Health (Medical Legislation).
 - g) Primary Health Care in India.
 - h) International Health Organizations - WHO, UNICEF etc.
 - i) Disaster management.
 - j) Hospital management

2. Family Welfare Programmes (Parivara Kalyana Karyakrama)
 - a) Demography
 - b) Definition and scope of family planning.
 - c) Family planning methods (both Modern and Ayurveda).
 - d) Family planning services.
 - e) National family planning programmes including R.C.H. programme.
 - f) Establishment of MCH centre, urban family welfare centre and their role in community health.
 - g) School health programmes.
 - h) Care of handicapped children.
 - i) Care of senior citizen.
3. Concept of Mental health- Manasika swasthya – Ayurvedic perspective.

Paper – II

Aupasargika - Anoupasargika Roga Pratishedha and Applied Aspects of Yoga – Nisargopachara

Part-A

Aupasargika evam Anoupasargika Roga Pratishedha

1. Communicable disease prevention and their management
 - a) Ayurvedic aspect of Kuprasangaja roga and Aupasargika roga.
 - b) Laboratory investigations for detection of various infectious diseases.
 - c) Description and preventive measures of viral, bacterial, vector borne and other communicable diseases.
 - d) Description and preventive measures of various STD's (HIV/ AIDS)
 - e) Emerging and re-emerging infectious diseases like SAARS, Chikungunya, Bird-flu etc.
 - f) Hospital acquired infections
2. Non-communicable diseases and their management– Hypertension, Cancer, Obesity, Blindness, Diabetes, etc.
3. Health promotive nutrition in Ayurveda like Balya, Urjaskara, Hridya, Chakshushya Dravya etc.
4. Disaster management in Natural calamities

Part-B

Yoga

1. Practical application of Ashtanga Yoga
2. Practising of Asana with precautions.
3. Individual Yoga practice- procedures, indications, contraindication and their effect on various organs and Dosha
 - a) Standing Position Asana- Tadasana, Vrikshasana, Chakrasana, Ardhakati Chakrasana, Trikonasana, Parivrittatrikonasana and Ardachakrasana.
 - b) Sitting position Asana (Meditative Asana)- Padmasana, Vajrasana, Siddhasana etc.

- c) Cultural Asana- Ardhamatsyendrasana, Gomukhasana, Yogamudrasana, Pashchimottanasana, Janushirshasana, Baddhakonasana, Ushtrasana, Kukkutasana, Kurmasana.
 - d) Supine Asana- Pavanamuktasana (Purna and Ardha), Ekapada Uttanasana, Halasana, Matsyasana, Viparitakarani, Sarvangasana, Chakrasana, Suptavajrasana, Ekapadasana and Shavasana.
 - e) Prone position Asana - Bhujangasana, Naukasana, Shalabhasana, Dhanurasana, Mayurasana, Makarasana.
4. Practice of Pranayama – Bhastrika, Ujjayi, Suryabhedhi, Chandrabhedhi, Anuloma-Viloma, Bhramari, Sheetali and Sheetkari.
 5. Shatkriya practice - Neti, Nauli, Dhouti, Trataka, Kapalabhati, Shankhaprakshalana, Agnisara.
 6. Practice of Bandha and Mudra.
 7. Practices of meditation and its importance in maintenance of health.
 8. Therapeutic application of yoga for various diseases and conditions.
 9. Researches conducted for management of diseases by Yoga and their results.

Nisargopachara

1. Jala Chikitsa (Hydrotherapy) –
Different types of water used in treatment.
Different types of baths and their indications and contra indications.
Steam bath- indications and contra indications
2. Surya Rashmi Chikitsa (Solar therapy) - Mahatwa and methods of sun bath.
3. Mrittika Majjana- Mud therapy
4. Diet therapy
5. Upavasa (fasting) - techniques and benefits
6. Mardanam (massage)-Techniques and therapeutic effects

PRACTICAL

Content of Practical

1. Family planning appliances like condom, copper-T, oral pills, etc.
2. Educational visits – P.H.C, Family Welfare Centre, Leprosy sanatorium, Rural Ayurvedic dispensary, M.C.H centre.
3. Health survey and field work in rural community.
4. Participation in National Health Programmes like immunization programmes and such other programmes, active participation in various health event days i.e. WHO day, AIDS day, etc.
5. Clinical Suggestion-Field Study-Case taking, recording and discussion of-
 - a) Non-infectious diseases
 - b) Infectious disease
 - c) Rugnapatrika regarding Yoga and Naturopathy
 - d) Antenatal cases
 - e) Vaccination report and Malnutrition - each of 10 cases
6. Applicability and management of the Janpadodhvansa in present era.
7. Applied aspect of the Pathyapathya, Dincharya, Ritucharya and Yoga.

Pattern of Practical Examination

1. Case Record in respect to Pathyapathya, Dincharya, Ritucharya and Yoga	10 Marks
2. Therapeutic application of Yoga and Naturopathy	20 Marks
3. Spotting	20 Marks
4. Project Work	20 Marks
5. Viva-voce	30 Marks
Total	100 Marks

Text Books for Reference

1. Brihatrayee - Laghutrayee - related portion
2. Hatha Yoga Pradeepika
3. Patanjalyogapradeep
4. Yogavashistha
5. Gherand Samhita
6. Swasthavritta Samucchaya : Vd Pandit Rajeshwardatta Shastri
7. Swasthya Vigyan : Dr. B.G. Ghanekar
8. Yoga aur Ayurveda : Acharya Rajkumar Jain
9. Swasthavritta Vigyan : Ram Harsh Singh
10. Preventive and Social Medicine : K. Park
11. Preventive and Social Medicine : Yashpal Bedi
12. Preventive and Social Medicine : Kulkarni
13. Preventive and Social Medicine : Mahajan
14. Dr. Reddy's Comprehensive guide to Swasthavritta : Dr.P. Sudhakar Reddy (Chowkhamba Sanskrit Pratishtan) New Delhi
15. Food and Nutrition Part I & Part II : M. Swami Nathan
16. WHO publications on preventive and social medicine
17. Kashyapa Samhita
18. Yogaratnakara

RASAYAN AND VAJIKARAN

D. Geriatrics (Ay.)

First Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) – Maximum Marks-100

Paper – I

Rasayan and Vajikaran Siddhanta

Part-A

1. Fundamentals of Rasayan
 - a) Historical evolution and concept of Rasayan (from Vedic to contemporary)
 - b) Source material related to Rasayan in various classics
 - c) Synonyms, utility, scope, etymology and definition of Rasayan.
 - d) Present scenario and future prospect in practice of Rasayan
2. Anatomy and applied physiology in context to Rasayan
 - a) Triguna, Mahabhuta, Dosha, Dhatu, Mala, Srotas, Agni, Ojas, Indriya and Mana.
 - b) Brief Introduction to Ahara Rasa Nirman, Dhatu Poshanakrama- Kedari Kulya, Kshiradadhi, Khale Kapota Nyaya and their role in Dhatu formation.
 - c) Concept of nutrition, preservation & promotion of tissue health. Role of various nutrients like vitamins, proteins, fats, micronutrients and trace elements in preservation and promotion of tissue health.
 - d) Metabolism: General and pertaining to ageing
 - e) Endocrinology: General, growth related and ageing.
 - f) Immunity: Antigen antibody reactions, cell mediated and humoral immunity, immune responses, immune deficiency states, hypersensitivity and autoimmunity.
3. Classification and application of Rasayan alongwith their types and examples
 - a) Kutipravesnik, Vatatapika, Droni pravesnik
 - b) Kamyā, Naimittika, Ajasrika, Medhya
 - c) Indriyanusari, Dhatvanusari
 - d) Lekhan-Brimhanusari
 - e) Samshodhan-Samshamananusari
 - f) Swasthyanuvartaka Rasayan- Achara Rasayan, Sadvritta, Brahmacharya.
 - g) Rasayan adhikaritva-Indications and contraindications.
 - h) Optimum time for the use of Rasayan as per age, season, day/night, etc.
 - i) Pathyapathya during and after the use of Rasayan
 - j) Methods of using Rasayan- Poorva, Pradhana and Pashchat Karma.
4. Preservation and Promotion of health by Rasayan
5. Prevention of recurrence of Physical and Mental disorders by Rasayan
6. Kutipravesnik Rasayan
 - a) Concept of Trigarbha Kuti and its descriptions
 - b) Scope and limitation of Kuti Pravesnika Rasayan
 - c) Standard Operative Procedures for Kutipravesnika Rasayan in general and specific to different Rasayan usage.

- d) Duration of Kutipravesik Rasayan and rules for termination of Kutipravesha
- e) Benefits of Kutipravesika Rasayan.

Part-B

1. Fundamentals of Vajikaran
 - a) Historical evolution and concept of Vajikaran (from Vedic to contemporary era)
 - b) Source material related to Vajikaran in various classics
 - c) Etymology, definition, synonyms, utility and scope of Vajikaran
 - d) Epidemiology of sexual disorders and infertility – Indian and global scenario.
 - e) Present scenario and future prospects in practice of Vajikaran
 - f) Cross cultural perspectives of sexuality and fertility.
2. Applied Anatomy and Physiology in context of Vajikaran
 - a) Triguna, Mahabhuta, Dosha, Dhatu, Mala, Srotas, Agni, Oja, Indriya and Mana.
 - b) Srotas with special reference to Sukravaha Srotas and Artavavaha Srotas Shukradhara kala.
 - c) Study of Beeja, Shukra, Veerya, Retasa and Rupadravya
 - d) Dhatuposhan Krama with special reference to Shukra formation
 - e) Reproductive anatomy and physiology- spermatogenesis, oogenesis
 - f) Shuddha Shukra Lakshana, Falavata Shukra Lakshana, Shudha Artava Lakshana.
 - g) Process of fertilization, Factors responsible for Garbhotpatti
3. Sexual behavior and response
 - a) Physiology of erection, ejaculation and orgasm
 - b) Hormonal regulation of human sexuality and fertility
 - c) Metabolism: general and pertaining to sexuality and fertility
4. Types and Methods of Vajikaran.
 - a) Classification of Vajikaran.
 - b) When and which Vajikaran is to be used.
 - c) Methods of using Vajikaran – Poorva, Pradhan and Pashchatkarma.
 - d) Dietetic, physical and behavioural code for using Vajikaran.
 - e) Contraindications for Vajikaran.

Paper - II

Part-A

Jara Samprapti Vigyan (Ageing)

1. Concept of Jara and ageing
 - a) Introduction and definition.
 - b) Epidemiology of ageing and degenerative diseases.
2. Causes of ageing
 - a) Dosh, Dhatu, Agni and Mala in Jara.
 - b) Age of onset of ageing, different Ayurvedic and Modern concepts regarding onset of ageing.
 - c) Factors of ageing process- Swabhav, Jara, Kala.
 - d) Prakriti and ageing
 - e) Environment and allied factors in ageing.

- f) Town dwelling and Diet articles such as Lavana, Kshara, etc. in ageing.
- g) Effect of life style in ageing.
- h) Psychological factors in ageing- Irshya, Bhaya, Krodha, Chinta etc.
- 3. Samprapti of Jara
- 4. Roopa of Jara- Srotanusari Rupa of Jara
- 5. Epidemiology of ageing and degenerative diseases
- 6. Classification of Jara
 - a) Reversible and Irreversible ageing process.
 - b) Introduction to common geriatric disorders like- Dementia, Alzheimer's disease, Degenerative diseases, Stress induced diseases, Injuries, Urinary retention, GIT problems, BPH, CVA, TIA, PVD, OA.

Part-B Vajikaran

- 1. Concept of Vajikaran
 - a) Knowledge of different terms used in reference to Vajikaran- Vrishya, Vajikaran, Chatakavat, Hastivat, Ashwavat, Apatyam, Santankaram
 - b) Different types of Shukradushti and their symptoms
 - c) Different types of Artavadushti and their symptoms
- 2. Panchanidan of diseases related to Shukravaha Srotas
Klaibya, Shandya, Napunsakata, Shukragatavata, Dhvajabhanga, Vyavayashosha, Shighrapatan, Shukrataralya, Shukadosha
- 3. Sexual dysfunctions
 - a) Libido related disorders-increased libido, decreased libido
 - b) Erectile dysfunctions : - Organic,secondary to chronic diseases, functional and iatrogenic
 - c) Ejaculatory disorders – premature, delayed, retrograde, anejaculation
- 4. Infertility
 - a) Male infertility-oligozoospermia, asthenozoospermia, teratozoospermia, obstructive azoospermia, immunological infertility, pyospermia
 - b) Female infertility
- 5. Introduction to sexually transmitted diseases- Phiranga, Upadamsha, Puyameha, Syphilis, Gonorrhoea, HIV/AIDS.

Second Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) – Maximum Marks-100

Paper - I

Rasayan and Vajikaran Pariksha Vigyan

Part-A

Rasayan Pariksha Vigyan

- 1. History taking and Clinical examination
 - a) Rog and Rogi Pariksha, Trividha, Chaturvidha, Shadvidha, Ashtavidha, Dashavidha and Dwadashvidha.
 - b) Neurological, ENT and Ophthalmological examination.

2. Lab Investigations
 - a) Routine Investigations - Hb, TLC, DLC, ESR, Biochemistry (Blood Sugar, Blood Urea, Creatinine, Uric acid, Lipid profile) etc.
 - b) Hormonal Assay - Thyroid, biomarker related to ageing.
 - c) Immunoglobulin studies
 - d) Enzyme studies
 - e) Radiological and sonological investigations
 - f) Specific investigations for ageing.
3. Importance of Samshodhana in Rasayan
Role of importance of Shodhana Karma in Rasayan, knowledge of different procedures useful in Rasayan
4. Psychosocial Assessment
 - a) Personality assessment and development in relation with Rasayan.
 - b) Different Scales for assessment of IQ, Memory, EQ
 - c) Anxiety and depression scale
 - d) MME Scale
 - e) Quality of life parameters
 - f) Positive psychology assessment
 - g) Counselling techniques

Part-B

Vajikaran Pariksha Vigyan

1. History taking and examination
 - a) History- general and sexual
 - b) Physical examination
 - c) General examination
 - d) Neurological and vascular
 - e) Specific Examination - sexual examination- local examination of testes, penis, vas deferens, spermatic cord
 - f) Nocturnal penile tumescence (NPT) Examination
2. Investigations
 - a) Routine Investigations - Hb, TLC, DLC, ESR, Biochemistry (Blood Sugar, Blood Urea, Creatinine, Uric acid, Lipid profile) etc.
 - b) Hormonal Assay - Thyroid, Testosterone, FSH, LH, Prolactin, etc.
 - c) Immunoglobulin studies
 - d) Enzyme studies
 - e) Genetic mapping, Chromosomal analysis
 - f) HIV, VDRL, HBSAg, etc.
 - g) Semen analysis (Semenogram)
 - h) Radiological and Sonological Investigations - Scrotal doppler, penile doppler, scrotal USG
3. Importance of Samshodhana in Vajikaran and knowledge of individual Karma useful in Vajikaran
4. Myths and Misconcepts about Sex and Vajikaran
 - a) Classification of males and females as per Kamashastra
 - b) Knowledge of different organs of sensuality and achieving orgasm.

5. Sex Education
 - a) Counselling techniques
 - b) Marriage sex counselling
 - c) Concepts of safer sex- Knowledge of pharmacology of male and female contraceptives.
 - d) Reproduction, contraception etc.
 - e) Decision making about pregnancy and parenthood
 - f) Ayurvedic and Modern concept of genetic defects leading to malformation of Secondary sexual factors.
6. Ethics and legal aspects of sex and reproduction.

Paper – II

Rasayan and Vajikaran Aushadhi Vigyan

Part-A

Rasayan Aushadhi Vigyan

1. Brief Introduction to Rasayan Drugs - Jivaniya, Brihaniya, Balya, Shramahar and Vayasthapana.
2. Pharmacology and Pharmacodynamics of Ayurvedic Rasayan Drugs.
3. Classification of Rasayan Drugs –
 - a) Vyadhyutapadaniya Pratibandhak Rasayan drugs
 - b) Vyadhibala Virodhaka Rasayan drugs
 - c) Medhya Rasayan drugs
 - d) Vatatapika Rasayan drugs
 - e) Naimittik Rasayan drugs for specific diseases
 - f) Svarna Prashana Rasayan
 - g) Knowledge of single herbal drugs used as Rasayan
 - h) Knowledge of Herbomineral-metalic and acqua marine compounds used as Rasayan
 - i) Knowledge of Compound formulation mentioned in Ayurveda
 - j) Knowledge of Drugs – Used in Kutipravesika and Vatatapika Rasayan.
 - k) Agravya Rasayan- Application and importance of Achara Rasayan in today's scenario.
4. Mode of action of Rasayan
5. Methodology of deciding the drug, dose, dosage form, anupana, pathya, apathya for Rasayan Karma.
6. Management –
 - a) Management of Jara and Akaal Jara
 - b) Management of immune deficiency disorders
 - c) Management of metabolic and endocrine disorders
 - d) Management of life style disorders
 - e) Management of degenerative disorders.
 - f) Management of pollution and toxicity related disorders
 - g) Symptomatic treatment of Kaal Jara
 - h) Procedures contraindicated in Jara
 - i) Rasayan useful in different branches of Ayurveda

- j) Rasayan drugs used in contemporary and other allied medical sciences e.g. Chinese – Ginseng, Ginko Biloba
- 7. Prevention or delaying of Jara - According to the stages
- 8. Modern perspectives of Rasayan- Immunomodulator, anti oxidants, tissue supplements, neutropics, disease modifying anti arthritics drugs, prebiotics, probiotics, Nano-Bio technological products etc.
- 9. Recent advances in Rasayan
- 10. Research methodologies in Rasayan

Part-B

Vajikaran Aushadhi Vigyan

1. Classification of Vajikaran Drugs –
 - a) Vajikar, Vrishya, Chatakvat, Hastivat, Punsatvakar, Apatya Santankar, Shukra Janak, Shukra Pravartak, Shukrasrutikar, Shukravridhikar, Shukrasrutivridhikar, Shukrastambhaka, Shukrarechak and Shukrashosaka.
 - b) Single herbal drugs used in Vajikaran and their efficacy.
 - c) Herbomineral-metallic and aqua marine compounds used in Vajikaran and their efficacy.
 - d) Compound formulations mentioned in Ayurveda as Vajikar.
 - e) Detailed Study of Vajikaran Yoga -
 - i. Drugs used in Male infertility
 - ii. Drugs used in Female infertility
2. Management-
 - a) Management of sexual dysfunctions with Vajikaran Dravya.
 - b) Invasive and noninvasive procedures in Vajikaran
 - c) Uttarbasti- Its indication and contraindication, method, drugs used, precaution and complication.
 - d) Application of Panchkarma in infertility management
 - e) Surgical procedures and implants in Vajikaran
 - f) Management of male and female infertility
 - g) Assisted reproductive techniques (IVF, IUI, ICSI, GIFT, ZIFT, etc).
 - h) Use of Vajikaran drugs in different branches of Ashtanga Ayurveda.
 - i) Vajikaran drugs used in contemporary and other allied medical sciences. e.g. Chinese Ginseng, etc.
3. Modern perspectives of Vajikaran.
4. Pumsavan karma - Gender selection, legal aspects of sex and reproduction.
5. Recent Advances and Research Methodologies in Vajikaran.

PRACTICALS

Contents of Practicals

1. Knowledge and practical aspects of Rasayan and Vajikaran.
2. Knowledge of Panchkarma procedures relevant to Rasayan and Vajikaran like Snehan Swedana, Vamana, Vircehana, Basti, Nasya and Samsarjan Krama.
3. Knowledge and interpretation of various Laboratory investigations relevant to Rasayan Vajikaran like Haemoglobin, TLC, DLC, ESR complete blood chemistry, LFT, Lipid profile, Urine examination, Semen examination, Hormonal assays etc.
4. Knowledge of current trends in Geriatrics and Sexology relevant to Rasayana and Vajikaran.

Pattern of Practical examination

1. Interpretation of Lab investigations	10 Marks
2. Knowledge of Panchkarma procedures in Rasayan and Vajikaran	10 Marks
3. Case record of Rasayan	10 Marks
4. Case record of Vajikaran	10 Marks
5. Project Work	20 Marks
6. Viva-voce	40 Marks
Total	100 Marks

Text Books for Reference

1. Vajikaran Tantra	: Dr. J.L.N. Shastri & Dr. K. Nishteshwar
2. Aphrodisiacs and treatment of Impotence in Alternative system of medicine	: Dr. P.V.V. Prasad, Mohd. Siddique and Dr. Abdul Wadood
3. Rajit Roga Shastra (Part I & Part II)	: Dr. Shiv Kumar Shastri
4. Santati Nigraha	: Dr. Shivdayal Gupta
5. Kamashastra antargat Vajikaran Vigyan	: Prof. Jyotirmitra
6. Ayurvediya Rasayan Sar	: Dr. Shailaja Shrivastava
7. Rasayan Sar (Part I & Part II)	: Dr. Shyam Sunder Acharya
8. Rasayan Khand	: Dr. Indra Dev Tripathi
9. Rasayan Tantra	: Dr. Pakshdhar Jha
10. Ayurved Chikitsa Vigyan	: Prof. Banwari Lal Gaur

AYURVEDIC COSMETOLOGY AND SKIN DISEASE

(त्वक सौन्दर्य एवं रोग विज्ञान)

D. Dermatology (Ay.)

First Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) – Maximum Marks-100

Paper - I

Physiopathology of Tvak and Saundarya Vigyan

Part-A

1. Introduction and scope of Tvak Vigyan.
2. Embryological development and anatomy of Tvak and skin.
3. Applied anatomy of Tvak- Ayurveda and Modern aspect.
4. Description of Svedavah Srotas and Kleda and applied patho-physiology of sweat.
5. Applied physiology of Tvak (Skin) in Ayurveda and Modern aspect and Srotas Vivechan in relation to skin.
6. Applied anatomy of Nail.
7. Applied aspects of Tvak as adhistan of Indriya, Dosha and Dushya.
8. Trividha, Chaturvidha, Panchvidha, Shadvidha, Ashtavidha and Dashavidha Pariksha in diagnosis of Tvak and Yaun Sankramak Roga.
9. Varna, Chhaya, Prabha and their Vikar.
10. Role of Prakriti and Sara in health and Vikar of Tvak, Keshha and Loma.
11. Role of Ahar and Vihar in maintenance of healthy skin.
12. Role of Mana in Prakriti and Vikriti of Tvak
13. Cosmetology: Ayurved and Modern aspect.
 - a) Basics of skin care, beauty and biochemistry.
 - b) Review of single and compound drugs in Ayurved and Sanskrit literature for Saundarya Prasadhan.
 - c) Natural care of skin and preventive measures.
 - d) Lepa, Pralepa, Pradeha, Udvartan, Dhoopan, Abhyanga, Swedan, Utsadan, Avasadan, Krishnakarma, Pandukarma, Pratisaran, Romsanjanan, Lomapaharan for Saundarya Prasadhan and Tvak Vikar.
 - e) Prevention and management of ageing related Tvak Vikar.
 - f) Breast care and Stan Vriddhikar Chikitsa.
 - g) Hair care in Ayurved.
 - h) Role of Rasayan in promotion of skin health.

Part-B

1. Knowledge of various lesions:
 - a) Pitika, Pidaka, Visphot, Utsedh, Mandal, Sanrambh, Pak, Koth, Utkoth, Granthi, Arbud, Vidradhi, Vaivarnya, Vyang, Charmakeel, Mansankur, Arsha, Kikkis, Vali, Vranavastu, Tvakvidaran and Valmik.
 - b) Primary lesions – Macule, patch, papule, nodule, tumor, plaque, vesicle, pustule, bullae, cyst, wheal, telangiectasia.

- c) Secondary lesions: Scale, crust, erosion, ulcer, scar, atrophy, sclerosis, excoriations, burrow, comedo, milium.
2. Histopathological, microbiological (bacterial and fungal) skin test such as skin biopsy, skin scrapping, wood's light examination, Lepromin test, VDRL, Allergy test, patch testing etc.
3. Inflammation, de-generation, atrophy and hypertrophy in relation to skin.
4. Role of Krimi in various Tvak Vikar.
5. Role of Asatmya, Viruddhahar-Vihar in Tvak Vikar.
6. Knowledge of Tvak related to Arishta Lakshana.
7. Knowledge of immunity and genetics in relation to Tvak Vikar.

Paper -II

Principles of management of Tvak Roga and Kushtha Roga

Part-A

1. Principle of management of Tvak Vikar evam Yaun Sankramak Roga in Ayurveda and Modern.
2. Role of various Shodhana measures and Raktamokshana specially Jalaukavacharana in Tvak Vikar evam Yaun Sankramak Roga.
3. Agnikarma, Ksharakarma, Shastrakarma in Tvak Vikar evam Yaun Sankramak Roga.
4. Kushthahara, Udarda prashamana, Tvachya, Varnya, Kandughna, Rakta prasadak, Rakta shodhak drugs.
5. Pathya, Apathya and Nidan parivarjan in Tvak Vikar evam Yaun Sankramak Roga.
6. Role of Sadvritta, Satvavajaya, Yoga and Rasayan in Tvak Vikar evam Yaun Sankramak Roga.
7. Recent advances in management of Tvak Vikar evam Yaun Sankramak Roga.

Part-B

1. Introduction to Kushtha.
2. Nidan, Purvarupa, Rupa, Upasaya and Samprapti of various Kushtha.
3. Various classifications of Kushtha.
4. Diagnostic methods, modern co-relation, differential diagnosis of each type of Mahakushtha and Kshudrakushtha.
5. Principles of management of each type of Kushtha including Dhatugat Avastha.
6. Detail management of all Mahakushtha and Kshudrakushtha
7. Upadrava of Kushtha and their management.
8. Sadhyata and Asadhyata of Kushtha.
9. Leprosy, its Ayurvedic co-relation and modern management in light of National Leprosy Eradication Programme.

Second Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) –Maximum Marks-100

Paper - I

Kilasa, Kshudra Roga Evam Anya Tvak Roga Part-A

1. Kilasa / Shvitra - etiopathogenesis, types, diagnosis and management.
2. Ayurvedic co-relation and management of Pigmentary skin disorders – Vitiligo, Leucoderma, Albinism, Pityriasis Versicolor, Melasma and Generalized Hyperpigmentation.
3. Ayurvedic co-relation and management of photosensitivity and photo induced disorders with environmental factors, sun burn, tanning, ultra violet radiation, skin related adverse drug reactions, photo dermatosis, localised heat urticaria, solar urticaria, cold urticaria, acrocyanosis, cold panniculitis, cold erythema, Raynaud's phenomenon.
4. Ayurvedic co-relation and management of cutaneous reaction to allergens and pollutants borne by the air, cutaneous reaction to cold, frost bite, trench foot, immersion foot, chilblains.
5. Ayurvedic co-relation and management of keratinisation and papulosquamous disorders: ichthyosis, corns, follicular keratosis, psoriasis
6. Knowledge of trichology.
7. Ayurvedic co-relation and management of alopecia, baldness, hypertrichosis, hirsutism and graying of hair.
8. Ayurvedic co-relation and management of sweat glands and sebaceous glands related disorders.

Part-B

1. Introduction to Kshudra Roga and their Modern correlation.
2. Diagnosis and management of all types of Kshudra Roga in relation to Tvak Vikar evam Yaun Sankramak Roga.
3. Diagnosis and management of all types of Prameha Pidika
4. Ayurvedic co-relation and management of Acne, Acneform eruptions and Rosacea
5. Diagnosis and management of Shitapitta, Udarda, Kotha, Utkotha
6. Ayurvedic co-relation and management of Urticaria, Urticarial vasculitis, Cholinergic urticaria, Angioedema, Insect bite.
7. Tvakgata Vata- lakshana and chikitsa.
8. Diagnosis and management of Vishphota.
9. Ayurvedic co-relation and management of Vesiculobullous skin disorders, viz –
 - a) Genetic bullous disorders like Epidermolysis bullosa, Epidermolysis bullosa simplex, Junctional epidermolysis bullosa, Hailey disease.
 - b) Autoimmune blistering disorders like Pemphigus, Bullous pemphigoid, Bullous SLE.
10. Knowledge of Skin tumors and its Ayurvedic management.

Paper - II
Sankramaka Tvak Roga and Yaun Roga
Part-A

1. Diagnosis and management of Shuka Roga.
2. Diagnosis and management of Guhya Roga.
3. Diagnosis and management of Phirang (Syphilis), Upadansha, Puyameha (Gonorrhoea)
4. Ayurvedic co-relation and management of skin disorders in AIDS.
5. Sexually transmitted infection and mucocutaneous manifestation:
 - a) Viral infection - Herpes Simplex, Warts, Molluscum Contagiosum.
 - b) Bacterial infection
 - c) Fungal infection - Candidiasis
6. Ayurvedic co-relation and management of Inflammatory dermatosis, Atopic dermatitis, Seborrhoeic dermatitis, Lichen simplex chronicus, Exogenous eczema, Irritant contact dermatitis, Allergic contact dermatitis, Phytodermatitis, Infective dermatitis.

Part-B

1. Diagnosis and management of all types of Visarpa.
2. Ayurvedic co-relation and management of viral skin infection: Herpes Simplex, Herpes Zoster, Warts and Molluscum Contagiosum.
3. Ayurvedic co-relation and management of fungal skin infection: Pityriasis versicolor, Candidiasis, Madurai foot, Dermatophytosis, Tinea Corporis, T. Cruris, T. Pedis and T. Capitis.
4. Ayurvedic co-relation and management of bacterial skin infections: Furuncle, Carbuncle, Folliculitis, Impetigo, Erysipelas, Cellulitis, Lupus vulgaris, Tubercular and non-tubercular Mycobacterial infection.
5. Ayurvedic co-relation and management of protozoal and parasitic skin infestation: Scabies, Dracunculiasis, Filariasis, Ascariasis, Pediculosis enterobiasis
6. Introduction to Paediatric, Geriatric and Occupational dermatology.

PRACTICALS

Content of Practical

1. Laboratory investigation and histopathology :
 - a) KOH preparation
 - b) Tzanck Smear
 - c) Wood's light examination
 - d) Lepromin test
 - e) Patch testing
 - f) VDRL
 - g) Biopsy
 - h) Allergy test and Hyposensitisation
 - i) Diascopy
2. Routine haematological, biochemical and pathological investigations and other routine lab investigations.

3. History taking of cases of Tvak Vikar evam Yaun Sankramak Roga:
 - a) Importance of personal history
 - b) Importance of associated complaints
 - c) Importance of family history
 - d) Importance of previous illness and its medication
 - e) History of vaccination
 - f) Importance of previous surgical interventions
 - g) Importance of present medication
 - h) Importance of occupational history: nature of work, time of work and climatic influences in working places.
 - i) Importance of food habits
 - j) Effects of drug abuse
 - k) Importance of personal hygiene
 - l) Importance of public hygiene
4. Clinical examination
 - a) Types of skin lesions
 - i. Primary
 - ii. Secondary and special
 - b) Pattern of skin lesions
 - c) Shape and surface of lesions
 - d) Distribution of lesions
 - e) Examination of all srotas
5. Clinical tests: Auspitz's sign, Nikolsky's sign, Darier's sign, Dermatographism, etc.
6. Panchkarma
 - a) Bahya Parimarjan Chikitsa
 - b) Vamana
 - c) Virechana
 - d) Basti
 - e) Nasya Karma
7. Raktamokshana:
 - a) Sira Vyadhana
 - b) Jalaukavacharana
8. Kshar Karma
9. Advance management and preventive measures in skin diseases

Pattern of Practical Examination

1. Case Records	10 Marks
2. Knowledge and Interpretation of Lab Investigations	10 Marks
3. Upakarma	10 Marks
4. Project Work	20 Marks
5. Viva-voce	50 Marks
Total	100 Marks

Text Books for Reference

1. Charak Samhita of Agnivesa with Chakrapani Tika
2. Sushruta Samhita of Sushruta with Dalhan Tika
3. Ashtanga Samgraha of Vagbhata with Indu Tika : Dr. Shivprasad Sharma
4. Ashtanga Hridaya with Arundatta and Hemadri Tika : Pt. Harishastri Paradkar
5. Bhavaprakash of Bhavmishra with Vidyotini Tika : Pt. Brahma Sankara Mishra
6. Sharangdhar Samhita with Dipika Tika : Dr. Brahmanand Tripathi
7. Bhaisajyaratnawali with Vidyotini Tika : Vd. Rageshwardatta Shastri
8. Chakradatta with Vaidyaprabha Hindi Commentary : Prof. Ramnath Dwivedi
9. Yogratnakar with Vidyotini Hindi Commentary : Bhashagaratna Brahmashankar Shastri
10. Shabda Kalpadruma : Radhakanta Deva
11. Ayurvedic Beauty Care : Melanie Sachs
12. Ayurvediya Shabdakosha : Vaidya Venimadhav shastri Joshi
13. Geriatrics in Ayurveda : Dr. S. Suresh Babu
14. AIDS evam Ayurveda : Dr. Hiralal Shivhare
15. An Illustrated Hand Book of Skin Diseases and Sexually Transmitted Infection : Uday Khopkar
16. Roxburgs Common Skin Diseases : Ronald Marks
17. Adams Occupational Skin Diseases : Adam
18. Dermatological Diseases A Practical Approach : Venkatraman Mysore
19. Clinical Methods in Dermatology and Venereology : J. S. Pasricha, Binod Khaitan
20. Illustrated Text Book of Dermatology : J. S. Pasricha, Ramji Gupta
21. Text Book of Clinical Dermatology : Virendra N. Sehgal
22. Harrisons Principles of Internal Medicine : Dennis Kasper
23. API Text Book of Medicine : Dr. Siddharth N. Shah
24. Essentials of Dermatology Venereology and Leprosy : S. P. Chattopadhyay
25. Clinical Leprosy : Virendra N. Sehgal
26. Text Book of Dermatology Venereology and Leprology : Devinder M. Thappa
27. Colour Atlas of Dermatology : L. K. Bhutani
28. Text Book of Dermatosurgery and Cosmetology : Satish Sawant
29. Illustrated Synopsis of Dermatology and STD : Neena Khanna
30. Clinical Anatomy for Medical Students : Richard Snell
31. Principles of Anatomy and Physiology : Tortora and Grabowski
32. Text Book of Medical Physiology : Guyton and Hall.

KSHAR KARMA

D. Kshar Karma First Year

Theory (Two papers) - Maximum Marks -100 (each)
Practical (one) – Maximum Marks-100

Paper - I Basic principles Part-A

Introduction to Shalya Tantra - definition and importance of Shalya Tantra, qualities of surgeon.

1. Trividha karma- Poorva karma, Pradhan karma and Pashchat karma (preoperative, operative and post operative) procedures related to application of Kshara and Kshara Sutra in ano-rectal disorders.
2. Surgical ethics.
3. Basic surgical concepts and practice of surgery.
4. Anatomy and physiology of ano-rectal region.

a) Ayurvedic View

Anatomical concepts of Guda in Ayurveda, development, various measurements, Guda vali, Uttaraguda and Adharaguda, Guda as a Marma. Function of Uttarguda and Adharaguda. Importance of Guda valis and their functions in act of defaecation. Concept of Apana Vayu and its function. Importance of Apana Vayu in act of defaecation, micturation and its involvement in the development of various ano-rectal disorders. Features of vitiated Apana vayu and measures of pacification.

b) Modern View

Anatomical structures in ano-rectal region, anatomy of anal canal, rectum, perianal area, perianal skin, fascia, muscles, anal sphincters, supports of rectum and anal canal, various structures / spaces around anal and perianal area and their significance in ano-rectal disorders. Anal gland, anal crypts, anal mucosa, anal valves, land marks of anal canal and rectum. Venous and arterial supply, venous plexus, speciality of vascular supply of rectum and anal canal. Lymphatics and innervations of rectum and anal canal. Pudendal canal (Alcocks canal) its contents and importance. Peritoneal reflections, facial covering of rectum, pelvic diaphragm, male and female perineum. Histological structures of rectum and anal canal. Functions of anal canal, rectum, perianal muscles, anal sphincter, act of defaecation, storage of waste product, structures in relation to anorectal area and their functional impact on anorectal area in relation to anorectal disorders. Continence and incontinence, assessment of anal sphincter tone.

Part-B

1. Knowledge of equipments/surgical instruments used for diagnosis and management of ano-rectal disorders. Instruments useful in the diagnosis and treatment of Fistula-in-ano. Dr.P.J.Deshpande's instruments for the use of Kshara karma.
2. Sterilization – Importance, methods and their application.
3. Diagnostic investigations for ano-rectal disorders, knowledge of Radiograph, Fistulogram, Sonogram, Sonography, CAT-Scan, MRI and other updated equipments.
4. Introduction to Research Methodology and Bio Statistics

Paper-II

Ayurvedic and Modern Drugs Pharmacology

Part-A

1. Detailed description of Kshara –
 - a) Definition, types- Pratisaraneeya Kshara and Paneeya Kshara , properties, pharmacological actions of drugs, chemical constituents, method of preparation, its standardization, sterilization and storage.
 - b) Indications, contraindications and complications of Kshara karma.
2. Ksharsutra preparation –
 - a) Historical aspects, various drugs used for its preparation including their identification, collection, properties, pharmacological actions of drugs, chemical constituents, method of preparation, its standardization, sterilization and storage.
 - b) Indications and contraindications and complications of Kshara Sutra in Ano-rectal diseases.
 - c) Various other Kshara preparations like – Kshar varti and Kshar pichu.
3. Pharmacodynamics of Kshara -
Chemical analysis, pH value, probable mode of action like penetration, necrotic and dissolution actions of Kshara.
4. Description of Paneeya Kshara and its indications.

