<b>UNIT - VI</b>	<b>Kinetics of a Particle</b>	<b>(06 Hours)</b>
	D'Alemberts Principle, Work-Energy Principle and Impulse-Momentum Principle, Coefficient of Restitution, Direct Central Impact.	
<b>Term Work:</b>		
A) The term-work shall consist of minimum <b>Five</b> experiments from list below.		
1. Determination of reactions of Simple and Compound beam.		
2. Study of equilibrium of concurrent force system in a plane.		
3. Determination of coefficient of friction for Flat Belt.		
4. Determination of coefficient of friction for Rope.		
5. Study of Curvilinear motion.		
6. Determination of Coefficient of Restitution.		
B) The term-work shall also consist of minimum <b>Five</b> graphical solutions of the problems on different topics.		
<b>Text Books:</b>		
1) "Engineering Mechanics (Statics and Dynamics)", Hibbeler R.C., McMillan Publication.		
2) "Vector Mechanics for Engineers-Vol.-I and Vol.-II (Statics and Dynamics)", Beer F.P. and Johnston E.R., Tata McGraw Hill Publication.		
3) "Engineering Mechanics", Bhavikatti S.S. and Rajashekarappa K.G., New Age International (P) Ltd.		
<b>Reference Books:</b>		
1. "Engineering Mechanics (Statics and Dynamics)", Shames I.H., Prentice Hall of India (P) Ltd.		
2. "Engineering Mechanics (Statics and Dynamics)", Singer F.L., Harper and Row Publication.		
3. "Engineering Mechanics (Statics and Dynamics)", Meriam J.L. and Kraige L.G., John Wiley and Sons Publication.		
4. "Engineering Mechanics (Statics and Dynamics)", Timoshenko S.P. and Young D.H., McGraw Hill Publication.		
5. "Engineering Mechanics (Statics and Dynamics)", Tayal A.K., Umesh Publication.		
6. "Engineering Mechanics-I and II (Statics and Dynamics)", Mokashi V.S., Tata McGraw Hill Publication.		
<b>Syllabus for Unit Test:</b>		

**BHARATI VIDYAPEETH  
DEEMED UNIVERSITY, PUNE**

Unit Test -1	UNIT – I to III
Unit Test -2	UNIT – IV to VI

**BHARATI VIDYAPEETH  
DEEMED UNIVERSITY, PUNE**

**ENGINEERING CHEMISTRY**

**Teaching Scheme:**

**Lectures: 4Hrs/Week**

**Practical: 2Hr/Week**

**Examination scheme:**

**End Semester Examination: 60 marks**

**Continuous Assessment: 40 marks**

**Term Work: 25marks**

**Credits Allotted:**

**Theory: 04**

**Practical: 01**

**Unit I**

**WATER**

Introduction, Hardness of water, Effect of hard water on boilers and heat exchangers: a) boiler corrosion b) caustic embrittlement c) scales and sludges d) priming and foaming  
Water softening methods for industrial purposes :a) Zeolite process b) Phosphate conditioning Numerical based on the zeolite process

**(08 Hours)**

**Unit II**

**MATERIAL CHEMISTRY**

**Crystallography :** Unit cell, Laws of crystallography, Weiss indices and Miller indices, Crystal defects (point and line defects), X-ray diffraction – Bragg's Law and numerical.

**Cement :** Introduction of cement, Hydraulic/ Non-hydraulic cementing materials, classification of cement, chemistry of portland cement, chemical composition and compound constituents of portland cement, properties of cement and its applications.

**(08 Hours)**

**Unit III**

**FUELS**

Introduction, classification of fuels, calorific value of fuels, NCV and GCV, Determination of calorific values using Bomb calorimeter and Boys' gas calorimeter.

Theoretical calculation of calorific value of a fuel, Analysis of coal a) Proximate b) Ultimate analysis of coal, Numericals based on NCV, GCV.

**(08 Hours)**

**Unit IV**

**CORROSION AND ITS PREVENTION**

Corrosion: - Definition, atmospheric corrosion-mechanism, Wet corrosion-mechanism, Electrochemical and galvanic series, Factors affecting corrosion-nature of metal, nature of environment.

Methods of prevention of corrosion- Cathodic and Anodic protection, Metallic coatings, Electroplating, Hot dipping.

**(08 Hours)**

**Unit V**

**ELECTROCHEMISTRY**

Introduction, Arrhenius Ionic theory, Kohlrausch's law of independent migration of ions  
Laws of electrolysis: Faradays Laws, Ostwald's dilution law, Acids and Bases, concept of pH and pOH, Buffer solutions, Solubility Product, Redox Reactions.

Electrode Potential, electrochemical cell, concentration cell, reference Electrodes, Overvoltage, Conductometric Titrations, Fuel cells, Lead Acid Storage Cell and numericals based on the above articles.

**(08 Hours)**

**BHARATI VIDYAPEETH  
DEEMED UNIVERSITY, PUNE**

**Unit VI**

**STEREOCHEMISTRY**

Introduction, chirality, optical activity, Enantiomers, Diastereomers, projection formula of tetrahedral carbon- Newman projection, Wedge projection, Fischer projection, Geometrical isomerism :- cis and trans isomerism, E and Z isomers

Optical isomerism :- Mesoform, the number of optical isomers for chiral molecules,

Conformations :- conformations of ethane, conformations of n-butane

**(08 Hours)**

**TERM WORK**

**Experiments**

**Any Ten experiments from the following:**

1. Estimation of hardness of water by EDTA method.
2. Estimation of chlorine by Mohr's method.
3. Determination of percentage of Ca in given cement sample
4. Determination of coefficient of viscosity by Ostwald's viscometer
5. Study of Bomb calorimeter for determination of calorific value.
6. Determination of calorific value of gas fuel by using Boy's gas calorimeter.
7. Determination of dissolved oxygen in a water sample.
8. To determine the Molecular Weight of polymer
9. Estimation of Copper from brass sample solution by Iodometrically
10. Estimation of percentage of Iron in Plain Carbon Steel by Volumetric Method
11. To standardize NaOH solution and hence find out the strength of given hydrochloric Acid solution
12. To determine Surface Tension of given liquid by Stalagmometer
13. Study of corrosion of metals in medium of different pH.
14. To set up Daniel cell
15. To determine pH of soil
16. To determine Acidity of soil

**Assignments**

7. Effect of hard water on boilers and heat exchangers
8. Hydraulic/ Non-hydraulic cementing materials
9. Analysis of coal a) Proximate b) ultimate analysis of coal
10. Wet corrosion-mechanism, Electroplating, Hot dipping
11. Geometrical isomerism :- cis and trans isomerism, E and Z isomers
12. Fuel cells

**References / Text Books :**

7. Engineering Chemistry by Jain and Jain, Dhanpat Rai Company (P) Ltd, New Delhi
8. Chemistry of Engineering Materials, Agarwal C.V, Rata Publication Varanasi, 6<sup>th</sup> edition (1979)
9. Chemistry in Engineering and Technology, Volume W, Tata McGraw Hill Publishing Company Ltd, New Delhi (1988)
10. Applied Chemistry, O. P. Vidyankar, J. Publications, Madurai, (1955)
11. Engineering Chemistry, S. N. Chand and Co., Jalandhar, 31st Edition (1990)
12. Engineering Chemistry by Dara S. S. S Chand Publications
13. Fundamentals of Electrochemistry, V. S. Bagotsky (Ed) Wiley NY (2006)

**BHARATI VIDYAPEETH  
DEEMED UNIVERSITY, PUNE**

**Syllabus for Unit Test:**

**Unit Test I :- Unit I,II,III**

**Unit Test II :- Unit IV,V,VI**

**BHARATI VIDYAPEETH  
DEEMED UNIVERSITY, PUNE**

**MECHANICAL ENGINEERING DRAWING**

Teaching Scheme:	Examination Scheme:	Credits Allotted
Theory: -02Hours / Week	End Semester Examination: - 60Marks	<u>04</u>
Practical: 04Hours / Week	Continuous Assessment: -40Marks	
	Term Work: 25 Marks	

UNIT-I	<p><b>Introduction to Computer Aided Drafting:</b> Working Interface of AutoCAD, Drawing Limits, Creating 2-D Drawing in AutoCAD, AutoCAD commands, Editing commands in AutoCAD, Dimensioning in AutoCAD, Creating text in Auto CAD, Changing object properties Scale, Object Snap Mode, Display control in AutoCAD, Layer</p>	(06)
UNIT-II	<p><b>Dimensioning Practices:</b> Terms and Notations, Leader, Extension Lines, Terminations and Origin indication, Functional dimension, Non-functional dimension, Datum dimension, Redundant and auxiliary dimension, Chain dimensioning, Running dimensioning, Co-ordinate dimensioning, Symmetrical or equidistant dimensioning, Methods of dimensioning Common features: Diameters, Radii, Hole sizes, chamfers, Screw threads, Chords, Arcs, Angles, Spheres, Cylinders, Squares. Conventional Representation of Machine Components As per SP-46 (1988)</p>	(06)
UNIT-III	<p><b>Orthographic Projections [ By Using AutoCAD]</b> Reference planes, types of orthographic projections – First angle projections, Third angle projections, methods of obtaining orthographic views by First angle method, Sectional orthographic projections – full section, half section, offset section.</p>	(06)
UNIT-IV	<p><b>Isometric Projections [ By Using AutoCAD]</b> Isometric view, Isometric scale to draw Isometric projection, Non-Isometric lines, construction of Isometric view from given orthographic views and to construct Isometric view of a Pyramid, Cone, Sphere.</p>	(06)
UNIT-V	<p><b>Development of Lateral Surfaces (DLS) of Solids. [ By Using AutoCAD]</b> Applications of DLS, method of development, development of lateral surface of above solids, development of lateral surface of cut solids.</p>	(06)

**BHARATI VIDYAPEETH  
DEEMED UNIVERSITY, PUNE**

UNIT-VI	<b>Freehand Sketching</b> Free hand sketching -- FV and TV of standard machine parts – Hexagonal headed nut and bolt, foundation bolts, shafts, keys, couplings, springs, screw thread forms, welded joints, riveted joints.	(06)
---------	---	------

**Term Work**

First sheet based on dimensioning practice, convention and symbols in machine drawing

Second sheet based on free hand sketches.

Four AutoCAD drawing assignments

**Text Book/ Reference Books :**

N.D. Bhatt, Elementary Engineering Drawing, Chartor Publishing house, Anand, India.

D. N. Johle, Engineering Drawing, Tata Mcgraw-hill Publishing Co. Ltd..

P.S. Gill, Engineering Graphics.

N.D. Bhatt, Machine Drawing, Chartor Publishing house, Anand, India.

Warren J. Luzzader, Fundamentals of Engineering Drawing, Prentice Hall of India, New Delhi.

Fredderock E. Giesecke, Alva Mitchell & others, Principles of Engineering Graphics, Maxwell McMillan Publishing

SP 46:1988, Engineering Drawing Practice for School and Colleges

J. D. Bethune, Engineering Graphics with Auto CAD 2002, Pearson Education, 2003

**BHARATI VIDYAPEETH  
DEEMED UNIVERSITY, PUNE**

**PRODUCTION PRACTICE I**

**TEACHING SCHEME:**

Theory: -  
Practical: 02 Hours / Week

**EXAMINATION SCHEME:**

End Semester Examination: -  
Continuous Assessment: -  
Term Work: 50 Marks

**CREDITS ALLOTTED:**

01 Credit

**Course Pre-requisites:** Basic knowledge of various machine tools.

**Course Objectives:** Make the students familiar with basic manufacturing processes

**Course Outcomes:** students should be able to understand

1. Understand machine tools, mechanism and accessories used in various production processes
2. Make the job of turning & taper turning operation using lathe
3. Perform Forging and grinding of lathe tool with one knife and other end vee
4. Prepare simple solid pattern involving wood turning
5. Perform Welding using gas/arc welding process
6. Understand Sand Casting process

Each candidate shall be required to complete and submit the following term work:

**A. Jobs:**

Plain and Taper turning – one job

Forging and grinding of lathe tool with one knife and other end vee – one job

Making a simple solid pattern involving wood turning – one job

Welding (gas or arc) – one job

Sand Molding – one job

**B. Journal & Demonstration:**

Assignments on machine tools will be in the form of a journal based on demonstrations on machine tools. This should include sketches and relevant descriptions as given below:

**1) Block Diagrams (Any Two)**

- a) Lathe
- b) Universal milling machine
- c) Radial drilling machine
- d) Cylindrical grinder.

**2) Mechanisms (Any Two) a) All geared headstock of a center lathe.**

- b) Spindle arbor (assembly) drive of milling machine
- c) Crank and slotted lever quick return drive of shaping machine.
- d) Spindle assembly in a drilling machine.

**3) Accessories (Any Two)**

- a) Taper turning attachment for a center lathe.
- b) Universal dividing head.
- c) Milling cutters.

**Bharati Vidyapeeth University, Pune**

**Faculty of Engineering & Technology**

**Programme : B.Tech (Production) Sem – III (2014 Course)**

<b>WELDING AND FOUNDRY TECHNOLOGY</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic knowledge of Manufacturing Processes	
2.	Basic knowledge of Joining.	
3.	Basic knowledge of Casting.	
<b>Course Objectives:</b>		
The student should understand the scope, objective and application of welding and foundry technology		
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	Describe the advantages and disadvantages of the different classes of manufacturing processes.	
2.	Understand the different casting process	
3.	Know the pattern making and mold making	
4.	Choose the best casting process for a specific product.	
5.	Understand the different Welding process	
6.	Choose the proper process for different joining cases	
<b>UNIT-I</b>	<b>Introduction Of Welding Processes</b> Classification of welding processes. Advantages and disadvantages of welding processes Arc welding processes-Carbon arc, Submerged arc, Tungsten inert gas (TIG), Metal inert gas (MIT), Plasma arc, Stud welding and related arc welding processes –Theory, Comparison on merits, limitation and applications, Fluxes used in arc welding. Gas welding – Processes and equipment used, Types of flames, Gas cutting– Merits, demerits and applications	<b>(06)</b>
<b>UNIT-II</b>	<b>Resistance Welding</b> Resistance welding –, Spot, Seam, Projection, Butt, Percussion welding, Tube	<b>(06)</b>

	welding, Electric resistance welding process, its merits, demerits and application. <b>Solid-State Welding</b> Solid-State Welding- Pressure, Diffusion, Ultrasonic, Explosive, Friction, Forge, Principle, Equipment used, Flux used, Merits demerits and application of the above process.	
<b>UNIT-III</b>	<b>Other Welding Processes</b> ThermitWelding,Laser beam welding, Electron beam welding, Braze welding, Welding of dissimilar metals, Welding of polymers, Welding of Cast Iron, Welding of Tool Steel, Welding of Aluminium and its Alloys, Welding inspection, Welding defects and their Classification. Welding Symbols.Importance of ASME codes, ISO standards on joiningprocesses.	<b>(06)</b>
<b>UNIT-IV</b>	<b>Pattern And Mould Making</b> Foundry Layout, Foundry departments and sections, Pattern and pattern making, Design and allowances for patterns, Colour codes for patterns, Storage of patterns, Moulding sand and core sands, Sand control Test, Core and core making – Introduction, Core making Procedure, Types of cores, Core print, Core boxes. Mould and mould making-Moulding Methods, Moulding processes, Gating System, Software available	<b>(06)</b>
<b>UNIT-V</b>	<b>Melting And Pouring Practice:</b> Melting furnaces and their selection, Cupola and its operation, Advantages and limitations, applications, Induction melting furnaces, Advantages, Limitations, applications, Pouring practice and equipments, Ladle technology, Solidification of castings, Strike out, Fettling, Cleaning and Surface preparation of castings, Inspection and testing of castings, Defects in castings.	<b>(06)</b>
<b>UNIT-VI</b>	<b>Die Casting Process:</b> Pressure and gravity die casting, Shell mould casting, Investment casting, Continuous casting, centrifugal casting, Applications, Merits and limitations of all, Use of robots in foundry, Production of iron Casting, Copper alloy foundry practice, Aluminium alloy foundry practice, Export potentials for cast products in Indian context.	<b>(06)</b>

<p><b>Term work:</b>  <b>List of Experiments:</b></p> <ul style="list-style-type: none"> <li>• Mechanical test on weldment (weld) - Tension bend, drop weight, tear test.</li> <li>• Moulding and core sand testing (Clay content test, moisture content test etc).</li> <li>• Fluidity test using fluidity spiral pattern</li> <li>• Permeability test.</li> <li>• Green strength mould and Green strength core.</li> <li>• Mould and core hardness test.</li> </ul>					
<p><b>Assignments:</b></p> <ul style="list-style-type: none"> <li>• Six Assignments based on above syllabus &amp; Industrial visit</li> </ul> <p><b>Oral/Practical</b>  Term work and oral will be based on above syllabus</p> <p><b>Text Books / References</b></p> <ul style="list-style-type: none"> <li>• O. P. Khanna, A text book of Welding Technology, Dhanpat Rai and Sons</li> <li>• O. P. Khanna, A text book of Foundry Technology, Dhanpat Rai and Sons</li> <li>• P. N. Rao, Manufacturing Technology- Vol 1, McGraw Hill Education (India) Private Limited</li> <li>• Md. ## BASIC ELECTRONICS AND COMMUNICATION ENGINEERING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students have completed a course in Physics and have the knowledge of laws of Dynamics		
<b>Course Objectives:</b>		
Students will get basic knowledge of electronic components, devices, microcontroller, digital electronics and communication.		
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	The basic components of electronics	
2.	Working of rectifiers.	
3.	Basic of Microprocessor.	
4.	Basics of Digital electronics	
5.	Basics of analog communication.	
6.	Basics of digital communication.	
<b>UNIT - I</b>	<b>Electronic components:</b> Resistors, Inductors and Capacitors and their types, Construction and characteristics of PN junction diode Zener Diode Tunnel diode Bipolar junction transistors CB,CC,CE circuits Field Effect transistors	<b>(06)</b>
<b>UNIT - II</b>	<b>Electronic Devices and Linear ICs:</b> Rectifiers: Half wave, Full wave and Bridge rectifiers capacitor filter wave forms, ripple factor regulation characteristics. Special semiconductor devices: FET SCR LED VI characteristics, applications. Introduction to Op -Amp and Timers.	<b>(06)</b>
<b>UNIT - III</b>	<b>Digital electronics:</b> Number system: Binary system, Decimal to Binary, Octal system, Hexadecimal system, binary addition, subtraction, multiplication and division. Logic gates: OR, AND, NOT, Exclusive OR, NOR, NAND gates, Logic	<b>(06)</b>

	networks, Gate Standardization, Introduction to Logic Circuit Combinational and Sequential Circuits	
<b>UNIT - IV</b>	<b>Analog Communication:</b> Communication System diagram, need of modulation, amplitude modulation, frequency modulation, phase modulation.	<b>(06)</b>
<b>UNIT - V</b>	<b>Digital Communication:</b> Sampling process, pulse code modulation, delta modulation adaptive delta modulation.	<b>(06)</b>
<b>UNIT - VI</b>	<b>Microprocessor:</b> Architecture, Block Diagram, Instruction set, Interrupts, Timing Diagrams, Stacks, Subroutines, Serial I/O. Memory Design Concepts: Decoding, Memory Types, Design of Microprocessor based system, Interfacing Techniques; (I/O Mapping & Memory Mapping) with eg. of 8255 IC.	<b>(06)</b>
<b>Assignment:</b> Assignment based on above syllabus.		
Any 8 practical's should be conducted from the following list: <ol style="list-style-type: none"> <li>1. To study various electronics components: Resistors, Inductors, Capacitors, diodes and transistors.</li> <li>2. Binary - BCD &amp; BCD – Binary conversion</li> <li>3. Study of CRO and Different modes of operation.</li> <li>4. To plot VI characteristics of PN junction diode.</li> <li>5. To plot regulation characteristics of half wave rectifier with and without capacitor filter.</li> <li>6. To plot regulation characteristics of Full wave rectifier with and without capacitor filter.</li> <li>7. To plot input-output characteristics of CE configuration of BJT.</li> <li>8. To study basic logic gates: AND, OR, NOT, NAND, NOR, Ex-OR, Ex-NOR.</li> <li>9. To realize the Boolean expression using basic gates.</li> <li>10. Study of amplitude &amp; frequency modulation.</li> <li>11. Pulse code modulation.</li> </ol>		
<b>Text Books/Reference Books:</b>		
1	Mottershed Allen, Electronic Devices & Circuits, PHI	
2	R. P. Jain, Modern Digital Electronics, Mc Graw Hill	
3	Thomas L. Floyd, Electronic Devices, Pearson Education (Sixth edition)	
4	Millman&Halkis, Electronic Devices & Circuits, PHI	
5	Malvino Leach, Digital Principles & Applications, Mc Graw Hill	
6	Millman&Halkis, Integrated Electronics, MGH	
7.	John Keneddy"Electronics communication System" Mc Graw Hill	
8.	TaubSchilling"Digital Communication System" Mc Graw Hill	
<b>Syllabus for Unit Test:</b>		
Unit Test -1	Unit I, II and III	
Unit Test -2	Unit IV, V and VI	

<b>INDUSTRIAL ENGINEERING &amp; MANAGEMENT</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Tutorial: 01 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Knowledge of basic concept of Management	
2.	Basic information of Industrial engineering.	
3.	Basic knowledge of human considerations in manufacturing.	
<b>Course Objectives:</b>		
	The student should understand the scope, objective and application of industrial engineering tools and management practices in manufacturing.	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	Definition, principles and functions of management.	
2.	Types and selection of business organizations.	
3.	Functioning of Personnel, Marketing and Finance Department.	
4.	Method Study tool for standardizing the method.	
5.	Work Measurement tool for standardizing the time.	
6.	Ergonomically accepts in manufacturing.	
<b>UNIT - I</b>	<b>Management-An Introduction:</b> Management- Meaning and Definitions, Management, Administration, and Organization concepts, Management as an Art and Science and a profession, contribution of various thinkers to management thought, Types and Functions of Management. Different approaches to management – scientific, operational, human and system approach.	<b>(06)</b>
<b>UNIT - II</b>	<b>Organization:</b> Different forms of business Organization –Individual proprietorship, Partnership, Joint stock company, Co-Operative enterprise, Public Sector, Undertakings, organizational structures in Industries, Line, Functional ,Line and functional , Project, Matrix Organization and Committees	<b>(06)</b>

<b>UNIT - III</b>	<p><b>Financial, Marketing and Personnel Management:</b>  Personnel Management-Definitions Recruitment, Selection and training of the employees, Job valuation and Merit rating, wage administration different methods of wage payments, incentives.</p> <p>Marketing Management-Definitions, Marketing and Selling concept, market segmentation, distribution channels, Market Research, Advertising and sales promotion and Sales forecasting.</p> <p>Financial Management-Capital structure, Fixed capital, working capital, sources of finance, cost analysis, Break even analysis, Depreciation and Financial statement.</p>	<b>(06)</b>
<b>UNIT - IV</b>	<p><b>Method Study:</b>  Steps in method study, tools and techniques used, process chart symbols, flow diagrams, two handed chart, multiple activity chart, use of motion pictures and its analysis. SIMO charts, chorno &amp; cycle graph, developing, presentation, installation and maintenance of improved methods.</p>	<b>(06)</b>
<b>UNIT - V</b>	<p><b>Work Measurement :</b>  Time Study: Aim and objectives , terminology and tools, use of stop watch procedure in making a time study, elements, selection of operations time study forms, handling of foreign elements. Performance rating. Allowances: Personal, Fatigue and other allowances. Analysis and calculation of Standard Time. Determination of number of cycles time study for indirect functions such as Maintenance , Marketing etc., Most Technique.</p> <p>Works Sampling: Definition, Objectives, theory of Work Sampling. Other applications of work sampling, errors in work sampling study.</p> <p>Synthetic and Standard data Methods: Concepts, introduction to PMTS, MTM-1, WF, Basic motion time, MTM-2, and other second – generation methods timing of group operations.</p>	<b>(06)</b>
<b>UNIT - VI</b>	<p><b>Ergonomics and Industrial Safety:</b>  Definitions, importance in industry, basic anatomy of human body, anthropometrics, measurement of physical work and its techniques, work and rest cycles, bio mechanical factors environment effects.</p> <p>Importance of safety, planning, training, safety precautions, safety Equipments, Government regulations on safety.</p>	<b>(06)</b>
<b>Assignments:</b>		
Six Assignments based on above syllabus.		
<b>Text Books/</b>		

1.	O. P. Khanna, Industrial Engineering & Management, Dhanapat Rai & Sons.
2.	M. C. Shukla, Business Organization and Management, S. Chand & Co. Ltd, New Delhi.
3.	Harold Koontz & Heinz Enrich, Essentials of Management, McGraw Hill International.
4.	M. N. Mishra, Organizational Behavior, Vikas publishing New Delhi.
5.	Dale Yoder, Personnel Management.
6.	Work Study, ILO.
7.	S. S. Patil, Industrial Engineering & Management, Electro tech Publication.
8.	Mansoor Ali & Dalela, Industrial Engineering & Management System, Standard Publisher distributions.
9.	R. M. Currie, Work Study, ELBS.
10.	Management by James A. F. Stoner, R. Edward Freeman, PHI
11.	Management Today: Principles and Practice by Gene Burton and Manab Thakur, TMH
12.	Organizational Behavior by Keith Davis, TMH
13.	Management (Tasks, responsibilities and Practices) by Peter Drucker, Harper Business
14.	Production Management by Lockyer, ELBS
15.	Modern Production Management by E. S. Buffa ( John Wiley )
16.	Financial Management by Vanhorne, PHI
17.	Financial Management (Theory and Practice) by Prasanna Chandra, TMH
18.	Marketing Management by Philip Kotler, Pearson Edition
19.	Marketing Management by Rajan Saxena, TMH
20.	Personnel Management by Edward Flippo, TMH
<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

## STRENGTH OF MACHINE ELEMENTS

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: -03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50Marks	

### Course Pre-requisites:

The Students should have

- |           |                                       |
|-----------|---------------------------------------|
| <b>1.</b> | Fundamentals of engineering mechanics |
| <b>2.</b> | Analysis of forces and moments        |
| <b>3.</b> | Laws of motion, kinetics, kinematics  |
| <b>4.</b> | Algebra and trigonometry              |

### Course Objectives:

To provide basic concepts of stresses and strains in machine elements.

### Course Outcomes:

Students will be able to understand

- |           |  |
|-----------|--|
| <b>1.</b> | Stresses and strains in different materials.                 |
| <b>2.</b> | Shear force and bending movement of loading elements.        |
| <b>3.</b> | Principal stresses and strain.                               |
| <b>4.</b> | Torsional, bending and axial force on the shaft.             |
| <b>5.</b> | Bending stresses and shear stresses in the machine elements. |
| <b>6.</b> | Design of simple machine components.                         |

### UNIT - I

#### Simple stresses & strains

Revision of Concept of stresses & strains (linear, lateral, shear, thermal & volumetric). Hooke's law, Poisson's ratio, Modulus of Elasticity, Modulus of Rigidity, Bulk Modulus. Stress-strain diagrams for ductile & brittle materials.. Axial force diagrams, stresses and strains in determinate & indeterminate homogeneous & composite bars under concentrated loads & self weight.

Strain energy due to axial load (gradual, sudden & impact), strain energy due to self weight Introduction to thermal stresses (Theory)

**(06)**

<b>UNIT - II</b>	<p><b>Principal stresses &amp; strains</b> Normal &amp; shear stresses on any oblique plane. Concept of principal planes derivation of expression for principal stresses &amp; maximum shear stress, position of principal planes &amp; planes of maximum shear, graphical solution using Mohr's circle of stresses, combined effect of axial force, bending moment &amp; torsional moment on circular shafts (solid as well as hollow)</p> <p><b>Theories of elastic failure:</b> Maximum principal stress theory, maximum shear stress theory, Maximum distortion energy theory, maximum strain theory – their applications &amp; limitations.</p>	<b>(06)</b>
<b>UNIT - III</b>	<p><b>Shear Force &amp; Bending Moment Diagrams</b> Shear forces &amp; bending moments of determinate beams due to concentrated loads, uniformly distributed loads, uniformly varying loads &amp; couples, relation between SF &amp; BM diagrams for cantilevers, Simply supported beam. Maximum bending movement &amp; positions of points of contra flexure, construction of loading diagrams &amp; BMD from SFD &amp; construction of loading Diagram &amp; SFD from BMD.</p>	<b>(06)</b>
<b>UNIT - IV</b>	<p><b>Torsion</b> Stresses, strain &amp; deformations in determinate shafts of solid &amp; hollow</p> <p><b>Slope &amp; deflection of beams</b> - relation between BM &amp; slope, slope &amp; deflection of determinate beams, double integration method (Macaulay's method), derivation of formula for slope &amp; deflection for standard cases.</p>	<b>(06)</b>
<b>UNIT - V</b>	<p><b>Stresses in Machine Elements.</b></p> <p><b>Bending stresses :</b> Theory of simple bending, assumptions, derivation of flexural formula, second moment of area of common cross sections( rectangular, I,T,C ) with respective centroidal&amp; parallel axes, bending stress distribution diagrams, moment of resistance &amp; section modulus calculations.</p> <p><b>Shear stresses :</b> Concept, derivation of shear stress distribution formula, shear stress distribution diagrams for common symmetrical sections, maximum and average shears stresses, shear connection between flange &amp; web.</p>	<b>(06)</b>
<b>UNIT - VI</b>	<p><b>Design of Simple Machine parts:</b> Machine Design, Traditional design methods, Basic procedure of Machine Design, Factor of safety, Service factor, Design of simple machine parts - Cotter joint, Knuckle joint and Levers, Eccentric loading , Stresses in curved beams.</p>	<b>(06)</b>

	<p><b>Term work:</b>  The Journal containing the record of following:</p> <ul style="list-style-type: none"> <li>i) Experiment on Tension test on M.S. bar.</li> <li>ii) Experiment on Compression test on M.S. bar.</li> <li>iii) Experiment on Shear test on M.S. bar.</li> <li>iv) Experiment on Torsion test on M. S. bar.</li> <li>v) Experiment on Impact test.</li> </ul> <p>Drawing file containing two half imperial sheets:</p> <ul style="list-style-type: none"> <li>i) Drawing sheet of SFD – BMD of shafts using computer.</li> <li>ii) Drawing sheet of Mohr's circle.</li> </ul>	
	<p><b>Oral :</b>  Based on above term work.</p>	
<p><b>Assignments :</b>  Assignments based on each unit. (Each assignment consist of 5 problems)</p>		
<p><b>Text Books/</b></p>		
1.	Timoshenko & Young, Engineering Mechanics, Tata McGraw Hill Book Publishing Co. Ltd. 1981.	
2.	James Gere, Mechanics of Materials, Thomson Learning	
3.	S Ramamrutham, Strength of Materials	
4.	V. B. Bhandari, Design of Machine Elements, Tata McGraw Hill Publication	
5.	J. E. Shigley, Mechanical Engineering Design, McGraw Hill	
<p><b>Syllabus for Unit Test:</b></p>		
Unit Test -1	Unit I ,II and III	
Unit Test -2	Unit IV,V and VI	

<b>APPLIED THERMODYNAMICS</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Knowledge of basic concept of thermodynamics	
2.	Knowledge of pumps and compressors	
3.	Basic knowledge of I.C.Engine	
<b>Course Objectives:</b>		
	The student should understand the scope and application of Applied Thermodynamics	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	to apply the concepts of Carnot theorem to applications such as heat pump and refrigerator	
2.	basic concepts of thermodynamics and their application to energy conversion device like Compressors	
3.	basic concept of refrigeration and air conditioning system	
4.	Concept of air standard cycle	
5.	Concept of Internal Combustion system	
6.	Heat Transfer performance	
<b>UNIT - I</b>	<b>Second Law of Thermodynamics:</b> Limitations of first law, Heat engine, refrigerator & heat pump, Kelvin-Planks and Clausius statement, Equivalence of Kelvin -Planks and Clausius statement, Perpetual motion machine of second kind, Carnot cycle & Carnot heat engine, Entropy. <b>Steam Generators:</b> Classification, Constructional details of Process & Power boilers, boilers mountings & accessories, equivalent evaporation, boiler efficiency, energy balance, boiler draught.	<b>(06)</b>
<b>UNIT - II</b>	<b>Refrigeration</b> Unit of refrigeration, reversed Carnot cycle, Bell Coleman cycle, Vapour compression cycle, C. O. P , TR Capacity, Use of p-h charts, Desirable properties of refrigerants, & alternative refrigerants <b>Air conditing</b> Factors affecting human comfort, Dalton's law, psychrometry, DBT,WBT, Specific humidity, relative humidity, degree of saturation, study of	<b>(06)</b>

	psychrometric chart, psychrometric processes such as sensible heating, cooling, humidification & dehumidification, Different Air conditioning systems, Applications of air conditioning.	
<b>UNIT - III</b>	<p><b>Reciprocating Air Compressors:</b> Introduction, Use of compressed air, construction &amp; working of reciprocating air compressors, P-V diagrams of single stage air compressor, Effect of clearance, Volumetric efficiency, Power required to drive the compressor, Isothermal efficiency, Mechanical efficiency, Multi-staging of air compressor, perfect inter cooling, Advantages of Multi-staging</p> <p><b>Rotary Compressor:</b> Introduction, classification and working principles of different types of compressors, comparison between reciprocating and rotary compressors, positive displacement and rotary dynamic compressors,</p>	<b>(06)</b>
<b>UNIT - IV</b>	<p><b>Air Standard Cycles</b> Introduction to Air Standard cycle, assumptions, Air Standard cycle, Diesel cycle, Dual combustion cycle, comparison of above cycles, Actual cycle</p>	<b>(06)</b>
<b>UNIT - V</b>	<p><b>Internal Combustion Engine Systems:</b> <b>Fuel Feeding Systems:</b> Introduction of carburetor S.I. engines, Mixture requirements, Solex carburetor, Fuel injection systems in C.I. engines, Bosch fuel injection pump, fuel injectors, Type of nozzles. <b>Ignition Systems:</b> Battery ignition, magneto ignition, Electronic ignition systems. <b>Cooling and Lubrication Systems:</b> Necessity of cooling, Cooling systems, Types of cooling and lubrication system <b>Engine Testing &amp; Performance:</b> Measurement of I.P, B.P, Rope brake dynamometer, Hydraulic dynamometer, Eddy current dynamometer, Measurement of F.P, Willian's line method, Morse Test, Measurement of fuel &amp; air, Measurement of speed, Heat balances heat.</p>	<b>(06)</b>
<b>UNIT - VI</b>	<p><b>Heat transfer and applications</b> <b>Extended surfaces:</b> Heat Transfer through extended surfaces, derivation of differential equation for fins, Solution of differential equation for different boundary conditions having constant cross-section area, Effectiveness and efficiency of a fin.</p>	<b>(06)</b>

	<b>Heat Exchangers:</b> Classification, heat exchanger analysis, use of Log Mean Temperature Difference (LMTD) and effectiveness NTU method for parallel and counter flow heat exchangers.	
<b>Assignment:</b> Assignment based on above syllabus.		
<b>Text Books/ Reference Books:</b>		
	P.L.Ballany, “Thermal Engineering”, Khanna Publications	
	C.P.Arora, “Engineering Thermodynamics”, Tata Mc Graw Hill Publications	
	Ganesan V., “Internal Combustion Engine”, Tata McGraw Hill Publications	
	Arora C. P., “Refrigeration& Air-Conditioning”, Tata McGrawHill Publications, New Delhi	
	V. M. Domkundwar, “Thermal Engineering”, Dhanpat Rai & Co.(P)Ltd	
	R. K. Rajput, Engineering Thermodynamics ,EVSS Thermo Laxmi Publications	
	Y.Cengel&Boles, Thermodynamics-Anengineeringapproach, TataMcGrawHill Publications	
	Hawkins G. A., “Engineering Thermodynamics”, John Wiley and Sons.	
<b>Syllabus for Unit Test:</b>		
Unit Test -1	Unit I, II and III	
Unit Test -2	Unit IV, V and VI	

<b>PRODUCTION PRACTICE - II</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: - Hours / Week		
Practical: 04 Hours / Week	Term Work and Practical Examination: 50 Marks	04 Credits
<b>Course Pre-requisites:</b>		
The Students should have		
<b>1.</b>	Basic Knowledge of Welding.	
<b>2.</b>	Basic Knowledge of engineering components.	
<b>3.</b>	Basic Knowledge of materials.	
<b>Course Objectives:</b>		
	The student should understand the processes in casting and welding..	
<b>Course Outcomes:</b>		
Students will be able to understand		
<b>1.</b>	Welding processes	
<b>2.</b>	Pattern making process.	
<b>3.</b>	Sand Testing methods	
<b>4.</b>	Sand Moulding techniques.	
<b>5.</b>	Casting process	
	<p><b>Term Work</b></p> <p>Each candidate shall be required to complete and submit the following jobs:</p> <ol style="list-style-type: none"> <li>1. Welding-TIG / MIG / Arc Welding (One Job)</li> <li>2. Pattern making: A solid pattern consisting of wood turning or a core box. (One Job)</li> <li>3. Sand Testing.(Five test )</li> <li>4. Sand Moulding. (One Job)</li> <li>5. Casting.</li> </ol>	

## SEMESTER IV

<b>MACHINING TECHNOLOGY</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
<b>1.</b>	Basic knowledge of cutting tools	
<b>2.</b>	Basic knowledge of machining processes	
<b>3.</b>	Basic knowledge materials.	
<b>Course Objectives:</b>		
The student should understand the scope, objective and application of Machining Technology		
<b>Course Outcomes:</b>		
Students will be able to understand		
<b>1.</b>	To Suggest different cutting tool materials for different work piece materials according to their properties	
<b>2.</b>	Use dynamometer for measuring the cutting forces during various cutting operations.	
<b>3.</b>	Perform different operations on lathe machine	
<b>4.</b>	Perform different operations on Milling machine	
<b>5.</b>	Explain, analyzed, predict and prevent material failures in primary manufacturing processes	
<b>6.</b>	Indicate which types of manufacturing process are suited to producing different shapes of product.	
<b>UNIT-I</b>	<b>Process of Metal Cutting</b> Metal cutting - Introduction, principle, classification of cutting tools, Types of metal cutting process, Mechanism of chip formation, Types of chips, Concept of speed, feed & depth of cut, Cutting tool materials	<b>(06)</b>
<b>UNIT-II</b>	<b>Theory of Metal Cutting</b> Single point cutting tool, Tool geometry, Tool signature, selection of tools from catalogue. Systems of defining cutting angles of a single point cutting tool, Cutting forces in Orthogonal cutting, Merchant's circle of forces, Measurement of cutting forces, Tool failure - its classification, Tool wear & its types .Types of cutting Fluids.	<b>(06)</b>

<b>UNIT-III</b>	<p><b>Lathe</b> Introduction, function, types, specification of lathe machines, construction accessories, attachments, operations. Difference between capstan and turret and engine lathe, <b>Automatic Machines</b> Automatic Lathes-Introduction, function, Classification of automatic machines.</p>	<b>(06)</b>
<b>UNIT-IV</b>	<p><b>Drilling machines</b> Drilling-Introduction, Classifications of Drills. Twist drills. Types of drilling machines, operations, cutting speed, feed and depth of cut. <b>Milling machines</b> Milling- Introduction, Types of milling machines, operations, Milling cutters, Dividing head, methods of indexing.</p>	<b>(06)</b>
<b>UNIT-V</b>	<p><b>Abrasive Machining Processes</b> Abrasive machining, abrasive-types, size and geometry. Specifications of Grinding, grinding wheels, wheel marking, wheel selection. Wheel mounting. Types of grinding machines, Grinding faults. <b>Surface Finishing Processes</b> Honing, lapping, super finishing, buffing, burnishing process. Electroplating, phosphating, metal spraying, anodizing, shot Peening. Effects of surface treatment processes.</p>	<b>(06)</b>
<b>UNIT-VI</b>	<p><b>Broaching</b> Broaching-Introduction, broach geometry, Types of broaching machines, Broach design. Broaching applications. <b>Numerical control and CNC</b> Introduction to NC, basic principles of NC machine, classifications of NC system. Introduction to CNC, CNC controllers, Introduction to DNC machines, machining centers.</p>	<b>(06)</b>
<b>Term Work:</b>		
<b>List of Experiments: ( Any Five)</b>		
<ul style="list-style-type: none"> <li>• Effect of tool geometry on cutting speed, feed, depth of cut on cutting processes</li> <li>• Measurement of cutting forces in turning, drilling &amp; milling with the help of tool dynamometers</li> <li>• Study and demonstration of Automate Lathe</li> <li>• Study of dividing indexing mechanism on milling machine.</li> <li>• Study and demonstration of Grinding Machines.</li> <li>• Study and demonstration of NC and CNC machine program.</li> </ul>		
<b>Assignments</b>		
<ul style="list-style-type: none"> <li>• Six Assignments based on above syllabus &amp; Industrial visit</li> </ul>		

<b>Text Books / References</b>		
<ul style="list-style-type: none"> <li>• G.R.Nagpal, Tool Engineering and Design, Khanna Publishers</li> <li>• B.S.Raghuwanshi, Workshop Technology, Vol-II, Dhanpat Rai &amp; Co.</li> <li>• P. N. Rao, Manufacturing Technology , Vol- II, McGraw Hill Education (India) Private Limited</li> <li>• HajraChaudhari, Workshop Technology, Vol.-II</li> <li>• Roy A. Lindberg, Process &amp; Materials of Manufacture, PHI</li> <li>• P. C. Sharma, Production Engineering, S. Chand Publications</li> <li>• R. K. Jain, Production Technology, Khanna Publishers</li> <li>• E. P. DeGrmo, J. T. Black and A. Kosher, Material and processes in manufacturing, PHI</li> <li>• HMT Handbook, Production Technology, TMH</li> </ul>		
<b>Syllabus for Unit Test</b>		
Unit Test 1	Units I , II and III	
Unit Test 2	Units IV, V ,VI	

## MATERIAL SCIENCE

<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hours / Week	End Semester Examination 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW and Oral: 50 Marks	

### **Course Pre-requisites:**

The Students should have

1. Knowledge of basic concept of Physics and chemistry
2. Basic information of engineering materials.
3. Basic knowledge of manufacturing processes.

### **Course Objectives:**

The student should understand the scope, objective and application of material, engineering properties, practices in material testing and selections of materials as per industrial requirements.

### **Course Outcomes:**

Students will be able to understand

1. basics of crystal structure, Mechanism of plastic deformation and Annealing and re-crystallization
2. how to measure different types of mechanical properties
3. Use of equilibrium diagrams in selections of alloys for different applications..
4. Concept of powder metallurgy and manufacturing of components by powder metallurgy
5. How to manufacture composite components
6. Basics of corrosion and Prevention of corrosion by different methods

<b>UNIT - I</b>	<b>Study of Engineering materials and Plastic Deformation:</b> Study of Engineering materials Study of crystal structure, Indexing of planes and directions, Imperfections in crystals, Mechanism of plastic deformation, Critical resolve shear stress, Deformation of single crystal and polycrystalline metals, Work Hardening , Cold and hot working, Annealing and re-crystallization	<b>(06)</b>
<b>UNIT - II</b>	<b>Mechanical Testing of Metals;</b> Study of destructive testing Tensile test, Engineering stress and true stress strain, evolution of properties, Numerical based Tensile test, Hardness testing such as Brinell, Rockwell, Vickers and Micro hardness test, Impact test, Fatigue test, Creep test, Cupping test, Non	<b>(06)</b>

	Destructive testing such as Liquid dye penetrate test, Magnaflux test, Eddy current test , Ultrasonic testing and Radiography testing.	
<b>UNIT - III</b>	<b>Study of Equilibrium Diagrams:</b> Related terms and their definitions, Hume Ruther’s rule of solid solubility, Allotropy and polymorphism, Solidification, Dendritic growth, Cooling curves, Plotting of Equilibrium diagrams, Lever rule, Coring, Isomorphs system, Eutectic system, Partial eutectic and eutectoid system, Non Equilibrium cooling and it’s effects	<b>(06)</b>
<b>UNIT - IV</b>	<b>Processing of metal powder and ceramics:</b> Introduction, Advantages and limitations of powder metallurgy, Production of metals powder, Characteristics of powder, Powder conditioning, Powder Compacting, Sintering and sintering furnaces, Ceramic, Properties and applications of ceramics. Manufacturing of ceramics Production of powder metallurgical parts such as self lubricating bearings, ferrites, electric contact materials, Carbide cutting tools etc.	<b>(06)</b>
<b>UNIT - V</b>	<b>Study of Composite Materials:</b> Introduction, Classification of composites, Types of composite, Properties, Metal matrix composite, Ceramic matrix composite, Fiber Reinforced plastic, Manufacturing methods, Applications in Different field.	<b>(06)</b>
<b>UNIT - VI</b>	<b>Corrosion and Prevention:</b> Introduction, Types of corrosion, Oxide film growth laws, Action of hydrogen, Polarization, Stress corrosion, Season Cracking, Prevention of corrosion, Design of component, Modification of environment, Cathodic Protection, Deposition and coating, Ion Implantation, PVD, CVD, Powder coating etc.	<b>(06)</b>
<b>List of Experiments:</b>		
	<ol style="list-style-type: none"> <li>1.Tensile test to determine strength and other mechanical properties</li> <li>2.Hardness test Brinell and Vickers</li> <li>3.Rocwell and Poldi hardness test</li> <li>4.Micro-Hardness test</li> <li>5.Erichsen Cupping test</li> <li>6.Magnetic Particle test</li> <li>7.Liquid penetrate test</li> <li>8.Utrasonic Test</li> <li>9. Visual inspection of casting and welded components.</li> </ol>	
	<b>Assignments</b> <ol style="list-style-type: none"> <li>1. Density calculations on crystal structure and miller indices for crystal structure .</li> <li>2. Draw different types of curves such as , Tensile stress strain , S N curves , Creep curves , brittle transient temperature curves</li> <li>3. Draw the equilibrium diagram from given data. Find out the different types of phases.</li> <li>4. Collect list of components which are made from powder metallurgical technique</li> </ol>	

	and write flow chart for production processes.. 5. Find out ten different composite parts and its composite classifications. 6. Collect different type of old components and study the corrosion on it also study the prevision processes also
	<b>Text Books/Reference Books:</b>
	<ol style="list-style-type: none"> <li>1. "Material Science and Physical Metallurgy", Dr.V.DKodgere , Everest Publication, Pune.</li> <li>2. "Physical Metallurgy", S H Avner, Tata Micro hill Publication , Delhi</li> <li>3. "Material science and Metallurgy", O P Khanna, Khanna Publication ,Delhi.</li> <li>4. "Material Science and Engineering", R K Rajput ,S K Kataria and Sons Publication, Delhi</li> </ol>
<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

## DESIGN OF MACHINE ELEMENT

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Knowledge of basic concept of Design	
2.	Basic information of Mechanical Elements	
3.	Basic knowledge of design consideration into different Mechanical/Machine Elements	
<b>Course Objectives:</b>		
	The student should understand the scope, objective and application of Design of Machine Element.	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	Definition, principles and functions of Design	
2.	Design and selection of shafts, keys, splines and couplings	
3.	Working principal of brakes and clutches	
4.	Design and selection of bearings.	
5.	Design and selection of joints	
6.	Design and selection of power screws and springs	

<b>UNIT - I</b>	<b>Introduction:</b> Concept of machine design, general design considerations, design procedure; factor of safety for different types of loading its significance and selection; theories of failures, Selection of engineering materials for a component considering functionality, raw material generating process, strength, cost, quantity and aesthetics, use of IS codes	<b>(06)</b>
<b>UNIT - II</b>	<b>Design of shafts, keys, splines and couplings:</b> Design of solid and hollow shafts for strength and rigidity against pure torsion, pure bending, combined bending, torsion and axial loads; design of keys and splines; design of rigid and flexible couplings.	<b>(06)</b>
<b>UNIT - III</b>	<b>Clutch &amp; Brake:</b> Types, classification, selection of different type of clutch Design of multiplate clutch. Introduction: different types of clutch(cone, centrifugal clutch).Energy absorbed by brake, Design consideration of block brake ,Introduction: internal expanding shoe brake, disk brake.	<b>(06)</b>
<b>UNIT - IV</b>	<b>Rolling Contact Bearing:</b> Types, static and dynamic load carrying capacities, stibeck's equation used, Equivalent bearing load, load life relationship, selection of bearing life, selection of rolling contact bearing from manufacture's catalogue. Bearing with probability of survival other than 90%, lubrication and mounting of bearings	<b>(06)</b>
<b>UNIT - V</b>	<b>Design of joints:</b> Design of bolted joint subjected under transverse and eccentric loading, materials for bolts, initial tightening loads on bolts, effect of washer and gasket, uniform strength bolts. Adhesive joints	<b>(06)</b>
<b>UNIT - VI</b>	<b>Power screw :</b> Power Screws: Forms of threads, Torque analysis of power screw self locking screw, stresses in power screw, collar friction, Design of Screw Jack.	<b>(06)</b>
<b>TERM WORK</b>		
1) Study of Engineering Materials, their applications and selection as per different standards used in practice. 2) Design of Coupling and Detailed Working drawings with assembly. 3) Design of bolted, riveted and welded joints for transverse and eccentric loading. 4) Working drawing of shafts, keys, splines and couplings. 5) Design of spring and power screw. 6) Types of bearing. 7) Types of brakes and clutches.		
<b>Text Books/Reference Books:</b>		
1.Design of Machine Elements, V. B. Bhandari, (Tata McGraw-Hill Publishing		

Company Ltd.)

2. Elements of Machine Design, N. C. Pandya and C. S. Shaha, (Charotar Publishing House)
3. Mechanical Engineering design, J. E. Shigley, Mitchell, (McGraw-Hill Publishing Co. Ltd)
4. Machine Tool Design, N. K. Mehta, (Tata McGraw-Hill Publishing Company Ltd.)
5. Design of Machine Elements, Drobvalsky ( MIR Publisher )
6. A Text Book of Machine Design, R. S. Khurmi, (S. Chand)
7. Design of Machine Elements by M. F. Spoots, T.E.Shoup (PHI)
8. Machine Design, R. K. Jain, (Khanna Publishers.)
9. Engg. Design, a Materials & Processing Approach, G. Dieter, (Tata McGraw-Hill Publishing Company Ltd.)
10. Computer Aided Analysis and Design of Machine Elements by Dukki Patti, Rao, Bhat , (New Age, Delhi)
11. CMTI Machine Tool Design Handbook (TMH)
12. Design of Machine Elements, An Integrated Approach by Robert and Norton, (Pearson)
13. Machine Design by Black and Adams (McGraw-Hill Publishing Company Ltd)

<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I, II and III
Unit Test -2	Unit IV, V and VI

**ENGINEERING MATHEMATICS - III**

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Tutorial: 01 Hour / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
<b>Course Pre-requisites:</b>		
The Students should have		
<b>1.</b>	Basic knowledge of arithmetic calculations and engineering applications.	
<b>2.</b>	Knowledge of basic concept of statistics	
<b>3.</b>	Basic information of probability	
<b>Course Objectives:</b>		
	The student should understand the scope, objective and application of statistical tools	
<b>Course Outcomes:</b>		
Students will be able to understand		
<b>1.</b>	The use of statistical methodology and tools in the engineering problem solving process.	
<b>2.</b>	The use of different measures of central value	
<b>3.</b>	The use of correlation analysis	
<b>4.</b>	The use of regression analysis	
<b>5.</b>	The concept of probability, random variable and probability distribution.	
<b>6.</b>	The concept of testing of hypothesis and experimental design.	
<b>UNIT - I</b>	<b>Introduction to Statistics-</b> Origin and growth of statistics, statistical methods Vs experimental methods. Collection of data, primary and secondary data, sampling and sample designs, methods of sampling, merits and limitations of sampling, sampling and non-sampling errors. Diagrammatic and graphic presentation of data.	<b>(06)</b>
<b>UNIT - II</b>	<b>Measures of central value-</b> Arithmetic mean, median and mode, geometric mean and harmonic mean. Measures of dispersion, mean deviation, standard deviation, skewness moments and kurtosis.	<b>(06)</b>

<b>UNIT - III</b>	<b>Correlation analysis</b> Significance of the study of correlation, types of correlation, coefficient of correlation, coefficient of determination, rank correlation	<b>(06)</b>
<b>UNIT - IV</b>	<b>Regression analysis-</b> Uses of regression analysis, difference between correlation and regression analysis. Regression equations, standard error of estimate, limitations of regression analysis.	<b>(06)</b>
<b>UNIT - V</b>	<b>Probability</b> Basics of probability, conditional probability, bayes' theorem, mathematical expectations, random variable and probability distribution, binomial, Poisson, normal distribution.	<b>(06)</b>
<b>UNIT - VI</b>	<b>Testing of hypothesis-</b> Z test, chi square test and goodness of fit, F test and analysis of variance. <b>Applications of Statistics-</b> Experimental designs, SQC, business forecasting.	<b>(06)</b>
<b>Assignments-</b> <b>5 Assignments based on above syllabus</b>  These assignments may preferably completed and verified using software's.

<b>PRODUCTION PLANNING AND CONTROL</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Knowledge of basic concept of Industrial Engineering & Management	
2.	Knowledge of statistics.	
3.	Basic knowledge of resources of production Man, Machine Material..	
<b>Course Objectives:</b>		
	The student should understand the scope, objective and application of Production Planning And Control manufacturing Industries.	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	The importance of PPC in industry.	
2.	The Forecasting by using different techniques.	
3.	Different ideas and concept to improve PPC in industry.	
4.	Different techniques for material requirement planning	
5.	Different techniques used for PPC in industry.	
6.	Computer Aided Process Planning.	
<b>UNIT - I</b>	<b>Introduction to PPC:</b> Role and stages of PPC, PPC as an integrated function, Product Life Cycle Analysis, Types of Production systems.	<b>(05)</b>
<b>UNIT - II</b>	<b>Forecasting Techniques:</b> Use and types of forecasting, Methods of forecasting and comparison, Verification and control.	<b>(05)</b>
<b>UNIT - III</b>	<b>Techniques and Production Control:</b> Process sheet, Routing, Scheduling- Gantt Chart, Machine Loading Chart, Line Balancing, Dispatching rules, Sequencing - Johnson's rule, Loading, Follow-up, Evaluation, PERT, CPM.	<b>(06)</b>

<b>UNIT - IV</b>	<b>Materials Planning and Purchasing:</b> Scope and requirement of MRP, MRP I and MRP II, Master Production Schedule, Bill of Materials, Capacity Requirement Planning. Introduction to ERP, Purchasing - Documentation, Make or Buy decisions, Vendor Development.	<b>(08)</b>
<b>UNIT - V</b>	<b>Inventory Control:</b> Types of Inventory, Cost of Inventory, EOQ, Selective Inventory Control, Replenishment Systems. <b>Stores Management:</b> Types of stores, Storage layout and storage systems, Stores Documentations, Stores Control and Control of Wastage and surplus, JIT, KANBAN, KAIZEN, Value Stream Mapping.	<b>(08)</b>
<b>UNIT - VI</b>	<b>Computer Aided Production Planning and Control:</b> a) Machine capacity planning and utilization. b) Productivity measurement. c) Material Requirement Planning. d) Scheduling Techniques. Hands on experience of Computer aided Production Planning and Control	<b>(04)</b>
<b>Assignments:</b> Six Assignments based on above syllabus.		
<b>Text Books/Reference Books:</b>		
1	"Production Systems - Planning Analysis and Control, J. L. Riggs, " , JhonWiley& Sons.	
2	"Operations Management - Design, Planning & Control for Manufacturing and Services, J.B. Dilworth " , McGraw Hill	
3	"Production and Operation Management S N Charry " Tata McGraw Hill	
4	Elements of PPC, Samuel Elion " , Universal Book Company	
5	"Industrial Engineering and Production Management MartandTelsang " S. Chand and Co. Ltd.	
6	" Production Planning And Inventory Control" Mager and Boodman	
7	S. S. Patil, Industrial Engineering & Management, Electrotech Publication.	
8	. "Production Management " Martin Star,	
9	Process Engineering " Erry Johnson	
10	"Production Planning and Control, A. K. Bewoor, " Satya Publication	
11	"Production Planning and Cost Control Jain and Arrawal", Khanna Publisher	
<b>Syllabus for Unit Test:</b>		
Unit Test -1	Unit I,III & II	
Unit Test -2	Unit IV,V & IV	

<b>PRODUCTION PRACTICE - III</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: NIL		
Practical: 04 Hours / Week	Term Work and Practical Examination: 50 Marks	04Credits
<b>Course Pre-requisites:</b>		
The Students should have		
<b>1.</b>	Basic Knowledge of manufacturing processes.	
<b>2.</b>	Basic Knowledge of engineering graphics.	
<b>3.</b>	Basic Knowledge of materials.	
<b>Course Objectives:</b>		
	The student should understand the machining processes by lathe milling and grinding.	
<b>Course Outcomes:</b>		
Students will be able to understand		
<b>1.</b>	Turning process.	
<b>2.</b>	Taper turning process.	
<b>3.</b>	Threading process.	
<b>4.</b>	Gear cutting process..	
<b>5.</b>	Milling process.	
<b>6.</b>	Grinding process.	
	<p><b>Term Work</b>  Each Candidate shall be required to complete and submit the following jobs: ( Any Two)  One assembled job consisting of 2 to 3 pieces as below</p> <ol style="list-style-type: none"> <li>1. Operations on lathe machine (3 assembled parts)</li> <li>2. Operations on milling machine</li> <li>3. Operations on grinding. machine</li> </ol>

Total Credits Sem. I – 25

Total Credits Sem. II – 25

Grand Total - 50

<b>Subject :METAL FORMING</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic knowledge of conventional and non conventional manufacturing processes.	
2.	Knowledge of material science.	
3.	Knowledge engineering drawing.	
<b>Course Objectives:</b>		
	To study the metal forming processes i.e wire drawing, rolling, forging, extrusion, sheet metal working etc.	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	To select wire drawing machine and understand its defects and remedies.	
2.	To select proper forging process and understand its defects and remedies.	
3.	To select type of rolling mills and understand its defects and remedies.	
4.	To select various sheet metal working processes and advance sheet metal processes.	
5.	To design simple and progressive and deep drawing die.	
6.	To select extrusion die and extrusion proper process and understand its defects and remedies.	
<b>UNIT - I</b>	<b>Fundamentals of Material Forming:</b> Introduction of forming processes. Concept of Formability, formability limits and formability diagram. <b>Wire and Tube Drawing:</b> Introduction rod and wire drawing machines - construction and working. Preparation of stock for wire drawing. Wire drawing dies, material and design. Heat treatment, variables in wire drawing, Maximum reduction in wire in one pass, forces required in drawing. Multiple drawing, defects in drawing and remedies, work hardening, lubrication in wire drawing. Tube drawing: Methods, force calculations, stock penetration. Lubrication in tube drawing.	<b>(06 Hours)</b>
<b>UNIT – II</b>	<b>Forging:</b> Introduction, classification of forging processes. Forging equipment-	<b>(06 Hours)</b>

	Hammers, presses, furnaces etc. construction working capacities and selection of equipment. Basic forging operations such as drawing, fullering edging, blocking etc. Forgability tests, design of forging as a product, friction in forging. Forging defects and the remedies. New technologies: Liquid metal forging, Isothermal forging, No draft forging, P/M forging, Rotary swaging, Roll forging, lubrication in forging.	
<b>UNIT - III</b>	<b>Rolling of Metals:</b> Scope and importance of rolling. Effect of grain direction in rolling Types of Rolling Mills- construction and working. Deformation in rolling and determination forces required. Process variables, redundant Deformation, Roll bite and friction. Roll flattening, Roll camber - its effect on rolling process, mill spring. Defects in rolling. Automatic gauge control- Roll pass classification & design. Lubrication in rolling.	<b>(06 Hours)</b>
<b>UNIT - IV</b>	<b>Sheet Metal Working:</b> Sheet Metal properties, gauges and surface conditions. various cutting and forming operations, types of dies used, force requirement, theory of shear, methods of force reduction, defects, lubricants used. Miscellaneous sheet metal working operations: Metal spinning, fine blanking, coining, embossing, rubber forming, stretch forming. Coining Embossing, Curling, Spinning and fine blanking. <b>Advanced Metal Forming Processes:</b> Introduction to High velocity forming- principles, comparison of high velocity and conventional forming processes. Explosive forming, Magnetic pulse forming, Electro hydraulic forming. Stretch forming, , Flow forming advantages, limitations and application of the process.	<b>(06 Hours)</b>
<b>UNIT - V</b>	<b>Design of Press Tools:</b> General classification and components of press tools, types of dies simple, compound, combination dies, various press working operations such as punching, blanking, deep drawing, bending, forming etc. Design and calculations for above press working dies.	<b>(06 Hours)</b>
<b>UNIT - VI</b>	<b>Extrusion:</b> Types: Direct, reverse, impact, hydrostatic extrusion. Dies for extrusion, stock penetration. Extrusion ratio of force equipment (with and without friction), metal flow in extrusion, defects. Role of friction and lubricants. Manufacture of seam-less tubes.	<b>(06 Hours)</b>
<b>Term Work/Practical's:</b>		
1. Design & working drawing of simple blanking die.		
2. Design & working drawing of progressive/compound/combination die.		

3. Design & working drawing of a deep drawing die.	
4. A report on factory visit, comprising of product range, processes, plant layout, Auxillary equipment, process parameters etc.	
<b>Assignments:</b>	
1. Assignment based on each unit of syllabus.	
<b>Text Books/Reference Books:</b>	
1	Dieter, "Mechanical Metallurgy"
2	P. N. Rao, "Manufacturing Technology", Tata McGraw Hill
3	G.W. Rowe, "Principles of Industrial Metal Working Process", Edward Arnold
4	Dr. R. Narayanswamy, "Metal Forming Technology", Ahuja Book Co.
5	Surender Kumar, "Principles of Metal Working"
6	"ASM Metal hand book Vol: 4 forming"
7	P.C.Sharma, "Production Engineering", S. Chand
8	Masleror and Berkvasky, "Theory of Plastic Deformation and Metal Working", MIRPublications
9	J. N. Harris, "Mechanical Working of Metals", Pergmon Press
10	Aviter, "Fundamental of Metal Working", McGraw Hill Publisher
11	Schilles, "Press Working"
12	R.G.W. Pye; "Injection Moulding", EWP.
<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

<b>Subject : KINEMATICS &amp; DESIGN OF MANUFACTURING MACHINES</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 00 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	00 Credit
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Students should have Basic knowledge of Measuring Units, Mathematics, and Various terms like as displacement, Velocity, Acceleration.	
2.	Students should have Basic knowledge of various Machine Structures and drives.	
3.	Students should have Basic knowledge of Design Tolerance, Allowance and other related terms	
<b>Course Objectives:</b>		
1	To study the kinematics design for various products, its aesthetics, ergonomics, statistical techniques and reliability.	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	The analytical ability of students in synthesis of mechanism.	
2.	The knowledge of gear design.	
3.	Element of product design.	
4.	To set familiarization of Aesthetic and Ergonomic consideration in design	
5.	Importance of statistical consideration in design.	
6.	Basic vibration modules, tribology of material.	
<b>UNIT - I</b>	<b>Computer Aided Analysis and Synthesis of Mechanisms and Kinematics Structure of Machine Tools:</b> Computer Aided Analysis and coupler curves for four bar mechanism and. Slider crank mechanism, dimensional synthesis of mechanisms, three position synthesis of slider crank mechanism, Over lay method, Bloch Synthesis, Least square technique, Machine tool motion and their Transmissions, Kinematic balancing equation for motion transmitting elements, Kinematic structure of machine tool.	<b>(06 Hours)</b>
<b>UNIT - II</b>	<b>Spur Gears:</b> Design considerations based on Beam Strength, tangential loading, gear standards, types of gear tooth failures, Calculations of modules, teeth number . <b>Helical Gears:</b> Normal Module, Virtual no. of teeth, force analysis, Beam and wear	<b>(07 Hours)</b>

	strength, Introduction to Design of Helical Gears.	
<b>UNIT - III</b>	<p><b>Design for Manufacture:</b> General Principles for Design for Manufacture, Principles of design for casting, Forging, Machining, Welded Joints, etc., Design for Manufacturing &amp; Assembly.</p> <p><b>Product Design:</b> <b>Aesthetics:</b> Aim, basic forms of elements, contribution of factors like structure, elegance, rhythm, proportions, harmony, use of curves, joints, materials, surface finish &amp; color. <b>Ergonomics:</b> Aim, man-machine relationship, use of anthropometrical data related with machine tool &amp; control elements, design of controls &amp; display.</p>	<b>(05 Hours)</b>
<b>UNIT - IV</b>	<p><b>Friction and Lubrication:</b> Dry friction, friction between screw and nut, friction in turning pairs, friction circle and friction axis, friction in mechanism, principles of thick and thin film lubrication methods, principles of hydrodynamic and hydrostatic lubrication.</p>	<b>(05 Hours)</b>
<b>UNIT - V</b>	<p><b>Fundamentals of Vibration:</b> a) Un-damped Free Vibration, Equilibrium method, Energy method, Rayleigh's method. b) Damped Free Vibrations of single degree freedom system, types of damping, free vibration with viscous damping, over damped system, critically damped system, under-damped system, logarithmic decrement, viscous dampers, dry friction or coulomb damping, frequency of damped Oscillations. c) Vibration measuring instrument, measurement of displacement, velocity, acceleration, frequency and damping of vibrating systems</p>	<b>(07 Hours)</b>
<b>UNIT - VI</b>	<p><b>Statistical considerations in Design and Optimum Design:</b> <b>Statistical Considerations in Design:</b> Analysis of Tolerances, Design and Natural Tolerances, Factor of safety and reliability. <b>Optimum Design:</b> Objectives of Johnson's Method of optimum design, design for normal specification and redundant and incompatible specification.</p>	<b>(06 Hours)</b>
<b>Assignments:</b>		
1. Assignment based on above six units.		
<b>Text Books/Reference Books:</b>		
1	Bhandari V.B:” Design of Machine Elements”, Tata McGraw Hill Publication	
2	Shigly “Mechanical Engineering Design”, Tata McGraw Hill Publication	

3	M.F.Spott” Design of Machine Elements”, Prentice Hall
4	Thomas Bevan” Theory of Machines”, CBS Publisher & Distributors
5	J.E. Shigly” Theory of Machines & Mechanisms”, McGraw Hill
6	Bhargave. S.R.” Theory of Machines-II”, Technova Publishing House .
7	P.L.Ballany “Theory of machines”, Khanna Publishing, New Delhi
8	R.S.Khurmi, J. K. Gupta, “Theory of Machines”, E P H
9	G.K.Grover, Mechanical Vibrations
10	Sen and Bhattacharya, ”Machine Tool Design
11	Phakatkar, ”Theory of Machine-II”
<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

<b>Subject :METROLOGY AND QUALITY CONTROL</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks	01 Credit
	Assignments : 10 Marks	
	Unit Test : 20 Marks	
	TW/PR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic knowledge of Measuring Units, Mathematics, and Various terms like as displacement, Velocity, Acceleration.	
2.	Basic knowledge of Design Tolerance, Allowance and other related terms.	
3.	Familiarity with elements of mechanical components like gear, screw thread, bearings etc.	
<b>Course Objectives:</b>		
	To make students have the basic principles of measuring methods and, have hands on experience on Measuring equipments and quality theories.	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	Make use of equipment like sine bar, angle gauge, Autocollimator, and angle dekkor to carry out angular measurement	
2.	Use of concepts like limits, fits and tolerances for designing the limit gauges	
3.	Read the symbols on drawing for surface finish and measure surface finish by instruments like Tomlinson surface meter, surftester etc	
4.	Measure the various screw thread parameters by using equipments like floating carriage micrometer, tool makers microscope and profile projector	
5.	Measure the gear tooth parameters with equipment like gear tooth vernier calliper, constant cord method, span micrometer, base tangent comparator etc	
6.	Familiarity with various TQM models	
<b>UNIT - I</b>	<b>Introduction:</b> Meaning of metrology, precision, accuracy, errors in measurement, calibration. Linear Measurement: Standards- line standard, end standard, wave length standard, classification of standards, precision and non precision measuring instrument, slip gauges. Angular Measurement: Sine bar, Sine center, Uses of sin bar, angle gauges, Auto Collimator & Angle Dekkor, Constant Deviation Prism Interferometry: Introduction, flatness testing by interferometry, NPL flatness interferometer. Laser interferometry.	<b>(04 Hours)</b>
<b>UNIT - II</b>	<b>Limits, Fits and Tolerances and Gauge design:</b> Meaning of limit, Fits and Tolerance, Cost-Tolerance relationship, concept of Interchangeability, Indian Standard System (ISS). Design of limits gauges: Types, Uses, Taylors principle, Design of	<b>(07Hours)</b>

	<p>limit gauges.</p> <p><b>Inspection of geometric parameters:</b> Flatness, Straightness, Parallelism, Concentricity, Squareness, circularity and Cylindricity.</p> <p>Comparators: Uses, types, advantages and disadvantages of various types of comparators.</p> <p><b>Recent trends in Metrology:</b> Introduction to CMM, Measuring geometrical parameters with CMM. techniques for automated inspection – contact and non-contact inspection methods – in processes automated measuring methods-machine vision, optical inspection methods.</p>	
<b>UNIT - III</b>	<p><b>Surface finish measurement:</b> Surface texture, Meaning of RMS and CLA values, Tomlinson's Surface meter, Taylor- hobson surface meter, grades of roughness, specifications.</p> <p><b>Screw Thread Metrology:</b> External screw threads terminologies, floating carriage instruments, pitch and flank measurement of external screw thread, application of Tool Makers Microscope, use of profile projector.</p> <p><b>Gear Metrology:</b> Spur gear parameters, gear tooth thickness measurement, gear tooth verniercaliper, constant chord method, span micrometer, base tangent comparator, lead and profile measurement.</p>	<b>(07 Hours)</b>
<b>UNIT - IV</b>	<p><b>Introduction to Quality:</b> Meaning of quality, Approaches-Deming's Approach, Juran's Approach, quality of product, quality of service, cost of quality, value of quality, difference between inspection, quality control, quality circle, quality policy.</p> <p><b>Introduction to quality control:</b> Meaning of Quality Control, 100% inspection and Sampling inspection, Statistics in selective inspection Introduction to statistical quality control: Control chart:- Attribute (P, np, C, U) and variable (X &amp; R chart), sampling inspection, Operating Characteristic curves and sampling plans.</p>	<b>(06 Hours)</b>
<b>UNIT - V</b>	<p><b>Quality Assurance Systems:</b> Total quality management (TQM): 7 tools of problem solving, cause and effect diagram, Pareto analysis etc, Quality Function Deployment (Q.F.D), Kaizen, Introduction to Six sigma, process capability index (Cp, Cpk) concept, methods of determining Cp and Cpk .</p> <p><b>Reliability, availability and maintainability;</b> Distribution of failure and repair times; determination of MTBF and MTTR, reliability models; determination of system reliability; preventive maintenance and replacement. Design of Experiments</p>	<b>(07 Hours)</b>

	(DOE).	
<b>UNIT - VI</b>	<b>Quality Management Systems:</b> History and evaluation of ISO9000 series, importance and over view of ISO9000-1998 series standards, structure of ISO9000-2000 series standards, clauses of ISO9000 series standards and their interpretation and implementation, quality system documentation, BIS standards ,ISO/TS 16949 and audit ISO14000: Environmental management concept, and requirement of ISO14001, benefits of environmental management systems. OH and AS standards.	<b>(05 Hours)</b>
<b>Term Work/Practical's:</b>		
1. Measurement bearing Parameters by using Vernier Calliper and Micrometer Screwgauge		
2. Measurement of Ovality Using Johanson Mikrokator.		
3. Measurement of angle by sine bar/sine center.		
4. Measurement of optical surface using Interferometer.		
5. Study and experiment on profile projector / Tool makers microscope		
6. Measurement of screw thread parameters using Floating Carriage Micrometer		
7. Measurement of the surface roughness		
8. Measurement of gear tooth thickness using gear tooth vernier caliper and span micrometer		
9. Machine tool Alignment test on lathe/drilling/milling machine.		
10. Experiment to measure Process Capability using Statistical Process Control Or Minitab Software		
<b>Assignments:</b>		
1. Quality and Quality Control		
2. Quality Assurance syaytem and reliability		
3. ISO 9000		
<b>Text Books/Reference Books:</b>		
1	R. K. Jain, "Engineering Metrology", Khanna Publication	
2	I.C.Gupta, "A Text book of Engineering Metrology", Dhanpat Rai and Sons.	
3	K. J. Hume, "Engineering Metrology"	
4	K. W. B. Sharp, "Practical Engineering Metrology", Pitman Publication

6	"Hand Book of Industrial Metrology", A.S.T.M.E. Prentice Hall	
7	J. M. Juran, "Hand Book of Quality Control", McGraw Hill Publication	
8	Kaoru Ishikawa, "Guide to Quality Control", Asian Productivity Organisation, Series,	
<b>Syllabus for Unit Test:</b>		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

<b>Subject : ENGINEERING METALLURGY</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks	01 Credit
	Assignments : 10 Marks	
	Unit Test : 20 Marks	
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Student should have knowledge of material science and mechanical properties of materials	
2.	Student should know about study of equilibrium diagrams ,phase ,crystal structures and microstructures .	
3.	Student should know about forging ,rolling and some manufacturing processes such as casting , machining etc.	
<b>Course Objectives:</b>		
	Student will understand different heat treatment for steel and select the materials as per requirement of industries .	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	The manufacturing of steel and will be able to identify different steels as per classifications	
2.	Different heat treatment that is to be carried out for steel as per requirement	
3.	Surface and core heat treatment for different applications	
4.	Types of tool steels and alloy steels and able to suggest as per requirement	
5.	Types of cast irons and able to choose different cast irons as per applications	
6.	Non ferrous material and their applications .	
<b>UNIT - I</b>	<b>Study of Metallography and steels.</b> Study of metallography & microscopes, Etching methods, macroscopic examination methods. Brief idea about iron & steel making, blast furnace, sponge iron, cast irons, Wrought irons, pig iron, Study of Iron-Iron carbide equilibrium diagram, different types of reactions & phases, critical temperatures, cooling of different steels, Classification & specifications of steels, Structure – property relationship, microstructures of plain carbon steels, Measurement of grain size.	<b>(06 Hours)</b>
<b>UNIT - II</b>	<b>Cast Irons :</b> Classification of Cast irons, effect of cooling rate and alloying elements on cast irons , Types of cast irons, Manufacturing methods, Properties, applications of each cast irons, alloy cast irons , Comparison of steels & cast irons, Heat treatments of cast irons.	<b>(06 Hours)</b>
<b>UNIT - III</b>	<b>Alloy Steels &amp; Tool Steels :</b> Classification of alloying elements, Effect of alloying elements on properties, Various alloy steels,	<b>(06 Hours)</b>

	Stainless steels – Classification, Applications & properties, Tool Steels – Classification, Applications & properties, heat treatment of tool steels, mold tool steel.	
<b>UNIT - IV</b>	<b>Heat Treatment of steels :</b> Transformation products of austenite, Martensite transformation & characteristics of martensite, Time – Temperature Transformation curve, Critical Cooling rate, Heat treatment of steels - Annealing, Normalizing, Hardening , Hardenability, Martempering, Austempering, Retained austenite, Tempering, Ausforming, Secondary hardening, Quench cracks,	<b>(06 Hours)</b>
<b>UNIT - V</b>	<b>Surface treatments and furnaces :</b> Necessity of surface hardening, Carburizing & its types, nitriding& its types, Carbonitriding, Tuffriding, Flame & Induction hardening, Heat treatment furnaces, Atmospheres used in heat treatment, Defects in heat treatments.	<b>(06 Hours)</b>
<b>UNIT - VI</b>	<b>Study of Non-ferrous metals and its alloys:</b> Study of copper and it's alloys, equilibrium diagram of Cu-Zn system, Brasses , Bronzes, Study of Aluminum and its alloys, Al-Si equilibrium diagram, applications and properties of non ferrous alloys, Nickel and magnesium alloys, Materials for Bearings. Recent developments in materials like smart materials, magnetostrictive materials etc.	<b>(06 Hours)</b>
<b>Term Work/Practical's:</b>		
<ol style="list-style-type: none"> <li>1. Study of metallurgical microscope and etching technique</li> <li>2. Specimen preparation for metallography</li> <li>3. Macroscopic examination tests.</li> <li>4. Study of plain carbon steels and its microstructures.</li> <li>5. Study of cast irons and its microstructures</li> <li>6. Study of Non ferrous metals and its microstructures</li> <li>7. Heat treatment for plain carbon steels.</li> <li>8. Jominy End Quench test for hard ability measurements</li> <li>9. Any one surface Hardening Heat treatment.</li> </ol>		
<b>Assignments:</b>		
1. Describe in briefly the manufacturing of steels from ore ,list out the steel manufacturing industries		
2. Collect the different component made from steels find out there heat treatment done on it describe in details and submit the component.		
3. Visit the industries that do heat treatment on component and submit the report		
4. Do collection of some tools write the chemical compositions ,manufacturing and supporting treatment etc. and submit the report		
5. take any one cast iron component and write the details about it that is chemical composition ,manufacturing methods and properties		
6. List out the nonferrous materials and its applications , properties and chemical composition.		
<b>Text Books/Reference Books:</b>		

1	“Material Science and Physical Metallurgy”, Dr.V.DKodgire , Everest Publication, Pune.
2	“Physical Metallurgy”, Vijendra Singh, Standard Publishers Distributors, Delhi.
3	“Physical Metallurgy”, S H Avner, Tata Micro hill Publication , Delhi
4	“Heat Treatments of Metals ” R K Rajput ,S K Kataria and Sons Publication, Delhi.
5	“Mechanical Metallurgy”, Ditter
<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

<b>NUMERICAL METHODS</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Internal evaluation: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
Tutorial : 01 Hour/ Week		01 Credit
<b>Course Pre-requisites:</b>		
<b>The Students should have</b>		
1.	Basic knowledge of Mathematics	
2.	Basic knowledge of Differentiation and Integration	
3.	Basic knowledge of Interpolation	
<b>Course Objectives:</b>		
The student should recognize the difference between analytical and Numerical Methods and effectively use Numerical Techniques for solving complex Mechanical engineering Problems		
<b>Course Outcomes:</b>		
Students will be able to		
1.	Use appropriate Numerical Methods to solve complex mechanical engineering problems	
2.	Find the roots of equations by various methods.	
3.	Find the solutions to simultaneous equations by various methods	
4.	Use the appropriate method of curve fitting for the given data.	
5.	Use Numerical differentiation and Integration to solve the real time problems	
6.	Write the program on ordinary differential equations	
UNIT-I	<b>Introduction</b> MATLAB fundamentals, MATLAB graphics, simple matlab demonstration programs. Error Analysis Significant figures, Accuracy and Precision, Error definition, Round-Off errors, Truncation error, Total numerical error, Blunders, Formulation error and Data Uncertainty.	(06 Hours)
UNIT-II	<b>Roots of Equation</b> Bracketing methods-Bisection and False position method. Open methods-Simple fixed-point iteration, Newton Raphson method and Secant method. Engineering Applications.	(06 Hours)
UNIT-III	<b>Solutions of Simultaneous Equations</b> Navier Gauss elimination, pitfalls of Gauss Elimination, techniques of improving solutions, complex numbers. Gauss Jordan, Gauss seidal and LU Decomposition. Engineering application-spring mass system.	(06 Hours)
UNIT-IV	<b>Curve Fitting</b> Least-Square Regression-Linear regression, polynomial regression and multiple linear regressions. Interpolation -Newton's divided	(06 Hours)

	difference interpolating polynomial. Lagrange's interpolating polynomial, coefficients of interpolating polynomials. Inverse interpolation spline interpolation. Engineering Applications.	
UNIT-V	<b>Numerical Differentiation and Integration</b> Trapezoidal rule, Simson's rules, integration with unequal segment, multiple integral, romberg integration, Gauss Quadrature. Richardson Extrapolation, derivatives of unequally spaced data. Engineering Applications. Numerical Differentiation using Forward, backward and central difference.	(06 Hours)
UNIT-VI	<b>Ordinary Differential Equations</b> Euler's method, improvement of Euler's method, Runge-Kutta method, system of equations, Adaptive Runge Kutta method. Stiffness and multistep method. Engineering Applications.	(06 Hours)
<p>Term work: List of Experiments:</p> <ol style="list-style-type: none"> <li>1. Program on Roots of Equation (Validation by suitable solver) Bisection Method, False position Method, Newton Raphson method and Successive approximation method</li> <li>2. Program on Simultaneous Equations (Validation by suitable solver) Gauss Elimination Method, Partial pivoting, Gauss-Seidal method, Gauss Jordan method</li> <li>3. Program on Numerical Integration(Validation by suitable solver) <ol style="list-style-type: none"> <li>a) Trapezoidal rule,</li> <li>b) Simpson`s Rules (1/3rd, 3/8th)</li> </ol> </li> <li>4. Program on Curve Fitting using Least square technique (Validation by suitable solver)</li> <li>5. Program on Interpolation (Validation by suitable solver)</li> <li>6. Program on Ordinary Differential Equations</li> </ol>		
<p><b>Assignments:</b></p> <p>Six Assignments based on above syllabus</p> <p><b>Text Books / References</b></p> <ul style="list-style-type: none"> <li>• S. S. Syllabus for Unit Test		
Unit Test 1	Units I, II and III	
Unit Test 2	Units IV, V and VI	

<b>PRODUCTION PRACTICE – IV</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Practical: 04 Hours / Week		01 Credit
<b>Course Pre-requisites:</b>		
The Students should have		
1	Basic knowledge of handling the Lathe machine.	
2	Basic knowledge of handling the Milling machine.	
3	Basic knowledge of handling the Grinding machine.	
<b>Course Objectives:</b>		
The students should able to manufacture the job on lathe, Milling and Grinding Machine		
<b>Course Outcomes:</b>		
Students will be able to performed		
1	Different operations on lathe machine.	
2	Gear Cutting on Milling machine.	
3	Finishing operation on Cylindrical grinding machine and Surface grinding machine.	
<b>Term Work</b>		
Each Candidate shall be required to complete and submit the following jobs:		
1. One Composite job consisting of 3 to 4 pieces as below: Machining of components covering all operations on Lathe (Including Internal and external threading, Taper Matching, Knurling )		
Grinding operation on Above (Turning ) Job		- One Job
2. Gear Cutting on milling machine.		-One Job
<b>Note:</b> Practical examination of 6 Hours duration shall be conducted at the end of Sem.-II based on the process and practical conducted in production practice-III		

# **B.Tech.Production**

## **Sem-VI**

<b>Subject :JIG FIXTURE AND DIE DESIGN</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks	01 Credit
	Assignments : 10 Marks	
	Unit Test : 20 Marks	
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic knowledge of conventional and non conventional manufacturing processes.	
2.	Knowledge of casting processes.	
3.	Knowledge plastic processes methods.	
<b>Course Objectives:</b> To design jig, fixtures and dies for manufacturing system.		
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	To understand the concept of jigs and fixture and its principles.	
2.	To design jigs with use of standard components.	
3.	To design fixture with use of standard components.	
4.	To select plastic processes methods.	
5.	To understand the concept of injection moulding and able to design the injection molding die.	
6.	To design dies for the pressure die casting.	
<b>UNIT - I</b>	<b>Fundamentals of Jigs And Fixtures:</b> Significance and purpose of jigs and fixtures and their functions in manufacturing processes. Classifications of Jigs and Fixtures. Design features of main elements of Jigs and Fixtures such as locating, clamping and guiding elements and their integrations. Indexing, locking and auxiliary elements. Bodies and bases or frames of Jigs and fixtures. Economics of Jigs and fixtures, Pneumatics & Hydraulics for Jig & Fixtures.	<b>(06 Hours)</b>
<b>UNIT - II</b>	<b>Design of Jigs:</b> General guidelines & procedures for design of Jigs. Design & selection of standard elements, Analysis of clamping force required & their magnitude, Design of drilling jigs.	<b>(06 Hours)</b>
<b>UNIT - III</b>	<b>Design of Fixtures:</b> General guidelines & procedures for design of fixtures. Design & selection of standard elements, Analysis of clamping force required & their magnitude, concept of modular fixtures & tool presetting fixtures. Design of milling, turning fixture and fixture for assembly. Economic analysis .	<b>(06 Hours)</b>

<b>UNIT - IV</b>	<b>Plastics Processing:</b> Materials used for plastic processing, Compression, transfer, injection & blow moulding processes - its working, construction, types & advantages and limitations.	<b>(06 Hours)</b>
<b>UNIT - V</b>	<b>Design of Injection Molds:</b> Specifications and elements of injection molding machine, Injection molding feed system: runner and gates, ejection methods, ejection force calculation, parting surface selection, cooling systems, Defects & remedies.	<b>(06 Hours)</b>
<b>UNIT - VI</b>	<b>Design of Die Castings Dies:</b> Die casting machines-Hot & cold chamber, metals for die casting, die locking methods, interlocks & safety devices, specific details of die constructions, casting, ejection, cores, slides, loose die pieces, types of cores, directional solidification, types of feeders, die venting, water cooling, classification of dies- single, combination, multi impression. General details of die design, Gating system, inserted impressions, die casting defects and remedies, die lubrication & rules for die lubrication.	<b>(06 Hours)</b>
<b>Term Work/Practical's:</b>		
1. Design & working drawing of one drilling jig.		
2. Design & working drawing of one fixture.		
3. Design & working drawing of a die casting die.		
4. Design & drawing of a injection molding die.		
<b>Assignments:</b>		
1. Six Assignment based on the syllabus.		
<b>Text Books/Reference Books:</b>		
1	Donaldson, Lecain&Goold, "Tool Design", Tata McGrw Hill	PRODUCTION
2	Doebler H. H., "Die Casting", McGraw Hill	
3	P. N. Rao, "Manufacturing Technology", Tata McGraw Hill	
4	Wilson, "Fundamentals of Tool Design", A. S. T. M. E.	
5	M. H. A. Kempster, "Introduction to Jigs and Fixtures Design"	
6	P. H. Joshi, "Press Tools", A.H. Wheeler	
7	P. C. Sharma, "Production Engineering", S. Chand	
8	Dr. Surender Kumar, "Production Engg. Design (Tool Design)", Satya Prakashan	
9	R. G. W. Pye, "Injection Mould Design", EWP	
10	A. S. Athalye, "Plastic Processing Handbook", Multitech	
11	Richard Kibbe, John E. Neely, Meyer, White, "Machine Tool Practices"	
12	Hoffman, "Introduction to Jigs and Fixtures"	
13	"Tool Engineering Handbook", A. S. T. M. E.	
14	R. K. Jain, "Production Technology", Khanna Publishers	
15	Dr. Surender Kumar, "Production Engineering Design"	
16	"Metals Handbook", Vol II ASME	

17	"Toll and Die Design Handbook", McGraw Hill
18	Hiram and Grant, "Non Conventional Clamping Devices"
<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

<b>Subject :PRODUCTION MANAGEMENT</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Knowledge of Industrial Engineering.	
2.	Knowledge of Industrial Management.	
3.	Knowledge of Production Planning and Control.	
<b>Course Objectives:</b>		
	The student should understand the scope, objective and application of Production Management tools and practices in manufacturing.	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	To understand the evolution of Production Management, its scope, operations, organization.	
2.	To understand the factors deciding location of plant, Layout of facility and objectives of material handling.	
3.	To understand manpower planning and capacity planning techniques based on technology and objective of material, handling.	
4.	To understand the organization and administration of maintenance function- it's types, principles, operations policies etc.	
5.	To understand the concept of World-Class-Manufacturing, it's elements, problems and various contributors to develop World-Class-Manufacturing.	
6.	To understand topics in Production Management such as Green/Agile and Lean manufacturing and energy conservation and energy efficiency manufacturing with knowledge based system (IT) application	
<b>UNIT - I</b>	<b>Scope of Production Management</b> The evolution of Production management / Operations Management. Different production eras - Mass, Batch, Job production customization. Relationship of Production/Operations Management with materials, maintenance, quality control, design production engineering and sales. Scope, Definition and its relationship with other management functions such as marketing, finance and personal management. Production organizations for single product, multi product, single location, multilocation. <b>Product Design</b> Product life cycle, Relationship between product design and product cost. Stage of Product Design & Development, Functional, Economic, manufacturing and marketing aspects in product design, Concept of Concurrent engineering, 3S, House of Quality.	<b>(06 Hours)</b>

<b>UNIT - II</b>	<p><b>Location</b> Facility-location: Objectives, factors affecting site selection, , center of gravity method, profit volume rating and hub and scope model.</p> <p><b>Layout</b> Layout types, material flow pattern.</p> <p><b>Material handling</b> Material handling: Its relation with layout, Objectives, principles and types of material handling. AGV'. Unit load concept.</p>	<b>(06 Hours)</b>
<b>UNIT - III</b>	<p><b>Manpower Planning and Capacity Planning</b> Manpower forecasting, manpower inventory, capacity and level strategies, aggregate capacity planning.</p> <p><b>Productivity</b> Productivity : Factor productivity, Total productivity, Labor productivity, measurement of productivity, techniques of productivity Toyato Production System (TPS) ,Total Productivity Management(TPM) and Mangement Information System (MIS).</p>	<b>(06 Hours)</b>
<b>UNIT - IV</b>	<p><b>Industrial Maintenance</b> Organization, Administration of maintenance function, types of maintenance, principles, operating policies, scope of maintenance management, budget and Total productive maintenance.</p>	<b>(06 Hours)</b>
<b>UNIT - V</b>	<p><b>World Class Management:</b> Concept of World Class manufacturing, Emergence of information age, Manufacturing challenges of Information age, elements of business turbulent environment, Problems in manufacturing sector, Evolution of WCM, Contribution of Hall, Schoenberger, Gunn, Maskel, WCM practices in industries and WCM scenario in India.</p>	<b>(06 Hours)</b>
<b>UNIT - VI</b>	<p><b>Recent Techniques of Production Management</b> Concept, implementation, applications, advantages and disadvantages of following tools and techniques: Energy conservation and Energy audit, Green Production, Waste heat treatment, Energy efficient manufacturing system, Lean and agile manufacturing, Knowledge Based System, Manufacturing Information System.</p>	<b>(06 Hours)</b>
<b>Assignments:</b>		
1.Six Assignment based on above syllabus.

<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

<b>COMPUTER AIDED DESIGN AND MANUFACTURING</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR: 50 Marks	
<b>Course Pre-requisites:</b>		
<b>The Students should have</b>		
1.	Basic knowledge of drawing.	
2.	Basic knowledge of standards	
3.	Basic knowledge of manufacturing processes.	
<b>Course Objectives:</b>		
To understand the basics of CAD/CAM and to learn about the geometric issues concerned to the manufacturing and its related areas.		
<b>Course Outcomes:</b>		
<b>Students will be able to</b>		
1.	Understand the concepts of CAD and computer graphics system.	
2.	Understand the curves and the concept of geometric modeling.	
3.	Understand the concept of part families and cellular manufacturing	
4.	Understand the concept of CIM and its models.	
5.	Write the manual and APT part program for various machining operations	
6.	Understand the process of computer aided process planning and various approaches.	
UNIT-I	<b>Introduction:</b>  Product Life Cycle, Design Process, Application of Computers for Design, Benefits of CAD, Computer configuration for CAD Applications, Grover's	(06)

	<p>Model of Product life Cycle for Selection of CAD/CAM.</p> <p>Configuration of graphics workstations, Fundamentals of 2D graphics, Menu design and Graphical, User Interface (GUI), Homogeneous coordinate systems, Geometric transformations, graphics standards.</p>	
UNIT-II	<p>Space Curve design -Analytical and Synthetic approaches, parametric equations, modeling of cubic spline, Bezier curve, B-spline curve and NURBS and their manipulation techniques.</p> <p>Geometric modeling techniques- Wireframes, B-Rep, CSG and Hybrid modelers, Feature based, Parametric and Variation modeling.</p>	(06)
UNIT-III	<p><b>Group Technology and FMS</b></p> <p>Group Technology: Part families, Part Classification and coding, Cellular manufacturing and composite part concept.</p> <p>Concept of manufacturing systems and automation, automation strategies, concept of machine cell and CMS, Building blocks of FMS Planning and implementations of FMS.</p>	(06)
UNIT-IV	<p><b>CIM:</b></p> <p>Introduction, ESPRIT - CIM OSA model, The NIST - AMRF Hierarchical Model, The siemens model of CIM, The CIM model of Digital Equipment Corporation, IBM concept of CIM, Present Scenario, Rapid product development and manufacture, Extended Enterprises.</p>	(06)
UNIT-V	<p><b>Advanced Manufacturing Techniques:</b></p> <p>Principles of Numerical control, Types of CNC Machine Tools, Features of CNC Systems, Direct numerical control (DNC), Elements of CNC viz. Ball screws, rolling guide ways, structure, drives and controls, standard controllers, Virtual machining. Machining Centers and Interpolators.</p> <p>CNC Programming: Types, Manual Part Programming, Canned Cycle, Offset, APT.</p> <p>Introduction to Rapid prototyping, introduction to additive manufacturing</p>	(06)

	techniques.	
UNIT-VI	<p><b>Computer Aided Process Planning:</b></p> <p>Process Planning and Production Planning, manual experience based planning, Decision table and decision trees, Process capability analysis, Variant and Generative process planning approach, Process planning systems like CAM-I, CAPP, MIPLAN, APPAS, AUTOPLAN and PRO,CPMP</p> <p>Introduction to total integrated process planning systems</p>	(06)
<p>Term work:</p> <p>List of Experiments:</p> <ol style="list-style-type: none"> <li>1. Manual part programming using G and M codes for Turning, Step turning, Taper turning, multiple turning, Facing, Multiple facing, thread cutting and radius turning on cylindrical components.</li> <li>2. CNC Milling program involving linear motion and circular interpolation.</li> <li>3. CNC Milling program involving contour motion and canned cycles.</li> <li>4. CNC Milling program involving Pocket milling</li> <li>5. CNC code generation using any CAM software.</li> <li>6. Simulation of machining operations using any CAM software.</li> <li>7. Route sheet generation using CAM software.</li> <li>8. Study on Rapid Prototyping Technologies.</li> </ol>		
<p><b>Assignments:</b></p> <p>Six Assignments based on above syllabus.</p> <p><b>Oral/Practical</b></p> <p>Term work and oral will be based on above syllabus</p> <p><b>Text Books / References</b></p> <ul style="list-style-type: none"> <li>• RadhaKrishnan P and Subramanyam, “CAD/CAM/CIM”, Wiley Eastern Ltd</li> <li>• M. Groover, E. Zimmers, “CAD/CAM: Computer-Aided Design and Manufacturing”, Prentice Hall of India Pvt Ltd, 1995</li> </ul>

<b>Subject : FLUID MECHANICS AND MACHINE TOOL CONTROL SYSTEM</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
Tutorial : 01Hours / Week		01 Credit
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have knowledge of		
1.	Fluids and its properties	
2.	Fundamentals of engineering mechanics	
3.	Basics of electrical and electronics component	
<b>Course Objectives:</b>		
	The student should understand the scope, objective and application of industrial circuits in hydraulic and pneumatic.	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	Used for fluid mechanics fundamentals, including concepts of mass and momentum conservation.	
2.	An ability to apply the Bernoulli's equation to solve problems in fluid mechanics.	
3.	An ability to apply control volume analysis to problems in fluid mechanics.	
4.	Knowledge of laminar and turbulent boundary layer fundamentals.	
5.	An exposure to recent developments in fluid mechanics, with application to industries.	
6.	An ability to apply the concepts developed for fluid flow analysis to issues in industrial design.	
<b>UNIT - I</b>	<b>Fluid Properties and Fluid Statics:</b> Definition of fluid, Newtonian and non Newtonian fluids. properties of fluids, Types of fluids, Viscosity, specific gravity, Compressibility, Surface tension, Capillarity etc. effect of temperature and pressure on hydraulic fluid. Pressure at a point, Pascal's law, measurement of pressure, methods, manometers, liquid pressure – horizontal, vertical plane surface.	<b>(06 Hours)</b>
<b>UNIT - II</b>	<b>Fluid Dynamics:</b> Types of flow, steady and unsteady, uniform and non uniform, streamline flow, laminar and turbulent flow, Use of Reynolds's number in flow through pipes. Continuity equation, energy equation, momentum equation. Euler's equation of motion along a stream line, Bernoulli's equation, Application of Bernoulli's equation to pitot tube, Venturimeter, Orifices, Orifice Meter, Triangular & Rectangular notch. Calculations of flow, friction and work done by fluid under pressure	<b>(06 Hours)</b>

<b>UNIT - III</b>	<p><b>Fluid power:</b> Introduction to fluid power: Classification, general feature and application in various fields, hydraulic and pneumatic ISO symbols in fluid power applications</p> <p>Fluids for hydraulic power: functions, properties and conditioning of hydraulic fluids.</p> <p>Sources of fluid power: classification, types and selection of pumps: positive displacement pumps and negative displacement pumps, types of compressors.</p> <p>Distribution of fluid power: selection of conductors for system considering various factors, sealing and packing devices</p>	<b>(06 Hours)</b>
<b>UNIT - IV</b>	<p><b>Control of fluid power:</b> Pressure control valves- direct acting type, pilot operated, sequence, counter balancing, unloading, pressure reducing, construction and working:</p> <p>Direction control valves- types, construction and working, spool actuation methods, spool centre positions.</p> <p>Flow control valves- compensated and non compensated type, construction and working. Actuators: types, applications and selection</p>	<b>(06 Hours)</b>
<b>UNIT - V</b>	<p><b>System components and circuits:</b> Study of various accumulators, intensifiers, hydraulic jack, power jack, etc. Linear and regenerative circuits with accumulators and intensifiers. Study of various hydraulic and pneumatic circuits for machine tools: components, working and applications. Performance of system (descriptive treatment only).</p> <p>Fluid power maintenance and safety.</p> <p>Introduction to fluidics, maintenance and study of simple logic gates, Use of hydraulics V/s Pneumatics in industry.</p>	<b>(06 Hours)</b>
<b>UNIT - VI</b>	<p><b>Pneumatic system Elements:</b> Piping materials and pressure ratings, piping layout, calculation of pressure drop in pneumatic line; Air compressors, types, working, selection criteria; FRL unit, construction and working; pneumatic cylinders and air motors, construction and working; types, calculation of force and air consumption of air, hydraulic and electric motor</p> <p>Hydro pneumatic system: concept, working and applications (Descriptive treatment only).</p>	<b>(06 Hours)</b>
<b>Term Work/Practical's:</b>		
A journal containing record of any eight experiments of the following:		
1. Verification of modified Bernoulli's equation.		
2. flow through orifice/ Venturimeter		
3. At least two experiments on Hydraulic Trainer.		
4. Practical performance using Automation Studio Software		

<b>Assignments:</b>	
1. study of symbols used in fluid power	
2.) study of different types of valves used in fluid circuits	
3. Study of actuators / Intensifier/ Accumulators	
4. Design of control circuit for a machine tool.	
5. study of power pack unit	
6. Design of hydraulic and pneumatic circuits.	
<b>Text Books/Reference Books:</b>

<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

<b>Subject :ELECTIVE I MARKETING MANAGEMENT</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic Management Concept.	
2.	Functions of Management.	
3.	Principles of Management.	
<b>Course Objectives:</b> The objective of this course is to facilitate understanding of the conceptual framework of marketing and its applications in decision making under various environmental constraints.		
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	Structure, functions and strategies of Marketing department.	
2.	Design the product marketing and cost for the product marketing.	
3.	The distribution channels and their selection.	
4.	Importance of Market Segmentation.	
5.	Implementation of Marketing Information System & Marketing Research.	
6.	Advance tools in marketing and their implementation.	
<b>UNIT - I</b>	<b>Marketing</b> – Definition, Concepts Significance & functions of Marketing, Approaches to the study of Marketing, Relevance of Marketing in a developing economy. Role & functions of Marketing Manager Marketing mix; Strategic marketing planning – an overview. Introduction to 8P for marketing.	<b>(06 Hours)</b>
<b>UNIT - II</b>	<b>Product Decisions:</b> Concept of a product; Classification of products; Major product decisions; Product line and product mix; Branding; Packaging and labeling; Product life cycle – strategic implications; New product development and consumer adoption process. <b>Pricing Decisions:</b> Factors affecting price determination; Pricing policies and strategies; Discounts and rebates.	<b>(06 Hours)</b>
<b>UNIT - III</b>	<b>Distribution Channels and Physical Distribution Decisions:</b> Nature, functions, and types of distribution channels; Distribution channel intermediaries; Channel management decisions; Retailing and wholesaling.	<b>(06 Hours)</b>

	Factors influencing channels, Elements of Promotion Mix – Sales Promotion System. Recent Trends in Promotion Sale. Advertising – Role of Advertising, Advertising Media, B to B and online marketing.	
<b>UNIT - IV</b>	<b>Market Segmentation</b> Meaning, Definition, Different ways to Segmentation, Essential of effective Market Segmentation, Distinction between Differential Marketing & Concentrated Marketing.	<b>(06 Hours)</b>
<b>UNIT - V</b>	<b>Marketing Information System &amp; Marketing Research.</b> Concept & components of a Marketing Information System – Marketing Research – Meaning & scope – marketing research procedure – types & techniques of Marketing Research – Managements use of Marketing Research.	<b>(06 Hours)</b>
<b>UNIT - VI</b>	<b>Issues and Developments in Marketing:</b> Social, ethical and legal aspects of marketing; Marketing of services; International marketing; Green marketing; Cyber marketing; Relationship marketing and other developments of marketing.	<b>(06 Hours)</b>
<b>Assignments:</b>		
1. Six Assignment based upon above syllabus

5	John Fraire., Principles and practice of Marketing	
6	Kanuk , Consumer Behavior By Schiffman	
7	Davis – Olsan , Marketing Information System	
8	Gandhi , Marketing – A Managerial Introduction	
<b>Syllabus for Unit Test:</b>		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

<b>Subject :ELECTIVE I DESIGN FOR MANUFACTURING AND ASSEMBLY</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic Knowledge of Manufacturing processes.	
2.	Knowledge of Materials and its properties.	
3.	Knowledge of Casting and metal extrusion.	
<b>Course Objectives:</b>		
	To make the student well conversant with the relations between design for manufacturing and design for assembly.	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	The steps in DFMA.	
2.	Carry out sand castings and manufacture powder metallurgy products.	
3.	The process of design for machining.	
4.	The process for metal extrusion and forging	
5.	The process for assembly	
6.	The use of CAD in DFMA	
<b>UNIT - I</b>	<b>Introduction to DFMA:</b> History of DFMA, Steps for applying DFMA during product design, Advantages of applying DFMA during product design, Reasons for not implementing DFMA, Introduction to Manufacturing Process: Classification of manufacturing process, Basic manufacturing processes, Mechanical properties of material: Tensile properties, Engineering stress-strain, True stress strain, Compression properties, Shear properties, Introduction to materials and material selection: Classification of engineering materials, Material selection for product design	<b>(06 Hours)</b>
<b>UNIT - II</b>	<b>Sand casting:</b> Introduction to sand casting, Typical characteristics of a sand cast part, Design recommendation for sand casting, Investment casting: Introduction, Steps in investment casting, Design consideration of Investment casting, Typical characteristics and applications, Die casting: Introduction to die casting, Advantages of the die casting process, Disadvantages of the die casting process, Applications, Suitable material consideration, General design consideration, Specific design recommendation, Injection moulding: Introduction	<b>(06 Hours)</b>

	to injection moulding, Typical characteristics of injection moulded parts, Effect of shrinkage, Suitable materials, Design recommendations, Design for powder metal processing: Introduction to powder metal processing, Typical characteristics and applications, Limitations, Design recommendations.	
<b>UNIT - III</b>	<b>Design for machining:</b> Introduction to machining, Recommended materials for machinability, Design recommendations, Design for tuning operation: Process description, Typical characteristics and applications, Suitable materials, Design recommendations, Design for machining round holes: Introduction, Suitable materials, Design recommendations, Recommended tolerances, Parts produced by milling: Process description, Characteristics and applications of parts produced on milling machines, Design recommendations for milling, Dimensional factors and tolerances, Parts produced by planning, shaping and slotting: Process description, Design recommendation planning, Design for broached parts: Process description, Typical characteristics of broached parts, Suitable materials for broaching, Design recommendations.	<b>(06 Hours)</b>
<b>UNIT - IV</b>	<b>Metal Extrusion:</b> Process, Suitable material for extrusion, Design recommendation for metal extrusion, Metal stamping: Process, Characteristics and application of metal stamping, Suitable materials for stamping, Design Recommendations for metal stamping, Fine blanked parts: Fine blanking process, Material suitable for fine blanked parts, Design recommendations for piece parts, Rolled formed section: Process, Design recommendations rolled section, Impact or cold extrusion: Process, Design recommendations for backward extrusion, Forward extrusion: Process, Design recommendations for forward extrusion, Design for Forging: Forging processes, Forging nomenclature, Suitable materials for forging, Design recommendations, Metal injection moulded parts: Process, Materials suitable, Design recommendations for metal injectionmolded parts.	<b>(06 Hours)</b>
<b>UNIT - V</b>	<b>Introduction to Assembly:</b> The assembly process, Characteristics and applications, Example of common assembly, Economic significance of assembly, General taxonomies of assembly operation and systems, Assembling a product, Design for Assembly: Introduction, Design consideration, Design for Fasteners: Introduction, Design recommendation for fasteners.	<b>(06 Hours)</b>
<b>UNIT - VI</b>	<b>Introduction to CAD:</b> Geometric Representation in CAD, Extraction of part feature	<b>(06 Hours)</b>

	information from CAD Model: Introduction, Feature recognition techniques, Free Form Features, Hybrid Techniques, Reference, Extraction of assembly feature information from CAD Model: Introduction, Assembly features, Definition of assembly feature attributes, Characterization of assembly feature, Examples of Assembly feature, Overview of procedure to extract assembly features from CAD model of Assembly, Description of steps in the assembly feature extraction procedure, Examples of assembly feature extraction: Aircraft wing and automotive chassis assembly.	
<b>Term Work/Practical's:</b>		
1. Introduction to DFMA		
2. Sand casting and Powder metallurgy		
3. CAD		
<b>Assignments:</b>		
1. Design for Machining		
2. Metal Extrusion and Forging		
3. Design for Assembly		
<b>Text Books/Reference Books:</b>

<b>Syllabus for Unit Test:</b>		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

<b>Subject : ELECTIVE I NON TRADITIONAL MANUFACTURING</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance : 10 Marks	01 Credit
	Assignments : 10 Marks	
	Unit Test : 20 Marks	
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Conventional manufacturing Processes	
2.	Engineering materials and its properties	
3.	Basics of electrical, thermal and chemical energy.	
<b>Course Objectives:</b>		
	To learn about various unconventional machining processes, the various process parameters and their influence on performance and their applications	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	Appreciate use of nonconventional machining methods	
2.	The working principles and working parameters of mechanical processes.	
3.	Electrochemical and electro chemical grinding processes.	
4.	Various techniques in chemical machining process	
5.	Terminology used in (EDM) nontraditional manufacturing industries.	
6.	Various techniques in laser beam machining.	
<b>UNIT - I</b>	<b>INTRODUCTION:</b> Non Traditional machining, Definitions of various processes. Classification of NCMP, Historical background of New - Technological processes.	<b>(06 Hours)</b>

<b>UNIT - II</b>	<b>MECHANICAL PROCESSES:</b> Processes principles, equipment process Parameters and applications. Examples of Abrasive jet machining, Ultrasonic machining, Abrasive flow machining, water jet machining, magnetic abrasive machining. Evaluation of material removal rate (MRR) in AJM	<b>(06 Hours)</b>
<b>UNIT - III</b>	<b>ELECTRO CHEMICAL MACHINING (ECM):</b> Background of ECM process, Classification of ECM processes introduction to ECD fundamental principles of ECM. Electrochemistry of ECM, Equipment required in ECM. Process capabilities processes parameters and application examples. Trouble shootings. Evaluation of MRR of pure metal in ECM. <b>ELECTRO CHEMICAL GRINDING:</b> Process principles, process parameters, Applications.	<b>(08 Hours)</b>
<b>UNIT - IV</b>	<b>CHEMICAL MACHINING:</b> Introduction, Fundamental principles, process parameters, classification and Selection of etchant resistant materials, Photo chemical machining	<b>(04 Hours)</b>
<b>UNIT - V</b>	<b>ELECTRICAL DISCHARGE MACHINING (EDM):</b> Fundamental principle of EDM, Equipments required for EDM process Parameters, process capabilities. Application example trouble shooting, Introduction to wire EDM, Process principle and parameters, process Capacities and its applications.	<b>(06 Hours)</b>
<b>UNIT - VI</b>	<b>LASER BEAM MACHINING (LBM):</b> Introduction, Background of laser action, production of photon cascade in solid optical laser. Machining applications of laser wire drilling, cutting, marking, welding, heat treating, cladding. Introduction and process principle of thermal energy method, EBM. <b>PLASMA ARC CUTTING (PAC):</b> Process principles, equipment, applications, and examples	<b>(08 Hours )</b>
<b>Term Work/Practical's: List of Practical (Any Eight)</b>		
1) study and demonstration of ECM		
2) Study and demonstration on EDM		
3) study and demonstration of ECDM		

<b>4) study and demonstration of ECM with ultrasonic vibrations</b>	
<b>Assignments:</b> - Six assignments based on above syllabus	
<b>Text Books/Reference Books:</b>	
1	Vijay.K. Jain “Advanced Machining Processes” Allied Publishers Pvt. Ltd., New Delhi, 2007
2	Benedict. G.F. “Nontraditional Manufacturing Processes” Marcel Dekker Inc., New York (1987).
3	Pandey P.C. and Shan H.S. “Modern Machining Processes” Tata McGraw-Hill, New Delhi (2007).

**SEM VII**

<b>OPERATIONS RESEARCH</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: --	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	--
Tutorial : --		03 Credits
<b>Course Pre-requisites:</b>		
<b>The Students should have</b>		
1.	Basic knowledge of Mathematics.	
2.	Basic knowledge of inventory control.	
3.	Basic knowledge of project management.	
<b>Course Objectives:</b>		
The student should understand and apply the correct operation research model Engineering Problems to satisfy the objective function.		
<b>Course Outcomes:</b>		
Students will be able to		
1.	Identify and develop operational research models from the verbal description of the real system and solve optimization problems using linear programming.	
2.	Use the acquired knowledge to design a transportation and assignment model.	
3.	Use the acquired knowledge to select and apply the proper inventory control system for industry.	
4.	Apply the correct sequence for sequencing problems as well as identify the queuing system and analyze it from the given data.	
5.	Use the acquired knowledge to decide the replacement policy and solve the game theory problems for different cases.	
6.	Use the network technique (PERT/CPM) to find the project costing and its duration.	
<b>UNIT-I</b>	<b>Introduction to Operation Research and Linear Programming:</b> Basics definition, scope, objectives, phases, models, advantages, limitations and applications of Operations Research. Linear Programming Problem – Formulation of LPP, Graphical solution of LPP. Simplex Method, Big-M method, duality in linear programming problem.	(06 Hours)
<b>UNIT-II</b>	<b>Transportation and Assignment Models:</b> <b>Transportation:</b> Formulation, Finding initial basic feasible solution by different methods, Optimality test: MODI method, unbalanced Transportation problem. <b>Assignment:</b> Formulation, Hungarian method for optimal solution. Solving unbalanced problem, restrictions on assignments and Traveling salesman problem.	(06 Hours)
<b>UNIT-III</b>	<b>Inventory Control:</b>	(06 Hours)

	<p>Introduction to inventory, cost associated with inventory, stock out inventory models, probabilistic models, price-break models, inventory models under uncertainty and risk. Methods of selective inventory control.</p> <p>Introduction, application, Different problems solved by dynamic programming,</p>	
<b>UNIT-IV</b>	<p><b>Sequencing and Queuing Models:</b></p> <p><b>Sequencing models:</b> Solution of Sequencing Problem – Processing n Jobs through 2 Machines, Processing n Jobs through 3 Machines, Processing 2 Jobs through m machines, Processing n Jobs through m Machines.</p> <p><b>Queuing Models:</b> Operating characteristics, Poisson single and multi-channel queuing system (M/M/1): (<math>\infty/\infty</math>/FCFS), (M/M/1): (<math>\infty/\infty</math>/SIRO), (M/M/1): (N/<math>\infty</math>/FCFS), (M/M/c): (N/<math>\infty</math>/FCFS)</p>	(06 Hours)
<b>UNIT-V</b>	<p><b>Replacement models and Games Theory:</b></p> <p><b>Replacement models:</b> Replacement of capital equipment that deteriorates with time, Time value of money. Cases in which time value of money remains same and changes with constant rates during period. Group and individual replacement.</p> <p><b>Games Theory:</b> Introduction, Two -person zero sum game, Minimax and Maximin principle, Saddle point, Methods for solving game problems with mixed strategies.</p>	(06 Hours)
<b>UNIT-VI</b>	<p><b>Network Modelling:</b></p> <p>Fundamentals of CPM and PERT networks, CPM: Construction of networks, Critical paths, Forward and backward pass, Floats and their significance, crashing for optimum and/or minimum duration and the cost, PERT: Time estimates, Construction of networks, Probability of completing projects by given date.</p>	(06 Hours)
Term work: <b>NA</b>		
<p><b>Assignments:</b></p> <ol style="list-style-type: none"> <li>1. Assignment on formulation of LPP and its solution.</li> <li>2. Assignment on formulation of transportation problem.</li> <li>3. Assignment on Assignment model.</li> <li>4. Assignment on inventory control.</li> <li>5. Assignment on price break models.</li> <li>6. Assignment on Sequencing models.</li> <li>7. Assignment on queuing models.</li> <li>8. Assignment on replacement models.</li> <li>9. Assignment on game theory.</li> <li>10. Assignment on calculation of the total cost and duration of the project.</li> </ol> <p>The typical softwares are to be used for any of the 3 assignments.</p>

**Syllabus for Unit Test**

Unit Test 1	Units I , II and III
Unit Test 2	Units IV, V and VI

<b>MACHINE TOOL DESIGN</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
Practical: 02 Hrs / Week	TW/OR : 50 Marks	01 Credits
<b>Course Pre-requisites:</b>		
1.	Basic knowledge of conventional and non conventional Machines.	
2.	Knowledge of material science.	
3.	Knowledge of Strength of Material.	
<b>Course Objectives:</b>		
The students should be able to understand the design methodology of machine tools.		
<b>Course Outcomes:</b>		
Students will be able to		
1.	Understand the fundamentals of machine tool design.	
2.	Select the type of gear box for applications in machine tool and design the sliding cluster gear box.	
3.	Understand the design considerations for machine tool structures.	
4.	Select the guideways and design the power screws.	
5.	Select the spindle bearings	
6.	Design cams for single spindle automate.	
<b>UNIT-I</b>	<b>Introductions to Machine Tools</b> General Principles of Machine Tool Design: Working and Auxiliary Motions in Machine Tools. Parameters Defining Working Motions of a Machine Tool. Techno-Economical Prerequisites for Undertaking the Design of New Machine Tool. General Requirements of Machine Tool Design. Engineering Design Process Applied to Machine Tools. Layout of Machine Tools, Modular Concept of Machine tool design.	<b>( 06 Hrs)</b>
<b>UNIT-II</b>	<b>Drives:</b> Design considerations for drives based on continuous and intermittent requirement of power, Types and selection of motor for the drive, Regulation and range of speed based on preferred number series, geometric progression. Design of speed gear box for spindle drive and feed	<b>( 06 Hrs)</b>

	gear box. Stepless drives: Design considerations of Stepless drives, electromechanical system of regulation, friction, and Kopp variators, Toroidal and Reeves Mechanisms , PIV drive, Epicyclic drive, principle of self locking, VFD and VVFD drives-Design Considerations.	
<b>UNIT-III</b>	<b>Design of Machine Tool Structures:</b> Functions of Machine Tool Structures and their requirements – Design criteria for machine tool structures – Materials of machines Tools structures – Static and Dynamic stiffness – Profiles of machine tool structures – Basic Design procedure of machine tool structures Analysis of forces on machine tool structure, static & dynamic stiffness. Design of beds, columns, housings, bases and tables.	<b>( 06 Hrs)</b>
<b>UNIT-IV</b>	<b>Design of Guideways &amp; Power Screws :</b> Functions & types of guideways, design criteria & calculation for sideways, design of hydrodynamic ,hydrostatic and aerostatic slideways , Design of Anti-Friction Guideways – Combination Guideways –Protecting devices for slideways Stick-Slip motion in slideways. Design of power screws: Distribution of load & rigidity analysis.	<b>( 06 Hrs)</b>
<b>UNIT-V</b>	<b>Design of Spindles and Spindle Supports:</b> Functions of Spindle Unit and requirements – Materials of Spindles – Effect of machine tool compliance on machining accuracy- Design calculations of spindles– Anti friction bearing – Sliding bearings. Preloading of bearings. Bearings selection for machine tools.	<b>( 06 Hrs)</b>
<b>UNIT-VI</b>	<b>Automatic Drives for Machine tools:</b> Principles of automation. Automatic lathes with mechanical control.Design of cams for automatic screw cutting machines.Automatic loading and feeding of workpieces. Transfer devices in automatic machine tool systems. Modular design and unit heads for machine tools. Automatic in-process gauging.	<b>( 06 Hrs)</b>
	<b>Term work:</b> Term work shall consist of record of assignments on following topics. 1. Design and working drawing of speed gear box 2. Design and working drawing of feed gear box 3. Study of stepless drives 4. Design of bed or column. 5. Design for spindle or power screw. 6. Design for guide ways and sideways. 7. Internet assignment based on any one of the topics above.	
	<b>Assignments</b> 1. Assignment on Introductions to Machine Tools	

<ol style="list-style-type: none"> <li>2. Assignment on Drives.</li> <li>3. Assignment on Design of Machine Tool Structures.</li> <li>4. Assignment on Design of Guideways &amp; Power Screws</li> <li>5. Assignment on Design of Spindles and Spindle Supports.</li> <li>6. Assignment on Automatic Drives for Machine tools.</li> </ol>

<b>MECHATRONICS &amp; MANUFACTURING AUTOMATION</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance: 10 Marks	01 Credits
	Assignments : 10 Marks	
	Unit Test : 20 Marks	
	TW/OR: 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic knowledge of Mechatronics systems.	
2.	Basic knowledge of sensors and system response.	
3.	Basic knowledge of automation.	
<b>Course Objectives:</b>		
The student should understand the scope, objective and application of finite element analysis.		
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	Identify the suitable sensor and actuator for a Mechatronics system	
2.	Develop the skill required for interfacing the electromechanical system.	
3.	Illustrate basic aspects of design and development of a Mechatronics system	
4.	Apply automation techniques to manufacturing set-ups.	
5.	Design and develop pneumatic and hydraulic control circuits of medium complexity.	
6.	Illustrate the use of PLC in control systems and Model the system and check the stability of a mechanical system.	
<b>UNIT-I</b>	<b>Introduction to Mechatronics and Measurement Systems:</b> Introduction, concepts of Mechatronics, Principles, Objectives and applications. Elements of Mechatronics System. <b>Sensors:</b> Position and speed Measurement: Proximity sensors and Switches, Potentiometer, LVDT, Digital optical Encoder. Stress and Strain Measurement: Electrical Resistance Strain Gauge, Measuring Resistance Changes With a Wheatstone Bridge, Measuring Different States of Stress With Strain Gauges, Force Measurement With Load Cells Temperature Measurement: Liquid –in Glass Thermometer, Bimetallic Strip, Electrical Resistance Thermometer, and Thermocouple. Vibration and Acceleration Measurement: Piezoelectric Acceleration, Pressure and Flow Measurement, Semiconductor Sensors & Microelectromechanical Devices.	<b>( 06 Hrs)</b>
<b>UNIT-II</b>	<b>System Response:</b> Introduction, Amplitude linearity, Fourier Series representation of signals, Bandwidth and Frequency response, Phase linearity, Distortion of signals , Dynamic characteristics of systems, Zero order system, First order system:- Experimental testing of a first order system. Second order system, step response of a second order system, frequency response of a system, System modeling and analogies.	<b>( 06 Hrs)</b>
<b>UNIT-III</b>	<b>Signal Conditioning:</b>	<b>( 06 Hrs)</b>

	Introduction, The operational amplifier, Filtering, Wheatstone bridge, Digital signals, Multiplexers, Data acquisition, Digital signal processing, and Pulse modulation. <b>Data Acquisition:</b> Introduction, Quantizing theory, Analog to Digital conversion, Digital to Analog conversion, Virtual Instrumentation, Data acquisition and control.	
<b>UNIT-IV</b>	<b>Basics of Automation:</b> Definition, Automation in Production systems, Basic elements of automated systems, Types of Automation, Need, Advantage And Disadvantages of automation, Levels of Automation. Special purpose machine, High speed machines.	<b>( 06 Hrs)</b>
<b>UNIT-V</b>	<b>High Volume Manufacturing System:</b> Transfer lines, Material handling systems, Manufacturing cell, Group technology, Cellular manufacturing, Flexible manufacturing systems, Automated quality control and inspection systems, Automated assembly systems and line balancing, Automated flow lines and its technology.	<b>( 06 Hrs)</b>
<b>UNIT-VI</b>	<b>Programmable Automation And Control Systems:</b> Programmable logic controller, Ladder diagram, Microprocessor, PIC 16F84 OR 8085 Microprocessor, Logic gates and control, Electrical drives, Thermal relays, PID, Industrial control devices, Computer based industrial controls.	<b>( 06 Hrs)</b>
<p><b>Term work:</b>  <b>List of Experiments: ( Any Five)</b></p> <ul style="list-style-type: none"> <li>• Study of Switches and relays.</li> <li>• Study and experiment of different types of sensors.</li> <li>• Study and experiment of ADC and DAC.</li> <li>• Study and experiment of PLC</li> <li>• Study and experiment of 8085 Microprocessor</li> <li>• Study and experiment of PID.</li> </ul>		
<p><b>Assignments:</b></p> <ul style="list-style-type: none"> <li>• Different types of Sensors and Transducers.</li> <li>• Assignment on system response of mechatronics systems.</li> <li>• Assignment on signal conditioning and data acquisition.</li> <li>• Basics of automation.</li> <li>• High volume automation.</li> <li>• PLC, PID, 8085 Microprocessor.</li> <li>• Industrial Visit.</li> </ul>		
<p><b>Oral/Practical</b>  Term work and oral will be based on above syllabus.  <b>Text Books / References</b></p> <ul style="list-style-type: none"> <li>• Vickers manual on hydraulics.</li> </ul>

### **Syllabus for Unit Test**

Unit Test 1	<b>Units I, II and III</b>
Unit Test 2	<b>Units IV, V ,VI</b>

<b>Elective II: Powder Metallurgy</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: N A	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic knowledge of conventional manufacturing processes.	
2.	Knowledge of material science.	
3.	Knowledge of engineering Metallurgy.	
<b>Course Objectives:</b>		
	Student will understand the concepts of Powder Metallurgy and also able to understand Manufacturing of components by Powder metallurgy.	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	To select the manufacturing of metal powders by different methods .	
2.	To select proper process and understand characteristics of Metal powder .	
3.	To select different methods of compacting of metal powders .	
4.	To select various design of dies for compacting of metal powders.	
5.	Mechanism of Sintering .	
6.	To select advance processes and understand its defects and remedies in powder metallurgy.	
<b>UNIT - I</b>	<b>Fundamentals of Metal Powder productions :</b> Introduction of Powder Metallurgy processes. Advantages and limitations of processes, production of metal powder by Machining, milling, atomization, electrodeposition, reduction from oxide, carbonyl process, production of alloy powders, New development etc..	<b>(06 Hours)</b>
<b>UNIT - II</b>	<b>Characteristics of metal powder:</b> Particle size, shape and size distribution, Characteristics of powder mass such as apparent density, tap density, flow rate, friction conditions. Properties of green compact and sintered compact; Powder conditioning, Mixing and blending, processes details.	<b>(06 Hours)</b>
<b>UNIT - III</b>	<b>Fundamentals of powder compaction;</b> Types of compaction presses, compaction tooling and role of lubricants, Single and double die compaction, isostatic pressing,	<b>(06 Hours)</b>

	hot pressing, Powder rolling, powder forging, powder extrusion and explosive forming technique, pressure less compacting .	
<b>UNIT - IV</b>	<b>Design of Press Tools in compacting:</b> General classification and components of press tools, types of dies simple, compound, combination dies, various press working operations. Design and calculations for above press working dies. Extrusion ratio of force equipment (with and without friction), metal flow in extrusion, defects. Role of friction and lubricants, hot dies for compacting. Tooling materials	<b>(06 Hours)</b>
<b>UNIT - V</b>	<b>Sintering</b> Definition, Theories of sintering: Sintering mechanism, Roll of diffusion, Recrystallization, Pore-growth and coalescence. Liquid phase sintering and related processes. Effect of compacting pressure, sintering temperature and time on sintered properties stages, effect of variables, sintering atmospheres and furnaces, infiltration process.	<b>(06 Hours)</b>
<b>UNIT - VI</b>	<b>Production Methods for typical components :</b> Study of sintered bearings, cutting tools, and metallic filters, Study of friction and antifriction parts and electrical contact materials, hard metals, refractory metals, magnetic materials, structural parts, dispersion strengthened materials.	<b>(06 Hours)</b>
<b>Assignments:</b>		
1. Write the production of metal powder by carbonyl processes in details , Write the production of metal powder by Electrolysis method.		
2. Write different methods for measurement of particle size ,shape and size distributions.		
3. Explain in details advantages of Isostatic compacting , Slip casting ,and powder rolling .		
4. Design tooling system for powder compacting for given shape of components.		
5. Give the sintering temperatures and atmospheres used for different metallic components.		
6. Write complete Flow chart of productions of few components by powder metallurgy, such as Tungsten carbide tools. Clutch, etc.		
<b>Text Books/Reference Books:</b>		
1	Gopal S. Upadhayay. Powder Metallurgy “ Science ,Technology and Materials” -University press	
2	P. N. Rao, Manufacturing Technology, Tata McGraw Hill	
3	Powder Metallurgy ASM Metal hand book Vol: 7	
4	A K Shinna Powder Metallurgy ; Dhanpatrai Publications	

5	Gopal S. Upadhayay. Cemented Tungsten carbide Production, properties and testing- University press	
<b>Syllabus for Unit Test:</b>		
Unit Test -1	Unit I to III	
Unit Test -2	Unit IV to VI	

<b>Elective II: Materials Management</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: --	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	--
Tutorial : --		03 Credit
<b>Course Pre-requisites:</b>		
<b>The Students should have</b>		
1.	Basic knowledge of management	
2.	Basic knowledge of purchasing	
3.	Basic understanding for stores operations	
<b>Course Objectives:</b>		
The students should be able to apply different materials management techniques for the maximization of the profit and minimization of the production cost.		
<b>Course Outcomes:</b>		
Students will be able to		
1.	Understand various types of values and value analysis techniques.	
2.	Use the proper inventory control system for the industry	
3.	Take correct decision for make or buy for a situation.	
4.	Understand the various techniques of logistic management	
5.	Understand the various warehousing techniques	
6.	Understand and apply import export substitutions in given situation	
<b>UNIT-I</b>	Introduction to Materials Management <b>Functions of Materials Management</b> – Sourcing/Procurement, Inventory, Stores, Vendor Development, value analysis and value engineering. Classification and Costs of Inventories: Types, Objective of holding inventories, Different types of Inventories, Costs Associated with Inventory - Carrying cost, Procurement cost. EOQ - Concept, Assumptions of EOQ Model, Practical Constraints – Numerical Analysis, Quantity Discounts. EMQ Model - Carrying cost, Set up cost. EOQ Special Considerations – Spares, Bought-outs, etc. <b>Organization of Materials Management Function</b>	(06 Hours)
<b>UNIT-II</b>	<b>Replenishment Systems and Inventory Management</b> A. <b>Replenishment Systems:</b> Introduction, Concept of lead time and its effects on Inventory, Components of Lead Time - Internal and External. Variability in demand and lead time. Safety Stock Evaluation and ways to minimize lead time, Different types of replenishment systems like Fixed order quantity system, Fixed order interval system, Combination of fixed order interval and quantity system, Two Bin System. Forecasting - Methods of forecasting - Moving Average Method, Regression Analysis, Exponential Smoothing Method	(06 Hours)

	B. Probabilistic Replenishment System. Selective Inventory Control - VED analysis, HML analysis, SDE analysis, SOS analysis, FSN analysis, GOLF analysis.	
<b>UNIT-III</b>	<p><b>Procurement Management</b></p> <p>A. Procurement Management: Responsibilities of Purchase Department. Procurement Procedure, Documents in Procurement, Types of Buying, Methods of Buying, Legal Aspects of Buying, Vendor Selection, Vendor Development, Vendor Rating.</p> <p>B. Documentation – Bin Cards, Stores Ledger, Goods Receipt Note, Material Requisition, Purchase Order – Format, Terms &amp; Conditions. Documentation in Imports</p>	(06 Hours)
<b>UNIT-IV</b>	<p><b>Logistics Management</b></p> <p>A. Definition, Logistics Function: Transportation – Significance, Modes of Transportation, Warehousing – Objectives, Warehousing Functions, Types of Warehouses, Inventory Management, Order Processing – Role of IT, Material Handling Transportation: Modes of Transportation – Rail, Road, Pipelines, Water Air – Advantages &amp; Disadvantages, Concept of TL, LTL, FTL. Selections of Appropriate Modes of Transportation B. Modes of Transportation – Rail, Road, Pipelines, Water Air – Advantages &amp; Disadvantages</p>	(06 Hours)
<b>UNIT-V</b>	<p><b>Stores Management and Warehouse Management</b></p> <p>A. <b>Warehouse Management:</b> Concept of SKUs, Warehousing Principles &amp; Best Practices in Receiving, Shipping, Order Picking, Storage &amp; Put away, Warehouse Activity Profiling, Warehouse Layout Planning. Stores Management: Functions of Stores, Stores Procedure – Documentation. Need of physical stock taking, method of stock taking like annual, continuous, reorder point stock taking, Inventory records. Surplus and Obsolete stocks: Introduction, Genesis of surplus materials. Disposal of surplus and obsolete materials</p> <p>B. Stores Documentation – Bin Cards, Stores Ledger. WMS Systems in Practice</p>	(06 Hours)
<b>UNIT-VI</b>	<p><b>Import Export and supply chain management:</b></p> <p>Factors affecting National and International markets, Import procedure and documents, current EXIM policies, import substitution, E-procurement.</p> <p><b>Supply chain management:</b></p> <p>Basic concepts of SCM, design considerations, role of safety inventory, planning and managing inventories, order processing, economic considerations.</p>	(06 Hours)
Term work: <b>NA</b>		
<p><b>Assignments:</b></p> <ol style="list-style-type: none"> <li>1. Assignment on materials management</li> <li>2. Assignment on replenishment systems</li> <li>3. Assignment on inventory control</li> <li>4. Assignment on procurement and documentation</li> <li>5. Assignment on logistic management</li> </ol>		

<ol style="list-style-type: none"> <li>6. Assignment on material handling</li> <li>7. Assignment on stores management</li> <li>8. Assignment on warehouse management</li> <li>9. Assignment on import exports</li> <li>10. Assignment on supply chain management</li> </ol> <p>Students are required to present case studies on any two topics.</p>					
<p><b>Text Books / References</b></p> <ol style="list-style-type: none"> <li>1. K S Mennon, "Purchasing management and inventory control", Wheeler Publication, ISBN 81-85814-10-4.</li> <li>2. Unit Test 1	Units I , II and III				
Unit Test 2	Units IV, V and VI				

<b>Elective II: MANUFACTURING SYSTEM AND SIMULATION</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic knowledge of Manufacturing System.	
2.	Basic knowledge of advance manufacturing system .	
3.	Basic knowledge of Simulation.	
<b>Course Objectives:</b>		
The student should understand the scope, objective and application of modeling, simulation and analysis of advanced manufacturing systems.		
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	The basics of manufacturing system.	
2.	Discuss the information system about manufacturing machine tools.	
3.	The modeling and analysis of manufacturing system.	
4.	Describe the continuous path of simulation process.	
5.	The simulation and programming languages.	
6.	Develop the simulation process in industry.	
<b>UNIT-I</b>	<b>Manufacturing Systems:</b> Definition of systems, basic concepts and problems concerning systems. Systems design: Decision making procedures, Structural, Transformational and procedural aspects of manufacturing, Modes of production. Process systems for manufacturing, logistic systems, material flow & technological information flow. Management and information systems for manufacturing: Managerial information flow in manufacturing systems.	<b>( 06 Hrs)</b>
<b>UNIT-II</b>	<b>Information Systems:</b> Fundamentals of information technology, information systems, information networking, and parts oriented production information systems, and computerized production scheduling, online production control systems. Computer based production management systems. Automation systems for manufacturing: Industrial automation, kinds of automation, principles of CIM, effectiveness of CIM, factory automation, automatic machine tools for mass production, NC machine tools, and computer controlled manufacturing systems, FMS, automated assembly, automatic material handling, automatic inspection and testing, computer integrated automation systems unmanned factory.	<b>( 06 Hrs)</b>
<b>UNIT-III</b>	<b>System Models:</b> Concepts, continuous and discrete systems, systems modeling, type of models, subsystems, corporate model, and system study. System	<b>( 06 Hrs)</b>

	simulation, Techniques, comparison of simulation and analytical methods, types of simulation, distributed log model, cobweb models.	
<b>UNIT-IV</b>	<b>Continuous System Simulation:</b> Numerical solution of differential equation, analog computers, hybrid computers, continuous system simulation languages CSMP, system dynamic growth models, logistic curves. Discrete systems simulation: Events generation of arrival patterns, simulation programming tasks, analysis of simulation output. Queuing theory: Arrival pattern distribution, service times, queuing disciplines, and measure of queues.	<b>( 06 Hrs)</b>
<b>UNIT-V</b>	<b>GPSS and SIMSCRIPT:</b> General description of GPSS and SIMSCRIPT, programming in GPSS Simulation Programming Techniques: Data structures, implementation of activities, event and queues, event scanning, simulation algorithms in GPSS and SIMSCRIPT.	<b>( 06 Hrs)</b>
<b>UNIT-VI</b>	<b>Application of Simulation:</b> Flow shop system, Job shop system, M/M/1 Queues with infinite and finite capacities, Simple fixed inventory system, Output data analysis, steady state analysis, Building of simulation validation.	<b>( 06 Hrs)</b>

**Assignments:**

- Basic concepts of manufacturing system.
- Advanced manufacturing system.
- Modeling and simulation of any manufacturing system.
- Assignment on continuous simulation process used in manufacturing system.
- GPSS and SIMSCRIPT programming techniques.
- Application of simulation in automated industry.
- Industrial visit

**Syllabus for Unit Test**

Unit Test 1	<b>Units I , II and III</b>
Unit Test 2	<b>Units IV, V ,VI</b>

<b>TOTAL QUALITY MANAGEMENT</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits *
	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
<b>1.</b>	Basics of Quality Control	
<b>2.</b>	Basics of Measurements and measuring Instruments	
<b>3.</b>	Knowledge of Statistics.	
<b>Course Objectives:</b>		
To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management and to understand the statistical approach for quality control.		
<b>Course Outcomes:</b>		
<b>1.</b>	Implement the principles of total quality management.	
<b>2.</b>	Apply six sigma concepts and increase the quality of product.	
<b>3.</b>	Make use of Advanced Techniques	
<b>4.</b>	They will be able to implement TQM Tools.	
<b>5.</b>	Execute Quality standards in companies	
<b>6.</b>	Make use of Advanced Techniques of Total Quality Management like Design of experiments, Failure mode effect analysis, Taguchi method Taguchi's quality engineering	
<b>UNIT-I</b>	<b>Quality &amp; Total Quality Management:</b> Quality, New philosophy of quality, Product quality, & its prospects. Overview of TQM: Concept & definition, Fundamentals, Principles of TQM, Elements of TQM, Approaches of TQM, Models of TQM, Zero defect concept, Benefits of TQM.	<b>( 06 Hrs)</b>
<b>UNIT-II</b>	<b>Quality Assurance:</b> Basic concepts, Quality assurance input – process – output. Significance of feedback for Quality assurance, Process capability analysis, Concept of Six Sigma. Internal customer approach, Customer – Satisfaction, data collection & complaint, Redressal mechanism.	<b>( 06 Hrs)</b>
<b>UNIT-III</b>	<b>TQM PRINCIPLES:</b>	<b>( 06 Hrs)</b>

	Customer satisfaction - Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement - Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement - Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership - Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures - Basic Concepts, Strategy, Performance Measure, Just – in- Time.	
<b>UNIT-IV</b>	<b>TQM TOOLS</b> Benchmarking - Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) - House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) - Concept, Improvement Needs, FMEA - Stages of FMEA.	<b>( 06 Hrs)</b>
<b>UNIT-V</b>	<b>Quality Systems :</b> Policy & objectives, Quality standards, Concept of quality system standards, Relevance & origin of ISO 9000–2000 standard & certification, Benefits. Elements of ISO 9001, 9002, 9003 series–Clauses, contents, interpretations & implementation. TS - 16949, QS-9000, ISO 14000, OHSAS	<b>( 06 Hrs)</b>
<b>UNIT-VI</b>	<b>Advanced Techniques of Total Quality Management:</b> Design of experiments, Failure mode effect analysis, Taguchi method Taguchi's quality engineering –Loss function, orthogonal arrays, Signal to noise ratio, parameter design & tolerance design.Total Quality in service sector. S. S. Technique, Kaizen.	<b>( 06 Hrs)</b>
<b>Term work:</b>	Detail Study and Presentations on Above topics to be submitted.	
<b>Assignments</b>		
	<ol style="list-style-type: none"> <li>1. Assignment on TQM</li> <li>2. Assignment on Six sigma concept.</li> <li>3. Assignment on TQM principles.</li> <li>4. Assignment on TQM tools.</li> <li>5. Assignment on Quality Systems</li> <li>6. Assignment on Advanced Techniques of Total Quality Management</li> </ol>

8. Total Quality Management Handbook, J. K. Hradeskym, Tata McGraw Hills.

**Syllabus for Unit Test**

Unit Test 1	<b>Units I , II and III</b>
Unit Test 2	<b>Units IV, V ,VI</b>

<b>Computer Aided Manufacturing</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory:	End Semester Examination: Nil	
Practical: -- 02 Hrs/Week	Internal evaluation: NIL Assignments : Nil Unit Test : NIL	01 Credit
Tutorial : --	TW/OR – 50 Marks	
<b>Course Pre-requisites:</b>		
<b>The Students should have</b>		
1.	Basic knowledge of mechanical drawing	
2.	Knowledge of various symbols of dimensioning and tolerancing	
3.	Basic knowledge of process planning and programming	
<b>Course Objectives:</b>		
To provide proper interfacing between theoretical aspects and the practical aspects of computer aided manufacturing.		
<b>Course Outcomes:</b>		
Students will be able to		
1.	Students will describe basic concepts of CAM application and understand CAM wheel	
2.	Students will prepare CNC programs for manufacturing of different geometries on milling and lathe machines.	
3.	Students will classify different components using different techniques of group technology	
4.	Students will select layouts of FMS for industrial applications	
5.	Students will classify different components using different techniques of group technology	
6.	Students will prepare Process planning for different components	
<b>Term Work</b>		
	<b>1. Cim Model For Any Industry:</b> Term work assignment based on background theory of CIM System, actual visit to any industry to see and study the different aspects of CIM system	
	<b>2. Simulation on CNC lathe and CNC mill enabling the learning of following points,</b> <b>1. Simulation on CNC lathe</b> -Description of codes, Description of codes, Directives, programs covering basics operations <b>2. Simulation on CNC Mill-</b> Description of M codes, Description of codes, Directives, programs covering basics operations, Liner Interpolation, Circular Interpolation	
	<b>3. Manual part programming on CNC lathe, milling And drilling enabling learning of</b> a) NC technology, CNC components, Part programming techniques, Manual part programming technique, Interpretation of codes, Usage of codes, Formulation of part program, Compete sketch with Dimensions b) Execution of complete part program on CNC machine.	

	<p><b>4. Study and demonstration on robots:</b></p> <p>a. Term work assignment based on Introduction to Cybernetics, Robot Anatomy, Joints and Links, Common Robot configurations, Drive System, End Effectors, Types of sensors, Robot Economics, Robot applications in manufacturing</p> <p>b. Robot programming – actual execution of the programme on the robot</p>	
	<p><b>5. Computer aided process planning:</b></p> <p>a. Term work assignment based on Traditional Process plan, Introduction to Computer Aided Process Plan (CAPP), Types of CAPP, Algorithm for process planning software.</p> <p>b. One recent paper or Case Study of CAPP.</p>	
	<p><b>6. Exercise on group technology, part coding enabling learning of</b></p> <p>Introduction to GT, Concept of Part Family, Methods of grouping part into part family, Parts classification and Coding, Opitz classification and coding system, Two Examples on FORM code.</p>	
	<p><b>7. Computer aided quality control:</b></p> <p>a. Term work assignment based on Quality control, Concept of 100% inspection, Automated Inspection principles and methods, On Line inspection system, Off Line Inspection System.</p> <p>b. Actual measurement of any standard component on Coordinate Measuring Machine (CMM).</p>	
	<p><b>8. Introduction to CAM software:</b></p> <p>a. Term work assignment based on Fundamentals of CAM, applications.</p> <p>b. Use of CAM software for specific application.</p>	
	<p><b>9. Study of computer controlled business functions:</b></p> <p>Term work assignment based on Purchase order receiving, Sales and marketing, Job costing, Bill of Material, Financial control, Inventory management</p> <p>b. One recent paper or Case Study of computer controlled business functions.</p>	
	<p><b>10. Generation of any one simple model using Any CAM software:</b></p> <p>1) simulate the process</p> <p>2) tool path generation</p>	
<b>Assignments: NA</b>

Syllabus for Unit Test

NA

<b>INPLANT TRAINING</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: -		
Practical: -	Term Work and Oral Examination: 50Marks	03 Credits
<b>Course Pre-requisites:</b>		
The Students should have		
<b>1.</b>	Basic knowledge of theoretical subjects of Production Engineering	
<b>2.</b>	Basic knowledge of Industrial Management	
<b>3.</b>	Basic knowledge of Manufacturing Processes	
<b>Course Objectives:</b>		
To help to correlate the lessons learnt in theory and actual practices followed in the industries, expose to an industrial environment, make aware of the psychology of the workers, their habits, attitudes and to prepare them to approach the problems.		
<b>Course Outcomes:</b>		
Students will be able to		
<b>1.</b>	Get an opportunity to apply their knowledge in problem solving and eventually develop that skill.	
<b>2.</b>	Demonstrate understanding of various constraints of time and cost within which goods are produced and services rendered in a specified quantum.	
<b>3.</b>	Get familiarized with various technological trends, approaches and applications along with managerial exposure.	
<b>4.</b>	Develop a positive attitude, which will bring in a visible change in their approach while dealing with technical and interpersonal issues.	
<b>5.</b>	Describe the scope, functions and job responsibilities in various departments of an organization.	
<b>6.</b>	Appreciate and realize the size and scale of operations in Industry.	
<b>Training:</b>		
The student shall undergo training programme prepared by the industry in following manufacturing and functional areas:		
<ol style="list-style-type: none"> <li>1. Industrial Engineering: Method Study, Work Measurement, Ergonomics and Productivity Improvement Technique.</li> <li>2. Production Planning &amp; Control, Quality Assurance.</li> <li>3. Material Management: Inventory Control, Vendor Development, Vendor Rating, Raw Material and Finished Goods stores.</li> <li>4. Plant Engineering: Plant Layout, Plant Maintenance, Housekeeping, Material Handling &amp; safety.</li> <li>5. Costing and Cost Control.</li> <li>6. Management Information System (M.I.S.).</li> <li>7. Incentive Schemes, Labour Laws. Factory Acts.</li> <li>8. Import Export Procedures.</li> <li>9. Incentive schemes, labour laws, factory laws.</li> </ol>		

10. Machine / Process Diagnosis.
11. Quality Assurance, Quality Improvement.
12. Improvement in tool layout, tool selection machine selection.
13. Maintenance of machines, housekeeping, safety precautions.
14. Computer based information study for stores, purchase wastage of material.

### Term Work

Term work will consist of a comprehensive report based on his observation, training received and assignments completed during 45 Days of training. The report shall also include good drawing figure, process sheets, machine and product specifications.

Some instructions for Inplant Training Report:

Language	The report should be written in <b>English</b>
Printing	<ul style="list-style-type: none"> <li>• Report must be printed single sided.</li> <li>• Printing must be of high quality. Text and figures must be clear and legible</li> </ul>
Number of Copies	Final Report (3 copies)
Page Margin	Left, Right, Top, Bottom margins: 2.5 cm
Title / Paragraph Margin	<ul style="list-style-type: none"> <li>• Chapter number and title should be centered.</li> <li>• Subsection number should align with the left margin</li> <li>• Subsection title should be indented 1.5 cm from the left margin.</li> <li>• The first paragraph in a subsection should align with left margin.</li> <li>• The subsequence paragraphs should be indented 1.27 cm from the left margin.</li> <li>• General alignment for texts in paragraph should be "justified".</li> </ul>
Numbering the Chapters and Subsections	<p>All chapters and their subsections must be numbered and titled. Example:</p> <p>Chapter 2 Title of Chapter 2.1 Title of the subsection (second level) 2.1.1 Title of the sub-subsection (third level) 2.1.1.1 Title of the sub-sub-subsection (fourth level)</p>
Typesetting	<ul style="list-style-type: none"> <li>• Font Type : Times New Roman</li> <li>• Font Size : 12 pt</li> <li>• Chapter Title : Uppercase, Bold, Centered</li> <li>• Chapter Sub-section : Title Case, Bold, Align left</li> </ul>
Page Numbering	Page numbering should start from chapter-1 in number format (1,2,3,4 etc)
Report Submission	The report to be submitted within fifteen days from completion of the training.

### Examination

Oral Examination shall be conducted after training by appointing one internal examiner and one external examiner from industry .45 Days Industrial Inplant Training successful completion certificate is essential for granting the term of student.

<b>PROJECT STAGE-I</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Practical: 02 Hours / Week	TW/OR : 50 Marks	04 Credits
<b>Course Pre-requisites:</b>		
The Students should have		
<b>1.</b>	Basic knowledge of conventional and non-conventional Machines.	
<b>2.</b>	Knowledge of material science.	
<b>3.</b>	Knowledge of Strength of Material.	
<b>Course Objectives:</b>		
To prepare the students to carry out a comprehensive study of any design or process or phenomenon, to encourage the process of independent / creative thinking and working in groups and to expose them to industrial atmosphere of accountability.		
<b>Course Outcomes:</b>		
Students will be able to		
<b>1.</b>	Work in Team	
<b>2.</b>	Allocate work among students according to expertise in specific field	
<b>3.</b>	Break the Project into Tasks.	
<b>4.</b>	Develop Leadership quality	
<b>5.</b>	Carry out Purchasing activity	
<b>6.</b>	Carry out fabrication and assembly of components.	
<b>Term Work</b>		
<p>While selecting the projects preference should be given to industrial projects, social impact projects, productivity improvement and renewable energy resources or development of manufacturing technique. The students in a group of not more than FOUR will work under the guidance of the faculty member on the project work undertaken by them. The work started in Semester VII will be continued in the Semester VIII. There will be an end semester University Exam on work done in semester VII. Different tools should be used for Project Management like PERT technique or use of software for analysis of data etc. Three reviews will be conducted throughout the semester and the reference of these reviews will be considered during final assessment. An interim report of the work completed in Semester VII in the form of report and yellow card shall be submitted for the term work along with the synopsis. The report will be assessed by the Project Guide and External faculty member appointed by the Head of the Department / concerned responsible official of the sponsoring industry (Co-guide). The synopsis shall be endorsed by the Head of Department.</p> <p>The work to be completed in Semester VII shall include,</p> <ol style="list-style-type: none"> <li>a) Literature Review</li> <li>b) Problem Identification/Definition</li> <li>c) Design and Methodology / CAD simulation of component or Mechanism</li> <li>d) Activity planning for the time frame and division of responsibility to each student.</li> </ol>		

**The oral examination shall be based on the work planned and completed in Semester VII.**

**CERTIFICATE**

This is to certify that Mr. /Ms .....

(Seat No.)..... has carried out a Project entitled ,..... (Project Stage –I) for partial fulfillment of the requirement of the B.Tech. Production Engineering Course during the academic Year .....

Date:

Place:

(Guide)

(Project Co-Ordinator)

(Examiner)

(Head of Department)

**B Tech Prod**

**SEM VIII**

<b>Subject: Process Planning and Tool Design</b>		
<b><u>EACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
	Attendance : 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	
Practical: 02 Hours / Week	TW/OR : 50 Marks	01 Credit
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Knowledge of Machines and Processes	
2.	Knowledge of Tooling's used in Machine shops	
3.	Knowledge of using Machining data.	
<b>Course Objectives:</b>		
	The students should be able to do Prepare process sheets.	
<b>Course Outcomes:</b>		
Students will be able to		
1.	Perform part print analysis for Establishing general characteristics of work piece, Auxiliary methods for visualizing part print, Functional surfaces, nature of Work piece, finishing and identifying operations, relating the part to assembly.	
2.	Perform dimensional and tolerance analysis	
3.	Identify operations for classification based on importance.	
4.	Carry out Selection of Equipment and toolings from manufacturers catalog	
5.	Select and plan the process and carryout process planning with holistic approach.	
<b>UNIT - I</b>	<b>Product and Process Engineering</b> General Manufacturing processes, Product Engineering, Process Engineering, communications, relation with other departments, classification of processes, manufacturing operations. Part Print analysis-Establishing general characteristics of work piece,Auxiliary methods for visualizing part print, Functional surfaces, nature of work piece, finishing and identifying operations, relating the part to assembly.	<b>(06 Hours)</b>
<b>UNIT – II</b>	<b>Dimensional and tolerance analysis</b> Types of dimensions, concept of straightness, squareness, roundness, and concentricity symmetry, surface quality and surface integrity, surface finish affecting product properties and product cost, base lines, direction of specific dimensions. Tolerance analysis-causes of work piece variations, to express limits and tolerance, tolerance stack, purpose of tolerance chart,	<b>(06 Hours)</b>

	balancing the Tolerance Chart, Rules for adding and subtracting tolerances , layout of tolerance chart.	
<b>UNIT - III</b>	<b>Work piece Control &amp; Classifying operations</b> Work piece control theories, Causes of Work piece variation, shape of part affecting processing, Mechanical, Geometric and Dimensional Control Variables influencing Work piece control, Classifying operations: Basic process operations, principal process operations, major operations, qualifying and requalifying operations, auxiliary process operations.	(06 Hours)
<b>UNIT - IV</b>	<b>Selection of Equipment and tooling's</b> Process capability of Equipments, prime accuracies and producible accuracies of Equipments, Factors influencing make or buy decisions, relation between Process selection and Machine selection, sources for selection , General purpose, special purpose machines, factors in machine selection in terms of cost and design factors, cost analysis, operating cost, comparative cost analysis. Classification of tooling: Factors affecting selection of Tooling, sources of tooling, tool holders, work piece holders, jigs fixtures, moulds, pattern, core boxes, dies, templates, gauges.	(06 Hours)
<b>UNIT - V</b>	<b>Selecting and planning the process</b> Function, Economy and appearance, fundamental rules for manufacturing process, Engineering approach, basic design of product, influence of process engineering on product design, specifications, materials and its cost analysis, eliminating operations, combined operations, availability of equipment, effect of operations speed on performance of economy, Computer aided process planning	(06 Hours)
<b>UNIT - VI</b>	<b>Process sheet design</b> Determining manufacturing sequence, Factors affecting operation sequence, major process sequence, combining operations, Operation routing, routing uses routing description, process picture, process picture sheet, processing dimensions and views	(06 Hours)
<b>Term Work/Practical's</b> (All the assignments include time estimation of processes):		
1. Part print analysis of one industrial component drawing		
2..Process design of one component on GPM/CNC for batch production.		
3. Process design of one component for mass production		
4. Time estimation for one component on GPM / CNC for batch production		
<b>Assignments:</b>		
1. Assignment on Product and Process Engineering.		
2. Assignment on Dimensional and tolerance analysis		

3. Assignment on work piece control and classifying operations.
4. Assignment on Selection of equipment and toolings.
5. Assignment on selecting and planning the process
6. Assignment on process sheet

**Text Books/Reference Books:**

1	D.F.Eary, G.E.Johnson, "Process Engineering for Manufacturing", Prentice-Hall
2	P.W.Wang, J.Kelly, " Computer Aided Process Planning".
3	Nanua singh, "System Approach to Computer Integrated Design and Manufacturing"
4	H.W.Wage, "Manufacturing Engineering", McGraw hill
5	"Manufacturing catalogues for cutting tools and inspection equipments" P.Radhakrishnan, S.Subrmaniyum, V.Raju, "CAD\CAM\CIM", New Age Interanational Pvt. Ltd.
6	K.Hitomi , "Manufacturing Systems Engg", John Willey
7	Groover Mikell. P. "Fundamentals of Modern Manufacturing", Materials, Processes and Systems", 2nd edition, Willey 2002.
<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

<b>INDUSTRIAL ROBOTICS</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credits
	TW/OR: 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic knowledge of Industrial robotics	
2.	Basic knowledge of Sensors and Grippers and Vision system.	
3.	Basic knowledge of Programming.	
<b>Course Objectives:</b>		
The student should understand the scope, objective and application of industrial robotics.		
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	The basic concepts of mechatronics and robots.	
2.	Develop skills in understanding various sensors, robot peripherals and their use & deployment in manufacturing system.	
3.	Acquire skills in understanding robot language and programming.	
4.	The concept of kinematics and dynamics equations.	
5.	Acquire skill in robot task planning for problem solving.	
6.	Develop skills in identifying areas in manufacturing where robotics can be deployed for enhancing productivity.	
<b>UNIT-I</b>	<b>Basic concept in Robotics:</b> Automation and robotics, robot anatomy, basic structure of robots, resolution, accuracy and repeatability. Classification and structure of robotics system Point to point and continuous path system control loops of robotics system, manipulators, wrist motions and grippers.	<b>( 06 Hrs)</b>
<b>UNIT-II</b>	<b>Drives</b> Control Loops, Basic Control System Concepts & Models, Control System Analysis, Robot Activation & Feedback Components, Position & Velocity Sensors, Actuators and Power Transmission system. <b>Robot &amp; its Peripherals</b> <b>End Effectors:</b> Type mechanical and other grippers, Tool as end effector. <b>Sensors:</b> Sensors in Robotics, Tactile Sensors, Proximity & Range Sensors, Sensor Based Systems, Vision systems and Equipment.	<b>( 06 Hrs)</b>
<b>UNIT-III</b>	<b>Machine vision</b> Introduction, Low level & High level Vision, Sensing & Digitizing, Image Processing & analysis, Segmentation, Edge detection, Object Description & recognition, interpretation and Applications. <b>Programming for Robots</b>	<b>( 06 Hrs)</b>

	Method, Robot Programme as a path in space, Motion interpolation, motion & task level Languages, Robot languages, Programming in suitable languages and characteristics of robot.	
<b>UNIT-IV</b>	<b>Robot Kinematics and Dynamics</b> Forward, reverse & Homogeneous Transformations, Manipulator Path control and Robot Dynamics. The direct kinematics problem, the inversion kinematics solution, Lagrangian –Euler formation, generalized D’Almbert equations of motion. Denavit Hartenberg convention and its application.	<b>( 06 Hrs)</b>
<b>UNIT-V</b>	<b>Root Intelligence &amp; Task Planning</b> Introduction, State space search, Problem reduction, use of predictive logic, Means. Ends Analysis, Problem solving, Robot learning and Robot task planning. <b>Implementation Principles and Issues</b> An Approach for implementing robotics, Safety, Training, Maintenance and Quality. And Social issues and The future of Robotics.	<b>( 06 Hrs)</b>
<b>UNIT-VI</b>	<b>Robot application in manufacturing</b> Material transfer, machine loading & un loading, processing operation, Assembly & inspectors, robotic Cell design & control, Social issues & Economics of Robotics. Interfacing robot with PC, handshaking, hardware handshaking, RS232C serial interface.	<b>( 06 Hrs)</b>

**Term work:**

**List of Experiments: ( Any Five)**

- Study of elements of industrial robots.
- Study of model a work space for robot application.
- Design a robot gripper.
- Study of vision systems in industrial robots.
- Design a pick and place robot.
- Programming of pick and place robot.
- Make individual model of robot.

**Assignments:**

- Assignment on basic concepts of robots.
- Drives and control systems for robot application.
- Different types of sensors and grippers used in robots.
- Advances in robot programming
- Robot applications in manufacturing systems.
- Industrial visit

**Oral/Practical**

Term work and oral will be based on above syllabus

### Syllabus for Unit Test

Unit Test 1	<b>Units I , II and III</b>
Unit Test 2	<b>Units IV, V ,VI</b>

<b>FINANCIAL MANAGEMENT &amp; COST CONTROL</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: --	Attendance: 10 Marks	01 Credit
Tutorial - 01 Hrs/Week	Assignments : 10 Marks Unit Test : 20 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
<b>1.</b>	Basic knowledge of Mathematics.	
<b>2.</b>	Basic knowledge of Production Planning And Control	
<b>3.</b>	Basic knowledge of Manufacturing Process And Inventory Control	
<b>Course Objectives:</b>		
The student should understand the scope, objective and application of financial management & costing control		
<b>Course Outcomes:</b>		
Students will be able to understand		
<b>1.</b>	Function, scope, goals and tools used for financial management & costing control	
<b>2.</b>	Control of Capital Expenditure.	
<b>3.</b>	Concept and design of Working Capital.	
<b>4.</b>	Methods of costing and Depreciation cost.	
<b>5.</b>	Budgetary control and variance Analysis.	
<b>6.</b>	Concept, development & use of standard costing.	
<b>UNIT-I</b>	<b>Financial Management</b> Financial function, Scope, goals and tools. Sources of finance, corporate planning and financial management. Financial Statements: Balance sheet, profit and loss account. Ratio Analysis: Classification, Ratio Analysis and its limitations. Operating and Financial Leverage.	<b>( 06 Hrs)</b>
<b>UNIT-II</b>	<b>Capital Budgeting</b> Control of Capital Expenditure, Evaluation Process-Payback approach, Accounting of Rate of Return, Present Value Method Vs Internal Rate of Return. Replacement cost and discounted cash flow.	<b>( 06 Hrs)</b>
<b>UNIT-III</b>	<b>Working Capital Management</b> Concept and design of Working Capital, types of working capital, sources of working capital, time value of money, cost and capital, cost of capital. Funds Flow Analysis: Concepts, Objectives, and Techniques of Funds Flow Statement, cash flow statement.	<b>( 06 Hrs)</b>
<b>UNIT-IV</b>	<b>Costing And Cost Accounting</b> Methods of costing and elements of cost. Type of cost, Material Cost: Different methods of pricing of issue of materials. Material losses - Wastage and its consideration. Labour Cost: Different methods wages and incentive plans. Principles of good remunerating system, labour turnover and its methods.	<b>( 06 Hrs)</b>

	<b>Job And Process Costing:</b> Job costing, Factory job costing, Contract cost a) Unit costing:, output and operating cost b) Process costing; Normal and abnormal losses, abnormal gains, waste, scrap, by-products	
<b>UNIT-V</b>	<b>Standard Costing And Marginal Costing:</b> <b>Standard Costing:</b> Material, Labour, Overhead, Sales. Profit, Product-mix and Yield Variance. Capital cost control repetitive operating cost, standard costs, cost reporting and corrective action. Advantages and disadvantages. <b>Marginal Costing:</b> Concept ,Profit Volume relationship, Breakeven chart, contribution, breakeven point, Margin of Safety, Advantages and disadvantages	<b>( 06 Hrs)</b>
<b>UNIT-VI</b>	<b>Depreciation And Overheads:</b> <b>Depreciation:</b> Concept, importance and different methods of depreciation. Estimation of material, machining and labour cost machining. <b>Overheads:</b> Classification, collection of overheads, Primary and Secondary apportionment of overheads, absorption of overheads. Machine hour and labour hour rate. Under and over absorption of overheads. Estimation of overheads	<b>( 06 Hrs)</b>
<b>Assignments:(Any six)</b>		
<ul style="list-style-type: none"> <li>• Assignment on Financial Management</li> <li>• Assignment on Capital Budgeting.</li> <li>• Assignment on Working Capital Management..</li> <li>• Assignment on Costing Cost Accounting</li> <li>• Assignment on Standard Costing And Marginal Costing</li> <li>• Assignment on Depreciation And Overheads</li> <li>• Case Study</li> </ul>		
<b>Text Books</b>		
1. N. K. Prasad, "Principles and Practice of Cost Accounting", Syndicate Pvt. Ltd., Calcutta		
2. M. Pandey, "Financial Management", New Delhi Vikas Publication House Pvt. Ltd., ISBN 81-259-0638-X		
3. M. Y. Khan, P. K. Jain, "Financial Management", Tata McGraw Hill Publishing Ltd.		
4. B. K. Bhar, "Cost Accounting Methods and Problems", Academic Publishers, Calcutta		
5. P.C.Tulsian "Cost Accounting" Sultan Chand & Co.,		
6. P.C.Tulsian "Financial Management" Sultan Chand & Co.,		
<b>Reference Books:</b>		
1. Henry M. Steiner, "Engineering Economics Principles", McGraw Hill Publication.		
2. C.B. Gupta, "Fundamentals of Business", Sultan Chand & Co.,		
3. P. A. Samuelson, "Economics", McGraw Hill International.		
4. K. K. Dewett, "Modern Economic Theory", Sultan Chand & Co., ISBN 81-219-0331-1		
5. Colin Drury, "Management and Cost Accounting", English Language Book Society, Chapman & Hall London.		
<b>Syllabus for Unit Test</b>		
Unit Test 1	<b>Units I, II and III</b>	
Unit Test 2	<b>Units IV, V ,VI</b>	

<b>Elective III - Human Resource Management</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hrs/Week	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
Tutorial: --	TW/OR: 50 Marks	
<b>Course Pre-requisites:</b>		
<b>The Students should have</b>		
1.	Basic knowledge of business management	
2.	Knowledge of employee welfare	
3.	Basic knowledge of factory acts and labour laws	
<b>Course Objectives:</b>		
The student should be able to understand and apply the principles of human resource management.		
<b>Course Outcomes:</b>		
Students will be able to		
1.	Understand the concept of human resource management	
2.	Use proper HR forecasting techniques for successful planning	
3.	Understand the concept of training and development	
4.	Understand the concept of performance appraisal and compensation	
5.	Use the various methods of job evaluation, analysis and design	
6.	Understand the grievance procedure and employee welfare	
<b>UNIT-I</b>	<b>Introduction to Human Resource Management:</b> Introduction, Concept of Human Resource Management, Scope of Human Resource Management, History of Human Resource Management, Function of Human Resource Management, Role of HR Executives Changing Role of Human Resource in India, Globalization, Its Impact on HR.	(06 Hours)
<b>UNIT-II</b>	<b>Human Resource Planning:</b> Process of Human Resource Planning, Need for Human Resource Planning, HR Forecasting Techniques, Successful Human Resource Planning <b>Recruitment and Selection:</b> Concept of Recruitment, Factors Affecting Recruitment, Sources of Recruitment, Recruitment Policy, Selection, Selection Process, Application Forms, Selection Test, Interviews, Evaluation, Placement, Induction	(06 Hours)
<b>UNIT-III</b>	<b>Training and Management Development:</b> Meaning of Training, Area of Training, Methods of Training, Concept of Management Development, Management Development Methods, Differences Between Training and Development, Evaluation of Training and Management Development	(06 Hours)

	<b>Employee Career Planning and Growth:</b> Concept of Employee Growth, Managing Career Planning, Elements of a Career Planning Programme, Succession Planning.	
<b>UNIT-IV</b>	<b>Performance Appraisal:</b> Concept and Need for Performance, Reviews, Overview of Performance Appraisal, Types of Appraisal Methods, 360 degree appraisal, Benefits <b>Compensation Management:</b> Wage and Salary Administration, Managing Wages, Concept of Rewards and Incentives, Managing Benefits in Organisations <b>Labour Laws:</b> introduction to labour laws and factory act.	(06 Hours)
<b>UNIT-V</b>	<b>Job Evaluation:</b> Concept of Job Evaluation, Objectives, Techniques, Advantages and Limitations, Introduction to Competency <b>Job Analysis and Design:</b> Concept of Job Analysis and Design, Process of Job Analysis, Methods of Job Analysis, Job Analysis Information, Concept of Job Design, <b>Human Resource Information System:</b> Introduction, Concept, Components, Types, Application, Implementation, Benefits, Impact,	(06 Hours)
<b>UNIT-VI</b>	<b>Employee Welfare and Working Conditions:</b> Concept of Employee Welfare, Welfare Measures, Types, Employee Welfare Responsibility, the Business Benefits of Employee Welfare Activities <b>Grievance and Grievance Procedure:</b> Concept of Grievance, Causes of Grievances, Forms and Effects of Grievance, the Grievance Handling Procedure, Need for Grievance Redressal Procedure <b>Emerging Trends in HRM:</b> Competency Mapping, Business Process Outsourcing, Right Sizing of Workforce, Flexi time, Talent Management, Employee Engagement	(06 Hours)
Term work:		
<ol style="list-style-type: none"> <li>1. Introduction to Human resource management</li> <li>2. Exercise covering human resource planning, recruitment and selection.</li> <li>3. Exercise on training and development</li> <li>4. Assignment on employee career planning and growth</li> <li>5. Exercise on career planning and compensation.</li> <li>6. Exercise on job evaluation, analysis and design.</li> <li>7. Assignment on employee welfare and working conditions.</li> <li>8. Exercise on grievance procedure and emerging trends in HRM.</li> </ol>		
<b>Assignments:</b>		
<ol style="list-style-type: none"> <li>1. Assignment on cost effective recruitment</li> <li>2. Assignment on use of portals for recruitment.</li> <li>3. Assignment on training need analysis.</li> <li>4. Assignment on compensation benchmarking.</li> <li>5. Assignment on mandatory requirements of factories act.</li> <li>6. Assignment on design of appraisal system.</li> <li>7. Assignment on employee satisfaction survey.</li> </ol>		

**Text Books / References**

1. Aswathappa, "Human Resource and Personnel Management", Tata McGraw Hill.
2. C.B. Mammoria, "Personnel Management",
3. Dessler, "Human Resource Management", Prentice Hall India.
4. DeCenzo & Robbins, "Personnel/Human Resource Management: "Prentice Hall India.
5. D. K. Bhattacharya, "Human Resource Management", Excel Books; 2nd edition
6. V. S. P. Rao, "Human Resource Management", Excel Books.

8. Dr P Jyothi and Dr D.N Venkatesh, "Human Resource Management", Oxford Publications.

**Syllabus for Unit Test**

Unit Test 1	Units I, II and III
Unit Test 2	Units IV, V and VI

<b>Elective III: Manufacturing of Composite Materials</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 03 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credits
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic knowledge of conventional manufacturing processes.	
2.	Knowledge of material science.	
3.	Knowledge of engineering Metallurgy.	
<b>Course Objectives:</b>		
	Student will understand the concepts of Composite and also able to understand the Manufacturing of Composite Materials .	
<b>Course Outcomes:</b>		
Students will be able to understand		
1.	Different types of composite and its classification .	
2.	To select proper process and understand characteristics of fibers .	
3.	To select different methods of reinforcement of materials .	
4.	To select various design of dies for manufacturing .	
5.	Mechanism of curing.	
6.	To select advance processes and understand its defects and remedies in Manufacturing of Composite Materials	
<b>UNIT - I</b>	<b>Introduction:</b> Definition of composite material, Classification based on matrix and topology, Constituents of composites, Interfaces and Interphases, Distribution of constituents, Nano-composites,	<b>(06 Hours)</b>
<b>UNIT - II</b>	<b>Performance of Structural Composites:</b> Combination effects Fabrication and processing of metal matrix (MM), polymer Matrix (PM) and ceramic matrix (CM) composites and their characterization; Fabrication of nano-composites; Secondary processing and joining of various composite materials for structural applications and their fracture behaviour and safety.	<b>(06 Hours)</b>
<b>UNIT - III</b>	<b>Strengthening mechanisms,</b> Stress distribution in fibre and the matrix (shear stress and axial tensile stress in the fibre along its length), critical length of fibre for full strengthening, Analysis of uniaxial tensile stress-strain curve of unidirectional continuous and short fibre composites, Estimation of the required minimum amount of fibre and critical amount of fibre to gain a composite strength, Analysis of strength of a composite during loading at an angle to the fibres,	<b>(06 Hours)</b>

<b>UNIT - IV</b>	<b>Characterisation Composites</b> :Control of particle/fibre and porosity content, particle/fibre distribution, Interfacial Reaction of matrix-reinforcing component, Coating of reinforcing component, Strength analysis Performance of Composite in Non-structural Applications :Composites in Electrical, Superconducting and Magnetic Applications, Nano-composite devices	<b>(06 Hours)</b>
<b>UNIT - V</b>	<b>Fabrication Composites</b> :Fabrication of Metal Matrix Composites: Commonly used Matrices, Basic Requirements in Selection of constituents, solidification processing of composites - XD process ,Spray processes - Osprey Process, Rapid solidification processing, Dispersion Processes - Stir-casting & Compocasting, Screw extrusion, Liquid- metal impregnation technique - Squeeze casting, Pressure infiltration, Lanxide process), Pinciple of molten alloy infiltration, rheological behaviour of melt -particle slurry, Synthesis of In situ Composites;	<b>(06 Hours)</b>
<b>UNIT - VI</b>	<b>Fabrication of Polymer Matrix Composites</b> - Commonly used Matrices Basic Requirements in selection of Constituents, Moulding method, Low pressure closed molding, pultrusion, Filament winding, Fabrication of ceramic matrix composites - Various techniques of vapour deposition, Liquid phase method and Hot pressing etc. Fracture & Safety of Composite : Fracture behavior of composites, Mechanics and Weakest link statistics,Griffith theory of brittle fracture and modification for structural materials, Basic fracture mechanics of composite	<b>(06 Hours)</b>
<b>Term work:</b>		
<b>List of Experiments: ( Any six )</b>		
<ul style="list-style-type: none"> <li>• Manufacturing of Fibres on Electrospin Machine</li> <li>• Study of different binders</li> <li>• Manufacturing of composite by Hand Lay up processes .</li> <li>• Manufacturing of composite by VARTUM</li> <li>• Study of MMC .</li> <li>• Study of CMC.</li> <li>• Study of different Matrix Materials and reinforced materials</li> <li>• Testing of composite component</li> </ul>		
<b>Assignments:</b>		
<ol style="list-style-type: none"> <li>1. Explain the different types of composite ,Interfaces and Interphases.</li> <li>2. Discuss the Fabrication of nano-composites in details</li> <li>3. Explain the Stress distribution in fiber and the matrix.</li> <li>4. How the carbon and glass fiber are manufactured.</li> <li>5. What is Liquid- metal impregnation technique?</li> <li>6. Explain the basic requirements in selection of Constituents in composite .</li> </ol>		

<b>Text Books/Reference Books:</b>

2	Nanocomposite Science and Technology, P.M. Ajayan, L.S. Schadler, P. V. Braun, (2003), Wiley-VCH Verlag GmbH Co. KGaA, Weinheim.
3	Ceramic matrix composites, K.K. Chawala, 1sted., (1993) Chapman & Hall, London
4	Advances in composite materials, G. Piatti, (1978) Applied Science Publishers Ltd., London.
<b>Syllabus for Unit Test:</b>	
Unit Test -1	Unit I to III
Unit Test -2	Unit IV to VI

<b>Elective III: KNOWLEDGE BASED SYSTEMS</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW/OR : 50 Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
<b>1.</b>	Basic Knowledge of Information Technology	
<b>2.</b>	Introductory computer course.	
<b>3.</b>	Information systems course.	
<b>Course Objectives:</b>		
The basic purpose of the course is to discuss the application of artificial intelligence techniques and more specifically knowledge based systems, in information processing and information systems design. Discuss methodological and project management approaches to developing knowledge based systems.		
<b>Course Outcomes:</b>		
Students will be able to		
<b>1.</b>	Understand the knowledge-based systems representation.	
<b>2.</b>	Understand automatic reasoning.	
<b>3.</b>	Understand inductive and deductive learning.	
<b>4.</b>	Implement a small knowledge- based system.	
<b>5.</b>	Understand Methodologies for building knowledge based systems	
<b>6.</b>	Understand Organizational and Managerial Issues	
<b>UNIT-I</b>		<b>( 06 Hrs)</b>
<b>Artificial Intelligence and Information Systems:</b> Fourth & fifth generation languages, Nonprocedural Paradigms, Data and Knowledge.AI, knowledge based systems, Expert Systems. Basic architecture of knowledge based systems		
<b>UNIT-II</b>		<b>( 06 Hrs)</b>
<b>Knowledge representation and the knowledge base:</b>  First-Order Logic, Production Rules, Horn Clauses, Frames, Semantic Networks, Objects. Metaknowledge, Conceptual modelling.		

<b>UNIT-III</b>	<b>( 06 Hrs)</b>
<b>Interfaces:</b> User interface: explanation facilities, unknown values. Systems interface: language and database hooks. Developer interface: knowledge acquisition, testing & debugging	
<b>UNIT-IV</b>	<b>( 06 Hrs)</b>
<b>Methodologies for building knowledge based systems:</b> Development lifecycle, structured development and prototyping. Knowledge acquisition techniques, protocol analysis, repertory grid. Integration with databases, data processing and information systems methodologies	
<b>UNIT-V</b>	<b>( 06 Hrs)</b>
<b>Expert system building tools:</b> AI-Languages, Knowledge representation languages, E.S.-shells, products and environments .Knowledge base management systems	
<b>UNIT-VI</b>	<b>( 06 Hrs)</b>
<b>Organizational and Managerial Issues:</b> Knowledge as a strategic asset in the organization, knowledge problems and management. Applications, pitfalls and successes.	
<b>Term work:</b> <b>List of Experiments: ( Any Five)</b> <ol style="list-style-type: none"> <li>1. Study of Artificial Intelligence</li> <li>2. Study of Basic architecture of knowledge based systems</li> <li>3. Conceptual modelling.</li> <li>4. Study of Developer interface.</li> <li>5. Data processing and information systems methodologies.</li> <li>6. Knowledge base management systems.</li> <li>7. Study of knowledge problems and management.</li> </ol>	
<b>Assignments: ( Any Six)</b> <ol style="list-style-type: none"> <li>1. Study of Expert Systems.</li> <li>2. Knowledge based systems.</li> <li>3. Study of Production Rules.</li> <li>4. Study of Semantic Networks.</li> <li>5. Study of Systems interface.</li> <li>6. Study of protocol analysis.</li> </ol>	

<p>7. Study of AI-Languages.  8. Different Knowledge acquisition techniques.  9. Study of Knowledge representation languages.  10. Study of products and environments.  11. Knowledge as a strategic asset in the organization</p>

### Elective III: Design And Analysis of Experiments.

<b>Elective III: Design And Analysis of Experiments.</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 03 Hrs/Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Attendance: 10 Marks Assignments : 10 Marks Unit Test : 20 Marks	01 Credit
	TW &OR :50Marks	
<b>Course Pre-requisites:</b>		
The Students should have		
1.	Basic knowledge of Introduction to Statistics or a similar basic statistics course	
2.	Basic knowledge of Graphical Representation.	
3.	Basic knowledge of some Software's such as statease and Minitab.	
<b>Course Objectives:</b>		
This course provides an introduction to designing experiments and analyzing their results.		
<b>Course Outcomes :</b>		
Students will be able to understand		
1.	Design of Experiments	
2.	Selection of Levels and Parameters.	
3.	Factorial Design. The $2^k$ Factorial Design	
4.	Analysis of Variance (ANOVA)	
5.	Model building using the method of least squares.	
6.	Performing hypothesis tests,	
<b>UNIT-I</b>	<b>Introduction to design of experiments:</b> Strategy of Experiment, Basic Principles, Guide Lines for designing Experiment, Brief History of Stastical Design. Using Stastical Techniques in Experimentation. A typical application of Experimental Design.	<b>( 06 Hrs)</b>
<b>UNIT-II</b>	<b>Simple Comparative Experiments.:</b> Introduction, Basic Stastical Concepts, Sampling and Sampling distributions, difference in means, hypothesis testing, choice of sample size, confidence intervals, comparing single mean to Specified value, difference in means, paired comparison designs.	<b>( 06 Hrs)</b>
<b>UNIT-III</b>	<b>Design of Experiments:</b> Introduction to Factorial Designs. The $2^k$ Factorial Design, The $2^2$ Factorial Design, The $2^3$ Factorial Design, General $2^k$ design, Single replicate of the $2^k$ design, Taguchi Method and addition of center points to the $2^k$ design.	<b>( 06 Hrs)</b>
<b>UNIT-IV</b>	<b>Analysis of Variance :(ANOVA)</b>	<b>( 06 Hrs)</b>

	Analysis of the fixed effects Model, decomposition of the Total Sum of Squares, Stastical Analysis, Estimation of the Model Parameters, Unbalanced Data.	
<b>UNIT-V</b>	<b>Regression Analysis:</b> Regression Model, Comparison among Means, Regression Approach to the Analysis of Variance Least Squares, Estimation of the Model Parameters, General Regression Significant Test,	<b>( 06 Hrs)</b>
<b>UNIT-VI</b>	<b>Result Analysis:</b> Fitting Regression Models, Linear Regression Models, Estimation of the Model Parameters in Linear Regression Models, Hypothesis Testing in Multiple Regression, Test for Significance of Regression, Test on Individual Regression Coefficient and group of Coefficients, Confidence intervals on the individual Regression Coefficient, Confidence intervals on the Mean Response, Prediction the new response observation F-Test, Matching the Calculated value with standard value, Use of Software's, Statease, Systat, Minitab ,Predict analysis	<b>( 06 Hrs)</b>
<b>Term work: Students have to write the assignments as well as perform the experiment and prepare the journal for the same.</b>		
<b>Assignments: (Any Six)</b> <ul style="list-style-type: none"> <li>• Assignment on Introduction to design of experiments</li> <li>• Assignment on Simple Comparative Experiments</li> <li>• Assignment on Design of Experiments.</li> <li>• Assignment on Analysis of Variance (ANOVA)</li> <li>• Assignment on Regression Analysis</li> <li>• Assignment on Result Analysis.</li> <li>• Case Study (Perform the experiments by selecting at least 2 levels and 3 parameters.)</li> </ul>		
<b>Oral/Practical</b> Term work and oral will be based on above syllabus		
<b>Text Books</b> <ol style="list-style-type: none"> <li>1) George E. P. Box, William G. Hunter, J. Stuart Hunter, Statistics for Experimenters: An Introduction to Design, Data Analysis, and Model Building, Second Edition, John Wiley &amp; Sons, New York, 2005</li> <li>2) Douglas C. Montgomery, Design and Analysis of Experiments, Sixth Edition, John Wiley &amp; Sons, New York, 2004.</li> </ol>		
<b>Syllabus for Unit Test</b>		
Unit Test 1	<b>Units I , II , III</b>	
Unit Test 2	<b>Units IV, V ,VI</b>	

<b>Computer Aided Engineering</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: --	End Semester Examination: --	
Practical: -- 02 Hrs/Week	Internal evaluation: -- Assignments : -- Unit Test : --	01 Credit
Tutorial : --	TW/OR – 50 marks	01 Credit
<b>Course Pre-requisites:</b>		
<b>The Students should have</b>		
1.	Basic knowledge of computer aided design and analysis	
2.	Basic knowledge of manufacturing	
3.	Basic knowledge of numerical methods	
<b>Course Objectives:</b>		
The students should understand the scope, objectives and applications of Computer Aided Engineering.		
<b>Course Outcomes:</b>		
Students will be able to		
1.	Solve ordinary and partial differential equations using Galerkin method.	
2.	Analyse the 2D problems by using software.	
3.	Solve the problems related to heat transfer by using software.	
4.	Design and analyse the connecting rod.	
5.	Design and analyse the burnished components.	
6.	Analyse the screw jack.	
<b>Term work:</b>		
1.	Structural analysis of a corner bracket.	
2.	Structural analysis of Truss structure.	
3.	Modal analysis of Simple Pendulum.	
4.	Steady state heat transfer through a plate with hole.	
5.	Analysis of a connecting rod.	
6.	Analysis of Leaf spring	
7.	Analysis of burnished components	
8.	Analysis of piston	
9.	Analysis of camshaft	
10.	Analysis of Screw jack.	
<b>Assignments: NA</b>		
<b>Text Books / References</b>		
<ol style="list-style-type: none"> <li>1. S. S. Rao, " Finite Element methods in Engineering", Pergomon press Oxford, 2<sup>nd</sup> edition 1989</li> <li>2. <b>PROJECT STAGE-II</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Practical: 04 Hours / Week	TW/OR :150 Marks	08 Credits
<b>Course Pre-requisites:</b>		
The Students should have		
<b>1.</b>	Basic knowledge of Machines.	
<b>2.</b>	Knowledge of material science.	
<b>3.</b>	Knowledge of Strength of Material.	
<b>Course Objectives:</b>		
To prepare the students to carry out a comprehensive study of any design or process or phenomenon, to encourage the process of independent / creative thinking and working in groups and to expose them to industrial atmosphere of accountability.		
<b>Course Outcomes:</b>		
Students will be able to		
<b>1.</b>	Work in Team	
<b>2.</b>	Allocate work among students according to expertise in specific field	
<b>3.</b>	Break the Project into Tasks.	
<b>4.</b>	Develop Leadership quality	
<b>5.</b>	Carry out Purchasing activity	

6.	Carry out fabrication and assembly of components.

### **Term Work**

The students will complete their project work started in B.Tech. (Production Engineering) – Semester VII and will submit the report in a prescribed format as given below at the end of Semester VIII. The report will be assessed by the Project Guide and External faculty member appointed by the Head of the Department / concerned responsible official of the sponsoring industry (Co-guide). A publication of work in national conference or journal is compulsory. The report shall be submitted, typed on A4 size sheets and hard bound.( One copy for the department and one copy for each student). The contents of the report shall include the following in a broad sense.

#### **Detailing may be done according to the problem undertaken.**

- a) Problem identification and statement
  - b) Review of relevant literature / present practices regarding the problem
  - c) Methodology followed to carry out the work
  - d) Inputs for the project design
  - e) Processing / conversion of these inputs
  - f) Outputs testing / validation
  - g) Results, conclusion, future scope, references, acknowledgement
  - h) **Review of initial plan and deviations in it.**
- 1) Term work will be assessed by the project guide along with Co-guide from sponsoring industry **or** one more faculty member appointed by the Head of Department for in-house projects; based on the work done and the report submitted.
  - 2) The students will be examined orally by the examiner appointed by the university and the project guide as the internal examiner.

**Marks will be awarded on the basis of the work done and performance in the oral examination.**

Format of the project report should be as follows:

1. Paper: The Project report should be typed/printed on white paper of A-4 size.
2. Typing: The typing shall be with one and half spacing and on one side of the paper.
3. Binding: The Industrial Implant Report should be submitted with front and back cover in black  
Hard bound, with golden embossing.
4. Margins: Left - 1.25", Right - 1". Top and Bottom 1"
  
5. Sequence of Pages:
  1. Title page
  2. Certificate form Institute
  3. Completion Certificate form Industry, if sponsored.
  4. Acknowledgement
  5. Abstract
  6. Index
  7. Nomenclature and Symbols
  8. Actual Content
  9. Conclusion
  10. References.
  
6. Front cover: The front cover shall have the following details in block capitals
  - i. Title at the top.
  - ii. Name of the candidate in the centre, and
  - iii. Name of the Institute, Name of Industry, if sponsored and the year of submission on separate

lines, at the bottom.

### CERTIFICATE

This is to certify that Mr. /Ms .....

(Seat No.)..... has carried out a Project entitled ,.....for partial fulfillment of the requirement of the B.Tech. Production Engineering Course during the academic Year .....

Date:

Place:

(Guide)

(Project Co-Ordinator)

(Examiner)

(Head of Department)

## Structure of M.Tech Electronics Engineering (VLSI)

Based on Credit Pattern

**M.Tech.(Electronics) Sem-I**

## **ADVANCED DIGITAL COMMUNICATION SYSTEM**

### **TEACHING SCHEME**

Lectures: 04 Hrs/Week

### **EXAMINATION SCHEME**

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

---

### **Course prerequisites:**

Knowledge of random processes and linear system theory (Transforms, convolution, sampling)

---

### **Course objective:**

To provide students with the knowledge & understanding of modern communication systems.

---

**Course Outcomes:** Upon Completion of the course, the students will be able to

1. To identify and describe different techniques in modern communication systems.
2. To understand the basic theory of modulation & demodulation techniques.
3. To possess knowledge of different codes.
4. To apply fundamentals of communication systems to solve the Engineering Problems.

### **Contents:**

#### **UNIT I**

(08 Hours)

#### **Basic digital pass band modulation**

Introduction, Binary amplitude shift keying(BASK), Binary Phase shift keying(BPSK), Binary frequency shift keying(BFSK),Performance comparison of BASK, BFSK,BPSK, Digital modulation techniques for spectral efficiency, Quadrature Phase shift keying(QPSK),

Offset Quadrature Phase shift keying(OQPSK), Minimum shift keying(MSK), Comparison of M-ary signaling techniques.

## UNIT II

(08 Hours)

### **Demodulation:**

The matched filter, The correlator, envelop detector, output signal to noise ratio, Binary demodulation, coherent PSK,DPSK,FSK, non-coherent FSK,DPSK ,MSK .

## UNIT III

(08 Hours)

### **Channel coding**

Reed soloman codes, Interleaving & concatenated codes, coding and Interleaving applied to the compact disc digital audio system, Linear block codes, Cyclic Redundancy check (CRC), Turbo codes, Automatic repeat request (ARQ).

## UNIT IV

(08 Hours)

### **Fading Channels**

Multipath propagation, Flat & frequency selective fading, Fast and slow fading Random channel models, Signal design for radio channels, Diversity, Modulation, Coding.

## UNIT-V

(08 Hours)

### **Advanced Modulation techniques**

Trellis –coded modulation, Direct sequence modulation, IS-95 forward link, Code division multiple Access (CDMA), IS-95 reverse link, Frequency hop Spread Spectrum (FH-SS) ,CDMA, Pseudorandom sequences: generation & properties, Rake receiver

## UNIT VI

(08 Hours)

### **OFDM**

Introduction to OFDM, Low mobility, High mobility, Time diversity, Frequency diversity, Receiver antenna diversity (SIMO), Transmit antenna diversity (MISO), Transmit receive antenna diversity.

### **Text Books/ References:**

1. Digital communications- Simon Haykin, John Wiley and sons, 1998
2. Digital Communications- Bernard Sklar, Second edition, Pearson Education, 2001.
3. Nguyen Ha, Shwedyk Ed, “ A First Course in Digital Communications, Cambridge University Press.
4. Digital communication, 4th ed. - J. G. Proakis, MGH International edition.
5. Principle of Communication Systems – Taub, Schilling, TMH
6. Communication Systems, 4th ed. – A. Bruce Carlson, Paul B. Crilly, Janet C. Rutledge, MGH International edition.
7. Advanced Digital Communication Sytems-NIIT,PHI learning.

## DIGITAL VLSI DESIGN

### TEACHING SCHEME

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40

Marks

TW&OR: 50 Marks

Total Credits: 05

---

### Course Prerequisite:

Knowledge of Digital Electronics

---

### Course Objective:

To understand theory and to learn design of digital system. The course will involve design and simulation of digital circuits using VHDL

---

**Course Outcomes:** On successful completion of this course, students will be able to

- Ability to apply various modeling styles for digital circuits.
  - Ability to design sequential and combinational circuits using VHDL.
  - Ability to conceptualize FSM.
  - Ability to simulate digital circuits.
  - Ability to apply concepts of PLD designs.
- 

### Contents:

#### UNIT I

(08 Hours)

#### VHDL Basics

Objectives of VHDL, Entity-Architecture Concepts, Introduction to various modeling styles of VHDL (Behavioral, Dataflow, Structural and Mixed), VHDL Basic Elements (Data types, Data objects and Operator), Configuration, Package declaration.

**UNIT II**  
**VHDL Modeling-1**

(08 Hours)

Dataflow Modeling: Example based on dataflow modeling, When-Else and With Select Statement, Concept of Delta delay and multiple drivers, Generate and Block Statements  
Structural modeling: Concept of Component

**UNIT III**

(08 Hours)

**VHDL Modeling-2**

Behavioral and mixed modeling for digital design, If-else, Loop, Case, Assert and Report statements, State Machine Design, Moore and Mealy FSM Design using VHDL

**UNIT IV**

(08 Hours)

**EDA tools**

Digital Design Flow, RTL Synthesis, Synthesis Flow, Functional and Timing simulation, Physical Verification, Floor planning, Place and route, IP Design

**UNIT V**

(08 Hours)

**Programmable Logic Devices**

Overview of PLDs, SPLD, CPLD, FPGA, Case study of Xilinx family XC 4000 and XC9500, Modes of configuration.

**UNIT VI**

(08 Hours)

**Designing with PLDs**

Designing with ROM, PLA, PAL, GAL, CPLD and FPGA, Implementing functions in PLDs.

**Text Books/ References:**

1. VHDL: Programming by Example-Douglas Perry, McGraw Hill, Fourth Edition, 2002.
2. Fundamentals of Logic Design-Charles Roth, Larry Kinney, Cengage Learning, Seventh edition, 2014.
3. A VHDL Primer-J. Bhaskar, PHI Learning, Third Edition, 1998.
4. CMOS VLSI Design: A Circuits and system perspectives- Neil H.E. Weste, Davir Harris, Pearson Education 3rd Edition, 2004.

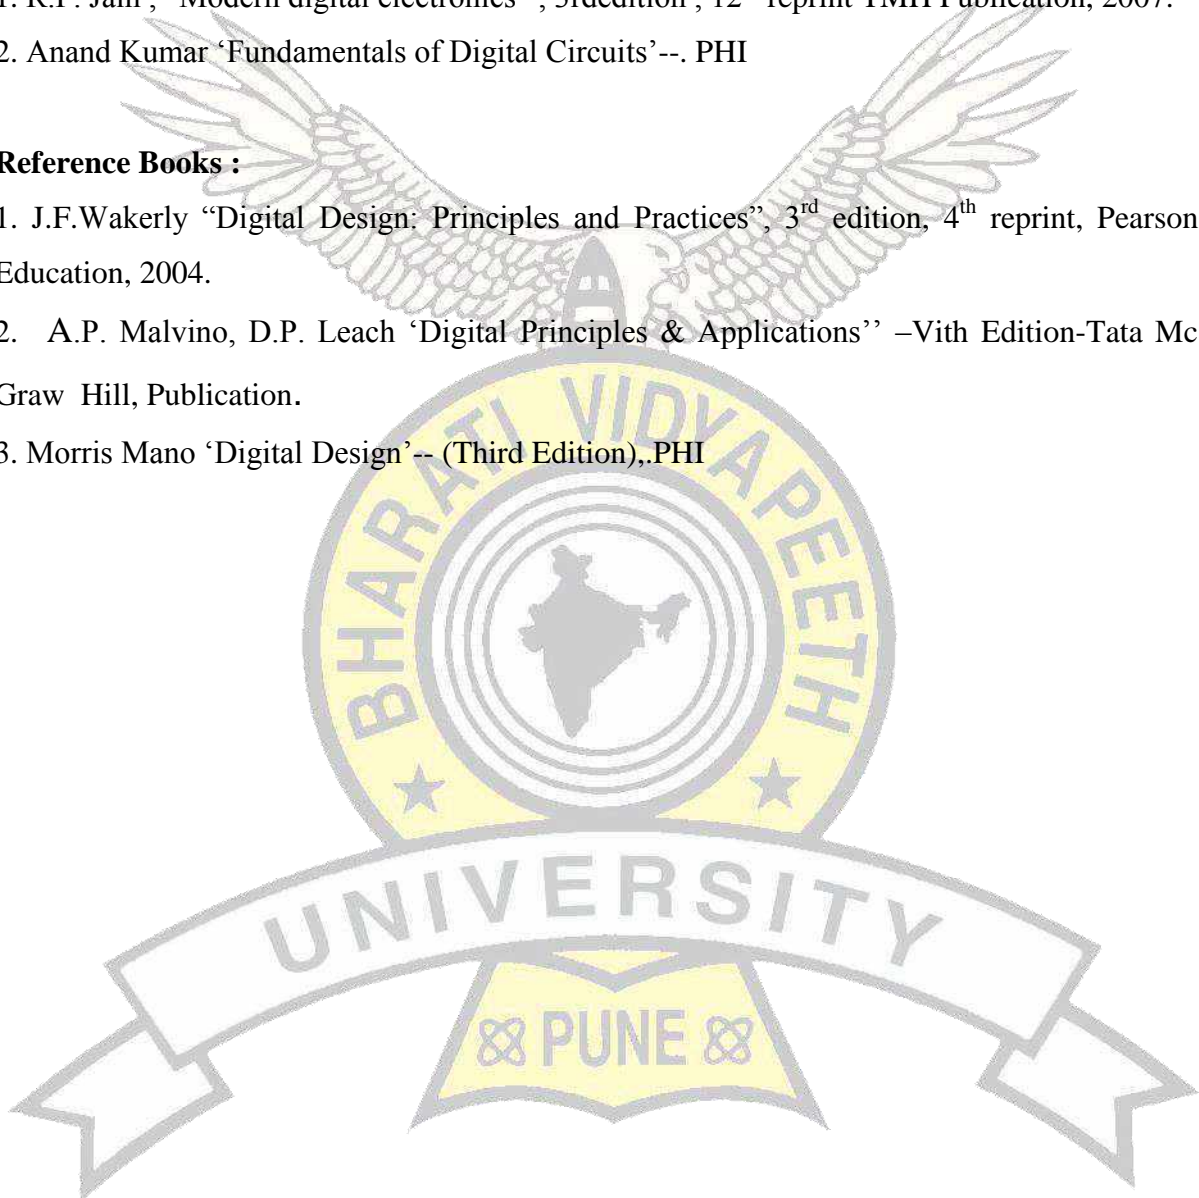

5. Circuit Design and Simulation with VHDL- V. Pedroni, MIT Press, Second Edition, 2010

**Text Books:**

1. R.P. Jain , “Modern digital electronics” , 3rd edition , 12<sup>th</sup> reprint TMH Publication, 2007.
2. Anand Kumar ‘Fundamentals of Digital Circuits’--. PHI

**Reference Books :**

1. J.F.Wakerly “Digital Design: Principles and Practices”, 3<sup>rd</sup> edition, 4<sup>th</sup> reprint, Pearson Education, 2004.
2. A.P. Malvino, D.P. Leach ‘Digital Principles & Applications’ –Vith Edition-Tata Mc Graw Hill, Publication.
3. Morris Mano ‘Digital Design’-- (Third Edition),.PHI

**Bharati Vidyapeeth Deemed University,  
College of Engineering, Pune**

## **EMBEDDED SYSTEMS AND PROCESSORS**

### **TEACHING SCHEME**

Lectures: 04 Hrs/Week

### **EXAMINATION SCHEME**

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

TW&OR:50 Marks

Total Credits: 04

---

### **Course Prerequisites:**

Knowledge of microcontrollers like 8051, PIC and ARM

---

### **Course objective:**

- To understand need and application of ARM Microprocessors in embedded system.
  - To understand architecture and features of typical PSoC.
  - To learn the importance of interprocess communication.
  - To learn Real time operating system and its application.
- 

### **Course Outcomes:** After successfully completing the course students will be able to

- Describe the PSoC architectures and its feature.
- Interface the advanced peripherals to ARM based microcontroller.
- Design embedded system with available resources.

**Contents:**

**UNIT I** (08hours)

**ARM7 & ARM 9 Based Microcontroller**

Review of ARM7, ARM9, &ARM11 processors .  
Interfacing of ARM7 & ARM 9 processors with real world: LED, LCD, KEYPAD,SDI card,UART.

**UNIT II** (08hours)

**Interprocess Communication**

Multiple processes in an application, problem of shared data, interprocess communication, RTOS task scheduling, interrupt latency and response time, interrupt service mechanism Context and context switching.

**UNIT III** (08hours)

**Real Time systems**

Kernel, Scheduler, Non-Preemptive Kernel , Preemptive Kernel, Reentrancy, Round robin scheduling, Task Priorities, Static & Dynamic Priority, Priority Inversion, Assigning task priorities, Mutual Exclusion, Deadlock, Clock Tick, Memory requirements, Advantages & disadvantages of real time kernels

**UNIT IV** (08hours)

**Introduction to PSoC**

PSoC technology, programmable routing and interconnect, configurable analog and digital blocks, cpu sub system, families of PSoC .

PSoC 3/5, architecture – block diagram, system wide resources, I/O interfaces, CPU sub system, memory organization, digital sub systems, analog sub systems

**UNIT V** (08hours)

**PSoC components:**

Universal digital blocks (UDB), UDB arrays and counter and PWM, digital filter gain amplifiers, switched capacitor / continuous time, analog routing, flash temperature sensors,DTMF dialers, sleep timers, UART, I2 C, SPI,USB,CAN buses.

## UNIT VI

(08hours)

### μCOS II

Features of. Kernel structure. μCOS II RTOS services:Task management, Time management, Intertask Communication and Synchronization.

## LINEAR ALGEBRA AND RANDOM PROCESS

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

---

### Course prerequisites:

Knowledge of Group theory, ring theory, Field theory

---

### Course objective:

- To develop the ability to use the concepts of linear algebra and special functions for solving problems to related networks
  - To formulate and construct a mathematical model for linear programming problem in real life situations
- 

**Course Outcomes:** On successful completion of this course, students will be able to

- To achieve an understanding of the basic concepts of algebraic equations and methods of solving them
- To familiarize the students with special functions and solve problems associated with engineering applications

## Contents:

### UNIT I

(08 Hours)

#### LINEAR Algebra:

Vector spaces-norms-inner products-Eigen values using QR transformations-QR factorization-generalized eigenvectors-canonical forms-singular value decomposition and applications-pseudo inverse-least square approximation-Toeplitz matrices and some applications

### UNIT II

(08 Hours)

#### LINEAR PROGRAMMING:

Formulation-graphical solution-simplex method-Two phase method-Transportation and assignment models, Efficient computational algorithms, Duality, Parametric Linear programming, integer Linear Programming.

### UNIT III

(08 Hours)

#### ORDINARY DIFFERENTIAL EQUATIONS:

Runge-kutta methods for system of IVP's, numerical stability, Adams-Bashforth multistep method, solution of stiff ODE's shooting method, BVP: Finite difference method, orthogonal collocation method, orthogonal collocation with finite element method, Galerkin finite element method

### UNIT IV

(08 Hours)

#### TWO DIMENSIONAL RANDOM VARIABLES:

Joint distributions- marginal and conditional distributions- functions of two dimensional random variables- regression curve- correlation.

### UNIT V

(08 Hours)

#### QUEUEING MODELS:

Poisson's process- Markovian queues- single and multi server models- little's formula – machine interference model- steady state analysis- self service queue. Pure Birth and Death Models (Relationship between the Exponential And Poisson Distribution.)

### UNIT VI

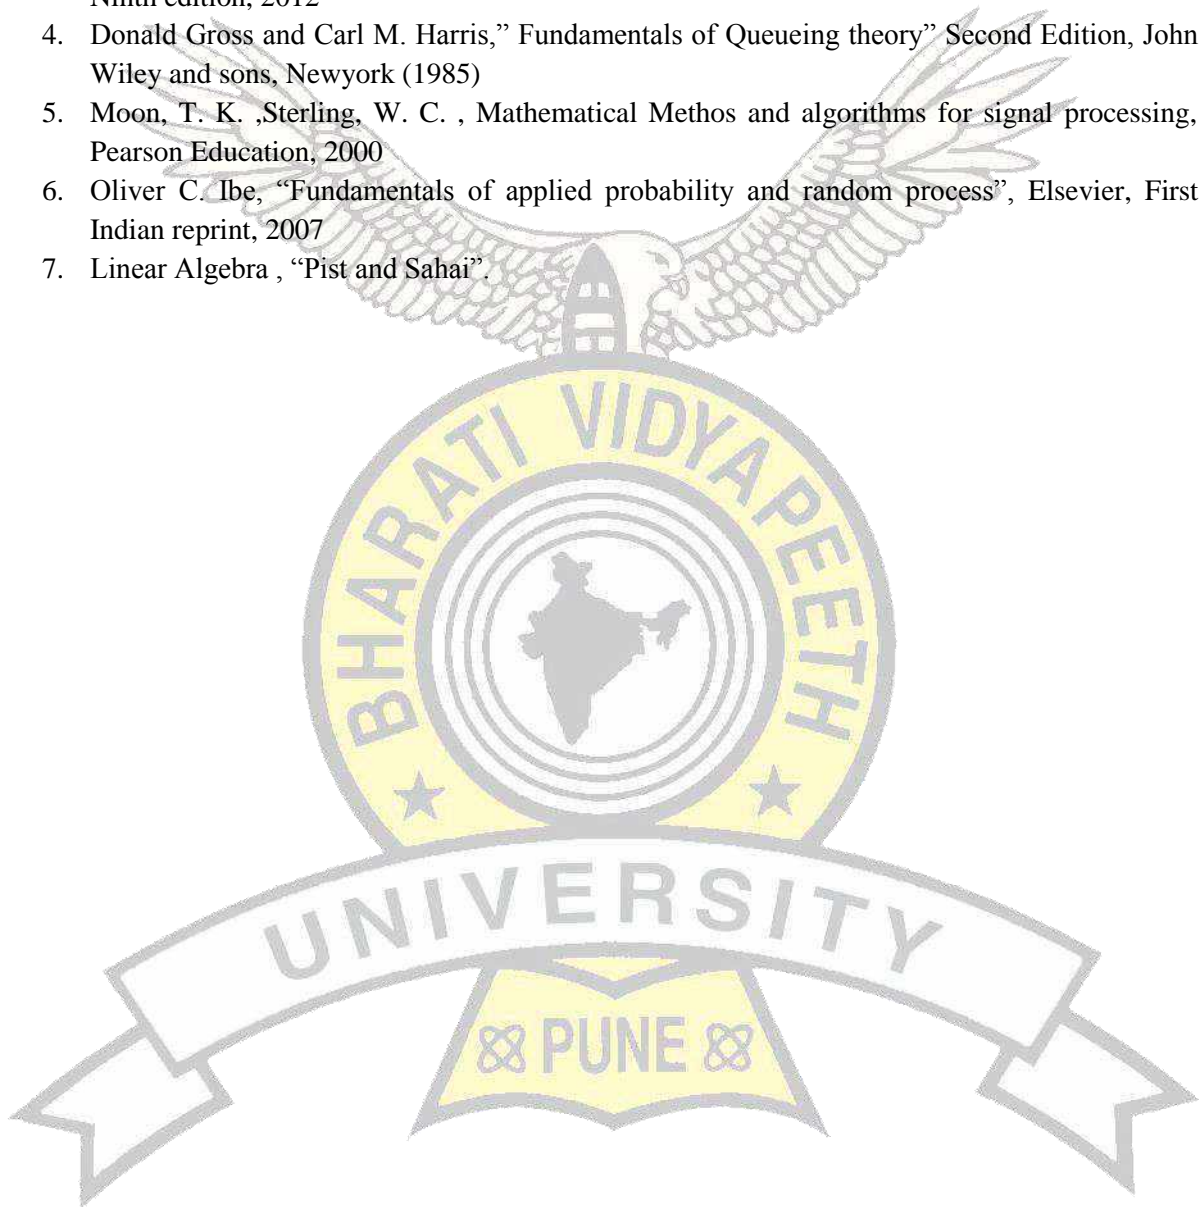

(08 Hours)

#### RANDOM PROCESS:

Averages of a random process, stationary random process, ergodic random process, random process-mean and covariance function, linear filtering of random process, power spectral density, spectral analysis of random process, Gaussian Poisson random process.

**Text Books/ References:**

**M.Tech.(Electronics) Sem-II**

**Bharati Vidyapeeth Deemed University,  
College of Engineering, Pune**

## **ADVANCED DIGITAL SIGNAL PROCESSING**

### **TEACHING SCHEME**

Lectures: 04 Hrs/Week  
Practicals: 2Hrs/Week

### **EXAMINATION SCHEME**

Duration: 03 Hrs  
Theory: 60 Marks  
Internal Assessment: 40 Marks  
TW&OR: 50 Marks  
Total Credits: 05

---

### **Course objective:**

- This course covers the fundamental aspects of digital signal processing.
- To introduce the various techniques that is fundamental to a variety of application areas.

---

**Course Outcomes:** On successful completion of this course, students will be able to

1. To apply fundamental mathematical tools, in the analysis and design of signal processing systems.
2. To identify estimation problems and design, implement algorithms for solving them.
3. To understand the basic theory of wavelet transform and the concepts of using Simple wavelets for simple applications.

### **Contents:**

#### **UNIT I**

(08 Hours)

#### **Linear Prediction:**

Forward and Backward Linear prediction, optimum reflection coefficient for lattice backward and forward prediction, solution of normal equations (Levinson-Durbin algorithm and Schur algorithm), properties of linear prediction filters.

## **UNIT II**

(08 Hours)

### **Adaptive Filters:**

Applications of adaptive filters: System identification, adaptive channel equalization echo cancellation in data transmission over telephone channels, linear predictive coding of speech signals, adaptive direct form filters-LMS algorithm, RLS algorithm.

## **UNIT III**

(08 Hours)

### **Power Spectrum Estimation:**

Estimation of power spectrum and correlation, Non-parametric and parametric methods, Minimum Variation Estimation methods, Eigen Analysis algorithm, Power Spectrum analysis using DFT.

## **UNIT IV**

(08 Hours)

### **Programmable Digital Signal Processors:**

Multiplier accumulator unit (MAC), modified bus structures, Multiple Access memory, VLIW architecture, pipelining, special addressing modes in P-DSP's.

## **UNIT V**

(08 Hours)

### **An Overview of TMS320C6X DSPs:**

Introduction, features of TMS320C6X processors, Internal Architecture, CPU & data paths, Addressing modes, memory architecture, pipeline, peripherals, program development.

## **UNIT VI**

(08 Hours)

### **Wavelet Transforms:**

Fourier Transform and its limitations, Short Time Fourier Transform, Continuous Wavelet Transform, Discretization of the Continuous wavelet Transform, Multiresolution Approximations; wavelet and Scaling Function Coefficients, Orthonormality of Compactly Supported Wavelets, Bi-orthogonal Decomposition, Harr wavelets, The Daubechies Wavelets Construction, Fast Wavelet Transform and Image Compression, Denoising using wavelets, Perfect Reconstruction Filter bank design using Wavelets.

### **Text Books/References:**

1. Digital Signal Processing Using MATLAB by V.K.Ingle and J.G.Prokakis (Books/Colle,2000)
2. Digital Signal Processing:Principles,Algorithms and Applications by J.G.Prokakis and D.G.Manolakis

**Bharati Vidyapeeth Deemed University,  
College of Engineering, Pune**

## **ANALOG VLSI DESIGN**

### **TEACHING SCHEME**

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

### **EXAMINATION SCHEME**

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

TW&OR:50 Marks

Total Credits: 05

---

### **Course prerequisites:**

Basic Electronics and Physics

---

### **Course objective:**

To understand theory and to learn design of analog systems at transistor level. The course will involve design, layout and simulation of analog VLSI circuits using various CAD tools.

---

**Course Outcomes:** On successful completion of this course, students will be able to

- Ability to apply modeling for MOS circuits.
- Ability to design Analog CMOS sub-circuits.
- Ability to conceptualize CMOS amplifiers.
- Ability to characterize CMOS Op-amps.
- Ability to apply concepts of Switched Capacitor Circuits.

### **Contents:**

#### **UNIT I**

(08 Hours)

#### **MOS Devices and Modeling**

The MOS Transistor, CMOS Device Modeling -Simple MOS Large-Signal Model, Other Model Parameters, Small-Signal Model for the MOS Transistor, Sub-threshold MOS Model.

**UNIT II** (08 Hours)

**Analog CMOS Sub-Circuits**

MOS Switch, MOS Diode, MOS Active Resistor, Current Sinks and Sources, Current Mirrors, Current and Voltage References, Band gap Reference.

**UNIT III** (08 Hours)

**CMOS Amplifiers**

Inverters, Differential Amplifiers, Cascode Amplifiers

**UNIT IV** (08 Hours)

**CMOS Operational Amplifiers**

Design of CMOS Op Amps, Compensation of Op Amps, Design of Two-Stage Op Amps, Power-Supply Rejection Ratio of Two -Stage Op Amps, Cascode Op Amps, Measurement Techniques of OP Amp.

**UNIT V** (08 Hours)

**High Performance CMOS OP AMP**

High Speed/Frequency OP AMP, Micro Power OP AMP, Low Noise OP AMP, Low Voltage OP AMP.

**UNIT VI** (08 Hours)

**Switched Capacitor Circuits**

Switched Capacitor Circuits Switched Capacitor Amplifiers, Switched Capacitor Integrators.

**Text Books/ References:**

1. CMOS Analog Circuit Design -Philip E. Allen and Douglas R. Holberg, Oxford University Press, International Second Edition/Indian Edition, 2010.
2. Analysis and Design of Analog Integrated Circuits -Paul R. Gray, Paul J. Hurst, S. Lewis and R. G. Meyer, Wiley India, Fifth Edition, 2010.
3. Analog Integrated Circuit Design-David A. Johns, Ken Martin, Wiley Student Edn, 2013
4. Design of Analog CMOS Integrated Circuits-Behzad Razavi, TMH Edition, 2002.
5. CMOS: Circuit Design, Layout and Simulation-Baker, Li and Boyce, PHI, 2010.

College of Engineering, Pune

## DIGITAL IMAGE AND VIDEO PROCESSING

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

### Course objective:

- This course provides an introduction to basic concepts, algorithms of digital image and video processing.
- To provide different analytical tools and methods applied in Digital Image processing

**Course Outcomes:** On successful completion of this course, students will be able to

- To apply principles and techniques of digital image processing in applications related to digital imaging system.
- To use and implement basic algorithms for image & video compression

### Contents:

#### UNIT I

(08 Hours)

#### Fundamentals of Image processing

Introduction to Digital Image Processing : Digital image fundamentals:, Applications of Image Processing, Simple image formation model, Image sampling and quantization - Basic relationships between pixels, connectivity, adjacency. Distance between the pixels . Elements of human visual perception, MTF, Image statistics.

#### UNIT II

(08 Hours)

#### Image Enhancement

Image Enhancement: Spatial domain methods: point processing - intensity transformations, histogram processing, image subtraction, image averaging; Image zooming, Spatial filtering - smoothing filter, sharpening filter. 2D-DFT, FFT, Frequency domain filtering: low pass filtering, high pass filtering, and Homomorphic filtering.

**UNIT III** (08 Hours)

**Image Compression**

Image Compression: Fundamentals, Lossless Compression schemes like Huffman, Arithmetic, LZW and lossless Prediction. 2D-DCT, KL, Hadamard Image compression using DCT, zig-zag scanning, still image compression standard - baseline JPEG. Vector Quantization

**UNIT IV** (08 Hours)

**Image Segmentation**

Image Segmentation: Fundamentals, point, line and edge and combined detection, Thresholding Edge linking Hough transform, Region oriented segmentation - basic formulation, region growing by pixel aggregation, region splitting and merging, Segmentation using watersheds

**UNIT V** (08 Hours)

**Image Restoration**

Morphological Operations: Erosion and Dilation, Opening and Closing, Hit and Miss transform, Boundary extraction, region filling, Extraction of connected components. Image Restoration: Image degradation/restoration model, Noise models, Linear Position invariant degradation, Estimation of degradation function, inverse filtering, Wiener filter.

**UNIT VI** (08 Hours)

**An overview of Video processing**

Analog Video, Digital Video, Motion estimation and detection, video enhancement, Video compression fundamentals.

**Text Books/References:**

1. Gonzalez and Woods, "Digital Image Processing", 3<sup>rd</sup> Edition, Pearson Education.
2. Pratt William K. "Digital Image Processing", John Wiley & sons .
3. S. Jayaraman, S. Esakkiraian "Digital Image Processing", Tata McGraw-Hill Education .
4. Al.Bovik," Handbook of Image and Video Processing " Academic Press.
5. B,Chanda and D.Datta Mujumdar " Digital Image Processing and Analysis", Prentice Hall of India.
6. Madhuri Joshi," Digital Image Processing" Prentice Hall of India.
7. Joshi, Madhuri A., Mehul S. Raval, Yogesh H. Dandawate, Kalyani R. Joshi, and Shilpa P. Metkar. *Image and Video Compression: Fundamentals, Techniques, and Applications*. CRC Press, 2014.

**Bharati Vidyapeeth Deemed University,  
College of Engineering, Pune**

## **WIRELESS NETWORKS**

### **TEACHING SCHEME**

Lectures: 04 Hrs/Week

Practical: --Hrs/Week

### **EXAMINATION SCHEME**

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

---

### **Course objective:**

- To introduce the concepts and techniques associated with Wireless Cellular Communication systems.
- To familiarize with state of art standards used in wireless cellular systems.

To understand the concept of new technologies in wireless systems

---

**Course Outcomes:** On successful completion of this course, students will be able to

1. Explain the Classification of mobile communication systems
2. Analyze the radio channel characteristics and the cellular principle
3. Ability to analyze improved data services in cellular communication

### **Contents:**

#### **UNIT I**

(08 Hours)

#### **Introduction**

Systems and Design Fundamentals, Propagation Models Description of cellular system, Frequency Reuse, Co channel and Adjacent channel interference, Propagation Models for Wireless Networks, Multipath Effects in Mobile Communication, Models for Multipath Reception.

**UNIT II**

(08 Hours)

**Cellular Communications**

Introduction to Cellular Communications, Frequency reuse, Multiple Access Technologies, Cellular Processes-Call Setup, Handover etc, Teletraffic Theory, Capacity Building, Blocking Probability

**UNIT III**

(08 Hours)

**CDMA**

Introduction to CDMA, Walsh codes, Variable tree OVVSF, PN Sequences, Multipath diversity, RAKE Receiver, CDMA Receiver Synchronization

**UNIT IV**

(08 Hours)

**GSM**

Architecture and Protocols - Air Interface, GSM Multiple Access Scheme, GSM Channel Organization, Traffic Channel multiframe, Control (Signaling) Channel Multiframe, Frames, Multi-frames, Super-frames and Hyper-frames, GSM Call Set up Procedure, GSM Protocols and Signaling, Location Update Procedure, Routing of a call to a Mobile Subscriber.

**UNIT V**

(08 Hours)

**MIMO**

Introduction to MIMO, MIMO Channel Capacity, SVD and Eigen modes of the MIMO Channel, MIMO Spatial Multiplexing – BLAST, MIMO Diversity – Alamouti, MIMO Diversity-OSTBC, MIMO Beam Forming-MRT, MIMO - OFDM

**UNIT VI**

(08 Hours)

**3G and 4G Wireless Standards/UWB**

GPRS, WCDMA, LTE, WiMAX, UWB Definition and Features, UWB Wireless Channels, Bit-Error Rate Performance of UWB

**Text Books/ References:**

1. Wireless Communications, Principles, Practice – Theodore, S. Rappaport, 2nd Ed.2002, PHI.
2. Wireless Communications-Andrea Goldsmith, 2005 Cambridge University Press.

3. Mobile Cellular Communication – Gottapu Sasibhushana Rao, Pearson Education, 2012.
4. Principles of Wireless Networks – Kaveh Pah Laven and P. Krishna Murthy, 2002
5. Wireless Digital Communications – Kamilo Feher, 1999, PHI.
6. Wireless Communication and Networking – William Stallings, 2003, PHI.
7. Wireless Communication – Upen Dalal, Oxford Univ. Press
8. Wireless Communications and Networking – Vijay K. Gary, Elsevier.

## Elective I- PROGRAMMABLE SYSTEM ON CHIP

### TEACHING SCHEME

Lectures: 04 Hrs/Week  
Practicals: 02 Hrs/week

### EXAMINATION SCHEME

Duration: 03 Hrs  
Theory : 60 Marks  
Internal Assessment: 40 Marks  
TW&OR: 50 Marks  
Total Credits: 05

---

### Course prerequisites:

Knowledge of microprocessors and microcontrollers

---

### Course objective:

1. To introduce the students to the Cypress PSoC technology
  2. To study the architecture of PSoC
  3. To learn interfacing of real world with PSoC
- 

**Course Outcomes:** Upon Completion of the course, the students will be able to

1. Describe and identify the features of PSoC
  2. Design the system for interfacing to the real world.
- 

### Contents:

#### UNIT I

(08 hours)

#### Introduction to PSoC

PSoC Technology, Programmable Routing and Interconnect Configurable Analog and Digital Blocks, CPU Sub System, Families of PSoC (PSoC1, PSoC2, PSoC3,) Difference between PSoC and Conventional MCU.

**UNIT II** (08 hours)

**Introduction to PSoC 3/5**

PSoC3/5 architecture-block diagram system wide resources, I/O interfaces, CPU Subsystem, memory organization digital subsystems, analog subsystems

**UNIT III** (08 hours)

**PSoC Design Modules**

Cypress PSoC Structure, PSoC Designer Suit, limitations of PSoC improvements of the PSoC, PSoC Subsystem design, PSoC memory management.

**UNIT IV** (08 hours)

**Mixed –Signal Embedded design**

Overview of mixed-signal embedded system designs, hardware and software subsystems of mixed-signal architectures, PSoC Hardware components, PSoC software components, PSoC interrupt subsystem, Introduction to PSoC Express, System design using PSoC express.(8hrs)

**UNIT V** (08 hours)

**PSoC Components**

Universal Digital Blocks (UDB), UDB arrays and digital System Interconnect (DSI),Timer, Counter and PWM,Digital Filter Blocks (DFB),ADC topologies and Circuits Programmable gain amplifiers, Switched capacitor / continuous time, analog routing, flash temperature sensors,DTMF Dialers, Sleep times,UART,12C,SPI,USB,CAN buses.

**UNIT VI** (08 hours)

**System design using PSoC**

Interfacing of temperature Sensors and Tachometers, SPI and UART based task communications, Lower Noise Continuous Time Signal Processing with PSoC Data Acquisition and Control System with PSoC, Ultra wide-band RADAR, Serial Bit Receiver with Hardware Manchester Decoder, DTMF Detector, and Ultrasonic Vehicle Parking Assistant, Universal wide-Range Signal Generator.

**Text Books:**

1. PSoC3, PSoC5 Architecture Technical Reference Manual-Cypress website
2. My First Five PSoC3 Designs (e-book)by Robert Ashby-Cypress website

### Reference Books:

1. Designers Guide to the Cypress PSoC by Robert Ashby –Elsevier Publications
2. Introduction to Mixed Signal Embedded Design, Alex Boboli-Springer
3. The Beginners Guide to Using PSoC Express: Mixed –Signal Microcontroller Development Without code by Oliver H.Bailey-Timelines Industries Incorporated,2007
4. PSoC Microcontroller by Fredi Kruger Franzis,2006

## **Elective I-NANO ELECTRONICS**

### **TEACHING SCHEME**

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

### **EXAMINATION SCHEME**

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

TW&OR: 50 Marks

Total Credits: 05

---

### **Course Prerequisite:**

Physics, Basic electronics

---

### **Course Objective:**

To learn and understand basic and advance concepts of nanoelectronics.

---

**Course Outcomes:** On successful completion of this course, students will be able to

1. Understand basic and advanced concepts of nanoelectronic devices
  2. Gain knowledge about Nanostructure devices and logic devices.
  3. Know the techniques of fabrication and measurement.
- 

### **Contents:**

#### **UNIT I**

#### **Basics of nanoelectronics**

Capabilities of nanoelectronics – physical fundamentals of nanoelectronics – basics of information theory – the tools for micro and nano fabrication – basics of lithographic techniques for Nanoelectronics

**(08 hours)**

## **UNIT II**

**(08 hours)**

### **Quantum electron devices**

classical to quantum physics: upcoming electronic devices – electrons in mesoscopic structure – short channel MOS transistor – split gate transistor – electron wave transistor – electron spin transistor – quantum cellular automate – quantum dot array – Principles of Single Electron Transistor (SET) – SET circuit design – comparison between FET and SET circuit design

## **UNIT III**

**(08 hours)**

### **Fabrication and Measurement Techniques**

Growth, fabrication, and measurement techniques for nanostructures- Bulk crystal and heterostructure growth- Nanolithography, etching, and other means for fabrication of nanostructures and nanodevices- Techniques for characterization of nanostructures- Spontaneous formation and ordering of nanostructures- Clusters and nanocrystals- Methods of nanotube growth- Chemical and biological methods for nanoscale fabrication- Fabrication of nano-electromechanical systems

## **UNIT IV**

**(08 hours)**

### **Nanostructure Devices -I**

Electron transport in semiconductors and nanostructures- Time and length scales of the electrons in solids- Statistics of the electrons in solids and nanostructures- Density of states of electrons in nanostructures- Electron transport in nanostructures-Electrons in traditional low-dimensional structures- Electrons in quantum wells- Electrons in quantum wires- Electrons in quantum dots

## **UNIT V**

**(08 hours)**

### **Nanostructure devices- II**

Resonant-tunneling diodes- Potential-effect transistors- Light-emitting diodes and lasers- Nano-electromechanical system devices- Molecular electronics – elementary circuits – flux quantum devices – application of superconducting devices –Strain –oxide nanowire, Nano designs and Nanocontacts – metallic nanostructures

## **UNIT VI**

**(08 hours)**

### **Logic Devices and Applications**

Logic Devices-Silicon MOSFETs-Ferroelectric Field Effect Transistors-Quantum Transport Devices Based on Resonant Tunneling-Single-Electron Devices for Logic Applications-Superconductor Digital Electronics-Quantum Computing Using Superconductors-Carbon Nanotubes for Data Processing- Molecular Electronics

### **Text Books :**

## Elective I-ALGORITHMS FOR VLSI DESIGN AUTOMATION

### TEACHING SCHEME

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

TW&OR:50 Marks

Total Credits: 05

---

### Course Prerequisites:

Analog and Digital VLSI Design, Engineering Mathematics

---

### Course objective:

To introduce the student to the algorithms used for VLSI Design Automation

---

**Course Outcomes:** After successfully completing the course students will be able to

1. Apply various algorithms for VLSI design.
  2. Conceptualize placement, floorplanning and pin assignment.
  3. Plan global and detailed routing.
  4. Apply concepts of via minimization and compaction
- 

### Contents:

#### UNIT I

(08 Hours)

#### Basic Algorithms

Basic Terminology, Complexity issues, NP- hardness, Graph algorithms, Computational geometry algorithms.

#### UNIT II

(08 Hours)

#### Partitioning

Problem formulation, Classification of partitioning algorithms, Group migration algorithms, Simulated annealing & evolution, Other partitioning algorithms.

### UNIT III

(08 Hours)

#### **Placement, Floor Planning and Pin Assignment**

Problem formulation, Classification of Placement algorithms, Overview of placement algorithms, Constrain based floor planning, Floor planning algorithms for mixed block and cell design, General and channel pin assignment.

### UNIT IV

(08 Hours)

#### **Global Routing**

Problem formulation, classification of global routing algorithms, Maze routing algorithms, Line probe algorithm, Steiner tree based algorithms, ILP based approaches.

### UNIT V

(08 Hours)

#### **Detailed Routing**

Problem formulation, classification of routing algorithms, single layer routing algorithms, Two layer channel routing algorithm, Three layer channel routing algorithm & switch box routing algorithms.

### UNIT VI

(08 Hours)

#### **Over The Cell Routing & Via Minimization:**

Two layers over the cell routers, Constrained & unconstrained via minimization.

#### **Compaction:**

Problem formulation, one-dimensional compaction, Two dimension based compaction, hierarchical compaction.

#### **Text Books/ References:**

1. Naveed Shervani, "Algorithms for VLSI physical design Automation", Kluwer Academic Publisher, Third edition, 1999.

## Elective II -ASIC DESIGN

### TEACHING SCHEME

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

Total Credits: 05

---

### Course prerequisites:

Digital VLSI Design

---

### Course objective:

The course focuses on the semi custom IC Design and introduces the principles of design logic cells, I/O cells and interconnects architecture, with equal importance given to FPGA and ASIC styles.

---

**Course Outcomes:** On successful completion of this course, students will be able to

1. Apply fundamentals of ASIC and its design methods
  2. Understand block level abstractions of FPGA and ASIC design
  3. Gain knowledge on programmable architectures for ASICs
  4. Conceptualize the physical design of ASIC.
- 

### Contents:

#### UNIT-I

(08 Hours)

#### Introduction to ASICS, CMOS Logic and ASIC Library Design

Types of ASICS, Design flow, Combinational Logic Cell, Sequential logic cell, Data path logic cell, Transistors as Resistors, Transistor Parasitic Capacitance, Logical effort.

#### UNIT-II

(08 Hours)

#### Programmable ASICS, Programmable ASICS Logic Cells and Programmable ASICS I/O Cells

Anti fuse, static RAM , EPROM and EEPROM technology, Actel ACT , Xilinx LCA, Altera FLEX , Altera MAX DC & AC inputs and outputs , Clock & Power inputs, Xilinx I/O blocks.

### **UNIT-III**

(08 Hours)

#### **Programmable ASIC Logic Cells**

Actel ACT, Xilinx LCA , Xilinx EPLD, Altera MAX 50 00 and 7000 , Altera MAX 9000 , Altera FLEX, Design systems, Logic Synthesis , Half gate ASIC, Schematic entry, Low level design language.

### **UNIT-IV**

(08 Hours)

#### **Logic Synthesis, Simulation and Testing**

VHDL and logic synthesis, Types of simulation, Boundary scan test, Fault simulation, Automatic test pattern generation.

### **UNIT-V**

(08 Hours)

#### **ASIC Floor Planning, Placement and Routing**

System partition, FPGA partitioning, Partitioning methods, Floor planning, Placement, Physical design flow, Global routing, Detailed routing

### **UNIT-VI**

(08 Hours)

#### **Optimization Algorithms**

Planar subset problem(PSP), single layer global routing single layer detailed routing wire length and bend minimization technique, over the cell(OTC) Routing, multichip modules(MCM), Programmable logic arrays, Transistor chaining, Weinberger Arrays, Gate Matrix Layout.

#### **Reference Books:**

## Elective II -TESTING AND VERIFICATION OF VLSI DESIGN

### TEACHING SCHEME

Lectures: 04 Hrs/Week

Practicals: 02 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

TW&OR:50 Marks

Total Credits: 05

---

### Course prerequisites:

Analog and Digital VLSI Design

---

### Course objective:

To introduce the student to the mathematical and scientific principles based on which systematic test and validation can be carried out on multimillion transistor VLSI design.

---

**Course Outcomes:** On successful completion of this course, students will be able to

1. Apply various fault modeling for digital circuits.
  2. Test VLSI circuits.
  3. Conceptualize Verification process.
  4. Plan verification using verification tools.
  5. Apply concepts of DFT and BIST.
- 

### Contents:

#### UNIT I

(08 Hours)

#### Introduction to Verification

Importance of verification, Testbench, Human factor, What is being verified, Functional verification approaches, Testing v/s Verification, Verification and design reuse, Cost of verification.

**UNIT II** (08 Hours)

**Verification Tools**

Linting Tools, Simulators, Third party models, Waveform viewers, Code coverage.

**UNIT III** (08 Hours)

**Verification Plan**

Role of verification plan, Levels of verification, Verification strategies, From specification to features, From features to testcases, From testcases to testbenches.

**UNIT IV** (08 Hours)

**Basics of Testing and Fault Modeling**

Introduction to Testing, Faults in digital circuits, Modeling of faults, Logical Fault Models, Fault Detection, Fault dominance, Delay fault models.

**UNIT V** (08 Hours)

**Test Generation for Combinational and Sequential Circuits**

Test generation for combinational logic circuits, Testable combinational logic circuit design, Test generation for sequential circuits, Design of testable sequential circuits.

**UNIT VI** (08 Hours)

**DFT and BIST**

Design for Testability, Ad-hoc design, Scan based design, Built-In-Self-Test.

**Text Books/ References:**

## Elective II-ARTIFICIAL NEURAL NETWORK

### TEACHING SCHEME

Lectures: 04 Hrs/Week  
Practicals: 02 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs  
Theory : 60 Marks  
Internal Assessment: 40 Marks  
TW&OR:50 Marks  
Total Credits: 05

---

### Course prerequisites:

- Basic knowledge of human nervous systems.
- Basic knowledge of mathematical concepts like state-space, Matrix fundamentals.

---

### Course objective:

This course provides in depth knowledge of Artificial Neural Network and role of ANN in different application areas.

---

**Course Outcomes:** On successful completion of this course, students will be able to

- 1 Identify potential use of learning approaches of ANN.
2. Analyze role of perceptron, Adaline & Madeline networks
3. Evaluate different application scenarios of ANN

---

### Contents:

#### UNIT I

(08 Hours)

#### Introduction and ANN Structure.

Biological neurons and artificial neurons, Model of an ANN, ANN Terminologies, Activation functions used in ANNs, Typical classes of network architectures, Mc-Culloch-Pitts Neuron Model, Learning rules.

#### UNIT II

(08 Hours)

#### Mathematical Foundations and Learning mechanisms.

Re-visiting vector and matrix algebra, State-space concepts, Concepts of optimization, Error-correction learning, Memory-based learning, Hebbian learning, Competitive learning.

### UNIT III

(08 Hours)

#### **Single layer perceptrons. Adaline & Madeline Networks**

Structure and learning of perceptrons, Pattern classifier - introduction and Bayes' Classifiers, Perceptron as a pattern classifier, Perceptron convergence, Limitations of a perceptrons, Adaline architecture, algorithm, MR-I, MR-II algorithms.

### UNIT IV

(08 Hours)

#### **Feedforward ANN.**

Structures of Multi-layer feedforward networks, Back propagation algorithm, Back propagation - training and convergence, Functional approximation with back propagation, Practical and design issues of back propagation learning. Radial Basis Function Networks, Pattern separability and interpolation, Regularization Theory, Regularization and RBF networks, RBF network design and training, Approximation properties of RBF.

### UNIT V

(08 Hours)

#### **Competitive Learning and Self organizing ANN**

General clustering procedures, Learning Vector Quantization (LVQ), Competitive learning algorithms and architectures, Self organizing feature map, Properties of feature maps, Mexican Net, Hamming Net.

### UNIT VI

(08 Hours)

#### **Special Networks & Applications of Neural Networks**

Support Vector machines, Design of an SVM, Examples of SVM, Probabilistic Neural Network, Boltzmann Machine with learning, cognitron, simulated annealing, applications of Neural Networks in bioinformatics, forecasting, healthcare, robotics, pattern recognition.

#### **Text Books/ References:**

## Self Study Paper I -LOW POWER VLSI DESIGN

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

---

### Course prerequisites:

Analog and Digital VLSI Design

---

### Course objective:

To introduce the student to the concept of low power VLSI design, power estimation and power optimization

---

### Course Outcomes:

1. Ability to apply various low power techniques at device and circuit level.
1. Ability to design low power VLSI circuits.
2. Ability to conceptualize low power VLSI basics.
3. Ability to plan low power architectures.
4. Ability to apply concepts of low power design at system level.

---

### Contents:

#### UNIT I

(08 Hours)

#### Low Power Basics

Need for low power VLSI chips, Sources of power dissipation on Digital Integrated circuits, Emerging Low power approaches, Physics of power dissipation in CMOS devices.

#### UNIT II

(08 Hours)

#### Impact of Device & Technology on Low Power

Dynamic dissipation in CMOS, Transistor sizing & gate oxide thickness, Impact of technology Scaling, Technology & Device innovation.

### **UNIT III**

(08 Hours)

#### **Low Power Design**

##### **Circuit level:**

Power consumption in circuits, Flip Flops & Latches design, High capacitance nodes, Low power digital cells library

##### **Logic level:**

Gate Reorganization, Signal Gating, Logic Encoding, State Machine Encoding, Pre-Computation Logic

### **UNIT IV**

(08 Hours)

#### **Low power Architecture & Systems**

Power & performance management, Switching activity reduction, Parallel and Pipeline architecture for low power memory design.

### **UNIT V**

(08 Hours)

#### **Low power Clock Distribution**

Power dissipation in clock distribution, single driver Vs distributed buffers, Zero skew Vs tolerable skew, chip & package co-design of clock network

### **UNIT VI**

(08 Hours)

#### **Algorithm & architectural level methodologies**

Introduction, design flow, Algorithmic level analysis & optimization, Architectural level estimation & synthesis.

##### **Text Books/ References:**

1. Gary K. Yeap ,”Practical Low Power Digital VLSI Design”, KAP, 2002
2. Rabaey, Pedram ,”Low power design methodologies”, Kluwer Academic, 1997
3. Kaushik Roy, Sharat Prasad ,”Low-Power CMOS VLSI Circuit Design”,Wiley,2000

## Self Study Paper I -IC FABRICATION TECHNOLOGY

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

---

### Course prerequisites:

Physics, Chemistry

---

### Course objective:

To understand theory and to learn IC Fabrication Technology..

---

**Course Outcomes:** On successful completion of this course, students will be able to

1. Conceptualize steps required for IC fabrication.
2. Apply concepts of Oxidation, Lithography , Chemical Vapour Deposition and Metal Film Deposition.

---

### Contents:

**UNIT-I** (08 Hours)

**Environment for VLSI Technology**

Basic Fabrication Steps, Concepts of Clean room and safety requirements, Wafer cleaning processes and Wet chemical etching techniques.

**UNIT-II** (08 Hours)

**Oxidation**

Kinetics of Silicon dioxide growth for thick, thin and ultrathin films. Oxidation technologies in VLSI and ULSI, High k and Low k dielectrics

**UNIT-III** (08 Hours)

**Lithography**

Photolithography, E-beam lithography and newer lithography techniques for VLSI/ULSI.

## UNIT-IV

(08 Hours)

### Chemical Vapour Deposition Techniques

CVD techniques for deposition of polysilicon, silicon dioxide, silicon nitride and metal film

## UNIT-V

(08 Hours)

### Metal Film Deposition

Evaporation and sputtering techniques, Failure mechanisms in metal interconnects Multi-level metallization schemes

## UNIT-VI

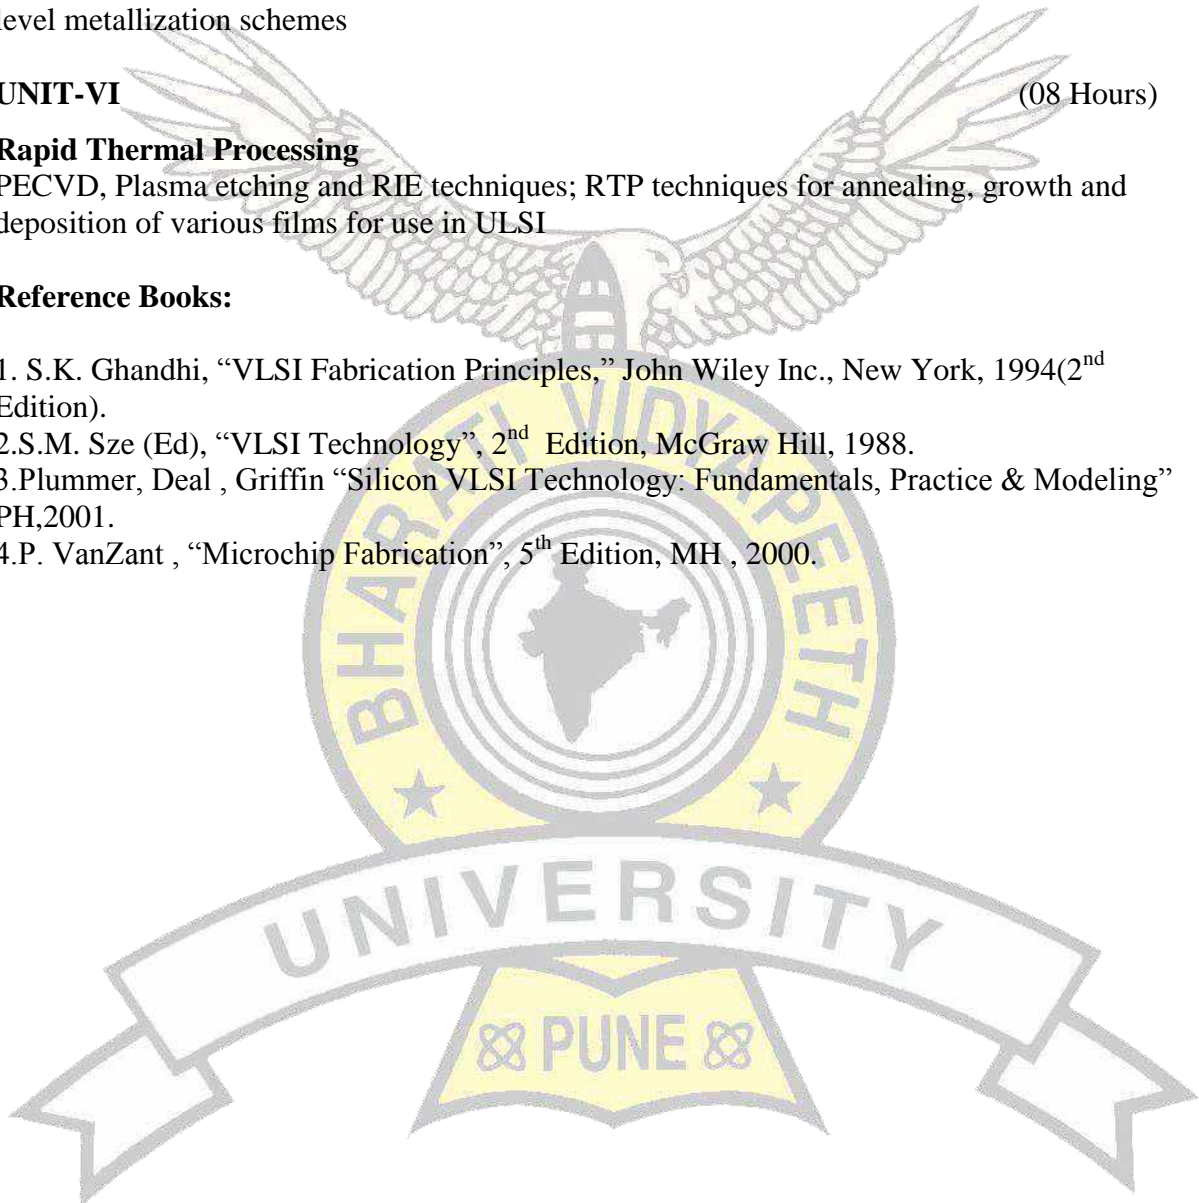

(08 Hours)

### Rapid Thermal Processing

PECVD, Plasma etching and RIE techniques; RTP techniques for annealing, growth and deposition of various films for use in ULSI

### Reference Books:

1. S.K. Gandhi, "VLSI Fabrication Principles," John Wiley Inc., New York, 1994(2<sup>nd</sup> Edition).
- 2.S.M. Sze (Ed), "VLSI Technology", 2<sup>nd</sup> Edition, McGraw Hill, 1988.

## Self Study Paper I -IN-VEHICLE NETWORKING

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

---

### Course prerequisites:

Knowledge of Basic Electronics and Physics

---

### Course objective:

1. To Provide Students with a working of in-vehicle network systems and exposure to aspects of design, development, application issues associated with those systems.
2. To Provide Knowledge in concepts of capture of Sensor data, Storage and exchange of data to obtain remote services.

---

**Course Outcomes:** On successful completion of this course, students will be able to

1. Get knowledge in Information –intensive applications that are being enabled for vehicles by a combination of telecommunication computing technology.
2. Develop communications, and navigation/in automotive telemetries.

---

### Contents:

#### UNIT I

#### Basics of In-vehicle Networking

(08 hours)

Over view of Data communication and networking –need for In-Vehicle networking-layers of OSI reference model –multiplexing and de-multiplexing concepts-vehicles

#### UNIT II

#### Networks and Protocols

(08 hours)

Over view of general purpose networks and protocols –Ethernet, TCP, UDP, IP, ICMP, ARM, RARP, Over view CAN-Fundamentals-selecting CAN controller-CAN development tools-CAN application areas.

CAN protocol: principles of Data exchange –real time transmission –message frame formats, bit encoding bit physical layer standards

**UNIT III** (08 hours)

**CAN Higher Layer Protocol**

Introduction to CAN open-Device net –TTCAN-SAE J1939-overview of CAN open and application in transportation electronics –CAN open standards

**UNIT IV** (08 hours)

**LIN Protocol**

LIN standard over view – applications- LIN communication concept message frame-development flow

**UNIT V** (08 hours)

**MOST and Flex Ray**

MOST over view –Data rates –data types-topology –application areas –Flex Ray Introduction-network topology –ECUs and bus interfaces –controller host interface and protocol operation controls-media Access Control and frame and Symbol processing – Coding/decoding unit-Flex Ray Scheduling –message processing –wakeup/Startup-applications

**UNIT VI** (08 hours)

**Wireless Systems**

Introduction to wireless system –GPS –Setting receivers-Positioning-activating the navigation function –Concept of latitude and grid System-mapping and location technologies-Application.

**Reference Books:**

1. B.Hoffman-Wellenhof,H.Lichtenegger and J.Collins,"GPS Theory and practice ".4<sup>th</sup> revised edition, Spriger, Wein New York,1997

## Self Study Paper I -RESEARCH METHODOLOGY

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

TW & OR : 50 Marks

Total Credits: 04

### Course prerequisites:

- Basic knowledge of modeling and simulation.
- Basic knowledge of probability and statistics

### Course objective:

This course provides basic knowledge of Research Methodology in different areas.

**Course Outcomes:** On successful completion of this course, students will be able to

1. Learn research fundamentals like objectives, literature review process.
2. Apply the various methods of modeling and simulation.
3. Apply the probability statistics in the simulation.
4. Write the technical research paper with required presentation.
5. Know about of Information communication technology: e-research, indices, patents, virtual lab etc

### Contents:

#### UNIT I

(08 Hours)

#### Research fundamentals

Definition, objectives, motivation, types of research and approaches, research- descriptive, conceptual, theoretical, applied and experimental

## **UNIT II**

(08 Hours)

### **The initial research process**

Literature review, research design, assortment of the problem, identification of problem, defining a problem, objective, sub objective and scope, assumptions, validation criteria, research proposal(synopsis)

## **UNIT III**

(08 Hours)

### **Mathematical modeling and simulation**

Mathematical modeling – need, techniques and classification, system models –types, static, dynamic, system simulation – why to simulate, technique of simulation, Monte Carlo simulation, types, continuous modeling, discrete model

## **UNIT IV**

(08 Hours)

### **Probability and statistics in simulation**

Role of probability and statistics in simulation, statistical distributions, inference about the difference in means, statistical output analysis

## **UNIT V**

(08 Hours)

### **Design of experiment**

Strategy of experimentation, types, basic principle, guidelines, need of precision, types of errors

## **UNIT VI**

(08Hours)

### **Report writing and presentation of results**

Need, report structure, formulation, sections, protocols, graphs, tables, IEEE format, evaluation of report, writing abstract, writing technical paper, Introduction of Information communication technology: e-research, indices, patents, virtual lab, digital lab, ethical issues in research

### **Reference books:**

## Self Study Paper I -INTELLECTUAL PROPERTY RIGHTS

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory : 60 Marks

Internal Assessment: 40 Marks

TW & OR: 50 Marks

Total Credits: 04

---

### Course objective:

- To introduce fundamental aspects of intellectual property rights to students.
- To provide case studies to demonstrate the application of legal concepts in engineering.

---

**Course Outcomes:** On successful completion of this course, students will be able to

- Understand the international intellectual property rights system.
- Use the necessary analytical tools to understand intellectual property in its broader environment

---

### Contents:

#### UNIT I

#### Overview of Intellectual Property

(08 Hours)

Introduction and need for Intellectual Property Rights (IPR), Different categories of IP in instruments, Rational behind Intellectual Property, Rights of the owner of the IP. IPR in India-Genesis & development, International Background of Intellectual Property, some important examples of IPR.

**UNIT II** (08 Hours)

**Patents**

Introduction to patents, Concept: Novelty, Utility, Patent document, Granting of patent, Rights of a patent, Drafting of a patent, Filing of a patent, The Indian Patent law, Infringement

**UNIT III** (08 Hours)

**Copyright**

Introduction to Copyright, Originality, Works protected under Copyright Law, Authorship and Ownership

**UNIT IV** (08 Hours)

**Trademarks**

Introduction, Rights of trademark, Need for protection of trademarks, Types of trademarks, Registration of trademarks, Rights of Registered Trademark Owners, Infringement of trademarks

**UNIT V** (08 Hours)

**Acquisition & maintenance of Intellectual Property Rights**

Introduction to Acquisition & maintenance of Intellectual Property Rights, Intellectual property offices (IPOs), Costs-Patents, costs-Trademark, Costs-Copyright

**UNIT VI** (08 Hours)

**Enforcement of Intellectual Property Rights**

Introduction to Enforcement of Intellectual Property and Global economy. The knowledge of economy & IP, valuation & accounting of Intangible assets, Management of IP in knowledge economy.

**Text books/Reference**

- 1) W.R. Cornish, 'Intellectual Property', Sweet & Maxwell, London (2000)
- 2) N.S. Gopalakrishnan & T.G. Agitha, 'Principles of Intellectual Property' Eastern Book Company, Lucknow.
- 3) P. Narayana, 'Patent Law', Wadhwa Publication.
- 4) V. V. Sopale, 'Managing Intellectual Property: The Strategic Importance', Second edition, PHI.

**M.Tech.(Electronics-VLSI) Sem-IV**

## Self Study Paper II- GENETIC ALGORITHMS FOR VLSI DESIGN

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

TW & OR: 50 Marks

Total Credits: 04

---

### Course prerequisites:

Analog and Digital VLSI Design

---

### Course objective:

To introduce the student to the concept of Genetic Algorithm for VLSI

---

### Course Outcomes:

1. Ability to apply Genetic Algorithm for VLSI Design.
  2. Ability to optimize VLSI Design through algorithm.
  3. Ability to conceptualize VLSI design flow through Genetic Algorithm .
- 

### Contents:

#### UNIT I (8 hours)

##### VLSI Design

Design Methodology and Hardware Implementation Methodologies, Digital ASIC Implementation

#### UNIT II (8 hours)

##### Genetic Algorithms

Components of a GA Based Optimization Engine, Individual Encoding, Fitness of an Individual, Selection Mechanism Genetic Operators, Crossover Operators, Uniform Crossover, Elitism in Genetic Algorithms, Multi-Objective Genetic Algorithms

**UNIT III**

(8 hours)

**Multi-Objective Genetic Floorplanning For Vlsi Asics**

Multi-objective Optimization, Floor planning and Floor planning Using Sequence Pair Representation, Conversion from a Floor plan to a Sequence Pair, Conversion from a Sequence Pair to a Floor plan

**UNIT IV**

(8 hours)

**FPGA Based Genetic Algorithm**

Pseudo-Random Number Generation and GA Performance, Basics of Evolvable Hardware, FPGA Based Genetic Algorithm, Implementation and Interfacing, Design Considerations for ASIC Implementation, RT-Level Simulations, Runtime Comparison of Implemented design.

**UNIT V**

(8 hours)

**Power Estimation**

Application of GA-Standard cell placement-GA for ATG-problem encoding- fitness function-GA vs Conventional algorithm

**UNIT VI**

(8 hours)

**Hybrid Genetic**

Genetic encoding-local improvement-WDFR-Comparison of Cas-Standard cell placement-GASP algorithm-unified algorithm.

**Text Books**

1. Pinaki Mazumder, E. M. Rudnick, "Genetic Algorithm for VLSI Design, Layout and test Automation", Prentice Hall, 1998.

## Self-Study Paper II: FUZZY LOGIC SYSTEMS

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

---

### Course prerequisites:

- Basic knowledge of set & probability theory.
- Basic knowledge of propositional logic & control systems

---

### Course objective:

This course provides in depth knowledge of Fuzzy Logic and role of Fuzzy Logic systems in different application areas.

---

**Course Outcomes:** On successful completion of this course, students will be able to

1. Analyze basic concepts of fuzzy sets, fuzzy relation and fuzzy arithmetic.
2. Identify potential use of fuzzy logic controller in different applications.
3. Evaluate fuzzy logic systems with fuzzy classification, fuzzy pattern recognition and hybrid systems.

---

### Contents:

#### UNIT I

(08 Hours)

#### Classical Sets and Fuzzy Sets

Crisp Sets: An Overview, Fuzzy Sets: Basic Types, Fuzzy Sets: Basic Concepts, Characteristics and Significance of the Paradigm Shift, Additional Properties of alpha Cuts, representations of Fuzzy Sets, Extension Principle for Fuzzy Sets, Types of Operations, Fuzzy complements, Fuzzy Intersections: t-Norms, Fuzzy Unions: t-Conorms, Multivalued Logic, Fuzzy Propositions, Fuzzy Quantifiers.

## UNIT II

(08 Hours)

### **Classical Relations and Fuzzy Relations**

Cartesian Product ,crisp relations, operations on crisp Relations, properties of crisp relations, composition, Fuzzy Relations, operations on fuzzy relations, properties of fuzzy relations, Fuzzy Tolerance and Equivalence Relations, Fuzzy Compatibility Relations, Fuzzy Ordering Relations.

## UNIT III

(08 Hours)

### **Fuzzy Arithmetic, Fuzzification and Defuzzification**

Fuzzy Numbers, Linguistic Variables, Arithmetic Operations on intervals, Arithmetic Operations on Fuzzy Numbers, Lattice of Fuzzy Numbers, Fuzzy Equations, Fuzzification, Defuzzification to Crisp Sets,  $\lambda$ -Cuts for Fuzzy Relations, Defuzzification to Scalars.

## UNIT IV

(08 Hours)

### **Fuzzy Systems**

Conventional Control Systems, Analysis, Design, PID Control, Fuzzy Logic Controller (FLC), Design, Defuzzification, Analysis, Simplified Examples of Applications- Washing machine, Vacuum cleaner. Fuzzy Control System Design, Aircraft Landing Control Problem, Fuzzy Engineering Process Control, Fuzzy Statistical Process Control. Fuzzy Neural Networks, Fuzzy Automata.

## UNIT V

(08 Hours)

### **Fuzzy Classification & Fuzzy Pattern Recognition**

Classification by Equivalence Relations, Cluster Analysis, Cluster Validity,  $c$ -Means Clustering, Hard  $c$ -Means (HCM), Fuzzy  $c$ -Means (FCM), Fuzzy  $c$ -Means Algorithm, Classification Metric, Hardening the Fuzzy  $c$ -Partition, Similarity Relations from Clustering, Feature Analysis, Partitions of the Feature Space, Single-Sample Identification, Multifeature Pattern Recognition.

## UNIT VI

(08 Hours)

### **Hybrid Systems & Applications of Fuzzy Logic**

Hybrid Systems, Fuzzy Neuron, Multilayer FNN Architectures, Fuzzy ART, Fuzzy ARTMAP Neural Fuzzy Systems, economics application, civil & industrial applications, Fuzzy Systems and Genetic Algorithms, Fuzzy Regression, Interpersonal Communication.

### **Text Books/ References:**

1. Timothy Ross, "Fuzzy Logic with Engineering Applications", Third Edition, Wiley publication.
2. George J. Klir & Bo Yuan, "Fuzzy Sets & Fuzzy Logic Theory & Applications", Prentice Hall India, 2007.
3. Ahmad M. Ibrahim "Fuzzy Logic for Embedded Systems Applications" 2003, Elsevier Science.

## Self-Study Paper II: BIOMEDICAL INSTRUMENTATION

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

---

### Course prerequisites:

- Knowledge of basic cell structure, organs and systems in the human body

---

### Course objective:

1. To make student understand different body systems.
2. To introduce amplifiers in order to design ECG Preamplifier system to pick up ECG waveform from the body.
3. To introduce various types of blood pressure monitoring and pulse oxymetry techniques.
4. To make student understand the importance of respiratory organs and parameters.
5. To make student understand various types of clinical lab equipments and its applications.
6. To introduce importance of electrosurgical equipment and electrodes used for electrosurgical

---

**Course Outcomes:** On successful completion of this course, students will be able to

1. Classify different body systems with their functions.
  2. Design ECG preamplifier system to pick up ECG waveform from the body.
  3. Categorize various pressure transducers as well as measurement techniques used for blood pressure monitoring.
  4. Describe respiratory system organs, parameters and respiratory transducers.
  5. Describe clinical equipments used in the pathology lab for blood test and analysis.
  6. Classify various electrodes and techniques used for surgery.
-

## Contents

### UNIT I (08 hours)

#### Human Body System

Human body as a uniquely adaptable organism , Overview of Different systems

### UNIT II (08 hours)

#### Amplifier Systems for ECG

Introduction to amplifiers in biomedical electronics,ECG wave form,Standard lead system,ECG Preamplifier.

### UNIT III (08 hours)

#### Blood Pressure and Blood Flow Measurements

Physiological pressures, Blood pressure measurements, Pressure transducers, pulse oximetry

### UNIT IV (08 hours)

#### Respiratory System Measurements

Introduction to human respiratory system,organs of Respiration,Parameters of respiration,Respiratory transducers, plethysmography.

### UNIT V (08 hours)

#### Clinical Laboratory Equipments

Blood components, overview of Laboratory measurements,Blood gas Analyzer,Blood cell counters,Spectrophotometer,Blood Tests and analyzers.

### UNIT VI (08 hours)

#### Electrosurgical Equipments

Introduction to Electrosurgical Unit ,electro surgery circuits, Electro surgery safety, Patients safety

#### Text Books:

1. Joseph.J.Carr and John.M.Brown, "Introduction to Biomedical Equipment Technology", Pearson Education.

#### References:

1.Arthur C Guyton, "Medical Physiology", Prism Book.

2.Leslie Cromwell,Fred.J.Weibel,"Biomedical Instrumentation and Measurements", PHI.

## Self-Study Paper II: COMPUTER AIDED VLSI DESIGN

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

---

### Course prerequisites:

VLSI Design

---

### Course objective:

The course will introduce CAD tools required for VLSI.

---

### Course Outcomes:

On successful completion of this course, students will effectively utilize various CAD tools for VLSI design.

---

### Contents

#### UNIT I

**Digital Design and Design Environments: (08 hours)**

Design, Hierarchy, Views, Connectivity, Spatial Dimensionality, Introduction of Design Environments, System Level, Algorithm Level, Component Level, Layout Level

#### UNIT II

**Representation: (08 hours)**

Introduction, General Issues of Representation, Hierarchy Representation, View Representation, Connectivity Representation, Geometry Representation.

#### UNIT III

**Synthesis Tools: (08 hours)**

Introduction, Cell Contents Generation and Manipulation, Generators of Layout outside the Cells, Cells and Their Environment, Silicon Compilers, Post layout Generators,

#### **UNIT IV**

##### **Static Analysis Tools, Dynamic Analysis Tools:**

**(08 hours)**

Node Extraction, Geometrical Rule Checker, Electrical Rule Checker, Verification, Circuit–Level Simulators, Logic-Level Simulators, Functional and Behavioral Simulation Issues, Event Driven and Hardware Simulation

#### **UNIT V**

##### **Output of Design Aids and Programmability:**

**(08 hours)**

Introduction, Circuit Boards, Integrated Circuits, Implementation Issues, Imperative Programming, Declarative Programming, Hierarchy.

#### **UNIT VI**

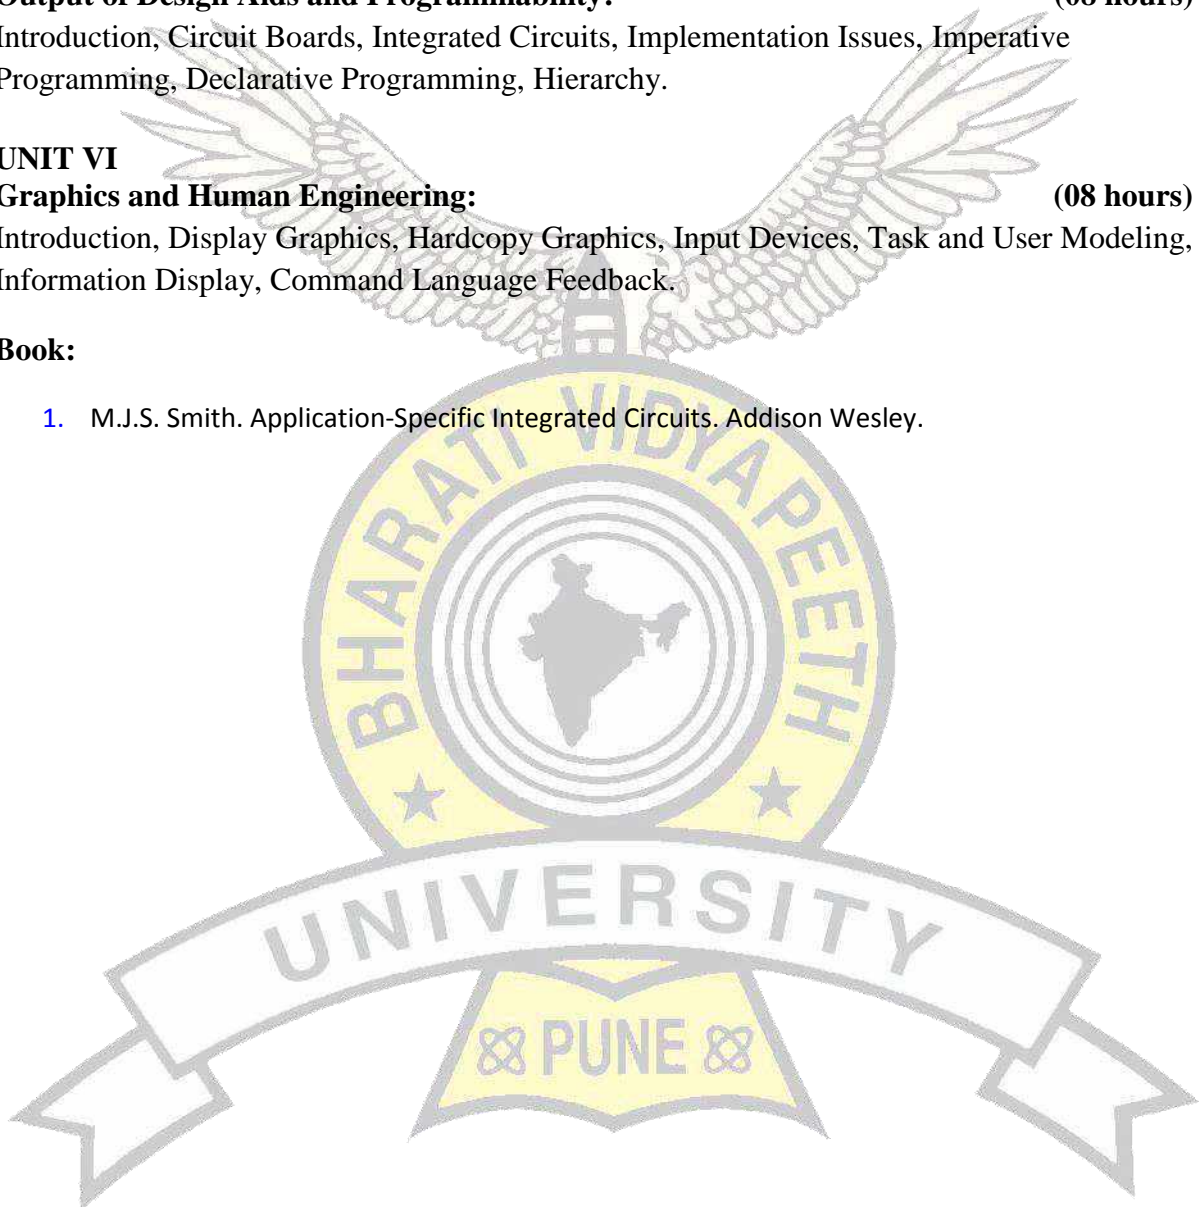

##### **Graphics and Human Engineering:**

**(08 hours)**

Introduction, Display Graphics, Hardcopy Graphics, Input Devices, Task and User Modeling, Information Display, Command Language Feedback.

##### **Book:**

1. M.J.S. Smith. Application-Specific Integrated Circuits. Addison Wesley.

## Self-Study Paper II: HUMAN VALUES & PROFESSIONAL ETHICS

### TEACHING SCHEME

Lectures: 04 Hrs/Week

### EXAMINATION SCHEME

Duration: 03 Hrs

Theory: 60 Marks

Internal Assessment: 40 Marks

Total Credits: 04

---

### Course prerequisites:

- Listening skills for academic and professional purposes.
- Ability to speak effectively in English in real-life situations.

---

### Course objective:

1. To create awareness on engineering ethics and human values
2. To understand social responsibility of an engineer
3. To appreciate ethical dilemma while discharging duties in professional life

---

### Course Outcomes: On successful completion of this course, students will be able to

1. Familiar with the ethical issue and professional issue in the engineering profession.
2. Familiar with social impact of decision and the action of participants in the engineering profession

---

### Contents

#### UNIT I

#### Human Values

(08 Hours)

Morals, Values and Ethics - Integrity, - Work Ethics - Service Learning - Civic Virtue - Respect for others - Living Peacefully - Caring - sharing - Honesty - Courage - Valuing Time- Cooperation - Commitment - Empathy – Self-Confidence - Character - spirituality

#### UNIT II

#### Engineering Ethics

(08 Hours)

Senses of engineering ethics - Variety of Moral Issues - Types of inquiry - Moral Dilemmas Moral Autonomy - Kohlberg's Theory - Gilligan's Theory - Consensus and Controversy -

Models of Professional Roles - Theories about Right Action - Self-Interest - Customs and Religion .

**UNIT III**

(08 Hours)

**Safety, Responsibilities and Rights**

Safety and Risk - Assessment of safety and Risk - Risk Benefit Analysis and Reducing Risk - The Three Mile Island. And Chernobyl Case Studies. Collegiality and Loyalty - Respect for Authority - Collective Bargaining - Confidentiality - Conflicts of Interest - Occupational Crime - Whistle Blowing - Professional Rights – Employee Rights - Intellectual Property Rights (IPR) – Discrimination

**UNIT IV**

(08 Hours)

**Global Issues**

Multinational Corporations - Environmental Ethics - Computer Ethics - Weapons Development - Engineers as Managers - Consulting Engineers - Engineers as Expert Witnesses and Advisors - Sample Code of Ethics of ASME, ASCE, IEEE, Institution of Engineers (India), etc.

**UNIT V**

(08 Hours)

**Engineer's responsibility for safety**

Collegiality and loyalty-respect of authority-collective bargaining-confidentiality-conflicts of interest-occupational crime- professional rights-employee rights-Intellectual property rights(IPR).

**UNIT VI**

(08 Hours)

**Engineering as social Experimentation**

Engineering as social experimentation-engineers as responsible experimenters-codes of ethics-a balanced outlook on law- the challenger case study

**Text Books/ References:**

**List of Self Study paper I & II**

Self Study Paper I	Self Study Paper II
Condition Monitoring of Electrical Equipments	Electrical Power Capacitors
Energy Storage Devices	Nano technology & its applications in Electrical Engineering
Digital Measurement Techniques	High voltage insulation system & design
Energy Conservation & Audit	Use of synchronized measurement techniques in power system
Solar PV & Wind energy systems	Distributed Generation
Demand response & demand side management	Smart Grid - Automation System for State Transmission Utility
Digital Signal Processing Applications in Power Systems	Substation design

<b>RESEARCH METHODOLOGY</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
<b>UNIT - I</b>	<b>Fundamentals</b>	<b>(08 Hours)</b>
	Definition, Research Characteristics, Research Need, Objectives and types of research, Motivation and objectives – Research methods vs Methodology, Types of research – Descriptive vs. Analytical, Applied vs. Fundamental, Quantitative vs. Qualitative, Conceptual vs. Empirical	
<b>UNIT - II</b>	<b>Formulation of research problem</b>	<b>(08 Hours)</b>
	Research Formulation – Defining and formulating the research problem - Selecting the problem - Necessity of defining the problem - Importance of literature review in defining a problem – Literature review – Primary and secondary sources – reviews, treatise, monographs-patents – web as a source – searching the web - Critical literature review – Identifying gap areas from literature review - Development of working hypothesis. Summarizing a Technical Paper -summary template , Online tools - Google, CiteSeer, ACM Digital Library, IEEE, The on-line Computer Science bibliography, Searching patents	
<b>UNIT - III</b>	<b>Research design methods</b>	<b>(08Hours)</b>
	Research design, sampling design and scaling techniques – Research design – Basic Principles- Need of research design — Features of good design – Important concepts relating to research design, basic principles of experimental designs, implications of sample design, steps in sample design, criteria of selecting sampling procedure, characteristics of good sampling design, different types of sample design. Scaling techniques: measurement scales, sources of error, technique of developing measurement tool, important scaling techniques, scale construction techniques.	
<b>UNIT - IV</b>	<b>Statistical analysis</b>	<b>(08 Hours)</b>
	Data Collection and analysis:- Observation and Collection of primary and secondary data - Methods of data collection, processing operations, types of analysis, statistics in research, measures of central tendency, measures of dispersion, measures of asymmetry, measures of relationships, simple regression analysis, multiple correlation and regression, partial correlation.	
<b>UNIT - V</b>	<b>Research Paper &amp; Thesis writing</b>	<b>(08 Hours)</b>
	Reporting and thesis writing – Structure and components of scientific reports - Types of report – Technical reports and thesis – Significance – Different steps in the preparation – Layout, structure and Language of typical reports – Illustrations and tables - Bibliography, referencing and footnotes - Oral presentation – Planning – Preparation –Practice – Making presentation –	

	Use of visual aids - Importance of effective communication - Documentation and presentation tools: LATEX. Types of technical papers - Journal papers, Conference papers, Survey papers, Poster papers, Review papers Comparison, Structure of a survey, conference and journal paper, Organization and flow of thesis/ Project report, Research proposal: preparation, budgeting, presentation, funding agencies for engineering research,	
<b>UNIT - VI</b>	<b>Research ethics, IPR and publishing</b>	<b>(08 Hours)</b>
	Ethics: ethical issues. IPR: intellectual property rights and patent law, techniques of writing a Patent, filing procedure, technology transfer, copy right, royalty, trade related aspects of intellectual property rights Publishing: design of research paper, citation and acknowledgement, plagiarism tools, reproducibility and accountability.

<b>Syllabus for Unit Test:</b>		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

## FACTS & HVDC

<b>FACTS &amp; HVDC</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
<b>UNIT - I</b>	<b>FACTS:</b>	<b>(08 Hours)</b>
	Conventional methods to increase transmission capacity, Series, Shunt reactors, Phase shifting transformers, Synchronous condensers, Flexible AC transmission controllers Basics, Challenges and needs, Static Power converter structures, AC controller based structures, DC link converter topologies, Converter output and harmonic control, Power converter control issues	
<b>UNIT - II</b>	<b>Shunt and Series Compensation:</b>	<b>(08 Hours)</b>
	Operation and control of thyristor controlled reactor, Thyristor switched Capacitor, SVC, STATCOM configuration and control, Applications of SVC, Power oscillation damping, Mitigation of sub-synchronous resonance, TCSC operation, Layout and protection, Applications of TCSC, Static Synchronous Series Compensator (SSSC)	
<b>UNIT - III</b>	<b>Unified Power Flow Controller:</b>	<b>[08 Hrs ]</b>
	UPFC configuration, Independent real and reactive power flow control, Control scheme for UPFC, Basic control system for P and Q control, Dynamic performance, Operational constraints of UPFC, Power flow studies in UPFC embedded systems	
<b>UNIT - IV</b>	<b>General Background of HVDC Transmission:</b>	<b>(08 Hours)</b>
	EHV AC versus HVDC Transmission, Different configurations of HVDC link - Monopolar, Bipolar, Back to Back, Power flow through HVDC link, Equation for HVDC power flow, Connections of three phase six pulse and twelve pulse converter bridges, Voltage and current waveforms. Effect of delay angle, Extinction angle, Overlap angle, Control of DC voltage	
<b>UNIT - V</b>	<b>Multi Terminal HVDC:</b>	<b>(08 Hours)</b>
	Bipolar HVDC terminal, Converter transformer connections, Switching arrangements in DC yard for earth return to metallic return, HVDC switching system, Switching arrangements in a bipolar HVDC terminal, Sequence of switching operations, HVDC circuit breakers, DC current interruption, Commutation principle, Probable types and applications of HVDC circuit breakers, Multi-terminal HVDC systems, Parallel tapping, Reversal of power, Configurations and types of multi-terminal HVDC systems, Commercial multi terminal systems	
<b>UNIT - VI</b>	<b>Protection and Control:</b>	<b>(08 Hours)</b>
	Faults and abnormal condition in bipolar, Two terminal HVDC system, Pole-wise segregation, Protective zones, Clearing of DC line faults and reenergizing, Protection of converters, Transformer, Converter valves, DC yards, Integration of protection and controls, Hierarchical levels of control, Block diagram, Schematic diagram, Current control, Power	

	control, DC voltage control, Commutation channel, Master control, Station control, Lead station, Trail station, Pole control, Equidistant firing control, Synchronous HVDC link, Asynchronous HVDC Link	
<b>Text Books:</b>		
1. E.Acha, V.A.Agelidis, O.Anaya-lara and TJE MillerNewnes, Power Electronic control in Electrical Systems Oxford.		
2. N.G. Hingorani and L.Gyugi, Understanding FACTS- IEEE Press, New York.		
3. J. Arrilaga, Y.H.Liu and N.R.Watson, Flexible Power Transmission- The HVDC Options, John Wiley and sons Ltd., New York.		
<b>Reference Books:</b>		
1. T J E Miller, “Reactive Power Control in Electric Systems”, John Wiley		
2. Padiyar K R “FACTS Controllers in Power Transmission & Distribution”, New Age.		
3. R. Mohan and R.K.Varma, “Thyristor-Based FACTS Controllersfor Electrical Transmission Systems”, IEEE Press.		
<b>Syllabus for Unit Test:</b>		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

## Advance Micro controllers and applications

<b><u>TEACHING SCHEME:</u></b>		<b><u>EXAMINATION SCHEME:</u></b>		<b><u>CREDITS ALLOTTED:</u></b>	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
		Continuous Assessment: 40 Marks			
		TW&OR : 50 Marks		01 Credits	
<b>UNIT - I</b>					
<b>UNIT - I</b>		Introduction to PIC 16F8XX family and development tools. CPU architecture and instruction set. Harvard architecture and pipelining, program memory considerations, register file structure and addressing modes, CPU registers.			(08 Hours)
<b>UNIT - II</b>					
<b>UNIT - II</b>		PIC peripherals I/O ports, external interrupts and timers, timer operation, ADC, short overview of synchronous serial port, serial peripheral interface I2C bus.			(08 Hours)
<b>UNIT - III</b>					
<b>UNIT - III</b>		Learning MPLAB (V 5.0 or above) Integrated development environment from Microchip (Assembler and simulator), Study of applications like motor control, temperature control, lamp dimmer, 4X4 matrix keyboard and LCD interfacing etc.			(08 Hours)
<b>UNIT - IV</b>					
<b>UNIT - IV</b>		ARM & AVR Processors : RISC, ARM design philosophy, ARM fundamentals, instruction set, thumb instruction set, exception & interrupt handling, efficient C programming, optimizing ARM assembly code, AVR architecture, instruction set, hardware interfacing, communication links and design issues.			(08 Hours)
<b>UNIT - V</b>					
<b>UNIT - V</b>		Interfacing considerations: Intel process communication, synchronization of processes, tasks, threads, devices & buses for networks, hardware-software co-design embedded programming in C/RT Linux			(08 Hours)
<b>UNIT - VI</b>					
<b>UNIT - VI</b>		Real time operating systems: Survey of software architectures- round robin, with interrupts, function queue scheduling, RTOS architecture, selecting an architecture, task states, task and data semaphores and shared data, message queues, mailboxes ,pipes, timer functions, events, memory management, interrupt routines in an RTOS environment, basic design using RTOS, embedded software development tools, Micro C/OS- II, VX works.			(08 Hours)
<b>Reference Books:</b>					
<ol style="list-style-type: none"> <li>1. Microchip PIC family Microcontroller handbook</li> <li>2. Design with PIC microcontrollers –John Peatman, Pearson Education Asia ,LPE</li> <li>3. Rajkamal, ”Embedded system –architecture, programming and design”,TMH Publication, edition 2003</li> <li>4. David Simon, ” An embedded software Primer”, Pearson education , Asia</li> <li>5. Jonathan W. Valvano, Brooks, Cole” Embedded Microcomputer systems-Real time interfacing” Thomson Learning</li> </ol>					
<b>Syllabus for Unit Test:</b>					
Unit Test -1		UNIT – I, UNIT – II, UNIT – III			
Unit Test -2		UNIT – IV, UNIT – V, UNIT – VI			

## Power System Modeling

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>		<b>CREDITS ALLOTTED:</b>	
Theory: 04Hours / Week		End Semester Examination: 60 Marks		04Credits	
		Continuous Assessment: 40 Marks			
		PR & OR : 50 Marks		01 Credits	
<b>UNIT – I</b>	<b>Modeling of Non-Electrical Parameters:</b>				<b>(08 Hours)</b>
	Different areas of power system analysis, Need for mathematical modeling of power system, Simplified models of non-electrical components such as boiler, steam & hydro turbine, governor system				
<b>UNIT – II</b>	<b>Modeling of Transformers:</b>				<b>(08 Hours)</b>
	Transformer modeling for two winding transformer, tap-changer, phase shifting transformer, three winding transformer and auto-transformer				
<b>UNIT – III</b>	<b>Modeling of Transmission Line:</b>				<b>(08 Hours)</b>
	Modeling of transmission network, Transformation to Alpha-Beta components using D-Q components, Steady state equations				
<b>UNIT – IV</b>	<b>Synchronous Machine Modeling:</b>				<b>(08 Hours)</b>
	Introduction, Park's Transformation, Flux Linkage Equation, Voltage Equations, Formulation of State-Space Equation, Current Formulation, Per Unit Conversion, Normalizing Voltage equations, Normalizing Torque Equations, Torque & Power Equivalent Circuit of Synchronous Machine				
<b>UNIT – V</b>	<b>Excitation System Modeling :</b>				
	Types of excitation systems, Control and protective systems, Modeling of excitation systems (excitation system components and entire excitation system, Voltage Response Ratio, Exciter voltage ratings				<b>(08 Hours)</b>
<b>UNIT – VI</b>	<b>Load Modeling:</b>				
	Basic Load Modeling concepts, Static load representation, Dynamic load representation, Induction motor (as load) modeling, synchronous motor (as load) modeling, acquisition of load model parameters				<b>(08 Hours)</b>
<b>Text Books:</b>					
1. K. R. Padiyar", Power System Dynamics", B.S. Publications					
2. John J. Granier & W.D. Stevenson Jr., "Power System Analysis ", 4 <sup>th</sup> Edition, McGraw Hill International Student Edition					
3. Olle Elegard, "Electrical Energy System Theory - An Introduction", TMH Publishing Company, 2 <sup>nd</sup> Edition					
4. Kundur, "Power System Dynamics & Control", IEEE Press, New York					
<b>Reference Books:</b>					
1. Anderson & Foud, "Power System Control & Stability", Vol-I, IEEE Press, New York					
2. P.S.R Murthy, " Power System Operation & Control"					
<b>Syllabus for Unit Test:</b>					
Unit Test -1	UNIT – I, UNIT – II				
Unit Test -2	UNIT – III, UNIT – IV				
Unit Test-3	UNIT –V, UNIT-VI				

<b>Power System Dynamics</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
<b>UNIT - I</b>	<b>Classical Methods of Power System Dynamic Studies</b>	<b>(08 Hours)</b>
	Equality and inequality constraints in power system operation, state transition diagram, concept of system security and stability, classical model of system of one machine connected to infinite bus, Clark diagram for two machines series reactance system, extension of Clark diagram to cover any reactance network, elementary model of overall power system	
<b>UNIT - II</b>	<b>Small Signal Stability:</b>	<b>(08 Hours)</b>
	Small signal analysis, analysis of synchronizing & damping torque, state equation for small signal model, Simplified synchronous machine model, calculation of initial conditions, system simulation, improved model of synchronous machine, small signal stability of multi machine system	
<b>UNIT - III</b>	<b>Large Signal Analysis:</b>	<b>(08 Hours)</b>
	Elementary view of transient stability, Large signal analysis, Analysis using numerical integration methods (Modified Euler's, Runge-Kutta), Simulation of power system dynamic response, Analysis of unbalanced faults, Case study of a large system	
<b>UNIT - IV</b>	<b>Power System Stabilizers:</b>	<b>(08 Hours)</b>
	Basic concepts of control signals in power system stabilizers (PSS), Structure and tuning, Field implementation, PSS design and application, Future trends	
<b>UNIT - V</b>	<b>Multi-machine system:</b>	<b>(08 Hours)</b>
	Simplified model, Improved model of the system for linear load, Inclusion of load and SVC, Introduction to analysis of large power system	
<b>UNIT - VI</b>	<b>Voltage stability:</b>	<b>(08 Hours)</b>
	Definition, Factors affecting voltage stability & collapse, Analysis & comparison of angle & voltage stability and voltage instability & collapse, Control of voltage instability, islanding - necessity, methods, advantages and disadvantages, implication on power system dynamic performance	
<b>Text Books:</b>		
1. Anderson & Foud, "Power system Control & Stability", IEEE press, New York		
2. OlleElgerd, "Electrical Energy System Theory - An Introduction", TMH		
<b>Reference Books:</b>		
1. K R Padiyar, "Power System Dynamics", B S Publications		
2. PrabhaKundur, "Power system Stability & control", TMH		
3. C.W.Taylor, "Power System Voltage Stability", TMH		
4. R. A. Walling, "Distributed Generation Islanding", N.W. Miller		
<b>Syllabus for Unit Test:</b>		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

## Digital Protection of Power System

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04Hours / Week		End Semester Examination: 60 Marks	04 Credits
		Continuous Assessment: 40 Marks	
		TW & OR : 50 Marks	01 Credit
<b>UNIT – I</b>	<b>Introduction:</b>		<b>(08 Hours)</b>
	Need for Power system protection, Digital Protection: State of Art, Merits of Microprocessor relaying scheme, Power System Components, Basic Philosophy of Protection Scheme, Section of Protection Scheme, Circuit Breakers and Relays, Types and Applications. Architecture of Modern Digital Relay		
<b>UNIT - II</b>	<b>Static Relays:</b>		<b>(08 Hours)</b>
	Introduction to Static Relay, Overcurrent Relay, Distance Relay, Protection Schemes of transmission lines, Switched distance relay, Poly-phase relay, Relay as Comparator - Dual input Comparator, Relay characteristics by comparison of constants, Multi-input comparator, Pilot Relaying Scheme		
<b>UNIT - III</b>	<b>Elements of Digital Protection:</b>		<b>(08 Hours)</b>
	Basic components of a digital relay, Signal conditioning subsystem: Transducers, Surge protection circuits, Analog filtering and analog multiplexers, Conversion subsystems, Sampling Theorem, Digital filter signal aliasing error, Sample and hold circuit, Digital multiplexing, Digital to analog conversion, Analog to digital conversion, Digital relay subsystem, Digital relay as unit		
<b>UNIT – IV</b>	<b>Digital Protection of Transmission Line:</b>		<b>(08 Hours)</b>
	Protection scheme of transmission line, Distance Relay, Travelling wave relays. Digital protection scheme based on fundamental signal: hardware design, software design, Digital protection of EHV/UHV transmission line based on travelling wave phenomena, New relaying scheme using amplitude comparison		
<b>UNIT – V</b>	<b>Digital Protection of Transformer and Synchronous Generator:</b>		<b>(08 Hours)</b>
	Faults in Transformer, Schemes used for Transformer Protection, Digital Protection of Transformer Faults in Synchronous generator, Protection schemes for Synchronous generator, Digital Protection of Synchronous Generator		
<b>UNIT – VI</b>	<b>Artificial Intelligence in Power System Protection:</b>		<b>(08 Hours)</b>
	Introduction, An Expert System (ES) for Protective Relay Settings: Introduction, Problem Description, ES Approach, Typical Application, Fuzzy Logic (FL) for Power system Protection: Introduction, Problem Description, FL Approach, Artificial Neural Network (ANN) in Phase Selection: Introduction, Problem Description, Measurement of fault generated in high frequency components, ANN Approach		

### Text Books:

1. "Digital Protection – Protective Relaying from Electro-Mechanical to Microprocessor" By L.P. Singh. 2<sup>nd</sup> Edition, Reprint-2004, New Age International Publisher, New-Dehli.
2. "Digital Power System Protection" By S.R. Bhide. PHI Learning Private Limited, New Delhi.
3. "Artificial Intelligence Techniques in Power Systems", By Kevin Warwick, Auther Ekwue & Raj Aggarwal, Publication : Institution of Electrical Engineers, London, UK.
4. "Digital Protection for Power system" by A.T Johns and S.K. Salman. Peter Peregrinus Ltd. Of The Institute of Electrical Engineers, London, United Kindom.
5. "Soft Computing Techniques and its Applications in Electrical Engineering" By Dr. Devendra Chaturvadi,

Publication: Springer – Verlag Berlin Heidelberg.

**Reference Books:**

1. “Power System Protection 4: Digital Protection and Signalling” edited by ETA Electricity Training Association. Published by Institute of Engineers, London, UK.

2. “Digital Signal Processing in Power System Protection and Control” By Waldemar Rebizant, Janusz Szafran, Andrzej Wiszniewski.

**Syllabus for Unit Test:**

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

## PLC and SCADA

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
	Term Work: 50 Marks	01 Credits

<b>UNIT – I</b>	<b>Introduction to PLC</b>	<b>(08 Hours)</b>
	Definition & History of PLC, Overall PLC system, PLC Input and Output modules, CPU, Interfaces, Power supplies, PLC advantages and disadvantages, Selection criteria for PLC, Architecture of Industrial Automation Systems, Process Control, PID Control, Predictive Control, Introduction to Sequence Control, PLCs and Relay Ladder Logic, Hardware environment	
<b>UNIT – II</b>	<b>PLC Programming</b>	<b>(08 Hours)</b>
	Programming equipments, Construction of PLC ladder diagram, Basic components and symbols in ladder diagram, Ladder logic, Functional block, Structural text, Instruction, trouble shooting, features, programming ON/OFF Inputs to produce ON/OFF outputs, Networking of Sensors, Actuators and Controllers: The Fieldbus, The Fieldbus Communication Protocol	
<b>UNIT – III</b>	<b>PLC Applications</b>	<b>(08 Hours)</b>
	Analog PLC operation, PID control of continuous processes, simple closed loop systems, closed loop system using Proportional, Integral & Derivative (PID), PLC interface, Motors Controls: AC Motor starter, AC motor overload protection, DC motor controller, Variable speed (Variable Frequency) AC motor Drive	
<b>UNIT – IV</b>	<b>SCADA</b>	<b>(08 Hours)</b>
	Need of SCADA system, Features, SCADA architecture – First generation, Second generation, Third generation, HMI, MTU, RTU, IED's, 7 Layers of OSI, Communication requirements for SCADA (communication protocols – DNP, IEC, Ethernet, TCP/IP, Modbus, UDP), Client – Server based communication concept, SCADA Benefits	
<b>UNIT – V</b>	<b>SCADA in Power System</b>	<b>(08 Hours)</b>
	Operation and control of interconnected power system, Automatic substation control, SCADA configuration, Energy Management System (EMS), system security, State estimation, SCADA system security issues overview	
<b>UNIT – VI</b>	<b>Supervisory Management</b>	<b>(08 Hours)</b>
	Networked SCADA environment with implementation examples, Substation Automation and Equipment condition monitoring using SCADA, Distribution system design mapping, trouble call management, Customer level intelligent automation system, computer level monitoring and control of equipments	

### **Text Books:**

1. Terson, "Power System Control Technology", Prentice Hall
2. Green, J. N, Wilson, R, "Control and Automation of Electric Power Distribution Systems", Taylor and Francis, 2007
3. Turner, W. C, " Energy Management Handbook", 5<sup>th</sup> Edition, 2004
4. Gary Dunning, "Introduction to Programmable Logic Controllers", Thomson, 2<sup>nd</sup> Edition
5. John W. Webb, Ronald A. Reis, "Programmable Logic Controllers: Principles and Application", 5<sup>th</sup> Edition
6. Stuart A Boyer, "SCADA supervisory control and data acquisition"

**Reference Books:**

1. Handschin, E. "Energy Management Systems", Springer Verlag, 1990
2. Gordan Clark, Deem Reynders, "Practical Modem SCADA Protocols"

**Syllabus for Unit Test:**

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

<b>(Elective – I) Power Sector Restructuring &amp; Deregulation</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
<b>UNIT - I</b>	<b>Power Sector in India</b> Introduction to various institutions in an Indian Power sector such as CEA, Planning Commissions, PGCIL, PFC, Ministry of Power, State and Central governments, REC, Load Dispatch Centers, Utilities and their roles. Critical issues / challenges before the Indian power sector, Electricity act 2003-Provision in the Generation, Transmission & Distribution Sector, Various national policies and guidelines under this act.	<b>(08 Hours)</b>
<b>UNIT - II</b>	<b>Fundamentals of Economics &amp; Power Sector Regulation</b> Fundamentals of economics applicable to Power Sector, Consumer behavior, Supplier behavior, Market Equilibrium, Short-run & Long-run costs, Various costs of production- Total cost (TC), Average fixed cost (AFC), Average variable cost (AVC), Average cost (AC) and Marginal cost (MC), Relationship between short-run and long-run average costs, Perfectly competitive market, Concept of life cycle cost, Annual rate of return, methods of calculations of Internal Rate of Return (IRR) and Net Present Value (NPV) of project, Role of regulation and evolution of regulatory commission in India, Types and methods of economic regulation, Regulatory process in India.	<b>(08 Hours)</b>
<b>UNIT - III</b>	<b>Power Tariff</b> Different tariff principles (marginal cost, cost to serve, average cost), Consumer tariff structures and considerations, different consumer categories, telescopic tariff, fixed and variable charges, time of day, interruptible tariff, and different tariff based penalties and incentives etc., Subsidy and cross subsidy, life line tariff, Comparison of different tariff structures for different load patterns. Government policies in force from time to time. Effect of renewable energy and captive power generation on tariff, Availability based tariff, Latest reforms and amendments	<b>(08 Hours)</b>
<b>UNIT - IV</b>	<b>Power sector restructuring and market reform</b> Introduction to power sector restructuring, Reasons for restructuring / deregulation of power industry, Understanding the restructuring process-Entities involved, The levels of competition, The market place mechanisms and Sector-wise major changes required, Different industry structures and ownership models, Market models based on contractual arrangements-Monopoly Model, Single buyer Model, Wholesale competition model and Retail competition model, Market architecture, Timeline for various energy markets, Bilateral / forward contracts, The spot market, Models for trading arrangements, ISO or TSO model, Reasons and objectives of deregulation of various power systems across the world-The US, The UK, The Nordic Pool and The developing countries. Congestion Management, Ancillary Services	<b>(08 Hours)</b>
<b>UNIT - V</b>	<b>Electricity Markets Pricing and Non-price issues</b> Electricity price basics, Market Clearing price (MCP), Zonal and locational MCPs, Dynamic, spot pricing and real time pricing, Dispatch based pricing, Power flows and prices. Optimal power flow Spot prices for real and reactive power. Unconstrained real spot prices, constraints and real spot prices. Non price issues in electricity restructuring (quality of supply and service, environmental and social considerations), Global experience with	<b>(08 Hours)</b>

	electricity reforms in different countries.	
<b>UNIT - VI</b>	<b>Transmission Planning and Pricing</b> Transmission planning & operation in open access power systems, Introduction & Principles of transmission pricing, Different transmission pricing methods, Transmission cost allocation methods, Marginal & Composite pricing Paradigms & their comparison, Introduction to transmission loss allocation & various methods of loss allocation, Debated issues in transmission pricing, Congestion issues and management, Ancillary Service Management, Forward ancillary service auction. Power purchase agreements.	<b>(08 Hours)</b>

<b>Syllabus for Unit Test:</b>		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

<b>(Elective – I) POWER SYSTEM PLANNING AND RELIABILITY</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	Term Work: 25 Marks	01 Credit
<b>UNIT - I</b>	<b>Unit 1: Load Forecasting :</b>	<b>(06 Hours)</b>
	Introduction, Factors affecting Load Forecasting, Load Research, Load Growth Characteristics, Classification of Load and Its Characteristics, Load Forecasting Methods -(i) Extrapolation (ii) Co-Relation Techniques, Energy Forecasting, Peak Load Forecasting, Reactive Load Forecasting, Non-Weather sensitive load Forecasting, Weather sensitive load Forecasting, Annual Forecasting, Monthly Forecasting, Total Forecasting, Objectives & Factors affecting to System Planning , Short Term Planning, Medium Term Planning, Long Term Planning. [10 hrs]	
<b>UNIT - II</b>	<b>Unit 2: Probability theory</b>	<b>(06 Hours)</b>
	Introduction to probability, Probability distributions : Random variables, density and distribution functions. Mathematical expectation. Binominal distribution, Poisson distribution, normal distribution, exponential distribution, Weibull distribution. Normal Gaussian, Gamma and Beta distribution. Correlation and regression	
<b>UNIT - III</b>	<b>Unit 3: Reliability</b>	<b>(06 Hours)</b>
	Reliability, Failure, Concepts of Probability, Evaluation Techniques (i) Markov Process (ii) Recursive Technique, Stochastic Prediction of Frequency and Duration of Long & Short Interruption, Adequacy of Reliability, Reliability Cost.	
<b>UNIT - IV</b>	<b>Unit 4: Generation Planning and Reliability :</b>	
	Objectives & Factors affecting Generation Planning, Generation Sources, Integrated Resource Planning, Generation System Model, Loss of Load (Calculation and Approaches), Outage Rate, Capacity Expansion, Scheduled Outage, Loss of Energy, Evaluation Methods. Interconnected System, Factors affecting interconnection under Emergency Assistance.	
<b>UNIT - V</b>	<b>Unit 5: Transmission Planning and Reliability</b>	<b>(06 Hours)</b>
	Transmission Planning and Reliability: Introduction, Objectives of Transmission Planning, Network Reconfiguration, System and Load Point Indices, Data required for Composite System Reliability.	
<b>UNIT - VI</b>	<b>Unit 6: Distribution Planning and Reliability</b>	<b>(06 Hours)</b>
	Radial Networks – Introduction, Network Reconfiguration, Evaluation Techniques, Interruption Indices, Effects of Lateral Distribution Protection, Effects of Disconnects, Effects of Protection Failure, Effects of Transferring Loads, Distribution Reliability Indices. Parallel & Meshed Networks -Introduction, Basic Evaluation Techniques, Bus Bar Failure, Scheduled Maintenance, Temporary and Transient Failure, Weather Effects, Breaker Failure.	

<b>Text Books:</b>	
1. Roy Billinton & Ronald N. Allan, Reliability Evaluation of Power System - Springer Publication.	
2. R.L. Sullivan Power System Planning -, Tata McGraw Hill Publishing Company Ltd.	
3. Miler & Freund's, Probability and Statistic for Engineers, Pearson Education, Richard Johnson.	
<b>Reference Books:</b>	
1. X. Wang & J.R. McDonald, Modern Power System Planning -, McGraw Hill Book Company	
2. T. Gönen, Electrical Power Distribution Engineering - McGraw Hill Book Company	
3. B.R. Gupta Generation of Electrical Energy -, S. Chand Publications	
4. A.S. Pabla, Electrical Power Distribution Tata McGraw Hill Publishing Company Ltd.	
5. T.W. Berrie, Electricity Economics & Planning -, Peter Peregrinus Ltd., London	
<b>Syllabus for Unit Test:</b>	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

## Power Quality Issues

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>		<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits
		Continuous Assessment: 40 Marks		
<b>UNIT - I</b>	<b>Voltage sag; swells and interruptions</b> Introduction; importance of power quality; terms and definitions of power quality as per IEEE std. 1159. Sources & Effects of Power Quality Problems; Sources of sag; swell and interruptions; Estimation of voltage sag performance; Fundamental principles of protection; solutions at end user level; utility systems and fault clearing issues; motor starting sags; evaluation of the economics of different alternatives.			<b>[8Hrs]</b>
<b>UNIT - II</b>	<b>Transient Over- Voltages</b> Sources of transient over voltages; capacitor switching; lightening; Ferro resonances and other switching transients; Principles of over voltage protections; devices of over voltage protections; Utility capacitor switching transients; Utility system lightening protection; managing Ferro resonance; switching transients problems with loads; computer tools for transient analysis.			<b>[8Hrs]</b>
<b>UNIT - III</b>	<b>Fundamentals of Harmonics and its Analysis</b> Introduction; the Mechanism of Harmonic Generation; Definitions and Standards: Factors Influencing the Development of Standards, Existing Harmonic Standards, General Harmonic Indices. Introduction to Harmonic Analysis; Fourier Series and Coefficients; Simplifications Resulting from Waveform Symmetry; Complex Form of the Fourier Series; Convolution of Harmonic Phasors; The Fourier Transform; Sampled Time Functions; Discrete Fourier Transform (DFT); The Nyquist Frequency and Aliasing; Fast Fourier Transform (FFT); Window Functions; Efficiency of FFT Algorithms; Alternative Transforms.			<b>[8Hrs]</b>
<b>UNIT - IV</b>	<b>Harmonic Sources and Distortions</b> Harmonic Sources : Introduction; Transformer Magnetization Nonlinearities; Rotating Machine Harmonics; Distortion Caused by Arcing Devices; Single-Phase Rectification; Three-Phase Current-Source Conversion; Three-Phase Voltage-Source Conversion; Thyristors-Controlled Reactors. Harmonic Distortion : Introduction; Resonances; Effects of Harmonics on Rotating Machines; Effect of Harmonics on Static Power Plant; Harmonic Interference with Power System Protection; Effect of Harmonics on Consumer Equipment; Interference with Communications.			<b>[8Hrs]</b>
<b>UNIT - V</b>	<b>Computation, Assessment and Harmonic Elimination</b> Harmonic Computation : Introduction; Direct Harmonic Analysis; Derivation of Network Harmonic Impedances from Field Tests; Transmission Line Models; Underground and Submarine Cables; Load Models; Computer Implementation; Examples of Application of the Models; Harmonic Elimination : Introduction; Filter Design Criteria; Network Impedance for Performance Calculations; Tuned Filters; Damped Filters; Conventional Filter			<b>[8Hrs]</b>

	Configurations; Band-Pass Filtering for Twelve-Pulse Converters; Distribution System Filter Planning; Filter Component Properties; D.C. Side Filters; Active Filter	
<b>UNIT - VI</b>	<p><b>Power quality monitoring; Assessment &amp; Mitigation</b></p> <p>Need and approaches followed in power quality monitoring; objectives and requirements; Initial site survey; Power quality Instrumentation; Selection of power quality monitors; monitoring location and period; Selection of transducers; Harmonic monitoring; Transient monitoring; event recording and flicker monitoring.</p> <p>Power Quality assessment; Power quality indices and standards for assessment; waveform distortion; voltage and current unbalances; Power assessment under waveform distortion conditions. Power quality state estimation; State variable model; observability analysis; capabilities of harmonic state estimation; Test systems; Mitigation techniques at different environments.</p>	<b>[8Hrs]</b>

<b>Syllabus for Unit Test:</b>		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

**(Elective – II) Advanced Control System**

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	03 Credits
	Continuous Assessment: 40 Marks	
<b>UNIT - I</b>	<b>PID Control:</b>	<b>(08 Hours)</b>
	Review of classical and modern control concepts: PID control and tuning approaches, Selection of Variables for Control, PID Controller Tuning for Dynamic Performance - Determining Tuning Constants for Good Control Performance, Ziegler-Nichols method, Correlations for Tuning Constants, Fine-Tuning the Controller Tuning Constants, Controller tuning based on stability – Dead beat and self tuning, Rate feedback	
<b>UNIT - II</b>	<b>State Variable Analysis:</b>	<b>(08 Hours)</b>
	Control System Analysis Using State Variable Methods, Conversion of transfer function to phase variable and canonical variable model, Eigen value and eigen vector, Kalman's test and Gilbert's Test for controllability and observability analysis and design of control system in state space, Pole placement, State observer, Design of control system with Luenberger observer	
<b>UNIT - III</b>	<b>Nonlinear and Robust Control:</b>	<b>(08 Hours)</b>
	Nonlinear Systems and Equilibrium Points, Concepts of Stability, Describing function analysis, Phase plane analysis, Linearization, Feedback Linearization, Input-output linearization, Input-State Linearization Concept of robust control, Description and categorization of system uncertainties, System and signal norms, Small gain theorem, Robust stability, Design of robust control, Introduction to H-∞ control.	
<b>UNIT - IV</b>	<b>Digital Control:</b>	<b>(08 Hours)</b>
	Structure of the Digital Control System, ADC, DAC, Effects of Sampling of continuous time signals, Quantization, Sample and hold, Reconstruction of signal, Sampling Theorem, Aliasing, Elementary discrete-time signals, Impulse response, Linear convolution and its properties, Z transform: Basics, Properties, Inverse Z transform using power series and partial fraction difference equation, Stability analysis in z- plane with Jury's stability criteria	
<b>UNIT - V</b>	<b>Frequency Analysis:</b>	<b>(08 Hours)</b>

	<p>Frequency response of first order and second order systems, Polar plot, Bode plot, Bode plot from Sweep Frequency Response Analysis (SFRA) of transformer and its conclusion, Phase and group delays, Ideal filters and their pole zero locations, Zero phase and linear phase transfer functions</p> <p>Exponential representation of Fourier series and Fourier transform of continuous time signals, The Fourier series for discrete-Time periodic signals (only concept), The Fourier transform of discrete-time a periodic signals (only concept), Discrete Fourier Transform, Properties: Periodicity, Linearity, Symmetry properties, Circular convolution, Linear convolution using circular convolution, Fast Fourier Transform: Radix 2 DIT and DIF algorithms</p>	
<b>UNIT - VI</b>	<b>Optimal Control:</b>	<b>(08 hours)</b>
	<p>Parameter optimization and optimal control problems, Hamiltonian formulation of optimal control problem, Hamilton-Jacoby equation, Linear regulator problem, Quadratic performance criterion, Numerical solution of Matrix Riccati equation, Pontryagin's minimum principle, Application to optimal control of discrete and continuous systems (quadratic performance index, analysis and design of finite and infinite time), Linear Quadratic Regulators, Introduction to Linear Quadratic Gaussian approach</p>	
<b>Text Books:</b>		
1. 'Modern Control Engineering' - Katsuhiko Ogata, Prentice Hall India, 5th edition 2010.		
2. 'Non-linear Systems', by Hassan Khalil, Prentice Hall.		
3. Digital Control – Ogata , Prentice Hall India		
<b>Reference Books:</b>		
1. Digital Control- B.C.Kuo		
2. 'Digital Control and State Variable Methods' by M. Gopal, Tata-McGraw-Hill Publishing Company Limited		
3. Optimal Control: Linear Quadratic Methods' Brian D. O. Anderson, John Barratt Moore, Dover Publications, 2007		
<b>Syllabus for Unit Test:</b>		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

**(Elective – II) ADVANCED POWER ELECTRONICS AND DRIVES**

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>		<b>CREDITS ALLOTTED:</b>	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 25 Marks		01 Credit	
<b>UNIT - I</b>	<b>Converters:</b>				<b>(08 Hours)</b>
	<b>Voltage Source Converters</b> Review of 3-ph-full wave bridge converter, operation and harmonics, 3 level voltage source converters. PWM converter. Generalized technique of harmonic elimination and voltage control. Advanced modulation techniques (space vector modulation, 3 <sup>rd</sup> harmonic PWM) Comparison of PWM techniques. Converter rating <b>Current source converters</b> (i) Matrix Converter: 3×3 matrix converter, principle of working, mathematical treatment, comparison of matrix converter with multipulse converter (ii) Self and Line commutated current source converter: Basic concepts of CSC, converters with self commutating devices				
<b>UNIT - II</b>	<b>Multilevel Inverters:</b>				<b>(08 Hours)</b>
	Multilevel concept, Types of multilevel Inverters, diode clamped multilevel inverter, flying-capacitors multilevel inverters, cascaded multilevel inverter, switching device currents, D.C. link capacitor voltage balancing, features of multilevel inverters, comparison of multilevel inverters. Applications of multilevel Inverter: Reactive power compensation Back to back intertie system				
<b>UNIT - III</b>	<b>DC Drives:</b>				<b>(08 Hours)</b>
	Single phase and 3 phase converter drives. Four quadrant Chopper drives, closed loop control of DC motor, Permanent magnet DC motor drives, DC Servo drives, applications				
<b>UNIT - IV</b>	<b>Induction Motor Drives:</b>				<b>(08 Hours)</b>
	3 phase induction motor control, stator voltage control/rotor voltage control, voltage and frequency control, current control, closed loop control of 3-phase induction motor. Soft starters, comparison of variable frequency drives, Speed control by static slip power recovery, induction motor servo drives, applications.				
<b>UNIT - V</b>	<b>Synchronous Motor Drives:</b>				<b>(08 Hours)</b>
	Voltage and frequency control, closed loop control of synchronous motors. Synchronous motor servo drive with sinusoidal waveform, synchronous motor servodrive with trapezoidal waveform. Load commutated inverter drives, speed control of synchronous motors by cyclo-convertors, applications				
<b>UNIT - VI</b>	<b>Akagi's p-q theory</b>				<b>(08 Hours)</b>
	Conventional concepts of active and reactive power in single phase and three phase circuits-Equation of power with sinusoidal voltage source and non-linear loads - $\alpha\beta$ transformation of three phase four wire system-Akagi's instantaneous power (pq) theory-relationship between Akagi's components and conventional active and reactive power application of pq theory to reactive and harmonic power compensation in simple circuits.