Part-B

1. Detailed study of pharmacology of the following drugs used in the management of ano-rectal disorders.

(a) Antibiotics	(b) Laxatives
(c) Analgesics and NSAID's	(d) Haemostatics
(e) Anaesthetic agents	
2. Ayurvedic drugs used in ano-rectal disorders

Second Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) –Maximum Marks-100

Paper - I

Nidan and Chikitsa

Part-A

1. Nidan, Samprapti, Lakshana and Chikitsa of Vrana Shophya, Vrana and Nadi Vrana.
2. Aetiopathogenesis, types, signs and symptoms of inflammation, wound, sinus & pilonidal sinus.
3. Nidan, Samprapti, Lakshana and Chikitsa of Guda vidradhi.
4. Bhagandar Pidika and Bhagandar –
Bhagandar Pidika – Aetiology, types, clinical presentation, character, differential diagnosis, investigations, curable and incurable varieties, prevention and management of Bhagandar Pidaka.
Perianal, ischio-rectal, sub mucosal and other abscesses in the ano-rectal area and perineum; their clinical presentation, investigations, differential diagnosis and management.
Bhagandar- Aetiopathogenesis, types, classifications, clinical presentations, diagnosis, investigations, methods of treatment and prognosis, surgical principles, pre-operative preparations, types of incisions, operative techniques in Ayurveda for the management of Bhagandar. Post operative measures, Complications and their management.
Medical management - conservative and para surgical procedures like Kshara and Agni karma in the treatment of Bhagandar.

Part-B

Fistula -in-ano:

1. Its definition, aetiology, classifications, clinical presentation and diagnostic modalities
2. Complicated fistulae and their management – Treatment of difficult and complicated fistula-in-ano e.g. blind internal, blind external, supra levator extension, multiple fistula-in-ano, long perineal and gluteal extension. Horse shoe type fistula-in-ano, recurrent fistula-in-ano.
3. Fistulae other than crypto glandular origin - Fistula communicating with other organs like urethra, vagina, and urinary bladder, traumatic fistula etc.
4. Treatment of fistula-in-ano – Different modalities of fistula-in-ano; fistulectomy, fistulotomy, fistulectomy with primary closure, fistulectomy with skin grafting, etc, Seton treatment of fistula-in-ano; indications and contraindications, merits and demerits.
5. Management of fistula in ano in patients suffering from Diabetes, HIV, Tuberculosis, IHD and in those on steroid therapy.
6. Pre operative measures - Different Pre-operative preparation related to application of Kshara and Ksharsutra in anorectal diseases specially fistula-in-ano.
7. Post operative care - Postoperative care, wound care, urinary problems and follow up patients, etc.
8. Adjuvant therapy - Analgesics and Antibiotics and other Ayurvedic medicines in the management of fistula-in-ano.

Paper - II
Nidan and Chikitsa
Part-A

1. Arshas (Haemorrhoids)
 - a) Definition, aetiopathogenesis, prodromal features, types, clinical features, diagnosis, differential diagnosis, complications, prognosis and management according to Ayurveda and Modern.
 - b) Management of Arsha by Kshara lepa and Kshara sutra – Indications, method of application, observations and post operative observations.
2. Parikartika (Fissure-in-ano)
Definition, aetiopathogenesis, prodromal features, types, clinical features, diagnosis, differential diagnosis, complications, prognosis and management according to Ayurveda and Modern.
3. Guda Bhramsha (Prolapse of rectum): Definition, aetiopathogenesis, clinical features and management according to Ayurveda and Modern medicine.

Part-B

1. Management of pain during and after Ksharsutra therapy and measures to minimize the pain.
2. Problems and complications of Kshara Karma and Ksharsutra therapy e.g. pain, haemorrhage, infection, delayed cutting, recurrence, incontinence, strictures etc. and their management.
3. Modified technique of Ksharsutra in treatment of fistula-in-ano by Ksharsutra. Combination of surgery and Ksharsutra therapy.
4. Diagnosis of Malignancies and referral :
 - a) Malignancy of prostate
 - b) Malignancy of anal canal and rectum
 - c) Malignancy of external genitalia, cervix and uterus
 - d) Any other condition requiring immediate intervention /referral to an appropriate facility.
5. Update knowledge of Research and recent advances in the field of Kshara karma.

PRACTICALS

Contents of Practical

1. Case history recording and demonstration of Kshara Karma on patients.
2. Guidelines for Practical Training:
 - a) History taking and clinical examination of ano-rectal diseases.
 - b) Application of Kshara Karma-

Observed	-	100 cases
Assisted	-	50 cases
Operated	-	25 cases
3. Clinical examination of ano-rectal diseases includes rectal examination, digital examina-

- tion, abdominal examination and inguinal examination.
4. Special Investigations:
 - a) Proctoscopy
 - b) Sigmoidoscopy
 - c) Techniques of fistulogram
 - d) Anal manometry
 - e) Any other latest diagnostic radiological investigations.

Pattern of Practical Examination

1. Case Record	20 Marks
2. Applicability of Kshara Karma in different diseases particularly in reference to the Fistula-in-Ano, Haemorrhoids etc.	30 Marks
3. Project Work	20 Marks
4. Viva-voce	30 Marks
TOTAL	100 Marks

Text Books for Reference

1. Relevant portions of Sharir Rachana and Kriya from Bhrihatrayee and Laghutrayee.
2. Clinical Anatomy for Medical student : Snell
3. Text Book of Medical Physiology : Guyton and Hall
4. Manual of Surgical Instruments and Procedures : M.M.Kapur
5. Kshara Sutra : RAV
6. Essentials of Medical Pharmacology : K.D. Tripathi
7. Primary Anaesthesia : Maurice King
8. Relevant portions from Bhrihatrayee and Laghutrayee
9. Surgery of Colon, Rectum and Anus : Rob and Smith
10. Surgery of the Anus, Rectum and Colon : Goligher. JC
11. Demonstration of Physical signs in clinical surgery : Hamilton Bailey
12. Treatment of Fistula-in-ano by a new technique : P.J. Deshpande and K.R.Sharma.

13. Standardisation of Kshara Sutra – Ayurvedic medicated thread used in the management of Fistula-in-ano : Anupam Sharma, Manisha Mehata, Handa S.S et al Jr. Proct. Feb. 1993
14. IMCR centre for advanced Pharmacological Research on Traditional Remedies, CDRI Lucknow.
15. Dr. P.J. Deshpande's instruments for the use of Kshara Karma.

g # f

ROGA NIDAN VIDHI (DIAGNOSTIC TECHNIQUES)
[Diploma in Clinical Pathology-Ay] D.C.P (Ay.)
First Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) – Maximum Marks-100

Paper - I
Principles of Roga Nidan and General Pathology
Part-A

Roga Nidan

Importance of Roga Nidan in clinical and laboratory practice.

1. Dosha Dushya Vigyan
2. Concepts of Agni and Ama
3. Concept of Vyadhi Kshamatwa
4. Sroto Vigyan
5. Nidan Panchaka
6. Shatkriya Kaal.

Part-B

General Pathology

Basics of Pathology-

1. Cell injury
2. Inflammation and repair.
3. Haemodynamic disorders.
4. Neoplasia.
5. Immunopathology.
6. Environmental disorders
7. Nutritional disorders
8. Hereditary and genetic disorders

Principles of Laboratory medicine-

1. General concepts and administrative issues
2. Optimizing laboratory work flow and performance
3. Principles of instrumentation
4. Clinical laboratory automation
5. Quality Control
6. Laboratory Statistics
7. Anticoagulants
8. Biomedical waste management

Paper – II
Vyadhivigyan, Clinical Pathology and Chemical Pathology
Part-A

Clinical Pathology

Haematology and Blood Banking -

1. Collection of specimen, labelling, documentation and processing
2. Staining and reporting of smears
3. Complete Haemogram.
4. Special staining methods for blood cells.
5. Investigations in haemolytic anemias and haemorrhagic disorders.
6. Bone Marrow examination
7. Haematopoiesis
8. Erythrocytic Disorders
9. Leukocytic Disorders
10. Transfusion Medicine : Blood bank serology, ABO grouping, Rh typing, special blood groups, blood banking, selection of donors, investigations in transfusion reactions.
11. Coagulation disorders

Part-B

Chemical Pathology

1. Ayurvedanusara Vishesha Pariksha –Mutra-Purisha-Sweda-Rakta-Stanya-Nishtiva-Shukra-Vamita Dravya –Puya Pariksha
2. Examination of urine, body fluids and stool.
3. Collection of blood, anti coagulants, protein precipitants.
4. Colorimetry, chromatography and electrophoresis.
5. Estimation of Blood sugar , Urea ,Creatinine,Proteins,Bilirubin,Lipid profile, LFT, Uric acid, Electrolytes,Calcium and Enzymes, T3, T4, TSH, HCG, etc.
6. Use of autoanalyzer techniques.

Second Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) –Maximum Marks-100

Paper-I

Rogi Roga Pariksha and Clinical Methods

Part-A

Rogi Roga Pariksha

1. Knowledge and clinical application of various examination tools mentioned in Ayurveda- Trividha pariksha, Chaturvidha Pariksha, Shadvidha Pariksha, Ashtavidha pariksha, Dasavidha Pariksha, Dwadasvidha Pariksha etc.

Part-B

Microbiology, Immunopathology, Histopathology Methods Clinical Microbiology and Serology

1. Collection, handling, documentation and selection of material for important procedures.
2. Use of various microbiological stains.
3. Use of various culture media and identification of bacteria by specific procedures.
4. Antibiotic sensitivity tests.
5. Sterilization and disinfection.
6. Identification of fungi in specimen and culture.
7. Diagnostic procedures in important viral infections.
8. Serological techniques, Widal, Weil Felix, VDRL, HIV, HBV, CRP, RF, ASO and Pregnancy tests.

Paper – II

Immuno-Pathology and Histo-Pathology

Part-A

Immuno-Pathology

1. Overview of the immune system and immunologic disorders.
2. Immunoassay and immunochemistry
3. Laboratory evaluation of the cellular immune system
4. Laboratory evaluation of immunoglobulin function and humoral immunity
5. Mediators of inflammation: complement systems, cytokines and adhesion molecules
6. Clinical and laboratory evaluation of immunodeficiency disorders
7. Clinical and laboratory evaluation of autoimmune diseases
8. Clinical and laboratory evaluation of hypersensitivity reactions

Part-B

Histo-Pathology

1. Collection of specimen, labelling, documentation, fixation.
2. Grossing techniques and tissue processing.
3. Cutting and staining of sections, use of special stains and immunocytochemistry, frozen sections
4. Interpretation and reporting.
5. Museum techniques.
6. Cytological techniques including FNAC – preparation, staining and reporting.

PRACTICALS

Contents of Practical

1. Laboratory Postings in various sections of Laboratory with Laboratory record book detailing, Collection, Processing and recording of the readings, Handling of Various instruments.
2. All investigative procedures, finalisation and opinion on the report.

Pattern of Practical Examination

1. Laboratory Record book	10Marks
2. Laboratory Investigations	40 Marks
3. Spotting	10 Marks
4. Project Work	20 Marks
5. Viva-voce	20 Marks
Total	100 Marks

Text Books for Reference

1. Vyadhi Vigyan : Yadavji
2. Madhava Nidan (with Madhukosha Vyakhya)
3. Kaya Chikitsa (Part 1) : Ramraksha Pathak
4. Charak Samhita-Nidan-Vimana-Indriya Sthana
5. Charak, Sushrut, Vagbhata-Related reference
6. Rogi Roga Pariksha Paddhati : Dr.Govind Prasad Upadhyay
7. Ayurvediya Nadi Pariksha Vigyan : Dr.Govind Prasad Upadhyay
8. Vikruti Vigyan : Vd.Vidhyadar Shukla
9. Clinical Pathology : Shivnath Khanna
10. Clinical methods in Ayurveda : Dr. K.R.Srikanta Murthy
11. Ayurvediya Vikriti Vigyan and Roga Vigyan : Dr.P.S.Byadgi
(Vol I & II)
12. Chest X-Ray made easy : Elsevier, Churchill Livingstone
13. Interpretation of diagnostic tests : Jacques Wallach M.D
14. Medical laboratory technology – Methods and interpretation : Dr. Sood
15. Interpreting ECG : P.J Mehta
16. Essential laboratory medicine : V.H.Talib M.D
17. Clinical radiology for medical students : G.M. Roberts, J.P.Hughes,
M.D.Hariharan
18. Clinical pathology
19. Harper's illustrated biochemistry : Robert.K.Murray

20. Text book of Microbiology	
21. Text book of Pathology	: Robins
22. Text book of Pathology	: Harshmohan
23. Pathologic basis of disease	: Robbins
24. Pathology	: Anderson
25. Oxford text book of Pathology	
26. General Pathology	: Walter & Israel
27. Systemic Pathology	: Symmers
28. Surgical Pathology	: Ackerman
29. Surgical Pathology and Cytology	: Silverberg
30. Soft Tissue Tumours	: Enzinger
31. Histopathology of the Skin	: Lever
32. Gynaecologic and Obstetric Pathology	: Novak
33. Diagnostic Cytology	: Koss
34. Fine Needle Aspiration Cytology	: Orell
35. Clinical Haematology	: Wintrobe
36. Tumours of bone	: Mirra
37. Haematology	: De Gruchy
38. Practical Haematology	: Dacie
39. Histopathology techniques	: Bancroft/Culling
40. Clinical diagnosis and management by lab methods	: Todd Sanford
41. Medical Microbiology	: Cruickshank
42. Short textbook of Chemical Pathology	: Baron
43. Essential Immunology	: Roitt
44. Autopsy Pathology	: Rezek Millard
45. Transfusion methods	: Mollison

AYURVEDIC SANGYAHARAN
Diploma in Anaesthesiology -Ay. [D.A. (Ay.)]
First Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) – Maximum Marks-100

Paper - I

Sangyahan Siddhant - Basic Sciences related to Sangyahan (Anaesthesia)

Part-A

1. History and development of Sangyahan and Anaesthesiology.
2. Nirukti and definition of Sangyahan.
3. Shishyopanayan (Induction).
4. Vishikhanupraves (Internship).
5. Agropaharaniya (Preanaesthetic measures)
6. Knowledge of Yantra-Shastra
7. Dosha-Dhatu-Mala and Prakriti in Sangyahan.
8. Shat Kriya Kaal.
9. Roga-Rogi pariksha (Examination of patients)
10. Marma and Snayu
11. Knowledge of Unmad, Mada, Murchha, Stabdhatu and Sanyas
12. Poorva Karma - Snehan, Swedan, Vaman, Virechan and Basti.
13. Sanjeevan Vidhi.
14. The relevant parts of Ayurvedic classics especially Sushrut, Charak and Ashtang Hridaya

Part-B

1. Knowledge and practical application of essential investigations related to anaesthesia practice - Blood, urine, stool, X-ray, ECG, Sonography, CT Scan, MRI, etc.
2. Applied anatomy and physiology of respiratory, cardiovascular, nervous system, hepato renal system, musculo skeletal and endocrine system.
3. Fluid and electrolyte balance.
4. Blood and component therapy.
5. Principles of gaseous exchange
6. Principles of preanaesthetic assessment and premedication in anaesthesia.
7. Shock and its management.
8. Knowledge of anaesthesia apparatus and equipments.
9. Breathing systems and monitoring devices.
10. Ethics and values in Sangyahan practice- consequences and importance.
11. Medicolegal aspect in the practice of Anaesthesia.

Paper – II

Sangyahanopayogi Bhaishajya Vigyanam (Pharmacology related to Anaesthesia with Ayurvedic and Modern concepts including recent advances)

Part-A

1. Pharmacology and clinical application of Medhya Dravya - Brahmi, Vacha, Ashvagandha, Shankhpushpi, Jatamansi, Guduchi, Madhuyasthi, Jyotishmati, etc.
2. Vedanahara Dravya-Rasna, Eranda, Nirgundi, Bhringaraja, Parijata, Shigru, Kadamba, Padmaka, Guggulu, Bhanga, Ahiphena and Godanti, etc.
3. Nidrajanana Dravya.
4. Chhardihara dravya.
5. Hridayottejaka dravya.
6. Kasahara dravya.
7. Sanjeevana dravya.

Part-B

1. Pharmacology of local anaesthetics, general anaesthetics, muscle relaxants and reversal drugs.
2. Pharmacology of drugs used in premedication
3. Pharmacology of drugs acting on autonomic nervous system, central nervous system, cardio vascular system, respiratory system and endocrine system.
4. Pharmacology of drugs used as antidepressants, cardiac stimulants and respiratory stimulants.
5. Pharmacology of drugs used in Emergency.
6. Analgesics – Narcotics and non-narcotics.

Second Year

Theory (Two papers) - Maximum Marks -100(each)
Practical (one) – Maximum Marks-100

Paper - I

Sangyahan Vidhi (Techniques of Anaesthesia)

Part-A

1. Types of Anaesthesia - Local, Regional and General Anaesthesia.
2. Techniques used in Anaesthesia.
3. The instruments and equipments useful in these techniques.
4. Special technique of anaesthesia in Paediatrics, Orthopedics, Gynaecology and Obstetrics, Cardiothoracic, Neurosurgery, Plastic surgery, Eye and E.N.T. Surgery.
5. Accident in Anaesthesia.

Part-B

Management of Anaesthesia (technique) in the following conditions:
Diabetes, Hypertension, Jaundice, Anaemia, Respiratory diseases, Thyroid diseases, Infections, Burns, Renal failure, Musculoskeletal disorders, Pulmonary Tuberculosis, Geriatrics, Laparoscopic Surgeries- Cholecystectomy, Herniotomy and Appendectomy etc.

Paper – II

Vedanaharan Evam Upshaman Chikitsa (Pain and Palliative Care)

Part-A

1. Concept of pain in Ayurved, pain pathways, pain management by drugs and other methods. e.g. Accupressure, Acupuncture, Aroma Therapy, Magnet Therapy, Panchkarma, Jalaukavacharan, Agni Karma and Siravyadha, their principles, materials and methods with indications and contraindications.
2. Upshaman Chikitsa (Palliative care) – Methods and importance.

Part-B

Saghan Chikitsa (Intensive care) –

1. Establishment and management of I.C.U. / C.C.U. / H.D.U. / NICU/ MICU/ Critical care unit.
2. Critical Care medicine.
3. Monitoring and resuscitation CPR (Cardiopulmonary Resuscitation)
4. Post anaesthetic care
5. Pain clinic setup.
6. Recent advances in the field of Pain management, Palliative care, Sangyaharan and Anaesthesiology.

PRACTICALS

Content of the Practical

Administration and Management of all type of anaesthesia techniques in different conditions and diseases as per syllabus under guidance and supervision of senior anaesthesiologist.

Practical knowledge of setting up and working of intensive care unit.

Pattern of Practical Examination

- | | |
|--|------------------|
| 1. Project work | 20 marks |
| 2. Presentation of different type of anaesthesia | 30 marks |
| 3. Spotting | 10 marks |
| 4. Viva-voce | 40 marks |
| Total | 100 marks |

Text Books for Reference

1. Sushrut Samhita with Dalhana Commentary
2. Charak Samhita
3. Ashtanga Hridaya
4. Practice of Anaesthesia : Churchill's Davidson
5. Anaesthesia : Renald D. Miller
6. Synopsis of Anaesthesia : Alfred Lee
7. Anaesthesia : Colins
8. Other upto date Reference Books and Journals available
9. Sangyahan Prakash : Dr. D.N. Pande
10. Agnikarma – Technological Innovation : Dr. P.D. Gupta
11. Practice of Anaesthesia and Resuscitation : Dr. P.K. Gupta
12. Essentials of Anaesthesiology : Prof. A.K. Paul
13. Clinical Anaesthesia : Prof. A.K. Paul
14. Anushastra Karma : Dr. D.N. Pande

CHHAYA EVAM VIKIRAN VIGYAN

[Diploma in Radiodiagnosis (Ay.)] D.M.R.D. (Ay.)

First Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) – Maximum Marks-100

Paper - I

Fundamentals of Vikiran evam Chhaya Vigyan (Radiodiagnosis and Imaging)

Part-A

1. History and development of Vikiran evam Chhaya Vigyan.
2. Shishyopanayan - as described by Sushrut in context of Vikiran evam Chhaya Vigyan.
3. Discipline (duties and responsibilities) in Vikiran evam Chhaya section. (Radiodiagnosis and Imaging Section).
4. Fundamental principles of Ayurveda and their applied aspects, specially Panch Mahabhuta, Dosh, Dhatu, Mala, Panch Nidan, Prakriti, Shatkriyakaal, Praman, Chhaya-Pratichchaya , Prabha, Pranashta Shalya Vigyan, Rogi Pariksha (Trividha, Shadvidha especially Darshan Pariksha).

Part-B

1. Infrastructure of an ideal Vikiran evam Chhaya Section.
2. Fundamental principles of Vikiran evam Chhaya Vigyan
3. Ethics in Vikiran evam Chhaya Vigyan.
4. Introduction to basic radio imaging techniques.
5. Environmental issues related to Vikiran evam Chhaya Vigyan, disposing or recycling of radiological materials.
6. Ionizing and non ionizing energies- relevant hazards, prevention and precautions, their management by Ayurvedic and Modern medicine.
7. Emergencies in Vikiran evam Chhaya (Radiodiagnosis and Imaging) section and their management.

Paper – II

Applied Anatomy, Physiology, Pathology and Procedures in Vikiran evam Chhaya Vigyan (Radiodiagnosis and Imaging)

Part-A

Applied Anatomy, Physiology and Pathology in Vikiran evam Chhaya Vigyan (Radiodiagnosis and Imaging):

1. Knowledge of Ayurvedic and Modern applied radiological anatomy (including sectional), Physiology and Pathology of the human body.

2. Sira (Vessels), Gaurya Sira (Lymphatic channels), Mansa (Muscles), Snayu (Ligaments), Kandara (Tendons), Sandhi(Joints), Nadi (Nerve), Asthi(Bones), Strotas, Marma, Antahsravi granthi (Endocrine glands) etc.
3. Urdhwajatrugata(Supraclavicular) parts- Kapaal (Skull), Karna (Ears), Chakshu (Eyes), Nasa (Nose), Paranasal sinuses, Lala granthi (Salivary glands), Face, Greeva (Neck), Sushumna (Spinal cord) and Kaseruka (Vertebrae), Mukha (Mouth), Danta (Teeth), Mastulunga (Brain), Lasika granthi (Lymph glands), etc.
4. Koshtha (Trunk) parts- Sushumna (Spinal cord) and Kaseruka (Vertebrae).
 - a. Vaksha (Thoracic) parts- Phuphus (Lungs), Hridaya (Heart) and Sira (Vessels), Shwashnalika (Trachea, Bronchi), Annamarg (Oesophagus), Lymph nodes, Stan (Breast), Hridayabandhan (Diaphragm), etc.
 - b. Udar (Abdominal) parts- Audaryakala (Peritoneum) Aamashaya (Stomach), Kshudrantra (Small intestine), Brihadantra (Large intestine), Guda (Rectum and Anal canal), Aantrapuchha (Appendix), Yakrit (Liver), Tilam (Gall bladder), Billiary channels, Pleeha (Spleen), Agnyashaya (Pancreas), Vrikka (Kidney), Gavini (Ureter), Basti (Urinary bladder), Shishna (Penis), Paurushgranthi (Prostate), Vrishan (Testes), Shukrashaya (Seminal vesicles), Dimbashaya (Ovaries), Perineum, Garbhashaya (Uterus), Yoni, Dimbavahini (Fallopian tubes), Lasika granthi (Lymph nodes), etc.
5. Shakha- parts of upper and lower extremities.

Part-B

Procedures in Vikiran evam Chhaya Vigyan (Radiodiagnosis and Imaging)

1. Equipments used in Chhaya evam Vikiran Vigyan.
2. Trividha Karma- Poorva, Pradhan and Paschaat Karma in Vikiran evam Chhaya Vigyan.
3. Dark room techniques
4. Various routine and special, non-contrast and contrast radiography, digital radiography, radiographic positions and views.
5. Various ultra sonography procedures.
6. CT, MRI, Radionuclide scanning, PET and other recent advanced procedures in radiodiagnosis and imaging, mammography, bone densitometry, interventional radiology.

Second Year

Theory (Two papers) - Maximum Marks -100(each)

Practical (one) – Maximum Marks-100

Paper - I

Physics and Biology related to Vikiran evam Chhaya Vigyan (Radiodiagnosis and Imaging)

Part-A

1. Physics of radiography, their application, Digital radiography, Fluoroscopy.
2. Physics of ultrasonography, its applied aspect related to various USG, Doppler procedures.
3. Study of contrast materials used in Radiology.

Part-B

1. Physics of CT scan, its applied aspect, efficiency and limitations.
2. Physics of MRI, its applied aspect, efficiency and limitations.
3. Physics and its applied aspect related to other imaging procedures, e.g. PET, Radio Nuclides imaging, etc.

Paper - II

Applied Vikiran Evam Chhaya Vigyan (Radiodiagnosis and Imaging)

Part-A

1. Study of Ayurvedic classics and Modern medical Science texts related to Vikiran evam Chhaya Vigyan.
2. Applied aspects of Vikiran evam Chhaya Vigyan and interpretation of various diseases related to system, organ and metabolism as per syllabus through X-Rays.

Part-B

1. Applied aspects of Vikiran evam Chhaya Vigyan and interpretation of various diseases related to system, organ and metabolism as per syllabus through Ultrasonography, CT scan, MRI scan and other advanced Radiological techniques.
2. Application of Vikiran evam Chhaya Vigyan in context to Ayurvedic fundamentals, diagnosis, management and research.

PRACTICALS

Contents of Practical

1. Routine and Special, non-contrast and contrast radiography, interpretation and reporting.
2. Various diagnostic Ultrasonography: Routine, various Endo-USG, Garbha vinishchaya, Masanumasik Garbha vridhhi, Garbha swasthya and vyadhi, Vikrita garbha, Apra, Nabhinadi darshan, Apra / Garbha Apatan, Yonivyapat, Vandhyatva, Garbhashayabhransha, Doppler, USG guided techniques, Interpretation and reporting etc.
3. Mammography, Bone Densitometry- interpretation and reporting.
4. Interventional Radiology – interpretation and reporting.

Pattern of Practical Examination

1. Case Record	20 Marks
2. Spotting/ Investigative Spot Diagnosis	30 Marks
3. Project Work	20 Marks
4. Viva-voce	30 Marks
Total	100 marks

Text Books for Reference

1. Sushrut Samhita
2. Charak Samhita
3. Ashtanga Hridaya / Samgraha
4. Introduction to Kayachikitsa : C. Dwarkanath
5. Text Book of Radiographic Positioning and Related Anatomy : Kenneth, L Bontrager, John P Lampignano
6. Procedures in diagnostic Radiology : T. Doyle, W. Have, K. Thomson
7. Radiographic positioning : Clark
8. Radiobiology for the Radiologist : Hall
9. Christensen's Physics of Diagnostic Radiology : Curry T S , Dowdey J E, Murry R C
10. Farr's Physics for Medical Imaging : Penelope Allisy, Roberts, Jerry Williams
11. Fundamental of Diagnostic Radiology : Brant
12. Diagnostic Imaging : Federle
13. Diagnostic Imaging : Peter Armstrong, Martin Wastie, Ansrea Rockall
14. Text Book in Radiology and Imaging : D. Sutton.
15. Introduction to Vascular Ultrasonography : Zwiebel , Pellerito
16. Text book in Ultrasonography : Roumack
17. Manual of Medical Diagnostic Ultrasonography : W.H.O. Scientific group
18. Computed Tomography and MRI of the whole body: Hagga.
19. Surface and Radiological Anatomy : A. Halim
20. X-Ray equipment for student Radiographers : D N and M O Chesney
21. Clinical Sonography, A Practical Guide : Roger C. Sanders, Tom Winter.

**CENTRAL COUNCIL OF INDIAN MEDICINE
NEW DELHI**

List of Experts who participated to review the PG Diploma Syllabus

PHARMACEUTICS		22.	Vd. Bhajandas Swami Jaipur
1.	Dr. M.M. Jumle Convener	23.	Dr. Satyanarayan Bhat Bangalore
2.	Dr. Pradeepkumar Prajapati Jamnagar	24.	Prof. Rambabu Dwivedi IPGTR, Jamnagar
3.	Dr. L.K. Dwivedi NIA, Jaipur	BALROGA	
4.	Dr. S.S. Savarikar Mumbai	25.	Prof. Shailaja Rao SDM College, Hassan
5.	Dr. C.B. Jha BHU Varanasi	26.	Dr. B. M. Singh BHU, Varanasi
6.	Dr. Anand Chaudhary BHU Varanasi	27.	Prof. Abhimanyu Kumar NIA, Jaipur
7.	Dr. Ramachandra Reddy BHU Varanasi	28.	Prof. S K Ramachandran Govt. Ayu. Coll., Thiruvananthapuram

1. AYURVED SAMHITA & SIDDHANT

**Theory- 400 marks(100 Each)
Practical and Viva-Voce - 100 marks**

PAPER –I Charak Samhita

1. Charak Samhita complete with Ayurved Dipika commentary by Chakrapani.
2. Introductory information regarding all available commentaries on Charak Samhita

PAPER –II Sushrut Samhita & Ashtang-Hridayam

1. Sushrut Samhita Sutra sthana and Sharir- sthana. with Nibandha Samgraha commentary by Acharya Dalhana.
2. Ashtang-Hridayam Sutra Sthanamatram with Sarvanga Sundara commentary by Arun Dutt.
3. Introductory information regarding all available commentaries on Sushrut Samhita and Ashtang Hridaya.

PAPER – III Ayurvediya and Darshanika Siddhanta

Introduction and description of philosophical principles incorporated in Charak Samhita, Sushrut Samhita, Ashtanga Hridya, shtang Samgraha.

1. Analysis of principles specially loka-purusha samya, Shadpadartha, Praman, Srishti Utpatti, Panchmahabhuta, Pilupaka, Pitharpaka Karana- Karyavada, Tantrayukti, Nyayas (Maxims), Atmatatva siddhant.
2. Importance of Satkaryavad, Arambhavada, Parmanuvada Swabhavoparamvada, Swabhava Vada, Yadricha Vada, Karmvada.
3. Practical applicability principles of Samkhya- Yoga, Nyaya-Vaisheshika, Vedanta and Mimansa.

PAPER – IV Ayurved Itihas and Prayogika Siddhant.

1. Post independent Development of Ayurveda: Education, Research.
2. Globalisation of Ayurved.
3. Introduction of department of AYUSH, CCIM, CCRAS, RAV.
4. Tridosh Siddhant.
5. Panchabhautik Siddhant
6. Manastatva and its Chikitsa Siddhant.
7. Naishthiki Chikitsa.
8. Practical applicability principles of Charvak, Jain & Bauddha Darshana.
9. Journals, types of Journals review of Articles.

Practical- Viva-voce

(50 case sheets are to be filled from samhita siddhant IPD / OPD)

- 100 Marks

Reference Books

1. Charak Samhita with Chakrapani commentary.
2. Sushruta Samhita with Dalhana Commentary.
3. Ashtanga Samgraha with Sarvangasundara.
4. Ashtanga Hridaya with Sarvangasundara.
5. Vaisheshika Darshan – Prashastapada Bhasya
6. Nyaya Darshan - Vatsyayan Bhasya Patanjala
7. Yoga Darshan- Vyas Bhasya
8. Vedantsara
9. Sarvadarshan Samgraha
10. Bhartiya Darshan - Baldev Upadhyaya.
11. Ayurved Darshanam - Acharya Rajkumar Jain.
12. Ayurved Darshan Vimarsha- Dr O.P. Upadhyay.

13. Ayurvediy Jeevak Su -Dr O.P. Upadhyay.
14. Padartha Vidnyan - Dr O.P. Upadhyay.
15. Scientific Exploration of Ayurved – Dr. Sudhir Kumar.

2. AYURVEDA SAMHITA & SIDHANTA (Basic Principles)

Astanga Hridaya, Charaka (P,U), Padartha Vignana & Ayurveda Ithihasa, Sanskrit

1	Dr. B. P. Pandey	Group leader	
2	Dr. Mahesh Vyas	Coordinator -	Coordinator -
3	Dr. B. L. Gaur	Samhitha & Siddantha U.G. & P.G.	
4	Dr. O. P. Upadhyaya	Samhitha & Siddantha U.G. & P.G.	
5	Dr. H. P. Sharma	Samhitha & Siddantha U.G. & P.G.	
6	Dr.S.L.Sharma	Samhitha & Siddantha U.G. & P.G.	
7	Dr. R. D. Thakkur	Samhitha & Siddantha U.G. & P.G.	
8	Dr. Naresh Sharma	Samhitha & Siddantha U.G. & P.G.	
9	Dr. Yogita Jamadade	Samhitha & Siddantha U.G. & P.G.	
10	Dr. Abichal C.	Samhitha & Siddantha U.G. & P.G.	
11	Dr. Mohan Joshi	Samhitha & Siddantha U.G. & P.G.	
12	Dr. G. P. Rama Reddy	Padartha Vigyana & Ayurveda Ithihasa	Coordinator -
13	Dr. Brij Kumar Dwivedi	Padartha Vigyana & Ayurveda Ithihasa	
14	Dr. Milind Mokashi	Padartha Vigyana & Ayurveda Ithihasa	
15	Dr. Santhosh Nair	Padartha Vigyana & Ayurveda Ithihasa	
16	Dr. Ahalya Sharma	Padartha Vigyana & Ayurveda Ithihasa	
17	Dr. Suhag Rawal	Padartha Vigyana & Ayurveda Ithihasa	
18	Dr. G.R.R Chakravarthy	Padartha Vigyana & Ayurveda Ithihasa	
19	Dr. Nandani	Padartha Vigyana & Ayurveda Ithihasa	
20	Dr. Manoj Sharma	Padartha Vigyana & Ayurveda Ithihasa	
21	Dr. Mallika K. J.	Padartha Vigyana & Ayurveda Ithihasa	
22	Dr. Shubhangi K	Padartha Vigyana & Ayurveda Ithihasa	
23	Dr. Premchand Shastri	Sanskrit	Coordinator
24	Dr. Mohan Chand Bhat	Sanskrit	
25	P. V. Thothadrinathan	Sanskrit	
26	Dr. Nigam Sharma	Sanskrit	
27	Dr. Savitri G.S	Sanskrit	
28	Dr. B.K. Shyam Raw	Sanskrit	

2. RACHANA SHAARIRA

Total Marks – 400

PAPER-I (GARBHA SHAARIRA)

100 Marks

1. Etymology of Garbhavakranti Shaarira, features of Shukra and Shonita, description of Beeja, Beejbhaga, Beejbhagavyava and Garbhotpadakabhava, Garbha Poshana Krama, Garbhavridhikar Bhav, Masanumashiki Garbhavridhi, Foetal circulation. Explanation of lakshana occurring in Ritumati, Sadhyah Grihita Garbha. Yamal garbha, Anasthi garbha.
2. Explanation of Basic Embryology, and Systemic embryology.
3. Knowledge of basic facts in advancement in Anuvanshiki (Genetics) and Garbhajavikara (Teratology).

PAPER –II (KOSHTHANGA SIRA DHAMANI SROTAS SHAARIR)

100 Marks

- 1) **Koshthanga Shaarira:** - Detail etymological derivation of 'Koshtha' and Koshthanga, including detail study of structure of each Koshthanga. Male and Female genital organs.
- 2) **Ashaya:** - Definition, detail description.
- 3) **Kala Shaarira:**-Etymology, Definition, description of Seven Kala with their Modern component and applied aspects.
- 4) **Paribhashika Shaarira:** - Snayu, Kandara, Rajju, Sanghata, Jalaetc. and their general description.
- 5) **Sira, Dhamani and Srotas Shaarira:** - Etymological derivation, definitions, synonyms, number and types of Sira, Dhamani and Srotas, anatomical differences among Sira, Dhamani and Srotas, description of Vedhya and AvedhyaSira (Puncturable and Non puncturable Veins) and clinical importance of Sira, Dhamani and Srotas including Modern Anatomical counterparts.

PAPER –III (Marma Shaarira Evum Asthi Sandhi Peshee Shaarira)

100 Marks

- 1) **Marma Shaarira:** - Derivation and definitions of the term Marma and their features, characteristics and number of Marma according to Sushruta Divisions of Marma on morphological basis (Rachana Bheda), Shadangatvam (Regional), Abhighataja (Prognostic) classification, Trimarma according to Charaka. Knowledge of 'Marmaabhighata', MarmaViddha, Detailed study of individual marma with their clinical and Surgical importance. Importance of Marma in Shalyatantra.
- 2) **Asthi Shaarira :-** General introduction and description of Asthi, differences among number of Asthi.Types of Asthi. Detail study of each bone with its ossification &Applied anatomy.
- 3) **Sandhi Shaarira :-** Etymological derivation,description, features, number, types and Applied anatomy of all Sandhi (joints).
- 4) **Peshee Shaarira :-** Etymological derivation,description, features, number, types and Applied anatomy of all Peshee (Muscles).

PAPER – IV (Tantra Shaarira Evum Antah and BahihGranthi Vigyaniya)

100 Marks

1. Description of Panchgyanendriya – Ayurved and Modern aspects. (Sensory organs (Eye, Ear, Nose, Tongue and Skin with their Applied anatomy).

2. Shat Chakra - Location and significance in Yoga. Description of Ida, Pingala, Sushumnanadi.
3. Anatomy of brain and spinal cord, Peripheral nervous system (explanation of Nerve Plexuses and peripheral nerves, Cranial nerves and Autonomic nervous system, Cerebro-spinal fluid, Venous sinuses of Brain, Ventricular system of Brain, Blood supply of Brain, Meninges with Applied Anatomy).
4. AntahSraviGranthi and BahihSraviGranthi:-Detail study of Exocrine & Endocrine glands.

PRACTICAL:-

- 1) Dissection of atleast one cadaver during the Final part of the course.
- 2) Training of preservation techniques in the Embalming room.
- 3) Preparation of Soft tissue specimen and Models using current technology like Plastination, Lumen casting etc. under the guidance of Teaching staff and Experts of the relevant fields.
- 4) Preparation of Charts and Models of Rachana Shaarira subject to the individual capacity.
- 5) Observation of MRI, CT Scan, USG procedures, Colour Doppler etc.
- 6) Visits to various Museums of other colleges in the Medical field.
- 7) Observation of Ward procedures like Lumbar puncture, Tracheostomy, Abdominal parentesis, Liver biopsy, Venesection, etc. (subject to the availability and opportunities)

Pattern of Practical Examination

- | | |
|---|------------|
| 1. Practical record book & log book | - 20 Marks |
| 2. Spotting (Dissected organs and Bones-Joints-Muscles) | - 20 Marks |
| 3. Dissection | - 40 Marks |
| 4. Surface & Radiological Anatomy | - 40 Marks |
| 5. Dissertation Presentation | - 10 Marks |
| 6. Teaching Skills | - 20 Marks |
| 7. Viva-voce | - 50 Marks |

Reference Books-

- | | |
|--|---------------------------|
| 1. Relevant matters of Brihatrayee and Laghutrayee | |
| 2. PratyakshaShariram | - GananathSen |
| 3. AbhinavaShariram | - Damodar Sharma Gaur |
| 4. Parishadyam Sabdartha Shariram | - Damodara Sharma Gaur |
| 5. BrihatShariram | - P S Varier |
| 6. Shiva Samhita | |
| 7. Gray's Anatomy | - Latest Edition |
| 8. Human Anatomy | - B D Chaurasia |
| 9. Cunnigham's Companion to Manual of Practical Anatomy. Vol I, II & III | |
| 10. Developing Human | - Keith L Moore & Persaud |
| 11. Clinically oriented Anatomy | - Keith L Moore |
| 12. Clinically oriented Neuro Anatomy | - Richard Snell |
| 13. Surface and Radiological Anatomy | - Halim |
| 14. Grant's Methods of Anatomy | - Grant |
| 15. Grant's dissector | - Grant |
| 16. Human Embryology | - I. B. Singh |

3. KRIYA SHARIR

Paper- I (Dosa-Dhātu-Mala Vijñāna)

Contribution of different Ayurveda Samhita in Kriya Sharir

- Theory of Pancamahābhūta
- Principle of Loka-Purusa Sāmya
- Importance of Sāmānya - Viśesa principle.
- Different views on the composition of Purusa and the importance of Cikitsya Purusa.
- Importance of Gurvādi Guna in Ayurveda.
- General description of Tridosā theory
- Mutual relationship between Triguna-Tridosā-Pancamahābhūta-Indriya.
- Mutual relationship between Rtu-Dosa-Rasa-Guna.
- Biological rhythms of Tridosā on the basis of Day-Night-Age-Season and Food intake.
- Role of Dosa in the formation of Prakṛti of an individual.
- Role of Dosa in maintaining health.
- **Vāta Dosa:** General locations (*Sthāna*), general attributes (*Guna*) and general functions (*Sāmānya Karma*). Five subdivisions of *Vāta* with their specific locations, specific properties, and specific functions (*Prāna, Udāna, Samāna, Vyāna, Apāna*)
- **Pitta Dosa:** General locations (*Sthāna*), general attributes (*Guna*) and general functions (*Sāmānya Karma*). Five subdivisions of *Pitta* with their specific locations, specific properties, and specific functions (*Pācaka, Ranjaka, Ālocaka, Bhrājaka, Sādhaka*). Similarities and differences between *Agni* and *Pitta*.
- **Kapha Dosa:** General locations (*Sthāna*), general attributes (*Guna*) and general functions (*Karma*) of *Kapha*. Five subdivisions of *Kapha* with their specific locations, specific properties, and specific functions (*Bodhaka, Avalambaka, Kledaka, Tarpaka, Ślesaka*).
- Applied physiology of Tridosā principle: *Kriyākāla, Dosa Vrddhi-Dosa Ksaya*.
- **Dhātu Posana:** Process of nourishment of *Dhātu*. Description of various theories of *Dhātu Posana* (*Ksīra-Dadhi, Kedāri-Kulya, Khale Kapota* etc).
- **Dhātu:** General introduction and definition of *Dhātu*. Formation, Definition (*Nirukti*), Distribution, Attributes, quantity, classification, *Pāñcabhautika* composition and Functions of all seven *Dhātus* in detail: *Rasa, Rakta, Māmsa, Meda, Asthi, Majjā, Śukra*.
- Applied physiology of *Dhātu*: Manifestations of *Ksaya* and *Vriddhi* of each *Dhātu*. Description of *Dhātu Pradosaja Vikāra*.
- Description of *Āśraya* and *Āśrayī* kind of relationship between *Dosa* and *Dhātu*.
- Description of the characteristic features of *Astavidha Sāra*. Description of *Rasavaha, Raktavaha, Māmsavaha, Medovaha, Asthivaha, Majjāvaha* and *Śukravaha Srotāmsi*.
- **Ojas:** Definition, locations, synonyms, Formation, Distribution, Properties, Quantity, Classification and Functions of *Ojas*. Description of *Vyādhiksamitva, Bala Vrddhikara Bhāva*. Classification of *Bala*. Relation between *Ślesmā, Bala* and *Ojas*.
- Applied physiology of *Ojas*: Etiological factors and manifestations of *Ojaksaya, Visramsa* and *Vyāpat*. Physiological and clinical significance of *Ojas*.
- **Upadhātu:** General introduction and Definition of the term '*Upadhātu*'. Formation, Nourishment, Quantity, Properties, Distribution and functions of each *Upadhātu*.
- **Stanya:** Characteristic features and methods of assessing *Śuddha* and *Dūsita Stanya*, Manifestations of *Vrddhi* and *Ksaya* of *Stanya*.

- **Ārtava:** Characteristic features of Śuddha and Dūsita Ārtava. Differences between Raja and Ārtava, physiology of Ārtavavaha Srotāmsi.
- Study of Tvak
- **Physiology of Mala** - Definition of the term 'Mala'. Definition, Formation, Properties, Quantity and Functions of Purīsa, Mutra. Manifestations of Vrddhi and Kshaya of Purīsa and Mūtra.
- **Sveda** – Definition, Formation, Properties, Quantity and Functions of Svedavaha Srotāmsi. Formation of Sveda. Manifestations of Vrddhi and Kshaya of Sveda.
- **Dhātumala** – Definition, Formation, properties, Quantity, Classification and Functions of each Dhātumala .

Paper-II - Prakrti- Sattva Vijñāna

- **Deha-Prakrti:** Various definitions and synonyms for the term 'Prakrti'. Factors influencing the Prakrti. Classification of Deha-Prakrti. Characteristic features of the individuals belonging to each kind of Deha-Prakrti. Recent advances in understanding the Prakrti.
- **Pancajnanendriya:** Physiological description of Pancajnanendriya and physiology of perception of Śabda, Sparśa, Rūpa, Rasa, Gandha. Indriya-panca-pancaka; Physiological description of Karmendriya.
- **Manas** – Definition, location (sthana), Properties, Functions and Objects of Manas.
- **Ātmā** – Definition, Properties of Ātmā. Difference between Paramātmā and Jīvātmā; Characteristic features of Ātmā.
- **Buddhi** – Location, Types, Functions of Buddhi; Physiology of Dhī, Dhrti and Smrti.
- **Nidrā** – Definition of Nidrā, Classification of Nidrā. Tandra, physiological and clinical significance of Nidra; Svapnotpatti and Svapnabheda.
- Physiology of special senses. Intelligence, Memory, Learning and Motivation.
- Physiology of sleep.
- Physiology of speech and articulation;
- Physiology of Pain and temperature.

Paper-III - Kosthanga Kriya Vijñāna

- **Āhāra:** Definition and significance of Āhāra. Classification of Āhāra. Āhāra-vidhi-vidhāna. Asta āhāra-vidhi viśesāyatana, Āhāraparināmakara bhāva.
- **Āhārpāchana:** Āhāra Pāka Prakriyā, Description of Annavaha Srotās. Description of Avasthāpāka and Nishthapāka. Role of dosha in Āhārapāka. Sāra and Kitta Vibhajana. Absorption of Sāra. Utpatti and Udieeran of Vāta-Pitta-Kapha.
- Definition of the term Kostha. Physiological classification of Kostha and the characteristics of each kind of Kostha.
- **Agni:** Description of the importance of Agni. Classification of Agni. Locations, properties and functions of Jātharāgni, Bhūtāgni, and Dhātvagni.
- Applied physiology of Agni in Kriyā Śārīra and Cikitsā.
- Description of the aetiology and features of Annavaha Srotodusti. Applied physiology of Annavaha Srotās: Arocaka, Ajīrna, Atīsāra, Grahanī, Chardi, Parināma Śūla Agnimāndya.
- Description of the process of digestion of fats, carbohydrates and proteins in human gastrointestinal tract. Different digestive juices, their enzymes and their mechanisms of action. Functions of Salivary glands, Stomach, Pancreas, Small intestine, Liver and large intestine in the process of digestion and absorption.

- Movements of the gut (deglutition, peristalsis, defecation etc.) and their control. Role of neuro-endocrine mechanisms in the process of digestion and absorption. Enteric nervous system.
- Applied physiology of gastrointestinal tract: Vomiting, Diarrhoea, Malabsorption etc.
- Recent understandings related to the gut microbiota and their role in health and disease.
- Introduction to biochemical structure, properties and classification of proteins, fats and carbohydrates.
- Description of the processes involved in the metabolism of proteins, fats and carbohydrates.
- Vitamins: sources, daily requirement and functions. Physiological basis of signs and symptoms of hypo and hyper-vitaminosis.

Paper-IV - Modern Physiology and its applied aspect

Physiology of Neuro-Immune-Endocrine Mechanisms:

- Physiology of Nervous System. General introduction to nervous system: neurons, mechanism of propagation of nerve impulse.
- Study of CNS, PNS and ANS. Sensory and motor functions of nervous system. Functions of different parts of brain and spinal cord, Hypothalamus and limbic system
- Physiology of Endocrine system. Classification and characteristics of different hormones. Description of hormones secreted by Hypothalamus, Pituitary gland, Thyroid gland, Parathyroid glands, Pancreas, Adrenal glands and their physiological effects. Effects of hypo and hyper-secretion of various hormones.
- Male and female reproductive physiology. Spermatogenesis and oogenesis. Hormonal regulation of uterine and ovarian cycles. Physiology of pregnancy and lactation. Parturition.
- Adipose tissue and its Function. Circulating lipids. Description of lipoproteins like VLDL, LDL and HDL and their composition.
- Physiology of immune system. Definition and classification of immunity: Innate, acquired and artificial. Mechanisms involved in humoral and cell mediated immunity.

Cardiovascular physiology, Respiratory physiology and Blood:

- Physiology of Cardio-Vascular system: Functional anatomy of cardiovascular system. Cardiac cycle. Heart sounds. Regulation of cardiac output and venous return. Physiological basis of ECG. Heart-rate and its regulation. Arterial pulse. Systemic arterial blood pressure and its control. Regional circulations. Physiology of lymphatic circulation.
- Physiology of Respiratory system: Functional anatomy of respiratory system. Ventilation. Mechanism of respiration. Exchange and transportation of gases. Neural and chemical control of respiration. Spirometry and lung function tests. Artificial respiration.
- Functions of Haemopoietic system: Composition and functions of blood and blood cells. Haemopoiesis- (stages and development of RBCs, WBCs and platelets); Introduction to bone marrow: composition and functions of bone marrow. Structure and functions of haemoglobin, mechanism of blood clotting, study of platelets. physiological basis of blood groups. Principles of blood transfusion, plasma proteins-synthesis and functions. Applied physiology: Anaemia, Jaundice.

Musculoskeletal Physiology:

- Physiology of muscles. Classification of muscles. Electrical and mechanical properties of Cardiac, skeletal and smooth muscles.

Physiology of Excretion:

- Physiology of excretion. Functional anatomy of urinary tract. Functions of kidneys. Mechanism of formation of urine. Control of micturition. Renal function tests.
- Structure and functions of skin, sweat glands and sebaceous glands.

Learners should be well versed with the following instruments-

- Physiograph, Computerised spirometry, Biochemical Analyzer, Pulse oxymeter, Elisa Reader, Hematology Analyzer, Tread mill

Bridge areas including recent advances:

- Recent studies in biorhythms.
- Recent advances in Neuro-Immune-Endocrine physiology.
- Recent advances in stem cell research

PRACTICAL**Ayurvedic practicals**

- Assessment of Prakrti
- Assessment of Sāra
- Assessment of Dosa Vrddhi Ksaya Laksana
- Assessment of Dhātu Vrddhi – Ksaya Laksana
- Assessment of Agni
- Assessment of Kostha
- Assessment of Śarīra Bala through Vyāyāma Śakti
- Mūtra Parīksa
- Nādī Parīksā
- Anguli Pramāna
- Assessment of Sātmya

Hematology

- Use and care of Compound microscope
- Histological study of different organs
- Hemoglobin estimation
- Total RBC count
- Total WBC count
- Differential leukocyte count
- Packed cell volume (PCV)
- ESR
- Bleeding time
- Clotting time
- Blood grouping and Rh typing

Urine examination**Physical examination**

- Specific gravity and reaction of urine
- Detecting the presence of Albumin in urine

- Detecting the presence of Sugar in urine
- Detecting the presence of Ketone bodies in urine
- Detecting the presence of Bile salts and bile pigments in urine

Cardio-Vascular system

- Clinical methods of examining cardiovascular system
- Examination of Arterial Pulse
- Arterial blood pressure measurement: Effect of posture, exercise and cold pressor test on Blood Pressure
- ECG recording and its interpretation
- Heart Sounds

Respiratory system

- Clinical examination of Respiratory System
- Lung Function Tests including Spirometry

Nervous System

- Clinical examination of nervous system
- Examination of higher mental functions
- Examination of cranial nerves
- Examination of reflexes
- Examination of sensory functions
- Examination of motor functions
- Examination of Autonomic Nervous System
- EEG recording (Demonstration)

4. DRAVYAGUNA VIGYAN

PAPER-I Namarupa Vigyana

100 marks

1. Importance of Namagyana of Dravya, origin of Namarupagyana of Aushadhi in Veda, etymological derivation of various names and synonyms of Aushadhi.
2. Rupagyana in relation to Aushadhi. Sthula and Sukshma description (Macroscopic and Microscopic study) of different parts of the plant.
3. Synonyms of dravyas(aushadha and Ahara) mentioned in Vedic compendia, Brihatrayee, Bhavaprakasha and Rajanighantu.
4. Basonyms, synonyms and distinguish morphological characteristic features of medicinal plants listed in Ayurvedic Pharmacopoeia of India(API).
5. Knowledge of Anukta dravya (Extrapharmacopial drugs)with regards to namarupa.
6. Sandigdha dravya(Controversial drugs) vinischaya.
7. Knowledge of biodiversity, endangered medicinal species.
8. Knowledge of TKDL, Introduction to relevant portions of Drugs and cosmetic act, Magic remedies Act, Intellectual Property Right (IPR) and Regulations pertaining to Import and Export of Ayurvedic drugs.
09. Knowledge of tissue culture techniques
10. Knowledge of Genetically Modified Plants

PAPER –II Guna Karma Vigyan

100 marks

1. Fundamental principles of drug action in Ayurveda and conventional medicine.
2. Detailed study of rasa-guna- virya- vipaka-prabhava and karma with their applied aspects and commentators (Chakrapanidatta, Dalhana, Arunadatta, Hemadri and Indu) views on them.
3. Comprehensive study of karma as defined in Brihatrayee & Laghutrayee
4. Detailed study of Guna and Karma of dravyas listed in API and Bhavaprakasha Nighantu along with current research review.
5. Detailed study of aharadravya/ ahara varga ascribed in Brihatrayee and various nighantus along with Kritanna varga.
6. Pharmacological principles and knowledge on drugs acting on various systems.
7. Basic knowledge on experimental pharmacology for the evaluation of - analgesic, anti pyretic, anti inflammatory, anti diabetic, anti hypertensive, hypo lipidemic, anti ulcer, cardio protective, hepatoprotective, diuretics, adaptogens, CNS activites.
8. Knowledge on Heavy metal analysis, pesticidal residue and aflatoxins
9. Knowledge on evaluation of anti microbial and antimycotic activities.

PAPER – III Prayogavigyana

Marks 100

1. Bhaishjya Prayog Siddhant [Principles of drug administration] - Bhaishajya Marga (routes of drug administration), Vividha Kalpana (Dosage forms), Principles of Yoga Vijnan(compounding), Matra (Dosage), Anupana (Vehicle), Aushadha grahankal (Time of drug administration), Sevankal avadhi (duration of drug administration), Pathyapathya (Dos' /Donts' /Contraindications), complete Prescription writing (Samagra Vyavastha patraka).
2. Samyoga- Viruddh Sidhanta and its importance
3. Amayika prayoga (therapeutic uses) of important plants ascribed in as well as Brihatrayee, Chakradutta, Yoga ratnakara and Bhavaprakasha.
4. Knowledge of Pharmaco-vigilance in Ayurveda and conventional system of medicine.

5. Knowledge of clinical pharmacology and clinical drug research as per GCP guide lines.
6. Knowledge of Pharmacogenomics

PAPER- IV

100 marks

1. Etymology of nighantu, their relevance, utility and salient features.
2. Chronological history of the following Nighantus with their authors name, period and content- Paryaya ratnamala, Dhanvantari nighantu, Hridayadipika nighantu, Ashtanga nighantu, Rajanighantu, Siddhamantra nighantu, Bhavaprakasha nighantu, Madanpala nighantu, Rajavallabha nighantu, Madhava Dravyaguna, Kaiyadeva nighantu, Shodhala nighantu, Saligram nighantu, Nighantu ratnakara, Nighantu adharsha and Priya nighantu
3. Detailed study Aushadha kalpana mentioned in Sharangadhara samhita and Ayurvedic Formulary of India (AFI).
4. General awareness on poshaka ahara (Nutraceuticals), Varnya (cosmoceuticals), food additives, Excipients etc.
5. Knowledge of plant extracts, colors, flavors and preservatives.
6. Review of important modern works on classical medicinal plants published by Govt of India, department of AYUSH and ICMR.

Syllabus of the Practical training of part two M.D. (Ayu) - Dravyaguna

Practical:-

Study tours:

Field identification of medicinal plants through at least three local Dravyaguna study tours within the state and one study tour out of state. Preparation of minimum 50 herbarium sheets, along with raw drug either from field, of plants be collected during study tours.

1. Evaluation of Crude drugs:

Macro and microscopic methods of examining five drugs of each of different useful parts of plants, including their powders.

2. Phytochemical evaluation of raw material:

Quantitative standards like foreign matter, extractive (water and alcohol), ash value, acid insoluble ash and TLC separation of various parts of minimum two plants of Ayurvedic Pharmacopoeia of India.

3. Yoga vijnana :

Preparation of two yoga of each kalpana of Ayurvedic Formulary of India:

4. Pharmacology:

- ✓ Rasa nirdharana by Taste Threshold method of minimum one drug for each of rasas.
- ✓ Observation of animal experimentation models (both in vitro and in vivo)- 05 models for possible rasadi gunas.

5. Clinical

- ✓ Regular clinical training in the hospital for submission of Single Aushadhi Prayoga (Single drug trial/ Clinico-pharmacological studies.)
- ✓ Survey for Amayika prayoga of aushadhi (Pharmaco epidemiology) for studying their role in clinical practice in contemporary period -observational study-minimum.

6. Dissertation

A Dissertation, as per the approval of Departmental Research Committee/Competent Committee for the purpose, be prepared under the guidance of approved supervisor

in Dravyaguna and submitted 6 months before the final examination. The approval of Dissertation shall be essential before appearing the final examinations.

7. Method of practical training – Posting for minimum one month in each of the following units -

- ✓ Quality control laboratory of nearest pharmacy/institution for crude drug identification, adulterants and substitutes & understanding standardization techniques.
 - ✓ Experimental pharmacology laboratory for developing skills in animal experimentation
 - ✓ Regular clinical training in the Teaching hospital for studying Ekala Aushadhi Prayoga & Adverse drug reactions(ADR).
8. Post Graduate Scholar is expected to present minimum two scientific papers in National / international seminars during the course of study
9. Post Graduate Scholar is expected to publish / get accepted at least one paper in indexed/ peer reviewed journal under the supervision of guide.

Pattern of Practical Examination-

Total =200 marks

- | | |
|--|------------|
| 1. Herbarium | - 10 Marks |
| 2. Pharmacognosy practical record | - 10 Marks |
| 3. Pharmacology practical record | - 10Marks |
| 4. Clinical records record | - 10 Marks |
| 5. Practical examination(Identification of green and raw drugs, microscopic examination, Ekala aushadha pariksha | - 60 Marks |
| 6. Thesis Presentation | - 20Marks |
| 7. Viva voce | - 80 Marks |

Reference books -

5. RASA SHASTRA AND BHAI SHAJYA KALPANA

Paper I Rasa Shastra

Part A

1. History and Chronological evolution of Rasashastra, concept of Raseshwara darshan. Fundamental Principles of Rasashastra Technical terminologies (Paribhasha) used in Rasa shastra.
2. Detailed knowledge of ancient and contemporary Yantropakarana and their accessories used in aushadhikaran and their contemporary modification such as yantras, mushas, putas, Koshtis, bhrashtis, muffle furnaces and other heating appliances, ovens, driers etc. used in manufacturing of Rasaushadhis in small scale and large scale along with their applications.
3. Study of Samskara, Role of agni (Heat), jala and other dravas (water and other processing liquids), kala (Time span), paatra (container) etc. and their significance in aushadhikarana.
4. Concept of Bhavana, study of Mardana and its significance and knowledge of ancient and contemporary grinding techniques.
5. Detailed Knowledge of different procedures of Shodhana, Jarana Murchana and Marana, concept of Puta, definition, types and specifications of different Putas. Significance of different Putas in relation to Bhasmikarana and therapeutic efficacy of dravya under process. Bhasma pariksha vidhi and its significance in relation to contemporary testing procedures. Amritikaran and Lohitikarana.
6. Detailed knowledge of Satva and Druti, Satva shodhan, mrudukaran and Maran of Satva, its significance, in relation to therapeutic efficacy of dravya under process.
7. Concept of Pratinidhi dravya and discussion on controversial drugs.

PART – B

1. Detailed ancient and contemporary knowledge of Parada and its compounds with reference to source, occurrence, physico-chemical characterization, graahya agrahyatva, Parada dosha, Parada gati, Parada shodhan, Study of Ashta sanskara, ashtadasha sanskara etc., Hingulottha Parada. Concept of Parada jaran, moorcchana, bandhan, pakshaccheda and marana etc. Therapeutic properties and uses of Parada.
2. Detailed ancient & contemporary knowledge with Geochemical / mineralogical / biological identification, source, occurrence, physico-chemical characterization, graahya-agraahyatva, Shodhan Maranadi vidhi and therapeutic properties and uses of dravyas etc. included in Maharasa, Uparasa, Sadharana rasa, Dhatu, Upadhatu, Ratna, Uparatna, Visha, Upavisha, Sudha varga, Lavana varga, Kshara varga, Sikata varga and other miscellaneous drugs used in Rasashastra.
3. Detailed knowledge of manufacturing, pharmacopeial standards, storage, shelf life, therapeutic efficacy, dose, anupana, vikarashanti upaya and development of technology with Standard Operating Procedures of processing, standardization, quality control of Bhasmas and Pishtis

Bhasma - Abhraka Bhasma, Svarnamakshika Bhasma, Kasis Bhasma, Svarna Bhasma, Rajata Bhasma, Tamra Bhasma, Loha Bhasma, Mandur Bhasma, Naga Bhasma, Vanga Bhasma, Yashad Bhasma, Trivanga Bhasma, Pittala, Kamsya and Varthaloha Bhasma, Shankha Bhasma, Shukti Bhasma, Kapardika Bhasma, Godanti Bhasma, Praval Bhasma, Mrigashringa Bhasma, Mayurpiccha Bhasma, Kukkutand twak Bhasma, Hiraka Bhasma, Manikya Bhasma.

Dravaka - Shankha Dravaka

Pishti - Praval pishti, Manikya Pishti, Mukta pishti, Jahara mohara pishti, Trinakanta mani pishti etc.

4. Detailed knowledge of manufacturing, storage, shelf life, pharmacopeial standards, therapeutic efficacy, dose, anupana and development of technology with Standard Operating Procedures of processing, standardization and quality control of Kharaliya rasa, Parpati, Kupipakva rasa and Pottali rasa.
5. Study of classical texts with respective commentaries and special emphasis on Rasarnava, Rasahridaya tantra, Rasa Ratna Samucchaya, Rasendra Chintamani, Rasendra Chudamani, Rasa Ratnakara, Rasadhyaya, Rasa Kamdhenu, Anandkanda, Siddha Bhesaja Manimala, Ayurveda Prakash, Rasatarangini, Bhaishajya Ratnavali, Rasamritam etc. and the books mentioned in the Schedule I of D & C Act – 1940. Relevant portions of Brihatrayi.

Paper II Bhaishajya Kalpana

Part A

1. History and Chronological evolution of Bhaishajya Kalpana, Concept of Bhesaja and Aushadh, fundamental principles of Bhaishajya Kalpana. Technical terminologies (Paribhasha) used in Bhaishajya Kalpana.
2. Classical and Contemporary concepts of Collection, storage, Saviryata Avadhi and preservation methods of different fresh and dry Aushadhi dravyas and their graahya agrahyatva
3. Detailed knowledge of routes of drug administration, Aushadha matra, Anupana, Sahapana, Aushadha Sevana Kala, Kala Avadhi, Pathya, Apathya (Posology).
4. Detailed knowledge of manufacturing, standardization, quality control, pharmacopeial standards, storage, shelf life and development of innovative technology with Standard manufacturing Operating Procedures of following dosage forms
 - i) Panchavidha Kashaya, Churna, Rasakriya, Ghana, Avaleha, Pramathya, Mantha, Panaka, Sarkara, Kshirapaka, Ushnodaka, Aushadha Siddha Udaka, Sadangodaka, Tandulodaka, Laksharasa, Arka, Satva, Kshara, Lavana, Masi, Gutika, Vatika, Modaka, Guggulu and Varti etc.
 - ii) Sneha Kalpana: Concept of accha sneha and sneha pravicharana and Murchhana. Sneha paka, types of sneha paka and sneha siddhi lakshana, Avartana. Sneha kalpa karmukata (Pharmacokinetics and dynamics of sneha kalpa). Role of Sneha in relation to absorption of drug.
 - iii) Kritanna and Bhesaja Siddha Anna Kalpana, Aharopayogi varga, concept of medicinal and functional food, dietary supplements and nutraceuticals etc.
 - iv) Sandhana kalpana: Madya varga and Shukta varga. Asava yoni. Alcoholic and acidic fermentation. Sandhana kalpa karmukata (Pharmacokinetics and dynamics). Advancements in fermentation technology. Knowledge of regulations in relation to alcoholic drug preparations.
 - v) Bahya Prayogarthi Kalpana : Lepa, Upanaha, Udvartan, Avachurnana / Avadhulana, Abhyanga, Dhupana, Malahara.
 - vi) Mukha, Karna, Nasa, Netropacharartha Kalpana:

- vii) Basti Kalpana: Basti Yantra Nirmana, Types of basti. Anuvasana and Asthapana basti. Karma, kala and yoga basti etc. Basti Kalpa (Madhutailika, Piccha basti etc.), Comparison of Asthapana and Anuvasana basti with evacuation and retention enema.

Part B

All the following procedures are to be studied in relevance to Ayurvedic Bhaishajya Kalpas.

1. Methods of Expression and Extraction: Maceration, percolation, distillation, infusion and decoction.
2. **Liquids:** Clarified liquid, syrup, elixir, filtration techniques
3. **Solid dosage Forms: Powders:** Size reduction, separation techniques, particle size determination, principles of mixing. **Tablets:** Methods of tableting, suppositories, pessaries and capsules, sustained release dosage forms.
4. **Semisolid dosage forms,** emulsions, suspensions, creams and ointments, sterilization of ophthalmic preparations.
5. An introduction to various cosmetic preparations.
6. Drying, open and closed air drying, freeze drying, vacuum drying and other drying methods pharmaceutical excipients.
7. Study of classical texts with special emphasis on Chakradatta, Sharangadhara Samhita, Bhaishajya Ratnavali, Bhava Prakasha, Yogaratnakara, relevant portions of Brihatrayi, Ayurvedic Pharmacopeia of India, Ayurvedic Formulary of India.

Paper III Rasa Chikitsa & Aushadha Yoga Vigyana

PART- A

1. Rasachikitsa, Kshetrikaran, Rasajirna, Lohajirna, Aushadhi Sevana Vikarashanti Upaya. Ashuddha, Apakva, Avidhi Rasadravya Sevanajanya Vikara evam Vikara shanti upaya.
2. Detailed knowledge of Aushadhi patha Nischiti and sanyojan (formulation composition), dose, anupana and method of administration, therapeutic efficacy and uses (indications and contra-indications), probable mode of action etc. of the following Aushadhi yogas
 - i. **Kharaliya Rasa :** Shwasa kuthara Rasa, Tribhuvana kirti Rasa, Higuleshwara Rasa, Ananda bhairava Rasa, Maha Lakshmi vilasa Rasa, Vasnata kusumakara Rasa, Vasanta malti Rasa, Brihat vata chintamani Rasa, Laghu suta shekhar Rasa, Suta shekhara Rasa, Ram ban Rasa, Chandra kala Rasa, Yogendra Rasa, Hridyarnava rasa, Grahani kapata Rasa, Garbha pala Rasa, Jalodarari Rasa, Mrityunjaya Rasa, Madhumalini vasanta Rasa, Arsha kuthara Rasa, Krimi mudgara Rasa, Suchika bharana Rasa, Tri netra Rasa, Smruti sagara Rasa, Vata gajankusha Rasa, Agni kumar Rasa, Ekangavir Rasa, Kama dugha Rasa, Purna chandrodaya Rasa, Pratap lankeshwara Rasa, Maha vata vidhwansaka Rasa, Kasturi bhairava Rasa, Ashwa kanchuki Rasa, Gulma kuthara Rasa, Maha jwarankusha Rasa, Chandra mrita Rasa, Kapha ketu Rasa, Prabhakara Vati, Pravala Panchamrita, Gandhaka Rasayana, Chaturbhuj rasa, Navajivan rasa, Shonitargal rasa, Raktapitta kulakandan rasa, Amavatari Rasa, Kravyada Rasa, Garbha chintamani Rasa, Chintamani Rasa, Trilokya chintamani Rasa, Pradarantaka Rasa, Vangeshwara Rasa, Brihat vangeshwara Rasa, Shwasakasa Chintamani Rasa, Arogya vardhini Vati, Chandra prabha Vati, Agni tundi vati, Shankha Vati.

- ii. Kupipakva Rasa:** Rasa Sindura, Makaradhwaja, Sidha makaradhwaja, Samira pannaga Swarnavanga, Malla sindura, Rasa karpura, Rasa pushpa, Manikyasa Rasa.
- iii. Parpati Rasa :** Rasa Parpati, Loha Parpati, Tamra Parpati, Suwarna Parpati, Gagana Parpati, Vijay Parpati, Panchamrit Parpati, Shwet Parpati, Bola Parpati
- iv. Pottali Rasa:** Rasagarbha pottali, Hemagarbha pottali, Mallagarbha pottali, Hiranyagarbha pottali, Shankagarbha pottali, Lokanatha rasa, Mriganka Pottali
- v. Loha evam Mandura Kalpa:** Ayaskriti, Loha Rasayana, Amla pittantaka loha, Chandanadi loha, Dhatri loha, Navayasa loha, Putapakva vishama jwarantaka loha, Shilajatwadi loha, Tapyadi loha, Saptamrita loha, Dhatri loha Amritasara Loha, Shankaramat loha, Pradarantaka loha, Rohitaka loha. Punarnava Mandura, Shatavari Mandura, Tara Mandura, Triphala Mandura, Mandura Vataka etc.

Part B

Detailed knowledge of Aushadhi patha Nischiti and sanyojan (formulation composition), dose, anupana and method of administration, therapeutic efficacy and uses (indications and contra-indications), probable mode of action etc. of the following Aushadhi yogas

- i. Panchavidha Kashayas and their Upakalpa:** Ardraka swarasa, Tulasi swarasa, Vasa putapaka swarasa, Nimba kalka, Rasona kalka, Kulattha Kwath, Punarnavasthaka kwatha, Rasna saptaka kwatha, Dhanyak hima, Sarivadi hima, Panchakola phanta, Tandulodaka, Mustadi pramathya, Kharjuradi mantha, Shadanga paniya, Laksha rasa, Arjuna kshirapaka, Rasona kshirapaka, Chinchapanaka, Candana panaka, Banapsha sharkara, Nimbu sharkara, Amrita satva, Ardraka satva, Ajamoda arka, Yavanyadi arka
- ii. Kritanna and Bhesaja Siddha Ahara Kalpana:** Yavagu, (Krita and Akrita), Ashtaguna manda, Laja manda, Peya, Vilepi, Krishara, Yusha, Mudga yusha, Kulattha yusha, Saptamushtika yusha, Khada, Kambalika, Raga, Shadava, Mamsarasa, Veshavara, Dadhi, Katvar Dadhi, Dadhi Mastu, Takra, Gholi, Udasvita, Mathita, Chhacchika etc.
- iii. Churna:** Sitopaladi Churna, Talisadi Churna, Triphala Churna, Hingvashtaka Churna, Avipattikara Churna, Swadishta Virechana Churna, Bhaskar Lavana Churna, Sudarshana Churna, Maha Sudarshana Churna, Gandharva Haritaki Churna, Pushyanuga Churna, Ajamodadi Churna, Hingvadi Churna, Eladi Churna, Dadimashtaka Churna, Trikatu Churna, Vaishwanara Churna, Gangadhara Churna, Jati phaladi Churna, Narayana Churna etc.
- iv. Gutika:** Arogya vardhani vati, Chandra prabha vati, Chitrakadi Gutika, Sanjivani Vati, Lasunadi vati, Lavangadi Vati, Vyoshadi vati, Khadiradi Vati, Kankayana Vati, Abhayadi modaka, Marichyadi gutika, Amalakyadi gutika, Samshamini Vati, Kutaja Ghana vati, Amarasundari Vati, Shiva Gutika, Eladi Vati, Kasturyadi Gutika, Arshoghni Vati.
- v. Guggulu:** Yogaraja Guggulu, Maha yogaraja Guggulu, Trayodashanga Guggulu, Kanchanara Guggulu, Rasnadi Guggulu, Triphala Guggulu, Simhanada Guggulu, Gokshuradi Guggulu, Kaishora Guggulu, Panchatikta Guggulu, Amritadi Guggulu, Vatari Guggulu, Lakshadi Guggulu, Abha Guggulu, Navaka Guggulu, Nava Karshika Guggulu.
- vi. Sneha Kalpa**
 - Sneha Moorchhana** - Ghrita Murchhana, Taila Murchhana
 - Siddha Ghrita** - Shatavari Ghrita, Jatyadi Ghrita, Phala Ghrita, Dadimadi Ghrita, Kshirashatpala Ghrita, Mahatriphala Ghrita, Dhanvantari Ghrita, Amritaprasha Ghrita, Kalyanaka Ghrita, Brahmi Ghrita, Changeri Ghrita, Panchatikta Ghrita, Sukumara Ghrita, Panchagavya Ghrita
 - Siddha Taila** - Maha Narayana Taila, Maha Masha Taila, Bala Taila, Nirgundi Taila, Shadbindu Taila, Vishagarbha Taila, Sahacharadi Taila, Jatyadi Taila, Apamarga Kshara Taila, Tuvarka Taila, Kshirabala Taila (Avartita), Lakshadi Taila, Anu Taila, Kumkumadi Taila, Hingutriguna Taila, Kottumchukadi Taila, Prasarinyadi Taila,

Dhanwantari Taila, Balashwagandhadi Taila, Balaguduchyadi Taila, Nilibhringyadi Taila, Brihadavadi Taila, Irimedadi Taila, Chandanadi Taila, Panchaguna taila, Arka taila, Pinda Taila, Kasisadya Taila

vii. Rasakriya, Avaleha, Khanda etc.: Darvi Rasakriya, Vasa Avaleha, Brahma rasayana, Chyavanprasha Avaleha, Kushmanda Avaleha, Dadima Avaleha, Bilvadi Avaleha, Kantakaryavaleha, Haridra Khanda, Narikela khanda, Saubhagya shunthi paka, Amrita Bhallataka, Kamsa Haritaki, Chitraka Haritaki, Vyaghri Haritaki, Bahushala Guda, Kalyana Guda

viii. Sandhana Kalpa: Lodhrasava, Kumaryasava, Ushirasava, Chandanasava, Kanakasava, Sarivadyasava, Pippalyasava, Lohasava, Vasakasava, Kutajarishta, Draksharishta, Raktamitrarka, Dashamularishta, Abhayarishta, Amritarishta, Ashokarishta, Sarasvatarishta, Arjunarishta, Khadirarishta, Ashwagandha Arishta, Vidangarishta, Takrarishta, Mahadrakshasava, Mritasanjivani sura, Maireya, Varuni, Sidhu, Kanji, Dhanyamla, Madhu Shukta, Pindasava.

ix. Anya Kalpa : Phala varti, Chandrodaya varti, Arka lavana, Narikela lavana, Triphala masi, Apamarga kshara, Snuhi kshara, Ksharasutra, Atasi upanaha, Sarjarasa malahara, Gandhaka malahara, Sindhuradi Malahara, Shatadhouta Ghrita, Sahasra Dhouta Ghrita, Siktha taila, Dashanga lepa, Doshaghna lepa, Bhallataka taila patana, Jyotishmati Taila, Bakuchi Taila, Dashanga dhupa, Arshoghna dhupa, Nishadi Netra bindu, Madhutailika Basti, Piccha Basti, Yapana Basti.