#### Elective I

1. Advanced Stress analysis
2. Manufacturing Information Systems
3. Computational Fluid Dynamics
4. Micro-electro Mechanical Systems

#### Elective II

1. Composite Materials
2. Analysis and Synthesis of Mechanisms
3. Artificial Intelligence
4. Design of Experiment

#### Self-Study Paper I

1. Advanced Manufacturing Processes
2. Machine Condition Monitoring and Diagnostics
3. Product Lifecycle Management
4. Robust Design of Product & Process
5. Computer Aided Process Planning
6. Flexible Manufacturing System
7. Product Design & Process Planning
8. Experimental Technique and Data analysis
9. Tribology in Design
10. Manufacturing System and Simulation

Semester IV									Total Duration: 14 Hrs/Week Total Marks: 325 Total Credits:36		
Subjects	Teaching Scheme (Hrs) Hrs/Week		Examination Scheme (Marks)						Examination Scheme (Credits)		Total Credits
	L	P	Theory	Unit Test	Attendance	Tutorial /Assignments	TW	Pract/Orals	TH	TH/PR/OR

#### Self-Study Paper II

1. CAD/CAM Practices in Metal Forming
2. Optimization Techniques
3. Robotics and Sensors
4. Rapid Prototyping
5. Design for Manufacture
6. Theory of Elasticity & Plasticity
7. Design of Dies
8. Integrated Product Design & Development
9. Design for Manufacturing & Assembly
10. Concurrent Engineering

# Computer Aided Design

## TEACHING SCHEME

Lectures : 04 Hrs/week  
Practicals : 04 Hrs/week

## EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Pract/Oral : 50 Marks  
Total Credits : 06

### Unit I

(08 Hours)

#### **CAD TOOLS**

Definition of CAD Tools, Types of system, CAD/CAM system evaluation Criteria, Graphics standards, functional areas of CAD, Modeling and viewing, software documentation, efficient use of CAD software.

Wire frame modeling -Types of mathematical representation of curves, wire frame models, wire frame entities, parametric representation of synthetic curves - Hermite cubic splines, Bezier curves, B-Splines, rational curves - NURBS.

### Unit II

(08 Hours)

#### **SURFACE MODELING**

Mathematical representation of surfaces, Surface model, Surface entities, surface representation, Parametric representation of surfaces, plane surface, ruled surface, surface of revolution, Tabulated surface.

### Unit III

(08 Hours)

#### **SURFACE MODELING**

Hermite Bicubic surface, Bezier surface, B-Spline surface, COONs surface, Blending surface, Sculptured surface, Surface manipulation - Displaying, Segmentation, Trimming, Intersection, Transformations - 2D and 3D, Orthogonal and Perspective transformations.

### Unit IV

(08 Hours)

#### **SOLID MODELLING**

Solid Representation - Boundary Representation (B-rep), Constructive Solid Geometry (CSG) and other methods, Design Applications: Mechanical tolerances, Mass property calculations, CAD database structure.

CAD/CAM Data Exchange: Evaluation of data- exchange formats, IGES data representations and structure, STEP Architecture, implementation, ACIS & DXF.

### Unit V

(08 Hours)

#### **ADVANCED MODELING CONCEPTS:**

Feature Based Modeling, Assembly Modeling, Behavioral Modeling, Conceptual Design & Top-down Design. Techniques for visual realism - hidden line - Surface removal - Algorithms for shading and Rendering. Parametric and variational modeling, Feature recognition, Design by features, Assembly and Tolerance Modeling, Tolerance representation - specification, analysis and synthesis, AI in Design.

### Unit VI

(08 Hours)

#### **COLLABORATIVE ENGINEERING:**

Collaborative Design, Principles, Approaches, Tools, Design Systems. Product Data Management (PDM).

## **Text Books/ References**

1. Ibrahim Zeid, CAD/CAM Theory and Practice, McGraw Hill international.
2. P. N. Rao, CAD/CAM Tata McGraw Hill.
3. Foley, Van Dam, Feiner and Hughes, Computer Graphics Principles and Practice,

second edition, Addison–Wesley, 2000.

4. Martenson, E. Micheal, Geometric Modelling, John Wiley & Sons, 1995.
5. Hill Jr, F.S., Computer Graphics using Open GL, Pearson Education, 2003.
6. Singeresu S. Rao, Engineering Optimization-Theory and Practice, New Age International Limited Publishers, 2000.
7. Johnson Ray, C. Optimum Design of Mechanical Elements, Wiley, John & Sons, 1981.
8. P. Radhakrishnan, S. Subramanyam, CAD/CAM/CIM, New Age International.
9. V. Ramamurti, Computer Aided Mechanical Design and Analysis, Tata McGraw Hill-1992.

**Termwork**

Eight Assignments using either of UG, SolidWorks, CATIA, ProE, Hyperwork

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

# Modeling and Simulation

## TEACHING SCHEME

Lectures : 04 Hrs/week  
Practicals : 04 Hrs/week

## EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Pract/Oral : 50 Marks  
Total Credits : 06

### Unit I

(08 Hours)

#### **System Concept and Modeling**

Physical model, Mathematical model, Types of mathematical model, Dynamic Versus Static Models, Continuous-Time Versus Discrete-Time, Dynamic Models, Quantitative Versus Qualitative Models, Mechanical system modeling examples.

Simulation Basics, When Simulation Is the Appropriate Tool, when Simulation Is Not Appropriate, Advantages and Disadvantages of Simulation, Areas of Application, Steps in a Simulation Study

### Unit II

(08 Hours)

#### **Simulation Concepts**

Simulation Basics, When Simulation Is the Appropriate Tool, when Simulation Is Not Appropriate, Advantages and Disadvantages of Simulation, Areas of Application, Steps in a Simulation Study

Simulation and analytical methods, Basic nature of simulation, The simulation process, Types of system simulation, Generation of random numbers .Monte Carlo Simulation.

### Unit III

(08 Hours)

#### **Probability as Used in Simulation**

Basic Probability Concepts, Discrete Random Variable, Expected Value and Variance of a Discrete Random Variable, Measure of Probability Function, Continuous Random Variable, Exponential Distribution, Mean and Variance of Continuous Distribution, Normal Distribution.

### Unit IV

(08 Hours)

#### **System Simulation**

Introduction, Simulation of Pure pursuit problem, exponential growth model, simulation of water reservoir system, Trajectory simulation, suspension system, simulation of pendulum.

### Unit V

(08 Hours)

#### **Simulation Models**

Discrete Simulation, Continuous System Simulation. Simulation of Queuing Systems, Inventory Control Models

### Unit VI

(08 Hours)

#### **Design and Evaluation of Simulation Experiments.**

Introduction, development of simulation experiments, principles of verification, validation and accreditation, Simulation experimentation, classical experimental design, validation of simulation experiments, evaluation of simulation experiments.

Simulation Languages

5. J. Schwarzenbach and K.F. Gill Edward Arnold; System Modelling and Control

6. M Close and Dean K. Frederick; Modeling and Analysis of Dynamic Systems ;Houghton Mifflin

**Term Work**

1. Simulation of water reservoir system.
2. Trajectory simulation.
3. Suspension system.
4. Simulation of pendulum.
5. Discrete Simulation,
6. Continuous System Simulation.
7. Simulation of Queuing Systems,
8. Inventory Control Models

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

# Computer Integrated Manufacturing

## TEACHING SCHEME

Lectures : 04 Hrs/week

## EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks

Total Credits : 04

### Unit I

(08 Hours)

#### **CONCEPT OF CIM**

Introduction to CIM, Types of Manufacturing, CIM hardware and software, Elements of CIM, Product development through CIM Design Activities in a networked environment, networking in a manufacturing company, hardware elements of networking.

### Unit II

(08 Hours)

#### **CIM DATABASE**

Introduction, Database requirements of CIM, Database, Database management, Database Models, EDM, Product Data Management (PDM), Advantage of PDM., Collaboration Engineering.

### Unit III

(08 Hours)

#### **WORK CELL & FLEXIBLE MANUFACTURING SYSTEM**

Manufacturing cell, Group Technology, Cellular Manufacturing. DNC system and transfer of program from PC to machine. Introduction to FMS, Manufacturing integration model, flexible manufacturing strategy, Components of Flexible Manufacturing- Pallets and fixtures, machining centers, inspection equipment, material handling stations, storage system, In-process storage, manually operated stations, allied operation centers

### Unit IV

(08 Hours)

#### **INTEGRATIVE MANUFACTURING PLANNING AND CONTROL**

Role of integrative manufacturing in CAD/CAM integration, Over view of production control - Forecasting, Master production schedule, Capacity planning, M.R.P., Order release, Shop-floor control, Quality assurance, Planning and control systems, Cellular manufacturing, JIT manufacturing philosophy.

### Unit V

(08 Hours)

#### **WEB BASED MANUFACTURING**

Integrating process with web, Process management and control through web, Applications of web based manufacturing, casting, machining, forming & forging.

### Unit VI

(08 Hours)

#### **FUTURE TRENDS IN MANUFACTURING SYSTEMS**

Lean Manufacturing: Definition, Principles of Lean Manufacturing, Characteristics of Lean Manufacturing, Value of Product, Continuous Improvement, Focus on Waste, Relationship of Waste to Profit, Four Functions of Lean Production, Performance Measures, The Supply Chain, Benefits of Lean Manufacturing. Introduction to Agile and Web Based Manufacturing systems.

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

<b>Product Design And Development</b>			
<b><u>TEACHING SCHEME</u></b>		<b><u>EXAMINATION SCHEME</u></b>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
<b><u>Unit I</u></b>			(08 Hours)
<b>Introduction</b>			
	<p>Characteristics of successful product development, Design and development of products, duration and cost of product development, the challenges of product development.</p> <p>Development Processes and Organizations: A generic development process, concept development: the front-end process, adopting the generic product development process, the AMF development process, product development organizations, the AMF organization.</p>		
<b><u>Unit II</u></b>			(08 Hours)
<b>Product Planning</b>			
	<p>The product planning process, identify opportunities. Evaluate and prioritize projects, allocate resources and plan timing, complete pre project planning, reflect all the results and the process. Identifying Customer Needs: Gather raw data from customers, interpret raw data in terms of customer needs, organize the needs into a hierarchy, establish the relative importance of the needs and reflect on the results and the process.</p> <p>Product Specifications: What are specifications, when are specifications established, establishing target specifications, setting the final specifications.</p>		
<b><u>Unit III</u></b>			(08 Hours)
<b>Concept Generation</b>			
	<p>The activity of concept generation clarify the problem, search externally, search internally, explore systematically, reflect on the results and the process.</p> <p>Concept Selection: Overview of methodology, concept screening, and concept scoring, Concept Testing: Define the purpose of concept test, choose a survey population, choose a survey format, communicate the concept, measure customer response, interpret the result, reflect on the results and the process.</p>		
<b><u>Unit IV</u></b>			(08 Hours)
<b>Product Architecture</b>			
	<p>What is product architecture, implications of the architecture, establishing the architecture, variety and supply chain considerations, platform planning, related system level design issues.</p>		
<b><u>Unit V</u></b>			(08 Hours)
<b>Industrial Design</b>			
	<p>Assessing the need for industrial design, the impact of industrial design, industrial design process, managing the industrial design process, assessing the quality of</p>		

	<p>industrial design.  Design for Manufacturing: Definition, estimation of manufacturing cost, reducing the cost of components, assembly, supporting production, impact of DFM on other factors.  Prototyping: Prototyping basics, principles of prototyping, technologies, planning for prototypes.</p>	
<b>Unit VI</b>	(08 Hours)	
<b>Product Development Economics</b>		
	<p>Elements of economic analysis, base case financial mode,. Sensitive analysis, project trade-offs, influence of qualitative factors on project success, qualitative analysis.  Managing Projects: Understanding and representing task, baseline project planning, accelerating projects, project execution, postmortem project evaluation.</p>

<b>Syllabus for Unit Test</b>		
	Unit Test I	Unit I,II,III
	Unit Test II	Unit IV,V,VI

## Semester II

**K60504: ADVANCE FINITE ELEMENT METHOD**

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
Practicals	: 02 Hrs/week	Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Term Work	: 25 Marks
		Pract/Oral	: 25 Marks
		Total Credits	: 05
<b>Unit I</b>			(08 Hours)
	Basic concepts of FEM, Weak formulation, Variational methods of approximation-Rayleigh Ritz Method, Stress strain relations, shape functions- linear and quadratic. Approximation errors in FEM, Accuracy of solution, p & h refinement		
<b>Unit II</b>			(08 Hours)
	One dimensional problems – Finite element modeling, Basic boundary condition, Multipoint constraints, Convergence of results , Potential energy approach, Global stiffness matrix, properties of stiffness matrix, load vector, Penalty approach, Elimination approach, Methods of Weighted Residuals-Least Square Method, Subdomain Method, Collocation Method, Garlekin's method.		
<b>Unit III</b>			(08 Hours)
	Finite Element Analysis of 2-D problems. Basic boundary value problems in 2-D, Triangular, Quadrilateral, Higher order elements. Constant strain triangle. Introduction to plate bending problems. Kirchhoff's theory, Mindlin plate element.		
<b>Unit IV</b>			(08 Hours)
	Isoparametric formulation – Natural Co-ordinate system, Lagrangian interpolation polynomials, Isoperimetric element, Numerical Integration Newton Cotes formula, Guass Quadrature formula in two and three dimensions, triangular elements, rectangular elements.		
<b>Unit V</b>			(08 Hours)
	Dynamic Analysis, Formulation of Dynamic problems, Consistent and Lumped Mass Matrices. Solution of Eigen Value Problems. Transformation Method, Jacobi Method, Vector Iteration Method, Subspace Iteration Method. Forced Vibration- Steady State and Transient vibration analysis, Analysis of damping, Mode of Super position Scheme, Direct Integration Method, Implicit and Explicit numerical methods.		
<b>Unit VI</b>			(08 Hours)
	Special Topics: - Linear Buckling Analysis, Adaptive Finite Element Technique .Sub modeling and substructuring.		

<b>Term Work</b>	
	Term work shall consists of three assignment based on above syllabus. Four computer program assignments to be developed for FEA. Using programming language. Two assignment of structural Analysis using FEA Software
<b>Oral/Practical</b>	
	Term work and Oral will be based on above syllabus.
<b>Text Books/ References</b>

<b>Syllabus for Unit Test</b>	
Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Control Systems

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
Practicals	: 04 Hrs/week	Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Pract/Oral	: 50 Marks
		Total Credits	: 06
<b>Unit I</b>			(08 Hours)
<b>Introduction to Control System</b>			
	Introduction to control systems. Classification of control system, basic characteristic of feedback control systems. Mathematical modeling of control systems, concept of transfer function. Basic control actions:-On-Off Control, Proportional, Integral, Derivative and PID, Feedback and feed forward control system and their applications.		
<b>Unit II</b>			(08 Hours)
<b>Time Response Analysis of Control System</b>			
	Time response analysis: Time response of control system, standard test signal, Time Response Analysis of First and Second order system, Time Domain specifications. Step response of second order system. Steady-state errors, static error constants, steady state, analysis of different type of Systems using step. Ramp and parabolic inputs.		
<b>Unit III</b>			(08 Hours)
<b>Control System Stability Analysis</b>			
	Classification of control systems according to types of systems, Stability Analysis: Introduction to concepts of stability. The Routh-Hurwitz's Stability criteria. Stability in the sense of Lyapunov and absolute stability, autonomous systems, the invariance principle, linear systems and linearization, non autonomous systems, linear time varying systems and linearization.		
<b>Unit IV</b>			(08 Hours)
<b>Root Locus and Frequency Response Methods</b>			
	Frequency Response Analysis, Frequency domain specifications Correlation between time and frequency response. Polar Plots. Bode Plots, Nyquist Plots stability in frequency domain, frequency domain methods of design, compensation and their realization in time and frequency domain, improving system performance.		
<b>Unit V</b>			(08 Hours)
<b>State Space Modeling</b>			
	Concept of state, state variable, state model State space method. State space representation using physical and phase variables, decomposition of transfer function, diagonalisation. solutions of homogeneous and non homogenous equations, zero and pole placement using state space techniques. Transfer function from state model. Controllability and observability of linear system. State transition matrix, state controllability matrix, state observability matrix.		
<b>Unit VI</b>			(08 Hours)
<b>Non-Linear Control Systems</b>			
	Discrete time systems and Z-Transformation methods, State space analysis, Optimal and adaptive control systems, Non-Linear Systems Phase plane analysis: Phase portraits, Singular points characterization. Compensation (Introduction only): Types of compensator, selection of Compensator, Lead, Lag and Lag-Lead compensation. Control system Components : servomotor, stepper motors, Synchronos, Potentiometer, amplifiers

<b>Term Work</b>			
Two Experiments on PID controller Four computer based assignments using MATLAB			
<b>Syllabus for Unit Test</b>			
Unit Test I	Unit I,II,III		
Unit Test II	Unit IV,V,VI		

## Precession Engineering

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
<b>Unit I</b>			(08 Hours)
<b>Concepts Of Accuracy</b>			
	Introduction - concept of accuracy of machine tools - spindle and displacement accuracies - Accuracy of numerical control systems - Errors due to numerical interpolation - Displacement measurement system and velocity lags.		
<b>Unit II</b>			(08 Hours)
<b>Geometric Dimensioning And Tolerancing</b>			
	Interpretation, measurement and application of form tolerances - datum system and targets – tolerance of position Tolerance zone conversions - Surfaces, features, features of size, datum features-Datum, oddly configured and curved surfaces as datum features, equalizing datum.		
<b>Unit III</b>			(08 Hours)
<b>Surface and form metrology</b>			
	Flatness, roughness, waviness cylindricity etc. Methods of improving accuracy & surface finish, Influence of forced vibration on accuracy, Dimensional wear of cutting tools and its influences on accuracy		
<b>Unit IV</b>			(08 Hours)
<b>Precision Measuring Systems</b>			
	Units of length - legal basis for length measurement – Traceability - Processing system of nanometer accuracies - LASER light source - LASER interferometer - LASER alignment telescope - LASER micrometer-on-line and in-process measurements of diameter and surface roughness using LASER - Micro holes and topography measurements -.- In processing or in-situ measurement of position of processing point-Post process and on-machine measurement of dimensional features and surface-mechanical and optical measuring systems. Straightness and flatness measurement – Optoelectronic Measurement Systems in Metrology, Opto electronic devices contact and non contact types Applications - Tool wear measurement - 3D Surface roughness - Pattern generation studies.		
<b>Unit V</b>			(08 Hours)
<b>Nano-Positioning Systems Of Nano Accuracy &amp; Repeatability</b>			
	Guide systems for moving elements - Servo control systems for tool positioning - Computer Aided digital and ultra precision position control.		
<b>Unit VI</b>			(08 Hours)
<b>Computer Integrated Quality Assurance</b>			
	Concept of Total quality control & quality assurance - Zero defects-POKA-YOKE Statistical evaluation of data using computer- CNC CMM applications - Computer Aided measurement, data integration of 3D-CMM

<b>Syllabus for Unit Test</b>			
	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

# Optimization for Engineering Design

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	:04
<b>Unit I</b>			(08 Hours)
<b>Introduction</b>			
	Optimal problem formulation-Design variables, constraints, objective function, variable bound. Engineering optimization problems, Optimization algorithms		
<b>Unit II</b>			(08 Hours)
<b>Single Variable Optimization</b>			
	Optimality criteria, Bracketing methods, region elimination method, point estimate method, gradient based method, root finding using optimization techniques.		
<b>Unit III</b>			(08 Hours)
<b>Multivariable Optimization</b>			
	Optimality criteria, unidirectional search, direct search method- evolutionary optimization, simplex search, Hooke-Jeeves pattern search method, gradient based methods,-steepest descent method, Newton's method, Marquardt's method.		
<b>Unit IV</b>			(08 Hours)
<b>Constrained Optimization</b>			
	Kuhn-Tucker conditions, transformation methods, sensitivity analysis, direct search for constrained minimization, linearized search techniques, feasible direction method.		
<b>Unit V</b>			(08 Hours)
<b>Specialized Algorithms</b>			
	Integer programming, penalty function, branch-and-bound method Geometric programming		
<b>Unit VI</b>			(08 Hours)
<b>Nontraditional Optimization</b>			
	Genetic algorithm, simulated annealing, global optimization using steepest descent, genetic algorithm and simulated annealing.		
<b>Text Books/ References</b>

<b>Syllabus for Unit Test</b>			
	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

## Semester III

## Elective I : Advanced Stress analysis

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
<b>Unit I</b>			(08 Hours)
<b>Theory of Elasticity</b>			
	Elasticity problems in two dimensions - stress strain relationship for brittle materials, ductile materials. Compatibility equations in two and three dimensions, free body diagram of complicated structures and stress calculations, stress functions in rectangular and cylindrical coordinate systems, evaluation of stresses in flat rectangular plates with different clamp and load conditions evaluation of the stresses in the flat and circular plate with center hole/holes using stress function		
<b>Unit II</b>			(08 Hours)
<b>Theory of Plasticity</b>			
	Different criterions for three dimensional stress analysis using plasticity, evaluation of stress concentration factors in different geometries using plasticity theorem, practical problems on stress analysis for plasticity-stress in the sharp groove of the shaft, stress in the L shaped bracket under cantilever load, strain rate effects on highly deformable materials and stress calculations.		
<b>Unit III</b>			(08 Hours)
<b>Stress Analysis of Engineering Plastics and Composites</b>			
	Types of engineering plastics (Nylon, ABS, PP) failure modes, failure phenomenon in two and three dimensional stress analysis, wear and tear of plastics, impact properties of plastics, types of composites (fiber reinforced plastics), evaluation of elastic properties of composites, stress analysis of composite circular tubes (internal and external pressure), flat plate fixed at the edges and concentrated load, uniformly distributed load		
<b>Unit IV</b>			(08 Hours)
<b>Plate bending</b>			
	Bending of plate to cylindrical surface, bending of a long uniformly loaded rectangular plate, pure bending in two perpendicular directions, bending of circular plates loaded symmetrically w.r.t. center, bending of circular plates of variable thickness, circular plate with circular hole at center symmetrically loaded and load distributed along inner and outer edges		
<b>Unit V</b>			(08 Hours)
<b>Contact stresses</b>			
	Geometry of contact surfaces, method of computing contact stresses and deflection of bodies in point contact, stress for two bodies in line contact with load normal to contact area and load normal and tangent to contact area, gear contacts, contacts between cam and follower, ball bearing contacts		
<b>Unit VI</b>			(08 Hours)
<b>Experimental stress analysis</b>			
	Dimensional analysis, analysis techniques, strain gauges, types of strain gauges, materials, configuration, instrumentation, characteristics of strain gauge measurement, theory of photoelasticity, elements of polariscope, simple and circular polariscope, fringes in dark and white field, isoclinic and isochromatic fringe patterns, evaluation of stresses from these fringe patterns		

**Text Books/ References**

2. Advanced Strength and Applied Stress Analysis – Richard G. Budynas, McGraw Hill
3. Advanced Mechanics of Materials – Boresi, Schmidt, Sidebottom, Willey
4. Theory of Elasticity – Timoshenko and Goodier, Mc Graw Hill
5. Advanced Strength of Materials, Vol. 1, 2 – Timoshenko, CBS
6. Advanced Strength of Materials – Den Harteg
7. Experimental Stress Analysis – Dally & Riley
8. Theory of Plates and Shells – Timoshenko Mc Graw Hill
9. The Mathematical Theory of Plasticity - R. Hill, Oxford University Press, 1998

**Syllabus for Unit Test**

	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

## **Elective I: Management Information Systems**

### **TEACHING SCHEME**

Lectures : 04 Hrs/week

### **EXAMINATION SCHEME**

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

**Unit I** (08 Hours)

Knowledge based system, Introduction, Development of data base and knowledge bases, knowledge representing paradigms – rule based, object oriented, semantic nets and frames, uncertainty, fuzzy logic, neural nets.

**Unit II** (08 Hours)

Interference mechanism, goals, control strategies forward and backward chaining, conflict resolution, explanation, blackboard model.

**Unit III** (08 Hours)

Implementation issues: knowledge acquisition, coding, expert system shells, PROLOG, and LISP

**Unit IV** (08 Hours)

Selected applications in manufacturing: product design, process planning and scheduling, robot movement, factory layout, defect analysis, diagnostic maintenance, quality control.

**Unit V** (08 Hours)

Knowledge based approaches for engineering design, blackboard architecture, other knowledge based approaches.

**Unit VI** (08 Hours)

Artificial intelligence.

### **Term Work**

Three case studies from the following

- ÿ Information and knowledge requirement in Manufacturing Function
- ÿ Inventory control systems
- ÿ Production Planning and Control System – Scheduling and capacity requirement calculation.
- ÿ Design information systems.

### **Oral/Practical**

Based on above termwork.

### **Text Books/ References**

1. Kerr R., "Knowledge Based Manufacturing Management", Addison Wiley, 1991
2. Addis T. R., "Designing Knowledge Based System", Prentice Hall, 1985
3. Roltson D. W., "Principles of Artificial Intelligence and Expert Systems Development", McGraw Hill Publications, 1988

5. Maus R. and Keyes J., "Hand Book of Expert Systems in Manufacturing", McGraw Hill Publications, 1991
6. C. S. Krishnamurthy, S. Rajeev, "Computer Aided Design" Narosa Pub. House

### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## **Elective I: Computational Fluid Dynamics**

### **TEACHING SCHEME**

Lectures : 04 Hrs/week

### **EXAMINATION SCHEME**

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

#### **Unit I**

(08 Hours)

Introduction to Fluid Dynamics, Concepts of Fluid Flow, Pressure distribution in fluids, Reynolds transport theorem, Integral form of conservation equations, Differential form of conservation equations, Different Types of Flows, Euler and Navier Stokes equations, Properties of supersonic and subsonic flows, Flow characteristics over various bodies.

#### **Unit II**

(08 Hours)

Geometric Modeling and CAD Repairing Geometric transformations, Parametric representation of curves and surfaces, Concept of topology, Surface modeling, Faceted models, Solid modeling. Creation of water tight geometry, Faceted Boolean operations, Dependent and independent CAD errors.

#### **Unit III**

(08 Hours)

Introduction to CFD, Philosophy of CFD, Governing equations of fluid dynamics and there physical meaning, Mathematical behavior of governing equations and the impact on CFD , Simple CFD techniques and CFL condition.

#### **Unit IV**

(08 Hours)

Numerical Methods in CFD, Finite Difference, Finite Volume, and Finite Element, Upwind and downwind schemes, Simple and Simpler schemes, Higher order methods, Implicit and explicit methods, Study and transient solutions

#### **Unit V**

(08 Hours)

Surface mesh generation, Surface mesh repair, Volume grid generation, Volume mesh improvement, mesh smoothing algorithms, grid clustering and quality checks for volume mesh. Adaptive, Moving and Hybrid Grids, Need for adaptive and, moving grids, Tet, pyramid, prism, and hex grids, using various elements in combination.

#### **Unit VI**

(08 Hours)

Introduction to Turbulence Modeling, Introduction and background, Algebraic models, One equation models, Two equation models, Near wall treatment, Reynolds stress models, Introduction to Multiphase Modeling Fundamentals of multiphase flows, Eulerian - Lagrangian (ELAG) approach, Eulerian- Eulerian (E2P) approach, Volume Of Fraction (VOF) approach.

#### **Term Work**

Minimum four assignments on above topic to study CFD analysis.

Use of Any CFD software like FLUENT – Basic issues, model development, and post process sing.

## Oral/Practical

Based on Term work.

### Syllabus for Unit Test

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Elective I : Micro-electro Mechanical Systems

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
<b>Unit I</b>			(08 Hours)
<b>Introduction</b>			
	Micro-Electro-Mechanical Systems (MEMS), Microsystems and their products, miniaturization, applications, mechanical MEMS, thermal MEMS, micro-opto electromechanical systems, magnetic MEMS, radio frequency (RF) MEMS, micro fluidic systems, bio and chemo devices, Nanotechnology - definition, nanoscale, consequences of the nanoscale for technology and society, need and applications of nano electromechanical systems (NEMS)		
<b>Unit II</b>			(08 Hours)
<b>Micro Fabrication Processes &amp; Materials</b>			
	Materials for MEMS - substrate and wafers, silicon as a substrate material, crystal structure, single crystal and polycrystalline, mechanical properties, silicon compounds, silicon piezo-resistors, gallium arsenide, quartz, piezo-electric crystals, polymers, packaging materials; Fabrication Processes - Bulk micro manufacturing, photolithography, photoresists, structural and sacrificial materials, X-ray and electron beam lithography, Thin film deposition - spin coating, thermal oxidation, chemical vapour deposition (CVD), electron beam evaporation, sputtering; Doping - diffusion, ionimplantation; Etching - wet etching, dry etching; Surface micromachining, bulk vs. surface micromachining; Wafer bonding - glass-frit, anodic and fusion bonding; LIGA process and applications.		
<b>Unit III</b>			(08 Hours)
<b>Microsensors and actuators</b>			
	Sensing and actuation, Chemical sensors, Optical sensors, Pressure sensors, Thermal sensors - thermopiles, thermistors, micromachined thermocouple probes, thermal flow sensors, MEMS magnetic sensor, Piezoelectric material as sensing and actuating elements - capacitance, piezomechanics, Piezoactuators as grippers, microgrippers, micromotors, microvalves, micropumps, microaccelerometers, microfluidics, shape memory alloy based optical switch, thermally activated MEMS relay, microspring thermal actuator, data storage cantilever.		
<b>Unit IV</b>			(08 Hours)
<b>Microsystem Design</b>			
	Design constraints and selection of materials, selection of manufacturing process, selection of signal transduction technique, electromechanical system and packaging.		
<b>Unit V</b>			(08 Hours)
<b>Nanomaterials:</b>			
	Molecular building blocks to nanostructures - fullerenes, nanoscaled biomolecules, chemical synthesis of artificial nanostructures, molecular switches and logic gates, nanocomposites; Carbon nanotubes -structure, single walled, multi walled, properties of carbon nanostructures and their synthesis, Potential applications of nano-structures.		
<b>Unit VI</b>			(08 Hours)
<b>Nanofinishing Techniques</b>			
	Abrasive flow machining, magnetic abrasive finishing, magnetorheological finishing, elastic emission machining, ion beam machining, chemical mechanical polishing, Nanomanipulation,		

	Nanolithography, Top-down versus bottom - up assembly, Visualisation, manipulation and characterization at the nanoscale; Applications - in Energy, Tribology, Informatics, MDSicine, etc.

<b>Syllabus for Unit Test</b>			
	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

## Elective II : Composite Materials

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week		Theory : 60 Marks
			Duration : 03 Hours
			Internal Assessment : 40 Marks
			Total Credits : 04
<b>Unit I</b>			(08 Hours)
<b>Basic concepts and characteristics</b>			
	Definition and characteristics of composite materials, overview of advantages and limitations of composite materials, significance and objectives, sciences and technology, types and classification of typical composite materials, current status and future prospects.		
<b>Unit II</b>			(08 Hours)
<b>Macromechanical behaviours of lamina:</b>			
	Stress-strain relations for anisotropic materials, engineering constants for orthotropic materials, stress-strain relations for a lamina of arbitrary orientation, biaxial strength theories.		
<b>Unit III</b>			(08 Hours)
<b>Micromechanical behaviour of a lamina</b>			
	Mechanics of materials approach to stiffness, elasticity approach to stiffness, comparison of approaches to stiffness, mechanics of materials approach to strength.		
<b>Unit IV</b>			(08 Hours)
<b>Hygrothermal effects</b>			
	Hygrothermal effects on mechanical behaviours, hygrothermal stress-strain relations, coefficients of thermal and moisture expansion of unidirectional lamina		
<b>Unit V</b>			(08 Hours)
<b>Macromechanical behaviours of a laminate</b>			
	Classical lamination theory, lamina stress-strain behaviour, strain and stress variation in a laminate, laminate forces and moments, special cases of laminate, interlaminar stresses, design of laminates.		
<b>Unit VI</b>			(08 Hours)
<b>Manufacture and testing of composite materials</b>			
	Manufacturing: Stamp moulding, diaphragm forming, thermoforming, filament winding, pultrusion, compression moulding, injection moulding. Testing: Determination of physical properties such as density, fibre volume ratio, void volume ratio, co-efficient of thermal expansion, determination of tensile, compressive and shear properties of unidirectional lamina, determination of interlaminar and intralaminar strength, biaxial testing, characterisation of composites with stress concentration.

<b>Syllabus for Unit Test</b>			
	Unit Test I		Unit Test I
	Unit Test II		Unit Test II

## Elective II : Analysis and Synthesis of Mechanisms

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I (08 Hours)

#### **Introduction:**

Review of fundamentals of kinematics, D. O. F; Multi loop kinematics chains, Gross motion concepts; Position analysis -Vector loop equations for four bar slider crank.

### Unit II (08 Hours)

#### **Kinematic Analysis:**

Inverted slider crank - Geared five bar and six bar linkages; Analytical method for velocity and acceleration analysis - Four bar linkage jerk analysis - Plane complex mechanism

### Unit III (08 Hours)

#### **Path Curvature Theory:**

Fixed and Moving centroids, inflection points and inflection circle; Graphical constructions - Cubic of stationary curvature; Dimensional synthesis – Function generation; path generation, motion generation.

### Unit IV (08 Hours)

#### **Synthesis of Mechanisms**

Graphical methods; Coupler; curve synthesis, design of six bar mechanisms. Algebraic methods. Application of instant centre in linkage design; Cam mechanism - Determination of optimum size of Cams.

### Unit V (08 Hours)

#### **Dynamic of Mechanisms**

Static force analysis with friction - Inertia force analysis - combined static and inertia force analysis; shaking force, Kinetostatic analysis. Introduction to force and moment; balancing of linkages. The Matrix Method.

### Unit VI (08 Hours)

#### **Spatial Mechanism and Robotics:**

Kinematic analysis of spatial RSSR mechanism; Denavit - Hartenberg parameters; Forward and inverse Kinematics of robotic manipulators.

#### **Term Work**

Practical in Use Of Mechanical Software Packages- Tutorials.

#### **Oral/Practical**

Based on Term work.

**Text Books/ References**

1. Ā Erdman A G & Sandor, G N, “Mechanism Design: Analysis and Synthesis”, prentice hall of India
2. Ā Mallik, A K, Ghosh A, and Gunter Dittrich, “Kinematic Analysis and Synthesis of Mechanisms”, CRC Press London
3. Ā Robert L Norton, “Design of Machinery” McGraw Hill Book Co.
4. Ā Robert HA, “Mechanical Design Systems Handbook”, McGraw Hill Book Co.

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Elective II : Artificial Intelligence

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
<b>Unit I</b>		(08 Hours)	
<b>Human and machine intelligence</b>			
	Concepts of fifth generation computing, programming in AI environment, developing artificial intelligence system, natural language processing, neural networks.		
<b>Unit II</b>		(08 Hours)	
<b>Introduction to fuzzy logic</b>			
	Basic concepts in fuzzy set theory – operations of fuzzy sets – fuzzy relational equations – propositional, predicate logic – inference – fuzzy logic principles – fuzzy inference – fuzzy rule based systems – fuzzification and defuzzification – types.		
<b>Unit III</b>		(08 Hours)	
<b>Fuzzy logic applications</b>			
	Fuzzy logic controllers – principles – various industrial applications of fuzzy logic control – adaptive fuzzy systems – fuzzy decision making – fuzzy classification – fuzzy pattern recognition – image processing applications – fuzzy optimization.		
<b>Unit IV</b>		(08 Hours)	
<b>Introduction to artificial neural networks</b>			
	Fundamentals of neural networks – neural network architectures – learning methods – taxonomy of neural network architectures – standard back propagation algorithms – selection of various parameters – variations.		
<b>Unit V</b>		(08 Hours)	
<b>Associative memory</b>			
	Associative memory – exponential bidirectional associative memory – adaptive resonance theory – introduction – adaptive resonance theory 1 – adaptive resonance theory 2 – applications – Kohen self organizing maps – counter propagation networks – industrial applications. Expert system development: Definition, choice of domain, collection of knowledge base, selection of inference mechanism, case studies of expert system development in design and manufacturing.		
<b>Unit VI</b>		(08 Hours)	
<b>Industrial application of AI and expert systems</b>			
	Robotic vision systems, image processing techniques, application to object recognition and inspection, automatic speech recognition. Recent advances: Fundamentals of genetic algorithms – hybrid systems – meta heuristic techniques like simulated annealing, tabu search, ant colony optimization, perpetual self organizing, artificial immune systems – applications in design and manufacturing		
<b>Text Books/ References</b>

<b>Syllabus for Unit Test</b>			
-------------------------------	--	--	--

	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

## Elective II : Design of Experiment

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
<b>Unit I</b>		(08 Hours)	
<b>Introduction</b>			
	Strategy of Experimentation, Some Typical Applications of Experimental Design, Basic Principles, Guidelines for Designing Experiments, A Brief History of Statistical Design, Summary: Using Statistical Techniques in Experimentation		
<b>Unit II</b>		(08 Hours)	
<b>Simple Comparative Experiments</b>			
	Introduction, Basic Statistical Concepts, Sampling and Sampling Distributions, Inferences About the Differences in Means, Randomized Designs, Hypothesis Testing, Confidence Intervals, Choice of Sample Size, Comparing a Single Mean to a Specified Value		
<b>Unit III</b>		(08 Hours)	
<b>Experiments with a Single Factor:</b>			
	The Analysis of Variance, Analysis of the Fixed Effects Model, Decomposition of the Total Sum of Squares, Statistical Analysis, Estimation of the Model Parameters ,Unbalanced Data, Model Adequacy Checking, The Normality Assumption,Plot of Residuals in Time Sequence, Plot of Residuals Versus Fitted Values, Plots of Residuals Versus Other Variables, Practical Interpretation of Results, A Regression Model, Comparisons Among Treatment Means ,Graphical Comparisons of Means		
<b>Unit IV</b>		(08 Hours)	
<b>Introduction to Factorial Designs</b>			
	Basic Definitions and Principles, The Advantage of Factorials, The Two-Factor Factorial Design, Statistical Analysis of the Fixed Effects Model , Model Adequacy Checking , Estimating the Model Parameters , Choice of Sample Size ,The General Factorial Design, Fitting Response Curves and Surfaces , Blocking in a Factorial Design		
<b>Unit V</b>		(08 Hours)	
<b>The 2<sup>k</sup> Factorial Design</b>			
	Introduction, the 2 <sup>2</sup> Design, the 2 <sup>3</sup> Design, the General 2 <sup>k</sup> Design, a Single Replicate of the 2 <sup>k</sup> Design, 2 <sup>k</sup> Designs are Optimal Designs, The Addition of Center Points to the 2 <sup>k</sup> Design		
<b>Unit VI</b>		(08 Hours)	
<b>Response Surface Methods and Designs</b>			
	Introduction to Response Surface Methodology, The Method of Steepest Ascent, Analysis of a Second-Order Response Surface, Location of the Stationary Point, Characterizing the Response Surface, Ridge Systems, Multiple Responses, Experimental Designs for Fitting Response Surfaces, Designs for Fitting the First-Order Model, Designs for Fitting the Second-Order Model, Blocking in Response Surface Designs, Optimal Designs for Response Surfaces		
<b>Text Books/ References</b>			
	<ol style="list-style-type: none"> <li>1. Design and analysis of experiments, Douglas C. Montgomery, Wiley, 2008</li> <li>2. Introduction to the Design And Analysis of Experiments, Geoffrey Mallin Clarke, R. E. Kempson, Arnold, 1994</li> </ol>		

	3. Experimental Design and Statistics, Stephen Henry Miller, Methuen, 1975		
<b>Syllabus for Unit Test</b>			
	Unit Test I	Unit I,II,III	
	Unit Test II	Unit IV,V,VI	

## Self Study Paper I : Advanced Manufacturing Processes

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

### METAL CUTTING AND MECHANICS OF METAL CUTTING

Introduction to metal removal processes, Chip formation, forces acting on cutting tool and their measurement, Chip thickness, Theory of Ernest and Merchant, theory of Lee and Shafer, Tool wear and tool life, surface finish, thermal aspects, friction in metal cutting and testing of machine tools.

### Unit II

(08 Hours)

### ABRASIVE PROCESSES

Introduction, Grinding wheel-designation and selection, grinding process, grinding process parameters, creep feed grinding, honing, lapping and other finishing processes

(08 Hours)

### Unit III

### FORMING PROCESSES.

Sheet metal forming, punching, extrusion, coning. Plastic molding process, injection molding, blow molding, compression molding. Metal injection molding, powder injection molding, sintering process, and their applications

### Unit IV

(08 Hours)

### UNCONVENTIONAL MACHINING PROCESSES

Need for unconventional processes, Range of non conventional machining processes USM, WJM, AJM, chemical machining, Electrochemical machining, Electrolytic grinding, EDM, LBM, EBM, Plasma arc cutting.

### Unit V

(08 Hours)

### HIGH SPEED MACHINING

Introduction to high speed machining, economics of high speed machining, brief historical perspective, material properties at high strain rates, influence of increasing speed on chip formation, stainless steel, aerospace aluminum and titanium and recommendations.

(08 Hours)

### Unit VI

## GENERATIVE MANUFACTURING PROCESSES (GMP) FOR RAPID PROTOTYPING

General features and classification, Issues related to CAD and GMP software, Overviews of generative manufacturing processes, two dimensional layer-by-layer techniques and direct three-dimensional techniques for RP

### **Text Books/ References**

1. G. Boothroyd and W. A. Knight, Fundamentals of Machining and Machine Tools, CRC Press.
2. E. M. Trent and P. K. Wright, Metal Cutting, Butterworth- Heinemann, Boston.
3. P. N. Rao, Manufacturing Technology, Tata Mc-Graw Hill.
4. D. A. Stephenson and J. S. Agapiou, Metal Cutting Theory and Practice, CRC Press
5. Amitabha Ghosh, Rapid Prototyping
6. Kalpak Jain S. and Schmid S. R., Manufacturing Processes for Engineering Materials, Addition Wesley,
7. Mikell P. Groover, Fundamentals of Modern Manufacturing: Materials, Processes, and Systems, John Wiley & Sons.

### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## **Elective II : Machine Condition Monitoring and Diagnostics**

### **TEACHING SCHEME**

Lectures : 04 Hrs/week  
Practicals : 02 Hrs/week

### **EXAMINATION SCHEME**

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Term Work : 25 Marks  
Pract/Oral : 25 Marks  
Total Credits : 05

#### **Unit I** (08 Hours)

##### **Predictive Maintenance Techniques:**

Predictive maintenance basics, Maintenance philosophies, Evolution of maintenance philosophies, Plant machinery classification and recommendations, Principles of predictive maintenance, Predictive maintenance techniques, Vibration analysis – a key predictive maintenance technique.

#### **Unit II** (08 Hours)

##### **Fundamentals of Vibrations:**

Vibration basics, Spring-mass system: mass, stiffness, damping, System response, What is vibration? The nature of vibration, Harmonics, Limits and standards of vibration.

#### **Unit III** (08 Hours)

##### **Data Acquisition:**

Introduction, Collection of vibration signal – vibration transducers, characteristics and mountings, Conversion of vibrations to electrical signal.

#### **Unit IV** (08 Hours)

##### **Signal Processing, Applications and Representation:**

The fast Fourier transform (FFT) analysis, Time waveform analysis, Phase signal analysis, Spectral signal processes.

#### **Unit V** (08 Hours)

##### **Machinery Fault Diagnosis Using Vibration Analysis:**

Commonly witnessed machinery faults diagnosed by vibration analysis, correcting faults that cause vibration; Balancing, Alignment, Resonance vibration control with dynamic absorbers.

#### **Unit VI** (08 Hours)

##### **Oil and Particle Analysis Oil Fundamentals:**

Condition-based maintenance and oil analysis, Setting up an oil analysis program, Oil analysis – sampling methods, Oil analysis – lubricant properties, Oil analysis – contaminants in lubricants, Particle analysis techniques, Alarm limits for various machines.

#### **Term Work**

Term work shall consist of  
Data acquisition using a velocity pickup.  
Data acquisition using an accelerometer.

Data acquisition of sound signals.  
Spectral analysis of velocity, acceleration noise signals.  
Experiment demonstrating balancing of rotating shaft shaft.  
Three assignments based on above syllabus.

**Oral/Practical**

Based on Term work.

**Text Books/ References**

1. Thomson, W. T., "Theory of Vibration with Applications", CBS Publishers and Distributors, New Delhi, 1990
2. Gupta K., "Introductory Course on Theory and Practice of Mechanical Vibrations", New Age International Ltd., 1984
3. J. S. Rao., "Vibratory Condition Monitoring of Machines", Narosa publishing house, New Delhi
4. Cyril M. Harris, Allan G. Piersol, "Shock and Vibration Handbook", McGraw-Hill Publishing Co.
5. C. Scheffer, Paresh Girdhar, "Practical Machinery Vibration Analysis and Predictive Maintenance", Newnes an imprint of Elsevier

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

# Self Study Paper I : Product Lifecycle Management

## TEACHING SCHEME

Lectures : 04 Hrs/week

## EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Product Life Cycle Environment**

Background, Overview, Need, Benefits, Concept of Product Life Cycle. Components / Elements of PLM, Emergence of PLM, Significance of PLM, Customer Involvement. Product Data and Product Workflow, Company's PLM vision, The PLM Strategy, Principles for PLM strategy, Preparing for the PLM strategy, Developing a PLM strategy, Strategy identification and selection, Change Management for PLM.

### Unit II

(08 Hours)

#### **Product Development Process**

Integrated Product development process Conceive – Specification, Concept design, Design - Detailed design, Validation and analysis (simulation), Tool design, Realize - Plan manufacturing , Manufacture, Build/Assemble , Test (quality check) , Service - Sell and Deliver , Use , Maintain and Support, Dispose.

(08 Hours)

### Unit III

#### **Product Development Approaches**

Bottom-up design, Top-down design, Front-loading design workflow, Design in context, Modular design. Concurrent engineering, partnership with supplier, collaborative and Internet based design, work structuring and team deployment, Product and process systemization, problem, identification and solving methodologies, improving product development solutions

### Unit IV

(08 Hours)

#### **Product Modelling**

Product Modelling - Definition of concepts - Fundamental issues - Role of Process chains and product models -Types of product models – model standardization efforts-types of process chains - Industrial demands. Foundation technologies and standards (e.g. visualization, collaboration and enterprise application integration),

### Unit V

(08 Hours)

#### **Product Data Management (PDM) Technology**

Product Data Management – An Introduction to Concepts, Benefits and

Terminology, PDM functions, definition and architectures of PDM systems, product data interchange, portal integration, PDM acquisition and implementation. Information authoring tools (e.g., MCAD, ECAD, and technical publishing), Core functions (e.g., data vaults, document and content management, workflow and program management), Functional applications (e.g., configuration Management)

(08 Hours)

## **Unit VI**

### **Recent Advances**

Intelligent Information Systems - Knowledge based product and process models - Applications of soft computing in product development process - Advanced database design for integrated manufacturing.

### **Text Books/ References**

1. Product Life Cycle Management - by Antti Saaksvuori, Anselmi Immonen, Springer, 1st Edition (Nov.5, 2003)
2. Product Design & Process Engineering, McGraw Hill – Kogalkusha Ltd., Tokyo, 1974.
3. Product Design & Development – by Kari Ulrich and Steven D. Eppinger, McGraw Hill International Edns, 1999.
4. Effective Product Design and Development – by Stephen Rosenthal, Business One Orwin, Homewood, 1992 ISBN 1-55623-603-4.
5. Burden, Rodger PDM: Product Data Management, Resource Pub, 2003. ISBN 0970035225
6. Clements, Richard Barrett. Chapter 8 ("Design Control") and Chapter 9 ("Document Control") in Quality Manager's Complete Guide to ISO 9000, Prentice Hall, 1993. ISBN 013017534X

### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Self Study Paper I : Robust Design of Product and Process

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### Concepts of Quality Engineering

Taguchi's Approach to Quality, On-line and Off-line Quality Control, Difference from Classical Approach, Quality Loss Function, System Design, Parameter Design, Tolerance Design, Causes of Variation, Classification of Parameters, Parameter Design Strategy.

### Unit II

(08 Hours)

#### Introduction to Robust Design

Robustness Strategy & its primary tools: P-Diagram, Quality Measurement, Quality Loss Function, Signal to Noise (S/N) Ratios, Orthogonal Arrays, Steps in Robust Parameter Design. Robust design and Six-Sigma for Lean Enterprises.

(08 Hours)

### Unit III

#### Introduction to Taguchi's Experiment Design

Criteria for the Use of Experiment Design Methods, Applying Experiment Design Methods According To Situation; Problem Analysis and Empiric Parameter Reduction. Orthogonal Arrays, Graphical representation of factor combinations, linear graphs, Variance Analysis (ANOVA), Inner-Outer arrays Design.

### Unit IV

(08 Hours)

#### Parameter Design according to Taguchi

Direct product design, indirect variance analysis, Product design with characteristic values, taking cost into account, Signal-to-noise ratio according to Taguchi.

### Unit V

(08 Hours)

#### Data Analysis

Deterministic and random data, Uncertainty analysis, Tests for significance: Chi-square, Regression modeling, Direct and Interaction effects, ANOVA, F-test, Time Series analysis, Autocorrelation and Autoregressive modeling.

(08 Hours)

### Unit VI

#### Response surface Methodology

Linear experiment designs, quadratic experiment designs.

**Text Books/ References**

1. Montgomery D (2001). Design and Analysis of Experiments, 5th edition, Wiley
2. Phadke, M (1989). Quality Engineering using Robust Design, Prentice Hall.
3. Ross, P (1996). Taguchi Techniques for Quality Engineering, 2nd edition, McGraw Hill.
4. J. Krotzmaier, Optimizing Engineering Design, McGraw Hill Ltd.
5. A. Mitra, Quality Control and Improvement, Pearson Publications.

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

# Self Study Paper I : Computer Aided Process Planning

## TEACHING SCHEME

Lectures : 04 Hrs/week

## EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **INTRODUCTION**

The Place of Process Planning in the Manufacturing cycle - Process Planning and Production Planning – Process Planning and Concurrent Engineering, CAPP, Group Technology.

### Unit II

(08 Hours)

#### **PART DESIGN REPRESENTATION**

Design Drafting - Dimensioning - Conventional tolerancing - Geometric tolerancing - CAD - input / output devices - topology - Geometric transformation - Perspective transformation - Data structure – Geometric modelling for process planning - GT coding - The optiz system - The MICLASS system.

(08 Hours)

### Unit III

#### **PROCESS ENGINEERING AND PROCESS PLANNING**

Experienced, based planning - Decision table and decision trees - Process capability analysis - Process Planning -Variant process planning - Generative approach - Forward and Backward planning, Input format.

### Unit IV

(08 Hours)

#### **COMPUTER AIDED PROCESS PLANNING SYSTEMS**

Logical Design of a Process Planning - Implementation considerations -manufacturing system components,production Volume, No. of production families - CAM-I, CAPP, MIPLAN, APPAS, AUTOPLAN and PRO,CPPP.

### Unit V

(08 Hours)

#### **AN INTERGARTED PROCESS PLANNING SYSTEMS**

Totally intergarded process planning systems - An Overview - Modulus structure -Data Structure, operation -Report Generation, Expert process planning.

(08 Hours)

### Unit VI

#### **Simulation**

Major activities, purpose, simulation process, types methodology, simulation packages, process quality simulator, computer requirements trends, applications simulation of manufacturing systems.

**Text Books/ References**

1. Gideon Halevi and Roland D. Weill, " Principles of Process Planning ", A logical approach, Chapman & Hall, 1995.
2. Tien-Chien Chang, Richard A.Wysk, "An Introduction to automated process planning systems ", Prentice Hall, 1985.
3. Chang, T.C., " An Expert Process Planning System ", Prentice Hall, 1985.
4. Rao, " Computer Aided Mnuufacturing ", Tata McGraw Hill Publishing Co., 2000.

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

# Self Study Paper I : Flexible Manufacturing System

## TEACHING SCHEME

Lectures : 04 Hrs/week

## EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Evolution of Manufacturing Systems**

FMS definition and description, General FMS considerations, Manufacturing cells, Cellular versus Flexible Manufacturing. Systems Planning: Objective, introduction planning, preparation guidelines, the project team, supplier selection, system description and sizing, facility preparation planning, FMS layouts. Human resources: staff considerations, team work, communication and involvement, the supervisors role, personnel selection, job classifications, employee training.

### Unit II

(08 Hours)

#### **Manufacturing's Driving Force**

Definition, description and characteristics. Just in-time manufacturing, definition and description, benefits and relationship to FMS, implementation cornerstones, quality and quantity application principles. Single manufacture Cell – design scheduling of jobs on single manufacturing cells. Group Technology: Concepts, classification and coding, benefits and relationship to FMS, design of group technology using rank order clustering technique.

(08 Hours)

### Unit III

#### **FMS Design**

Using Bottleneck, Extended bottleneck models, Processing and Quality Assurance: Turning centres, Machining centre, construction and operations performed, axes, programming, and format information, work-holding and work-changing equipment, automated features and capabilities, cleaning and deburring – station types and operation description, importance to automated manufacturing, coordinate measuring machines, types, construction and general function, operation cycle description, importance to flexible cells and systems.

### Unit IV

(08 Hours)

#### **Automated movement and storage systems**

AGVs, Robots, automated storage and retrieval systems, storage space design, queuing carousels and automatic work changers, coolant and chip Disposal and recovery systems, auxiliary support equipment, cutting tools and tool Management – introduction, getting control of cutting tools, Tool Management, tool strategies, data transfer, tool monitoring and fault detection, guidelines, work holding considerations, General fixturing, Modular fixturing. FMS and the relationship with workstations – Manual, automated and transfer lines design aspects.

### Unit V

(08 Hours)

## **FMS Software**

Communications networks and Nanotechnology – general functions, and manufacturing usages, hardware configuration, programmable logic controllers, cell controllers, communications networks. FMS implementation.

(08 Hours)

## **Unit VI**

### **FMS and Simulation**

System issues - Types of software - specification and selection - Trends -Application of simulation - software -Manufacturing data systems - data flow -CAD/CAM considerations - Planning FMS database.

### **Text Books/ References**

1. Parrish, D.J., ‘Flexible Manufacturing’, - Butter Worths – Heinemann, Oxford, 1993.
2. Groover, M.P., ‘Automation, Production Systems and CIM’, - Prentice Hall India, 1989.
3. Kusiak, A., ‘Intelligent Manufacturing Systems’, - Prentice Hall, 1990.
4. Considine,D.M., & Considine,G.D., ‘Standard Handbook of Industrial Automation’,-Chapman & Hall, 1986

### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

# Self Study Paper I : Product Design & Process Planning

## TEACHING SCHEME

Lectures : 04 Hrs/week

## EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Product design and process design functions**

Selection of a right product, essential factors of product design, Morphology of design, sources of new ideas for products, evaluation of new product ideas. Product innovation procedure-Flow chart. Qualifications of product design Engineer. Criteria for success/failure of a product. Value of appearance, colours and Laws of appearance.

### Unit II

(08 Hours)

#### **Product reliability**

Mortality Curve, Reliability systems, Manufacturing reliability and quality control. Patents: Definitions, classes of patents, applying for patents. Trademarks and copyrights. Cost and quality sensitivity of products, Elements of cost of a product, costing methods, cost reduction and cost control activities. Economic analysis, Break even analysis Charts. Value engineering in product design, creativity aspects and techniques. Procedures of value analysis – cost reduction, material and process selection.

(08 Hours)

### Unit III

#### **Various manufacturing processes**

Degree of accuracy and finish obtainable, process capability studies. Methods of improving tolerances. Basic product design rules for Casting, Forging, Machining, Sheet metal and Welding. Physical properties of engineering materials and their importance on products. Selection of plastics, rubber and ceramics for product design.

### Unit IV

(08 Hours)

#### **Industrial ergonomics**

Man-machine considerations, ease of maintenance. Ergonomic considerations in product design- Anthropometry, Design of controls, man-machine information exchange. Process sheet detail and their importance, Advanced techniques for higher productivity. Just-in-time and Kanban System. Modern approaches to product design; quality function development, Rapid prototyping

### Unit V

(08 Hours)

#### **Role of computer in product design**

Management of manufacturing, creation of manufacturing data base, Computer Integrated Manufacturing, communication network, production flow analysis, Group Technology, Computer Aided product design and process Planning. Integrating product design,

manufacture and production control.

(08 Hours)

## **Unit VI**

### **Computer Aided Process Planning**

Logical Design of a Process Planning - Implementation considerations -manufacturing system components,production Volume, No. of production families - CAM-I, CAPP, MIPLAN, APPAS, AUTOPLAN and PRO

### **Text Books/ References**

1. Niebel, B.W., and Draper, A.B., Product design and process Engineering, Mc Graw Hill – Kogalkusha Ltd., Tokyo, 1974
2. Chitale, A.K, and Gupta, R.C., Product Design and Manufacturing, Prentice Hall of India Pvt. Ltd., New Delhi, 2004.
3. Mahajan, M. Industrial Engineering and Production Management, Dhanpath Rai & Co., 2000.
4. Considine,D.M., & Considine,G.D., ‘\_Standard Handbook of Industrial Automation’,-Chapman & Hall, 1986

### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Self Study Paper I : Experimental Technique and Data analysis

<u>TEACHING SCHEME</u>		<u>EXAMINATION SCHEME</u>	
Lectures	: 04 Hrs/week	Theory	: 60 Marks
		Duration	: 03 Hours
		Internal Assessment	: 40 Marks
		Total Credits	: 04
<b><u>Unit I</u></b>			(08 Hours)
<b>Research Modeling</b>			
	(a) Mathematical – Classification of Models, Development of Models, Stages in Model building, Principles of Modelling, Use of Analogy, Models as Approximations, Data consideration and Testing of Models (b) Heuristics and Simulation – Definition, Applications and reasons for using Heuristics, Heuristic Methods and approaches, Meta-Heuristics; Simulation – Meaning, Applications and Classification of Simulation Models, Process of Simulation, Steps and Features of Simulation Experiments and their Validation.		
<b><u>Unit II</u></b>			(08 Hours)
<b>Experimentation</b>			
	Objective, Strategies, Factorial Experimental Design, Applications of Experimental Design, Basic Principles – Replication, Randomization and Blocking, Guidelines for designing experiments; Laboratory Experiments, Methods of manipulating Variables, Errors in Experiments, Steps in Design of Experiments.		
<b><u>Unit III</u></b>			(08 Hours)
<b>Introduction to Data and Errors</b>			
	Types Of Data counts, measurements. Types of error: inherent, instrument, operator. Statistical distributions: Uniform, Binomial, Poisson, Exponential, Normal Estimation of means, proportions, population sizes, variances		
<b><u>Unit IV</u></b>			(08 Hours)
<b>Hypothesis testing</b>			
	Procedures for hypothesis testing, means, proportions, variances, contingency, goodness of fit of data to a proposed model. Use of hypothesis tests to compare products or processes.		
<b><u>Unit V</u></b>			(08 Hours)
<b>Design and analysis</b>			
	Principles of experimental design: randomisation, replication, blocking. Analysis of variance: one-way and two-way analyses, with and without interaction. Cross-classified and nested forms. Fixed and random effect models. Factorial experiments versus one-at-a-time experiments.		
			(08 Hours)

<b><u>Unit VI</u></b>		
<b>Regression analysis</b>		
	Simple and multiple regression analysis. Use of transformation, analysis of residuals, variable selection procedures	
<b>Text Books/ References</b>		
	<ol style="list-style-type: none"> <li>1. C.R Kothari, Research Methodology, Methods &amp; Technique; New Age International Publishers, 2004</li> <li>2. R. <b><u>Syllabus for Unit Test</u></b>		
	Unit Test I	Unit I,II,III
	Unit Test II	Unit IV,V,VI

## Self Study Paper I : TRIBOLOGY IN DESIGN

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

#### Unit I

(08 Hours)

##### **Introduction to Tribology:**

Introduction, Friction, Wear, Wear Characterization, Regimes of lubrication, Classification of contacts, lubrication theories. Newton's Law of viscous forces, Effect of pressure and temperature on viscosity.

#### Unit II

(08 Hours)

##### **Hydrodynamic Lubrication:**

Newton's Law of viscous forces, Flow through stationary parallel plates. Hagen's poiseuille's theory, viscometers. Concept of lightly loaded bearings, Petroff's equation, Hydrodynamic Bearings, Pressure development mechanism. Converging and diverging films and pressure induced flow. Reynolds's 2D equation with assumptions. Introduction to idealized slide bearing with fixed shoe and Pivoted shoes. Expression for load carrying capacity. Location of center of pressure.

#### Unit III

(08 Hours)

##### **Hydrostatic Bearings:**

Types of hydrostatic Lubrication systems Expression for discharge, load carrying capacity, Flow rate, Condition for minimum power loss. Torque calculations.

#### Unit IV

(08 Hours)

##### **Elasto Hydrodynamic Lubrication:.**

Introduction to Elasto - hydrodynamic lubricated bearings. Introduction to 'EHL' constant. Grubin type solution, Different regimes in EHL contact

#### Unit V

(08 Hours)

##### **Porous, Gas Bearings and Magnetic Bearings:**

Introduction to porous bearings. Equations for porous bearings and working principal, Fretting phenomenon and it's stages. Introduction to gas bearing, Governing Equation, Infinitely long journal bearings, Externally pressurized gas bearing. Introduction to magnetic bearings, Active magnetic bearings. Different equations used in magnetic bearings and working principal. Advantages and disadvantages of magnetic bearings, Electrical analogy, Magneto-hydrodynamic bearings.

#### Unit VI

(08 Hours)

##### **Tribo Measurement In Instrumentation:**

Surface topography measurements - Electron microscope and friction and wear measurements - Laser method - Instrumentation - International standards - Bearings performance measurements - Bearing vibration measurement.

### **Text Books/ References**

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

# Self Study Paper I : Manufacturing System and Simulation

## TEACHING SCHEME

Lectures : 04 Hrs/week

## EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Fundamentals System concept and design**

Hierarchical structure, Decision making procedure, System types in manufacturing environments; Manufacturing Systems: Structural aspects, transformational aspects, procedural aspects, integrated manufacturing systems; Modes of Production-Jobbing/Intermittent/ Continuous; Mass Production-Economies of Scale, Optimum production scale, Mass Customization; Multi-Product Small Batch Production- Economies of Scope with Diversification; Logistic Systems- Material flow: conversion / transportation / storage

### Unit II

(08 Hours)

#### **Product / Process Planning and Design**

Product Life Cycle, Planning of a new product, Product Design Aspects, Design cost considerations, Concurrent Engineering; Process and Operation Design-Computer Aided Process Planning, Optimum routing analysis using Dynamic Programming and Network Techniques, Criteria for line balancing.

(08 Hours)

### Unit III

#### **Manufacturing Optimization**

Criteria for Evaluation, Optimization of single stage manufacturing- Unit production time and cost; Optimization of multistage manufacturing system-Scope, basic mathematical models; Cost Estimating- Classical metal cutting cost analysis, Industrial cost estimation practices, Estimating material, setup and cycle times.

### Unit IV

(08 Hours)

#### **Information Systems in Manufacturing**

Database structures, hierarchical, network, Relational- concepts, keys, relational operations, query languages; Shop Floor Data Collection Systems-Types of data, on-line and off-line data collection, Automatic data collection systems

### Unit V

(08 Hours)

#### **Computer Simulation in Manufacturing System Analysis**

Characteristics, Models, applications of probability and statistics; Design and evaluation methodology, General framework, Analysis of situation, Setting objectives, Conceptual modeling, Detailed design, Evaluation and Decision.

(08 Hours)

## **Unit VI**

### **Modern approaches in Manufacturing**

Cellular Manufacturing- Group Technology, Composite part, Rank Order Clustering Technique, Hollier method for GT cell layouts; Flexible Manufacturing- Concept, components, architecture; Lean Production concept, principles, Agile Manufacturing- concept, principles and considerations for achieving agility.

#### **Text Books/ References**

1. Katsudo Hitomi, (1998), “Manufacturing Systems Engineering”, Viva Low Priced Student Edition, ISBN 81-85617-88-0
2. B. Wu, “Manufacturing Systems Design & Analysis: Context and Techniques” (2/e), Chapman & Hall, UK, ISBN 041258140X
3. Mikell P. Groover, (2002), “Automation, Production Systems and Computer Integrated Manufacturing”, (2/e), Pearson Education, ISBN 81-7808-511-9
4. Radhakrishan P., Subramaniyan S. and Raju V., “CAD / CAM / CIM”, (3/E), New Age International Publication
5. Luca G. Sartori,(1998), “ Manufacturing Information Systems”, Addison Wesley Publishing Co.
6. N. Viswanadhan & Y, Narhari, (1998), “Performance Modeling of Automated Manufacturing Systems”, Prentice Hall of India

#### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## DISSERTATION STAGE I

### TEACHING SCHEME

Practicals : 07 Hrs/week

### EXAMINATION SCHEME

Term Work : 25 Marks

Practical/Oral : 25 Marks

Total Credits : 15

### Stage-I:

The aim of the dissertation work is to carry out research and development work. Every student will be required to choose the topic of dissertation in consultation with the faculty guide.

This stage will include a report consisting of synopsis, the plan for experimental/theoretical work and the summary of the literature survey carried out till this stage.

## SEMINAR

### TEACHING SCHEME

Practicals : 05 Hrs/week

### EXAMINATION SCHEME

Term Work : 25 Marks

Total Credits : 07

The student will be required to choose the topic of seminar on advanced topics based on courses taught in first and second semester and present the work during the seminar.

## **SEMESTER – IV**

## Self Study Paper II : CAD/CAM Practices in Metal Forming

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Fundamentals of Material Forming:**

Introduction of forming processes. Concept of Formability, formability limits and formability diagram. Wire and Tube Drawing: Introduction rod and wire drawing machines - construction and working. Preparation of stock for wire drawing. Wire drawing dies, material and design. Heat treatment, variables in wire drawing, Maximum reduction in wire in one pass, forces required in drawing. Multiple drawing, work hardening, lubrication in wire drawing. Tube drawing: Methods, force calculation, stock penetration. Lubrication in tube drawing.

### Unit II

(08 Hours)

#### **Forging:**

Introduction, classification of forging processes. Forging equipment- Hammers, presses, furnaces etc. construction working capacities and selection of equipment. Basic forging operations such as drawing, fullering edging, blocking etc. Forgability tests, design of forging as a product, friction in forging. Forging defects and the remedies. New technologies: Liquid metal forging, Isothermal forging, No draft forging, P/M forging, Rotary swaging, Roll forging, lubrication in forging.

(08 Hours)

### Unit III

#### **Rolling of Metals:**

Scope and importance of rolling. Types of Rolling Mills- construction and working. Roll bite, reduction, elongation and spread. Deformation in rolling and determination forces required. Process variables, redundant deformation. Roll flattening, Roll camber - its effect on rolling process, mill spring. Defects in rolling. Automatic gauge control- Roll pass classification & design. Lubrication in rolling.

### Unit IV

(08 Hours)

#### **Sheet Metal Working:**

Sheet Metal properties, gauges and surface conditions. Study of presses and equipments used, various cutting and forming operations, types of dies used, force requirement, theory of shear, methods of force reduction, defects, lubricants used. Miscellaneous sheet metal working operations: Metal spinning, fine blanking, coining, embossing, rubber forming, stretch forming.

Design of Press Tools:

General classification and components of press tools, types of dies simple, compound, combination dies, various press working operations such as punching, blanking, deep drawing, bending, forming etc. Design and calculations for above press working

dies.

(08 Hours)

## **Unit V**

### **Extrusion:**

Types: Direct, reverse, impact, hydrostatic extrusion. Dies for extrusion, stock penetration. Extrusion ratio of force equipment (with and without friction), metal flow in extrusion, defects. Role of friction and lubricants. Manufacture of seam-less tubes. Advanced Metal Forming Processes:

High velocity forming- principles, comparison of high velocity and conventional forming processes. Explosive forming, Magnetic pulse forming, Electro hydraulic forming. Stretch forming, Coining Embossing, Curling, Spinning, Flow forming advantages, limitations and application of the process.

(08 Hours)

## **Unit VI**

### **Finite-Element Method**

Basics of Metal Forming and Finite-Element Method - Comparison of Finite-Difference and Finite Element Methods with Analytical Solutions - Spatial Discretization - Shape Functions - Assembly of the Stiffness Matrix. Finite Elements for Large Deformation - Solution of Linear Finite-Element Systems and Nonlinear Finite-Element Systems, Typical Finite Elements.

### **Text Books/ References**

1. Dieter, "Mechanical Metallurgy"
2. P. N. Rao, "Manufacturing Technology", Tata McGraw Hill
3. G.W. Rowe, "Principles of Industrial Metal Working Process", Edward Arnold
4. Dr. R. Narayanswamy, "Metal Forming Technology", Ahuja Book Co
5. Surender Kumar, "Principles of Metal Working"
6. "ASM Metal hand book Vol: 4 forming"
7. Shiro Kobayashi, Soo Ik oh and Taylan Atlan , "Metal Forming and Finite Element Method", Oxford pub, 1992.
- 8.

### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Self Study Paper II : Optimization Techniques

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Introduction to Optimization**

Statement of an Optimization Problem - Design Vector, Design Constraints, Constraint Surface, Objective Function, Objective Function Surfaces. Classification of Optimization Problems - Classification Based on the Existence of Constraints, Nature of the Design Variables, Physical Structure of the Problem, Nature of the Equations Involved, Permissible Values of the Design Variables, Deterministic Nature of the Variables, Separability of the Functions and Number of Objective Functions

### Unit II

(08 Hours)

#### **One-Dimensional Unconstrained Minimization**

Introduction , Theory Related to Single Variable (Univariate) Minimization , Unimodality and Bracketing the Minimum, Fibonacci Method, Golden Section Method ,Polynomial-Based Methods. Programming using MATLAB

(08 Hours)

### Unit III

#### **Unconstrained Optimization**

Introduction Necessary and Sufficient Conditions for Optimality Convexity Basic Concepts: Starting Design, Direction Vector, and Step Size. The Steepest Descent Method The Conjugate Gradient Method Newton's Method Quasi-Newton Methods Approximate Line Search Using MATLAB

### Unit IV

(08 Hours)

#### **Stochastic Programming**

Introduction, Basic Concepts of Probability Theory, Stochastic Linear Programming, Stochastic Nonlinear Programming and Stochastic Geometric Programming

### Unit V

(08 Hours)

#### **Modern Methods of Optimization**

Genetic Algorithms, Simulated Annealing, Particle Swarm Optimization, Neural-Network-Based Optimization and Ant Colony Optimization

(08 Hours)

**Unit VI**

**Multiobjective Optimization**

Introduction, Concept of Pareto Optimality, Generation of the Entire Pareto Curve. Methods to Identify a Single Best Compromise Solution .

**Text Books/ References**

1. Singeresu S. Rao, Engineering Optimization-Theory and Practice, New Age International Limited Publishers.
2. J. S. Arora, Introduction to Optimum Design, McGraw Hill, New York
3. S. S. Stricker, Optimizing Performance of Energy Systems, Battelle Press, New York.
4. Ashok D. Belegundu and Tirupathi R. Chandrupatla Optimization concepts and applications in engineering

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Self Study Paper II : Robotics and Sensors

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Introduction**

Brief History, Basic concepts, Three laws of Robotics, Robot and Robotic mechanism, Automation and Robotics, Need for industrial Robots, Robot generations, Robot anatomy, Classification, Robot performance parameters, Socio-Economic aspects of Robotisation.

### Unit II

(08 Hours)

#### **Grippers**

Introduction, types of end effectors, types of grippers, tools as end effectors, Guidelines for design of robotic gripper, force analysis of mechanical pneumatic and hydraulic grippers. Robot Drives Introduction, Classification of Drives, Characteristics of Drives, Types of Drives, Comparison of Drive system, Actuation Schemes, Reduction and Transmission Systems.

(08 Hours)

### Unit III

#### **Sensors and Controllers**

Internal and external sensors, position, velocity and acceleration sensors, proximity sensors, force sensors, laser range finder. Robot vision: image processing fundamentals for robotic applications, image acquisition and pre-processing. Segmentation and region characterization object recognition by image matching and based on features.

### Unit IV

(08 Hours)

#### **Kinematics**

Introduction, Rotation and Transformation, Denavit-Hartenberg Parameters, Mapping revisited, Forward kinematics, Inverse kinematics.

### Unit V

(08 Hours)

#### **Vision System for Robotics**

Introduction, Need, Robot Vision System – Levels of processing, Functions of Machine Vision System, Image Acquisition, Sampling, Image Processing, Image Processing Technique, Edge detection, A typical vision system for robot, System hardware and function.

(08 Hours)

### Unit VI

#### **Robot Programming**

Robot languages: AL, AML, RAIL, RPL, VAL, Demonstration of points in space :  
Continuous path (CP), Via points (VP), Programmed points (PP).

**Text Books/ References**

1. Groover, Weiss, "Industrial Robotics", Tata McGraw-Hill.
2. Fu Ks, Re Congalez and CSG Lee, "Robotics- Control, Sensing, Vision and Intelligence", Tata McGraw Hill.
3. Koren Yoram, "Industrial Robotics", Tata McGraw-Hill.
4. Puranik M.T. and P.R.Ghorpade, "Robotics Fundamental", Nirali Publication, Pune.
5. Spong M.W., S. Huchrison and M. Vidyasagar, "Robot Modelling and Control", Willey-2006.
- 6.

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Self Study Paper II : Rapid Prototyping

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Introduction**

Need - Development of RP systems – RP process chain - Impact of Rapid Prototyping on Product Development –Digital prototyping - Virtual prototyping-Rapid Tooling - Benefits- Applications, materials used in rapid prototyping

### Unit II

(08 Hours)

#### **Reverse Engineering and CAD Modeling**

Basic concept- Digitization techniques – Model Reconstruction – Data Processing for Rapid Prototyping: CAD model preparation, Data Requirements – geometric modeling techniques: Wire frame, surface and solid modeling – data formats -Data interfacing, Part orientation and support generation, Support structure design.

(08 Hours)

### Unit III

#### **Liquid Based Rapid Prototyping**

Stereolithography (SLA): Apparatus: Principle, per-build process, part-building, post-build processes, photo polymerization of SL resins, part quality and process planning, recoating issues, materials, advantages, limitations and applications.

### Unit IV

(08 Hours)

#### **Solid Based Rapid Prototyping System**

Solid Ground Curing (SGC): working principle, process, strengths, weaknesses and applications. Fused deposition Modeling (FDM): Principle, details of processes, process variables, types, products, materials and applications

### Unit V

(08 Hours)

#### **Powder Based Rapid Prototyping Systems**

Selective Laser Sintering(SLS): Principle, process, Indirect and direct SLS- powder structures, modeling of SLS, materials, post processing, post curing, surface deviation and accuracy, Applications. Laser Engineered Net Shaping(LENS): Processes, materials, products, advantages, limitations and applications– Case Studies.

(08 Hours)

### Unit VI

## **Other Rapid Prototyping Technologies**

Three dimensional Printing (3DP):Principle, basic process, Physics of 3DP, types of printing, process capabilities, material system. Solid based, Liquid based and powder based 3DP systems, strength and weakness, Applications and case studies. Examples and case studies

## **Text Books/ References**

1. Rapid prototyping: Principles and applications, second edition, Chua C.K., Leong K.F and Lim C.S., World Scientific Publishers, 2003.
2. Rapid prototyping, Andreas Gebhardt, Hanser Gardener Publications, 2003
3. Rapid Prototyping and Engineering applications : A tool box for prototypedevelopment, Liou W.Liou, Frank W.Liou, CRC Press, 2007.
4. Rapid Prototyping: Theory and practice, Ali K. Kamrani, Emad Abouel Nasr, Springer,2006.
5. Rapid Tooling: Technologies and Industrial Applications, Peter D.Hilton,Hilton/Jacobs, Paul F.Jacobs, CRC press, 2000

## **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Self Study Paper II : Design for Manufacture

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Introduction**

General design principles for manufacturability, strength and mechanical factors, mechanisms selection, evaluation method, geometrical tolerances, tolerance control and utilization. Economic Use of Raw Materials: Ferrous steel, hot rolled steel, cold finished steel, stainless steel, non ferrous materials aluminum, copper, brass, non metallic materials, plastics, rubber and composites

### Unit II

(08 Hours)

#### **Components Design I**

Metal extrusion, metal stamping, fine blanking, four slide parts, spring and wire forms, spun metal parts, cold headed parts, extruded parts, tube and section bends, rolled formed parts, power metal parts, forging electro forming parts, specialized forming methods, turned parts, machined round holes, drilled parts, milled parts.

(08 Hours)

### Unit III

#### **Components Design II**

Planned shaped and slotted parts, screw threaded contoured and internal ground parts, center less ground, electrical discharged, rolled furnished parts, electro chemical and advanced machine parts. Sand cast, die cast, investment cast and other cast products. Non Metallic Components Design Thermosetting plastic, injection moulded and rotational moulded parts, blow moulded, welded plastic articles, ceramics

### Unit IV

(08 Hours)

#### **Composite Materials**

Introduction, Classification of composites, Types of composite, Properties, Metal matrix composite, Ceramic matrix composite, Fiber Reinforced plastic, Manufacturing methods, Applications in Different field. Ceramic, Properties and applications of ceramics. Manufacturing of ceramics.

### Unit V

(08 Hours)

#### **Assembled Parts Design I**

Welded parts, arc, resistance, brazed and soldered parts, gear box assembly, bearing assembly.

(08 Hours)

## **Unit VI**

### **Assembled Parts Design II**

Retention, bolted connection, screwed connections, flanged connections, centred connections, press fitted connections, surface finishing, plated parts, heat treated parts, NC machining, group technology, low cost automation, computer aided manufacture, product design requirements.

### **Text Books/ References**

1. James G. Bralla, —Hand book of product design for manufacturing| McGraw Hill Co., 1986
2. K.G. Swift —Knowledge based design for Manufacture|, Kogan page Limited, 1987.
3. S H Avner, Physical Metallurgy, McGraw Hill Publication

### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Self Study Paper II : Theory of Elasticity & Plasticity

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### Basic Concepts of Stress

Definition, State of Stress at a point, Stress tensor, invariants of stress tensor, principle stresses, stress ellipsoid, derivation for maximum shear stress and planes of maximum shear stress, octahedral shear stress, Deviatoric and Hydrostatic components of stress, Invariance of Deviatoric stress tensor, plane stress.

### Unit II

(08 Hours)

#### Basic concepts of Strain

Deformation tensor, Strain tensor and rotation tensor; invariants of strain tensor, principle strains, derivation for maximum shear strain and planes of maximum shear strain, octahedral shear strain, Deviatoric and Hydrostatic components of strain tensor, Invariance of Deviatoric strain tensor, plane strain.

(08 Hours)

### Unit III

#### Generalized Hooke's Law

Stress-strain relationships for an isotropic body for three dimensional stress space, for plane stress and plane strain conditions, differential equations of equilibrium, compatibility equations, Material (D) matrix for Orthotropic Materials.

### Unit IV

(08 Hours)

#### True stress and true strain

Von-Mise's and Tresca yield criteria, Haigh-Westergard stress space representation of von - Mise's and Tresca yield criteria, effective stress and effective strain, St. Venants theory of plastic flow, Prandtl-Reuss and Levy-Mise's constitutive equations of plastic flow, Strain hardening and work hardening theories, work of plastic deformation.

### Unit V

(08 Hours)

#### Analysis methods

Slab method, Slip line field method, uniform deformation energy method, upper and lower bound solutions. Application of Slab method to forging, wire drawing, extrusion and rolling processes.

(08 Hours)

## **Unit VI**

### **Stresses in flat Plate**

Stresses in circular and rectangular plates due to various types of loading and end conditions  
buckling of plates

### **Text Books/ References**

1. Timoshenko and Goodieer, Theory of Elasticity, Mcgraw Hill Publications 3Rd Edition,
2. Madleson, Theory of Plasticity,
3. J. Chakrabarty, Theory of Plasticity, 2 nd edition, McGraw Hill Publications 1998
4. George E Dieter, Mechanical Metallurgy, McGraw Hill Publications 1988

### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Self Study Paper II : Design of Dies

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

#### Unit I

(08 Hours)

##### **Design principles**

Design principles for dies of thermo-plastic and thermo-setting components. Impression core cavities, strength of cavities, guide pillars and bushes, ejection systems, cooling methods, bolster types. Split moulds, methods of actuating the splits, moulds of threaded components, internal & external under cuts, moulds with under – feed systems. Design principles and standards for Transfer and compression moulding dies. Design of Tools: Mould for a spindle component with sleeve, pin ejection. Mould with splits Multi-cavity mould with stripper plate, inserts, and ejectors.

#### Unit II

(08 Hours)

##### **Specifications & Elements of Blow Moulding**

Determination of number of cavities, types of cooling system, design of cooling channels, heat transfer considerations, types of ejectors, determination of mould opening force & ejection force, use of CAD for mould design, defects and remedies

(08 Hours)

#### Unit III

##### **Design of Dies for metal mould Castings**

Design of Dies for metal mould Castings, Die casting, Shell moulding. Design of casting cavity, sprue, slug, fixed and movable cores, finger cam, core, pin, draft, ejector pins, ejector plate, gate, goose-neck, nozzle, over-flow, platen plunger, runner, slot, slide, vent, water line. Design of hot chamber, cold chamber machines, vertical, horizontal,, die locking machines, toggle and hydraulic systems, injection systems, rack and pinion, knockout pins and plates, hydraulic ejection, Other parts of die casting machines

#### Unit IV

(08 Hours)

##### **Design of various types of dies**

Design of various types of dies – Single cavity, multi cavity, combination, unit dies. Alignment of dies with sprue. Design approach for die elements. Selection of materials and heat treatment for die casting dies and elements – die casting alloys – types of die casting alloys, Case studies on executed dies and design details. Finishing, Trimming, and inspection. Gravity die casting – Die design with cores and inserts – Bulk forming tools. Mould flow analysis. Softwares used for Die Design.

#### Unit V

(08 Hours)

##### **Open die forging**

Open die forging, Advantages of open die forging over closed die forging. Calculation of allowances and tolerances. Methods of open die forging. Design of dies. Closed die forging. Preparation of material for forging. Calculation of raw-stock, cutting off, heating in furnaces. Allowances and tolerances for closed die forging as per IS: 3469 1974.

(08 Hours)

## **Unit VI**

### **Die blocks for forging operations**

Die blocks for forging operations. Design of fuller impression, Roller impression, Bender impression, Blocker impression, Finisher impression. Swaging tools. Planning layout of multi impression dies. Flash and cutter calculations –additional operations on forging, piercing, and trimming dies, coining dies. Horizontal forging machines. Design of upsetting dies. Calculations on upsetting dies

### **Text Books/ References**

1. Rusinoff S.E., Forging & Forming Metals, Taraporewala, Bombay, 1952.
2. Dochlar H.H., Die Casting Dies, McGrawhill, 1951.
3. I.S. Standards, BSI., New Delhi.
4. Pye R.G.W., Injection Mould Design, Longman scientific & Technical Publishers, London, 1989.

### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Self Study Paper II : Integrated Product Design & Development

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Introduction**

Definition and morphology of product design (seven phases), standardization, simplification and specialization in product design, modern approaches-concurrent design and quality function deployment, product development, product development versus product design, types of design and redesign, modern product development process, product development team and product development planning with reference to ISO standard, difference between product verification and production validation.

### Unit II

(08 Hours)

#### **Product Development – Technical and Business Concerns**

Technology Forecasting and Technology S-Curve (Technology Stage), Mission Statement and Technical Questioning, Economic Analysis of Product, Customer Needs and Satisfaction, Customer Population and Market Segmentation, Customer Needs-Types and Models, Gathering Customer Needs Information, Analysis of Gathered Information.

(08 Hours)

### Unit III

#### **Product Development from Concept to Product Function**

Generating concepts, information gathering, and brainstorming, morphological analysis, concept selection-design evaluation, estimation of technical feasibility, concept selection process, Pugh's concept, selection charts, numerical concept scoring, process of concept embodiment, system modeling, FMEA, functional modeling and decomposition, fast method, subtract and operate procedure, establishing system functionality, augmentation and aggregation.

### Unit IV

(08 Hours)

#### **Product Development in the Context of Reverse Engineering**

Product Teardown Process, Tear Down Methods - Force Flow Diagrams, Measurement and Experimentation, Applications of Product Teardown, Benchmarking Approach and Detailed Procedure, Tools Used In Benchmarking -Indented Assembly Cost Analysis, Function - Form Diagrams, Trend Analysis, Setting Product Specifications, Introduction to Product Portfolio and Architecture.

### Unit V

(08 Hours)

#### **Design for Manufacture, Assembly and Environment**

Design guidelines, design for manufacture, design for assembly, design for piece part production,

manufacturing cost analysis, need and importance of design for environment, global, local and regional issues, basic DFE methods-guidelines and applications, life cycle assessment - basic method, weighed sum assessment method, life cycle assessment method, DFX, product testing, product validation, field trials, virtual trials, iterations.

(08 Hours)

## **Unit VI**

### **Product development Methodology:**

Integrated product development process invariant, Integrated product development process, steps in IPD methodology, Product requirement planning and management, problem identification and solving methodology

### **Text Books/ References**

1. K. Chitale; R.C. Gupta, Product Design and Manufacturing, Prentice - Hall India.
2. Effective Product Design and Development, Stephen Rosenthal, Business One Orwin, Homewood, 1992, ISBN, 1-55623-603-4
3. Tool Design – Integrated Methods for successful Product Engineering, Stuart Pugh, Addison Wesley Publishing, New York, NY, 1991, ISBN 0-202-41639-5
4. Concurrent Engineering Fundamentals volume II Integrated Product development, Biren Prasad, Prentice Hall International series in Industrial and system Engineering
5. Product Design and Development, Karl T. Ulrich and Steven D. Eppinger, McGraw – Hill International Edns. 1999

9. Bralla, James G., Handbook of Product Design for Manufacturing, McGraw Hill Pub. 1986

### **Syllabus for Unit Test**

Unit Test I	Unit I, II, III
Unit Test II	Unit IV, V, VI

## Self Study Paper II : Design for Manufacturing & Assembly

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Introduction**

Design philosophy – steps in Design process – General Design rules for manufacturability – basic principles of designing for economical production –creativity in design. Application of linear & non-linear optimization techniques. Materials: Selection of Materials for design – Developments in Material technology – criteria for material selection – Material selection interrelationship with process selection – process selection charts. Philosophy for design for X.

### Unit II

(08 Hours)

#### **Machining Process**

Overview of various machining processes – general design rules for machining -Dimensional tolerance and surface roughness – Design for machining – Ease –Redesigning of components for machining ease with suitable examples. General design recommendations for machined parts.

(08 Hours)

### Unit III

#### **Metal Casting**

Appraisal of various casting processes, selection of casting process, - general design considerations for casting – casting tolerances – use of solidification simulation in casting design – product design rules for sand casting.

### Unit IV

(08 Hours)

#### **Metal joining**

Appraisal of various welding processes, Factors in design of weldments – general design guidelines – pre and post treatment of welds – effects of thermal stresses in weld joints – design of brazed joints. Forging – Design factors for forging – Closed die forging design – parting lines of dies drop forging die design – general design recommendations

### Unit V

(08 Hours)

#### **Extrusion and sheet Metal work**

Design guidelines for extruded sections - design principles for Punching, Blanking, Bending, and Deep Drawing – Keeler Goodman Forming Line Diagram –Component Design for Blanking.

(08 Hours)

## **Unit VI**

### **Plastics**

Visco-elastic and creep behavior in plastics – Design guidelines for Plastic components – Design considerations for Injection Moulding – Design guidelines for machining and joining of plastics Assembly: Compliance analysis and interference analysis for the design of assembly Design and development of features for automatic assembly – liaison diagrams. Influence on the productivity and cost.

### **Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## Self Study Paper II : Concurrent Engineering

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Total Credits : 04

### Unit I

(08 Hours)

#### **Introduction:**

Background and challenges faced by modern production environment, sequential engineering process, Concurrent engineering definition and requirement, meaning of concurrent objectives of CE, benefits of CE. Sequential engineering.

### Unit II

(08 Hours)

#### **Product Life Cycle Management :**

Life cycle design of products, life cycle costs. Support for CE: Classes of support for CE activity, CE organizational, structure CE, team composition and duties, Computer based Support, CE Implementation Process.

(08 Hours)

### Unit III

#### **Quality Function Deployment:**

Industrial Design, Quality Function Deployment, house of quality, Translation process of quality function deployment (QFD). Modeling of Concurrent Engineering Design: Compatibility approach, Compatibility index, implementation of the Compatibility model, integrating the compatibility Concerns.

### Unit IV

(08 Hours)

#### **Design for Manufacture (DFM):**

Introduction, role of DFM in CE, DFM methods, e.g. value engineering, DFM guidelines, design for assembly, creative design methods, product family themes, design axioms, Taguchi design methods, Computer based approach to DFM. Evaluation of manufacturability and assimilability

### Unit V

(08 Hours)

#### **Quality by Design:**

Quality engineering & methodology for robust product design, parameter and Tolerance design, Quality loss function and signal to noise ratio for designing the quality, experimental approach.

(08 Hours)

**Unit VI**

**Design for X-ability:**

Design for reliability, life cycle serviceability design, design for maintainability, design for economics, decomposition in concurrent design, concurrent design case studies.

**Text Books/ References**

1. Concurrent Engineering- Kusiak - John Wiley & Sons
2. Concurrent Engineering- Menon - Chapman & Hall
3. David M. Anderson, Design For Manufacturing And Concurrent Engineering, CIM press, 2004
4. G. H. Haung, Design for X: Concurrent Engineering Approach, Chapman & Hall, 1996.
5. Shina, S.G., Concurrent Engineering and Design for Manufacture of Electronics Products, Van Nostrand Reinhold, New York, 1991.

**Syllabus for Unit Test**

Unit Test I	Unit I,II,III
Unit Test II	Unit IV,V,VI

## DISSERTATION STAGE II

### TEACHING SCHEME

Practicals : 10 Hrs/week

### EXAMINATION SCHEME

Term Work : 150 Marks  
Pract/Oral : 75 Marks  
Total Credits : 32

### Stage-II:

This stage will include comprehensive report on literature survey, design and fabrication of experimental set up and / or development of model, relevant computer program. The student is require to publish at least one national/international paper based on the dissertation work. The publication / accepted paper for publication shall be included in the report.

Student has to submit the authentic copy of dissertation Stage-I report.

**Bharati Vidyapeeth University**  
**College of Engineering**  
**Department of Civil Engineering**

**Proposed Structure of M.Tech (Civil – Hydraulic Engineering) 2015**  
**Based on Choice Based Credit System**

### List of Self Study Papers

Sr.No	SELF STUDY PAPER- I (SEM-III)	SELF STUDY PAPER- II (SEM-IV)
	1	Water Resources Planning and Management
2	Ground Water Hydrology	Urban Water Management
3	Instrumentation in Hydraulics	River Engineering
4	Disaster Management	Planning of Ports
5	Operation and Maintenance of Hydraulic Structures	Soil conservation and Watershed Management
6	Application of Remote Sensing To Water Resources	Reservoir Sedimentation
7	Floods and Flood management	Tides and Tidal Hydraulics
8	Environmental Impact assessment for Water Resources Projects	Dam break analysis

## **SEMESTER I**

# 1: ADVANCED FLUID MECHANICS

## TEACHING SCHEME

Lectures : 04 Hrs/Week  
Practical : 02 Hrs/Week

## EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Term Work : 25 Marks  
Oral. : 25 Marks  
Credits : 5

### Unit-I

(08 Hours)

Kinematics of Flow: Flow visualization, stream lines, streak lines, path lines, continuity equation in cartesian and cylindrical polar coordinates system, accelerations, rotation, vorticity.

### Unit-II

(08 Hours)

Velocity potential and stream function, flow-net, Laplace equation and its solution by graphical and relaxation methods, simple flow patterns.

### Unit-III

(08 Hours)

Dynamics of Flow: Integration of Euler's equation along streamline and in cartesian coordinate system. Bernoulli's equation, momentum equation, applications of energy and momentum equations to different problems.

### Unit-IV

(08 Hours)

Navier-Stokes equations for incompressible fluids, Stokes law, creeping flow, Helle-shaw motion, flow between parallel plates, flow near suddenly accelerated plate, flow in a circular pipe. Review of dimensional analysis, drag on immersed bodies.

### Unit-V

(08 Hours)

Boundary layer on flat plate, b. L. equations, Blasius solution, Karman's momentum and Integral equation, laminar and turbulent boundary layers, transition mechanisms, b.L.separation

### Unit-VI

(08 Hours)

Turbulent Flow: Nature of turbulence, scales of turbulence, different averages, Reynolds rules of averaging, Reynolds equations, statistical approach, isotropic and homogeneous turbulence, spectrum of turbulence.

## Text Books / References

## Syllabus for Unit Test

Unit Test 1  
Unit Test 2

Units I , II & III  
Units IV, V & VI

## 2: IRRIGATION WATER MANAGEMENT

### TEACHING SCHEME

Lectures : 04 Hrs/Week  
Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
T. W. : 25 Marks  
Or. : 25 Marks  
Credits : 5

#### Unit – I

(08 Hours)

Soil Plant water relationship-Water relation of soils, Soil moisture and plant growth, estimating water requirement of crops, evapotranspiration and consumptive use , soil water availability to plants..

#### Unit – II

(08 Hours)

Water Application methods- Surface and sub surface irrigation methods ,Border Irrigation, Check basin, Furrow, Sprinkler and drip irrigation. Prospective new methods of irrigation

#### Unit – III

(08 Hours)

Design of drip and sprinkler irrigation systems-Hydraulic design of various Components of Drip and sprinkler Irrigation

#### Unit – IV

(08 Hours)

Measurement of Irrigation Water-Variou methods, Weirs, Parshall flumes, orifices, meter gates, tracer method. Irrigation efficiency, components of project irrigation efficiency, efficiency of irrigation practices, water use and operation of irrigation system..

#### Unit – V

(08 Hours)

Scheduling of irrigation , time of irrigation ,frequency and interval of irrigation ,Water conveyance and control-Surface water distribution system, under ground Pipe line Irrigation distribution system.

#### Unit VI

(08 Hours)

Study Salt problems in Irrigated Agriculture-Salt balance, Quality of irrigation water, Plant response to saline and alkali soils, Reclamation and management of salt affected soils, Case studies.

### Text Books / References

Irrigation Theory and Practice –A.M.Michael, Vikas Publishing House.  
Irrigation Engineering- G.L. Asawa, Wiley Eastern Ltd.

### Syllabus for Unit Test

Unit Test 1  
Unit Test 2

Units I, II & III  
Units IV, V & VI

### 3: COMPUTATIONAL METHODS IN HYDRAULIC ENGINEERING

#### TEACHING SCHEME

Lectures : 04 Hrs/Week

#### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

#### Unit-I

(08 Hours)

Complex Variables: Function of complex variables, Analytic function, Cauchy-Riemann equations (Cartesian and polar form), Harmonic functions, Construction of Analytic function, Milne-Thompson method.

#### Unit-II

(08 Hours)

Complex Variables: Transformations or Mapping, Conformal mapping, Bilinear transformations, The Schwarz-Christoffel transformation, Complex Integration, Cauchy's Integral theorem, Cauchy's Integral formula, Residue theorem, Taylor's and Laurent's series. Applications to boundary value problems.

#### Unit-III

(08 Hours)

Numerical Solution of Partial Differential Equations: Classification of second order partial differential equations, Solution of Laplace's, Poisson's, heat and wave equations by finite difference methods, Use of method of characteristics for solution of initial and boundary value problems. System of Linear equations- Jacobi, Gauss Seidel, Relaxation methods.

#### Unit-IV

(08 Hours)

Numerical Methods: Curve fitting : Method of least squares, Straight line, Second degree parabola, Exponential curve. Numerical Integration-General Quadrature formula, Trapezoidal rule, Simpson's 1/3rd rule, Simpson's 3/8th rule, Weddle's rule, Newton-Cotes Integration formulae, Gauss-Quadrature two point and three points formulae.

#### Unit-V

(08 Hours)

Statistics: Measure of central tendency, measures of dispersion, Moments, Skewness and Kurtosis. Coefficient of Correlation and Regression, Multiple and Partial Correlation coefficient, Reliability of regression estimates (standard error of estimates).

#### Unit-VI

(08 Hours)

Probability : Classical definition of probability, Addition and multiplication theorem of probability, Conditional Probability, Random variable, discrete and continuous random variables, Binomial, Poisson, Normal, Geometric, Exponential Beta, Gamma Distributions, Sampling distributions, Testing of Hypothesis, Large sample tests for means and proportions, small sample tests based on Chi-square test of goodness of fit and independence of attributes.

#### Syllabus for Unit Test

Unit Test 1

Units I , II & III

Unit Test 2

Units IV, V & VI

## 4: HYDROLOGY

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

#### Unit-I (08 Hours)

Forms of precipitation, hydrologic cycle, climate and seasons in India. Water availability in India and world. Methods of measuring precipitation, location of rain gauge, rainfall mass curve and rainfall hyetograph, intensity-duration-frequency analysis, depth-area-duration analysis, PMP,

#### Unit-II

Evaporation , Evaporimeters, empirical evaporation equations, empirical method of evaporation estimation, Evapotranspiration , Measurement of evapotranspiration, evapotranspiration equations , Infiltration , Infiltration capacity, measurement of infiltration, modeling infiltration capacity , infiltration indices.

#### Unit-III (08 Hours)

Runoff: runoff components, factors affecting runoff, basin yield, runoff-rainfall relations.

Data Analysis: Correlation, regression analysis, transformations, stochastic process, and time series analysis ,auto correlation analysis and synthetic flow generation models using random variates.

#### Unit-IV (08 Hours)

Unit Hydro graph, S-curve and IUH, Cleark's method of IUH. Synthetic Unit-hydrograph. Floods: Frequency analysis, normal, log-normal and Gumbel's distributions, envelope curves, empirical formulae and regional flood frequency analysis.

#### Unit-V (08 Hours)

.Flood Routing- Introduction , basic equations, Hydrologic/ storage routing in reservoir and channels, Hydraulic methods of flood routing, Simple cases.

#### Unit-VI (08 Hours)

Ground Water Hydraulics: Types of aquifers, distribution of surface and sub surface water in global and Indian context, Darcy's law, Dupuits assumptions, application of Darcy's law to simple flow systems, differential equation for confined and unconfined aquifers, wells fully and partially penetrating, multiple wells, interference of wells, pumping test with steady and unsteady flow. Ground Water Development: Ground water exploration, types of wells, construction and design of wells, screens, pumping equipment, ground water quality, ground water pollution

**Syllabus for Unit Test**

Unit Test 1

Units I , II & III

Unit Test 2

Units IV, V & VI

## **SEMESTER II**

## 5 : SEDIMENT TRANSPORT AND RIVER ENGINEERING

### TEACHING SCHEME

Lectures : 04 Hrs/week  
Practical : 02 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
T.W. : 25 Marks  
Oral : 25 Marks  
Credits : 5

#### Unit-I (08 Hours)

Introduction: Sediment problems, significant sediment properties, beginning of sediment movement – Shields analysis, critical tractive stress of non uniform materials.

#### Unit-II (08 Hours)

Bed Forms and Resistance: Description of bed forms, flow regimes, their significance, resistance analysis, different resistance laws.

#### Unit-III (08 Hours)

Modes of sediment transport, bed load transport, Dubuoy's equation. Einstein's approach, Meyer Peter and Muller's equation, suspended load transport, total load transport microscopic and macroscopic methods.

#### Unit-IV (08 Hours)

Design of stable channels: Regime method, Kennedy's method, Lacey's method, Blench and Simons-Albertson method and tractive force approach.

#### Unit-V (08 Hours)

Sediment Measurement: Bed load measurement, suspended load measurement, erosion from catchments, aggradation, degradation, silting of reservoirs, scour around bridge piers in uniform and non-uniform sediments.

#### Unit-VI (08 Hours)

Planforms and their prediction, river channel dimensions and their analysis, river training: objectives of river training, methods of river training by guide banks, spurs, levees, cut offs, pitched island and vanes, methods of bank protection.

### Syllabus for Unit Test

Unit Test 1	Units I , II & III
Unit Test 2	Units IV, V & VI

## 6: HYDRAULIC STRUCTURES

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

#### Unit-I

(08 Hours)

Gravity Dams-Concrete, masonry , Forces acting on a gravity dam, earthquake force-pseudo static and dynamic response approach, load classification, stability analysis, distribution of shear and normal stresses, principal stresses .

#### Unit-II

(08 Hours)

Stress concentration around opening, foundation treatment, use of colgrout masonry in gravity dams, Roller Compacted Concrete Dams: Materials for R.C.C mixture, design concepts, construction methods, advantages.

#### Unit-III

(08 Hours)

Earth Dam: Cross section of earth dam, Seepage through dam and its foundation, stability analysis for sudden draw down condition and steady seepage condition, during construction stages.

#### Unit-IV

(08 Hours)

Seismic effects, pore pressure, protection of upstream and down stream slopes, design of filters. Rock fill Dams: Relevant rock fill characteristic, general design principles, method of construction and compaction.

#### Unit-V

(08 Hours)

Spill ways: Determination of capacity, types of spillways, ogee, siphon, chute, side, shaft, orifice spillway and stepped spillway, their hydraulic design, crest profile, energy dissipaters and divide walls.

#### Unit-VI

(08 Hours)

Spillway gates: Vibration, types of gates, radial, drum, vertical lift and automatic gates. Instrumentation in Dams: necessity, measurements and their purpose, planning of installation of instruments. Weirs and Barrages, water bridges and culverts ,design concepts .

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & IV

## 7: OPEN CHANNEL FLOW

### TEACHING SCHEME

Lectures : 04 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

- Unit-I** (08Hours)  
Basic Concepts of Fluid Flow: Classification of flow, differential form of continuity and momentum equations, energy equation, energy and momentum correction coefficients, pressure variation in vertical.
- Unit-II** (08 Hours)  
Steady Uniform Flow in Rigid Boundary Channels: Shear stress on the boundary, velocity distribution in the vertical, resistance laws and their limitations, Stickler's equation, conveyance and section factor.
- Unit-III** (08 Hours)  
Specific energy, specific force and critical depth, control section, applications of specific energy and critical depth concepts.
- Unit-IV** (08 Hours)  
Gradually varied flow, governing equations, classification of surface curves, computation of gradually varied flow in prismatic and non-prismatic channels, graphical, direct and numerical integration methods
- Unit-V** (08 Hours)  
Rapidly varied flow and application of momentum equation, hydraulic jump in horizontal and sloping rectangular channels, location and length of jump.
- Unit-VI** (08 Hours)  
Unsteady flows : Waves and classification, celerity of waves, surges , equations of motion, and method of characteristics.

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## 8: OPTIMIZATION IN HYDRAULICS

### TEACHING SCHEME

Lectures : 04 Hrs/week  
Practicals : 02 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Marks : 40 Marks  
Term Work : 25 Marks  
Oral. : 25 Marks

**Unit-I** (08 Hours)  
Concept and need of Optimization; Linear Programming: Formulation of problem, graphical solutions, simplex method, Big M method, Two-phase method, duality.

**Unit-II** (08 Hours)  
Transportation problems-BFS-Optimality test, maximization problems. Assignment Problems - minimization, maximization.

**Unit-III** (08 Hours)  
Nonlinear Programming: Unconstrained one dimensional search methods - Dichotomous search, Fibonacci, golden section; Multivariable unconstrained methods-gradient techniques, steepest ascent, descent methods, Newton's method .

**Unit-IV** (08 Hours)  
Nonlinear Programming :Constrained method : Lagrangian multiplier techniques, Khun- Tuckers conditions, Dynamic Programming: Principle of optimality, recursive equation.

**Unit-V** (08 Hours)  
Introduction to genetic algorithms, simulated annealing, neural networks and fuzzy systems for solving optimization problems.

**Unit-VI** (08 Hours)  
Model formulation and case studies : Conjunctive use of ground water and surface water, hydropower optimization, crop yield optimization, multi-basin and multi-reservoir systems.

### Syllabus for Unit Test

Unit Test 1 Units I , II, III  
Unit Test 2 Units IV, V, VI

## SEMESTER III

## 9 : ELECTIVE I: COASTAL ENGINEERING

### TEACHING SCHEME

Lectures : 04 Hrs/week  
Practical : 02 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Termwork : 25 Marks  
Oral : 25 Marks  
Credits : 5

#### Unit-I

(08 Hours)

Basic understanding of wave mechanics including wave generation, propagation, form and assessment in the surf zone. Statistical and spectral analysis of recorded wave data and prediction in coastal zone.

#### Unit-II

(08 Hours)

Global tidal cycle, tidal analysis. Types of tides, effect of tides, significance in coastal engineering, Coastal process-erosion/accretion due to waves, estimation of littoral drift, Effect of construction of coastal structures on stability of shoreline / beaches, shoreline configuration

#### Unit-III

(08 Hours)

Introduction to Coastal structures:, Design criteria and functional aspects of coastal structures: sea wall, revetment, bulk-head, quay- wall, jetties, breakwater types : rubble-mound, composite, floating and pneumatic types, design of RBW , offshore structures: oil platform, design criteria for sub marine pipelines, cables, response of oil platform members , floating structure to wave load –vibration and spacing of piles, forces on piles.

#### Unit-IV

(08 Hours)

Dredging technology: types of dredgers, Radio active tracers studies for feasibility of dumping ground for dredged materials- environmental aspects of dredging etc.

#### Unit-V

(08 Hours)

Planning and management of port and Harbors, Modern trends and techniques in port engineering.- Roll on-Roll off/ Lift on –Lift off etc. Special purpose ports: Concepts of twin /mother port, SBM , outer to outer port etc. Significance of port cost analysis economics.

#### Unit-VI

(08 Hours)

Pollution in Coastal zone, disposal of waste/dredged spoils, design criteria of coastal outfall inlets and system. Oil spills and contaminants, coastal zone management: activities in coastal zone, CRZ, Issues related to Integrated coastal zone management. Coastal regulation zone.

### Syllabus for Unit Test

Unit Test 1  
Unit Test 2

Units I, II & III  
Units IV, V & VI

## 9 : ELECTIVE I : HYDRAULIC MODELLING TECHNIQUES

### TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Term work : 25 Marks

Oral : 25 Marks

Credits : 5

### Unit-I

Dimensional analysis: Units, dimensions of physical quantities, different methods of obtaining dimensionless parameters viz., Rayleigh's method, method of repeating variables, Buckingham  $\pi$  theorem, Reynolds number, Froude number, Mach number, Euler Number and Weber number.

### Unit-II

(08 Hours)

Determination of scales for models, Necessity of distortion of scales, scale effects. Movable bed models. Construction and operation of hydraulic models. Wind tunnels, flumes-2D, comprehensive models-3D.

### Unit-III (08 Hours)

Measuring Equipments: Flumes, Weirs, flow meters, pressure transducers, hot film anemometer, Current meter, Laser Doppler, pointer gauges.

### Unit-IV

(08 Hours)

Application to coastal and tidal problems. Design of Regular & Random (3D and 2D) wave modelling techniques, stability of coastal structures, Simulation of littoral drift, Design of sand trap, Distorted scale tidal modelling technique (rigid/movable) for Estuarine Ports,

### Unit-V

(08 Hours)

Rigid bed models and movable bed models, bank protection works, barrages and weirs, canal offtakes, power intakes, gates, bridges and intakes. Applications for structures in hilly regions – Dams, spillways and energy dissipaters, combination of rigid and movable bed models, sedimentation and flushing of reservoirs.

### Unit-VI (08 Hours)

Introduction to basic mathematical modelling techniques for hydraulic phenomena & processes related to various hydraulic structures, Advantages & limitations for interpretation of the results, need of validation with field/prototype data- Typical case studies using software.

### Text Books / References

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## 10 : ELECTIVE II WATER POWER ENGINEERING

### TEACHING SCHEME

Lectures : 04 Hrs/week  
Practical : 02 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Term work : 25 Marks  
Oral : 25 Marks  
Credits : 5

#### Unit -I (08 Hours)

Classification of Hydropower plants, low & high head plants. Run of river plants, High head diversion plants, pumped storage plants, Electrical load on turbines load factor, power factor, capacity factor, load duration curve, firm power, secondary power.

#### Unit -II (08 Hours)

Assessment of available power, Essential stream flow data for water power studies flow duration curves, Intakes structures, location and intake type, shape of inlet, aeration in inlets, design of intake, sediment exclusion arrangement.

#### Unit -III (08 Hours)

Penstocks and Accessories, classification of pen stocks, design criteria for penstocks, Economical diameter of penstocks, Anchor blocks, conduit valves, Bends & manifolds.

#### Unit -IV (08 Hours)

Water hammer and surges, channel surges, water hammer, resonance in penstocks. Function of surge tank, Types of surge tanks, Differential surge tanks.

#### Unit -V (08 Hours)

Turbines- Type of turbines, Hydraulic features, Turbine size, lay out arrangements, Hydraulics of turbines, draft turbines, cavitation in turbines, characteristics of turbines.

#### Unit -V (08 Hours)

Planning of power house – Power house structure, under ground power station, components of under ground power house, types of layouts, small scale Hydropower, Potential of small scale Hydropower.

### Text Books / References

Dandekar M.M., K.N.Sharma “Water Power Engineering “ Vikas Publishing house.  
Varshney R.S.”Hydro power Structures” Nemchand & Bros, Roorkey.

### Syllabus for Unit Test

Unit Test 1	Units I, II & III
Unit Test 2	Units IV, V & IV

## 10 : ELECTIVE II: NUMERICAL METHODS IN HYDRAULIC ENGINEERING

### TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Term work : 25 Marks

Oral : 25 Marks

Credits : 5

### Unit-1

(08 Hours)

Governing equations of 1-D and 2-D unsteady flow : St. Venant equations, Boussinesq equations, groundwater flow equations and boundary conditions.

### Unit-2

(08 Hours)

Numerical method for one dimensional flow : Method of characteristics, characteristics, initial and boundary conditions, characteristic grid method, method of specified intervals, other numerical methods.

### Unit-3

(08 Hours)

Numerical method for one dimensional flow : Finite difference method, explicit finite difference schemes, implicit finite difference schemes, stability.

### Unit-4

(08 Hours)

Numerical method for two dimensional flow : Finite difference method, explicit finite difference schemes, implicit finite difference schemes, stability.

### Unit-5

(08 Hours)

Numerical method for ground water flow : Explicit finite difference method, Implicit finite difference method, finite element method, application.

### Unit-6

(08 Hours)

Applications of unsteady flows using commercial 1-D and 2-D software.

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## 10 ELECTIVE II: ENVIRONMENTAL FLUID MECHANICS

### TEACHING SCHEME

Lectures : 04 Hrs/week

Practical : 02 Hrs/week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Term work : 25 Marks

Oral : 25 Marks

Credits : 5

### Unit-I

(08 Hours)

Global wind currents, atmospheric boundary layer, simulation of boundary layer in wind tunnel and applications to forces on structures, use of wind tunnel for studying dispersion, diffusion. Cyclones, anti cyclones, and tornadoes, Tsunami.

### Unit-II

(08 Hours)

Waves, deep and shallow water waves, braking of waves, littoral drift and sediment transport by waves, dispersion and diffusion in coastal waters, ocean out falls.

### Unit-III

(08 Hours)

Vortex formation at intakes, similarity criteria, hydraulic design of sumps, design of water intakes.

### Unit-IV

(08 Hours)

Heated water disposal in reservoirs and channels, mathematical considerations, solution techniques, physical modeling.

### Unit-V

(08 Hours)

Thermal plumes, dispersion and diffusion in atmosphere.

### Unit-VI

(08 Hours)

Problem and numerical solution.

Dam break

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## **11 SELF STUDY PAPER I**

## **12 SEMINAR**

### **TEACHING SCHEME**

Practical : 01 Hrs/week

### **EXAMINATION SCHEME**

Term work : 25 Marks:

Oral : 25 Marks

Credits : 5

Each student will select a topic in the area of Hydraulic Engineering keeping track of the recent technological trends and developments. Students will make a seminar presentation using audio visual aids and submit the seminar report in the form of bound journal.

## **13 DISSERTATION STAGE I**

### **TEACHING SCHEME**

Practical : 02 Hrs/week

### **EXAMINATION SCHEME**

Term work : 25 Marks

Credits : 21

Dissertation stage-I will include identification of problem, preparation of synopsis literature survey and formulation of problem.

## SEMESTER IV

## **14 : SELF STUDY PAPER II**

## **15 : DISSERTATION STAGE II**

### **TEACHING SCHEME**

Practical : 04 Hrs/week

### **EXAMINATION SCHEME**

Term work : 150 Marks

Oral : 75 Marks

Credits : 30

Dissertation stage-II will include experimentation, data analysis and submission of final report.

## 11 : SELF STUDY PAPER I: WATER RESOURCES PLANNING AND MANAGEMENT

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

#### Unit-I

(08 Hours)

Water Resources of India: Land resources of India, water sources per capita water availability, Irrigation potential, methods of assessment of water resources.

#### Unit-II

(08 Hours)

Water Resources Development: Objectives, planning for water resources development, water resources system design, economics of water resources development, micro and macro economics, discounting factors, discounting techniques – present worth, rate of return, benefit cost analysis, annual cost methods, profitability analysis.

#### Unit-III

(08 Hours)

Integrated and conjunctive use of water, allocating water for various uses. Irrigation water management, constraints in irrigation development. National water policy.

#### Unit-IV

(08 Hours)

Augmentation of water resources: Conservation of water, augmentation of water resources, method of artificial recharge.

#### Unit-V

(08 Hours)

Water quality: Quality of water for irrigation and municipal use, water pollution and its control. Development of water resources and environment. Environmental impacts of water storage reservoirs.

#### Unit-VI

(08 Hours)

Water logging and land reclamation: Causes of water logging, anti logging measures, factors responsible for formation of saline and alkali soils, ill effects of salinity and alkalinity, land reclamation methods.

### Syllabus for Unit Test

Unit Test 1

Units I , II & III

Unit Test 2

Units IV, V & VI

## 11 : SELF STUDY PAPER I: GROUND WATER HYDROLOGY

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

#### Unit – I (08 Hours)

Hydrological cycle, role of ground water in hydrological cycle, aquifers, classification and characteristics.

#### Unit – II (08 Hours)

Ground water hydraulics- Darcy's law and application, flow nets-application.

#### Unit – III (08 Hours)

Ground water hydraulics- mass conservation, aquifer flow equation, heterogeneity, anisotropy, unsaturated flow, recharge, stream-aquifer interaction, well hydraulics.

#### Unit – IV (08 Hours)

Application of ground water hydraulics for estimation of yield- case study.

#### Unit – V (08 Hours)

Model (Numerical) in ground water hydraulics

#### Unit – VI (08 Hours)

Working organization: Global and Indian data collection, water quality and control.

### Text Books/References

Groundwater Hydrology, David Keith Todd and Larry W. Mays

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## 11: SELF STUDY PAPER I: INSTRUMENTATION IN HYDRAULICS

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Credits : 4

#### Unit – I (08 Hours)

Definition of instruments, purpose of instrumentation, system of application of instrumentation, different classifications of instruments, main hydraulic and other civil engineering parameters involved.

#### Unit – II (08 Hours)

Qualifications and characteristic of instruments, calibration and errors – definitions, utility and dependability, transducers - their purpose, characteristics and usage, decision on the requirements for selection of instruments, need of system analysis before the selection of instruments.

#### Unit – III (08 Hours)

Specific instruments : measurement of velocity and discharge, requirements for field and laboratory, methods of measurement and different structures used, supporting structure requirements, designs parameters.

#### Unit – IV (08 Hours)

Methodologies adopted for observations, requirements for good instruments and Instrumentation, application of above requirements to instrument systems.

#### Unit – V (08 Hours)

Specific instruments : measurement of pressure and strain, requirements for field and laboratory methods of measurement and different structures used, supporting structure requirements, designs parameters.

#### Unit – IV (08 Hours)

Modern electronic and high precision instruments. hot film anemometer, 3D observations for velocities, eddies, etc.

Calibration of Pressure Measurements – USBR No 1040-1989  
Discharge measurement structures – USBR; Agricultural research Service  
Experimental Uncertainty and Measurement errors – An update - World Water and Environment Conference May 2005

### Syllabus for Unit Test

Unit Test 1  
Unit Test 2

Units I, II & III  
Units IV, V & IV

## 11 : SELF STUDY PAPER I : DISASTER MANGEMENT

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Credits : 4

#### Unit – I

(08 Hours)

Factors causing disaster & damage to properties & human lives- Natural man made, cause & short term / long term effects & needs to take measures.

#### Unit – II

(08 Hours)

Extreme value conditions- Waves, flooding, storm surge, earthquake & Tsunami etc.

#### Unit – III

(08 Hours)

Failure of hydraulic structures - dams, fires in plants, (Thermal, Nuclear etc.), oil tanker leakage, sinking etc.

#### Unit – IV

(08 Hours)

Measures to avoid disasters (manmade), measures for minimum damage natural Disasters.

#### Unit – V

(08 Hours)

Warnings systems pre disaster- remote sensing, satellite, media, (Radio, Tv), communication systems.

#### Unit – VI

(08 Hours)

Rescue operation, -Helicopter, Life saving systems, transportation, detection of areas of disaster, Global, National, Local management systems for all various activities.

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & IV

# 11 : SELF STUDY PAPER I : OPERATION AND MAINTENANCE OF HYDRAULIC STRUCTURES

## TEACHING SCHEME

Lectures : 04 Hrs/Week

## EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

### Unit – I

(08 Hours)

Introduction : Hydraulic structures, types, major hydraulic structures requiring operation and maintenance, dams, types.

### Unit – II

(08 Hours)

Dam failures : historic dam failures, their causes, modes of failures of Embankment dams, external erosion, internal erosion, structural failure, safety requirements/measures, Modes of failures of concrete dams, external erosion, internal erosion, structural failure, safety requirements/measures

### Unit – III

(08 Hours)

Guidelines for operations of dams, Operations of typical embankment dam and concrete dam

### Unit – IV

(08 Hours)

Inspection guidelines of dams, inspection of embankment dam : the crest, the upstream slope, the downstream slope, the abutments, the downstream toe etc. inspection of concrete dam , inspection, of appurtenant works, spillway, outlets etc.

### Unit – V

(08 Hours)

Monitoring and surveillance of embankment dams : Task and purpose of monitoring, Monitoring of pore pressure, seepage, monitoring of displacements, measurements of stresses, seismic measurements , general principles on the selection and positioning layout of measuring instruments, Monitoring and surveillance of concrete dams : On monitoring, surveillance and instrumentation of concrete dams in general, Monitoring by precise survey methods, surveillance with embedded instruments

### Unit VI

(08 Hours)

Maintenance of embankment dam, maintenance of concrete dam, maintenance of appurtenant works, spillway, outlets etc.

## Text Books / References

## Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## 11 : SELF STUDY PAPER I: APPLICATION OF REMOTE SENSING TO HYDRAULICS

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Credits : 4

**Unit – I** (08 Hours)

Principles of electromagnetic remote sensing, electromagnetic spectrum. aerial photography, satellite imagery.

**Unit – II** (08 Hours)

Infra red photography, temperature difference in water, aeromagnetic surveys at Low Altitude.

**Unit – III** (08 Hours)

Photographic techniques by aircrafts, satellites their principles & interpretation, aerial magnetic surveys a) subsurface rock structure b) flow of ground water.

**Unit – IV** (08 Hours)

Electrical conductance of rock, velocity of sound through different rocks , Electrical resistivity surveys.

**Unit – V** (08 Hours)

Preparation of maps on political land use, physiographic land gradient, methodology, geology of soil, hydrology and water shed , ground water potential, hydrogeology, agronomy, forestry, Civil engineering, A R. S. system classification a) Passive b) Active (A) Remote Sensing Characteristics i) Spatial resolution ii) Spectral resolution iii) Radiometric resolution iv) (B) Temporal resolution , 1D Extraction of information, fundamentals of Photogrammetric, Thermal infrared sensor (C) Side looking airborne radar (SLAR) (D) Land remote sensing satellite systems- satellites of different nations their sensors, No. of bands.

**Unit – VI** (08 Hours)

Fundamental concepts in computer aided image classification, data preprocessing : radiometric correction, geometric correction, large classifications : soft x hard classifiers, Contextual x Neural networks Classifiers, integration of Remote Sensing & GIS – Separate but equal, Seamless integration, Total integration.

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## **11 : SELF STUDY PAPER I : ENVIRONMENTAL IMPACT ASSESSMENT FOR WATER RESOURCES PROJECT**

### **Unit – I**

(08 Hours)

Environmental Aspects of Water Resources Development, Rehabilitation of people affected by the project, submergence of the forest area, water logging and salinity in command areas, adverse effects on wild life ,water borne diseases, siltation of manmade reservoirs.

### **Unit – II**

(08 Hours)

Effect of dam construction on downstream river regime. Sediment transport, National water policy and recommendations for environmental monitoring of water resources projects.

### **Unit – III**

(08 Hours)

Environmental Impact Assessment methodology. Description of site and its Development description of present and projected conditions, assessment of probable impacts, compliance with regulations , review of alternatives.

### **Unit – IV**

(08 Hours)

Environmentally sound water resources management, Various Case studies, catchment area treatment, compensatory afforestation, command area treatment , status of environmental monitoring of water resources development projects.

### **Unit – V**

(08 Hours)

Socio economic issues related to water resources project. Deforestation ,submergence of land, change in land use pattern, submergence of existing roads, construction of new approach roads, construction of new town ships and other infrastructure.

### **Unit – VI**

(08 Hours)

Environmental legislation in India with respect to water resources projects. Water-prevention and control of pollution act, wild life protection act, forest conservation act, environmental protection act.

### **Text Books/References**

Government of India National water policy

Central water commission Guide lines for sustainable water resources development and management, 1992.

### **Syllabus for Unit Test**

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## 11:SELF STUDY PAPER I– FLOODS AND FLOOD MANAGEMENT

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

#### Unit – I

(08 Hours)

Introduction, Necessity, General information on flood damages at global level and in India. Various methods of flood estimation and models.

#### Unit – II

(08 Hours)

Flood routing through channels , various method, with case studies.

#### Unit – III

(08 Hours)

Flood Mitigation, Identification of floods and flood zones.

#### Unit – IV

(08 Hours)

Flood control – Single & multipurpose reservoir , reservoir operation , rule curve, routing, zones of reservoir, structural and non structural measures.

#### Unit – V

(08 Hours)

Special floods- Estimation , dam break, PMF, Application for damage evolution.

#### Unit – VI

(08 Hours)

Aspects of flood management- identification of areas, extent & duration of flood, Environmental & Ecological aspects, economics of flood control project.

### Text Books/References

“Flood & Flood control” Workshop proceedings at CWPRS Pune

“Flood forecasting & Warning” CWC guideline.

“Flood & Flood control” NIH Roorkey.

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & IV

## 14 : SELF STUDY PAPER II : OFFSHORE STRUCTURES

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

#### Unit – I (08 Hours)

Types of ocean Structures,- Onshore / Offshore, Requirement of structures, its types/ classification- depth, function, design aspect.

#### Unit -II (08 Hours)

History of development of offshore structures, installation of platforms, development in Indian continental shelf in future, need for crude oil and availability

#### Unit -III (08 Hours)

Basic design criteria for drag/ lift forces, design principles for structural members , spacing, wave data and vibration analysis.

#### Unit -IV (08 Hours)

Additional facilities/ functions related for oil transportations, storage, transport, pumping from oil well to the refinery .

#### Unit -V (08 Hours)

Safety of offshore structures natural/ manmade ,accidental- case studies , factors affecting stability, design of pipe lines.

#### Unit -VI (08 Hours)

Environmental aspects- oil leakages, pollution, fire protection, extreme wave conditions-storm, Tsunami etc. Economic aspects in design, Installation, maintenance, and operations related to offshore structures

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & IV

## 14 : SELF STUDY PAPER II: URBAN WATER MANAGEMENT

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Credits : 4

#### Unit – I (08 Hours)

Drinking water qualities, potable limits, water softening processes, common impurities, alkalinity, acidity, Water purification, storage, treatment of waters, settling basins, slow sand filters, pressure and gravity filters

#### Unit – II (08 Hours)

Storage of water, service reservoirs, cisterns, elevated tanks, pressure equalizing Reservoirs, distribution of waters, demand of water for domestic and public purpose, wastage of water, prevention of leakages, different methods of distribution, design of distribution system, intermittent and constant system of supply

#### Unit – III (08 Hours)

Pipes of different metals, cement concrete pipes, Valves, meters taps

#### Unit – IV (08 Hours)

Pumping of water, suction and delivery pipes, water pumps, design of pumping stations

#### Unit – V (08 Hours)

Ground water and wells, water bearing strata, discharge from wells, tests of yields, depression head, cone of depression

#### Unit – IV (08 Hours)

Methods of boring, strainers, well lining

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & IV

## 14 : SELF STUDY PAPER II : RIVER ENGINEERING

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Credits : 4

#### Unit – I

(08 Hours)

Classification of Rivers: Based on different approach/criteria, River plan forms and their Characteristics, Development/variation of plan forms in meandering and migration, braiding, its characteristics and causes for their development.

#### Unit – II

(08 Hours)

Rivers in equilibrium: Channel stability, regime relations and applications, Natural constraints and their effects on the river regime, Hydraulic structures and their effects in the river regime.

#### Unit – III

(08 Hours)

Rivers in dynamics: Bed level changes, aggradation and degradation confluences and braiding, their causes and effects on river regime.

#### Unit – IV

(08 Hours)

River flow control structures: weirs, barrages, intakes, bridges and diversion structures, design and operational concepts, river improvement methods.

#### Unit – V

(08 Hours)

Rivers training works: Rivers training structures for weirs, barrages, intakes, bridges, diversion structures, hydraulic design and operational concepts, river improvement.

#### Unit – VI

(08 Hours)

Rivers navigation: Advantages and disadvantages, hydraulic structures for river navigation, river dredging, necessity and effects.

### Text Books/References

River mechanics, Pierre Y, Julian (2002), Cambridge University Press  
Brown S. A. 1985a, "Design of spur – type, Stream stabilization structure, final report," Federal highway administration.

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## 14 : SELF STUDY PAPER II : PLANNING OF PORTS

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

#### Unit – I

(08 Hours)

Port development requirement, world port development- Major, Minor Fisheries, Indian port service, General planning of port requirement, Roll of modeling in planning of port, present status of Indian port & future demands of next four decades

#### Unit -II

(08 Hours)

Modern port facilities, roll of road / rail link with planning of ports, Automation in port development

#### Unit- III

(08 Hours)

Analysis of case studies- evaluation , comments suggestions  
Special purpose berths in ports- Container, oil, Car transport .

#### Unit -IV

(08 Hours)

Port cost analysis and economics', maintenance of port structures, Modern trends- Roll of management techniques , skill in operation for safety purpose ,concept of GDP/GNP.

#### Unit -V

(08 Hours)

Concept of mother port, outer to outer port, offshore port etc. SBM linked transport, efficacy of port-Transport ,cost per tonne, VLCC

#### Unit -VI

(08 Hours)

Limiting factors for planning of ports-facilities, pollution, draft requirement, maintenance of port, measures for various aspects, development, National policy

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## 14 : SELF STUDY PAPER II : SOIL CONSERVATION AND WATERSHED MANAGEMENT

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Credits : 4

#### Unit – I (08 Hours)

Watershed concept-Size , shape, physiographic , climate, drainage, land use, vegetation, geology and soils, hydrology , hydrogeology.

#### Unit – II (08 Hours)

Water Erosion- Mechanics of water erosion, types of erosion, estimation of water erosion losses, measurement of water erosion.

#### Unit – III (08 Hours)

Water erosion control- land classification for soil conservation, mechanical methods of water erosion control , biological methods of water erosion control.

#### Unit – IV (08 Hours)

Soil conservation in special problem areas – hilly areas, control of gullies, ravine reclamation, waterlogged and wetlands.

#### Unit – V (08 Hours)

Land use management practices in semiarid and arid zones –problems of soil and water Management in semi arid and arid zones of India, control measures.

#### Unit – VI (08 Hours)

Watershed Management- Planning for watershed management, measures for watershed management , land use planning, water harvesting and recycling ,socio economic aspects, recent trends in watershed management.

### Text Books/References

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## 14 : SELF STUDY PAPER II : RESERVOIR SEDIMENTATION

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

(08 Hours)

#### Unit – I

Introduction : Scope and significance of reservoir sedimentation, properties of sediments. Basic concepts of sedimentation, bed load, suspended load sediment inflow, sediment out flow, trap efficiency, retention time.

#### Unit – II

(08 Hours)

Reservoir sedimentation process Settling of sediments, Density currents, pattern of reservoir sedimentation . Aggregation above dams, Degradation below dams, sources of sediments.

#### Unit – III

(08 Hours)

Reservoir sedimentation Prediction , Factors affecting sedimentation, various methods of predicting sedimentation Empirical studies, Mathematical modeling.

#### Unit – IV

(08 Hours)

Measurement of reservoir sedimentation , need for measurement , measurement of sediments in Rivers, streams etc. Measurements of suspended load, reservoir survey for sediments methods of measurements of sediments , sediments transport ,capacity survey, remote sensing techniques.

#### Unit – V

(08 Hours)

Sedimentation of reservoirs in India case studies, control of reservoir sedimentation, soil conservation measures, vegetation land treatment measures to check inflow of sediments in to reservoirs. Removal of sediments from reservoir.

#### Unit – VI

(08 Hours)

Estimate life of reservoir , different concepts and procedures practiced in USA, Japan, India.

### Text Books/References

Reservoir sedimentation and control Central water Commission 1991, New Delhi.

Sedimentation of reservoirs-National Institute of Hydrology Dept. RN – 26-1985-86.

Life of reservoir – Technical report No.19. CBIP – New Delhi

### Syllabus for Unit Test

Unit Test 1

Units I, II & III

Unit Test 2

Units IV, V & VI

## 14 : SELF STUDY PAPER II: TIDES AND TIDAL HYDRAULICS

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Internal Assessment : 40 Marks  
Credits : 4

#### Unit I

Definition of tide, Generation of tides, reasons for formation , Role of celestial bodies, Global tidal Phenomenon, Amphedormic point, Co-tidal lines, tidal constituents, coriolis force, Harmonic analysis, High water, low water, intertidal zones.

#### Unit II

Sidereal day ,Solar day, Lunar day, Declination of moon, Sidereal year, Lunar month, Apibelson, Peribelson , Apogee, Perigee, Force diagram for tide generation, if of lunar and earth axis

#### Unit III

Theories of tides, Tidal predictions, tidal inequality, types of tides, tidal duration, Amplitude, tidal variaties, spring tides, neap tides, Effects of tide, tidal scenario in India and world, Diurnal tides, mixed tides, semi-dia tides, shift of tides.

#### Unit IV

Different similitude's, similarities, Hydraulic models, tidal in Distortions in model, Reasons for distortions, Fixed bed and movable bed tidal models, Layout of tidal model, different instruments for tidal model studies, Automatic tide generator in model, inferances from tidal model studies.

#### Unit V

Definition of tidal inlet, different features, stability of tidal inlet, Hydraulic processes near tidal inlet, tidal prism, formulae for assessment of stability of tidal inlets, different types of tidal inlets, meaoewes for stabilization of inlet effect of littoral drift, jarretts clarification, kenlegen's k, importance of tides in port and harbor operations.

#### Unit VI

Global tide ranges, range variation along Indian coast, different forms of unconventional/renewable energy their cheeris sources, tidal power, economies of tidal power, potential locations of tidal power plants around world and in India, single basin/double basin-single cycle/double cycle model of power generation, case study of existing/operating tidal power plants.

### Text Books/References

Coastal Engineering Manual (CEM) USA corps of engineering

Ven Te Chow-Open Channel Hydraulics.

Jarrette M.A. : Stability of coastal inlets.

CWPRS Brochures on model Studies.

Indian institute of Ocean Technology : Coastal Manual Dr.Kathirola, at Chennai.

## **Syllabus for Unit Test**

Unit Test 1  
Unit Test 2

Units I, II & III  
Units IV, V & IV

## 14 : SELF STUDY PAPER II : DAM BREAK ANALYSIS

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Internal Assessment : 40 Marks

Credits : 4

**Unit – I** (08 Hours)

Introduction: Review of dams in India, Necessity of Dam Break Analysis

**Unit – II** (08 Hours)

Design criteria of Dams: Earth, Gravity, Arc Dams with likelihood of Exceedence

**Unit – III** (08 Hours)

Types of Failures : Type of dam, Structural, Purpose, Parameters of Failure

**Unit – IV** (08 Hours)

Aspects in Dam Break Analysis : Economic, Managerial, Social, Environmental

**Unit – V** (08 Hours)

Hydraulics of Dam Break Analysis : St. Venant's equations - forms, methods of Solution Simulation Models – DAMBRK, FLDWAV, MIKE 11, HECRAS

**Unit – VI** (08 Hours)

Case Study, Review of Literature, Data Collection and Compilation.

**List of Self Study paper I & II**

<b>Self Study Paper I</b>	<b>Self Study Paper II</b>
Enterprise Resource Planning	Grid Computing
Bioinformatics	Research Methods in Computer Science
Information Retrieval and Web Search	Middle ware Technologies
Speech Processing	Agile Systems
Sensor Network and Embedded Systems	Soft Computing
Computer Graphics and Visualization	E-Commerce and Payment Systems
Cloud Computing	Knowledge Representation and Reasoning
Pervasive computing	Computational Intelligence
Data Warehousing and Data Mining	High Performance Information systems
Software Security	Advanced Web Technologies

# Advanced Database Management System

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week		End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		TW&OR : 50 Marks	01 Credits
<b>UNIT - I</b>	<b>Parallel and Distributed Databases :</b>		<b>(08 Hours)</b>
	Architectures for parallel database, Parallel query Evaluation, Parallelizing individual operation, Parallel Query Optimization, Distributed DBMS Architecture, Storing data in distributed DBMS, Distributed Catalog Management, Distributed query processing, Updating distributed data, Distributed concurrence control, Distributed recovery.		
<b>UNIT - II</b>	<b>Web databases :</b>		<b>(08 Hours)</b>
	Web search engines, web search architecture, Inverted indexes the IR way, Inverted indexes for web search engines, web crawling, web search statistics.		
<b>UNIT - III</b>	<b>Data Warehousing and Data Mining:</b>		<b>(08Hours)</b>
	<b>Data Warehousing:</b> Introduction Data Warehousing OLAP, Implementation Techniques for OLAP, Views and decision support. <b>Data Mining:</b> Introduction, Counting Co-occurrences, Mining for rules, Tree structured rules, Clustering, Similarity search over sequences, Additional data mining tasks.		
<b>UNIT - IV</b>	<b>Object Database Systems and XML:</b>		<b>(08 Hours)</b>
	<b>Object Database Systems:</b> User defined abstract data types, Structured types, Objects, Objects Identity and Reference types, Inheritance, database design for an ORDBMS, Comparing RDBMS with OODBMS and ORDBMS. <b>XML:</b> Introduction, Structure of XML Data, XML Document Schema, Querying and Transformation, API to XML, Storage of XML Data, XML Applications.		
<b>UNIT - V</b>	<b>Spatial Data Management:</b>		<b>(08 Hours)</b>
	Types of Spatial Data and Queries Application involving Spatial data, Introduction to spatial Indexes, Indexing based on space filling Curves, Grid files, R trees, High command Indexing.		
<b>UNIT - VI</b>	<b>Deductive Databases AND Advanced Transaction Processing:</b>		<b>(08 Hours)</b>
	<b>Deductive Databases:</b> Recursive Queries, Theoretical foundation, Recursive Queries with Negation, Efficient evaluation of Recursive Queries, Additional Transaction Processing, Advance transaction processing Integrated access to Multiply data sources, Mobile database, multiplying database, Geographic Information systems, Temporal and Sequence database, Information Visualization. <b>Advanced Transaction Processing:</b> Transact ion-Processing Monitors, Transactional Workflows, Main- Memory Databases, Real-Time Transaction Systems, Long-Duration Transactions and Transaction Management in Multi-databases.

<b>Syllabus for Unit Test:</b>	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

# Advanced Software Engineering

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	TW&OR : 50 Marks	01 Credits

<b>UNIT - I</b>	<b>Software Development Process:</b>	<b>(08 Hours)</b>
	Software Processes, SDLC Models, Waterfall Model, The V Model, Prototyping Model, Iterative Model, Spiral Model. Agile Development, Agile Principles, XP, Scrum, AUP, Kanban, ASD, DSDM, FDD, Agile practices, Empirical Model in Software engineering	
<b>UNIT - II</b>	<b>Requirement Engineering and Black Box Testing:</b>	<b>(08 Hours)</b>
	Requirement Engineering: Requirements phase and its importance, Requirement Elicitation and Analysis, Process models (DFD), Data models (ERD), Software, Requirement Specification Standard and Preparation, Characteristics of good SRS Documents, traceability matrix and its importance, CASE tool, and its basic features. Black box testing: Test case design and implementation, Automated testing and limitations, debugging methods, Black box testing methods.	
<b>UNIT - III</b>	<b>Process Improvement and Verification:</b>	<b>[08 Hrs ]</b>
	Process and product quality, Process classification, Process Measurement, Process Analysis and Modelling, Process change, The CMMI process improvement framework, Configuration Management Planning, Change management, Version and release management, System building, CASE tools for configuration management.	
<b>UNIT - IV</b>	<b>User interface Design, Maintenance and reengineering:</b>	<b>(08 Hours)</b>
	User interface design issues: The UI design process, User analysis, User interface prototyping, Interface Evaluation. Software Maintenance: Reengineering, Business process reengineering, software reengineering, reverse engineering, restructuring, Forward engineering, The economics of reengineering.	
<b>UNIT - V</b>	<b>Software Reuse, CBSE:</b>	<b>(08 Hours)</b>
	The reuse landscape, Design patterns, Frameworks, Generator based reuse, Application frameworks, Application system reuse, components and component models, The CBSE process, component composition, service oriented software engineering - services as reusable components, service engineering, software development with services.	
<b>UNIT - VI</b>	<b>Quality Management and SAQ:</b>	<b>(08 Hours)</b>
	Quality Management - Quality Concepts, Software Quality, The review technique, cost impact of software defects, defect amplification and removal, Review metrics and their use, Reviews: A formal spectrum, Informal spectrum, Formal technical reviews, SQA: Background issues, Elements of SQA: SQA tasks, goals and metrics, Formal approaches to SQA: statistical SQA, Software reliability. The ISO 9126 quality factors, Mc Call's quality factors, The SQA plan

# Mobile Operating System

<b>Mobile Operating System</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	
<b>UNIT - I</b>	<b>Introduction to Mobile Operating Systems:</b>	<b>(08 Hours)</b>
	Brief History of Mobile Operating Systems, OS-Interfaces, Multilevel Views of OS, Categories, Small and Specialized OS, 64-Bit OS, Processes and Threads, System Performance and Models: Performance of Computer Systems, Performance Metrics, Workload and System Parameters, Simulation Models: Types, Discrete-Event Model, Stochastic Model.	
<b>UNIT - II</b>	<b>Multiprogramming:</b>	<b>(08 Hours)</b>
	System with Multiprogramming, Processor Scheduling, Synchronization, Deadlocks, File Management, Memory Management: Process Address Space, Contiguous Memory Allocation, Non Contiguous Memory Allocation, Virtual Memory, Paging with Virtual Memory.	
<b>UNIT - III</b>	<b>Security and Protection:</b>	<b>(08 Hours)</b>
	Components for Security and Protection, Physical Security, User Authentication, Protection, Secure Communications, Digital Certificates, System Vulnerabilities, Invasive and Malicious Software, Defending the System and User, Intrusion Detection Management.	
<b>UNIT - IV</b>	<b>Mobile Ecosystems:</b>	<b>(08 Hours)</b>
	Application Framework, Developing a Mobile Strategy, Mobile Information Architecture, Mobile Design: Elements of Mobile Design, Ubiquity in the Mobile Web, Mobile Web Development	
<b>UNIT - V</b>	<b>Introduction to Linux:</b>	<b>(08 Hours)</b>
	Command Line Interface, Files and Directories, Shell Variables, Script Files, Connecting a Remote Linux Server. Java Modeling Framework, Java and Posix Threads.	
<b>UNIT - VI</b>	<b>Case Study:</b>	<b>(08 Hours)</b>
	Android SDK, iOS, Windows, Mobile Web Apps vs. Mobile Applications

# Distributed Computing

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>		<b>CREDITS ALLOTTED:</b>	
Theory: 04Hours / Week		End Semester Examination: 60 Marks		04 Credits	
		Continuous Assessment: 40 Marks			
<b>UNIT – I</b>	<b>Distributed System Concepts:</b>				<b>(08 Hours)</b>
	Distributed Computing Models, Software Concepts, Issues in Designing Distributed Systems Client-Server Model. Case Studies. Network Communication: LAN and WAN Technologies, Protocols for Network Systems, Asynchronous Transfer Mode, Protocols for Distributed Systems.				
<b>UNIT – II</b>	<b>Interprocess Communication:</b>				<b>(08 Hours)</b>
	Message Passing, Advantages and Features of Message Passing Systems, IPC Message Format, IPC Synchronization, Message Buffering Strategies, Multidatagram Messaging, Process Addressing Techniques, Failure Handling Mechanism. Case Study: IPC in Mach				
<b>UNIT – III</b>	<b>Remote Communication:</b>				<b>(08 Hours)</b>
	Introduction, Remote Procedural Call, RPC Implementation, RPC Implementation, Parameter Passing Semantics, Server Management, RPC Call Semantics, Communication Protocols, Client Server Binding, Exception Handling and Security, RPC in Heterogeneous Environment, Failure Handling, RPC Optimization, Case Study: Sun RPC, Java RMI.				
<b>UNIT – IV</b>	<b>Synchronization:</b>				<b>(08 Hours)</b>
	Clock Synchronization, Physical Clocks, Clock Synchronization Algorithms, Logical Clocks, Global State, Mutual Exclusion, Election Algorithms, Deadlocks: Prevention, Detection Recovery, Deadlocks in Message Communication.				
<b>UNIT – V</b>	<b>Distributed System Management:</b>				
	Resource Management, Task Assignment Approach, Load Balancing Approach, Load Sharing Approach, Process Management in Distributed Environment, Process Migration, Threads, Fault Tolerance, Component Faults, System Failures and Use of Redundancy				<b>(08 Hours)</b>
<b>UNIT – VI</b>	<b>Distributed Shared Memory:</b>				
	Architecture, Types of DSM, Hardware DSM, and Design Issues in DSM Systems. Distributed File Systems, Naming, Security in Distributed Systems, Real Time Distributed Operating System, Distributed Database Management System, Emerging Trends in Distributed Computing.				<b>(08 Hours)</b>
<b>Reference Books:</b>

Unit Test-3	UNIT –V, UNIT-VI				

# High Performance Computing

TEACHING SCHEME:	EXAMINATION SCHEME:	CREDITS ALLOTTED:
Theory: 04Hours / Week	End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	PR & OR : 50 Marks	01 Credits

UNIT - I	Computer organization:	(08 Hours)
	Memory, Registers, Instruction set architecture, Instruction processing, Pipelined processors: Pipelining, Structural, data and control hazards, Impact on programming. Cache memory: Organization, impact on programming, virtual caches, Operating systems: Processes and system calls, Process management, Program profiling.	
UNIT - II	Modern Computer Architectures :	(08 Hours)
	Memory, Floating-Point Numbers, Programming and Tuning Software - What a Compiler Does, Timing and Profiling, Eliminating Clutter, Loop Optimizations, Program execution, Program, Compilation, Object files, Function call and return, Address space, Data and its representation. Parallel Processing Concepts - Levels of parallelism instruction, transaction, task, thread, memory, and function, Models SIMD, MIMD, SIMT, SPMD, Dataflow Models, and Demand-driven Computation etc. Case Study: Cluster Computing network.	
UNIT - III	Parallel Algorithms:	(08 Hours)
	Parallel models: ideal and real frameworks, Basic Techniques: Balanced Trees, Pointer Jumping, Divide and Conquer, Partitioning, Regular Algorithms: Matrix operations and Linear Algebra, Irregular Algorithms: Lists, Trees, Graphs, Randomization: Parallel Pseudo-Random Number Generators, Sorting, Monte Carlo techniques	
UNIT - IV	Parallel Programming:	(08 Hours)
	Revealing concurrency in applications, Task and Functional Parallelism, Task Scheduling, Synchronization Methods, Parallel Primitives (collective operations), SPMD Programming (threads, OpenMP, MPI), I/O and File Systems, Parallel Matlabs (Parallel Matlab, Star-P, Matlab MPI), Partitioning Global Address Space (PGAS) languages (UPC, Titanium, Global Arrays).	
UNIT - V	High-End Computer Systems:	(08 Hours)
	Memory Hierarchies, Multi-core Processors: Homogeneous and Heterogeneous, Shared-memory Symmetric Multiprocessors, Vector Computers, Distributed Memory Computers, Supercomputers and Petascale Systems, Application Accelerators / Reconfigurable Computing, Novel computers: Stream, multithreaded, and purpose-built, Architectures: N-wide superscalar architectures, multi-core, multi-threaded	
UNIT - VI	Achieving Performance:	(08 Hours)
	Performance metrics and measurements, Measuring performance, Identifying performance bottlenecks, Restructuring applications for deep memory hierarchies, Partitioning applications for heterogeneous resources, Using existing libraries, tools, and frameworks, CASE tools.