PAPER – IV Pharmacology and Pharmacy Management

PART - A

1. General Pharmacology:
 - a) Principles of Pharmacology, Pharmacodynamics & Pharmacokinetics: Absorption, distribution, Metabolism & excretion, mechanism of action, dose determination and dose response, structure activity relationship.
 - b) Routes of drug administration
 - c) Factors modifying drug effect, Bioavailability and Bioequivalence, drug interactions, adverse drug reaction and drug toxicity
 - d) Preclinical evaluation: experimental pharmacology [bioassay, in vitro, in vivo, cell line studies] animal ethics.
2. Clinical pharmacology: Evaluation of New Chemical Entity – phases and methods of clinical research. Ethics involved in human research.
3. Elemental constituents of human body and its physiological importance. Deficiencies and excess of various elements (micro-nutrients).
4. Toxicity of heavy metals and chelation therapy.
5. Knowledge of toxicity and pharmacological activities of herbo-mineral compounds.
6. Detailed Knowledge of Pharmacovigilance – National and International Scenario. Pharmacovigilance of Ayurvedic Drugs

Part B

1. Scope and evolution of pharmacy. Information resources in pharmacy and pharmaceutical Science.
2. Pharmaceutical dosage form design (Pre-formulation)
3. Packaging materials and Labeling
4. Management of pharmacy, store and inventory management, personnel management, Good Manufacturing Practices related to Ayurvedic drug industry.
5. Pharmaceutical Marketing, product release and withdrawals.
6. Hospital, Dispensing and Community pharmacy.
7. Patenting and Intellectual Property Rights.
8. Laws Governing Ayurvedic drugs

- i. Relevant regulatory provisions of Ayurvedic drugs in Drug and Cosmetics Act - 1940 and Rules - 1945
 - ii. Laws pertaining to Drugs and Magic remedies (Objectionable Advertisement) Act - 1954.
 - iii. Prevention of Food Adulteration (PFA) act.
 - iv. Food Standards and Safety Act - 2006
 - v. Laws pertaining to Narcotics
 - vi. Factory and Pharmacy Acts
 - vii. Consumer Protection Act -1986
9. Regulatory Affairs related to International Trade and Practices of Ayurvedic Drugs
 10. Introduction to Ayurvedic Pharmacopoeia of India, Ayurvedic Formulary of India.
 11. Introduction to Indian Pharmacopoeia, British and United States Pharmacopoeia, Pharmacopoeial Codex
 12. Introduction to Traditional Knowledge Digital Library

Practicals:-

Minimum 150 Practical are to be performed covering all the dosage forms.
 Educational Visits to minimum Five (5) GMP approved Ayurvedic Pharmacies.
 Ten days posting in R & D / Production unit in GMP certified Ayurvedic Pharmacy.
 Minimum attendance in three National Conferences within three academic years.
 Minimum 10 clinical cases using different dosage forms are to be studied and recorded for efficacy and ADRs (if any).
 Minimum one research paper on the core contributory work of dissertation published or accepted in peer reviewed, indexed journal.
 Examinee has to submit supporting documents in relation to above mentioned academic activities at the time of Practical examination.

Pattern of Practical Examination

Total Marks : 100

Duration of the practical: 2 days

- | | |
|---|-------------------------|
| 1. Identification of the specimen: | 10 Marks |
| 2. Drug Processing | 30 Marks
(10+10+5+5) |
| i) Major Practicals: 2 (1 Rasashastra and 1 Bhaishajya Kalpana) | |
| ii) Minor Practicals: 2 (1 Rasashastra and 1 Bhaishajya Kalpana) | |
| 3. Drug testing and Analysis | 10 Marks (5+5) |
| i) Rasaushadhi – 1 | |
| ii) Kashthaushadhi – 1 | |
| 4. Power Point Presentation on dissertation work: 15 Minutes | 10 Marks |
| 6. A Demo Lecture on any subject topic: 10 Minutes. | 10 Marks |
| 7. Documentation | 15 Marks |
| i. Journals (Practical Records) of minimum 75 practicals (25 each from Rasa Shastra, Bhaishajya Kalpana and Analytical part). | |
| ii. Reports of the Visits | |
| iii. Case Records | |
| 8. Viva Voce examination | 15 Marks |

Reference Books:-

1. Rasahridaya Tantra
2. Rasarnava

3. Rasaratna Samuccahaya
4. Ayurved Prakasha
5. Rasendrachudamani
6. Rasendra Chintamani

44. Drugs and Magic remedies (Objectionable advertisement) Act-1954
45. Prevention of Food Adulteration (PFA) act
46. Laws pertaining to Narcotics
47. Factory and Pharmacy Acts
48. Consumer Protection Act -1986
49. Brief information on the peer reviewed journals, official websites and other official search engines along with their links (related with the subject)
50. Rutleys Elements of Mineralogy
51. Bhasma Vigyaniam
52. Kupipakva Vigyaniam
53. Anupana Manjari

6. AGADA TANTRA EVUM VIDHIVAIIDYAKA

PAPER-I Agada Tantra (Ayurvedic and Contemporary Toxicology)

100 marks

1. Agada Tantra, its sequential development during Veda kala, Samhitha kala, Samgraha kala and Adhunika kala.
2. Definition of Visha, properties of visha and its comparison with madya and oja, visha samprapti, visha prabhava, visha-vega, vegantara and visha karmukata (toxicodynamic and toxicokinetic study).
3. Descriptive and comparative study of Upavisha in unison with Contemporary Toxicology.
4. Examination of poisons as per Contemporary and Ayurvedic Methods.
5. Descriptive study of sthavara visha, definition, classifications, classical signs and symptoms of poisoning including vanaspatic (phyto poison), khanija (mineral) and compound sthavara visha.
6. Study of Jangama visha and their sources (Animal poisoning and Zoonotic Diseases). Descriptive study of snakes according to ancient and contemporary knowledge. Causes of snake bite and its types. Composition of snake venom and its pharmacological actions. Signs and symptoms of envenomation and its prognostic signs. Clinical features of Vrischika (scorpion), Luta (spider), Grihagadhika (Lizard), Mushaka (rats), Alarka (dogs), Makshika and Mashaka (mosquitoes) and their pathologic manifestations including their role in the manifestation of communicable diseases.
Shanka visha and its management. Visha sankat and Visha Kanya.
7. Garavisha and Dushi visha, their varieties, signs, symptoms and management with contemporary relevance. Detailed study of Allergies including allergic manifestations in the eyes, nose, lungs and skin.
8. Detailed study of Madya visha and substances acting on the nervous system; substance abuse. (Diagnosis, Management and De-addiction)
9. Detailed study of the contemporary knowledge about vishajanya Janpadodhvarsaniya roga (community health problems due to poisons - Environmental pollution, water pollution, soil pollution, air pollution, Industrial pollutions etc. their features and management according to ancient and recent concepts.
10. Concept of Virudha aahara, Aahara visha and Satmyasatmyata in contemporary and Ayurvedic views.
11. Conceptual study: - Drug interactions and incompatibility, Pharmacovigilance

PAPER- II Visha Chikitsa Vigyan (Management Of Poisoning)

100 marks

1. Fundamental Principles for treatment of poisoning
2. General and specific treatment of different types of Sthavara visha.
3. General and specific treatment of different types of Jangama visha (animal poisons, insect poisons, snake bites and other zoonotic diseases).
4. Emergency medical management of poisoning including preparation, administration and complications of antivenoms/antisera.
5. Chaturvimsati upakrama (24 management procedures).
6. Management of Garavisha and Dushivisha. Treatment of Allergies including allergic manifestations in the eyes, nose, lungs and skin.
7. Diagnosis and Management of Drug Induced Toxicity
8. Management of the toxic manifestations caused by the contact poisons (paduka, vasthra, abharana, mukhalepa- vishabadha etc).
9. Management of food poisoning.
10. Death due to poisoning, Duty of physician in poisoning, in cases of suspected poisoning. Post mortem findings in poisoning.
11. Extra -corporeal techniques (dialysis etc) for removal of poisons.

PAPER –III Vyavahara Ayurveda Evam Vidhi Vaidyaka**100 marks**

1. Definition of Vyavahara Ayurveda, its evolution in ancient and contemporary periods.
2. Personal identity and its medico-legal aspects
3. Death and its medico-legal aspects (Medical Thanatology)
4. Asphyxial deaths and its medico-legal importance.
5. Death due to starvation, heat and cold, lightening and electricity. Suspended Animation.
6. Medico-legal autopsy.
7. Injuries due to explosions, chemical and nuclear warfare.
8. Medico-legal aspects of injuries and wounds.
9. Impotence and sterility-Its medico-legal aspects. Regulations of Artificial Insemination. Medico –legal aspects of surrogate motherhood.
10. Sexual offences and perversions.
11. Medico-legal aspects of virginity, pregnancy, delivery, abortion, infanticide and legitimacy with related acts.
12. Indian Penal Code, Criminal procedure code and study of related acts like Indian Evidence Act, Pre Natal Diagnostic Test Act, Nursing Home Act, Human Organ Transplantation Act, Drugs and Cosmetic Act 1940, Narcotic drugs and Psychotropic substances Act 1985, Pharmacy Act 1948, Drugs and Magical Remedies (Objectionable Advertisements) Act 1954, Medicinal and Toilet Preparations Act 1955 and Anatomy Act etc. Any related act enacted by the government from time to time.
13. Courts and Legal procedures.
14. Forensic Science Laboratory
15. Medico legal aspects of mental illness
16. Duties and privileges of physician.
17. Structure of Central Council of Indian Medicine, its jurisdiction and functions. Code and Conducts as per the CCIM, Rules and Regulations there under.
18. Respective State Council of Indian Medicine, its structure, power, voluntary duties.
19. Doctor - patient relationship.
20. Rights and privileges of patients; Euthanasia.
21. Professional secrecy and privileged communication.
22. Professional negligence and malpractice
23. Indemnity Insurance scheme.
24. Consumer Protection Act related to medical practice.
25. Ethics as in classics. Types of physicians and methods of identification, Pranabhisara and Rogabhisara Physicians, qualities of physician, responsibilities of Physicians, Chaturvidha vaidya vriti, duties of physicians towards patients, Vaidya sadvritam, Apujya Vaidya who is accepting fees, relationship with females.

PAPER – IV Aushadha Yoga Vigyan**100 marks**

1. Study of process for sodhana, marana and samskarana of poisonous drugs.
2. Pharmaco-dynamics of different formulations used in Agadatantra
3. Study of pharmacology and usage of antidotes as per the Ayurvedic and contemporary science.
4. Fundamentals of pharmaceuticals according to Ayurvedic and contemporary point of view.
5. Chemical, analytical, laboratory examination of poisons and suspicious substance.
6. Introduction of different instruments /equipments used in the examination of poisons.
7. Introduction to Clinical toxicology
8. Introduction to Experimental toxicology

9. Introduction to Toxicology - genomics
10. Survey and study of the traditional and folklore vishachikista sampradaya.

Content of Practical/Demonstration

1. Identification of specimens models and equipments of toxicological and jurisprudence importance.
2. Practical training in postmortem examination (10 cases)
3. Regular clinical postings in the Agadatantra OPD / IPD
4. Medico-legal cases (20 cases)
5. Chemical Identification of various acids, alkalies, alcohols – Hydrochloric acid, Nitric acid, Sulphuric acid, Ascorbic acid, Sodium Hydroxide and Potassium Hydroxide
6. Detection of minerals Copper, Mercury, Lead, Arsenic and their compounds.
7. Physical and Chemical analysis of Datura, Karaveera, Vatsanabha, Jayapala, Arka and Bhallataka with Microscopy, powder microscopy, TLC, solvent extraction, detection of Phenol, tannins etc. (10 studies)
8. Detection of human blood, hair, semen and other biological secretions of Forensic importance.
9. Herbarium of 15 sthavara vishas and 10 agadas.
10. Preparation of two Agada yogas

Clinical Postings

1. Modern medical hospitals – 2 weeks
(For emergency management of poisoning)
2. Postmortem postings - 2 weeks
3. Court postings - 1 week

Visit to

1. Forensic Laboratory
2. Anti snake venom serum manufacturing Unit.

Pattern of practical examination

- | | |
|---|------------------|
| 1. Post mortem / Medico-legal case record and clinical record | - 10 Marks |
| 2. Identification of specimens models and equipments of jurisprudence importance. | - 20 Marks |
| 3. Spotting related to Visha, Upavisha and others poisonous drugs | - 20 Marks |
| 4. Thesis presentation | - 25 Marks |
| 5. Viva-voce | - 25 Marks |
| Total | 100 Marks |

7. SWASTHAVRITTA

PAPER I VAIYAKTIKA SWASTHAVRITTAM SADVRITTAM CHA

Marks 100

1. Concept of holistic health according to Ayurveda.
2. Spectrum of health, Iceberg phenomenon of diseases, dimensions of health.
3. Dinacharya – Detailed accounts by Charaka, Sushruta, Vagbhata and Bhavamishra.
4. Probable Physiologic effect of Dinacharya procedures.
5. Ratricharya – Bhavamishra and other classics.
6. Day and night pattern in various countries.
7. Ritucharya – Classical description by Charaka, Sushruta, Vagbhata, BhelaSamhita and Bhavamishra.
8. Ritus prevalent in various Indian states.
9. Ritu pattern in various countries of the world.
10. Shodhana Schedule for Ritusandhis.
11. Concept of Vegas, types and the physiology behind each vega and vegadharana.
12. Ahara – Classical food items in Charaka, Sushruta, Vagbhata and Sharangadhara.
13. Aharavargas and comparison with todays' food items.
14. Staple diet of various States of India.
15. Staple diet of various countries in correlation with their climate.
16. Principles of dietetics. Balanced diet for healthy adult, adolescent, elderly people, pregnant ladies and lactating mothers.
17. Food intervention in malnutrition, under nutrition and over nutrition.
18. Rules of food intake according to Charaka, Sushruta and Vagbhata.
19. Pros and Cons of vegetarian and Non vegetarian foods.
20. Viruddhahara – Classical and modern day examples.
21. Sadvritta – Compare Charaka, Sushruta and Vagbhata .
22. Prajnaparadha – Causes, Effects and solution.
23. AcharaRasayana, Nityarasayana.
24. Rasayana procedures for Swastha
25. Vajeekarana for Swastha.
26. Mental Health and the role of Ayurveda in it.
27. Vyadhikshamatva – Modern and Ayurvedic concepts.
28. Principles of Health Education.
29. Genetics in Ayurveda and Modern Science

PAPER II SAMAJIKA SWASTHAVRITTAM (COMMUNITY HEALTH)

Marks 100

1. Concept of community health.
2. Concept of Prevention according to Ayurveda.
3. Concept of prevention according to Modern medicine. Levels of prevention. Stages of intervention.
4. Web of causation of diseases, Multifactorial causation.
5. Natural History of diseases.
6. Ecology and community health.
7. Disinfection practices for the community – Modern and Ayurvedic.
8. Immunization programmes. Possible contribution of Ayurveda.
9. Environment and community health (Bhumi, Jala, Vayu, Shuddhikarana ,Prakasha,Shabda, Vikirana)
10. Housing –W.H.O Standards. Design of Aaturalaya(hospital), Sutikagara, Kumaragara, Panchakarmagara and Mahanasa (Kitchen)
11. Disposal of Wastes- Refuse, Sewage. Methods of Sewage disposal in sewered and unsewered areas.
12. Occupational Health. Ergonomics. Role of Ayurveda in ESI.
13. Medical Entomology– Arthropods of Medical Importance and their control measures.

14. Knowledge of parasites in relation to communicable diseases.
15. School Health Services and possible contribution of Ayurveda.
16. Demography and Family Planning.
17. Family Welfare Programme and the role of Ayurveda in it.
18. Old age problems in community. Role of Ayurveda in Geriatrics.
19. Care of the disabled.
20. Life Style disorders (Non Communicable diseases) in community and the role of Ayurveda in them.
21. Health tourism. Ayurvedic Resort Management- Panchakarma and allied procedures.
22. Medical Sociology.

PAPER III SAMKRAMAKA ROGA PRATISHEDHAM EVAM SWASTHYAPRASHASANAM

Marks 100

1. Modern Concept of Epidemiology
2. Critical evaluation of Janapadodhwamsa.
3. Epidemiology of different Communicable diseases in detail.
4. General investigations for Communicable diseases
5. Sexually Transmitted Diseases and their control
6. Ayurvedic view of Samkramaka Rogas.
7. Investigation of an Epidemic
8. Control of Epidemics.
9. Host Defenses.
10. Ayurvedic methods of Vyadhikshamatva.
11. Health advice to travelers.
12. Hospital, Isolation ward and bio medical waste management
13. National Health Programmes. Contribution of Ayurveda in National Health Programmes.
14. Health administration under Ministry of H &FWD
15. AYUSH , NRHM, NUHM administration, functions and programmes.
16. National and International Health Agencies and their current activities.
17. Disaster management
18. Statistics related with Infectious diseases at International, National and State levels
19. Vital Statistics

PAPER IV YOGA AND NISARGOPACHARA

Marks 100

1. History and evolution of Yoga
2. Different Schools of Yoga
3. Rajayoga –(Ashtanga yoga) philosophy of Patanjali according to Yogasutras.
4. Hathayoga - according to Hathayogapradeepika, GherandaSamhita and Shivsanhita.
5. Karmayoga – Philosophy according to Bhagavad Gita
6. Mantrayoga, Layayoga, Jnanayoga and Bhaktiyoga.
7. Physiological effect of Yoga on Body and mind – Ancient and modern concepts.
8. Concept of Sthula, Sukshma and Karana Shariras
9. Concept of Panchakoshas
10. Concept of Shad chakras and Kundalini
11. Shad Kriyas and their therapeutic effects.
12. Therapeutic effect of yogic practice in the following diseases - Diabetes, Hypertension, Cardiovascular disorders, Obesity, Asthma, Piles, Irritable Bowel Syndrome, Eczema, Psoriasis, Stress Disorders, Eye disorders, Head Ache, Juvenile Delinquency, Mental retardation, Depression, Neurosis, Sexual Dysfunction, Uterine Disorders, Cancer.

13. Yoga in Ayurveda –Concept of moksha,Tools for Moksha,Naishtikichikitsa, TatvaSmriti, Satyabudhhi, yoginamBalamAishwaram (charakaSamhitaSharirasthana chapter 1 & 5)
14. History of Nisargopachara.
15. Basic Principles of Western School of Nature Cure
16. Basic Principles of Indian School of Nature Cure – Panchabhuta Upasana and its therapeutic utility.
17. Different types of Massage and their therapeutic effects
18. Concepts of Acupuncture and Acupressure.
19. Principles of Chromotherapy and Magnetotherapy

Scheme of Practicals

1.Health promotive and protective practices of Dinacharya procedures viz. Dantadhavana, Anjana, Nasya, Kavala, Gandusha, Dhumapana, Abhyanga, Udvartana

2) Practical Demonstration of Yoga

a) Aasanas (24)

- 1) Swastikasan
 - 2) Gomukhasan,
 - 3) Sarpasan,
 - 4) Kukuttasan,
 - 5) Uttankurmasan,
 - 6) Dhanurasan,
 - 7) Matsyendrasan,
 - 8) Mayurasan,
 - 9) Bhadrasan,
 - 10)Sinhasan,
 - 11)Sarvangasan,
 - 12)Shirshasan,
 - 13)Pavanmuktasan,
 - 14)Bhujangasan,
 - 15)SuptaVajrasan,
 - 16)Chakrasan,
 - 17)Siddhasan,
 - 18)Padmasan,
 - 19)Veerasan,
 - 20)Paschimatanasan,
 - 21)Vajrasan,
 - 22) Shavasan,
 - 23)Makarasan,
- Suryanamaskara

b) Pranayama

- 1) Nadishudhhi- AnulomVilomPranayam,
- 2) Suryabhedani,
- 3) Ujjayi,
- 4) Bhasrika,
- 5) Bhramari,
- 6) Sheetali,
- 7) Sitkari

c) Mudra

1) Viparita karani

- 2) Yoga Mudra
- 3) Maha Mudra
- 4) brahma Mudra
- 5) Ashwini mudra

d) Bandha

1) Jalandhara, uddiyana, mula bandha

e) Shuddhikriya – JalaNeti, Sutra Neti, JalaDhauti, Kapalbhata, Tratak Basti, Nauli, vastra dhauti (if possible)

3) Practical Demonstration of Naturopathy procedures

- a. MruttikaSnana
- b. Mruttika Patti
- c. Pada and Hasta Snana
- d. Bashpasnana (Steam bath)
- e. Awagahana (Immersion bath)
- f. pristasnana (Spinal bath)
- g. Katisnana(Hip bath)
- h. Alternate hot and cold bath
- i. Observe Jacuzzi and whirlpool bath at available places.

4) Long case sheets for Pathya, Apathya, Aushadhi (if needed), Yoga and Nisargopachara advice to

- a) Non communicable diseases 20
- b) Communicable diseases 10
- c) Garbhini Paricharya 10
- d) Mal Nutrition treatment cases 10
- e) Case studies of Immunization cases 10

iv) Departmental Practicals

- 1) Dantadhawana - 2
- 2) Anjana - 2
- 3) Nasya - 2
- 4) Gandusha- 2
- 5) Kavala- 2
- 6) Dhoompana – DhumavartiNirmana - 2

5) Educational Visits-

The brief report of each visit (Minimum 10 compulsory) should be written by student in a journal (Duly signed by Guide and HOD)

- 1) Water Purification Centre,
- 2) Milk Dairy,
- 3) Industry,
- 4) Leprosy Centre,
- 5) T.B. Centre,
- 6) Yoga Centre,
- 7) Naturopathy Centre,
- 8) Primary Health Center
- 9) Disposal of Waste Unit,
- 10) Sewage Disposal Unit ,
- 11) Hospital Disinfections,
- 12) Govt. Psychiatric Hospital
- 13) Isolation Hospital
- 14) A.R.T. Centre
- 15) Food and Drug Administration Centre
- 16) District /Civil Hospital

7) Field Work

- a) Active Participation in Various National Health Programmes
- b) Community Health Survey
- c) School Health Check-up (minimum 100 students)
8. Departmental duties : Regular Attendance as-

Duty in OPD and IPD with regard to Pathyapathya, Yoga and Nisargopachar.

1. Museum Development
2. Yoga training for self Swastha and patients.
3. Departmental Seminars
4. Research Journal /Article Reviews
5. Submit minimum 2 papers in any publications.
6. Practical knowledge of AharaDravya&Adulteration of Food
7. Proper planning, beginning ,completion of Thesis work under the guides
8. Micro Teaching (Training to take Lectures and Practicals of UG). Minimum 10.
9. Daily diary- Log book

Format of Practical / Oral Examination

Sr.No.	Heading of Practicals	Marks
1	Daily work book-Log book	10
2	Case Record Sheets	20
3	One Long Case (Pathya-Apathya advice)	20
4	Two Short Cases(10X2) (Yoga and naturopathy advice each)	20
5	Spotting on Instrument/Equipment/ Medicine/Solve a Problem-(10 Spots x2)	20
6	Thesis Presentation	50
7	Viva Voce	60
	Total	200

Reference Books:-

8. ROGA NIDANA

PAPER- I FUNDAMENTAL PRINCIPLES OF ROGANIDANA

Concept of Tridosha and its Pathological implications. 63 permutations and combination of Tridosha. Lina and Stambhita Dosha, their cause and importance in manifestation of Samprapti

Concept of Rakta as a Chaturtha Dosha. Importance of Rakta in the manifestation of diseases.

Concept of Ashrayashrayi bhava and its applied utility.

Different types of Dosha Gati.

Causative factors and practical utility of movement of Doshas from Kostha to Shakha and Shakha to Koshtha. Concept of Ashayapakarsha.

Trayo roga marga, their diseases and clinical importance of Roga Marga.

Concept and classification of Avarana, its role in pathogenesis, mode of diagnosis of Avarana and its importance in chikitsa sutra.

Applied aspect of Dhatu Poshana Krama and Dhatu Samvahana. Concept of Margaga and Sthanastha Dhatus.

Concept and applied aspects of Doshapaka and Dhatupaka

Fundamental and applied aspect of Dhatu, Upadhatu and Mala. Diseases developed due to their vitiation (pradoshaja vikara).

Concept and applied aspects of Srotas, their importance in health and diseased conditions.

Concept and applied aspects of Sroto Dushti and Khavaigunya. Understanding the various srotas which are not included in classical list of srotas but enumerated while describing the samprapti of diseases.

Description of Dosha-Dushya-Sammurchhana, Concept of Prakriti Sama Samaveta and Vikriti Vishama Samaveta Sammurchhana. Importance of Dosha-Dushya-Sammurchhana in Diagnosis and treatment.

Concept of Vikara vighata bhavabhava prativisesha.

Concept of Agni and its role in manifestation of health and disease.

Concept and pathogenesis of Ama. Contemporary interpretation of Ama and its role in pathogenesis.

Sama, Nirama stages of Dosha, Dhatu and Mala.

Understanding Samprapti of Santarpanottha and Apatarpanottha Vyadhi

Detailed classification of diseases as described in Ayurveda. Knowledge of ICD and DSM classification.

Detailed understanding of Nidan Panchaka with their classification and clinical importance.

Relation between 'Hetu & Lakshana' and 'Samprapti & Lakshna'.

Explanation and applied aspects of Kriyakala and its utility in diagnosis and treatment.

Importance of Upadrava, Arishta and Sadhyasadhyata and Udarka.

Natural History of the Diseases, concept of vyadhisankara in Ayurveda.

PAPER – II ROGA VIGYANA

Knowledge of classical Samprapti of following diseases with interpretation of Nidana Panchaka including Upadrava, Arishta and Sadhyasadhyata and Chikitsa Sutra. Knowledge of commonly occurring diseases of the respective systems mentioned in contemporary medicine and their Ayurvedic interpretation.

1. Diseases of Pranavaha srotas- Kasa - Shwasa - Hikka – Urahkshata – Shosha – Rajayakshma and Ayurvedic understanding of common clinical entities like Pneumonia, Pleural effusion, Bronchitis, Bronchiectasis, Pulmonary Tuberculosis, Bronchial Asthma.
2. Diseases of Annavaha- Pureeshavaha Srotas- Agnimandya - Ajirna - Aruchi- Chhardi, Amlapitta- Shoola, Grahani –Gulma- Udara Roga –Vibandha, Atisara – Pravahika along

- with various clinical presentations. Ayurvedic understanding of common clinical entities like Peptic Ulcer, Irritable Bowel Syndrome, Diarrhoea, Dysentery, Constipation, ulcerative colitis.
3. Diseases of Udakavaha Srotas- Trishna, Daha and knowledge of water and electrolyte imbalance disorders
 4. Diseases of Rasavaha Srotas - jwara and Ayurvedic understanding of common clinical entities like various types of Fever- Malaria, Typhoid, viral fevers. Pandu, Amavata, Hridroga, Shotha and Ayurvedic understanding of common clinical entities like Anaemia & its Classification, Rheumatic fever, Rheumatoid Arthritis, Angina, Ischaemic Heart Disease, Hypertension, Myocardial Infarction ,Congestive cardiac failure.
 5. Diseases of Raktavaha Srotas- Kamala - Raktapitta - Vatarakta – Kroshtukaseersha - Shitapitta – Maha Kushta – Visarpa – Shwitra and Kshudra Kushta and Ayurvedic understanding of common clinical entities like jaundice, hepatitis, bleeding disorders, Gout, Thrombo Angitis Obliterans (TAO), Deep Vein Thrombosis (DVT), Leukaemia, Thalessemia, Sickle cell Anaemia. Introduction to Urticaria, Psoriasis, Eczema, Pemphigus, Herpes.
 6. Diseases of Mamsavaha srotas- Introduction to Granthi, Arbuda, Galaganda and Arsha. Ayurvedic understanding of all types neoplasia and Thyroid diseases.
 7. Diseases of Medovaha srotas- Sthoulya - Karshya – Prameha and Ayurvedic understanding of common clinical entities like Obesity and Diabetes Mellitus.
 8. Diseases of Asthi - Majjavaha srotas- Sandhigatavata, Introduction to Asthi-majjaparipaka, Asthigata Vidradhi and Ayurvedic understanding of common clinical entities like Osteo- Arthritis, Osteomyelitis, Osteoporosis.
 9. Vatavyadhi-Akshepaka - Apatanaka - Ardita - Pakshaghata – Gridhrasi – Viswachi, Avabahuka, Manyasthambha – Katigraha-Pangutwa- Khanja-Khalwee and Ayurvedic understanding of common clinical entities like Hemiplegia, Parkinson's disease, Lumbago- Sciatica syndrome, Bell's Palsy, Ankylosing Spondylitis, MND and other commonly occurring neurological diseases.
 10. Diseases of Sukravaha srotas- Klaibya and Vandhyatva and understanding of male and female Infertility, Impotence.
 11. Diseases of Mutravaha srotas -Mutrakrichha – Mutraghata, Ashmari and Ayurvedic understanding of common clinical entities like Urinary Tract Infection, Urolithiasis, Nephropathies and Renal failure.
 12. Diseases of Swedavaha srotas-knowledge of khalitya, Palitya and Cosmetology.
 13. Diseases of Manovaha Srotas - Vishada, Udvega, Bhaya, Bhrama, Anidra, Mada, Murchha, Sanyasa, Apsmara, Unmada, Atatwabhinivesha and Ayurvedic understanding of common clinical entities like Depression, Anxiety neurosis, Phobia, Personality disorders.
 14. Indriya Pradoshaja Vikara.
 15. Jara janya Vyadhi: Alzheimer's Disease
 16. Concept and tools for the study of Anukta Vyadhi (Unexplained and newly emerging diseases).
 17. Understanding the concept of karmaja vyadhi

PAPER – III PARIKSHA VIGYANA

1. Introduction to Clinical methods and technique for the study of clinical examination
2. Importance of medical history taking and its importance in clinical medicine.
3. Aims, Objectives and Methods, applied aspects and importance of various Rogi and Roga Pariksha as per classics.
4. Srotas Pariksha, Shadanga Pariksha vis-à-vis general & systemic examination of patient.
5. Interpretation of Charakokta trividha pramana pariksha and Sushrutokta shadvidha pariksha with clinical methods mentioned in modern medicine.
6. Interpretation and use of ashtasthana nirikshana along with use of current tools as per Ayurveda.

7. Charakokta dashavidha and Sushrutokta Dwadashavidha pariksha along with the use of modern supportive tools for understanding of rogibala and roga bala concept to derive chikitsa sutra
8. Ayurvedic interpretation of all relevant findings of modern clinical examinations, various Laboratory and other Diagnostic tools.
9. Understanding of diagnostic procedures in medical emergencies.
10. Concept of Good clinical practice in Ayurveda and modern medicine.
11. Knowledge of standard clinical laboratory set up useful for Ayurvedic practice.
12. Knowledge of Ancillary common laboratory investigations for diagnosis of diseases, their methods, normal and abnormal values, factors influencing values and their Ayurvedic interpretations & clinical significance as mentioned in practical syllabus.
13. Importance of Bio markers and their utility in clinical researches
14. . Update knowledge of emerging diagnostic tools and technologies.
15. . Knowledge of various Ayurvedic diagnostic softwares/programmes available.
16. Avayava Pariksha – Radio- Imaging Techniques, Sonological Techniques, ECG, EEG etc and their clinical interpretation.

PAPER - IV VIKRITI VIGYANA AND JIVANU VIGYANA

1. Introduction to pathology and technique for the study of pathology
2. Cell injury and cellular adaptations
3. Immunopathology including amyloidosis and its interpretation with the concept of Ojas vis-à-vis Bala
4. Concept of Shotha versus Inflammation, oedema and healing
5. Derangement of Homeostasis and Hemodynamic disorders
6. |General character and classification of Neoplasia
7. Upasargjanya Vyadhi (Communicable diseases)- Romantika – Masurika – Upadamsha – Phirang and introduction to Syphilis, AIDS, Leprosy, Tuberculosis
8. Detail study of Krimi Vigyanam versus infectious and parasitic diseases along with their mode of infection and life cycle
9. Concept of Snayuka, Shleepada and introduction to Filariasis and classification of common parasites.
10. Concept and applied aspects of Janapadodhvasma and Environmental diseases
11. Nutritional disorders
12. Concept of genetic diseases and its interpretation in terms of Bija dosha
13. Knowledge of common Bacteria, Virus, Parasites, Fungi and their classification with their disease processes, Nutrition requirements, media and methods for culture and sensitivity

PRACTICAL DEMONSTRATION AND HANDS ON EXPERIENCE

1. Regular posting in Roga Nidana O.P.D.
2. Regular posting in Roga nidana I.P.D.
3. Regular posting in Laboratories
4. Regular posting in other departmental units and Educational Tour to update current medical knowledge
5. Laboratory record – maintenance of observation diary and laboratory record book.
6. Experience in conducting following laboratory investigations for diagnosis of diseases and their methods
 - a) Hematological, Biochemical and Serological measures, Peripheral blood film examination
 - b) Rapid diagnostic techniques.
 - c) Screening test for bleeding disorders- Platelet Count, bleeding time (BT), Clotting time (CT), Prothrombin time (PT).
 - d) Blood grouping - ABO system, Rh typing (Rhesus system)
7. Urine Examination
 - a. Ayurveda anusara mutra pariksha.

- b. Physical Examination, Chemical Examination, and Microscopic Examination
- c. Dipstix examination
- 8. Stool Examination
 - i. Ayurveda anusara purisha pariksha-Physical examination - Sama-Nirama Pariksha
 - ii. Microscopic and macroscopic examination of stool
- 9. Sputum Examination
 - i. Ayurveda pariksha anusara sthivana.
 - ii. Physical, Chemical and Microscopic Examination of the sputum.
- 10. Semen examination
 - 1) Ayurvediya anusara Retas pariksha.
 - 2) Semen examination & clinical interpretation
- 11. Biochemical tests related to various organ panels- Liver, Kidney, Heart, Thyroid, Pituitary and Bones.
- 12. Knowledge of different staining techniques in microbiology.
- 13. Knowledge of Sero-immunological Investigations: RA, Widal test, ASLO titer, ANA, Etc
- 14. Physical, chemical, microscopic, biochemical and bacteriological tests for various kinds of body aspirates
- 15. Knowledge of histopathological techniques.

BEDSIDE PRACTICAL /CLINICAL METHODS

1. Expertise in clinical methods (General and Systemic Examination).
2. Practical knowledge of examination of Roga based on Pancha Nidan.
3. Practical knowledge of instruments used for clinical examination.
4. Practical records of clinical examination of at least 30 long cases in I.P.D.
5. Practical records of clinical examination of at least 50 short cases.
6. Practical knowledge of ECG, USG and Imaging techniques and their clinical interpretation
7. Understanding of various Ayurvedic diagnostic softwares/programmes available like Ayu soft, Rudra, Ayut Nidana etc.

PATTERN OF EXAMINATION

Name of Paper	Hours of training	Marks
Paper I	100	100
Paper II	100	100
Paper III	100	100
Paper IV	100	100
Practicals:	Hospital/Laboratory duties at least 4 Hours per day	Total 200 :
Observation Diary		10
Laboratory record		10
Short Case (including Case Record)		20
Long Case (including Case Record)		30
Laboratory Work		40
Thesis Presentation		40
Viva Voce		50

9. PRASUTI TANTRA- STREE ROGA

PAPER – I Garbhagarbhini Vigyan

1. Applied anatomy of female Genito urinary system, pelvis and Pelvic floor. Pelvic assesment and foetal skull.
2. Physiology, neuro endocrinology and pathology of puberty and Neuroendocrine control of menstrual cycle.. Artava, Rituchakra, Streebija, Pumbija.
3. Garbha sambhava samaagri, Garbhadhanam, Pre-conceptional counseling and care, Pumsavana, Garbhasya shad dhatvatmakata, Garbhavakranti, Matrijadi bhava, Garbha vriddhi, role of panchamahabhutas in the formation and development of foetus. Garbhasya avayavotpatti, Fundamentals of reproduction – gamatogenesis, Fertilization, Implantation and early development of human embryo.
4. Aparā, Garbhodaka Jarayu, Nabhinadi.
Placenta, amniotic fluid, membranes and umbilical cord -their formation, structure, Functions and abnormalities.
Garbha-poshana, Garbha shareerkriya vaishishtyam, Garbha lingotpatti, Garbha varnotpatti, Garbhasya masanumasika vriddhi.
Foetal physiology, circulation, Foetal growth and development
5. Bija – Bijabhaga – Bijabhagavayava janya garbhanga vikruthi. Genetics, Birth defects and other teratologic abnormalities
6. Garbhini nidana, sapekshanidana, Garbhakalina matrigata parivartana, lakshana, Dauhrida. Diagnosis and differential diagnosis of pregnancy, anatomical and physiological changes during pregnancy, Endocrinology related to pregnancy, Immunology of pregnancy.
7. Garbhiniparicharya, Masanumasika Pathya Apathya evum Garbha upaghatakara bhava. Ante Natal care, examination investigations and management,.
8. Garbhasankhya nirnay, Bahu apatyata, Multiple pregnancy.
9. Garbhavyapad - causes, clinical features, complications, management and treatment of Garbhasrava and Garbhapata , Upavishtaka, Nagodara / Upashushka, Lina garbha, Goodagarbha, Jarayu Dosha, Antarmrita garbha , Garbha shosha, Garbha kshaya, Bhutahrta garbha, Raktagulma.
Abortions, I.U.G.R, Intrauterine Foetal death Ectopic pregnancy and gestational trophoblastic neoplasia,
10. Garbhini vyapad – nidana panchaka and chikitsa of garbhini vyapad.
Early recognition, differential diagnosis and prompt management of pregnancy complications, Emesis and Hyperemesis gravidarium, Anaemia, Pregnancy Induced Hypertension, Pre-eclampsia, Eclampsia, Antepartum hemorrhage, Rh-incompatibility.
Management of pregnancies complicated by medical, surgical or Gynecological disorders in consultation with the concerned specialties by team approach
 - a. Pyrexia, Heart disease, Diabetes mellitus, Liver disorders, Respiratory diseases, Renal diseases, Epilepsy, Hypertensive disorders.
 - b. Fibroids, Ovarian tumors, Genital prolapse, Carcinoma Cervix.Infections in pregnancy:
Toxoplasmosis, Viral infections ,Rubella, CMV, Hepatitis-B, Herpes, Syphilis and other Sexually Transmitted Infections including HIV, Prevention of mother to child transmission of HIV infection (PMTCT).
11. Jataharini related to garbhini avastha
12. Evaluation of Foetal and maternal health in complicated pregnancies by making use of diagnostic modalities.
13. Prenatal diagnosis of fetal abnormalities and appropriate care. PNDT Act and its Implications.
14. Vishesh adhyayan of –

Ashtanghriday sharira	-	Adhyay	-1 st – Garbhavkranti
Sushrutasamhita sharira	-	Adhyay	-3 rd – Garbhavkranti
Charak Samhita sharira	-	Adhyaya	- 8 th Jatisutriya

PAPER – II Prasava – Vigyan

Prakrit prasav

1. Prasav paribhasha, Prasav kaal, Prasava prarambha karana, Prasava kalina garbha sthiti, Avi, Sutikagara.
 - a) Initiation and onset of parturition.
 - b) Examination and evaluation of patient in labour.
 - c) Physiology of labour.
 - d) Mechanism of labour.
 - e) Selection of place of delivery and labour room.
2. Prasava avastha evum paricharya
 - a) Stages of normal labour
 - b) Intrapartum maternal and foetal monitoring
 - c) Management of normal labour

Prasava vyapad

1. Etiopathogenesis, clinical features, prevention and management of Garbhasanga, vilambita prasav, Mudhagarbha and Aparasanga.
 - a. Prolonged labour
 - b. Cephalo pelvic disproportions
 - c. Malpresentation
 - d. Obstructed labour
 - e. Methods of Induction and Augmentation of labour
2. Complications of different stages of labour
3. Obstetric management of high risk Pregnancies- Pre eclamptic toxemia, Eclampsia, Diabetes, cardiac disease, asthma, Epilepsy, ante partum haemorrhage, preterm premature rupture of membranes, , Preterm, Post term, Multiple pregnancy, IUGR & HIV -AIDS
4. Still birth- diagnosis, complications and management.