<b>Syllabus for Unit Test:</b>	
Unit Test -1	UNIT – I, UNIT – II, UNIT – III
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI

<b>Advanced Computer Algorithms</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04Hours / Week	End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	TW & OR : 50 Marks	01 Credit
<b>UNIT – I</b>	<b>Introduction:</b>	<b>(08 Hours)</b>
	Asymptotic notation, Models of Computation, Algorithm & their complexity, Random Analysis machines, Computational complexity of RAM programs, A stored program model, Abstractions of the RAM, A primitive model of computation(Turing Machines),Relational between Turing machine & RAM model ,Pidgin ALGOL A high level lang.	
<b>UNIT - II</b>	<b>Algorithm Analysis and Algorithm Design techniques:</b>	<b>(08 Hours)</b>
	<b>Algorithm Analysis:</b> Analyzing Algorithm, Designing Algorithm, Time & Space Complexity, Average & Worst case analysis, Lower Bounds. <b>Algorithm Design techniques:</b> Divide & Conquer, Search Traversals, Dynamic Programming, Backtracking, Branch & Bound, Greedy Algorithm	
<b>UNIT - III</b>	<b>Sorting and Searching Algorithm :</b>	<b>(08 Hours)</b>
	The Sorting problem, Radix Sorting, Sorting by comparison, Heap sort-an $O(n \log n)$ comparison sort, Quick Sort-an $O(n \log n)$ expected time sort, Expected time for Order statistics, Binary Search, binary search trees, optimal binary search tree, B-Trees Algorithms on graph: Elementary graph Algorithm, Minimum spanning tree, Single Source shortest Path, All pairs shortest path	
<b>UNIT – IV</b>	<b>String Processing Algorithm and Divide and conquer method and Greedy method:</b>	<b>(08 Hours)</b>
	<b>String Processing Algorithm:</b> The naive string matching, The Robin-Karp algorithm, String matching with Finite Automata, Knuth Morris Pratt Algorithm <b>Divide and conquer method:</b> Binary search, Mergesort, Quick sort, Strassen's matrix multiplication. <b>The Greedy method:</b> Knapsack problem, job sequencing, optimal merge patterns, minimal spanning trees.	
<b>UNIT – V</b>	<b>Dynamic Programming, Back Tracking, Branch &amp; Bound:</b>	<b>(08 Hours)</b>
	<b>Dynamic Programming:</b> Multistage graphs, OBST, 0/1 Knapsack, traveling sales man problem. <b>Back Tracking:</b> Eight Queens problem, graph coloring, Hamiltonian cycles, Knapsack problem, Maze problem. <b>Branch &amp; Bound:</b> 0/1 Knapsack, Traveling salesman problem lower bound theory-comparisons trees for sorting/searching, lower bound on parallel computation.	
<b>UNIT – VI</b>	<b>NP-hard and NP-complete problems:</b>	<b>(08 Hours)</b>
	Algorithms, Complexity- intractability, Non-Deterministic Polynomial time ( NP) Decision problems, Cooks Theorem, NP-Complete problems- satisfiability problem, vertex cover problem. NP-Hard problems-graph, scheduling, code generation problems, Simplified NP Hard Problems, Approximation Algorithm for NP Hard Problem.

Unit Test -1

UNIT – I, UNIT – II, UNIT - III

Unit Test -2

UNIT – IV, UNIT – V, UNIT - VI

# Web Technologies

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week	End Semester Examination: 60 Marks	04 Credits
	Continuous Assessment: 40 Marks	

<b>UNIT – I</b>	<b>Web Environment:</b>	<b>(08 Hours)</b>
	<p>WWW, HTTP, Web Server and its deployment, N-Tier Arch., Services of Web Server – Mail server, News server, Proxy server, Multimedia server.</p> <p><b>XML Primer :</b></p> <p>Mark-up languages, XML, Uses of XML. WELL-FORMED XML: Parsing XML, Tags, text, elements, attributes, comments and empty elements. XML Declaration, Processing, Instructions, Errors in XML</p> <p>XML NAMESPACES: Need for namespaces, How XML namespaces work, URIs, When to use, namespace. <b>VALIDATION:</b> Document type definitions (DTD), Sharing vocabularies, Anatomy of DTD, Developing DTDs, DTD Limitations.</p> <p><b>XML SCHEMAS:</b> Benefit of XML schemas, Elements of XML Schema Definition, Creating a Schema from multiple documents. XPATH, XSLT, Xquery</p>	
<b>UNIT – II</b>	<b>JSP :</b>	<b>(08 Hours)</b>
	JSP overview, JSP language basics, JSP translation and compilation directives, Standard java objects from JSP, JSP configuration and deployment, actions and tags of JSP; Java servlets – Arch, servlet interface, applications of servlets.	
<b>UNIT – III</b>	<b>ASP :</b>	<b>(08 Hours)</b>
	Objects and Components, Handling databases, Data Retrieval from Databases, applications of ASP, session management, ASP with .NET	
<b>UNIT – IV</b>	<b>Web Technologies :</b>	<b>(08 Hours)</b>
	<p>Server side programs. CGI programs. Client side scripts. The Applet Concept.</p> <p>Search Engine Optimization: Strategies, Optimizing Search strategies, Robots, Spiders and Crawlers, Mobile Search Engine Optimization.</p>	
<b>UNIT – V</b>	<b>The Web as an example of client server computing :</b>	<b>(08 Hours)</b>
	<p>Characteristics of web servers: handling permissions. File Management Capabilities of common server architectures , Role of client Computer.</p> <p>Nature of Client server relationship. Web protocols Support tools for website creation and management. Developing Internet Information servers. Publishing information and application.</p>	

<b>UNIT – VI</b>	<b>Building Web applications :</b>	<b>(08 Hours)</b>
	Protocols at the application layer. Principles of Web engineering. Database driven websites. RPC. Lightweight distributed objects. The role of the middleware. Support tools. Security issues in Distributed object systems. Enterprise- wide web base.

	4. Herbert Schildt, "Complete Reference JAVA 2", TMH	
	5. Jerri L. Ledford, "Search Engine Optimization", 2 <sup>nd</sup> Edition, Wiley Publication	
<b>Syllabus for Unit Test:</b>		
Unit Test -1	UNIT – I, UNIT – II, UNIT - III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI	

## Wireless Communication And Security

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week		End Semester Examination: 60 Marks	04 Credits
		Continuous Assessment: 40 Marks	
<b>UNIT - I</b>	<b>Introduction :</b>		<b>(08 Hours)</b>
	A Short history of wireless communication. A market for mobile communication. Some research topics. A simplified reference model. Wireless Transmission. <b>Frequencies for Radio Transmission:</b> Signal antennas, signal propagation. Multiplicity, modulation, spread spectrum, cellular systems.		
<b>UNIT - II</b>	<b>Medium Access Control:</b>		<b>(08 Hours)</b>
	Motivation for a specialized MAC. SDMA, FDMA, TDMA, CDMA, Comparison of S/T/F/CDMA. <b>Telecommunication Systems:</b> GSM, DECT, TETRA, UMTS.		
<b>UNIT - III</b>	<b>Satellite Systems :</b>		<b>(08 Hours)</b>
	Basics, Routing, Localization, Handover. <b>Broadcast Systems :</b> Cyclic repetition of data, digital audio broadcasting, digital video broadcasting		
<b>UNIT - IV</b>	<b>Wireless LAN:</b> Infrared vs. radio transmission, Ad-Hoc networks, IEEE802.11, Bluetooth, Case Study on WLAN. <b>Wireless ATM :</b> Motivation for WATM, WATM services reference model, functions, radio access layer, handover, location management, addressing, mobile quality of service, access point control protocol, Case Study on WATM.		<b>(08 Hours)</b>
<b>UNIT - V</b>	<b>Mobile Network Layer:</b>		<b>(08 Hours)</b>
	Mobile IP, Dynamic host configuration protocol, Ad-hoc Networks. <b>Mobile Transport Layer :</b> Traditional TCP, Indirect TCP, Mobile TCP.		
<b>UNIT - VI</b>	<b>Performance Issues :</b>		<b>(08 Hours)</b>
	QOS issues, Security issues, Non line of sight issues, Power control issues. <b>Security</b> Encryption and Authentication, Key pre-distribution and management, Secure Ad-Hoc Networks, Denial-of-Service Attacks, Energy-aware Security Mechanisms

Unit Test -1	UNIT – I, UNIT – II, UNIT – III		
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI		

## E-Commerce and ERP

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>		<b>CREDITS ALLOTTED:</b>	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 50 Marks		01 Credit	
<b>UNIT - I</b>					
<b>Ecommerce business models and concepts, EC infrastructure, Ecommerce:</b>				<b>(06 Hours)</b>	
Ecommerce business models and concepts, EC infrastructure, Ecommerce -Frame work, anatomy of E-Commerce applications					
E-Commerce Consumer applications, E-Commerce organization. Applications. Consumer Oriented Electronic commerce - Mercantile Process models					
<b>UNIT - II</b>					
<b>E-Security and payment systems, Electronic payment systems :</b>				<b>(06 Hours)</b>	
E-Security and payment systems, Electronic payment systems - Digital Token-Based, Smart Cards, Credit Cards, Risks in Electronic Payment systems. Inter Organizational Commerce - EDI, EDI Implementation, Value added networks.					
<b>UNIT - III</b>					
<b>Concepts and communications, ethical, social and political EC issues, Intra Organizational Commerce:</b>				<b>(06 Hours)</b>	
Concepts and communications, ethical, social and political EC issues, Intra Organizational Commerce - work Flow, Automation Customization and internal Commerce, Supply chain Management.					
Corporate Digital Library - Document Library, digital Document types, corporate Data Warehouses. Advertising and Marketing - Information based marketing, Advertising on Internet, on-line marketing process, market research. Marketing, online retailing, services, content and media, social networks.					
<b>UNIT - IV</b>					
<b>Introduction To ERP:</b>					
Introduction To ERP: Evolution of ERP, What is ERP? Reasons for the growth of ERP, Scenario and Justification of ERP in India, Evaluation of ERP, Various Modules of ERP, Advantage of ERP.					
<b>UNIT - V</b>					
<b>Overview of Enterprise:</b>					
An overview of Enterprise, Integrated Management Information, Business Modeling, ERP for Small Business, ERP for make to order companies, business Process Mapping for ERP Module Design, Customized ERP, Hardware Environment and its Selection for ERP Implementation.				<b>(06 Hours)</b>	
<b>UNIT - VI</b>					
<b>ERP Market:</b>				<b>(06 Hours)</b>	
ERP Market: Introduction, SAP AG, Baan Company, Oracle Corporation, People Soft, JD Edwards World Solutions Company, System Software Associates, Inc. (SSA) QAD, A Comparative Assessment and Selection of ERP Packages and Modules.ERP implementation lifecycle, issues in implementing Vendors, Consultants and users, In-House Implementation - pros and cons, vendors, consultants, end user.					
<b>Reference Books:</b>

4. ERP Ware: ERP Implementation Framework – V.K. Garg & N.K. Venkitakrishnan					

<b>Syllabus for Unit Test:</b>	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

# Information Storage and Management

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04Hours / Week		End Semester Examination: 60 Marks	04Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		PR & OR : 50 Marks	01 Credits
<b>UNIT - I</b>	<b>Introduction to Storage Technology:</b>		<b>[8Hrs]</b>
	Data proliferation and the varying value of data with time & usage, Sources of data and states of data creation, Data center requirements and evolution to accommodate storage needs, Overview of basic storage management skills and activities, Traditional file storage and its pitfalls. The five pillars of technology, Overview of 12 storage infrastructure components, Evolution of storage, Information Lifecycle Management concept, Data categorization within an enterprise, Storage and Regulations.		
<b>UNIT - II</b>	<b>Storage Systems Architecture:</b>		<b>[8Hrs]</b>
	Intelligent disk subsystems overview, Contrast of integrated vs. modular arrays, Component architecture of intelligent disk subsystems, Disk physical structure components, properties, performance, and specifications, Logical partitioning of disks, RAID & parity algorithms, hot sparing, Physical vs. logical disk organization, protection, and back end management, Array caching properties and algorithms, Front end connectivity and queuing properties, Front end to host storage provisioning, mapping, and operation, Interaction of file systems with storage, Storage system connectivity protocols.		
<b>UNIT - III</b>	<b>Introduction to Networked Storage:</b>		<b>[8Hrs]</b>
	JBOD, DAS, SAN, NAS, & CAS evolution, Direct Attached Storage (DAS) environments: elements, connectivity, & management, Storage Area Networks (SAN): elements & connectivity, Fibre Channel principles, standards, & network management principles, SAN management principles, Network Attached Storage (NAS): elements, connectivity options, connectivity protocols (NFS, CIFS, ftp), & management principles IP SAN elements, standards (SCSI, FCIP, FCP), connectivity principles, security, and management principles, Content Addressable Storage (CAS): elements, connectivity options, standards, and management principles, Hybrid Storage solutions overview including technologies like virtualization & appliances.		
<b>UNIT - IV</b>	<b>Introduction to Information Availability:</b>		<b>[8Hrs]</b>
	Business Continuity and Disaster Recovery Basics, Local business continuity techniques, Remote business continuity techniques, Disaster Recovery principles & techniques. Case study: Storage Network for Business Continuity.		
<b>UNIT - V</b>	<b>Managing &amp; Monitoring:</b>		<b>[8Hrs]</b>
	Management philosophies (holistic vs. system & component), Industry management standards (SNMP, SMI-S, CIM), Standard framework applications, Key management metrics (thresholds, availability, capacity, security, performance), Metric analysis methodologies & trend analysis, Reactive and pro-active management best practices, Provisioning & configuration change, Problem reporting, prioritization, and handling techniques, Management tools overview		
<b>UNIT - VI</b>	<b>Information storage on cloud:</b>		<b>[8Hrs]</b>
	Concept of Cloud, Cloud Computing, storage on Cloud, ClouVocabulary, Architectural Framework, Cloud benefits, Cloud computing Evolution, Applications & services on cloud, Cloud service providers and Models, Essential characteristics of cloud computing, Cloud Security and integration.

Unit Test -1	UNIT – I, UNIT – II, UNIT – III
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI

# Cyber Security

<b>Cyber Security</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04Hours / Week	End Semester Examination: 60 Marks	04Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	PR & OR : 50 Marks	01 Credits
<b>UNIT - I</b>	<b>Cyber Security Fundamentals:</b>	<b>(08 Hours)</b>
	Network and Security Concepts, Authentication, Authorization, Non repudiation, Confidentiality, Integrity, Availability, Basic Cryptography, Symmetric Encryption, Public Key Encryption, The Domain Name System, Firewalls, Virtualization, Microsoft Windows Security Principles	
<b>UNIT - II</b>	<b>Attacker's Techniques:</b>	<b>(08 Hours)</b>
	Types of Proxies, Tunneling Techniques, Phishing, Smishing, Vishing, and Mobile Malicious Threat Infrastructure.	
<b>UNIT - III</b>	<b>Exploitation:</b>	<b>(08 Hours)</b>
	Shell code, Stack-Based Buffer Overflows, Format String Vulnerabilities, Malicious PDFs, Web Exploit Tools, Brute Force and Dictionary Attacks, Misdirection, Reconnaissance, and Cross-Site Scripting, DNS Amplification Attacks.	
<b>UNIT - IV</b>	<b>Malicious Code:</b>	<b>(08 Hours)</b>
	Self-Replicating Malicious Code, Virtual Machine Obfuscation, Persistent Software Techniques, Privileged User Accounts and Escalation of Privileges, Token Kidnapping, Man-in-the-Middle Attack.	
<b>UNIT - V</b>	<b>Defense and Analysis Techniques:</b>	<b>(08 Hours)</b>
	Memory Forensics, Capabilities of Memory Forensics, Memory Analysis Frameworks, In-Memory Forensics and Using Volatility, Honey pots, Malicious Code Naming, Automated Malicious Code Analysis Systems	
<b>UNIT - VI</b>	<b>Cyber Security Real World Impact:</b>	<b>(08 hours)</b>
	Cyber security and internal political security, International conflict in cyberspace, Nation-state cyber attack mitigation strategies, IP V6 address space, Improved security, privacy concerns, uneven world wide deployment. Case study	
<b>Reference Books:</b>		
1. Cyber security essentials by James Graham, Richard Howard, Ryan Olson		
2. Strategic Cyber Security by Kenneth Geers		
<b>Syllabus for Unit Test:</b>		
Unit Test -1	UNIT – I, UNIT – II, UNIT – III	
Unit Test -2	UNIT – IV, UNIT – V, UNIT – VI	

## Big Data Analytics

<b>Big Data Analytics</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04Hours / Week	End Semester Examination: 60 Marks	04Credits
Practical: 02 Hours / Week	Continuous Assessment: 40 Marks	
	PR & OR : 50 Marks	01 Credits
<b>UNIT - I</b>	<b>Introduction:</b>	<b>(08 Hours)</b>
	Introduction to Big data, Data Exposition, Types of data, Need for big data, Big data & its sources, Three Characteristics of big data, Challenges of Conventional Systems – Big data Problem, Traditional IT Analytics Approach, Big data use cases, Handling limitations of Big data, big data platform. Evolution of Analytic Scalability.	
<b>UNIT - II</b>	<b>Big Data Storage and Computing Platforms:</b>	<b>(08 Hours)</b>
	Big Data Storage and Computing Platforms: Traditional RDBMS, NoSQL, NewSQL, and Hadoop, Parallel computing systems, Programming models for batch, interactive, and streaming applications, Trade-offs between programming models, Survey of new emerging database and storage systems for Big Data, Tradeoffs between reduced consistency, performance, and availability, MangoDB: Introduction, overview, Design Goals for MangoDB, MangoDB shell, MangoDB applications, Multimedia database application.	
<b>UNIT - III</b>	<b>Regression Modeling - Multivariate Analysis:</b>	<b>(08 Hours)</b>
	Regression Modeling - Multivariate Analysis - Bayesian Modeling - Inference and Bayesian Networks - Support Vector and Kernel Methods - Analysis of Time Series: Linear Systems Analysis - Nonlinear Dynamics - Rule Induction - Neural Networks: Learning And Generalization - Competitive Learning - Principal Component Analysis and Neural Networks - Fuzzy Logic: Extracting Fuzzy Models from Data - Fuzzy Decision Trees - Stochastic Search Methods	
<b>UNIT - IV</b>	<b>Introduction To Streams Concepts:</b>	<b>(08 Hours)</b>
	Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform(RTAP) Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.	
<b>UNIT - V</b>	<b>Mining Frequent Itemsets:</b>	<b>(08 Hours)</b>
	Market Based Model – Apriori Algorithm – Handling Large Data Sets in Main Memory – Limited Pass Algorithm – Counting Frequent Itemsets in a Stream – Clustering Techniques – Hierarchical – K-Means – Clustering High Dimensional Data – CLIQUE And PROCLUS – Frequent Pattern based Clustering Methods – Clustering in Non-Euclidean Space – Clustering for Streams and Parallelism	
<b>UNIT - VI</b>	<b>MapReduce:</b>	<b>(08 Hours)</b>
	MapReduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases - S3 - Hadoop Distributed File Systems – Visualizations - Visual Data Analysis Techniques - Interaction Techniques; Systems and Analytics Applications - Analytics using Statistical packages-Approaches to modeling in Analytics – correlation, regression, decision trees, classification, association-Intelligence from unstructured information-Text analytics-Understanding of emerging trends and technologies-Industry challenges and application of Analytics.

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

# Cryptography and Network Security

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>		<b>CREDITS ALLOTTED:</b>	
Theory: 04Hours / Week		End Semester Examination: 60 Marks		04Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		PR & OR : 50 Marks		01 Credits	
<b>UNIT - I</b>	<b>Introduction:</b>				<b>(08 Hours)</b>
	Services, Mechanisms and Attacks, The OSI Security Architecture, A Model for Network Security. Symmetric Ciphers: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, Steganography. Block Ciphers and the Data Encryption Standard: Simplified DES, Block Cipher Principles, The Data Encryption Standard, Differential and Linear Cryptanalysis, Block Cipher Design Principles, Block Cipher Modes of Operation.				
<b>UNIT - II</b>	<b>Introduction to Finite Fields:</b>				<b>(08 Hours)</b>
	Introduction to Finite Fields: Groups, Rings, Fields, Modular Arithmetic, Euclid's Algorithm, Finite Fields of the Form GF, Polynomial Arithmetic, Finite Fields of the Form GF. Advanced Encryption Standard: Evaluation Criteria for AES, The AES Cipher. Contemporary Symmetric Ciphers: Triple DES, Blowfish, RC5, Characteristics of Advanced Symmetric Block Ciphers, RC4 Stream Cipher. Confidentiality Using Symmetric Encryption: Placement of Encryption Function, Traffic Confidentiality, Key Distribution, Random Number Generation				
<b>UNIT - III</b>	<b>Public-Key Encryption and Hash Functions:</b>				<b>(08 Hours)</b>
	Prime Numbers, Fermat's and Euler's Theorems, Testing for Primality, The Chinese Remainder Theorem, Discrete Logarithms. Public-Key Cryptography and RSA, Principles, The RSA Algorithm, Key Management, Diffie Hellman Key Exchange, Elliptic Curve Arithmetic, Elliptic Curve Cryptography				
<b>UNIT - IV</b>	<b>Message Authentication and Hash Functions:</b>				<b>(08 Hours)</b>
	Authentication Requirements, Authentication Functions, Message Authentication Codes, Hash Functions, Security of Hash Functions. Hash Algorithms: MD5 Message Digest Algorithm, Secure Hash Algorithm, RIPEMD-160, HMAC, Digital Signatures, Authentication Protocols, Digital Signature Standard.				
<b>UNIT - V</b>	<b>Authentication Applications:</b>				<b>(08 Hours)</b>
	Kerbos, X.509 Authentication Service, E-mail Security, Pretty Good Privacy, S/MIME, IP Security, Architecture, Authentication Header, Encapsulation Security Payload, Combining Security Associations, Key Management Web Security: Secure Sockets Layer and Transport Layer Security, Secure Electronic Transaction.				
<b>UNIT - VI</b>	<b>System Security:</b>				<b>(08 Hours)</b>
	Intruders, Intrusion Detection, Password Management. Malicious Software, Firewalls: Firewall Design Principles, Trusted Systems.				
<ol style="list-style-type: none"> <li>1. William Stallings, "Cryptography and Network Security", Principles and Practices, Pearson Education, Sixth Edition.</li> <li>2. Behrouz A. Forouzan, "Cryptography and Network Security", McGraw Hill Publication</li> <li>3. Atul Kahate, "Cryptography and Network Security", McGraw Hill(India)Publication, Third Edition.</li> </ol>					
<b>Syllabus for Unit Test:</b>					

Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

## Parallel Computing

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>		<b>CREDITS ALLOTTED:</b>	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 50 Marks		01 Credit	
<b>UNIT - I</b>	<b>Introduction to Parallel Programming Paradigms:</b>				<b>(08 Hours)</b>
	Types of Parallelism , Parallel Computation Models, Memory less Parallel Computers, Parallel Computers with Memory, Flynn's Taxonomy, The Data-Parallel Model, Networked Computers, The Performance of Parallel Algorithms, Amdahl's Law, Gustafson Barsis's Law, Karp-Flatt Metric, Multidimensional Meshes, Hypercube-Based Machines, Routing in Networks, The PRAM Model.				
<b>UNIT - II</b>	<b>Convergence of Parallel Architecture:</b>				<b>(08 Hours)</b>
	Communication Architecture, Shared Address Space, Message Passing, Convergence, Data parallel processing, Other Parallel Architectures, A Generic parallel architectures, shared memory systems and cache coherence, distributed-memory systems, interconnection networks and routing, Architectural Trends, Application Trends, Technology Trends, Supercomputers case study: Param.				
<b>UNIT - III</b>	<b>Programming scalable systems:</b>				<b>(08 Hours)</b>
	The message-passing model, the message-passing interface, MPI standard basic concepts of MPI: MPI_Init, MPI_Comm_size, MPI_Comm_rank, MPI_Send, MPI_Recv, MPI_Finalize, timing the MPI programs: MPI_Wtime, MPI_Wtick, collective communication: MPI_Reduce, MPI_Barrier, MPI_Bcast, MPI_Gather, MPI_Scatter, case studies: the sieve of Eratosthenes, Floyd's algorithm, Matrix-vector multiplication.				
<b>UNIT - IV</b>	<b>Shared-Memory Programming:</b>				<b>(08 Hours)</b>
	Shared-memory model, OpenMP standard, Parallel for loops, Parallel for pragma, private variables, critical sections, reductions, parallel loop optimizations, general data parallelism, functional parallelism, case studies: the sieve of Eratosthenes, Floyd's algorithm, matrixvector multiplication – distributed shared-memory programming, DSM primitives.				
<b>UNIT - V</b>	<b>Implications for Programming Models and Case Study:</b>				<b>(08 Hours)</b>
	Naming, Replication, Overhead and granularity of communication, Block Data transfer, Synchronization, Hardware Cost and Design Complexity, Case Study: Ocean, Ray trace, Data mining.				
<b>UNIT - VI</b>	<b>Fundamental Design issues:</b>				<b>(08 Hours)</b>
	Partitioning of data, Mapping of data onto the processors, Reproducibility of results, Synchronization, Scalability and Predictability of performance, Performance & Scalability, Performance Requirements, Types of performance requirements, Performance Metrics of Parallel Systems, Communication Abstraction, Programming model requirements, Communication and Replication, Starssen's Matrix multiplication to compute complexity less than $O(n^3)$ .

4. Introduction to Parallel Computing by AnanthGrama, George Karypis, Vipin Kumar, and Anshul Gupta.	
5. Programming Massively Parallel Processors by D.Kirk and W. Hwu	
<b>Syllabus for Unit Test:</b>	
Unit Test -1	UNIT – I, UNIT – II, UNIT - III
Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

## Wireless Sensor Networks

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Theory: 04 Hours / Week		End Semester Examination: 60 Marks	04 Credits
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks	
		Term Work: 50 Marks	01 Credit
<b>UNIT - I</b>	<b>Introduction &amp; Characteristics of Wireless Sensor Networks :</b>		<b>(08 Hours)</b>
	Introduction, Brief Historical Survey of Sensor Networks. Characteristic requirements for WSN - Challenges for WSNs – WSN vs Adhoc Networks - Sensor node architecture – Commercially available sensor nodes –Mote, IRIS, Mica Mote, EYES nodes, BTnodes, TelosB, Sunspot -Physical layer and transceiver design considerations in WSNs, Energy usage profile, Choice of modulation scheme, Dynamic modulation scaling, Antenna considerations.		
<b>UNIT - II</b>	<b>Medium Access Control Protocols:</b>		<b>(08 Hours)</b>
	Schedule-based protocols - SMAC - BMAC - Traffic-adaptive medium access protocol (TRAMA) - The IEEE 802.15.4 MAC protocol, <b>Case Study:</b> IEEE 802.15.4 LR-WPANs Standard - Target detection and tracking - Contour/edge detection - Field sampling, ZigBee.		
<b>UNIT - III</b>	<b>Routing And Data Gathering Protocols:</b>		<b>(08 Hours)</b>
	Routing Challenges and Design Issues in Wireless Sensor Networks, Flooding and gossiping – Data centric Routing – SPIN – Point-to-Point VPN Tunneling Protocol and Challenges- Gradient-based routing - Rumor Routing – COUGAR – ACQUIRE – Hierarchical Routing - LEACH, PEGASIS – Location Based Routing – GAF, GPSR – Real Time routing Protocols – APTEEN, SPEED, RAP - Data aggregation - data aggregation operations - Aggregate Queries in Sensor Networks - Aggregation Techniques – TAG, Tiny DB,		
<b>UNIT - IV</b>	<b>Embedded Operating Systems:</b>		<b>(08 Hours)</b>
	Operating Systems for Wireless Sensor Networks – Introduction - Operating System Design Issues - Examples of Operating Systems – TinyOS – Mate – MagnetOS –OSPM - EYES OS. Introduction to Tiny OS – NesC – Interfaces and Modules- Configurations and Wiring - Generic Components -Programming in Tiny OS using NesC, Emulator TOSSIM.		
<b>UNIT - V</b>	<b>Transport Control Protocols and Middlewares for Wireless Sensor Networks :</b>		<b>(08 Hours)</b>
	Traditional Transport Control Protocols: TCP (RFC 793), UDP (RFC 768), MobileIP, Introduction, WSN Middleware Principles, Middleware Architecture: Existing Middleware: MiLAN (Middleware Linking Applications and Networks), IrisNet (Internet-Scale Resource-Intensive Sensor Networks Services)		
<b>UNIT - VI</b>	<b>Applications of WSN:</b>		<b>(08 Hours)</b>
	WSN Applications - Home Control - Building Automation - Industrial Automation - Medical Applications - Reconfigurable Sensor Networks - Highway Monitoring - Military Applications - Civil and Environmental Engineering Applications - Wildfire Instrumentation - Habitat Monitoring - Nanoscopic Sensor Applications.

Unit Test -2	UNIT – IV, UNIT – V, UNIT - VI

# Storage Area Network

<b>TEACHING SCHEME:</b>		<b>EXAMINATION SCHEME:</b>		<b>CREDITS ALLOTTED:</b>	
Theory: 04 Hours / Week		End Semester Examination: 60 Marks		04 Credits	
Practical: 02 Hours / Week		Continuous Assessment: 40 Marks			
		Term Work: 50 Marks		01 Credit	
<b>UNIT - I</b>	<b>Information Storage and Data Centre Environment:</b>				<b>(08 Hours)</b>
	Information Storage, Evolution of Storage Architecture, Data Center Infrastructure, Virtualization and Cloud Computing, Application, Database Management System (DBMS), Host (Compute), Connectivity, Storage, Disk Drive Components, Disk Drive Performance, Disk I/O Controller Utilization, Host Access to Data, Direct-Attached Storage, Storage Design Based on Application Requirements and Disk Performance, Data Protection: RAID.				
<b>UNIT - II</b>	<b>Data and Information in SAN:</b>				<b>(08 Hours)</b>
	Data organization: File vs. Block, Object, Data store, Searchable models, File Systems, Volume Managers, Caches, Prefetching, Storage Networking Technologies, What Storage Networking Is, What to Expect from SANs, Leading up to SANs, Killer Apps for SANs				
<b>UNIT - III</b>	<b>SAN Hardware Ecosystem:</b>				<b>(08 Hours)</b>
	Components of an Intelligent Storage System, Front End, Cache, Back End, Physical Disk, Storage Provisioning, Virtual Storage Provisioning, Types of Intelligent Storage Systems – DAS, SAN, NAS, Comparing DAS, SAN & NAS, Host Bus Adapters, SFPs, FC Cables and Connectors, SCSI/SATA/SAS Cables and Connectors, JBODs, RAID Arrays, RAID Controllers, External Storage Boxes, Tape Drive, Tape Library, NAS Device, NAS Head, Fiber Channel Switches, Bridges, FC Appliances.				
<b>UNIT - IV</b>	<b>Storage Virtualization:</b>				<b>(08 Hours)</b>
	Storage Virtualization, Disk Virtualization, Block Virtualization, File Virtualization, File system Virtualization, Tape Virtualization, Tape Library Virtualization, Host Based Virtualization, Network Based Virtualization, Storage Device Virtualization.				
<b>UNIT - V</b>	<b>Protocols in SAN:</b>				<b>(08 Hours)</b>
	ATA and SATA, SPI – Parallel SCSI, SAS – Serial Attached SCSI, SAS Topology, SAS Devices, FC Topologies, FC Ports, FC Protocol Layers, FC WWNs, FC Addresses, FC Frame, FC Flow Control, Zoning, Lun Masking, iSCSI Topology, iSCSI Initiators and Targets, iSCSI Names and Addresses, Speeding Up iSCSI, iSCSI Advantages, iSCSI Limitation, Comparing Storage Protocols.				
<b>UNIT - VI</b>	<b>SAN Managements and Storage Systems:</b>				<b>(08 Hours)</b>
	Storage Management, Storage Vs. Data Classification, Information Lifecycle Management, Hierarchical Storage Management, RTO and RPO, Backup and Restore, Snapshot & CDP, De-duplication, Storage Provisioning, Storage Migration, SRM, Case study - Google FS/BigTable, Programming models: Hadoop, NAS.

	<b>Term Work:25 Marks</b>	<b>Total Credits : 05</b>	
	<b>Prat/Oral : 25 Marks</b>		
The aim of the course is to design a system to provide the solution to the existing system			
<b>Course Objectives:</b>			
1) Analyze the problem in existing system.			
2) Apply the efficient solution by wisely designing the architecture.			
<b>Course Prerequisites:</b>			
<b>Students should have knowledge of</b>			
1) Basic knowledge of java programming.			
...			
<b>Course Outcome:</b>			
<b>Students will be able to:</b>			
1) Understand problems in existing system			
2) Analyze feasibility of design proposed.			
3) Analyze the technology suitable to build the proposed system.			
4) Understand the use of design pattern to design the architecture			
5) Analyze the adherence of solution with the requirement			
6) Apply the efficient architecture to optimize the performance of the system			
...			
<b>UNIT-I</b>	<b>INTRODUCTION TO SOFTWARE ARCHITECTURE</b>	<b>( Hours)</b>	
	Introduction to Software Architecture, Architecture of Business Cycle, software architecture requirements, Types of Architecture, Documenting software architectures, recent trends in software architectures.	06	
<b>UNIT-II</b>	<b>DESIGN CONCERNS</b>	<b>( Hours)</b>	
	Introduction to the issues in design, Considering important aspects during the design SRS, Cost, Security, Resources, Compatibility, Scalability, dependency. Selection of Technology according to the requirement.	06	

<b>UNIT-III</b>	<b>DESIGN PATTERNS</b>	<b>( Hours)</b>
	Introduction to Design patterns, principles and expectations Types of design patterns Singleton, Factory, Adaptor, Facade, Proxy, Iterator, Observer, Mediator, composite. Rules and regulations to select design patterns.	06
<b>UNIT-IV</b>	<b>TECHNOLOGIS USED IN MIDDLEWARE</b>	<b>( Hours)</b>
	Types of Middleware, Application servers, Introduction to Java EE, Introduction to Java EE , JDBC, RPC, RMI, EJB Architecture, Entity, Session, Message beans, XML, XSLT. Specifications and characteristics of Middleware technologies. Recent advances in Middleware technologies.	06
<b>UNIT-V</b>	<b>N TIER ARCHITECTURE</b>	<b>( Hours)</b>
	Introduction to tiers in Architecture, Types of Tiers , XML, Client side technologies HTML, DHTML, Java Applets, ActiveX controls, DOM, AJAX. Client side technology in multi-tier architectures Examples of three tier and n-tier architectures, client side technologies.	06
<b>UNIT-VI</b>	<b>SERVER SIDE TECHNOLOGY</b>	<b>( Hours)</b>
	Multi-tier architectures, introduction to server side technologies: JSP, JSF, SOA, MVC. Java Servlets, introduction to framework struts, spring.	06

**Assignment List:**

- 1) **Design an architecture to solve collision problem in Traffic Signaling System**
- 2) **Design generalized and specialized approach to simulate traffic signaling system.**
- 3) **Implement all types of driver to connect front end with back end using modular approach.**
- 4) **Implement and maintain cookies in a structured relational database.**
- 5) **Implement data and page transfer using servlet.**
- 6) **Implement library management system using JSP.**
- 7) **Implement**
- 8) **Implement CRUD functionality using MVC architecture with struts framework.**

**Text Books:**

- 1) Software Architecture in Practice, Second Edition By Len Bass, Paul Clements, Rick Kazman  
Publisher: Addison Wesley
- 2) Design Patterns: Elements of Reusable Object-Oriented Software, Erich Gamma, Pearson Publication
- 3) OCM Java EE 6 Enterprise Architect Exam Guide (Oracle Press) by Paul Allen , Joseph Bambara, Oracle Press.

<b>Reference Books:</b>	
1)	Software Architecture in Practice, Second Edition By Len Bass, Paul Clements, Rick Kazman Publisher: Addison Wesley
2)	Agile Software Development, Principles, Patterns, and Practices, Robert C. Martin, Pearson Education
3)	Enterprise Integration Patterns: Designing, Building, and Deploying Messaging Solutions Gregor Hohpe, Bobby Woolf, Publisher: Addison Wesley
<b>Syllabus for Unit Test:</b>	
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>

<b>M.Tech (IT) Semester - I      Subject : Machine Learning</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory : 04 hrs/week</b>	<b>End Semester Examination : 60 Marks</b>	<b>Theory :04</b>
<b>Practical : 02 Hrs</b>	<b>Continuous assessment : 40 Marks</b>	<b>Practical : 01</b>
	<b>Term Work:25 Marks</b>	
	<b>Prat/Oral : 25 Marks</b>	<b>Total Credits : 05</b>
<b>Course Objectives:</b>		
1) Introduces fundamental concepts and methods for machine learning		
2) Familiarize with basic learning algorithms and techniques and their applications		
<b>Course Prerequisites:</b>		
Students should be familiar with logic, elementary probability theory, elementary linear algebra, and multivariable calculus		
<b>Course Outcome:</b>		
..		
<b>Students will be able to:</b>		
1) Understand regression		
2) Understand basic probability theory		
3) Understand estimation and classification techniques		
4).Understand Bayesian and Monto Carlo methods		
5).Understand concepts of Lagrange multipliers and Clustering		
6) Understand Hidden Markov Models		
<b>UNIT-I</b>		<b>( 08 Hours)</b>
	<p>Introduction to Machine Learning: Types of Machine Learning, A simple problem.</p> <p>Linear Regression: The ID case, Multidimensional inputs, Multidimensional outputs.</p> <p>Non Linear Regression: Basis function regression, Over fitting and Regularization,</p> <p>Artificial Neural Networks, K-Nearest Neighbors.</p>	

	Quadratics: Optimizing a quadratic.	
<b>UNIT-II</b>		<b>( 08 Hours)</b>
	Basic Probability Theory: Classical logic, Basic definitions and rules, Discrete random Variables, Binomial and Multinomial distributions, Mathematical expectations. Probability Density Functions(PDFs): Mathematical expectation, mean, and variance, Uniform distributions, Gaussian distributions: Diagonalization, Conditional Gaussian Distribution.	
<b>UNIT-III</b>		<b>( 08 Hours)</b>
	Estimation: Learning a binomial distribution, Bayes' Rule, parameter estimation: MAP, ML, and Bayes' Estimates, Learning Gaussians, MAP nonlinear regression. Classification: Class Conditionals, Logistic Regression, Artificial Neural Networks, K-Nearest Neighbor Classification, generative vs. Discriminative models, Classification by LS Regression, Naïve Baye's: Discrete Input Features, Learning, Gradient Decsnt: Finite differences.	
<b>UNIT-IV</b>		<b>( 08 Hours)</b>
	Cross Validation, Bayesian methods: Bayesian Regression, Hyperparameters, Bayesian model Selection. Monte Carlo Methods: Sampling Faussions, Importance Sampling, Markov Chain Monte Carlo (MCMC). Principal Components Analysis: The model and learning, Reconstruction, Properties of PCA, Whitening, Modelling, Probabilistic PCA.	
<b>UNIT-V</b>		<b>(08 Hours)</b>
	<b>Lagrange Multipliers:</b> Examples, Least-Squares PCA in one-dimension, Multiple constraints, Inequality constraints.  <b>Clustering:</b> K-means Clustering, K-medoids Clustering, Mixtures of Gaussians: Learning, Numerical issues, the Free Energy, proofs, Relation to K-means, Degeneracy. Determining the number of clusters.	
<b>UNIT-VI</b>		<b>(08 Hours)</b>
	<b>Hidden Markov Models:</b> Markov Models, Hidden Markov Models, Viterbi Algoriyhm, The Forward Algorithm,	
<b>Assignment List:</b>		
1)	<b>To study and implement K-Nearest neighbor algoritm</b>	
2)	<b>Problems solving on Probability density functions and Gaussian distribution</b>	
3)	<b>Solving problems related to classification and estimation</b>	
4)	<b>Solving problems related to Bayesian method and Monte Carlo methods</b>	
5)	<b>To study and implement K-means clustering</b>	

<b>6)</b>	<b>Comparison of various Hidden Markov Models</b>	
<b>Text Books:</b>		
<b>1)</b>	Y Kononenko, "Machine Learning And Data Mining: Introduction to Principles and Algorithms", Horwood Publishing	
<b>2)</b>	Kevin Patrick Murphy, "Machine Learning: a Probabilistic Perspective", MIT Press	
<b>Reference Books:</b>		
<b>1)</b>	Tom Mitchell, "Machine Learning", McGraw-Hill, 1997	
<b>2)</b>	Michael Berry & Gordon Linoff, "Mastering Data Mining", John Wiley & Sons	
<b>3)</b>	Cios, W. Pedrycz, R. Swiniarski, L. Kurgan, "Data Mining: A Knowledge DiscoveryK. Approach", Springer	
<b>Syllabus for Unit Test:</b>		
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>	
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>	

<b>M.Tech (IT) Semester - I Subject : MOBILE NETWORKS AND COMMUNICATION</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory : 04 hrs/week</b>	<b>End Semester Examination : 60 Marks</b>	<b>Theory :04</b>
	<b>Continuous assessment : 40 Marks</b>	<b>Total Credits : 04</b>
<b>Course Objectives:</b>		
To gain an understanding of the principles behind the design of wireless communication systems and technologies.		
<b>Course Prerequisites:</b>		
<b>Students should have knowledge of</b>		
Computer Networking & communication system		
<b>Course Outcome:</b>		
<b>Students will be able to:</b>		
1) Understand mobile cellular architecture.		
2) Understand the multiple access schemes & IEEE802.11		
3) Analyze the technology channel interference in path propagation.		
4) Understand the technology switching and traffic system.		
5) Analyze the GSM System.		
6) Understand the technology HEPERLAN & Android system.		
<b>UNIT-I</b>	<b>Introduction to Mobile Communication</b>	<b>( Hours)</b>
	Cellular mobile architecture overview and cellular system design , Frequency management and channel assignment, Frequency reuse channels, concepts of cell splitting, handover in cellular system, handoff algorithms and dropped calls.	08
<b>UNIT-II</b>	<b>Multiple Access Schemes</b>	<b>( Hours)</b>
	SDMA, FDMA, TDMA, CDMA, comparison of S/T/F/CDMA based on terminals signal separation and advantages and disadvantages; IEEE 802.11 & 802.16 wireless standards, System architecture.	08
<b>UNIT-III</b>	<b>Propagation Path Loss and Propagation Models</b>	<b>( Hours)</b>
	Co-channel & Non-co-channel interference: Exploring co-channel interference areas in system, reduction of co channel interference, Different types of non-co channel interferences, different ways to reduce interference and in turn improve cell coverage.	08
<b>UNIT-IV</b>	<b>Switching and traffic</b>	<b>( Hours)</b>
	General description, Special features for handling traffic, Small switching systems, systems enhancement, resource allocation and	08

	mobility management.	
<b>UNIT-V</b>	<b>Practical Cellular Mobile system-GSM</b>	<b>( Hours)</b>
	Cellphone generations 1G, 2G, 3G, Standards for wireless communication system UMTS etc; GSM architecture and interfaces, GSM subsystems, mapping of GSM layers on to OSI layers. <b>CDMA:</b> Major attributes IS-95 system architecture, air interface, physical and logical channel and call processing.	08
<b>UNIT-VI</b>	<b>Wireless Local Area Networks</b>	<b>( Hours)</b>
	Introduction, Types of WLANs, Hidden station problem, HIPERLAN Type 1: HIPERLAN/1 MAC sublayer, HIPERLAN/1 CAC layer, HIPERLAN/1 physical layer. IEEE 802.11 WLAN standards: IEEE 802.11 physical layer, IEEE 802.11 MAC sublayer. IEEE 802.11 and HIPERLAN standards for 5 GHz band: HIPERLAN/2 physical layer, HIPERLAN /2 data link control layer. Bluetooth: Introduction, User Scenario, Architecture, protocol. <b>Introduction to Android</b> Layers, android components, mapping application to process. Android development basics. Hardware tools, Software tools, Android SDK features	08
<b>Text Books:</b>		
1)	William C.Y.Lee, “Mobile cellular Telecommunication” ,2nd Ed. McGraw-Hill Ā	
2)	Jochen Schiller, “Mobile Communication” Pearson Education Ā	
3)	V. K. Garg, J. E. Wilkes, “Principle and Application of GSM”, Pearson Education	
<b>Reference Books:</b>		
1)	V. K. Garg, “IS-95 CDMA &CDMA 2000”, Pearson Education	
2)	W. Frank Ableson,Robi sen, Chris King, “ Android IN ACTION “, Third Edition, Dreamtech Press	
3)	Mobile Computing By Rajkamal (Oxford).	
<b>Syllabus for Unit Test:</b>		
<b>Unit Test - 1</b>	<b>Unit I ,II and III</b>	
<b>Unit Test - 2</b>	<b>Unit IV, V and VI</b>	

<b>M.Tech (IT) Semester - I Subject: MOBILE NETWORKS AND COMMUNICATION</b>

<b>Theory : 04 hrs/week</b>	<b>End Semester Examination : 60 Marks</b>		<b>Theory : 04</b>
	<b>Continuous assessment : 40 Marks</b>		<b>Total Credits : 04</b>
<b>Course Objectives:</b>			
1) Assist students in planning and carrying out research projects, further research oriented studies or jobs			
2) The students are exposed to the principles, procedures and techniques of implementing a research finding.			
3) Students involve with finding out the literature using information technology / computer technology and with using the tools for data analysis in various sectors, and writing the reviews, papers, reports and thesis.			
<b>Course Prerequisites:</b>			
<b>Students should have knowledge of</b>			
1) Problem definition			
2) Project Preparation and publications			
3) Mathematical and Statistical Analysis			
<b>Course Outcome:</b>			
<b>Students will be able to:</b>			
1) Define and describe the research, research process and research methods.			
2) Understand and apply research methods including design, data analysis, and interpretation.			
3) Project Report, and Research Paper writing			
<b>UNIT-I</b>	<b>Research Idea</b>		<b>( Hours)</b>
	Introduction to research. Research: objectives, motivation, types, approaches, methods and methodology. Research and scientific method.		08
<b>UNIT-II</b>	<b>Research Processes</b>		<b>( Hours)</b>
	How research is done, research processes, research criteria, research problem definition, problem selection, need of defining the problem, techniques involved in defining a problem.		08
<b>UNIT-III</b>	<b>Research Design</b>		<b>( Hours)</b>
	Research design: idea, why research designs, characteristics of design, types of designs, experimental design.		08
<b>UNIT-IV</b>	<b>Novelty</b>		<b>( Hours)</b>
	Novelty and Originality in Research: Resources, skills, time management, role of supervisor and research scholar, interaction with subject experts.		06
<b>UNIT-V</b>	<b>Paper, Thesis and Report Writing</b>		<b>( Hours)</b>
	Thesis Writing: Title, Abstract, Introduction, Literature review / previous works, Methodology, Result / Data analysis, Comparisons		08

	with earlier works, Conclusion, Future Scopes and References (IEEE / Springer / ACM / Elsevier formats). Importance of literature review, source of literature: books, journals, proceedings, thesis and dissertations, unpublished documents. On-line Searching: Database, SciFinder, Scopus, Science Direct, Searching research articles, Citation Index, Impact Factor, H-index.	
<b>UNIT-VI</b>	<b>Tools</b>	<b>( Hours)</b>
	Analytical tools, Introduction to data analysis, linear data and non-linear data, exponential type data, logarithmic type data, power function data and polynomials of different orders. Plotting and fitting of linear, Non-linear, Gaussian, Polynomial, and Sigmoidal type data. Quantitative Techniques: Steps of quantitative analysis, reliability of the data, errors classification, accuracy, precision, statistical errors. LaTeX: Writing scientific report, research report, revision, writing project proposal, paper writing for international journals, conference presentation, Slides preparation, pictures, graphs and citation styles.	10
<b>Assignment List:</b>		
1)	Briefly describe the different steps involved in a research process. What do you mean by research? Explain its significance in modern times.	
2)	Write short notes on: Design of the research project; Ex post facto research; Motivation in research; Objectives of research; Criteria of good research; Research and scientific method.	
3)	Describe the different types of research, clearly pointing out the difference between an experiment and a survey.	
4)	What is the necessity of defining a research problem? Explain.	
5)	Explain the meaning of the following in context of Research design: (a) Extraneous variables; (b) Confounded relationship; (c) Research hypothesis; (d) Experimental and Control groups; (e) Treatments.	
6)	Distinguish between an experiment and survey. Explain fully the survey method of research.	
7)	Write short notes on the following: (a) Cross tabulation; (b) Discriminant analysis; (c) Coefficient of contingency; (d) Multicollinearity; (e) Partial association between two attributes.	
8)	5. Distinguish between the following:	

	<p>(a) Statistic and parameter;  (b) Confidence level and significance level;  (c) Random sampling and non-random sampling;  (d) Sampling of attributes and sampling of variables;  (e) Point estimate and interval estimation.</p> <p>7. 8. In a sample of 400 people, 172 were males. Estimate the population proportion at 95% confidence level.</p>
9)	<p>(a) 500 articles were selected at random out of a batch containing 10000 articles and 30 were found defective. How many defective articles would you reasonably expect to find in the whole batch?  (b) In a sample of 400 people, 172 were males. Estimate the population proportion at 95% confidence level.</p>
10	<p>“We can teach methods of analysis, yet any extensive research... requires something equally important: an organisation or synthesis which provides the essential structure into which the pieces of analysis fit.” Examine this statement and show how a good research report may be prepared.</p>
<b>Text Books:</b>	
1)	C. R. Kothari, Research Methodology Methods and Techniques, 2nd. ed. New Delhi: New Age International Publishers, 2009.
2)	P. Oliver, Writing Your Thesis, New Delhi: Vistaar Publications, 2004.
<b>Reference Books:</b>

<b>Syllabus for Unit Test:</b>	
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>

<b>M.Tech IT Semester II</b>		<b>Subject : Information Retrieval</b>		
<b>Teaching Scheme</b>		<b>Examination Scheme</b>		<b>Credit Allotted</b>
<b>Theory : 04 hrs/week</b>		<b>End Semester Examination : 60 Marks</b>		<b>Theory :04</b>
<b>Practical :02</b>		<b>Continuous assessment : 40 Marks</b>		<b>Practical : 01</b>
		<b>Term Work:25 Marks</b>		
		<b>Prat/Oral : 25 Marks</b>		<b>Total Credits : 05</b>
<b>Course Objectives:</b>				
1) To provide students with an overview of the main principles and methods underlying the domain of Information Retrieval.				
2) To address more recent developments in IR such as collaborative filtering and Latent Semantic Indexing.				
<b>Course Prerequisites:</b>				
<b>Students should have knowledge of</b>				
1) Basic basic information retrieval techniques.				
2) Data Structures and Algorithm Analysis				
<b>Course Outcome:</b>				
<b>Students will be able to:</b>				
1) Understand the impact on web of information retrieval.				
2) Understand basic information retrieval models.				
3) understand experimental evaluation of information retrieval				
4) understand information retrieval implementation in search engines				
5) understand language-model based retrieval				
6) understand Information Extraction and Integration				
<b>UNIT-I</b>	<b>Introduction</b>			<b>( Hours)</b>
	Goals and history of IR. <b>IR Basics:</b> inverted index, query and document representations, boolean retrieval, simple tf/idf and other ranking schemes.			08
	The impact of the web on IR. Information behavior, browsing vs seeking, types of search			
<b>UNIT-II</b>	<b>Basic IR Models</b>			<b>( Hours)</b>
	Boolean and vector-space retrieval models; ranked retrieval; text-similarity metrics; TF-IDF (term frequency/inverse document frequency) weighting; cosine similarity.			08
	<b>Basic Tokenizing, Indexing, and Implementation of Vector-Space Retrieval:</b>			
	Simple tokenizing, stop-word removal, and stemming; inverted indices; efficient processing with sparse vectors; Java implementation.			

<b>UNIT-III</b>	<b>Experimental Evaluation of IR</b>	<b>( Hours)</b>
	Performance metrics: recall, precision, and F-measure; Evaluations on benchmark text collections.  <b>Query Operations and Languages:</b>  Relevance feedback; Query expansion; Query languages.  <b>Text Representation:</b>  Word statistics; Zipf's law; Porter stemmer; morphology; index term selection; using thesauri. Metadata and markup languages (SGML, HTML, XML).	08
<b>UNIT-IV</b>	<b>Web Search</b>	<b>( Hours)</b>
	Search engines; spidering; metacrawlers; directed spidering; link analysis (e.g. hubs and authorities, Google PageRank); shopping agents.  <b>Text Categorization:</b> Categorization algorithms: Rocchio, nearest neighbor, and naive Bayes. Applications to information filtering and organization.	08
<b>UNIT-V</b>	<b>Language-Model Based Retrieval</b>	<b>( Hours)</b>
	Using naive Bayes text classification for ad hoc retrieval. Improved smoothing for document retrieval.  <b>Text Clustering:</b> Clustering algorithms: agglomerative clustering; k-means; expectation maximization (EM). Applications to web search and information organization.	08
<b>UNIT-VI</b>	<b>Recommender Systems</b>	<b>( Hours)</b>
	Collaborative filtering and content-based recommendation of documents and products.  <b>Information Extraction and Integration:</b>  Extracting data from text; semantic web; collecting and integrating specialized information on the web.	08
<b>Assignment List:</b>		
<b>1)</b>	Study impact of Information retrieval on web	
<b>2)</b>	Write a program to implement TF-IDF to rank data	
<b>3)</b>	Write a program to normalize the data	
<b>4)</b>	Write a program to analyze indexer	
<b>5)</b>	Write a program to analyze recall and F-measure top 3 popular search engines.	
<b>6)</b>	Analyze working of open source crawlers.	
<b>7)</b>	Implement naïve bayes algorithm to retrieve the data	
<b>8)</b>	Write a program to implement k-means algorithm.	
<b>9)</b>	Write a program to design dynamic forms for collaborative filtering	

<b>10)</b>	Write a program to to collect feedback using various recommendation techniques
<b>Text Books:</b>	
1)	Introduction to Information Retrieval, by C. Manning, P. Raghavan, and H. Schütze. Cambridge University Press, 2008
<b>Reference Books:</b>	
1)	Search Engines: Information Retrieval in Practice by W. Bruce Croft, Donald Metzler, and Trevor Strohman
2)	Introduction to Information Retrieval, Christopher D. Manning, Prabhakar Raghavan, and Hinrich Schutze, Cambridge University Press. 2008
<b>Syllabus for Unit Test:</b>	
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>

<b>M.Tech IT Semester II                      Subject : Real Time Systems</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory     : 04 hrs/week</b>	<b>End Semester Examination     : 60 Marks</b>	<b>Theory        :04</b>
	<b>Continuous assessment             : 40 Marks</b>	
		<b>Total Credits : 04</b>

<b>Course Objectives:</b>		
1) The aim of the course is to introduce the student to the theory of formal verification methods and techniques used for real time systems.		
2) This course provides a comprehensive introduction to understand the underlying principles, techniques and approaches which constitute a coherent body of knowledge in Real Time System.		
<b>Course Prerequisites:</b>		
<b>Students should have knowledge of</b>		
1)Basic understanding of C.		
2) Basic understanding of Computer Architectures.		
3) Basic understanding of Operating Systems		
<b>Course Outcome:</b> Real time system is one of class of f complex systems whose performance must be analyzed at the earlier phases of development. The methods and techniques in this course are widely used now a day in industries for these verifications of Real Time System. The students would have then a strong background of modeling, simulation and verification..		
<b>Students will be able to:</b>		
1) Clearly differentiate the different issues that arise in soft and hard real-time systems. Explain the various concepts of time that arise in real-time systems.		
2) Understand basic multi -task scheduling algorithms and approaches for scheduling.		
3) Understand basic for periodic, aperiodic, and sporadic tasks as well as understand the impact of the latter two on scheduling.		
4)Able to understand the desired language characteristics of real time programming languages.		
5) Clearly differentiate the Real Time Vs Gerenal – Purpose Databases.		
6)Understand the real time communication.protocols.		
<b>UNIT-I</b>	<b>Introduction</b>	<b>( 08 Hours)</b>
	Real time Applications,Hard Versus Soft Real Time Systems, A reference model of Real Time Systems ,Issues in Real-Time Computing, Structure of real time systems, Task Classes, characterizing Real -Time Systems: Performance Measures for Real Time Systems., Estimating Program Run Times	
<b>UNIT-II</b>	<b>Real Time Scheduling</b>	<b>( 08 Hours)</b>
	<b>Approaches to Real Time Scheduling :</b> Clock Driven Approach, Weighted Round Robin Approach, Priority Driven Approach <b>Scheduling :</b> Introduction, Classical Uniprocessor Scheduling - Rate Monotonic scheduling Algorithm,Preemptive Earliest Deadline First(EDF) Algorithm <b>Uniprocessor scheduling of IRIS tasks-</b> Identical Linear Reward Functions,Nonidentical Reward Functions,0/1 Reward Functions,Identical	

	Concave Reward Function, Non identical Concave Reward Function,	
<b>UNIT-III</b>	<b>Task Assignment</b>	<b>( 08 Hours)</b>
	Utilization Balancing Algorithm,A Next – Fit Algorithm for RM Scheduling,A Bin – Packing Assignment Algorithm for EDF,A Myopic Offline Scheduling (MOS) Algorithm,The Buddy Strategy,Assignment and Precedence Conditions.	
<b>UNIT-IV</b>	<b>Programming Languages and Tools</b>	<b>( 08 Hours)</b>
	Introduction,Desired language characteristics,Data Typing,Control Structures,Facilitating Hierarchical Decomposition,Packages,Run Time Error Handling,Multitasking,Task Scheduling,Timing specifications,Experimental Languages:Flex,Euclid <b>Run Time Support:</b> Compiler,Linker,Debuuger,Kernel	
<b>UNIT-V</b>	<b>Real Time Databases</b>	<b>(08 Hours)</b>
	Introduction,Real Time Vs Gerenal – Purpose Databases,Main memory databases,Transaction Priorities,Transaction Aborts,Concurrency Control Issues,Disk Scheduling Algorithm,A Two-Phase Approach to improve predictability,Mainaining serilaliation Consistency,Databases for Hard real Time systems.	
<b>UNIT-VI</b>	<b>Real Time Communication</b>	<b>(08 Hours)</b>
	Introduction,Model Of Real Time Communication,Priority based Service Disciplines for switched network,Weighted Round Robin service disciplies,Medium Access control protocols of Broadcast networks,Real Time Protocols,Communication in multicomputer systems	

**Text Books:**

- 1) C.M.Krishna,Kang G.Shin “Real Time Systems”,Tata McGraw Hill Edition
- 2) Jane W.S.Liu,”Real Time Systems” Pearson Educatio

**Reference Books:**

- 1) Real-Time Systems: Theory and Practice Kindle Edition by Rajib Mall

**Syllabus for Unit Test:**

**Unit Test -1** | **Unit I ,II and III**

**Unit Test -2** | **Unit IV, V and VI**

<b>M.Tech IT Semester II            Subject :Information Security</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory : 04</b> Hrs/week	<b>End Semester Examination : 60 Marks</b>	<b>Theory: 04</b>
<b>Practical :02</b> Hrs/week	<b>Continuous assessment : 40 Marks</b>	<b>Practical : 01</b>
	<b>Term Work : 25 Marks</b>	<b>Total Credits:05</b>
	<b>Prat/Oral : 25 Marks</b>	
<b>Course Objectives:</b>		
<ul style="list-style-type: none"> <li>• Discuss various administrative, technical, governance, regularity and policy aspects of Information Security Management.</li> </ul>		

- Provide hands on approaches will be discussed to better understand and to devise strategies related to security policy.

**Course Prerequisites:**

**Students should have knowledge of**

**1** Fundamentals of Telecommunication and computer networks.

**Course Outcome:**

**Students will be able to:**

**1)** Understand mathematical formulation in security algorithms.

**2)** Understand aspect of information security management including planning, process, policy, procedure and security model as well as hardware and software technologies to safeguard organizational assets.

**3)** develop skills of security management progression within an organization.

**4)** Perform email and graphic image recovery as well as investigations.

**5)** Implement cryptography algorithms.

**6)** Learn business continuity planning concepts.

UNIT-I	MATHEMATICAL FOUNDATIONS OF INFORMATION SECURITY :	(6 Hours)
	<p>Topics in elementary number theory: <math>O</math> and <math>\Omega</math> notations ,Euclidean algorithm ,Congruence's, Euler's phi function , Fermat's Little Theorem , Chinese Remainder Theorem , Applications to factoring ,finite fields , quadratic residues and reciprocity: Quadratic residues ,Legendre symbol , Jacobi symbol. Simple Cryptosystems: Enciphering Matrices, Encryption Schemes, Symmetric and, Asymmetric Cryptosystems, Cryptanalysis, Block ciphers, Use of Block Ciphers, Multiple Encryption, Stream Ciphers, Affine cipher, Vigenere, Hill, and Permutation Cipher, Secure Cryptosystem.</p>	
UNIT-II	SECURITY ELEMENTS:	( 6 Hours)
	<p>Authorization and Authentication - types, policies and techniques - Security certification - Security monitoring and Auditing - Security Requirements Specifications - Security Polices and Procedures, Firewalls, IDS, Log Files, Honey Pots .Access control, Trusted Computing and multilevel security - Security models, Trusted Systems, Software security issues, Physical and infrastructure security, Human factors – Security awareness, training , Email and Internet use policies, Third Party Development - Intellectual Property Issues .</p>	
UNIT-III	INFORMATION SECURITY POLICIES: INDUSTRIES PERSPECTIVE:	(6 Hours)
	<p>Introduction to Information Security Policies, About Policies, why Policies are Important ,When policies should be developed , How Policy should be developed - Policy needs – Identify what and from</p>	

	whom it is being protected , Data security consideration, Backups, Archival storage and disposal of data - Intellectual Property rights and Policies – Incident Response and Forensics - Management Responsibilities – Role of Information Security Department.	
<b>UNIT-IV</b>	<b>SECURITY THREATS :</b>	<b>( 6 Hours)</b>
	Sources of security threats- Motives - Target Assets and vulnerabilities – Consequences of threats- E-mail threats - Web-threats - Intruders and Hackers, Insider threats, Cyber crime Security Threat Management: Risk Assessment - Forensic Analysis - Security threat correlation – Threat awareness - Vulnerability sources and assessment- Vulnerability assessment tools -Threat identification - Threat Analysis - Threat Modeling - Model for Information Security Planning.	
<b>UNIT-V</b>	<b>PUBLIC KEY CRYPTOSYSTEMS:</b>	<b>(6 Hours)</b>
	The idea of public key cryptography, RSA Cryptosystem , Bit security of RSA , ElGamal Encryption , Discrete Logarithm , Knapsack problem , Zero-Knowledge Protocols . Primality and Factoring: Pseudo primes , the rho ( $\gamma$ ) method , Format factorization and factor bases ,the continued fraction method , the quadratic sieve method. Number Theory and Algebraic Geometry: Elliptic curves, basic facts , elliptic curve cryptosystems , elliptic curve primality test ,elliptic curve factorization.	
<b>UNIT-VI</b>	<b>AUDITING AND BUSINESS CONTINUITY PLANNING</b>	<b>( 6 Hours)</b>
	: Introduction to information security audit and principles of audit. Business continuity planning and disaster recovery. Case study: 9/11 tragedy. Backup and recovery techniques for applications and storage. Computer forensics: techniques and tools. Forensic tools VMware,Security testing tool BackTrack, Audit Tools: NISSUS and NMAP. Information Security Standards and Compliance: Overview of ISO 17799 Standard. Legal and Ethical issues.	
<b>Assignment List:</b>		
<b>1.</b>	Assume a web-based system that has a state-less front-end web server (which just processes requests as it is with no state being tracked), an application engine (such as a Java servlet engine) that receives requests forwarded by the front-end, and a database that is used store/retrieve/manage data by the application engine. The application engine hosts application for a bank. The web-based system allows for a user to carry out online transactions, online viewing of accounts as well as other common tasks. (a) What types of logging mechanisms should be used for the front-end, the application engine, and for the database in order to audit the requests received, their processing, and the privilege modes/user ids in which requests are processed. (b) What auditing should such a system support?	

2.	<p>Pretend you've just seen a new type of malware that places the malicious code in an audio file, by using different frequencies to correspond to different instructions. Existing vulnerabilities are used to get access to the system and install a small interpreter that reads the infected audio files and executes them. Assume that you are unable to detect/prevent the interpreter (and that it doesn't do anything harmful by itself anyway) - your job is to detect or prevent it from executing malicious audio files.</p> <p>(a) List one or more ways you could <i>detect</i> an infected audio file. Provide a brief (one paragraph) description of each approach.</p>
3.	Write a program to perform substitution ciphers to encrypt the explain text to Caesar cipher and to decrypt it back to plain text.
4.	Write a program to generate Symmetric Keys for the following Cipher algorithms DES, AES, Blowfish, TripleDES.
5.	<p>Write a program to encrypt input string by using SecretKey of the following algorithms, and then decrypt the encrypted string and compare the decrypted string with the input string. Use the following algorithms for encryption and decryption:</p> <p>a.RSA b.AES c.DSA</p>
6.	Write a program to perform transposition ciphers to encrypt the plain text to cipher and to decrypt it back to plain text using Simple Columnar technique.
7.	Assignment based on the presentation on either of following topics: ISO 17799 Standard NESSUS and NMAP Audit Tools ElGamal Encryption Asymmetric Cryptosystems
8.	Case study on secure configuration of Email Server.

<b>M.Tech IT Semester III ELECTIVE I: Natural Language Processing And Understanding</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory : 04 hrs/week</b>	<b>End Semester Examination : 60 Marks</b>	<b>Theory :04</b>
<b>Practical : 02 Hrs</b>	<b>Continuous assessment : 40 Marks</b>	<b>Practical : 01</b>
	<b>Term Work :25 Marks</b>	
	<b>Prat/Oral : 25 Marks</b>	<b>Total Credits : 05</b>
<b>Course Objectives:</b>		
1. To understand natural language processing and to learn how to apply basic algorithms in this field.		
2. To conceive basics of knowledge representation, inference, and relations to the artificial intelligence.		
3. To get acquainted with the algorithmic description of the main language levels: morphology, syntax, semantics, and pragmatics, as well as the resources of natural language		
<b>Course Prerequisites:</b>		
Students should have knowledge of working of compiler phases		
<b>Course Outcome:</b>		
<b>Students will be able to:</b>		
1. Evaluate language technology components.		
2. Understand various parsing methodologies.		
3. Understand various language models and relate them in probability perspective.		
4. Map and solve the language parsing problem with dynamic programming.		
5. Understand machine learning techniques and can assess which ones are suitable for a given problem.		
<b>UNIT-I</b>	Introduction and Overview:	<b>( 08 Hours)</b>
	Introduction, Overview and Linguistics, Grammars and Languages, Basic Parsing Techniques, Semantic analysis and Representation Structures, Natural Language Generation, Natural Language Systems, What is Natural Language Processing ?,Ambiguity and Uncertainty in language.	
<b>UNIT-II</b>	<b>Parsing and CFG:</b>	<b>( 08 Hours)</b>
	<p><b>String Edit Distance and Alignment:</b> Key algorithmic tool: dynamic programming, First a simple example, its use in optimal alignment of sequences. String edit operations, edit distance, examples of use in spelling correction, machine translation.</p> <p><b>Context Free Grammars:</b> Constituency, CFG definition, use and limitations. Chomsky Normal Form. Top-down parsing; Bottom-Up Parsing, and the Problems with each. Non-probabilistic model.</p> <p><b>Parsing:</b> Efficient CFG parsing with CYK, another dynamic programming algorithm. Designing a little grammar and parsing with it on some test data.</p>	

<b>UNIT-III</b>	<b>Information Theory :</b>	<b>( 08 Hours)</b>
	What is information? Measuring it in bits. Entropy, cross-entropy, information gain. Its application to some language phenomena. <b>Language modeling and Naive Bayes:</b> Probabilistic Language modeling and its applications. Markov models. Estimating the Probability of a Word, and Smoothing. Generative models of language and their Application.	
<b>UNIT-IV</b>	<b>Hidden Markov Models :</b>	<b>( 08 Hours)</b>
	<b>Part of Speech Tagging and Hidden Markov Models :</b> The concept of Parts-of-speech, Examples, usage. The Penn Treebank and Brown Corpus. Probabilistic (weighted) finite state automata. Hidden Markov models (HMMs), definition and use. <b>Viterbi Algorithm for Finding Most Likely HMM Path :</b> Dynamic programming with Hidden Markov Models, and its use for part-of-speech tagging, Chinese Word Segmentation, Prosody, information extraction, Weighted Context Free Grammars. Weighted CYK. Pruning and Beam Search.	
<b>UNIT-V</b>	<b>Classifiers and Models:</b>	<b>(08 Hours)</b>
	<b>Maximum Entropy:</b> The maximum entropy principle, and its relation to maximum likelihood. The need in NLP to integrate many pieces of weak evidence. Maximum entropy classifiers and their application to document classification, sentence segmentation, and other language tasks. <b>Maximum Entropy Markov Models &amp; Conditional Random Fields:</b> Part-of-speech tagging, Noun-phrase segmentation and information extraction models that combine maximum entropy and finite-state machines. State-of-the-art models for NLP.	
<b>UNIT-VI</b>	<b>Machine Translation:</b>	<b>(08 Hours)</b>
	Probabilistic models for Translating any Language into English. Alignment, translation, Language generation.	
<b>Text Books:</b>		
1.	Jurafsky, Dan and Martin, James, Speech and Language Processing, Prentice Hall.	
<b>Reference Books:</b>		
1.	Allen, James, Natural Language Understanding, Second Edition, Benjamin/Cumming, 1995.	
2.	Charniack, Eugene, Statistical Language Learning, MIT Press, 1993.	
3.	Manning, Christopher and Heinrich, Schutze, Foundations of Statistical Natural Language Processing, MIT Press, 1999.	

4.	Radford, Andrew et. al., Linguistics, an Introduction, Cambridge University Press, 1999.
	<b>Assignment list :</b>
1.	Implement part of a noisy-channel model for spelling correction.
2.	Write regular expressions that extract phone numbers and regular expressions that extract email addresses.
3.	Using Naïve Bayes algorithm classify selected movie review as positive or negative
4.	Build a maximum entropy Markov model (MEMM) for identifying person names in newswire text.
5.	Implement two translation models, IBM model 1 and IBM model 2, and apply these models to predict English word alignments.
<b>Syllabus for Unit Test:</b>	
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>

<b>M.Tech IT Semester III Subject: Elective - I Advanced MIS</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory : 04 hrs/week</b>	<b>End Semester Examination : 60 Marks</b>	<b>Theory : 04</b>
<b>Practical : 02 Hrs</b>	<b>Continuous assessment : 40 Marks</b>	<b>Practical : 01</b>
	<b>Term Work : 25 Marks</b>	
	<b>Prat/Oral : 25 Marks</b>	<b>Total Credits : 05</b>
<b>Course Objectives:</b>		
1) Explain the changing organizational environment and the use of information technology to manage contemporary organizations		
2) Identify the business impacts of business and social networking		
3) Explain the technological foundations of information systems, i.e., hardware, software and telecommunications		
<b>Course Prerequisites:</b>		
<b>Students should have knowledge of</b>		
1) <b>Information System Management</b>		
2) <b>System Analysis and design</b>		
3) <b>Management information system</b>		
<b>Course Outcome:</b>		
<b>Students will be able to:</b>		
1) Explain the organizational context of information systems, including decision making and information processing concepts		
2) Identify, conceptualize, and develop solutions to prepare conceptual design report		
3) Based on conceptual system design the student should able to prepare detailed system design alongwith technological foundations of information systems, i.e., hardware, software,informationprocessing.		
4).To understand implementation evaluation of system and pitfalls in MIS.		
5).Identify applications of MIS in manufacturing sector.		
6)Understand design of business systems using contemporary tools.		
<b>UNIT-I</b>	<b>Introduction:</b>	<b>( 08 Hours)</b>
	<p><b>Foundation of Information System :</b> Introduction to Information System and MIS, Decision support and decision making systems, systems approach, the systems view of business, MIS organization within company, Management information and the systems approach.</p> <p><b>Information Technology:</b> A manager's overview, managerial overviews, computer hardware &amp; software, DBMS, RDBMS and Telecommunication.</p>	
<b>UNIT-II</b>	<b>Conceptual System Design:</b>	<b>( 08 Hours)</b>
	Define the problems, set systems objective, establish system constraints, determine information needs, determine information sources, develop alternative conceptual design and select one document ,the system concept, prepare	

	the conceptual design report.	
<b>UNIT-III</b>	<b>Detailed System Design :</b>	<b>( 08 Hours)</b>
	Inform and involve the organization, aim of detailed design, project management of MIS detailed design , identify dominant and trade of criteria, define the sub systems, sketch the detailed operating sub systems and information flow, determine the degree of automation of each operation, inform and involve the organization again, inputs outputs and processing, early system testing, software, hardware and tools propose and organization to operate the system, document the detailed design, revisit the manager user.	
<b>UNIT-IV</b>	<b>Implementation Evaluation and Maintenance of the MIS :</b>	<b>( 08 Hours)</b>
	Plan the implementation, acquire floor space and plan space layouts, organize for implementation, develop procedures for implementation, train the operating personnel, computer related acquisitions, develop forms for data collection and information dissemination, develop the files , test the system, cut-over, document the system, evaluate the MIS control and maintain the system. Pitfalls in MIS development.	
<b>UNIT-V</b>	<b>Advanced Concepts in Information Systems :</b>	<b>(08 Hours)</b>
	Enterprise Resources Management(ERP), Supply Chain Management, CRM, Procurement Management System. Applications of MIS in Manufacturing sector, Service sector	
<b>UNIT-VI</b>	<b>Designing of business systems :</b>	<b>(08 Hours)</b>
	Design of business systems using contemporary tools and methods such as SQL, CASE tools, OOD tools, etc. Advanced Case Studies in MIS.	
<b>Text Books/Referemnce Books:</b>		
1)	Kenneth C. Laudon , “Management Information Systems”, Eighth Edition, PHI	
2)	James O'Brien and George Marakas, “Management Information Systems	
3)	Effy Oz, “Management Information Systems”, Course TechEffy	
<b>Assignment List :</b>		
1)	<b>Introduction to MIS</b>	
2)	<b>Generating conceptual system design report</b>	
3)	Case study on detailed system design based on <b>conceptual system</b>	
4)	<b>Implementation ,evaluation and maintainance of MIS.</b>	

5)	Analysis of pitfalls in MIS developement
6)	<b>Case study of advanced concepts in information system.</b>
7)	To study applications of MIS in service sector.
8)	<b>Design of business system using contepoorary tools and methods such as SQL.</b>
9)	<b>Study of CASE tools and OOD tools.</b>
10	<b>Case study of Isoftware used for building information system.</b>
<b>Syllabus for Unit Test:</b>	
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>

**M.Tech IT Semester III Subject: Elective-I WIRELESS COMMUNICATION NETWORK**

Teaching Scheme	Examination Scheme	Credit Allotted
<b>Theory : 04 hrs/week</b> <b>Practical : 02 hrs/week</b>	<b>End Semester Examination : 60 Marks</b>	<b>Theory :04</b>
	<b>Continuous assessment : 40 Marks</b>	<b>Practical :01</b>
	<b>Term Work :25 Marks</b>	<b>Total Credits : 05</b>
	<b>Prat/Oral : 25 Marks</b>	

**Course Objectives:**

To gain an understanding of the principles behind the design of wireless communication systems and technologies.

**Course Prerequisites:**

**Students should have knowledge of**

...Computer Networking And Communication

**Course Outcome:**

**Students will be able to:**

- 1) Understand mobile cellular architecture.
- 2) Understand the multiple access schemes & Handover, Handoff system.
- 3) Analyze the technology digital cellulare system.
- 4) Understand the technology WLAN ,Bluetooth.
- 5) Understand the GPRS System.
- 6) Understand the technology ADHOC & 802.16 system.

...

UNIT-I	INTRODUCTION OF WIRELESS COMMUNICATION	( Hours)
	Challenges in wireless networking, Wireless communications standards Overview, evolution of cellular system, Cellular system architecture & operation, Performance criteria. Multiple access schemes for wireless communication -TDMA, FDMA, CDMA, SDMA	08
UNIT-II	WIRELESS NETWORK PLANNING AND OPERATION	( Hours)
	frequencies management, channel assignments, frequency reuse, System capacity& its improvement, Handoffs & its types, roaming, co channel & adjacent channel interference .	08
UNIT-III	DIGITAL CELLULAR NETWORKS	( Hours)
	GSM architecture& interfaces, signal processing in GSM, frame structure of GSM, Channels used in GSM, The European TDMA Digital cellular standard.	08
UNIT-IV	WIRELESS LAN TECHNOLOGY	( Hours)

	Overview, WLAN technologies, infrared LANs, Spread Spectrum LANs Narrowband Microwave LANs IEEE 802.11- Architecture, protocols, MAC layer .MAC frame, MAC management. <b>BLUETOOTH</b> Overview, Radio specification, Base band specification, Link manager specification, logical link control & adaptation protocol.	08
<b>UNIT-V</b>	<b>MOBILE DATA NETWORKS</b>	<b>( Hours)</b>
	Introduction, Data oriented CDPD networks, GPRS <b>WIRELESS ACCESS PROTOCOL</b> WAP architecture , Wireless Datagram ,Wireless Transport layer security, wireless transaction ,Wireless Session ,Wireless Application Environment ,WML	08
<b>UNIT-VI</b>	<b>Emerging Wireless Network Technology</b>	<b>( Hours)</b>
	IEEE 802.11 WLAN, ETSI HIPER LAN Technology, IEEE 802.15 WPAN Technology, IEEE 802.16 WMANTechnology, Mobile Adhoc Network, Mobile IP and Mobility Management, Mobile TCP, Wireless Sensor Networks, RFID Technology.	08
<b>Text Books:</b>		
1)	William C.Y.Lee, “Mobile cellular Telecommunication” ,2nd Ed. McGraw-Hill ĳ	
2)	Jochen Schiller, “Mobile Communication” Pearson Education ĳ	
3)	V. K. Garg, J. E. Wilkes, “Principle and Application of GSM”, Pearson Education	
<b>Reference Books:</b>		
1)	William Stalling,” Wireless Communication & Networking”	
2)	Rampantly,” Mobile communication”	
3)	Kamilo Feher,” Wireless digital communication”, PHI, 1999	
<b>Syllabus for Unit Test:</b>		
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>	
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>	

<b>M.Tech IT Semester III Subject: Elective –I DATA WAREHOUSING AND E-COMMERCE</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory : 04 hrs/week</b>	<b>End Semester Examination : 60 Marks</b>	<b>Theory :04</b>
<b>Practical : 02</b>	<b>Continuous assessment : 40 Marks</b>	<b>Term Work : 01</b>
	<b>Term Work : 25 Marks</b>	<b>Total Credits : 5</b>
	<b>Oral/Practical : 25 Marks</b>	
<b>Course Objectives:</b>		
1) Techniques for Developing Proper Data Warehouses		
2) Analyze the E-Commerce Payment Mechanism and Risk		
3) Recognize the business impact and potential of e-Commerce		
<b>Course Prerequisites:</b>		
<b>Students should have knowledge of</b>		
1) Information Systems		
<b>Course Outcome:</b>		
<b>Students will be able to:</b>		
1) Understand the analysis Decision Support System, Types and architecture.		
2) Understand and analyze process for Development of DSS.		
3) To understand Data Warehouse Concept and database.		
4) To understand E-Commerce & Third Parties		
5) To understand Risk and E-Commerce Payment Mechanism		
6) To understand E-Commerce payment mechanism		
<b>UNIT-I</b>		<b>( Hours)</b>
	Types of Decision Support System: The DSS hierarchy, Generalising the categories, Matching the DSS to the Decision type, Individual and group DSS. Matching the DSS to the user Community, Matching DSS to the decision Maker's Psychological type, User modes institutional Vs ad-hoc DSS.  DSS Architecture, Hardware and Operating Systems Platform: Defining the DSS Arch. The major options, the internet and client-server computing in DSS, DSS using shared data on separate system, DSS on stand alone system, Open system and DSS, DSS user interface. DSS Software Tools: DSS software categories, standard packages, Specialized tools and generators, programming languages for DSS, DSS user interfaces	08
<b>UNIT-II</b>		<b>( Hours)</b>
	Building & Implementing Decision Support System: The DSS development process, DSS development project particulars. The implementation stage, system conversion. Overcoming resistance to change, DSS implementation issues, using the list of issues, Ethical issues in DSS.	08

<b>UNIT-III</b>	Data Warehousing & Executive Information System Fundamentals: Definitions uses & necessity of a data warehousing, Data warehouse concepts, Executive information systems. The Data Warehouse Database: Contents of the data warehouse database, database structures, and Getting data into data warehouse, Media.	<b>( Hours)</b>
		08
<b>UNIT-IV</b>	E-Commerce & The Role of Independent Third Parties: Introduction, consulting parties & accountant's independence, CPA version project, New assurance project, New assurance services undefined by the AICTE the Elliot committee 7 the Cohen Committee, three views of E-Commerce. E-commerce integrity & security assurance, internal control framework, competition, risk assessment assurance, impact of e-commerce on the traditional assurance function, continuous auditing, third party assurance of web based e-commerce, security of data, business plitics, transactions processing integrity, privacy of data, web-site seal options, better business bearu. Trustee, veri-sign, ACSA, AICPA/CICA web trust, business practices, transaction integrity, information protection, report issuance, implication for the accounting, professional skill sets, expansion of assurance services, consulting and international services	<b>( Hours)</b>
		08
<b>UNIT-V</b>	E-Commerce & Internet: Introduction, traditional EDI system, the origin of EDI, non-EDI systems, value added network(VANS) and pre-established trading partners, partially integrated EDI systems, benefits of EDI systems, Data transfer and standards, Department of Defense transaction,. Examples, financial EDI, EDI systems and Internets, Security concerns, security of data during transmission, audit trials and acknowledgements, authentication, interact trading relationship; consumer to business, business to business, government to citizen benefits, EDI web browser transaction, software, insights EDI and internet systems. Real time EDI inventory links with suppliers, integrated delivery links with federal express, web based sales, Impact of EDI internet applications on the accounting profession, Increased complexity of auditing through the computer, integrity of reliance in the VANs, Extension of audit to trading partners systems, increased technological skill of smaller accounting firms.	<b>( Hours)</b>
		08
<b>UNIT-VI</b>	Risk of Insecure Systems: Introduction, Overview of risks associated with internet transactions, internet associated risks, risks of customers, false or malicious web sites, stealing visitor's hard id, & passwords, stealing visitor's credit card and information, spying on visitor's hard drive, theft of customer data from selling	<b>( Hours)</b>

	<p>agents and ISPs, Privacy and use of cookies, risk to selling agents, customer impersonation, denial of service attacks, data theft, internet associated risks, sabotage by former employees, sniffers, financial fraud, down loading of data, emails proofing, social engineering, risks associated with business transaction data transferred between trading partners, intranet extranet and internet relationship, data interception, message origin authentication, proof of delivery, message integrity &amp; unauthorized viewing of messages, timely delivery of messages, risk associated with viruses and malicious code overflows, viruses, Trojan Horses, hoaxes, buffer overflows, implication for the accounting profession, intranet internet controls web site assurance.</p> <p>E-Commerce Payment Mechanism:  Introduction, the SET protocol. SET v/s SSI, version 1.0, payment gateway, Certificate Insurance, Certificate trust chain, Cryptography methods, Dual signature, the set logo, Compliance testing, Status of software implementation, version 2.0, and intermediate releases, magnetic strip cards, smart cards, Electronic cheques, The FSTC's electrons cheques, the FSTC's BIPS specification, audit implications, Electronic bill presentation &amp; payment system.</p>	
		08
<b>Assignment List:</b>		
1)	What is Decision Support System? Explain Types of Decision Support System.	
2)	Case Study: DSS Software Tools	
3)	Explain Building & Implementing Decision Support System	
4)	Case Study: Trustee, veri-sign, ACSA, AICPA/CICA web trust	
5)	Explain EDI, non-EDI systems, value added network (VANS) with example.	
6)	What are the types of digital wallets? Explain	
7)	Relationship-Based Smart Credit Cards	
<b>Text Books and References::</b>		
1)	Efrem G. Mallach, "Decision support & data warehouse system", MGH International	
2)	Green Stein, FeinMan , "Electronic Commerce", MGH International	
3)	W.S.Jawadekar, "Management Information System", MGH International	
4)	Daniel Minoli, "Web Commerce technology handbook", MGH International	
5)	Mathews Leon, "The E-biz Primer- Alexis Leon", MGH International	
<b>Syllabus for Unit Test:</b>		
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>	
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>	

<b>M.Tech IT Semester III Subject: Elective I: Computer Forensics and Cyber Laws</b>		
Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory : 04
Practical : 02 hrs/week	Continuous assessment : 40 Marks	Term Work : 01
	Term Work : 25 Marks	Total Credits: 05
	Pract/Oral : 25 Marks	
<b>Course Objectives:</b>		
1) Computer Forensics is a rapidly changing field. Simple things, like stronger encryption introduced into operating systems, create new challenges for forensic examiners every day.		
<b>Course Prerequisites:</b>		
Students should have knowledge of		
1) Practical experience of Computer Network and Network Security		
<b>Course Outcome:</b>		
Students will be able to:		
1) Know the role of computer as forensic investigator		
2) Know techniques for recovering data, tools used for recovery		
3) setting up remote logging in Windows		
4) Apply data recovery mechanism with the help of tools.		
5) Analyze the security audit with the help of logs		
6) Apply copyright protection standard to the innovative network		
<b>UNIT-I</b>	<b>Overview:</b>	<b>(08 Hours)</b>
	Concept of Computer Forensic, Types of Forensic Science, Storage device, Storage device characteristics, types of storage device.  Forensic Investigator: Role of Computer Forensic Investigator, line of investigation, investigation steps, responsibilities of Computer Forensic Investigator.	
<b>UNIT-II</b>	<b>Evidence:</b>	<b>(08 Hours)</b>
	Definition of evidence, life cycle of evidence, types of evidence, rules for evidence, evidence. Storage and its Security Incident Response: Introduction, Investigations, Pre-Incident Preparations, Formation of Incident Response Team, Role of Incident Response Team. Data Recovery: Definition of data recovery, data recovery mechanism, techniques for recovering data, tools used for recovery.	
<b>UNIT-III</b>	<b>Investigating Logs:</b>	<b>(08 Hours)</b>
	Audit logs and security, system log, remote logging, configuring Windows, logging, setting up remote logging in Windows, event	

	reporter and Application Logs.	
UNIT-IV	Forensic Tools:	(08 Hours)
	WinHex, X-Ways, Index.dat Analyzer, Data Doctor. Disaster Recovery: Preparing for disaster recovery, backing up data, scheduling backup jobs, restoring data, recovering from server failure, selecting disaster recovery methods.	
UNIT-V	Battling Cyber Squatters and Copyright Protection in the Cyber World :	( 08 Hours)
	Concept of domain name and reply to cyber squatters, meta-tagging, legislative and other innovative moves against cyber squatting, freedom and control on the internet, works in which copyright subsists and meaning of copyright, copyright ownership and assignment, license of copyright, copyright term and respect for foreign works, copyright infringement, offences and remedies, copyright protection and content on the internet, copyright notice, disclaimer and acknowledgment, downloading for viewing contents, hyper-linking and framing, liability of ISPs for copyright, violation in the cyber world, legal developments in the US, Napster and its cousins, computer software piracy	
UNIT-VI	Digital Signature, Certifying Authorities and E-Governance :	(08 Hours)
	Digital signature, digital signature certificate, certifying authorities and liabilities, digital signature Governance in India.	

**Assignment List:**

1)	Analyze various types of storage structures
2)	Understand line of investigation in the form of steps
3)	Analyze life cycle of evidence for security
4)	Apply data recovery mechanism with the help of tools.
5)	Analyze the security audit with the help of logs
6)	Analyze WinHex in detail
7)	Apply disaster recovery techniques to preserve data
8)	Apply copyreight protection standard to the innovative network.

**Text Books/References:**

1)	Jay A. Siegel, "Forensic Science: The Basics "
2)	Joe Nickell and John F. Fischer, "Crime Science: Methods of Forensic Detection"
3)	Anthony J. Bertino, "Forensic Science: Fundamentals and Investigations"
4)	Stuart H. James and Ph. D., Jon J. Nordby, "Forensic Science: An Introduction to Scientific and Investigative Techniques", 2nd edition
5)	Colin Evans, "The Casebook of Forensic Detection: How Science Solved 100 of the

	World's Most Baffling Crimes”
6)	Edward Amoroso, “Cyber Security, Computer Network Security and Cyber Ethics”, 2nd edition by Joseph Migga Kizza
7)	Robert McCrie, “Security Operations Management”, Second Edition Andy Jones and Debi Ashenden, “Risk Management for Computer Security:
8)	Andy Jones and Debi Ashenden, “Risk Management for Computer Security
Syllabus for Unit Test:	
Unit Test -1	Unit I ,II and III
Unit Test -2	Unit IV, V and VI

<b>M.Tech IT Semester III Subject: Elective II: BIOINFORMATICS</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory : 04 hrs/week</b>	<b>End Semester Examination : 60 Marks</b>	<b>Theory :04</b>
<b>Practical : 02</b>	<b>Continuous assessment : 40 Marks</b>	<b>Term Work : 01</b>
	<b>Term Work : 25 Marks</b>	
	<b>Oral/Practical : 25 Marks</b>	<b>Total Credits : 05</b>
<b>Course Objectives:</b>		
1. Receive an introduction and historical perspective to the field of bioinformatics		
2. Learn the key methods and tools used in bioinformatics		
3. Understand the theoretical basis behind bioinformatics		
4. Analyze protein sequences, identify proteins, and retrieve protein structures from databases. View and interpret these structures.		
...		
<b>Course Prerequisites:</b>		
<b>Students should have knowledge of</b>		
1) Advanced Molecular Biology (or equivalent)		
...		
<b>Course Outcome:</b>		
<b>Students will be able to:</b>		
1) Understand the Basic concepts of Bioinformatics		
2) Understand and analyze Sequence Alignment and Database Searching		
3) To understand Protein Structure		
4) To understand Protein-protein Interactions and Algorithms.		
5)To understand Protein function and Computer tools for phylogenetic analysis		
...		
<b>UNIT-I</b>	Bioinformatics Basics: Basic concepts, Protein and amino acid , DNA & RNA, Sequence, structure and function. Bioinformatics databases: Introduction, Motivation, Type of databases, Nucleotide sequence databases, Protein sequence databases, Sequence motif databases, Protein structure databases, Other relevant databases.	<b>(08 Hours)</b>
<b>UNIT-II</b>	Sequence Alignment and Database Searching: Single sequence alignments, Biological motivation, Pairwise alignments, Scoring matrix, Gap penalty, Dynamics programming, Needleman- Wunsch, Smith-Waterman, Heuristic methods, FASTA, BLAST, Statistics of sequence alignment score, E-Value, P-Value, Multiple sequence alignments, ClustalW, Profile, Profile-sequence	<b>(08 Hours)</b>

	<p>alignment, Profile-profile alignment, PSI-BLAST, Hidden Markov Models.</p> <p>Protein structure alignments :  Structure superposition, structure alignment, Different structure alignment algorithms.</p>	
<b>UNIT-III</b>	<p>Protein Structure:</p> <p>Protein secondary structure predictions: Protein secondary structure, Hydrogen bond, secondary structure element, Methods for predicting secondary structure.</p> <p>Protein tertiary structure modeling:  Basic concepts Protein folding and dynamic simulation, Comparative modeling, Threading, Ab initio modeling, Combined modeling approaches, CASP: A blind protein structure prediction competition. Experimental methods for protein structure determination:  X-ray crystallography, Nuclear magnetic resonance (NMR).</p>	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<p>Protein-protein Interactions:  Experimental identification of protein-protein interactions, Yeast two- hybrid assay, High-throughput mass spectrometry, Interaction networks and system biology.</p> <p>Protein quaternary structure modeling:  Basic concepts, Degrees of freedom, Presentation of protein conformations, Hydrophobicity factor, Shape complementary, Docking Scoring function, Protein-protein docking algorithms, Protein-ligand docking algorithms, Drug design, Multiple-threading algorithms, Homology modeling of protein-protein interactions, Protein and ligand binding, CAPRI.</p>	<b>(08 Hours)</b>
<b>UNIT-V</b>	<p>Biomolecular Simulations:  Basic concepts, Units and derivatives , Force field and energy landscape, Truncation of nonbonded interactions.</p> <p>Conformational Sampling:  Introduction, Minimization and algorithms, Molecular dynamics, Ensembles (statistical mechanics), Monte Carlo simulations.</p>	<b>(08 Hours)</b>

	Solvation: Introduction, Periodic boundary condition, Ewald summation, Implicit solvent model and continuum electro statics, Monte Carlo simulation on parallel computers. Advanced Techniques: Introduction, Replica-exchange simulations, Restraint potentials, Free energy calculations, Membrane simulations.	
<b>UNIT-VI</b>	<p>Biological Membranes:  Introductions, Biological roles, Structural features, Membrane lipids, General structures, Aggregation states, Polymorphism, Thermal transitions, Electrostatic effects, Molecular dynamics, Membrane proteins, MD simulation of Membrane proteins.</p> <p>Protein function:  Sequence to function, Structure to function, Protein function identification methods and databases. Phylogenetics, Sequence-based taxonomy, Models, assumptions, and interpretations, From multiple alignment to phylogeny, Computer tools for phylogenetic analysis.</p>	<b>(08 Hours)</b>
<b>Assignment List:</b>		
1)	Explain Bioinformatics Basics.	
2)	Explain concept of Sequence Alignment and Database Searching.	
3)	Explain Protein Structure and Protein quaternary structure modeling	
4)	Explain Bio-molecular Simulations.	
5)	Explain Conformational Sampling.	
6)	Explain in detail Biological Membranes.	
7)	Explain Protein function with examples.	
<b>Text Books and References::</b>		
1)	David Mount, "Bioinformatics", Cold Spring Harbor Press"	
2)	James Jisdall, "Beginning Perl for Bioinformatics"	
3)	David W. Mount, "Bioinformatics- Sequence & Genome Analysis"	
<b>Syllabus for Unit Test:</b>		
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>	
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>	

<b>M.Tech IT Semester III Subject: Elective – II Advanced Computing Architecture</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory : 04</b> hrs/week <b>Practical : 02</b> hrs/week	<b>End Semester Examination : 60 Marks</b>	<b>Theory :04</b>
	<b>Continuous assessment : 40 Marks</b>	<b>Practical : 01</b>
	<b>Term Work : 25 Marks</b>	<b>Total Credits : 05</b>
	<b>Practical / Oral : 25 Marks</b>	
The aim of the course is to design distributed computing architecture to improve the efficiency of system.		
<b>Course Objectives:</b>		
1) Analyze the structure of distributed computing		
2) Apply the efficient solution with respect to suitable distributed computing Architecture.		
<b>Course Prerequisites:</b>		
<b>Students should have knowledge of</b>		
2) Basic knowledge of distributed system		
<b>Course Outcome:</b>		
<b>Students will be able to:</b>		
1) Understand distributed environment.		
2) Analyze performance of distributed Architectures		
3) Analyze the computing parameters.		
4) Understand data and computing measures		
5) Analyze bottlenecks during the enhancement		
6) Apply the suitable architecture to enhance the performance.		
<b>UNIT-I</b>	<b>Introduction to cloud computing</b>	<b>( Hours)</b>
	Introduction to various distributed computing architectures – Grid, cluster, cloud. Structure of cloud, computing parameters of cloud, boost in the performance due to cloud.	06
<b>UNIT-II</b>	<b>Architecture of cloud computing</b>	<b>( Hours)</b>
	Service Models – Infrastructure As a Service (IaaS) , Platform as a Service (PaaS), Software as a Service (SaaS)  Deployment Models – Public cloud, private cloud, Hybrid cloud, community cloud	06
<b>UNIT-III</b>	<b>Big Data</b>	<b>( Hours)</b>
	Concept of Big Data, Challenges to deal with Big Data , solution with respect to big data, data Analytics.	06
<b>UNIT-IV</b>	<b>Data Intensive Computing</b>	<b>( Hours)</b>
	Introduction to hybrid data, concept of Hadoop Distributed	06

	File Structure (HDFS), data node, name node, job tracker, Task Tracker.	
<b>UNIT-V</b>	<b>Architecture of Map Reduce Algorithm</b>	<b>( Hours)</b>
	Concept of unstructured data, Introduction to Map Reduce Algorithm, Implementation with word count example.	06
<b>UNIT-VI</b>	<b>Case Study of advanced computing Architecture</b>	<b>( Hours)</b>
	Cloudstack, Eucalyptus, Azure, big data analytics, Hadoop, Implementation of MapReduce -II	06
<b>Assignment List:</b>		
1)	<b>Design cluster using apache web server</b>	
2)	<b>Design cloud computing environment using public cloud</b>	
3)	<b>Design cloud computing environment using private cloud</b>	
4)	<b>Analyse the Complete data of BVUCOE using big data analytics</b>	
5)	<b>Use HDFS to deal with huge data.</b>	
6)	<b>Implement Map Reduce Algorithm to prove the rise in the efficiency</b>	
7)	<b>Implement Map Reduce II</b>	
8)	<b>Analyze various computing environments like cloudstack , openstack.</b>	
<b>Text Books:</b>		
1)	<b>Architecture the cloud, Michael J. Kevis, Wiley publication</b>	
2)	<b>Microsoft Big Data Solution, Adam Jorgensen, Wiley publication</b>	
3)	<b>Hadoop: The Definitive Guide, Tom White, O'REILLY' publication</b>	
<b>Reference Books:</b>		
1)	<b>Building the Infrastructure for cloud security, Raghu Yelori, Enrique castro-Leon</b>	
2)	<b>Hadoop Operations, Eric Sammer, O'REILLY' publication</b>	
3)	<b>MapReduce Design Patterns: Building Effective Algorithms and Analytics Donald Miner, O'REILLY' publication</b>	
<b>Syllabus for Unit Test:</b>		
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>	
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>	

<b>M.Tech IT Semester III Subject: Elective II: Usability Engineering</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory : 04 hrs/week</b>	<b>End Semester Examination : 60 Marks</b>	<b>Theory : 04</b>
<b>Practical : 02 hrs/week</b>	<b>Continuous assessment : 40 Marks</b>	<b>Term Work : 01</b>
	<b>Term Work : 25 Marks</b>	<b>Total Credits: 05</b>
	<b>Pract/Oral : 25 Marks</b>	
<b>Course Objectives:</b>		
1) To present the basic principles and practical knowledge regarding the design, development and evaluation of human-computer interfaces in the light of usability		
<b>Course Prerequisites:</b>		
<b>Students should have knowledge of</b>		
2) Practical experience of software system analysis and design		
<b>Course Outcome:</b>		
<b>Students will be able to:</b>		
2) Define and distinguish between the different types of user interface		
2) Develop a more usable interface		
3) To identify techniques and technologies that can satisfy usability and accessibility specifications		
4) To apply usability methods in developing interactive systems		
5) To identify and analyze the various components of the overall context of use of an interactive system		
6) To develop usability and accessibility specifications that can be used in evaluating and developing interactive systems-		
<b>UNIT-I</b>	<b>Introduction</b>	<b>(08 Hours)</b>
	Introduction, Importance, Human computer interface, Characteristics of GUI, Direct manipulation graphical system, Web user interface, Mobile UI, Popularity of graphics  <b>Generations of User Interfaces:</b> Batch Systems, Line-Oriented Interfaces, Full-Screen Interfaces	
<b>UNIT-II</b>	<b>Development Processes</b>	<b>(08 Hours)</b>
	<b>Managing Design Processes:</b> Organizational Design to Support Usability, The three Pillars of Design, Development Methodologies, Ethnographic Observation, Participatory Design, Scenario Development, Social Impact Statement for Early Design Review, Legal issues <b>Evaluating Interface Designs:</b> Expert Reviews, Usability Testing and Laboratories, Survey Instruments, Acceptance Tests, Evaluation during Active Use, Controlled Psychologically Oriented Experiments	

<b>UNIT-III</b>	<b>User Interface Software and Specifications</b>	<b>(08 Hours)</b>
	Languages and tools for specifying and building interfaces, Dialogue independence, UIMS (user interface management system) approach, Languages and software abstractions for user, interfaces, Programming support tools	
<b>UNIT-IV</b>	<b>Develop System Menus and Navigation Schemes</b>	<b>(08 Hours)</b>
	<b>Menus:</b> Structures, Functions, Content, Formatting of Menus, Phrasing the Menu, Selecting Menu Choices, Navigating Menus, Kinds of Graphical Menus <b>Windows:</b> Window Characteristics, selection of window, Components of a Window, Window Presentation Styles, Types of Windows, Window Management, Organizing Window Functions, Window Operations, Web Systems	
<b>UNIT-V</b>	<b>Interaction Styles, Devices and Techniques</b>	<b>( 08 Hours)</b>
	<b>Interaction Styles:</b> Question and answer, Form-based, Command language Menus, Natural language, direct manipulation  <b>Interaction Devices:</b> Keyboard and function keys, pointing device, speech recognition digitization and generation, image and video displays, drivers  <b>New Interaction Techniques:</b> New modes of human-computer communication, Voice, Gesture, Eye movement, Tangible, user interfaces, Brain-computer interfaces	
<b>UNIT-VI</b>	<b>UI Feedback, Guidance and Assistance</b>	<b>(08 Hours)</b>
	<b>Providing the Proper Feedback:</b> Response Time, Dealing with Time Delays, Blinking for Attention, Use of Sound  <b>UI Guidance and Assistance:</b> Preventing Errors, Problem Management, Providing Guidance and Assistance, Instructions or Prompting, Help Facility	
<b>Assignment List:</b>		
1)	Introduction to fundamentals of Usability Engineering	
2)	Study on User Interface Software and Specifications	
3)	Design a sport watch interface	
4)	Design a web application interface for online grocery shopping	
5)	Design a touch screen interface for an Automatic Teller Machine (ATM) geared towards kids aged 10-15 whose parents have opened a savings account for them	
6)	Design an interface and list user experience for a universal remote to be used in home settings	
<b>Text Books:</b>		
1)	Shneiderman, C. Plaisant, M. Cohen, and S. Jacobs, <i>Designing the User Interface:</i>	

	<i>Strategies for Effective Human-Computer Interaction</i> , Addison-Wesley, Reading, Mass. (any recent edition)
2)	Y. Rogers, H. Sharp, and J. Preece, <i>Interaction Design: Beyond Human-Computer Interaction</i> , John Wiley & Sons. (any recent edition)
<b>Reference Books:</b>	
1)	Don Norman, <i>The Design of Everyday Things</i>
2)	Jakob Nielsen, <i>Usability Engineering</i>
3)	Jakob Nielsen and Raluca Budiu, <i>Mobile Usability</i>
<b>Syllabus for Unit Test:</b>	
<b>Unit Test -1</b>	<b>Unit I ,II and III</b>
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>

**M.Tech IT Semester III Subject: Elective II: Advanced Database Management System**

Teaching Scheme	Examination Scheme	Credit Allotted
Theory : 04 hrs/week	End Semester Examination : 60 Marks	Theory : 04
Practical : 02 hrs/week	Continuous assessment : 40 Marks	Practical : 01
	Term Work : 25 Marks Prat/oral : 25 Marks	Total : 05

**Course Objectives:**

- 1) Introduce principles and foundations of distributed databases and parallel databases
- 2) Understand the operations in Transaction management

**Course Prerequisites:**

**Students should have knowledge of**

- 1) Basic database management system concepts and their operations.

**Course Outcome:**

**Students will be able to:**

- 1) Understand distributed database architecture and design
- 2) Understand the processing and optimization of distributed queries
- 3) Understand the performance issues in high performance databases
- 4) Understand the working of parallel database management system
- 5) Understand the transaction management process
- 6) Understand latest advancement in database management systems

UNIT-I	Distributed databases: Architecture and Design	( Hours)
	Distributed data processing, What is a DDBS; Advantages and disadvantages of DDBS, Problem areas  Distributed DBMS Architecture: Transparencies in a distributed DBMS, Distributed DBMS architecture, Global directory issues,  Distributed Database Design: Alternative design methodologies and strategies, Distributed design issues, Types and role of Fragmentation, Types and role of replication, Data allocation	08
UNIT-II	Distributed query processing and optimization	( Hours)
	Distributed Query processing: Problem of query processing, Distributed query, Query decomposition, Distributed Query Processing Methodology, translation global queries to fragment	08

	<p>queries</p> <p>Distributed Optimization: Objectives of query optimization, Factors governing query optimization, Ordering of fragment queries, optimization of join operation, Load balancing, Distributed query optimization algorithms</p>	
<b>UNIT-III</b>	<b>Issues and Concerns in High Performance Databases</b>	<b>( Hours)</b>
	<p>Database Tuning and Performance: benchmarking, TPC benchmarks, object oriented benchmarks, TP Monitors, TPC and Wisconsin benchmarks, performance measurement, and performance tuning.</p> <p>Semantic data Control : View management, Data security, Semantic Integrity Control</p> <p>Indexing structures: Btrees, hash files, multi-attribute indexing.</p>	08
<b>UNIT-IV</b>	<b>Parallel Database Management System</b>	<b>( Hours)</b>
	<p>Introduction: Types of parallelism in database systems, Parallel Query Processing, multiprocessor architectures, parallel relational operators, parallelism in main-memory DBMS, parallel handling of integrity constraints, Integrated I/O parallelism</p> <p>Parallel Query Processing and Optimization: Inter-query parallelism, intra-query parallelism, intra-operation parallelism, inter-operation parallelism, objectives of parallel query optimization, parallel query optimization, load balancing, parallelism in join queries, testing the quality of query optimization</p>	08
<b>UNIT-V</b>	<b>Advanced concepts in Transaction Management</b>	<b>( Hours)</b>
	<p>Transaction Management: ACID properties, pessimistic locking, optimistic locking, flat transactions, nested transactions, deadlock detection and management and their algorithms, Recovery Methods</p> <p>Concurrency control and Reliability in Distributed Databases: Concurrency control in centralized database systems vs Concurrency control in DDBSs, Distributed concurrency control algorithms, Deadlock management, Reliability issues in DDBSs; Types of failures, Reliability techniques, Commit protocols, Recovery protocols</p>	08
<b>UNIT-VI</b>	<b>Emerging trends in databases</b>	<b>( Hours)</b>
	<p>Mobile Databases, Distributed Object Management, Multi-databases, Semantic databases, Hadoop Distributed File Systems, MapReduce Overview, NoSQL Databases, Design and Comparison of NoSQL Databases, Active and Deductive databases</p>	08

<b>Assignment List:</b>	
1)	To study and implement different types of Views in SQL
2)	Study and implementation of all types of Joins using SQL
3)	Implementation of hash files
4)	Study of transaction and implementing transaction operations using SQL/PL-SQL
5)	Installation and study of Hadoop.
6)	Installation and study of any NoSQL database
7)	Comparison and Implementation of locking techniques
8)	Case study of the operations of any real time distributed DBMS and parallel DBMS
<b>Text Books:</b>	
1)	Stefano Ceri and Giuseppe Pelagatti, "Distributed databases principles and systems", Tata Hill
2)	Raghu Ramkrishnan, "Database Management System", McGraw-Hill
3)	Silberschatz, Korth and Sudharshan, "Data base System Concepts", Mc-GrawHill
<b>Reference Books:</b>	
1)	M. Tamer Özsu and Patrick Valduriez, "Principles of Distributed Database Systems", Springer Science & Business Media, 2011, 3 <sup>rd</sup> edition
2)	Elmasri and Navathe, "Fundamentals of Database Systems", Addison-Wesley, 2007
3)	Thomas Connolly, Carolyn Begg, "Database Systems: A Practical Approach to Design, Implementation and Management", Pearson Education, LPE
<b>Syllabus for Unit Test:</b>	
<b>Unit Test -1</b>	<b>Unit I,II and III</b>
<b>Unit Test -2</b>	<b>Unit IV, V and VI</b>

<b>M.Tech IT Semester III Subject: Elective-II- Advanced Operating Systems</b>		
<b>Teaching Scheme</b>	<b>Examination Scheme</b>	<b>Credit Allotted</b>
<b>Theory : 04 hrs/week</b>	<b>End Semester Examination : 60 Marks</b>	<b>Theory : 04</b>
<b>Practical :02</b>	<b>Continuous assessment : 40 Marks</b>	<b>Practical : 01</b>
	<b>Term Work :25 Marks</b>	
	<b>Prat/Oral :25 Marks</b>	<b>Total Credits : 05</b>
<b>Course Objectives:</b>		
1) To provide students with an overview of operating systems with change in technologies and use		
<b>Course Prerequisites:</b>		
<b>Students should have knowledge of</b>		
1) Basic concepts of operating systems.		
2) Basic algorithms in operating systems.		
<b>Course Outcome:</b>		
<b>Students will be able to:</b>		
1) Understand core structure of operating systems		
2) Understand distributed operating systems.		
3) Understand distributed resource management.		
4) Understand multiprocessor and database operating systems.		
5) Understand real time and mobile operating systems.		
<b>UNIT-I</b>		
<b>INTRODUCTION</b>		<b>( Hours)</b>
Overview – Functions of an Operating System – Design Approaches – Types of Advanced Operating System – Synchronization Mechanisms – Concept of a Process, Concurrent Processes – The Critical Section Problem, Other Synchronization Problems – Language Mechanisms for Synchronization – Axiomatic Verification of Parallel Programs – Process Deadlocks – Preliminaries – Models of Deadlocks, Resources, System State – Necessary and Sufficient conditions for a deadlock – Systems with Single-Unit Requests, Consumable Resources, Reusable Resources.		08
<b>UNIT-II</b>		
<b>DISTRIBUTED OPERATING SYSTEMS</b>		<b>( Hours)</b>
Introduction – Issues – Communication Primitives – Inherent Limitations - Lamport’s Logical Clock; Vector Clock; Casual Ordering Global State; Cuts; Termination Detection. Distributed Mutual Exclusion – Non Token Based Algorithms – Lamport’s Algorithm – Token-Based Algorithms – Suzuki-Kasami’s Broadcast Algorithm – Distributed Deadlock Detection – Issues – Centralized Deadlock Detection Algorithms – Distributed Deadlock-Detection Algorithms, Agreement Protocols – Classification – Solutions – Applications.		08

<b>UNIT-III</b>	<b>DISTRIBUTED RESOURCE MANAGEMENT</b>	<b>( Hours)</b>
	Distributed File Systems – Architecture – Mechanisms – Design Issues – Distributed Shared Memory – Architecture – Algorithm – Protocols – Design Issues, Distributed Scheduling – Issues – Components - Algorithms	08
<b>UNIT-IV</b>	<b>FAULT RECOVERY AND FAULT TOLERANCE</b>	<b>( Hours)</b>
	Basic Concepts – Classification of Failures- Basic Approaches to Recovery; Recovery in Concurrent Systems; Synchronous and Asynchronous Check pointing and Recovery; Check pointing in Distributed Database Systems; Fault Tolerance; Issues – Two phase and Non-blocking Commit Protocols; Voting Protocols; Dynamic Voting Protocols.	08
<b>UNIT-V</b>	<b>MULTIPROCESSOR AND DATABASE OPERATING SYSTEMS</b>	<b>( Hours)</b>
	Structures – Design Issues – Threads –Processing Synchronization – Process Scheduling – Memory Management – Reliability / Fault Tolerance; Database Operating Systems –Introduction – Concurrency Control – Distributed Database Systems – Concurrency Control Algorithms.	08
<b>UNIT-VI</b>	<b>REAL TIME AND MOBILE OPERATING SYSTEMS</b>	<b>( Hours)</b>
	Basic Model of Real Time Systems - Characteristics- Applications of Real Time Systems – Real Time Task Scheduling - Handling Resource Sharing - Mobile Operating Systems – Micro Kernel Design - Client Server Resource Access – Processes and Threads - Memory Management – File system.	08
<b>Assignment List:</b>		
1)Study of hardware and software requirements of different operating systems		
2) Implement CPU scheduling policies.		
3)Implement Lamport’s Algorithm – Token-Based Algorithm		
4) Implement Suzuki-Kasami’s Broadcast Algorithm		
5) Study of distributed file systems – architecture		
6)Study of fault recovery and fault tolerance		
7) Implement file storage allocation techniques.		
8) Study of Concurrency Control Algorithms.		

9) Case study of mobile operating systems	
10) Case study of real time operating systems	
<b>Text Books:</b>	
1)	Mukesh Singhal and Niranjana G. Shivaratri, "Advanced Concepts in Operating Systems – Distributed, Database, and Multiprocessor Operating Systems", Tata McGraw-Hill, 2001.
2)	Rajib Mall, "Real-Time Systems: Theory and Practice", Pearson Education India, 2006.
<b>Reference Books:</b>	
1)	Abraham Silberschatz; Peter Baer Galvin; Greg Gagne, "Operating System Concepts", Seventh Edition, John Wiley & Sons, 2004.
2)	Daniel P Bovet and Marco Cesati, "Understanding the Linux kernel", 3rd edition, O'Reilly, 2005.
3)	Neil Smyth, "iPhone iOS 4 Development Essentials – Xcode", Fourth Edition, Payload media, 2011.
<b>Syllabus for Unit Test:</b>

Sr.No.	SELF STUDY PAPER- I (SEM-III)	SELF STUDY PAPER- II (SEM-IV)
1	Optimization Techniques in Process design	Technology Transfer Practices –Bridge to Industry
2	Non Conventional Energy System	Polymer Engineering
3	Mechanical Aspects in Chemical Engineering	Food Technology
4	Green Chemistry & Technology	Modeling & Simulation of Processes
5	Cavitation Techniques	Nanoscience
6	Safety Engineering in Industries	Petrochemical Engineering
7	Petroleum Engineering	Physical Concepts of Unit Operations
8	Fluid Particle Technology	Multiphase Reactor Engineering

## SEMSETER-I

<b>K10501 APPLIED MATHEMATICS FOR CHEMICAL ENGINEERING</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Lectures : 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical : 2 Hour /Week	Unit Test: 20 Marks	Practical: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	
<b>Topics covered</b>		
<b>UNIT-I</b>	<b>Introduction:</b> Approximation and round-off errors, significant figures, accuracy and precision, error definitions, truncation errors. Taylor series, error propagation, total numerical error, formulation errors and data uncertainty. Tests of significance. Analysis of variance.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Numerical solution of linear &amp; nonlinear algebraic equations:</b> Linear systems of equations, solutions by Creamer's Rule, Matrix methods, Gaussian, Gauss-Jordan, Jacobean, Gauss-Seidel and Relation methods. Non-linear equations: Bisection, Regula-falsi, Secant and Newton- Raphson methods.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Curve fitting:</b> Least square regression: Linear regression, polynomial regression. Interpolation: Newton's divided-difference interpolating polynomials, Lagrange interpolating polynomials, coefficient of an interpolating polynomial. Fourier approximation.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Numerical integration and differentiation:</b> Newton-cotes integration of equations. Integration of equations: Romberg integration, Gauss Quadrature. <b>Partial differential equations:</b> Finite difference: Elliptic equations, parabolic equations, finite element method. Diffusion/convection form of partial differential equations in chemical engineering. Characteristics and partial differential equation types and their analytical solution.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Numerical solution of ordinary differential equations:</b> Formulation of linear and non-linear first and second order ordinary differential equations, higher order linear, differential equations for systems involving momentum, heat and mass transfer with and without chemical reactions and their analytical solutions. Ordinary differential equations: Runge-Kutta, Euler's and Milne's predictor corrector methods. Boundary-value and eigenvalue problems, general methods of boundary-value problems.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	<b>Mathematical analysis and engineering problem-solving:</b> Design and analysis of experiments: data analysis, treatment, generalization and interpretation on engineering data. Formulation of physical problems: mathematical statement of the problem, representation of problems, problem solving with appropriate mathematical method, analysis of results with statical tests.	<b>(08 Hours)</b>

<b>Term Work:</b>	
Oral examination will consist of assessment of the termwork (duly certified by the teacher and HOD) and oral exam based on the term work/practical. The term work shall consist of the following: Minimum 8 practical based on solving numerical methods mentioned in the syllabus using C, C++ language, or TK solver software, or any chemical Engineering Software.	
<b>Assignment: :</b> Each student will submit assignments based on different topics in consultation with faculty, in the area of application of mathematics in chemical engineering, keeping track of the recent technological trends and developments..

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

**K10502 ADVANCED MOMENTUM AND HEAT TRANFER**

<b>TEACHING SCHEME:</b>			<b>EXAMINATION SCHEME:</b>			<b>CREDITS ALLOTTED:</b>		
Lectures: 4 Hours/Week			End Semester Examination: 60 Marks			Theory : 04		
Total : 4Hours/Week			Unit Test: 20 Marks			Total credits: 04		
			Assignment: 10 Marks					
			Attendance:10 Marks					
			Total :100 Marks					
<b>Topics covered</b>								
<b>UNIT-I</b>	<p><b>Shear stress in laminar flow:</b> Newtonian and non Newtonian fluids; Rheological models; theories of transport properties of gases and liquids; effect of pressure and temperature.</p> <p><b>One dimensional momentum transport in laminar flow (shell balance):</b> General method of shell balance approach to momentum transfer problems; momentum flux and velocity distribution for flow of Newtonian and non-Newtonian fluids in pipes, planes, slits and annulus; Fluid flow of two immiscible fluids.</p>						<b>(08 Hours)</b>	
<b>UNIT-II</b>	<p><b>Differential equations of fluid flow:</b> Control volume approach; Differential continuity equation; Navier-Stokes Equation and Bernoulli's equation; Applications of differential equations of fluid flow</p> <p><b>Effect of turbulence on momentum transfer:</b> Description of turbulence; Turbulent shearing stresses; The mixing length hypothesis, velocity distribution from the mixing length theory; The universal velocity distribution; The turbulent boundary layer on a flat plate</p>						<b>(08 Hours)</b>	
<b>UNIT-III</b>	<p><b>Fluid flow in closed Conduits:</b> Friction factors for fully developed laminar, turbulent and transition flow in circular conduits; Friction factors for flow in the entrance to a circular conduit; Friction factors for packed columns.</p> <p><b>Macroscopic momentum balances:</b> The macroscopic mass, momentum and mechanical energy balances; Use of macroscopic balances for steady-state problems; Use of macroscopic balances for unsteady-state problems.</p>						<b>(08 Hours)</b>	
<b>UNIT-IV</b>	<p><b>Mechanism of energy transport:</b> Fourier's law of heat conduction; Thermal conductivity of liquids and solids; Effective thermal conductivity of composite solids.</p> <p><b>Temperature distribution in solids and in laminar flow:</b> Heat conduction through composite walls; Heat conduction in a cooling Fin; Forced convection; Free convection.</p>						<b>(08 Hours)</b>	
<b>UNIT-V</b>	<p><b>The equation of change for non isothermal systems:</b> The equation of energy; The equation of motion for forced and free convection; Use of equations of change to solve the steady-state problems</p> <p><b>Unsteady Heat Conduction in Solids:</b> Heating of a semi-infinite slab; Heating of a finite slab; Unsteady heat conduction near the wall with sinusoidal heat flux</p> <p><b>Temperature distribution in turbulent flow:</b> Time smoothed equation of change for incompressible non isothermal flow; Time smoothed temperature profile near a wall; Empirical expressions for the turbulent heat flux; Temperature distribution for turbulent flow in tubes</p>						<b>(08 Hours)</b>	
<b>UNIT-VI</b>	<p><b>Interphase transport in non-isothermal systems:</b> Heat transfer coefficients for forced convection in tubes and through packed beds; Heat transfer coefficients for free and mixed convection; Heat transfer coefficients for condensation of pure vapors</p>						<b>(08 Hours)</b>	

	on solid surfaces. <b>Analogies of momentum and heat transfer:</b> Reynolds and Chilton Colburn analogy	
--	--	--

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of advanced momentum and heat transfer, keeping track of the recent technological trends and developments.

3.	J.C. Slattery, "Advanced transport phenomena", Cambridge University Press
4.	J. G. Knudsen, D. L. Kaz, "Fluid Dynamics and Heat Transfer", McGraw Hill

**Syllabus for Unit Test:**

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## K10503 THERMODYNAMICS OF PHASE EQUILIBRIA

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	

### Topics covered

<b>UNIT-I</b>	<b>Thermodynamics of Multicomponent mixtures:</b> Ideal mixtures and excess mixture properties, Fugacity of species in gaseous, liquid and solid mixtures, Criteria for phase equilibrium in multicomponent systems, Modified Rault's law and its significance, Gibbs Duhem equation, Hydrogen bonding and charge transfer complexing Equilibrium	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Vapor liquid Equilibrium of mixtures</b> Vapor Liquid equilibrium (VLE) of ideal mixtures, Low pressure VLE in non-ideal mixtures, High pressure VLE using equation of states, Solubility of gas in liquid, Liquid-Liquid Equilibrium, Vapor Liquid-Liquid Equilibrium, Models for activity coefficient, UNIFAC method, UNIQUAC equation, Osmotic pressure, osmotic equilibrium	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Mixture phase equilibrium involving solids</b> Solubility of solid in liquid and supercritical fluid, Solid Liquid Equilibrium, Partitioning of solid between two liquid phases, distribution coefficient, Freezing point depression of solvent due to presence of solute, freezing point of liquid mixtures in presence of solid.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Chemical Reaction Equilibria:</b> Chemical equilibrium in single phase system, Heterogeneous chemical reactions, Chemical equilibrium when several reaction occurs in single phase, Combined chemical and phase equilibrium. Phase rule and Duhem's theorem for reacting systems, Degree of freedom analysis for non-reacting and reacting systems	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Surfaces, Interfaces and Adsorption</b> Thermodynamics of interfaces, Gibbs surface model and surface tension, Surface energy of solids, Surface effects on heterogeneous phase equilibrium, effect of particle size on vapor pressure, effect of bubble size on the boiling temperature of pure substances, solubility and nucleation, effect of particle size on melting temperature, Gibbs adsorption equation	<b>(08 Hours)</b>
<b>UNIT-VI</b>	<b>Thermodynamics of acid, alkali interaction, Energy analysis</b> Acidity of solutions, ionization of chemicals, solubilities of weak acids, weak bases, pharmaceuticals as function of pH, Gibbs-Donnan equilibrium. Defining Energy, Control Volume Energy Rate Balance, Exergetic Efficiency, Introduction to Energy Costing .	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of thermodynamics of phase equilibria, keeping track of the recent technological trends and developments.

**Text Books/References:**

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## K10504 MULTIPHASE REACTORS

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	

### Topics covered

<b>UNIT-I</b>	<b>Introduction to Multiphase Reactor Engineering:</b> Types, Classification, Application of Industrial Importance.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Thermodynamics and kinetics:</b> Notable industrial heterogeneous systems and thermodynamic role. Application of equilibrium criteria to chemical reactions. The Gibbs energy change and equilibrium constant. Estimation of equilibrium constant for heterogeneous system by defining standard state of the phases involved. Determination of rate controlling step: intrinsic kinetics for heterogeneous systems.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Hydrodynamic Characteristics:</b> Hydrodynamic characteristics of different multiphase reactors: Mechanically Agitated Contactors (MAC), Bubble Columns, Slurry Reactors, Fluidized Beds, Loop Reactors and Modified Versions.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Mixing Studies :</b> Effect of geometrical, system, and operating parameters on phase mixing in multiphase reactors. Quantification of phase mixing. Development of a mathematical model.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Heat Transfer and Mass Transfer Studies :</b> Effect of geometrical, system, and operating parameters on heat transfer coefficient in multiphase reactors. Quantification of heat transfer coefficient. Application of correlations available to different multiphase reactors. Experimental techniques used for estimation of mass transfer coefficient and selection of suitable technique for a multiphase reactor. Effect of geometrical, system, and operating parameters on mass transfer coefficient in multiphase reactors. Quantification of mass transfer coefficient. Application of correlations available to different multiphase reactors.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	<b>Design Aspects of Multiphase Reactors:</b> Pressure drop, Fractional phase hold- up, mass and heat transfer coefficient, extent of mixing, etc.	<b>(08 Hours)</b>

#### Term Work:

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of multiphase reactors, keeping track of the recent technological trends and developments.

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## SEMESTER-II

### K10505 MODELLING AND SIMULATION OF CHEMICAL PROCESSES

<b>K10505 MODELLING AND SIMULATION OF CHEMICAL PROCESSES</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	
<b>Topics covered</b>		
<b>UNIT-I</b>	<b>Basics of phenomenological modelling</b> Introduction to modeling, systematic approach to model building, fundamentals of mathematical modeling-principles of formulations, fundamental laws: continuity equations, energy equation, equation of motion, transport equations, equation of state, equilibrium, chemical kinetics, advantages and limitations of models and applications of process models of stand-alone unit operations and unit processes, classification of models-simple vs. rigorous, lumped parameter vs. distributed parameter, Steady state vs. dynamic, concept of degree of freedom for steady state and unsteady state systems.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Empirical modelling building and analysis</b> Development of steady state and dynamic lumped and distributed parameter models based on first principles, analysis of ill-conditioned systems, development of grey box models, empirical model building, statistical model calibration and validation, population balance models; Examples: simple hydraulic tank, variable hydraulic tank, mixing Vessel, mixing with reaction, steam jacked vessel	<b>(08 Hours)</b>
<b>UNIT-III</b>	Mathematical models of heat-transfer equipments: shell & tube heat exchangers, evaporators, partial condensers; Mathematical models of mass-transfer equipments: batch and continuous distillation columns, reactive distillation columns, packed absorption columns; Mathematical models of reactors: batch reactors, continuous-stirred tank reactors, plug-flow reactors, reactor with axial dispersion, etc.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Basics of simulation</b> Fundamentals of simulations – Ab-initio methods, basis sets, Hartree-Fock theory, density functional theory, geometry optimization, vibrational analysis; elementary, classical statistical mechanics, elementary concepts of temperature, ensembles and fluctuations, partition function, ensemble averaging, ergodicity; molecular dynamics methodology – force field, integrating algorithms, periodic box and minimum image convention, long range forces, non bonded interactions, temperature control, pressure control, estimation of pure component properties, radial distribution function; molecular dynamics packages.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Parameter estimation and sensitivity analysis</b> Parameter estimation, parameter sensitivity analysis, statistical validity, discrimination between two models, solution strategies for lumped parameter models, stiff differential equations, solution methods for initial value and boundary value	<b>(08 Hours)</b>

	problems, solving the problems using <i>MATLAB or other chemical engineering software</i> , solution strategies for distributed parameter models..	
<b>UNIT-VI</b>	<b>Modern approaches</b> Broad overview of tools, deterministic and stochastic approaches, statistical decision theory, Markov processes, queuing theory, renewal theory, reliability theory, Non-traditional techniques: Simulated annealing, ant colony method or ANN, particle swarm method, neural networks, genetic programming, genetic algorithm, fuzzy logic, Wavelet, principal component analysis, etc.	<b>(08 Hours)</b>

**Term Work:** Oral examination will consist of assessment of the termwork (duly certified by the teacher and HOD) and oral exam based on the term work/practical. The term work shall consist of the following:

Minimum 6 practical based on solving numerical methods mentioned in the syllabus using MATLAB/SCILAB, any language, or TK solver software, or any chemical Engineering Software.

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of modeling and simulation of chemical processes, keeping track of the recent technological trends and developments.

Unit Test -II	UNIT – IV ,V,VI

## K10506 CHEMICAL REACTOR ANALYSIS AND DESIGN

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	

### Topics covered

<b>UNIT-I</b>	Chemical factor affecting the choice of the reactor, Model for batch reactor optimum operation policies and control strategies, optimal batch operation time, optimal temperature policies.	<b>(08 Hours)</b>
<b>UNIT-II</b>	Transient and steady state analysis, Optimal design of reactors, Multiphase reactors: fluidized, trickle bed, slurry etc	<b>(08 Hours)</b>
<b>UNIT-III</b>	Steady state non isothermal reactor design, the energy balance, adiabatic operation, tubular reactor with heat exchange, equilibrium conversion, CSTR with heat effects, multiple steady states.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Unsteady state non isothermal reactor design. Energy balance on batch reactor, Adiabatic operation of batch reactor, Batch reactor with interrupted isothermal operation, Semi batch reactors with a heat exchanger, Unsteady operation of CSTR, Unsteady operation of plug flow reactors	<b>(08 Hours)</b>
<b>UNIT-V</b>	Design of fixed bed catalytic reactors, isothermal ,adiabatic ,non isothermal	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Non ideal flow in reactors, Estimation of dispersion/back mixing, design aspects of reactors with non ideal flow, micro and meso mixing in reactors.	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of chemical reactor analysis and design, keeping track of the recent technological trends and developments.

#### Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## K10507 SYNTHESIS AND DESIGN OF CHEMICAL PROCESSES

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	

### Topics covered

<b>UNIT-I</b>	<b>Introduction to SDCP</b> Significance of SDCP in chemical process industry, Hierarchy of chemical process design: Hierarchy, approach to process design, performance. Preliminary Process Synthesis, Synthesis of reaction: Function of process recycle, vapor cycles and purges, vapor versus liquid cycles, batch processes, process yield	<b>(08 Hours)</b>
<b>UNIT-II</b>	Choice of reactor: Reaction path, types of reaction systems, reactor Continuous or Batch Processing, Chemical state, Process Operations, Synthesis Steps, Synthesis Tree, Heuristics, Algorithmic Methods.	<b>(08 Hours)</b>
<b>UNIT-III</b>	Recycle structure, Recycle material balances, Reactor heat effects, Equilibrium limitations, Reactor design, Separation system, vapor recovery system, Liquid separation system, Distillation column sequencing, azeotropic systems, Residue Curves for Heterogeneous Systems.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Heat exchanger networks</b> Pinch Methodology: Problem representation, temperature enthalpy diagram, simple match matrix. Heat content diagram, Temperature interval diagram. Pinch Design and Optimization: Networks for maximum energy recovery, Pinch design method, Flexibility criteria of the pinch, case studies	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Industrial Safety and risk management</b> Hazards: Chemical hazards classification. site selection and plant layout. Industrial lighting and ventilation. Occupational diseases and prevention methods. Instrumentation and control for safe operation. Personal protective equipments. Management and Risk Analysis: Case studies pertaining to chemical industries. Legislations and economics: Factory Act. Environmental Act. Provisions under various acts.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Introduction to scale-up methods, pilot plants, models and principles of similarity. Industrial applications. Computer–Aided Design application in chemical process industries, complete plant simulation.	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of synthesis and design of chemical processes, keeping track of the recent technological trends and developments.

	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	

### Topics covered

<b>UNIT-I</b>	<b>Diffusion:</b> Steady State diffusion with heterogeneous chemical reaction, Steady state diffusion accompanied by homogeneous Chemical reaction. Unsteady state molecular diffusion in isotropic media, unsteady state diffusion for typical cases of mass transfer in infinite, semi-infinite and finite plane media and in spherical and cylindrical media.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Ionic Separations :</b> Controlling factors, applications, Theory mechanism and equipments for electrophoresis, dielectrophoresis and electro dialysis, commercial applications and design considerations.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Adsorption Techniques :</b> Mechanism, Thermal-Swing Adsorption, Pressure-Swing Adsorption, Continuous, Countercurrent Adsorption Systems, Slurry Adsorption , Fixed-Bed Adsorption (Percolation), Simulated-Moving-Bed Systems, affinity chromatography and immuno chromatography, types of equipment and commercial processes, recent advances and process economics.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Multicomponent Distillation:</b> Tray by Tray calculation, feed plate location, operating reflux and plates, recent advances in column design and operation-Petlyuk, divided wall, kaibel, pre fractionators, post fractinator. Azeotropic distillation, Extractive distillation, Molecular distillation, Reactive distillation.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Membrane Separations :</b> Classification of membrane processes; Liquid permeation membrane processes or dialysis – Series resistance in membrane processes, Dialysis processes, Types of equipment for dialysis; Gas permeation membrane processes – Types of membranes and permeability for separation of gases, Types of equipment for gas permeation membrane processes (flat membranes, spiral-wound membranes, hollow-fibre membranes); Types of flow in gas permeation; Complete-mixing model, cross-flow model and countercurrent flow model for gas separation by membranes; Effect of processing variables on gas separation by membranes.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	<b>Novel Separation Techniques :</b> Supercritical fluid extraction, Reactive extraction, Zone melting, separation based on thermal diffusion, separation based on surface science, adductive crystallization.	<b>(08 Hours)</b>

**Term Work :**

Oral examination will consist of assessment of the term work (duly certified by the teacher and HOD) and oral exam based on the term work/practical. The term work shall consist of the following.

Seminar presented and duly report prepared on any topic given from syllabus.

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of advanced mass transfer, keeping track of the recent technological trends and developments.

**Text Books/References:**

**Syllabus for Unit Test:**

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## SEM-III

<b>K10601 ELECTIVE - I ADVANCED PROCESS CONTROL</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	
<b>Topics covered</b>		
<b>UNIT-I</b>	<b>Response of Control Loop Components and Transfer Functions:</b> Open loop response, most useful forcing functions, step function, sinusoidal function and the pulse function, respective responses of the forcing functions. Response of a more complex system to forcing functions.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Types of Controls:</b> Feed forward control: Advantages and drawbacks, typical examples. Feedback control: Advantages and drawbacks, typical examples.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Adaptive and Inferential Control Systems:</b> Adaptive - Feed forward, feedback Inferential - Need for a model Examples for illustration.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Response Analysis:</b> Stability and Testing Step response analysis Frequency response analysis Bode criterion, Nyquist Diagram, Root-Locus, Routh-Hertzwitz criterion. Pulse function Laplace transforms, transfer function of various system.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Dynamics of Various Systems:</b> Dead time, distance-velocity lag, inverse response systems, dynamic analysis, Qualitative characteristics, Distributed parameter systems.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	<b>Control Strategies for various unit operations and processes:</b> Distillation, Drying, Absorption column, Stirred tanks. Processes: Process Design, Product quality control. Computer control: Direct Digital Control (DDC), Supervisory Digital Control, Economic justification for supervisory digital control.	<b>(08 Hours)</b>
<p><b>Term Work:</b> based on the term work/practical. The term work shall consist of the following.</p> <ul style="list-style-type: none"> <li>• Ability of the student to explain the theory and related course material.</li> <li>• The process control modules are now extensively used in industry. The student should demonstrate their working principles and the utility citing at least 4 chemical industries.</li> <li>• The controllers used in chemical industry need careful monitoring.</li> <li>• Students should briefly describe the type of maintenance for controllers.</li> </ul>		
<p><b>Assignment:</b> Each student will submit assignments based on different topics in consultation with faculty, in the area of advanced process control, keeping track of the recent technological trends and developments.</p>

<b>Syllabus for Unit Test:</b>	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

<b>K10601 ELECTIVE – I : NON CONVENTIONAL ENERGY SOURCES</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical:2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	
<b>Topics covered</b>		
<b>UNIT-I</b>	<b>Renewable Sources of Energy:</b> Solar energy: Thermodynamic and heat transfer aspects of solar collection; Energy storage; Solar distillation; Solar drying; Wind energy; Tidal, Wave and ocean thermal energy; Geothermal energy.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Fuel Cells:</b> Introduction, Principles; Types of fuel cells; phosphoric acid, molten salt, solid oxide and other types of fuel cells; Anodes and cathodes; Fuel cells as alternative energy source.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Biomass and biofuels:</b> Introduction, Biofuel classification; Biomass production for energy farming; Direct combustion for heat; Pyrolysis (destructive distillation); Thermochemical processes; Alcoholic fermentation; Anaerobic digestion for biogas; Vegetable oils and biodiesel; Economics of bio-mass energy systems.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Hydro-power:</b> Introduction, Principles, Assessing the resource for small installations, An impulse turbine, Reaction turbines, Hydroelectric systems, The hydraulic ram pump, Social and environmental aspects	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Tidal power:</b> Introduction, The cause of tides, Enhancement of tides, Tidal current/stream power, Tidal range power, World range power sites 447 <b>Ocean thermal energy conversion (OTEC):</b>	<b>(08 Hours)</b>

	Introduction, Principles, Heat exchangers, Pumping requirements, Practical considerations.	
<b>UNIT-VI</b>	<b>Utilization of Wastes:</b> Utilization of fly ash, blast furnace slag in cement and concrete, Wastes and residues	<b>(08 Hours)</b>

**Term Work:** The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of non conventional energy sources, keeping track of the recent technological trends and developments

**Text Books/References:**

**Syllabus for Unit Test:**

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## K10601 ELECTIVE I:INDUSTRIAL WASTE WATER TREATMENT

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical:2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	

### Topics covered

<b>UNIT-I</b>	Introduction, Source of Industrial waste water, Physical, Chemical & Biological characteristics Of Industrial Waste Water. Measurement of polluting strength of Ind.Waste water (physical, chemical & biological)	<b>(08 Hours)</b>
<b>UNIT-II</b>	Physical Unit operations: Sedimentation & Design of Settling Chambers. Filtration & Design of Filters. Coagulation, Flocculatores, Froth Flotation	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Conventional Waste Water Treatment:</b> Primary Treatment (Physical).Design Principles of Grit chambers & screens. Principles of Aeration .Secondary treatments (Biological), Kinetics of Growth & Food utilization, Design Principles of A.S.P. Trickling Filters, oxidation ponds, stabilization ponds, Aerobic, anaerobic Lagoons	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Sludge Treatment &amp; Disposal:</b> Anaerobic digestion, Aerobic Digestion, Sludge disposal, composting	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Advanced Waste Water Treatment:-</b> Carbon adsorption, Ion exchange, membrane processes. Nitrogen removal, Phosphorous removal, Chemical oxidation, Recovery of materials from process effluents	<b>(08 Hours)</b>
<b>UNIT-VI</b>	<b>Solid Waste Management:</b> Characteristics, Solid waste collection & transport, Solid Waste Processing & recovery, Disposal of Solid waste. Hazardous waste management & Risk assessment. Types of hazardous waste, health Effects, Treatment methods & Final disposal	<b>(08 Hours)</b>

**Term Work:** The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of industrial waste water treatment, keeping track of the recent technological trends and developments

<b>Syllabus for Unit Test:</b>	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

### K10601 ELECTIVE I: HETEROGENEOUS CATALYSIS

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	
<b>Topics covered</b>		
<b>UNIT-I</b>	<b>Adsorption, Desorption:</b> Definition, rates of adsorption and desorption, surface areas for physical adsorption. Experimental aspects of adsorption and allied phenomena on catalyst surfaces	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Significance of Pore Structure and Surface Area in Heterogeneous Catalysis:</b> Importance of pore structure and surface area, experimental methods to determine surface area, methods of ascertaining pore volume and diameter .Kelvin equation, pore size distribution by gas adsorption, pressure porosimeter, density measurement. Pore structure of adsorbents and catalysts: Hysteresis and shape of capillaries, surface area from hysteresis loops, modes for characterizing pore structures. Reaction rates in pores catalysts: Mass transfer, concentration profiles, reaction rates, pressure and temperature gradients, catalyst deactivation	<b>(08 Hours)</b>

<b>UNIT-III</b>	<b>Role of Lattice Imperfections in Heterogeneous Catalysis:</b> Classification of lattice imperfections, role of point dislocations and point defects, lattice imperfections and polymerization catalysts, role of geometric and electronic factors in catalytic activity.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Dynamics of Selective and Poly-functional Catalysis:</b> Catalyst selectivity, selective formation of intermediate products, effect of pore size on electivity, mass transport of intermediate product in non-trivial poly-step reactions, selectivity of poly-functional catalysts Zeolites in catalysis: Structural aspects and synthesis of zeolites, modification of zeolites, diffusion in zeolites, applications.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Fischer-Tropsch synthesis: Synthesis and Decomposition of Ammonia</b> Catalyst cracking: catalyst composition and chemical properties, mechanism of cracking reactions. Catalysis of electrode reactions. Kinetics of catalytic reactions: Rate of chemical reaction, overall reaction rate, mass transfer through gas phase, mass transfer in pores.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Mass and heat transfer in solid catalyst beds. Design calculations: Isothermal conditions, adiabatic conditions, non-adiabatic conditions. Thermal selectivity of packed bed reactors. Fluidized bed reactors. Optimum design: Continuous variation of parameter along the reaction path, temperature profiles for reversible and consecutive reactions, optimum catalyst concentration in bi-functional catalyst systems	<b>(08 Hours)</b>

**Term Work:** The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of heterogeneous catalysis, keeping track of the recent technological trends and developments.

**Text Books/References:**

1.	Thomas J. M., Thomas W. J., "Introduction to The Principles of Heterogeneous catalysis", Academic Press
2.	Srivastav R. D., "Heterogeneous catalytic Science", CRC Press
3.	Thomas S. J., Webb G., "Heterogeneous Catalysis", Oliver & Boyd Ltd.

**Syllabus for Unit Test:**

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV, V,VI

## K10601 ELECTIVE I: CATALYST MATERIALS

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	

### Topics covered

<b>UNIT-I</b>	<b>Bimetallic Catalysts:</b> Introduction, nature, method of preparation and characterization, catalytic properties of bimetallic systems. Supported bimetallic catalyst, chemical nature, factors affecting efficiency and uniformity of co clustering, structure, surface composition, catalytic properties.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Perovskite Related Oxides:</b> Solid state properties, Zeolite, crystal structure, non-stoichiometry, magnetic and electrical properties, ferro electric and acoustic properties, applications. Crystal chemistry and catalytic properties of oxides with scheelite structure, crystal chemistry, olefin oxidation, and mechanism. Catalytic properties of synthetic layered silicates and alumino silicate, synthetic mica-montmorillonite and nickel reducibility, layered metalsilicate catalyst.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Biological Catalyst:</b> Enzymes, incentives for using enzymes, methodology, chemical and physical properties, activity, pH-activity behavior, stability, application.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Catalyst Design:</b> Optimization of catalyst distribution in a single pellet, the case of single and multiple reaction, isothermal and non-isothermal conditions, complex reaction system, factors affecting catalytic dispersion, optimal distribution of catalytic loading.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Optimization of Catalyst Distribution in a Reactor:</b> Single reaction and multiple reaction, isothermal and non-isothermal conditions. Catalytic deactivation, non-selective and selective poisoning..	<b>(08 Hours)</b>
<b>UNIT-VI</b>	<b>Membrane Reactor:</b> Membrane reactor with non-uniform catalytic distribution, optimal catalyst distribution in pellets for an inert membrane reactor and catalytic membrane reactor, preparation of catalytic membrane.	<b>(08 Hours)</b>

**Term Work:** The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in

the area of catalyst materials, keeping track of the recent technological trends and developments.

2.	Morbideilli M., Gavriilidis A. and Varma A., “Catalyst design: Optimal distribution of catalyst in pellets, reactors and membrane”, Cambridge university press, Cambridge,2001.
<b>Syllabus for Unit Test:</b>	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

<b>ELECTIVE II: MEMBRANE SEPERATION</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical:2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	
<b>Topics covered</b>		
<b>UNIT-I</b>	<b>Introduction</b> Separation Processes, Introduction to membrane processes, Definition of Membrane Merits of the Processes. Classification of the membrane separation process.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Materials &amp; Materials Properties</b> Membrane Polymers, Molecular weight, Porous & Porous membrane, Thermal, Chemical & Mechanical Properties of Inorganic membranes, Biological membranes. Retention & rejection co-efficient. Factor affecting the	<b>(08 Hours)</b>

	separation processes. Effect of polymeric structure on Tg Glass transition temperature depression.	
<b>UNIT-III</b>	<b>Preparation of Synthetic Membranes</b> Phase inversion membranes, Preparation by evaporation, Precipitation from the vapour phase. Precipitation by controlled evaporation, Thermal & immersion precipitation. Flat membranes, Tubular membranes, Zeolite membranes, Dense membrane. Preparation Technique for Composite Membrane, Inorganic Membranes	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Characteristics of porous membrane, Bubble Point Method, Mercury intrusion method, Permeability Method, Ultrafiltration, Gas-adsorption desorption, Characterisation of ionic membranes, characterisation of nonporous membrane.	<b>(08 Hours)</b>
<b>UNIT-V</b>	Transport in membrane, Knudsen flow, Friction Model, Transport through non-porous membrane. Determination of diffusion co-efficient & solubility co-efficient. Transport in ion exchange membranes.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Membrane Processes, M.F, U.F, R.O, Nano filtration Dialysis, Electrodialysis, Piezodialysis, Diffusion Dialysis, Membrane reactors & membrane bioreactors, Polarization & Fouling Phenomena in Membranes, C.P in electro dialysis, Temperature Polarization, Membrane Fouling, Method to reduce Fouling.	<b>(08 Hours)</b>

**Term Work:** The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of membrane separation, keeping track of the recent technological trends and developments.

**Text Books/References:**

1.	Osada Yoshohito, Nakagawa T., "Membrane Science and Technology", Marcel Dekker Inc.
2.	Mulder, "Basic Principles Membrane Technology", Kluwer Academic Marcel of Publishers, Netherlands, 1998
3.	C.J.King, "Separation Processes", Tata Mc Graw-Hill

**Syllabus for Unit Test:**

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## K10602 ELECTIVE II: BIOPROCESS ENGINEERING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	

### Topics covered

<b>UNIT-I</b>	Introduction, Biotechnology & Bioprocess Engineering types & structure of cells ,Growth kinetics, Growth cycle phase, effect of substrate concentration, cell concentration and death rate on growth of M.O.	<b>(08 Hours)</b>
<b>UNIT-II</b>	Simple Enzyme Kinetics, Michaelis-Menten Kinetics, evaluation of M.M equation parameters, line weaver, Burk plot, Eadie-Hofstee plot, factors influencing enzyme activity, immobilized enzyme technology ,immobilized kinetics	<b>(08 Hours)</b>
<b>UNIT-III</b>	Selection, Scale-up & Control of Bioreactors Ideal, on-ideal Bioreactors, Fed Batch reactor, sterilization reactor, Aeration & Agitation & mass transport in cellular system. Scale up difficulties, Bioreactor instrumentation & control.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Recovery & Purification of Product Separation of insoluble products. Cell disruption, separation of soluble products, finishing steps for purification, integration of reaction & separation	<b>(08 Hours)</b>
<b>UNIT-V</b>	Industrial Production of Chemicals Ethanol, Acetic acid, Citric acid, Gluconic acid. Solvents such as Glycerol, acetone, butanol. Anti-biotics such as penicilline, streptomycine, tetracycline. Production of High Fructose Corn Syrup (HFCS), production of Bakers Yeast Single Cell Protein	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Medical & other applications of Bioprocess Engg. introduction, Tissue Engineering, Gene Therapy, Stem cell, Use of microbes in mineral beneficiation & oil recovery, Biofertilizers & Biopesticides, Biopolymer Biological treatment of Industrial Waste	<b>(08 Hours)</b>

**Term Work:** The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in

the area of bioprocess engineering, keeping track of the recent technological trends and developments.

<b>Syllabus for Unit Test:</b>	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV ,V,VI

### K10602 ELECTIVE II: MULTICOMPONENT SEPERATION

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	

#### Topics covered

<b>UNIT-I</b>	Characteristics and selection of separation process: Importance and variety of separation, economic significance, characteristics, inherent separation factor, selection, factors influencing the choice of separation process, solvent selection, selection of equipment.	<b>(08 Hours)</b>
<b>UNIT-II</b>	Multicomponent separation: General short-cut equation, Edmister method, distillation, absorption, extraction, alternate short-cut method, Fenske and Underwood equation.	<b>(08 Hours)</b>
<b>UNIT-III</b>	Multicomponent separation: Distillation, Rigorous method, Lewis-Matheson method, Thiele-Geddes method, Amundson-Pontinen method.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Azeotropic and extractive distillation: Activity coefficient, equilibrium relationship, binary and ternary azeotropes, selection of solvent, calculations..	<b>(08 Hours)</b>
<b>UNIT-V</b>	Multicomponent separation: Extraction, Rigorous method, stripping factor equation, material balance, single and cross-current multiple contact, calculations.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Multicomponent separation: Absorption, Rigorous method for absorption, calculations.	<b>(08 Hours)</b>

**Term Work:** The term work shall consist of the following.  
 Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the

product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.	
<b>Assignment:</b> Each student will submit assignments based on different topics in consultation with faculty, in the area of multicomponent separation, keeping track of the recent technological trends and developments

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

<b>K10602 ELECTIVE II: FOOD PROCESS ENGINEERING</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical:2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance:10 Marks	
	TW :25 Marks	
	Oral:25 Marks	
	Total :150 Marks	
<b>Topics covered</b>		
<b>UNIT-I</b>	Introduction: Characteristics and nutritional properties of food texture, taste, flavour and aroma. Geometric, physical and functional properties of food material. Preparation for food processing, energy conservation, material and energy balance	<b>(08 Hours)</b>
<b>UNIT-II</b>	Processing Methods: Heating : Balancing and pasteurization, freezing, dehydration, canning, additives. Fermentation: Extrusion cooking, hydrostatic pressure cooking. Dielectric heating microwave processing and asptic processing, infrared radiation processing, concept and equipment used	<b>(08 Hours)</b>

<b>UNIT-III</b>	Drying: Moisture content: Definition, method of determination, direct and indirect methods. Equilibrium moisture content: Hysteresis Effect. Psychometric of air water vapour mixture, Drying mechanism, constant rate period and falling rate period , Method and equipments used, factor affecting rate of drying	
<b>UNIT-IV</b>	Food conservation Operation: Sieve reduction, fibrous foods, dry foods and liquid foods. Theory and equipment, membrane	<b>(08 Hours)</b>
<b>UNIT-V</b>	Material handling: types of candling and conveying system food products, and their design, belt conveyors, screw conveyors, bucket elevator and pneumatic conveyor.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Preservation of food material: Preservation by drying, preservation by low temperature, chemical preservation .Thermal death time curve	<b>(08 Hours)</b>

**Term Work:** The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of food process engineering, keeping track of the recent technological trends and developments

**Text Books/References:**

1.	Shivshankar B., "Food Processing and Preservation", Prentice Hall of India Pvt. Ltd., New Delhi 110001, 2002
2.	Sahay and Singh, "Unit Operation in Agricultural Processing
3.	Dennis R. H., " Food Process Engineering"
4.	Rao M. A. & Rizvi S. S. H, " Engineering Properties of Food

**Syllabus for Unit Test:**

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## K10602 ELECTIVE II: FLUIDIZATION ENGINEERING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Practical: 2 Hours/Week	Unit Test: 20 Marks	TW/PR/OR: 01
Total : 6 Hours/Week	Assignment: 10 Marks	Total credits: 05
	Attendance: 10 Marks	
	TW : 25 Marks	
	Oral: 25 Marks	
	Total : 150 Marks	

### Topics covered

<b>UNIT-I</b>	Introduction and Application : Phenomenon of Fluidisation, Liquid like behavior of a fluidized bed, comparison with other methods , Advantages and Disadvantages, Types of Fluidisation. Gas behavior Of Fluidised bed : Fixed beds, minimum fluidisation velocity, Terminal velocity, and pressure drop, importance of distributor, voidage, TDH, viscosity and fluidity of fluidized beds.	<b>(08 Hours)</b>
<b>UNIT-II</b>	Bubbles and Emulsion phase in Dense bubbling beds: Single rising bubble, Stream of bubbles from single source, Ordinary Bubbling bed. Experimental findings. Bubbling bed model for Emulsion phase	<b>(08 Hours)</b>
<b>UNIT-III</b>	Flow pattern of gas through fluidized bed: Experimental findings , Bubbling bed model for gas interchange. Evaluation of inter change coefficient. Radial and Axial dispersion of gas. Mass and heat transfer b/w fluid and solid.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Conversion of gas in bubbling beds: Two region model, Model using distribution. Catalytic conversion, reaction rate, contacting efficiency, application to successive reactions, control of bubble size, baffling and scale-up.	<b>(08 Hours)</b>
<b>UNIT-V</b>	Entrainment and Elutriation : Entrainment at or above TDH, Entrainment below TDH. Model for entrainment from dense fluidized bed and its applications	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Application in physical operations: Synthesis reactions, cracking and reforming of hydrocarbons, carbonization and gasification. Gas solid reactions	<b>(08 Hours)</b>

**Term Work:** The term work shall consist of the following.

Research survey, literature review and analysis, synthesis, design and development, experimental work, testing on the product or system, generation of new ideas and concept, modification in the existing process/system, development of computer programs, solutions, modeling and simulation related to the subject. The student is required to choose the topic in consultation with the subject teacher. The student is expected to submit a report on the work carried out throughout the semester.

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of fluidization engineering, keeping track of the recent technological trends and developments.

5.	Phillip C. Wankat, "Equilibrium Staged Separations", Prentice Hall
<b>Syllabus for Unit Test:</b>	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

<b>K 10604 DISSERTATION STAGE –I</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Practical:7 Hours/Week	TW :25 Marks	TW: 21
Total : 7Hours/Week	Total :25 Marks	Total credits: 21
<p>This stage will include comprehensive report on literature survey, design and fabrication of experimental set up and/or development of model, relevant computer programs and the plan for stage II.</p>		

<b>K 10603 SEMINAR</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Practical:5 Hours/Week	TW :25 Marks	TW: 5
Total : 5Hours/Week	Oral:25Marks	Total credits: 5
	Total :50 Marks	
<p>The students will be required to select advanced research topics for the seminar and present the seminar during the semester. A detailed report should also be submitted and assessment will be based on the quality in terms of the research and development.</p>		

## SELF STUDY PAPER-I

<b>SELF STUDY PAPER -I : OPTIMIZATION TECHNIQUES IN PROCESS DESIGN</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total: 4 Hours/Week	Internal assessment: 40 Marks	Total credits:04
	Unit Test: 20 Marks	
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	
<b>Topics covered</b>		
<b>UNIT-I</b>	<b>Introduction to optimization</b> Scope and Hierarchy of optimization, Essential features of optimization Problems, General Procedure for solving optimization problems, obstacles to optimization, Developing Models for optimization, Classification of Models, How to build Model, Selecting functions to fit empirical data, degree of Freedom, Formulation of objective function .	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Classification of Optimization Techniques</b> , Single variable, Multivariable optimization with no constraints ,equality constraints ,inequality constraints	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Linear Programming</b> Simplex method, Geometry of LPP, solution to linear simultaneous equations, Pivotal reduction of a general system of equations, sensitivity Analysis	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Non Linear Programming</b> One dimensional minimization method, unimodal function, Dichotomous search, Fibonacci Method, Golden section Method, Interpolation Method, Scanning and bracketing Method	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Non linear Programming unconstrained optimization &amp; constrained Optimization</b> Direct Search Method, Random Search method, Descent Method, Conjugate Gradient Method , Introduction to NLP constrained optimization Direct and Indirect Methods .	<b>(08 Hours)</b>
<b>UNIT-VI</b>	<b>Examples and case study for different engineering applications..</b>	<b>(08 Hours)</b>
<b>Assignment:</b> Each student will submit assignments based on different topics in consultation with faculty, in the area of optimization techniques in process design, keeping track of the recent technological trends and developments.		
<b>Text Books/References:</b>		
1.	Edgar T F , Himmelblau D N , “Optimization of Chemical Processes”, MC Graw Hill Publication .	
2.	S S Rao, Optimization theory and Application, Wiley Eastern Publication	

<b>Syllabus for Unit Test:</b>	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

### SELF STUDY PAPER -I: NON CONVENTIONAL ENERGY SYSTEMS

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	

#### Topics covered

<b>UNIT-I</b>	<b>Renewable Sources Of Energy</b> Renewable sources of energy such as hydro, solar, wind, biomass, tidal and geothermal – their availability and limitation. Energy crisis and energy demand projection.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Solar Energy</b> Solar radiation, photovoltaic cell, pyranometer, solar thermal collectors, solar air heaters, solar constant, solar cell, applications of solar energy.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Wind Energy</b> Wind map of India, mean wind speed and wind density during different months in specific areas. Types of wind mills, their assembly and application as electric converters, pumping motors. Concept of wind farms, its applications.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Bio-Mass Energy</b> Bio-mass as a source of energy, energy plantation, pyrolysis classification and anaerobic fermentation, types of biogas plant, their comparative status, design and application.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Other Alternate Sources Of Energy</b> Tidal power, sites for tidal power plants in India, micro-hydel power station, geothermal energy, limitations and applications of such power plants.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	<b>Energy Conservation And Auditing</b> Conservation of energy in – domestic application and industries, use of fuel efficiently in vehicles, waste recycling fuel gas and heat recovery, energy demand management, energy accounting and auditing.	<b>(08 Hours)</b>

#### Text Books/References:

4.	Majumdar B., A Textbook of Energy Technology, APH Publications
5.	J. T. McMullan, R. Morgan and R. B. Murray, Energy Resources and Supply, John Wiley & Sons, London, 1976
6.	G.D. Rai, Solar Energy Utilization, Khanna Publishers, Delhi
7.	A.W. Culp, Principles of energy conservation, Tata MGH

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of non conventional energy systems, keeping track of the recent technological trends and developments.

**Syllabus for Unit Test:**

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

**SELF STUDY PAPER -I: MECHANICAL ASPECTS IN CHEMICAL ENGINEERING**

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test : 20 Marks	Total credits: 04
	Assignment : 10 Marks	
	Attendance :10 Marks	
	Total :100 Marks	

**Topics covered**

<b>UNIT-I</b>	Mechanical aspects of piping design and layout, Pipe and its representation, pipe fittings, methods of pipe joining, piping insulation, Piping insulation, piping symbols, design of piping systems, piping isometrics, plot plan and Pipe racks.	<b>(08 Hours)</b>
<b>UNIT-II</b>	Chemical equipment design - mechanical aspects, Design of Support for process vessels, basic theory for vertical vessels, design of skirt support, Bracket or lug support, leg support, ring support, horizontal support, saddle support, leg support, Ring support, engineering materials, classification and commercial applications.	<b>(08 Hours)</b>
<b>UNIT-III</b>	Principles of mechanical engineering in chemical engineering, Power conversion devices such as steam turbines, IC engines, different types of pumps, Air conditioning and refrigeration, ON-OFF valves, Non return and other type of valves.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Energy conservation and heat pumps, Energy conservation in India and World, mechanical vapor compression , heat pumps, various thermodynamic cycles, actual vapor compression heat pumps with liquid sub cooling, various types of heat pumps.	<b>(08 Hours)</b>

<b>UNIT-V</b>	Mechanical aspects in chemical process engineering, Alternative routes in process engineering , general approach to plant design, process research and pilot studies, process design and development , preparation of operating manual instructions, cost cutting machines, trouble shooting , green engineering and process intensification.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Mechanical engineering aspects in chemical engineering and technology, Study of general purpose tools and special purposes tools and machines, lathes, milling, drilling and accessories. EDM , TWEDM, hobbling, electroplating, ,ECM, arc welding, gas welding, brazing, soldering, riveting, TIC, MIG welding processes, equipment used and applications, drop forging, press forging , role forging, and industrial applications.	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of mechanical aspects in chemical engineering, keeping track of the recent technological trends and developments.

**Text Books/References:**

**Syllabus for Unit Test:**

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## SELF STUDY PAPER -I: GREEN CHEMISTRY AND TECHNOLOGY

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test : 20 Marks	Total credits: 04
	Assignment : 10 Marks	
	Attendance :10 Marks	
	Total:100 Marks	

### Topics covered

<b>UNIT-I</b>	Introduction: Definition, the twelve basic principles of green chemistry. Use of Renewable Feedstock, Reduction of Derivatives, Catalysis, Design for Degradation, Real-time Analysis for Pollution Prevention, Inherently Safer Chemistry for Accident Prevention.	<b>(08 Hours)</b>
<b>UNIT-II</b>	Green synthetic methods: Microwave synthesis, electro-organic synthesis, Design and development of environmentally friendly chemical pathways: challenges and opportunities. Materials for green chemistry and technology: Catalysis, environmental friendly catalysts, Bio-catalysis, biodegradable polymers, alternative solvents.	<b>(08 Hours)</b>
<b>UNIT-III</b>	Biochemical conversion: anaerobic digestion, alcohol production from biomass; Chemical conversion process: hydrolysis and hydrogenation; Biophotolysis: Hydrogen generation from algae biological pathways; Storage and transportation; Applications.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Green innovation & sustainability: Criteria for choosing appropriate green energy technologies, life cycle cost; the emerging trends – process/product innovation-, Eco/green technologies for addressing the problems of Water, Energy, Health, Agriculture and Biodiversity- WEHAB (eco-restoration/ phyto-remediation, ecological sanitation, renewable energy technologies.	<b>(08 Hours)</b>
<b>UNIT-V</b>	Global warming; greenhouse gas emissions, impacts, mitigation and adaptation; future energy Systems- clean/green energy technologies; International agreements/conventions on energy and sustainability - United Nations Framework Convention on Climate Change (UNFCCC); sustainable development.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Environmental reporting and ISO 14001; climate change business and ISO 14064; green financing; financial initiative by United Nations Environment Programme (UNEP); green energy management; green product management , green tax incentives and rebates (to green projects and companies); green project management in action; business redesign; eco-commerce models.	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of green chemistry and technology, keeping track of the recent technological trends and developments.

Unit Test -II	UNIT – IV,V,VI

### SELF STUDY PAPER I- CAVITATION TECHNIQUES

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4 Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance: 10 Marks	
	Total : 100 Marks	

#### Topics covered

<b>UNIT-I</b>	<b>Introduction</b> The physical phenomenon , Definition, Vapor pressure, The main forms of vapor cavities, Cavitation regimes, Typical situations favorable to cavitation , The main effects of cavitation in hydraulics , Specific features of cavitating flow, Pressure and pressure gradient, Liquid-vapor interfaces, Thermal effects, some typical orders of magnitude, Non-dimensional parameters: Cavitation number, Cavitation number at inception, Relative under pressure of a cavity.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Acoustic Cavitation</b> Cavitation Bubble Temperature, Classification of Acoustic Cavitation, Sonoluminescence, Sonochemistry, Experimental Factors that Control Sonochemistry, Sites where Sonochemical Reactions Occur, The Classification of Sonochemical Reactions.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Synthesis of Inorganic Materials</b> Ultrafine powders and nanostructured materials, metal oxides, metal powders, supported nano powders etc.	<b>(08 Hours)</b>

<b>UNIT-IV</b>	<b>Synthesis of organic Materials</b> Homogeneous reactions, heterogeneous sono chemistry, Synthesis using alkylation reactions, addition reactions, reduction and oxidation reactions etc.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Environmental protection and remediation</b> Degradation of organic pollutants, Water purification, application of cavitation alone, combined application of cavitation and ozone, combined application of cavitation and ultraviolet light, combined application of cavitation and advanced oxidation processes(AOPs)	<b>(08 Hours)</b>
<b>UNIT-VI</b>	<b>Other applications of cavitation</b> <u>Polymers:</u> Degradation of polymers, factors affecting polymer degradation, polymer synthesis, ultrasonic processing of polymers. <u>Sonoelectrochemistry:</u> Electroplating in presence of ultrasound, zinc, iron, copper, nickel etc. Sonoelectro - organic synthesis.	<b>(08 Hours)</b>
<b>Assignment:</b> Each student will submit assignments based on different topics in consultation with faculty, in the area of Cavitation techniques, keeping track of the recent technological trends and developments.		
<b>Text Books/References:</b>		
1.	Jean-Pierre Franc, Jean-Marie Michel, "Fundamentals of Cavitation", Kluwer Academic Publishers, Dordrecht.

3.	T. J. Mason and J. P. Lorimer, "Applied sonochemistry: Uses of power ultrasound in chemistry and processing", Wiley-VCH publishers.	
<b>Syllabus for Unit Test:</b>		
Unit Test -I	UNIT – I ,II,III	
Unit Test -II	UNIT – IV,V,VI	

## SELF STUDY PAPER-I: SAFETY ENGINEERING IN INDUSTRIES

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

### Topics covered

<b>UNIT-I</b>	Types of chemical Process Industries, various hazards in industries, handling of Hazardous chemicals, case study (one or two), chemical composition of hazards, case Study (one or two), first aid measures, fire fighting measures, accidental release Measures, personal protection and storage.	<b>(08 Hours)</b>
<b>UNIT-II</b>	Process Selection, plant operation, plant selection, construction, process system Engineering.	<b>(08 Hours)</b>
<b>UNIT-III</b>	Industrial pollution, pollution control aspects, pollution control acts, various Toxic materials, handling of toxic materials, and industrial gases.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Safety program, engineering ethics, accident and loss statistics, acceptable Risk, nature of accidental process, one or two case studies	<b>(08 Hours)</b>
<b>UNIT-V</b>	Government regulations, identification, MSD sheets, evaluation and control.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Relief concept, definitions, location of relief, relief types, relief scenario, Data for sizing relief, relief systems, design considerations and recommendations	<b>(08 Hours)</b>

### Text Books/References:

1.	Environmental Engineering, Howard S Peavy, Donald R Rowe and George Tchobanogloglons, Mc Graw Hill Book company.
2.	Shreve s Chemical Process Industries, George T Austin, Mc Graw Hill International Edition
3.	Pollution Control in Chemical Process Industries, Mahajan S B, Tata Mc Graw Hill edition (P) Ltd.
4.	Introduction to process Engineering and Design ,Thakore S.B and Bhatt B. I. Mc Graw Hill Publishing Company Ltd. New Delhi

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of safety engineering in industries, keeping track of the recent technological trends and developments.

### Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## SELF STUDY PAPER -I: PETROLEUM ENGINEERING

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

### Topics covered

<b>UNIT-I</b>	Distribution of Reserves Worldwide distribution of oil and gas reserves, Subsurface data sampling and data interpretation, Measurement scaling	<b>(08 Hours)</b>
<b>UNIT-II</b>	Origin of Hydrocarbons , accumulation and migration of hydrocarbons, Reservoir traps.	<b>(08 Hours)</b>
<b>UNIT-III</b>	Properties of reservoir rocks and fluids, Rock – fluid interface, Reservoir description by direct and indirect methods, Oil and Gas in place. Chemical, physical and thermodynamic properties of petroleum and reservoir fluids	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Drilling of oil and gas wells, Classification of wells, Drilling operating systems, Drilling fluids.New trends in drilling engineering.	<b>(08 Hours)</b>
<b>UNIT-V</b>	Hazard and safety measures in handling of natural gas, transportation and storage of oil and gas ,Storage of oil and gas , Types of storage tanks, underground storage of natural gas Catalytic cracking, Catalytic reforming, Hydrodesulfurization, Hydrocracking	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Recent developments in Hydrocarbon production techniques, Hydrocarbon recovery mechanisms, Non-conventional hydrocarbon energy sources, International trading in oil and gas.	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of petroleum engineering, keeping track of the recent technological trends and developments.

### Text Books/References:

1.	Bradley, “Petroleum Engineering Handbook”, SPE
2.	Mian, M. A., “Petroleum Engineering Handbook for Practicing Engineer”, Vol. I and II, Pennwell Publication.
3.	Deshpande, B.G., “World of Petroleum”, Wiley.
4.	John, F., Cook, M., and Graham, M., “Hydrocarbon Exploration and Production”, Elsevier.

### Syllabus for Unit Test:

Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

## SELF STUDY PAPER- I: FLUID PARTICLE TECHNOLOGY

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

### Topics covered

<b>UNIT-I</b>	<b>Applications of fluidized beds</b> Introduction. Industrial application of fluidized beds. Physical operations and reactions.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Fluidization and analysis of phases</b> Fluidization and analysis of phases for gas-solid, liquid-solid, and gas-liquid-solid fluidized beds. Hydrodynamic characteristics: pressure drop, velocity mapping, and fractional hold- up.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Mixing studies in fluidized beds</b> Effect of geometrical, system, and operating parameters on phase mixing in fluidized beds. Quantification of phase mixing. Development of a mathematical model.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Heat and mass transfer in fluidized beds</b> Mass and heat transfer between fluid and particles. Effect of geometrical, system, and operating parameters on heat and mass transfer coefficients. Application of correlations available for estimating heat and mass transfer coefficients	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Circulating Fluidized Beds</b> Fluid and particle distribution in a fluidized bed. Introduction to circulating fluidized bed and its application. Hydrodynamic aspects of circulating fluidized beds. Standardization of circulating fluidized beds.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Design of fluidization system for physical operations, catalytic and non-catalytic reactions, three phase fluidization and its standardization with regards to pressure drop, fractional phase hold- up, mass and heat transfer coefficient, extent of mixing, etc.	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of fluid particle technology, keeping track of the recent technological trends and developments.

<b>Syllabus for Unit Test:</b>	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

### SEM –IV

<b>K 10605 DISSERTATION STAGE –II</b>		
<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Practical: 10 Hours/Week	TW :150 Marks	TW & Oral:30
	Oral:75 Marks	
Total : 10Hours/Week	Total :225 Marks	Total credits: 30
<p>This is the final stage in the dissertation work. This stage will include comprehensive report on the work carried out at this stage and relevant portions from stage I, including experimental studies, analysis and/or verification of theoretical model, conclusions. The student is required to publish at least one national/international paper based on the dissertation work. The publication/ accepted paper for publication shall be included in the report</p>		

## SELF STUDY PAPER-II

<b>SELF STUDY PAPER-II-TECHNOLOGY TRANSFER PRACTICES –BRIDGE TO INDUSTRY</b>		
<b>TEACHING SCHEME:</b>		
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total:100 Marks	
<b>Topics covered</b>		
<b>UNIT-I</b>	Innovation and the dynamics of technological change. The interactive and non-linear nature of Innovation, Defining the Innovation Need, Dynamics of Technological Change and Systems of Innovation	<b>(08 Hours)</b>
<b>UNIT-II</b>	Theory and practice of processes of technology transfer and diffusion: Commercialization of technology; intellectual property rights. Product innovation: impact of product innovation, Product Innovation within OEM (case studies)	<b>(08 Hours)</b>
<b>UNIT-III</b>	success factors for product innovation; developing a product innovation strategy: Interactive learning and networks of innovation: technology Platforms; firms taxonomy	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Systems of Innovation and the corporate value chain: fostering clustering effects. Regional innovation strategies	<b>(08 Hours)</b>
<b>UNIT-V</b>	SWOT Analyses of company and product, Product Portfolio Analyses: Product Life Cycle (PLC) Product Innovation and Design consultancies (case studies), New Product-Service-System development	<b>(08 Hours)</b>
<b>UNIT-VI</b>	External trends (PESTED) and company core competences, Strategic Gap, Selection of ideas, Market implementation	<b>(08 Hours)</b>
<p><b>Assignment:</b> Each student will submit assignments based on different topics in consultation with faculty, in the area of technology transfer practices-bridge to industry, keeping track of the recent technological trends and developments.</p>

Unit Test -II	UNIT – IV,V,VI

### SELF STUDY PAPER-II: -POLYMER ENGINEERING

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hrs/week	End Semester Examination: 60 Marks	Theory : 04
Total: 4 Hrs/week	Internal assessment: 40 Marks	Total Credits:04
	Total :100 Marks	

#### Topics covered

<b>UNIT-I</b>	<b>Introduction to polymer technology</b> Types of polymerization, effect of temperature and pressure on polymerization, degree of polymerization, molecular weight determination.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Polymerization process</b> Manufacturing process of phthalic anhydride, propylene, acrylonitrile, adipic acid, tetraphthalic acid, LDPE, HDPE, PVC, PP, PC, polystyrene, polyurethanes, PTFE, polyester via terephthalic acid, nylon-6.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Polymerization reactors</b> Batch, continuous, plugflow, CSTR, Design consideration of batch reactor, design consideration in high pressure LDPE reactors LLDPE & HDPE Fluid bed reactor. Types of agitators for polymerization reactors, polymer drying.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Polymer characterization & rheology. Mechanical properties of polymer, crystallinity, glass transition temperature (T <sub>g</sub> ), heat distribution temperature, mathematical models of viscoelastic behaviour of plastic, viscosity determination of polymer.	<b>(08 Hours)</b>
<b>UNIT-V</b>	Plastic processing – injection moulding , compression moulding , rotational moulding , transfer moulding , coating polymer blends , & composites – polymer alloys , reinforced plastics.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Polymer adhesives technology - Different types of adhesive , polyvinyl alcohol , rubber cement , polymer applications , identification and waste management.	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of polymer engineering, keeping track of the recent technological trends and developments.

<b>Syllabus for Unit Test:</b>	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

### SELF STUDY PAPER -II: FOOD TECHNOLOGY

<b><u>TEACHING SCHEME:</u></b>	<b><u>EXAMINATION SCHEME:</u></b>	<b><u>CREDITS ALLOTTED:</u></b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test : 20 Marks	Total credits: 04
	Assignment : 10 Marks	
	Attendance :10 Marks	

#### Topics covered

<b>UNIT-I</b>	Principle of food processing: Rheology of solid, semi-solid and liquid foods. Heat transfer and thermal death times, Schmidt plot procedure.	<b>(08 Hours)</b>
<b>UNIT-II</b>	Canning of food: Thermal processing, determining time of heat sterilization process. Conductive and convective foods.	<b>(08 Hours)</b>
<b>UNIT-III</b>	Balancing and freezing of foods: Balancing processes, freezing, Ultra-high temperature thermal processing, food sterilization, probability of non-sterile unit, Convective drying of food, rate of drying, time of drying.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Membrane processing of liquid foods: Principles, membrane configuration, types, evaporation concentration of liquid food, evaporator load calculation.	<b>(08 Hours)</b>
<b>UNIT-V</b>	Osmotic dehydration of food: Mechanism of osmotic dehydration, kinetics. Microwave heating of food, Frying of food, heat and mass transfer in frying.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Extrusion cooking of foods: extrusion process, role of moisture content. Packaging of foods, packaging materials, shelf life, water transmission rate, prediction of packaging	<b>(08 Hours)</b>

	time. Process control in food manufacturing.	
<b>Assignment:</b> Each student will submit assignments based on different topics in consultation with faculty, in the area of food technology, keeping track of the recent technological trends and developments

Unit Test -II	UNIT – IV, V, VI	

<b>SELF STUDY PAPER-II- MODELING AND SIMULATION OF PROCESSES</b>		
<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4 Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total :100 Marks	
<b>Topics covered</b>		
<b>UNIT-I</b>	<b>Introduction:</b> Models, Open loop systems, Feedback controls, cascade controls, System analysis from models, The control engineers role.	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Modeling of dynamic systems:</b>	<b>(08 Hours)</b>

	Modeling principles, Modeling physical components, Obtaining a transfer function for Analysis or Simulation with SIMULINK. Modeling of various systems.	
<b>UNIT-III</b>	<b>Frequency response analysis:</b> Mathematical basis, Application of frequency response diagram, using MATLAB to obtain gain margin (GM) and phase margin (PM).using MATLAB to produce a Nichols Chart, comparison of various methods.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Process identification:</b> Purpose, Direct methods, time domain fitting of step test data, direct sine wave testing, digital evaluation of Fourier transformation, auto tuning, approximate transfer functions.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Building blocks of feed forward neural network:</b> Building blocks of ANN, processing elements, connections, weights, activation and transfer functions, learning rules	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Computer Simulation for various industrial applications.	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of modeling and simulation of processes, keeping track of the recent technological trends and developments

Unit Test -II	UNIT – IV,V,VI

### SELF STUDY PAPER -II: PETROCHEMICAL ENGINEERING

<u>TEACHING SCHEME:</u>	<u>EXAMINATION SCHEME:</u>	<u>CREDITS ALLOTTED:</u>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total:100 Marks	

#### Topics covered

<b>UNIT-I</b>	Existing Feedstock Scenario Fossil fuel feedstock, Coal, Natural Gas and Petroleum, Reserves, Present and Future ,Production Trends, Statics for India and World, Distribution and utilization pattern of existing fossil reserves, Demand supply scenario, Cycle of oil prices, Need for alternative feedstocks	<b>(08 Hours)</b>
<b>UNIT-II</b>	Non conventional Fossil Fuels ,Coal Bed Methane, Coal Gasification, Shale Oil, Hydrates, Reserves, Potential, and Technologies for exploitation of these resources, Cost factor	<b>(08 Hours)</b>
<b>UNIT-III</b>	Coal Gasification Chemistry and Technology for coal gasification and Syngas production, Fischer TropschSynthesis, Chemistry, Catalyst and Process Technology, Other outlets for Syngas	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Alco Chemicals -Pathways and technologies for chemicals from ethanol, isopropyl alcohol, n-butanol,isobutanol, Lube oil additives, Octane boosters	<b>(08 Hours)</b>
<b>UNIT-V</b>	Fundamentals of natural gas engineering, chemical composition of natural gas, Processing of Petroleum and Hydrocarbons.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	Industrial Applications in Petrochemical Industry	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of Petrochemical Engineering, keeping track of the recent technological trends and developments

#### **Text Books/References:**

4.	John, F., Cook, M., and Graham, M., "Hydrocarbon Exploration and Production", Elsevier.
<b>Syllabus for Unit Test:</b>	
Unit Test -I	UNIT – I ,II,III
Unit Test -II	UNIT – IV,V,VI

### SELF STUDY PAPER -II: PHYSICAL CONCEPTS OF UNIT OPERATIONS

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

#### Topics covered

<b>UNIT-I</b>	Vapor-Liquid Equilibrium, relative volatility, boiling point diagram,Raolts law, Mc Cabe-Thiele method, Lewis-Sorel method, reflux ratio, partial condenser, H-X diagram,Azeotropes, steam distillation, different types of columns and analysis.	<b>(08 Hours)</b>
<b>UNIT-II</b>	Applications of liquid-liquid extraction, difference between distillation and extraction,Distribution coefficient,ternary systems, selection of solvent, different stages of operation,Various types of extraction equipments.	<b>(08 Hours)</b>
<b>UNIT-III</b>	Equilibrium data, solubility curves, crystallization theory, classification of crystallizationEquipments, types of crystallizers, mechanism of crystallisation.	<b>(08 Hours)</b>
<b>UNIT-IV</b>	Application of adsorption, nature of adsorption, types of adsorption, adsorption Isotherms, different stages of adsorption, breakthrough curves.	<b>(08 Hours)</b>
<b>UNIT-V</b>	Introduction to leaching operation, equilibrium diagram, various stages of operation, Countercurrent leaching operation, leaching of fine solids, dorr agitator.	<b>(08 Hours)</b>
<b>UNIT-VI</b>	General definitions of drying, equilibrium in drying, rate of drying curve, General classification and types of dryers.	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of physical concepts of unit operations, keeping track of the recent technological trends and

developments

Unit Test -II	UNIT – IV,V,VI

### SELF STUDY PAPER- II: MULTIPHASE REACTOR ENGINEERING

<b>TEACHING SCHEME:</b>	<b>EXAMINATION SCHEME:</b>	<b>CREDITS ALLOTTED:</b>
Lectures: 4 Hours/Week	End Semester Examination: 60 Marks	Theory : 04
Total : 4Hours/Week	Unit Test: 20 Marks	Total credits: 04
	Assignment: 10 Marks	
	Attendance:10 Marks	
	Total: 100 Marks	

#### Topics covered

<b>UNIT-I</b>	<b>Introduction to Multiphase Reactor Engineering</b> Types, Classification, Application of Industrial Importance	<b>(08 Hours)</b>
<b>UNIT-II</b>	<b>Thermodynamics and kinetics</b> Notable industrial heterogeneous systems and thermodynamic role. Application of equilibrium criteria to chemical reactions. The Gibbs energy change and equilibrium constant. Estimation of equilibrium constant for heterogeneous system by defining standard state of the phases involved. Determination of rate controlling step: intrinsic kinetics for heterogeneous systems.	<b>(08 Hours)</b>
<b>UNIT-III</b>	<b>Hydrodynamic Characteristics</b> Hydrodynamic characteristics of different multiphase reactors: Mechanically Agitated Contactors (MAC), Bubble Columns, Slurry Reactors, Fluidized Beds, Loop Reactors and Modified Versions	<b>(08 Hours)</b>
<b>UNIT-IV</b>	<b>Mixing Studies</b> Effect of geometrical, system, and operating parameters on phase mixing in multiphase reactors. Quantification of phase mixing. Development of a mathematical model.	<b>(08 Hours)</b>
<b>UNIT-V</b>	<b>Heat Transfer and Mass Transfer Studies</b> Effect of geometrical, system, and operating parameters on heat transfer coefficient in multiphase reactors. Quantification of heat transfer coefficient. Application of	<b>(08 Hours)</b>

	correlations available to different multiphase reactors. Experimental techniques used for estimation of mass transfer coefficient and selection of suitable technique for a multiphase reactor. Effect of geometrical, system, and operating parameters on mass transfer coefficient in multiphase reactors. Quantification of mass transfer coefficient. Application of correlations available to different multiphase reactors.	
<b>UNIT-VI</b>	<b>Design Aspects of Multiphase Reactors</b> Pressure drop, Fractional phase hold- up, mass and heat transfer coefficient, extent of mixing, etc.	<b>(08 Hours)</b>

**Assignment:** Each student will submit assignments based on different topics in consultation with faculty, in the area of multiphase reactor engineering, keeping track of the recent technological trends and developments

## NANOSCIENCE AND NANOTECHNOLOGY

### TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

### Unit-I

(08 Hours)

#### Title: Introduction

Scientific Revolutions – Types of nanomachines and nanotechnology-periodic table-Atomic structure molecules and phase Energy -Molecular and Atomic size -surfaces and dimensional space -Top down and bottom up. Misnomers and misconception of Nanotechnology.

### Unit-II

(08 Hours)

#### Title: Nanomaterial Synthesis Methods

Introduction to Nano scale materials - Synthesis and processing, method of nano structured material preparation – mechanical grinding, wet chemical synthesis – sol-gel processing, gas phase synthesis, gas condensation processing, chemical vapor condensation – nano composite synthesis – processing.

### Unit-III

(08Hours)

#### Title: NanoStructures

Introduction, length scale of different structures, definition of nanoscience and nanotechnology, fullerenes, CNTs, graphenes and inorganic nanostructures, the evolution of Nanoscience, quantum dots and electronic structure of various nanophase materials. Clusters of metals and semiconductors, rare gas and molecular clusters, nanowires and nanorods, size dependent properties, size dependent absorption, phonons in nanostructures. Quantum dots - Nano wires-Nano tubes 2D and 3D films Nano and mesopores, micelles, bilayers, vesicles, bio-nano machines-biological membranes. Dendritic and supramolecular structures, metal nanocluster composites, glasses. Biological building blocks, bionanopolymers, self-assembly by Nature. Polypeptide nanowire and protein nanoparticles, nucleic acids, DNA helix. Examples of biological nanostructures, proteins, micelles and vesicles, proteins, Amphiphilicity as a driving force in synthesis of biological structures. Multilayers. Bio-nano interface.

**Unit-IV****(08 Hours)****Title: Nanomaterial Properties**

Opportunity at the nano scale - Length and time scale in structures -energy landscapes-Inter dynamic aspects of inter molecular forces -Evolution of band structure and Fermi surface.

**Unit-V****(08hours)****Title: Physical Properties Of Nanostructured Materials**

Influence of Nano structuring on Mechanical - Optical, electronic, magnetic and chemical properties –grainsize effects on strength of metals optical properties of quantum dots and quantum wires –electronic transport in quantum wires and carbon nano tubes -magnetic behavior of single domain particles and nanostructures-surface chemistry of tailored monolayer -self assembling. Nano Characterization, mechanical characterization, structural characterization

**Unit-VI****(08 Hours)****Title: Applications of Nanotechnology**

Industrial applications of nanomaterials, in the areas of electronics, photonics, biology, health and environment, medicine, defence, chemicals, catalysts, textiles, etc. Application of nanotechnology in remediation of pollution, photocatalysis and other nanocatalysts, greenhouse gases, global warming. Monitoring nanoparticles at work place and sensors used for this. Toxicity of nanoparticles, exposure to nanoparticles and CNTs and influence on respiratory systems.

**Termwork**

At least Eight Assignment based on above syllabus

**Oral**

Term work and oral will be based on above syllabus.

### **Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## NANO PHYSICS

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory	: 60 Marks
Duration	: 03 Hours
Unit Test –I	: 20 Marks
Unit Test –II	: 20 Marks
Theory Credits	: 04

### Unit-I

(08 Hours)

#### Atomic and Molecular Physics:

Rutherford atom model, Electron orbits, Bohr atom, Energy levels and spectra, Atomic excitation and atomic spectra, Rotational & Vibrational energy levels, Rotational and Vibrational spectra. Electronic spectra of molecules. Bohr and Sommerfeld atom models - Vector atom model - Pauli's exclusion principle - various quantum numbers - angular momentum and magnetic moment - coupling schemes - LS and JJ coupling - Bohr magneton, Hund's rule, Stern and Gerlach experiment, Zeeman Effect and Stark Effect. Molecular bonding in homo and hetero nuclear molecules, polyatomic molecules, vibration and rotational levels, vibrations and Group frequencies.

### Unit-II

(08 Hours)

#### Quantum Mechanics:

Wave-particle duality, Schrodinger equation and expectation values, Uncertainty principle. Solutions of the one-dimensional Schrodinger equation for free particle, particle in a box, particle in a finite well. Reflection and transmission by a potential step and by a rectangular barrier. Theory of radiation, transition probability for absorption and emission, forbidden transitions, decays, lifetime concepts. Solution of Time independent Schrödinger equation at higher dimensions. Particle in a three dimensional box, linear harmonic oscillator and its solution, density of states, free electron theory of metals. The angular momentum problem. The spin half problem and properties of Pauli spin matrices.

### Unit-III

(08Hours)

#### Solid State Physics:

Amorphous, crystalline, crystals, polycrystals, symmetry. Unit Cells, Crystal Structures (Bravais Lattices), Crystallographic Directions, Crystallographic Planes, Miller Indices, Bragg's Law, X-ray Diffraction. Imperfections of crystal structure: point defects, Grain boundaries, phase boundaries, Dislocations: Screw, Edge and Mixed Dislocations. Free electron theory, Bloch theorem. Motion of electrons in solids, effective mass of electron and hole, reduced, periodic and extended zone scheme, Fermi surfaces, Direct and indirect band gaps in semiconductors, temperature dependence.

Electronic, ionic and orientational polarizabilities, Clausius-Mossotti relation, static and frequency dependence of dielectric constant, Kramers-Kronig relation. Mean field theory, Heisenberg interaction, magnons, origin of domains in magnetic materials.

#### **Unit-IV**

**(08 Hours)**

##### **Electronics:**

Semi conducting materials, p-n junction, space charge and electric field distribution at junctions, forward & reverse biased condition, minority & majority carrier currents, Zener and avalanche break downs, Schottky barrier, Shockley diode & silicon control rectifier, Zener diodes, tunnel diodes, photo diodes. Operational amplifier and Applications– Ideal op-amp, equivalent circuit of op-amp, open loop op-amp configurations – inverting, non-inverting and differential amplifiers, lock-in-amplifier. Active filters – types, first and second order active low and high pass filter. Oscillators – basic principles, types- phase shift oscillator, Wien bridge oscillator, triangular wave generator.

#### **Unit-V**

**(08Hours)**

##### **Laser Technology:**

Basic principles of lasers, properties of laser beams, population inversion in three and four level lasers, resonance frequencies, modifications of the laser output, single mode operation, Q-switching. Laser materials and types of lasers, solid state lasers, characteristics of dye lasers, semiconductor lasers. Laser applications.

#### **Unit-VI**

**(08 Hours)**

##### **Electrodynamics:**

Coulomb's law, Gauss's law, Electrostatic Potential Energy. Biot-Sevart law and Ampere Laws, faraday's law, Maxwell's Equations, Poynting Theorem, Conservation Laws.

#### **Termwork**

- At least Eight Assignment based on above syllabus

#### **Oral**

Term work and oral will be based on above syllabus.

#### **Books /Text References**

1. Herzberg (D. van Nostrand Co., Inc)
2. Berkley Series, Vol. II (Tata McGraw Hill)
3. Modern Quantum Mechanics, J. J. sakurai (Addison Wiley)
4. Quantum Mechanics, L. I. Schiff (McGraw Hill)
5. Quantum Physics, Robert Eisberg and Robert Resnick
6. Classical Electrodynamics, J. D. Jackson (John Wiley)
7. Introduction to Electrodynamics, D. Griffiths
8. Electricity and Magnetism, Reiz, Millford, Christy
9. Introduction to Solids State Physics, C. Kittel (Wiley Estern Ltd.)
10. Elementary Solid State Physics, M. Ali Omar (Addison Wesely)
11. The Art of Electronics, P. Horowitz and W. Hill (Cambridge University Press)

12. Electronic Principle, A. P. Malvino (McGrw Hill)
13. Principles of Quantum Mechanics 2nd ed. - R. Shankar
14. Thermodynamics and Statistical Mechanics - A N Tikhonov, Peter T Landberg, Peter Theodore Landsberg
15. Thermodynamics and Statistical Mechanics by John M. Seddon , J. D. Gale
16. Statistical Physics by K. Huang
17. Statistical Mechanics-Landau &Lifshitz
18. Statistical Mechanics – Sonntag.
19. Statistical Mechanics – Mc Le Leland

**Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## NANO CHEMISTRY

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory	: 60 Marks
Duration	: 03 Hours
Unit Test –I	: 20 Marks
Unit Test –II	: 20 Marks
Theory Credits	: 04

#### Unit-I

(08 Hours)

##### Title:

Atomic Bonding in solids, Types of bond: Metallic, Ionic, Covalent and vanderwaals bond; Hybridisation; H- bonding Molecular orbital theory for simple molecules such as diatomic molecule etc. Chemical bonding & theories (e.g. Valence band & Molecular Orbital), atomic structure– energy – molecular and atomic size and their properties, Ionic bond, covalent bond, coordination bond,

#### Unit-II

(08 Hours)

##### Title: Types of Material

Metals, Semiconductors, Composite materials, Ceramics, Alloys, Polymers, Their Failure Mechanisms, Properties and Application Areas, Solid state chemistry, Chemistry of surfactants, Polymer chemistry, metal complexes, Inorganic Chemistry, Alkoxide and sol-gel Chemistry, Organometallic chemistry, and their fundamentals for synthesis of oxides & other inorganic Nano composites.

#### Unit-III

(08Hours)

##### Title: Overview to Thermodynamics

The first and second laws of thermodynamics. Thermodynamic, functions, heat capacity, enthalpy, entropy. Phase equilibrium in one component system, real gases, the interactions between gases. Ehrenfest classification of phase transition, the physical liquid surface; surface tension, curved surfaces, capillary action. Theory of Solution and related topics: Liquid mixtures: free energy as a function of composition, ideal solutions and excess functions.

#### Unit-IV

(08 Hours)

##### Title: Chemical Equilibrium

Equilibrium Electrochemistry; electrochemical cells, Methods for calculation of thermodynamic equilibrium. Electrochemical processes, Inorganic complexes, Ionic Equilibria and spectroscopy (UV, IR, Raman), Atomic structure and properties, Organometallic chemistry, Thermodynamics of solids,.

**Unit-V****(08Hours)****Title: Diffusion Kinetics**

Diffusion-Fick's Law, mechanisms of diffusion; generation of point defects; self-diffusion; the influence of the pressure and pressure gradient; Kirkendall effect; fast diffusion; influence of isotropic state; experimental methods of investigation of diffusion, Chemical kinetics, Chemistry of surfactants, Basic polymer chemistry, Solid state chemistry, Reactivity of solids, Quantum chemistry

**Unit-VI****(08 Hours)****Title: Reaction Kinetics and Photochemistry**

Zero, First & Second order reactions. Dependence of k on Temperature. An overview of collision and activated complex theory. Steady State approximation. Laws of Photochemistry, Fluorescence, Phosphorescence, Chemiluminescence, Jablonski diagram and quenching, Photochemistry of nanomaterials.

**Termwork**

- At least Eight Assignment based on above syllabus

**Oral**

Term work and oral will be based on above syllabus.

**Books /Text References**

1. Physical Chemistry, 1st Edition –Ball.
2. Thermodynamics-Glasston.
3. Principals of Physical Chemistry-Marron-Pruton.
4. Advanced Physical Chemistry – Atkins Peter, Paula Julio
5. Inorganic chemistry-Cotton-Wilkinson.
6. Introduction to Theoretical Chemistry – Jack Simons.

**Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## NANO BIOLOGY

### TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

### Unit-I (08 Hours)

The Cell: the basic unit of life, Molecular components (DNA, protein, lipids, carbohydrates), Expression of genetic information (Transcription, translation), Types of cells: plants, animals, bacteria, viruses and fungi, DNA: Structure, components, physical and chemical properties,

### Unit-II (08 Hours)

Amino acids and proteins: structure and reactions of amino acids (hydrophilic and hydrophobic), structure of proteins (primary, secondary, tertiary and quaternary), Enzyme chemistry : kinetics of enzyme catalysis,

### Unit-III (08Hours)

Lipids and carbohydrates: Structure and types of lipids, biological membranes, structure and types of carbohydrates, Basic immunology: Adaptive and innate immunity, cells of immune system, Antigens and antibodies structure and functions

### Unit-IV (08 Hours)

Cytoskeleton: microtubules, intermediate filaments and microfilaments; cell motility Protein motors: ATP synthase F1 motor, Bacterial Flagellar motor, Proton motive forces, ion channels, chimeric kinesin and myosin motors, Cell signaling, G-protein transmembrane receptors, DNA nanostructures for mechanics and computing, DNA-Protein nanostructures, Biomimetic fabrication of DNA-based metallic nanowires, conjugates and networks.

### Unit-V (08Hours)

Biological methods of synthesis: Use of bacteria, fungi, Actinomycetes for nanoparticle synthesis, Magnetotactic bacteria for natural synthesis of magnetic nanoparticles; S-layer proteins, Viruses as components for the formation of nanostructured materials; Synthesis process and application, Role of plants in nanoparticle synthesis

### Unit-VI (08 Hours)

Nano-biotechnology: Interaction between biomolecules and nanoparticle surface, Different types of inorganic materials used for the synthesis of hybrid nano-bio assemblies, Nanosensors,

Nanomedicine: Nanotechnology in Diagnostics applications, materials used in Diagnostics and Therapeutic, Environmental and Agricultural Applications of nanotechnology.

### **Termwork**

At least Eight Assignment based on above syllabus

### **Practicals (Any Five):**

1. Microscopic observation of bacterial, plant, fungi and animal cells
2. Temporary preparation of cell / tissues
3. Demonstration of Cytotoxicity/cell viability- Tryphan blue dye exclusion
4. Absorbance spectra of biomolecules (DNA, proteins)
5. Immunodiffusion techniques
6. Isolation and purification of genomic DNA- 2
7. Isolation and purification of plasmid DNA -2
8. Estimation and purification of proteins -2
9. Biological Synthesis of nanoparticles (bacteria, fungi and plants)- 4
10. Demonstration of nanoparticles based drug delivery in cell line-3

### **Oral**

Term work and oral will be based on above syllabus.

### **Books /Text References**

1. Alberts, "Molecular Biology of the cell" Garland Science.
2. Lodish, "Molecular cell biology" FREEMAN
3. Watson, James, T.Baker, S.Bell, A.Gann, M.Levine, And R.Losick. "Molecular Biology of the gene", san francisco: Addison-Wesley,
4. Janis Kuby "Immunology" W H Freeman,
5. Nelson, D.L., Fox.M.M., "Lehninger Principles of Biochemistry", W.H.Freeman,
6. B.Lewin, "Genes IX", International Edition. Sudbury: Jones & Bartlett
7. R. Cantor, P.R.Samuel, "Biophysical Chemistry", W.H., Freeman & Co., 1985.
8. Watson, James, T.Baker, S.Bell, A.Gann, M.Levine, and R.Losick. "Molecular Biology of the Gene", 5th ed., San Francisco: Addison-Wesley, 2000.
9. Alberts, Bruce, Alexander Johnson, Julian Lewis, Martin Raff, Keith Roberts, and Peter Walter. Molecular Biology of the Cell. 4th ed. New York: Garland Science, 2002.
10. Branden, Carl-Ivar, and John Tooze. Introduction to Protein Structure. 2nd ed. New York: Garland Pub., 1991.
11. Creighton, E, Thomas, "Proteins: Structures and Molecular Properties", 2nd Ed. New York: W.H. Freeman, 1992.
12. Bionanotechnology: Lessons from Nature by David S. Goodsell
13. Nanomedicine, Vol. IIA: Biocompatibility by Robert A. Freitas
14. Handbook of Nanostructured Biomaterials and Their Applications in Nanobiotechnology - Hari SinghNalwa
15. Nanobiotechnology; ed. C.M.Niemeyer, C.A. Mirkin.
16. Nanocomposite Science & Technology Ajayan, Schadler & Braun
17. BioMEMS (Microsystems) - Gerald A. Urban

18. Introduction to Nanoscale Science and Technology (Nanostructure Science and Technology)  
Massimiliano Di Ventra
19. Nanosystems: Molecular Machinery, Manufacturing, and Computation - K. Eric Drexler
20. Springer Handbook of Nanotechnology - Bharat Bhushan
21. Nanobiotechnology; ed. C.M.Niemeyer, C.A. Mirkin.
22. Nanofabrication towards biomedical application: Techniques, tools, Application and impact – Ed. Challa S., S. R. Kumar, J. H. Carola.
23. Nanomedicine, Vol. I: Basic Capabilities
24. Nanomedicine, Vol. IIA: Biocompatibility - Robert A. Freitas
25. Dendrimers I, II, III, Ed. F. Vogtle

**Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## NANO COMPUTING

### TEACHING SCHEME

Lectures : 04 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Unit Test –I : 20 Marks  
Unit Test –II : 20 Marks  
Theory Credits : 04

#### Unit-I

(08 Hours)

##### Title: Fundamental Principles Of Numerical Methods

Root finding, interpolation and approximation, numerical integration and differentiation, solution of systems of linear equations, least squares data fitting, eigenvalue problems, numerical methods for ODEs - initial value problems and boundary value problems, Scientific Modeling - Numerical data and Numerical operations -Numerical Algorithms -Numerical Programs - Numerical Software - Approximations in Mathematical Model building- Numerical integration - Differentiation -Variational finite element methods-Rayleigh's method-Ritz method.

#### Unit-II

(08 Hours)

##### Title: Mathematical Modeling

Introduction to mathematical modeling, review of basic calculus - physical simulation - advantages and limitations - Concept of physical domain and computational domain - assumptions and limitations in numerical solutions – Finite element method and Finite difference method.

#### Unit-III

(08Hours)

##### Title: Differential Equations & Applications

Equations of first order, linear differential equations of second order, power series solutions, Laplace transforms, nonlinear differential equations, Fourier series and boundary value problems. Euler method, Runge-Kutta method, boundary values- partial differential equations - separation of variables-wave equation-Laplace equation-nonlinear partial differential equations - Parabolic (Heat/Diffusion) Equation, Derivation, separation of variables, transformation of boundary conditions, Fourier series and transforms.

#### Unit-IV

(08 Hours)

##### Title: Simulation

Basic concepts of simulation- data manipulation, data exchange of the structure, properties and processing of materials- Molecular dynamics simulation, Derivation, D'Alembert principle, vibrating string/beam, finite Fourier transforms, method of characteristics, wave equation in 2D.

#### Unit-V

(08Hours)

##### Title: Monte Carlo Methods

Basics of the Monte Carlo method-Algorithms for Monte Carlo simulation-Applications to systems of classical particles-modified Monte Carlo techniques-percolation system-variation

Monte Carlo method-diffusion Monte Carlo method - Quantum Monte Carlo method, Finite difference methods - implicit and explicit schemes, truncation error, single step and multi-step schemes. Finite element methods - Galerkin approximation and solution.

## **Unit-VI**

**(08 Hours)**

### **Title: Nanoscale Modeling and Simulations**

Introduction to Matlab OR Mathematica (and their open source counterparts-Scilab and Octave); examples from nano-optics and nano-electronics, Molecular dynamics, computing and simulations, Simulations from ab initio to multiscale Modeling, Nanodesign Nano-CAD.

### **Termwork**

- At least Eight Assignment based on above syllabus

### **Oral**

Term work and oral will be based on above syllabus.

### **Books /Text References**

1. S.C. Chapra and R.P.Canale, "Numerical methods for Engineers", Tata McGraw Hill, New Delhi, 2002.
2. Erwin Kreyzig, "Advanced Engineering Mathematics", John Wiley & Sons, 2004.
3. R.J. Schilling and S.L. Harris, "Applied Numerical Methods for Engineers using MATLAB and C", Thomson publishers, New Delhi, 2004..
4. D. Frenkel and B. Smith, "Understanding molecular simulation from algorithm to applications", Kluwar Academic Press, 1999.
5. K. Ohno, K. Esfarjani and Y. Kawazoe, "Introduction to Computational Materials Science from ab initio to Monte Carlo Methods", Springer-Verlag, 1999.
6. Partial Differential Equations for Scientists and Engineers, S. J. Farlow
7. Partial Differential Equations - Analytical and Numerical Methods, M. S. Gockenbach
8. Linear Partial Differential Equations for Scientists and Engineers, T. Myint-U and L. Debnath
9. An Introduction to Partial Differential Equations with MATLAB, M. P. Coleman

### **Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## NANO FABRICATION AND ADVANCED SYNTHESIS TECHNOLOGY

### TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

### Unit-I

(08 Hours)

#### Title: Bulk synthesis

Synthesis of bulk nano-structured materials –sol gel processing –Mechanical alloying and mechanical milling- Inert gas condensation technique – Nanopolymers – Bulk and nano composite materials

### Unit-II

(08 Hours)

#### Title: Chemical Approaches

Self-assembly, self-assembled monolayers (SAMs). Langmuir-Blodgett (LB) films, clusters, colloids, zeolites, organic block copolymers, emulsion polymerization, templated synthesis, and confined nucleation and/or growth. Biomimetic Approaches: polymer matrix isolation, and surface-templated nucleation and/or crystallization. Electrochemical Approaches: anodic oxidation of alumina films, porous silicon, and pulsed electrochemical deposition.

### Unit-III

(08Hours)

#### Title: Physical Approaches

Vapor deposition and different types of epitaxial growth techniques- pulsed laser deposition, Magnetron sputtering - Micro lithography (photolithography, soft lithography, micromachining, e-beam writing, and scanning probe patterning). Inert gas condensation, Arc discharge, RFplasma, Plasma arc technique, Ion sputtering, Laser ablation, Laser pyrolysis, Ball Milling, Molecular beam epitaxy, Chemical Vapour Deposition method and Electro deposition.

### Unit-IV

(08 Hours)

#### Title: Nanoporous Materials

Nanoporous Materials – Silicon - Zeolites, mesoporous materials - nanomembranes and carbon nanotubes - AgX photography, smart sunglasses, and transparent conducting oxides –molecular sieves – nanosponges.

**Unit-V****(08Hours)****Title: Application of Nanomaterials**

Molecular Electronics and Nanoelectronics – Nanobots- Biological Applications – Quantum Devices – Nanomechanics - Carbon Nanotube – Photonics- Nano structures as single electron transistor –principle and design.

**Unit-VI****(08 Hours)****Title: Lithography Techniques**

M based nanolithography and nanomanipulation, E beam lithography and SEM based nanolithography and nanomanipulation, Ion beam lithography, oxidation and metallization. Mask and its application. Deep UV lithography, X-ray based lithography.

**Termwork**

At least Eight Assignment based on above syllabus

**Oral**

Term work and oral will be based on above syllabus.

**Books /Text References**

1. S.P. Gaponenko, Optical Properties of semiconductor nanocrystals, Cambridge University Press, 1980.
2. W.Gaddand, D.Brenner, S.Lysherski and G.J.Infrate(Eds.), Handbook of NanoScience, Engg. and Technology, CRC Press, 2002.
3. K. Barriham, D.D. Vvedensky, Low dimensional semiconductor structures: fundamental and device applications, Cambridge University Press, 2001.
4. G. Cao, Nanostructures & Nanomaterials: Synthesis, Properties &Applications , Imperial College Press, 2004.
- J.George, Preparation of Thin Films, Marcel Dekker, Inc., New York. 2005.
5. Microfabrication and Nanomanufacturing- Mark James Jackson

**Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## NANO CHARACTERIZATION

### TEACHING SCHEME

Lectures : 04 Hrs/Week  
Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Unit Test –I : 20 Marks  
Unit Test –II : 20 Marks  
TW/Pract./Oral : 50 Marks  
Theory Credits : 04  
Practical Credits : 01

#### Unit-I

(08 Hours)

##### Title: MICROSCOPY

Optical absorption and emission spectroscopy – Basics - AAS – ICP OES – Electron Microscopy: Scanning electron microscopy – Transmission electron microscopy – Scanning tunneling electron microscopy – Image collection in electron microscopes – Environmental transmission electron microscopy – Electron energy loss spectroscopy at the nanometer scale – In-situ nano measurements.- Qualitative approach. Electron Energy Loss Spectroscopy; High Resolution Imaging Techniques- HREM, Atom probe field ion microscopy

#### Unit-II

(08 Hours)

##### Title: THERMAL ANALYSIS METHODS

Principle and Instrumentation of Thermogravimetry; Differential Thermal Analysis and Differential scanning calorimetry-Importance of thermal analysis for nanostructures.

#### Unit-III

(08Hours)

##### Title: SCANNING PROBE MICROSCOPY

Scanning Probe microscopy – Atomic manipulations – Atomic force microscopy – Scanning probe lithography – Optical microscopy – Confocal microscopy – Scanning near field optical microscopy – Secondary ion mass (SIMS) spectrometry – Matrix assisted laser desorption ionization mass spectrometry (MALDIMS).

#### Unit-IV

(08 Hours)

##### Title: SPECTROSCOPIC TECHNIQUES

Introduction to Molecular Spectroscopy and Differences-With Atomic Spectroscopy-Infrared (IR) Spectroscopy and Applications- Microwave Spectroscopy- Raman Spectroscopy and CARS Applications-Electron Spin Resonance Spectroscopy; New Applications of NMR Spectroscopy; Dynamic Nuclear Magnetic Resonance; Double Resonance Technique. Spectroscopy of semiconductors – Excitons – Infrared surface spectroscopy – Raman spectroscopy – Brillouin spectroscopy – Dynamic Light Scattering (DLS) – NMR Spectroscopy – ESR spectroscopy – Mossbauer spectroscopy

**Unit-V****(08Hours)****Title: Nanoindentation Mechanical Characterisation**

Nanoindentation principles- elastic and plastic deformation -mechanical properties of materials in small dimensions- models for interpretation of nanoindentation load-displacement curves- Nanoindentation data analysis methods-Hardness testing of thin films and coatings- MD simulation of nanoindentation. Mechanical Characterization – Modulus and load carrying capability of nano region/ compression - microhardness – Fatigue – Abrasion and wear resistance – Super plasticity – Nano indentation – Nano tribology – Nano tribometre – Surface Force apparatus – Quartz crystal microbalance – Friction force microscope.

**Unit-VI****(08 Hours)****Title: Structural Characterization**

Neutron and X- ray diffraction – Debye Scherrer formula – Dislocation density – Micro strain macromolecular crystallography using synchrotron radiation – Role for neutron scattering in nano science - Photoluminescence - Thermo luminescence – X-ray absorption Fine Structure (XAFS) – Extended X- ray absorption fine structure (EXAFS) – Electron scattering for chemical Analysis (ESCA). X-ray diffraction (XRD), X-Ray Photoelectron Spectroscopy, X-ray powder diffraction – single crystal diffraction techniques - Determination of accurate lattice parameters – structure analysis - profile analysis - particle size analysis using Scherer formula. X-Ray Characterization of Nanomaterials – EDAX and WDA analysis – EPMA – ZAP corrections.

**Termwork**

At least Eight Assignment based on above syllabus

**Oral**

Term work and oral will be based on above syllabus.

**Books /Text References**

1. B. D.Cullity, “Elements of X-ray Diffraction”, 4th Edition, Addison Wiley, 1978.
2. M. H.Loretto, “Electron Beam Analysis of Materials”, Chapman and Hall, 1984.

6. Mick Wilson, Kamali Kannangara, Geoff Smith, Michelle Simmons, Burkar Raguse, “Nanotechnology:Basic sciences and emerging technologies”, Overseas Press, 2005.
7. Willard, “Instrumental Methods of Analysis”, 2000.
8. Ewing. Etal, “Instrumental Methods for Chemical Analysis”, 2000.

**Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## **ENERGY, ENVIRONMENT, SAFETY AND COMMERCIALIZATION FOR NANOTECHNOLOGY**

### **TEACHING SCHEME**

Lectures : 04 Hrs/Week

### **EXAMINATION SCHEME**

Theory	: 60 Marks
Duration	: 03 Hours
Unit Test –I	: 20 Marks
Unit Test –II	: 20 Marks
Theory Credits	: 04

### **Unit-I**

**(08 Hours)**

#### **Title: Renewable Energy Technology**

Energy challenges, development and implementation of renewable energy technologies - nanotechnology enabled renewable energy technologies - Energy transport, conversion and storage, Nano, micro and meso scale phenomena and devices.

### **Unit-II**

**(08 Hours)**

#### **Title: Micro Fuel Cell Technology**

Micro-fuel cell technologies, integration and performance for micro-fuel cell systems - thin film and microfabrication methods - design methodologies - micro-fuel cell power sources,

### **Unit-III**

**(08Hours)**

#### **Title: Microfluidic Systems**

Nano-electromechanical systems and novel microfluidic devices - nano engines - driving mechanisms - power generation - microchannel battery - micro heat engine (MHE) fabrication - thermocapillary forces - Thermocapillary pumping (TCP) - piezoelectric membrane.

### **Unit-IV**

**(08 Hours)**

#### **Title: Hydrogen Storage Methods**

Hydrogen storage methods - metal hydrides - size effects - hydrogen storage capacity - hydrogen reaction kinetics - carbon-free cycle- gravimetric and volumetric storage capacities - hydriding/dehydriding kinetics - high enthalpy of formation - and thermal management during the hydriding reaction - distinctive chemical and physical properties - multiple catalytic effects - degradation of the sorption properties - hydride storage materials for automotive applications.

### **Unit-V**

**(08Hours)**

#### **Title: Environmental Concerns of Nanomaterials**

Identification of Nano - Specific Risks- Responding to the Challenge -Human health hazard – Risk reduction – Standards – Safety – transportation of NP– Emergency responders. Risk

assessment –Environmental Impact – Predicting hazard – Materials Characterization. Risk Assessment related to nanotechnology – Environmental and policy making - Ecotoxicity measurement of Polychlorinated biphenyl and intermediates in their degradation Vacuum Packaging under inert gas atmosphere, Methodology for Stabilization, Human safety in Nonmaterial processing area.

## **Unit-VI**

**(08 Hours)**

### **Title: Product Development with Nanomaterials**

Criteria for selection of product- Product development process- Design for Manufacture - Estimate the manufacturing cost- Reduce the support cost- Prototyping- Economics of Product development projects - Elements of Economic analysis- financial models - Sensitive analysis and influence of the quantitative factors.

### **Termwork**

At least Eight Assignment based on above syllabus

### **Oral**

Term work and oral will be based on above syllabus.

### **Books /Text References**

1. J. Twidell and T. Weir, Renewable Energy Resources, E & F N Spon Ltd, London, 1986.
2. Hydrogen from Renewable Energy Sources by D. Infield,
3. Fuel Storage on Board Hydrogen Storage in Carbon Nanostructures by R.A. Shatwell,
4. Fuel cell technology handbook. Hoogers. CRC Press, 2003.
5. Handbook of fuel cells: Fuel cell technology and applications by Vielstich. Wiley, CRC Press, 2003.
6. P.P. Simeonova, N. Opopol and M.I. Lus ter, “Nanotechnology - Toxicological Issues and Environmental Safety”, Springer 2006.

### **Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2 -Units IV,V and VI

## Elective I: COMPUTATIONAL NANOSCIENCE

### TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

### Unit-I

(08 Hours)

#### Title: Fundamental Principles Of Numerical Methods

Scientific Modeling - Numerical data and Numerical operations -Numerical Algorithms - Numerical Programs -Numerical Software - Approximations in Mathematical Model building- Numerical integration -Differentiation -Variational finite element methods-Rayleigh's method-Ritz method.

### Unit-II

(08 Hours)

#### Title: Mathematical Modeling

Mathematical modeling - physical simulation - advantages and limitations - process control - Transport phenomena- concept of physical domain and computational domain - assumptions and limitations in numerical solutions – Finite element method and Finite difference method.

### Unit-III

(08Hours)

#### Title: Differential Equations & Applications

Euler method, Runge-Kutta method, Multi step-differential equations-boundary values- Elliptic equations-one dimensional parabolic equation-hyperbolic equation- partial differential equations -separation of variables-wave equation-Laplace equation-nonlinear partial differential equations - approximation methods of nonlinear differential equations.

### Unit-IV

(08 Hours)

#### Title: Simulation

Basic concepts of simulation- data manipulation, data exchange of the structure, properties and processing of materials-Three dimensional model for capillary nanobridges and capillary forces. Molecular dynamics simulation.

### Unit-V

(08Hours)

#### Title: Monte Carlo Methods

Basics of the Monte Carlo method-Algorithms for Monte Carlo simulation-Applications to systems of classical particles-modified Monte Carlo techniques-percolation system-variation Monte Carlo method-diffusion Monte Carlo method - Quantum Monte Carlo method.

## **Unit-VI**

**(08 Hours)**

### **Title: Nanoscale Modeling and Simulations**

Introduction to Matlab and Mathematics (and their open source counterparts-Scilab and Octave); examples from nano-optics and nano-electronics, Molecular dynamics, computing and simulations, Simulations from ab initio to multiscale Modeling, Nanodesign Nano-CAD.

### **Termwork**

At least Eight Assignment based on above syllabus

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## Elective I: NANO ELECTRONICS

### TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

### Unit-I

(08 Hours)

#### Title: Semiconductor Nanodevices

Single-Electron Devices; Nano scale MOSFET – Resonant Tunneling Transistor - Single-Electron Transistors; Single-Electron Dynamics; Nanorobotics and Nanomanipulation; Mechanical Molecular Nanodevices; Nanocomputers: Theoretical Models; Optical Fibers for Nanodevices; Photochemical Molecular Devices; DNA-Based Nanodevices; Gas-Based Nanodevices; Micro and Nanomechanics.

### Unit-II

(08 Hours)

#### Title: Electronic And Photonic Molecular Materials

Preparation –Electroluminescent Organic materials - Laser Diodes - Quantum well lasers:- Quantum cascade lasers- Cascade surface-emitting photonic crystal laser- Quantum dot lasers- Quantum wire lasers:- White LEDs - LEDs based on nanowires - LEDs based on nanotubes- LEDs based on nanorods High Efficiency Materials for OLEDs- High Efficiency Materials for OLEDs - Quantum well infrared photo detectors.

### Unit-III

(08Hours)

#### Title: Thermal Sensors

Thermal energy sensors -temperature sensors, heat sensors- Electromagnetic sensors- electrical resistance sensors, electrical current sensors, electrical voltage sensors, electrical power sensors, magnetism sensors - Mechanical sensors -pressure sensors, gas and liquid flow sensors, position sensors - Chemical sensors - Optical and radiation sensors.

### Unit-IV

(08 Hours)

#### Title: Gas Sensor Materials

Criteria for the choice of materials, Experimental aspects – materials, properties, measurement of gas sensing property, sensitivity; Discussion of sensors for various gases, Gas sensors based on semiconductor devices.

### Unit-V

(08Hours)

#### Title: Biosensors

Principles- DNA based biosensors – Protein based biosensors – materials for biosensor applications- fabrication of biosensors—future potential

**Unit-VI**

**(08 Hours)**

**Title: NanoBio Electronic Systems**

Nano Bio Sensors, Bio-Characterization

**Termwork**

At least Eight Assignment based on above syllabus

**Oral**

Term work and oral will be based on above syllabus.

**Books /Text References**

1. W. Ranier, “Nano Electronics and Information Technology”, Wiley, (2003).
2. K.E. Drexler, “Nano systems”, Wiley, (1992).
3. M.C. Pettey, “Introduction to Molecular Electronics”.

**Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2 -Units IV,V and VI

## Elective I: NANO MEDICINE

### TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

### Unit-I

(08 Hours)

Applications of nano-medicine: Bio- Pharmaceuticals, biological implants, diagnostic tools, Genetic testing – imaging – nanoparticles probe

### Unit-II

(08 Hours)

Microfabricated drug delivery systems: microneedles- micropumps-microvalves-implantable microchips,

### Unit-III

(08Hours)

Nanocarriers : drug delivery : sustained / controlled/ targeted

### Unit-IV

(08 Hours)

Polymeric nanoparticulate systems: polymeric micelles as drug carriers – dendrimers as nanoparticulate drug carriers - nanocapsules preparation, characterization and therapeutic applications

### Unit-V

(08Hours)

Liposomes for genetic vaccines and cancer therapy - recent advances in microemulsions as drug delivery vehicles, lipoproteins as pharmaceutical carriers, solid lipid nanoparticles as drug carriers Tumor detection and targeting in vivo, Gene Therapy using nanoparticles

### Unit-VI

(08 Hours)

Diagnosis, Characterization and Testing of Nano-Bio Systems.

### Termwork

At least Eight Assignment based on above syllabus

### Oral

Term work and oral will be based on above syllabus.

**Practicals:**

1. Liposome based delivery of DNA (GFP based vector) in cells and their detection under fluorescence microscope-4
2. Delivery of nanoparticles based drugs in cells-3
3. Isolation of protein, estimation and running of gel, western blotting to detect a particular protein (e.g. p53)- 5

**Books /Text References**

1. Dr.Parag Diwan and Ashish Bharadwaj (eds) Nano Medicines, Pentagon Press
2. Vladimir P.Torchilin (Ed.) Nanoparticulates as Drug Carriers, Imperial College Press, North Eastern University, USA
3. Drug Delivery: Engineering Principles for Drug Therapy, M. Salzman.
4. Drug Delivery and Targeting, A.M. Hillery, CRC Press.
5. Drug Delivery: Principles and Applications, B. Wang, Wiley Interscience

**Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## **Elective I: NANO ENGINEERED DEVICES**

### **TEACHING SCHEME**

Lectures : 04 Hrs/Week  
Practical : 02 Hrs/Week

### **EXAMINATION SCHEME**

Theory	: 60 Marks
Duration	: 03 Hours
Unit Test –I	: 20 Marks
Unit Test –II	: 20 Marks
TW/Pract./Oral	: 50 Marks
Theory Credits	: 04
Practical Credits	: 01

### **Unit-I**

**(08 Hours)**

#### **Title: Quantum Devices**

Quantum Electronic devices – upcoming electronic devices – Electrons in mesoscopic structures – Shortchannel MOS Transistor – Split gate transistor – Electron wave transistor – Electron spin transistor –Quantum cellular Automata – Quantum Dot array – Quantum computer- Bit and Qubit – Coherence and Entanglement – Quantum Parallelism.

### **Unit-II**

**(08 Hours)**

#### **Title: Tunneling Devices**

Tunneling element – Tunnel Effect and Tunneling Elements -Tunneling Diode – Resonant Tunneling Diode – Three -Terminal Resonate Tunneling Devices -Technology of RTD-Digital circuits design based on RTDs –Memory Applications – Basics Logic Circuits – Dynamic Logic Gates - Digital circuits design based on RTBT –RTBT Mobile – RTBT Threshold Gate – RTBT Multiplexer – Single Electron Transistor(SET) – Principle –Coulomb Blockade- Performance – Technology- Circuit Design- Writing and Drivers – Logic and Memory Circuits – SET adder as an Example of a Distributed Circuit – Comparison between FET and SET.

### **Unit-III**

**(08Hours)**

#### **Title: Superconducting Devices And Photonics**

Basics - Macroscopic characteristics – Macroscopic model- Super conducting switching De vices – Cryotron-Josephson Tunneling Devices - Elementary circuits – Associative or Content – Addressable Memory - SQUID– Flux Quantum device –LC –Gate – Magnetic Flux Quantum – Quantum cellular Automata – Quantum computer with Single Flux devices – SFQD- RSFQD – Application of superconducting devices – Intergrated Electronics – Comparison of FET Electronics. Introduction to Photonics - Principle- Fabrication –application.

### **Unit-IV**

**(08 Hours)**

#### **Title: Uncertainty Of Nanodevices**

Limits of Integrated Electronics - Survey of Limits – Replacement of Technologies – Energy Supply and Heat Dissipation – Parameter Spread as Limiting Effect – Limits due to Thermal

Particle motion - Debye Length –Thermal Noise- Reliability of as Limiting Factor – Physical limits – Thermodynamic Limits - Relativistic Limits– Equal Failure Rates by Tunneling and Thermal Noise – Final Objectives of Integrated Electronic Systems -Removal of uncertainty by Nanomachines – Uncertainties in Nanosystems - Uncertainties in the Development of Nanoelectronics.

### **Unit-V**

**(08Hours)**

#### **Title: Molecular And Bioelectronics**

Bioelectronics – molecular processor – DNA Analyser molecular electronics – switches based on fullerenes and nanotubes – polymer electronic – self Assembling circuits – optical molecular memories – DNA computer – Information Processing with chemical reaction – Nanomachines – Parallel Processing - Drexler – Smalley debate – realistic projection- Synergy of Nano-Bio-Info.

### **Unit-VI**

**(08 Hours)**

#### **Title: Nanobio Systems**

#### **Reference(s) :**

#### **1Termwork**

At least Eight Assignment based on above syllabus

#### **Oral**

Term work and oral will be based on above syllabus.

#### **Books /Text References**

1. K. Goser, P. Glosekotter and J. Diens tuhl, “Nanoelectronics and Nanosystems -From Transistors to Molecular Quantum Devices” , Springer, 2004.
- 2 Herve Rigneault, Jean-Michel Lourtioz, Claude Delalande, Ariel Levenson, “Nanophotonics”, ISTE.
3. W.R.Fahrner, “Nanotechnology and Nanoelectronics – Materials, Devices and Measurement Techniques” Springer, 2006.

#### **Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## Elective II: NANO PHOTONICS

### TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

### Unit-I

(08 Hours)

#### Title: Quantum Confined Materials

Quantum dots – optical transitions – absorption-inter-band transitions-quantum confinement intraband transitions-fluorescence/ luminescence–photoluminescence /fluorescence optically excited emission – electroluminescence emission.

### Unit-II

(08 Hours)

#### Title: Plasmonics

Internal reflection and evanescent waves- plasmons and surface plasmon resonance (SPR)- Attenuated total reflection- Grating SPR coupling- Optical waveguide SPR coupling- SPR dependencies and materials- plasmonics and nanoparticles.

### Unit-III

(08Hours)

#### Title: New Approaches in Nanophotonics

Near-Field Optics- Aperture near-field optics- Apertureless near-field optics- Near-field scanning optical microscopy (NSOM or SNOM)- SNOM based detection of plasmonic energy transport- SNOM based visualization of waveguide structures- SNOM in nanolithography- SNOM based optical data storage and recovery.

### Unit-IV

(08 Hours)

#### Title: Biophotonics

Interaction of light with cells- tissues- nonlinear optical processes with intense laser beams- photoinduced effects in biological systems-generation of optical forces-optical trapping and manipulation of single molecules and cells in optical confinement-laser trapping and dissection for biological systems-single molecule biophysics- DNA protein interactions.

**Unit-V****(08Hours)****Title: Photonic Crystals**

Important features of photonic crystals- Presence of photonic bandgap- Anomalous Group Velocity Dispersion- Microcavity-Effects in Photonic Crystals- Fabrication of photonic crystals- Dielectric mirrors and interference filters- Photonic Crystal Laser- PC based LEDs- Photonic crystal fibers (PCFs)- Photonic crystal sensing.

**Unit-VI****(08 Hours)****Title: Nanobio Systems****Termwork**

At least Eight Assignment based on above syllabus

**Oral**

Term work and oral will be based on above syllabus.

**Books /Text References**

6. J.D.Joannopoulos, R.D.Meade and J.N.Winn, Photonic Crystals, Princeton University Press, Princeton, 1995.

**Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## **Elective II: INDUSTRIAL NANOTECHNOLOGY**

### **TEACHING SCHEME**

Lectures : 04 Hrs/Week  
Practical : 02 Hrs/Week

### **EXAMINATION SCHEME**

Theory : 60 Marks  
Duration : 03 Hours  
Unit Test –I : 20 Marks  
Unit Test –II : 20 Marks  
TW/Pract./Oral : 50 Marks  
Theory Credits : 04  
Practical Credits : 01

#### **Unit – I**

**(08 Hours)**

##### **Title:Product Design**

Concept generation- Product Architecture- Industrial Design Process- Management of Industrial design Process and Assessing the quality of Industrial Design - Establishing the product specification

#### **Unit – II**

**(08 Hours)**

##### **Title: Product Development**

Criteria for selection of product- Product development process- Design for Manufacture - Estimate the manufacturing cost- Reduce the support cost- Prototyping- Economics of Product development projects - Elements of Economic analysis- financial models - Sensitive analysis and influence of the quantitative factors.

#### **Unit – III**

**(08 Hours)**

##### **Title:Management Techniques**

Technology Management - Scientific Management - Development of management Thought-Principles of Management- Functions of management-planning- organization- Directing, Staffing and Controlling- Management by objective- SWOT analysis- Enterprise Resource planning and supply chain management.

#### **Unit – IV**

**(08 Hours)**

##### **Title: Entrepreneurial Competence & Environment**

Concept of Entrepreneurship- Entrepreneurship as a career- Personality Characteristic a successful Entrepreneur- Knowledge and skill required for an Entrepreneur- Business environment- Entrepreneurship Development Training - Center and State government policies and Regulations - International Business.

## **Unit–V Management Of Small Business (08 Hours)**

Pre-feasibility study - Ownership - budgeting - project profile preparation - Feasibility Report preparation - Evaluation Criteria- Market and channel selection- Product launching - Monitoring and Evaluation of Business- Effective Management of Small business.

### **Termwork**

At least Eight Assignment based on above syllabus

### **Oral**

Term work and oral will be based on above syllabus.

### **Reference Books:**

1. Karal, T. Ulrich Steven, D. Eppinger, “Product Design and Development”, McGraw- Hill International, editions, 2003.

4. Nanotechnology Demystified by Linda Williams and Wade Adams (Aug 29, 2006)
5. Microsystems and Nanotechnology by Zhaoying Zhou, Zhonglin Wang and Liwei Lin (Nov 28, 2011)

### **Syllabus for Unit Test**

Unit Test 1-- Units I ,II and III

Unit Test 2- Units IV,V and VI

## Elective II: NANO MATERIAL SCIENCE

### TEACHING SCHEME

Lectures : 04 Hrs/Week  
Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks  
Duration : 03 Hours  
Unit Test –I : 20 Marks  
Unit Test –II : 20 Marks  
TW/Pract./Oral : 50 Marks  
Theory Credits : 04  
Practical Credits : 01

#### Unit-I

(08 Hours)

##### Title: Physical Properties

Melting point and phase transition processes- quantum-size-effect (QSE). Size-induced metal-insulator-transition (SIMIT)- nano-scale magnets, transparent magnetic materials, and ultrahigh-density magnetic recording materials-chemical physics of atomic and molecular clusters.

#### Unit-II

(08 Hours)

##### Title: Physical Chemistry of Solid Surfaces

Surface energy – chemical potential as a function of surface curvature-Electrostatic stabilization-surface charge density-electric potential at the proximity of solid surface-Van der Waals attraction potential.

#### Unit-III

(08Hours)

##### Title: Chemistry Aspects

Photochemistry; Photoconductivity; Electrochemistry of Nanomaterials-Diffusion in Nanomaterials; Nanoscale Heat Transfer; Catalysis by gGold Nanoparticles; Transport in Semiconductor Nanostructures; Transition Metal Atoms on Nanocarbon Surfaces; Nanodeposition of Soft Materials; Nanocatalysis.

#### Unit-IV

(08 Hours)

##### Title: NanoStructures

Electronic Structure of Nanoparticles- Kinetics in Nanostructured Materials- Zero dimensional, one-dimensional and two dimensional nanostructures- clusters of metals and semiconductors, nanowires, nanostructured beams, and nanocomposites-artificial atomic clusters-Size dependent properties-size dependent absorption spectra-phonons in nanostructures.

#### Unit-V

(08Hours)

##### Title: Nanosystems

Nanoparticles through homogeneous nucleation-Growth controlled by diffusion-growth controlled by surface process-influences of reduction reagents-solid state phase segregation-kinetically confined synthesis of nanoparticles-template based synthesis.

## **Unit-VI**

**(08 Hours)**

### **Title: Nano Electronics**

Quantization of action, charge and flux – electrons in potential well – photons interacting with electrons in solids – diffusion processes – basic information theory – data & bits – data processing - Size Effects on structure and Morphology of free or Supported Nanoparticles – Size and confinement Effects – Fraction of surface atoms – Specific surface energy and surface stress.

### **Termwork**

At least Eight Assignment based on above syllabus

### **Oral**

Term work and oral will be based on above syllabus.

### **Books /Text References**

6. The Physics and Chemistry of Solids - Stephen Elliott & S. R. Elliott

### **Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## Elective II: NANO COMPOSITES

### TEACHING SCHEME

Lectures : 04 Hrs/Week

Practical : 02 Hrs/Week

### EXAMINATION SCHEME

Theory : 60 Marks

Duration : 03 Hours

Unit Test –I : 20 Marks

Unit Test –II : 20 Marks

TW/Pract./Oral : 50 Marks

Theory Credits : 04

Practical Credits : 01

### Unit-I

(08 Hours)

#### Title: Metal Based Nanocomposites

Metal Oxide or Metal Ceramic Composites, Different aspects of their preparation techniques, their final properties and functionality.

### Unit-II

(08 Hours)

#### Title: Polymer Based Nanocomposites

Preparation and Characterization of Diblock Copolymer based nanocomposites; Polymer – Carbon Nanotubes based composites, Their electrical, magnetic and mechanical properties. Polymer Dendrimer based composite .Percolation theory for CNT polymer based nanocomposite. Nanoscale reinforcement:Nanoclays:Carbon Nanomaterials,Polymer Matrix Nanocomposite. Lamellar nanocomposite.Application of different nanocomposite in industries:polymer:textile:automotive etc.,

### Unit-III

(08Hours)

#### Title: Properties and Characterization of Nanocomposites

### Unit-IV

(08 Hours)

#### Title: Bionano Composites for Tissue Engineering

Major Physiological systems of current interest to Biomedical Engineers: Cardiovascular, endocrine, nervous, visual, gastrointestinal systems. Tissue Engineering for specific organs such as, Bone marrow, skeletal muscles and cartilage, Cell biological fundamentals of tissue engineering. Application of nanomaterials in biomedical Transplant: architecture , assembly, transportation, nutrients. Concept of transplant and its rejection. Xenotransplantation. Imaging of cancer cells, Tissue imaging by QD, Nanoparticles: principles process, application .MRI.

### Unit-V

(08Hours)

#### Title Manufacturing of Bionanomaterials

Natural and artificial (Microbial Nanoparticles production,Viral Nanoparticles production, Plant and diatoms Nanoparticles production), DNA, peptide, Protein ,enzyme based manufacturing: Application: architecture: electronics, (Topdown, Bottom up):Devices, Nano particles with

biosystems ,Natural biocomposite :spider silk:Bone :shells,CNT based biomaterials: using cnt as a template, Biosensors:using Nano materials with bio systems(Plant and animal cell,DNA,microtubules,antibodies,antigens etc..).Cellular imaging. Bionanoarrays: DNA, Protein, nucleotide based, viruses . DNA based computation . DNA as functional template for nanocircuitry. Nanomotors. Cellular nanosystem interaction :concept, process ,application,Biochip. Magnetic Nanoparticle by bacteria:mechanism of formation, application.

## **Unit-VI**

**(08 Hours)**

### **Title: Properties and Characterization of Bionanomaterials**

Use of AFM, SEM , TEM, XRD based bionanomaterial characterization, Properties of DNA structure as nanotechnology aspects, Surface modification properties of Cell, antibodies, antigens, proteins, enzymes.

### **Termwork**

At least Eight Assignment based on above syllabus

### **Oral**

Term work and oral will be based on above syllabus.

### **Books /Text References**

1. Nanocomposite Science & Technology Ajayan, Schadler & Braun
2. Nanocomposites, By Challa S. S. R. Kumar, John Wiley & Sons.
3. Nanostructured Materials: Selected Synthesis Methods, Properties, and Applications, Philippe Knauth, Joop Schoonman
4. Polymeric Nanocomposites: Theory and Practice, By Sati N. Bhattacharya, Musa Rasim Kamal, Rahul K. Gupta, Hanser Verlag
5. Polymer Nanocomposites: Processing, Characterization, And Application, McGraw-Hill Prof Med/Tech
6. Introduction to Nanocomposite Materials: Properties, Processing, By Thomas E. Twardowski, Thomas Twardowski, DEStech Publications, Inc.
7. Nanobiotechnology II more concept and application chad A. Mirkin and christof M.niemeyer Publi WILY WH.
8. **Handbook of Nanostructured Biomaterials and Their Applications in Nanobiotechnology** - Hari Singh Nalwa.
9. **Bionanotechnology: Lessons from Nature** by David S. Goodsell.

### **Syllabus for Unit Test**

Unit Test 1- Units I ,II and III

Unit Test 2- Units IV,V and VI

## **SELF STUDY-I**

### **MODELING AND SIMULATION OF NANOSYSTEMS**

#### **TEACHING SCHEME**

Lectures: 04 Hrs/Week

#### **EXAMINATION SCHEME**

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

#### **Unit I:**

##### **Introduction to modeling and simulation**

Abstract, what is modeling? ,What is simulation?, How to develop a simulation model, How to design a simulation experiment, how to perform simulation analysis, what makes a problem suitable for simulation modeling and analysis, How to select simulation software, benefits of simulation modeling and analysis, what are some pitfalls to guard against in simulation.

#### **Unit II:**

##### **Computer Modeling of Nanostructured material**

Introduction, Modeling Methods: Molecular dynamics and Monte Carlo Modeling, atomic potential energies and Forces, Multiscale Modeling, Nanostructured Materials: Nanoparticle properties

#### **Unit III:**

##### **Microstructure Modeling**

Microstructure Modeling, Sintering and grain growth dynamics, mechanical deformation and fracture, shock loading, irrational properties, Nan alloys, Prospects for future modeling

#### **Unit IV:**

##### **Molecular Dynamics:**

Overview, Nano statistical mechanics, Fundamentals of Molecular Dynamics

#### **Unit V:**

##### **Software's for Molecular Dynamics Modeling**

Principles of Nano Modeling, PES revisited, accuracy requirements, conclusions

#### **Unit VI:**

##### **Application: Nanorobot modeling and simulation**

Abstract, introduction, blood components, nanorobot modeling and design, nanorobot simulation

### **Books /Text References**

1. Nanostructure material by Carl C. Koch
2. Nanosystems by K.Eric Drexler

### **Syllabus for Unit Test**

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV,V and VI

# SYNTHESIS AND DESIGN OF NANOSCALE PRODUCTS

## TEACHING SCHEME

Lectures: 04 Hrs/Week

## EXAMINATION SCHEME

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

### Unit I:

Fundamental concepts of Nanoscale materials, various types of nanomaterials used in Nanotechnology such as CNTs, fullerenes, nanorods, metal oxides, quantum dots, etc.

### Unit II:

Approaches such as top-down approach, bottom up approach, biomimetic and functional approach to construct nanomaterials

### Unit III:

Nanomaterials related to nanoionics and nanoelectronics, Reticular synthesis and the design of new materials, Synthesis of highly ordered mesoporous materials from layered polysilicates, Flexible Synthesis of Composite Aerogels

### Unit IV:

Nanoscale integrated three dimensional circuits

### Unit V:

Nanoscale materials for bulk applications

### Unit VI:

Toxicological aspects of nanoscaled materials

**Books /Text References**

**Syllabus for Unit Test**

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV, V and VI

# **APPLICATIONS OF NANOTECHNOLOGY IN FOOD AND AGRICULTURE**

## **TEACHING SCHEME**

Lectures: 04 Hrs/Week

## **EXAMINATION SCHEME**

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

### **Unit I:**

#### **Use of nanotechnologies in the agriculture sector**

Precision farming for basic agriculture, real time monitoring of soil conditions, combating the crop pathogens and the treatment of waste

### **Unit II:**

#### **Strategic applications of Nanotechnology in agriculture**

Development of innovative products in food production, processing, preservation and packaging and applications in agriculture, animal feed and agrochemicals, disease detection tools, targeted treatments

### **Unit III:**

#### **Impact of nanotechnologies in the food sector**

Nanotechnology-based food and health food products and food packaging materials, Nano-enabled food contact materials (FCMs) and packaging, Polymer composites with various nanomaterials, coatings containing nanoparticles

### **Unit IV:**

#### **Nanosensors in food sector**

Intelligent packaging concepts based on nanosensors, use of nanodiagnostic tools for detection and monitoring in food production, sensing applications, biosensors for detection of herbicides, pesticides and pathogens

### **Unit V:**

## **Encapsulation technology for nanodelivery systems**

Use of micelles, liposomes or biopolymer-based carrier systems, processed nanostructures, inorganic and organic nanomaterials in health food products, surface functionalized nanomaterials

### **Unit VI:**

#### **Health aspects**

Assessment of human health risks associated with the use of nanotechnologies and nanomaterials in the food and agriculture sectors, safety, current risk assessment approaches used by FAO/WHO, environmental, ethical, policy and regulatory issues

#### **Books /Text References:**

1. Nanotechnology in the Agri-food Sector, Lynn J. Frewer , Willem Norde, Arnout Fischer and Frans Kampers, 2011
2. Bionanotechnology: Lessons from Nature by David S. Goodsell

4. Handbook of Nanostructured Biomaterials and Their Applications in Nanobiotechnology - Hari Singh Nalwa
5. Nanobiotechnology; ed. C.M. Niemeyer, C.A. Mirkin.

#### **Syllabus for Unit Test**

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV,V and VI

# FINITE ELEMENT METHODS FOR NANOSCALE STRUCTURES

## TEACHING SCHEME

Lectures: 04 Hrs/Week

## EXAMINATION SCHEME

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

### UNIT I:

Calculus of variation, Introduction to calculus of variations, Introduction to equilibrium equations in elasticity, Euler's Lagrange's equations, Principle of virtual work, virtual displacements, Principles of minimum potential energy, boundary value, initial value problems, Flexibility approach, Displacement approach, Different problems in structural analysis

### UNIT II:

FEM Procedure, Derivation of FEM equations by variation principle polynomials, Concept of shape functions, Derivation for linear simplex element, Need for integral forms, Interpolation polynomials in global and local coordinates

### UNIT III:

Weighted residual Methods: Concept of weighted residual method, Derivation of FEM equations by Galerkin's method, Solving cantilever beam problem by Galerkin's approach Derivation of shape functions for CST triangular elements, Shape functions for rectangular elements, Shape functions for quadrilateral elements.

### UNIT IV:

Higher order Elements: Concept of iso-parametric elements, Concept of sub-parametric and super -parametric elements, Concept of Jacobin matrix.  
Numerical Integration: Numerical Integration, one point formula and two point formulas

### UNIT V:

Different problems of numerical integration evaluation of element stiffness matrix, Automatic mesh generation schemes, Pascal's triangle law for 2D shape functions polynomial, Pascal's triangle law for 3D shape function polynomials, Shape function for beam elements, Hermite shape functions

## **UNIT VI:**

Convergence: Convergence criteria, Compatibility requirements, Geometric isotropy Invariance, Shape functions for iso-parametric elements, Special characteristics of stiffness matrix, direct method for deriving shape functions using Langrage's formula, Plane stress problems

### **Books /Text References:**

4. Nanotechnology Demystified by Linda Williams and Wade Adams (Aug 29, 2006)
5. Microsystems and Nanotechnology by Zhaoying Zhou, Zhonglin Wang and Liwei Lin (Nov 28, 2011)

### **Syllabus for Unit Test**

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV,V and VI

# MEMS & NEMS

## TEACHING SCHEME

Lectures: 04 Hrs/Week

## EXAMINATION SCHEME

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

### UNIT I:

#### Introduction

Basic Electronics, Application of Electronics to Mechanical Systems, Various Micro Mechano-Electronic Systems, Various Nano Mechano-Electronic Systems, Components and Applications

### UNIT II:

#### Micro-electromechanical Systems (MEMS)

What is MEMS? Definitions and Classifications, History, Applications, Established MEMS Applications New MEMS Applications, MEMS Market Miniaturization Issues

### UNIT III:

#### MEMS Fabrication Methods

Photolithography, Materials for Micromachining Substrate, Additive Films and Materials, Bulk Micro machining, Wet Etching, Dry Etching, Surface Micro machining, Fusion Bonding, High-Aspect-Ratio-Micromachining,

### UNIT IV:

#### NEMS Fabrication Methods

LIGA, self assembling system, Molecular Manipulation, Laser Micromachining, 3Computer Aided Design, Assembly and System Integration, Packaging, Multi-Chip Modules, Passivation and Encapsulation, Foundry Services

### UNIT V:

#### Applications

MEMS Transducers, Piezoelectric MEMS, Interstitial MEMS, Biochemical analysis, Power MEMS, Acoustical MEMS, Microreactors, Optical MEMS

### UNIT VI:

#### Future of MEMS

Industry Challenges, the Way Ahead, NEMS

**Books /Text References/Web Site:**

1. An Introduction to MEMS (Micro-electromechanical Systems) – By PRIME Faraday Partnership

<http://www.amazon.co.uk/exec/obidos/ASIN/1844020207>

2. MEMS and NEMS: Systems, Devices, and Structures. Sergey Edward Lyshevski, Rochester Institute of Technology, New York, USA. CRC Press, 2002.
3. Development of micro-diesel injector nozzles via MEMS technology and effects on spray characteristics Seunghyun Baik, James P. Blanchard and Michael L. Corradini (Pdf files)

**Syllabus for Unit Test**

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV, V and VI

# **SELF STUDY-II**

## **SILICON NANOSTRUCTURES & CARBON NANOTUBES BASED NANOELECTRONICS**

### **TEACHING SCHEME**

Lectures: 04 Hrs/Week

### **EXAMINATION SCHEME**

Duration	: 03 Hours
Theory	: 60 Marks
Internal Assessment	: 40 marks
Theory Credits	: 04

#### **Unit I:**

#### **Semiconductor Nanostructures & Nanomaterials**

Semiconductor Nanostructures & Nanomaterials: Introduction, Importance of Semiconductor Nanomaterials in Electronic Industry, Various Silicon Nanostructures, Silicon Nanowires

Silicon Quantum Dots, Silicon Nanotubes, Hybrid Silicon-Carbon Nanotubes

Silicon Carbide Nanotubes

#### **Unit II:**

#### **Carbon Nanotubes Nanoelectronics**

Carbon Nanotubes: Introduction, Synthesis of Carbon Nanotubes, Properties of Carbon Nanotubes, Specific Applications in Electronics, Carbon Nanotube based Field Emission Devices, Carbon Nanotube Transistors, Single Electron Transistor, Ballistic Carbon Nanotube Field Effect Transistor with Palladium Contact

#### **Unit III:**

#### **Carbon Nanotubes: Nanoelectronics**

Overview of Carbon Nanotube Field Effect Transistor Technology

#### **Unit IV:**

#### **Notable Achievements in Nanoelectronics**

Single-Molecule Electronics: Molecular electronics, Molecular logic gate, Molecular wires

Solid State Nanoelectronics: Nanocircuitry, Nanolithography, Nanosensors

**Unit V:**

**Silicon Nanotechnology**

Silicon Nanotechnology: CMOS Nanotechnology, Ballistic Properties, Memory

**Unit VI:**

**Display Devices**

Nano Emissive Display Devices, Quantum Dots, Nano Chips

Nano Electro Mechanical System (NEMS)

**Books /Text References:**

1. Nanotechnology Demystified by Linda Williams and Wade Adams (Aug 29, 2006)
2. Microsystems and Nanotechnology by Zhaoying Zhou, Zhonglin Wang and Liwei Lin (Nov 28, 2011)
3. Polymeric Nanocomposites: Theory and Practice, By Sati N. Bhattacharya, Musa Rasim Kamal, Rahul K. Gupta, Hanser Verlag
4. Polymer Nanocomposites: Processing, Characterization, And Application, McGraw-Hill.

**Syllabus for Unit Test**

Unit Test-1	Units- I ,II and III
Unit Test-2	Units -IV,V and VI

## **SELF STUDY II**

**Subject: Nanobioelectronics**

### **Unit I**

Semiconductor Fabrication – Top-down techniques

### **Unit II**

Introduction to Semiconductor and Carbon-based nanostructures

Introduction to Carbon-based electronic devices

### **Unit III**

Electrical transport at nanoscale

Coupling of biology and nanoelectronics

### **Unit IV**

Biorecognition and transduction events

Biosensors - Electrochemical and Impedance-based methods

### **Unit V**

DNA bioelectronics

Protein (biomimetic) based nanodevices

### **Unit VI**

Current applications in cancer, regenerative medicine, neuroscience,

## **SELF STUDY II**

### **Subject: Compound Semiconductor Materials and Devices**

#### **Unit I**

Introduction to the Compound semiconductor materials and devices

Miller Indices, Reciprocal lattice vector-1, Reciprocal vector -2.

#### **Unit II**

Bragg Diffraction-1, Bragg Diffraction-2.

Brillouin Zone, Bandstructure, Effective Mass, Infinite Quantum Well.

#### **Unit III**

DOS of Nanostructure-1, DOS of Nanostructure-2, Finite Quantum Well-1.

Finite Quantum Well-2, Triangular Well-1, Triangular well-2,

Double Quantum well-1, Double Quantum Well-2.

#### **Unit IV**

Bloch Theorem, Superlattice-1, Superlattice-2.

Heterostructure strain, Band gap engineering.

#### **Unit V**

Band alignment, anion rule, Auger recombination.

#### **Unit VI**

Long wavelength infrared photodetectors, Quantum cascaded lasers

## **SELF STUDY II**

### **Subject: Nanoprocessing**

#### **Unit I**

Introduction, Characterization and manipulation at nano-scale

Scanning electron microscope (SEM)

Transmission electron microscope (TEM)

#### **Unit II**

Scanning probe microscope (SPM)

Scanning tunneling microscope (STM)

Atomic force microscope (AFM)

#### **Unit III**

X-ray diffraction

Synthesis and processing 0D nanostructures – nanoparticles

#### **Unit IV**

Homogeneous nucleation

Synthesis of metallic nanoparticles

Synthesis of nonoxide semiconductor nanoparticles

Synthesis of oxide nanoparticles

Vapor phase synthesis

Solid-state synthesis

#### **Unit V**

Heterogeneous nucleation

Spatially confined growth

Core-shell nanoparticles

#### **Unit VI**

Synthesis and processing 1D nanostructures – nanowires/nanorods/nanotubes/nanofibers

Bottom-up approaches: Anisotropic growth

Top-down approach – electrospinning

Synthesis and processing 2D nanostructures – thin films

Vapor phase deposition

Liquid phase growth

## **SELF STUDY PAPER II: SEM IV**

### **Subject: Introduction to Nano-modelling**

#### **Unit I**

**Computational Modelling** – Process, Model, Mathematical Model, Methods of Computational Modelling, application to nano-engineering

#### **Unit II**

**Molecular Dynamic** – Modelling & Simulation, Analysis background, Potential Energy Function, Naoscale phenomena, approach to technique

**Molecular mechanic** – basic aspect, Mechanics of systems of particles, General co-ordinate system, Least Action Principle

#### **Unit III**

**Energy Minimization** - Concept, Methods - First order minimization, Second Order Minimization, Simplex Minimization. Application to molecular dynamic

#### **Unit IV**

**Statistical Mechanics in Molecular Dynamics** – Definition, Ensemble – Micro canonical, Canonical, Isobaric-Isothermal, MD and Time average, Ensemble average

#### **Unit V**

**Boundary in MD** – Periodic Boundary Condition – Fixed simulation cell, semi rigid atomistic boundary

#### **Unit VI**

**MD Packages** - GROMACS – Flow Chart, Computational Lab practical to use of this package

**Revised Rules  
Structure and contents of  
Detailed Syllabus**

**NOTIFICATION NO. 925**

It is hereby notified for the information of all concerned that the University authorities have decided to approve the revised syllabus of M.Arch. programme and B.Arch. programme by adopting the Council of Architecture's amendments in the existing B.Arch. 2015 CBCS syllabus (Sem VII-X) to be implemented from the academic year 2018-19.

All the concerned are requested to make a note of this.

Changes in the contents of syllabus as per MOM of BOS meeting conducted on 24/12/2018

A meeting of Board of Studies in architecture was conducted on 24<sup>th</sup> December 2018 to discuss the feed by faculty members for implemented course of B.Arch CBCS 2015 and M.Arch CBCS 2018. Both the courses are approved through university notification 925 and in academic council meeting conducted on 4<sup>th</sup> December 2018. It is decided by the BOS in the meeting that the feedback should be carefully considered for next revision of syllabus in the syllabus formation meetings after detailed discussion. The specific suggestions for immediate action are follows for **B.Arch (CBCS 2015 course)**.

1. **Working Drawing I (B.Arch CBCS 2015 amended in 2018)**- 'Municipal Drawing' needs to be included over and above the contents of the syllabus.
2. **Elective V-Sustainable architecture (B.Arch CBCS 2015 amended in 2018)**, the contents are revised as follows:

Aim: To understand the principles and practices of sustainable architecture.

- Concept of sustainable development and its relation to built environment
- Understanding relationship between climate and human comfort
- Understanding sustainable building design principles and practices

 21/11/2019

Prof Archana Gaikwad

Chairperson BOS in Architecture

## **Rules of Structure for First To Fifth Year B. Arch**

### **Rule No.1: Eligibility for Admission**

*Eligibility Criteria:* Students seeking admission to First year of Bachelors Degree Course in Architecture must fulfill the eligibility criteria laid down by Council of Architecture and the University as applicable from time to time.

### **Rule No.2: Duration and stages of the course (as per Council of Architecture)**

- The architecture course shall be of minimum duration of 5 academic years/ 10 semesters of approximately 18 working weeks each inclusive of 90 days of practical training in IX semester in a professional's office.
- The 5 years Bachelors Degree Course in Architecture shall be conducted in two stages.
- The First stage of the course shall be the first 3 academic years or 6 semesters of institutional academic studies. The First stage shall be completed within the stipulated time as prescribed by the Council of Architecture.
- The Second stage of the course shall be of 2 academic years/ 4 semesters including 90 days (15-18 weeks) of practical training.
- A candidate will be eligible to register as an architect under the Architects Act, 1972 only after successful completion of both the stages.

### **Rule No.3: Scheme of Assessment**

A candidate to be eligible for the degree of Bachelor of Architecture will be required to appear for and pass all examinations as under:

#### Stage I

- Semester I Examination in Architecture (First Year Sem I)
- Semester II Examination in Architecture (First Year Sem II)
- Semester III Examination in Architecture (Second Year Sem III)
- Semester IV Examination in Architecture (Second Year Sem IV)
- Semester V Examination in Architecture (Third Year Sem V)
- Semester VI Examination in Architecture (Third Year Sem VI)

#### Stage II

- Semester VII Examination in Architecture (Fourth Year Sem VII)
- Semester VIII Examination in Architecture (Fourth Year Sem VIII)
- Semester IX Examination in Architecture (Final Year Sem IX)
- Semester X Examination in Architecture (Final Year Sem X)

-

#### **Rule No. 4: Granting of Academic Term**

Each semester shall comprise of Eighteen weeks (Minimum 90 working days).

The candidate will be permitted to appear for semester examination only if he/she has,

- 75% attendance in each course that constitute a head of passing, prescribed by the university.
- Satisfactory completion of the 100% term work prescribed for each course.
- Satisfactory conduct as a bonafide student

The Principal/ Director of the institution shall have the right to withhold the student from appearing for examination of a specific course if the above requirements are not fulfilled.

#### **Rule No. 5: Progression Requisite**

As general rule a student shall be allowed to keep the next year of study of the course if he/she has a backlog of not more than “**Six heads of passing**” in the preceding year.

Furthermore,

- A student shall be allowed to get admitted to Second Year B. Arch. course if he/she has a backlog of not more than **six heads** of passing at First year B. Arch (semester I and II considered together).
- A student shall be allowed to get admitted to Third Year B. Arch course, if he/she has cleared all the subjects of passing at First year B.Arch and if he/she has a backlog of not more than **six heads** of passing at Second Year B.Arch (semester III and IV considered together).
- A student shall be allowed to get admitted to Fourth Year B.Arch course if he/she has cleared all the subjects of passing at Second Year B.Arch (Semester III and IV considered together.) and if he/she has a backlog of not more than **six heads** of passing at Third Year B.Arch (semester V and VI considered together)
- A student shall be allowed to get admitted to Final Year B.Arch course if he/she has cleared all the subjects of passing at Third Year B. Arch (Semester V and VI considered together), and if he/she has a backlog of not more than **six heads** of passing at fourth Year B.Arch (semester VII and VIII considered together)

#### **Rule No 6: Examinations**

##### **6.1. Conduct of Examinations**

The university examinations for all the 10 semesters shall be conducted at the end of each semester by the University.

##### **6.2. Pattern of Examination:** The evaluation scheme for B.Arch comprises of;

University Examination (UE)

Internal Assessment (IA)

6.2.1: ***University Examination***

UE will be conducted by the University and will be based on the entire syllabus. Assessment would be undertaken by internal examiner and external examiner jointly in equal weightage. Oral will be based on sessional work produced by the student covering entire syllabus.

The nature of assessment will vary depending upon the subject and its delivery and whether it is studio-based or theory based. Refer to detailed syllabus on the format of UE for individual subjects.

6.2.2: ***Internal Assessment***

IA will be conducted by the Institution imparting B.Arch course. IA will be done by the teacher teaching the course through a continuous assessment system that is spread through the duration of course. The attendance will have weight age of 10 marks and 25 marks for IA of 40 marks and 100 marks respectively. For remaining at least **two** and a maximum **four** of the below components can be used for continuous assessment.

Individual faculty member shall have the flexibility to design the continuous assessment in a manner so as to evaluate students' capabilities across knowledge, skills and attitudes. IA may be undertaken through any or combination of the methods stated below:

- Seminar presentation
- Written Test /Open Book
- Reviews
- Essays
- Short answer questions
- Study of best practices /precedent study/field study
- Multiple choice questions/Quiz
- Projects/group projects/Dissertation
- Reflective Practical assignments
- Drawing Portfolios
- Report writings
- Learning logs/diaries

The faculty shall announce in advance the units based on which continuous assessment shall be conducted. This progressive assessment for the IA must be communicated by the Institute to the university as per the schedule declared by the university. Detailed records of continuous

assessment shall be maintained by the Institute. The student does not have facility of grade improvement, if he/she passes at IA in a course.

### **6.3: Assessment of Term work**

- In respect of term work “due date” shall be fixed for the completion of each assignment and the same shall be collected on the due date.
- At the end of the semester term work shall be assessed jointly by the internal and external examiners from amongst the panel approved by the University.
- Performance of a candidate in viva-voce shall be assessed on basis of the depth of understanding of the principles involved.
- Students may use computers for preparing term work where nature of work is unique to an individual and stress is on content rather than skill. For common form of work, drawing and reports/notes shall be manually prepared.
- An examiner for any of the subjects of examinations shall have a minimum of 3 years teaching/ professional experience in his/her field of study.

### **Rule No. 7: Credits**

- The credits are defined in terms of the student-time spent in hours which are divided into two parts such as face to face instruction and Notional (lectures and studio).
- The total credits to be earned by the student to achieve B.Arch degree will be 300credits.

Semester	I	II	III	IV	V	VI	VII	VIII	IX	X
Credits	30	30	30	30	30	30	30	30	30	30

- Where, one credit is equal to 1hour of Lectures and 1 hour of Studio.
- Note: If a student secure D grade in either or both IA and UE for a particular course credits earned by the student for that courses shall be zero

### **Rule No.8: Criteria for Passing**

To pass in every semester examination and earn the assigned credits, a candidate must obtain minimum 40% marks in each head of passing.

- a) For all courses, Both UE and IA constitute separate heads of passing. In order to pass in such courses and earn the assigned credits

The student must obtain minimum grade point of 5.0(40% marks) at UE and also minimum grade point of 5.0 (40%) marks at IA.

Or

If he/she fails in IA, the student passes in the course provided he/she obtains a minimum of 25% in IA and grade point average(GPA) for course is at least 6.0(50%in aggregate).the GPA for a course will be calculated only if student passes at UE.

- b) A student who fails at UE in a course has to reappear only at UE as a backlog candidate and clear the head of passing. Similarly, a student who fails in a course at IA has to reappear only at IA as a backlog and clear heads of passing.
- c) Students with backlog in IA will have to present themselves and their work for progressive marking throughout the semester for which they intend to appear.

## **Rule No.9: Grading system**

### **9.1: Conversion of Marks to Grade points and Grades.**

The marks shall be converted to grade points and grades as given in table below.

Range of marks (out of 100)	Grade Point	Grade
$80 \leq \text{Marks} \leq 100$	10	O
$70 \leq \text{Marks} < 80$	9	A+
$60 \leq \text{Marks} < 70$	8	A
$55 \leq \text{Marks} < 60$	7	B+
$50 \leq \text{Marks} < 55$	6	B
$40 \leq \text{Marks} < 50$	5	C
Marks < 40	0	D

### **9.2: Performance**

The performance of a student will be evaluated in terms of two indices, viz

- a) Semester Grade Point average (SGPA) which is grade point average for all the semester
- b) Cumulative Grade point average (CGPA) which is the grade point average for all the completed semesters at any point.

### **9.3: Semester Grade point average (SGPA)**

SGPA measures the cumulative performance of a learner in all courses in a particular semester. SGPA is calculated by the formula

$$SGPA = \frac{\sum C_k \times GP_k}{\sum C_k}$$

Where  $C_k$  is the credit-value assigned to a course and  $GP_k$  is a GPA obtained by the learner in the course.

The SGPA shall be calculated up to two decimal place accuracy.

### **9.4: Cumulative Grade point average (CGPA)**

CGPA measures the cumulative performance of a learner in all courses since his/her enrolment. CGPA is calculated by the formula

$$CGPA = \frac{\sum C_k \times GP_K}{\sum C_k}$$

Where  $C_k$  is the credit-value assigned to a course and  $GP_K$  is a GPA obtained by the learner in the course.

The CGPA shall be calculated up to two decimal place accuracy.

The CGPA calculated after the minimum credits specified for the programme are earned will be the final result.

### **9.5: Award of Honours**

A student who has completed the minimum credits specified for the programme shall be declared to have passed in the programme. The final result will be in terms of letter grade only and is based on the CGPA of all courses studied and passed. The criteria for the award of honours are as given in table below

Range of CGPA	Final Grade	Letter Grade
$9.50 \leq CGPA \leq 10.00$	O	Outstanding
$9.00 \leq CGPA \leq 9.49$	A+	Excellent
$8.00 \leq CGPA \leq 8.99$	A	Very Good
$7.00 \leq CGPA \leq 7.99$	B+	Good
$6.00 \leq CGPA \leq 6.99$	B	Average
$5.00 \leq CGPA \leq 5.99$	C	Satisfactory
CGPA Below 5.00	F	Fail

### **Rule No.10: Introduction of this Curriculum**

The new curriculum for the degree course in architecture B.Arch will be introduced from Academic Session 2015 -2016

- First year B.Arch Course from June 2015
- Second year B.Arch Course from June 2016
- Third year B.Arch Course from June 2017
- Fourth year B.Arch Course from June 2018
- Final year B.Arch Course From June 2019

### **Rule No 11: Completion**

Completion of only Stage-I, shall not qualify the candidates for registration as an architect. Degree of Bachelors in architecture shall be awarded only after successful completion of stage II.

Registration as an architect by council of architecture will only be given as per the prevailing rule of Council of Architecture, India.

#### ***Degree Requirements***

**Earned credits:** A candidate who has successfully completed all the Core courses and elective courses, not less than minimum number of credits prescribed shall be eligible to receive the degree.

### **Rule No.12: Subject Code**

Code used for serial numbers of the subjects in the structure for B.Arch course shall be as follows (from left, five digit/alphabet code)

- First alphabet for faculty of engineering-K
- Second digit for Board of Studies of architecture
- Third digit representing the year of the course in architecture
- Fourth and Fifth digits representing number of that subject in the course structure of that particular year

<b>Semester-IX: Practical Training</b>								<b>Total Credits-30</b>			
Subject code	Subject	Teaching Scheme			Examination Scheme **			Credits			
		L	S	Total	I.A	U.E		Total	L	S	Total
K8501	Practical Training					Paper	Oral		100		
					40		60				
		-	-	-					-	-	30

Notations: L-Lectures, S-Studio

IA: Internal Assessment; UE: University Examination

Note 1: For practical training, a student is expected to work for standard office timings i.e. @ 8 hours a day and minimum five days per week. Student has to undergo minimum 15 -18 weeks (90 work days ) of training per semester. The credit requirement for practical training as per circular No.265, pt.II.8 is 24. Since a student will spend the entire semester learning at an office as an intern he/she will be given the 30 credits which are consistent with the 30 credits that are allotted to all other semesters.

Note 2: The work from practical training will be assessed after the student completes the internship in this semester.

Note 3: Validity of training shall be only for a year after completion of training.

# **Semester – I**

## Architectural Design -I

<b>Subject Code</b>	<b>K8101</b>	<b>Semester -I</b>
<b>Credits</b>	<b>6</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To acquire knowledge about elements of design and principles of design.
<b>2</b>	To explore and understand fundamentals of design central to architecture and space design.
<b>3</b>	To understand design as a composite process of elements, principles and fundamentals of design.

<b>A. Learning Outcomes: Student will be able to</b>	
<b>1</b>	explore elements of design, principles of design and fundamentals of design
<b>2</b>	assimilate the above three to understand comprehensive design process
<b>3</b>	learn and analyze built and/or non-built spaces with respect to above elements

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Elements, Principles and Fundamentals of Design</b> Introduction to <ul style="list-style-type: none"> <li>- different Elements of design,</li> <li>- Principles of design and</li> <li>- Fundamentals of Design</li> </ul>
<b>Unit II</b>	<b>Design Process: Function</b> <ul style="list-style-type: none"> <li>- Introduction to ‘human dimensions’ (anthropometry, modes of measurement)</li> <li>- Introduction to function and circulation of various building types</li> <li>- Demonstration the relationship of the above two with elements and principals of design (form, organization, movement, openings, linkages, etc)</li> </ul>
<b>Unit III</b>	<b>Design Process: Structure</b> <ul style="list-style-type: none"> <li>- Introduction to different structural systems</li> <li>- Introduction to components of structure</li> <li>- Introduction to structural behavior of different materials</li> </ul>
<b>Unit IV</b>	<b>Design Process : Context</b> <ul style="list-style-type: none"> <li>- Introduction to buildings and climate</li> <li>- Introduction to building and site</li> <li>- Introduction to building and orientation</li> <li>- Analyze and demonstrate relationship of context with elements and principles of design</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	<ol style="list-style-type: none"> <li>1. ChingF. D. K. (2007), <i>Architecture: form, space, and order</i>, New Jersey, Canada, John Wiley and sons.</li> <li>2. Pramara V. S.(1997),<i>Design Fundamentals in Architecture</i>,New York, U.S.A., Somaiya Publications</li> </ol>
<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. Editors of Phaidon Press (2004), <i>ThePhaidon Atlas of Contemporary World Architecture</i>, Phaidon Press; Comprehensive Edition.</li> <li>2. Pandya Y., VastuShilpa Foundation, (2013),<i>Elements of space making</i>, India, New Jersey, Mapin Publishing.</li> <li>3. Salvadori M., &amp; Robert H., (1975),<i>Structure in architecture: the building of</i></li> </ol>

	<i>buildings</i> , Cornell University, Prentice-Hall. 4. Gropius W., (1962), <i>Scope of Total Architecture</i> , New York, Collier book
<b>Websites:</b>	Drawing Guidelines – Shaping Space <a href="http://www.riai.ie/downloads/education/pdf/ss_guidelines/drawing_guidelines.pdf">http://www.riai.ie/downloads/education/pdf/ss_guidelines/drawing_guidelines.pdf</a>
<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignment (Any 3)</b>	
<b>1</b>	Analysis and study of design principles and elements using different kinds of examples of built and/or non-built spaces with help of sketches, photographs, drawings etc.
<b>2</b>	Study of structural systems, components of structures in built spaces.
<b>3</b>	Analysis of relationship between building and climate, building and site and orientation with the help of built and/or non-built environment with the help of sketches, photographs, drawings, etc.
<b>4</b>	Photo documentation and study of use of materials for various design components and design considerations.

## Building Construction and Materials-I

<b>Subject Code</b>	<b>K8102</b>	<b>Semester-I</b>
<b>Credits</b>	<b>6</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand the properties, characteristics, strength, processing and application of materials
<b>2</b>	To understand the different components of masonry construction

<b>Learning outcomes: Student will be able to</b>	
<b>1</b>	Explore materials, properties characteristics, methods of preservation, treatment and methods of construction and uses of different materials
<b>2</b>	Describe in detail the method of construction of superstructure with various masonry
<b>3</b>	Discuss different material used for fencing as well as for gates.
<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Introduction</b> <ul style="list-style-type: none"> <li>- Building construction as subject and its relevance to architectural design.</li> <li>- Introduction to various components of building from foundation to roof.</li> <li>- Basic structural systems load bearing and framed structure</li> </ul>
<b>Unit II</b>	<b>Study of Materials</b> Properties, various types, market form available, standard sizes, cost, application in buildings resource use, defects and strengths of each material <ul style="list-style-type: none"> <li>- Bricks and stones</li> <li>- Cement, Sand , aggregates</li> <li>- Mortar, Plaster, Pointing</li> <li>- Lime</li> </ul>
<b>Unit III</b>	<b>Superstructure Masonry</b> <ul style="list-style-type: none"> <li>- Fundamentals, principal of load bearing construction for medium rise structures using Brick, stone, Concrete Blocks, solid Blocks, Hollow Blocks, Cavity Block etc.</li> <li>- Introduction to various types and junctions of brick bond and types of stone masonry</li> </ul>
<b>Unit IV</b>	<b>Fencing And Entrance Gate</b> <ul style="list-style-type: none"> <li>- Fencing and compound wall construction in different materials like Barbed wire, Chain link, Wire mesh, R.C.C. Grills, M.S. Grills etc.</li> <li>- Constructional details of an entrance gate in a compound wall of following types: Sliding Gate, Entrance gate side hung with floor channel, Entrance gate side hung with wicket gate</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	1. Rangwala S. C.(2007) <i>Engineering Materials</i> . Gujarat, Charotar, Publishing House. 2. Duggal S.K.(2009) <i>Building materials</i> . New Delhi, New Age International.
<b>Reference Books:</b>	1. Varghese P.C.(2005) <i>Building Materials</i> . New Delhi, Prentice Hall of India put Ltd. 2. Duggal S.K.(1997) <i>Building materials</i> . New Delhi, Oxford and IBH

	publishing Co, put, Ltd 3. Spencke R. F.and Cook D.J.(1983) <i>Building Materials in Developing Countries</i> . New York,John Wiley and sons
<b>Websites:</b>	<b><a href="http://www.shannonmasonryconstruction.com">www.shannonmasonryconstruction.com</a></b>
<b>Journals:</b>	Construction and building materials -journal- else vier ( <a href="http://www.journals.elsevier.com/construction-and-building-materials/">www.journals.elsevier.com/construction-and-building-materials/</a> ) Journal of building construction and planning research ( <a href="http://www.scirp.org/journal/jbcpr/">www.scirp.org/journal/jbcpr/</a> )

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Portfolio of technical drawings of above mentioned topic with supporting documents of sketched booklet and pictographic presentation.(Min.4drgs.)
<b>2</b>	Field reports and Market survey of building technology topics.
<b>3</b>	Proposals of different designs in masonry construction and fencing designs for prescribed projects.(Under discretion of the subject faculty)

## Theory of Structure -I

<b>Subject Code</b>	<b>K8103</b>	<b>Semester-I</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand basic structural concepts
<b>2</b>	To understand behavior of different materials
<b>3</b>	To understand fundamentals of structure

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Develop understanding of basic requirements of stability, strength of materials
<b>2</b>	Develop understanding of behaviour of basic structural elements
<b>3</b>	Understand importance of basic structural elements in structural systems.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Introduction</b> Introduction to basic structural elements like column/post, beam, slab, load bearing walls. The load transfer mechanism. Introduction to dead load and live load. Simple calculation of dead load of one way slab and beam if their dimensions are known, in order to know how much load is transferred from each element
<b>Unit II</b>	<b>Supports</b> <ul style="list-style-type: none"> <li>- Types Of Supports And Load Transfer To The Supporting Element : Explain beams as a system in equilibrium and explain conditions of equilibrium (<math>\Sigma f_x</math>, <math>\Sigma f_y</math> and <math>\Sigma m = 0</math>)</li> <li>- Types of supports: roller hinged and fixed supports. Explain in which practical connection we idealize it as hinge/ roller/ fixed. (theory only)</li> <li>- Type of beams: simply supported, cantilever and overhanged beam. Calculating the reaction they transfer to the support. (calculation should include udl and point load standard cases</li> <li>- UDL over entire span</li> <li>- Point load at centre and eccentric</li> <li>- UDL near one support</li> <li>- Shear force and Bending Moment and its importance</li> </ul>
<b>Unit III</b>	<b>Properties Of Section</b> <ul style="list-style-type: none"> <li>- Centre of gravity – its importance</li> <li>- How to find CG of standard T, Channel, I, angle section and combination of such sections</li> </ul>
<b>Unit IV</b>	<b>Moment of Inertia</b> <ul style="list-style-type: none"> <li>- Moment of inertia – its importance</li> <li>- MI formulae of standard sections. Calculations for rectangle and circle, T, Channel, angle and I section using parallel axis theorem.</li> <li>- Section modulus and radius of gyration – definition.</li> </ul>

<b>Learning Resources</b>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Calculate the load transferred on the supporting beam/ column for simply supported cantilever and overhang beam. (find reactions)
<b>2</b>	Study of various cross sections such T, C,L, I and O as various structural elements. Calculations of T,C, L ,I and o sections
<b>3</b>	Photo Documentation : various type of beams, various type of supports, various types of loads, various types of cross sections
<b>4</b>	Making models : various type of beams, various type of supports, various types of loads, various types of cross sections

## Creativity & Communication -I

<b>Subject Code</b>	<b>K8104</b>	<b>Semester -I</b>
<b>Credits</b>	<b>4</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
1	To understand elements of design and principles of design as a basic creative activity.
2	To study/analyze principles of organizations.
3	To develop artistic and architectural vocabulary for effective verbal and written communication.
4	To appreciate visual art forms like sculpture, paintings, calligraphy, caricatures etc.

<b>Learning Outcomes: Student will be able to</b>	
1	Explore basic elements of design and their expressions artistically
2	Explore principles of design and their expressions artistically
3	Understand and explore principles of organizations
4	Understand and develop artistic and architectural vocabulary

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Elements of Design</b> <ul style="list-style-type: none"> <li>- Introduction to Elements of design</li> <li>- Interpretation of points, lines and planes</li> <li>- Expressions through colors, textures and light</li> </ul>
<b>Unit II</b>	<b>Principles of Design</b> <ul style="list-style-type: none"> <li>- Introduction to Principles of Design</li> <li>- Theory on Lateral Thinking and exercise on generation of alternatives</li> <li>- Explorations of Principles of Design through 2D compositions</li> </ul>
<b>Unit III</b>	<b>Organization</b> <ul style="list-style-type: none"> <li>- Introduction to Organization</li> <li>- Explorations of Organization through 3D compositions</li> </ul>
<b>Unit IV</b>	<ul style="list-style-type: none"> <li>- Introduction to Visual arts (painting, sculpture, calligraphy etc.)</li> <li>- Understanding attributes of elements of visual and architectural aesthetics</li> <li>- Visual Arts appraisal</li> </ul>
<b>Unit V</b>	<b>Verbal and Written Communication</b> <ul style="list-style-type: none"> <li>- Exploration of different ways of verbal and written communication</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	<ol style="list-style-type: none"> <li>1. Ching Francis, D. K. (2007) <i>Architecture: Form Space &amp; Order</i>, New Jersey, John Willy and Sons</li> <li>2. Ching Francis, D. K. (1999) <i>Visual Dictionary of Architecture</i>, New Jersey, John Willy and Sons</li> </ol>

<b>Journals</b>	

<b>Assessment</b>		<b>Marks</b>
<b>IA</b>	<b>Internal Assessment</b>	40
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>UE</b>	<b>University Examination</b>	60
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
Drawing portfolio consisting of relevant exercises including	
<b>1</b>	Self Portrait
<b>2</b>	Exercise on inter-relation of emotions and their expressions though lines and colors – in the form on thumb sketches or series of expressions explaining a story line OR creating a graphic strip explain a story OR creating a graphical story board for a concept
<b>3</b>	Exploration of textures in form of 3D models
<b>4</b>	Analysis of effects of different lighting conditions in architecture
<b>5</b>	Exploration of different generations of alternatives through modules
<b>6</b>	Exploration of Principles of Design based on 2D compositions of modules
<b>7</b>	Exploration of Vertical and Horizontal Planes based on modules to understand anthropometry
<b>8</b>	Exploration of Organization through 3D composition with solids like cubes, cuboids, pyramids, cones, cylinders, spheres etc.
<b>9</b>	Group work on Appreciation of Visual Arts
<b>10</b>	Exercise on verbal and written communication in the form of compilation of an architect's works and seminar presentation of the same or newspaper article etc.

## Architectural Drawings and Graphics-I

<b>Subject Code</b>	<b>K8105</b>	<b>Semester -I</b>
<b>Credits</b>	<b>6</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand visualization principles of various objects related to architecture.
<b>2</b>	To enable students to present in graphical form all building elements and free hand sketching.

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Develop skills in free hand sketching
<b>2</b>	Represent different forms, building elements and materials
<b>3</b>	Visualize and represent in Two-Dimension And Three-Dimension Graphic communication

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Basic skills of drafting</b> <ul style="list-style-type: none"> <li>- Lettering: Freehand architectural lettering.</li> <li>- Lines: Concept and types of lines, Dimension lines.</li> <li>- Drafting convention.</li> <li>- Study of Scales.</li> </ul>
<b>Unit II</b>	<b>Geometry</b> <ul style="list-style-type: none"> <li>- Geometrical constructions</li> </ul>
<b>Unit III</b>	<b>Represent 3D objects in 2 D</b> <ul style="list-style-type: none"> <li>- Definition, Meaning &amp; concept.</li> <li>- Projection of points, lines, planes and solids through orthographic projections to understand 2D building representation.</li> </ul> <b>Sections</b> <ul style="list-style-type: none"> <li>- To represent the building through sections</li> </ul>
<b>Unit IV</b>	<b>Three dimensional representation</b> <ul style="list-style-type: none"> <li>- Existing building views through sketching</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	<ol style="list-style-type: none"> <li>1. F. D K. Ching (2009) <i>Architectural Graphics</i>, New Jersey, John and Wiley and Sons</li> <li>2. Hugh C. Browing (1996) <i>The Principles of Architectural Drafting</i>, New York, Watson-Guptill Publications</li> <li>3. N.D.Bhatt (2012) <i>Engineering Drawing</i>, Gujrat, Charator Publishing House.</li> <li>4. Rangwala(1991)<i>Civil Engineering Drawing</i>, Gujarat, Charator Publishing House</li> </ol>
<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. Calvin F. Schmid, Stanton E. Schmid, (1954) <i>Handbook on Graphic Presentation</i>, New York, The Ronald Press Company</li> <li>2. David Littlefield (2012) <i>Matric Handbook</i>, London and New York, Routledge Taylor and Francis Group.</li> <li>3. Sleeper R.( 2000)<i>Architectural Graphic Standards</i>, New York, John Wiely and Sons.</li> </ol>
<b>Websites:</b>	
<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>UE</b>	<b>University Examination</b>	<b>60</b>
	Theory paper of 03 hours	

## Workshop –Model Making

<b>Subject Code</b>	<b>K8106</b>	<b>Semester -I</b>
<b>Credits</b>	<b>5</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To equip students with the basic skills necessary to represent their ideas in a model format using simple materials like paper, thermocol, hardwood, Metals, glass fiber etc.
<b>2</b>	To familiarize students with cutting, drilling, grinding, slotting, shaping, bending and measuring instruments, filing, scraping and fitting etc.; processes used in making models.

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Develop skills in making 2D and 3Dmodels.
<b>2</b>	Apply carpentry instruments and their uses.
<b>3</b>	Understand the importance of model making as a tool to represent ideas and visualize objects/ elements/structures in architecture.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Introduction to types of model</b> - Block models, detailed model, Construction Model and interior, Models etc.
<b>Unit II</b>	<b>Introduction to various materials</b> - Experimentation with these materials for different geometries and scales of models
<b>Unit III</b>	<b>Tools in model making</b> - Development of the skill to use the tools with precision to obtain desired results in model making.
<b>Unit IV</b>	<b>Exploration of Building materials</b> - Hands on approach

<b>Learning Resources</b>	
<b>Text Books:</b>	<ol style="list-style-type: none"> <li>1. Akiko Busch (1991) <i>The Art of Architectural Models</i>, Hong Kong, Design Press</li> <li>2. Nick Bunn (2010) <i>Architectural Model Making</i>, London, Laurence KingPublishing.</li> <li>3. Paul Jackson, Angela A Court, Marion Elliot (1993) <i>The Ultimate Papercraft and Origami Book</i>, United Kingdom, Acropolis Books</li> <li>4. Alexander Schilling, (2008)<i>Basics Model Building</i>, BostenBerlin,Birkhauser publishers for Architecture</li> </ol>

<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>100</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>Note</b>	There is no 'University Examination' for this subjects	

<b>Assignments</b>	
<b>1</b>	Model making-design projects.
<b>2</b>	Model-Construction details.
<b>3</b>	Model -Creative Arts and crafts

## **Semester – II**

## Architectural Design -II

<b>Subject Code</b>	<b>K8107</b>	<b>Semester -II</b>
<b>Credits</b>	<b>6</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To develop communication and representation skills
<b>2</b>	To document spaces in graphic form
<b>3</b>	To explore concepts of space design with a focus on function and anthropometry

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Develop skills to understand and represent design ideas through graphic communication.
<b>2</b>	Learn to measure, document and represent spaces.
<b>3</b>	Understand and demonstrate a simple design responding to functional requirements and appropriate scale.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Measured Drawing</b> - Introduction and demonstration of modes of measurements and methods of documentation of built and/or non built spaces - Introduction and demonstration of different methods of representation
<b>Unit II</b>	<b>Analysis</b> - Study of function, circulation, scale and modes of measurement with respect to a specific activity.
<b>Unit III</b>	<b>Design Demonstration</b> - Design of single activity spaces reflecting understanding of the above.

<b>Learning Resources</b>	
<b>Text Books:</b>	
<b>Reference Books:</b>	1. Batley C., (1948), <i>The design development of Indian architecture</i> , J. Tiranti, ltd. 2. Ching F. D. K. (2007), <i>Architecture: form, space, and order</i> , New Jersey, Canada, John Wiley and sons. 3. Editors of Phaidon Press (2004), <i>The Phaidon Atlas of Contemporary World Architecture</i> , Phaidon Press; Comprehensive Edition. 4. Pandya Y., VastuShilpa Foundation, (2013), <i>Elements of space making</i> , India, New Jersey, Mapin Publishing. 5. S., (nd), <i>An Ethnographic and Collaborative Model of Inquiry: Activity Centre Project in India</i> , Chapter 2, from <a href="http://www.springer.com/978-981-4585-10-1">http://www.springer.com/978-981-4585-10-1</a>
<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Measured drawing of any structure relevant to the topic - Drawing Portfolio
<b>2</b>	Design of single activity unit with a demand of knowledge of function, circulation and anthropometry (e.g. Canteen, bus-stop, play school, library, clinic, boutique, etc.) – Drawing portfolio. Models to understand and explain the Designed Spaces.
<b>3</b>	Photo documentation and analysis of related / similar designed spaces.

## Building Construction and Materials-II

<b>Subject Code</b>	<b>K8108</b>	<b>Semester -I</b>
<b>Credits</b>	<b>5</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To involve students in a number of drawing exercises that will analyze the various building components in a simple load bearing structure.
<b>2</b>	To inform properties and characteristics of timber, its conversion, preservation and uses
<b>3</b>	To make students aware of various market forms of timber, their production, properties and application in the building industry

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Understand the different construction practices adapted for the various components of doors and windows to specific material in which it's made.
<b>2</b>	Understand the concept of opening and its construction techniques

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Door, Windows and Openings</b> <ul style="list-style-type: none"> <li>- Introduction to various hardware used for doors, window</li> <li>- Terminology and construction aspects of door ,windowand opening</li> </ul>
<b>Unit II</b>	<b>Spanning Of Opening</b> <ul style="list-style-type: none"> <li>- lintel and arch construction</li> <li>- Terminology of arch construction and load transfer</li> <li>- Construction and formwork for lintel and arch</li> <li>- Spanning of opening using brick and stone for various types of arches like flat, segmental, semi circular etc.</li> <li>- Spanning of opening using brick, stone, timber, built-up sections for lintel construction</li> </ul>
<b>Unit III</b>	<b>Doors</b> <ul style="list-style-type: none"> <li>- Design considerations, single and double shutters, party glazed and partly paneled shutters</li> <li>- Glazed, Paneled and Flush doors in wood. Types of Flush doors.</li> <li>- Ledged, braced and battened and framed door. ( Introduction)</li> <li>- Sliding and sliding- folding door in T.W. and Aluminum.</li> <li>- Steel Door Construction</li> <li>- Pressed sheet shutter</li> <li>- Box section frame and paneled shutter</li> <li>- Rolling shutter</li> <li>- Collapsible gates</li> <li>- Safety or Grilled doors</li> </ul>
<b>Unit IV</b>	<b>Windows</b> <ul style="list-style-type: none"> <li>- Underline principles for appropriate selection and application of different type of wooden windows &amp; steel windows.</li> <li>- Paneled, fixed and partly and fully glazed and louvered, centrally pivoted, top hung windows, Side hung windows in wood.</li> <li>- Bay windows in wood</li> <li>- Steel window using 'Z' section</li> <li>- Steel window using Box section &amp; of proprietary nature</li> </ul>

<b>Unit V</b>	<b>Study of Materials</b> <ul style="list-style-type: none"> <li>- Timber and Bamboo</li> <li>- Various timber joints</li> <li>- Hollow concrete block</li> <li>- Reinforced Brick work</li> </ul>

<b>Journals:</b>	The open construction and Building Technology journal (benthamopen.com/tobctj/home)

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b> Assignments or portfolios based on entire syllabus as mentioned below.	<b>60</b>

<b>Assignments</b>	
<b>1</b>	Portfolio of technical drawings of above mentioned topic with supporting documents of sketched booklet and pictographic presentation.(min.4 drawings.)
<b>2</b>	Field reports and Market survey of building technology topics.
<b>3</b>	Proposals of different designs in door and window construction and opening designs for prescribed projects (Under discretion of the subject faculty).

## Theory of Structures-II

<b>Subject Code</b>	<b>K8109</b>	<b>Semester -II</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand forces acting on members
<b>2</b>	To understand properties and behaviour of different materials
<b>3</b>	To understand shear and bending stresses

<b>B. Learning Outcomes: Student will be able to</b>	
<b>1</b>	Develop understanding of stresses and strains on members.
<b>2</b>	Develop understanding of properties of basic structural materials.
<b>3</b>	Understand importance of consideration of shear forces.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Stress and Strain</b> - What is stress (axial, bending and shear), strain. - Calculation of axial stress, strain for composite material like RCC.
<b>Unit II</b>	<b>Bending Stress</b> - Calculation of bending stress using formulae for standard sections. T,C, L and I - What is combination of axial and bending stress,for a masonry column and base of retaining wall for stability.
<b>Unit III</b>	<b>Shear Stress Calculation</b> - Calculation of shear stress using formulae for standard sections. T, C, L and I.
<b>Unit IV</b>	<b>Elastic constants and stresses</b> - Structural properties: Elasticity, maximum Permissible Tensile/compressive stress, bending stress and shear stress for various materials like timber, masonry, concrete and steel. Explain the difference between behaviour of a ductile material like steel and brittle material like concrete subjected to tensile force. ( stress-strain curve and Hooke's law).

<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Numerical problems on calculation of axial stress and strain in composite elements.
<b>2</b>	Numerical problems on calculation of bending stress in beams and columns.
<b>3</b>	Numerical problems on calculation of combined stresses
	Photo Documentation: structural damages due to excessive stresses, identifying the reasons of damages.

## Creativity & Communication-II

<b>Subject Code</b>	<b>K8110</b>	<b>Semester -II</b>
<b>Credits</b>	<b>4</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand volume and form.
<b>2</b>	To study/analyze scale and proportions
<b>3</b>	To appreciate performing art forms like films, theatre, dance etc

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Explore volume and form as basic elements of design
<b>2</b>	Understand scale and proportion and their impact on spaces
<b>3</b>	Appreciate performing arts

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Volume and Form</b> - Introduction to Attributes of Form and Space - Understanding derivatives of form - Volumetric Study of Spaces – positive and negative spaces
<b>Unit II</b>	<b>Scale and Proportion</b> - Theory on Scale and Proportion - Exploration of Scale and Proportion through 2D and 3D mediums
<b>Unit III</b>	<b>Performing Arts Appraisal</b> - Introduction to Performing arts (films, theatre, dance etc.) - Understanding attribute of elements of performing arts
<b>Unit IV</b>	<b>Communication through performing art</b> Exploration of different ways of communication through performing art

<b>Learning Resources</b>	
<b>Text Books:</b>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
Drawing portfolio consisting of relevant exercises including	
<b>1</b>	Understanding Volume as an element of design and exploration of positive and negative spaces in a volume or 3D composition
<b>2</b>	Exercise on exploration of derivatives of form
<b>3</b>	Understanding theory of scale and proportions and representing the same through study of anthropometry of spaces
<b>4</b>	Group work on Documentary/ Film as Performing Arts appraisal

## Architectural Drawings and Graphics-II

<b>Subject Code</b>	<b>K8111</b>	<b>Semester -II</b>
<b>Credits</b>	<b>5</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To develop perception and presentation of different forms and their spatial dimension.
<b>2</b>	To develop rendering techniques and presentation skill

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Visualize three Dimensional representations of complex objects and to relate the graphics content with Architectural Design.
<b>2</b>	Explore Rendering technique skills with various media, incorporating sciography and creating three-dimensional effects.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Three dimensional representation</b> - Isometric, axonometric and oblique view of solid composition and building.
<b>Unit II</b>	<b>Interpenetration of solids</b> - Interpenetration of various solids and its relation in building design.
<b>Unit III</b>	<b>Presentation of drawings</b> - Rendering technique with various media.
<b>Unit IV</b>	<b>Sciography</b> - Introduction of sciography. - Representation of Shade and shadows in plans and elevations.

<b>Learning Resources</b>

	Theory paper of 03 hours	<b>60</b>

## History of Architecture-I

<b>Subject Code</b>	<b>K8112</b>	<b>Semester -II</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand development of architecture as a process of contextual and cultural evolution rather than simply as a product.
<b>2</b>	To acknowledge and interpret from history, best design guidelines which respond aptly to the vernacular character of that place, the lifestyle of the users and building traditions of that time.
<b>3</b>	To gain knowledge of the development of architectural form with reference to Technology, style and character.

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Discuss Geography, Politics, Economy, Social Systems, Religion, Paintings and Sculptures and its influence on Architecture at different periods of time.
<b>2</b>	Explore cultures and civilizations and settlements across the world

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Pre-historic</b> <ul style="list-style-type: none"> <li>- Housing forms in the initial phase: Cave shelters- at Lascaux, Terra Amata</li> <li>- Community structures: Menhir, dolmen, gallery and passage graves, Stonehenge, Ggantija Malta</li> </ul>
<b>Unit II</b>	<b>River Valley Civilizations</b> <ul style="list-style-type: none"> <li>- Yellow River</li> <li>- Indus River</li> <li>- Nile River</li> <li>- Tigris River</li> </ul>
<b>Unit III</b>	<b>Vedic Architecture</b> <ul style="list-style-type: none"> <li>- Vedic culture and town planning layouts, Vedic Village, City Planning in later Vedic period, Building materials and construction techniques.</li> </ul> <b>Buddhist Phase</b> <ul style="list-style-type: none"> <li>- Major typologies – Stambha, Stupa, Chaitya, Vihara.</li> <li>- Development of Chaitya arch - Lomas Rishi, AshokanStambhas, The Great Stupa at Sanchi, Chaitya Hall at Karli, Viharas at Ajanta</li> </ul>
<b>Unit IV</b>	<b>Greek Civilization</b> <ul style="list-style-type: none"> <li>- History, evolution and characteristics Elements of special attributes: Classical Orders, Optical corrections – Acropolis, City of Athens</li> <li>- Major typologies</li> <li>- Temples, Theatres, Agora, Stoa, Council Halls</li> </ul>
<b>Unit V</b>	<b>Roman Civilization</b> <ul style="list-style-type: none"> <li>- History, evolution and characteristics Elements of special attributes:</li> <li>- Arches, lintels, bridges, aqueducts, Roman engineering skills</li> <li>- Major typologies</li> <li>- Temples- Pantheon, Basilica at Trajan, Amphitheatre, Hippodrome, Circus, Palaces, Thermae at Carcalla</li> </ul>

<b>Learning Resources</b>

	Theory paper	

## Climatology and Climate Responsive Architecture

<b>Subject Code</b>	<b>K8113</b>	<b>Semester -II</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand climate and its impact on architectural design.
<b>2</b>	To understand co-relation between climate and other environmental parameters and built form at individual and settlement level
<b>3</b>	To understand the use of surrounding environment as one of the strategic design parameters.

<b>C. Learning Outcomes: Student will be able to-</b>	
<b>1</b>	Familiarize with climatological influences on built environment and comfort conditions for inhabitants.
<b>2</b>	Explore design principles in different climatic zones

<b>Units</b>	<b>Content</b>
<b>Unit I</b>	<b>Basic Climatology</b> <ul style="list-style-type: none"> <li>- Introduction: To climate, weather, earth, sun relationship. Global, Macro and Micro climate. Importance of climate in architecture.</li> <li>- Elements of climate: Temperature, rainfall, humidity, wind, solar radiation etc.</li> </ul>
<b>Unit II</b>	<b>Basic Climatology</b> <ul style="list-style-type: none"> <li>- Human Comfort:</li> <li>- Human heat balance and comfort, thermal comfort and means of thermal comfort, heat stress, effective temperature, bioclimatic chart, subjective variables</li> <li>- Thermal Comfort Indices</li> <li>- Active &amp; Passive means of thermal control: Degree of control</li> </ul>
<b>Unit III</b>	<b>Basic Climatology</b> <ul style="list-style-type: none"> <li>- Structural control : Shadow formation, sun control and shading devices</li> <li>- Ventilation &amp; Air movement: Study of ventilation &amp; its functions in buildings, air flow through buildings, position &amp; size of opening</li> </ul>
<b>Unit IV</b>	<b>Climate Responsive Architecture</b> <ul style="list-style-type: none"> <li>- Study of nature of climate, its physiological objectives and design criteria's and discomfort indices. Planning of internal and external spaces, surface treatments and openings etc. for various climatic zones</li> <li>- Case Study of a contemporary or traditional shelter in the given climate</li> <li>- Study of traditional /vernacular architecture from various climatic zones (Hot and Dry; Warm and Humid; Composite; Cold –Dry, Cold-wet)</li> <li>- Study of effect of orientation, topography, vegetation, form, building material and surfaces on building design in response to climate</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	1. Koenigsberger, Ingersoll, Mayhew, Szokolay, (1996) Manual of Tropical Housing and Building - Climatic Design, Orient Longman Limited
<b>Reference Books:</b>	2. G. Z. Brown and Mark Dekay, John Wiley and Sons, (2001) Sun, Wind and Light, 2nd Edition, New York

	<p>3. Baruch Givoni,(1976) Man, Climate and Architecture, U. K., Applied science Publishers, 2nd Edition</p> <p>4. T. N. Sheshadri,(2001) Climatological and Solar Data for India, Meerat, SaritaPrakashan</p> <p>A. Krishan,(2001), Climate Responsive Architecture, Tata Mcgraw Hill</p>

<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignment</b>	
<b>1</b>	Case study of a climate responsive building
<b>2</b>	Study of shading devices in a building.
<b>3</b>	Performance of openings for light and ventilation
<b>4</b>	Site-Analysis (Climatic context) considering various climatic elements.

## Workshop-Model Making and Building Appraisal

<b>Subject Code</b>	<b>K8114</b>	<b>Semester -II</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand appreciation in architecture.
<b>2</b>	To understand how to read a building.

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Explain building using architecture language.
<b>2</b>	Analyses components of the building.
<b>3</b>	Represent same building in model format.
<b>4</b>	Apply model making as a tool of expression.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Aspects of appraisal</b> - Aesthetics, Technical, Financial, Economic, Environmental and anthropological appraisals.
<b>Unit II</b>	<b>Art consciousness</b> - Aesthetics, perception, symbolism, expression, style, fashion, appropriateness and values.
<b>Unit III</b>	<b>Building Appraisal</b> - Understanding the meaning of appreciation and its normative criteria such as Form, space, site, function, structure etc.
<b>Unit IV</b>	<b>Analysing design</b> - Identification of place, Basic and modifying elements of architecture, geometries, Themes in Spatial organization - Appreciation of designer skills, theories of perception and variability of perception.
<b>Unit V</b>	<b>Model Making</b>

<b>Learning Resources</b>	
<b>Text Books:</b>	1. Simon Unwin (2009). <i>Analysing Architecture</i> third edition, revised and enlarged. USA and Canada by Routledge

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>100</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>Note</b>	<b>There is no 'University Examination' for this subjects</b>	

<b>Assignment</b>	
<b>1</b>	Building appraisal Essay/report with sketches /Photographs
<b>2</b>	Model of a structure

## **Semester – III**

## Architectural Design -III

<b>Subject Code</b>	<b>K8201</b>	<b>Semester -III</b>
<b>Credits</b>	<b>6</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To study and explore properties and behavior of different structural materials
<b>2</b>	To introduce students to a design process with a focus on materials and structural systems
<b>3</b>	To develop capacity of third dimensional thinking in students
<b>4</b>	To understand the process of multi activity space designing

<b>Learning Outcomes: students will be able to</b>	
<b>1</b>	Make appropriate choice of material based on the requirements of the design project
<b>2</b>	Explore properties of a particular material to its fullest.
<b>3</b>	visualize and think in third dimension and translate it into two dimensional design
<b>4</b>	synthesize and reflect analytical understanding of multi activity spaces into Architectural Design

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Exposure to Materials</b> - Introduction and knowledge of different materials and innovative structural systems
<b>Unit II</b>	<b>Exploration of Forms</b> - Exploration of innovative forms of structures based on the behavior of materials
<b>Unit III</b>	<b>Design Demonstration</b> - Introduction to a complex multi activity space design - Demonstrating the best use of the studied material/s in this space

<b>Learning Resources</b>	
<b>Text Books:</b>	
<b>Reference Books</b>	<ol style="list-style-type: none"> <li>1. Ching F. D. K. (2007), <i>Architecture: form, space, and order</i>, New Jersey, Canada, John Wiley and sons.</li> <li>2. Editors of Phaidon Press (2004), <i>The Phaidon Atlas of Contemporary World Architecture</i>, Phaidon Press; Comprehensive Edition.</li> <li>3. Salvadori M., &amp; Robert H., (1975), <i>Structure in architecture: the building of buildings</i>, Cornell University, Prentice-Hall</li> <li>4. Shankar P., (2014) <i>Himalayan Cities: Settlement Patterns, Public Places and Architecture</i>, New Delhi, India, USA, Canada, Niyogi Books.</li> </ol>

<b>Journals:</b>	

<b>Assessment</b>	<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>
	Refer To 'Rule number 6, sub point 6.2.2.'
<b>U.E.</b>	<b>University Examination</b>
	<b>60</b>

	Assignments or portfolios based on entire syllabus as mentioned below.	
--	--	--

<b>Assignment</b>	
<b>1</b>	Analysis of different materials and structural systems through research and market surveys
<b>2</b>	Experimentation with models to explore properties, strengths, weaknesses, possibilities of different configurations of chosen materials (application of lateral thinking process)
<b>3</b>	Drawing portfolio for design of a complex multi activity space design (e.g., bungalow of some celebrity or professional, a small neighborhood shopping, primary health clinic, departmental store, small scale community housing, etc.