Jatamatra/ Navajata shishu paricharya

1. Examination and management of neonate.
2. Management of birth asphyxia.
3. Detection of congenital malformation in newborn and timely referral for correction.

Sutika vigyana

1. Sutika Paribhasha, kala maryada, paricharya.
2. Sutika vyadhi and their chikitsa.
3. Stana sampat, Stanya utpatti, Stanya sampat, Stanya pariksha, Stanya vriddhi, kshaya and dusti karana, lakshan and its Chikitsa, stana shotha, stana vidhradhi.
4. Suppression of lactation
5. Normal and abnormal puerperium.

Obstetric shock and management

1. Raktadhana: blood transfusion and replacement of blood constituents.
2. Management of fluid and electrolyte imbalance in obstetrics.

Drugs used in obstetric practice, indications/contra indications, doses and side effects.

Vishesha Adhyayana of –

Ashtanga Hridaya Sharira Sthana 2nd Adhyaya – Garbha vyapad
Sushruta Samhita Nidana Sthana 8th Adhyaya – Mudhagarbha nidana
Sushruta Samhita Chikitsa Sthana 15th Adhyaya – Mudhagarbha Chikitsa

PAPER – III Stree Rog vigyan

1. **Disorders of menstruation and Female reproductive system.**
 - A) Congenital malformations of female genital tract
 - B) Artav dushti, artava vriddi, artava kshaya, asrigdara, anartava, and kashtartav.
 - C) Genital infections including sexually transmitted infections.
 - D) Abnormal vaginal discharges.
 - E) Arsha, Yonikanda, Gulma, Granthi, Arbuda.
 - F) Abnormal uterine bleeding, Endometriosis, fibroid uterus, Adenomyosis, Polycystic ovarian syndrome and neoplasia of female genital organs.
 - G) Endocrinological disorders affecting female reproductive system.
 - H) Somarog.
2. **Detailed study of yoni vyapad mentioned by different Acharyas with their commentaries and all possible correlations with modern gynecological diseases.**
3. **Vandhyatva**
 - A) Hetu, Bheda, Pariksha, and Chikitsa.
 - B) Detailed study of causative factors, Investigations with recent advances in management of infertility, Adoption law.
4. **Stanaroga**

Detailed study of Stanashotha, Stanakilaka and stanavidradhi, stana granthi, stanarbuda.
Examination of breast, diagnosis and differential diagnosis of breast lump.
5. **Measures of contraception**
 - A) Ayurvedic view of Garbha nirodha and Garbhapatkara yogas.
 - B) Temporary Contraception
 - C) Recent studies in the field of contraception.
 - D) National Health programme to improve maternal and Child health, social obstetrics and vital statistics (maternal and perinatal mortality).
6. **Sthanik chikitsa**

Detailed study of Pichu, Varti, Dhupan, Dhavana, Parisheka, lepa, Kalkadharana, Uttarabasti, agnikarma and kshara karma.
7. **Rajo Nirvritti** - Climacteric and menopause.
- Geriatric health care
8. **Study of modern diagnostic techniques and Investigations.**
9. **Important drugs used in Streerog.**
10. **Panchakarma in streerog**
11. **Vishesha Adhyayana of –**

Charaka Samhita Chikitsa Sthana – 30th Adhyaya - Yonivyapad Chikitsa
Sushruta Samhita Uttara Tantra - 38th Adhyaya – Yonivyapad Pratishedha
Kashyapa Samhita Kalpa Sthana - Shatapushpa Shatavari, Lashuna kalpa Adhyaya

PAPER – IV Prasuti–Streerog-Shalya Karma

General principles of Gynecological and Obstetric Surgeries. Analgesia and Anaesthesia in Obstetrics and Gynaec operative procedures.

Operative Obstetrics

Decision making, techniques, diagnosis and management of surgical complications.

Dilatation and evacuation, Hysterotomy, Provision of safe abortion services –selection of cases, technique and management of complications, septic abortion, criminal abortion, MTP Act.

Cervical encirclage.

Instrumental delivery (Forceps, vacuum extraction), Caesarean Section, Manual removal of Placenta, Caesarean Hysterectomy.

Operative gynecology

Selection of cases, technique and management of complications of minor and major gynecological procedures.

Dilatation and Curretage, Cervical cauterization.

Polypectomy, Myomectomy, Cystectomy, Oophorectomy.

Surgical sterilization procedures.

Hysterectomy.

Surgical procedures for genital prolapse.

Surgical management of benign genital neoplasm.

Recent advances in Gynaecology and obstetrics – Diagnostic and therapeutics

Shock and its management, Blood Transfusion, Fluid and electrolyte imbalance, Fluid therapy.

Record keeping, ethical and legal issues involved in obstetrics and gynaecology.

Medico-legal aspects – ethics, communication and counselling in obstetrics and Gynecology

Intensive care in Obstetrics and Gynecology.

Content of Practical

1. Practical training to conduct
 - Normal and Complicated deliveries
 - Assisted/ Instrumental deliveries
 - Caesarean Section
 - Neonatal resuscitation
2. Practical knowledge of grabhini pricharya, sutika pricharya and masaanumasik garbha vriddhi.
3. Practical training to perform obstetrical and Gynaecological Surgery
4. Practical training to provide family welfare/ Planning services, safe abortion methods along with surgical sterilization.
5. Practical knowledge and practice of all relevant equipment, Procedures, complications, Emergencies with their management.
6. Practical knowledge of Yogasanas and pranayam useful in Stree rog and Prasuti tantra.
7. Practical knowledge of Panchakarma and Sthanik Chikitsa used in Stree Rog and Prasuti Tantra.
8. Practical Knowledge of recent advances in Gynaecology and obstetrics.

Pattern of Practical Examination

- | | |
|--|------------|
| 1. Practical Record Book | - 20 Marks |
| 2. Bed side examination | |
| Short Case | - 20 Marks |
| Long Case | - 40 Marks |
| 3. Identification of the Instruments/x-ray/USG plate | - 20 Marks |
| 4. Thesis Presentation | - 50 Marks |
| 5. Viva Voce | - 50 Marks |

Reference Books-

1. Related matter from all the samhitas and their commentaries.
2. Prasuti tantra evum stree roga by prof Tewari P V
3. Concepts of gynecology Dr Nirmala G Joshi.
4. Prasuti Tantra Prof. M. Dwivedi
5. Stree roga vigyan - Dr VNK Usha
6. Navya prasuti Vigyan Dr Pooja Bharadwaja
7. Text book of gynaecology-Berek and Novak.
8. Text book of obstetrics- Williams
9. Text book of obstetrics- D C Dutta
10. Text book of gynaecology - D C Dutta
11. Gabbe's normal and problem pregnancies.
12. Human embryology by Sandler.
13. Jeffcoat's principles of gynaecology
14. Te linde's gynaecological surgery.

10. KAUMARBHRITYA-BALA ROGA

PAPER – I Bija, Garbha Vigyaniya (Human Genetics, Embryology)

Marks: 100

A. Prakrita Bija-Bijabhaga-Bijabhagavayava evam Tadjanya Vikriti (Genetics and related disorders)

1. Ayurvedic genetics with modern interpretations: Shukra, Shonita, Shukra Shonita Doshas, Bija-Bijabhaga-Bijabhagavayava Vikriti, Matrija and Pitraja Bhavas, Yajjah Purushiya and Atulyagotriya; Measures for obtaining good progeny.
2. Modern genetics
Basic concepts:
 1. Cell, cell division, nucleus, DNA, chromosomes, classification, karyotype, molecular and cytogenetics, structure of gene, and molecular Screening.
 2. Human Chromosomes - Structure, number and classification, methods of chromosome preparation, banding patterns.
 3. Single gene pattern inheritance: Autosomal & Sex chromosomal pattern of inheritance, Intermediate pattern and multiple alleles, Mutations, Non Mendelian inheritance, mitochondrial inheritance, Genomic imprinting, parental disomy.
 4. Criteria for multi-factorial inheritance.

Pathogenesis

1. Pathogenesis of chromosomal aberrations and their effects, recombinant DNA, genetic inheritance, inborn errors of metabolism
2. Chromosomal abnormalities: Autosomal & Sex chromosomal abnormalities, syndromes
3. Multifactorial pattern of inheritance: Teratology, Cancer Genetics – Haematological malignancies, Pharmacogenetics.
4. Chromosomal disorders
5. Chromosomal aberration (Klinefelter, Turner and Down's syndrome)
6. Genetic Counseling, Ethics and Genetics.

B. Prakrita Bija-Bijabhaga-Bijabhagavayava evam Tadjanya Vikriti (Genetics and related disorders)

1. Garbha (embryo), Garbhawastha (gestation period), sperm, ovum; spermatogenesis; oogenesis; structure of ovum
2. Sperm in the male genital tract; sperm in the female genital tract, activation and capacitation of sperm.
3. Garbha Masanumasika Vriddhi evam Vikasa (Ayurvedic and modern concepts of Embryo and Fetal development)
 - First week of development
 - Second week of development
 - Third week of development
 - Fourth to eighth week of development (Embryonic period)
 - Development from third month till birth (Fetal period)
4. Formation of Prakriti, their assessment in children viz. Bala, Kumara, Yauvana; Pathya-Apathya according to Prakriti.
5. Aparā (Placenta) Aparā Nirmana (Formation of placenta), Aparā Karya (Functions of placenta); Aparā Vikara (Placental abnormalities)
6. Nabhinadi (Umbilical Cord)
Formation and features of umbilical cord
7. Garbha Poshana (Nutrition- from conception to birth)
8. Yamala Garbha(twins)

9. Garbha Vriddhikara Bhavas, Garbhopaghatkara Bhavas.
10. Effect of maternal medication, diet and illness over fetus.
11. Teratology including defects of bija, atma karma, kal, ashaya etc.: causative factors for teratogenicity, mode of actions of teratogenes, critical periods
12. Perinatal Care and Perinatal complications
13. Scientific study of Jataharini specific to children.
14. Prenatal diagnosis
15. Samanya Janmajata Vikara (Common congenital anomalies of different systems): Sahaja Hridaya Vikara (Congenital Cardiac Disorders) Jalashirshaka (Hydrocephalus), Khandaoushtha (cleft lip), Khanda-Talu (cleft palate), Sanniruddha Guda (Anal stricture / imperforated anus), Pada-Vikriti (Talipes equinovarus and valgus), Tracheoesophageal Fistula (TOF), Spina bifida, Meningocele, Meningomyelocele, Pyloric Stenosis.

PAPER-II Navajata Shishu Vigyan evam Poshana

Marks: 100

PART-A

1. Navajata Shishu Paribhasha, Vargikarana (Important definitions and classification related to neonates.)
2. Navajata Shishu Paricharya evam Prana-Pratyagamana (Care of the newborn including recent methodology for the resuscitation)
3. Samanya Navajata Shishu Paricharya (General Neonatal Care –Labour room onwards)
4. Samaya purva evam Samaya pashchat Jata Shishu Paricharya (Management of preterm, post term and IUGR newborn)
5. Prasava Kalina Abhighataja Vyadhi (Birth injuries): Upashirshaka (Caput , cephalohematoma), Bhagna (Fractures), Mastishkantargata Raktasrava (ICH, IVH, Subdural hemorrhage)
6. Navajata Shishu Parikshana (Examination of new born): Ayu Parikshana (including Lakshanadhyaya) Modern approach of Neonatal Examination including gestational age assessment
7. Kumaragara: Navajata Shishu Kaksha Prabandhana (Nursery management), NICU, Nursery plan, staff pattern, medical records, Visankramnikarana (sterilization), Knowledge of equipments used in nursery.

PART-B

8. Navajata Shishu Vyadhi (Early neonatal disorders): Hypothermia, Shvasavarodha (Asphyxia Neonatorum/Respiratory distress), Ulvaka (Aspiration pneumonia), Rakta Vishamayata (Neonatal septicemia), Kamala (Neonatal Jaundice), Akshepaka (Neonatal convulsion), Pandu (Anemia), Atisara (Diarrhea), Asamyaka Nabhinal kartanjanya vyadhi.
9. Navajata Kshudra Vikara (Minor neonatal ailments): Chhardi (Vomiting), Vibandha (constipation), Udara shul (Infantile colic), Puya Sphota (Pyoderma), Shishu Netrabhishyanda (Ophthalmia neonatorum).
10. Sadyojatasya Atyayayika Chikitsa (Management of neonatal emergencies): Shock, Fluid and electrolyte imbalance, Convulsion, Hemorrhagic diseases of Newborn etc.
11. Procedures: Shiro-Pichu, Abhyanga, Parisheka, Pralepa, Garbhodaka Vamana (Stomach wash), Ashchytana Neonatal resuscitation techniques, Blood sampling, Intravenous canulation, Umbilical vein catheterization, Bone marrow aspiration, Phototherapy, Naso-Gastric tube insertion, Urethral catheterization, Exchange blood transfusion, Thoracocentesis, Bone marrow infusion, Lumbar puncture
12. Nutrition:
 - A. Navjat Shishu Ahara (Neonatal feeding):

1. Specific Feeding methodology as per Ayurveda and recent advances; Day to day fluid, milk, caloric requirement for the newborn, feeding technique for the preterm baby.
2. Stanyotpatti and Prasruti (Lactation physiology), Stanya Samghatana (Composition of breast milk), Stana Sampat (Characteristics of normal breast), Stanya Sampata evam Mahatva (Properties & importance of pure milk), Stanya-Piyusha (Colostrum); Stanya-Pana-Vidhi (Method for breast milk feeding), Stanyakshaya / Stanyanasha (Inadequate production and absence of breast milk), Stanya parikshana (Examination of breast milk), Stanyabhava Pathya Vyavastha (Alternative feeding methods in absence of breast milk), Various feeding methods, TPN(Total Parenteral Nutrition)
3. Stanyadosha (Vitiating of Breast milk), Stanya Shodhana (Purification of breast milk), Stanya Janana and Vardhanopakrama (Methods to enhance breast milk formation)
4. Dhatri (Wet nurse): Dhatri Guna and Dosha (Characteristics of Wet nurse), Concept of Breast Milk Banking.
5. Lehana (Elucturies)

B Bala-Poshana (Child Nutrition):

6. Daily requirements of nutrients for infant and children
7. Common food sources
8. Satmya and Asatmya Ahara (Compatible and incompatible diet)
9. Pathya evam Apathya Ahara (Congenial and non-congenial diet)
10. Stanyapanayana (Weaning)

PAPER-III Balrog (Pediatric Disorders)

Marks: 100

PART-A

1. Pranvaha Srotasjanya Vyadhi (Respiratory disorders)- Kasa (Cough), Shvasa (Respiratory distress Syndrome), Tamaka Shwasa (Childhood Asthma), Bronchiolitis, Shvasanaka Jwara (Pneumonia- bacterial, viral etc) Rajyakshma (tuberculosis), Vaksha-Puyata (Pyothorax), Vaksha Vata-Purnata (Pneumothorax)
2. Annavaha Srotasjanya Vyadhi (Gastrointestinal disorders): Jwar (Fever), Chhardi (Vomiting) Ajirna (Indigestion), Kshiralsaka, Atisara (Diarrhea), Pravahika, Vibandha (Constipation, Udarshula (Pain in abdomen), Guda bhramsh (Rectal prolapse)
3. Rasa evam Raktavaha Srotasjanya Vyadhi (Hematological and circulatory disorders): Pandu (Anemia and its various types like Nutritional, haemolytic etc.) and , Raktapitta (Bleeding disorders), Vishishta Hridrog (Specific cardiac diseases- RHD etc), Hypertension, Leukemia.
4. Mamsavaha Srotasjanya Vyadhi: Myopathies
5. Mutravaha srotasjanya Vyadhi (Urinary System disorders): Vrikkashotha (Glomerulonephritis and nephrotic syndrome), Mutrakriccha (Dysuria), Mutraghata (Anuria),
6. Vataavaha Sansthanjanya Vyadhi (Nervous system disorders): Apasmara (Epilepsy), Mastulunga-Kshaya, Mastishka-Shotha (Encephalitis), Mastishkavrana-Shotha (Meningitis),
7. Pediatric disabilities and Rehabilitation: Cerebral palsy, Ardita (Facial paralysis), Pakshavadha (Hemiplegia), Ekangaghata (Monoplegia), Adharanga Vayu (diplegia), Amavata (Juvenile Rheumatoid arthritis)
8. Manovaha Srotasa Vyadhi: Breath holding spell, Shayya mutra (Bed wetting), Autism, ADHD (Attention Deficit and hyperactive disorders), Learning Disability, Mental retardation, Temper tantrum, Pica.

PART-B

9. Antahsravi evam Chayapachayajanya Rog (Endocrine and Metabolic disorders)

10. Kuposhanjanya Vyadhi (Nutritional disorders): Karshya-Phakka-Balshosha-Parigarbhika (PEM and allied disorders), Vitamin-mineral and trace elements deficiency disorders, Hypervitaminosis,
11. Krimi evam Aupsargika Rog (Infestations and Infections): Krimi (Giardiasis and intestinal helminthiasis, Amoebiasis) Common bacterial, viral infections with special reference to vaccine-preventable diseases: Rohini (Diphtheria), Whooping cough, Aptanaka (Tetanus including neonatal tetanus), Romantika (Measles), Karnamula Shotha (Mumps), Rubella and Masurika (Chickenpox), Antrika Jwar (Typhoid and Paratyphoid), Viral Hepatitis,;; Vishama Jwar (Malaria) and Kala-azar, Dengu fever, HIV (AIDS), Poliomyelitis, Mastishkavaran Shotha (Meningitis), Mastishka Shotha (Encephalitis), Chickengunia
12. Tvaka Vikara (Skin disorders): Ahiputana (Napkin Rashes), Shakuni (Impetigo), Sidhma, Pama, Vicharchika, Charmadal (Infantile atopic dermatitis), Gudakutta.
13. Anya Vyadhyi (Miscellaneous disorders): Jalodar (Ascites), Gandamala, Apachi (Cervical lymphadenitis), Kukunakadi Akshi Rog, Hodgkin & non-Hodgkin Lymphoma, Abnormal growth patterns, Short stature, Niruddha prakash (Phimosis), Paridagdha Chhavi, Utpullika
14. Samghata- Bala Pravrita Rog (damstra): Dog bite. Snake bite, Scorpion bite etc
15. Atyayika Balarog Prabandhana (Pediatric emergency management): Shock and Anaphylaxis, Fluid and electrolyte management, Drowning, Foreign body aspiration, Status epilepticus, Acute hemorrhage, Acute renal failure, Febrile convulsion, Status asthmaticus, Burn, Acute Poisoning
16. Balagraha: Scientific study of Graha Rogs
17. Life Style disorders

PAPER-IV Kaumarabhritya in Ancient Classics and recent Advances Marks: 100

1. Significant contributions of Kashyapa samhita, Arogya raksha Kalpadrum and other texts /treatises of Ayurveda such as Harita Samhitain the field of Kaumarbhritya including relevant parts from Brihatrai
2. Panchakarma: Principles of Panchakarma [Swedan–Hasta–Pata sweda etc], and their application in pediatric practice in detail.
3. Update knowledge of clinical pediatrics including recent researches in Kaumarbhritya.
4. Fundamentals of Hospital management with special emphases on Pediatric Ward.

Practical/ Clinical Exposure for (Record of exposures to be produced at the practical examination)

1. Full term, preterm, post term new born baby care
2. Practical procedures like – phototherapy, premature baby care, KMC, venepuncture, cord blood sampling, stomach wash, suction, resuscitation, etc.
3. Practical skill of Pediatric Panchakarma procedures
4. Child Health Check up
5. IQ Assessment of Children
6. Exposure to National Health Programs related to Children, including Immunization Program.
7. Patient case Records (50 Records)
8. Practical knowledge of modern diagnostic (invasive & non invasive) tools and techniques used in pediatrics.
9. Management of common pediatrics emergencies.
10. Participation in UG teaching/training from UG syllabus via A-V aids (minimum-3)
11. Minimum 15 days compulsory reciprocal exposures in Kaumarbhritya department of other institution during the study period.
12. Participation in National/international seminars
13. Publication/acceptance of two research papers in indexed/peer reviewed/ISSN journals from the dissertation.

Pattern of practical examination:

- | | |
|--|-----------|
| 1. Case record | -15 Marks |
| 2. Bed side examination | |
| a) Short Case | -15 Marks |
| b) Long Case | -25 Marks |
| 3. Identification of instruments/ spotting | -10 Marks |
| 4. Lecture/Dissertation Presentation | -10 Marks |
| 5. Viva-voce | -25 Marks |

Reference Books

13. Essential Pediatrics O.P. Ghai
14. Text Book of Pediatrics Nelson
15. Care of New Born by Meharban Singh

11. KAYACHIKITSA

PAPER- I Fundamentals of Kayachikitsa

100 marks

1. Rogi-Roga Pariksha: Nidan Panchak, Trividha pariksha, Ashtavidhpariksha, Dashvidhpariksha in the light of recent advances. Clinical methods-Detailed history taking and patient examination, Systemic examination as per ayurveda and recent advances.
2. Interpretation of common investigations: ECG, Echo cardiography, TMT, Spirometry, X-ray, USG, CT-Scan, MRI, EEG, EMG, in different pathological conditions.
3. Detailed Knowledge of Principles of Chikitsa in Ayurveda. Types of Chikitsa. Principles and practices of Rasayana and Vajikarna.
4. National Health Programmes and prospective role of Ayurveda services and therapeutics in them.
5. Medical ethics, Common laws and regulations applicable to clinical practice.
6. Elaborate knowledge of undertaking common medical procedures like Ryle's tube feeding, tapping, transfusions, catheterization, tractions.
7. Ayurveda Dietetics: importance of Pathya, Apathya and Anupana.
8. Drug-drug interactions and adverse drug reactions, Iatrogenic disorders.

PAPER – II Samanya Roga Chikitsa

100 marks

Nidana/ Chikitsa including Nidana Parivarjana, Pathya, Apathaya, Chikitsa siddhanta, Shamana, Shodhana, Panchakarma, Rasayana and Atyayika Chikitsa (Anupana, Drug/Non-drug) as per Ayurvedic and conventional therapeutics of following Srotogata vyadhi:

1. Pranavahasrotas: Shwasa, Hikka, Kasa, Rajayakshma, Hridroga, Parshwashoola, Urakshata, Svarabheda
Cardio-respiratory system: Bronchitis, Bronchiactasis, Bronchial asthma, COPD, Cor-pulmonale, Pneumonias, Occupational lung diseases, Pulmonary tuberculosis, Congenital Heart disorders, IHD, RHD- Valvular diseases, Cardiac failures, Cardiomyopathy, Pericarditis, Endocarditis, Hypertension,.
2. Annavahasrotas: Agnimandya, Ajirna, Aruchi, Amadosha, Amlapitta, Chhardhi, Shoola, Grahani.
Gastrointestinal disorders: GERD, APD, Malabsorption Syndrome,
3. Udakavahasrotas: Trishna, Shotha, Udararoga, water and electrolyte imbalance
4. Rasavaha srotas: Jwara, Amavata, Pandu, Madatyaya, Anaemias, Rheumatoid arthritis, Substance abuse disorders.
5. Raktavaha Srotas: Raktapitta, Kamala, Vatarakta, Kushtha, Kshudraroga, Sheetpitta, Udarda, Kotha, Visarpa, Shvitra. Haemopoeitic disorders, Bleeding and Coagulation disorders, Leukaemias, Thrombocytopenia, Disorders of Bone Marrow, Hepatobiliary disorders, Hepatitis, Cirrhosis, Cholecystitis, Liver abscess, Jaundice, Dermatological disorders, Parasitic, Infective, Allergic, Autoimmune skin disorders, Eczemas,
6. Mamsa-Medovahasrotas: Medoroga, Sthaulya, Prameha, Galaganda, Gandamala, Urustambha, Diabetes mellitus, over weight .
7. Asthi-Majjha vahasrotas: Asthikshaya, Sandhigatavata, Osteoarthritis, Osteopenia
8. Shukravahasrotas: Such as Kalibya, Dwajabhanga. Impotence
9. Mutravahasrotas: Mutrakricchra, Mutraghata, Ashmari, Urinary disorders: UTI, Lithiasis, ARF, CRF, Uraemia, BPH.
10. Purishvaha srotas: Atisara, Pravahika, Anaha, Adhamana, Krimi, Udavarta, Enteritis, Dysenteries, Ulcerative colitis, IBS, Worm infestation.

PAPER – III Vishishta Roga Chikitsa

100 marks.

Comprehensive knowledge of etiology, demography, pathogenesis, symptomatology, complications, investigations, diagnosis and drug/non-drug management of following diseases as per Ayurveda/ Conventional therapeutics:

1. Vata-Vyadhi- Pakshavadha, Adharanga Vata, Sarvanga Vata, Ananta Vata, Gata Vata, Gridhrasi, Ardita, Akshepaka, Apatantraka, Ekangvata, Vishvachi, Avabahuka, Avarana.
Musculoskeletal disorders: Myopathies, G B Syndrome, Muscular dystrophies, Lumbago
Neurological disorders: Neurodegenerative disorders like Alzheimer's, Parkinsonism, CVA, Neuropathies, Facial palsy, Motor Neuron Diseases, Epilepsy, Sciatica.
2. Sankramakroga: Sheetala, Masoorika, Updansha, Phiranga, Gonorrhoea, Chancroids, Syphilis,
3. Manasa vyadhi; Unmada, Apasmara, Atatvavinivesha, Mada, Moorcha, Sanyasa.
Common psychiatric disorders: Classification of psychiatric ailments. Disorders of thought like Schizophrenia. Disorders of Mood like Mania, Depression. Neurosis, personality disorders, psychosexual disorders.
4. Metabolic disorders: Gout, Dyslipidaemia, Atherosclerosis, Obesity.
5. Endocrinal disorders; Disorders of Pituitary, Thyroid, Adrenal Medulla, Reproductive hormones.
6. Parasitic/Infective/Communicable disorders: Shlipada, Filariasis, Vishama Jvara, Malaria, Manthara Jwara, Enteric Fever, Dengue, Chickenpox, Measles, Influenza, Kalaazar, Mumps, Rabies, Poliomyelitis, Plague, Meningitis, Encephalitis, Chickungunya, HIV/AIDs, Common worm infestations.
7. Common neoplastic disorders and their management strategies. Role of Ayurveda medicines in cancer care including palliative care.
8. Autoimmune diseases: Myopathies, Rheumatic fever, SLE.
9. Common poisonings and their management like Insecticide/Pesticide poisoning, Snake poisoning, Vegetable and chemical poisoning.
10. Janapadodhvasa Vikara. Environmental diseases and their management.

PAPER – IV Advances in Kayachikitsa

100 Marks.

Critical care medicine, Management of medical emergencies, ICU services, Field medical services

1. Hospital management strategies, Infrastructure, use of IT technology, essential manpower, equipment, Patient care, management and coordination with contemporary health institutions and field institutions.
2. National Health Campaigns of AYUSH and components under NRHM.
3. Clinical Research in Kayachikitsa and its application in clinical medicine as per new evidence base in different systemic disorders.
4. New emerging health challenges and ayurvedic medicines: Chickangunya, HIV/AIDs, Swineflu, Chickenflu, Dengue, Restless leg syndrome, Sick building syndrome, Fibromyalgia.
5. Role of Ayurveda in immune-protection, immuno-modulation and in management of other allergies and immunological disorders.
6. Indications and importance of Organ transplantation, Ethical and legal issues involved.
7. Knowledge of Geriatric care and terminal care medicine.
8. Basic knowledge of Gene therapy, Stem cell therapy, Genetic modeling and chromosomal disorders in different disease conditions.
9. Radio-isotopes, disease and tumor markers in diagnosis and assessment of therapy.
10. Scope and methods of independent and collaborative research in Kayachikitsa.
11. Disaster management strategies.
12. Application of advances in Rasayana and Vajikarana therapies
13. Application of emerging trends in Panchakarma in medical management.
14. Physical medication and rehabilitation.

PRACTICALS

Practicals shall be held to evaluate the patient care, diagnostic and treatment expertise of the student. It should also be taken as a chance to evaluate the clinical skills.

Clinical Ability Evaluation-60 marks based on

- | | |
|--|-----------|
| 1. Case records of 40 IPD Patients in Detail | 10 marks |
| 2. Long case History-1: | 20 Marks |
| 3. Short Case history-1 : | 10 Marks |
| 4. Medical procedures demonstration/ Panchakarma procedure | 20 Marks. |
- Academic Competence evaluation- 40 marks based on:
- | | |
|---------------------------------------|-----------|
| 1. Viva | 30 Marks. |
| 2. Teaching and communication skills: | 10 Marks. |

Reference Books

12. MANOVIGYAN AVUM MANASAROGA

PAPER-I Manovyapara Evam Manovigyanam

Marks 100

1. Prachya - arvachya matanusara Mano vigyanasya Bhutavidyayah, Amanusha tatha Grahadinam parichaya, setihasa.
2. Prachya arvachya matanusara Manasah Nirupanam-Concept of Manas from Ayurved and modern perspective.
3. Vividha darshananusara Manasah varnanam.-concept of mind in various philosophies.
4. Manasah Svarupam – Structure of mind, Manasah Sthanam- Location of mind, Manovishayah- Objects of mind, Manogunah (Anutva and Ekatva) –Attributes of mind- Minuteness and oneness, Manasah Ubhayatmakatvam-Duality of Manas, Manasah Dravyatvam Karanatvam cha- mind as a substance and tool,Manasah Karanadravyatvam-mind as causative substance,Manodoshah- (Rajas and Tamas),Manasah Bhoutikatvam- Elemental nature of Manas Introduction to concept of Buddhi and Ahamkara - intellect and ego, Manasah Ahamkarikatvam –origin of mind from ego (samkhya),Manasah Annamayatvam- Relationship between food and mind,Manasah trigunatmakatvam(Sattva,Rajas, Tamas)- mind and the three major attributes,Manasah jadatvam- inertia of mind, Manasah dhatutvam-mind as a component of living being, Manasah Karma- Actions of Manas.
5. Manovyapara Nirupanam.
6. Manovyapare Pranodana sadhaka Bodhakadi Doshanam Sambandhah-Relation of humoral fractions such as Prana, Udana, Sadhaka- Bodhaka in the activity of Manas, Concept of Ojas and Manas
7. Katham prakopayanti ManoDoshah SharirDoshan?- How does manasika Doshas aggravate sharirika Doshas?
8. Indriya panchapanchakam- five factors in relation to the mental faculties.
9. Gyanendriyanam vishayah- the objects of sense faculties.
10. Gyanotpatti prakriyayam Manaso pradhanyam- Importance of Manas in cognitive process.
11. Indriyarthagrahananantaram Manasah vyapara avum gyanotpattou manaso dayitvam - Action of Manas in cognition after reception by respective Indriya.
12. Knowledge of Dirgha Shashkuli nyaya, Alata-chakra nyaya, Vichi-taranga nyaya, Kadamba-mukula nyaya.
13. Shabda – sparsha – rupa – rasa – gandhanam grahakam manah, tasya mahatvam cha - Manas as conductor of sense objects and its importance.
14. Vayuh indriyanam udyojakah tatha Manasah preranam -Vayu as stimulator of indriya and initiator of manas.
15. Vakpravrittou Manasah yogadanam - Role of Manas in production of speech.
16. Pratisharire Manasah bhinnatvam - Concept of individuality of mind.
17. Chikitsya purushah- treatable person (living being).
18. Atma nirupanam- description of Atma, Sukshma sharirsya varnanam- description of subtle body, Atma manasoh sambandhah- relation between Manas and Atma.
19. Antah karana chatusthaya (the four internal faculties).
20. Importance of Dhi, Dhriti and Smriti- importance of intellect, retention power and memory.
21. Role of manas in achieving Tri eshana and Chaturvidha Purushartha/chatur varga- role of manas in attaining the pursuits and four goals of life.
22. Concept of Satyabuddhi, Ritambhara Pragya and Upadha- concept of true and false knowledge.
23. Concept of Punarjanma, Purvajanmakrita karma, Karmaphala.
24. Manovaha Srotasam Parichaya– Introduction of Manovaha srotas(channels of mind)
25. Manovaha, Samgyavaha, Buddhivaha, Chetanavaha, Chetovaha, Vatavaha, Raktavaha adi upayukta Srotasam Manasroge varnanam- Description of Manovaha,

- Sangyavaha, Buddhivaha, Chetanavaha, Vatavaha, Raktavaha srotas etc in relation to Manasroga
26. Shatchakra nirupanam.
 27. Sattvasara purusha- person with mental excellence.
 28. Nidravichara- Concept of sleep, Swapna vichara- Concept of dream, Tandravichara – Concept of drowsiness.
 29. Concept of manasprakriti- mental temperament, Concept of Manasa bhava in Shareerika prakriti.
 30. Manasaroge Manovigyane cha upayukta Paribhashika shabdanam vishleshanam- technical terms used in psychology and psychiatry
 31. Manas roge upayukta Samhitanam satika adhyayanam- study of portions of treatises useful in psychiatry along with their commentary.
 32. Arvachina mano viganasya adhishtana siddhantah, mastishka karmanam sthapanam cha-Fundamentals of modern psychology and functions of brain.
 33. Applied Neuro-anatomy and physiology, Neurotransmitters, Psychoneuro immuno endocrinology
 34. Manasah swabhavika pratirodhah - Defence mechanism of mind.
 35. Shishu manas-shastra, vikasatmaka Manas-shastra – Shishu, Bala, Kumarah, Proudah, Vriddhah cha- Essential elements of psychology, developmental psychology: child, adolescence, adult and aged.
 36. Bhava, Sheela, Buddhi, Smriti, Prerakatva adinam gyanam -Concept of Mood, behaviour, attitude, emotions, intelligence, memory, motivation, perception etc.
 37. Manas Swasthya Evam Manoroganam Paribhasha – Definition of Mental Health and psychiatric disorders.
 38. Manasrogvigyansya mahatvam, phalam, prayojanam, prabhavashcha

PAPER –II Manovaiikariki Evam Bhutavidya

Marks 100

1. Manovega, Mano vikarah, ManoDoshah, ManaSharirayoh paraspara anuvaidhayitvam- mutual symbiosis of sharir and manas, Manasah chanchalatvam, Manaso vyadhinam ashrayatvam, Manasrogeshu Doshanam paraspara anubandhah, Manasvyadhi utpattou sharirDoshanam vikarakaritam, Indriyadinam hinamithyatiyogah. Prajnaparadha, Purva janma krita karma tatha Papa karmasya rogkarakatvam, Adharmasya Achararasayana upekshanasya cha rogkarakatvam.

Bhutavidya – Definition and scope with applied aspects: Divergent views

1. Types and Characteristic features of Bhuta and Graha, Amanushopasarga Vikara caused by Bhuta and Graha, Aetio-pathogenesis of Bhuta and Graha
2. Relationship of Bhuta with Jwara, Ojakshaya, Manovikara, Arishta Lakshana and Daivabala Pravritta diseases.
3. Grahavesha, affecting time of Graha, their specific features, prodromal features and prognosis.
4. Differential understanding of Balagraha and Grahabadha.
5. Sushrut's concept of invasion of Bhuta/Graha.
6. Manas Rognam Nidan, Sampraptischa
7. Manobuddhyadi Vibhramsha
8. Manas dharaniya vega.
9. Kayika-Vachika-Manasika karma hinamithyati yoga in Manasa roga samprapti.