## Building Construction and Materials-III

<b>Subject Code</b>	<b>K8202</b>	<b>Semester-III</b>
<b>Credits</b>	<b>6</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To involve students in a number of drawing exercises that will analyze the Various building components in a simple framed structure.
<b>2</b>	To inform the properties and characteristics of different roofing and flooring materials

<b>Learning outcomes: Student will be able to</b>	
<b>1</b>	Understand the construction techniques of different building components like staircase and roof.
<b>2</b>	Acquire the knowledge of different flooring materials and its construction techniques.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Staircase</b> <ul style="list-style-type: none"> <li>- Design Consideration</li> <li>- Principles and components of staircase</li> <li>- Types of staircases</li> <li>- Staircase in Timber, steel and stone</li> </ul>
<b>Unit II</b>	<b>Roof</b> <ul style="list-style-type: none"> <li>- Timber Roofs: General idea of various forms in timber for different spans. General information of timber trusses, fixing of Mangalore tiles.</li> <li>- Steel roofing: Simple ridge roof trusses for various spans, design consideration, advantages, Connections of various members supported on RCC column, Brick piers, fixing of G.I. and A.C. and Aluminum sheets, gutter types, wind bracing etc.</li> <li>- Steel North light Roofing system: Connections, Gutters, paneled glazing etc.</li> <li>- Steel Monitor roofs: on steel Stanchions, Connections, Gutters, paneled glazing etc.</li> <li>- R.C.C. roofing types: Flat slabs (one way and two ways), vaults, domes, Grid slabs.</li> <li>- Masonry vaults and domes</li> </ul>
<b>Unit III</b>	<b>Floors</b> <ul style="list-style-type: none"> <li>- Specialized timber flooring for: - Dance halls, Sports halls etc.</li> <li>- Parquet flooring details.</li> <li>- General idea of timber floors in relation to spans, load transmission, Jack arch and composite floors.</li> <li>- Flooring &amp; paving materials such, IPS Finish, Mosaic Tiles, and Plain Cement Tiles. Natural stones like Shahabad, Tandoor, Kota, Kadappa, Marble, Granite, etc.</li> <li>- Glazed and Ceramic Tiles, PVC Rubber, Linolium, Carpet etc</li> </ul>

<b>Unit IV</b>	<b>Study of Materials</b> <ul style="list-style-type: none"> <li>- Roofing materials.</li> <li>- Different flooring materials.</li> <li>- Importance of water proofing, its need in building construction.</li> <li>- Traditional and modern systems of water proofing and various water proofing materials available in the market</li> </ul>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Portfolio of technical drawings of above mentioned topic with supporting documents of sketched booklet and pictographic presentation. (min.4drgs.)
<b>2</b>	Field reports and Market survey of building technology topics.
<b>3</b>	Proposals of different design in staircase for prescribed projects. (Under discretion of the subject faculty)

## Theory of Structure -III

<b>Subject Code</b>	<b>K8203</b>	<b>Semester-I</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand types-indeterminate and analysis of structures
<b>2</b>	To understand behavior of different structural elements

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	develop understanding of basic requirements of framed structure
<b>2</b>	develop understanding of behaviour of basic structural elements
<b>3</b>	understand importance of basic structural elements in structural systems

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Shear force and bending moment diagram</b> - Simply supported beams, cantilever beams and overhang beams for simple combinations of the cases mentioned in segment 1.
<b>Unit II</b>	<b>Deflection in beams</b> - Using formulae for standard cases simply supported and cantilevers reaction of propped cantilever. Maximum and zero deflection conditions for simply supported and cantilever beams. Factors affecting deflection. Importance of deflection in design of structural elements.( no complicated problems with double integration
<b>Unit III</b>	<b>Introduction to arches</b> - Two hinged and three hinged. Differentiate between beam and arch action. (no problems) - Suspension structures: their behaviour and sample analysis. (no problems)
<b>Unit IV</b>	<b>Fixed beams</b> - Concept of fixity and end moments using formulae.Deflected shape and placement of steel. (no analysis) - Continuous beams Concept of continuity and moments using co-efficients from IS 456, concept of distribution of moments based on stiffness only explanation (no analysis by moment distribution method)

<b>Learning Resources</b>

<b>Journals:</b>	
------------------	--

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignment</b>	
<b>1</b>	Problems of SFD, BMD
<b>2</b>	Deflection (limited to the standard load cases mentioned in segment 1) deflection problems using formulae, study of behavior of Arches, suspension bridges
<b>3</b>	Behavior of fixed and continuous beams.
	Making models of fixed beam, continuous beams, arches, suspension bridges, tensile structures, deflection of long span structures.

## Creativity & Communication -III

<b>Subject Code</b>	<b>K8204</b>	<b>Semester -III</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To enhance creative skills with different techniques and sources of inspiration.
<b>2</b>	To enhance digital communication skills.

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Understand various methods of improving creative skills.
<b>2</b>	Use different sources of inspiration to improve creative skills.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Techniques for improving Creativity</b> - Brainstorming, Lateral Thinking, Random Combinations, Use of Manipulative Verbs, Tree of Possibilities, Abstraction, Transformation, Use of the Ridiculous, Matrix of Ideas, Role of Memory and Experience
<b>Unit II</b>	<b>Sources of inspiration for Creativity</b> - Material, Geometry, History, Nature & Climate, Mimesis, Multicultural, Association with other arts, Biographies, Fantasy.
<b>Unit III</b>	<b>Graphical Communication</b> - Introduction and application of computer software for graphical communication

<b>Learning Resources</b>	
<b>Text Books:</b>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination-</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
	Drawing portfolio consisting of relevant exercises including –
<b>1</b>	Any two exercises to demonstrate Techniques for improving Creativity (2D and 3D)
<b>2</b>	Any two exercises to explore Sources of inspiration for Creativity (2D and 3D)
<b>3</b>	One exercise to demonstrate Graphical Communication
	(The nature of exercises will depend on the focus of the studio)

## Architectural Drawings and Graphics-III

<b>Subject Code</b>	<b>K8205</b>	<b>Semester -III</b>
<b>Credits</b>	<b>5</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand the relation between depth of building elements and shades and shadows.
<b>2</b>	To understand three - dimensional view of architectural projects

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Represent Sciography in Plan and Elevation of Architectural design project
<b>2</b>	Sketch perspective of Interior and Exterior.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Sciography</b> - Sciography in buildings. - Projection of sciography in plan and elevation
<b>Unit II</b>	<b>Perspective</b> - Anatomy of perspective: Station point, Eye level, Cone of vision, Picture plane, Horizon line, Ground line, Vanishing points. - Types of perspectives: One point, Two point, Three point
<b>Unit III</b>	<b>Perspective</b> - Perspective drawing by, Measuring pt. method, directs projection method Grid method etc - Perspectives of simple and complex blocks - Perspectives of simple household furniture items. - Perspectives of interiors - Perspectives of Residences
<b>Unit IV</b>	<b>Sciography in perspective</b>

<b>Learning Resources</b>	
<b>Text Books:</b>	<ol style="list-style-type: none"> <li>1. F. D K. Ching (2009) <i>Architectural Graphics</i>, New Jersey, John and Wiley and Sons.</li> <li>2. <b>Journals:</b>	

<b>Assessment</b>	<b>Marks</b>
<b>I.A.</b>	<b>40</b>
	20
	Refer To 'Rule number 6, sub point 6.2.2.'

<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>		
<b>I.A. Assignments</b>		
<b>1</b>	Sem II AD Project to be presented with 2 point Perspective using any method.	
<b>2</b>	Sciography of overhangs, stairs porticos pergolas to be enhanced on vertical, horizontal and curved surfaces.	
<b>U.E. Assignments</b>		
<b>3</b>	Drawing portfolio - Adequate number of drawings covering all the units.	

## History of Architecture-II

<b>Subject Code</b>	<b>K8206</b>	<b>Semester -III</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand development of architecture as a process of contextual and cultural evolution rather than simply as a product.
<b>2</b>	To acknowledge and interpret from history, best design guidelines which respond aptly to the vernacular character of that place, the lifestyle of the users and building traditions of that time.
<b>3</b>	To gain knowledge of the development of architectural form with reference to technology, style and character

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Explore Geography, Politics, Economy, Social Systems, Religion, Paintings and Sculptures and its influence on Architecture at different periods of time.
<b>2</b>	Acquire knowledge of the development of architectural form with reference to technology, style and character in the Indian context through the evolution of the temples, mosques and tombs in the various phases of Hindu and Islamic rule in India.
<b>3</b>	Acquire knowledge of the development of architectural form with reference to technology, style and character in the Western World through the evolution of the church from early Christian phase up to the Renaissance period

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<p><b>Architecture in Indian sub-continent-Hindu Temple Architecture</b></p> <ul style="list-style-type: none"> <li>- Evolution of architectural style, major influences on development of form and other architectural elements.</li> <li>- Gupta and early Chalukyan style</li> <li>- Gupta temple, Tigawa, Dasavatara Temple, Deogarh, Ladkhan and Durga temples, AiholeVirupaksha temple, Pattadakkal, Papanath temple, Pattadakkal, Cave temple, Badami, Kailash Temple, Ellora</li> </ul> <p><b>Dravidian style</b></p> <ul style="list-style-type: none"> <li>- Pallava - Rathas, Mamallapuram, Shore temple, Mamallapuram</li> <li>- Chola - Brihadeswara temple, Thanjavur</li> <li>- Hoysala - Keshava temple, Somnathpur</li> <li>- Vijayanagara - Vitthalaswami temple, Hampi, column orders</li> <li>- Madura - Meenakshi temple, Madurai, Sriranganathaswami temple, Srirangam</li> </ul> <p><b>Indo Aryan Style</b></p> <ul style="list-style-type: none"> <li>- Orissa - Parasurameswara, Mukteswara, Lingaraja temples, Bhubaneswar, Sun temple, Konark</li> <li>- Khajuraho - KandariyaMahadeo temple, Khajuraho</li> <li>- Gujarat - Sun temple, Modhera</li> </ul> <p><b>Jain School</b></p> <ul style="list-style-type: none"> <li>- Vimal Shah at Mount Abu, Chaumukh at Ranakpur</li> </ul>
<b>Unit II</b>	<p><b>Architecture in Indian sub-continent -Islamic Architecture in India</b></p> <ul style="list-style-type: none"> <li>- A brief introduction to origin and characteristics of Islamic architecture: building types, elements, structural systems, construction techniques</li> </ul>

	<p><b>Imperial style of Delhi</b></p> <ul style="list-style-type: none"> <li>- Slave dynasty</li> <li>- Quwat-ul-Islam Mosque, QutbMinar, Khirki Masjid, Sultan Ghari, Tomb of Iltumish, Tomb of Balban</li> <li>- Khilji Dynasty</li> <li>- Alai Darwaza., JamatKhana masjid</li> </ul> <p><b>Provincial styles: (any two provinces)</b></p> <ul style="list-style-type: none"> <li>- Punjab,Sind,Bengal,Gujrat,Kashmir,Jaunpur,Malwa,Deccan</li> <li>- Mosque: Jami – Ahmedabad, Champaner and Gulbarga</li> <li>- Tomb: GolGumbaj, Ibrahim Rauza, Bijapur</li> <li>- Civic work: Dada Hari stepped well, Adalaj</li> </ul> <p><b>The Mughal phase</b></p> <ul style="list-style-type: none"> <li>- Evolution of Mughal style and the different eras of rule:</li> <li>- Mosque: Jami – FatehpurSikri , Delhi</li> <li>- Tomb: Humayun, Akbar, Itmadud-daulla, TajMahal</li> <li>- Fort: FatehpurSikri, Red Fort, Delhi,</li> <li>- Regal Buildings: Birbal’s house, Jodhabai’s palace at FatehpurSikri</li> </ul>
<b>Unit III</b>	<p><b>Architecture in Europe</b></p> <p><b>Early Christian and Byzantine Architecture</b></p> <ul style="list-style-type: none"> <li>- Evolution of Church form, technique adopted to construct domes, surface treatment and material of construction</li> <li>- Elements of Special Attributes:</li> <li>- Domes, timber trusses, clear storey, pendentives</li> <li>- Major typologies</li> <li>- St. Peters, Rome (earlier one) Hagia Sophia, Constantinople</li> </ul> <p><b>Romanesque</b></p> <ul style="list-style-type: none"> <li>- Design evolution, planning principles and structural details</li> <li>- Elements of Special Attribute: Wall passages, raking arcades, triforium gallery, vaulting systems</li> <li>- Major typologies</li> <li>- Churches – St. Michelle Pavia, Campus at Pisa</li> </ul>
<b>Unit IV</b>	<p><b>Architecture in Europe</b></p> <p><b>Gothic Phase</b></p> <ul style="list-style-type: none"> <li>- Elements of Special Attribute: Structural innovations with buttresses, pointed arches, vaulting systems, window traceries, flying buttresses etc.</li> <li>- Major typologies</li> <li>- Churches- Amines Cathedral, Notre dame cathedral, Salisbury cathedral, West Ministers Abbey, castles</li> </ul> <p><b>Renaissance Phase</b></p> <ul style="list-style-type: none"> <li>- Elements of Special Attribute: Revived column orders, rusticated masonry, grand cornices, public architecture – piazzas- St Mark, Del Signoria</li> <li>- Major typologies</li> <li>- Churches – St. Peters Rome, St Paul’s, Palladian villas, buildings with respect to architects</li> </ul>

## Building Services-I

<b>Subject Code</b>	<b>K8207</b>	<b>Semester -III</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To Study Water supply, treatments, distribution and plumbing system for various type of buildings.
<b>2</b>	To Study Waste water treatments, Sewer lines for various types of buildings
<b>3</b>	To Study Drainage system for a low and medium level building

<b>Learning Outcomes : Students will be able to</b>	
<b>1</b>	Understand how water supply and sanitation services are managed, in small and medium buildings.
<b>2</b>	Acquire knowledge about the principles of water supply and sanitation

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Water supply</b> - Sources of water supply. - Treatment plants and Pipe Appurtenances
<b>Unit II</b>	<b>Distribution Patterns</b> - Service Connection (Ferrule, water meter etc.) - Water storage tanks (Ground and overhead), their capacity and location. Calculation of water consumption. - Water Distribution pipes, their sizes, materials, jointing, fixing and laying
<b>Unit III</b>	<b>Sanitation</b> - Principles of sanitation. Introduction of various terminologies used in sanitation. Collection of waste matter in buildings. Various sanitary fittings and fixtures like washbasins, WC's, bathtubs, sink urinals, bidets, flushing cistern traps etc. Various traps and their functions. - Sewerage Systems: Dry conservancy method Water carriage systems. - Sewage collection and disposal system for individual house of urban areas. - Locations and use of appurtenances i.e. I.C, manholes, disconnecting chambers. - Various types of sanitary pipes, their joining, fixing and laying. Pipes and piping network. Anti- Siphonage Pipes.
<b>Unit IV</b>	<b>Testing of house drains.</b> - Sewage disposal system for individual house of rural areas or un-sewered localities (Septic tank, soak pit, cesspools, aqua privy, leeching pits. - Self-cleaning and non-scouring velocities for drain pipes. Invert levels and drains on sloping site

<b>Learning Resources</b>	
<b>Text Books:</b>	1. S.C.Rangwala,(1989) <i>Water supply and sanitary engineerin.</i> ,Gujarat, Charotar publishing house.

## Elective-I

<b>Subject Code</b>	<b>K8208</b>	<b>Semester- III</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Elective</b>

<b>Learning Objectives</b>	
1	To give students an opportunity to develop their skills in a subject they may opt for further studio.
2	To study the selected topic in depth of a particular subject that student is interested.
3	To prepare a technical base for students through in depth study.

<b>Learning Outcomes: student will be able to</b>	
1	Engage in systematic self study of topic they feel interested in.

<b>Students can select one elective from the following list</b>	
<b>1</b>	<b>Traditional Building science</b>
	<ul style="list-style-type: none"> <li>- Introduction, Meaning, Elements etc.</li> <li>- Vastusastra Principles</li> <li>- Climatological, sustainable aspects of VastuSastra.</li> <li>- Relevance of vastushastra in Today's Built Environment</li> </ul>
<b>2</b>	<b>Vernacular architecture and settlements ( Regionalism )</b>
	<ul style="list-style-type: none"> <li>- Defining Vernacular</li> <li>- Culture ,Tradition, Society, Climate and Shelter</li> <li>- Vernacular architecture in India</li> <li>- Study of traditional Building materials and Techniques</li> <li>- Study of Vernacular Settlements pattern</li> <li>- Style of the Maratha region</li> </ul>
<b>3</b>	<b>Environmental Studies</b>
	<ul style="list-style-type: none"> <li>- Environmental Factors effecting human habit such as climate, environmental pollution, environmental degradation, Green cover etc.at micro and macro scales.</li> <li>- Fundamentals of eco system</li> <li>- Environmental legislation</li> </ul>
<b>4</b>	<b>Photography</b>
	<ul style="list-style-type: none"> <li>- Introduction to Architectural Photography.</li> <li>- Techniques of Recording Building and surrounding on a film with respect to position of viewer and angle, light and shades, foreground and background, scale, colour, texture, mood, time etc.</li> <li>- Techniques of Photography for documentation</li> <li>- Photographs of drawings, models, feature of buildings and surroundings to be elaborated.</li> <li>- Close up Photographs</li> <li>- Photography practicals on: simple objects, still life composition with the play of light and shadow, Historical and modern Buildings with surroundings landscape ,Architectural details such as brackets, staircase etc.</li> </ul>

<b>Assessment</b>		<b>Marks</b>
<b>IA</b>	<b>Internal Assessment</b>	<b>100</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
Note	<b>There is no 'University Examination' for this subjects</b>	

## **Semester – IV**

## Architectural Design -IV

<b>Subject Code</b>	<b>K8209</b>	<b>Semester -IV</b>
<b>Credits</b>	<b>6</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand the contextual relationship of buildings with climate and landform
<b>2</b>	To document rural/traditional settlement to understand the context, people, function
<b>3</b>	To understand the process of complex multi-activity space design

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	understand relationship of building and site, climate and landform
<b>2</b>	document rural/traditional settlement
<b>3</b>	design multi-activity spaces responding to climate and landform

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Documentation and analysis of Settlement</b> <ul style="list-style-type: none"> <li>- Document rural settlement in terms of settlement patterns, cluster configurations and building typology.</li> <li>- Document and analyze influence of climate and landform and all three levels</li> <li>- Document and analyze any traditional knowledge systems, structural system and architectural vocabulary of that place.</li> <li>- Documentation of social structure, religious and cultural practices that guide the built form</li> </ul>
<b>Unit II</b>	<b>Application of Context</b> <ul style="list-style-type: none"> <li>- Proposal of small design insert responding to existing context of the settlement based on the analysis</li> </ul>
<b>Unit III</b>	<b>Design Demonstration</b> <ul style="list-style-type: none"> <li>- Climate responsive design demonstrating passive design principles</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	
<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. Baruch G., (1976), <i>Man, Climate and Architecture</i>, 2nd Edition, U. K., Applied Science Publishers.</li> <li>2. Ching F. D. K. (2007), <i>Architecture: form, space, and order</i>, New Jersey, Canada, John Wiley and sons.</li> <li>3. Dingle N., (2013), <i>Zarokha</i>, Brain Tonic Publishing.</li> <li>4. Dingle N., (1998), <i>The Introvert and Extrovert Aspects of the Marathi House'</i>, House and Home in Maharashtra, USA, Oxford University Press.</li> <li>5. Editors of Phaidon Press (2004), <i>The Phaidon Atlas of Contemporary World Architecture</i>, Phaidon Press; Comprehensive Edition.</li> <li>6. Shankar P., (2014) <i>Himalayan Cities: Settlement Patterns, Public Places and Architecture</i>, New Delhi, India, USA, Canada, Niyogi Books.</li> <li>7. Jain K. B. &amp; Jain M., (2001), <i>Architecture of the Indian Desert</i></li> <li>8. Koenigsberger O.H.; Ingersoll, T.G.; Mayhew, Alan; Szokolay, S.V., (1980), <i>Manual of Tropical Housing and Building. Part one: Climatic design</i>, Longman Used.</li> </ol>

	9. Steele J., Doshi B.V., (1998) <i>The complete architecture of Balkrishna Doshi: rethinking modernism for the developing world</i> , India, Super Book House
<b>Websites:</b>	
<b>Journals:</b>	Ahmed Muhaisen, S. "Shading simulation of the courtyard form indifferent climatic regions", <i>Building and Environment</i> Vol. 41, pp. 1731-1741, 2005.

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Rural/traditional settlement studio - Drawing portfolio, Models
<b>2</b>	Drawing portfolio or a detailed model for short design-insert related to settlement study shall be carried out as a time bound exercise
<b>3</b>	Drawing portfolio for design of a small campus involving complex issues of site, topography, integration, environment (primary school, sports club, small resort / institute, primary health care, nursing home, etc.)

## Building Construction and Materials-IV

<b>Subject Code</b>	<b>K8210</b>	<b>Semester -IV</b>
<b>Credits</b>	<b>6</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To involve students in construction process of special construction of cavity walls and retaining walls.
<b>2</b>	To aware student for natural disasters and techniques of protection
<b>3</b>	To inform the students about materials like steel and aluminum its properties

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Understand special construction of masonry walls.
<b>2</b>	Understand site development with retaining walls with respect to different materials.
<b>3</b>	Be aware about earthquake resisting structures and its protections.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Retaining Wall</b> - Retaining walls and its terminology, mass retaining wall in bricks, Stones etc. and cantilever retaining wall in R.C.C.
<b>Unit II</b>	<b>Cavity Walls:</b> - Principles of Cavity wall construction & advantages of Cavity wall - Cavity wall in Brick, Stone and Concrete blocks - Precautions in Hollow Concrete wall construction - Reinforced and Decorative Brick masonry, Jali construction
<b>Unit III</b>	<b>Aluminum Doors &amp; Windows</b> - Aluminum and P.V.C. Windows - Aluminum and P.V.C. Doors
<b>Unit IV</b>	<b>Earthquake Resistant Structures</b> - For engineered and non-engineered construction.
<b>Unit V</b>	<b>Study of Materials</b> - Steel and Aluminum. - Water concrete admixtures. - Paints and varnishes

<b>Learning Resources</b>	
<b>Text Books:</b>	1. Rangwala S. C.(2007) <i>Engineering Materials</i> . Gujarat,Charotar, Publishing House. 2. Duggal S.K.(2009) <i>Building materials</i> . New Delhi, New Age International.

<b>Journals:</b>	Journal of construction engineering, technology <a href="http://stmjournals.com/index.php?journal=jocetm">stmjournals.com/index.php?journal=jocetm</a> ) Master builder -construction magazine, construction news( <a href="http://www.masterbuilder.co.in">www.masterbuilder.co.in</a> )

<b>Assessment</b>	<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b> <b>40</b>

	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Portfolio of technical drawings of above mentioned topic with supporting documents of sketched booklet and pictographic presentation. (min.4drgs.)
<b>2</b>	Field reports and Market survey of building technology topics.
<b>3</b>	Proposals of different design in aluminum door and window for prescribed projects. (Under discretion of the subject faculty).

## Theory of Structures-IV

<b>Subject Code</b>	<b>K8211</b>	<b>Semester -IV</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand basic structural concepts
<b>2</b>	To understand behavior of RCC as a material for framed structure
<b>3</b>	To understand fundamental beam column slab construction and loading

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	develop understanding of basic requirements of framed structure
<b>2</b>	develop understanding of strength of RCC structure
<b>3</b>	Understand different loads affecting strength and stability of structure.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<p><b>Design of RCC structures using limit state method (IS456)</b></p> <ul style="list-style-type: none"> <li>- Different type of loads: dead load, live load, wind load, earthquake load.</li> <li>- Calculation of dead load (self weight) if dimensions of a beam, column, wall or slab and unit weight of material are given.</li> <li>- Principles and applications of live load and wind load in different types of structures such as residential, commercial, institutional etc.</li> <li>- Introduction to related IS specifications.</li> </ul>
<b>Unit II</b>	<ul style="list-style-type: none"> <li>- RCC framed structures flat roof i.e. beam slab column system</li> <li>- IS 456 provisions for removal of formwork, nominal cover.</li> <li>- Design of one way and two way slab, cantilever slab, load transfer from one way and two way slabs to beams and cantilever slab.</li> <li>- Beam design 1) simply supported 2) cantilever and 3) continuous. Continuous beam moments to be found using co-efficient. Explain similar details for continuous slab</li> <li>- Design of columns. Explain the structural actions on columns, explain slenderness ratio and its effect on load carrying capacity of columns, design of only short axially loaded columns. Explain uni-axial and biaxial bending cases.</li> <li>- Introduction to doubly reinforced beams and T or L beams. (no design problems)</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	<ol style="list-style-type: none"> <li>1. Dr.Shah V.L. &amp; Dr. Karve S.R.(2014)<i>RCC Theory and Design</i>.Pune,Structures Publishers.</li> <li>2. Shah H.J. (2013)<i>Design of Reinforced Concrete Structures</i>.Anand,Charotar Publishing house.</li> <li>3. Sinha S.N. (2014) <i>Reinforced Concrete Design</i>.New Delhi,Tata McGraw-Hill Publishing Company limited.</li> </ol>
<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. Dr.Shah V.L. &amp; Dr. Karve S.R.2014) <i>Illustrated design of reinforced concrete buildings(design of G+3 storied office/residential building)</i>.Pune, Structures Publishers.</li> <li>2. Negi L.S.&amp;Jangid R.S.(2000)<i>Structural analysis</i>. New Delhi,Tata McGraw-Hill Publishing company limited</li> </ol>
<b>Websites:</b>	Bureau of Indian standards

<b>Journals:</b>	IS: 456 - 2000
------------------	----------------

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	calculation of dead load, live load, G+1 building slab design, one beam, one column design, make drawings and schedule for the same

## Computer Aided Design and Drawings

<b>Subject Code</b>	<b>K8212</b>	<b>Semester -IV</b>
<b>Credits</b>	<b>4</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To develop computer aided drafting skill in 2D and 3D.
<b>2</b>	To familiarize with various software available for documentation, presentation and drawing purpose.
<b>3</b>	To understand the use of computer for graphical applications.
<b>4</b>	To introduce and use of various software's available for computer application in Architecture.

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Understand the use of computer as a tool for imagination and design.
<b>2</b>	Apply architectural presentation techniques using different software's.
<b>3</b>	Know how to use commands rather than what commands are.
<b>4</b>	Create 3D compositions and drafting plans.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Computer Aided Drawing ( 2D Composition)</b> <ul style="list-style-type: none"> <li>- Introduction of Auto CAD as drafting tool.</li> <li>- Basics of 2D drafting, Drawing simple objects, projections and plans etc.</li> <li>- Preparation of 2 dimensional drawing with dimensioning.</li> <li>- Creating layers, styles, Blocks, line types etc</li> </ul>
<b>Unit II</b>	<b>Computer Aided Architectural Modeling</b> <ul style="list-style-type: none"> <li>- Introduction to Auto cad 3D/Sketch up /3Dmax.</li> <li>- Drawing 3D standard solid models.</li> <li>- Drawing 3D planes and surfaces.</li> <li>- Complex 3D commands such as extrude/revolve, meshes and solids</li> <li>- Solid editing in 3D such as subtract</li> <li>- General introduction to rendering and light effects</li> </ul>
<b>Unit III</b>	<b>Computer aided presentation skills</b> <ul style="list-style-type: none"> <li>- Introduction of various software available for Architectural presentation.</li> <li>- Introduction to power point, Microsoft excel, Microsoft word</li> </ul>
<b>Unit IV</b>	<b>Animation/Walkthroughs</b>

<b>Learning Resources</b>	
<b>Text Books:</b>	<ol style="list-style-type: none"> <li>1. George Omura(1998).<i>Mastering Autocad</i>,Singapore,Tech publications.</li> <li>2. Ted Boardman and Jercy Hubbell (1998).<i>Inside 3D studio Max2</i>, volume II,Modeling and Materials,New Delhi,G.C.Jain for techmedia.</li> <li>3. Stephen Paul Jacobs(1991)<i>The CAD Design studio,3DModeling as a Fundamental Design Skill</i>,New York,McGraw-Hill,Inc.</li> <li>4. Durvid Frey (1998)<i>Autocad 14</i>,New Delhi,BPB publications.</li> </ol>
<b>Reference Books</b>	As required by subjects /topics in a particular semester.

<b>Websites:</b>	
<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Rendering drafting for Sem.III design .
<b>2</b>	Prepare digital drawings for Sem.III design portfolio.
<b>3</b>	Create 3D model.

## History of Architecture-III

<b>Subject Code</b>	<b>K8213</b>	<b>Semester -IV</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To gain knowledge of the development of architectural form with reference to style and character in the Indian context through the evolution of colonial Architecture in the country
<b>2</b>	To understand the Industrial era as evolving within specific contexts including aspects of social and political factors.
<b>3</b>	To gain knowledge of the development of architectural form with reference to technology, style and character in the Western World through the Industrial revolution and in the phases covering the Art and Craft , Art Nouveau styles

<b>Learning Outcomes: Students will be able to</b>	
<b>1</b>	Explore spatial and stylistic qualities associated with Colonial architecture.
<b>2</b>	Explain architecture as an outcome of various social, political and economic upheavals
<b>3</b>	Comprehend the condition of Industrial Revolution and its impact on architecture
<b>4</b>	Understand Art and Craft, Art Nouveau styles with reference to Industrial Revolution.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<p><b>Colonial Architecture in India</b></p> <ul style="list-style-type: none"> <li>- Colonial Architecture under British, Portuguese and French with reference to industrial revolution and emergence of new materials and construction techniques.</li> <li>- Indian Colonial architecture-British: The styles and trends of architecture brought by British to India and their evolution – The impact of Indo-Sarcenic style on the British Architecture in India – The characteristics of British Colonial Architecture with examples from work of Edwin Lutyens.</li> <li>- The Impact of Portuguese architecture in India – The characteristics of Portuguese Colonial Architecture with examples from Goa-Bom Jesus Cathedral Complex-Old Goa.</li> <li>- The Impact of French Architecture in India – The characteristics of French Colonial Architecture with examples from Puducherry, Maheetc</li> <li>- The Impact of French Architecture in India – The characteristics of French Colonial Architecture with examples from Puducherry, Maheetc</li> </ul>
<b>Unit II</b>	<p><b>Baroque Art, Rococo Art</b></p> <ul style="list-style-type: none"> <li>- Roman Baroque churches: The central plan modified – St. Peters, Rome;</li> <li>- French Baroque: Versailles</li> <li>- English baroque – Sir Christopher Wren;</li> <li>- St. Paul’s London – Domestic Architecture in England.</li> <li>- Rococo Architecture – Interiors – hotels</li> </ul>
<b>Unit III</b>	<p><b>Neo classical Art and Architecture</b></p> <ul style="list-style-type: none"> <li>- Beginnings of modernity –Origin and development of Neo Classicism</li> </ul> <p>Structural Neo classicists: Laugier, Soufflot, Schinkel, Labrouste - Romantic Neo classicists: Ledoux, Boullée, Durand, Jefferson</p>

<b>Unit IV</b>	<p><b>Industrial Revolution</b></p> <ul style="list-style-type: none"> <li>- Causes, consequence and impact in Architecture – Urbanization in Europe and America- split of design education into architecture and engineering streams- Emergent new building / space types. Growing need for mass housing .Its influences in building, technology and modern building materials Steel, glass, RCC etc. Industrial exhibitions- Chicago School and skyscraper development.</li> <li>- Arts and Crafts in Europe and America : Morris, Webb</li> <li>- Art Nouveau: Opposition to industrial arts and production Horta, Van De Velde, Gaudi, Guimard, Mackintosh Hoffman, Olbrich- Wright’s early works</li> </ul>
----------------	--

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Theory paper	

<b>Assignments</b>	
1	Study of Colonial Architecture in India with literature survey
2	Analysis of various Architecture and Art styles studied and their development
3	Report based on field study.

## Surveying & Leveling

<b>Subject Code</b>	<b>K8214</b>	<b>Semester -IV</b>
<b>Credits</b>	<b>4</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand various land forms.
<b>2</b>	To introduce surveying as a method to explain land form and its utility in site planning.
<b>3</b>	To acquaint students with the physical surveying and levelling work in order to, Measure and document built and non-built spaces.
<b>4</b>	To prepare and interpret of Base Map for Architectural Design Projects.
<b>5</b>	To read and interpret various forms of cartographic presentation.

<b>Learning Outcomes: Students will be able to</b>	
<b>1</b>	Understand importance of land forms and topography and its significance in site planning /Design.
<b>2</b>	Calculate area of a site / plot.
<b>3</b>	Discuss slope of land for site planning.
<b>4</b>	Design services and buildings on sloping terrain

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<ul style="list-style-type: none"> <li>- Introduction to surveying and survey equipments, understanding land topography and its relevance in Architecture.</li> <li>- Methods of Surveying: Chain and Compass, Plane Table Survey, computation of areas</li> </ul>
<b>Unit II</b>	<ul style="list-style-type: none"> <li>- Methods of Levelling: Contour Survey, Use of Theodolite.</li> <li>- Use of electronic equipment like EDM, Total Station etc.</li> </ul>
<b>Unit III</b>	<ul style="list-style-type: none"> <li>- Introduction to remote sensing and aerial photographic surveying etc.</li> <li>- (Electronic Total Station) ETS Survey</li> <li>- Study and analysis of Topo-sheet</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	<ol style="list-style-type: none"> <li>1. N.N. Basak ,(2004) <i>Surveying and Levelling</i> , New Delhi ,Tata Mcgraw Hill,</li> <li>2. Kanetkar, T.P and Kulkarni, S.V (2013) <i>Surveying and Leveling</i>. Pune Vidyarthi Pune.</li> <li>3. R.Subramanian (2012) <i>Surveying and Leveling</i>Roorkee,Cyber TechPublication.</li> </ol>
<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. David Clerk, Surveying Vol -I &amp; II,</li> <li>2. Dr. K.R. Arora, Surveying Vol -I &amp; II,</li> <li>3. S.K. Duggal, Fundamentals of Surveying Milton.O.Schimidit.</li> </ol>
<b>Websites:</b>	<p>www.aboutcivil.org,                      www.cambridge.org,                      www.civilprojectsonline.com</p>
<b>Journals:</b>	<p>International Organization of Scientific Research (IOSR)                      IOP Science (Institute of Physics),                      American Journal of Engineering Research (AJER)</p>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	To measure plot by linear method and determine the area.
<b>2</b>	To measure the contour plot and work out the site sections to understand levels and slopes.
<b>3</b>	To prepare small report with presentation of various equipments used in surveying and leveling
<b>4</b>	Measurement of plot by using different methods. (Equipments, plot selection can be done by the student and approved by instructor
<b>5</b>	To measure the live plot by using chain & compass, plane table survey, and prepare drawing for the area calculation
<b>6</b>	Survey of a given area of city road to understand slope, road details by using chain & compass, plane table survey .submission will in the form of drawings and digital presentation
<b>7</b>	Report on topics related to remote sensing and aerial photographic survey.

## Building Services-II

<b>Subject Code</b>	<b>K8215</b>	<b>Semester -IV</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To Study basics of electricity and wiring systems within domestic and commercial buildings.
<b>2</b>	To Study fundamentals of lighting and lighting design.
<b>3</b>	To familiarize the students with the fundamentals of acoustics and principles in designing various built environment

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Understand the basics of Electricity and wiring system
<b>2</b>	Understand various fundamentals of Lighting and Lighting design
<b>3</b>	Learn and evaluate fundamentals of acoustics and its applications in buildings.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Electrical Services.</b> <ul style="list-style-type: none"> <li>- Different wiring systems, fuses and MCBs, electrical fittings and appliances.</li> <li>Detailed layout of electrical services in residences</li> </ul>
<b>Unit II</b>	<b>Daylighting</b> <ul style="list-style-type: none"> <li>- Day lighting, sky condition, daylight availability graph, sky condition square.</li> <li>- Luminance levels for various sky conditions as a function of solar altitude, daylight factor, daylight factor standards, components of daylight factor, functional objectives of daylight,</li> <li>- Site criteria, building configuration, building orientation.</li> <li>- Day light apertures, glare control, shading devices- external and internal, measurement of day lighting</li> </ul>
<b>Unit III</b>	<b>Illumination (Artificial lighting)</b> <ul style="list-style-type: none"> <li>- Light radiation, its unit, laws of illumination, types of illumination schemes –direct, semi direct, diffused lighting and their design consideration</li> <li>- Light sources, various types of lamps and their characteristics</li> <li>- Types of luminaries for interior and exterior</li> <li>- Exterior lighting for monuments, gardens, fountains, sculptures etc</li> </ul>
<b>Unit IV</b>	<b>Acoustics</b> <ul style="list-style-type: none"> <li>- Frequency range of Audible sound.</li> <li>- Propagation of sound, sound reflection, diffusion, diffraction, sounds insulation.</li> <li>- Echo, Reverberation and Doppler effect.</li> <li>- Sound absorption, absorbing materials, their classification and application. Sound Reflection and reflecting materials, their classification and application.</li> <li>- Space layout consideration and Buffer zones</li> <li>- Noise and Noise control Noise criteria curves, noise from ventilation and AC systems.</li> <li>- Floor and ceiling construction for noise insulation.</li> <li>- Floating floors, outdoor barriers for noise Control.</li> <li>- At least one live case study in detail of acoustical treatment of</li> </ul>

	<ul style="list-style-type: none"> <li>- Auditorium, Lecture halls/Conference hall (any performing space)</li> <li>- Acoustical defects and remedies.</li> </ul>
--	--

<b>Learning Resources</b>

<b>Journals:</b>	Building Services Engineering Research and Technology (bse.sagepub.com) Energy and buildings-Journal-Elsevier (www.journals.elsevier.com/energy-and-buildings/) Technical journals- CIBSE-( <a href="http://www.cibse.org/knowledge/technical-journals/technical-journals-bsert-lr-t">www.cibse.org/knowledge/technical-journals/technical-journals-bsert-lr-t</a> )

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Theory paper	

<b>Assignments( Any 2)</b>	
1	Design electrical layout for a low or medium size building.(an individual /independent unit)
2	Layout of acoustical space with reverberation time calculations
3	Daylight Calculation in medium sized space.

## Elective - II

<b>Subject Code</b>	<b>K8216</b>	<b>Semester IV</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Elective</b>

<b>Learning Objectives</b>	
1	To give students an opportunity to develop their skills in a subject they may opt for further studio.
2	To study the selected topic in depth of a particular subject that student is interested.
3	To prepare a technical base for students through in depth study.

<b>Learning Outcomes: student will be able to</b>	
1	Engage in systematic self study of topic they feel interested in.

<b>Students can select one elective from the following list</b>	
<b>1</b>	<b>Passive Design Principles (SBDP)</b> <ul style="list-style-type: none"> <li>- Meaning ,Need of Passive Cooling</li> <li>- Principles of Passive Cooling</li> <li>- Passive Cooling in Different Climatic zones</li> <li>- Case studies</li> </ul>
<b>2</b>	<b>Seminar –I (Design Philosophies of Master Architects)</b> <ul style="list-style-type: none"> <li>- Independent study and documentation of architectural and allied subjects by individual student along with oral and visual presentation.</li> <li>- The seminar shall be a research paper on a topic related to Architecture.</li> </ul>
<b>3</b>	<b>Human settlements</b> <ul style="list-style-type: none"> <li>- Origin and growth of human settlement.</li> <li>- Role of River Banks in growth of human settlement.</li> <li>- Study of ancient Indian settlements like Mohenjodaro, Taxila, Nalanda.</li> <li>- Study of ancient Indian cave settlements of Ajanta, Ellora, Elephanta.</li> <li>- Ancient texts and treatises on settlement and area planning in India.</li> <li>- Historical survey of the city as an expression of the vitality of a civilization.</li> <li>- Human settlements during ancient medieval and modern periods in and India, and other parts of the world.</li> <li>- Characteristics of human settlements built by Hindu and Islamic Rulers in India</li> </ul>
<b>4</b>	<b>Communication skill/public speaking</b> <ul style="list-style-type: none"> <li>- Basic principles and Benefits of Better Communication, Communication Theory, Organizing Thoughts, Valuing People, Choosing Appropriate Words, Using Non Verbal Behaviors (Body Language, Voice Inflection)</li> <li>- Conducting Meetings, Giving Presentations, Writing for Business, Writing Letters, Memos and minutes, Writing Reports and reviews, Using Visuals, Interviewing and facing interviews.</li> <li>- English usage, grammar and composition, learning to listen and speak correctly (One to one communication, on the telephone, Group discussions)</li> <li>- Basic knowledge of effective use of ms word and excel and power point.</li> <li>- Business Etiquettes: Professional Image, Introductions and Greetings, Networking Manners, General, Workplace Manners, Life on the Cube Farm, Interacting With Superiors, Manager's Manners, Business Meetings,</li> </ul>

	Business Gifts, Business Cards, Telephone Manners, Cell Phone Etiquette, E-Mail Etiquette, Gender-Free Etiquette, Business Dining, Avoiding Social Blunders When Abroad, Dealing with Angry Customers
--	---

<b>Assessment</b>		<b>Marks</b>
<b>IA</b>	<b>Internal Assessment</b>	<b>100</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
Note	<b>There is no 'University Examination' for this subjects</b>	

## **Semester – V**

## Architectural Design -V

<b>Subject Code</b>	<b>K8301</b>	<b>Semester -V</b>
<b>Credits</b>	<b>8</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand and reflect 'culture as maker of space'

<b>Learning Outcomes: Students will be able to</b>	
<b>1</b>	Develop analytical skill set for spatial design of built spaces
<b>2</b>	Synthesize and translate analytical understanding into Architectural Design

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	Research and analysis of community living with examples.
<b>Unit II</b>	Study of theories on neighborhood planning concepts, community living, campus planning principles etc.
<b>Unit III</b>	It can be a small eskii project like a club house, small community hall, badminton court.

<b>Learning Resources</b>	
<b>Text Books:</b>	
<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. Bhatt V. &amp; Seniver P., (1990), <i>Contemporary Indian Architecture: After The Masters</i>, Ahmedabad, USA, Mapin Publishing Pvt. LTD.</li> <li>2. Kanvinde A. P. &amp; Miller J. H., (1969), <i>Campus Design in India: Experience of a Developing Nation</i>, Jostens/American Yearbook Company</li> <li>3. Mehta J., (2011) <i>Rethinking Modernity</i>, New Delhi, India, Niyogi Books</li> <li>4. Pressman A., <i>Design Architecture the elements of Process</i>, USA, Routledge</li> <li>5. Pandya Y., (2005) <i>Concepts of Space in Traditional Indian Architecture</i>, India, New Jersey, Mapin Publishing.</li> <li>6. Salvadori M., &amp; Robert H., (1975), <i>Structure in architecture: the building of buildings</i>, Cornell University, Prentice-Hall</li> <li>7. Steele J., Doshi B.V., (1998) <i>The complete architecture of Balkrishna Doshi: rethinking modernism for the developing world</i>, India, Super Book House</li> <li>8. Unwin S. (4<sup>th</sup> Ed), <i>Analysing Architecture</i>, Canada, Routledge</li> </ol>
<b>Websites:</b>	
<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Design Project demonstrating principles of community living, neighborhood planning etc. on any one of the following - Group Housing, High-end residential building, housing for economically weaker sections, Community Housing etc. –

	Drawing portfolio and model.
<b>2</b>	Design Project on any one of the following – Club House, Community Hall, Sports Club etc. which can be an extension of the projects mentioned above - Drawing portfolio and model.

## Building Construction and Materials-V

<b>Subject Code</b>	<b>K8302</b>	<b>Semester-V</b>
<b>Credits</b>	<b>6</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To introduce construction of building components in Reinforced Cement Concrete.
<b>2</b>	To introduce water proofing, insulation & protection systems and their methods of construction
<b>3</b>	To explain the concept of curtain wall and its architectural relevance.

<b>Learning outcomes: Student will be able to</b>	
<b>1</b>	Understand different foundation systems with respect to site and building character
<b>2</b>	Explore special construction techniques of curtain wall and design integration.
<b>3</b>	Become knowledgeable of alternative building materials used in construction

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Foundation :</b> <ul style="list-style-type: none"> <li>- Concept of bulb of pressure and its significance for site investigation.</li> <li>- Introduction to relevance of soil mechanics in foundation design</li> <li>- Soil types &amp; its behavior under different loading conditions</li> </ul>
<b>Unit II</b>	<b>Types Of Foundation</b> <ul style="list-style-type: none"> <li>- Mass concrete strip foundation.</li> <li>- Foundation for brick piers, entrance steps, compound walls etc.</li> <li>- Foundation on sloping site.</li> <li>- Foundation for point load.</li> <li>- Isolated R.C.C. footing for columns</li> <li>- Combined R.C.C. footing</li> <li>- Cantilever R.C.C .footing &amp; eccentric footing</li> <li>- Foundation on weak strata.</li> <li>- Raft Foundation.</li> <li>- Pile Foundation</li> </ul>
<b>Unit III</b>	<b>Foundation and D.P.C.</b> <ul style="list-style-type: none"> <li>- Damp proof course treatment using rigid &amp; flexible treatment</li> <li>- Brick on edge</li> <li>- Rough Shahabad stone</li> <li>- Bitumen sheets</li> </ul>
<b>Unit IV</b>	<b>Misc. Constructions :</b> <ul style="list-style-type: none"> <li>- Construction Details of Curtain Walls and Structural Glazing Including External Fixing and Cladding Details.</li> </ul> <b>Special Construction:</b> <ul style="list-style-type: none"> <li>- Basement Construction, Water Proofing details, etc. (Sketches, notes etc.)</li> <li>- Shoring and Underpinning</li> <li>- Flying, raking &amp; dead shoring</li> <li>- Wall, Jack and mega pile, needle &amp; pile, column underpinning</li> </ul>

<b>Unit V</b>	<b>Study of Materials</b> <ul style="list-style-type: none"> <li>- R.C.C. end connection details.(beam and column. Slab and beam etc.)</li> <li>- Reinforcement.</li> <li>- Fly ash brick, Stabilized earth block, Rammed earth block, Ferrocete, Concrete debri block.</li> <li>- Timbering &amp; shuttering for French excavation</li> <li>- Glass</li> </ul>
---------------	---

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Portfolio of technical drawings of above mentioned topic with supporting documents of sketched booklet and pictographic presentation. (min.4drgs.)
<b>2</b>	Field reports and Market survey of building technology topics.
<b>3</b>	Proposals of different design in aluminum door and window for prescribed projects. (Under discretion of the subject faculty).

## Theory of Structure -V

<b>Subject Code</b>	<b>K8303</b>	<b>Semester-V</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand basic structural concepts in steel design.
<b>2</b>	To understand behavior of steel as a structural materials.
<b>3</b>	To understand fundamentals of steel structure.

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Develop understanding of basic requirements of steel structure
<b>2</b>	Develop understanding of behavior of use of steel structures
<b>3</b>	Explain importance of types of steel connections and jointing

<b>Units</b>	<b>Contents</b>
	Steel design ( working stress and limit state both are acceptable – IS: 800)
<b>Unit I</b>	<b>Sloping roof system</b> - truss, loads acting on truss, design of purlin (working stress or limit state both shall be acceptable), analysis of truss using method of joints, identifying ties and struts, design of tension and compression members.
<b>Unit II</b>	<b>Connections</b> - Riveted, welded bolted connections, their strength. Explain single and double shear (no calculations, no zigzag riveting). Finding length of weld and arranging it along member edges
<b>Unit III</b>	<b>Design of steel beams</b>
<b>Unit IV</b>	<b>Design of steel columns</b> - (Compression members) single and built in (Introducing lacing and battening. No calculations for lacing and battening design) - Introduction to masonry structures and timber structural members. (no numericals)

<b>Learning Resources</b>

<b>Websites:</b>	www.bis.org.in
<b>Journals:</b>	IS 800-2007

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Design of an industrial building, show column locations for given plan area, determine type of truss, design of purlin, purlin-truss connection detail, analysis of any three joints of truss, design of tension member with rivet/weld/bolt, design of compression member, design of columns (built in) supporting the trusses. Drawings and schedule

## Working Drawing-I

<b>Subject Code</b>	<b>K8304</b>	<b>Semester -V</b>
<b>Credits</b>	<b>5</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand and prepare working drawings necessary for construction/execution of buildings on site.
<b>2</b>	To make student understand how to read “Working drawings” on site

<b>Learning Outcomes: Students will be able to</b>	
<b>1</b>	Prepare working drawings for load bearing structure.
<b>2</b>	Prepare Detailed drawings such as doors, windows, toilets, kitchen, flooring etc.
<b>3</b>	Prepare drawing which are readable for all agencies which are involved in execution of the project.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	Introduction to WD, their significance, study of Example of Working Drawings, site visit
<b>Unit II</b>	Translating design into working drawing of entire project.
<b>Unit III</b>	Drawing showing construction details.
<b>Unit IV</b>	Details of toilets, doors, windows etc

<b>Learning Resources</b>	
<b>Text Books:</b>	
<b>Reference Books:</b>	1. Wakita, Osamu A., Richard M. Linde, and Nagy R. Bakhom (2011). "The Professional Practice Of Architectural Working Drawings" 2. Drawings from ISO certified architect office
<b>Websites:</b>	
<b>Journals:</b>	Gawne, Eleanor. "Cataloguing architectural drawings." Journal of the Society of Archivists 24.2 (2003): 175-187

<b>Assessment</b>	<b>Marks</b>
<b>I.A.</b>	<b>40</b>
<b>Internal Assessment</b>	
	Refer To ‘Rule number 6, sub point 6.2.2.’
<b>U.E.</b>	<b>60</b>
<b>University Examination</b>	
	Assignments or portfolios based on entire syllabus as mentioned below.

<b>Assignments</b>	
<b>1</b>	Site visit report, Common project assignment.
<b>2</b>	Assignment of Time bound working studio assignment.
<b>3</b>	A portfolio of working drawings where student selects their own design.

## History of Architecture-IV

<b>Subject Code</b>	<b>K8305</b>	<b>Semester -V</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To introduce the idea of modernity and demonstrate its impact in the realm of Architecture.
<b>2</b>	To study modern architecture as evolving from specific aspects of modernity industrialization, urbanization, material development, modern art.
<b>3</b>	To study in detail different post modern and contemporary directions in World Architecture
<b>4</b>	To study quest for Indianness in architecture of India from the end of colonial rule to contemporary period

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Acquire knowledge of the development of architectural form with reference to technology, materials, style and character of the decades of modernism, post modernism and contemporary architecture and architects.
<b>2</b>	Obtain an overall understanding of the architectural developments of Architecture of post-colonial India

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<p><b>Modernism</b></p> <ul style="list-style-type: none"> <li>- Introduction to Modern Architecture.</li> </ul> <p><b>Isms in Art and Architecture</b></p> <ul style="list-style-type: none"> <li>- Adolf Loos and critique of ornamentation- Raumplan: Peter Behrens-Werkbund. Expressionism: Mendelsohn, Taut, Polzeig- Futurism- Constructivism, Cubism-Suprematism- De-Stijl. Bauhaus- Gropius, Meyer and Mies. Bauhaus School, Chicago School of Architecture and Taliesin School of Architecture – Great masters like Louis Sullivan, Frank Lloyd Wright</li> </ul> <p><b>International Style</b></p> <ul style="list-style-type: none"> <li>- Post WW II developments and spread of international style –works of Corbusier:- Brasilia, Unite</li> <li>- Works of later modernists: Louis Kahn, Paul Rudolph, Eero Saarinen, Philip Johnson</li> </ul>
<b>Unit II</b>	<p><b>Post Modernism</b></p> <ul style="list-style-type: none"> <li>- Critiquing Modernism - Brutalism- projects of Smithsons and Aldo Van Eyck – writing of Jane Jacobs, Robert Venturi, Aldo Rossi and Christopher Alexander</li> <li>- Deconstructivism –Critical regionalism</li> <li>- Innovation and ideas of Archigram – post modern architects like Peter Cook, Paolo Soleri, Robert Venturi</li> <li>- Contemporary architects: Norman Foster, Richard Rogers, James Sterling, Peter Eisenman, Renzo Piano, Daniel leibskind, Zahahadid, Frank O Gehry, Santiago Calatrava, , Rem koolhaas</li> </ul>
<b>Unit III</b>	<p><b>Post Colonial Architecture in India and any two examples across the globe</b></p> <ul style="list-style-type: none"> <li>- Architectural debates associated with nation formation– early modernist architecture-</li> </ul>

	- Post-independence city planning: Chandigarh and Bhuvanesar- influences on post-independence architects- Architecture of Kanvinde, Raje, Doshi, Correa, Nari Gandhi, Raj Rewal.
<b>Unit IV</b>	Master Architects influenced by Vernacular/Regional Architecture of India

<b>Learning Resources</b>	
<b>Text Books:</b>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>Note</b>	Based on the Assignments listed below with continuous assessment and attendance scrutiny. The final presentation in standard specified Portfolio with all written reports and graphical representations (sketches, pictures)
1	Analytical study of Post-Colonial Architecture in India with literature survey
2	Power point Presentation and discussion of Modern, Post modern, Contemporary World Architects with references to their styles, designs, technologies, materials and directions
3	Critical Analysis through book /literature survey of various architects and their buildings with relevance to vernacular architecture of India
4	Report based on field study.
5	Model making.

## Specification Writing

<b>Subject Code</b>	<b>K8306</b>	<b>Semester -V</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To develop skill of writing specifications for materials and works.

<b>Learning Outcomes:</b> students will be able to	
<b>1</b>	Write specifications with reference to building trades, materials, workmanship and performance of different items of work
<b>2</b>	Discuss specifications as integral part of contract document for building projects

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<ul style="list-style-type: none"> <li>- Specifications as part of contract document, definition, need and importance, its relationship with working drawings, bill of quantities and Schedule of rates.</li> <li>- Types of specifications, open, closed, restricted, prescriptive, performance based, or combination of above types. Use of manufacturers guide etc.</li> <li>- Specification writing method to include master list, sectional formats, page formats, general material items, tests, performance, mode of measurements etc</li> </ul>
<b>Unit II</b>	<ul style="list-style-type: none"> <li>- Methodology of writing detailed specifications including methods and forms of writing descriptive notes on materials and workmanship based on working drawings.</li> <li>- Collection of catalogues and technical information on various materials, products and specialized items.</li> <li>- Preparation of checklist for writing detailed specifications</li> </ul>
<b>Unit III</b>	<ul style="list-style-type: none"> <li>- Study of different building trades, their scope and contents.</li> <li>- Introduction to writing specifications for building services and checklist for services such as Water Supply, Drainage, Electrical and HVAC installations.</li> <li>- Writing specifications of a previous design project in full or part as final assignment</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	<ol style="list-style-type: none"> <li>1. S. Patil (2013) <i>Civil Engineering Contracts and Estimate</i>. Anand. Orient Blackswan, Bangalore</li> <li>2. B.N.Datta (2011) <i>Estimation and Quantity Surveying</i>, UBS Publishers &amp; Distributors Ltd. Mumbai.</li> </ol>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Theory paper.	

## Building Services-III

<b>Subject Code</b>	<b>K8307</b>	<b>Semester -V</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To expose students to the science behind HVAC system.
<b>2</b>	To familiarize students with the various air- conditioning systems and their applications
<b>3</b>	To study various aspects of Natural Ventilation

<b>Learning Outcomes:</b> student will be able to	
<b>1</b>	Acquire knowledge of various air conditioning systems and their applications.
<b>2</b>	Address various issues in design of HVAC system
<b>3</b>	Understand various issues in natural ventilation systems in buildings

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>HVAC</b> <ul style="list-style-type: none"> <li>- Air distribution systems, ducts and ducting layout.</li> <li>- Costing data and space requirements. Integration of AC systems in Design.</li> <li>- Principles of Psychometrics and heat transfer</li> </ul>
<b>Unit II</b>	<b>Components of HVAC</b> <ul style="list-style-type: none"> <li>- Unit AC's, Central AC's split AC's.</li> <li>- Components of AC system such as chilling plant, cooling towers, air handling units, calculation of AC load.</li> <li>- Water consumption for AC</li> </ul>
<b>Unit III</b>	<b>Ventilation of buildings</b> <ul style="list-style-type: none"> <li>- Natural ventilation (passive.)</li> <li>- Ventilation functions and requirements.</li> <li>- Physical mechanism of ventilation.</li> <li>- Design factors affecting ventilation</li> </ul>
<b>Unit IV</b>	<b>Mechanical ventilation (active)</b> <ul style="list-style-type: none"> <li>- Need of mechanical ventilation                             <ol style="list-style-type: none"> <li>a) Forced ventilation – Exhaust fans, Axial flow fans, Blowers for industrial ventilation.</li> <li>b) Introduction to Air conditioning, heating and cooling</li> </ol> </li> </ul>

	Theory paper	

### Elective- III

<b>Subject Code</b>	<b>K8308</b>	<b>Semester IV</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Elective</b>

<b>Learning Objectives</b>	
1	To give students an opportunity to develop their skills in a subject they may opt for further studio.
2	To study the selected topic in depth of a particular subject that student is interested.
3	To prepare a technical base for students through in depth study.

<b>Learning Outcomes: Student will be able to</b>	
1	Engage in systematic self study of topic they feel interested in.

<b>Students can select one elective from the following list</b>	
<b>1</b>	<p><b>Barrier Free Architecture</b></p> <ul style="list-style-type: none"> <li>- Types of disabilities and its implications in Architecture, barrier free environment, access- provisions to facilities and amenities.</li> <li>- Typical barrier problems of the physically challenged people-parking, approaches to buildings travel within buildings etc.</li> <li>- Special design considerations in residential buildings, congregational buildings like auditoriums, theatres, studios, transport terminals etc, Institutional buildings, outdoor appurtenances, garden – parks etc.</li> <li>- Study of norms set by Central Government</li> </ul>
<b>2</b>	<p><b>Appropriate technology</b></p> <ul style="list-style-type: none"> <li>- Introduction to the concept of Appropriate technology and services suitable in Indian context for both rural and urban application</li> <li>- Study of theoretical and practical aspects of innovative /alternative materials and construction techniques developed in recent past.</li> <li>- Mud wall, suitability of soil for mud walls</li> <li>- Waffle and daub walls, Rammed earth walls, adobe walls</li> <li>- Walls, vaults using soil cement, compressed mud blocks, Nubian arch roof</li> <li>- Use of Bamboo as material its properties ,available in country</li> <li>- Burnt clay tile roofing, ferro cement roofing units, doubly curved tile roofing</li> </ul>
<b>3</b>	<p><b>Contemporary Design Theory( History and Design)</b></p> <ul style="list-style-type: none"> <li>- Detail study and analysis of styles of contemporary Indian and foreign Architects</li> <li>- Study of spatial order, structural, constructional and material order, manner of articulation, symbols, and meanings as these evolved in time and space.</li> <li>- Comparative study of building typologies in vernacular and architecture in modern period</li> </ul>
<b>4</b>	<p><b>Seminar II</b></p> <ul style="list-style-type: none"> <li>- Independent study and documentation of architectural and allied subjects by individual student alongwith oral and visual presentation.</li> <li>- The seminar shall be a research paper on a topic related to Architecture</li> </ul>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>100</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>Note</b>	<b>There is no 'University Examination' for this subjects</b>	

## **Semester – VI**

## Architectural Design -VI

<b>Subject Code</b>	<b>K8309</b>	<b>Semester -VI</b>
<b>Credits</b>	<b>8</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To explore and demonstrate ‘technology and services as major determinants of Architectural form’ and understand co-relation between function, structure, services and form.

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Develop analytical skill set for understanding built and non-built spaces
<b>2</b>	Synthesize and translate the analytical understanding into Architectural Design

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	Research and Analysis of innovative technologies and materials prevailing in market, state of the art services and systems.
<b>Unit II</b>	Multi-functional public buildings like IT Complex, Hospitals, Commercial Centers, High Rise Structures
<b>Unit III</b>	Extension of the large project mentioned above e.g. Design of gymnasium, bank, departmental store, operation theatre, auditorium, etc.

<b>Learning Resources</b>	
<b>Text Books:</b>	
<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. Bhatt V. &amp; Seniver P., (1990), <i>Contemporary Indian Architecture: After The Masters</i>, Ahmedabad, USA, Mapin Publishing Pvt. LTD.</li> <li>2. Kanvinde A. P. &amp; Miller J. H., (1969), <i>Campus Design in India: Experience of a Developing Nation</i>, Jostens/American Yearbook Company</li> <li>3. Mehta J., (2011) <i>Rethinking Modernity</i>, New Delhi, India, Niyogi Books</li> <li>4. Pressman A., <i>Design Architecture the elements of Process</i>, USA, Routledge</li> <li>5. Pandya Y., (2005) <i>Concepts of Space in Traditional Indian Architecture</i>, India, New Jersey, Mapin Publishing.</li> <li>6. Salvadori M., &amp; Robert H., (1975), <i>Structure in architecture: the building of buildings</i>, Cornell University, Prentice-Hall</li> <li>7. (4<sup>th</sup> Ed), <i>Analysing Architecture</i>, Canada, Routledge</li> </ol>
<b>Websites:</b>	
<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Design project demonstrating integration of the building components and

	technology, services, vertical circulation, byelaws etc. on any one of the following – 3-star hotel, commercial complex, hospital, civic center, convention centre etc – Drawing portfolio and models
<b>2</b>	Design Project on any one of the following – gymnasium, bank, departmental store, operation theatre, auditorium, etc. - Drawing portfolio and models

## Building Construction and Materials-VI

<b>Subject Code</b>	<b>K8310</b>	<b>Semester -VI</b>
<b>Credits</b>	<b>6</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To introduce construction of building components in Reinforced Cement Concrete.
<b>2</b>	To introduce construction of building components in steel and its use in industrial construction
<b>3</b>	To introduce methods of the pre-engineered structures

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Explore different R.C.C components of framed construction as well as special component construction.
<b>2</b>	Discuss different steel components and its construction
<b>3</b>	Understand concept of pre-engineered construction with respect to industrial construction

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>R.C.C. Framed Construction Element study</b> <ul style="list-style-type: none"> <li>- Principles and practices of R. C. Framed construction and its components</li> <li>- R. C. C. Footing for column, Isolated footing</li> <li>- R. C. C. Plinth beams and Plinth formation</li> <li>- R. C. C. Lintels and Chajja projections</li> <li>- R. C. C. Slab – one way, two way, single span and continuous spans</li> <li>- R. C. C. Beams – singly and doubly reinforced, single and continuous spans, cantilever beams</li> <li>- R. C. C. Columns</li> </ul>
<b>Unit II</b>	<b>R.C.C. Framed Construction Special Component study</b> <ul style="list-style-type: none"> <li>- R.C.C., Balconies, Canopies, fins, parapets</li> <li>- R.C.C. its potential and application</li> <li>- Details of junctions of slab and beam, slab-beam- column, primary, secondary beams</li> <li>- Study of form work construction</li> <li>- R.C.C. Staircase</li> </ul>
<b>Unit III</b>	<b>Steel Structures</b> <ul style="list-style-type: none"> <li>- Study of portal frames, its various types &amp; connection details.</li> <li>- Study of Castellated Beam, Veradale girder, Portal Frames &amp; Lattice Construction with</li> <li>- Connection details.</li> <li>- Medium span Roof Trusses with Sheet Cladding details &amp; Rain Water Disposal details.</li> <li>- Introduction to framed steel structures using steel sections &amp; steel decking</li> </ul>
<b>Unit IV</b>	<b>Industrial Building:</b> <ul style="list-style-type: none"> <li>- Study of constructional details for industrial buildings.</li> <li>- Details for lighting, Ventilation &amp; Rain water disposal for industrial buildings.</li> <li>- Study of Machine foundation, gantry &amp; high Strength flooring etc</li> </ul>
<b>Unit V</b>	<b>Study of Materials</b>

	<ul style="list-style-type: none"> <li>- Different cladding materials with fixing details.</li> <li>- Pre engineered structures.</li> <li>- Pre-stressed and post-tensioning methods pros and cons.</li> </ul>
--	--

<b>Journals:</b>	Journal of Construction Engineering, Technology stmjournals.com/index.php?journal=jocetm) Master Builder -Construction Magazine, construction News( <a href="http://www.masterbuilder.co.in">www.masterbuilder.co.in</a> )

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Portfolio of technical drawings of above mentioned topic with supporting documents of sketched booklet and pictographic presentation. (min.4drgs.)
<b>2</b>	Field reports and Market survey of building technology topics.
<b>3</b>	Proposals of different design in industrial building for prescribed projects. (Under discretion of the subject faculty).

## Theory of Structures-VI

<b>Subject Code</b>	<b>K8311</b>	<b>Semester -IV</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand basic concepts for RCC foundations
<b>2</b>	To understand behavior of different soils and foundation choice
<b>3</b>	To understand different types of RCC footings

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	develop understanding of basic staircase design.
<b>2</b>	develop understanding of behaviour of footings
<b>3</b>	understand importance of prestressing structural elements

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Staircases</b> - Types based on supports, loads, design of simply supported doglegged staircase
<b>Unit II</b>	<b>Soil types and foundations</b> - Soil types and determining suitable foundation (only theory) : safe bearing capacity, shear failure, excessive settlement, differential settlement, trial pits, need of pile foundation, need of raft foundation. - Design of rcc isolated pad footing. Explain (not design)rcc details of isolated circular and sloped footing, eccentric footing. - Necessity of combined footing, behaviour of combined footing, rcc details. (no design problem)
<b>Unit III</b>	<b>Foundation for steel columns</b> - Theory.(no numerical )
<b>Unit IV</b>	<b>Prestressing</b> - Introduction to prestressed structural elements, procedures, advantages, disadvantages, simple numerical beam problem to explain the concept of prestressing

<b>Learning Resources</b>	
<b>Text Books:</b>	1. Shah H.J. (2014) <i>Design of RCC structures part II</i> . Anand, Charotar publishing house.
<b>Reference Books:</b>	1. Dr.Shah V.L.& Dr. Karve S.R.(2014) <i>RCC Theory and Design</i> .Pune,Structures Publishers. 2. Shah H.J.(2013) <i>Design of Reinforced Concrete Structures</i> .Anand,Charotar Publishing house. 3. Sinha S.N.(2014) <i>Reinforced Concrete Design</i> .New Delhi,Tata McGraw-Hill Publishing company limited.
<b>Websites:</b>	www.bis.org.in www.nptel.ac.in
<b>Journals:</b>	IS: 456-2000 code of practice for plain and reinforced concrete SP:16-Design aids for reinforced concrete

<b>Assessment</b>	<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>
	<b>40</b>

	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Design of simply supported doglegged stair case, drawing and schedule
<b>2</b>	Design of isolated pad footing, drawing and schedule
<b>3</b>	Making a typical RCC structural drawing with column location, numbering, beams (identifying beams to be designed as simple/cantilever/continuous...slabs to be identified as one way/two way/cantilever/continuous...typical detail of each element and schedule – no design)
<b>4</b>	Photo documentation of various foundation problems and their solutions

## Working Drawings -II

<b>Subject Code</b>	<b>K8312</b>	<b>Semester -VI</b>
<b>Credits</b>	<b>4</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand and prepare advanced drawings necessary for construction/ execution of the buildings on site

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Prepare working drawings for RCC Framed structure
<b>2</b>	Prepare Detailed drawings such as OHWT, staircase, electrical layout, toilet details
<b>3</b>	Ability to coordinate with other consulting agencies involved in the project.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	Preparation of working drawing for RCC structure
<b>Unit II</b>	Details
<b>Unit III</b>	Fieldwork: Setting of structure on Site

<b>Learning Resources</b>	
<b>Text Books:</b>	
<b>Reference Books:</b>	1.Wakita, Osamu A., Richard M. Linde, and Nagy R. Bakhoum (2011). "The Professional Practice Of Architectural Working Drawings
<b>Websites:</b>	
<b>Journals:</b>	Gawne, Eleanor. "Cataloguing architectural drawings." Journal of the Society of Archivists 24.2 (2003): 175-187

<b>Assessment</b>	<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>
	Refer To 'Rule number 6, sub point 6.2.2.'
<b>U.E.</b>	<b>University Examination</b>
	Assignments or portfolios based on entire syllabus as mentioned below.

<b>Assignment</b>	
<b>1</b>	Common project
<b>2</b>	Field assignments
<b>3</b>	Individual design translated to working drawing portfolio with all details necessary for construction.

## Landscape Architecture

<b>Subject Code</b>	<b>K8313</b>	<b>Semester -VI</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To emphasis learning of architecture beyond building, in the outdoor environment and spaces
<b>2</b>	To introduce the role and importance of landscaping and site planning in enhancing and improving the quality of building environs, functionally and aesthetically.
<b>3</b>	To explain site and its context while designing of buildings
<b>4</b>	To use landscape elements to create and enhance exterior spaces and to achieve climatic control at the buildings and site level.

<b>Learning Outcomes: Students will be able to</b>	
<b>1</b>	Explore various aspects of site planning and relationship between built and openspaces
<b>2</b>	Understand role of landscape in architecture.
<b>3</b>	Design small scale landscape project using landscape elements.

<b>Units</b>	
<b>Unit I</b>	<p><b>Introduction to landscape architecture – Importance, need and scope</b></p> <p><b>Landscape Elements</b></p> <ul style="list-style-type: none"> <li>- Plant element: Different aspects of - trees, shrubs, lawns, climbers, hedges, Indoor plants as elements. Basic idea about plants, plant selection, planting design and care of plants. Importance and use of NATIVE vegetation</li> <li>- Land element: Different aspects –soils, topography, levels, grading, earth forms, and foundations.</li> <li>- Water elements: Fountains, waterfalls, pools, cascades, channels, irrigation etc.</li> <li>- Architectural elements: sculptures, curbs, walls, steps, fence, etc</li> </ul>
<b>Unit II</b>	<p><b>Historical and contemporary landscape practices and case studies</b></p> <p><b>Integration of indoor and outdoor spaces</b></p>
<b>Unit III</b>	<p><b>Climate</b></p> <ul style="list-style-type: none"> <li>- Macro and microclimatic consideration in landscaping; effect on landscape and microclimate</li> </ul> <p><b>Site analysis and planning</b></p> <ul style="list-style-type: none"> <li>- Methodology and process of site study. Landform analysis, site analysis techniques. Importance of site planning for landscape design and architecture.</li> </ul> <p><b>Principles of landscape design</b></p> <ul style="list-style-type: none"> <li>- Aesthetical consideration</li> </ul>
<b>Unit IV</b>	<p><b>Relation between built and open spaces</b></p> <p>Pedestrian and vehicular circulation</p> <p>Landscape construction details</p> <p>Services related to landscape</p> <ul style="list-style-type: none"> <li>- Plumbing, water supply, electrical, sewage management</li> </ul>

Learning Resources	
<b>Text Books:</b>	
<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. Jellicoe, G. A., &amp; Jellicoe, S. (1982). <i>The Landscape of Man: Shaping the Environment from Prehistory to the Present Day</i>: Van Nostrand Reinhold.</li> <li>2. Simonds, J. O. (1998). <i>Landscape Architecture: A Manual of Site Planning and Design</i>: McGraw-Hill.</li> <li>3. Booth, N. K., &amp; Hiss, J. E. Assessment		Marks
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

Assignments	
<b>1</b>	Comprehensive landscape proposal( Drawing portfolio) <ol style="list-style-type: none"> <li>a) One project for Functional and Aesthetic considerations, at residence level. (Especially landscape places like interiors, courtyards, terrace gardens, window landscaping etc.)</li> <li>b) One project for campus planning including vegetation, parking, road sections, footpaths, lighting etc.</li> </ol>
<b>2</b>	Case studies of landscape project under consideration in the form of report

## Estimation and Costing

<b>Subject Code</b>	<b>K8314</b>	<b>Semester -VI</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To equip students with necessary technical knowledge for calculating estimates and detailed costing for small to medium projects with developing the skill of writing specifications for materials and item works.

<b>Learning Outcomes: Students will be able to</b>	
<b>1</b>	Compute quantities of various building items for simple load bearing structures and be acquainted with various types of Estimates including mode of measurements as adopted by I.S.1200.
<b>2</b>	Compute quantities and rate analysis of various building items of R.C.C. framed structure along with building services such as water supply, sanitation and drainage, electrical installations etc

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	Introduction, purpose of “Quantity Computation” i.e. estimating, types of estimates (preliminary, Detailed) - Study of I.S.-1200. - A small project in load bearing and R.C.C. frame construction or their part to work out quantities and to understand market rate of materials and labours.
<b>Unit II</b>	- Bill of quantities for single story structures - Load bearing construction system. - R.C.C. Frame construction system.
<b>Unit III</b>	- Methods of calculating quantities for building works - Preparation of Bill of Quantities (B.O.Q.) Mode of measurements of quantities. Market rates of labour and building materials. Labour requirement and norms for consumption of basic materials. - Schedule of rates
<b>Unit IV</b>	- Study of different agencies involved in construction e.g. CPWD, PWD, etc. - Rate analysis and cost index. - Study of rate of innovative building materials in the market. - General factors affecting the rate of an item .rate analysis for different components of construction. - Software for calculation of quantities of various building items

<b>Learning Resources</b>	
<b>Text Books:</b>	1. B. S. Patil(2006). Civil Engineering Contracts and Estimates (Third Edition), Orient Blackswan. 2. B.N.Datta, (2011) Estimation and quantity surveying
<b>Reference Books:</b>	1. SP 27 (1987): Handbook of Method of Measurement of 2. Buildings Works [CED 44: Methods of Measurement of Works of 3. Civil Engineering] (first revision-2003) Bureau of India Standards 4. Arthur J.Willls (1979). Specification writings for Architects and surveyor by. Published by Crosby Lockwood 5. 	<a href="http://www.cost-estimating.com">www.cost-estimating.com</a>
<b>Journals:</b>	Specifications Consultants in Independent Practice (SCIP) International Cost Estimating and Analysis Association (ICEAA)

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Theory paper	

<b>Assignments</b>	
	<b>Exercises for IA</b>
<b>1</b>	To work out the quantities of a small load bearing structure having area not more than 40 sqm.
<b>2</b>	To work out the quantities of items of construction work of load bearing and R.C.C. framed structure along with presentation
<b>3</b>	To prepare the list of items in construction and work out the quantities of items as directed by instructor

## Building Services-IV

<b>Subject Code</b>	<b>K8315</b>	<b>Semester -VI</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To study different high rise systems with respect to service core designs and building automation systems.
<b>2</b>	To familiarize the students with firefighting equipment and their installation
<b>3</b>	To familiarize students with water supply and sanitation systems in high rise
<b>4</b>	To study various aspects of vertical communication systems.

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Explore various services including core and building automation systems.
<b>2</b>	Understand fire safety, fire fighting, fire prevention and installations in buildings including codal requirements
<b>3</b>	Address various design issues of water supply and sanitation systems in high rise buildings.
<b>4</b>	Understand various systems of vertical communication

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Advanced Building Services</b> - Types of High Rise Buildings - Building Core Arrangements
<b>Unit II</b>	- Water distribution systems in High rise buildings- downfeed water distribution, pumped upfeed distribution, constant pressure upfeed, gravity downfeed system - Sanitation systems in High rise buildings- two pipe system, solvent system.
<b>Unit III</b>	- Vertical communication systems for high rise buildings-Types of Elevators, Sky lobby Elevator system, double- deck elevator system, Hydraulic Elevators
<b>Unit IV</b>	- Fire fighting in high rise buildings- Water fire suppression systems and other fire suppression systems, Fire detection systems - Codal provision and standards for Fire fighting
<b>Unit V</b>	- Building automation system

<b>Learning Resources</b>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Theory paper	

## Elective-IV

<b>Subject Code</b>	<b>K8316</b>	<b>Semester IV</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Elective</b>

<b>Learning Objectives</b>	
1	To give students an opportunity to develop their skills in a subject they may opt for further studio.
2	To study the selected topic in depth of a particular subject that student is interested.
3	To prepare a technical base for students through in depth study.

<b>Learning Outcomes; student will be able to</b>	
<b>1</b>	Engage in systematic self study of topics they feel interested in.

<b>Students can select one elective from the following list</b>	
<b>1</b>	<b>Architectural Journalism</b> <ul style="list-style-type: none"> <li>- Structure of architecture Journals</li> <li>- Writing Descriptive and analytical reports</li> <li>- Editing write ups, Photo Journalism.</li> <li>- Book reviews</li> <li>- Page compositions</li> <li>- The public process</li> <li>- Electronic media</li> </ul>
<b>2</b>	<b>Theatre /Film set Design</b> <ul style="list-style-type: none"> <li>- History of set and backdrop design for performance</li> <li>- Theme based design strategies</li> <li>- Period and modern sets, Technology applications</li> </ul>
<b>3</b>	<b>Green material/advanced material</b> <ul style="list-style-type: none"> <li>- Green material Selection, factors in selection, Resources to assist in determining materials appropriateness.</li> <li>- Material consideration when using the LEED rating program</li> <li>- Finishing materials for interior and exterior</li> <li>- Insulating materials :organic binders and bitumen and tar based materials like Bitumen, tar, emulsions, mastics, waterproofing items</li> <li>- Polymer sand polymer –based materials and components, polymer based building material for walls, pipes, sanitary-ware, glues and mastics</li> <li>- Metals in advanced building systems, steel cables, structural glazing and curtain walling</li> <li>- Light weight roofing materials :asbestos, galvanized iron, acrylic, polycarbonate</li> </ul>
<b>4</b>	<b>Visual Communication</b> <ul style="list-style-type: none"> <li>- Visual communication in architecture</li> <li>- Non verbal communication –signs, symbols, metaphor.</li> <li>- General concepts of image and schema</li> <li>- Concept sketches, bubble Diagrams, Area Diagram</li> <li>- Exploring methods of presentation for design through photographs, ppt, sketching, rendering etc.</li> <li>- Built forms and environment, Way finding in architecture and space between environment</li> </ul>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>100</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>Note</b>	<b>There is no 'University Examination' for this subjects</b>	

## **Semester – VII**

## Architectural Design -VII

<b>Subject Code</b>	<b>K8401</b>	<b>Semester -VII</b>
<b>Credits</b>	<b>10</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To learn different visual mapping methods in architecture
<b>2</b>	To understand and analyze the urban context and respond through design of a public space /public building

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Learn methods of mapping data
<b>2</b>	Develop analytical skills responsive to the broader socio-economic & physical context of the study area
<b>3</b>	Synthesize and translate analytical understanding into Architectural Design

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Data Collection, Representation</b> <ul style="list-style-type: none"> <li>- Learning different methods of data collection, documentation and representation through mapping</li> <li>- Documenting the socio-economic &amp; physical context of the study area, understanding character and distinctive features of the same.</li> <li>- Understanding of the legislative provisions including land-use, zoning, DCR&amp; relevant acts as applicable to the study area.</li> </ul>
<b>Unit II</b>	<b>Data Analysis</b> <ul style="list-style-type: none"> <li>- Analyzing the available data to arrive at issues, concerns and design decisions based on methods like SWOT analysis.</li> <li>- Arriving at a design proposal and developing design brief based on the analysis</li> </ul>
<b>Unit III</b>	<b>Design Proposal</b> <ul style="list-style-type: none"> <li>- Design of a public space/building responsive to the context - site and people</li> </ul>

<b>Learning Resources</b>

<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignment</b>	
<b>1</b>	Data collection and analysis of urban fabric of selected site
<b>2</b>	Site responsive design demonstration of the following building typologies may be encouraged — residential, industrial, museums, libraries, transportation, institutional, hospitality buildings, recreational, any public activity spaces, etc. - Drawing portfolio and 3 - d model

## Building Construction and Materials-VII

<b>Subject Code</b>	<b>K8402</b>	<b>Semester-VII</b>
<b>Credits</b>	<b>4</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To introduce students to the advanced construction systems.
<b>2</b>	To introduce large scale roof constructions like stadiums, industrial buildings etc, and related materials.
<b>3</b>	To introduce types of swimming pool design and construction.
<b>4</b>	To introduce student to concepts of modular design and construction.

<b>Learning outcomes: Student will be able to</b>	
<b>1</b>	Understand various typologies and technologies of long span structures.
<b>2</b>	Understand various design and construction parameters of swimming pools.
<b>3</b>	Analyze modular concept of design and construction in large scale projects.
<b>4</b>	Explore sport stadiums, their field area and support space as well as building envelopes.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Long Span Structures</b> <ul style="list-style-type: none"> <li>• Shell structure like single curvature and double curvature etc.</li> <li>• Folded slab structure</li> <li>• Tension Structures like membrane, cable net and air supported etc.</li> <li>• Grid structure and skeletal like Space frames etc.</li> </ul>
<b>Unit II</b>	<b>Multi-basement</b> <ul style="list-style-type: none"> <li>- Soil bearing capacity and excavation techniques for basement.</li> <li>- Different uses of basement, it's planning criteria, Techniques of construction techniques like retaining wall, diaphragm wall, caissons, cofferdam etc.</li> <li>- Various services related to Basement like waterproofing, drainage, Ventilation, Ramps, elevators etc.</li> </ul>
<b>Unit III</b>	<b>Auditorium</b> <ul style="list-style-type: none"> <li>- Auditorium shape and size, seating arrangements.</li> <li>- Cone of vision, sightlines, stage and back stage design.</li> <li>- Acoustical design consideration, Noise and its criteria, sound defects etc.</li> <li>- Ancillary spaces like projection room, balcony, green rooms, orchestra pit etc. required for Auditorium.</li> <li>- Services related to Auditorium like fire protection and ventilation etc.</li> </ul>
<b>Unit IV</b>	<b>Modular coordination.</b> <ul style="list-style-type: none"> <li>• Precast and prefabricated building components used for roof, wall, interior and floor construction etc.</li> </ul>
<b>Unit V</b>	<b>Study of Materials</b> <ul style="list-style-type: none"> <li>- Study of modern building materials with respect to long span roof, modular system ,Acoustics ,basement etc.</li> </ul>

<b>Learning Resources</b>

## Theory of Structures -VII

<b>Subject Code</b>	<b>K8403</b>	<b>Semester-VII</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand trends and challenges in contemporary building structural systems.
<b>2</b>	To understand complex building structures and large spans
<b>3</b>	To understand importance and need for structural modeling

<b>Learning Outcomes :Student will be able to</b>	
<b>1</b>	Develop connections between Design, Construction and Material.
<b>2</b>	Design Ground and First floor structures with R.C.C. and steel building with simple configuration
<b>3</b>	Apply software as tool for modeling structures

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<ul style="list-style-type: none"> <li>- Earthquake zoning, base shear, lateral forces. Introduction to IS: 1893</li> <li>- Introduction to shear wall, structural behaviour, typical details.</li> <li>- Ductile detailing: introduction to IS: 13920, typical details of beams, columns, junctions</li> </ul>
<b>Unit II</b>	<ul style="list-style-type: none"> <li>- Introduction to flat slab (beamless). Major structural actions, behaviour and RCC details.</li> <li>- Introduction to plate girders, gantry girders, castellated girders.</li> <li>- Introduction to flitched beams.</li> </ul>
<b>Unit III</b>	<ul style="list-style-type: none"> <li>- Introduction to shell roofs. Behaviour, structural actions and rcc details of spherical dome.</li> <li>- Understanding space frame and space truss (3D elements, equilibrium conditions and concepts only)</li> <li>- Introduction to long span structures: arches, open web sections, bow string girders, typical details.</li> <li>- Modelling and analysis of structure on STAAD-Pro software.</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	<ol style="list-style-type: none"> <li>1. Sarma T.S. (2014) <i>STAAD Pro V8i for Beginners with Indian Examples</i>. Chennai, Notion Press.</li> <li>2. Shah H.J.(2014)<i>Design of RCC Structures part II</i>.Anand,Charotar Publishing house.</li> </ol>

<b>Journals:</b>	IS :1893 and IS: 13920

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignment</b>	
<b>1</b>	Sketching and explaining structural behaviour of above topics.
<b>2</b>	Case study of structural systems implemented by imminent architects in their projects
<b>3</b>	Modelling and analysis of simple structure on STAAD-Pro

## Interior Design I

<b>Subject Code</b>	<b>K8404</b>	<b>Semester -VII</b>
<b>Credits</b>	<b>4</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To make students understand various aspects of interior spaces
<b>2</b>	To make students understand qualities of interior spaces to develop skills in designing for functional and aesthetical meaningful interior spaces.

<b>Learning Outcomes: Student will be able to</b>	
<b>1</b>	Design interior spaces of buildings.
<b>2</b>	Design furniture with all necessary details.
<b>3</b>	Develop competence for working with various materials & construction techniques used in interior design

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	- Introduction to the field of interior design and various parameters. market survey of various interior materials
<b>Unit II</b>	- Market survey of various interior materials.
<b>Unit III</b>	- Case study of a small interior project. ( 100sq.m to 150 sq,m) Carpet area.
<b>Unit IV</b>	- A detailed design of the interior projects. ( 50sq.m to 100 sq,m) Carpet area.

<b>Learning Resources</b>	
<b>Text Books:</b>	1. John Coles & Naomi, (2007) The fundamentals of interior architecture/AVA Publishing SA.
<b>Reference Books:</b>	1. Mitcheil Beazley (2004), The new colour book/octopus publishing group ltd. 2. Julie Savill (2001), Good homes magazine(101 colour schemes that really works)/BBC World wide. 3. Elizabeth wilhide. (2007), Surface & Finish( Directory of materials for interiors) /Quadrille publishing Ltd. UK
<b>Websites:</b>	www.quadrille.co.in. www.theaid.in.
<b>Journals:</b>	Magazine published by IIID “Insite” International journal of interior architecture & spatial design.

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
1	Study Example report with drawings & Studio based time bound Interior design project.
2	Report on survey of materials in market (This will be referred for UE examination)
3	Drawing portfolio comprising of Individual interior design layout, elevations,

	sections and views
4	Constructional drawing of various interior components and specification of the above interior finalized project.

## Advance Landscape Architecture

<b>Subject Code</b>	<b>K8405</b>	<b>Semester -VII</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To understand the complex issues related to landscape architecture and respond comprehending natural, man-made and social environment.
<b>2</b>	To understand various factors affecting landscape design at urban scale

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Respond to complex issues related to landscape architecture at macro level
<b>2</b>	Understand influences of various factors on design of landscape at urban scale

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Understanding advancements in Landscape Architecture</b> -Terrace Gardens, Roof Gardens, Vertical Landscapes, etc. -Landscape for atriums -Innovative Landscape construction techniques.
<b>Unit II</b>	<b>Understanding the process of site analysis and planning at macro level (involving complex issues such as physical, functional, environmental and socio-cultural)</b> - Physical factors such as topography, geology, site features, hydrology, surrounding land-use, buildings and soil conditions - Environmental factors such as climate, existing flora and fauna - Socio-cultural such as existing use, structures of historic or religious importance if any , - Aesthetics such as views from and within site - Storm water management
<b>Unit III</b>	<b>Understanding role of landscape for energy conservation</b> -Role of vegetation -Role of water bodies -Role of land form -Effect on temperature, air movement, noise and pollution
<b>Unit IV</b>	<b>Understanding the various factors affecting design and planning of urban open spaces and provide landscape solution for the same.</b> - Physical Factor - Social Factors - Environmental Factors - Functional Aspects

<b>Learning Resources</b>	
<b>Text Books:</b>	-----
<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. Jellicoe .G and Jellicoe. S (1987).The Landscape of Man, Thames and Hudson, London</li> <li>2. Simonds. J. O. (1961). Landscape Architecture, The Shaping of Man's Natural Environment. F.W. Dodge Cooperation, London</li> <li>3. Harris.C.W and Dine.N.T ; Time Saver Standards For Landscape Architecture, McGraw – Hill International Edition, Arch. Series</li> </ol>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Case studies based on unit I
<b>2</b>	Assignment based on unit III
<b>3</b>	Case studies or readings based on unit IV
<b>4</b>	One large scale studio project based on unit II or IV

## Urban Planning I

<b>Subject Code</b>	<b>K8406</b>	<b>Semester -VII</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
1	To introduce students to the basic concepts of Town and Urban Planning.
2	To understand the hierarchy of planning.
3	To understand the importance of Town Planning with respect to legislative guidelines, through Acts and Byelaws
4	To introduce the subject of Urban Design in order to enable students to establish a larger context for Architectural Design

<b>Learning Outcomes: Student will be able to</b>	
1	Understand the basic concepts of Town and Urban Planning
2	Legislation and rules of Town Planning
3	Do the Subdivision of Layout, and Municipal Drawings.
4	Understand the evolution of urban form of cities

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Introduction to the subject of Urban Planning.</b> Introduction to the Basic concepts in planning like landuse, zoning, byelaws etc Need and importance of study of Rural/ Town /Urban Planning for an architect.
<b>Unit II</b>	<b>Evolution of planning in settlements from ancient to contemporary times.</b> Principles, influences on Indus cities, Egyptian cities, Greek cities, Roman cities, Industrial cities etc.
<b>Unit III</b>	<b>Planning Theories By</b> Patrick Geddes; Kevin Lynch; Clarence Perry; Frank Lloyd Wright; Ebenezer Howard; Le Corbusier, C.A. Doxiadis, Lewis Mumford. <b>Conceptual study</b> of Garden city, Satellite towns, Industrial Towns, New Towns, Planned Cities, Twin Cities, Neighbourhood Etc. <b>City plan patterns</b> -Linear, Radial, Grid Iron layout and Ribbon development
<b>Unit IV</b>	<b>Introduction to Housing and Housing Typologies</b> Characteristics of Urban housing. Study of Housing typologies based on Topographical and Social, Economics aspects. Housing scenario and its impact. Study of Housing Neighbourhoods with reference to planning concepts and principles by planners.
<b>Unit V</b>	<b>Introduction to Planning Legislation</b> Introduction to various planning related laws, their contents and provisions, viz: M.R.T.P. Act of 1966, Land Acquisition Act of 1894, Maharashtra Slum Redevelopment Act, Urban Arts Commission Act, Municipal Act etc
<b>Unit VI</b>	<b>Introduction to urban form and space</b> Urban Form and space in historical and theoretical terms.

<b>Learning Resources</b>	
<b>Text Books:</b>	1. Kevin Lynch (1960) <i>The Image of the City</i> USA, MIT press. 2. Lewis Mumford (1972) <i>The City in History: Its Origins, Its Transformations, and Its Prospects.</i> USA, Harcourt, Inc.

	<p>3. Peter Geoffrey Hall (1996 Updated Edition) <i>Cities of Tomorrow: An Intellectual History of Urban Planning and Design in the Twentieth Century</i> USA, Blackwell publishing.</p> <p>4. Anthony J. Catanese, James C. Snyder (2014) <i>Urban Planning</i>. New Delhi, McGrawHill Education Private Limited.</p> <p>5. AbirBandyopadhyay, (2010) <i>Town Planning</i>, Kolkata, ArunabhaSen</p>
<b>Reference Books:</b>	<p>1. Brown A.J.(1969) <i>Introduction to town and country planning</i> Australia, Angus and Robertson publisher.</p> <p>2. P.Healey,(1981) <i>Planning Theory</i>.UK, Pergamon Press</p> <p>3. Arthur Gallion(1993)<i>The Urban Pattern</i>. New York, John Wiley and Sons</p>

<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Theory paper	

## Building Services-V

<b>Subject Code</b>	<b>K8407</b>	<b>Semester -VII</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To expose students to the various integrated services of water supply And drainage at campus level.
<b>2</b>	To familiarize students with solid waste management.
<b>3</b>	To study various Building Management Systems.

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Acquire knowledge of various integrated building services.
<b>2</b>	Address various issues of solid waste management.
<b>3</b>	Understand various Building management systems

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Water Distribution systems</b> <ul style="list-style-type: none"> <li>- For housing schemes and high rise buildings. Schematic water distribution from treatment plant to town, group housing etc.</li> <li>- Hot water supply in high rise buildings.</li> <li>- Water heaters, boilers</li> <li>- Solar water heating</li> </ul>
<b>Unit II</b>	<b>Sewage collection and disposal</b> <ul style="list-style-type: none"> <li>- For large campuses, complexes, High rise Buildings etc. Mechanical methods of removal of sewage from basements (Shone's ejector).</li> <li>- Sewage treatment, Waste water conservation, recycling, biogas etc</li> </ul>
<b>Unit III</b>	<b>Urban Drainage Systems</b> <ul style="list-style-type: none"> <li>- For private and public places.</li> <li>- Drainage ,sub drains, culverts, ditches, gutters, drop inlets and catch basins</li> <li>- Rain water Harvesting.</li> </ul>
<b>Unit IV</b>	<b>Solid waste or refuse Disposal</b> <ul style="list-style-type: none"> <li>- Refuse chutes.</li> <li>- Waste /kitchen</li> <li>- waste Managements</li> </ul>
<b>Unit V</b>	<b>Integration of Services</b> <ul style="list-style-type: none"> <li>- ETP, STP and other building management services like CCTV, PG &amp; UPS</li> </ul>

<b>Learning Resources</b>	
<b>Text Books:</b>	1. Benjamin Stein and John Renolds.(2006) <i>Mechanical and Electrical Equipment for Building</i> , New York, John Wiley and Sons.
<b>Reference Books:</b>	1. Vasisth K.(2011) <i>Waste management</i> New Delhi, Essential books. 2. National Building Code of India, 2005 (NBC 2005)
<b>Websites:</b>	<a href="http://bst1.cityu.edu.hk/e-learning">http://bst1.cityu.edu.hk/e-learning</a>
<b>Journals:</b>	CIBSE journal <a href="http://www.cibsejournal.com/">http://www.cibsejournal.com/</a> Building Services Engineering Research and Technology ( <a href="http://bse.sagepub.com">bse.sagepub.com</a> ) Energy and buildings-Journal-Elsevier ( <a href="http://www.journals.elsevier.com/energy-and-buildings/">www.journals.elsevier.com/energy-and-buildings/</a> ) Technical journals- CIBSE-( <a href="http://www.cibse.org/knowledge/technical-journals/technical-journals-bsert-lr-t">www.cibse.org/knowledge/technical-journals/technical-journals-bsert-lr-t</a> )
<b>Assessment</b>	<b>Marks</b>

<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Detail services layout which includes water supply and sanitation requirements for a campus project. (Project is preferably the architectural design project which the students have already worked on)

## Elective- V

<b>Subject Code</b>	<b>K8408</b>	<b>Semester IV</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Elective</b>

<b>Learning Objectives</b>	
1	To give students an opportunity to develop their skills in a subject they may opt for further studio.
2	To study the selected topic in depth of a particular subject that student is interested.
3	To prepare a technical base for students through in depth study.

<b>Learning Outcomes: Student will be able to</b>	
1	Engage in systematic self study of topics they feel interested in.

<b>Students can select one elective from the following list</b>	
<b>1</b>	<p><b>Housing</b></p> <ul style="list-style-type: none"> <li>- Housing survey and methodologies</li> <li>- Factors effecting housings</li> <li>- Housing demand, slums, Typologies, finance, etc.</li> <li>- Comparative study of various housing policies and programmes.</li> <li>- Housing case studies</li> <li>- Post Occupancy evaluation.</li> <li>- Importance of housing in urban and regional development</li> <li>- Structural concepts, use of traditional and new building materials ,self help and low cost housing</li> <li>- Role of co-operative and public and private agencies</li> </ul>
<b>2</b>	<p><b>Disaster Management</b></p> <ul style="list-style-type: none"> <li>- Study of building designs to resist following types of disasters: Earthquake; Fire; Flood; Cyclone; Tsunami; Other natural disasters</li> <li>- Post-disaster problems</li> <li>- Study of geological structure and its deformation</li> <li>- Study of behaviour of the structure in such disasters</li> <li>- design aspects and considerations for various types of buildings especially the residential, congregational and institutional buildings</li> </ul>
<b>3</b>	<p><b>Sustainable architecture</b></p> <ul style="list-style-type: none"> <li>- Study of effects of Luminous Environment on comfort condition in built space, including Analysis Techniques, Design Strategies and Evaluation Procedures</li> <li>- Introduction and Analysis of the Precedent</li> <li>- Analysis of the site and climate</li> <li>- Analysis of the building programme and use.</li> <li>- Schematic design.</li> <li>- Design development.</li> <li>- System integration</li> <li>- Various rating systems like LEED, GRIHA.</li> </ul>
<b>4</b>	<p><b>Industrial Architecture</b></p> <ul style="list-style-type: none"> <li>- Location and planning aspects of Industrial areas</li> <li>- Indoor and Outdoor working environment in Industries</li> <li>- Services essential for Industries, considerations f industrial safety (Fire)</li> <li>- Various acts applicable to construction of industries such as Factory act,</li> </ul>

	Pollution control Act etc. - Review of structural systems used for Industries with materials. - Environmental pollution as resultant of industrial activity.
--	--

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>100</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>Note</b>	<b>There is no 'University Examination' for this subjects</b>	

## **Semester – VIII**

## Architectural Design VIII

<b>Subject Code</b>	<b>K8409</b>	<b>Semester -VIII</b>
<b>Credits</b>	<b>10</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
1	To develop understanding of present day urban/socio-economic/technological/infrastructural issues and identify redevelopment triggers.
2	To evaluate performance of a built space with respect to present day urban parameters.
3	To develop skill of feasibility analysis and design capacity in given urban context.

<b>Learning Outcomes: Student will be able to</b>	
1	Learn building Design issues such as parking, additional FSI with design and work out feasibility due to change in life style.
2	Redevelop a precinct to meet the present day needs like innovative technology
3	Study of relevant bylaws applicable for the above mentioned project.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	Identify, Research and analyze urban issues such as parking/changed life style/changed urban fabric/infrastructure of a given plot of land and feasibility study.
<b>Unit II</b>	Case study of redevelopment projects
<b>Unit III</b>	Design of given plot (Redevelopment)

<b>Learning Resources</b>	
<b>Text Books:</b>	
<b>Reference Books:</b>	1. Shah Jagan, 2008, Contemporary Indian Architecture, Lustre Press 2008 8 ISBN 174364463, 9788174364463 2. National Building Code of India, 2016
<b>Websites:</b>	
<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b> Refer To 'Rule number 6, sub point 6.2.2.'	<b>40</b>
<b>U.E.</b>	<b>University Examination</b> Assignments or portfolios based on entire syllabus as mentioned below.	<b>60</b>

<b>Assignment</b>	
<b>1</b>	Collecting data about a project/site to be developed.
<b>2</b>	Feasibility study and formulation of design brief
<b>3</b>	Design: The project that can be taken up can be redevelopment of a plot, addition and alterations to existing structures/change of use.

## Building Construction and Material VIII

<b>Subject Code</b>	<b>K8410</b>	<b>Semester -VIII</b>
<b>Credits</b>	<b>04</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
1	To introduce the concept of multi-basement and its construction systems.
2	To introduce the Acoustical design considerations for Auditorium and its construction systems.
3	To introduce various considerations in Design and Construction of high rise structures.

<b>Learning Outcomes: Student will be able to</b>	
1	Understand different systems of basement constructions and its services.
2	Understand different systems of Semi- permanent structures and its installation techniques.
3	Understand different design consideration for Auditorium and its systems of construction.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Swimming Pool</b> <ul style="list-style-type: none"> <li>• Components of Swimming pool like basin, drain, filter, deck, ladder, diving board, lane and lane marking etc.</li> <li>• Types like private, public, recreational, theme based, sports etc.</li> <li>• Materials used for swimming pool like brick, concrete, fiber reinforced etc.</li> <li>• Techniques used for constructions of swimming pool like underground, above ground, elevated etc.</li> <li>- Services related to swimming pool like filtration, electrical, drainage , maintenance etc.</li> </ul>
<b>Unit II</b>	<b>Stadium:</b> <ul style="list-style-type: none"> <li>• Introduction to Components of Stadiums like stadium field area, Seating area, envelope and roof.</li> <li>• Field area and their shapes, orientation, field drainage, field protection etc.</li> <li>• Stadium Bowl design parameters like viewing distances and sightlines, gangways, vomitories, media boxes, VIP areas, player areas, facility areas like food and services.</li> <li>• Building Envelope and roof materials and their technologies.</li> <li>• Roof design considerations like wind and sun.</li> <li>• Services related to Stadium like lighting, access control, signage, toilet, maintenance etc.</li> <li>-</li> </ul>
<b>Unit III</b>	<b>Semi-permanent Structures</b> <ul style="list-style-type: none"> <li>- Need, Planning and Layout, Installation techniques used worldwide.</li> <li>- Various Semi-permanent Structural systems for floor, wall, roof etc.</li> <li>- Services related to water and sanitation layout, natural and mechanical ventilation, lighting, insulation etc.</li> </ul>
<b>Unit IV</b>	<b>High Rise Structures</b> <ul style="list-style-type: none"> <li>- Design consideration like wind and seismic, foundation, form work systems,</li> </ul>

	Construction Techniques and Building Envelope, mechanical floors. - Systems in steel and Concrete. - Structural glazing, elevators,
<b>Unit V</b>	<b>Study of Materials</b> - Study of different modern building materials with respect to Swimming Pool, Stadium, installable structures and high rise.

<b>Learning Resources</b>	
<b>Text Books:</b>	1. T.D Ahuja and G.S. Birdie (1996) <i>Fundamentals of Building Construction</i> New Delhi, Dhanpat Rai Publishing Company Pvt. Ltd
<b>Reference Books:</b>	2. J. S. Foster, Roger Greeno(2007) <i>Mitchell's Structure &amp; Fabric: Part 2</i> .New York,Taylor and Francis group. 3. Gorenc, Tinyou, Syam(2005) <i>Steel Designer's Handbook</i> New Delhi,CBS Publishers and Distributor. 4. Ralph Monletta (1989) <i>Plastics in Architecture” – A guide to acrylic and Polycarbonate</i> .New York, Marcel Dekker Inc.

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Theory paper	

<b>Assignments</b>	
<b>1</b>	Portfolio of technical drawings of above mentioned topic with supporting documents of sketched booklet and pictographic presentation. (min.4drgs.)
<b>2</b>	Field reports and Market survey of building Material topics.
<b>3</b>	Proposals of different designs of swimming pool and sitting area for small scale stadia. (as per discretion of the subject faculty)

## Vocabulary and Repertoire

<b>Subject Code</b>	<b>K8411</b>	<b>Semester -VII</b>
<b>Credits</b>	<b>3</b>	<b>Subject type-Core</b>

Learning Objectives	
<b>1</b>	To express understanding of architecture writings.
<b>2</b>	To learn vocabulary to be used for analyzing Architecture.

Learning Outcomes: student will be able to	
<b>1</b>	Acquire effective verbal communication in architecture
<b>2</b>	Write essays, research papers, book reviews etc.

Units	Contents
<b>Unit I</b>	<b>Architectural expression</b> <ul style="list-style-type: none"> <li>- Form and expression</li> <li>- structural expression</li> <li>- society</li> <li>- culture and expression</li> <li>- spatial expression</li> </ul> <b>Vocabulary and grammar of form</b> <b>Glossary of technical words</b>
<b>Unit II</b>	<b>Architectural Journalism</b> <ul style="list-style-type: none"> <li>- Writing Descriptive and analytical reports</li> <li>- Book reviews</li> <li>- Page compositions</li> </ul>
<b>Unit III</b>	<b>Elements of Architecture</b> <ul style="list-style-type: none"> <li>- Basic elements of architecture</li> <li>- Modifying elements of architecture</li> </ul>
<b>Unit IV</b>	<b>Seminar on Architects Biography and Concepts in contemporary architecture</b>

Learning Resources	
<b>Text Books:</b>	Simon Unwin (2009). <i>Analysing Architecture</i> third edition, revised and enlarged. USA and Canada by Routledge.
<b>Reference Books:</b>	John Ruskin (1989). <i>The seven lamps of Architecture</i> . London, Dover Publications Neelkanth Chhaya (2014). <i>Harnessing the intangible, collected essays on the work of Balkrishna Doshi</i> , New Delhi, NIASA Council of Architecture.

Assessment	Marks
<b>I.A.</b>	<b>40</b>
<b>Internal Assessment</b>	
	Refer To 'Rule number 6, sub point 6.2.2.'
<b>U.E.</b>	<b>60</b>
<b>University Examination</b>	
	Assignments or portfolios based on entire syllabus as mentioned below.

Assignments	
<b>1</b>	Writing Journals on Theory of design
<b>2</b>	Any one Book review and Any one Architects Biography

## Interior Design II

<b>Subject Code</b>	<b>K8412</b>	<b>Semester -VIII</b>
<b>Credits</b>	<b>04</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
1	In this subject students will apply their skills, knowledge gained in the previous interior design studio for more complex interior design projects with all details of services.
2	The students will also understand the complex interior designing process, specification, various detailing and tentative estimate of to fulfill the needs of client.

<b>Learning Outcomes: Student will be able to</b>	
1	Acquire knowledge of various high end interior building materials their specification its cost and its application in interior design project.
2	Design complex Interior spaces with services, construction details with cost consideration to suit its function and aesthetics in a Systematic cad presentation with all detail drawings.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	Introduction to the field of interior design with respect to services.
<b>Unit II</b>	Market survey of application of various finishing interior materials and techniques.
<b>Unit III</b>	Detailed Case study of a medium scale interior project. ( 150 sq.m to 250 sq.m.)
<b>Unit IV</b>	A detailed design of the medium scale interior projects showing all necessary services, specifications and costing. Carpet Area ( 150 sq.m to 250 sq.m.)

<b>Learning Resources</b>	
<b>Text Books:</b>	Office Spaces – Crane Dixon, Architectural Data Sheets
<b>Reference Books:</b>	Corporate Interiors – Kogek Yee, Office Interiors – Alan Phillips
<b>Websites:</b>	www.quadrille.co.in. www.theaid.in.
<b>Journals:</b>	Architectural Digest, Elle Décor, Home and Design, Interior Design etc.

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignment</b>	
<b>1</b>	Report based on Market survey of interior Materials
<b>2</b>	Live Case Study of a completed Interior Project
<b>3</b>	Detailed drawings of the Interior Design project of the following – residential, public, commercial etc with thrust on services, specification and tentative

	estimate etc.
<b>4</b>	Design of the decorative ceiling, paneling, lightings, floor details, toilet details etc for the above projects.
<b>5</b>	Detailed design of two furniture units with specification and construction/ joinery details.

## Urban Planning II

<b>Subject Code</b>	<b>K8413</b>	<b>Semester -VIII</b>
<b>Credits</b>	<b>03</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
1	To introduce students to the advanced concepts of Town and Urban Planning.
2	To understand the planning procedures at various levels of planning.
3	To understand the holistic relationship of planning with various other aspects of physical developments.
4	To develop an urban vocabulary required to understand urban form and public spaces

<b>Learning Outcomes: Student will be able to</b>	
1	Understand the interrelated concepts of Town and Urban Planning
2	Exposure to the various laws and rules for planning and balanced development.
3	Understand the effects of various policies on physical development.
4	Understand urban form and space

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Introduction to the process of formulation and implementation of :</b> Regional Plan, Development Plan and Town Planning Schemes. Study of various Planning agencies and their role in planning like HUDCO, CIDCO, HDFC, MHADA etc.
<b>Unit II</b>	Role and relevance of Transport Planning, Landscape and Environmental issues, Heritage etc in Urban Planning.
<b>Unit III</b>	<b>Introduction to various planning tools.</b> Methodology of conducting town planning surveys, types of surveys (physical, social, and economical, Aesthetic Surveys etc) and analysis of data collected.
<b>Unit IV</b>	<b>Urbanization and Its Impacts.</b> Introduction to Study of Contemporary Issues of Urban Development and concerns in the City.
<b>Unit V</b>	<b>Policies and legal framework for contemporary planning development:</b> National Missions, Schemes for funding various planning activities, infrastructure development schemes like JNNURM, HRIDAY, SMART CITY etc.
<b>Unit VI</b>	<b>Introduction to urban design terminologies and definitions</b> To understand the urban form derived from theories as well as empirical evidence.

<b>Learning Resources</b>	
<b>Text Books:</b>	6. Kevin Lynch (1960) <i>The Image of the City</i> USA, MIT press. 7. Lewis Mumford (1972) <i>The City in History: Its Origins, Its Transformations, and Its Prospects</i> .USA, Harcourt, Inc. 8. Peter Geoffrey Hall (1996 Updated Edition) <i>Cities of Tomorrow: An Intellectual History of Urban Planning and Design in the Twentieth Century</i> USA, Blackwell publishing. 9. Anthony J. Catanese, James C. Snyder (2014) <i>Urban Planning</i> . New Delhi, McGrawHill Education Private Limited.

<b>Journals:</b>	Cities: The International Journal of Urban Policy and Planning Urban Policy and Research Urban Studies
<b>Assessment</b>	
<b>I.A.</b>	<b>Internal Assessment</b>
	Refer To 'Rule number 6, sub point 6.2.2.'
<b>U.E.</b>	<b>University Examination</b>
	Theory paper
	<b>Marks</b>
	<b>40</b>
	<b>60</b>

## Research Skills

<b>Subject Code</b>	<b>K8414</b>	<b>Semester -VIII</b>
<b>Credits</b>	<b>04</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To inculcate in students methodical process to approach an architectural design project holistically.
<b>2</b>	To develop research skills necessary to provide approach and directions in design of architectural project.
<b>3</b>	To develop a systematic approach of research for application in Architectural Design Project.
<b>4</b>	To develop skill sets of writing research paper

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Develop primary skills to conduct research in Architecture
<b>2</b>	Demonstrate Visual Research Methods.
<b>3</b>	Demonstrate acquired research skills through the topic selected for Architectural Design Project.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	Introduction to Research Skills , Types of research , Methods of data collection , Ethics ,and Referencing
<b>Unit II</b>	Visual Research Methods in Design Imageability Environmental mapping – Direct observation and direct communication Visual representation Environmental behaviour
<b>Unit III</b>	Selection of topic for Architectural Design project giving overview of introduction, background, context, relevance, scope and limitation, methodology and identification of case studies.
<b>Unit IV</b>	Demonstration of Case study and its analysis (Minimum two Book /live case studies) to understand the Project. Literature review minimum three research papers relevant to the research project
<b>Unit V</b>	Research Paper Writing

<b>Learning Resources</b>	
<b>Text Books:</b>	
<b>Reference Books:</b>	1. Robert Bechtel et al (eds). Methods in Environmental and Behavioral Research, NY:VanNostrand Reinhold, 1987. 2. Gary T Moore et al. Environmental Design Research Directions: Process and Prospect. New York: Preager Publishers, 1985. 3. Henry Sanoff. Visual Research Methods in Design. New York: Van Nostrand Reinhold, 1991
<b>Websites:</b>	
<b>Journals:</b>	

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Synopsis of Architectural design project.
<b>2</b>	Literature review.
<b>3</b>	Case studies and its analysis (minimum two).
<b>4</b>	Research Paper Writing.
<b>5</b>	Seminar presentation of components level research areas based on selected Architectural Design Project .

## Elective- VI

<b>Subject Code</b>	<b>K8415</b>	<b>Semester IV</b>
<b>Credits</b>	<b>2</b>	<b>Subject type-Elective</b>

<b>Learning Objectives</b>	
1	To give students an opportunity to develop their skills in a subject they may opt for further studio.
2	To study the selected topic in depth of a particular subject that student is interested.
3	To prepare a technical base for students through in depth study.

<b>Learning Outcomes: Student will be able to</b>	
1	Engage in systematic self study of topics they feel interested in.

<b>Students can select one elective from the following list</b>	
<b>1</b>	<p><b>Real Estate Management</b></p> <ul style="list-style-type: none"> <li>- Real estate development: Fundamental concepts and techniques, recognizing institutional and entrepreneurial elements, issues encountered in various phases of development like site evaluation and land procurement, development team assembly,</li> <li>-market study and development scheme, construction &amp; project management, project marketing and hand-over of completed projects.</li> <li>-Development &amp; project financing: Project Feasibility, Development Financing, Asset Disposal and Redevelopment Options,</li> <li>-Analyses of Development Sites and Case Studies, integrated case study on a specific development project, which requires reviewing, analyzing and resolving the problems or strategic issues.</li> <li>- Urban policy &amp; real estate markets : Impact of Government Regulations and Public Policies on Real Estate Markets, include urban land rent and location theories, land use structures, community and neighbourhood dynamics, degeneration and renewal in urban dynamics, private-public participation, government policies on 95 public and private housing, and urban fiscal policy including property taxation, local government finance.</li> <li>- Corporate real estate asset management: Strategic plans to align real estate needs with corporate business plans;</li> <li>-Performance measurement techniques to identify asset acquisition or disposal; methods for enhancing value through alternative uses, efficient space utilization or improving user satisfaction.</li> <li>- Commercial real estate appraisals: Determination of the capitalization rates across different types of properties;-Appraisal of freehold and leasehold interests;</li> <li>-Critical analysis of the valuation approaches adopted for securitized real estate; Asset pricing models; investment flexibility and future redevelopment opportunities.</li> </ul>
<b>2</b>	<p><b>Architectural Conservation</b></p> <ul style="list-style-type: none"> <li>- History and theory of conservation</li> <li>- Philosophy of conservation</li> </ul>

	<ul style="list-style-type: none"> <li>- Pioneers of conservation</li> <li>- Definition of conservation, preservation, restoration, reconstruction ,Adoption</li> <li>- Broad concepts of terms such as Reuse, Rehabilitation, Revitalization, Regeneration, Up gradation etc.</li> <li>- Value and ethics</li> <li>- Traditional building materials and their decaying characteristics. Environmental influences: thermal effect, corrosion and oxidation.</li> <li>- Preparation of Inspection reports.</li> <li>- Cultural Heritage</li> <li>- Conservation methods</li> <li>- Classifications</li> <li>- Management of historic sites</li> <li>- Studies of various charters.</li> </ul> <p>Role of INTACH,UNESCO, ECOMOS and other organizations</p>
<b>3</b>	<p><b>Digital architecture</b> (can be a combination of seminar and workshop - project and practice based course)</p> <ul style="list-style-type: none"> <li>-Compare approaches of design processes - conventional process focused on architects' style and contemporary process influences by digital tools</li> <li>-Introduce the new tools of design, production and fabrication in architecture that affect various stages of architectural production, from conception and visualization to development and manufacturing</li> <li>-Provide opportunities to integrate the use of the computer for design, production, and presentation with the help of individual projects</li> <li>-Provide understanding of software packages, and modeling techniques</li> </ul>
<b>4</b>	<p><b>Architectural Software</b></p> <ul style="list-style-type: none"> <li>-Provide hands-on exposure to various software packages to work on design, modelling, and simulations used in architectural design</li> <li>-Use of various (relevant at the time) 2D drafting and 3D modeling tools for rendering and architectural presentation</li> <li>-Use of various software packages for analysing building systems and services performance (this can be for passive and/or active measures relevant to the semester focus)</li> <li>-Options</li> </ul> <p>Advanced AutoCAD Advanced SketchUp with various plugins Revit</p>

Assessment		Marks
<b>I.A.</b>	<b>Internal Assessment</b>	<b>100</b>
	Refer To 'Rule number 6, sub point 6.2.2.'	
<b>Note</b>	<b>There is no 'University Examination' for this subjects</b>	

## **Semester – IX**

## Practical Training

<b>Subject Code</b>	<b>K8501</b>	<b>Semester -IX</b>
<b>Credits</b>	<b>30</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To acquaint students with prevalent purview and procedure of architectural and allied practice
<b>2</b>	To invite practitioners participation in the education of the 'would-be entrants' to the profession for up datedness of information and orientation
<b>3</b>	To boost the dialogue between 'practice' and 'academics' of architecture for progressive learning of a student

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Develop skills in professional behavior
<b>2</b>	Explore different facets of office management including preparation of working drawings, detailed drawings, perspectives, study of filing systems of documentation, preparation of tender documents etc.
<b>3</b>	Gain site experience in respect of supervision of construction activity, observation, layout on site, taking the measurements and recordings.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<p><b>Indoor activities, office administration</b></p> <ul style="list-style-type: none"> <li>- Routine correspondence with client's local authorities, contractors and other agencies dealing in building industries</li> <li>- Systematic filing and registering office correspondence for easy re-reference.</li> <li>- Regular maintenance of work-diaries with notes on principal's instructions, interviews with various agencies, indoor and/or outdoor work and time-spent</li> <li>- Systematic filing and indexing of technical catalogues and price lists for handy reference.</li> <li>- Systematic ordering and use of office library</li> </ul>
<b>UnitII</b>	<p><b>Indoor activities, drawing and designing</b></p> <ul style="list-style-type: none"> <li>- Making of preliminary designs and drawings accountably by requisite prior study, research, and case studies.</li> <li>- Preparing 'Presentation' 'statutory ', 'working' and 'detailed' drawings of customary contents and format by understanding their propriety and logic</li> <li>- Reading and making use of 'Contour Plans' while at VI &amp; VII above</li> <li>- Dependably efficient handling of auxiliary routine operations like taking off and codified rendering of prints and electronic and/or computerized communication, drafting, copying etc</li> <li>- Briefing with various technical consultants and co-coordinating their drawings.</li> <li>- Preparation of 'study' and 'Presentation' models of buildings and/or development lay-outs in different levels and chromatic material-textures</li> </ul>
<b>Unit III</b>	<p><b>Outdoor activities:</b></p> <ul style="list-style-type: none"> <li>- Attending routine meetings with clients, local authorities, contractors and other trade representatives</li> <li>- Checking of lining-out of buildings on site</li> <li>- Systematic surveying of sites and/or existing buildings of moderate size and complexity in conventionally comprehensive format</li> <li>- Architecturally monitoring the work-progress on site/s through periodic</li> </ul>

	supervisions, instructions and reports thereon
--	--

<b>Learning Resources</b>	
<b>Reference</b>	<b>Architects Drawings</b>

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment-</b> Refer To ‘Rule number 6, sub point 6.2.2.’	<b>40</b>
<b>1</b>	<b>The Log-Book</b> duly filled in and authenticated by the said responsible registered architect- member of the employer-organization. (one member-signatory throughout Log-Book)	<b>15</b>
	<b>Diary-</b> The day to day hand-written preformed Work-Diary maintained by the student during the period of ‘training’ (as stipulated hereinabove) and certified by the said responsible registered architect-member of the employer-organization- one and the same members signatory who authenticates the Log-Book. (preferably initialed per day)	15
	<b>Work report-</b> The manually laboured ‘Work-Report’ structured as herein after prescribed under ‘Term work’ and authenticated too only by the said responsible registered architect-member of the employer organization. (One member-signatory who certifies Log-Book and Work-Diary).	10
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
	Portfolios consisting of drawings prepared by the student as intern in the office

<b>Details of training</b>	<p>-The practical training of minimum duration of 15 to 18 working weeks (90 work days) shall be carried out in the office of an architect or an organization Operating in an allied field of practice or research, duly approved by the institution, under mentorship of an architect having experience of at least 5 years.</p> <p>-Training in Foreign Country shall be done under the Registered Architect of that Country and to be approved and monitored by the Head of the Institution.</p>
----------------------------	---

## **Semester – X**

## Architectural Design Project

<b>Subject Code</b>	<b>K8502</b>	<b>Semester-X</b>
<b>Credits</b>	<b>16</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To inculcate in the students methodological process to approach an architectural project holistically.
<b>2</b>	To prepare students to handle large scale complex architectural projects individually.

<b>Learning Outcomes: student will be able to</b>	
<b>1</b>	Include intensive study of relevant literature, case studies, climatology and analysis of problems concerned with development of functional organisation of space form and structure.
<b>2</b>	Study based on correlation and interpretation of the social, economic and physical data.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	The architectural project should consist of 2 parts: A. Technical Report: well documented report consisting of hypothesis formulation, data acquisition, verification, and analysis by following qualitative and quantitative research methods. B. Design Solution: Self explanatory drawings, covering various aspects of construction, function, technology, services, and site planning etc. few suggested buildings types are institutional projects, civic amenities, commercial, industrial, sports and recreation, administrative, transportation facilities, housing, specialized building, etc.
<b>Unit II</b>	<b>Technical report:</b> - A hard bound copy of original report shall be submitted, which will be certified and signed by the college authorities as authentication of the work and by the guide who has guided the work - Size: Project Report size A4 Sized '120 Mm x 297 mm portrait with embossed title necessarily on the spine and front page. - Total Pages: There Shall Be Maximum 50 Pages with double side printing excluding drawings. - Printing: Font type like Arial/ Times New Roman With 12-point size shall be used for regular typing with 15- point size shall be used for captions. The typing shall be done with 1.5 lines spacing throughout. - The presentation copy shall be necessarily a hard bound copy. Number of copies shall be as prescribed by the college. (1 copy for the student, 1 original copy for the college library and 1 soft copy on a CD.)
<b>Unit III</b>	<b>Design solution:</b> Graphically presented design solution with minimum 5000 Sq.M Built up area shall be in form of a drawing portfolio. It shall consist sufficient number of architectural drawings (manually drawn / computerized) with models, etc. Since the architectural project is the culmination of five years of learning in various aspects of architecture, it is expected that student demonstrates an ability of holistic and comprehensive thinking in the areas of, - Site Planning - Structural considerations

	<ul style="list-style-type: none"> <li>- Space Designing</li> <li>- Landscape Design</li> <li>- Building Services</li> <li>- Climate Responsive, Energy Efficient and Exhibiting Qualities of sustainable architecture.</li> <li>- Architectural Detailing.</li> </ul> <p>The portfolio will consist of drawings (minimum of 10 and maximum of 15) sufficiently in detail to demonstrate consideration given to above mentioned attributes. The emphasis shall be given to prepare self-explanatory drawings.</p>
--	---

**Learning Resources:** As required by individual project.

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	The Internal Assessment of “Architectural Project shall be carried out stage wise as decided by the subject Coordinator for the year which shall be announced to the students at the beginning of the semester.	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	The final assessment in the examination shall be done by both internal and external examiners in which the student will display his/her work and answer all the queries raised by the examiner.	

## Capstone Project

<b>Subject Code</b>	<b>K8503</b>	<b>Semester -X</b>
<b>Credits</b>	<b>06</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To study interrelationship of all subjects that a student has learned in the curriculum of architectural studies.
<b>2</b>	To understand the architecture as a “craft”.

<b>Learning Outcomes; Student will be able to</b>	
<b>1</b>	Develop competence in transforming architectural drawing to professional working document
<b>2</b>	Prepare documents of building design project minimum 500 Sq.M. such as Presentation drawings, Working drawings, Specifications, Quantities, Estimates, and Tender document.

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	Preparation of working drawing, municipal drawing of the above
<b>Unit II</b>	Preparation of Specifications and Bill of Quantities (BOQ)
<b>Unit III</b>	Preparation of Contract Document

<b>Learning Resources</b>	
<b>Text Books:</b>	
<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. Wakita, Osamu A., Richard M. Linde, and Nagy R. Bakhom (2011) "The Professional Practice of Architectural Working Drawings.</li> <li>2. Reference drawings from an ISO certified architect’s office</li> <li>3. Handbook of Professional Documents: 2011, Council of Architecture, New Delhi, India</li> <li>4. Indian Institute of Architects, Handbook</li> </ol>
<b>Websites:</b>	
<b>Journals:</b>	Gawne, Eleanor. "Cataloguing Architectural Drawings." Journal of the Society of Archivists 24.2 (2003): 175-187.

<b>Assessment</b>		<b>Marks</b>
<b>I.A.</b>	<b>Internal Assessment</b>	<b>40</b>
	Refer To ‘Rule number 6, sub point 6.2.2.’	
<b>U.E.</b>	<b>University Examination</b>	<b>60</b>
	Assignments or portfolios based on entire syllabus as mentioned below.	

<b>Assignments</b>	
<b>1</b>	Assignment I: Preparation of Presentation Drawings with rough estimates
<b>2</b>	Assignment II: Preparation of Set of Working Drawings, Specifications, BOQ, and Contract Document

## Professional Practice

<b>Subject Code</b>	<b>K8504</b>	<b>Semester -X</b>
<b>Credits</b>	<b>4</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To introduce aspects of professional conduct, duties and responsibilities, legal rights and procedures of architectural profession.
<b>2</b>	To enable student to acquaint with various responsibilities of professional architect.
<b>3</b>	To acquaint students with documentation and procedures for execution of building work/projects as well as with management aspects

<b>Learning Outcomes</b>	
<b>1</b>	Visualise various working situations that may arise in practice as an architect
<b>2</b>	Manage his/her professional environment towards fair practice
<b>3</b>	Understand ethics of architectural profession
<b>4</b>	Learn to work with various agencies in practice

<b>Units</b>	<b>Contents</b>
<b>Unit I</b>	<b>Laws, Rules and Guidelines related to Architectural Practice</b> <ul style="list-style-type: none"> <li>- Architects Act 1972 - brief overview, introduction to nature, scope and functions of Council of Architecture</li> <li>- Detailed study of professional conduct regulation</li> <li>- Comprehensive architectural services, scale of professional fees as framed by Council of Architecture</li> <li>- Architectural competitions guidelines by Council of Architecture</li> <li>- Architects Liability</li> </ul>
<b>Unit II</b>	<b>Setting up architectural practice as profession, tax liabilities</b> <ul style="list-style-type: none"> <li>- Nature of profession, difference between trade, business and profession</li> <li>- Emerging Role of architectural profession</li> <li>- Accounting and taxation</li> <li>- Organization of architects office and different models of business</li> </ul>
<b>Unit III</b>	<b>Land tenures and contracts</b> <ul style="list-style-type: none"> <li>- Introduction to valuation, land tenures and easements and dilapidations</li> <li>- Architects role in construction contracts</li> </ul>

## Self Study

<b>Subject Code</b>	<b>K8505</b>	<b>Semester -X</b>
<b>Credits</b>	<b>4</b>	<b>Subject type-Core</b>

<b>Learning Objectives</b>	
<b>1</b>	To facilitate the students to learn out of a pool of specialized subjects, which provides extended scope or which enables exposure to cross-disciplinary subjects
<b>2</b>	To facilitate the students to learn cross-disciplinary subjects.

<b>Learning Outcomes</b>	
<b>1</b>	Engage in systematic self study.

<b>Units</b>	<b>Contents</b>
	Under this, the student can select any one subject related the parent course or other than the parent course. The choice of the subject is not restricted. If a student is interested in a subject of a particular discipline he/she has to inform accordingly to the Principal and academic Co-ordinator of that department.

**Learning Resources:** As required by subject.

<b>Assessment</b>		<b>Marks</b>
<b>U.E.</b>	<b>University Examination</b>	<b>100</b>

## **VISION OF BV (DU) UNIVERSITY**

“To be a world class University for Social Transformation through Dynamic Education”

## **MISSION OF BV (DU) UNIVERSITY**

- To provide quality technical education with advanced equipment, qualified faculty members, infrastructure to meet needs of profession and society.
- To provide an environment conducive to innovation, research and entrepreneurial leadership.
- To practice and promote professional ethics, transparency, and accountability for social community, economic and environmental conditions.

## **VISION OF BV (DU) COLLEGE OF ARCHITECTURE PUNE**

“Inculcate Sensitivity towards Sustainable Built Environment through Architectural Education”

## **MISSION OF BV (DU) COLLEGE OF ARCHITECTURE PUNE**

The institution shall strive

- To inculcate knowledge, skills, values and ethics to create ‘**socially responsible**’, ‘**environmentally sensitive**’, ‘**economically conscious**’, architectural professionals.
- To promote innovations and research for sustainable built environment.

## **PROGRAMME: BACHELOR OF ARCHITECTURE (B.ARCH)**

### **Programme Objectives:**

- To develop creative, capable, future ready architectural professionals.
- To create responsible and dedicated individuals who are intellectually mature, emotionally sensitive and self-motivated towards sustainable built environment.
- To orient courses and course content in order to develop holistic learners, for taking up challenging responsibilities in the respective field.
- To offer courses which help the graduates to emerge as competent professionals fully aware of their commitment to the society and nation.

### **Programme Outcomes:**

The graduates will be able to:

- Imbibe the fundamental knowledge of built environment.
- Identify and analyze current architectural issues.
- Create and envision built environment responding to physical, social, cultural, economical and environmental context.
- Communicate effectively in verbal, written and graphical form.
- Use modern architectural tools, technology and software for analysis, design and construction.
- Imbibe ethics and values as learners and professionals.
- Develop research ability and promote experiential learning.
- Function effectively as individual; work cooperatively and responsibly as team.
- Encourage interdisciplinary learning.
- Prepare for professional, societal and environmental challenges.
- Promote managerial, entrepreneur and leadership qualities in profession.

## **SALIENT FEATURES OF SYLLABUS**

- Imparting '**Outcome Based Education**'.
- Included programme outcome, programme specific outcome, course outcome and intended learning outcome.
- Categorisation of courses focusing on development of 'Cognitive', 'Affective' and 'Psychomotor' domains of learning and learners.
- Offered wide range of electives in every semester, which facilitates choice to learners in selecting courses of their own interests. Introduced open electives at First year B.Arch
- Skill enhancement facilitated through professional skill courses as well as open electives.
- Practical training incorporated in VIII semester which helps for students in achieving research ability by providing consecutive courses such as Research projects and Architectural design Project in IX and X semesters respectively.
- Social and environmental awareness through 'Audit Courses'.
- Vertical progression and horizontal integration of courses considering the stage of development of learning.

## RULES FOR FIRST TO FIFTH YEAR B. ARCH

### ❖ Rule No.1: Eligibility for Admission

**Eligibility Criteria:** Students seeking admission to First year of Bachelors Degree Course in Architecture must fulfil the eligibility criteria laid down by Council of Architecture, New Delhi, India and the University as applicable from time to time.

### ❖ Rule No.2: Duration of the course (as per Council of Architecture)

The Architecture course shall be of minimum duration of 5 academic years/ 10 semesters of approximately 15 to 18 working weeks (90 work days)each, inclusive of one semester of approximately 16 working weeks of Practical Training during Semester-VIII in a Professional's office.

### ❖ Rule No.3: Scheme of Assessment

A candidate to be eligible for the degree of Bachelor of Architecture will be required to appear for and pass all examinations as under:

- Semester I Examination in Architecture (First Year Semester-I)
- Semester II Examination in Architecture (First Year Semester-II)
- Semester III Examination in Architecture (Second Year Semester-III)
- Semester IV Examination in Architecture (Second Year Semester-IV)
- Semester V Examination in Architecture (Third Year Semester-V)
- Semester VI Examination in Architecture (Third Year Semester-VI)
- Semester VII Examination in Architecture (Fourth Year Semester-VII)
- Semester VIII Examination in Architecture (Fourth Year Semester-VIII)
- Semester IX Examination in Architecture (Final Year Semester-IX)
- Semester X Examination in Architecture ( Final Year Semester-X)

### ❖ Rule No. 4: Granting of Academic Term

Each semester shall comprise of Eighteen weeks (Minimum 90 working days).

The candidate will be permitted to appear for semester examination only if he/she has,

**-75 % attendance in each course that constitute a head of passing as prescribed by the university.**

- **Satisfactory completion of the sessional work as prescribed in the syllabus.**
- 

**Good conduct:** The Principal/ Director of the institution shall have the right to withhold the student from appearing for examination of a specific course if the above requirements are not fulfilled.

### ❖ Rule No. 5: Progression Requisite

As general rule, a student shall be allowed to keep the next year of study of the course, if he/she has a backlog of not more than “**Six heads of passing**” in the preceding year.

Furthermore,

- A student shall be allowed to get admitted to Second Year B. Arch. course, if he/she has a backlog of not more than “**Six heads of passing**” at First year B. Arch (semester I and II considered together).
- A student shall be allowed to get admitted to Third Year B. Arch course, if he/she has cleared all the heads of passing at First year B.Arch and if he/she has a backlog of not more than “**Six heads of passing**” at Second Year B.Arch (semester III and IV considered together).
- A student shall be allowed to get admitted to Fourth Year B.Arch course, if he/she has cleared all the heads of passing at Second Year B.Arch (Semester III and IV considered together) and if he/she has a backlog of not more than “**Six heads of passing**” at Third Year B.Arch (semester V and VI considered together).
- A student shall be allowed to get admitted to Final Year B.Arch course, if he/she has cleared all the heads of passing at Third Year B. Arch (Semester V and VI considered together), and if he/she has a backlog of not more than “**Six heads of passing**” at fourth Year B.Arch (semester VII and VIII considered together).

## ❖ Rule No 6: Examinations

### 6.1. Conduct of Examinations

The university examinations for all the 10 semesters shall be conducted at the end of each semester by the University.

### 6.2. Pattern of Examination: The evaluation scheme for B.Arch comprises of --

University Examination (UE) -60 marks (for courses having IA and UE both)

Internal Assessment (IA)- 40 marks (for courses having IA and UE both)

Internal Assessment (IA) - 100 marks (for courses having only IA)

**UE and IA will constitute two separate heads of passing.**

#### 6.2.1 University Examination (UE)

- UE will be conducted by the University and will be based on the entire syllabus.
- UE shall be assessed jointly by the internal and external examiners from amongst the panel approved by the University in equal weight-age. An examiner for any of the courses of examinations shall have a minimum of 5 years teaching or 5 years of professional experience in his/her field of study. However, an external examiner for Semester-X Architectural Design Project shall have minimum of 10 years teaching/ professional experience after Council of Architecture registration.

- The nature of assessment will vary depending upon the course and its delivery and whether it is studio-based or theory based. **Refer to detailed syllabus for individual courses.**
- Work done by the student which is assessed for UE i.e Sessional (SS) or Sessional + Oral (SO) will be based on entire syllabus.
- Number of assignments for UE will be minimum **three** and a maximum **five** .
- UE may be undertaken through following suggestive form of assignments (but not restricted to):
  - Portfolio
  - Models
  - Reports

**University Examination (UE) head will constitute ANY ONE of the following:**

**a. Sessional(SS)** : Assessment by internal & external examiner in equal weight-age of the sessional , that is ,work done by the student during the semester and certified by the course teacher.

**b. Sessional + Oral(SO):** Assessment by internal & external examiner in equal weight-age of the sessional ,that is, work done by the student during the semester and certified by the course teacher along with oral of the student is to be conducted (i.e provided that the student appears for UE).

**c. Terminal paper(TP):** Assessment by internal & external examiner in equal weight-age of total maximum marks.(Duration of paper: 2-1/2 hrs for theory paper & 3 hrs. for drawing paper.)

### **6.2.2: Internal Assessment (IA)**

IA will be conducted by the Institution imparting B.Arch course. IA will be done by the teacher teaching the course through a continuous assessment system that is spread through the duration of course and weight-age will be for the sessional , that is, work done by the student during the semester & assessed by the course teacher covering the entire syllabus. The marks assigned for attendance in IA weight-age will be 5(five) only. Number of assignments for IA will be minimum **three** and a maximum **five** .

There will be 15(fifteen) teaching and 3(three) assessment weeks in a semester.

Individual faculty member shall have the flexibility to design the continuous assessment assignments in a manner so as to evaluate student's capabilities across knowledge, skills and attitudes. IA may be undertaken through any or combination of the methods stated below:

The following components can be used-

- Seminar presentation
- Written Test /Open Book
- Reviews
- Essays

Final Draft B.Arch CBCS 2020 Course

- Short answer questions
- Study of best practices /precedent study/field study
- Multiple choice questions/Quiz
- Projects/group projects/Dissertation
- Reflective Practical assignments
- Drawing Portfolios
- Report writings
- Learning logs/diaries
- Hands on workshops and participation

For IA, in case of courses having Terminal paper (TP), it is mandatory to conduct minimum one class- test as a form of assignment.

The faculty shall announce in advance the units based on which continuous assessment shall be conducted. Detailed records of continuous assessment shall be maintained by the teaching faculty and these will be submitted to the institute at the end of the semester.

## ❖ Rule No. 7: Credits

**The total credits for B.Arch degree programme are 296 credits.**

Semester-wise distribution of credits is as follows:

Semester	I	II	III	IV	V	VI	VII	VIII	IX	X
Credits	30	30	30	30	30	30	30	30	28	28

### **7.1. Evaluation criteria for additional credits:**

Credit may also be given for participation in extra-curricular/co-curricular activities. There will be maximum of **10 credits at UG level. 25-30 hours** of extra-curricular/ co-curricular work may be considered as one credit.

Participation in these activities at national/ international/state level can be claimed to earn maximum 10 extra credits which are over and above the minimum number of credits the student has to complete for award of the degree. These credits would be awarded for type of activity undertaken from the joining of course till end of course. Students have to submit the necessary documents at the end of Semester-X.

### **7.2. Award of extra credits per participation**

Sr.No	Type of Activity	Credits Awarded
1	Publication in International/ National Journal(for 1st or 2nd author only)	01
	Publication in Scopus/ Referred Journal	02
2	Participation with presentation in seminar, workshop, conference, etc (national/ international/state/	01

3	Participation in seminar, workshop, conference, etc (national/ international /state/ local)	0.5
4	Sending entry to design competition held at state / national / international level	01
5	Winning award at the contest mentioned above	02
6	Publication of Final year Architectural Design Project in International/ National Journal under guidance & co-	1
7	MOOC Courses with certificate:	
	1. 4 hr/week course	1
	2. 12 hr/week course	3

The student has to accumulate and submit the respective documents to the Principal, to become eligible for getting the credits as mentioned above.

### 7.3. *Non-credit courses -Audit Courses:*

Audit Courses will be conducted in Semester-IV and Semester-VI as per the syllabus. University will conduct examination and it is mandatory for students to pass in these courses. Passing in these courses is by clearance. **Audit courses are Non-credit courses**

### 7.4. *Credit Transfer:*

Credit transfer option may be made available to students on exchange with other universities under MoUs if any after verifying the equivalency for particular courses on case to case basis.

## ❖ **Rule No.8: Criteria for Passing**

To pass in every semester examination and earn minimum grade point , a candidate must obtain minimum 50% marks in each head of passing and 50% marks in aggregate.

### **8.1. For all courses, both UE and IA constitute separate heads of passing.**

- In order to pass in such courses and earn minimum grade point.
- The student must obtain minimum grade point of 6.0(50% marks) at UE and also minimum grade point of 6.0 (50%) marks at IA.
- A student who fails at UE in a course has to reappear only at UE as a backlog candidate and clear the head of passing. Similarly, a student who fails in a course at IA has to reappear only at IA as a backlog candidate and clear the head of passing.

**8.2.**Students with backlog in IA will have to present themselves and their work for continuous assessment throughout the semester for which they intend to appear.

**8.3.**In case of backlog courses, a student can work on same topic of assignment for two more chances. Even after two chances in case he/she fails, the course teacher may change or modify the topic of assignment.

## ❖ Rule No.9: Grading system

The grading system will be 10-point absolute grading system.

### 9.1 Award of Grades (Ten point Grading systems):

The assignment of score obtained by the candidate (out of maximum 100) to a grade may be done as follows:

Range of % of marks	Grade Point	Grade Letter
80<= Marks <100	10	O
70<= Marks <80	9	A+
60<= Marks <70	8	A
55<= Marks <60	7	B+
50<= Marks <55	6	B
Marks <50	0	D

### 9.2 Performance

The performance of a student will be evaluated in terms of two indices, viz

- Semester Grade Point average (SGPA) is calculated separately after every end-semester examination.
- Cumulative Grade point average (CGPA) is calculated across all the semesters at the end of the programme.

### 9.3 Semester Grade point average (SGPA)

SGPA measures the cumulative performance of a learner in all courses in a particular semester. SGPA is calculated by the formula

$$SGPA = \frac{\sum C_k \times GP_K}{\sum C_k}$$

Where  $C_k$  the credit-value is assigned to a course and  $GP_K$  is a GPA obtained by the learner in the course.

The SGPA shall be calculated up to two decimal place accuracy.

### 9.4 Cumulative Grade point average (CGPA)

CGPA measures the cumulative performance of a learner in all courses since his/her enrolment. CGPA is calculated by the formula

$$CGPA = \frac{\sum C_k \times GP_K}{\sum C_k}$$

Where  $C_k$  is the credit-value assigned to a course and  $GP_K$  is a GPA obtained by the learner in the course.

The CGPA shall be calculated up to two decimal place accuracy.

#### ❖ Rule No.10: Award of Degree (B.Arch)

A student who has completed the minimum grade point specified for the programme and obtains required CGPA as prescribed (in the table below) shall be declared to have passed in the programme. The final result will be in terms of letter grade only and is based on the CGPA of all courses studied and passed within the time permissible by the University & as per COA Rules prescribed.

The criteria for the award of **Degree (B.Arch)** are as given in table below:

Range of CGPA	Final Grade	Letter Grade
$9.50 \leq CGPA \leq 10.00$	O	Outstanding
$9.00 \leq CGPA \leq 9.49$	A+	Excellent
$8.00 \leq CGPA \leq 8.99$	A	Very Good
$7.00 \leq CGPA \leq 7.99$	B+	Good
$6.00 \leq CGPA \leq 6.99$	B	Satisfactory
CGPA Below 6.00	F	Fail

#### Degree Requirements:

A candidate who has successfully completed all the Core and Elective courses and obtains required CGPA as prescribed (in the table above), shall be eligible to receive the Degree.

Registration (as an Architect) will only be given by Council of Architecture, New Delhi, India as per the prevailing rules .

University & Council of Architecture, New Delhi may frame additional rules and regulations or modify these rules if needed and once approved they would be binding on the students.

#### ❖ Rule No.11: Introduction of this Curriculum

The new curriculum for the degree course in architecture B.Arch will be introduced from Academic Session 2020 -2021

- First year B.Arch Course from June 2020

Final Draft B.Arch CBCS 2020 Course

- Second year B.Arch Course from June 2021
- Third year B.Arch Course from June 2022
- Fourth year B.Arch Course from June 2023
- Final year B.Arch Course From June 2024

### ❖ Rule No.12: Course Code

Code used for serial numbers of the courses in the structure for B.Arch course shall be as follows :

**12.1. First Character:** will be Faculty and for Engineering Faculty BVDU has assigned K character.

**12.2. Second Character:** will be for BoS to which that course belongs (H for Architecture)

**12.3. Third character:** relates to Department for which course is to be conducted (M for Architecture)

**12.4. Fourth character:** will be for UG or PG course (U for UG in Architecture)

**12.5. Fifth Character:** will stand for Semester No.

Semester Code :

1. First Semester
2. Second Semester
3. Third Semester
4. Fourth Semester
5. Fifth Semester
6. Sixth Semester
7. Seventh Semester
8. Eighth Semester
9. Ninth Semester
10. Tenth semester

**12.6. Sixth character:** will be serial no. of course in that semester structure from 1 to 9.

### ❖ Rule No.13: Maximum period for duration of course

Students have to qualify for a degree within the period prescribed by the University Grants Commission. If the student could not, he/she will be allowed two more years beyond prescribed period. In exceptional cases, further extension of one more year, may be considered by the University. University & Council of Architecture, New Delhi may frame additional rules and regulations or modify these rules if needed and once approved they would be binding on the students.

In case a candidate is not able to complete the course in the prescribed duration, the university or institution may provide an exit option for the candidate if has completed and earned all credits for the first three years of study.

## STRUCTURE OF B.ARCH DEGREE PROGRAMME

Structure of B.Arch degree programme is proposed to be implemented from academic year 2020-21, to provide students centric educational philosophy.

### A. Course Categories:

Under CBCS, the degree programme will consist of the following categories of courses, in the framework of council of Architecture:

1. Professional Core Courses (PC)
2. Building Science and Applied Engineering (BS& AE)
3. Enhancement Course
4. Skill Enhancement Courses (SEC)
5. Professional Ability Enhancement Courses (PAEC)
6. Elective Courses
  - a. Open Electives (OE)
  - b. Professional elective (PE)

In addition, a student should satisfactorily complete Audit courses (AC) minimum 2 Nos prescribed in the curriculum. Audit courses are non credit courses.

#### A.1. Compulsory courses consisting of

- a. **Professional Core (PC)** ) courses introducing the students the foundation of architectural topics
- b. **Building Science and Applied Engineering (BS& AE)** courses informs the Professional Core courses
- c. **Skill Enhancement (SEC)** Courses nurtures skill of the
- d. **Professional Ability Enhancement (PAEC)** Courses

**A.2. Elective Course** enables students to take up a course of their own interest and facilitates students a freedom in selecting courses.

- a. **Open Elective** Courses enables an exposure to some other discipline
- b. **Professional Elective** Courses supportive to the core discipline of the study or provides an extended scope; may be very specific; specialized; advanced.

#### A.3. Audit Course courses consisting of

- a. Disaster Management
- b. Environmental Studies

### B. Credits:

Credits are the weightages are assigned to the courses based on the following general pattern:

- |   |          |
|---|----------|
| 1. lecture period   | 1 credit |
| 2. Periods Lab/Workshop/ Tutorial                             | 1 credit |
| 3. Period of Design/ Construction/ Practical Training/ Thesis | 1 credit |

**B.1.**The curriculum for B. Arch. Programme is designed to have a minimum of 296 credits + 2Non CGPA credits distributed across ten semesters of study for the award of degree.

**B.2.**A student must earn a minimum number of credits under each category as shown in Table 1 and also a minimum total of credits (296 credits + 2 Non CGPA courses) for the award of B. Arch degree.

**Table1: Distribution of credits**

No.	Category	Code	Credits	Percentage
1	Professional Core	PC	149	50.34%
2	Building Science and Applied Engineering	BSAE	60	20.27%
3	Skill Enhancement Course	SEC	17	05.74%
4	Professional Ability Enhancement Courses	PAEC	34	11.49%
5	Open Elective	OE	10	03.38%
6	Professional Electives	PE	26	8.78%
	<b>Total Credits</b>		296	100.00%
		NON CGPA		
	Audit courses		----	---

## Structure & Examination Pattern of First Year B.Arch

## LIST OF ELECTIVES

Following is the list of electives under various streams for each semester to facilitate choice to learners in selecting courses of their own interest. However, the list given is only suggestive and can expand or modify it for enrichment of the course. The college will offer electives based upon the availability of resources in the college, provided minimum 20 students choose the particular elective. However colleges have to ensure that the student does not repeat a particular elective. Wide range of 'Open Electives are offered for Sem I , II & VIII as below. Students have to choose any one from the list.

Semesters	Open Electives
<b>Sem-I</b>	Physical Education and Yoga
	Performing Arts
	Culinary Art
	Stress Management
	Community Engagement
	Pottery
<b>Sem-II</b>	Architectural Photography
	Personality development and Communication Skills
	Foreign Languages
	Calligraphy Techniques
	Ayurveda as a lifestyle
	Cyber Security
<b>Sem.VIII</b>	Certificate Course
	Study in their interest area

For Sem. VIII students can take up certificate course such as MOOC, SWAYAM etc. It could be online course, or conduct study in their interest area.

From Sem-III to Sem X, students can choose electives as per structure of the syllabus from any of the three streams (Professional Electives) mentioned in the table below. A student may adhere to a particular stream of elective of his/her choice and nurture his/her area of interest and develop his/her expertise across semesters. In the semesters where two electives are offered per semester, students have to choose them from two different streams.