Manovikriti –Psychopathology

1. Bijapradosha and Kulaja bhava in manas roga -Genetics and hereditary factors in Psychiatry.
2. Manas roganam prachya arvachina matanusarena vargikaranam
3. Classification of manas rogas yatha kevalamanas, manas sharir, shariramanasika, agantuja adayah
4. Understanding of Parapsychology and its role in overt psychiatric disorders.
5. Recent ICD and DSM classification

Manas Rogi pariksha vidhi- Psychiatric examination

1. Prachya arvachina matanusarena rogi pariksha visheshena sattva pariksha – Examination of patient according to Ayurvedic and modern methods
2. Trividha Sattva Pariksha
3. Charakokta Anumana Pariksha
4. Manasika avastha Pariksha - Mental Status Examination
5. Vividha pariksha manakah -Different psychiatric assessment inventories like Hamilton's scale, Bech's Depression inventory etc.
6. Manorog chikitsiya manomapaka upakaranani cha - Psychiatric and psychometric tools for diagnosis, Evidence based diagnostic methods.
7. Prayogashaliya pariksha -Investigations– Haematological, biochemical, neuro-physiological, endocrinal, EEG, radio imaging- MRI etc.
8. Manasrognam sadhyasadhyata – Prognosis of psychiatric diseases.
9. Manas Rog Sandharbhe Vidhi Vaidyakasya vistrita gyanam.
10. Forensic psychiatry- Knowledge about legal and ethical issues in psychiatry, Indian lunacy act, mental health act, Norms to setup a well equipped Mental Hospital (OPD, IPD)

PAPER – III Manas Roga Chikitsa

Marks 100

Comprehensive knowledge of etiology, demography, underlying psycho pathogenesis, symptomatology, complications, investigations, diagnosis, prognosis and drug-non drug management of following psychiatric disorders as per Ayurvedic-Modern therapeutics with their pharmacodynamics:

1. Unmada (Psychoses)- Nija, Agantuja Unmada, Bhutonmada, Vishaja Unmada, Sutikonmada, Smaronmada, Tattvonmada- Paronoia, Mano dukhaja Unmada -Stress related disorders.
2. Apasmara - -seizure disorders
3. Apatantraka – hysterical convulsions
4. Tandavaroga -Chorea
5. Yoshapasmara - conversion disorders
6. Atatvabhinivesha- Obsessive compulsive disorders
7. Vishada- Depressive illness
8. Gadodvega -Hypochondriasis
9. Mada, Murchha, Sanyasa- sensorial disorders
10. Madatyaya, Panatyaya (Panavibhrama, Paramada, Panajirna) - Substance abuse disorders.
11. Nidra vikara (Sleep disorders) , Klama, Tandra, Glani.
12. Bhrama, Vibhrama - Delusional disorders.
13. Chittodvega - Generalized Anxiety disorders.
14. Smriti vikara (memory disorders)
15. Manasika klaibya, Sushrutokta Napumsakata
16. Manasa Dosha Vikara- Kama, Krodha, Lobha, Moha, Irshya, Bhaya, Mana, Mada, Dambha, Ahamkara, Harsha, Matsarya, Iccha, Dvesha.
17. Mood and affective disorders – major depressive disorders, mania and their possible Ayurveda co-relates.
18. Schizophrenia
19. Personality disorders
20. Behavioural disorders
21. Organic mental disorders
22. Post traumatic stress disorders
23. Psycho sexual disorders
24. Eating disorders
25. Somatoform and dissociative disorders

26. Senile psychiatric disorders - Dementia, Alzhiemer's disease, Parkinsonism, Menopause, Andropause and their possible Ayurveda co-relates.
27. Adhi- Vyadhi Roganam Manasika Prabhava Chikitsa Cha - Psychosomatic disorder-- Bhayaja and Shokaja Atisara, Kamaja and Shokaja Jwara, Tamakashwasa, Prameha, Amlapitta, Parinamashula, Grahani, Ucca Raktachapa(Hypertension), Shula (pain disorders), Twak Vikara.
28. Jirna- Asadhya Sopadrava Vyadhinam Vivechanam – Mental problems in chronic incurable diseases like AIDS, Cancer etc.
29. Mano prakriti vikara – psychopathic personality.
30. Jivana Shaili Tatha mano sammarda janya roгах - Life style and stress related disorders.
31. Shishu tatha Kumara Manoroga - Child and adolescent psychiatry.
32. Jadata, Buddhimandya , Adhyayana Akshamata – Mental deficiency, mentally challenged and learning disabilities.
33. Achara vaikalya - Conduct disorders
34. Manobhava vikara - Emotional disorders
35. Cerebral palsy, infantile autism, Attention Deficit Hyperactive disorders, Tourette's disorder with their possible Ayurveda co-relates.
36. Preventive aspects in Manas Roga – Achara Rasayana, Sadvritta, Shodhana, Rasayana and Vajikarana
37. Manas Roganam Samanya Vishesa Chikitsa Siddhantanam Varnanam,- Daiva Vyapashraya, Yukti Vyapashraya, Sattvavajaya, Adravyabhuta Chikitsa Upayah.
38. Sattvavajaya Chikitsa: Its application and techniques viz. Dhi, Dhairya, Atma Jnana, Kula Jnana, Kala Jnana, Desha Jnana, Bala Jnana, Samadhi, Santwana, Ashwasana, Ayurveda Psycho shock therapy viz. Trasana, Bhayadarshana, Adbhuta Darshana, Vismarana, Vismapana and Pratidvandwi Bhava with their scientific basis.
39. Role of Rasayana, Medhya Rasayana, Achara Rasayana and Vajikarana in Manasa Roga
40. Pathyapathya in Manasa Roga.
41. Manas Rogopayogi Vividha Aushadheenam Vivechanam: Ekamulika (Single drug), Panchavidha Kashaya Kalpana, Rasa Rasayana etc.
42. Brihatrayee, Yogaratnakara, Sharngadhara, Gadanigraha, Bhavaprakasha, Sahasrayoga ukta vividha yoganam vivechanam:Brahmi, Mandukaparni, Vacha, Jatamansi, Yashtimadhu, Shankhapushpi, Kushmanda, Ashwagandha, Kushtha, Tagara, Guduchi, Jyotishmati, Srikhandadichurna,Saraswatachurna etc. Swarna, Swarnamakshika Bhasma, Rajata, Pravala, Mukta, Manahshila, Krishna Chaturmukha Rasa, Krishnachaturbhuj Rasa, Brihatvatachintamani Rasa,Vata kulantaka Rasa, Manasmitra vataka, Smritisagar Rasa, Unmada gajakesari Rasa, Apatantrakari vati,Kumarakalyana Rasa etc. Kalyanaka ghrita, Brahmi ghrita, Mahapanchagavya ghrita, Mahapaishachika ghrita, Mahabhutarava ghrita, Kushmanda ghrita, Purana ghrita, Panchagavya ghrita etc.
43. Saraswatarishta, Ashwagandharishta, Chittachandirasava etc.
44. Himasagara taila, Tungadrumadi taila, Gandharaja taila, Brahmi taila, Sidharthaka agada etc.
45. Dhupa, Nasya, Lepa, Anjana yogas useful in Manas Roga.
46. Folk Medicine in Manasa Roga.
47. Mano Bheshaja vigyanam - Essentials of Psycho pharmacology, Knowledge of Biological and Pharmacological Therapies in the Management of Various Psychiatric diseases such as hypnotics, sedatives, anxiolytics, mood stabiliser/elevators, antidepressants, antipsychotics, anticonvulsants, Electro-convulsive therapy(ECT) and its applied aspects.

Panchakarma

1. Importance of Panchakarma and other allied procedures in the management of Manasa Roga.
2. Theoretical knowledge and application of the following karmas in Manasa Roga – Snehana, Svedana, Vamana, Virechana, Basti, Nasya, Raktamokshana, Mastishkya-Shiro-Basti, Shiro-Dhara, Shiro-Pichu, Shiro-Abhyanga, Murdhni taila, Anjana, Dhupa, Dhupana etc.

Yoga

1. Manovigyana sandharbhe yogasya vaishishtyam, Yogashastrasya upayogita mahatvam cha.
2. Yogasya darshanika svarupagyanasahitam tasya astanganam samichinam Gyanam.
3. Ayurveda drishtya yoga adhyayanasya upayogita, Ayurveda shastre pratipaditah yogasya siddhantah.
4. Satvavajaye gyana-bhakti-karma yoganam manasa roge vivechanam-Hatha yogascha.
5. Role of Shatkarma - Kapalabhati, Trataka etc. in Manasa Roga.
6. Naishthiki chikitsa in Manasa Roga.
7. Therapeutic potential of Yoga, Psycho biological effects of Yoga, Spiritual therapy and Yoga.
8. Sudarshana kriya , Transcendental meditation, Yoga nidra, Vipashyana and other allied yogic techniques in Manasa Roga chikitsa.
9. Manas and prana (bio-energy), pranic healing, means of bio-energy modulation in Manasa Roga.

Other allied therapeutic procedures:

1. Various methods of psychotherapy and counselling techniques, transactional analysis, behavioural therapy, psycho analysis.
2. Swapna Samvahana chikitsa -Hypnotherapy-Past life Regression and Age Regression Therapy in Manasa Roga.
3. Knowledge of psychiatric emergency and their management.
4. Knowledge of surgical intervention in Manasa Roga
5. Recent advances and updates in concepts, drugs and therapeutic procedures in Manasa Roga.

Content of the Practicals

S.No.	Topic	No. of Cases
1.	Hypnotherapy techniques	10
2.	Case Study- Unmada	20
	Apasmara	20
	Atatvabhinivesh	10
	Chittodvega	25
	Vishada	25
	Madatyaya	10
	Psycho Sexual disorders	25
	Psychogenic headache	20
	Nidra vikara	20
	Stress related disorders	25
3.	Examination of Manasika Bhava in psychosomatic illness	25
4.	Yogasana, Pranayama and Meditation Techniques	25
5.	Panchakarma Procedures in Manasa Roga	25
6.	Anjana, Dhoopanadi Karma	25

7.	Instruments (GSR biofeedback, EST, EEG, etc.)	25
8.	Counselling on the pattern of Sattvavajaya	25
9.	Psychometric scales (Ayurveda and conventional)	30

Visit to Mental Hospitals

Pattern of Practical Examination - 100 Marks

1.	Practical Record Book	- 10 Marks
2.	Bed side examination	
a.	Short Case	- 10 Marks
b.	Long Case	- 25 Marks
3.	Assessment of Scales and inventories (Ayurveda and Conventional)	- 10 Marks
4.	Thesis Presentation(PPT)	- 25 Marks
5.	Viva-voce	- 20 Marks

Reference Books-

1.	Related matter of Charak, Sushrut and Vagbhata and other ancient texts with commentaries	
2.	Prachin Manovikara Vigyanm	- Ayodhya Prasad Achal
3.	Ayurvediya Padarth Vigyan	- Ranjit Rai Deshai
4.	Ayurved Darshan	- Acharya Rajkumar Jain
5.	Purusha Vichaya	- Prof. V.J. Thakkar
6.	Ayurvediya Manas Vigyan	- Prof. Ram Harsh Singh
7.	Yoga evum Ayurved	- Acharya Rajkumar Jain
8.	Basic principles of Ayurvediya Padartha Vigyan	- Dr Yogesh Chandra Mishra
9.	Synopsis of Psychiatry	- Harold kaplon and Benjamin saddock
10.	Oxford textbook of Psychiatry	- Michael Gerlder, Paul Harrison
11.	General psychology and Abnormal psychology	- S.K. Mangal
12.	A text book of Post Graduate Psychiatry	- Neeraj Ahuja
13.	Mind in Ayurveda and other Indian Traditions	- A.R.V.Murthy
14.	Psychopathology in Indian medicine	- Satyapal Gupta
15.	Body- Mind-Spirit Integrative Medicine	- Prof. Ram Harsh Singh
16.	Rationale of Ayurveda Psychiatry	- Dr. A.R.V. Murthy
17.	Foundations of contemporary Yoga and Yoga Therapy-	Prof. Ram Harsh Singh
18.	Stress and its Management	- Dr. K.N. Udupa
19.	Concept of Mind	- Edited by Prof. C.R. Agnivesh, Kottakkal
20.	Kayachikitsa	- Part 3 by R. R. Pathak and Vidhyadhar Shukla
21.	Panchakarma Illustrated	- Prof. Shrinivasa Acharya
22.	Unified Dimensions of Ayurvedic Medicine	- Dr. J.S. Tripathi
23.	Essential Psychiatry	- Bhatia MS
24.	Sahassrayoga	- Nishteswar and Vaidyanath
25.	Ayurveda and the Mind	- David Frawley
26.	Manasa Roga Vijnana	- Balakrishna
27.	Comprehensive Textbook of Psychiatry	- Kaplan and Sadock's
28.	Psychiatry for medical students	- Robert J Waldinger
29.	Introductions to Psychology	- Morgan / King.

13. RASAYANA&VAJIKARANA

PAPER – 1 CONCEPT & PRACTICE OF RASAYANA

Marks: 100

1. Basic fundamentals and concepts of Rasayana

- Derivation, definition and synonyms of Rasayana
 - Classification of Rasayana
 - Understanding rasayana in perspective of:
 - Neutriceutical action
 - Immunomodulation
 - Oxygen free radicals &Antioxidant activity
 - Adaptogenesis
 - Cell proliferative activity
 - Cell regenerative activity
 - Genoprotectiveactivity
 - Micronutrients
 - Anabolic activity
 - Interpretation of different types of Rasayana
 - Prakruti-Guna/character wise Rasayana
 - Sara wise rasayana
 - Dhatu specific rasayana
 - Indriyanusararasayana like netryya, hridya, tvacchya etc.
 - Srotas wise rasayana
 - Occupation wise rasayana
 - Season wise rasayana
 - Molecular biology concerned to rasayana
 - Human genome project
 - Genetics and Gene therapy
 - Stem cell theories
 - Introduction to Bioinformatics
 - Concept of Bala, types of bala, vriddhikshayahetu.
 - Knowledge of measures to improve bala
 - Concept of ojas. Types of ojas. Ojo-vriddhi-kshaya-karabhava.
 - Ojodustiprakara, hetu, samprapti and their management
 - Immunology
 - Immune system & components
 - Knowledge of immune mechanisms
 - Immune disorders
 - Rasayana as immunomodulator
 - Rasayana – immune specific/immunoglobulin specific
 - Rasayana in Immune compromised disease like, HIV/AIDS, tuberculosis, Cancer, liver cirrhosis etc.
2. Concept of jara (geriatrics) and ageing (gerontology)
 3. Concept of svabhavabalapravrittavyadhi with special reference to Jara its classification (kalaja&akalaja), etiopathogenesis and management
 4. Organ wise, system wise Common geriatric disorders and their management
 5. Yogya, ayogya, vidhi and prayojana of:
 - Kutipraveshikarasayana
 - Dronipraveshikarasayana
 - Karapratichiyarasayana

- Indraproktarasayana
 - Vaatatapikarasayana
6. Concept & practice of Achararasayana
 7. Knowledge & application of svasthavritta measures
 8. Swasthyanuvartakarasayana
 9. Rasayana as nutrient supplement
 10. Panchakarma and its role in rasayana
 11. Application of Kamyarasayanato achieve - Smriti, Medha, Bala, Prabha, Varna, Svara
 12. Knowledge of Vayasthaapana/Ayushyarasayana
 13. Naimittikarasayana – Vyadhiharaandvyadhiapunarbhavarasayana

PAPER – 2 CONCEPTS OF APATYA&SUSANTAANA

Marks: 100

1. Etymology, derivation, definition, synonyms of vandhya, vandhyaa, apatya, santaankara, susantaana
2. Importance of fertility
3. Essentials of fertility
4. Knowledge of Garbhasambhavasamagri
5. Knowledge of Garbhaadanaparicharya
6. Knowledge of Garbhotpatti
7. Knowledge of Shukravridhhi, kshayahetu, lakshana and chikitsa
8. Knowledge of Shukrapradoshajavyadhi and its management
9. Knowledge of Shukradustihetu, prakara, lakshana, diagnosis and management
10. Knowledge of Retodustiprakara, hetu, lakshana and chikitsa
11. Knowledge of Sukravahasrotodustikarana, lakshana, diagnosis and management
12. Knowledge of Disorders of spermatogenesis (etio-pathogenesis, diagnosis and management)
 - a. Oligozoospermia, asthenozoospermia, teratozoospermia, azoospermia, aspermia, pyospermia, necrozoospermia, OAT syndrome, sertoli cell only syndrome, klinefelters syndrome, kallaman's syndrome. Dal-castele's syndrome etc.
13. Obstructive azoosprmia-diagnosis, medical management and knowledge of surgical procedures
14. Retrograde ejaculation and other ejaculatory disturbances in respect to fertility – knowledge, diagnosis and management.
15. Reproductive endocrinal disorders and management
16. Immunological infertility – knowledge of various components involved in immunological infertility, mechanism, diagnosis and management
17. Sperm function tests, semen and cervical mucus interaction, post coital test
18. Knowledge of karyotyping and interpretation
19. Knowledge of chromosomal, genetic disorders pertaining to fertility and management
20. Knowledge and practice of Genetic counseling
21. Knowledge of Normal and abnormal sexual differentiation
22. Applied aspects of panchakarmain rasayana and vajikarana
23. Applied aspects of uttarbasti
24. Knowledge of Susantaana (epigenetics): preconceptional measures
25. Knowledge and technique of Pumsavanakarma for healthy progeny
26. Introduction to MART (Medically Assisted Reproductive Technologies): IUI, IVF-ET, ICSI, cloning etc.
27. Testicular biopsy – indications, surgical procedure, interpretation of HPE results
28. Knowledge of cystoscopy – diagnostic, interventional
29. Scrotal scan & Doppler
30. Knowledge of Varicocele: diagnosis, medical and surgical management
31. Knowledge of disorders of accessory sex glands and their management

PAPER – 3 CONCEPTS AND PRACTICE OF VAJIKARANA**Marks: 100**

1. Etymology, derivation, definition, scope and understanding of word vajikarana and its application in present scenario
2. Physiology of sexual act including mechanism of erection, ejaculation and orgasm
3. Knowledge of hypothalamo-pituitary-testicular axis
4. Knowledge of Psycho-neuro-endocrino-vasculogenic mechanism of sexual activity
5. Knowledge of Haemodynamics and different stages of erection
6. Psychological aspects of sexual function
7. Sukrottejakabhava. Factors influencing sexual function
8. Knowledge of Sukrasrutikarabhava
9. Knowledge of erogenous zones and lunar relationship
10. Maithunavidhi –asthangamaithuan, rules and regulations to have intercourse as per ritu, kala, gotra, kula etc.
11. Concept of Brahmacharya & its application in the present context
12. Sexual ethics
13. Myths & misconcepts regarding sex & sexuality
14. Sex education & counseling including pre- marital counseling
15. Knowledge of contraception and contraceptives
16. Knowledge of sukragatavata/sukrasthavatasukravritavata,
17. Klaibya – definition, nidana, prakara, samprapti, and chikitsa
18. Male Sexual dysfunctions (etio-pathogenesis, diagnosis & management)
 - a. Disorders of sexual desire (increased libido, decreased libido, no desire etc.)
 - b. Erectile dysfunction (psychological, endocrinological, neurological & vasculogenic)
 - c. Ejaculatory disturbances (early, delayed, anejaculation, retrograde ejaculation)
 - d. Orgasmic disorders (anorgasmia)
19. Female sexual disorders, causes, diagnosis and management
20. Knowledge of various sexual postures and advantages
21. Napumsaka, shanda, trinaputrika, vaarta, hermaphroditism – definition, classification, samprapti, clinical manifestation, diagnosis and management
22. Knowledge of paraphilia, abnormal sexual behavior, perversions and management
23. Knowledge of diagnostic aids pertaining to sexual disorders
 - a. ICIVAD (Intra Cavernal Injection of Vaso Active Drugs)
 - b. Vacuum erection devices
 - c. Penile vibrators
 - d. Rigi scan NPT (Nocturnal Penile Tumescence)/snap gauge test
 - e. Penile biothesiometer
 - f. Penile Doppler
24. Knowledge of Dhat syndrome, night emissions
25. Mutrasukra, shukrashmari, sukrameha
26. Aharsha & apraharshabhava
27. Knowledge of Sexual performance assessment scales: MSP, GRISS, GRIMS, HARDS, Libido score, IIEF-5 scoring system for ED, Androgen deficiency score
28. Knowledge of Priapism and its management
29. Knowledge of theories of andropause and management

PAPER – IV PHARMACO-THERAPEUTICS OF RASAYANA & VAJIKARANA**Marks: 100**

1. Definition, derivation, etymology, synonyms of vajikara, vrishya
2. Pharmacology and pharmacodynamics of rasayana and vajikarana drugs
3. Definition, scope and understanding of
 - a. Rasayana
 - i. Vyadhibalavirodhi

- ii. Vyadyutpadakapratibandhak
- iii. Vayasthapan
- b. Sukrajanaka/sukrala
- c. Sukrapravarthaka/rechaka
- d. Shukrashodhana
- e. Shukrastambhaka
- f. Sukrashoshaka, vyavayi/vikashi
- g. Kamoddeepana/kamottejaka etc.
- 4. Pharmacology of drugs belonging to:
 - a. Sukrajanaka/sukrala
 - b. Sukrapravarthaka/rechaka
 - c. Shukrashodhana
 - d. Shukrastabhaka
 - e. Sukrashoshaka, vyavayi/vikashi
 - f. Kamoddeepana/kamottejaka etc.
- 5. Pathya and apathya in relation to shukradhatu
- 6. Formulation, indications & uses of: Vrishyabasti, Vajikaranaabasti, Yapanabasti
- 7. Pharmacology of:
 - a. Akarakarabha,
 - b. Amalaki,
 - c. Aswagandha,
 - d. Bhallataka,
 - e. Bhang,
 - f. Bhrihati,
 - g. Gokshura,
 - h. Guduchi,
 - i. Haritaki,
 - j. Ikshu,
 - k. Jatiphala,
 - l. Jivanti,
 - m. Kapikacchu,
 - n. Kokilaksha,
 - o. Ksheeravidari,
 - p. Mandukaparni,
 - q. Masha,
 - r. Punarnava,
 - s. Shatavari,
 - t. Svetamusalī,
 - u. Yastimadhu etc.
 - v. Indraproktharasayanaa
- 8. Pharmacology of following Rasaushadhis:
 - a. Abhraka,
 - b. KukkutandaTvakBhasma,
 - c. Naga,
 - d. Rajata,
 - e. Shilajit,
 - f. Svarna,
 - g. Svarnamakshika,
 - h. Vanga,
 - i. Yashada etc.
- 9. Ingredients, properties, indications and phalasaruti of:
 - Agasthyarasayanaa,
 - Ajamamsarasayanaa
 - Akarakarabhādivati,
 - Amrita PrashaGritha,
 - AswagandhaGritha,

- AvalgujaRasayanaa
- BalaswagandhaTaila,
- Bhallathakarasayana,
- Brahmarasayana,
- Brihatcchagalladyagritha
- Chandraprabhavati,
- Chyavanaprasha,
- GokshuradiGuggulu,
- HaritakyadiRasayana,
- JatiphaladiVati,
- Kaminividravana Rasa,
- KhadiraRasayana,
- KushmandaRasayanaa
- Lasunarasayana,
- MahamashaTaila,
- Makaradhwaja,
- NagabalaRasayana,
- NarasimhaRasayanaa,
- PippaliVardhamanaRasayanaa,
- Pippalirasayana,
- PurnachadrodayaMakaradhwaja,
- ShatavariGrita,
- Shilajathurasayana,
- Siddha Makaradhwaja,
- SrigopalaTaila,
- VanariGutika
- Vasantakusumakara,
- VeeryastambhaVati,
- VidangaRasayana,
- VidaryadiGritha,
- VrishyaGritha

10. Pharmacology & Pharmacodynamics of various vajikara, vrishya and rasayanabasties
11. Neuro-psycho pharmacology of rasayana, vajikarn drugs
12. Endocrinological aspects of rasayana,vajikarana drugs
13. Recent advances in rasayana and vajikarana drugs, formulations and therapeutic techniques

PRACTICALS

1. Assessment of Prakriti
2. Assessment of saara
3. Assessment of manasaprakriti
4. History taking & clinical examination of geriatric patients
5. Examination of male genito-urinary system
6. Semen analysis- Retopariksha
7. Post coital test, semen & cervical mucus interaction test
8. Technique of ICIVAD
9. Uttarbasti
10. Technique of psychosexual counseling
11. Applicatory knowledge of assessment scales pertaining to vajikaranaa/sexual functions
12. Technique of genetic counseling
13. Practical aspects of Panchakarma pertaining to rasayana&vajikarana
14. Technique of measuring penile BP

14. SHALYA TANTRA - SAMANYA

PAPER - I Shalya Siddhanta – Fundamentals of Surgery

100 Marks

1. Sushruta's contributions in surgical concepts and practices.
2. Knowledge of Dosha, Dhatu and Mala Vigyan and their importance in surgical diseases.
3. Significance and importance of Rakta as the Chaturth Dosha.
4. Yantras and Shastras – Surgical Instruments - Ancient and recent advances.
5. Trividha Karma – Purva, Pradhana and Pashchat Karma and its Importance.
6. Asepsis and Antisepsis.
7. Nirjantukarana – Sterilization – Various methods for surgical equipments, laparoscopes, linen and Operation theatre.
8. Surgical infections – Sepsis, Tetanus and Gas gangrene.
9. Care of patients suffering from Hepatitis, HIV-AIDS, STD and other associated infectious diseases.
10. Ashtavidha Shastra Karma – Critical knowledge and their application in surgical practice.
11. Suturing materials, appropriate use of sutures, drains, prosthetic, grafts and surgical implants.
12. Concept of Marma and their clinical application.
13. Shock - Its varieties and management.
14. Raktasrava / Haemorrhage – Types, Clinical features and Management.
15. Concept of Raktastambhana –Haemostasis.
16. Vranasopha – Inflammation and Vidradhi - Abscess
17. Granthi – Cyst and Arbuda – Benign and malignant Neoplasm – Concept of Oncogenesis and genetics of cancer.
18. Gulma and Udara Roga.
19. Kshudra Roga.
20. Fluid, electrolyte, Acid Base Balance and Nutrition
 - i. Introduction of physiology of fluids and electrolytes.
 - ii. Dehydration and over hydration.
 - iii. Specific electrolyte loss, Acidosis, Alkalosis, Symptomatology and Management.
 - iv. Electrolyte changes in specific surgical conditions and their management.
 - v. Plasma volume expanders and their use in surgical condition.
 - vi. Various replacement fluids in surgery, mode of administration and complications.
 - vii. Nutrition – Indications, types, mode of administration and complications.
21. Blood Transfusion – Blood groups, compatibility, Indications, Contraindications and complications with management.
22. Knowledge of antibiotics, analgesics, anti-inflammatory and emergency drugs in surgical practice.

PAPER – II Vishishta Shalya Vigyana - Shalya Tantra Speciality

100 Marks

1. Yogya Vidhi - Practical and Experimental training
 - i. Practice of surgical procedures on different models.
 - ii. Training of Laproscopic and Endoscopic procedures.
2. Vrana – Wound management
 - i. Management of Nija Vrana, Agantuja Vrana, Dushta Vrana and Nadi Vrana.
 - ii. Vrana Chikitsa – Shasti upakramas, Pathya-apathya .
 - iii. Types and Management of Dagdha Vrana - Burns and scalds.
 - iv. Infection of hands and foot, Diabetic wound, Prameha Pidaka – Diabetic carbuncle and its management.
 - v. Management of Pressure ulcers, Venous ulcers and other chronic non-healing ulcers.
 - vi. Gangrene and its management.

3. Mutra Roga – Urological diseases.
 - i. Anatomical and physiological knowledge of kidney, ureter, urinary bladder, prostate, seminal vesicles, urethra and penis.
 - ii. Investigations of Mutravaha Srotas – Urinary tract.
 - iii. Aetiopathogenesis and surgical procedures of Ashmari – Urinary stone diseases.
 - iv. Kidney and ureter – Clinical presentation, Investigations and Management of Congenital anomalies, Trauma, Infection, Neoplasm, Hydronephrosis, Hydroureter and Haematuria.
 - v. Urinary bladder - Clinical presentation, Investigations and Management of Congenital anomalies, Trauma, Infection, Neoplasm, Diverticulum, Vesico-vaginal fistula, Atony, Schistosomiasis, Urinary diversions, Retention of urine – Mutraghata and Mutrakruccha.
 - vi. Urethra - Clinical presentation, Investigations and Management of Congenital anomalies – Hypospadias, Epispadias, Posterior urethral valve, Trauma, Infection, and Neoplasm.
 - vii. Prostate and seminal vesicles – Benign and malignant enlargement of prostate, Prostatitis, Prostatic abscess and Calculi.
 - viii. Penis – Clinical presentation, Investigations and Management of Congenital anomalies, Trauma, Infection, Phimosis, Paraphimosis, Peyronie's disease and Neoplasm.
 - ix. Testis and scrotum - Clinical presentation, Investigations and Management of Congenital anomalies, Ectopic testis, Trauma, Infection, Neoplasm, Testicular torsion, Hydrocele, Varicocele, Spermatocele, Chylocele, Pyocele, Haematocele, Epididymal cyst and Fournier's gangrene.
 - x. Renal failure – Causes, Diagnosis, Investigations and Management.
4. Asthi roga and Marma Chikitsa - Orthopaedics
 - i. Anatomy and physiology of bone.
 - ii. Diseases of Asthi / Bone and Sandhi / Joints – Congenital, Degenerative, Infective, Metabolic and Neoplastic Disorders of Bones and Joints.
 - iii. Aetiopathogenesis, treatment along with surgical procedures of Bhagna - Fracture, Sandimoksha - Dislocation and bone grafting.
 - iv. Diseases of Spine, vertebral column and spinal cord.

PAPER – III Adhunik Shalya Karma - Modern surgery

100 Marks

1. Fundamentals of modern surgery and treatment of surgical disorders including surgical anatomy, physiology and pathology.
2. Diagnosis and Surgical treatment of head and spine injury, thoracic trauma and abdominal trauma. Blast injuries and Management
3. Diagnosis and Surgical management of neck disorders e.g. salivary glands, thyroid, Thyroglossal cyst and Fistula, Branchial cyst and fistula, Cystic hygroma and Lymphadenopathies.
4. Diagnosis and Surgical management of breast diseases, Benign and Malignant breast tumours.
5. Diagnosis and Surgical measures of diseases of Gastrointestinal system -
 - i. Oral cavity - Oral ulcers, Oral cancer, Precancerous conditions, Submucosal fibrosis, Leukoplakia, Cleft lip and palate, Lip tumours, Mucosal cyst, Nasopharyngeal cancer, Tongue ulcer and cancer.
 - ii. Oesophagus - Oesophageal varices, Dysphagia, Neoplasm, Strictures and Gastro oesophageal reflux.
 - iii. Stomach and duodenum –Congenital anomalies, Injuries, Inflammation, Ulcer, Neoplasm, Pyloric stenosis, Acute dilatation, Hiatus hernia and Foreign bodies.
 - iv. Pancreas - Congenital anomalies, Acute and Chronic pancreatitis, Calculi Neoplasm and Cysts of pancreas.

- v. Peritoneum, Omentum, Mesentery, Retroperitoneal Space – Peritonitis, Abscess, Neoplasm, Mesenteric cyst, Torsion of mesentery, Vascular thrombosis, Retroperitoneal cyst and Fibrosis.
 - vi. Abdominal mass - Diagnosis and Management.
 - vii. Small intestine - Congenital anomalies, Inflammation, Ulcer, Neoplasm, Stenosis, Injuries, Foreign bodies, Diverticuli, Peutz-jeghers syndrome, Chron's disease, Carcinoid tumours, Enteric perforation and Intestinal fistula.
 - viii. Large intestine - Congenital anomalies, Inflammation, Ulcer, Neoplasm, Stenosis, Injuries, Foreign bodies, Diverticuli, Faecal fistula, Amoebiasis and Familial polyposis coli.
 - ix. Caecum and Vermiform appendix- Appendicitis, Appendicular abscess, Appendicular mass, Perforation, Carcinoid Tumor and other Neoplasm.
 - x. Gastrointestinal bleeding – Haemetemesis, Malaena, Haemobilia, Bleeding per anum - Causes, Diagnosis and Management.
 - xi. Rectum and anal canal - Diagnosis and Surgical management of Congenital Anomalies, Inflammation, Ulcer, Neoplasm, Stenosis, Prolapse, Haemorrhoids, Fistula-in-ano, Fissure-in-ano, Anorectal Abscess, Incontinence, Injuries, Foreign bodies, Sacrococcygeal Teratomas and Pilonidal sinus .
6. Umbilicus and abdominal wall – Congenital anomalies, Umbilical infections, Sinus, Neoplasm, Abdominal dehiscence, Divarication of recti, Desmoid tumor and Meleney's gangrene.
 7. Diagnosis and surgical measures of diseases of Hepatobiliary system -
 - i. Liver – Abscess, Cyst - Hydatid cyst, Primary and Secondary malignant tumours, Portal Hypertension and Budd-Chiari Syndrome.
 - ii. Gall bladder and Bile duct - Congenital anomalies, Acute and Chronic Cholecystitis, Cholelithiasis, Neoplasm, Cholangitis, Stenosis, Choledocholithiasis, Choledochal cyst and Cholangiocarcinoma.
 - iii. Spleen – Splenomegaly and Splenic Injury.
 8. Diagnosis and surgical measures for disorders of Artery, Vein, Ligaments, Muscles and Tendons.
 9. Diagnosis and surgical management of Hernias – Inguinal, Femoral, Umbilical, Incisional, Abdominal wall and other hernias.
 10. Endoscopic procedures - Oesophagogastroduodenoscopy, Sigmoidoscopy and Colonoscopy.
 11. Diagnostic and therapeutic laparoscopy.
 12. Anaesthesia - Definition, Types, Anesthetic agents, Indications, Contraindications, Procedures, Complications and management.

PAPER –IV Shalya Vangmaya – Shalya literature, Research and Development

1. Thorough study of the Sushruta Samhita including other relevant portions of Brihatrayee and Laghutrayee.
2. Knowledge and importance of Surgical Audit.
3. Medico legal issues – Understanding the implications of acts of omission and commission in practice. Issues regarding Consumer Protection Act, medical profession, national health policy - Implications in a medico-legal case like accidents, assaults etc.
4. Surgical ethics including Informed consent.
5. Knowledge of different type of experimental Surgical Model for Research in Surgery.
6. Sandhana Karma – Plastic reconstructive and cosmetic surgery. Fundamentals of Sandhana Karma –
 - i. Karna Sandhana – Auroplasty
 - ii. Nasa Sandhana – Rhinoplasty
 - iii. Ostasandhana – Cheiloplasty
 - iv. Grafts and Flaps – Techniques and applications.
 - v. Vascular anastomosis and grafts.

7. **Anushalya Karma** – Parasurgical procedures

- i. Kshara Karma, Kshara Sutra, Agnikarma and Raktamoskhana.

Pattern of Practical examination

1. Case record (25)	100 Marks
2. Short case	-10 Marks
3. Long case	-10 Marks
4. Identification of specimen / radiograph and Instruments	-20 Marks
5. Thesis Presentation	- 20 Marks
6. Viva-voce	-20 Marks

Reference Books

1. Sushruta Samhita
2. Ashtanga Sangraha
3. Ashtanga Hridaya
4. Charaka Samhita
5. The Surgical instruments of the Hindus - Girindranath Mukhopadhyaya
6. Shalya Tantra Samuchchaya - Pandit Ramadesh Sharma
7. Shalya Vigyan (Part 1-2) - Dr. Surendra Kumar Sharma
8. Shalya Samanvaya (Part 1-2) - Vd. Anantaram Sharma
9. Shalya Pradeepika - Dr. Mukund Swaroop Verma
10. Sushruti - Dr. Ram Nath Dwivedi
11. Clinical Shalya Vigyan - Dr. Akhilanand Sharma
12. Bhagna Chikitsa Deshpande - Dr. Prabhakar Janardhan
13. Kshara sutra management in anorectal ailments and Dr. Kulwant Singh. - Dr. S.K. Sharma, Dr. K.R.Sharma
14. Anorectal diseases in Ayurveda Kumar Chowdary. - Dr. Sizoria and Dr. Praveen
15. Adhunik Shalya Chikitsa Siddanta - Dr. Katil Narshingham Udupa
16. Agnikarma Technology Innovation - Dr. P.D. Gupta
17. Shalya Tantra Ke Siddhant - Dr. K.K.Takral
18. Recent advances in the management of Arshas / Haemorrhoids - Dr. P. Hemantha Kumar
19. Arsha Evum Bhagander Mein sutra Avacharan - Vd. Kanak Prasad Vyas
20. Recent advances in Kshara Sutra - Dr. M. Bhaskar Rao
21. Leech application in Ayurveda - Dr. M. Bhaskar Rao
22. Kshara Sutra - Dr. S.N.Pathak
23. Shalya Shalaky Tantra - Vd. S.G. Joshi
24. Surgical ethics of Ayurveda - Dr. D.N. Pande
25. Text book of Surgery - Sabistan
26. Operative Surgery - Rob and smith
27. Bailey and Love's Short Practice of Surgery Mann and R.C.G. Russell - Norman.S. Williams, Charles.V.
28. Fractures and Joint Injuries - Watson-Jones
29. Text books of Operative Surgery - Farquharsons'
30. Principles of Surgery - Schwartz
31. Emergency Surgery -Hamilton Bailey's
32. Surgical pathology - Willing Worth
33. Clinical methods in surgery - S. Das
34. Textbook of Operative Surgery - S. Das
35. Shalya Vigyan (Sachitra) - Anantram Sharma
36. Anushastra Karma - Dr. D.N. Pande
37. Concept of Vrana is Ayurveda - Dr. Lakshman Singh
38. Significance for Poorva Karma in Surgical Patient - Dr. Lakshman Singh

- | | |
|--|---|
| 39. Sangyahan Prakash | - Dr. D.N. Pande |

| 56. Manipal Manual of Surgery | - Dr. Rajgopal Shenoy |

15. SHALYA – KSHARA EVUM ANUSHA STRA KARMA

PAPER - I Shalya Siddhanta – Fundamentals of Surgery

100 Marks

- 1 Sushruta's contributions in surgical concepts and practices.
- 2 Knowledge of Dosha, Dhatu and Mala Vigyan and their importance in surgical diseases.
- 3 Significance and importance of Rakta as the Chaturth Dosha.
- 4 Yantras and Shastras – Surgical Instruments - Ancient and recent advances.
- 5 Trividha Karma – Purva, Pradhana and Pashchat Karma and its Importance.
- 6 Asepsis and Antisepsis.
- 7 Nirjantukarana – Sterilization – Various methods for surgical equipments, laparoscopes, linen and Operation theatre.
- 8 Surgical infections – Sepsis, Tetanus and Gas gangrene.
- 9 Care of patients suffering from Hepatitis, HIV-AIDS, STD and other associated infectious diseases.
- 10 Ashtavidha Shastra Karma – Critical knowledge and their application in surgical practice.
- 11 Suturing materials, appropriate use of sutures, drains, prosthetic, grafts and surgical implants.
- 12 Concept of Marma and their clinical application.
- 13 Shock - Its varieties and management.
- 14 Raktasrava / Haemorrhage – Types, Clinical features and Management.
- 15 Concept of Raktastambhana –Haemostasis.
- 16 Vranasopha – Inflammation and Vidradhi - Abscess
- 17 Granthi – Cyst and Arbuda – Benign and malignant Neoplasm – Concept of Oncogenesis and genetics of cancer.
- 18 Gulma and Udara Roga.
- 19 Kshudra Roga.
- 20 Fluid, electrolyte, Acid Base Balance and Nutrition
 - a. Introduction of physiology of fluids and electrolytes.
 - b. Dehydration and over hydration.
 - c. Specific electrolyte loss, Acidosis, Alkalosis, Symptomatology and Management.
 - d. Electrolyte changes in specific surgical conditions and their management.
 - e. Plasma volume expanders and their use in surgical condition.
 - f. Various replacement fluids in surgery, mode of administration and complications.
 - g. Nutrition – Indications, types, mode of administration and complications.
- 21 Blood Transfusion – Blood groups, compatibility, Indications, Contraindications and complications with management.
- 22 Knowledge of antibiotics, analgesics, anti-inflammatory and emergency drugs in surgical practice.

PAPER – II Vishista Anushastra Karma

100 Marks

1. Kshara Karma and Prayoga – Therapeutic Chemical Cauterization.

- i. Introduction of different types of Kshara, Method of preparation, Standardization, pH value, Application, Complications and its management.
- ii. Surgical Anatomy and Physiology of Anus and Rectum.
- iii. Arshas - Nidana, Purvaroop, Roopa, Samprapti, Prakara and Chikitsa.
- iv. Haemorrhoids - Aetio-pathogenesis, types and its surgical management.
- v. Knowledge of different methods of treating Haemorrhoids - Rubber band ligation, D.G.H.A.L, Radiofrequency, Ablation, Cryo-surgery, Cautery, Laser, Infrared coagulation and other advanced techniques.
- vi. Bhagandara - Nidana, Samprapti, Prakara, Doshanusarachikitsa, Knowledge and application of Kshara Sutra.

- vii. Fistula-in-ano - Definition, Aetio-Pathogenesis, Types, Diagnostic methods and its Surgical, Para Surgical Management including knowledge of Fibrin Glue, Advanced Flap Therapies and other recent techniques.
- viii. Parikartika - Nidana, Samprapti and its Chikitsa.
- ix. Fissure-in-ano - Aetio-pathogenesis, types and its surgical management.
- x. Sannirudhaguda and its Chikitsa.
- xi. Anal Stenosis - Aetio-pathogenesis and its surgical management.
- xii. Gudavidradhi - Nidana, Purvaroopo, Roopa, Samprapti, Prakara and its Chikitsa.
- xiii. Anorectal abscesses – Aetio- pathogenesis, types, complications and its surgical management.
- xiv. Gudagatashalya – Diagnosis and its Management.
- xv. Foreign body in rectum and anal canal - Method of diagnosis and its management.
- xvi. Congenital Anorectal disorders and its surgical management.
- xvii.** Gudaarbuda and Granthi and its Chikitsa.
- xviii.** Anorectaltumour - Types and its surgical management.

2. Agnikarma – Therapeutic cauterization

- i. Introduction, definition and importance of Agnikarma.
- ii. Agnikarma - Poorva, Pradhana and Paschat karma, various substances and Shalakas used for Agnikarma and their indications, contra-indications and complications.
- iii. Diagnosis and management of Oil burn, Dhumopaghata, Ushnavata, Sunburn, Frost bite and Electric burn.
- iv. Knowledge of modern thermal equipment - Diathermy, Laser therapy, microwave, Ultracission technique, Cryo Technique and its uses.
- v. Effect of Agnikarma on skin, muscle tissue, nerves, metabolism, blood circulation and infective lesions.

3. Raktamokshana – Bloodletting Procedures

- i. Introduction and importance of Raktamokshana.
- ii. Indication and contraindication of Raktamokshana.
- iii. Justification of usage of different types of Raktamokshana in various therapeutic applications.
- iv. Different types of Raktamokshana – Sastrakriitha - Siravyadhana, Prachana and Asastrakriitha - Shringa, Jaluka, Alabu and Ghati.
- v. Jalauka - Nirukti, Paryaya, Bhedha, Sangrahana, Samrakshana, Jalaukavacharana Vidhi - Poorva, Pradhana and Paschat karma.
- vi. Knowledge of Leeches - Morphology, Anatomy, Physiology, Bio-chemical effects of its various constituents present in its saliva.
- vii. Rakta- Importance, Formation, Panchabhoutikatva, RaktaSthana, Guna, Prakurta Karma and Rakta Sara Purashalakshanas. Suddha and Dushta Rakta Lakshanas. Rakta Pradoshaja Vyadhis.

PAPER – III Adhunika Shastra Karma - Modern Surgery

100 Marks

1. Fundamentals of modern surgery and treatment of surgical disorders including surgical anatomy, physiology and pathology.
2. Diagnosis and surgical measures for disorders of vein, artery, ligaments, joints and muscles.
3. Diagnosis and Surgical management of neck disorders e.g. salivary glands, thyroid tumours, etc.
4. Diagnosis and Surgical management of breast diseases.
5. Diagnosis and surgical management of traumatic disorders - Head injury, thoracic and abdominal trauma.
6. Diagnosis and surgical management of diseases of Gastrointestinal system- stomach, pancreas, peritoneum, omentum, mesentery, retroperitoneal space, small intestine, large intestine and vermiform appendix.

7. Diagnosis and surgical management of Proctological disorders.
8. Diagnosis and surgical measures of diseases of Hepatobiliary system - Liver, gall bladder, bile ducts and spleen.
9. Diagnosis and surgical management of diseases of Urogenital system.
10. Diagnosis and surgical management of diseases of scrotum and testis. – Hydrocele, Ectopic testis and Undescended testis.
11. Diagnosis and surgical management of Hernias – Inguinal, femoral, umbilical, incisional, abdominal wall and other hernias.
12. Endoscopic procedures – Oesophagogastroduodenoscopy, Sigmoidoscopy and Colonoscopy.
13. Diagnostic and therapeutic laparoscopy.
14. Anaesthesia - Definition, Types, Anaesthetic agents, Indications, Contraindications, Procedures, Complications and Management.

PAPER – IV ShalyaVangmaya

100 Marks

1. Thorough study of the Sushruta Samhita including other relevant portions of Brihatrayee and Laghutrayee.
2. Knowledge and importance of Surgical Audit.
3. Value of research and teaching in surgery.
4. Medico legal issues - Understanding the implications of acts of omission and commission in practice. Issues regarding Consumer Protection Act, medical profession, national health policy - Implications in a medico-legal case like accidents, assaults etc.
5. Surgical ethics including Informed consent.
6. Knowledge of different type of experimental Surgical Model for Research in Surgery.

Pattern of Practical examination

100 Marks

16. AYURVED DHANVANTRI - ASTHI SANDHI AND MARMAGAT ROGA

Paper – 1 ASTHI SANDHI MARMA ABHIGHAT SIDDHANTA

100 marks

1. Asthi Sharira - Etymology, Embryology, Applied Anatomy and Physiology of Asthi. Its Panchbhautik constitution, Poshan (Nutrition), Asthivaha Srotas, Upadhatu and Mala. Total Number and classification of Asthi. Concept of Dhatwagni in Ayurveda. Asthi Dhatu Kshaya and Vriddhi lakshana. Knowledge about Tarunasthi. Embryology, Ossification, Histology, Metabolism, Blood Supply, Types and Biomechanics of Bone and cartilage.
2. Healing mechanism of bone and factors influencing the bone healing according to Ayurvedic and Modern concept. Biological and Biophysical technologies for the Enhancement of Fracture Repair. Knowledge of Sandhaniya and Ropaniya drugs.
3. Sandhi Sharira – Classification, Applied Anatomy and Physiology of Asthi Sandhi. Classification, Applied Anatomy and Physiology of Joints and Healing Mechanism of a joint.
4. Marma Sharira – Basic concept of Marma, etymological derivation, definition, classification, Pramana, importance & applied aspect of individual Marma. Interpretation of each Marma in present context (*Regional surgical anatomy*). Detailed discription of Tri-Marma and Rogamarga. Prognosis of Marmaghata.
5. Sira, Dhamni, Lasika, and Snayu Sharira - Applied Anatomy and Physiology of Vessels, Lymphatic, Ligaments, Tendons, Muscles, Peripheral Nerves and Plexuses.
6. Knowledge of Splints, Orthotics & Prosthetics.
7. Disability calculation, Bio-mechanics of gait.
8. Vrana Vigyan – Etiology, classification, symptomatology, prognosis, complications and management principles of Nija and Sadyo Vrana. Knowledge of Shashti Upakrama, Seevana - Suturing and Vrana Bandhana -Bandaging. Wounds and Ulcers – Etiology, classification, symptomatology, complications. prognosis and management principles. Advanced wound closure techniques, suture materials, dressing / bandaging materials and techniques. Wound Healing Mechanism.
9. Vranitopasniya - Management of Vranita - Wounded person. Management Principles of wounded persons. Assessment and immediate management of poly-trauma patient , crush syndrome and Acute Respiratory Distress Syndrome.
10. Vranashotha and Vidradhi - Inflammation and Abscess – Etiology, Pathogenesis, classification, stages and management.
11. Knowledge of Orthopedic implants (*e.g. wires, screws, plates, nails*) and Instruments. Knowledge of equipments (*e.g. C-arm image intensifier and drill machines etc*).
12. Orthopedic Radiology - Knowledge of Radiological imaging techniques (X-ray, CT Scan, MRI, USG, Radioisotop scanning) in Orthopedics.
13. Medico-legal aspects in Orthopedics - Handling of Medico- legal cases and issuing of MLCs, Understanding the implications of relevant acts e.g. Consumer Protection Act, Motor Vehicle Act, Right to information Act and other relevant acts in force time to time.
14. Concept of Pain according to Ayurved and Modern Medical science.
15. Principles of Reconstruction, Transplantation, Bone grafting, Bone Banking, Bone transportation and Amputation.
16. Knowledge about National Health Policies and relevant guidelines by State Govt. or Govt. of India.

Paper – II ASTHI SANDHI MARMA GATA VYADHI VISESHA

100 marks

1. Diseases of Asthi & Asthi Dhatu - Asthigata Vata, Asthivaha srothodushti, Asthi Dhatu Kshaya & Vriddhi, Adhyasthi, Asthi Vidradhi.
 - a. Congenital, Degenerative, Infective, Metabolic, Neoplastic and Miscellaneous Disorders of Bones.

2. Diseases of Sandhi – Sandhigat Vata, Vatarakta, Amavata and Kroshtukashirshaka.
 - a. Different diseases of joints – Etiology, classification, and treatment principles.
3. Vata Vikara – Asthi, Sandhi and Marma related Vata Vikara like Gridhrasi, Bisvachi, Avabahuka, Manyastambha, Khalvi, Dhatugata vata, Snayugata vata, Katishoola, Katigraha.
4. Diseases pertaining to Muscles, Tendons, Ligaments, Fascia and Bursae.
5. Diseases and Congenital anomalies of Spine e.g. Ankylosing spondylitis, Infective conditions, Tuberculosis, Spondylolisthesis, Inter-vertebral Disc Prolapse, Spondylosis, Scoliosis, Kyphosis, spina bifida, Hemivertebra, Block vertebra, Sacralisation and Lumbrisation etc.
6. Diseases and Congenital anomalies of Cervical Spine
7. Diseases and Congenital anomalies Sacroiliac Joint and Bony Pelvis.
8. Diseases and Congenital anomalies of Hand
9. Diseases and Congenital anomalies of Foot
10. Diseases and Congenital anomalies of Limbs
11. Orthopedic Neurological Disorders. Post Polio Paralysis & Cerebral Palsy.
12. Snehana, Swedana and Panchakarma in Marma, Asthi and Sandhi Vyadhi.
13. Yogic Practices in Orthopedics.
14. Principles of Arthroplasty- Joint Replacement.
15. Introduction of Peripheral Vascular Diseases.
16. Pediatric Orthopedics
17. Orthopedic Oncology
18. Introduction of Radiotherapy, Chemotherapy, Hormone Therapy, Immunotherapy and gene therapy.

Paper – III Abhigata Vigyan – Traumatology

100 marks

1. Bhagna - Etiology, classification and General Management principles and Prognosis.
2. Modern concept of Bone and Joint injuries - Etiology, Epidemiology, Classification and General management principles.
3. Individual Bone and Joint injuries - Etiology, Epidemiology, Classification and management principles.
4. External immobilization techniques - Classical and traditional Kusa -splints, Plaster of Paris Technique, Knowledge of different splints and Plasters
5. Pathological Fractures including Fragility fractures, Stress Fractures and Peri-prosthetic Fractures.
6. Fractures in Children – Etiology, Epidemiology, Diagnosis, management and complications.
7. Prognosis of skeletal injuries, Complications of Fractures and Joint Injuries e.g. Myositis ossificans, Volkman's ischemic contracture, Compartment syndrome, Crush Syndrome, DVT, Thromboembolism, Fat Embolism.
8. Rehabilitation of trauma patient and Principles of Sukhchestaprachara - Physiotherapy and its use in skeletal injuries
9. Treatment Principles of Asahanta Bhagna - Non-unions, Vishmolvana Sahanta - Malunions and Ignored or un-reduced dislocations.
10. Diagnosis and management principles of injuries of Vessels, Nerves, Tendons and Ligaments.
11. Head, Chest and Abdominal Injuries and management principles.
12. Pelvis and Spine injuries and their management principles.
13. Sports Medicine – Sports medicine and sports related Shoulder injuries, Elbow injuries, Knee injuries, Ankle Injuries, Recurrent Dislocations and other sports related injuries.
14. Knowledge of Marma Chikitsa like Kalari Marma - Martial Art, Adankal - Marmaghata Chikitsa in Siddha Marma in trauma and sports medicine.

Paper – IV Shalya Kriyatmaka - Operative Orthopedics**100 marks**

1. Agropharniya Vigyan – Knowledge about Pre-operative preparation and Post operative care, Operation Theatre and its requirements regarding Instruments / Equipments and Personnel.
2. Fumigation of Operation Theatre and sterilization of Instruments, Equipments, Linen and Implants by various techniques.
3. Anu Shalya Karma (Para surgical procedures) in orthopedics – Role of Kshara Karma, Agni Karma, Raktavsechana in orthopedic disorders.
4. Knowledge of various Implants regarding their material, types, mechanics and practical use.
5. Knowledge of Conventional and advanced procedures being done for Different Bone and Joint Injuries e.g. Open Reduction and Internal Fixation, Closed Reduction and Internal Fixation, External fixators and other operative techniques.
6. Knowledge of Plastic Surgery in orthopedics and Bone grafting techniques.
7. Knowledge of various surgical procedures being done for Different Bone and Joint Diseases.
8. Hand Surgery for Diseases, Deformities and Injuries.
9. Foot Surgery for Diseases, Deformities and Injuries.
10. Amputations and Arthrodesis – General Principles of Amputations /Arthrodesis and regional Amputations.
11. Knowledge of Diagnostic and Therapeutic Arthroscopy.

Pattern of Practical Examination

100 marks

- | | |
|--|----------|
| • Discipline and regularity | 10 Marks |
| • Bed side examination | |
| Short case | 10 Marks |
| Long case | 20 Marks |
| • Identification of specimen / instruments/Radiographs | 10 Marks |
| • Dissertation Presentation | 25 Marks |
| • Viva –Voce | 25 Marks |

PRACTICAL TRAINING

- Training of History taking, bed side clinical examination and case presentations.
- Identification and demonstration of surgical instruments.
- Training of orthopedic related Diagnostic imaging techniques.
- Training of Local anesthetic techniques in orthopedics.
- P.G. Scholar shall develop the skills by observing, assisting and performing independently the following procedures:
 - Non-operative
 - Manipulative reductions and external immobilization techniques.
 - Application of POP cast, Splints and Braces.
 - Bandaging Techniques
 - External medicaments and Procedures like Snehana, Swedana, Vasti, Kati Vasti, Janu Vasti, Greeva Vasti etc.
 - Training in various massage techniques.
 - Corrective POP casts for club foot & other congenital deformities
 - Operative
 - External fixation of compound fractures
 - Debridement of crush injuries
 - Amputations
 - Internal fixation of common simple fractures
 - Polio surgery such as TA lengthening.
 - Sequestrectomy in chronic osteomyelitis
 - Biopsy from a mass
 - Internal fixation of Fractures.
- Training in Vrana (Wound) Management techniques.
- Practical training of Physiotherapy in orthopedic and trauma patients.
- Training of Anu Shalya Karma like Agni Karma, Kshara Karma and Rakta Mokshna in orthopedic disorders.
- Orthopedic related Panchakarma Procedures.

17. SANGYAHARAN

Paper 1 Sangyahan siddhant avum vangmaya: Literary, Research And Development

- History of Sangyahan and its development in Ayurveda.
- Importance of anesthesia in Ayurveda.
- Contribution of AAIM and other pioneers in the development of Sangyahan.
- Applied aspects of Ayurveda with respect to sangyahan Vrihatrayee and Laghutrayee.
- Instruments for anesthesia in ancient era and their development.
- Rakta, its importance, Raktadhana and Raktstambhana.
- Knowledge of disorders like Unmada, Apasmara, Mada, Murrcha, Sanyasa and Stabdhatu etc.
- Madataya, Stages of Madataya and its management.
- Pharmacology of Medhya, Vednasthapak, Madkari, Sangyasthapak, Nidrajanan, Akshepjanan and shamana, Svedjanan, Hridyae, Hridyotejak, Raktbharshamak, Shoolprashaman, Vaman and hrillashar (Antiemetic) dravya as mentioned in Ayurvedic samhita & their application in Sangyahan.
- Aroma therapy as complementary and alternative therapy in pain management and Palliative care.

Paper 2 Sangyahan Bshhaja Vigyan (Pharmacology related to Anesthesia)

Pharmacology of:

- Drugs acting on Autonomic nervous system:
 - a .Cholinergic system and drugs- Agonist and antagonist
 - b .Adrenergic system and drugs- Agonist and antagonist
- Autocoids and related drugs:
 - a. Histamine and Antihistaminic
 - b. 5HT and antagonist
 - c. NSAID'S
 - d. Prostaglandins and leukotrienes
- Drugs acting on Respiratory system
- Drugs acting on Somatic nervous system
 - a. Skeletal muscle relaxants – Depolarizer and Non-Depolarizer.
 - b. Local anesthetics
- 5. Drugs acting on central nervous system
 - a. General Anesthetics- Fixed and Volatile anesthetic agents.
 - b. Sedative and hypnotics
 - c. Anti epileptics
 - d. Anti psychotic and anti-maniacs
 - e. Opioids Analgesics and antagonists
- 6. Drugs acting on cardiovascular system
 - a. Cardiac glycosides
 - b. Anti arrhythmic drugs
 - c. Anti anginal and other anti ischemic drugs
 - d. Anti hypertensive drugs
- 7. Drugs acting on Kidneys
 - a. Diuretics
 - b. Anti diuretics
- 8. Coagulants and anti coagulants

Paper 3 Vishishta Sangyahan – Applied Anesthesia

- Airway management- Intubation, failed intubation drill, LMA, Bag and mask ventilation.

- Anesthesia For: General surgery, Obstetric and Gynecology ,E.N.T. and Ophthalmic, Orthopedic ,Dental ,Pediatric , Urology , plastic and Outpatient / Day care surgery.
- Anesthesia for patients with: Diabetes mellitus, Thyroid diseases, inherited metabolic diseases, Obesity, Respiratory diseases, Cardiac diseases, Renal diseases, Geriatric problems and neuromuscular diseases.
- Regional anesthesia:
- Sub-arachnoid and epidural anesthesia, analgesia.
- Plexus and nerve blocks for upper and lower limb
- Regional anesthesia for thorax and abdomen
- Surface anesthesia, infiltration and field blocks
- Complications of Regional and general anesthesia, morbidity, mortality and medico-legal aspects.
- Anesthesia for Endoscopic, laparoscopic Surgery and Laser Surgery
- Anesthesia for Trauma and mass casualty
- Emergency anesthesia.

Paper 4 Monitoring Advances and Research in Sangyahan

- Monitoring in anesthesia:
 - Cardiovascular, Respiratory, Renal function, Neurologic and neuromuscular monitoring.
 - Peri- operative Thermo- regulation and monitoring
 - Peri- operative awareness and monitoring depth of anesthesia with BIS.
 - Peri- operative acid-base balance
 - Pt's positioning in anesthesia, its hazards and management
 - Peri- operative Fluid management and Blood transfusion.
 - Risks and hazards of anesthesia
- Anesthesia equipments –
 - Medical gas systems
 - Breathing systems
 - Ventilators
 - Anesthesia machine
- Post operative management-
 - Post anesthesia care
 - Post operative nausea and vomiting
 - Post operative Intra-Venous fluid therapy
 - Acute post operative pain
- Misalleneous-
 - HDU,ICU, CCPR- BLS & ACLS.
 - Parental nutrition.
 - Environmental factor and electrical safety
- Management of Acute / Chronic Pain:
 - Assessment of pain
 - Peri-operative pain,
 - Chronic pain syndrome-detection and prevention,
 - WHO regime for Cancer pain,
 - TENS, Behavioral therapy
- Anesthesia in remote locations
- Clinical care in extreme environments (At high and low pressure and space).
- Relevance of Sammohana (Hypnosis), Acupressure and Acupuncture in Sangyahan.
- Recent advances in research in Sangyahrana, Pain Management and Palliative Care. Scope and Application of principles of Ayurveda in Sangyahrana Research.

METHODS OF TRAINING AND TEACHING FOR M.D. (Ayu) ANAESTHESIOLOGY -

Case Presentation	Once a Week
Seminar / Symposia	Once a Week
Pre Anesthesia Care / Clinic	Thrice a Week
Critical Care unit / Recovery Room	Once a Week
Classroom Lectures	Twice a Week
Morbidity / Mortality	Once a Week
Audit	Once a month
Journal Club	Once a month
Record Keeping	Once a month
Emergency Drills / Protocols	Once a Week
Interesting Cases	Once a Month

Practical Examination

1. Case Record(25)	-50 Marks
2. Presentation of different types of Anesthesia	-50 Marks
3. Thesis Presentation	-50 Marks
4. Viva-Voce	-50 Marks
Minimum pass marks	50%

Result: - Pass/Fail

Staff required

Teaching- Professor-1
Reader/Asso. Prof-1
Lecturer/Assi Prof-2
Sen.Resident-2

Non Teaching staff
Anesthesia Technician- 1
Anesthesia Attendent-2
Ward boy-2
Sweeper-2

18. AYURVEDA DHANWANTRI -SHALAKYA - NETRA ROGA

**Theory Four papers of- 100 marks each
Practical and Viva-voce - 100 marks**

PAPER- I Netra Rog Vangmaya

1. Available literature of Netra roga vigyana in Brihatrayi, Laghutrayi, Yogaratnakar, Chakradutta, Bhel Samhita, Harita samhita and Kashyap samhita.
2. Critical analysis of the available literature of netra roga vigyana in the above given classics e.g. Puyalasa and Vatahata Vartma In Sushruta samhita and Vagabhat samhita.
3. Unique/ specific contribution of different classics, Acharyas and commentators in the development of Netra roga vigyana.
4. Analytical determination of subjects related to eye disorders in ancient and modern literatures.
5. Update chronological development of Netra roga vigyana right from Vedic period.
6. Update chronological development of Ophthalmology.

PAPER- II Ayurvediya Netra Rog Vigyan

1. Enumeration and classification of Netra Rogas.
2. Descriptive knowledge of *etiology, pathogenesis, prodromal symptoms, clinical features, complications and prognosis* of pakshma -vartma- sandhi- - shukla- Krishna- dristi & sarvagata rogas along with exogenous eye diseases available in Ayurvedic classics. Medical and surgical Management of the above diseases with special skill development in Ashtavidha shastra & Trividha Anushastra chikitsa related to Netra roga.
3. Netra kriya kalpa procedures like seka, ashchyotana, vidalaka, pindi, tarpan, putapaka & anjana and their practical application and analysis based on ocular pharmacology. Standard operative procedures for Kriyakalpas including Aushada kalpanas.
4. Study of nayanabhighata and , its management and prevention.
5. Knowledge of preventive and community ophthalmology along with national programme for control of blindness and role of Ayurveda.
6. Ayurvedic Concept of Congenital, developmental and neoplastic diseases of netra.

PAPER – III Adhunik Netra Rog Vigyan

1. Knowledge and application of current diagnostic techniques and equipments and therapeutics in Ophthalmology.
2. Detailed study of refractive errors along with defects of accommodation and their management.
3. Detailed knowledge of classification, etiology, pathogenesis, signs and symptoms, differential diagnosis, prognosis and complications of diseases of eye orbit, lacrimal apparatus, lids, conjunctiva, cornea, sclera, uveal tract, lens, vitreous, retina, optic nerve and visual pathway with comprehensive knowledge of their medical and surgical management.
4. Ocular trauma , its emergencies and management.
5. Ocular motility disorders and their medical and surgical management
6. Neurological and systemic disorders affecting the eyes and their management.

PAPER – IV Recent Advances in Netra Chikitsa & Ophthalmology.

1. Update advances in the development of Ayurvedic drug formulations, therapeutic procedures and treatments of Netra roga.

2. Advanced technologies in the diagnosis of eye diseases.
3. Advanced technologies & techniques in the medical & surgical management of Netra roga.
4. Advanced management and technologies in Ophthalmology.
5. Detailed study of recent research works on chakshushya dravyas.
6. Comparative and critical study of modern advances in surgical techniques over the surgical methods described in Ayurvedic classics

Pattern of practical/Clinical training

1. Posting in OPD,IPD,OT & Kriya kalp Kaksha.
2. Case presentation ,clinical discussion, Seminars & Work shops.
3. Skill development in Ashtavidha shastra karma, Trividha Anushastra Karma and Modern Ophthalmic Surgical procedures viz lid surgery, pterygium surgery, cataract surgery, squint surgery, glaucoma surgery, DCR & DCT ect.

Methods of Training

- Intensive integrative training would be imparted to scholars in understanding the classical Ayurvedic aspects with an emphasis of critical comparative interpretation.
- Mandatory participation of scholars in seminars, group discussions, clinical demonstrations , journal review meetings, case study, continuing education activities and research clinical projects.
- During the first year course the emphasis would be laid to impart adequate knowledge on fundamental aspects and their applications, with a focus on latest diagnostic tools , instrumentations and laboratory procedures. Practical orientation and hospital based clinical training is an integral part of the curriculum all through.
- In the second year ,training would stress upon extending the knowledge on techniques and imparting skill for surgical performance, ophthalmic procedure based therapies, surgical/para surgical procedures **so that the scholar is able to perform ophthalmic surgical procedures like** Ashtavidha shastra karma, Trividha Anushastra Karma and Modern Ophthalmic Surgical procedures viz lid surgery, pterygium surgery, cataract surgery, squint surgery, glaucoma surgery, DCR & DCT ect **independently.**
- In the third year the scholar should concentrate on the clinical work and research work based on the dissertation.
- The participation of the scholars in all the aspects of educational process is mandatory.
- Hospital postings – The student has to work for 6 terms of resident posting is compulsory out of which first 2 postings will be as a junior resident and the next four postings will be as a senior resident.
- The student should also develop in the academic work of the department.

Pattern of Practical Examination

100 Marks

- | | |
|---|-----------|
| 1. Bed side examination | |
| Short Case 2 of 10 marks each | -20 Marks |
| Long Case | -20 Marks |
| 2. Identification of specimen / Instrument / Radiograph | -10 Marks |
| 3. Thesis Presentation / Viva | -10 Marks |
| 4. Teaching skill | -10 Marks |
| 5. Viva Voce | -30 Marks |

Reference Books

1. Charaka Samhita with commentaries
2. Sushruta Samhita and Vagbhata with commentaries

19.AYURVEDA DHANWANTRI - SHALAKYA - SHIRO- NASA-

KARNA EVUM KANTHA ROGA

PAPER – I Shiro- Nasa- Karna - Kantha Roga Vigyan Maulik Siddhanta and Vangmaya

1. Detailed study of Shalakyatantra from Bruhat trayee, Laghutrayee, Kashyap samhita, Yoga ratnakar, Chakradutta, Bhel samhita , Harita samhita and other granthas.
2. Comparative and critical study of rogas explained by various granthas.
3. Syntactical derivation, definition and importance of the word "Shalakyaa". Sequential development and history of science of ear, nose, throat and Shiras disorders. Establishment of "Superiority of shiras' among the organs. Determination and importance of the verse '**Nasa Hi Shiraso Dvaram**'. Syntactical derivation and the synonyms of the words Karna, Nasa, Kantha, Shiras etc.
4. Descriptive knowledge of the anatomy and Physiology of ear, nose, throat and Shiras as per ancient and modern science.
5. Examination of the ear, nose, kantha and shira as per Ayurveda and modern science.
6. Common etiology of ear, nose, throat and shiras disorders, their pathogenesis, prodromal symptoms, classification, clinical features and general treatment.
7. Importance of shaman and sodhana therapy in ear, nose, throat and shira disorders with general introduction to local therapeutic procedures of ear nose and throat and shira e.g. kaval, gandusha etc.
8. Detailed applied knowledge of recent advanced diagnostic and therapeutic techniques and equipments (Yantra and Shastra) used for ENT and Shira disorders.
9. General knowledge of 'vrana bandhana' (bandaging of wounds) and applied bandage in ear etc.
10. Update chronological development of ENT from Vedic period.
11. Study of essential modern drugs, anaesthetic agents of diagnostic and surgical importance.

PAPER – II Ayurvediya Shiro – Nasa - Karna - Kantha Roga Vigyan

1. Examination of the ear, nose, throat and shira patients.
2. Karna-Nasa –Kantha –and Shira rogas samkhya samprapti, descriptive knowledge of etiology, pathogenesis, prodromal symptoms, classification, clinical features, Upasaya-Anupsaya(prognostic measures) sadhyasadhyatwa and, complications of ear disorders described in the classics of Ayurved. Detail description along with practical orientation of their management.
3. Nasa rogas samkhya samprapti, descriptive knowledge, etiology, pathogenesis, prodromal symptoms, classification, clinical features, Upasaya-Anupsaya (prognostic measures), sadhyasadhyatwa and complications of nasal diseases described in the classics of Ayurved. Detail description along with practical orientation of their treatment.
4. Kantha rogas samkhyasamprapti, descriptive knowledge about etiology, pathogenesis, prodromal symptoms, classification, clinical features, Upasaya- Anupsaya (prognostic measures),sadhyasadhyatwa and complications of kantha diseases described in the classics of Ayurved. Detail description along with practical knowledge of treatment.
5. Shira and Kapala (cranial vault) disorders samkhya samprapti, descriptive knowledge, etiology, pathogenesis, prodromal symptoms, classification, clinical features, Upasaya-Anupsaya (prognostic measures) and complications of Shira and kapala diseases described in the classics of Ayurved. Detail description along with practical knowledge of treatment.

PAPER – III Adhunika Shiro- Nasa- Karna - Kantha Roga vigyan

1. Descriptive knowledge of instruments and recent equipments available for diagnosis of ear – nose – throat – head disorders along with their practical application.
2. Descriptive knowledge of etiology, pathogenesis, clinical features, differential diagnosis, classification along with complications of different ear – nose- throat and

head disorders. Detail knowledge of the treatment (including conservative and surgical) of the above mentioned disorders.

3. Imaging in ENT and Head disorders, detailed knowledge of LASERS, radiotherapy, chemotherapy and other recently advanced treatment modalities like speech therapy, cochlear implant, rehabilitation of the deaf and mute, etc. related to ear – nose – throat – and head disorders.
4. Management of emergencies in ENT and head disorders.

PAPER – IV Shiro- Nasa- Karna -Kantha Roga Vigyan Shalya Chikitsa

1. Knowledge of agropaaharniya and d trividha karma i.e pre operative, operative and post operative measures. Knowledge of eight types of surgical procedures (Astavidha Sashtra Karma) and post operative care of the patient with respect to ENT disorders (Vranitopasaniya).
2. Practical knowledge of updated surgical procedures in ear – like constructive surgery of external and middle ear, excision of pre auricular sinus, Tympanoplasty, Mastoidectomy, Stapedectomy, Endolymphatic sac surgery, Facial nerve decompression surgery, Cochlear implant, etc with their complications and their management.
3. Nose – Septo-rhinoplasty, SMR, Functional Endoscopic sinus surgery, Caldwell luc surgery, Antral puncture, Antral lavage, Turbinectomy, Polypectomy, Various surgical procedures done for malignancy of Nose and paranasal sinuses, Young's surgery, etc
4. Throat - Adenoidectomy, Tonsillectomy, Surgical procedures for pharyngeal abscesses, cauterization of pharyngeal wall granulations, tracheostomy, vocal cord surgery, surgery of vocal cord paralysis, management of laryngeal trauma, laryngectomy, etc.
5. General introduction of four treatment procedures like Bheshaj– Kshar – Agni– Shastra and Raktavsechana with their applied aspects in ear nose throat and shiro disorders . Chaturvidha upakrama in raktasandhan vidhi related to ear nose throat and head disorders. Haemostatic management in ENT.
6. Removal of foreign bodies in the ear nose throat and shira as per Ayurveda and modern science.
7. Karna-Sandhan Nasa-Sandhan, fundamental and applied aspects of Ayurveda.

Methods of Training

- Intensive integrative training would be imparted to scholars in understanding the classical Ayurvedic aspects with an emphasis of critical comparative interpretation.
- Mandatory participation of scholars in seminars, group discussions, clinical demonstrations , journal review meetings, case study, continuing education activities and research clinical projects.
- During the first year course the emphasis would be laid to impart adequate knowledge on fundamental aspects and their applications, with a focus on latest diagnostic tools , instrumentations and laboratory procedures. Practical orientation and hospital based clinical training is an integral part of the curriculum all through.
- In the second year ,training would stress upon extending the knowledge on techniques and imparting skill for surgical performance, ENT procedure based therapies, surgical/para surgical procedures **so that the scholar is able to perform ENT surgical procedures independently.**
- In the third year the scholar should concentrate on the clinical work and research work based on the dissertation.
- The participation of the scholars in all the aspects of educational process is mandatory.
- Hospital postings – The student has to work for 6 terms of resident posting is compulsory out of which first 2 postings will be as a junior resident and the next four postings will be as a senior resident.
- The student should also develop in the academic work of the department.

20. AYURVEDA DHANWANTRI -SHALAKYA - DANTA EVUM MUKHA ROGA

PAPER – I Danta evum Mukha Roga – Ayurveda Siddhanta and Vangmaya Marks 100

1. Etymology, definition and importance of the word 'Shalakya', History and development of the science of oral and dental diseases. Etymology and synonyms of the word 'Mukha' and 'Danta'. Ancient and recent knowledge of anatomy of oral cavity and teeth along with the knowledge of salivary glands.
2. Detailed study of Oral cavity and gustatory physiology.
3. Oral hygiene, Social aspect of oral hygiene, preventive measures in oral cavity diseases, general etiology, pathogenesis, prodromal symptoms, clinical features and general management of oral cavity diseases.
4. Agropaharaniya, knowledge of purva, pradhan and pashchat karma. Study of Ashta Vidha Shastra Karmas in relation to Danta and Mukha Roga.
5. Applied and detailed study of therapeutic measures for oral and dental disorders, like Kavala, Gandusha, Dhumapana, Nasya, Murdhtaila Mukhalepa and Pratisarana and their definition, types, indications, contraindications, procedure, features of proper, excess, deficient application and their management.
6. Importance of shodhan and shaman treatment in oral and dental diseases and knowledge of common recipes useful in oral and dental diseases.
7. General introduction of four types of treatment (Bheshja, Shastra, Kshara, Agni). Detail description of Anushastra karma; their practical knowledge in oral and dental diseases.
8. Analytical determination of related subjects of danta-mukha disorders available in ancient and modern commentaries of different Samhita.

PAPER – II Ayurvediya Danta evum Mukha Rog Vijnana Marks 100

1. Examination of oral cavity, periodontia and teeth. Teeth eruption and its systemic disturbances in a child, Classification, Number of teeth along with detail knowledge of abnormal tooth eruption. Dental disorders in paediatric age group, their prevention and treatment.
2. Danta gata rogas - Dental diseases detailed in the classics of Ayurved; their etiology, pathogenesis, prodromal symptoms, clinical features, complication and applied approach in the treatment of dental diseases.
3. Detailed study of etiology, pathogenesis, prodromal-symptoms, clinical features, complications and prognosis of diseases of the Danta-Mula Gata Roga (**gum-periodontia**) as detailed in the classics of Ayurved. Practical approach/orientation in Treatment of the periodontal diseases.
4. Oshtha (lip), Jihva (tongue) and Talu (palate) Rogas, detailed study of etiology, pathogenesis, prodromal - symptoms, clinical features, complications and, prognosis. Detailed description of their treatment along with practical orientation.
5. Sarvasara Mukharogas (Generalized oral diseases) available in ayurvedic classics. Detailed study of etiology, pathogenesis, prodromal-symptoms, clinical features, complications, prognosis and management of mukha rogas along with practical orientation.
6. Knowledge of Dantabhighata (dental trauma) and Mukhabhighata (oral injury) along with diagnostic and referral skills.