<b>Semesters</b>	<b>Design</b>	<b>Technology and Management</b>	<b>Allied (Art, legalities, culture, environment, etc)</b>
Sem-III	Vernacular Architecture	Alternative Building Materials and	Sketching
	Theory of Design	Presentation Techniques in Architecture	Horticulture
Sem-IV	Climate Responsive Building Design	Modular Co-ordination	Visual Communication
	Vastu Shastra	Glass in Architecture	Study of Iconography in Temples
	Graphic Design	Sustainable Water Management	Introduction to Indology
Sem-V	Universal Design	Building Automation	Rural development
	Light in Architecture	Sustainable Waste Management	Architectural Journalism
	Water in Architecture	Cost Effective Construction	Ekistics
Sem-VI	Furniture Design	Auditorium Acoustics and Services	Affordable Housing
	Gendered Spaces	Fenestrations in Buildings	Building Economics
	Architects and Their Philosophies	Facility Management	Introduction to Archaeology
Sem-VII	Product Design	Long Span Structures	Gender in Architecture
	Architectural Conservation	Disaster Resistance Structures	Behaviour Psychology
	Healthcare Design	Pre-Fabricated and Pre-Stressed Structures	Ergonomics
	Critical Thinking of Modern Architecture	Steel Structures	Housing Laws and Policies
Sem-IX	Set Design	Office Management	Study of Cities
	Hospitality Design	Real Estate Management	Intellectual Property Rights
	Urban Design	Fire Fighting Systems in Buildings	Art in Architecture
	Landscape Urbanism	Pneumatic Structures	Urban Infrastructure Planning
Sem-X	Digital Architecture	Construction Management	Cultural Landscapes
	Industrial Design	Intelligent Building Systems	Geographic Information System
	Modular Furniture Design	Valuation	Legalities in Architectural Profession
	Specialized Architecture(Defence/	Specialized Services in Buildings	Green Building Rating Systems

## **GUIDELINES FOR PAPER-SETTING SYLLABUS CBCS-2020**

1. Question paper to cover questions from entire syllabus.
2. All UE theory papers are for maximum 60 marks.
3. Duration:
  - a. 2&1/2 hrs. for writing papers
  - b. 3hrs. for drawing papers.
4. There will be Two sections of max. marks 30 each.
  - a. Section-I from Units-I,II& III of syllabus
  - b. Section-II from Units-IV,V& VI of syllabus
5. There will be Four questions in each section of 10 marks each.
6. Maximum marks for each question will be in whole numbers & not in fractions.
7. In each Section following pattern will be followed:

Section –I

  - a. Question no. 1 is compulsory
  - b. Attempt any Two questions out of Question no. 2,3,4.

Section –II

  - a. Question no. 5 is compulsory
  - b. Attempt any Two questions out of Question no. 6,7,8.
8. In each section 20% marks will be assigned for Analytical questions i.e in each section out of 30 marks 6 marks are assigned for Analytical component. This component will be in compulsory question i.e Question no.1 and Question no.5.

## **SEMESTER I**

## First Year B Arch.

## Architectural Design-I

Course Code:KHMU11	Course Category: Professional Core		Semester: I
Credits :	6	Internal Assessment	40 Marks
Lectures per week	2	Terminal Paper	-
Studio Projects per week	2	Sessional Oral (SO	60marks
Workshops or studio exercises / week	2	Sessionals (SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	108Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	90 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	18 Hours

### Course Objectives:

1. To apply knowledge gained in other subjects and present them in graphic form using manual medium.
2. To imbibe the importance of pre-study in design process
3. To provide knowledge and understanding of design with special attention to design fundamentals and orientation

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Define</b> anthropometry and <b>recognize</b> the importance of cardinal directions in design.
2.	Understanding	<b>Comprehend</b> design fundamentals in relation to space design.
3.	Applying	<b>Develop</b> visualization of liveable spaces by understanding relationship between the activities and spaces through case studies and site visits.
4.	Analyzing	<b>Analyze</b> the aspects related to function, space, structure, and aesthetics
5.	Evaluating	<b>Relate</b> knowledge in the domain of fundamentals of design
6.	Creating	<b>Design</b> a single activity space and <b>create</b> final project and model

**Course Contents:**

<b>Units</b>	<b>Contents of The Course</b>	<b>Hours</b>
Unit -I	<b>Study of Design Fundamentals</b> <ul style="list-style-type: none"> <li>- Study of anthropometry, ( study of basic human activities in Indian and Global context)</li> <li>- Study of function and circulation (Relationship between function and space)</li> </ul>	12
Unit -II	<b>Study of orientation of buildings</b> <ul style="list-style-type: none"> <li>- Study of cardinal and ordinal directions</li> <li>- Study of building orientation with respect to basics of sun and wind</li> <li>- Understanding the preferred/ non preferred, favorable/ non favorable orientation with respect to cardinal directions and climate</li> </ul>	12
Unit -III	<b>Pre-study: Learning from primary and secondary resources</b> <ul style="list-style-type: none"> <li>- Case-studies and site visits</li> <li>- Books, reports, articles</li> <li>- Films and documentaries</li> </ul>	24
Unit-IV	<b>Architectural Design</b> <ul style="list-style-type: none"> <li>- Single activity architectural design project (approximately 50 sqm.), with application of the learning's from study of design fundamentals, study of cardinal directions, climate, and the pre-study.</li> </ul>	30
Unit-V	<b>3-D models</b> <ul style="list-style-type: none"> <li>- Study models</li> <li>- Physical model of the final design proposal with site development</li> </ul>	12
<b>Total Contact Hours</b>		<b>90</b>

## First Year B Arch.

## Building Construction and Material-I

CourseCode:KHMU13	Course Category: BSAE		Semester: I
Credits :	6	Internal Assessment	40 Marks
Lectures per week	2	Terminal Paper	-
Studio Projects per week	-	Sessional Oral (SO	60marks
Workshops or studio exercises / week	4	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	108Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	90 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	18 Hours

### Course Objectives:

1. To enable students to understand materials, principles and methods of construction
2. To cover the breadth of students including components and systems of buildings

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Define</b> various components of building and <b>know</b> technical terms, different materials available for masonry work
2.	Understanding	<b>Understand</b> the concept of load transmission and <b>distinguish</b> load bearing and framed structure
3.	Understanding	<b>Describe</b> purpose ,methods and types of finishes
4.	Applying	<b>Apply</b> knowledge gained in Theory of Structure and <b>develop</b> understanding about basic principles of construction method
5.	Analyzing	<b>Analyze</b> different materials in terms of properties, types, application in design ,market forms available ,advantages and disadvantages etc
6.	Evaluating	<b>Compare</b> different types of materials in masonry work
7.	Creating	<b>Design</b> masonry element and entrance gate applying alternative materials and methods of construction
8.	Creating	<b>Create</b> drawings, models and <b>relate</b> structural behaviourism and construction techniques

**Course Contents:**

<b>Units</b>	<b>Contents of The Course</b>	<b>Hours</b>
Unit -I	<p><b>Introduction</b> Introduction to building construction as course and its relevance to Architectural design.</p> <ul style="list-style-type: none"> <li>- Introduction to various components of building from foundation to roof.</li> <li>- Structural elements of load bearing and framed structure and its differences</li> </ul>	7
Unit -II	<p><b>Materials</b></p> <ul style="list-style-type: none"> <li>- Properties, sustainability aspects, various types, cost, application in buildings, defects and strengths, market survey of bricks , stones ,cement, sand, aggregates, mortar and lime.</li> </ul>	7
Unit -III	<p><b>Finishes</b></p> <ul style="list-style-type: none"> <li>- Pointing: Purpose and types</li> <li>- Plastering: Method and types i.e. neeru faced, sand faced, rough cast, pebble finish and all proprietary types.</li> </ul> <p>Innovative materials used for pointing and plastering</p>	7
Unit-IV	<p><b>Foundation</b></p> <ul style="list-style-type: none"> <li>- Excavation: purpose and types, plinth formation</li> <li>- Introduction to shallow foundation</li> <li>- Strip foundation for a load bearing structure in stone and brick upto plinth level including plinth formation</li> <li>- Foundation for brick piers, entrance steps, compound walls.</li> </ul>	21
Unit-V	<p><b>Masonry</b></p> <ul style="list-style-type: none"> <li>- Fundamentals, principles of load bearing construction for medium rise structures using brick, stone, concrete blocks, solid blocks, hollow blocks, cavity blocks etc.</li> <li>- Introduction to various types of brick masonry.</li> <li>- Bonds: English, Flemish, header, stretcher, garden wall, rat trap and other types.</li> <li>- Junctions: Tee, crossed and right angled</li> <li>- Introduction to stone masonry and its types : dry rubble, uncoursed rubble, random rubble, squared, polygonal, etc.</li> <li>- Composite masonry</li> </ul>	31
Unit-VI	<p><b>Entrance gate and Fencing</b></p> <ul style="list-style-type: none"> <li>- Entrance gate - Constructional details of entrance gate in a compound wall of following types: Sliding Gate with floor channel, Sidehung , side hung with wicket gate.</li> <li>- Fencing - Construction in different materials like Barbed wire, Chain link, Wire mesh, R.C.C. Grills, M.S. Grills etc.</li> </ul>	17
<b>Total Contact Hours</b>		<b>90</b>

**Learning Resources:**

## First Year B Arch

## Theory of Structures-I

CourseCode:KHMU13	Course Category: BSAE		Semester: I
Credits :	2	Internal Assessment	40 Marks
Lectures per week	1	Terminal Paper	-
Studio Projects per week	-	Sessional Oral (SO	-
Workshops or studio exercises/ week	1	Sessionals(SS)	60marks
No.s of Weeks in Semester	18	No.s of hours in Semester	36 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	30 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	6 Hours

### Course Objectives:

1. To understand the structural concepts and behaviour of structural element

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Recognize</b> the significance of the main structural elements in structural analysis
2.	Understanding	<b>Explain</b> structural concepts, fundamentals of structure and <b>describe</b> of the various loading conditions acting on the structure
3.	Understanding	<b>Illustrate</b> the concept of free body diagram of structures and structural elements
4.	Applying	<b>Calculate</b> self weight, resolution of forces, centre of gravity, moment of inertia, material constants for all types of structures, and stress calculations of structural members having different material properties
5.	Applying	<b>Develop</b> an ability to analyse internal response of structure
6.	Analyzing	<b>Compare</b> response of structural system for various materials
7.	Evaluating	<b>Evaluate</b> the behaviour of structural elements of ancient and modern structures
8.	Creating	<b>Design</b> stepped foundation, wall of uniform thickness and variable thickness and <b>relate</b> principals of this subject to the other subjects such as Building Construction, Architectural design, Architectural drawing and graphics, History of Architecture

**Course Contents:**

<b>Units</b>	<b>Contents of The Course</b>	<b>Hours</b>
Unit -I	<b>Introduction to fundamental concepts of structure:-</b> Introduction to fundamental concepts of Applied Mechanics relevant to structures and characteristics of material like unit weight, elasticity, plasticity, ductility, hardness. Understanding of rigid body, deformable body, force systems, characteristics of forces, transmissibility, types of structures. Concept of tension, compression in structures	04
Unit -II	<b>Resolution of forces :-</b> Types of loads and moment a) calculation of self weight based on density for load bearing elements. b) Resultant of concurrent force system with simple practical examples. c) Concept of moment and resultant of non concurrent force system with simple practical examples	06
Unit -III	<b>Equilibrium of forces acting on beam:-</b> Introduction to i) Equilibrium conditions of force systems. ii) Types of loads - point loads, uniformly distributed load(udl), uniformly varying load(uvl), types of supports (hinge, simple, roller, fixed) , types of beams (simply supported, cantilever, overhanging, fixed, continuous) iii) Support reactions in beams.	06
Unit-IV	<b>Centroid &amp; Centre of Gravity:</b> Importance and application of centroid and centre of gravity for plane sections like Rectangle, circle, semicircle, triangle.iii) Calculation of centroid for shapes-- C,T,L,I	04
Unit-V	<b>Moment of Inertia:</b> Moment of Inertia For standard sections, Parallel axis theorem, Perpendicular axis theorem, Radius of gyration. Moment of Inertia of sections considered for center of gravity (Unit IV).Importance and Application	04
Unit-VI	<b>Simple stress &amp; Strain:-</b> Concept of Simple stress and strain. Calculation of self weight for load bearing elements and downward soil pressure due to the same. Simple numerical based composite (modular ratio) and compound elements. Behaviour of ductile and brittle material in terms of stress and strain curve. Introduction to elastic constants and its significance. Definition of fatigue, creep. Introduction to flinched beams	06
Total Contact Hours		30

## First Year B Arch.

## History of Architecture-I

CourseCode:KHMU14	Course Category: Professional Core		Semester: I
Credits :	3	Internal Assessment	40 Marks
Lectures per week	1	Terminal Paper	60marks
Studio Projects per week	-	Sessional Oral (SO)	-
Workshops or studio exercises / week	2	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	54 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	45 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	9 Hours

### Course Objectives:

1. To learn from the wisdom of traditional knowledge systems.
2. To imbibe the fundamental knowledge of the built environment
3. To study history of architecture as a response to climate, culture and socio political conditions.

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Identify</b> issues with reference to cultures, civilizations and settlements across the world at different periods of time
2.	Remembering	<b>Know</b> technology and its impact on built environment and building for
3.	Understanding	<b>Understand</b> the development of architecture as a process through a holistic approach of contextual and cultural evolution
4.	Understanding	<b>Differentiate</b> between various styles and elements of development and <b>describe</b> prominent historic buildings
5.	Applying and Analyzing	<b>Develop</b> ability to <b>analyze</b> the evolutionary aspects of stage of progress
6.	Evaluating	<b>Compare</b> architectural style across culture of that time with reference to location -geography , Social Systems, Religion ,climate, art etc.
7.	Creating	<b>Derive</b> materials ,construction techniques in design from historic civilization

**Course Contents:**

<b>Units</b>	<b>Contents of The Course</b>	<b>Hours</b>
Unit -I	<p><b>Prehistoric</b>                      Housing forms in the initial phase: Cave shelters- (suggestive examples at Lascaux, Terra Amata etc)                      Community structures: (suggestive examples Menhir , dolmen, gallery and passage graves, Stonehenge, Ggantija Malta etc )</p>	6
Unit -II	<p><b>River Valley Civilizations –Asia</b>                      Introduction to development of the settlements - location, social and cultural aspects, climate, construction techniques, building materials, building typologies and architectural characteristics, settlement principles etc - Yellow River, Indus River</p>	9
Unit-III	<p><b>Vedic Architecture</b>                      Vedic culture and settlement planning layouts, City Planning in later Vedic period and Buildings and construction techniques.  <b>Buddhist Architecture</b>                      Introduction to the Evolution and development of Major typologies like Stambha, Chaitya, Vihara ,Stupa. Development of Chaitya arch(suggestive examples Ashokan Stambhas, Lomas Rishi Cave,The Great Stupa at Sanchi, Chaitya Hall at Karli, Chaitya and Viharas at Verul and Ajanta etc )</p>	7
Unit-IV	<p><b>River Valley Civilizations -Western</b>                      Introduction to development of the settlements - location, social and cultural aspects, climate, construction techniques, building materials, building typologies and architectural characteristics, settlement principles etc - Nile River ,Tigris River</p>	7
Unit-V	<p><b>Greek Civilization</b>                      Introduction to the, Social and cultural Systems, political scenario, History and evolution of Architectural typologies, Characteristics of Buildings, construction technology and elements evolved like Classical Orders, Optical corrections etc.                      (suggestive examples Acropolis, City of Athens Temples, Theatres, Agora, Stoa, Council Halls etc )</p>	8
Unit-VI	<p><b>Roman Civilization</b>                      Introduction of the History, evolution and characteristics Elements of special attributes.                      Introduction to the, Social and cultural Systems, political scenario, History and evolution of Architectural typologies, Characteristics of Buildings, construction technology and elements evolved like Arches, arcuated construction, bridges, aqueducts, etc(suggestive examples</p>	8

	City of Rome ,Temples- Pantheon, Basillica at Trajan, Amphitheatre, Hippodrome, Circus, Palaces-hydrian’s villa , Thermae at Carcalla etc	
Total Contact Hours		45

## Architectural Drawing and Graphics-I

CourseCode:KHMU15	Course Category: Professional Core		Semester: I
Credits :	5	Internal Assessment	40 Marks
Lectures per week	1	Terminal Paper	60marks
Studio Projects per week	-	Sessional Oral (SO)	-
Workshops or studio exercises / week	4	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	90 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	75Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	15 Hours

### Course Objectives:

1. To develop visualization and presentation skills as tools for creative thinking and representation of ideas and concepts
2. To acquire effective communication in graphical form in Architecture
3. To impart basic knowledge and skill to draft a drawing manually.

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Know</b> architectural drawing techniques using drafting tools.
2.	Remembering	<b>Acquire</b> vocabulary and grammar such as scale, annotations, labelling ,dimensioning etc.
3.	Understanding	<b>Understand</b> the concept of orthographic projection, surface development.
4.	Applying	<b>Use</b> freehand techniques for preparing drawings and <b>develop</b> perception and presentation of different forms
5.	Analyzing and Evaluating	<b>Analyze and relate</b> Architectural Drawing Graphics with Architectural Design, Building Construction, Working Drawing etc
6.	Creating	<b>Create</b> conceptual and presentation drawings for various purposes

**Course Contents:**

<b>Units</b>	<b>Contents of The Course</b>	<b>Hours</b>
Unit -I	<b>Introduction to graphic language and its components</b> <ul style="list-style-type: none"> <li>- Introduction to instruments</li> <li>- Line types: meaning and application</li> <li>- Architectural lettering and dimensioning techniques and their role and application in composition of drawings with various examples</li> <li>- Architectural annotations and conventions</li> </ul>	12
Unit -II	<b>Orthographic Projections</b> <ul style="list-style-type: none"> <li>- Geometrical construction, planar geometry</li> <li>- Method of Orthographic projections</li> <li>- Drawing 2-dimensional drawings from 3-dimensional objects</li> </ul>	18
Unit -III	<b>Surface Development</b> <ul style="list-style-type: none"> <li>- Surface Development of various three-dimensional objects</li> </ul>	13
Unit-IV	<b>Study of Graphical Scales</b> <ul style="list-style-type: none"> <li>- Introduction to graphic scale and their applications</li> <li>- Scaled enlargement and reduction of simple objects and site plans of complex shapes</li> <li>- Scaled drawings (plan/s section/s and elevation/s) of complex objects/ simple building of sufficient size to demonstrate use of various scales, conventions and standard annotations</li> </ul>	9
Unit-V	<b>Sketching</b> <ul style="list-style-type: none"> <li>- Introduction to architectural sketching and principles of free hand sketching such as proportions, light and shade: with primary thrust on sketching of building elements and built/un-built environment.</li> </ul>	8
Unit-VI	<b>Sections: from simple geometrical elements to complex architectural elements</b> <ul style="list-style-type: none"> <li>- Graphical and visual communication through sections of geometrical forms along with the understanding of the line weights, material indications, etc.</li> <li>- Graphical and visual communication through sections of architectural elements / building along with the understanding of the line weights, material, indications, etc</li> </ul>	15
<b>Total Contact Hours</b>		<b>75</b>

**Learning Resources:**

1.	F. D K. Ching (2009) Architectural Graphics, New Jersey, John and Wiley and Sons.
2.	Manual of Section, David J. Lewis, Marc Tsurumaki, and Paul Lewis.
3.	Architectural Drawing Course: Tools and Techniques for 2D and 3D Representation, by <i>Mo</i>
4.	N.D.Bhatt (2012) Engineering Drawing, Gujrat, Charotar Publishing House.
5.	Hugh C. Browning (1996) The Principles of Architectural Drafting, New York, Watson-
6.	Calvin F. Schmid, Stanton E. Schmid, (1954) Handbook on Graphic Presentation, New York,
7.	David Littlefield (2012) Matric Handbook, London and New York, Routledge Taylor and
8.	Sleeper R.( 2000)Architectural Graphic Standards, New York, John Wiely and Sons.

## First Year B Arch.

## Workshop

CourseCode:KHMU16	Course Category: Professional Core		Semester: I
Credits :	3	Internal Assessment	40 Marks
Lectures per week	1	Terminal Paper	-
Studio Projects per week	-	Sessional Oral (SO	-
Workshops or studio exercises / week	2	Sessionals(SS)	60
No.s of Weeks in Semester	18	No.s of hours in Semester	54 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	45 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	09 Hours

### Course Objectives:

1. To introduce various types of models at appropriate scales such as site model, study model, block model, finished presentation models
2. To introduce students to various materials, tools and techniques used in making architectural models.
3. To introduce students to various skills such as joinery, cutting, finishing in carpentry, smithy.

### Course Outcomes:

CO No.	Psychomotor levels	On successful completion of course the learner will be able to:
1.	Imitation	<b>Observe</b> the nature and texture of different materials
2.	Manipulation	<b>Replicate</b> forms in drawing by making models
3.	Precision	<b>Choose</b> tools and joinery techniques required for model making
4.	Precision	<b>Integrate</b> two dimensional drawing and three dimensional form
5.	Articulation	<b>Construct</b> or Compose three dimensional forms using different model making materials and equipment in different scale
6.	Naturalisation	<b>Make</b> everyday objects, some building elements ,building forms with a wide variety of available materials and <b>handle</b> simple tools in carpentry

**Course Contents:**

<b>Units</b>	<b>Contents of The Course</b>	<b>Hours</b>
Unit -I	<b>Materials for model making:</b> Introduction to various materials like various types of papers, mount boards, softwood (balsa), cork, clay etc for architectural model making.	6
Unit -II	<b>Tools and techniques in model making</b> Introduction to various tools and techniques cutting, scoring, folding and gluing techniques, using templates, measuring aids, to build surfaces and simple/ solids such as cubes, prism, cylinders, pyramids, cones, spheres etc or interpenetrated forms.	9
Unit-III	<b>Adv. Materials, methods and tools:</b> Using materials such as plastics, films, plaster of paris, clay, acrylic, wax, metals, glass, fabric etc and their moulding, scooping, cutting, joining methods etc	6
Unit -IV	<b>Wood and metal work:</b> Exercises in cutting and joinery with planers, saw, lathe, and jigs; Joinery details in wood, metal, blocks, pipes, plates, etc, composition of basic and complex geometrical forms.	9
Unit-V	<b>Finishing:</b> Exercises in finishing with planers, sander; Finishing surfaces with various protective coats, paints, varnishes, oils etc	9
Unit-VI	<b>Prototyping and advanced modelling:</b> Introduction to model making using machines - explore laser cutting, acid etching, stereo lithography, 3D printing, etc. Introduction to various types of model making for Architectural studies like block model, working models, contour models, site models ,openable models, service models etc.	6
<b>Total Contact Hours</b>		<b>45</b>

**Learning Resources:**

## Basic Design -I

CourseCode:KHMU17	Course Category: Professional Core		Semester: I
Credits :	3	Internal Assessment	40 Marks
Lectures per week	1	Terminal Paper	-
Studio Projects per week	-	Sessional Oral (SO)	60marks
Workshops or studio exercises / week	2	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	54 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	45 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	09 Hours

### Course Objectives:

1. To develop the basic understanding of the fundamentals of design
2. To provide knowledge and understanding of elements and principals of design; its importance

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Know</b> elements of Design
2.	Understanding	<b>Understand</b> effects of scale, the concept of form, space and structure through creative thinking
3.	Applying	<b>Develop</b> lateral thinking <b>and apply</b> the principles of design
4.	Analyzing	<b>Analyse</b> aspects of form, space and aesthetics
5.	Evaluating	<b>Appraise</b> design forms in terms of visual character and <b>critique</b> basic design composition
6.	Creating	<b>Create</b> two dimensional and three dimensional composition with various media

### Course Contents:

Units	Contents of The Course	Hours
Unit -I	<b>Elements of Design:</b> Introduction to: - Different Elements of design - Fundamentals of Design	08

Unit -II	<b>Scale, Proportion:</b> <ul style="list-style-type: none"> <li>- Proportion &amp; scale: Material proportions, structural proportions</li> <li>- Golden Section</li> <li>- Anthropometry</li> </ul> Visual Scale and Human Scale	08
Unit -III	<b>Principles of Design</b> <ul style="list-style-type: none"> <li>- Introduction to Principles of Design</li> <li>- Theory on Lateral Thinking and exercise on generation of alternatives</li> <li>- Explorations of Principles of Design through 2D and 3D compositions</li> </ul>	09
Unit-IV	<b>Volume , Form &amp; Space</b> <ul style="list-style-type: none"> <li>- Properties of Form</li> <li>- Subtractive &amp; additive forms</li> <li>- Degree of enclosure – Planes</li> <li>- Volumetric Study of Spaces – positive and negative spaces</li> </ul>	08
Unit-V	<b>Organization:</b> <ul style="list-style-type: none"> <li>- Organization of Form &amp; Space</li> <li>- Spatial Relationships</li> <li>- Spatial Organizations</li> <li>- Explorations of Organization through 3D compositions</li> </ul>	08
Unit-VI	<b>Indian Aesthetics:</b> Introduction to all art forms including architecture as a holistic sacred domain with reference from Vishudharmottar purana. ·Introduction to Art in India as a way of life, as a ritual, as a socio-cultural expression, and more, e.g. Rangoli, Mehendi, Serving of food, ornamentation, arrangement of puja, and so on.	04
<b>Total Contact Hours</b>		45

## Elective -I

CourseCode:KHMU18	Course Category: Open elective		Semester: I
Credits :	2	Internal Assessment	100 Marks
Lectures per week	1	Terminal Paper	-
Studio Projects per week	-	Sessional Oral (SO	-
Workshops or studio exercises / week	1	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	36 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	30 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	06 Hours

### Course Objectives:

1. To facilitate the students to learn out of a pool of specialized courses, which provides extended scope or which enables exposure to discipline-centric courses as well as cross-disciplinary courses.
2. To encourage interdisciplinary learning and imbibe values as learners
3. To give students an opportunity to develop their attitudes and skills in a subject they may opt for making carrier

### Course Outcomes:

CO No.	Affective levels	On successful completion of course the learner will be able to:
1.	Receiving	<b>Identify and describe</b> the aspects or issues of offered contents
2.	Responding	<b>Report</b> case study
3.	Valuing	<b>Justify</b> their ideas /opinions in relation to contents of elective
4.	Organization	<b>Document and present</b> the data collected in systematic way.
5.	Internalizing	<b>Display</b> a technical base through in depth study

### Course Contents:

Units	Contents of The Course	Hours
	The detail course contents will vary as per options selected for elective and expert teaching the course will frame the contents at the beginning of semester along with objectives, outcomes, references and details for assignments.	
Total Contact Hours		

### Learning Resources:

1.	As per topic chosen
----	---------------------

## **SEMESTER-II**

## First Year B Arch.

## Architectural Design -II

CourseCode:KHMU21	Course Category: Professional Core		Semester: II
Credits :	6	Internal Assessment	40 Marks
Lectures per week	2	Terminal Paper	-
Studio Projects per week	2	Sessional Oral (SO	60 Marks
Workshops or studio exercises / week	2	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	108 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	90 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	18 Hours

### Course Objectives:

1. To make the students familiar with design and the architectural design process as a synthesis of factors such as climate, comfort, land, technology
2. To equip the students with communication and presentation skills
3. To inculcate sensitivity towards environment through climate responsive design

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Represent</b> built/un-built spaces in graphic form
2.	Understanding	<b>Understand</b> the concept of form, space and structure through documentation
3.	Applying	<b>Use</b> isometric, axonometric, and rendering techniques and <b>demonstrate</b> their ideas and observations graphically as well as verbally
4.	Applying	<b>Develop</b> understanding to respond to the climate in order to achieve human comfort
5.	Analyzing	<b>Analyze</b> measured drawing with respect to structure ,form ,material, climate etc.
6.	Creating	<b>Design</b> multi activity space
7.	Creating	<b>Make</b> 3D views of design proposal

**Course Contents:**

Units	Contents of The Course	Hours
Unit -I	<b>Documentation</b> Measured drawing of a well-articulated structure with its surrounding context	18
Unit -II	<b>Pre-study: place, climate, scale, people and their activities</b> - Study of place and climate - Site analysis, activity and/or function analysis (Learning from primary and secondary resources such as case-studies and site visits, books, reports, articles, films and documentaries, etc.)	12
Unit -III	<b>Analysis</b> Analysis and presentation of measured drawing with respect to structure, material, planning, context, climate, geography, resources, form, function, elements of design, aesthetics, etc.	18
Unit-IV	<b>Architectural Design</b> - Context based multi-activity architectural design project (approximately 300 sq. m.)	30
Unit-V	<b>Time bound project</b> - Single-activity architectural design project: this project shall be based on values in architecture (e.g. universal design, etc.)	12
<b>Total Contact Hours</b>		90

**Learning Resources:**

1.	Akiko Busch (1991) <i>The Art of Architectural Models</i> , Hong Kong, Design Press
2.	Ching Francis, D. K. (1999) <i>Visual Dictionary of Architecture</i> , New Jersey, John Willy and Sons

## Building Construction and Materials -II

CourseCode:KHMU22	Course Category: BSAE		Semester: II
Credits :	6	Internal Assessment	40 Marks
Lectures per week	2	Terminal Paper	-
Studio Projects per week	-	Sessional Oral (SO	60 Marks
Workshops or studio exercises / week	4	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	108 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	90 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	18 Hours

### Course Objectives:

1. To enable students to understand materials, principles and methods of construction
2. To introduce timber construction and its elements in detail.

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Know</b> timber as materials in depth and its elements in building construction.
2.	Remembering	<b>Define</b> terms of different timber elements
3.	Understanding	<b>Describe</b> different flooring and roofing materials and understand the concept of spanning for roof element
4.	Applying	<b>Apply</b> appropriate type of timber elements such as door windows, staircase, floor and roof in design considering form..
5.	Analyzing	<b>Classify</b> different timber elements used in construction and <b>compare</b> different types of materials for roofing ,flooring etc
6.	Evaluating	<b>Evaluate</b> suitable joinery for openings
7.	Creating	<b>Summarise</b> knowledge gained in this subject to the architecture design and <b>create</b> drawings and models

**Course Contents:**

<b>Units</b>	<b>Contents of The Course</b>	<b>Hours</b>
Unit -I	<b>Introduction</b> <ul style="list-style-type: none"> <li>· Introduction to timber construction</li> <li>· Properties, strength, defects and preservation of timber.</li> <li>· Various timber joints : widening joints, halved joints, cogged joints, bearing joints, oblique joints, etc.</li> </ul>	7
Unit -II	<b>Materials</b> <ul style="list-style-type: none"> <li>· Mud blocks ,rammed earth blocks</li> <li>· Roofing materials - types, purpose, characteristics, advantages and disadvantages</li> <li>· Flooring and paving - different flooring and paving materials</li> </ul>	7
Unit -III	<b>Timber doors and windows</b> <ul style="list-style-type: none"> <li>· Terminology and construction aspects of doors and windows</li> <li>· Timber doors &amp; Partitions - Design consideration and construction for single and double shutters, partly glazed and partly panelled, fully glazed, fully panelled, flush doors, ledged, braced and battened doors.</li> <li>· Timber windows -Design considerations, principles and construction for sash types-panelled, fixed, partly glazed, fully glazed and louvered.</li> <li>· Timber windows -Types of opening- centrally pivoted, top hung, side hung, casement, bay window and sliding.</li> <li>· Hardwares used for doors and windows</li> </ul>	28
Unit-IV	<b>Timber roofs and trusses</b> <ul style="list-style-type: none"> <li>· Timber roofs - Types of roof construction with respect to slope, span and spanning members</li> <li>· Terminology of sloping roof and members</li> <li>· Need and types of sloping roofs : lean to roof, couple roof, close couple roof and collar roof.</li> <li>· Timber trusses – Principles and considerations of trusses. Forces in truss members. Construction of trusses such as king post, queen post truss, ,mansard roof and trusses for various spans</li> </ul>	28
Unit-V	<b>Timber floors</b> <ul style="list-style-type: none"> <li>· Timber flooring - General idea of timber floors in relation to spans, load transmission</li> <li>· Types :Single joist, double joist, triple joist</li> </ul>	15
Unit-VI	<b>Staircase</b> <ul style="list-style-type: none"> <li>· Design Consideration and components</li> <li>· Types of staircase</li> <li>· Timber staircase</li> </ul>	5
<b>Total Contact Hours</b>		<b>90</b>

**Learning Resources:**

## Theory of Structures -II

CourseCode:KHMU23	Course Category: BSAE		Semester: II
Credits :	2	Internal Assessment	40 Marks
Lectures per week	1	Terminal Paper	-
Studio Projects per week	-	Sessional Oral (SO	-
Workshops or studio exercises / week	1	Sessionals(SS)	60 Marks
No.s of Weeks in Semester	18	No.s of hours in Semester	36 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	30 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	6 Hours

### Course Objectives:

1. To understand the structural concepts and behaviour of structural element
2. To introduces forces acting on members in structures

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Recognize</b> the significance of shear force and Bending moment diagram in structural analysis
2.	Understanding	<b>Categorize</b> the forces acting on members in structural analysis
3.	Applying	<b>Develop</b> an understanding of stresses and strain on members
4.	Analyzing	<b>Analyze</b> the behaviour and response of structural system to various load consideration
5.	Evaluating	<b>Justify</b> the dimensions assigned to structural elements of structure for serviceability and safety criteria
6.	Creating	<b>Calculate</b> the load for various load combinations and nature of load (Dead load, Live load)

### Course Contents:

Units	Contents of The Course	Hours
Unit -I	Introduction to Shear Force Diagram (SFD) and Bending Moment Diagram (BMD) for Simply supported, cantilever, and overhang. Definition of Shear Force (SF), Bending Moment (BM), Sign convention, sagging ,hogging, Point of contra flexure, contra shear, effect of couple on beams	04

Unit -II	Details of Shear Force Diagram (SFD) and Bending Moment Diagram (BMD). Details for simply supported, cantilever, overhang beam for a combination of uniformly distributed load(UDL) and point load.	06
Unit -III	Theory of Simple Bending:- Theory of simple bending and bending stress. Details based on standard section with bending stress distribution diagrams.	06
Unit-IV	Shear Stress of Beam:- Shear stress. Details based on standard section with shear stress distribution diagram. Introduction to shear centre.	06
Unit-V	Slope And Deflection:- slope and deflection in beams based on standard cases (no derivations).	04
Unit-VI	Arches:- Introduction to arches as structural element, two hinged, three hinged and fixed.	04
<b>Total Contact Hours</b>		<b>30</b>

5.	Timoshenko Stephen.(2002) <i>Strength of materials part I. (elementary theory and problems) IIIrd ed.</i> New Delhi, CBS Publishers..Timoshenko Stephen.(2002) <i>Strength of materials part II (elementary theory and problems) IIIrded.</i> NewDelhi,CBS Publishers.

## First Year B Arch.

## History of Architecture -II

CourseCode:KHMU24	Course Category: Professional Core		Semester: II
Credits :	3	Internal Assessment	40 Marks
Lectures per week	1	Terminal Paper	60 Marks
Studio Projects per week	-	Sessional Oral (SO	-
Workshops or studio exercises / week	2	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	54 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	45 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	09 Hours

### Course Objectives:

1. To learn from the wisdom of traditional knowledge systems.
2. To imbibe the fundamental knowledge of the built environment
3. To study history of architecture as a response to climate, culture and socio political conditions.

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Identify</b> issues with reference to cultures, civilizations and settlements across the world at different periods of time
2.	Remembering	<b>Know</b> technology and its impact on built environment and building fo
3.	Understanding	<b>Understand</b> evolution of various styles of art and architecture
4.	Understanding	<b>Differentiate</b> between various styles and elements of development and <b>describe</b> prominent historic buildings
5.	Applying and Analyzing	<b>Develop</b> ability to <b>analyze</b> the evolutionary aspects of stage of progress
6.	Evaluating	<b>Compare</b> architectural style across culture of that time with reference to location -geography , Social Systems, Religion ,climate, art etc.
7.	Evaluating	<b>Appraise</b> structures as a developmental process rather than simply as a product and <b>critique</b> building forms, structure
8.	Creating	<b>Design</b> buildings in historic architectural styles

**Course Contents:**

<b>Units</b>	<b>Contents of The Course</b>	<b>Hours</b>
Unit -I	<p><b>Evolution of -Hindu Temple Architecture</b></p> <p>Evolution of architectural style, principles and major influences on development of form, Spatial organisation, structural development and ornamentation style and other architectural elements during.</p> <ul style="list-style-type: none"> <li>- Gupta period (suggestive examples Temple no 17 , Sanchi, Dasavatara Temple Deogarhetc )</li> <li>- Early and later Chalukyan Temple Development at Aihole , Badami Pattadakal. (suggestive examplesLadkhan and Durga temples-Aihole , Cave temple-Badami, Virupaksha and Papanath temple- Pattadakal, etc)3.</li> <li>- Temple Development by Rashakutas. (suggestive example Kailash Temple Ellora)</li> <li>- Temple Development by Pallava - Rock cut and Structural Temples (suggestive examples Rathas, Rock cut caves, Shore temple at Mamallapuram etc)</li> </ul>	9
Unit -II	<p><b>Introduction to Dravidian style (Development in South India)</b></p> <p>Evolution of architectural style, principles and major influences on development of form, Spatial organisation, structural development and ornamental style and other architectural elements during</p> <ul style="list-style-type: none"> <li>- Hoysala Temple Development.(suggestive example Keshava temple at Somnathpur)</li> <li>- Temple development by Cholas. (suggestive example - Brihadeshwara temple, ThanjavoreEtc</li> <li>- Development of gopuram during Pandya Period.</li> <li>- Vijayanagara Period. (suggestive example -Vitthalaswami temple, Hampi, column orders etc )</li> <li>- Development of Temple cities during Madura period. (suggestive examples - Meenaksi temple atMadurai, Sriranganathaswami temple at srirangametc )</li> </ul>	9
Unit -III	<p><b>Introduction to Nagara style (Development in North India)</b></p> <p>Evolution of architectural style, principles and major influences on development of form, Spatial organisation, structural development and ornamental style and other architectural elements in</p> <ul style="list-style-type: none"> <li>- Orissa -(suggestive examples Mukteshwar Temple, Lingaraja temples at Bhubaneswar, Sun temple at Konark )</li> <li>- Khajuraho- (suggestive examples –Kandariya Mahadeo temple, Khajuraho etc )</li> <li>- Western regions of Gujarat -(suggestive example Sun temple, Modheraetc )</li> <li>- Jain Temple Development in Western India. (suggestive</li> </ul>	9

	examples Vimal Shah at Mount Abu, Chaumukh Temple at Ranakpuretc )	
Unit-IV	<p><b>Early Christian and Byzantine Architecture</b></p> <p>Introduction to the social systems, aspects of Spatial organization, structural development, planning principles and ornamentation elements in the Evolution of Church form.</p> <p>Introduction to the special elements like timber trusses, clerestory, pendentives, dome construction, surface treatment, materials of construction etc. (suggestive examples -St. Peters at Rome (earlier one) Hagia Sophia at Constantinople etc )</p>	6
Unit-V	<p><b>Romanesque</b></p> <p>Introduction to the social systems, aspects of Spatial organization, structural development, planning principles and ornamentation elements in the Evolution of Church form.</p> <p>Introduction to the special elements like Wall passages, raking arcades, triforium gallery, vaulting systems etc(suggestive examples – St. Michelle Pavia, Campus at Pisa etc )</p>	6
Unit-VI	<p><b>Gothic Phase</b></p> <p>Introduction to the Spatial organization, planning principles and ornamentation elements in the Evolution of Church form.</p> <p>Introduction to the special elements like buttresses with Structural innovations, pointed arches, vaulting systems, window traceries, flying buttresses etc.(suggestive examples -Amines Cathedral, Notre dame cathedral, Salisbury cathedral, West Ministers Abbey, castles etc)</p>	6
<b>Total Contact Hours</b>		<b>45</b>

## First Year B Arch.

## Architectural Drawing and Graphics -II

CourseCode:KHMU25	Course Category: Professional Core		Semester: II
Credits :	5	Internal Assessment	40 Marks
Lectures per week	1	Terminal Paper	60 Marks
Studio Projects per week	-	Sessional Oral (SO	-
Workshops or studio exercises / week	4	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	90Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	75 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	15 Hours

### Course Objectives:

1. To introduce various techniques of three-dimensional presentation of simple , complex objects and building elements.
2. To enable the students to understand and express Composite three-dimensional built forms through additive and interpenetrated elements using various graphical projection systems through sections
3. To understand scale proportions in buildings and communication through architectural drawings

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Recognize</b> , three dimensional drawing and its importance in architectural drawing
2.	Understanding	<b>Understand</b> interpenetration of solids and <b>explain</b> concept of isometric, axonometric projections
3.	Applying	<b>Develop</b> understanding of sciography and <b>apply</b> in plan and elevations of design
4.	Analyzing Evaluating	<b>Analyze</b> and <b>relate</b> the graphics content with Architectural Design
5.	Creating	<b>Create</b> 3D views using isometric and axonometric

**Course Contents:**

<b>Units</b>	<b>Contents of The Course</b>	<b>Hours</b>
Unit -I	<b>Advanced orthographic projections</b> <ul style="list-style-type: none"> <li>- To draw and compose composite solids and its orthographic projection</li> <li>- Drawing Plan/s, Section/s, Elevation/s of building elements by using methods of orthographic projection</li> </ul>	15
Unit -II	<b>Three dimensional drawings-I</b> <ul style="list-style-type: none"> <li>- Drawing of isometric, axonometric and oblique views of solid objects and their compositions</li> </ul>	15
Unit-III	<b>Three dimensional drawings - II</b> <ul style="list-style-type: none"> <li>- Drawing of isometric, axonometric and oblique views of building elements</li> </ul>	10
Unit -IV	<b>Interpenetration of objects</b> <ul style="list-style-type: none"> <li>- Intersection and interpenetration of solid geometric objects and their compositions</li> <li>- Intersection and interpenetration of architectural elements and their compositions</li> </ul>	15
Unit-V	<b>Introduction to Sciography</b> <ul style="list-style-type: none"> <li>- Introduction to sciography of simple objects</li> <li>- Representation of shade and shadows in plans and elevations</li> </ul>	8
Unit-VI	<b>Architectural drawings.</b> <ul style="list-style-type: none"> <li>- Learning to make architectural drawings of Master Architect's building drawings (referred from books) in terms of plans, elevations and sections.</li> <li>- Architectural representation of trees, hedges, foliage, human figures, cars, etc.,</li> <li>- Building Elements: Techniques of representing building elements such as doors, windows, steps, chajja, porch, canopy, etc.</li> </ul>	12
<b>Total Contact Hours</b>		<b>75</b>

**Learning Resources:**

1.	F. D K. Ching (2009) Architectural Graphics, New Jersey, John and Wiley and Sons.
2.	Manual of Section, David J. Lewis, Marc Tsurumaki, and Paul Lewis.
3.	Architectural Drawing Course: Tools and Techniques for 2D and 3D Representation, by Mo
4.	N.D.Bhatt (2012) Engineering Drawing, Gujrat, Charotar Publishing House.

5.	Hugh C. Browning (1996) The Principles of Architectural Drafting, New York, Watson-Guptill
6.	Calvin F. Schmid, Stanton E. Schmid, (1954) Handbook on Graphic Presentation, New York,

8.	Sleeper R.( 2000)Architectural Graphic Standards, New York, John Wiley and Sons.
9.	Gill R.W.(2011) Rendering with Pen and Ink, London, Thames &Hudson ltd.

## First Year B Arch.

## Climatology

CourseCode:KHMU26	Course Category: Professional Core		Semester: II
Credits :	3	Internal Assessment	40 Marks
Lectures per week	1	Terminal Paper	-
Studio Projects per week	-	Sessional Oral (SO)	-
Workshops or studio exercises / week	2	Sessionals(SS)	60 Marks
No.s of Weeks in Semester	18	No.s of hours in Semester	54 Hours
No.s of Weeks for Teaching + Sessional Work	15	No.s of Hours for Teaching + Sessional Work	45 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	09 Hours

### Course Objectives:

- |   |
|---|
| 1. To understand climate and its impact on Architectural Design |
| 2. To encourage sensitivity towards environments                |

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Outline</b> elements of climate, nature of climate and its zone and <b>recognize</b> importance of climate in architecture
2.	Understanding	<b>Understand</b> the climatic influences on built environment and comfort conditions for inhabitants
3.	Applying	<b>Use</b> the surrounding environment as one of the strategic design parameters
4.	Applying	<b>Employ</b> solar charts and sun path and <b>apply</b> fundamentals of climatology in building design
5.	Analyzing	<b>Analyse</b> characteristic of climatic zone in India
6.	Evaluating	<b>Justify</b> opening position, its size in building design by considering air movement
7.	Creating	<b>Relate</b> climate, other environmental parameters and built form at individual and settlement level
8.	Creating	<b>Design</b> climate responsive building

**Course Contents:**

<b>Units</b>	<b>Contents of The Course</b>	<b>Hours</b>
Unit -I	<b>Introduction:</b> <ul style="list-style-type: none"> <li>- Climate, weather, earth- sun relationship</li> <li>- Elements of climate: Temperature, rainfall, humidity, wind, solar radiation etc.</li> <li>- Importance of climate in Architecture</li> <li>- Global, Macro and Micro climate</li> </ul>	6
Unit -II	<b>Human Comfort:</b> <ul style="list-style-type: none"> <li>- Human heat balance and comfort</li> <li>- Thermal comfort and means of thermal comfort</li> <li>- Heat stress, Effective temperature</li> </ul>	6
Unit -III	<b>Comfort conditions:</b> <ul style="list-style-type: none"> <li>- Bioclimatic chart</li> <li>- Subjective variables</li> <li>- Thermal Comfort Indices</li> <li>- Active &amp; Passive means of thermal control</li> <li>- Degree of control.</li> </ul>	9
Unit-IV	<b>Solar charts &amp; Sun-path:</b> <ul style="list-style-type: none"> <li>- Study of Sun-path, Azimuth &amp; Altitude Angle</li> <li>- Structural control : Sun control and shading devices</li> </ul>	9
Unit-V	<b>Ventilation &amp; Air movement:</b> <ul style="list-style-type: none"> <li>- Study of ventilation &amp; its functions in buildings</li> <li>- Air flow through buildings</li> <li>- Position &amp; size of opening</li> </ul>	6
Unit-VI	<b>Study of Climatic zones &amp; Built environment:</b> <ul style="list-style-type: none"> <li>- Study of nature of climate, its physiological objectives and design criteria</li> <li>- Planning Principles of internal and external spaces, surface treatments and openings etc. for various climatic zones</li> </ul>	9
<b>Total Contact Hours</b>		<b>45</b>

**Learning Resources:**

1.	Koenigsberger, Ingersoll, Mayhew, Szokolay, (1996) Manual of Tropical Housing and Building - Climatic Design, Orient Longman Limited
2.	G. Z. Brown and Mark Dekay, John Wiley and Sons, (2001) Sun, Wind and Light, 2nd Edition, New York
3.	Baruch Givoni, (1976) Man, Climate and Architecture, U.K., Applied science Publishers, 2nd Edition
4.	T. N. Sheshadri, (2001) Climatological and Solar Data for India, Meerat, Sarita Prakashan
5.	A. Krishan, (2001), Climate Responsive Architecture, Tata Mcgraw Hill

## First Year B Arch.

## Basic Design-II

CourseCode:KHMU27	Course Category: Professional Core		Semester: II
Credits :	3	Internal Assessment	40 Marks
Lectures per week	1	Terminal Paper	-
Studio Projects per week	-	Sessional Oral (SO)	60 Marks
Workshops or studio exercises / week	2	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	54 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	45 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	09 Hours

### Course Objectives:

1. To introduce to the design process as a synthesis of a variety of factors, analysed and studied.
2. To enhance creative thinking skill

### Course Outcomes:

CO No.	Cognitive levels	On successful completion of course the learner will be able to:
1.	Remembering	<b>Acquire</b> ,creative thinking and theory of Rasa
2.	Understanding	<b>Understand</b> various techniques for improving creativity
3.	Applying	<b>Use</b> the sources of inspiration for creating concepts for design
4.	Analyzing	<b>Select</b> tools for concept Building
5.	Evaluating	<b>Decide</b> inspiration for concept Building
6.	Creating	<b>Synthesis</b> knowledge gained in this subject with Architectural Design

### Course Contents:

Units	Contents of The Course	Hours
Unit -I	<b>Techniques for improving Creativity I:</b> <ul style="list-style-type: none"> <li>- Theories by Edward De Bono: Six thinking hats, lateral thinking</li> <li>- Brainstorming,</li> <li>- Random Combinations</li> <li>- Tree of Possibilities</li> </ul>	08

Unit -II	<b>Techniques for improving Creativity II</b> - Abstraction - Transformation - Matrix of Ideas	08
Unit -III	<b>Sources of inspiration for Creativity:</b> - Role of experience - Mimesis - Literature	08
Unit-IV	<b>Inspiration for concept building:</b> - Material - Geometry - History	08
Unit-V	<b>Tools for Concept building:</b> - Nature and geometry - Visual Memory - Association with other arts	08
Unit-VI	<b>Indian Aesthetics:</b> Introduction to theories of Indian aesthetics specifically the ‘Rasa’ theory by Abhinavgupta, Bharatmuni, Abhinavbharati, etc., with examples from Natyashastra	05
<b>Total Contact Hours</b>		<b>45</b>

### Learning Resources:

1.	Akiko Busch (1991) <i>The Art of Architectural Models</i> , Hong Kong, Design Press

## Elective-II

CourseCode:KHMU28	Course Category: Open Elective		Semester: II
Credits :	2	Internal Assessment	100 Marks
Lectures per week	1	Terminal Paper	-
Studio Projects per week	-	Sessional Oral (SO	-
Workshops or studio exercises / week	1	Sessionals(SS)	-
No.s of Weeks in Semester	18	No.s of hours in Semester	36 Hours
No.s of Weeks for Teaching+ Sessional Work	15	No.s of Hours for Teaching+ Sessional Work	30 Hours
No.of weeks for Assessment	3	No.of Hours for Assessment	06 Hours

### Course Objectives:

1. To facilitate the students to learn out of a pool of specialized courses, which provides extended scope or which enables exposure to discipline-centric courses as well as cross-disciplinary courses.
2. To encourage interdisciplinary learning and imbibe values as learners
3. To give students an opportunity to develop their attitudes and /or skills in a subject they may opt for making carrier

### Course Outcomes:

CO No.	Affective levels	On successful completion of course the learner will be able to:
1.	Receiving	<b>Identify and describe</b> the aspects or issues of offered contents
2.	Responding	<b>Report</b> case study
3.	Valuing	<b>Justify</b> their ideas /opinions in relation to contents of elective
4.	Organization	<b>Document and present</b> the data collected in systematic way.
5.	Internalizing	<b>Display</b> a technical base through in depth study

### Course Contents:

Units	Contents of The Course	Hours
	The detail course contents will vary as per options selected for elective and expert teaching the course will frame the contents at the beginning of semester along with objectives, outcomes, references and details for assignments.	
Total Contact Hours		

### Learning Resources:

1.	As per topic chosen
----	---------------------

# Contents

REVISED  
**CBCS 2018 COURSE**  
FOR  
POST GRADUATE DEGREE PROGRAMME  
IN  
**M. ARCH. (Sustainable Architecture)**

## Sustainable Development

<b>Subject Code : SA 101</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	4 hours/week	Credits	4
Teaching hours/ semester	60 hours	University examination (UE)	60 marks
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	40 marks

### Aim:

To enable students to understand the impact of development activities on the state of environment and need for sustainable development.

### Learning Outcome:

At the end of semester the student will understand:

- The impact of human activity on the environment
- The concept and practice of sustainable development
- Ways of reducing and repairing environmental damage and related laws.
- Principles of sustainable site planning and role of landscape in energy conservation

Unit I	<b>Environment and sustainability</b>	10 hours
	<ul style="list-style-type: none"> <li>• Basic concepts of Ecology, ecosystems</li> <li>• Biodiversity- types and value of biodiversity,</li> <li>• Environmental Degradation,</li> <li>• Need for sustainable development,</li> <li>• Basic principles of sustainable development.</li> </ul>	
Unit-II	<b>Global Environmental Concerns and Mitigation Measures</b>	08 hours
	<ul style="list-style-type: none"> <li>• Global environmental concerns,</li> <li>• Clean development mechanism</li> <li>• Methodologies for sustainable development</li> <li>• Sustainable development Goals (SDG 11 specifically goals towards built environment)</li> </ul>	
Unit III	<b>Environmental Laws, Impact Assessment and management</b>	12 hours
	<ul style="list-style-type: none"> <li>• Environmental impact assessment – Characteristics, methodologies and process</li> <li>• Environmental clearance process in India</li> <li>• Laws – Air Act, water Act, Environmental Protection Act</li> <li>• Protection and preservation of trees rules 2009</li> <li>• National green tribunal Act 2010</li> <li>• Wastewater Management Authority Act</li> <li>• Solid waste management and handling rules</li> <li>• MOEF guidelines for Eco sensitive zones</li> </ul>	
Unit IV	<b>Sustainable Cities</b>	12 hours
	<ul style="list-style-type: none"> <li>• Urbanization and Environment</li> <li>• Urban Environmental Issues (such as air and noise pollution, water pollution, transport, urban heat island, urban green</li> </ul>	

	<p>spaces, solid waste management)</p> <ul style="list-style-type: none"> <li>• Status of Environment, Sustainable development for built environment</li> <li>• Concept of Sustainable Cities and Framework for Sustainable Cities</li> <li>• Smart City And its Components</li> </ul>	
Unit V	<b>Sustainable Site Planning</b>	10 hours
	<ul style="list-style-type: none"> <li>• Site and microclimate</li> <li>• Site potential and constraints</li> <li>• Site planning principles and assessment</li> <li>• Checklist for sustainable site planning</li> <li>• Green campus policies and planning-case studies</li> </ul>	
Unit VI	<b>Sustainable Landscapes</b>	08 hours
	<ul style="list-style-type: none"> <li>• Slope analysis, Topography and Drainage</li> <li>• Landscape and microclimate</li> <li>• Water conservation with respect to site only</li> <li>• Role of vegetation in energy conservation, selection of plants</li> <li>• Green roofs and terraces, vertical gardens</li> </ul>	
Sessional work: Unit tests and assignments based on above content		
IA: Please refer to the guidelines given in the annexure

## Energy Management and Audit

<b>Subject Code : SA 102</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	4 hours/week	Credits	4
Teaching hours/ semester	60 hours	University examination (UE)	60 marks
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	40 marks
<b>Aim:</b> Introduction of various Aspects of Energy Management and Audit to assess the energy performances of built spaces.			
<b>Learning Outcome :</b> At the end of semester the student will understand: <ul style="list-style-type: none"> <li>• General aspects of Energy in buildings</li> <li>• Energy Management and Conservation Opportunities in Buildings</li> <li>• Energy Audits</li> </ul>			
Unit I	<b>General Aspects of Energy and Energy Scenario</b>		12hours
	Classification of Energy, Primary and Secondary Energy, Commercial and Non-commercial Energy, Renewable and Non-Renewable Energy, Global Primary Energy Reserves and Commercial Energy Production of Coal, Oil, Natural Gas, Global Primary Energy Consumption, Final Energy Consumption, Indian Energy Scenario Coal, Oil, Natural Gas, Electrical Energy Supply, Sector wise Energy Consumption, Energy Needs of Growing Economy, Energy Intensity, Energy Pricing in India, Long term Energy Scenario in India, Energy Security and Energy Independence, Energy Conservation and Energy Efficiency.		
Unit-II	<b>Basics of Energy and Various Forms of Energy</b>		6 hours
	Forms of Energy-Potential and Kinetic, Electrical Energy, Basics of Thermal Energy, Energy Content in Fuels, Heat Transfer, Steam Properties, Laws of Thermodynamics, Energy Units & Conversion, Concept of Fuel Pricing and Electricity Bill		
Unit III	<b>Energy Conservation Acts, Related Policies, Electricity Act and Energy Conservation Building Code</b>		12hours
	Salient Features of The Energy Conservation Act 2001 & The Energy Conversion (Amendment) Act 2010, Salient Features of The Electricity Act 2003, Present Status of Implementation, Introduction to Energy Conservation Building Code 2007 and 2017, energy performance index, determining EPI ratios		
Unit IV	<b>Energy Audit</b>		14 hours
	Definition & Objectives of Energy Audit and Management, Definition of Energy Audit, Need for Energy Audit, Types of Energy Audit & Approach, Technical and Economic Feasibility of ENCON Measures, Energy Audit Report, Energy Costs, Benchmarking, Energy Performance, Fuel and Energy Substitution, Need for		

	measurement parameters and Instruments, Scope and Coverage of Energy Audit of Commercial and Residential Buildings.	
Unit V	<b>Energy Management</b>	8 hours
	Concepts of Material and Energy Balance, Sankey Diagram. Key Elements and Principles of Energy Management, Energy Policy & Planning, Force Field Analysis of Energy Management, Implementation of Energy Management.	
Unit VI	<b>Financial Management and Management of Energy Efficiency Projects</b>	8 hours
	Investment in Energy Efficiency and Appraisal Criteria for Investment, Financial Analysis Techniques, Simple Payback Period, Return on Investment, Time Value of Money, Net Present Value, Internal Rate of Return, Salvage value, Energy Performance Contracting and Energy Service Companies and Case Study What is an Energy Efficiency Project? Pre-planning, Planning project implementation, Project evaluation, Measurement and Verification of Energy Efficiency Project.	
<b>Sessional Work: Unit tests and assignments based on contents above</b>		
<b>IA: Please refer to the guidelines given in the annexure</b>		
<b>Text Books and References</b>

**Sustainable Design Studio-I**

<b>Subject Code : SA 103</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	10 hours/week	Credits	10
Teaching hours/ semester	150 hours	University examination (UE)	60 marks
Hours for Internal Assessment	30 hours	Internal Assessment (IA)	40 marks
<b>Aim :</b>			
To translate sustainable design principles into architectural design concepts and application of environmental modeling and simulation tools and techniques to building design.			
<b>Learning Outcome:</b>			
At the end of the semester the student will be able review different approaches of solar passive architecture in building design.			
Unit I	<b>Studio :Project Description</b>		120 hrs
	<p>Design project of Area between range of 3000-5000 sq.m. built up to respond to Thermal Environments using scientific methods of design namely analysis techniques, design strategies and system integration and evaluation procedures.</p> <p>Or</p> <p>Design Studio to apply the Solar Passive Principles at all scales for their Graduation Thesis project.</p> <p>Students shall also perform Energy Simulation exercise for their design solution using energy simulation software e. g. Ecotect or similar.</p> <p>Design Methodology:</p> <ol style="list-style-type: none"> <li>1. Completion of data collection / basic graphic work related to climate and site</li> <li>2. Data base &amp; data processing, analysis, projection &amp; graphic presentation of climate and site</li> <li>3. Formulating Approach / parameters for proposed design / plan / model</li> <li>4. Design / plan / model proposals and details</li> <li>5. Implementation/application solar passive strategies with calculations both manual and simulation</li> <li>6. Evaluation, conclusion including cost - benefit appraisal for relevance of the work.</li> </ol> <p>The entire work will be contained in a comprehensive report and portfolio for final evaluation by the concerned faculty.</p>		
Unit-II	<b>Building Energy Modeling and Passive Design simulation</b>		30 hrs
	Introduction to environmental performance assessment and use of scientific tools and simulation software's for assessment of thermal and lighting processes in built forms and outdoor spaces. Building simulations for analysis of sustainable designs, software's for		

	simulation of passive building design and real time daylight calculations	
<b>IA: Please refer to the guidelines given in the annexure</b>		
<b>Sessional work</b>		
	<ol style="list-style-type: none"> <li>1. A report containing data collection, climate analysis , calculations and case studies, etc.</li> <li>2. A1/A2 size portfolio explaining the complete design scheme</li> </ol>	
<b>Text Books and References</b>		
	<ul style="list-style-type: none"> <li>• Man climate and architecture – <i>B. Givoni, Applied science pub. Ltd., U.K.</i></li> <li>• Manual of tropical housing and building – <i>Koenigsberger et al, Orient Longman, 1973.</i></li> <li>• Climate Design: Energy Efficient building principles and practices by <i>Watson Donalt</i></li> <li>• Climate responsive architecture- a design handbook for energy efficient buildings, <i>Tata McGraw-hill Publishing Company Limited -2000</i></li> <li>• Sun, Wind &amp; Light – <i>G.Z. ## Energy Conservation I (Thermal Environment)

<b>Subject Code : SA 104</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	6 hours/week	Credits	6
Teaching hours/ semester	90 hours	University examination (UE)	60 marks
Hours for Internal Assessment	18 hours	Internal Assessment (IA)	40 marks

<b>Aim:</b> Demonstrate knowledge and understanding the effects of thermal environment (climate) on comfort condition in built spaces.		
<b>Learning Outcome :</b> At the end of semester the student will understand: <ul style="list-style-type: none"> <li>• Climate parameters, climates zones and thermal comfort parameters</li> <li>• Building physics and thermal comfort</li> <li>• Building design and solar passive techniques</li> </ul>		
Unit I	<b>Introduction to Thermal Environment</b>	6 hours
	Introduction to need of Passive design and energy conservation. Introduction to climate and its elements Characteristics of Various climate zones Physics of Heat transfer in Buildings-Thermal Quantities, Heat exchange of Buildings, Periodic Heat Flow Thermal comfort factors	
Unit-II	<b>Climate and buildings : Analysis techniques</b>	18 hours
	<i>Climate as a context</i> : sun, wind, sun and wind, light, and comfort.	
Unit III	<b>Analysis Techniques to understand thermal behavior of buildings: Building Program and use, Building form and Envelope</b>	18 hours
	<i>Building program and use</i> : occupancy heat gain, electric lighting heat gain, equipment heat gain <i>Form and envelope</i> : skin heat flow, window solar gain, ventilation/ infiltration gains and losses <i>Combining Climate, program and form</i> : Building bioclimatic chart, Shading calendar, Total heat gains and losses, balance point temperatures and balance point profiles.	
Unit IV	<b>Thermal Design Strategies at Site, Building Scale and Component Scale</b>	24 hours
	Analysis, selection, formulation and evaluation of thermal design strategies at various scales.	
Unit V	<b>Strategies by Climate type and Energy Intentions.</b>	18 hours
	<i>Design decisions</i> : Making strategy bundles for neighborhoods, buildings and rooms. <i>Combined bundles</i> : single topical issues ( heating, cooling, lighting, ventilation or energy) Multiple integrated topical issues ( heating, cooling, lighting,	

	ventilation or energy liked across various scales)	
Unit VI	<b>High performance Buildings</b>	6 hours
	Net zero and peak zero buildings , net positive buildings, carbon neutral buildings etc.	
<b>Sessional Work: Unit tests and assignments based on contents above</b>		
<b>IA: Please refer to the guidelines given in the annexure</b>		
<b>Text Books and References</b>		
<ul style="list-style-type: none"> <li>• Sun, Wind &amp; Light – G.Z. Brown, Mark Dekay, John Wiley &amp; Sons, 2001. (Second edition)</li> <li>• Sun, Wind &amp; Light – G.Z. **Sustainable Materials and Technology**

<b>Subject Code : SA 105</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	4 hours/week	Credits	4
Teaching hours/ semester	60 hours	University examination (UE)	60 marks
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	40 marks
<b>Aim:</b> To study various contemporary and traditional materials, assess their performance and methods of sustainable construction for energy efficiency			
<b>Learning Outcome :</b> At the end of semester the student will understand: <ul style="list-style-type: none"> <li>• Significance of contemporary and traditional materials in buildings</li> <li>• Characteristics of specific materials and their sustainably managed alternatives</li> <li>• Traditional and advanced efficient building techniques.</li> </ul>			
Unit I	<b>Introduction to sustainable materials</b>		6 hours
	Environmental impact of building materials, Materials-related impacts of sustainable building materials, examples of “green” materials, issues related to “sustainable” materials, future of “sustainable” materials, characteristics of sustainable materials and energy efficiency in materials.		
Unit-II	<b>Life cycle analysis and Life cycle cost analysis</b>		6 hours
	Introduction of LCA and LCC, embodied energy of materials, material life cycle, process of calculation and relevance in sustainable building material selection and construction techniques , Eco Labeling of Materials		
Unit III	<b>Traditional Building Materials</b>		12 hours
	Application, treatment and implementation of various materials like soil identification and testing, stabilized soil blocks, rammed earth, cob and adobe , bamboo , stabilized earth blocks etc. Traditional materials for interior		
Unit IV	<b>Contemporary Building Materials</b>		12 hours
	Application, treatment and implementation of various materials like fly ash blocks and bricks ferrocement, ferrocete, glass, insulation, steel structures, building materials from solid wastes, recycled materials, gypsum, eco-boards etc. Contemporary materials for interior		
Unit V	<b>Sustainable Construction Technologies - Traditional</b>		
	Walling , flooring and Roofing techniques; composite walls, rammed earth walls, hollow block constructions, cavity walls, masonry domes vaults and arches, bamboo wall and roof construction, thatch & mud plaster etc. Traditional technologies for Interior Design		12 hours

Unit VI	<b>Sustainable Construction Technologies – Contemporary</b>	12 hours
	Advanced walling , flooring and roofing techniques; pre-Stressed and pre- cast construction, Pre-fabrication and Modular etc, precast waffle construction, precast hollow planks for flooring and roofing elements etc.)	
<b>Sessional Work: Unit tests and assignments based on contents above</b>		
<b>IA: Please refer to the guidelines given in the annexure</b>		
<b>Text Books and References</b>		
<ul style="list-style-type: none"> <li>• Green Building Materials; <i>Ross Spiegel and Dru Meadows</i></li> <li>• Sustainable building technical manual: Green building design, construction and operations, Abraham L.E. et al, 1996, Washington D.C. **Elective I**

<b>Subject Code : SA 106</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Contact Hours	2 hours/week	Credits	2
Contact hours/ semester	30 hours	University examination (UE)	-
Hours for Internal Assessment	6 hours	Internal Assessment (IA)	100 marks
<p><b>Aim:</b> To facilitate the students to learn out of a pool of specialized subjects, which provides extended scope or which enables exposure to discipline-centric' subjects as well as cross-disciplinary subjects.</p>			
<p><b>Learning Outcome :</b> At the end of semester the student will understand:</p> <ul style="list-style-type: none"> <li>• Application of knowledge in solving a real life problem in an analytical and scientific way.</li> </ul>			
<p><b>Description</b></p> <p>The student can select any one subject in semester I from the list of subjects prepared by the department. A comprehensive list of subjects to be included under three broad areas of study namely; Core, Allied and Open Electives A selected subject expertise be arranged to provide for necessary syllabus formulation and guidance to students.</p> <p><b>Sessional work :</b> The students are expected to study the selected topic in depth under the guidance of the expertise, undertake case-studies and necessary site visits, and collect all the relevant information and present an exhaustive study report in a group.</p>			

**IA: Please refer to the guidelines given in the annexure**

## Green Building Assessment & Certification

<b>Subject Code : SA 201</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	4 hours/week	Credits	4
Teaching hours/ semester	60 hours	University examination (UE)	60 marks
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	40 marks

<b>Aim:</b> To acquaint students with different Green Building Rating Systems prevailing in India namely GRIHA, LEED – IGBC and codes.		
<b>Learning Outcome :</b> At the end of semester the student will understand: <ul style="list-style-type: none"> <li>Established practices and emerging concepts in green buildings</li> <li>Various evaluation and assessment systems</li> </ul>		
<b>Unit I</b>	<b>Introduction to green rating systems</b>	<b>8 hours</b>
	Objectives and characteristics of National & International rating systems, facilitation and simulation for green rating systems , assessment criteria's for green rating, process of certification. Time line of GBRS	
<b>Unit II</b>	<b>Green Rating for Integrated Habitat Assessment</b>	<b>16 hours</b>
	Introduction to GRIHA, Role of GRIHA in recognizing environment-friendly initiatives, Concept of Green Buildings. GRIHA- National Green Building Rating System- its context, challenges, benefits, development and operation process and basic features. Process of rating buildings- registration and documentation, GRIHA evaluation process Criteria for rating in detail and Scoring points for GRIHA	
<b>Unit III</b>	<b>Leadership in Energy and Environmental Design</b>	<b>16 hours</b>
	LEED Green Building Rating System- Introduction, History of LEED, Features of LEED Introduction to USGBC LEED USGBC – Vision of USGBC, USGBC Structure and Services offered, USGBC rating systems focus areas, rating systems for different types of Buildings, registration and certification process, details of credits, process to achieve rating. LEED NC overview and process- use of LEED NC, Registration, Credit Interpretation Ruling, Application, Review and Certification.  LEED IGBC – Vision of IGBC, IGBC Structure and Services offered, IGBC rating systems focus areas, rating systems for different types of Buildings, registration and certification process, details of credits, process to achieve rating.	

Unit IV	<b>Design Base Green Rating System</b>	8 Hours
	Process of rating buildings- registration and documentation, IGBC evaluation process Criteria for rating in detail and Scoring points for IGBC Compliance of IGBC rating system for any building typology (Ongoing actual Project).	
Unit V	<b>Introduction to other green rating systems</b>	6 Hours
	BRE Environmental Assessment Method (BREEAM) BREEAM, drivers and users of BREEAM, Key Benefits of Users, Different Stages of BREEAM, BREEAM Criteria, Environmental Issues, History of BREEAM, Current Versions of BREEAM, Certification Process. Green Globe Systems- Canada, Green Star (Australia)	
Unit VI	<b>Standards and Codes for green rating systems</b>	6 Hours
	ASHRAE and ISHRAE Codes, ECBC 2017 ECBC compliance and approach, Compliance requirements, compliance documents, calculation of energy consumption of proposed and standard design, whole building compliance method	
<b>Sessional Work: Unit tests and assignments based on contents above</b>		
<b>IA: Please refer to the guidelines given in the annexure</b>		
<b>Text Books and References</b>		
<ul style="list-style-type: none"> <li>• Relevant Code Books for ASHRAE and ISHRAE</li> <li>• National Building Code India</li> <li>• National rating system (GRIHA) – GRIHA Manual I</li> <li>• LEED IGBC Reference Guide: <u>LEED-INDIA-NC Abridged Version 1.0</u></li> <li>• BREEAM New Construction, Non-domestic buildings, Technical Manual SD5073- 2.0:2011</li> <li>• GREEN GLOBES FOR NEW CONSTRUCTION-Technical Reference Manual-Version 1.3 February 19th, 2014</li> </ul>		

**Energy Systems and Utilities**

<b>Subject Code : SA 202</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	4 hours/week	Credits	4
Teaching hours/ semester	60 hours	University examination (UE)	60 marks
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	40 marks

**Aim:**

To make students aware about different aspects of Thermal & Electrical Utility Systems.

**Learning Outcome :**

At the end of semester the student will understand:

- Application of thermal systems in building industry and Energy Conservation Opportunities.
- Application of electrical systems in building industry and Energy Conservation Opportunities.
- HVAC systems and their types, their application and Energy Conservation Opportunities

Unit I	<b>Fuels and Combustion</b>	6 hours
	Introduction to Fuels, Properties of Liquid Fuels, Properties of Coal, Properties of Gaseous fuels, Properties of Agro Residues, Combustion Process – Principles and Three “T”s of combustion, Draft systems, Combustion controls.	
Unit-II	<b>Boilers and Steam Systems</b>	6 hours
	Boiler Specification, Indian Boiler Regulation, Boiler systems, Boiler types and Classification, , Boiler Performance Evaluation – Direct & Indirect methods, Energy Conservation Opportunities and Waste Heat Recovery Systems in Boilers. Properties of Steam, Steam distribution system, Efficient Steam Utilization, Benefits of Condensate Recovery, Insulation of Steam Pipelines and Hot Process Equipment, Energy Efficient Steam Utilization and Energy Saving Opportunities	
Unit III	<b>Insulation</b>	4 hours
	Purpose of Insulation, Insulation - Types and Application, Economic thickness of insulation, Hot and Cold Insulation. Introduction to Waste heat recovery process, Classification of Waste heat recovery and Application, Benefits of Waste heat recovery.	
Unit IV	<b>Electrical Systems and Major Electrical Equipment</b>	20 hours
	Introduction to Electrical Power Supply Systems - Generation, Transmission, Transmission & Distribution System losses and Efficiency, Industrial Consumer and Typical Industrial Distribution System, Electricity billing, Concept of Maximum Demand, Electrical load management and Maximum Demand Control, Power factor Improvement and benefits, Automatic Power Factor Controller, Distribution losses in Industrial systems and reduction in Losses.	

	<p>Types of Transformers, Transformer Rating, Location, Transformer Efficiency and Losses, Efficient Operation of Transformers and Labeling.</p> <p>Types of Electric Motor Characteristics and Efficiency, Energy Efficient Motors, Motor load survey, Star Labeling of Energy Efficient Motors, Energy Conservation in Motors</p> <p>Types of Fans in Buildings, Energy Efficient Ceiling Fans and Labeling of Roof top Turbo Ventilators. Calculation of number of Turbo Ventilators for Built Spaces.</p> <p>Pumps for Buildings, Characteristics of Pumps, System Characteristics of Pumps, Energy Savings in Pump Operation, Level Controller, Energy Efficient Pumps and Star Labeling</p>	
Unit V	<b>Air Conditioning &amp; Refrigeration Systems and Cooling Towers</b>	20 hours
	<p>Introduction, Types of Refrigeration systems, Vapor Compression, Vapour Absorption System, Radiant Cooling Systems, Solar Air Conditioning Systems, Commonly used Refrigerants, Compressor Types and Applications, Selection of Refrigeration system. Energy Efficiency Ratio, COP, Performance assessment, Factors affecting Performance and Energy Efficiency of AC / Refrigeration Plants, Standards and Energy Labeling of Room Air Conditioners, Energy Saving Opportunities.</p> <p>Cooling tower introduction, Types of Cooling Towers,, Components of Cooling Tower &amp; materials, Cooling Tower Performance, Energy Conservation Opportunities</p>	
Unit VI	<b>Energy Conservation Building Code (ECBC-2007 and 2017)</b>	4 hours
	<p>ECBC for Building Utilities ,HVAC, Service Water, Lighting And Electric Power &amp; Motors</p> <p><b>Building Utilities</b></p> <p>HVAC – Mandatory Requirements – Natural Ventilation, Minimum Equipment Efficiencies, Controls, and Piping and Ductwork, System balancing, Condensers, Economizers, Variable Flow Hydronic Systems</p> <p>Service Hot Water &amp; Pumping – Mandatory Requirements – Solar Water Heating, Equipment Efficiency, Supplementary Water Heating Systems, Piping Insulation, Heat Traps, Swimming Pools, Compliance requirements</p> <p>Lighting – Mandatory Requirements for Lighting control, Exterior Lighting Power Calculations by Building Area Method and Space Function Method, Exterior Lighting Power</p> <p>Electric Power – Mandatory Requirement for Transformers, Energy Efficient Motors, Power Factor Correction , Check Metering and Power distribution system losses</p>	
<b>Sessional Work: Unit tests and assignments based on contents above</b>		
<b>IA: Please refer to the guidelines given in the annexure</b>

**Sustainable Design Studio-II**

<b>Subject Code : SA 203</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	10 hours/week	Credits	10
Teaching hours/ semester	150 hours	University examination (UE)	60 marks
Hours for Internal Assessment	30 hours	Internal Assessment (IA)	40 marks
<b>Aim :</b> To translate sustainable design principles into with the Application Procedure of relevant Analysis Techniques, Design Strategies and Evaluation Procedures for Thermal and Luminous Environment, into Architectural Design Problem and application of environmental modeling and simulation tools and techniques to building design.			
<b>Learning Outcome:</b> At the end of the semester the student will be able review different approaches of thermal and lighting design in buildings.			
Unit I	<b>Studio :Project Description</b>		8 hrs/week
	<p>A large scale project of area from 5000 -20,000 sq.m. built up to respond to Thermal and Luminous Environments using scientific methods of design namely analysis techniques, design strategies and system integration and evaluation procedures. An area up to 5000sq.m of the same project could be taken as a small project for detail lighting design.</p> <p>The project sites should be selected by the students having different orientations, ground conditions, urban infrastructure and vegetation along with a set of six different climates of the Indian sub-continent.</p> <p>Students shall also perform Energy Simulation, day lighting and artificial lighting exercise for their design solution using energy simulation software e. g. Ecotect , radiance or similar.</p> <p>Design Methodology:</p> <ol style="list-style-type: none"> <li>1. Completion of data collection related to climate, site and day lighting</li> <li>2. Analysis of the building Programme and use for thermal and luminous environment.</li> <li>3. Data base &amp; data processing, analysis, projection &amp; graphic presentation of climate, site and day lighting</li> <li>4. Formulating Approach / parameters for proposed design / plan / model – Schematic Design</li> <li>5. Design / plan / model proposals and details</li> <li>6. Implementation/application thermal and lighting</li> </ol>		

	<p>calculations both manual and simulation</p> <p>7. Evaluation, conclusion including cost - benefit appraisal for relevance of the work.</p>	
Unit-II	<b>Building Energy Modeling and lighting simulation</b>	2 hrs/week
	<p>Introduction to environmental performance assessment and use of scientific tools and simulation software's for assessment of lighting processes in built forms and outdoor spaces.</p> <p>Building simulations for analysis of sustainable designs, software's for simulation of day lighting, artificial lighting and real time daylight calculations</p>	
<p><b>Sessional work</b></p> <p>1. A report containing data collection, climate analysis , calculations and case studies,etc</p> <p>2. A1/A2 size portfolio explaining the complete design scheme</p>		
<p><b>IA: Please refer to the guidelines given in the annexure</b></p>

**Energy Conservation II (Luminous Environment)**

<b>Subject Code : 204</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	6 hours/week	Credits	6
Teaching hours/ semester	90 hours	University examination (UE)	60 marks
Hours for Internal Assessment	18 hours	Internal Assessment (IA)	40 marks

**Aim:**

Demonstrate knowledge and understanding the effects of Luminous Environment on comfort condition in built space.

**Learning Objective :**

At the end of semester the student will understand:

- Phenomenon of Light and the Day-lighting strategies
- Less energy-intensive technologies for artificial lighting
- Artificial lighting performance and savings from day-lighting

Unit I	<b>Introduction to Luminous Environment</b>	2 hours
Unit-II	<b>Lighting Fundamentals</b>	18 hours
	Physics of light, Light and sight, Quantity of Light, Quality of Light, Fundamentals of Colour.	
Unit III	<b>Analysis Techniques, Design Strategies and Evaluation Procedures – Luminous Environment</b>	10 hours
	Analysis of the Precedent, Analysis of the site and climate, Analysis of the building Programme and use, Schematic design, Design development and System integration. Glazing Properties, Design Options of top lighting/side lighting/Core Daylighting/Atrium	
Unit IV	<b>Light Sources and Lighting Design Process</b>	16 hours
	Daylight sources, electric light sources	
Unit V	<b>Day lighting Design and Electrical Lighting Design</b>	24 hours
	Day lighting opportunities, Strategies for day lighting buildings, Aperture Sizing- side lighting and top lighting, specialized day lighting strategies, daylight factor, components of day lighting, guidelines for preliminary day lighting design, design analysis method and physical modeling. Luminaires, lighting control, Detailed Design procedures, evaluation.	
Unit VI	<b>Electrical Lighting Applications</b>	20 hours
	Residential occupancies, educational facilities, Commercial Interiors , industrial lighting and special lighting applications.	

**Sessional Work: Unit tests and assignments based on contents above**

## Research Design and Methods

<b>Subject Code : SA 205</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	4 hours/week	Credits	4
Teaching hours/ semester	60 hours	University examination (UE)	60 marks
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	40 marks

### Aim:

To induce research attitude in students by introducing them to research methodology with a focus on sustainable architecture.

### Learning Outcome :

At the end of semester the student will understand:

- Significance, types, approaches and areas of research in sustainable architecture
- To Conduct research and prepare report

Unit I	<b>Introduction to research methodology</b>	04 hours
	<ul style="list-style-type: none"> <li>• Meaning, need and significance of research.</li> <li>• Objectives and characteristics of research</li> <li>• Criteria for good research</li> <li>• Areas of research in sustainable architecture.</li> <li>• Ethics in research</li> </ul>	
Unit-II	<b>Introduction to research types and approaches</b>	10 hours
	<ul style="list-style-type: none"> <li>• <b>Research Types</b> <ul style="list-style-type: none"> <li>▪ Historic, Descriptive, Case study, Experimental, Applied and Causal, etc.</li> <li>▪ Advantages and disadvantages of various research types</li> </ul> </li> <li>• <b>Research Approaches</b> <ul style="list-style-type: none"> <li>▪ Qualitative</li> <li>▪ Quantitative</li> <li>▪ Mixed</li> <li>▪ Advantages and disadvantages of various approaches</li> </ul> </li> </ul>	
Unit III	<b>Research Design</b>	16 hours
	<ul style="list-style-type: none"> <li>• <b>Steps in conducting research</b> <ul style="list-style-type: none"> <li>▪ Preparing Research Proposal</li> <li>▪ Formulating research problem</li> <li>▪ Framing Hypothesis and understanding variables</li> <li>▪ Literature review and sources for literature</li> </ul> </li> <li>• <b>Sampling design</b> <ul style="list-style-type: none"> <li>▪ Need for sampling</li> <li>▪ Types of sampling design</li> <li>▪ Criteria for sample selections</li> </ul> </li> </ul>	

Unit IV	<b>Data collection</b>	08 hours
	<ul style="list-style-type: none"> <li>• Types of data</li> <li>• Tools for data collection (Survey, observation, interview, mapping, etc)</li> <li>• Measures of central tendencies (mode, mean, median)</li> <li>• Measurement and scaling techniques</li> </ul>	
Unit V	<b>Data presentation and analysis</b>	14hours
	<ul style="list-style-type: none"> <li>• Data presentation techniques</li> <li>• Introduction to analytical tools (Descriptive statistics, content analysis, visual analysis)</li> <li>• Interpreting results</li> </ul>	
Unit VI	<b>Research Report</b>	08hours
	<ul style="list-style-type: none"> <li>• Structure of report</li> <li>• Writing report and presentation</li> <li>• Referencing styles</li> </ul>	
<b>Sessional work: Unit tests and assignments based on above content</b>		
<b>IA: Please refer to the guidelines given in the annexure</b>

**Elective II**

<b>Subject Code : SA 206</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Contact Hours	2 hours/week	Credits	2
Contact hours/ semester	30 hours	University examination (UE)	-
Hours for Internal Assessment	6 hours	Internal Assessment (IA)	100 marks

**Aim:**

To facilitate the students to learn out of a pool of specialized subjects, which provides extended scope or which enables exposure to discipline-centric' subjects as well as cross-disciplinary subjects.

**Learning Outcome :**

At the end of semester the student will understand:

- Application of knowledge in solving a real life problem in an analytical and scientific way.

**Description**

The student can select any one subject in semester II from the list of subjects prepared by the department. A comprehensive list of subjects to be included under three broad areas of study namely; ; Core, Allied and Open Electives.

A selected subject expertise be arranged to provide for necessary syllabus formulation and guidance to students.

**Sessional work :**

The students are expected to study the selected topic in depth under the guidance of the expertise, undertake case-studies and necessary site visits, and collect all the relevant information and present an exhaustive study report in group.

**IA: Please refer to the guidelines given in the annexure**

**Advanced Simulation Modeling**

<b>Subject Code : SA 301</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	4 hours/week	Credits	4
Teaching hours/ semester	60 hours	University examination (UE)	60 marks
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	40 marks

**Aim:**

To introduce software simulation tools for energy efficient buildings.

**Learning Outcome :**

At the end of semester the student will understand:

- Environmental modeling and simulation of built and open spaces.

Unit I	<b>Introduction to simulation tools</b>	8 hours
	Introduction to advanced tools for thermal, air flow and lighting simulation and their application to building design and design research.	
Unit-II	<b>Performances Assessment and Inference</b>	
	Environmental software's will be introduced for assessment and representation of thermal, airflow, lighting processes and energy simulation in and around a real or virtual building and outdoor spaces. The course will allow the students to generate and analyze climate data for any site, predict micro-climate conditions, perform shading, day lighting and thermal simulation studies, calculate energy requirements and assess environmental impacts of building.	Module based distribution of teaching hours.
<b>Sessional work</b>		
	Students have to model and simulate a design project with a detailed report of inferences and solutions drawn from the simulation study.	
<b>IA: Please refer to the guidelines given in the annexure</b>		

**Clean Technologies**

<b>Subject Code : SA 302</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	4 hours/week	Credits	4
Teaching hours/ semester	60 hours	University examination (UE)	60 marks
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	40 marks
<b>Aim:</b> To introduce students to Fundamentals and Technologies of different Clean Technologies.			
<b>Learning Outcome :</b> At the end of semester the student will understand: <ul style="list-style-type: none"> <li>• Different types of Alternate or Renewable Energy Sources.</li> <li>• Developments in the field of clean technologies in India and abroad..</li> <li>• Their application and Energy Conservation Opportunities</li> </ul>			
Unit I	<b>Concept of Clean Technologies and Renewable Energy Sector Scenario in India and World</b>		6 hours
	Concept of Clean Technologies, Introduction to New & Renewable Sources, Types and Classification of Renewable Energy Sources, Need for Promoting Rapid Growth of New and Renewable energy in India, Benefits and Limitations on Use of Renewable Energy, Overview of Renewable Energy Development in the World over last few Years, Issues and Challenges for Growth of Renewable Energy at in India and at Global level		
Unit-II	<b>Fundamentals of Renewable Energy Technologies, Status of Technological Developments and Capacity Growth in India</b>		8 hours
	Principles and Fundamentals of Different types of Renewable Energy Sources, Status of Technologies and Technological Development of different Renewable Energy Sources in India. Present Status of Sector wise Renewable Energy Capacity Development in India, Potential & Future Scope for Renewable Energy Capacity Development in the Country, Targets for RE Development in the Country, Rural Renewable Energy Renewable Energy Policies, Present Incentives & Subsidies		
Unit III	<b>Solar Thermal Energy and Solar Electrical Energy Systems</b>		20 hours
	Fundamentals of Solar Energy, Solar Heating and Solar Power, Flat Plate Collector Technology, Evacuated Tube Collectors Technology, Solar Concentrators for Steam Generation, Solar Water Heating Systems for Commercial, Residential and Industrial Sectors, Thermal Storage Systems Jawaharlal Nehru National Solar Mission, Solar Energy Systems for Buildings, Sizing ,Selection Criteria and Feasibility. Solar Air Conditioning.		
Unit IV	<b>Wind Energy</b>		12 hours
	Basics of Wind Energy and Wind Power Generation, Variability of Wind Speed and its Effect, Types of Wind Turbines, Operating Characteristics of Wind Turbines and Generators, Wind energy		

	Calculations, Capacity factor, Grid connected Wind Generators, Future of Wind power Generation in India, Issues related to Wind power Generation, Small size Wind Energy Systems for Buildings, Selection Criteria and Feasibility	
Unit V	<b>Hydro Power, Bio-Energy, Oceanographic and Geothermal Energy</b>	8 hours
	Basics of Hydro power generation, Classification of Hydro power Plants, Future of Growth of Hydro power capacity increase in India Fundamentals of Bio-energy, Bio-mass, Biogas and Bio-fuels, Direct combustion of Biomass, Biomass Gasification, Bio- methanation, Bio-fuels from biomass, Installed Biomass Power Capacity, Growth of Ethanol & Bio-fuel Production Fundamentals of Wave, Tidal Energy and Ocean Thermal Energy Conversion (OTEC), Basics of Geothermal Energy, Usages of Geothermal energy, Power Generation through Geothermal energy. Indian Scenario of Oceanographic and Geothermal Energy	
Unit VI	<b>Chemical Energy Sources and Energy from Solid and Liquid Wastes &amp; Other Sources</b>	6 hours
	Principles of Fuel Cell Technology, Operation of Fuel Cells, Present Status and Future of Fuel Cell Development Hydrogen as efficient fuel, Principle of Waste to Energy Generation, Municipal Solid Waste Power Generation (MSW), Power Generation from Municipal Sewage and Effluents. Power Generation from Landfill Gas Principle of Magneto Hydro Dynamic Power Generation (MHD) Principle of Energy storage and Distribution, Batteries	
<b>Sessional Work: Unit tests and assignments based on contents above</b>		
<b>IA: Please refer to the guidelines given in the annexure</b>		
<b>Text Books and References</b>

### Sustainable Design Studio-III

<b>Subject Code : SA 303</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	10 hours/week	Credits	6
Teaching hours/ semester	150 hours	University examination (UE)	60 marks
Hours for Internal Assessment	30 hours	Internal Assessment (IA)	40 marks
<b>Aim:</b> To undertake detailed analysis of urban environmental issues related to sustainable planning and design of cities.			
<b>Learning Outcome :</b> At the end of semester the student will understand: <ul style="list-style-type: none"> <li>• Various urban environmental issues and approaches to address them.</li> </ul>			
Unit I	<b>Studio: Project I</b>		<b>60 hrs</b>
	<p>The exercise will address the urban environmental issues. The exercise shall consist of a critical issue for understanding environmental challenges faced in urban context.</p> <p>Design Methodology:</p> <ul style="list-style-type: none"> <li>• Identify environmental issues related to selected urban areas.</li> <li>• Study impact of these issues on selected area of the study.</li> <li>• Study parallel cases to understand the approaches for addressing the issues.</li> <li>• Provide guidelines and solutions for sustainable planning and designing of the study area.</li> </ul> <p>The base work for the lab will be carried out in group and issues will be addressed individually.</p>		
Unit-II	<b>Studio: Project II</b>		<b>90 hrs</b>
	<p>A design Project of area from 3000-5000 sq.m. built up that reflects clear understanding of solar passive principles, luminous and acoustic response taught during the semester.</p>		
<b>Sessional Work</b>			
<ol style="list-style-type: none"> <li>1. A well documented report for project I submitted by a group of students</li> <li>2. A2 size portfolio giving design solution along with analysis for project II.</li> </ol>			
<b>IA: Please refer to the guidelines given in the annexure</b>

**Energy Conservation III (Acoustics and Aqueous Environment)**

Subject Code : <b>SA 304</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	6 hours/week	Credits	6
Teaching hours/ semester	90 hours	University examination (UE)	60 marks
Hours for Internal Assessment	18 hours	Internal Assessment (IA)	40 marks
<b>Aim:</b> Demonstrate knowledge and understanding the effects of Acoustic and Aqueous on comfort condition in built space.			
<b>Learning Outcome :</b> At the end of semester the student will understand: <ul style="list-style-type: none"> <li>• Acoustical consideration and response of various spaces.</li> <li>• Concepts related to resource-oriented water conservancy</li> <li>• Management, recycling and reuse of waste.</li> </ul>			
Unit I	<b>Introduction to Introduction to Acoustic and Aqueous Environment</b>		8 hours
	Introduction and Analysis of the Precedents - Acoustic and Aqueous Response Climate and Site Analysis ,Analysis of Building Programme and Use, Schematic Design and Design development		
Unit-II	<b>Fundamentals of Architectural Acoustics and Sound in Enclosed Spaces</b>		12 hours
	Sound Theory and Hearing Phenomenon, Noise Sound in enclosures, Absorption, Room Acoustics, Room Design, Sound Reinforcement Systems		
Unit III	<b>Building Noise Control</b>		16 hours
	Noise Reduction, Absorption, Sound Isolation, Airborne Sound, Speech Privacy, Structure Borne Sound, Mechanical System of Noise Control, STC and IIC Recommendations and criteria, Outdoor Acoustic Considerations.		
Unit IV	<b>Water Management</b>		20 hours
	Water in Architecture, Hydrologic Cycle, Basic Planning, Collection and storage, site Planning and Components. Management of the water cycle as a single system, Management of water supply, sanitation and drainage - social imperatives, environmental considerations and economic challenges, technological, options for water management, recycling, reuse, conservation and treatment Design for water conservation – building and products Designing building services – plumbing, drainage and sewerage for effective water reuse, recycling, and recharge Rain water harvesting techniques – Basic Concepts of artificial recharge methods.		
Unit V	<b>Efficient Waste Water Treatment and Solid Waste Management</b>		24 hours

	Water less toilets and urinals, Principals of Drainage, piping, fittings and accessories, Design of residential and large building waste piping, Onsite individual and multiple Building Sewage treatment, Large scale sewage treatment systems, recycling and gray water, storm water treatment. Introduction to Waste management, Municipal Solid Waste Management, Waste as a Resource, Energy from Waste.	
Unit VI	<b>Waste Management and Recycling</b>	10 hours
	Wastes generated by Human Habitat – Solid, liquid and Gaseous Types of Wastes- Municipal, Industrial, Agricultural, Toxic, Bio-Medical, Hazardous, Electronic, Radioactive etc., Overview of laws /rules governing waste management in India , Importance of Community participation in waste management Impact on health and sanitation	
<b>Sessional Work: Unit tests and assignments based on contents above</b>		
<b>IA: Please refer to the guidelines given in the annexure</b>		
<b>Text Books and References</b>

**Dissertation I**

<b>Subject Code : SA 305</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Teaching	4 hours/week	Credits	4
Teaching hours/ semester	60 hours	University examination (UE)	60 marks
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	40 marks
<b>Aim:</b> To apply the methods taught in <b>research design &amp; methods</b> to carry out research related to the field of Sustainable Architecture. This will help in developing research skills in terms of selecting appropriate method to carry out research and writing report.			
<b>Learning Outcome :</b> At the end of semester the student will be equipped : <ul style="list-style-type: none"> <li>To carry research work individually using selected approach and prepare report.</li> </ul>			
Unit I	Identify area of research related to sustainable architecture & prepare a proposal Design complete research including selecting methods for data collection, tool for Analysis etc.		8 hours
Unit-II	To carry out literature review and case studies		12 hours
Unit III	To Carry out research (Field work)		12 hours
Unit IV	To Compile and analyze collected data using tools.		8 hours
Unit V	Present analysis & draw conclusions		8 hours
Unit VI	To prepare a detailed research report and write a paper for publication		12 hours
<b>Sessional Work: A research report of not more than 50 pages or a paper of approx. 3000 words on the selected area of research.</b>			
<b>IA: Please refer to the guidelines given in the annexure</b>			
<b>Text Books and References</b> <ul style="list-style-type: none"> <li>Kothari, C. R. (2004). <i>Research Methodology Methods &amp; Techniques</i> (Second Edition ). **Elective III**

<b>Subject Code : SA 306</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Contact Hours	2 hours/week	Credits	2
Contact hours/ semester	30 hours	University examination (UE)	-
Hours for Internal Assessment	6 hours	Internal Assessment (IA)	100 marks
<b>Aim:</b> To facilitate the students to learn out of a pool of specialized subjects, which provides extended scope or which enables exposure to discipline-centric' subjects as well as cross-disciplinary subjects.			
<b>Learning Outcome :</b> At the end of semester the student will understand: <ul style="list-style-type: none"> <li>• Application of knowledge in solving a real life problem in an analytical and scientific way.</li> </ul>			
<b>Description</b> The student can select any one subject in semester III from the list of subjects prepared by the department. A comprehensive list of subjects to be included under three broad areas of study namely; ; Core, Allied and Open Electives. A selected subject expertise be arranged to provide for necessary syllabus formulation and guidance to students.			
<b>Sessional work :</b> The students are expected to study the selected topic in depth under the guidance of the expertise, undertake case-studies and necessary site visits, and collect all the relevant information and present an exhaustive study report in a group.			
<b>IA: Please refer to the guidelines given in the annexure</b>			

## Dissertation II

<b>Subject Code : SA 401</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Contact Hours	18 hrs/week	Credits	18
Contact hours/ semester	270 hours	University examination (UE)	60 marks
Hours for Internal Assessment	18 hours	Internal Assessment (IA)	40 marks
<b>Aim:</b> To integrate the acquired knowledge in the previous semesters into design solution.			
<b>Learning Outcome :</b> At the end of semester the student will demonstrate application of knowledge in solving a real life/difficult problem in an analytical and scientific way.			
<b>Description</b> The objective of design dissertation is to provide an opportunity to each student to undertake original and independent project in Semester IV on the subject area of his / her interest and specialization, developed through theory courses and architectural design projects of the previous semesters. The quality of work should demonstrate student's ability to carry out successfully independent investigation, analysis and conclusions as well as evolve innovative design solution. The students will be guided in their work by appointed guides throughout the semesters to produce an illustrative, written dissertation.			
<b>Course Outline:</b> The subject selected may be conceptual or practical in nature related to a specific context and climate. The minimum built-up area shall not be less than 5000 sq.mtrs M. Arch. Dissertations shall include :  <ul style="list-style-type: none"> <li>• Selection of topic and preparing proposal</li> <li>• Aim, Objectives and scope of work</li> <li>• Methodology</li> <li>• Literature Survey</li> <li>• Data collection and Case Studies</li> <li>• Findings/inferences/guidelines from literature survey and case studies</li> <li>• Program formulation and analysis</li> <li>• Site selection and analysis</li> <li>• Selection of appropriate strategies and techniques</li> <li>• Formulating Approach / parameters for proposed design</li> <li>• Design solution and details</li> <li>• Verification using simulation modeling</li> </ul> A progressive evaluation of the dissertation work done by the student will be made throughout semester by the departmental evaluation committee and concerned faculty			

as per the schedule declared at the beginning of the term.  
The final evaluation of the dissertation work and report will be done by the Dissertation Viva-Voce board at the end of the forth semester.

**IA: Please refer to the guidelines given in the annexure**

**Sessional Work**

1. Technical report:  
The entire work should be submitted in a comprehensive report as per prevailing norms and specifications.
2. Design Solution:  
A1 size portfolio explaining the complete design scheme with detailing and simulation results.

**Self Study**

<b>Subject Code : SA 402</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Contact Hours	6 hours/week	Credits	4
Contact hours/ semester	60 hours	University examination (UE)	-
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	100 marks
<p><b>Aim:</b> To facilitate the students to learn out of a pool of specialized subjects, which provides extended scope or which enables exposure to cross-disciplinary subjects.</p>			
<p><b>Description</b> This subject is included in the syllabus to facilitate the students to learn cross-disciplinary subjects. Under this, the student can select any one subject related the parent course or other than the parent course. The choice of the subject is not restricted. If a student is interested in a subject of a particular discipline her/she has to inform accordingly to the Head and PG-Co-ordinator of that department.</p>			
<p><b>Sessional Work: A report on selected subject for study.</b></p>			
<p><b>IA: Please refer to the guidelines given in the annexure</b></p>			

**Seminar**

<b>Subject Code : SA 403</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Contact Hours	4 hours/week	Credits	4
Contact hours/ semester	60 hours	University examination (UE)	-
Hours for Internal Assessment	12 hours	Internal Assessment (IA)	100 marks
<b>Aim:</b> The aim of the seminar is to train the students to prepare state of art report by assimilation of concepts / ideas on a chosen topic in the area of Sustainable Architecture through an extensive literature study and data collection from the field.			
<b>Description</b> The topic for seminar is to be selected on the specific aspects of Sustainable Architecture and a comprehensive seminar report is prepared with the identification of areas for further research and development. The progress of the seminar work is presented and discussed by the student periodically in the classroom environment and progress monitored continuously. The seminar work develops the comprehension and presentation skills of the students. Alternatively the students can also identify new topics for the seminar work which can be supportive literature study of their dissertation.			
<b>Sessional Work: Presentations and seminar report.</b>			
<b>IA: Please refer to the guidelines given in the annexure</b>			

## Internship

<b>Subject Code : SA 404</b>			
<b>Teaching Scheme</b>		<b>Examination Scheme</b>	
Duration	40 Working Days	Credits	4
		University examination (UE)	60 marks
		Internal Assessment (IA)	40 marks
<p><b>Aim:</b> To give an opportunity for learning and for development of skills related to practical aspects of the discipline of Sustainable Architecture, by working in a firm/organization working in the field of Sustainability.</p>			
<p><b>Description</b></p> <p>The students will need to undertake internship of 40 working days to get acquainted with the procedures of the professional methods of consultancy.</p> <p>The students will have to complete internship under a professional/institute/NGO registered with respective bodies working in the field of sustainable architecture/environment/energy/resource management or consultancy. Student can also work as a research associate with doctoral candidate/ institute.</p> <p>During the course of their tenure, they will maintain a log book of their activities on a daily basis, which will be duly signed by the employer.</p> <p>At the end internship the candidate will have to submit a training report along the certificate by the employer to the effect that he / she has completed training satisfactorily for the stipulated period.</p> <p>Internal Assessment shall be done on the basis log book and training report which shall comprise of hard copies of the actual work done by the student, including reports on meetings attended, site visits performed and any work of special mention etc.</p>

## NOTIFICATION NO. 762

It is hereby notified for the information of all concerned that the Academic Council, at its 49<sup>th</sup> meeting held on 17/07/2015, has resolved to approve the course structure, syllabus and other rules including examination rules for B.Sc. Biotechnology programme based on choice based credit system to be implemented from the academic year 2015-16.

A copy of the course structure, syllabus and rules of B.Sc. Biotechnology programme based on Choice Based Credit System is enclosed.

## **INTRODUCTION**

The curriculum of Bachelor of Science (B. Sc.) in Biotechnology Course is revised and the new curriculum is framed according to the choice based credit system adapted by Bharati Vidyapeeth Deemed University. It is a full time 156 Credits program to be offered in its constituent units. Bharati Vidyapeeth Deemed University has been accredited with 'A' Grade by National Assessment and Accreditation Council (NAAC) (2004, 2011). Also, Ministry of HRD, Govt. of India has awarded "A" Category to the University in 2012 based on parameters including innovative programs, research and infrastructural facilities. Further, University Grants Commission (UGC), New Delhi has bestowed u/s 12B status to the university.

The programme will be offered at Rajiv Gandhi Institute of IT and Biotechnology, Pune with effect from the academic year 2015-2016. Rajiv Gandhi Institute of IT and Biotechnology is a constituent unit of BVDU that was established in the year 2003. The institute has excellent infrastructure, state-of-the-art laboratories, and competent faculty facilitating appropriate learning environment. The Institute offers five programmes in Biotechnology - one at undergraduate (B.Sc.) level and four at post graduate (M.Sc) level.

### **OBJECTIVES of the B.Sc. Biotechnology Programme**

The programme focuses on

1. Fundamental concepts in various allied subjects
2. Building of interdisciplinary approach
3. Developing skills in relevant areas to enhance employment opportunities
4. Inculcating social values, sense of scientific responsibilities and environmental awareness

### **ELIGIBILITY FOR ADMISSION TO THE COURSE**

Candidates satisfying the following conditions are eligible to apply for admission to B.Sc. Biotechnology programme

- i. The candidate should have passed Higher Secondary School Certificate (10+2) or its equivalent examination with at least 40% (35% for SC/ST) marks in aggregate.
- ii. Subject to the above conditions, the final admission is based solely on the merit at the all India entrance test (BBT) conducted by Bharati Vidyapeeth Deemed University.

## **DURATION OF THE COURSE**

The minimum credits required to complete the programme are 156 which normally takes a three years or six semesters. The medium of instruction and examination is English.

## **RULES AND REGULATIONS**

1. The entire course is of 156 credits and will be executed in 6 semesters.
2. One credit for theory course is equivalent to 15 lectures/tutorials while one credit for practical course is equivalent to 25-35 hrs. of lab /field work / or demonstration.
3. The curriculum comprises of Core Courses, Open courses and General Courses.
4. The entire syllabus consists of a total of 24 core theory (72 credits), 20 core practical (60 credits), 12 open (24 credits), and 6 general (12 credits) courses. Of these, the core courses are mandatory while the Open and General Courses are elective.
5. The Core Courses are aimed at imparting fundamental knowledge in various allied disciplines of biotechnology. The Open Courses are value addition courses intending skill development in commercial biotechnology sector. The General Courses are designed to develop relevant soft skills of students to compete in the global market.
6. There is a provision for opting Open and General Courses offered by other

constituent units of BVDU. In such case, the courses will be evaluated as per the rules of evaluation of the course undertaken and credits earned will be transferred from the respective constituent unit.

## RULES FOR EXAMINATION

### A: Nature of Examination:

1. For all subjects, there shall be an Internal Assessments (IA) conducted by the Institute and an end-of-the term University Examination (UE) conducted by the university. The UE will be based on the entire syllabus.
2. The performances at UE and IA will be combined to obtain the Grade Point Average (GPA) for the course. **The respective weights for performance at UE and IA shall be 60% and 40%.**

## STANDARD OF PASSING

**A: Grading System:** A **10-point absolute grading system** will be adapted for grading in each head of passing. The system will have seven grade points, the highest being 10. The grading system shall be as shown in Table-1 below. The performance indicators O, A+, A, B+, B, C, and D shall respectively mean Outstanding, Excellent, Very Good, Good, Average, Satisfactory, and Poor.

**Table-1: The grading system under CBCS**

Range of Marks (out of 100)	Grade Point	Grade
$80 \leq \text{Marks} \leq 100$	10	O
$70 \leq \text{Marks} \leq 80$	9	A+
$60 \leq \text{Marks} \leq 70$	8	A
$55 \leq \text{Marks} \leq 60$	7	B+
$50 \leq \text{Marks} \leq 55$	6	B
$40 \leq \text{Marks} \leq 50$	5	C
$\text{Marks} < 40$	0	D

1. The grade point average (GPA) for a course shall be calculated by first finding the total marks **out of 100 for the course. The corresponding GP (as per the table) shall be the GPA for the course.**
2. Two kinds of performance indicators, namely, the Semester Grade Point Average (SGPA) and the Cumulative Grade Point Average (CGPA) shall be computed at the end of each term. The SGPA measures the cumulative performance of a learner in all the courses in a particular semester, while the CGPA measures the cumulative performance in all courses up to and including the current semester. The CGPA of a student when he/she completes the programme is his/her final result.
3. The SGPA is calculated by the formula , 
$$\text{SGPA} = \frac{\sum C_k \times \text{GPA}_k}{\sum C_k}$$
 where  $C_k$  is the credit-value assigned to a course and  $\text{GPA}_k$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study during the semester, including those in which he/she might have failed or those for which he/she remained absent. **The SGPA shall be calculated up to two decimal place accuracy.**
4. The CGPA is calculated by the formula , 
$$\text{CGPA} = \frac{\sum C_k \times \text{GPA}_k}{\sum C_k}$$
 where  $C_k$  is the credit-value assigned to a course and  $\text{GPA}_k$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study from the time of his/her enrolment and also the during the semester for which CGPA is calculated, including those in which he/she might have failed or those for which he/she remained absent. **The CGPA shall be calculated up to two decimal place accuracy.**
5. The CGPA, calculated after the minimum credits specified for the programme are 'earned', will be the final result.
6. Grace marks of 1, 2 or 3 may be awarded to a candidate at UE as per the university rules.

## **B: Standards of Passing and ATKT rules:**

1. For all Core Courses, both UE and IE constitute separate heads-of-passing (HoP). In order to pass in such courses and to 'earn' the assigned credits

(a) the learner must obtain a minimum grade point of 5.0 (40% marks) at UE and also a minimum grade point of 5.0 (40% marks) at IA;

**OR**

(b) If he/she fails in IA, then also the learner passes in the course, **provided that a minimum of 25% is obtained in IA and GPA for the course is at least 6.0 (50%marks ) in aggregate.** The GPA for a course will be calculated only if the learner passes in that course.

1. A student who fails at UE in a course has to reappear only at UE as a backlog candidate and clear the HoP. Similarly, a student who fails in a course at IA has to reappear only at IA as a backlog candidate and clear the HoP. **A student who passes in aggregate in a course need not reappear even if he failed at IA if he/she obtains 25% at IA.**
2. The students of Semester I and II will be admitted to Semester III and IV even if they get backlog in any of the course. They can reappear in the next semester examination as a backlog candidate. The students will however not be admitted to Semester V **unless he/she clears all heads in Semesters I & II.** In case the candidate gets backlog in Sem III to Sem VI, then he will be admitted to Semester V and may improve the grade by reappearing in the next semester examination as a backlog candidate.

## **C: Award of Honours:**

1. A student who has completed the minimum credits specified for the programme shall be declared to have passed in the programme. The final result will be in terms of letter grade and CGPA only and is based on the CGPA of all courses studied and passed. The criteria for the award of honours are given in Table 2.

**Table 2: Criteria for the award of honours at the end of the programme**

Range of CGPA	Final Grade	Performance Descriptor	Equivalent Range of Marks (%)
$9.50 \leq CGPA \leq 10.00$	O	Outstanding	$80 \leq Marks \leq 100$
$9.00 \leq CGPA \leq 9.49$	A+	Excellent	$70 \leq Marks \leq 80$
$8.00 \leq CGPA \leq 8.99$	A	Very Good	$60 \leq Marks \leq 70$
$7.00 \leq CGPA \leq 7.99$	B+	Good	$55 \leq Marks \leq 60$
$6.00 \leq CGPA \leq 6.99$	B	Average	$50 \leq Marks \leq 55$
$5.00 \leq CGPA \leq 5.99$	C	Satisfactory	$40 \leq Marks \leq 50$
CGPA Below 5.00	F	Fail	Marks below 40

## THE FORMAT OF THE TRANSCRIPTS

The transcripts may be acquired by the students indicating his/her performance in every semester examination. The transcript shall show the performance indicators given in the following table, in addition to any other information.

Course Number	Course Description	Number of Credits	University Examination		IA/CA		Grade Point Average (GPA)	Result
			Grade	Grade Point	Grade	Grade Point		
Total Cumulative Credits Completed		SGPA	CGPA	Equivalent Marks (%)	<b>Note: GPA is calculated by adding the UE marks out of 60 and IA marks out of 40. The total marks out of 100 are converted to Grade Point, which will be GPA</b>			

## **PATTERN FOR ASSESSMENT**

### **A: Pattern of Evaluation for Internal Assessment of Theory Courses:**

The weightage for Internal Assessment is 40%. Students for IA of every theory course will be assessed for total of 40 marks which will be cumulative marks obtained in three separate assessments specified below.

1. Two internal examinations of 25 marks each. An average of the two tests will be considered.
2. One Assignment/Oral, Open book examination of 10 Marks
3. 05 Marks are assigned for the attendance of students in regular classes (lectures and tutorials). The students will acquire marks in the range of 01- 05 equating to the percent attendance of student in respective theory course

### **B. Pattern of Evaluation for Internal Assessment of Practical Courses:**

The Internal Assessment for every practical course will be of 40 Marks. The students for IA will be assessed on the basis of;

1. The average of two internal oral examinations of 25 marks each
2. One Assignment/Tour report of 10 Marks
3. 05 Marks are assigned for attendance of students in practical sessions. The students will acquire marks in the range of 01- 05 equating to the percent attendance of the student in respective practical course

### **C: Pattern of question paper at University Examination**

University Examination for every theory course will be of 60 Marks. The question paper will comprise of 8 questions of 10 marks each distributed equally in two sections. Students will appear for 3 questions out of 4 in each section. The pattern of question paper will be as given on next page.

**Pattern of question paper for university theory examination of B.Sc. Biotechnology 2015 CBCS Course**  
**(Total Marks:60, Tme:2.00 Hrs.)**

**Note:**

- I. Q.1 & Q.5 are compulsory. Answer Any Two from Questions 2,3 & 4 and from 6,7 & 8.
- II. Answers the questions of Section I and Section II in separate answer books

**SECTION I**

**Q. 1** Attempt **Any Five** of the following (10)

- a.
- b.
- c.
- d.
- e.
- f.

**Q. 2** a. (5)  
b. (5)

**Q.3** Explain the following/ Give reasons/ Differentiate between/Explain diagrammatically/ ---- (10)

- a.
- b.

**Q. 4** Write short notes on **Any Two** of the following (10)

- a.
- b.

**SECTION II**

**Q. 5** Attempt the following questions (Based on fundamental aspects of the course of Unit II & Unit III) (10)

- a.
- b.

**Q. 6** a. (5)  
b. (5)

**Q. 7** Give reasons/ write short notes/ differentiate between/----- (10)

- a.
- b.

**Q. 8** Describe the applications/ Give an account on/Any other (10)

- a.
- OR
- a.

-----

**D: Pattern for question paper of University Practical Examination of B.Sc. Biotechnology 2015 CBCS Course**

**(Total Marks:60, Tme:6.00 Hrs.)**

Q.1 Major Practical	(25)
Q.2 Minor Practical	(15)
Q.3 Viva	(10)
Q.4 Journal	(10)

**E: Pattern of continuous assessment for evaluation open courses**

The Open courses will be evaluated by continuous assessment mode. The students will be evaluated for 100 marks to be obtained in three separate assessments specified below conducted during the course of semester.

- 1) An assignment for 30 marks
- 2) Project / Seminar for 30 marks
- 3) One assessment, written test at end of the term for 30 marks
- 4) 05 Marks are assigned for attendance of students in practical sessions. The students will acquire marks in the range of 01- 05 equating to the percent attendance of the student in respective open course

**F: Pattern of continuous assessment for evaluation for General Courses**

The General courses of every semester will be evaluated by continuous assessment mode. The students will be evaluated for total of 100 marks to be obtained in three separate assessments specified below conducted during the course of semester.

- 1) An activity/project of 60 marks to be conducted during the course of the semester.
- 2) The presentation of above project/activity for 30 marks
- 3) 05 marks to be given on the basis of percent attendance of students to the respective general course

**Course structure of three- year B.Sc. Degree Course in Biotechnology  
Under Choice Based Credit System**

**SEMESTER I**

<b>Course No. &amp; Description</b>	<b>Title</b>	<b>Credits</b>	<b>IA</b>	<b>Univ. Exam</b>	<b>Total Credits</b>
<b>BBT 101</b> Core Course-Theory	Animal Science	3	40	60	28
<b>BBT 102</b> Core Course –Theory	Plant Science	3	40	60	
<b>BBT 103</b> Core Course –Theory	Foundations of Chemistry & Biochemistry	3	40	60	
<b>BBT 104</b> Core Course –Theory	Basics of Computer	3	40	60	
<b>BBT 105</b> Core Course –Practical	Animal Science Lab	3	40	60	
<b>BBT 106</b> Core Course –Practical	Plant Science Lab	3	40	60	
<b>BBT 107</b> Core Course –Practical	Foundations of Chemistry & Biochemistry Lab	3	40	60	
<b>BBT 108</b> Core Course –Practical	Computer Fundamentals & C-Programming Lab	3	40	60	
<b>BBT 109</b> Open Course I	Elective	2	Continuous Assessment		
<b>BBT 110</b> General Course I	Elective	2	Continuous Assessment		

**Elective Courses in Sem I: 1) BBT 109: Elective Open Course I; Option I:** General English. **Option II:** Basic Programming for Bioinformatics. **Option III.** Open course offered in other constituent units of BVDU.

**2) BBT 110: Elective General Course; Option I.** Yoga & Meditation, **Option II.** An appropriate General course offered in other constituent units of BVDU.

## SEMESTER II

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>BBT 201</b> Core Course –Theory	Introduction to Microbiology	3	40	60	28
<b>BBT 202</b> Core Course –Theory	Biochemistry I	3	40	60	
<b>BBT 203</b> Core Course –Theory	Cell Biology	3	40	60	
<b>BBT 204</b> Core Course –Theory	Genetics	3	40	60	
<b>BBT 205</b> Core Course -Practical	Introduction to Practical Microbiology	3	40	60	
<b>BBT 206</b> Core Course-Practical	Biochemistry I Lab	3	40	60	
<b>BBT 207</b> Core Course –Practical	Cell Biology Lab	3	40	60	
<b>BBT 208</b> Core Course –Practical	Genetics Lab	3	40	60	
<b>BBT 209</b> Open Course II	Elective	2	Continuous Assessment		
<b>BBT 210</b> General Course II	Elective	2	Continuous Assessment		

**Elective Courses in Sem II: 1) BBT 209: Elective Open Course II; Option I:** Ecology, **Option II:** Gardening & Landscaping, **Option III:** An appropriate Open course offered in other constituent units of BVDU.

**BBT 210: Elective General Course II; Option I:** Human Values, **Option II:** An appropriate General course offered in other BVDU constituent units

### SEMESTER III

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>BBT 301</b> Core Course –Theory	Concepts in Microbiology	3	40	60	25
<b>BBT 302</b> Core Course –Theory	Biochemistry II	3	40	60	
<b>BBT 303</b> Core Course –Theory	Principles & Techniques in Molecular Biology	3	40	60	
<b>BBT 304</b> Core Course –Theory	Immunology	3	40	60	
<b>BBT 305</b> Core Course-Practical	Practicals in Microbiology	3	40	60	
<b>BBT 306</b> Core Course-Practical	Practicals in Biochemistry II	3	40	60	
<b>BBT 307</b> Core Course-Practical	Practicals in Molecular Biology & Immunology	3	40	60	
<b>BBT 308</b> Open Course III	Elective	2	Continuous Assessment		
<b>BBT 309</b> General Course III	Elective	2	Continuous Assessment		

**Elective Courses in Sem III: 1) BBT 308: Elective Open Course III; Option I:** Patent & IPR, **Option II:** Nutrition, **Option III:** An appropriate Open course offered in other disciplines of BVDU.

**2) BBT 309: Elective General Course III; Option I:** Communication skills& Personality Development, **Option II:** An appropriate General course offered in other constituent units of BVDU

## SEMESTER IV

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>BBT 401</b> Core Course –Theory	Environmental Biotechnology	3	40	60	
<b>BBT 402</b> Core Course –Theory	Fundamentals in Molecular Biology	3	40	60	
<b>BBT 403</b> Core Course –Theory	Developmental Biology	3	40	60	
<b>BBT 404</b> Core Course –Theory	Analytical Techniques	3	40	60	
<b>BBT 405</b> Core Course-Practical	Environmental Biotechnology Lab	3	40	60	
<b>BBT 406</b> Core Course-Practical	Practicals in Molecular & Developmental Biology	3	40	60	
<b>BBT 407</b> Core Course-Practical	Analytical Techniques Lab	3	40	60	
<b>BBT 408</b> Open Course IV	Elective	2	Continuous Assessment		
<b>BBT 409</b> General Course IV	Elective	2	Continuous Assessment		

### Elective Courses in Sem IV: 1) BBT 408: Elective Course IV Option I:

Nanotechnology, **Option II:** Bio fertilizer Technology, **Option III:** An appropriate Open course offered in other disciplines of BVDU.

**2) BBT 409: General Course IV; Option I:** Seminar & Journal Club, **Option II.** An appropriate General course offered in other BVDU constituent units.

## SEMESTER V

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>BBT 501</b> Core Course –Theory	Biostatistics	3	40	60	
<b>BBT 502</b> Core Course –Theory	Clinical Biotechnology	3	40	60	
<b>BBT 503</b> Core Course –Theory	Recombinant DNA Technology	3	40	60	
<b>BBT 504</b> Core Course –Theory	Food Biotechnology	3	40	60	
<b>BBT 505</b> Core Course-Practical	Practicals in Clinical Biotechnology	3	40	60	
<b>BBT 506</b> Core Course-Practical	Practicals in Recombinant DNA Technology	3	40	60	
<b>BBT 507</b> Core Course-Practical	Practicals in Food Biotechnology	3	40	60	
<b>BBT 508</b> Open Course V	Elective	2	Continuous Assessment		
<b>BBT 509</b> General Course V	Elective	2	Continuous Assessment		

**Elective Courses in Sem V: 1) BBT 508: Elective Course V; Option i.** Biotechnology for forensics, **Option II:** Biodiversity, **Option III:**Information security

**2) BBT 509: Elective General Course V; Option I:** Innovative ideas in Biotechnology, **Option II:** An appropriate General course offered in other BVDUconstituent Unit

## SEMESTER VI

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>BBT 601</b> Core Course –Theory	Animal Biotechnology	3	40	60	25
<b>BBT 602</b> Core Course –Theory	Bioprocess Technology & Quality Control	3	40	60	
<b>BBT 603</b> Core Course –Theory	Plant Biotechnology	3	40	60	
<b>BBT 604</b> Core Course –Theory	Basics of Bioinformatics	3	40	60	
<b>BBT 605</b> Core Course-Practical	Practicals in Animal Tissue Culture	3	40	60	
<b>BBT 606</b> Core Course-Practical	Practicals in Plant Tissue Culture	3	40	60	
<b>BBT 607</b> Core Course-Practical	Exercises in Computer Applications & Bioinformatics	3	40	60	
<b>BBT 608</b> Open Course VI	Elective	2	Continuous Assessment		
<b>BBT 609</b> General Course VI	Elective	2	Continuous Assessment		

### Elective Courses in Sem VI: 1) BBT 608: Elective Open Course VI; Option i.

Entrepreneurship in Biotechnology, **Option II:** Business management in Biotechnology, **Option III:** Cyber Law

2) **BBT 609: Elective General Course VI; Option i:** Scientific Writing, **Option ii:** An appropriate General course offered in other BVDU constituent unit

**Total Credits: 28+28+25+25+25+25 = 156**

**B.Sc. Biotechnology Detail Curriculum  
SEMESTER I**

<b>BBT 101: Animal Science</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>

**UNIT I**

- |  |     |
|--|-----|
| 1 <b>Introduction</b> to Kingdom Animalia, Principles of classification of non chordates and chordates with representative examples.   | 4 L |
| 2 <b>Type study: Non chordate: Earthworm (<i>Pheretima posthuma</i>)</b><br>Systematic position, habitat and habits, external morphology, digestive system, vascular system, excretory system, reproductive system, cocoon formation, nervous system.  | 5L  |
| 3 <b>Type study: Chordates: Rat</b><br>Systematic position, habitat and habits, external characters and sexual dimorphism, Digestive system (functional anatomy and dentition), Respiratory system and mechanism of respiration, Circulatory system, (Heart, Arterial, Venous and Portal system), Nervous system (brain and its functions), reproductive system (male & female), excretory system (structure of kidney and uriniferous tubules). Rat as a food pest. | 6L  |

**UNIT II**

- |   |     |
|---|-----|
| 4 <b>Endocrinology and Physiology</b><br>Basic concept of neural and endocrine regulation of physiological processes; important endocrine glands and hormones of mammals, an overview; structure of pituitary gland and its secretions, (Pars distalis- STH/GH; Prolactation, TSH, FSH, LH/ ICSH, ACTH; Pars intermedia- MSH; Pars nervosa- Oxytocin, ADH), thyroid gland, adrenal gland ,pancreas (Islets of Langerhans)- insulin, glucagon; gonadotropic hormones, feedback mechanism in hormone secretion, impact of hormones on different physiological processes | 10L |
| 5 <b>Parasitology</b><br>Study of parasites with reference to <i>Entamoeba histolytica</i> , <i>Plasmodium vivax</i> , <i>Taenia solium</i> , <i>Ascaris lumbricoides</i> : systematic position, habitat and habits, morphology, life cycle, pathogenicity, mode of infection, control measures, effects on host and host response, brief introduction to human defense mechanism.  | 5L  |

**UNIT III**

- |   |    |
|---|----|
| 6 <b>Vermi-composting</b><br>Types of earthworms in vermi-composting; ( <i>Eudriuseugeniae</i> , <i>Eisenia foetida</i> , <i>Perionyx excavates</i> ); soil processing worms; | 3L |
|---|----|

(*Heretimaposthuma*, *Pheretima elongate*); economic and ecological importance of vermi-composting for garden, agriculture and industry. Vermi-wash applications.

- |    |  |    |
|----|--|----|
| 7  | <b>Apiculture</b><br>Wild species of honey bees: <i>Apis dorsata</i> , <i>Apis florea</i> ; domesticated species of honeybees: <i>Apis indica</i> , <i>Apis mellifera</i> , castes of honeybees, bee pollination and food plants, bee products (Pollen, glue, honey wax, venom, royal jelly) and their applications. | 3L |
| 8  | <b>Sericulture</b><br>Types of silkworms: Mulberry, Eri, Tasar, Muga; mulberry plant cultivation, rearing house, silkworm rearing, economic importance of wild and new silk moth.  | 3L |
| 9  | <b>Fisheries</b><br>Fish as nutritive human food, fish oil, fish glue, fish leather, fish manure, aqua culture industry, biological control in fish farming, fish preservation methods, pearl fishery and economic value of fishes, fish as bio-control agent.   | 3L |
| 10 | <b>Overview of use of animal and animal products for industrial applications</b>   | 3L |

**Core Course – Theory; 3 Credits** **45L**

**UNIT I**

- 1 **Plant diversity: Plant kingdom** 4 L  
General characteristics of plant kingdom; classification system; concept of binomial nomenclature; genus and species; diversity in habitat and habit; life span; mode of nutrition.
- 2 **Algae, Fungi and Lichens** 3 L  
General characteristics, classification with examples. Life history and uses of *Chlorella/Spirogyra*, *Aspergillus* & *lichens*. Biotechnological significance.
- 3 **Bryophytes and Pteridophytes** 4 L  
General characteristics, classification up to class with examples, alternation of generations, life history of *Riccia*, *Selaginella* and their economic importance.
- 4 **Gymnosperms and Angiosperms** 4 L  
General characteristics, classification up to orders with examples, life history of *Pinus*, difference between monocots & dicots, causes of phenomenal success of angiosperms; economic importance

---

**UNIT II**

- 4 **Plant Morphology: General organization of plant body** 3 L  
Underground, axis; aerial parts; morphology and functions of roots and leaves with their biotech significance
- 5 **Inflorescences and Flowers** 3 L  
Definition; major types with examples; significance of inflorescence; parts of flower and their functions; types based on symmetry and whorls; stalk and bracts; significance in Biotechnology industry.
- 6 **Fruits** 3 L  
Definition and formation of fruit parts; major types: simple, aggregate and composite fruits with examples; preservation of fruits and commercial applications
- 7 **Embryology** 3 L  
Male and female gametophytes; fertilization; endosperm; embryogenesis (monocot, dicot); polyembryony; apomixis
- 8 **Seeds** 3 L  
Definition; structure and types; seed preservation and germination methods; Concept of seed dormancy

### UNIT III

- 6 **Anatomy: Study of plant tissues** 7 L  
Types, structures and functions of plant tissues. Significance of anatomy in ecological interpretation, pharmacognosy and wood identification.  
Structure of root, stem, bark and leaves
- 7 **Plant physiology** 8 L  
Mineral nutrition and deficiency diseases, overview of nitrogen fixation, photosynthesis and respiration, phloem transport, photoperiodism and flowering, stress physiology (heat, water, salinity and metal), phytohormones and their role in fruit and seed development.

<b>BBT 103: Foundations of Chemistry &amp; Biochemistry</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>

**UNIT I**

<b>1</b>	<b>Introduction</b>	<b>3 L</b>
	Scope and contributions of biochemistry to human welfare; The cell as a unit of life, functions of plasma and cell membrane; water as a universal solvent –shape of H <sub>2</sub> O molecule, properties of water (B.P., M.P., solubility, polarity, adhesion-cohesion), diffusion, osmosis, osmotic pressure, surface tension	
<b>2</b>	<b>Carbohydrates</b>	<b>3 L</b>
	Occurrence/sources; Classification-on basis of carbon no & functional grs.; Structure with molecular formulae; Stereochemistry (structural and conformational isomers); isomers with one and more chiral centres, properties of stereoisomers; cyclization of sugars; conformations of cyclic forms (chair & boat forms).	
<b>3</b>	<b>Important monosaccharides</b>	<b>3 L</b>
	6 C sugars- glucose, fructose, mannose, galactose, 5 C sugars- ribose, deoxyribose, important modified monosaccharides (2-keto-3-deoxy-D- <i>manno</i> -octulosonic acid (KDO), 2-keto-3-deoxy-D- <i>glycero</i> -D- <i>galacto</i> -nonulosonic acid (KDN), sialic acids, aminosugars, sugar acids (their biological role/ occurrence)	
<b>4</b>	<b>Linkages in Sugars</b>	<b>3 L</b>
	Structure and functions of important di-saccharides (sucrose, lactose, maltose, cellobiose) and poly-saccharides (homo and heteropolymers, storage and structural polymers – starch, glycogen, cellulose, chitin, peptidoglycan)	
<b>5</b>	<b>Physico-chemical properties of carbohydrates</b>	<b>2 L</b>
	Reducing-non-reducing properties; Exploitation for detection and separation –Benedict’s test; Introduction to conjugate sugars (Glycoproteins and glycolipids and their importance)	
<b>6</b>	<b>Significance of carbohydrates in microbial, plant and animal system</b>	<b>1 L</b>
	ABO blood groups, heparin, lectins, carbohydrate vaccines	

**UNIT II**

<b>7</b>	<b>Lipids</b>	<b>1 L</b>
	Occurrence/sources: plant derived oils, ghee	
<b>8</b>	<b>Structure</b>	<b>2 L</b>
	Structure of fatty acids, triglycerides; Classification viz., simple and compound, structural and storage with examples; unsaturated-saturated, Oils (refined/unrefined significance); fats, waxes, rancidity/spoilage of fats (microbial, oxidative)	
<b>9</b>	<b>Functions</b>	<b>2 L</b>
	Functions in a living system: significance of hydrophobicity and water immiscibility for compartmentalisation, in vitamins, cofactors, for	

- signalling, pigments
- 10 **Lipid conjugates** 3 L  
Important conjugates and their functions: phospholipids, glycerophospholipids, sphingolipids; structure of membranes, micellar structures
- 11 **Cholesterol** 2 L  
Structure, function and significance
- 12 **Liposomes** 2 L  
Liposomes in drug delivery, soaps, biosurfactants
- 13 **Physico-chemical properties of carbohydrates and lipids** 3 L  
Compare and contrast of properties arising due to differences in C:O ratio; Comparison of carbohydrate & lipid as fuel molecule of the cell (Glycolysis and beta oxidation in brief, without detailed steps/enzymes)

### UNIT III

- 15 **Temperature profiles of carbohydrates & lipids** 4 L  
B.P., M. P.; morphology (amorphous/crystalline), solubility in polar/nonpolar solvents; Polarity and dipole moment, hydrophilic/hydrophobic interactions
- 16 **Properties of their solutions** 5 L  
True solutions, recap of colligative properties- (lowering of vapour pressure, elevation of boiling point, depression in freezing point); effects of temperature and pressure on solutions; viscosity, osmotic pressure, surface tension.  
Effect of temperature and pressure on interfacial tension; its significance on biological systems; colloids, dispersion, suspension, colloidal system; their stabilization in biological system; properties of colloids and emulsions
- 17 **Physico-chemical measurements** 6 L  
Concept of buffers, how to prepare normal/molar solutions (examples), standard buffers, measuring pH with pH-meter: Working, Calibration, maintenance of electrodes, effect of molarity on pH maintenance  
Spectroscopy – colorimetry; Beer-Lambert law  
Chromatography – adsorption – TLC, paper

**BBT 104: Basics of Computers** **Total**  
**Core Course – Theory; 3 Credits** **45L**

**UNIT I**

<b>1</b>	<b>Fundamentals</b> Introduction, History, Evolution, Characteristics of Computers, Block diagram of computer, Computer Generations	2 L
<b>2</b>	<b>Computer Organization</b> I/O units, Storage units (primary and Secondary), ALU, CU, CPU, Complete System	3 L
<b>3</b>	<b>Number Systems</b> Positional, Non-Positional, Binary , Octal , Hexadecimal, Conversion from one number system to another	4 L
<b>4</b>	<b>Classification of computers and features</b> Notebook, Personal, Workstations, Mini, Micro, Mainframe and Super	4 L
<b>5</b>	<b>Computer Networks: LAN, WAN and MAN</b>	2 L

**UNIT II**

<b>6</b>	<b>Types of Programming Languages</b> Machine, Assembly and High Level	2 L
<b>7</b>	<b>Computer software</b> Software and hardware relationship, System and Application software	2 L
<b>8</b>	<b>Algorithm and Flowcharts</b> Definition, characteristics, Advantages and limitations, example	3 L
<b>9</b>	<b>Operating System and Services</b> Introduction, Functions and performance Windows and Linux – Features and Windows Accessories MS Word, MS Powerpoint, MS Excel, MS Access	8 L

**UNIT III**

<b>10</b>	<b>Introduction to C Programming</b> Introduction	2 L
<b>11</b>	Character sets, Constants, variables, Keywords, Comments	3 L
<b>12</b>	Operators, Statements, I/O Operations, Preprocessor Directives	3 L
<b>13</b>	Pointers, Arrays, Strings	3 L
<b>14</b>	User defined data types: Structure and Union	2 L
<b>15</b>	Control structure, loop structures and Functions	2 L

<b>BBT 105: Animal Science Lab</b>		<b>Total</b>
<b>Core Course – Practical; 3 Credits</b>		<b>20 P</b>
1	<b>Animal Classification</b> Study of general and distinguishing characteristics; classification of chordates and non-chordates up to class level with examples	6 P
2	Demonstration of earthworm for visceral organs and various systems	1 P
3	Demonstration of rat for visceral organs and various systems	2 P
4	Study of slides of <i>Paramecium</i> and <i>Hydra</i> .	2 P
5	<b>Study of parasites</b> Morphology, mode of infection, pathogenicity and control measures: <i>Entamoebahistolytica</i> , <i>Plasmodium vivax</i> , <i>Taeniasolium</i> , <i>Ascaris lumbricoides</i> .	2 P
6	<b>Study of external morphology of honey bee</b> Mouth parts, legs, sting apparatus and wings. Observation of bee products: honey, wax, bee venom and royal jelly.	1 P
7	<b>Main fresh water cultivable fishes and their economic importance</b> <i>Catlacatla</i> , <i>Labeorohita</i> , <i>Cirrhinamrigala</i> , <i>Cyprinusbatrachus</i> , <i>Clarias batrachus</i> , <i>Tilapia mosambica</i> .	1 P
8	<b>Study of human blood groups</b>	1 P
9	<b>Histology</b> Observation of permanent slides of important mammalian organs	1 P
10	<b>Excursion Tour</b> Visit to sericulture industry/ Apiculture centre/Aquaculture industry/ Sea shore/Vermiculture Center.	3 P

<b>BBT 106: Plant Science Lab</b>		<b>Total</b>
<b>Core Course – Practical; 3 Credits</b>		<b>20 P</b>
<b>1</b>	<b>Study of modes of nutrition in plants</b> Autotrophs (Chlorophyllous plants), photo-autotrophs (Nitrifying bacteria), chemo-autotrophs ( <i>Rhizobium</i> ); Heterotrophs: total parasite ( <i>Cuscuta</i> ) partial parasite ( <i>Loranthus</i> ), insectivorous ( <i>Drosera</i> , <i>Utricularia</i> ); saprophyte: <i>Rhizopus</i> , mushrooms; symbiotic: symbionts (Lichens, Corolloid root of <i>Cycas</i> )	1 P
<b>2</b>	<b>Study of algae and life history of a typical alga</b> Chrysophyta (Diatoms and Desmids), Chlorophyta ( <i>Oedogonium</i> , <i>Chlorella</i> ), Phaeophyta ( <i>Sargassum</i> , <i>Ectocarpus</i> ), Rhodophyta ( <i>Batrachospermum</i> ), Cyanophyta ( <i>Nostoc</i> , <i>Oscillatoria</i> )	2 P
<b>3</b>	<b>Study of fungi and life history of a typical fungus</b> Phycomycota ( <i>Mucor</i> ), Ascomycota ( <i>Penicillium</i> ), Basidiomycota ( <i>Pleurotus</i> ), Rust ( <i>Puccinia</i> ), Smut ( <i>Ustilago</i> ) and Puffballs ( <i>Lycoperdon</i> ), Deuteromycota ( <i>Alternaria</i> )	2 P
<b>4</b>	<b>Study of Lichens</b> <i>Usnea</i>	1 P
<b>5</b>	<b>Study of bryophyta and life history of a typical bryophyte</b> <i>Anthoceros</i> , <i>Funaria</i> , <i>Riccia</i>	1 P
<b>6</b>	<b>Study of pteridophyta and life history of a typical pteridophyte</b> <i>Psilotum</i> , <i>Lycopodium</i> , <i>Equisetum</i> , <i>Selaginella</i> .	2 P
<b>7</b>	<b>Study of gymnosperms and life history of a typical gymnosperm</b> <i>Cycas</i> , <i>Pinus</i>	2 P
<b>8</b>	<b>Study of general organization of plant body</b> Underground (root and rhizome) and aerial parts (stem, leaves, fruits and seeds), Types and morphology	2 P
<b>9</b>	<b>Study of inflorescence and morphology of a typical flower</b> Racemose (raceme, spike & capitulum), cymose (solitary helicoids, dichasial <i>polychasial</i> ) and special types ( <i>cyanthium</i> , <i>hypanthium</i> , <i>verticillaster</i> ). Structure and types of flowers based on sexuality and symmetry, structure of a typical stamen and carpel.	2 P
<b>10</b>	<b>Study of types of fruits and structure of seeds</b> Simple fruits: Dehiscent (Legume and capsule), Indehiscent: dry (Caryopsis and Cypsella), indehiscent fleshy (Berry & drupe). Aggregate fruits (Etario of berry & etario of follicle). Albuminous seed	2 P

(castor), ex-albuminous seed(bean), types of seed germination

- 11 **Anatomy of dicot and monocot.** 2 P  
Dicot -Root, stem and leaf (Sunflower).  
Monocot-Root,stem and leaf (Maize and Jowar)  
Study of Vascular bundles (Maize stem sunflower, Cucurbita stem,  
Fern rachis and Dracaena stem, Monocot root.  
Study of types of stele (Permanent slide)
- 12 **Visit to forest** 1 P  
To study plant diversity

**BBT: 109- Open Course I; Elective Course; Option I - General English** **Total**  
**Open Course I; 2 Credits** **30L**

**UNIT I**

- |   |   |     |
|---|---|-----|
| 1 | Listening, Speaking, Essential Grammar, Undergraduate writing, Writing PG Assignments   | 5 L |
| 2 | Writing descriptions of places, objects etc.: Describing location and direction, Writing definitions, Classifying / categorizing, Comparing and contrasting: similarities and differences, Reporting and narrating  | 5 L |
| 3 | Answering exam questions: Understanding the question, Planning the answer, The exam answer, Evaluating the answer   | 2 L |
| 4 | <b>Research and using the library:</b> Finding relevant information, Using catalogues, Using books and periodicals, Using bibliographies and indexes, Using sources, Making notes, Paraphrasing and writing up notes, Summarizing, Quoting directly, Referring to sources, Writing a references list. | 3 L |

**UNIT II**

- |   |   |     |
|---|---|-----|
| 5 | <b>Describing processes and developments:</b> Expressing purpose, means and method, Expressing degrees of certainty, Expressing reasons and explanations / cause and effect, Describing developments and changes, Describing a sequence of events / time relations, Writing instructions  | 5 L |
| 6 | <b>Developing an argument:</b> Presenting arguments, ideas and opinions, Expressing certainty and doubt, Supporting an argument: illustrating and exemplifying ideas, Refuting arguments, ideas and opinions, Offering evaluative comments on opinions and arguments, Drawing conclusions | 5 L |
| 7 | <b>Writing an essay:</b> Essay organization: presentation and layout, Spelling and punctuation, Including graphs, charts and tables, Writing paragraphs, Writing introductions and conclusions, Academic writing style, Revising the essay – proofreading                                 | 5 L |

**BBT 110: General Course I Elective; Option I – Yoga & Meditation  
General Course I; 2 Credits,**

**Total  
20L/Act.**

As a school of philosophy, Yoga is a way of life, and incorporates its own epistemology, metaphysics, ethical practices, systematic exercises and self-development techniques for body, mind and spirit. Yoga and meditation when practiced together strengthen the mind body connection, improving overall fitness and well-being. Many styles of yoga combine meditation with the physical routines, which use controlled breathing throughout the yoga poses. Meditation is practiced by relaxing, clearing your mind and concentrating on controlled breathing. Both yoga and meditation, when used consistently, have proven health benefits. Meditation is also an effective stress reducer that is used to help reduce anxiety, panic disorders and agoraphobia, an anxiety disorder commonly seen in student life.

### **Unit I**

1. Overview of history of yoga, its origin and claimed benefits
2. Aasana alignment and the human anatomy and physiology explained in connection with yoga techniques like pranayama and meditation teaching methodology with practice

### **Unit II**

3. The science of meditation and current scientific research
4. What is meditation? Techniques of meditation
5. Different kinds of yoga
6. Overview of current styles, forms and purposes of meditation
7. Techniques for cultivation of inner calm, insight and wisdom through Yoga and meditation

## SEMESTER II

**BBT 201: Introduction to Microbiology** **Total**  
**Core Course – Theory; 3 Credits** **45L**

### UNIT I

- |  |     |
|--|-----|
| <b>1 History of Microbiology</b><br>Important experiments and discoveries, Golden age of Microbiology, Koch's postulates. .  | 5 L |
| <b>2 Introduction to Microscopy</b><br>Principle, instrumentation and applications of bright field, dark field, phase contrast, fluorescence and electron microscope | 10L |

### UNIT II

- |  |     |
|--|-----|
| <b>4 General properties and structure of prokaryotes</b><br>Bacterial cell structure and function; cell wall, cell membrane, endospore, capsule, flagella, fimbriae & pili, nucleoid, ribosomes, plasmids, cell inclusions, chemotaxis           | 8 L |
| <b>5 Taxonomy of bacteria</b><br>Nomenclature, its objectives, rules and regulations, taxometrics, intra-subspecific ranks-biovar, serovar, pathovar, phagovar, morphovar, <b>Salient features of Bergey's Manual of Systematic Bacteriology</b> | 7 L |

### UNIT III

- |  |     |
|--|-----|
| <b>6 Microbial growth</b><br>Growth curve, introduction to kinetics of growth, generation time, reproduction in microorganisms   | 4 L |
| <b>7 Microbial nutrition</b><br>Nutritional types of microorganisms, growth factors, macro and microelements, media ingredients, Different types of culture media: complex, defined, selective, differential media, pure culture techniques  | 3 L |
| <b>8 Microbial metabolism</b><br>Aerobic & anaerobic, respiratory, fermentative  | 3 L |
| <b>9 Control of microorganisms:</b><br><b>Physical agents</b> - Heat, Radiations, Filtration<br><b>Chemical agents and their mode of action</b> - Aldehydes, halogens, quaternary ammonium compounds, phenolic compounds, ethylene oxide, heavy metals, alcohol, soaps and detergents<br>Sterility checking- chemical and biological indicators. | 5L  |

**BBT 202: Biochemistry I**  
**Core Course – Theory; 3 Credits**

**Total**  
**45L**

**UNIT I**

- |          |   |     |
|----------|---|-----|
| <b>1</b> | <b>Amino acids, peptides and proteins</b><br>Occurrence/sources, Naturally occurring amino acids; structures; abbreviated names; stereoisomerism; amphoteric nature of amino acids; modified amino acids and their role in nature; Classification of amino acids (on basis of functional groups, essential/non-essential); Chemical reactivity due to functional group (amide, acid, amine); peptides & proteins (peptide bond, bond properties, N-Terminal, C-Terminal); importance of sequence of amino acids for structure and function of protein (eg. Sickle cell anaemia) | 5 L |
| <b>2</b> | <b>Protein structure</b><br>Primary, secondary ( $\alpha$ helix and $\beta$ conformation), tertiary and quaternary structure. Forces stabilizing molecular structure (covalent bond, ionic bond, hydrogen bond, salt linkage, van der Waal's forces) a brief over view of Ramchandran plot  | 4 L |
| <b>3</b> | <b>Classification of Proteins according to function</b><br>Structural proteins, transport proteins, chromoproteins, phosphoproteins, glycoproteins and their structures and significance in microbial, plant and animal systems   | 4 L |
| <b>4</b> | <b>Introduction to enzymes as biocatalysts</b>  | 2 L |

**UNIT II**

- |          |  |     |
|----------|--|-----|
| <b>6</b> | <b>Nucleic acids</b><br>Occurrence; Structures of purines and pyrimidines; nucleosides, nucleotides - as components of DNA & RNA; Spectrophotometric estimation of purines and pyrimidines-theory; Structure of DNA- Watson-Crick model; denaturation-renaturation of DNA;<br>Types of RNA- their structures and functions | 4 L |
| <b>7</b> | <b>AMP and cAMP, ADP &amp; ATP, NAD &amp; NADP, FMN &amp; FAD-</b> structure, function and biological role.  | 4 L |
| <b>8</b> | <b>Vitamins</b><br>Occurrence/sources; rich sources of different vitamins; Classification and general structural features, Role as coenzymes; Functions & Deficiency symptoms  | 4 L |
| <b>9</b> | <b>Minerals</b><br>Role of Na, K, Mg, Fe, Zn, Co, Cu, P and I in physiology; General electronic configurations and their shapes/preferred geometries and its significance in metalloenzymes  | 3L  |

### UNIT III

- |    |  |    |
|----|--|----|
| 10 | <b>Analytical tools for separation of biomolecules</b>   | 4L |
|    | Separation techniques: Filtration (gross, mini, micro and ultra-filtration), dialysis, specific gravity, sedimentation, density gradient ultracentrifugation |    |
| 11 | <b>Flame photometry:</b> Estimation of Na and K, principle and procedure, accuracy   | 1L |
| 12 | <b>Kjeldahl method of nitrogen estimation</b> Soil /fertilizer/ water/ plant analysis  | 1L |
| 13 | <b>Chromatography:</b> - gel, affinity, ion exchange, applications; purification of water, streptomycin, proteins and enzymes and DNA/RNA fractionation.     | 4L |
| 14 | <b>Electrophoresis:</b> Principle of separation, factors affecting separation, types-paper, agarose gel, PAGE, 2D- gel electrophoresis.                      | 2L |
| 15 | <b>Estimation of important minerals:</b> Calcium and Iron from industrial effluents (gravimetry); modern methods of estimation.                              | 1L |
| 16 | <b>Estimation of inorganic phosphate:</b> Analysis of soil for phosphate fertilizer (colorimetry)  | 1L |
| 17 | <b>Estimation of purity of water:</b> Fluoride, chloride, sulphate and arsenic from potable water (titrimetry)   | 1L |

<b>BBT 203: Cell Biology</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>

**UNIT I**

- |   |   |     |
|---|---|-----|
| 1 | <b>Introduction to Cell</b><br>Evolution of cell from molecules to first cell, from prokaryotes to eukaryotes and from single to multicellular organisms. Cell size, shapes, morphology and cell theory, General structure of prokaryotic and eukaryotic cell (plant and animal).   | 3 L |
| 2 | <b>Organelles of eukaryotic cells</b><br>Nucleus, Mitochondria, Endoplasmic Reticulum, Golgi apparatus, Lysosomes, Chloroplast and Plant Cell Wall; Structure and function of different organelles, comparison between prokaryotic and eukaryotic cell structure. Types of cells (neurons, RBC and muscle cells) and their functions. | 6 L |
| 3 | <b>Membrane Structure</b><br>Components of membrane, Structure (Fluid Mosaic Model), properties and functions of membrane. Function of lungs as membranous bags.  | 6 L |

**UNIT II**

- |   |   |     |
|---|---|-----|
| 3 | <b>Transport across the membrane</b><br>Passive diffusion, facilitated diffusion, Active transport. Structure, function and significance of Na <sup>+</sup> / K <sup>+</sup> ATPase and Ca <sup>+</sup> ATPase;<br>Ion channels – leak channels, gated channels, voltage gated and ligand gated channels. Ionophores, phosphotransferase system, transport antibiotics. Endocytosis and exocytosis , receptor mediated endocytosis. | 8 L |
| 4 | <b>Cytoskeleton</b><br>Actin filaments, Intermediate filaments, Microtubules, their structure, organization and functions, its polar nature, assembly and disassembly, regulators and role in cellular activities, tread milling. Muscle contraction, relevance of microtubules in anticancer treatment.  | 7 L |

**UNIT III**

- |   |  |     |
|---|--|-----|
| 5 | <b>Cell cycle and cell division</b><br>Cell cycle: steps and regulation. Cell division – mechanism of cell division, mitosis and meiosis, significance and comparison between two nuclear divisions. | 6 L |
| 6 | <b>Cell- cell interaction</b><br>Tight junctions, gap junctions, desmosomes & hemidesmosomes, plasmodesmata and extracellular matrix. Significance in neural transmission.                           | 3 L |

- 7 **Cell signaling** 3 L  
Types of cell signaling Signal molecules, receptors and mechanism of signal transduction.
- 8 **Cell death** 3 L  
Mechanism of apoptosis, its failure leading to cancer development, necrosis.  
Comparison between apoptosis and necrosis

**BBT 210: General Course II: Elective; Option I – Human Values**  
**General Course II; 2 Credits,**

Values are socially accepted norms to evaluate objects, persons, and situations that form part and parcel of sociality. A value system is a set of consistent values and measures. Knowledge of the values are inculcated through education. It contributes in forming true human being, who are able to face life and make it meaningful. There are different kinds of values like, ethical or moral values, doctrinal or ideological values, social values and aesthetic values. Values can be defined as broad preferences concerning appropriate courses of action or outcomes. As such, values reflect a person's sense of right and wrong or what "ought" to be.