PAPER – III Adhunik Danta evum Mukha Rog Vijnana Marks : 100

1. Detail study of etiology, pathogenesis, clinical features, classification and complication of various oral and dental diseases available in literature of Modern sciences. Detail study of their recent available medical therapeutics.
2. Detail description of diagnostic technology in the diagnosis of oral and dental disease.
3. Study of essential modern drugs, anaesthetic agents of diagnostic and surgical importance.

4. Descriptive Knowledge of up-to-date available modern instruments and their application for examination, diagnosis and management of oral, periodontal and dental diseases.
5. Up-to-date knowledge of applied and available surgical procedures indicated in various dental diseases like tooth extraction, RCT, Dental filling, filling materials, tooth fixation and tooth implants etc.
6. Systemic Effects of oral, periodontal and dental diseases.

PAPER – IV Danta evum Mukha Rog Vijnana & Dentistry

Marks - 100

1. Jaalandhara Bandha, its importance and application in Tooth extraction without anaesthesia.
2. Vishishta Upadanta parikalpana (Dental Material and Prosthesis).
3. Recent Research studies and advanced clinical applications of Kriya Kalpas in Danta and Mukha Rogas.
4. Detailed study of recent available medical therapeutics and Research studies in Dental and oral cavity disorders.
5. Advanced diagnostic technology in Dentistry and oral pathology.
6. Benign and malignant tumors of Oral Cavity, their management and role of Ayurveda in Such conditions.
7. Useful conducts for treatment of oral and dental diseases with study of related medico-legal aspects.

Methods of Training

- Intensive integrative training would be imparted to scholars in understanding the classical Ayurvedic aspects with an emphasis of critical comparative interpretation.
- Mandatory participation of scholars in seminars, group discussions, clinical demonstrations, journal review meetings, case study, continuing education activities and research clinical projects.

18. Oral Pathology - Stone

21. PANCHKARMA

PAPER-I Purva Karma-Snehana and Svedana

1. Panchkarma in Ashtanga Ayurved and Significance of Shodhana
2. Ama and Shodhana, benefits of Shodhana, Samikshya Bhavas in Shodhana,
3. Importance of Pachana prior to Snehana, methods, drugs, duration and dose for Pachana, samyak Lakshana of Pachana

Snehana

1. Etymology and definition of Sneha and Snehana
2. General considerations about Snehana
3. Classifications of Sneha, Sneha-Yoni, detailed knowledge of four types main Sneha- Ghrita, Taila, Vasa and Majja with their characteristics, importance and utility, various aspects of Uttama Sneha
4. Properties of Snehana Dravya and their interpretation
5. Effects of Snehana
6. Sneha Kalpana, various types of Sneha Paka with their utility
7. Indications and contraindications of Snehana
8. Classification of Snehana: Bahya and Abhyantara Snehana
9. Bahya Snehana and Bahir-Parimarjana, utility and importance of Bahya Snehana
10. Classification of Bahya Snehana
Methods, indications, contraindications, specific utility of the followings Abhyanga, Mardana, unmardana, Padaghta, Samvahana, Udvartana/Utsadana, Udgharshana, Avagaha, Pariseka, Lepa, Pralepa, updeha, Gandusha, Kavala; Karana and Nasa Purna, Akshi Tarpana; Murdhni Taila: Shiro-abhyanga, Shirodhara, Siro Pichu and Siro Basti, Shiro Lepa (Talapotichil), Talam and Takradhara, etc.
11. Knowledge of digestion and metabolism of fat
12. Karmukata of Abhyantara and Bahya Snehana
13. Knowledge of different western massage techniques
14. Abhyantara Snehana: Brimhnartha, Shamanartha and Shodhanartha, definition, method and utility of Brimhanartha and shamanrtha Snehana; difference between Shamanartha and Shodhanartha Snehana
15. Methods of Abhyantar Snehana
16. Shodhanartha Snehana: Acchapana and Vicharana, Utility and various methods of Sadyasnehana, Avapidaka Sneha
17. Matra of Sneha : Hrasiyasi, Hrasva, Madhyama and Uttma Matra with their indications, specific utility of Ghrita, taila, Vasa and majja; Anupana of Sneha
18. Need and method of Rukshana before performing Snehana in specific conditions and Samyak Rukshana Lakshana
19. Shodhannga Snehana Vidhi and methods of fixation of dose
20. Diet and Pathya during Snehana
21. Observation of sneha Jiryamana, Jirna and Ajirna Lkashana
22. Samyak, Asnigdha and Ati Yoga Lakshana of Snehana
23. Snehs vyapta and their management
24. Pariharya vishaya and Parihara Kala

Svedana

1. Etymology and definition of Svedana
2. General considerations about Svedana
3. Properties of Svedan and Svedopaga Dravya
4. Indications and contraindications of Svedana
5. Various Classifications of Sveda and Svedna
6. Detailed knowledge of four types of Sveda of Sushruta with their utility;

7. Hina, Mridu, Madhya and Mhana Sveda; Ekanga and Sarvanga sveda with their utility
8. Utility and method of each of 13 types of Sagni and 10 types of Niragni Sveda
9. Shodhannga and Samshamaniya Sveda
10. Methods to protect the vital organs (varjya anga) during Svedan Procedure
11. Detailed Knowledge about Utility of below mentioned Svedan procedures:- Patrapinda Sveda, Shashtika Shalipinda Sveda, Churna Pinda Sveda, Jambira Pinda Sveda, Dhanya Pinda Sveda, Kukkutanda Sveda, Anna Iepa, Valuka Sveda, Ishtika Sveda, Nadi Sveda, Bashpa Sveda, Kshira bashpa Sveda, Avagaha Sveda, Parisheka Sveda, Pizichil, Dhanyamla Dhara, Kashaya Dhara, Kshira Dhara and Upanaha Sveda.
12. Avasthanusari Svedana in various disorders
13. Samyak, Ayoga and Atiyoga Lakshana, Sveda Vyapat and their management
14. Diet and regimens during and after Svedana
15. Karmukata of Svedana
16. Current sudation modalities like Sauna bath, Steam Bath, Infrared, etc.
17. Svedana with Kati Basti, Janu Basti and Griva Basti
18. Study of Snehana and Svedana related portions in classics with commentaries

PAPER – II Vamana and Virechana Karma

Vamana Karma

1. Etimology, definition and general considerations of vamana
2. Properties of Vamaka and Vamanopaga drugs
3. Knowledge and utility of important Vamaka drugs and their preparations (Vamana Yoga)
4. Avasthanusara Vamana and its utility.
5. Indications of Vamana
6. Contraindications of Vamana with reasons
7. Pachana prior to Snehana
8. Detailed knowledge and method of preparation of patient with Snehana
9. Abhyanga and Svedana as Purvakarma of Vamana
10. Diet and management of gap day
11. Need of increasing of Kapha for proper Vamana, Kapha increasing diet
12. Management of Patients on the morning of Vamana
13. Administration of food articles prior to Vamana
14. Drug, time, Anupana, Sahapana, dose and method of administration of Vamana and Vamanopaga preparations
15. Method of Vamana Karma, waiting period for automatic Vamana Vega and manipulation in its absence
16. Observations prior to beginning of Vamana such as sweat on forehead, horripilation, fullness of stomach and nausea
17. Observation and assistance of the patient during Vamana
18. Vega and Upavega of Vamaana and its counting, observations and preservation of vomitus matter and its weighing
19. Samyak, Ayoga and Atiyoga of Vamana
20. Laingiki, Vaigiki, Manaki and Antiki Shuddhi,
21. Hina, Madhya and Pravara Shddhi and Samsajana Krama accordingly
22. Detail knowledge of methods of Samsarjana Krama and its importance
23. Kavala and Dhumapana after vamana
24. Management of Ayoga, Atiyog and Vyapat of Vamana with Ayurveda and modern drugs
25. Parihara Vishaya and Kala for Vamana

26. Vamana Karmukata with Pharmaco-dynamics of Vamana

Virechana Karma

1. Etymology, definition and general considerations of Virechana
2. Importance of Vamana and Virechana as shodhana, Virechana better than Vamana
3. Necessity of Vamana prior to Virechana
4. Preparation of patients for Virechana after Vamana
5. Preparation of patients directly for Virechana
6. Properties of main Virechaka and Virechanopaga drugs, Classifications of Virechana drugs with definition, example and utility of each type
7. Indications of Vamana Karma
8. Contraindications of Virechana with reasons
9. Utility of Virechana for the specific conditions and stages of the disease
10. Internal Snehana for Virechana with diet
11. Management of 3 gap day with diet and importance of low Kapha for proper Virechana
12. Abhyanga and Svedhana as Purvakarma of Virechana
13. Management of Patients on the morning of Virechana
14. Virechana should be performed in empty stomach
15. Drug, dose, time, Anupana, sahapana and method of administration of Virechana and Virechanopaga preparations
16. Method of performing of Virechana Karma
17. Observations during Virechana, Vega and Upavega of Virechana and its counting, observations and preservation of feces and its weighing
18. Samyak, Ayoga and Atiyoga of Virechana
19. Laingiki, Vaigiki, Manaki and Antiki Shuddhi of Virechana
20. Hina, Madhya and Pravara Shddhi and Samsajana Krama accordingly
21. Detail knowledge of methods of Samsarjana Krama and its importance, and Tarpana krama and its importance
22. Management of Ayoga, Atiyog and Vyapat of Virechana with Ayurveda and modern drugs
23. Parihara Vishaya and Kala for Virechana
24. Virechana a Karmukata with Pharmaco-dynamics of Virechana
25. Applied anatomy and physiology of Gastrointestinal system related with Vamana and Virechana
26. Study of Vamana and Virechana related portions in classics with commentaries
27. Recent advances of researches on the effect of Vamana and Virechana
28. Scope of research for Vamana and Virechana.
29. Role of Vamana and virechana in promotion of health prevention and treatment of diseases

PAPER – III Basti Karma and Nasya Karma

Basti Karma

1. Etymology, definition and general considerations of Basti
2. Importance of Basti in Kayachikitsa and other branches of Ayurveda
3. Classifications of Basti
4. Drugs useful in Basti
5. Indications of Basti, its role at the various stages of diseases
6. Contraindications of Basti with reasons
7. Description of Basti yantras, Basti netra and Basti putaka and their Doshas. Modified Basti Yantra, their merits and demerits

8. Dose schedules of Niruha and Anuvasana basti

Niruha basti

Etymology, synonyms, definition and classifications and subclassifications of Niruha Basti and detailed knowledge of each type of Niruha Basti along with indications and contraindications and benefits

Contents of various types of Niruha Basti, their proportions, methods of mixing basti Dravya,

Relation of Virechana, Shodhana, Anuvasana Basti with Niruha Basti

Purvakarma for Niruha Basti; Pathya before, during and after Niruha Basti; all the aspects of administration of various Niruha Basti

Observations during and after Niruha Basti

Basti Pratyagamana,

Samyakyoga, Ayoga and Atiyoga Lakshana and Various Vyapat of Niruha Basti and their management according to Ayurved and Modern Systems of Medicines

Management during and after Niruha Basti

Pariharya vishaya and pariharakala,

Anuvasana basti

Etymology, synonyms, definition and classifications of Anuvasana Basti and detailed knowledge of each type of Anuvasana Basti along with indications and contraindications and benefits

Various types of Ghrita and Taila useful in Anuvasana Basti; Anuvasana Basti with Vasa and Majja along with their merits and demerits

Relation of Virechana, Shodhana, Niruha Basti, Snehana with Anuvasana Basti

Purvakarma for Anuvasana Basti; Pathya before, during and after Anuvasana Basti; all the aspects of administration of Anuvasana Basti including Kala

Observations during and after Anuvasana Basti

Anuvasana Basti Pratyagamana,

Samyakyoga, Ayoga and Atiyoga Lakshana and Various Vyapat of Anuvasana Basti and their management.

Management during and after Anuvasana Basti

Pariharya vishaya, Pathya and pariharakala for Anuvasana

Various combined basti schedules such as Karma, Kala, yoga Basti etc.

Detailed knowledge of Matra Basti

Detailed Knowledge of different basti formulations like Piccha Basti, Kshira Basti, Yapana Bastis, Madhutailika Basti, Erandamuladi Niruha Basti, Panchaprasrutika Basti, Kshara Basti, Vaitarana Basti, Krimighna Basti, Lekhana Basti, Vrishya Bsti, Manjishtadi Niruha Basti, Dashamula Basti, Ardhamatrika Basti, Sarva roghara Niruha Basti, Brimhana Basti, Vataghna Basti, Pittaghna Basti and Kaphaghna Basti etc, and their practical utility.

Uttara basti

1. Definition and Classification of Uttara Basti, its Netra and Putaka. Dose of Uttara Basti Sneha and Kashaya Basti. Different Uttara Basti Kalpanas in various diseases.
2. Detailed knowledge of Purvakarma and Administration of Uttara Basti in male and female, precautions, aseptic measures, complications and their management
Karmukata of Basti. Applied anatomy and physiology of colon, Pharmacodynamics of Basti.
3. Concept of 'Gut Brain' and its relevance to Basti Therapy.
4. Study of relevant portions of Basti in classics with commentaries.

Nasya Karma

1. Etymology, synonyms, importance and definition of Nasya
2. Nasya drugs according to various Samhita

3. Classifications and sub-classifications of Nasya with detailed knowledge of each type
4. Indications and contraindications of each type of Nasya with reasons
5. Drugs useful for Nasya with Dose and methods of preparations and their doses
6. Nasya Kala and Pathya before, during and after Nasya; Duration of different Nasyas
7. Purvakarma of each types of Nasya
8. Detailed knowledge of administration of each type of Nasya with management during and after Nasya.
9. Detailed knowledge of common Nasya formulations such as Shadabindu Taila, Anu taila, Kshirabala Taila, Karpasastyadi Taila, Bramhi Ghrita.
10. Samyak yoga, Ayoga and Atiyoga of each types of Nasya, its Vyapat and their management
11. Pashchata Karma; Role of Dhumapana, Kavala after Nasya,
12. Diet and Pathya before, during and after Nasya Karma
13. Pariharya vishaya, Parihara Kala,
14. Nasya Karmukata, Applied anatomy and physiology related to Nasa hi Sirso Dvaram, blood and nerve supply to nose, Shringataka marma, olfactory nerve and centers, aroma therapy, trans nasal administration of drug, recent advances in nasal drug delivery
15. Study of relevant portion in classics with commentaries

PAPER – IV Raktamokshana, Physiotherapy and Diseasewise Panchakarma

A. Raktamokshana-33 Marks

1. Definition, importance, classifications and detailed knowledge of each type of Raktamokshana with their methods of performance
2. General principles, indications, contraindications of Raktamokshana
3. Detailed knowledge of Jalaukavacharana: Indications and contraindications of Jalaukavacharana, various tyoes of Jalauka with their beneficial and harmful effects.
4. Purvakarma and method of Jalaukavacharana, observations and Pathya before, during and after Jalaukavacharana
5. Management during and after Jalaukavacharana
6. Symptoms of Samyak, Ayoga and Atiyoga and Vyapat of of Raktamokshana and their management with Ayurveda and Modern medicines.
7. Pariharya vishaya and Parihara kala
8. Karmukata of different types of Raktamokshana

B. Clinical Physical Medicine-33 Marks

1. Definitions and terminology
2. Biomechanics of human movements; Physiology of exercise
3. Treatment modalities used in Physical Medicine- general properties and detailed clinical use of each
 - a. Heat – general physiological properties and mode of action as a treatment agent, Forms of heat therapy – superficial and deep heating. General knowledge of Infrared, Paraffin Wax bath, short wave diathermy, electro magnetic therapy, ultra sound therapy, convection heating devices,
 - b. Cold as a therapeutic agent
 - c. Prescription of physical modalities and their applications in medicine.
4. Clinical use of massage, manipulation, stretching
5. Principles of occupational therapy, training in activities of daily living for rehabilitation, self-help devices (walking aids, wheelchairs, tricycles & modified vehicles), instrumental activities of daily living,
6. Physiotherapy exercises for Paralytical disorders, cervical spondylosis, frozen shoulder and slip disc.

C. Disease-wise Panchakarma-34 Marks

Role of Panchakarma in Different Stages of the following Diseases:

Jvara, Raktapitta, Madhumeha, Kushtha, Shvitra, Unmada, Apasmara, Shotha, Plihodara, Yakridaluodara, jalodara,, Arsha, Grahani, Kasa,Tamaka Shwasa, Vatarakta, Vatavyadhi, Amlapitta, Parinama Shula, Ardhavabhedaka, Ananta Vata,, Amavata, Sheetapitta, Shleepada, Mutrakruchchra, Mutrashmari, Mutraghata, Hrudroga, Pinasa, Drushtimandya, Pandu, Kamala, Sthaulya, Krimi, Madatyaya, Moorchcha, Padadari, Mukhadushika, Khalitya, Palitya,

Use of Various panchakarma Procedures in the following disorders -

Migraine, Parkinson's Disease, trigeminal neuralgia, Bell's palsy, cerebral palsy, Muscular dystrophy, hemiplegia, paraplegia, Lumbar Disc disorders, Spondylolisthesis, Ankylosing spondylosis, Carpel Tunnel Syndrome, Calcaneal Spur, Plantar fasciitis, GB syndrome, Alzhiemer's disease, Irritable Bowel Syndrome, ulcerative colitis, psoriasis, hypothyroidism, hyperthyroidism, hypertension, allergic rhinitis, , Eczema, diabetes mellitus, Chronic obstructive pulmonary Disease, Insomnia, Rheumatoid Arthritis, Gout, Osteoarthritis,multiple sclerosis, SLE, male & female infertility, cirrhosis of liver, Jaundice, General Anxiety Disorders,

22.Chhaya Avum Vikiran Vigyan

Paper-1 Fundamentals of Chhaya Avum Vikiran Vigyan (Radio-diagnosis & Imaging)

Part-A

Detail knowledge of principles of Ayurveda and their applied aspects, specially Panch Mahabhuta, Dosh, Dhatu, Mala, Panch Nidan, Prakriti, Shatkriyakaal, Praman, Chhya-Pratichchhaya , Prabha, , Rogi pariksha (Trividha, Shatvidha especially Darshan pariksha),their relevance with Chhaya avum Vikiran Vigyan.

-Study of Ayurvedic classics and modern Medical Science texts related to Chhaya avum vikiran vigyan

- Chhaya avum Vikiran vigyan as a means of Darshan priksha.

Part-B

- Infrastructure of an ideal Chhaya avum vikiran unit.
- Fundamental principles of Chhaya avum vikiran vigyan
- Detail knowledge of equipments (yantra) used in Chhaya avum Vikiran Vigyan.
- Dark room techniques
- Ionizing and non ionizing energies related to Chhaya avum Vikiran Vigyan - relevant hazards, prevention and precautions, their management by Ayurvedic and modern measurements.
- Trividh Karma –Poorva ,Pradhan avum Pashchat Karma in Chhaya avum Vikiran Vigyan
- Occupational physical disorders of consultants related to Radio-diagnosis and imaging.

Paper-2 Applied Anatomy, Physio-pathology and Procedures in Chhaya avum Vikiran Vigyan (Radio-diagnosis & Imaging)

Part-A

Applied Anatomy, Physiology & Pathology in Chhaya avum vikiran Vigyan (Radio-diagnosis & Imaging)

Detail knowledge of Ayurvedic and Modern applied radiological Anatomy (including sectional), Physiology and Pathology of the human body;

1. Sira(Vessels), Gaurya Sira, (Lymphatic channels), Mansa (Muscles), Snayu (Ligaments), Kandara (Tendons), Sandhi(Joints), Nadi(Nerve), Asthi(Bones), Strotas,Marma, Antahsraivi granthi (Endocrine glands) etc.
2. Urdhwajatrugata(Supraclavicular) parts-Kapaal(Skull),Karna(Ears),Chakshu(Eyes), Nasa(Nose), Paranasal sinuses, Lalagranthi(Salivary glands), Face, Greeva(Neck), Sushumna(Spinal cord) and Kaseruka (vertebrae), Mukha(Mouth), Danta(Teeth), Mastulunga(Brain), Lasika granthi(Lymph glands)etc.
3. Koshtha (Trunk) parts-Sushumna(Spinal cord) and Kaseruka(vertebrae).
 - a. Vaksha(Thoracic)parts-Phuphphus(Lungs),Hridaya(Heart)&Sira(Vessels), Shwashnalika (Trachea, Bronchi), Annamarg (Esophagus), Lymph nodes, Kooch (Breast), Hridayabandhan (Diaphragm)etc.
 - b. Udar(Abdominal)parts- Audaryyakalaa (Peritoneum) Aamashaya(Stomach) , Kshudrant (Smallintestine), Vrihadantra (Large intestine), Guda(Rectum and Anal canal), Aantrapuchchha (Appendix) , Yakrit(Liver), Tilam(Gall bladder), Billiary channels, Pleeaha(Spleen), Agnyashaya(Pancreas), Vrikka (Kidney),Gavini(ureter), Basti(urinarybladder), Shishna(penis),Paurushgranthi (prostate) ,Vrishan(testes),Shukrashaya (seminalvesicles),Dimbashaya(ovaries), Perineum Garbhashaya(uterus), Yoni, Dimbvahini(fallopian tubes), Lasika granthi (lymph nodes) etc.
4. Shakha-parts of upper and lower extremities.

Part –B Procedures in Chhaya avum Vikiran Vigyan (Radio-diagnosis & Imaging)

- Various routine and special, non-contrast and contrast radiography, Digital radiography, Radiographic positions and views.
- Various Ultra Sonographic procedures -Various diagnostic and therapeutic Ultrasonography [routine,,joint study, various Endo-USG, Obstetrics -Garbha vinishchaya (confirmation of pregnancy) , Masanumas Garbh vridhhi (fetal development), Garbha swastha (fetal well being) and Vyadhi (fetal diseases) ,Vikrita garbha (congenital anomalies) . Aparā (Placenta) , Nabhinadi darshan (umbilical cord),Garbhapatta (abortion) Aparā / Garbhaavayav Apaatan (Retained conceptual products), Gynaecology –Yonivyapat (gynaecological disorders), Bandhyatva (infertility) , Garbhashayabhransha (uterine prolapse)etc. Dopplers USG guided techniques and other advances.
- CT, MRI, Radionuclide scanning, PET and other recent advanced procedures in Radio-diagnosis & Imaging.
Mammography
Bone Densitometry
Interventional radiology

Paper 3 *Physics and Biology related to Chhaya avum Vikiran Vigyan(Radio diagnosis & Imaging)*

Part-A

- Physics of radiography, Digital radiography, Fluoroscopy, their application.
- Physics of ultrasonography, its applied aspect related to various U.S.G, Doppler procedures.
- Study of contrast materials used in Radio-diagnosis and imaging.

Part-B

- Physics of CT scan, its applied aspect, efficiency and limitations.
- Physics of MRI, its applied aspect, efficiency and limitations.
- Physics and its applied aspect related to other imaging procedures e.g. PET, Radio-Nuclides imaging etc.
- Biology related to Chhaya avum Vikiran Vigyan

Paper-4th *Applied Chhaya avum Vikiran Vigyan (Radio-diagnosis & Imaging)*

Part-A

Applied aspects of radiographic interpretation and reporting of various diseases related to systems, organs (as mentioned in paper-2nd, part-A) and metabolism.

Part-B

- Applied aspects of Ultrasonography, interpretation and reporting of various diseases related to system, organ (as mentioned in paper-2nd, part-A,) and metabolism, routine joint study, various Endo-USG. , Obstetrics -Garbha vinishchaya (confirmation of pregnancy) , Masanumas Garbh vridhhi (fetal development), Garbha swastha (fetal well being,bio-physical profile) and Vyadhi (fetal diseases) ,Vikrita garbha (congenital anomalies,2nd level obstretic USG) . Aparā (Placenta) , Nabhinadi darshan (umbilical cord),Garbhapatta (abortion) Aparā / Garbhaavayav Apaatan (Retained conceptual products), Gynaecology –Yonivyapat (gynaecological disorders), Bandhyatva (infertility) , Garbhashayabhransha (uterine prolapse)etc. Dopplers, USG guided techniques and other advances..
- Applied aspect , interpretation and reporting of CT scan, MRI scan and other advanced Radiological techniques.

- Application of Chhaya avum vikiran vigyan in context to Ayurvedic fundamentals, diagnosis, management and research.

Reference Books;

Shusruta Samhita	Relevant part
Charak Samhita	- do-
Astang Hridaya/Sangrah	- do-
Text Book of Radiographic Positioning and Related Anatomy	- By Kenneth L Bontrager, John P Lampignano
Radiographic interpretation to general practitioner	-W.H.O.
Procedures in diagnostic Radiology	- By T. Doyle, W. have, K. Thomson.
Radiographic positioning	- By Clark
Radiobiology for the Radiologist	- By Hall.Christensen's
Physics of Diagnostic Radiology	- By Curry T S , Dowdey J E , Murry R C
Farr's Physics for Medical Imaging	- By Penelope Allisy-Roberts , jerry Williams
Fundamental of Diagnostic Radiology	- By Brant.
Diagnostic Imaging	- By Federle
Diagnostic Imaging	- By Peter Armstrong , Martin Wastie , Ansrea Rockall
Gastrointestinal radiology	- R.L. Eisenberg
Uro-radiology	- T.Sherwood, A.J.Davidson, .B.Talner
Grainger and Allison's Diagnostic Radiology	-Text book of medical imaging
Text Book in Radiology and Imaging	- By D. Sutton.
Introduction to Vascular Ultrasonography	- By Zwiebel , Pellerito
Text book in Ultrasonography	- By Roumack
Manual of Medical Diagnostic Ultrasonography	- By W.H.O. Scientific group.
Computed Tomography & MRI of the whole body	- By Hagga.
Surface and Radiological Anatomy	- By A. Halim
X-Ray equipment for student Radiographers	- By DN and MO Chesney
Clinical Sonography , A Practical Guige	- By Roger C. Sanders ,
Tom Winter	
Ultrasonography in obstretics and gynaecology	-Callen

SYLLABUS FOR POST – GRADUATE COURSE IN AYURVED

Preliminary Examination

I.		2-10
RESEARCH METHODOLOGY AND BIOSTATISTICS		
II. CONCERN SUBJECT :-		
1. AYURVED SAMHITA & SIDDHANTA		11-12
2. RACHANA SHARIR		INDEX
3. KRIYA SHARIR		15-17
4. DRAVYAGUNA VIGYAN		18-20
5. RASA SHASTRA & BHAISHAJYA KALPANA		21-24
6. AGADA TANTRA EVUM VIDHI VAIDYAKA		25-27
7. SWASTHAVRITTA		28-30
8. ROGANIDAN EVUM VIKRITI VIGYAN		31-32
9. CHHAYA EVUM VIKIRAN VIGYAN		33-35
10. KAYACHIKITSA		36-37
11. MANOVIGYAN EVUM MANASROGA		38-40
12. RASAYAN & VAJIKARAN		41-42
13. PANCHKARMA		43-44
14. PRASUTI EVUM STRI ROGA		45-46
15. KAUMARBHRITYA-BALA ROGA		47-48
16. SHALYA -SAMANYA		49-51
17. SHALYA - KSHAR EVUM ANUSHAstra KARMA		52-54
18. ASTHI SANDHI AND MARMAGAT ROGA		55-57
19. SANGYAHARAN		58-59
20. SHALAKYA - NETRA ROGA		60-61
21. SHALAKYA – DANTA EVUM MUKHA ROGA		62-63
22. SHALAKYA- SHIRO-NASA-KARNA EVUM KANTHA ROGA		64-65

PG 1st Year Syllabus-1

M.D./M.S.-AYURVEDA PRELIMINARY

PAPER-I

RESEARCH METHODOLOGY AND MEDICAL STATISTICS

PART-A
RESEARCH METHODOLOGY

- 1 **Introduction to Research**
 - A. Definition of the term research
 - B. Definition of the term anusandhan
 - C. Need of research in the field of Ayurveda

- 2 **General guidelines and steps in the research process**
 - A. Selection of the research problem
 - B. Literature review: different methods (including computer database) with their advantages and limitations
 - C. Defining research problem and formulation of hypothesis
 - D. Defining general and specific objectives
 - E. Research design: observational and interventional, descriptive and analytical, preclinical and clinical, qualitative and quantitative
 - F. Sample design
 - G. Collection of the data
 - H. Analysis of data.
 - I. Generalization and interpretation, evaluation and assessment of hypothesis.
 - J. Ethical aspects related to human and animal experimentation.
 - K. Information about Institutional Ethics Committee (IEC) and Animal Ethics Committee (AEC) and their functions. Procedure to obtain clearance from respective committees, including filling up of the consent forms and information sheets and publication ethics.

- 3 **Preparation of research proposals in different disciplines for submission to funding agencies taking EMR-AYUSH scheme as a model.**

4. **Scientific writing and publication skills.**
 - a. Familiarization with publication guidelines- Journal specific and CONSORT guidelines.
 - b. Different types of referencing and bibliography.
 - c. Thesis/Dissertation: contents and structure
 - d. Research articles structuring: Introduction, Methods, Results and Discussions (IMRAD)

- 5 **Classical Methods of Research.**

Concept of Pratyakshadi Pramana Pariksha, their types and application for Research in Ayurveda.

Dravya-, Guna-, Karma-Parikshana Paddhati
Aushadhi-yog Parikshana Paddhati
Swastha, Atura Pariksha Paddhati
Dashvidha Parikshya Bhava
Tadvidya sambhasha, vadmarga and tantrayukti

- 6 **Comparison between methods of research in Ayurveda (Pratigya, Hetu, Udaharana, Upanaya, Nigaman) and contemporary methods in health sciences.**

PG 1st Year Syallabus-2

7. Different fields of Research in Ayurveda

Fundamental research on concepts of Ayurveda

- a. Panchamahabhuta and tridosha.
- b. Concepts of rasa, guna, virya, vipak, prabhav and karma
- c. Concept of prakriti-saradi bhava, ojas, srotas, agni, aam and koshta.

8. Literary Research-

Introduction to manuscriptology: Definition and scope. Collection, conservation, cataloguing. Data mining techniques, searching methods for new literature; search of new concepts in the available literature. Methods for searching internal and external evidences about authors, concepts and development of particular body of knowledge.

9. Drug Research (Laboratory-based)- Basic knowledge of the following:

Drug sources: plant, animal and mineral. Methods of drug identification.

Quality control and standardization aspects: Basic knowledge of Pharmacopoeial standards and parameters as set by Ayurvedic Pharmacopoeia of India.

Information on WHO guidelines for standardization of herbal preparations. Good Manufacturing Practices (GMP) and Good Laboratory Practices (GLP).

10. Safety aspects: Protocols for assessing acute, sub-acute and chronic toxicity studies. Familiarization with AYUSH guidelines (Rule 170), CDCSO and OECD guidelines.

11. Introduction to latest Trends in Drug Discovery and Drug Development

-Brief information on the traditional drug discovery process

-Brief information on the latest trends in the Drug Discovery process through employment of rational

approach techniques; anti-sense approach, use of micro and macro-arrays, cell culture based assays, use of concepts of systems biology and network physiology
-Brief introduction to the process of Drug development

12. Clinical research:

Introduction to Clinical Research Methodology identifying the priority areas of Ayurveda

Basic knowledge of the following:-

Observational and Interventional studies

Descriptive & Analytical studies

Longitudinal & Cross sectional studies

Prospective & Retrospectives studies

Cohort studies

Randomized Controlled Trials (RCT) & their types

Single-case design, case control studies, ethnographic studies, black box design, cross-over design, factorial design.

Errors and bias in research.

New concepts in clinical trial- Adaptive clinical trials/ Good clinical practices (GCP)

Phases of Clinical studies: 0,1,2,3, and 4.

Survey studies -

Methodology, types, utility and analysis of Qualitative Research methods. Concepts of in-depth interview and Focus Group Discussion.

13. Pharmacovigilance for ASU drugs. Need, scope and aims & objectives. National Pharmacovigilance Programme for ASU drugs.

14. Introduction to bioinformatics, scope of bioinformatics, role of computers in biology. Introduction to Data base- Pub med, Medlar and Scopus. Accession of databases.

15. Intellectual Property Rights- Different aspect and steps in patenting. Information on Traditional Knowledge Digital Library (TKDL).

PG 1st Year Syallabus-3

PART-B

40 marks

MEDICAL STATISTICS

Teaching hours: 80

- 1 **Definition of Statistics** : Concepts, relevance and general applications of Biostatistics in Ayurveda
- 2 **Collection, classification, presentation, analysis and interpretation of data** (Definition, utility and methods)
- 3 **Scales of Measurements** - nominal, ordinal, interval and ratio scales.
Types of variables – Continuous, discrete, dependent and independent variables.
Type of series – Simple, Continuous and Discrete
- 4 **Measures of Central tendency** – Mean, Median and Mode.
- 5 **Variability:** Types and measures of variability – Range, Quartile deviation, Percentile, Mean deviation and Standard deviation
- 6 **Probability:** Definitions, types and laws of probability,
- 7 **Normal distribution:** Concept and Properties, Sampling distribution, Standard Error, Confidence Interval and its application in interpretation of results and normal probability curve.
- 8 **Fundamentals of testing of hypotheses:**
Null and alternate hypotheses, type I and type 2 errors.
Tests of significance: Parametric and Non-Parametric tests, level of significance and power of the test, 'P' value and its interpretation, statistical significance and clinical significance
- 9 **Univariate analysis of categorical data:**
Confidence interval of incidence and prevalence, Odds ratio, relative risk and Risk difference, and their confidence intervals
- 10 **Parametric tests:** 'Z' test, Student's 't' test: paired and unpaired, 'F' test, Analysis of variance (ANOVA) test, repeated measures analysis of variance
- 11 **Non parametric methods:** Chi-square test, Fisher's exact test, McNemar's test, Wilcoxon test, Mann-Whitney U test, Kruskal – Wallis with relevant post hoc tests (Dunn)
- 12 **Correlation and regression analysis:**
Concept, properties, computation and applications of correlation, Simple linear correlation, Karl Pearson's correlation co-efficient, Spearman's rank correlation.
Regression- simple and multiple.

- 13 **Sampling and Sample size computation for Ayurvedic research:**
Population and sample. Advantages of sampling, Random (Probability) and non random (Non-probability) sampling. Merits of random sampling. Random sampling methods- simple random, stratified, systematic, cluster and multiphase sampling. Concept, logic and requirement of sample size computation, computation of sample size for comparing two means, two proportions, estimating mean and proportions.
- 14 **Vital statistics and Demography:** computation and applications - Rate, Ratio, Proportion, Mortality and fertility rates, Attack rate and hospital-related statistics
- 15 **Familiarization with the use of Statistical software** like SPSS/Graph Pad

PG 1st Year Syllabus-4

PRACTICAL**100 marks****I. RESEARCH METHODOLOGY****Teaching hours 120****PRACTICAL NAME**

- 1 **Pharmaceutical Chemistry**
Familiarization and demonstration of common lab instruments for carrying out analysis as per API
- 2 **Awareness of Chromatographic Techniques**
Demonstration or Video clips of following:
 - Thin-layer chromatography (TLC).
 - Column chromatography (CC).
 - Flash chromatography (FC)
 - High-performance thin-layer chromatography (HPTLC)
 - High Performance (Pressure) Liquid Chromatography (HPLC)
 - Gas Chromatography (GC, GLC)
- 4 **Pharmacognosy**
Familiarization and Demonstration of different techniques related to:-
Drug administration techniques- oral and parenteral.
Blood collection by orbital plexuses puncturing.
Techniques of anesthesia and euthanasia.
Information about different types of laboratory animals used in experimental research
Drug identification as per API including organoleptic evaluation
- 5 **Pharmacology and toxicology**
Familiarization and demonstration of techniques related to pharmacology and toxicology
- 6 **Biochemistry (Clinical)**
Familiarization and demonstration of techniques related to basic instruments used in a clinical biochemistry laboratory – semi and fully automated clinical analyzers, electrolyte analyzer, ELISA- techniques, nephelometry.
Demonstration of blood sugar estimation, lipid profiles, kidney function test, liver function test. HbA1, cystatin and microalbumin estimation by nephelometry or other suitable techniques.
Interpretation of the results obtained in the light of the data on normal values.
- 7 **Clinical Pathology**
Familiarization and demonstration of techniques related to basic and advanced instruments used in a basic clinical pathology lab. Auto cell counter, urine analyzer, ESR, microscopic examination of urine.
- 8 **Imaging Sciences**
Familiarization and demonstration of techniques related to the imaging techniques.
Video film demonstration of CT-Scan, MRI-scan and PET-scan.
- 9 **Clinical protocol development**

PG 1st Year Syllabus-5

II. MEDICAL STATISTICS**Practical hours:20****Statistical exercise of examples from Topic number 4, 5, 8-12, 14, 15.****Records to be prepared.****Distribution of marks (practical):**

- | | |
|--|------------|
| 1. Instrumental spotting test | – 20 marks |
| 2. Clinical protocol writing exercise on a given problem | – 20 marks |
| 3. Records: | |

- | | |
|-------------------------|-----------|
| 4. Research methodology | -10 Mark |
| 5. Medical statistics | -10 marks |
| 6. Viva- Voce | -40 Marks |

REFERENCE BOOKS:-**Pharmacognosy:**

1. Aushotosh Kar "Pharmacognosy & Pharmacobiotechnology" New Age International Publisher. Latest Edition. New Delh
2. Drug Survey by Mayaram Uniyal
3. Fahn A (1981). Plant Anatomy 3rd Edition Pergamon Press, Oxford