The objectives of the course are:

- To lay a strong foundation in value education.
- To create awareness towards realizing self
- To inculcate in students the spirit of social responsibility
- To add value to human relations.
- To make students understand Salient values for life such as truth, commitment, honesty , integrity etc.

**Unit I: Yam – Satya, Ahinsa, Brahmacharya, Asteya, Aparigraha**

Value education-its purpose and significance in the present world –Holistic living – Balancing the outer and inner –Body, Mind and Intellectual level- Duties and responsibilities. Environment and Ecological balance –interdependence of all beings – living and non-living. The binding of man and nature – Environment conservation and enrichment.

**Unit II: Niyam – Soch, Santosh, Tapa, Swadhyaya, Ishwar Pranidhan**

- Social Evils – Corruption, Cyber crime, Terrorism – Alcoholism, Drug addiction – Dowry – Domestic violence – untouchability – female infanticide – atrocities against women-How to tackle them.
- Values for life : truth, commitment, honesty and integrity, forgiveness and love, empathy and ability to sacrifice, care, unity , and inclusiveness, Self esteem and self confidence, punctuality – Time, task and resource management – Problem solving and decision making skills- Interpersonal and Intra personal relationship – Team work – Positive and creative thinking

## SEMESTER III

**BBT 301: Concepts in Microbiology** **Total**  
**Core Course – Theory; 3 Credits** **45L**

### UNIT I

- 1 **Bacterial genetics:** Genetic exchanges in bacteria-Conjugation, Transformation, Transduction, Holliday model of Recombination 7 L
- 2 **Eukaryotic unicellular microorganisms:** Yeast and fungi: Distribution, classification, structure, reproduction, economic importance. Distinguishing characteristics of Archea, Actinomycetes, Rickettsia & Mycoplasma 8 L

### UNIT II

- 6 **Bacterial viruses:** General characteristics, classification, nomenclature, morphology and structure, life cycle (lytic & lysogenic) of  $\lambda$  phage. 7 L
- 7 **Plant and animal viruses:** Structure, classification, replication of plant viruses (TMV) and animal viruses (Influenza), methods of virus cultivation, viroids 8 L

### UNIT III

- 8 **Infection and pathogenicity:** Host parasite relationship, infection, sources of infection, mode of transmission, virulence factors, types of infectious diseases, epidemiology and public health microbiology, control of epidemics 7 L
- 9 **Antimicrobial chemotherapy:** Antibiotics and their mode of action, inhibition of cell wall synthesis, damage of cytoplasmic membrane, inhibition of nucleic acid & protein synthesis, inhibition of specific enzyme system, microbial assay. 8 L

**BBT 302: Biochemistry II**  
**Core Course – Theory; 3 Credits**

**Total**  
**45L**

**UNIT I**

- 1 Thermodynamics** 7 L  
(Recap second law of thermodynamics, entropy, spontaneous change, free energy, enthalpy, reactions at equilibrium, interpretation of equilibrium constants, acid and bases, solubility equilibria, biological activity), Bioenergetics: Anabolism and catabolism. Energy transformations obey laws of thermodynamics, oxidation and reduction, redox potential, high energy bonds / compounds.
- 2 Enzymes** 8 L  
Introduction, classification and nomenclature, specificity of enzymes, mechanism of enzyme actions (Induced fit theory etc), factors affecting enzyme activity; enzyme kinetics-Michaelis–Menten rate equation; regulatory enzymes; enzyme inhibition- allosteric, feedback, competitive and non-competitive inhibition (double reciprocal plots).

**UNIT II**

- 3 Catabolism of carbohydrates** 8 L
- I. Carbohydrates from diet, its digestion, concept of cellular respiration
  - II. Glycolytic pathway, entry of pyruvate in citric acid cycle: site, enzymes, regulation, energetics
  - III. Glycogenolysis: site, enzymes, regulation, energetics
  - IV. TCA: pathway, site, enzymes, regulation, energetic, amphibolic nature of citric acid cycle; Glyoxylate cycle: site, enzymes, regulation, energetics
  - V. Electron transfer chain, enzymes, pathway and oxidative phosphorylation in mitochondria, energetic, regulation
  - VI. Overview of entry of other sugars
  - VII. Alternate pathways: Pentose phosphate pathway
- 4 Anabolism of carbohydrates** 7 L
- I. Photosynthesis (C3):Photosynthetic pigments, light reaction (absorption of light, ETC and cyclic and non-cyclic photophosphorylation) and dark reactions, photorespiration, C4 and CAM metabolism
  - II. Gluconeogenesis (C6): site, enzymes, regulation, energetics
  - III. Glycogenesis (C6 polymer): site, enzymes, regulation, energetics

## UNIT III

- 5 **Lipid metabolism** 8 L
- I. Digestion, transport , absorption
  - II. Oxidation of fatty acids (saturated, unsaturated), regulation, energetics – compare with breakdown of carbohydrates
  - III. Ketone bodies
  - IV. Overview of anabolism
- 6 **Nitrogen metabolism** 7 L
- I. Overview of nitrogen metabolism
  - II. Digestion of proteins to peptides and amino acids, essential amino acids, transamination of amino acids
  - III. Nitrogen excretion and urea cycle
  - IV. Molecules Derived from Amino Acids

## SEMESTER IV

### BBT 401: Environmental Biotechnology Core Course – Theory; 3 Credits

Total  
45L

#### UNIT I

- |   |  |     |
|---|--|-----|
| 1 | Environmental Components: Constituents of environment, biotic and abiotic factors.   | 2 L |
| 2 | Ecosystems: Aquatic, forest, marine life, mountain life and underground life.  | 3 L |
| 3 | Atmosphere: composition and structure. Green house effect, ozone depletion and problems of climate change, related international conventions | 3 L |
| 4 | Characteristics of hydrosphere, water resources, hydrological cycle  | 2 L |
| 5 | Composition of lithosphere/soil; Biogeochemical cycles, their Implications on living systems   | 3 L |
| 6 | Characteristics of the biosphere.  | 2 L |

#### UNIT II

- |    |  |     |
|----|--|-----|
| 7  | <b>Natural resources and environment</b><br>Types of resources, current status and conservation. Sustainable development   | 4 L |
| 8  | <b>Concept of biodiversity</b> and its conservation, present status and types of biodiversity; extinct and endangered species; red data book, steps to preserve biodiversity; concept of in-situ and ex-situ conservation of species; concept of gene and germplasm banks in conservation of endangered species. | 4 L |
| 9  | <b>History of Environmental Biotechnology:</b> Role of Environmental Biotechnology in Environment protection, Microbial interactions in the environment  | 4 L |
| 10 | <b>Biotechnological processes:</b> Bioconversion, Bioaccumulation  | 3 L |

#### UNIT III

- |    |   |     |
|----|---|-----|
| 11 | <b>Environmental pollution &amp; Control</b><br>Introduction: Definition and sources of pollution; Different types of pollution                                   | 2 L |
| 12 | <b>Air pollutants</b> , monitoring techniques, pollution control devices, effects on human health, plants & atmosphere, acid rain, and aerobiology                | 2 L |
| 13 | <b>Water pollution</b> , effects on human health, monitoring techniques (BOD, COD, TVC), eutrophication, waste water treatment, ground water and marine pollution | 2 L |
| 14 | <b>Soil erosion and remedial measures</b> to recover alkaline, acidic and   | 2 L |

	saline soils, bio-pesticides	
15	<b>Solid waste and management:</b> Types of wastes (municipal, agricultural, industrial and mining), Hazardous wastes (electronic, nuclear and biomedical); Waste reduction for energy management - biomass, biogas, composting.	2 L 1 L
16	<b>Bioremediation,</b> biodegradation, biosorption	1 L
17	<b>Noise pollution:Sources,</b> measurement, effects on human health and control.	
18	<b>Radiation hazards:</b> Introduction, atomic radiation, effects of radiation, radioactive waste, radiation protection	2 L
19	<b>Sustainable sources of energy</b>	1 L

<b>BBT 404: ANALYTICAL TECHNIQUES</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>

**UNIT I**

- |   |   |     |
|---|---|-----|
| 1 | <b>Filtration techniques:</b> Gross filtration, steri-pad filtration, membrane filtration, milli-filtration, micro-filtration, ultra-filtration, reverse osmosis, dialysis, their applications in industry. Merits and limitations                    | 4 L |
| 2 | <b>Centrifugation-</b> Table top, high speed, microfuge, refrigerated, ultra, density gradient centrifugation. Basket centrifuges, cream separators, sharples centrifuge, continuous and batch-wise processing, applications in biochemical industry. | 4 L |
| 3 | <b>Lyophilization</b> Principle and practice, applications in R&D (cells and proteins) and nutraceuticals   | 4 L |
| 4 | <b>MALDI-TOF</b> - Introduction to mass spectrometry, applications in determining mass of peptides and proteins   | 3 L |

**UNIT II**

- |   |   |     |
|---|---|-----|
| 5 | <b>Chromatography-</b> Principle, types- (paper, thin layer, gel, affinity, ion exchange), applications; purification of proteins and enzymes and DNA/RNA fractionation | 4 L |
| 6 | <b>HPLC-</b> Concept, principle, procedure (analytical and preparatory), separation on the basis of detectors, accuracy, applications in research and quality control   | 4 L |
| 7 | <b>GC:</b> Concept, principle, procedure (analytical and preparatory), separation on the basis of detectors, accuracy, applications in research and quality control     | 4 L |
| 8 | <b>Introduction to NMR;</b> principle, <sup>1</sup> H and <sup>13</sup> C NMR, applications in determining structures of biomolecules, Magnetic resonance imaging (MRI) | 3 L |

**UNIT III**

- |    |  |     |
|----|--|-----|
| 9  | <b>Radioimmunoassays/MRI:</b> Definition of isotopes and radioisotopes, measurement (counters), half-life, useful isotopes for applications in health and research, carbon dating. Electromagnetic radiations (UV, IR, X-ray, α, β, γ rays, visible spectrum), their measurement. Applications for health and agriculture. | 4 L |
| 10 | <b>Electrophoresis</b> Principle of separation, factors affecting separation, types -paper, agarose gel, PAGE, 2D- gel electrophoresis   | 4 L |
| 11 | <b>AFM:</b> principle, method, applications  | 3 L |
| 12 | <b>X-ray diffraction</b> – principle, method, application for determining 3D structure of proteins - over view of Ramchandran plot.  | 4 L |

## **BBT 409: General Course IV, Elective; Option I – Seminar & Journal Club**

### **General Course IV; 2 Credits**

Journal Club is a student-run institutional course that gives graduate students the opportunity to read, interpret and present literature critically to fellow peers, docs and faculty. This course helps students stay abreast of current knowledge in the field, develop presentation skills .

#### **Course Objectives:**

1. Strengthens student's familiarity with and critical analysis of scientific publications and scientific writing. Seminars will emphasize student participation in discussion and evaluation of all journal articles presented.
2. Practices sound scientific thinking hypothesis construction and evaluation in terms of scientific method and merit.
3. Develops skills in critical evaluation through readings and discussions.
4. Improve written and oral communications skills.
5. Improve breadth of knowledge and of scientific topics, methods, and experimental approaches.
6. Introduces students to scientific writing techniques and manuscript reviewing

#### **PRESENTATION GUIDELINES**

Papers need to be submitted one week before the JC presentation date.

In each class session, three students will individually give a 20 minute presentation, followed by a question and answer session from the audience.

While there is no strict format, presentations should:

- focus on a critical review of a published paper, from any biotechnology topic,
- review a paper, highlight its strengths and weaknesses, and discuss its scientific implications,
- include an introduction to the topic/field, as topics will inherently be from a wide range of disciplines within biotechnology, not necessarily familiar to all students.

**Evaluation and Grading Policy:** Students are expected to attend the class, do the required reading, participate and present one lecture. Each student will lead a discussion for at least one journal article or give a research talk. The class will be graded Pass/Fail. A passing grade requires an overall percentage of 80% or greater. % of total grade Grades will be based on the following

Attendance 10%

Participation: 40%

Discuss and provide feedback to other participants, Ask questions, :50%

## SEMESTER V

### BBT 501 : Biostatistics

#### Core Course – Theory; 3 Credits

	<b>Total</b>
<b>UNIT I</b>	<b>45 L</b>
1 <b>Central Tendency:</b> Mean (Simple, Geometric and Harmonic), Median (Grouped: Discrete and Continuous, Ungrouped data), Mode (Grouped: Discrete and Continuous, Ungrouped data)	3 L
2 <b>Graphical Representation of data:</b> Line Diagram , Pie Chart, Bar diagram, Histogram, Frequency polygon, Ogives	2 L
3 <b>Set Theory</b>	2 L
4 <b>Frequency distribution:</b> Simple, Grouped, cumulative	2 L
5 <b>Probability:</b> Space and Events, Axioms of Probability, Conditional Probability, Independent Events, Bayes' Theory	3 L
6 <b>Measures of Variation:</b> Dispersion, range, Mean Deviation (Grouped: Discrete and Continuous, Ungrouped data), Standard Deviation (Simple and Discrete series), Variance, Covariance, Coefficient of Variation	3 L
<b>UNIT II</b>	
7 <b>Theoretical Distribution:</b> Normal Distribution, Permutation & Combination, Binomial Distribution, Poisson Distribution, Skewness, Kurtosis and Moments	3 L
8 <b>Discrete and Continuous Distributions:</b> Chi-Square Test: Goodness of fit, Contingency Chi-square and Homogeneity , Chi square ,Student's T Distribution: Unpaired t test and Paired t test, Z Distributions or Z test, F-Test	3 L
9 <b>Correlation:</b> Co-efficient of correlation, Types, Karl Pearson's Co-efficient of correlation, Rank correlation, scatter diagram, partial correlation, Multiple correlation	2 L
10 <b>Regression:</b> Simple, multiple, Linear and Non-linear ,Least Squares Method	2 L
11 <b>Analysis of Variance (ANOVA):</b> One-way Anova and Two-way Anova	2 L
12 <b>Statistical Inference/ Estimation Theory:</b> Estimating With Confidence,	3 L

Confidence Intervals for Population Mean, Population Variance, Testing Hypotheses , Tests for a Mean

### UNIT III

- 13 **Spread sheet as Statistical Package I:** (Problems) Data Naming, Cross tabulation using pivot table for Numerical as well as Nominal data, Computing All Elementary statistics (Measures of Central tendency , Measures of dispersion, Histograms , Frequency tables ). Preparation of simple Quality Control Charts. 3 L
- 14 **Spread sheet as Statistical Package II:** (Problems) Curve fitting (and trends), Exponential, Power, Polynomial, Growth curve analysis, Moving averages and trends 3 L
- 15 **Spread sheet as Statistical Package III:** (Problems) Chisq-test, TTests ( Paired, Unpaired,) , Ztest, ANOVA( one way and two way : Ftest ) 3 L  
Note: Use Data Analysis Tool Pack of Spread Shhets.
- 16 **SPSS or PSPP I:** (Problems) Handling large data, Data Preparation, Elementary statistics, Testing of Hypothesis, Report generation with simple graphics 3 L  
Note: PSPP is Open source equivalent of SPSS and is adequate for beginners.
- 17 **SPSS or PSPP II :** Applications (Problems on) to Linear regression, Multiple regression , ANOVA (one way, two way) 3 L

**Total**  
**45L**

**UNIT I**

- 1 **Clinical significance of biochemical tests-** concept of health and disease, factors causing diseases, clinical significance of biochemical tests and their role in diagnosis, monitoring and therapy of disease 3 L
- 2 **Specimen collection and processing-** collection of blood vein puncture, collection with syringe, collection with evacuated tube, skin puncture, arterial puncture and anticoagulants, plasma and serum. Collection of urine:-Timed urine specimens, urine preservatives. 3 L
- 3 **Blood analysis-** Significance of hemogram, total and differential count, clinical significance of packed RBCs, platelets and erythrocyte sedimentation rate (ESR), blood groups: matching and cross matching 3 L
- 4 **Blood coagulation-** Clotting factors, coagulation: tests- clotting time and prothrombin time, diseases associated with blood clotting/ blood lysis 3 L
- 5 **Urine analysis-** Structure and functions of kidney, abnormal constituents of urine and their significance: glucose, acetone bodies, urea, creatinine, uric acid, billirubin, protein, Na<sup>+</sup>, K<sup>+</sup> and calcium oxalate. 3 L

**UNIT II**

- 6 **Lipid profile-** Determination of triglycerides, cholesterol, VLDL, LDL, HDL, significance of deviation from normal range. 4 L
- 7 **Status of liver:** Structure and functions of liver, liver function tests, metabolism of RBC, free and conjugated billirubin, types of Jaundice - hemolytic, hepatic, post-hepatic, neonatal and jaundice of genetic origin. 4 L
- 8 **Significance of enzymes in diagnosis:** assay and significance of enzyme levels in heart, liver, kidney and pancreatic disorders. SGPT, SGOT, alkaline phosphatase, lactate dehydrogenase, creatine phosphokinase,  $\alpha$  – amylase. 4 L
- 9 **Radioisotopes in medicine-**Concept of radioactivity, use of radioisotopes in medicine, radiation hazards, radiation health safety and protection 3 L

**UNIT III**

- 10 **Acid-Base Balance:** Acids, bases and buffers, normal pH of the body fluids, regulation of blood pH, acidosis and alkalosis, anion gap 3 L

- 11 **Electrolyte balance and water metabolism-** Regulation of fluids and electrolytes, Water excess and depletion, Sodium balance, Potassium balance 3 L
- 12 **Carbohydrates pathophysiology: Regulation of Blood Sugar, Insulin and Diabetes Mellitus:**Regulation of blood glucose, insulin, glucagon, prediabetes, types of diabetes mellitus, glucose tolerance test, clinical presentation, diabetic keto acidosis, chronic complications 3 L
- 13 **Lipids pathophysiology:**Metabolism of adipose tissue, Hormone sensitive lipase, Obesity, Fatty liver, Lipotropic factors, Ketone bodies, Plasma cholesterol, Atherosclerosis, Coronary artery disease 3 L
- 14 **Protein pathophysiology-** determination of Hb, glycosylated Hb, definition of anemia, types of anemia – iron deficiency anemia, Pernicious anemia, hemolytic anemia, aplastic anemia, sickle cell anemia. Thalaessaemia. 3 L

**BBT 509: General Course V - Innovative ideas in Biotechnology  
General Course V; 2 Credits**

**Total  
30 Hrs.**

The knowledge of biotechnology is constantly advancing which has tremendous potential for applications in agriculture and medicine. From finding ways to fasten the essential processes eg. fermentation, diagnosis and slow down the unwanted process such as food spoilage, diseases; new applications and biotechnological inventions are continuously being developed to improve the society and world. The linkage between basic and applied research with new discoveries and innovations can find direct applications in agriculture, human health, environment etc.

**Objectives:**

- To understand how ideas/discoveries and inventions are commercialized,
- Apply the understanding and knowledge of the basics of biotechnology to find solution for the current issues/problems to their own field of study,
- Use the new skills and continue to independently learn more about the area of innovations,
- Express this knowledge of the innovation system in the form of oral/poster presentation.

**Teaching methods:**

- Orientation lecture, seminars / workshops as well as project assignments on group and individual level.

**References:**

## SEMESTER VI

**BBT 601 : Animal Biotechnology** **Total**  
**Core Course - Theory; 3 Credits** **45L**

### UNIT I

- |   |  |     |
|---|--|-----|
| 1 | <b>Introduction</b><br>Animal biotechnology to advance animal health; to develop more nutritive food; to advance human health; to introduce specific characters in strains for experimental research   | 2 L |
| 2 | <b>Biotechnology for improving animal health and welfare</b><br>Biotechnology for developing improved varieties of animals for increasing livestock productivity and nutrition content; Biotechnology for improving quality of milk, eggs and meat | 5 L |
| 3 | <b>Animal cloning, genetic engineering</b><br>Development of genetically engineered/ cloned animals; production of meat, milk from cloned animals  | 4 L |
| 4 | <b>Transgenic animals</b><br>Techniques and use of transgenic animals  | 4 L |

### UNIT II

- |   |   |     |
|---|---|-----|
| 3 | <b>Use of animals in life science research</b>  | 1 L |
| 4 | <b>Animal tissue culture</b><br>Introduction; systems of animal tissue culture, advantages and limitations; applications  | 3 L |
| 4 | <b>Simulating conditions for growth of cells</b><br>Temperature, pH, nutrition, sterility   | 3 L |
| 5 | <b>Culture media</b><br>Balanced salt solution, metabolic role of constituents of culture medium, serum and supplements, commercially available important media formulations              | 3L  |
| 6 | <b>Technique of cell culture</b><br>Disaggregation of tissue, preparation of primary culture, subculture and maintenance of cell lines, quantitation of cells and estimation of viability | 5 L |

### UNIT III

- |   |  |     |
|---|--|-----|
| 7 | <b>Biotechnology for improving detection, treatment and prevention of diseases</b>   | 1 L |
|   | <b>Monoclonal antibodies</b><br>Hybridoma technique for production of monoclonal antibodies; applications of monoclonal antibodies | 4 L |
| 6 | <b>Vaccines</b><br>Commonly used vaccines for humans; Recommended childhood  | 4 L |

	immunization schedule in India; Types of vaccines; method of production	
7	<b>Production of growth factors and therapeutic proteins</b> Important growth factors and therapeutic proteins approved for pharmaceutical use; method of production	3 L
8	<b>Stem cells</b> Introduction, types, use in regeneration of tissues	3 L

<b>BBT 602: Bioprocess Technology and Quality Control</b>	<b>Total</b>
<b>Core Course - Theory; 3 Credits</b>	<b>45L</b>

**UNIT I**

- |   |   |     |
|---|---|-----|
| 1 | Isolation & preservation of industrially important micro-organisms  | 5 L |
| 2 | Selection of the desired characteristics, Screening methods, different methods of culture preservation, improvement of industrial micro-organisms | 5 L |
| 3 | Media formulation: media ingredients, objectives and cost effectiveness   | 5 L |

**UNIT II**

- |   |  |     |
|---|--|-----|
| 4 | Types of fermentation, design of typical bioreactor and its various parts  | 5 L |
| 5 | Types of bioreactors: continuous stirred tank reactors (CSTR), packed bed reactors, fluidized bed reactors, air lift fermenter | 5 L |
| 6 | Online monitoring and computer control of fermentation process   | 3 L |

**UNIT III**

- |   |   |     |
|---|---|-----|
| 7 | Downstream processing: General steps, recovery of products, extraction and purification   | 08L |
| 8 | Quality control in pharmaceutical industry: Evolution of quality concepts: Quality, Quality control, Quality Assurance, GMP<br>Quality Assurance concepts & tools: Process approach, System approach, Statistical Quality control , Documentation<br>Input control: Contamination, Cross contamination, Raw Material/ Packaging material, Building, premises and Location, Utilities, Human resource,<br>Process control: Validation- Equipment/Instruments, process, Operators, Utilities, Materials,<br>IPQC and Final quality testing and release of product<br>Good Documentation Practices | 09L |

**BBT 603: Plant Biotechnology**  
**Core Course - Theory; 3 Credits**

**Total**  
**45L**

**UNIT I**

- 1 **Introduction:** Historical review, methodology, scope and limitations. 2 L
- 2 **Types of cultures and their applications:** Organ, callus, cell, meristem, embryo, protoplast, endosperm, nucellus, microspore cultures and micro-techniques 8 L
- 3 **Micropropagation and strategies:** Axillary shoot proliferation, organogenesis and somatic embryogenesis. 5 L

**UNIT II**

- 4 **Molecular marker technology:** Various types and their applications in genome analysis, marker-assisted selection, germplasm analysis, taxonomic and evolutionary studies in plantbreeding. DNA finger printing. 5 L
- 5 **Conservation of plant genetic resources:** Germplasm preservation and cryopreservation 5 L
- 6 **Secondary metabolite production:** Various culture types (organized tissue, disorganized tissue, immobilized cultures and hairy root cultures), Strategies used to optimize secondary metabolite yield (Plant cell reactors, precursors, elicitors, metabolic engineering). 5 L

**UNIT III**

- 7 **Genetic engineering and applications:** Indirect methods (*Agrobacterium* and viral mediated transformation), direct methods (Chemical transformation, electroporation, microinjection, particle bombardment, sonication, whisker). *In planta* and chloroplast transformation. Selection of transformed cells (selectable markers, reporter genes and PCR). Recovery of transformed plants. Gene expression and validation. Genetic stability and field performance. Production of transgenic plants tolerant to herbicide, resistant to virus and pathogens. Concerns regarding the GM plants. 10 L
- 8 **Commercial applications:** In floriculture, horticulture, forestry and medicine 5 L

**BBT 609: General Course VI; Elective; Option I- Scientific Writing  
General Course VI; 2 Credits**

**Total  
30 Hrs.**

**Technical and scientific writing skills**

The course will involve developing technical and scientific writing skills of students in clear and concise English. Students will select a relevant topic for which they will perform a literature search and write a review under the guidance of his tutor.

**Objectives:**

- To understand the technical ways of literature search
- To experience the mining of information relevant to the selected topic
- Learn to analyze and concise the information gathered on the selected topic in the form of review
- Building reading and writing skills

**Teaching methods:**

- Selection of a suitable topic of interest. Search the relevant literature on the topic and write a review article with assistance from the tutor/guide

## NOTIFICATION NO. 894

It is hereby notified for the information of all concerned that the Academic Council, at its 55<sup>th</sup> meeting held on 26-3-2018, has resolved to approve the revised course structures, syllabi and rules of examinations of M.Sc. Biotechnology and M.Sc. Medical Biotechnology under Choice Based Credit System to be implemented from the academic year 2018-19.

Copies of revised course structures, syllabi and rules of examinations of M.Sc. Biotechnology and M.Sc. Medical Biotechnology under Choice Based Credit System are enclosed.

All the concerned may please note.

**To be effective from Academic Year**

**2018-19**

Bharati Vidyapeeth Deemed to Be University is a multidisciplinary, multicampus university having 32 Institutions imparting quality education in various disciplines. All programmes of the University are approved by UGC and respective statutory councils. BVDU has been re accredited for the third time with 'A+' grade by NAAC in 2017. UGC has accorded 12B Status [UGC ACT1956] to the university. Ministry of Human Resource and Development, Government of India has awarded "A" category to the University in 2012 based on parameters including innovative programs, research and infrastructure facilities. The University is a member of Association of Indian Universities [AIU] which has ranked BVDU among top 10 universities of India for International students' enrollment. BVDU is also a member of International Association of Universities.

Rajiv Gandhi Institute of IT and Biotechnology is a constituent unit of BVDU established in 2003. The Institute is approved by UGC to conduct graduate and post graduate courses in Biotechnology. The Institute has excellent infrastructure, state-of-the-art laboratories and competent faculty facilitating appropriate learning environment. The Institute offers one undergraduate and four postgraduate programmes in Biotechnology.

## **INTRODUCTION**

The Master of Science (M.Sc.) in Biotechnology is a full time post graduate programme offered by Bharati Vidyapeeth Deemed to be University (BVDU) in its constituent unit Rajiv Gandhi Institute of IT and Biotechnology. The course was initiated in the year 2005 and was designed to facilitate empowerment of students to face cutting edge technological applications in biotechnology sector. The main advantage of proposing this course was availability of the expertise in biotechnology, health and environment disciplines on the same campus. The course received very encouraging response from all its stakeholders. On its implementation for 13 years, the curriculum is being revised to embrace newer emerging disciplines and value added courses. The revised M.Sc. Biotechnology is a full time 102 credits Programme to be implemented in Rajiv Gandhi Institute of IT and Biotechnology from the academic year 2017-18. The feedback of students, alumni, faculty, employers and parents has a substantial contribution in designing of this curriculum.

## **OBJECTIVES**

1. To impart deep knowledge of the discipline
2. Develop skills in relevant areas to enhance employment opportunities
3. Introduce emerging areas of pharma and biotech sector
4. Build interdisciplinary approach
5. Foster global competence among students
6. Inculcate social and moral values and sense of scientific responsibilities in students

## **ELIGIBILITY FOR ADMISSION TO THE COURSE**

Candidates satisfying following criteria are eligible to apply for M.Sc. Biotechnology Course

1. The candidate should have passed the Bachelors degree course in Biotechnology/ any branch of life science from the recognized university with minimum of 50% or 45% aggregate marks for open and SC / ST category respectively at graduate level university examination.
2. Subject to above conditions, the admission will be based on the merit at Entrance Examination conducted by Bharati Vidyapeeth Deemed to be University.

## **DURATION OF THE COURSE**

The course will be executed in four semesters. The medium of instruction and examination will be only English.

**RULES FOR THE COURSE**

1. The entire course is of 102 credits.
2. One credit for theory course is equivalent to 15 lectures/tutorials; while one credit for practical course is equivalent to 25 – 30 hrs. of lab /field work or demonstration.
3. The curriculum comprises of Core and Value Added courses. The Core Courses are compulsory where as Value Added are elective.
4. The Core Courses are aimed at providing fundamental knowledge of the discipline. The Value Added Courses intend to develop skills in relevant Biotechnology Industry sector.
5. The teaching schedule for the 3 credits and 2 credits theory courses will be 3 and 2 lectures per week respectively. All courses will have one tutorial fortnightly.
6. The respective elective course will be implemented only if more than 10 students enroll for that course.
7. Some of the core courses in Semester I and Semester II are common in two master's programmes; M.Sc. Biotechnology and M.Sc. Medical Biotechnology.
8. The teaching and evaluation for these courses will be combined for both disciplines.
9. The shared courses are coded as MBT&MedBT whereas the courses which are exclusive for M.Sc. Biotechnology are coded as MBT
10. All core courses will be evaluated by University Examination. The elective courses will be evaluated by Continuous Assessment.
11. Two extra credits will be awarded to students if there is any significant outcome of their dissertation study. The research outcome in terms of publication in indexed national/International journal; filing of patent; or commercialization of technology will be considered for the award of credits.

**RULES FOR EXAMINATION****A: Nature of Examination:**

1. Each course will have 40% marks for internal assessment and 60% marks for semester-end examination.
2. The assessment for 1, 2, 3 and 4 Credits courses will be as given in following table

Table 1: Evaluation pattern for one to four Credit Courses

Course Credits	Marks for UE (60% Weightage)	Marks for IE (40% weightage)	Total Marks for evaluation
1	15	10	25
2	30	20	50
3	45	30	75
4	60	40	100

- The duration of 60 Marks UE theory paper will be 3.00 Hrs; for 45 Marks 2.00 Hrs and for 30 Marks 1.30 Hrs. respectively.
- The Internal Assessments (IA) will be conducted by the Institute and an end-of-the term University Examination (UE) conducted by the university. The UE will be based on the entire syllabus.
- The performances at UE and IA will be combined to obtain the Grade Point Average (GPA) for the course.

#### STANDARD OF PASSING

**A: Grading System:** A 10-point absolute grading system will be adapted for grading in each head of passing. The system will have seven grade points, the highest being 10. The grading system shall be as shown in Table-2 below. The performance indicators O, A+, A, B+, B, C, and D shall respectively mean Outstanding, Excellent, Very Good, Good, Average, Satisfactory, and Poor.

Table-2: The grading system under CBCS

Range of Marks (out of 100)	Grade Point	Grade
$80 \leq \text{Marks} \leq 100$	10	O
$70 \leq \text{Marks} \leq 80$	9	A+
$60 \leq \text{Marks} \leq 70$	8	A
$55 \leq \text{Marks} \leq 60$	7	B+
$50 \leq \text{Marks} \leq 55$	6	B
$40 \leq \text{Marks} \leq 50$	5	C
$\text{Marks} < 40$	0	D

1. The grade point average (GPA) for a course shall be calculated by first finding the total marks **out of 100 for the course. The corresponding GP (as per the table-2) shall be the GPA for the course.**
2. Two kinds of performance indicators, namely, the Semester Grade Point Average (SGPA) and the Cumulative Grade Point Average (CGPA) shall be computed at the end of each term. The SGPA measures the cumulative performance of a learner in all the courses in a particular semester, while the CGPA measures the cumulative performance in all courses up to and including the current semester. The CGPA of a student when he/she completes the programme is his/her final result.
3. The SGPA is calculated by the formula ,  $SGPA = \frac{\sum Ck \times GPAk}{\sum Ck}$  where  $Ck$  is the credit-value assigned to a course and  $GPAk$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study during the semester, including those in which he/she might have failed or those for which he/she remained absent. **The SGPA shall be calculated up to two decimal place accuracy.**
4. The CGPA is calculated by the formula ,  $CGPA = \frac{\sum Ck \times GPAk}{\sum Ck}$  where  $Ck$  is the credit-value assigned to a course and  $GPAk$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study from the time of his/her enrolment and also the during the semester for which CGPA is calculated, including those in which he/she might have failed or those for which he/she remained absent. **The CGPA shall be calculated up to two decimal place accuracy.**
5. The CGPA, calculated after the minimum credits specified for the programme are 'earned', will be the final result grace marks of 1, 2 or 3 may be awarded to a candidate at UE as per the university rules. **B: Standards of Passing and ATKT rules:**

**1.** For all Core Courses, both UE and IE constitute separate heads-of-passing (HoP). In order to pass in such courses and to 'earn' the assigned credits

- (a) the learner must obtain a minimum grade point of 5.0 (40% marks) at UE and also a minimum grade point of 5.0 (40% marks) at IA;

**OR**

(b) If he/she fails in IA, then also the learner passes in the course, **provided that a minimum of 25% is obtained in IA and GPA for the course is at least 6.0 (50%marks ) in aggregate.** The GPA for a course will be calculated only if the learner passes in that course.

1. A student who fails at UE in a course has to reappear only at UE as a backlog candidate and clear the HoP. Similarly, a student who fails in a course at IA has to reappear only at IA as a backlog candidate and clear the HoP. **A student who passes in aggregate in a course need not reappear even if he failed at IA if he/she obtains 25% at IA.**
2. The students of Semester I and II & III will be admitted to next Semester even if he/she gets backlog in any of the course. They can reappear in the next semester examination as a backlog candidate.

#### C: AWARD OF HONOURS:

1. A student who has completed the minimum credits specified for the programme shall be declared to have passed in the programme. The final result will be in terms of letter grade and CGPA only and is based on the CGPA of all courses studied and passed. The criteria for the award of honours are given in Table 3.

**Table 3: Criteria for the award of honours at the end of the programme**

Range of CGPA	Final Grade	Performance Descriptor	Equivalent Range of Marks (%)
$9.50 \leq CGPA \leq 10.00$	O	Outstanding	$80 \leq Marks \leq 100$
$9.00 \leq CGPA \leq 9.49$	A+	Excellent	$70 \leq Marks \leq 80$
$8.00 \leq CGPA \leq 8.99$	A	Very Good	$60 \leq Marks \leq 70$
$7.00 \leq CGPA \leq 7.99$	B+	Good	$55 \leq Marks \leq 60$
$6.00 \leq CGPA \leq 6.99$	B	Average	$50 \leq Marks \leq 55$
$5.00 \leq CGPA \leq 5.99$	C	Satisfactory	$40 \leq Marks \leq 50$
CGPA Below 5.00	F	Fail	Marks below 40

**THE FORMAT OF THE TRANSCRIPTS**

The transcripts may be acquired by the students indicating his/her performance in every semester examination. The transcript shall show the performance indicators given in the following table, in addition to any other information.

Course Number	Course Description	Number of Credits	University Examination		IA/CA		Grade Point Average (GPA)	Result
			Grade	Grade Point	Grade	Grade Point		
Total Cumulative Credits Completed		SGPA	CGPA	Equivalent Marks (%)	<b>Note: GPA is calculated by adding the UE marks out of 60 and IA marks out of 40. The total marks out of 100 are converted to Grade Point, which will be GPA</b>			

**PATTERN FOR ASSESSMENT****A: Pattern of Evaluation for Internal Assessment of Theory Courses:**

The weightage for Internal Assessment is 40%. Students for IA of every theory course will be assessed for total of 30 marks for 3 credit course and for 20 marks for 2 credit course which will be cumulative marks obtained in two separate assessments specified below.

1. Two internal written examinations of 15 marks each for 3 credit course and 10 marks each for 2 credit course. A total of the two tests will be considered.
2. An optional assignment/ oral/ open book examination may be undertaken if desired.

**B. Pattern of Evaluation for Internal Assessment of Practical Courses:**

The Internal Assessment for every practical course will be of 20 Marks for 2 credits and 40 marks for 4 credits practical courses. The students for IA will be assessed on the basis of;

1. Performance for every practical: 10 Marks/20 Marks for 2/4 Credits practical courses respectively. (Marks to be distributed depending on total number of practicals)
2. Assignment/ Oral examination/Tour Report: 10/20 Marks for 2/4 Credits courses

**C: Pattern of question paper at University Examination**

University Examination for 3 credit and 2 credit theory course will be of 45 marks and 30 marks respectively. **For 3 credit course**, the question paper will comprise of 6 questions, 3 questions each in section I and section II. Q1 of section I will be of 6 marks while Q2 and Q3 will be of 8 marks each. Q 4 of section II will be of 7 marks while Q 5 and Q6 will be of 8 marks each. All questions will be compulsory. The pattern of question paper will be as given on next page.

**Pattern of question paper for 3 Credit Course of university theory examination of M.Sc. Biotechnology 2018 CBCS Course** (Total Marks:45, Tme:2.00 Hrs.)

**Instructions to Paper Setter:**

- I. Question paper of each course will comprise of total 6 questions,
- II. Section I will have 3 questions and Section II 3 questions.
- III. All questions will be compulsory. Each question will carry an internal option of one extra sub-question.
- IV. Q. no 1 will be objective, comprising of 7 questions of 1 mark each. They will be based on entire portion of Section I. Students will have to attempt any 6 out of these.
- V. Q no 4 will be objective, comprising of 8 questions of 1 mark each. They will be based on entire portion of Section II. Students will have to attempt any 7 out of these.
- VI. Questions 2 & 3 of **Section I** and 5 & 6 of **Section II** will be descriptive and contain 3 sub-questions of 4 marks each out of which students will attempt any two.

- VII. Q 2 and 3 will be based solely on Unit I and II whereas Q 5 and 6 will be based on Unit III and IV of the syllabus respectively.
- VIII. Students will attempt answers to Section I and Section II in separate answer books

**SECTION I**

**Q. 1** Attempt **Any Six** of the following (06)

- a
- b
- c
- d
- e
- f
- g

**Q. 2** Attempt **Any Two** of the following (08)

- a
- b
- c

**Q. 3** Write short notes on **Any Two** of the following (08)

- a
- b
- c

**SECTION II**

**Q. 4** Attempt **Any Seven** of the following (07)

- a
- b
- c
- d
- e
- f
- g
- h

**Q. 5** Attempt **Any Two** of the following (08)

- a
- b
- c

**Q. 6** Write short notes on **Any Two** of the following (08)

- a
- b
- c

Question Paper Pattern for 2 Credits Theory Course at University Examination

For 2 credit course, the question paper will comprise of 4 questions, 2 questions each in section I and section II. Q1 of section I and Q3 of section II will be of 7 marks each while Q2 and Q4 will be of 8 marks each. All questions will be compulsory. The pattern of question paper will be as given on next page.

**Pattern of question paper for 2 credit course of university theory examination of M.Sc. Biotechnology 2018 CBCS Course**  
(Total Marks:30, Tme:1.50 Hrs.)

**Instructions to Paper Setter:**

- IX. Question paper of each course will comprise of total 4 questions,
- X. Section I will have 2 questions and Section II 2 questions.
- XI. All questions will be compulsory. Each question will carry an internal option of one extra sub-question.
- XII. Questions 1 of section I and 3 of section II will be objective, and contain 8 questions of 1 mark each out of which students will attempt any 7. They will be based on entire portion of Section I and section II respectively.
- XIII. Questions 2 of **Section I** and 4 of **Section II** will be descriptive and contain 3 sub-questions of 4 marks each out of which students will attempt any two.
- XIV. Q 2 and 4 will be based solely on Unit I and II of the syllabus respectively..
- XV. Students will attempt answers to Section I and Section II in separate answer books

**SECTION I**

**Q. 1** Attempt **Any Seven** of the following (07)

- a
- b
- c
- d
- e
- f
- g
- h

**Q. 2** Attempt **Any Two** of the following (08)

- a
- b
- c

**SECTION II**

**Q. 3** Attempt **Any Seven** of the following (07)

- a
- b
- c
- d

- e
- f
- g
- h

Q. 4 Attempt **Any Two** of the following (08)

- a
- b
- c

<b>MBT&amp;MedBT 208</b> Core Course –Practical	Analytical Techniques and Proteomics Lab	<b>4</b>	40	60	
<b>MBT&amp;MedBT 209</b> Core Course - Practical	Immunology & Nanotechnology Lab	<b>4</b>	40	60	
<b>MBT&amp;MedBT 210</b> Elective Course I	Bioentrepreneurship/ IPR I	<b>2</b>	Continuous Assessment		
					<b>30</b>

**Elective Courses in Sem II:**

- 1) MBT 210: Elective Course I; Option I: Bioentrepreneurship, Option II: IPR I**

## SEMESTER III

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>MBT 301</b> Core Course –Theory	Environmental Biotechnology	3	40	60	27
<b>MBT 302</b> Core Course –Theory	Plant Biotechnology	3	40	60	
<b>MBT 303</b> Core Course –Theory	Microbial Technology	3	40	60	
<b>MBT 304</b> Core Course –Theory	Food Biotechnology	2	40	60	
<b>MBT&amp;MedBT 305</b> Core Course-Theory	Biostatistics	2	40	60	
<b>MBT&amp;MedBT 306</b> Core Course-Theory	Research Methodology	2	40	60	
<b>MBT 307</b> Core Course-Practical	Environment & Plant Biotech Lab	4	40	60	
<b>MBT 308</b> Core Course-Practical	Microbial & Food Biotech Lab	4	40	60	
<b>MBT 309</b> Core Course-Practical	Biostatistics Lab	2	40	60	
<b>MBT&amp;MedBT 310</b> Elective Course II	Biomedical Waste Management/ Drug designing/ IPR II	2	Continuous Assessment		

Elective Courses in Sem III:

1) MBT 310: Elective Course I; Option I: Biomedical Waste Management, Option II: Drug designing, Option III: IPR II

## SEMESTER IV

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>MBT 401</b> Core Course	Research Project	20	40	60	20

Total Credits Offered: 25 C, Sem I+ 30 C, Sem II +27 C, Sem III+ 20C, Sem IV = 102 C

SEMESTER I

<b>MBT&amp;MedBT 101: Microbiology</b>		<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>		<b>45L</b>
<b>UNIT I</b>		
<b>1</b>	Microbial diversity: Bacteria Archaea	<b>3</b>
<b>2</b>	Cell structure and functions of bacteria.	<b>3</b>
<b>3</b>	Cell structure and functions of archaea and fungi.	<b>4</b>
<b>UNIT II</b>		
<b>4</b>	Microbial growth: Growth kinetics, cytokinesis, factors affecting growth of microorganisms.	<b>4</b>
<b>5</b>	Growth on different environment Extremophiles and their adaptations	<b>3</b>
<b>6</b>	Anaerobic microorganisms, cultivation and applications.	<b>3</b>
<b>UNIT III</b>		
<b>7</b>	Microbial interactions: Symbiotic interactions, parasitism, ammensalism and competition;	<b>5</b>
<b>8</b>	Microbial flora of healthy human host: Distribution and occurrence of normal flora in humans	<b>5</b>
<b>9</b>	Microbial pathogenesis: Host-microbe interactions; Bacterial, fungal and protozoalpathogenesis in humans.	<b>4</b>
<b>UNIT IV</b>		
<b>10</b>	Effect of Antimicrobial drugs: on bacterial, fungal and viral pathogens	<b>4</b>
<b>11</b>	Virology: Diversity, Classification of virus, Cytopathic effect of virus	<b>3</b>
<b>12</b>	Taxonomy, Molecular methods, Bergey's manual of systematic bacteriology.	<b>4</b>

<b>MBT&amp;MedBT 102: Biochemistry</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I: Biomolecules structure, functions</b>	
<b>1 Introduction:</b> Scope and importance of biochemistry in biotechnology.	<b>1</b>
<b>2 Carbohydrates, lipids and proteins -</b> Structure, properties and biological role (functions) of carbohydrates, Proteins and lipids. Protein structure and Lectins- overview. Lipids and cell membranes – types of membrane lipids, phospholipids and glycolipids from bimolecular sheets. Monoglycerides and diglycerides- structure, properties and applications.	<b>7</b>
<b>3 Hydrolytic products of polysaccharides &amp; their applications.</b> Bulk production of Malt, peptides, malto-dextrin, glue.	<b>3</b>
<b>UNIT II: Metabolism</b>	
<b>4 Metabolism of carbohydrates and protein-</b> Glycolysis, Glucogenesis, Citric acid cycle and Glycogen metabolism. Protein turnover and Amino acid catabolism, Biosynthesis of amino acids, urea cycle. Biosynthesis of carbohydrate and proteins-overview	<b>5</b>
<b>5 Fatty acid metabolism and nucleic acid metabolism-</b> Overview of Fatty Acid Metabolism, synthesis and degradation of fatty acids, De novo synthesis of Nucleotides	<b>4</b>
<b>6 Oxidative phosphorylation and photophosphorylation</b> Oxidative Phosphorylation – regulation – light reactions of Photosynthesis	<b>3</b>
<b>UNIT III: Enzymology</b>	
<b>7 Introduction to enzymes-</b> Classification of enzymes, specificity of enzyme action – monomeric and oligomeric enzymes. Allosteric enzymes. Structural Components of Enzymes – apoenzymes, prosthetic group, cofactors,	<b>4</b>
<b>8 Mechanisms of reactions catalysed by enzymes –</b> Metal activated enzymes – metalloenzymes –involvement of co enzymes, Enzyme Inhibition	<b>4</b>
<b>9 Biotechnological applications of enzymes</b> in various industries like fruit juice extraction, leather processing, Meat tenderization, Baking and dairy industry.	<b>3</b>
<b>UNIT IV: Techniques</b>	
<b>10 Free and immobilised enzyme kinetics-</b> Rationale and Methods of immobilization of enzymes: covalent coupling, cross-linking and entrapment methods. Properties of immobilized enzymes, Whole cell immobilization, Advantages of immobilization, Types of Carriers,. Applications of Immobilized enzymes: Production of High fructose corn syrup, invert sugar, synthetic penicillin.	<b>4</b>
<b>11 Chromatography-</b> Principle, types- gel, affinity, ion exchange, applications	<b>3</b>
<b>12 Electrophoresis</b> Principle of separation, factors affecting separation, types - paper, agarose gel, PAGE, 2D- gel electrophoresis, western blotting	<b>4</b>
<b>References</b>

<b>MBT&amp;Med BT 103: Cell &amp; Developmental Biology</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>

**UNIT I**

- |          |  |          |
|----------|--|----------|
| <b>1</b> | <b>Structure of cell</b><br>Structure of cell organelles: Endoplasmic reticulum, mitochondria, golgi apparatus, lysosomes, chloroplast, nucleus, cell wall. Comparison of prokaryotic and eukaryotic cells | <b>6</b> |
| <b>2</b> | <b>Cytoskeleton:</b> Organization and functions cytoskeleton, Actin filaments, actin binding proteins, Intermediate filaments, Microtubules, Structure and functions of cilia and flagella.                | <b>5</b> |

**UNIT II**

- |          |  |          |
|----------|--|----------|
| <b>4</b> | <b>Plasma Membrane:</b><br>Plasma membrane structure and functions, membrane models, Transport across membrane- passive diffusion, osmosis, active transport, Ion Channels, Na <sup>+</sup> and K <sup>+</sup> pump, Ca <sup>2+</sup> ATPase pump, co-transport, symport, antiport, endocytosis and exocytosis. Membrane vesicle trafficking | <b>7</b> |
| <b>5</b> | <b>Specialized Cells (Muscle &amp; Nerve cells):</b><br>Structure & functions of muscles (Straited, nonstraited and cardiac). Structure of neuron, Neurotransmitters and their receptors   | <b>4</b> |

**UNIT III**

- |          |   |          |
|----------|---|----------|
| <b>6</b> | <b>Cell – Cell Interactions</b><br>Cell adhesion molecules, cadherins, Integrins, transmembrane proteoglycanc, Claudins and occludens, gap junctions, tight junctions, adherens, desmosomes and hemidesmosomes, plasmodesmata | <b>3</b> |
| <b>7</b> | <b>Cell Cycle</b><br>Molecular events of cell division and cell cycle, regulation of cell cycle events- Cyclins, Cyclin dependent kinases, inhibitors. Apoptosis and necrosis.  | <b>2</b> |
| <b>8</b> | <b>Cell Signaling</b><br>General principles of cell signaling, signaling via G-protein coupled receptors, kinase receptors, role of secondary messengers.   | <b>6</b> |

**UNIT IV**

- |           |   |          |
|-----------|---|----------|
| <b>9</b>  | <b>Developmental Biology</b><br>Gametogenesis (Spermatogenesis, Oogenesis), Meiosis and its significance, types of eggs, fertilization and implantation, types and patterns of cleavage, Blastulation | <b>5</b> |
| <b>10</b> | <b>Stages of fetal development</b><br>Gastrulation in Frog, Germ layer formation, fetal membranes, placenta formation in mammals  | <b>4</b> |
| <b>11</b> | <b>Concept of dedifferentiation, redifferentiation, transdifferentiation and regeneration</b>   | <b>3</b> |

<b>MBT&amp;Med BT 104: Genetics</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I</b>	
<b>1 Overview of genetics:</b>	<b>5</b>
Genes and Expression, Allele, multiple alleles, pseudoallele, complementation tests, Genetic variation, Molecular basis of allelic variation. Methodologies used in genetic studies, Model organisms. Genes-Environment interaction.	
<b>2 Modes of inheritance:</b> Mendelian and Non Mendelian Inheritance: Lethal alleles, Epistasis, Penetrance and expressivity, Pleiotropy, Phenocopies, mitochondrial inheritance	<b>6</b>
<b>UNIT II</b>	
<b>3 Structure and function of human chromosome:</b>	<b>3</b>
Ultra structure of human chromosome, Classification of chromosomes, Sex chromosome, Origin of Y chromosome, SRY genes and its effects. Dosage compensation	
<b>4 Human chromosomal Abnormalities:</b> Aneuploidy and Structural, associated syndromes	<b>4</b>
<b>5 Pedigree analysis of human:</b>	<b>2</b>
X linked and autosomal disorders. Linkage maps, Lod scores to assess linkage in human pedigrees	
<b>6 Diagnostics:</b> Prenatal diagnosis, Karyotype analysis, FISH, Genetic counseling	<b>3</b>
<b>UNIT III</b>	
<b>7 Population genetics:</b> Population genetics – Populations, Gene pool, Gene frequency; Hardy-Weinberg Law; concepts and rate of change in gene frequency through natural selection, migration and random genetic drift; Adaptive radiation; Isolating mechanisms; Speciation; Allopatricity and Sympatricity; Convergent evolution; Sexual selection; Co-evolution.	<b>5L</b>
<b>8 Brain, Behavior and Evolution:</b>	<b>6L</b>
Approaches and methods in study of behavior; Proximate and ultimate causation; Altruism and evolution-Group selection, Kin selection, Reciprocal altruism; Neural basis of learning, memory, cognition, sleep and arousal; Biological clocks; Development of behavior; Social communication; Social dominance; Use of space and territoriality; Mating systems, Parental investment and Reproductive success; Parental care; Aggressive behavior; Habitat selection and optimality in foraging; Migration, orientation and navigation; Domestication and behavioral changes.	
<b>Unit IV</b>	
<b>9 Cancer genetics;</b> genetic control of cell cycle, mutations that prevent normal checkpoints, inherited cancer syndromes, cancers acquired due to chromosomal abnormalities	<b>6L</b>
<b>10 Reproductive Technologies</b>	<b>5L</b>
<b>References:</b>

4. Human Genetics. A Gardner, T. Davies. 2<sup>nd</sup> Ed. Springer Verlag Publ 2010.

<b>MBT&amp;Med BT 105: Molecular Biology</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I</b>	
<b>1 Genomes and its content</b>	<b>8</b>
Basic concepts, flow of information transfer, genetic code, types of mutations	
Genome sizes of different organisms, C Value	
Gene families, clusters, pseudogenes, super-families, organelle genomes	
Organization of prokaryotic genome, Structure of nucleosome and organization of chromatin, structure of chromosome, centromere and telomere	
<b>UNIT II</b>	
<b>2 DNA replication &amp; repair</b>	<b>6</b>
DNA polymerases, mechanism of replication in prokaryotes and eukaryotes, DNA damage, Mechanisms of DNA repair in prokaryotes and eukaryotes,	
<b>3 Homologous and site specific recombination</b>	<b>4</b>
Insertion elements	<b>3</b>
<b>UNIT III</b>	
<b>4 Transcription and posttranscriptional mechanisms</b>	<b>12</b>
RNA polymerase and mechanism of prokaryotic transcription	
Eukaryotic RNA polymerases and their promoters, activating transcription, role of enhancers, gene silencers, CpG Islands, post transcriptional modifications, RNA splicing reactions, catalytic RNA, Regulatory RNA, MicroRNAs & RNA interference	
<b>Unit IV</b>	
<b>5 Translation</b>	<b>7</b>
Mechanism of translation in prokaryotes and eukaryotes, post translational modifications, transport of proteins, role of chaperons	
<b>6 Gene regulation</b>	<b>5</b>
Operon, Induction and repression, positive and negative regulation, attenuation, lactose, arabinose and tryptophan operon, Eukaryotic transcription regulation	
<b>7 Epigenetic effects</b>	<b>2</b>
Heterochromatin nucleation, Chromatin remodeling, epigenetic inheritance, genomic imprinting.

**MBT&Med BT 106: Biochemistry & Molecular Biology Lab****Core Course –Practical; 4 Credits****Biochemistry Lab**

- |   |  |   |
|---|--|---|
| 1 | To prepare an Acetic - Na Acetate Buffer system and validate the Henderson-Hasselbach equation.  | 2 |
| 2 | To determine an unknown protein concentration by plotting a standard graph of BSA using UV-Vis Spectrophotometer and validating the Beer- Lambert's Law.   | 2 |
| 3 | Titration of Amino Acids and separation of aliphatic, aromatic and polar amino acids by TLC.   | 2 |
| 4 | AN ENZYME PURIFICATION THEME (such as E.coli Alkaline phosphatase or any enzyme of choice).<br>(a) Preparation of cell-free lysates<br>(b) Ammonium Sulfate precipitation<br>(c) Ion-exchange Chromatography<br>(d) Gel Filtration<br>(e) Affinity Chromatography<br>(f) Generating a Purification Table | 6 |
| 5 | Enzyme Kinetic Parameters: Km, Vmax and Kcat   | 3 |
| 6 | Assessing purity by SDS-PAGE Gel Electrophoresis   | 2 |
| 7 | Estimation of diagnostic markers- glucose, urea  | 3 |

**Molecular Biology Lab**

- |    |   |   |
|----|---|---|
| 1  | Understanding of basic principles, equipments and molecular biology grade reagents, Preparation of buffers and reagents | 1 |
| 2. | Isolation of DNA from bacteria and eukaryotic cells, blood & plant  | 5 |
| 3. | Analysis of DNA preparations by UV spectrometry and agarose gel electrophoresis   | 2 |
| 4. | Isolation and estimation of RNA from bacteria/yeast/eukaryotic cells  | 2 |
| 5. | Amplification of DNA by PCR   |   |
| 6. | Evaluation of gene expression using Real Time PCR (Demonstration)   | 2 |
| 7. | DNA sequencing (Demonstration)  | 1 |

**MBT&Med BT 107: Cell Biology & Genetics Lab****Core Course –Practical; 4 Credits****Cell Biology Lab**

1	Study of mitosis with onion root tip chromosomes	1
2	Observation of permanent slides of meiosis	1
3	Temporary preparation of Polytene chromosomes from Chironomus salivary gland	2
4	Isolation of nuclei from rat liver	2
5	To determine Erythrocyte ( <i>RBC</i> ) & Leucocytes ( <i>WBC</i> ) count of a blood sample	2
6	Chlorophyll estimation: Spectrum and light scatter	1
7	Study of frog development, observation of frog embryo of different development stages	2
8	Study of eggs and sperms from animal samples	2

**Genetics Lab**

1	Planting of blood culture	1
2	Preparation of chromosome spreads from lymphocyte culture	2
3	Banding of metaphase slides	1
4	Karyotyping and analysis	1
5	Isolation and staining of lampbrush chromosomes	2
6	Cultivation of drosophila and study of Mendelian inheritance	5
7	Demonstration of cytogenetic analysis using FISH	1

**MBT&MedBT 108: Microbiology Lab****Core Course – Practical; 2 Credits**

1	Microscopy	2
2	Isolation of thermophile / halophile from soil, (media preparation, serial dilution, spread plating, streaking, staining and microscopy)	3
3	Checking the purity of pharmaceutical samples.	3
4	Use of differential media for isolation of various bacteria	2
5	Isolation of fungi from soil / clinical samples	2
6	Isolation of actinomycetes from soil/ water samples.	2
7	Cultivation of lactiobacillus under anaerobic condition	2
8	Antibiotic susceptibility testing	2
9	Ames test	2

SEMESTER II

<b>MBT&amp;Med BT 201: Genetic Engineering</b>		<b>Total</b>
<b>Core course- Theory; 3 credits</b>		<b>45L</b>
<b>UNIT I : Fundamental techniques and Vectors</b>		
1	Restriction-modification systems, Various enzymes in gene manipulation: nucleases, polymerases, kinases, phosphatases, ligases.	1
2	Cohesive and blunt end ligation	1
3	Plasmid based vectors (pBR and pUC)	1
4	λ based vectors	1
5	Cloning vectors for eukaryotes	2
6	Special purpose vectors e.g. expression vectors, tag vector	3
7	DNA labelling methods	1
8	Different methods to introduce recombinant DNA into host cell	1
<b>UNIT II : Gene cloning and Sequencing</b>		
9	Construction of genomic and cDNA library	1
10	Library screening methods (hybridization and immunochemical methods)	1
11	Polymerase chain reaction and its types e.g. real time PCR, multiplex PCR Reverse transcriptase PCR, Inverse PCR, Nested PCR	3
12	DNA sequencing- Maxam-Gilbert method, Sanger's Dideoxy chain termination method, Automated DNA sequencing method.	3
13	Pyrosequencing- microarrays technology	2
14	Human genome sequencing	1
15	Genetic and Physical mapping techniques	1
<b>UNIT III: Gene Expression and Mutagenesis</b>		
16	Tools for analyzing gene expression: Reporter genes, Analysis of gene regulation, Techniques for transcript analysis	3
17	Techniques for analysis of translation product	1
18	Introduction to si RNA technology: principle and applications	2
19	Micro RNA and detection methods	1
20	Differential gene expression, Protein-protein interactions: phage-display, yeast two-hybrid system	2
21	Mutagenesis techniques	1
22	Nucleic acid hybridization assays and micro-assays	2
<b>Unit IV : Applications</b>		
23	Production of recombinant proteins from pro and eukaryotic hosts	2
24	Expression of industrially important products	1
25	Electrophoretic methods for mutation detection: SSCP, hetero-duplex analysis, DGGE MCC (Mismatch Chemical Cleavage), ASA (Allele Specific Amplification), PTT (Protein Truncation Test)	3
26	Gene therapy – ex vivo, in vivo, gene delivery systems, viral and non viral	3
27	Bio-pharming	1

<b>MBT&amp;Med BT 202: Analytical Biotechnology</b>		<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>		<b>45L</b>
<b>UNIT I</b>		
1	<b>Introduction:</b> Scope and importance of various techniques in biotechnology. The goal of structural biology.	2
2	<b>Cell disruption methods:</b> physical and chemical	2
3	<b>Filtration techniques:</b> Gross filtration, steri-pad filtration, membrane filtration (macro-filtration, micro-filtration, ultra-filtration), reverse osmosis, dialysis, their applications in industry. Merits and limitations	5
<b>UNIT II</b>		
4	<b>Centrifugation-</b> Table top, high speed, microfuge, refrigerated, ultra, density gradient centrifugation, applications in biotech industry.	3
5	<b>Microscopy:</b> Structure and working of bright field and dark field microscopes. Principle, working and applications of phase contrast microscope,	4
6	<b>Advance microscopy:</b> confocal microscopy, fluorescence microscope, electron microscope, atomic force microscopy,	4
<b>UNIT III</b>		
7	<b>Biophysical methods:</b> Analysis of biomolecules using UV/visible spectrophotometer, fluorescence, circular dichroism	4
8	NMR and ESR spectroscopy, structure determination using X-ray diffraction	3
9	Different types of mass spectrometry, MALDI-TOF and surface plasma resonance methods.	4
<b>Unit IV</b>		
10	<b>Radio labeling techniques:</b> Properties of different types of radioisotopes normally used in biology, their detection and measurement; safety guidelines. Incorporation of radioisotopes in biological tissues and cells. Molecular imaging of radioactive material	3
11	<b>HPLC-</b> Concept, principle, procedure (analytical and preparatory), separation on the basis of detectors, accuracy, applications in research and quality control	4
12	<b>GC:</b> Concept, principle, procedure (analytical and preparatory), separation on the basis of detectors, accuracy, applications in research and quality control	4

<b>MBT&amp;Med BT 203: Immunology</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I : Introduction</b>	
<b>1 Immunity</b> – Types of Immunity, components of Innate and Acquired Immunity Cells and organs of immune system, Antigen presenting cells, endogenous and exogenous pathways of antigen presentation, presentation of non-peptide antigens	<b>4</b>
<b>2 Antigens</b> - Immunogenicity versus Antigenicity, Factors that influence immunogenicity, Epitopes - Properties of B-cell epitopes and T-cell epitopes, haptens and adjuvants, Antigen engineering-Increasing Immunogenicity	<b>3</b>
<b>3 Antibodies</b> - Basic structure of Immunoglobulins - The role of multiple myeloma in understanding Ig structure, domains-variable and constant region, Immunoglobulin classes and functions, application and engineering of monoclonal antibodies	<b>3</b>
<b>UNIT II : Lymphocyte ontology</b>	
<b>4 B- cell maturation, activation and differentiation</b> Antigen dependant and antigen independent stages of B- cell maturation, B-cell activation and proliferation by Thymus independent and Thymus dependant antigens, B-cell differentiation, class-switching and generation of plasma cells and memory cells, primary and secondary response kinetics, significance in vaccination programs.	<b>3</b>
<b>5 T cell maturation, activation and differentiation</b> Stages of T cell maturation, Positive and negative selection in thymus, role of TH1 and TH2 cells, mechanism of CTL mediated cytotoxicity, co-stimulatory molecules and signals, super antigen induced T cell activation, NK cell mediated lysis, ADCC	<b>3</b>
<b>6 Complement system and Cytokines</b> Classical, alternate and lectin pathways of complement activation and function of complement system, Types and general properties Cytokines, receptors, cytokine network, Immunoregulatory role of IL-4, IFN- $\gamma$ and TNB- $\beta$ .	<b>3</b>
<b>UNIT III : Immunogenetics</b>	
<b>7 Immunoglobulin genes and proteins</b> Multigene organization of Ig genes, Generation of antibody diversity.	<b>3</b>
<b>8 TCR genes, gene products and co-repressors:</b> Structure and types ( $\alpha\beta$ and $\gamma\delta$ ), gene organization and rearrangement, T cell accessory membrane molecules, Role of TCR-CD3 complex in immune activation and signal transduction pathways.	<b>3</b>
<b>9 Major Histo-compatibility complex</b> General organization and inheritance of MHC; MHC Haplotypes, the structure of MHC class-I and class-II molecules; organization of MHC class I and class II genes, peptide binding of MHC molecules, Polymorphism of MHC class I and class II molecules; the role of HLA typing in organ transplantation and disease susceptibility/resistance.	<b>3</b>
<b>Unit IV : Clinical Immunology</b>	
<b>10 Clinical Immunology</b> <b>Hypersensitivity</b> – Type I, II, III and IV- outline of mechanism with examples.	<b>2</b>

- 11 **Immune tolerance and autoimmunity** - establishment and failure of tolerance; 3  
Autoimmunity; Types of autoimmune diseases with one example; Mechanism and role of CD4+ T cells.
- 12 **Transplantation immunology** - basis and manifestation of graft rejection, 3  
General immune-suppressive therapy. Specific immune suppressive therapy. Immune tolerance to allograft.
- 13 **Tumor immunology**- Malignant transformation of cells and immune responses. 3  
Tumor antigens, Tumor evasion of the immune system, immuno-surveillance, Cancer immune-therapy.
- 14 **Immunotechniques:** Immuniprecipitation, agglutination, RIA, ELISA, ELISPOT, Western blotting, fluorescence based imaging technique, HLA typing, Flow cytometry, and animal systems

<b>MBT&amp;Med BT 204: Genomics and Proteomics</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I</b>	
<b>1 Introduction to Bioinformatics:</b>	<b>1</b>
Introduction to Bioinformatics: Definition, History, Goal, Scope, Applications, Limitations	
<b>2 Introduction to Biological Databases:</b>	<b>5</b>
Hierarchy of Biological databases: Primary, Secondary, Derived and knowledgebase	
<b>3 Sequence Alignment &amp; Analysis</b>	<b>6</b>
<ul style="list-style-type: none"> <li>• Sequence alignment methods: Local and global, Pairwise sequence alignment, Multiple sequence alignment</li> <li>• Sequence alignment algorithm: Needleman &amp; Wunsch, Smith &amp; Waterman</li> <li>• Sequence Similarity Search Tools: Dot Plot, BLAST, FASTA, ClustalW, ClustalX</li> <li>• Sequence analysis methods: AMAS, CINEMA, MaxAlign</li> </ul>	
<b>UNIT II</b>	
<b>4 Genomics:</b>	<b>3</b>
Genome sequencing: strategies & approaches, conventional DNA sequencing methodologies, NGS(Next generation sequencing), Third generation sequencing, Microarray Technology	
<b>5 Genomics Tools:</b>	<b>6</b>
<ul style="list-style-type: none"> <li>• Tools for Genomic Data Mining: Basic Aspects of Genome Annotation</li> <li>• Database Search Engines: Special tools for searching genomic data</li> <li>• Prediction of genes: ORFs, Prediction of Signal sequences (Promoters, Primers, splice sites, UTRs etc.), Operons</li> <li>• Identification of Disease Genes: Identification of Drug Targets, Metabolic diseases and Pathogenic diseases, Gene Expression Analysis</li> <li>• Structural Genomics and Functional Genomics</li> <li>• Genetic Disorders Databases: OMIM, OMIA, Genetic Association Database, Genetic Disorder Guide, IGDD, DisGenet, Genetic Disorder UK</li> </ul>	
<b>6 Genome mapping:</b> Genetic maps and physical maps	<b>2</b>
<b>UNIT III</b>	
<b>7 Comparative genomics and it's applications Methods:</b>	<b>4</b>
<ul style="list-style-type: none"> <li>• Genome Alignments: BLAST2, MUMmer, PipMaker, VISTA</li> <li>• Comparison of Gene Order: GeneOrder, Gene synteny</li> <li>• Comparative Genomics of organisms: Viruses, Microbes, Pathogens, Eukaryotes</li> <li>• Comparative Genomics Databases: COG, VirGen, CORG, HOBACGEN, Homophila, XREFdb</li> </ul>	
<b>8 Proteomics:</b>	<b>1</b>
Introduction to proteomics, scope	
<b>9 Classification of proteins:</b> Primary, secondary, tertiary, quaternary.	<b>6</b>
<b>Protein Primary Databases:</b> Protein database on NCBI/ Protein database on EMBL, PIR-PSD, UniProt KB/SwissProt, ExPASy, InterPro	

**Unit IV**

<b>10 Proteomics Applications:</b>	<b>4</b>
Strategies for protein identification, Protein sequencing, Protein engineering: Protein chips and functional proteomics; Clinical and biomedical application of proteomics.	
<b>11 Proteomics tools:</b>	<b>5</b>
Structural databases: PDB, MMDB, SCOP, CATH.	
3D structure visualization tools: Rasmol, Pymol, SPDBV, Cn3D	
Secondary structure prediction algorithms: Chou Fasman, Jpred, Psipred, GOR methods; analysis of results.	
3D structure validation databases: PROSA, Ramchandran Plot, Procheck	
<b>12 Protein-protein interaction :</b>	<b>2</b>
Protein-Protein Interaction Networks, databases and software:	
BIND - Biomolecular Interaction Network Database, STRING

MBT&MedBT 205: Nanobiotechnology	Total
Core Course – Theory; 2 Credits	30L

#### UNIT I

- |   |  |   |
|---|--|---|
| 1 | <b>Introduction to nanoscience</b> , properties of nanoparticles, Types of nanomaterial<br>Carbon nanomaterials (fullerene, nanotube, nanofibres, nanowires) Quantum dots,<br>magnetic nanoparticles | 5 |
| 2 | <b>Nanostructures:</b> Organic and Inorganic nanoparticles, Bionanostructures-protein,<br>carbohydrate and lipid, DNA based  | 4 |
| 3 | <b>Synthesis of nanoparticles</b> , Top down and Bottom up approach, Physical, Chemical<br>and Biological methods of synthesis   | 5 |

#### UNIT II

- |   |   |   |
|---|---|---|
| 4 | <b>Characterization of nanoparticles:</b> Optical (UV-Vis, FTIR, Photoluminescence<br>spectroscopy) X-ray diffraction, Microscopy (SEM,TEM,AFM,STM) Surface and<br>composition (ECSA, EDAX), Particle size analysis and charge distribution analysis,<br>Toxicity Evaluation of nanomaterials; Cyto-toxicity, Geno-toxicity In vivo tests/assays<br>etc containment | 7 |
| 5 | <b>Applications of Nano-Materials in Biosystems;</b> Nanomedicines, Targeted Drug<br>Delivery, Disease diagnosis at proteomic level, Biosensors (Nucleic acid based, protein<br>based), Lab on Chip, Applications in Gene therapy, cancer Biology. Bionanomachines  | 5 |
| 6 | <b>Application of nanobiotechnology in agriculture and environment:</b> desalination,<br>monitoring water quality, detection of pollutants  | 4 |

MBT 206: Animal Tissue Culture	Total
Core Course – Theory; 2 Credits	30L

## UNIT I

- |   |  |   |
|---|--|---|
| 1 | Introduction to animal tissue culture: Overview of its applications in research, industry & therapeutics                     | 1 |
| 2 | Systems of tissue culture with distinguishing features, advantages and limitations   | 3 |
| 3 | Growth characteristics of normal diploid and transformed cells growing in culture, anchorage dependent and independent cells | 3 |
| 4 | Aseptic techniques and its significance in ATC   | 2 |
| 5 | Tissue culture media: role of balanced salt solution, individual constituents and serum; Serum free media                    | 5 |

## UNIT II

- |    |  |   |
|----|--|---|
| 6  | Primary culture and routine maintenance: Disaggregation of tissue, techniques for primary culture, subculture and routine maintenance of cell lines, suspension culture, | 3 |
| 7  | Cryopreservation: Cryopreservation and revival of cell lines   | 6 |
| 8  | Quantitation of cells: Estimation of viability,  | 2 |
| 9  | Scale up: Scale up of anchorage independent and dependent cells, bioreactors, microcarriers, hollow fibers, perfused cultures  | 3 |
| 10 | Applications of animal cell culture for <i>in vitro</i> testing of drugs, in production of monoclonal antibodies, viral vaccines and therapeutic proteins                | 2 |

SEMESTER III

<b>MBT 301: Environmental Biotechnology</b>	<b>Total</b>
Core Course- Theory; 3 Credits	<b>45L</b>

**UNIT I : Environment and Waste water treatment technology**

- |          |  |          |
|----------|--|----------|
| <b>1</b> | <b>Basic concepts</b> , Its ingredients – soil, water, air, biota and non-biota and its significance   | <b>3</b> |
| <b>2</b> | <b>Environmental issues, Environmental pollution</b> - Types, measurement, effects on health & food, Air pollution and its control through Biotechnology, Water pollution and its control, Soil pollution sources, pesticides, heavy metals and agrochemical and its control, Noise pollution: effects and control, Degradation of Xenobiotic compounds in Environment | <b>4</b> |
| <b>3</b> | <b>Detection and control of micro-organisms</b> in environmental fresh water, in source and drinking water; Potable and non-potable water<br>Biosensors - types and applications in environmental pollution detection and monitoring   | <b>4</b> |

**UNIT II**

- |          |  |                      |
|----------|--|----------------------|
| <b>4</b> | <b>Biological treatment:</b> stabilization pond, aerated lagoon, activated sludge process, trickling filter anaerobic treatment  | <b>2</b>             |
| <b>5</b> | Sewage and waste water treatments systems; Primary, secondary and tertiary treatments; Measurement of treatment efficiencies   | <b>3</b>             |
| <b>6</b> | Bioreactors for waste water treatments; Reactors types and design; Reactors in series; Development and optimization of membrane bioreactor process for use in sanitary and industrial sewage treatment<br>Biological treatment: stabilization pond, aerated lagoon, activated sludge process, trickling filter anaerobic treatment | <b>3</b><br><b>2</b> |

**UNIT III**

- |           |   |          |
|-----------|---|----------|
| <b>7</b>  | <b>Global Environmental Issues</b><br>Solid waste Management, physicochemical characters, hazardous and non hazardous wastes, bio-degradable and non-biodegradable wastes, collection and transport of solid waste, composting, vermin-composting and methane production. | <b>4</b> |
| <b>8</b>  | Global warming: climate change, ozone depletion, UV- B and green house effects, acid rain, its effects  | <b>3</b> |
| <b>9</b>  | Biotechnological approaches for solid waste management  | <b>3</b> |
| <b>10</b> | Carbon credit   | <b>1</b> |

**Unit IV****Biotechnological approach for improving the Environment:**

- |           |  |          |
|-----------|--|----------|
| <b>11</b> | Characteristics of industrial effluents, Conventional treatments, kinetics of biodegradation of waste, Advances in aerobic and anaerobic treatments, genetically modified organisms for improving the environment, Techno-economic feasibility of conversion of waste into energy. | <b>2</b> |
|-----------|--|----------|

- |           |  |          |
|-----------|--|----------|
| <b>12</b> | Environmental pollution control- Bioremediation, Bioaugmentation, Biostimulation and Phytoremediation  | <b>2</b> |
| <b>13</b> | Desalination technique: Reverse osmosis, quality of input and output water, cost effectiveness, byproducts of desalination and industrial application  | <b>2</b> |
| <b>14</b> | Biotechnological approach for improving the Environment:   | <b>2</b> |
| <b>15</b> | Characteristics of industrial effluents, Conventional treatments, kinetics of biodegradation of waste, Advances in aerobic and anaerobic treatments, genetically modified organisms for improving the environment, Techno-economic feasibility of conversion of waste into energy. | <b>2</b> |
| <b>16</b> | Environmental pollution control- Bioremediation, Bioaugmentation, Biostimulation and Phytoremediation  | <b>2</b> |

<b>Med BT 302: Plant Biotechnology</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I</b>	
<b>1 Biodiversity hotspots in India:</b> Characterization of biodiversity through different biochemical and molecular methods (chemical printing of biodiversity),	<b>3</b>
<b>2 Conservation strategies of biodiversity,</b> threatened and extinct species	<b>2</b>
<b>3 Bio-prospecting</b> of biodiversity for product development	<b>2</b>
<b>UNIT II</b>	
<b>4 Plant tissue culture and micropropagation</b> Introduction, Different systems and stages in axillary shoot proliferation, organogenesis, somatic embryogenesis with examples..	<b>4</b>
<b>5 Cell culture technology</b> and its application for the production of artificial seeds and secondary metabolites..	<b>4</b>
<b>6 Homozygous plant production</b> through anther and pollen culture, Embryo rescue and embryo culture in rearing viable hybrid plants, Endosperm culture and production of triploids, Somaclonal and gametoclonal variations and their applications	<b>4</b>
<b>7 Protoplast technology</b> for the production of somatic hybrids and cybrids.Applications in crop improvement.	<b>3</b>
<b>UNIT III</b>	
<b>8 Transgenic Plants</b> Introduction, vertical versus horizontal gene transfer, vectors, reporter genes	<b>3</b>
<b>9 Direct and indirect methods for gene transformation,</b> plant cell and chloroplast transformation,	<b>3</b>
<b>10 Introduction to markers,</b> Marker – Assisted Crop Improvement, Genetic Markers and Linkage Maps	<b>3</b>
<b>Unit IV</b>	
<b>10 Applications of transgenic plants</b> Development of transgenes for the production of biofuels, single cell proteins, pigments, neutraceuticals, pharmaceuticals, biopesticides, pharmaceuticals, vaccines, plantibodies, value addition, bio-fortification.	<b>3</b>
<b>11 Selection and characterization of transformants</b> for biotic and abiotic stress tolerance, for increase in crop and timber productivity	<b>3</b>
<b>12 Marker Technology</b> in Crop Improvement	<b>3</b>

| <b>8</b> | <b>Technical Writing:</b> Different types of scientific documents, review paper, book reviews, research paper, thesis, project reports (for the scientific community), Plagiarism, Research Ethics, Patents and IPR.   | <b>3</b> |

**Objective:**

To provide the knowledge of how to define research problem, hypothesis testing, literature survey, research designs, data collection and analysis. Topics covered in this course includes, from meaning of research to technical writing.

**Teaching – Learning Methodology:**

Lectures and Tutorials: This is a compulsory subject offered by RGITBT for all M Sc. Biotech students. Lectures, tutorials, group discussion, paper presentation, assignments will be used as a teaching – learning process. There will be a recommended course books. Students are expected to read the research / review articles of their chosen topic of interest, develop research problem for their research project to be undertaken in the forthcoming semester.

**Expected Learning Outcome:**

Students are expected to learn key concepts in research methodology, data collection and data analysis, presentation of data, interpretation and technical write-up. It is expected that students will learn how different research methods

are useful in developing working hypothesis, establish theories, models or concepts. It is expected that the students will practice reading and interpreting research papers, review articles, understanding key concepts of research approaches used by investigators, literature survey, data analysis, interpretation and presentation.

Through this course, it is expected that students should able to independently develop a research plan or research ideas in their areas of research interest for the forthcoming semester.

**MBT&Med BT 310: Option I (310.1) – Biomedical Waste Management** **Total**  
**Elective Course II – Theory; 2 Credits** **30 L**

**UNIT I**

- 1 Introduction**, definition, classification/ categories, composition and sources. **15**
- Radioactive waste
  - Health Impacts, direct and Indirect hazards
  - Modern technology for handling biomedical waste
  - Basic steps in waste management, segregation, collection and handling of waste
  - On site pre-treatment of waste
  - Mechanical treatment and chemical disinfections
  - store and off-site transportation
  - Common treatment facilities in-site and off-site
  - Liquid waste treatment and different technologies, cost aspect

**UNIT II**

- 2 Technologies available for treatment of biomedical waste** **15**

**Conventional treatment technologies**

- a) Wet thermal technology
- b) Incineration - different models

**Treatment of general/non-infectious waste**

- a) Composting, rotating jumbling system French composting
- b) Vermi-composting

**Disposal Technologies**

- a) Sharp disposal pit
- b) Deep- burial pit
- c) Secured land

Controls applied to waste management,  
 Environmental safety, risks & public issues,  
 Instrumentation and monitoring, Crematories,  
 Risk management in hospitals -Environment issues in hospitals -Risk analysis  
 Legislation and policies on health care waste management.

**SEMESTER IV****MBT&MedBT 401: RESEARCH PROJECT****Core Course – 20 Credits****Guidelines for Research Project and Dissertation Submission during Sem IV for Master of Science (M. Sc.) in Biotechnology****Eligibility:**

- If student fails to pay any of the pending dues before the beginning of the project date, he/ she will not be considered to be eligible to undertake research project.

**Project Duration, Dissertation writing and Submission:**

- The project duration will be from beginning till the end of Semester IV
- Students shall submit dissertation title, name of research guide, name of co-guide (for off-campus only), name & place of research work within 10 days after the start date of semester IV. (As per the format enclosed).
- Student must have to submit Two hard copies (copy of Library/ Co-Guide & Student's copy) and one soft copy (Guide) of Dissertation only in the prescribed format (read below), duly approved by Research Guide(s) on or before April 15th of every year. The dissertation will not be accepted for evaluation for those who submit after March 15th, their presentation will be taken along with the next year batch.
- Students must acknowledge all the figures, maps, tables, methods, texts, etc., that are used, taken from other sources for writing the dissertation, except for original work that they have carried out. Dissertation having more than 10 % of plagiarism found will not be considered for evaluation.
- Dissertation must be written in specified format only as mentioned below:
  - a. The paper used for printing shall be of A4 size;
  - b. Printing shall be in a standardized form (word size of 12, font in Times New Roman) on one side of the paper and in 1.5 line spacing;
  - c. A margin of 1.5 inches shall be on the left hand side, top, bottom and right hand margin shall be of 1 inch.
  - d. The card for cover shall not be more than 330 GSM.
  - e. The title of the dissertation, name of the candidate, degree, name of the guide, co-guide, place of research and the date, month and year of submission shall be printed on the title page and on the front cover.
  - f. The hard- bound thesis cover shall be of black color. Spine of the binding [side cover] should mention 'M Sc. Biotechnology or Medical Biotechnology or Bioinformatics dissertation on the top, name of the candidate and date, month and year.
- Student must follow following chapter scheme for Dissertation submission:

### Chapter Scheme of Dissertation :

- ✓ Introduction
- ✓ Review of Literature
- ✓ Aims and Objectives
- ✓ Materials & Methods
- ✓ Observations and Results
- ✓ Discussion
- ✓ Summary
- ✓ Conclusions
- ✓ Bibliography –Reference etc.

### **Place of Research Project:**

- Student may prefer to undertake his/ her research project in-house or off-campus. Students those preferring to pursue research at off-campus will have to undertake research work only in any of the Department of Scientific and Industrial research (DSIR), Government of India recognized laboratory (Government, State-Government, Private).

### **Research Guide(s):**

- Students who are opting for off-campus will have one Major Research Guide from the host organization (Preferably a Ph D. qualified scientist), however, a Co-Guide from RGITBT will be appointed.

### **Dissertation Evaluation:**

- Students will have to submit **Two progress reports (45 days of Intervals) (Format Enclosed) and One evaluation report from Research Guide having 40 % weight age (Format Enclosed)** at the time of dissertation submission on the execution of research project duly signed by Guide / Co-Guide. The progress report will include, attendance percentage, review collection, research progress, sincerity, topic understanding, and systematic execution of research project, data collection and management. The evaluation report will include attendance, review work, project execution, critical thinking, originality of work, presentation of result, understanding of research, dissertation write-up, presentation of tables, figures, maps, references, etc.
- Student will have to give 20 min presentation on the work done in the presence of expert committee (between **April 21 to May 5 of every year**). (Note only working dates will be considered). The power point presentation format shall contain project title, name of candidate, place of research work, name of Guide/ Co-Guide, introduction, review, objectives, significance of the work, methodology, results & discussion, conclusion, references and acknowledgement. The presentation shall be of 12-15 min with 5-8 minutes of discussion.
- The presentation will carry **60 % of weight age** based on the following consideration. The overall understanding of the research project, objectives, methodology. The outcome of research work, data analysis and statistics, clarity in presentation and question – answer session (**Format Enclosed**).
- Student will be assigned a grade as per the Rules mentioned.

**RAJIV GANDHI INSTITUTE OF IT AND BIOTECHNOLOGY**

“Write here **approved title** of the Dissertation in all upper-case (capital letters) with a 'centre' alignment. Place this title on the upper central part of the cover with sufficient margin from top and both sides. Use font size suitable to length of the title”

A DISSERTATION SUBMITTED TO

**RAJIV GANDHI INSTITUTE OF I.T. AND BIOTECHNOLOGY,  
BHARATI VIDYAPEETH DEEMED TO BE UNIVERSITY, PUNE**

FOR AWARD OF DEGREE OF  
**MASTER OF SCIENCE in BIOTECHNOLOGY**

SUBMITTED BY

.....

UNDER THE GUIDANCE OF

.....  
.....

Name of Co-Guide  
Guide

Name of

RESEARCH CENTRE

.....  
.....  
.....

WRITE HERE DATE, MONTH & YEAR OF SUBMISSION

**CERTIFICATE**

This is to certify that the work incorporated in the dissertation entitled “.....” for the degree of ‘Master of Science’ in the subject of Biotechnology under the faculty of Interdisciplinary Science has been carried out by Mr/ Mrs..... Rajiv Gandhi Institute of I.T and Biotechnology, Bharati Vidyapeeth Deemed to be University, Dhankawadi, Pune (OR NAME OF THE LABORATORY, PLACE OF THE WORK) during the period from ..... to.....under the guidance of Dr.....

Place: Pune

(Signature of Head of the Institute with seal)

Date :

Principal / Director  
Seal

**CERTIFICATION OF GUIDE**

This is to certify that the work incorporated in the dissertation entitled  
 “ .....  
 ”

Submitted by..... for the degree of 'Master of Science' in the subject of  
 'Biotechnology' under the faculty of Interdisciplinary Science has been carried  
 out in the Department (laboratory) of....., RGITBT, BVDU (**Institute/  
 Private Lab, Govt Lab etc**) ....., Pune (**OR Place**) during the period from  
 .....to....., under my direct supervision/ guidance.

Place : ( Signature of Research Guide)

Date : (Name & Designation)

Place : Pune ( Signature of Research Co-Guide)

Date : (Name & Designation)

**DECLARATION BY THE CANDIDATE**

I hereby declare that the dissertation entitled “ \_\_\_\_\_  
”  
\_\_\_\_\_ submitted by me to  
(Title of thesis)

the Bharati Vidyapeeth Deemed to be University, Pune for the degree of Master of Science (M Sc.) in Biotechnology under the Faculty of Interdisciplinary Science is original piece of work carried out by me under the supervision of \_\_\_\_\_  
(Name of Guide) and

\_\_\_\_\_. I further declare that it has not been submitted to  
(Name of Co-guide (if any))

this or any other university or Institution for the award of any degree or Diploma.

I also confirm that all the material which I have borrowed from other sources and incorporated in this dissertation is duly acknowledged. If any material is not duly acknowledged and found incorporated in this dissertation, it is entirely my responsibility. I am fully aware of the implications of any such act which might have been committed by me advertently or inadvertently.

## NOTIFICATION NO. 894

It is hereby notified for the information of all concerned that the Academic Council, at its 55<sup>th</sup> meeting held on 26-3-2018, has resolved to approve the revised course structures, syllabi and rules of examinations of M.Sc. Biotechnology and M.Sc. Medical Biotechnology under Choice Based Credit System to be implemented from the academic year 2018-19.

Copies of revised course structures, syllabi and rules of examinations of M.Sc. Biotechnology and M.Sc. Medical Biotechnology under Choice Based Credit System are enclosed.

All the concerned may please note.

Bharati Vidyapeeth Deemed To Be University is a multidisciplinary, multicampus university having 32 Institutions imparting quality education in various disciplines. All programmes of the University are approved by UGC and respective statutory councils. BVDU has been re accredited for the third time with 'A+' grade by NAAC in 2017. UGC has accorded 12B Status [UGC ACT1956] to the university. Ministry of Human Resource and Development, Government of India has awarded "A" category to the University in 2012 based on parameters including innovative programs, research and infrastructure facilities. The University is a member of Association of Indian Universities [AIU] which has ranked BVDU among top 10 universities of India for International students' enrollment. BVDU is also a member of International Association of Universities.

Rajiv Gandhi Institute of IT and Biotechnology is a constituent unit of BVDU established in 2003. The Institute is approved by UGC to conduct graduate and post graduate courses in Biotechnology. The Institute has excellent infrastructure, state-of-the-art laboratories and competent faculty facilitating appropriate learning environment. The Institute offers one undergraduate and four postgraduate programmes in Biotechnology.

## **INTRODUCTION**

The Master of Science (M.Sc.) in Medical Biotechnology is a full time post graduate programme offered by Bharati Vidyapeeth Deemed to be University (BVDU) in its constituent unit Rajiv Gandhi Institute of IT and Biotechnology. The course was initiated in the year 2012 and was designed to facilitate empowerment of students to face cutting edge technological applications biomedical and pharmaceutical biotechnology sector. The main advantage of proposing this course was availability of the expertise in biotechnology and medical disciplines in the same campus. The course received very encouraging response from all its stakeholders. On its implementation for five years, the curriculum is being revised to embrace newer emerging disciplines and value added courses. The revised M.Sc. Medical Biotechnology is a full time 104 credits Programme to be implemented in Rajiv Gandhi Institute of IT and Biotechnology from the academic year 2017-18. The feedback of students, alumni, faculty, employers and parents has a substantial contribution in designing of this curriculum.

## **OBJECTIVES**

1. To impart deep knowledge of the discipline
2. Develop skills in relevant areas to enhance employment opportunities
3. Introduce emerging areas of pharma and biotech sector
4. Build interdisciplinary approach
5. Foster global competence among students
6. Inculcate social and moral values and sense of scientific responsibilities in students

## **ELIGIBILITY FOR ADMISSION TO THE COURSE**

Candidates satisfying following criteria are eligible to apply for M.Sc. Medical Biotechnology Course

1. The candidate should have passed the Bachelors degree course in Biotechnology/ any branch of life science/ Pharmacy & Medicine from the recognized university with minimum of 50% or 45% aggregate marks for open and SC / ST category respectively graduate level university examination.
2. Subject to above conditions, the admission will be based on the merit at Entrance Examination conducted by Bharati Vidyapeeth Deemed to be University.

## **DURATION OF THE COURSE**

The course will be executed in four semesters. The medium of instruction and examination will be only English.

**RULES FOR THE COURSE**

1. The entire course is of 104 credits.
2. One credit for theory course is equivalent to 15 lectures/tutorials; while one credit for practical course is equivalent to 25 – 30 hrs. of lab /field work or demonstration.
3. The curriculum comprises of Core and Value Added courses. The Core Courses are compulsory where as Value Added are elective.
4. The Core Courses are aimed at providing fundamental knowledge of the discipline. The Value Added Courses intend to develop skills in relevant Biotechnology Industry sector. The teaching schedule for the 3 credits and 2 credits theory courses will be 3 and 2 lectures per week respectively. All courses will have one tutorial fortnightly.
5. The respective elective course will be implemented only if more than 10 students enroll for that course.
6. Some of the core courses in Semester I and Semester II are common in two master's programmes; M.Sc. Medical Biotechnology and M.Sc. Biotechnology.
7. The teaching and evaluation for these courses will be combined for both disciplines.
8. The shared courses are coded as MBT&MedBT whereas the courses which are exclusive for M.Sc. Medical Biotechnology are coded as MedBT
9. All core courses will be evaluated by University Examination. The Elective courses will be assessed by Continuous Assessment.
10. Two extra credits will be awarded to students if there is any significant outcome of their dissertation study. The research outcome in terms of publication in indexed national/International journal; filing of patent; or commercialization of technology will be considered for the award of credits.

**RULES FOR EXAMINATION****A: Nature of Examination:**

1. Each course will have 40% marks for internal assessment and 60% marks for semester-end examination.
2. The assessment for 1, 2, 3 and 4 Credits courses will be as given in following table

Table 1: Evaluation pattern for One to Four Credit Courses

Course Credits	Marks for UE (60% Weightage)	Marks for IE (40% weightage)	Total Marks for evaluation
1	15	10	25
2	30	20	50
3	45	30	75
4	60	40	100

- The duration of 60 Marks UE theory paper will be 3.00 Hrs; for 45 Marks 2.00 Hrs and for 30 Marks 1.30 Hrs. respectively.
- The Internal Assessments (IA) will be conducted by the Institute and an end-of-the term University Examination (UE) conducted by the university. The UE will be based on the entire syllabus.

The performances at UE and IA will be combined to obtain the Grade Point Average (GPA) for the course.

#### STANDARD OF PASSING

**A: Grading System:** A 10-point absolute grading system will be adapted for grading in each head of passing. The system will have seven grade points, the highest being 10. The grading system shall be as shown in Table-1 below. The performance indicators O, A+, A, B+, B, C, and D shall respectively mean Outstanding, Excellent, Very Good, Good, Average, Satisfactory, and Poor.

Table-1: The grading system under CBCS

Range of Marks (out of 100)	Grade Point	Grade
$80 \leq \text{Marks} \leq 100$	10	O
$70 \leq \text{Marks} \leq 80$	9	A+
$60 \leq \text{Marks} \leq 70$	8	A
$55 \leq \text{Marks} \leq 60$	7	B+
$50 \leq \text{Marks} \leq 55$	6	B
$40 \leq \text{Marks} \leq 50$	5	C
$\text{Marks} < 40$	0	D

1. The grade point average (GPA) for a course shall be calculated by first finding the total marks **out of 100 for the course. The corresponding GP (as per the table) shall be the GPA for the course.**

2. Two kinds of performance indicators, namely, the Semester Grade Point Average (SGPA) and the Cumulative Grade Point Average (CGPA) shall be computed at the end of each term. The SGPA measures the cumulative performance of a learner in all the courses in a particular semester, while the CGPA measures the cumulative performance in all courses up to and including the current semester. The CGPA of a student when he/she completes the programme is his/her final result.

3. The SGPA is calculated by the formula ,  $SGPA = \frac{\sum Ck \times GPAk}{\sum Ck}$  where  $Ck$  is the

$$\sum Ck$$

credit-value assigned to a course and  $GPAk$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study during the semester, including those in which he/she might have failed or those for which he/she remained absent. **The SGPA shall be calculated up to two decimal place accuracy.**

4. The CGPA is calculated by the formula ,  $CGPA = \frac{\sum Ck \times GPAk}{\sum Ck}$  where  $Ck$  is the

$$\sum Ck$$

credit-value assigned to a course and  $GPAk$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study from the time of his/her enrolment and also the during the semester for which CGPA is calculated, including those in which he/she might have failed or those for which he/she remained absent. **The CGPA shall be calculated up to two decimal place accuracy.**

5. The CGPA, calculated after the minimum credits specified for the programme are 'earned', will be the final result grace marks of 1, 2 or 3 may be awarded to a candidate at UE as per the university rules. **B: Standards of Passing and ATKT rules:**

1. For all Core Courses, both UE and IE constitute separate heads-of-passing (HoP). In order to pass in such courses and to 'earn' the assigned credits

- (a) the learner must obtain a minimum grade point of 5.0 (40% marks) at UE and also a minimum grade point of 5.0 (40% marks) at IA;

OR

(b) If he/she fails in IA, then also the learner passes in the course, **provided that a minimum of 25% is obtained in IA and GPA for the course is at least 6.0 (50%marks ) in aggregate.** The GPA for a course will be calculated only if the learner passes in that course.

1. A student who fails at UE in a course has to reappear only at UE as a backlog candidate and clear the HoP. Similarly, a student who fails in a course at IA has to reappear only at IA as a backlog candidate and clear the HoP. **A student who passes in aggregate in a course need not reappear even if he failed at IA if he/she obtains 25% at IA.**
2. The students of Semester I and II & III will be admitted to next Semester even if he/she gets backlog in any of the course. They can reappear in the next semester examination as a backlog candidate.

#### C: AWARD OF HONOURS:

1. A student who has completed the minimum credits specified for the programme shall be declared to have passed in the programme. The final result will be in terms of letter grade and CGPA only and is based on the CGPA of all courses studied and passed. The criteria for the award of honours are given in Table 2.

**Table 2: Criteria for the award of honours at the end of the programme**

Range of CGPA	Final Grade	Performance Descriptor	Equivalent Range of Marks (%)
$9.50 \leq CGPA \leq 10.00$	O	Outstanding	$80 \leq Marks \leq 100$
$9.00 \leq CGPA \leq 9.49$	A+	Excellent	$70 \leq Marks \leq 80$
$8.00 \leq CGPA \leq 8.99$	A	Very Good	$60 \leq Marks \leq 70$
$7.00 \leq CGPA \leq 7.99$	B+	Good	$55 \leq Marks \leq 60$
$6.00 \leq CGPA \leq 6.99$	B	Average	$50 \leq Marks \leq 55$
$5.00 \leq CGPA \leq 5.99$	C	Satisfactory	$40 \leq Marks \leq 50$
CGPA Below 5.00	F	Fail	Marks below 40

#### THE FORMAT OF THE TRANSCRIPTS

The transcripts may be acquired by the students indicating his/her performance in every semester examination. The transcript shall show the performance indicators given in the following table, in addition to any other information.

Course Number	Course Discription	Number of Credits	University Examination		IA/CA		Grade Point Average (GPA)	Result
			Grade	Grade Point	Grade	Grade Point		
Total Cumulative Credits Completed		SGPA	CGPA	Equivalent Marks (%)	<b>Note: GPA is calculated by adding the UE marks out of 60 and IA marks out of 40. The total marks out of 100 are converted to Grade Point, which will be GPA</b>			

**PATTERN FOR ASSESSMENT**

**A: Pattern of Evaluation for Internal Assessment of Theory Courses:**

The weightage for Internal Assessment is 40%. Students for IA of every theory course will be assessed for total of 30 marks for 3 credit course and for 20 marks for 2 credit course which will be cumulative marks obtained in two separate assessments specified below.

1. Two internal written examinations of 15 marks each for 3 credit course and 10 marks each for 2 credit course. A total of the two tests will be considered.
2. An optional assignment/ oral/ open book examination may be undertaken if desired.

**B. Pattern of Evaluation for Internal Assessment of Practical Courses:**

The Internal Assessment for every practical course will be of 20 Marks for 2 credits and 40 marks for 4 credits practical courses. The students for IA will be assessed on the basis of;

1. Performance for every practical: 10 Marks/20 Marks for 2/4 Credits practical courses respectively. (Marks to be distributed depending on total number of practicals)
2. Assignment/ Oral examination/Tour Report: 10/20 Marks for 2/4 Credits courses

**C: Pattern of question paper at University Examination**

University Examination for 3 credit and 2 credit theory course will be of 45 marks and 30 marks respectively. For 3 credit course, the question paper will comprise of 6 questions, 3 questions

each in section I and section II. Q1 of section I will be of 6 marks while Q2 and Q3 will be of 8 marks each. Q 4 of section II will be of 7 marks while Q 5 and Q6 will be of 8 marks each. All questions will be compulsory. The pattern of question paper will be as given on next page.

**Pattern of question paper for 3 credit course of university theory examination of M.Sc. Medical Biotechnology 2018 CBCS Course**

**(Total Marks:45, Tme:2.00 Hrs.)**

**Instructions to Paper Setter:**

- I. Question paper of each course will comprise of total 6 questions,
- II. Section I will have 3 questions and Section II 3 questions.
- III. All questions will be compulsory. Each question will carry an internal option of one extra sub-question.
- IV. Q. no 1 will be objective, comprising of 7 questions of 1 mark each. They will be based on entire portion of Section I. Students will have to attempt any 6 out of these.
- V. Q no 4 will be objective, comprising of 8 questions of 1 mark each. They will be based on entire portion of Section II. Students will have to attempt any 7 out of these.
- VI. Questions 2 & 3 of **Section I** and 5 & 6 of **Section II** will be descriptive and contain 3 sub-questions of 4 marks each out of which students will attempt any two.
- VII. Q 2 and 3 will be based solely on Unit I and II whereas Q 5 and 6 will be based on Unit III and IV of the syllabus respectively..
- VIII. Students will attempt answers to Section I and Section II in separate answer books

**SECTION I**

**Q. 1 Attempt Any Six** of the following (06)

- a.
- b.
- c.
- d.
- e.
- f..
- g.

**Q. 2 Attempt Any Two** of the following (08)

- a.
- b.
- c.

**Q. 3 Write short notes on Any Two** of the following (08)

- a.
- b.
- c.

**SECTION II**

**Q. 4 Attempt Any Seven** of the following (07)

- a.
- b.
- c.
- d.**
- e.
- f.
- g.
- h.

**Q. 5 Attempt Any Two of the following**

(08)

- a.
- b.
- c.

**Q. 6 Write short notes on Any Two of the following**

(08)

- a.
  - b.
  - c.
- 

**For 2 credit course,** the question paper will comprise of 4 questions, 2 questions each in section I and section II. Q1 of section I and Q3 of section II will be of 7 marks each while Q2 and Q4 will be of 8 marks each. All questions will be compulsory. The pattern of question paper will be as given on next page.

**Pattern of question paper for 2 credit course of university theory examination of M.Sc. Medical Biotechnology 2018 CBCS Course**  
(Total Marks:30, Tme:1.50 Hrs.)

**Instructions to Paper Setter:**

- IX. Question paper of each course will comprise of total 4 questions,
- X. Section I will have 2 questions and Section II 2 questions.
- XI. All questions will be compulsory. Each question will carry an internal option of one extra sub-question.
- XII. Questions 1 of section I and 3 of section II will be objective, and contain 8 questions of 1 mark each out of which students will attempt any 7. They will be based on entire portion of Section I and section II respectively.
- XIII. Questions 2 of **Section I** and 4 of **Section II** will be descriptive and contain 3 sub-questions of 4 marks each out of which students will attempt any two.
- XIV. Q 2 and 4 will be based solely on Unit I and II of the syllabus respectively..
- XV. Students will attempt answers to Section I and Section II in separate answer books

## SECTION I

- Q. 1** Attempt **Any seven** of the following (07)
- I.
  - li.
  - lii.
  - lv.
  - v.
  - vi.
  - vii.
  - viii.

- Q. 2** Attempt **Any Two** of the following (08)
- I.
  - ii.
  - lii.

## SECTION II

- Q.3** Attempt **Any seven** of the following (07)
- I.
  - li.
  - lii.
  - lv.
  - v.
  - vi.
  - vii.
  - viii.

- Q. 4** Attempt **Any Two** of the following (07)
- I.
  - li
  - lii.

**Pattern of Question Paper for 2 and 4 Credits Practical Courses at University Examination**

Elective Courses in Sem II: 1) MBT 210: Elective Course I; Option I: Bioentrepreneurship, Option II: IPR I

## SEMESTER III

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>MedBT 301</b> Core Course –Theory	Animal Tissue Culture & Stem Cell Biology	3	40	60	
<b>MedBT 302</b> Core Course –Theory	Medical Biochemistry & Drug Discovery	3	40	60	
<b>MedBT 303</b> Core Course –Theory	Infectious Diseases	3	40	60	
<b>MedBT 304</b> Core Course –Theory	Pharmaceutical Biotechnology & Molecular Diagnostics	3	40	60	
<b>MBT&amp;MedBT 305</b> Core Course-Theory	Biostatistics	2	40	60	
<b>MBT&amp;MedBT 306</b> Core Course-Theory	Research Methodology	2	40	60	
<b>MedBT 307</b> Core Course-Practical	ATC & Pharma Biotech Lab	4	40	60	
<b>MedBT 308</b> Core Course-Practical	Infectious Diseases & Biostatistics Lab	4	40	60	
<b>MedBT 309</b> Core Course-Practical	Medical Biochemistry & Drug Discovery Lab	2	40	60	
<b>MBT&amp;MedBT 310</b> Elective Course II	Biomedical Waste Management/ Drug designing/ IPR II	2	Continuous Assessment		

Elective Courses in Sem III: 1) MBT 310: Elective Course I; Option I: Biomedical Waste Management, Option II: Drug designing, Option III: IPR II

## SEMESTER IV

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>MBT&amp;MedBT 401</b> Core Course	Research Project	20	40	60	<b>20</b>

Total Credits Offered: 25 C, Sem I+ 31 C, Sem II +28 C, Sem III+ 20C, Sem IV = 104 C

SEMESTER I

MBT&MedBT 101: Microbiology	Total
Core Course – Theory; 3 Credits	45L
<b>UNIT I</b>	
1 <b>Microbial diversity:</b>	3
Bacteria	
Archaea	
2 <b>Cell structure and functions of bacteria.</b>	3
3 <b>Cell structure and functions of archaea and fungi.</b>	4
<b>UNIT II</b>	
4 <b>Microbial growth:</b>	4
Growth kinetics, cytokinesis, factors affecting growth of microorganisms.	
5 <b>Growth on different environment</b>	3
Extremophiles and their adaptations	
6 <b>Anaerobic microorganisms, cultivation and applications.</b>	3
<b>UNIT III</b>	
7 <b>Microbial interactions:</b> Symbiotic interactions, parasitism, ammensalism and competition;	5
8 <b>Microbial flora of healthy human host:</b> Distribution and occurrence of normal flora in humans	5
9 <b>Microbial pathogenesis:</b> Host-microbe interactions; Bacterial, fungal and protozoal pathogenesis in humans.	4
<b>UNIT IV</b>	
10 <b>Effect of Antimicrobial drugs:</b> on bacterial, fungal and viral pathogens	4
11 <b>Virology:</b> Diversity, Classification of virus, Cytopathic effect of virus	3
12 <b>Taxonomy,</b> Molecular methods, Bergey's manual of systematic bacteriology.	4
<b>References</b>	
1. Brock Biology of Microorganisms 13 <sup>th</sup> eds, , Michael T. Madigan	
2. Prescott's Microbiology, 9 <sup>th</sup> eds, Joanne M. Willey	
3. Microbiology–6th Edition (2006), Pelczar M.J., Chan E.C.S., Krieg N.R., The McGraw Hill Companies Inc. NY	
4. General Microbiology - Stanier R.Y., 5th edition, (1987) Macmillan Publication UK.	
5. Introduction to Microbiology, 2nd Edn. Ingraham, J. L. and Ingraham C. A., Thompson Asia Pvt. Ltd., Singapore (2002).	

MBT&MedBT 102: Biochemistry	Total
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I: Biomolecules structure, functions</b>	
<b>1 Introduction:</b> Scope and importance of biochemistry in biotechnology.	<b>1</b>
<b>2 Carbohydrates, lipids and proteins -</b> Structure, properties and biological role (functions) of carbohydrates, Proteins and lipids. Protein structure and Lectins- overview. Lipids and cell membranes – types of membrane lipids, phospholipids and glycolipids from bimolecular sheets. Monoglycerides and diglycerides- structure, properties and applications.	<b>7</b>
<b>3 Hydrolytic products of polysaccharides &amp; their applications.</b> Bulk production of Malt, peptides, malto-dextrin, glue.	<b>3</b>
<b>UNIT II: Metabolism</b>	
<b>4 Metabolism of carbohydrates and protein-</b> Glycolysis, Glucogenesis, Citric acid cycle and Glycogen metabolism. Protein turnover and Amino acid catabolism, Biosynthesis of amino acids, urea cycle. Biosynthesis of carbohydrate and proteins-overview	<b>5</b>
<b>5 Fatty acid metabolism and nucleic acid metabolism-</b> Overview of Fatty Acid Metabolism, synthesis and degradation of fatty acids, De novo synthesis of Nucleotides	<b>4</b>
<b>6 Oxidative phosphorylation and photophosphorylation</b> Oxidative Phosphorylation – regulation – light reactions of Photosynthesis	<b>3</b>
<b>UNIT III: Enzymology</b>	
<b>7 Introduction to enzymes-</b> Classification of enzymes, specificity of enzyme action – monomeric and oligomeric enzymes. Allosteric enzymes. Structural Components of Enzymes – apoenzymes, prosthetic group, cofactors,	<b>4</b>
<b>8 Mechanisms of reactions catalysed by enzymes –</b> Metal activated enzymes – metalloenzymes –involvement of co enzymes, Enzyme Inhibition	<b>4</b>
<b>9 Biotechnological applications of enzymes</b> in various industries like fruit juice extraction, leather processing, Meat tenderization, Baking and dairy industry.	<b>3</b>
<b>UNIT IV: Techniques</b>	
<b>10 Free and immobilised enzyme kinetics-</b> Rationale and Methods of immobilization of enzymes: covalent coupling, cross-linking and entrapment methods. Properties of immobilized enzymes, Whole cell immobilization, Advantages of immobilization, Types of Carriers,. Applications of Immobilized enzymes: Production of High fructose corn syrup, invert sugar, synthetic penicillin.	<b>4</b>
<b>11 Chromatography-</b> Principle, types- gel, affinity, ion exchange, applications	<b>3</b>
<b>12 Electrophoresis</b> Principle of separation, factors affecting separation, types - paper, agarose gel, PAGE, 2D- gel electrophoresis, western blotting	<b>4</b>
<b>References</b>	
1. Biochemistry by Jeremy M.Berg, John L.Tymozko, Lubert Stryer, 5th Eds,	
2. Lehninger Principles of Biochemistry Edition 4, Nelson, David L. Cox, Michael M. Lehninger, Albert L. W, H Freeman & Co	
3. Student Companion to Accompany Biochemistry, Richard I. Gumpport, Jeremy M. Berg, Nancy Counts Gerber, Frank H. Deis, Jeremy Berg, W H Freeman & Co	

<b>MBT&amp;Med BT 103: Cell &amp; Developmental Biology</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I</b>	
<b>1 Structure of cell</b>	<b>6</b>
Structure of cell organelles: Endoplasmic reticulum, mitochondria, golgi apparatus, lysosomes, chloroplast, nucleus, cell wall. Comparison of prokaryotic and eukaryotic cells	
<b>2 Cytoskeleton: Organization and functions cytoskeleton, Actin filaments, actin binding proteins, Intermediate filaments, Microtubules, Structure and functions of cilia and flagella.</b>	<b>5</b>
<b>UNIT II</b>	
<b>4 Plasma Membrane:</b>	<b>7</b>
Plasma membrane structure and functions, membrane models, Transport across membrane- passive diffusion, osmosis, active transport, Ion Channels, Na <sup>+</sup> and K <sup>+</sup> pump, Ca <sup>2+</sup> ATPase pump, co-transport, symport, antiport, endocytosis and exocytosis. Membrane vesicle trafficking	
<b>5 Specialized Cells (Muscle &amp; Nerve cells):</b>	<b>4</b>
Structure & functions of muscles (Straited, nonstraited and cardiac). Structure of neuron, Neurotransmitters and their receptors	
<b>UNIT III</b>	
<b>6 Cell – Cell Interactions</b>	<b>3</b>
Cell adhesion molecules, cadherins, Integrins, transmembrane proteoglycanc, Claudins and occludens, gap junctions, tight junctions, adherens, desmosomes and hemidesmosomes, plasmodesmata	
<b>7 Cell Cycle</b>	<b>2</b>
Molecular events of cell division and cell cycle, regulation of cell cycle events- Cyclins, Cyclin dependent kinases, inhibitors. Apoptosis and necrosis.	
<b>8 Cell Signaling</b>	<b>6</b>
General principles of cell signaling, signaling via G-protein coupled receptors, kinase receptors, role of secondary messengers.	
<b>UNIT IV</b>	
<b>9 Developmental Biology</b>	<b>5</b>
Gametogenesis (Spermatogenesis, Oogenesis), Meiosis and its significance, types of eggs, fertilization and implantation, types and patterns of cleavage, Blastulation	
<b>10 Stages of fetal development</b>	<b>4</b>
Gastrulation in Frog, Germ layer formation, fetal membranes, placenta formation in mammals	
<b>11 Concept of dedifferentiation, redifferentiation, transdifferentiation and regeneration</b>	<b>3</b>

MBT&Med BT 104: Genetics	Total
Core Course – Theory; 3 Credits	45L
<b>UNIT I</b>	
<b>1 Overview of genetics:</b>	<b>5</b>
Genes and Expression, Allele, multiple alleles, pseudoallele, complementation tests, Genetic variation, Molecular basis of allelic variation. Methodologies used in genetic studies, Model organisms. Genes-Environment interaction.	
<b>2 Modes of inheritance:</b> Mendelian and Non Mendelian Inheritance: Lethal alleles, Epistasis, Penetrance and expressivity, Pleiotropy, Phenocopies, mitochondrial inheritance	<b>6</b>
<b>UNIT II</b>	
<b>3 Structure and function of human chromosome:</b>	<b>3</b>
Ultra structure of human chromosome, Classification of chromosomes, Sex chromosome, Origin of Y chromosome, SRY genes and its effects. Dosage compensation	
<b>4 Human chromosomal Abnormalities:</b> Aneuploidy and Structural, associated syndromes	<b>4</b>
<b>5 Pedigree analysis of human:</b>	<b>2</b>
X linked and autosomal disorders. Linkage maps, Lod scores to assess linkage in human pedigrees	
<b>6 Diagnostics:</b> Prenatal diagnosis, Karyotype analysis, FISH, Genetic counseling	<b>3</b>
<b>UNIT III</b>	
<b>7 Population genetics:</b> Populations, Gene pool, Gene frequency; Hardy-Weinberg Law; concepts and rate of change in gene frequency through natural selection, migration and random genetic drift; Adaptive radiation; Isolating mechanisms; Speciation; Allopatricity and Sympatricity; Convergent evolution; Sexual selection; Co-evolution.	<b>5</b>
<b>8 Brain, Behavior and Evolution:</b>	<b>6</b>
Approaches and methods in study of behavior; Proximate and ultimate causation; Altruism and evolution-Group selection, Kin selection, Reciprocal altruism; Neural basis of learning, memory, cognition, sleep and arousal; Biological clocks; Development of behavior; Social communication; Social dominance; Use of space and territoriality; Mating systems, Parental investment and Reproductive success; Parental care; Aggressive behavior; Habitat selection and optimality in foraging; Migration, orientation and navigation; Domestication and behavioral changes.	
<b>Unit IV</b>	
<b>9 Cancer genetics;</b> genetic control of cell cycle, mutations that prevent normal checkpoints, inherited cancer syndromes, cancers acquired due to chromosomal abnormalities	<b>6</b>
<b>10 Reproductive Technologies</b>	<b>5</b>

4. Human Genetics. A Gardner, T. Davies. 2 <sup>nd</sup> Ed. Springer Verlag Publ 2010.	

<b>MBT&amp;Med BT 105: Molecular Biology</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I</b>	
<b>1 Genomes and its content</b>	<b>8</b>
Basic concepts, flow of information transfer, genetic code, types of mutations	
Genome sizes of different organisms, C Value	
Gene families, clusters, pseudogenes, super-families, organelle genomes	
Organization of prokaryotic genome, Structure of nucleosome and organization of chromatin, structure of chromosome, centromere and telomere	
<b>UNIT II</b>	
<b>2 DNA replication &amp; repair</b>	<b>6</b>
DNA polymerases, mechanism of replication in prokaryotes and eukaryotes, DNA damage, Mechanisms of DNA repair in prokaryotes and eukaryotes,	
<b>3 Homologous and site specific recombination</b>	<b>4</b>
Insertion elements	<b>3</b>
<b>UNIT III</b>	
<b>4 Transcription and posttranscriptional mechanisms</b>	<b>12</b>
RNA polymerase and mechanism of prokaryotic transcription	
Eukaryotic RNA polymerases and their promoters, activating transcription, role of enhancers, gene silencers, CpG Islands, post transcriptional modifications, RNA splicing reactions, catalytic RNA, Regulatory RNA, MicroRNAs & RNA interference	
<b>Unit IV</b>	
<b>5 Translation</b>	<b>7</b>
Mechanism of translation in prokaryotes and eukaryotes, post translational modifications, transport of proteins, role of chaperons	
<b>6 Gene regulation</b>	<b>5</b>
Operon, Induction and repression, positive and negative regulation, attenuation, lactose, arabinose and tryptophan operon, Eukaryotic transcription regulation	
<b>7 Epigenetic effects</b>	<b>2</b>
Heterochromatin nucleation, Chromatin remodeling, epigenetic inheritance, genomic imprinting.

**MBT&Med BT 106: Biochemistry & Molecular Biology Lab****Core Course –Practical; 4 Credits****Biochemistry Lab**

- |   |  |   |
|---|--|---|
| 1 | To prepare an Acetic - Na Acetate Buffer system and validate the Henderson-Hasselbach equation.  | 2 |
| 2 | To determine an unknown protein concentration by plotting a standard graph of BSA using UV-Vis Spectrophotometer and validating the Beer- Lambert's Law.   | 2 |
| 3 | Titration of Amino Acids and separation of aliphatic, aromatic and polar amino acids by TLC.   | 2 |
| 4 | AN ENZYME PURIFICATION THEME (such as E.coli Alkaline phosphatase or any enzyme of choice).<br>(a) Preparation of cell-free lysates<br>(b) Ammonium Sulfate precipitation<br>(c) Ion-exchange Chromatography<br>(d) Gel Filtration<br>(e) Affinity Chromatography<br>(f) Generating a Purification Table | 6 |
| 5 | Enzyme Kinetic Parameters: Km, Vmax and Kcat   | 3 |
| 6 | Assessing purity by SDS-PAGE Gel Electrophoresis   | 2 |
| 7 | Estimation of diagnostic markers- glucose, urea  | 3 |

**Molecular Biology Lab**

- |    |   |   |
|----|---|---|
| 1  | Understanding of basic principles, equipments and molecular biology grade reagents, Preparation of buffers and reagents | 1 |
| 2. | Isolation of DNA from bacteria and eukaryotic cells, blood & plant  | 5 |
| 3. | Analysis of DNA preparations by UV spectrometry and agarose gel electrophoresis   | 2 |
| 4. | Isolation and estimation of RNA from bacteria/yeast/eukaryotic cells  | 2 |
| 5. | Amplification of DNA by PCR   |   |
| 6. | Evaluation of gene expression using Real Time PCR (Demonstration)   | 2 |
| 7. | DNA sequencing (Demonstration)  | 1 |

**MBT&Med BT 107: Cell Biology & Genetics Lab**

Core Course –Practical; 4 Credits

**Cell Biology Lab**

1	Study of mitosis with onion root tip chromosomes	1
2	Observation of permanent slides of meiosis	1
3	Temporary preparation of Polytene chromosomes from Chironomus salivary gland	2
4	Isolation of nuclei from rat liver	2
5	To determine Erythrocyte (RBC) & Leucocytes (WBC) count of a blood sample	2
6	Chlorophyll estimation: Spectrum and light scatter	1
7	Study of frog development, observation of frog embryo of different development stages	2
8	Study of eggs and sperms from animal samples	2

**Genetics Lab**

1	Planting of blood culture	1
2	Preparation of chromosome spreads from lymphocyte culture	2
3	Banding of metaphase slides	1
4	Karyotyping and analysis	1
5	Isolation and staining of lampbrush chromosomes	2
6	Cultivation of drosophila and study of Mendelian inheritance	5
7	Demonstration of cytogenetic analysis using FISH	1

6. Human Genetics. A. Gardner, T. Davies. 2<sup>nd</sup> Ed., Springer VerlagPubl, 2010

**MBT&MedBT 108: Microbiology Lab****Core Course – Practical; 2 Credits**

1	Microscopy	2
2	Isolation of thermophile / halophile from soil, (media preparation, serial dilution, spread plating, streaking, staining and microscopy)	3
3	Checking the purity of pharmaceutical samples.	3
4	Use of differential media for isolation of various bacteria	2
5	Isolation of fungi from soil / clinical samples	2
6	Isolation of actinomycetes from soil/ water samples.	2
7	Cultivation of lactiobacillus under anaerobic condition	2
8	Antibiotic susceptibility testing	2
9	Ames test	2

SEMESTER II

<b>MBT&amp;Med BT 201: Genetic Engineering</b>		<b>Total</b>
<b>Core course- Theory; 3 credits</b>		<b>45L</b>
<b>UNIT I : Fundamental techniques and Vectors</b>		
1	Restriction-modification systems, Various enzymes in gene manipulation: nucleases, polymerases, kinases, phosphatases, ligases.	1
2	Cohesive and blunt end ligation	1
3	Plasmid based vectors (pBR and pUC)	1
4	λ based vectors	1
5	Cloning vectors for eukaryotes	2
6	Special purpose vectors e.g. expression vectors, tag vector	3
7	DNA labelling methods	1
8	Different methods to introduce recombinant DNA into host cell	1
<b>UNIT II : Gene cloning and Sequencing</b>		
9	Construction of genomic and cDNA library	1
10	Library screening methods (hybridization and immunochemical methods)	1
11	Polymerase chain reaction and its types e.g. real time PCR, multiplex PCR Reverse transcriptase PCR, Inverse PCR, Nested PCR	3
12	DNA sequencing- Maxam-Gilbert method, Sanger's Dideoxy chain termination method, Automated DNA sequencing method.	3
13	Pyrosequencing- microarrays technology	2
14	Human genome sequencing	1
15	Genetic and Physical mapping techniques	1
<b>UNIT III: Gene Expression and Mutagenesis</b>		
16	Tools for analyzing gene expression: Reporter genes, Analysis of gene regulation, Techniques for transcript analysis	3
17	Techniques for analysis of translation product	1
18	Introduction to si RNA technology: principle and applications	2
19	Micro RNA and detection methods	1
20	Differential gene expression, Protein-protein interactions: phage-display, yeast two-hybrid system	2
21	Mutagenesis techniques	1
22	Nucleic acid hybridization assays and micro-assays	2
<b>UNIT IV : Applications</b>		
23	Production of recombinant proteins from pro and eukaryotic hosts	2
24	Expression of industrially important products	1
25	Electrophoretic methods for mutation detection: SSCP, hetero-duplex analysis, DGGE MCC (Mismatch Chemical Cleavage), ASA (Allele Specific Amplification), PTT (Protein Truncation Test)	3
26	Gene therapy – ex vivo, in vivo, delivery systems, viral and non viral	gene 3
27	Bio-pharming	1

<b>MBT&amp;Med BT 202: Analytical Biotechnology</b>		<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>		<b>45L</b>
<b>UNIT I</b>		
<b>1</b>	<b>Introduction:</b> Scope and importance of various techniques in biotechnology. The goal of structural biology.	<b>2</b>
<b>2</b>	<b>Cell disruption methods:</b> physical and chemical	<b>2</b>
<b>3</b>	<b>Filtration techniques:</b> Gross filtration, steri-pad filtration, membrane filtration (macro-filtration, micro-filtration, ultra-filtration), reverse osmosis, dialysis, their applications in industry. Merits and limitations	<b>5</b>
<b>UNIT II</b>		
<b>4</b>	<b>Centrifugation-</b> Table top, high speed, microfuge, refrigerated, ultra, density gradient centrifugation, applications in biotech industry.	<b>3</b>
<b>5</b>	<b>Microscopy:</b> Structure and working of bright field and dark field microscopes. Principle, working and applications of phase contrast microscope,	<b>4</b>
<b>6</b>	<b>Advance microscopy:</b> confocal microscopy, fluorescence microscope, electron microscope, atomic force microscopy,	<b>4</b>
<b>UNIT III</b>		
<b>7</b>	<b>Biophysical methods:</b> Analysis of biomolecules using UV/visible spectrophotometer, fluorescence, circular dichroism	<b>4</b>
<b>8</b>	NMR and ESR spectroscopy, structure determination using X-ray diffraction	<b>3</b>
<b>9</b>	Different types of mass spectrometry, MALDI-TOF and surface plasma resonance methods.	<b>4</b>
<b>Unit IV</b>		
<b>10</b>	<b>Radio labeling techniques:</b> Properties of different types of radioisotopes normally used in biology, their detection and measurement; safety guidelines. Incorporation of radioisotopes in biological tissues and cells. Molecular imaging of radioactive material	<b>3</b>
<b>11</b>	<b>HPLC-</b> Concept, principle, procedure (analytical and preparatory), separation on the basis of detectors, accuracy, applications in research and quality control	<b>4</b>
<b>12</b>	<b>GC:</b> Concept, principle, procedure (analytical and preparatory), separation on the basis of detectors, accuracy, applications in research and quality control	<b>4</b>

<b>MBT&amp;Med BT 203: Immunology</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I : Introduction</b>	
<b>1 Immunity</b> – Types of Immunity, components of Innate and Acquired Immunity Cells and organs of immune system, Antigen presenting cells, endogenous and exogenous pathways of antigen presentation, presentation of non-peptide antigens	<b>4</b>
<b>2 Antigens</b> - Immunogenicity versus Antigenicity, Factors that influence immunogenicity, Epitopes - Properties of B-cell epitopes and T-cell epitopes, haptens and adjuvants, Antigen engineering-Increasing Immunogenicity	<b>3</b>
<b>3 Antibodies</b> - Basic structure of Immunoglobulins - The role of multiple myeloma in understanding Ig structure, domains-variable and constant region, Immunoglobulin classes and functions, application and engineering of monoclonal antibodies	<b>3</b>
<b>UNIT II : Lymphocyte ontology</b>	
<b>4 B- cell maturation, activation and differentiation</b> Antigen dependant and antigen independent stages of B- cell maturation, B-cell activation and proliferation by Thymus independent and Thymus dependant antigens, B-cell differentiation, class-switching and generation of plasma cells and memory cells, primary and secondary response kinetics, significance in vaccination programs.	<b>3</b>
<b>5 T cell maturation, activation and differentiation</b> Stages of T cell maturation, Positive and negative selection in thymus, role of TH1 and TH2 cells, mechanism of CTL mediated cytotoxicity, co-stimulatory molecules and signals, super antigen induced T cell activation, NK cell mediated lysis, ADCC	<b>3</b>
<b>6 Complement system and Cytokines</b> Classical, alternate and lectin pathways of complement activation and function of complement system, Types and general properties Cytokines, receptors, cytokine network, Immunoregulatory role of IL-4, IFN- $\gamma$ and TNB- $\beta$ .	<b>3</b>
<b>UNIT III : Immunogenetics</b>	
<b>7 Immunoglobulin genes and proteins</b> Multigene organization of Ig genes, Generation of antibody diversity.	<b>3</b>
<b>8 TCR genes, gene products and co-repressors:</b> Structure and types ( $\alpha\beta$ and $\gamma\delta$ ), gene organization and rearrangement, T cell accessory membrane molecules, Role of TCR-CD3 complex in immune activation and signal transduction pathways.	<b>3</b>
<b>9 Major Histo-compatibility complex</b> General organization and inheritance of MHC; MHC Haplotypes, the structure of MHC class-I and class-II molecules; organization of MHC class I and class II genes, peptide binding of MHC molecules, Polymorphism of MHC class I and class II molecules; the role of HLA typing in organ transplantation and disease susceptibility/resistance.	<b>3</b>
<b>Unit IV : Clinical Immunology</b>	
<b>10 Clinical Immunology</b> <b>Hypersensitivity</b> – Type I, II, III and IV- outline of mechanism with examples.	<b>2</b>
<b>11 Immune tolerance and autoimmunity</b> - establishment and failure of tolerance; Autoimmunity; Types of autoimmune diseases with one example; Mechanism and role of CD4+ T cells.	<b>3</b>

- 12 **Transplantation immunology** - basis and manifestation of graft rejection, 3  
 General immune-suppressive therapy. Specific immune suppressive therapy.  
 Immune tolerance to allograft.
- 13 **Tumor immunology**- Malignant transformation of cells and immune responses. 3  
 Tumor antigens, Tumor evasion of the immune system, immuno-surveillance,  
 Cancer immune-therapy.
- 14 **Immunotechniques**: Immuniprecipitation, agglutination, RIA, ELISA, ELISPOT,  
 Western blotting, fluorescence based imaging technique, HLA typing, Flow  
 cytometry, and animal systems

<b>MBT&amp;Med BT 204: Genomics and Proteomics</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I</b>	
<b>1 Introduction to Bioinformatics:</b>	<b>1</b>
Introduction to Bioinformatics: Definition, History, Goal, Scope, Applications, Limitations	
<b>2 Introduction to Biological Databases:</b>	<b>5</b>
Hierarchy of Biological databases: Primary, Secondary, Derived and knowledgebase	
<b>3 Sequence Alignment &amp; Analysis</b>	<b>6</b>
<ul style="list-style-type: none"> <li>• Sequence alignment methods: Local and global, Pairwise sequence alignment, Multiple sequence alignment</li> <li>• Sequence alignment algorithm: Needleman &amp; Wunsch , Smith &amp; Waterman</li> <li>• Sequence Similarity Search Tools: Dot Plot, BLAST, FASTA, ClustalW, ClustalX</li> <li>• Sequence analysis methods: AMAS, CINEMA, MaxAlign</li> </ul>	
<b>UNIT II</b>	
<b>4 Genomics:</b>	<b>3</b>
Genome sequencing: strategies & approaches, conventional DNA sequencing methodologies, NGS(Next generation sequencing), Third generation sequencing, Microarray Technology	
<b>5 Genomics Tools:</b>	<b>6</b>
<ul style="list-style-type: none"> <li>• Tools for Genomic Data Mining: Basic Aspects of Genome Annotation</li> <li>• Database Search Engines: Special tools for searching genomic data</li> <li>• Prediction of genes: ORFs, Prediction of Signal sequences (Promoters, Primers, splice sites, UTRs etc.), Operons</li> <li>• Identification of Disease Genes: Identification of Drug Targets, Metabolic diseases and Pathogenic diseases, Gene Expression Analysis</li> <li>• Structural Genomics and Functional Genomics</li> <li>• Genetic Disorders Databases: OMIM, OMIA, Genetic Association Database, Genetic Disorder Guide, IGDD, DisGenet, Genetic Disorder UK</li> </ul>	
<b>6 Genome mapping:</b> Genetic maps and physical maps	<b>2</b>
<b>UNIT III</b>	
<b>7 Comparative genomics and it's applications Methods:</b>	<b>4</b>
<ul style="list-style-type: none"> <li>• Genome Alignments: BLAST2, MUMmer , PipMaker , VISTA</li> <li>• Comparison of Gene Order: GeneOrder , Gene synteny</li> <li>• Comparative Genomics of organisms: Viruses, Microbes, Pathogens, Eukaryotes</li> <li>• Comparative Genomics Databases : COG, VirGen, CORG, HOBACGEN, Homophila, XREFdb</li> </ul>	
<b>8 Proteomics:</b>	<b>1</b>
Introduction to proteomics, scope	
<b>9 Classification of proteins:</b> Primary, secondary, tertiary, quaternary.	<b>6</b>
<b>Protein Primary Databases:</b> Protein database on NCBI/ Protein database on EMBL, PIR-PSD, UniProt KB/SwissProt, Expasy, InterPro	

## Unit IV

- 10 Proteomics Applications:** 4  
Strategies for protein identification, Protein sequencing, Protein engineering: Protein chips and functional proteomics; Clinical and biomedical application of proteomics.
- 11 Proteomics tools:** 5  
Structural databases: PDB, MMDB, SCOP, CATH.  
3D structure visualization tools: Rasmol, Pymol, SPDBV, Cn3D  
Secondary structure prediction algorithms: Chou Fasman, Jpred, Psipred, GOR methods; analysis of results.  
3D structure validation databases: PROSA, Ramchandran Plot, Procheck
- 12 Protein-protein interaction :** 2  
Protein-Protein Interaction Networks, databases and software:  
BIND - Biomolecular Interaction Network Database, STRING

MBT&MedBT 205: Nanobiotechnology Core Course – Theory; 2 Credits	Total 30L
---	--------------

## UNIT I

- |   |  |   |
|---|--|---|
| 1 | <b>Introduction to nanoscience</b> , properties of nanoparticles, Types of nanomaterial<br>Carbon nanomaterials (fullerene, nanotube, nanofibres, nanowires) Quantum dots,<br>magnetic nanoparticles | 5 |
| 2 | <b>Nanostructures:</b> Organic and Inorganic nanoparticles, Bionanostructures-protein,<br>carbohydrate and lipid, DNA based  | 4 |
| 3 | <b>Synthesis of nanoparticles</b> , Top down and Bottom up approach, Physical, Chemical<br>and Biological methods of synthesis   | 5 |

## UNIT II

- |   |   |   |
|---|---|---|
| 4 | <b>Characterization of nanoparticles:</b> Optical (UV-Vis, FTIR, Photoluminescence<br>spectroscopy) X-ray diffraction, Microscopy (SEM,TEM,AFM,STM) Surface and<br>composition (ECSA, EDAX), Particle size analysis and charge distribution analysis,<br>Toxicity Evaluation of nanomaterials; Cyto-toxicity, Geno-toxicity In vivo tests/assays<br>etc containment | 7 |
| 5 | <b>Applications of Nano-Materials in Biosystems;</b> Nanomedicines, Targeted Drug<br>Delivery, Disease diagnosis at proteomic level, Biosensors (Nucleic acid based, protein<br>based), Lab on Chip, Applications in Gene therapy, cancer Biology. Bionanomachines  | 5 |
| 6 | <b>Application of nanobiotechnology in agriculture and environment:</b> desalination,<br>monitoring water quality, detection of pollutants  | 4 |

Med BT 206: Human Physiology	Total
Core Course – Theory; 3 Credits	45L

## UNIT I

- |   |  |   |
|---|--|---|
| 1 | <b>Introduction to various systems, complexities of system</b>   | 3 |
| 2 | <b>Digestive system</b> - Digestion, absorption, energy balance, BMR.  | 3 |
| 3 | <b>Blood and circulation</b> - Blood corpuscles, haemopoiesis and formed elements, plasma function, blood volume, blood volume regulation, blood groups, haemoglobin, immunity, haemostasis. | 5 |

## UNIT II

- |   |   |   |
|---|---|---|
| 4 | <b>Respiratory system</b> - Comparison of respiration in different species, anatomical considerations, transport of gases, exchange of gases, waste elimination, neural and chemical regulation of respiration. | 4 |
| 5 | <b>Nervous system</b> - Neurons, action potential, gross neuroanatomy of the brain and spinal cord, central and peripheral nervous system, neural control of muscle tone and posture.                           | 4 |
| 6 | <b>Sense organs</b> - Vision, hearing and tactile response.   | 3 |

## UNIT III

- |   |   |   |
|---|---|---|
| 7 | <b>Excretory system</b> - Comparative physiology of excretion, kidney, urine formation, urine concentration, waste elimination, micturition, regulation of.             | 4 |
| 8 | Water balance, blood volume, blood pressure, electrolyte balance, acid-base balance. Water, Minerals including trace elements, Vitamins, Recommended dietary allowances | 3 |
| 9 | <b>Thermoregulation</b> - Comfort zone, body temperature – physical, chemical, neural regulation, acclimatization   | 4 |

## UNIT IV

- |    |  |  |
|----|--|--|
| 10 | <b>Endocrinology and</b> - Endocrine glands, basic mechanism of hormone action, hormones and diseases; neuroendocrine regulation   |  |
| 11 | <b>Reproductive system:</b> reproductive processes, gametogenesis, ovulation   |  |
| 12 | <b>Nutrition:</b> The relationship between nutrition, health and disease, Proximate principles, Balance Diet, Energy Metabolism, Nutrition throughout life cycle, Malnutrition and Chronic Energy Deficit, Micronutrient disorders, Maternal and child nutrition, Neutrigenomics and nutrient gene interaction |  |

MBT&MedBT 210: Option II (210.2) – Intellectual property rights I (IPR-I) Elective Course I – Theory; 2 Credits	Total 30L
--	--------------

**UNIT I**

<b>1 Introduction to Intellectual Property</b>	<b>15</b>
--	-----------

General Introduction to IP & IPR; Introduction, History & role of International Conventions & Treaties- GATT, WTO, WIPO, TRIPS, Budapest Treaty, CBD, Nagoya Protocol; International framework for the protection of IP; IP as a factor in R&D; IPs of relevance to Biotechnology, Agriculture, Bioinformatics and Pharma sector

**UNIT II**

<b>2 Types of IP Industries:</b> Patents, Trademarks, Copyright & Related Rights, Industrial Design, Traditional Knowledge, Geographical Indications, Plant variety and Protection of New GMOs	<b>8</b>
--	----------

<b>3 Concept of 'prior art'</b>	<b>7</b>
---------------------------------	----------

Need of Prior Art for IP types, Classification search and its implications; Invention in context of "prior art"; Patent databases; Searching International Databases; Country-wise patent searches (USPTO, EPO, India etc.); Analysis and Report formation

SEMESTER III

<b>MedBT 301: Animal Tissue Culture &amp; Stem Cell Biology</b>	<b>Total</b>
<b>Core Course; (3 Credits, 3L)</b>	<b>45L</b>
<b>UNIT I</b>	<b>11</b>
1 Introduction to animal tissue culture. Overview of its applications in research, industry & therapeutics	
2 Systems of tissue culture with distinguishing features, advantages and limitations	
3 Growth characteristics of cells growing in culture, molecular basis of cell adhesion, contact inhibition, anchorage dependent and independent cells	
4 Aseptic techniques and its significance in ATC	
5 Tissue culture media, role of balanced salt solution, individual constituents and serum; Serum free media	
<b>UNIT II</b>	<b>12</b>
6 Techniques for primary culture and routine maintenance of cell lines, quantitation of cells, estimation of viability, cryopreservation of cell lines	
7 Characterization of cells, various methods for characterization, FACS analysis	
8 Cytotoxicity assays: Viability, survival, metabolic assays, transformation and mutagenesis, testing for carcinogenicity and inflammation	
9 Scale up of anchorage independent and dependent cells, bioreactors, microcarriers, perfused monolayer cultures	
10 Applications of animal cell culture for in vitro testing of drugs, in production of monoclonal antibodies, viral vaccines and therapeutic proteins	
<b>UNIT III</b>	<b>11</b>
11 Three dimensional cell culture, organ culture, organotypic culture, advantages and limitations	
12 Stem cells – Introduction, basic properties, and classification	
13 Types of stem cells: Hematopoietic, mesenchymal, embryonic and fetal stem cells; their characteristics, isolation, culture and characterization	
14 Applications of stem cells	
<b>UNIT IV</b>	<b>11</b>
15 Introduction to tissue engineering – Morphogenesis, approaches for in vitro engineering of tissues, scope in therapeutics and drug screening	
16 Microscale patterning of cells and their environment	
17 Scaffolds – Basic properties and types	
18 Modes of cells and tissue delivery	
19 Examples of Bio-constructs and their applications	
20 Islet cell transplantation and bioartificial pancreas	
21 Bioprinting of organs and tissues

<b>MedBT 302: Medical Biochemistry &amp; drug discovery</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>
<b>UNIT I</b>	
1 Introduction of health and disease. Molecular basis of diseases. Recent discoveries in medical and health sector	3
2 <b>Disorders of carbohydrate metabolism:</b> Diabetes mellitus, types, diagnosis, hypo-glycemias, ketone bodies, Glycogen storage diseases.	4
3 <b>Physiology of lipids/lipoproteins:</b> Lipoprotein, metabolism, fatty liver, Diagnostic tests for lipid profile, atherosclerosis. Clinical inter-relationships of lipids (sphingolipidosis and multiple sclerosis).	4
<b>UNIT II</b>	
4 <b>Inborn errors of metabolism:</b>	3
a) Disorders of amino acid metabolism- phenylketonuria, alkaptonuria, albinism.	
b) Disorders of nucleic acid metabolism- Disorders in purine/ pyrimidine metabolism.	
5 <b>Biochemical aspects of hematology:</b> Blood, composition, hemogram, hemoglobinopathies, thalassemias and anemias. blood clotting, Laboratory tests to measure coagulation and thrombolysis.	4
6 <b>Detoxification in the body:</b> Mechanism of Detoxification of Xenobiotics, Phase I Reactions, Phase II Reactions	4
<b>UNIT III</b>	
8 <b>Drug discovery:</b> History of Drug Development, Introduction to Clinical Research, Terminologies and definition in Clinical Research, Difference between Clinical Research and Clinical Practice, Types of Clinical Research	3
9 <b>Pharmacology &amp; Drug development:</b> Introduction to Pharmacology, types of drugs (antidiabetic), Routes of Drug Administration, Introduction to Sources of Drugs, Approaches to Drug Discovery, Pharmacovigilance, Pharmacodynamic /pharmacokinetic (PK/PD) correlation, Factors affecting drug response,	4
10 <b>Drug development process:</b> Methods involved in the development of new drugs. Drug Discovery, Preclinical toxicological studies. Calculation of LD50 & ED50. Acute, subacute and chronic toxicity studies. Irwin profile test, Pre-clinical pharmacokinetic and dynamic studies. Lipinski's rule for drug like molecule.	4
<b>Unit IV</b>	
10 <b>Therapeutic drug monitoring:</b> Basic principles of TDM. Therapeutic index. Trough level monitoring and dosage adjustments. Drug delivery systems: sustained release, enteric coated formulations and liposome etc. Pharmacovigilance, Pharmacoeconomics, Pharmacogenetics	4
11 <b>Drug regulations:</b> Drugs and Cosmetics Act, Drug Price Control order, Application for Investigational New Drug (IND), Application for New Drug Discovery (NDD) according to Indian Control Authority & USFDA guidelines. Ethical considerations in utilizing human subjects for drug, Ethical guidelines in utilising animals for experimental purposes.	4
12 <b>RNA interference</b> and its applications in prevention of cancer, a Therapeutic genome editing- ZFN, CRISPR-Cas gene editing technology (HIV), TALENS (Leukaemia)	4

MedBT 303: Infectious Diseases	Total
Core Course – Theory; 3 Credits	45L
<b>UNIT I</b>	
<b>1 Etiology, pathogenesis, laboratory diagnosis , treatment &amp; prophylaxis of :</b>	<b>11</b>
a. Diseases caused by Gram positive cocci- Staphylococci, Streptococci & Pneumococci	
b. Diseases caused by Gram negative cocci- Neisseria species	
c. Diseases caused by Gram positive bacilli- Corynebacterium species, Bacillus anthracis & Clostridium species	
<b>UNIT II</b>	
<b>2 Diseases caused by:</b>	<b>12</b>
a. Enterobacteriaceae -1	
b. Enterobacteriaceae -2	
c. Enterobacteriaceae -3	
d. Vibrio	
e. Pseudomonas	
f. Gram negative coccobacilli	
g. Mycobacterium tuberculosis	
h. Mycobacterium leprae & atypical mycobacteria	
i. Spirochaetes- Treponema, Borrelia & Leptospira	
<b>UNIT III</b>	
<b>3 Diseases caused by:</b>	<b>11</b>
a. Pox viruses- Variola, Vaccinia, Small pox	
b. Herpes viruses- HSV, VZ, HZ, Cytomegalio, E-B viruses	
c. Adeno viruses	
d. Picorna viruses	
e. Orthomyxo viruses	
f. Arbo viruses	
g. Hepatitis viruses	
h. Miscellaneous viruses: Rubella, SARA, Rota viruses	
i. Oncogenic viruses: DNA & RNA viruses	
j. HIV: AIDS	
<b>Unit IV</b>	
<b>4 1. Diseases caused by fungi:</b>	<b>11</b>
a) Superficial mycoses- surface infections, cutaneous infections, Dermatophytoses, Candidiosis	
b) Deep mycoses: subcutaneous & syatemic mycoses	
c) Opportunistic mycoses	
<b>2. Diseases caused by Parasites:</b>	
a) Protozoal infections: EH, Trichomonas, MP, Leishmaniasis.	
b) Helminthic infections caused by- Cestodes, Nematodes & Trematodes	
<b>References:</b>

4. Text book of Microbiology- Baveja C.P.	
5. Text book of Medical Mycology- Chander Jagdish, 3 <sup>rd</sup> edi.	
6. Principles & Practices of infectious diseases- Vol-1 &2 by Mandell G Gerald L. Gerald L.	

7. Diagnostic Medical Microbiology -colour atlas by Stephen Allen, Elmer Konman .
8. Diagnostic Microbiology by Bailey A. Forbes, Daniel Lehman & Alice S Weissfeld.
9. Parasitology & Helminthology by K D Chatterjee- 13<sup>th</sup> edi.

<b>MedBT 304: Pharmaceutical Biotechnology and Molecular diagnostics</b>		<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>		<b>45L</b>
<b>UNIT I : Chemotherapeutic agents</b>		
1	Types of antimicrobial agents, concept of bioassay, therapeutic index, MIC and LD <sub>50</sub>	1
2	Mechanism of action of antibacterial agents; antibiotics acting on cell-wall, cell membrane, nucleic acids and protein synthesis	3
3	Anti-fungal and anti-viral drugs	2
4	Adverse drug effects and resistance to antibiotics	2
5	Multiple Drug Resistance	1
6	Cloning biosynthesis genes, synthesis of novel antibiotics, Improving antibiotic production	3
<b>UNIT II : Vaccines</b>		
7	Animal cell bioreactors and fermentors: types, design and controls	3
8	Vaccines; Definition and Types	1
9	Subunit Vaccines (Herpes Simplex Virus, Foot and Mouth Disease)	1
10	Peptide Vaccines	1
11	Attenuated Vaccines (Cholera)	1
12	Vector Vaccines	1
13	DNA vaccines	1
14	Safety and potency of vaccines	1
15	Sterility testing	2
16	Animal cell bioreactors and fermentors: types, design and controls	1
<b>UNIT III : Molecular Diagnostics</b>		
17	Immunological diagnostic procedures: ELISA, Monoclonal antibodies	2
18	Bio florescence and bio luminescent systems: coloured florescent proteins, luciferase, microbial biosensors	2
19	Nucleic acid based diagnostic systems: Hybridization Probes, DNA fingerprinting, Immunoquantitative Real-Time PCR	2
20	Molecular diagnosis if genetic diseases: Cystic fibrosis, Sickle-cell anemia	2
21	Cloning Human Disease gene: Detection of Mutations in Human Genes, Functional Gene cloning, Candidate Gene cloning	2
22	Human Gene Therapy: Ex-vivo and In-vivo	2
<b>UNIT IV: Protein Therapeutics</b>		
23	Human Interferons	1
24	Human Growth Hormone	1
25	DNase I and Alginate lyase	1
26	Interlekin 10	1
27	Recombinant antibodies: Hybrid Human-Mouse Monoclonal antibodies, Human Monoclonal antibodies	2
28	Antibody fragments	1
29	Chemically-linked Monoclonal antibodies	1
30	Anti-cancer antibodies	1

3. Applied statistical designs for the researcher, Neil Ed Taylor and Francis Groop.		

<b>MBT&amp;MedBT 306: Research Methodology</b>		<b>Total</b>
<b>Core Course – Theory; 2 Credits</b>		<b>30L</b>
<b>UNIT I</b>		
<b>1</b>	<b>Basic concepts of Research</b> Introduction, Definition and basic concepts, objectives of research, Research approaches, types of research, techniques of research, hypothesisation, literature survey, selection of topic, compiling records.	<b>5</b>
<b>2</b>	<b>Research Design</b> Important concepts in research design – basic principles of research design, need of research design, features of good research design.	<b>5</b>
<b>3</b>	<b>Sampling and Data collection &amp; Analysis</b> Collection of primary and secondary data - parameters, techniques for data collection, methods of data presentations, classification and tabulation of data, graphical representation	<b>5</b>
<b>UNIT II</b>		
<b>6</b>	<b>Data Analysis</b> Statistical methods of data analysis: Applications of statistics in research, measures of central tendency and dispersion	<b>4</b>
<b>7</b>	<b>Testing hypothesis</b> What is a Hypothesis, Basic Concepts Concerning Testing of Hypotheses, Procedure for Hypothesis Testing, Flow Diagram for Hypothesis Testing, Measuring the Power of a Hypothesis Test, Tests of Hypotheses, Important Parametric Tests, Hypothesis Testing of Means	<b>3</b>
<b>8</b>	<b>Technical Writing:</b> Different types of scientific documents, review paper, book reviews, research paper, thesis, project reports (for the scientific community), Plagiarism, Research Ethics, Patents and IPR. <b>Objective:</b>  To provide the knowledge of how to define research problem, hypothesis testing, literature survey, research designs, data collection and analysis. Topics covered in this course includes, from meaning of research to technical writing.	<b>3</b>
<b>Teaching – Learning Methodology:</b>		
Lectures and Tutorials: This is a compulsory subject offered by RGITBT for all M Sc. Biotech students. Lectures, tutorials, group discussion, paper presentation, assignments will be used as a teaching – learning process. There will be a recommended course books. Students are expected to read the research / review articles of their chosen topic of interest, develop research problem for their research project to be undertaken in the forthcoming semester.		
<b>Expected Learning Outcome:</b>		
Students are expected to learn key concepts in research methodology, data collection and data analysis, presentation of data, interpretation and technical write-up. It is expected that students will learn how different research methods are useful in developing working hypothesis, establish theories, models or concepts. It is expected that the students will practice reading and interpreting		

research papers, review articles, understanding key concepts of research approaches used by investigators, literature survey, data analysis, interpretation and presentation.

Through this course, it is expected that students should be able to independently develop a research plan or research ideas in their areas of research interest for the forthcoming semester.

**SEMESTER IV****MBT&MedBT 401: RESEARCH PROJECT****Core Course – 20 Credits****Guidelines for Research Project and Dissertation Submission during Sem IV for Master of Science (M. Sc.) in Medical Biotechnology****Eligibility:**

- If student fails to pay any of the pending dues before the beginning of the project date, he/ she will not be considered to be eligible to undertake research project.

**Project Duration, Dissertation writing and Submission:**

- The project duration will be from beginning till the end of Semester IV
- Students shall submit dissertation title, name of research guide, name of co-guide (for off-campus only), name & place of research work within 10 days after the start date of semester IV. (As per the format enclosed).
- Student must have to submit Two hard copies (copy of Library/ Co-Guide & Student's copy) and one soft copy (Guide) of Dissertation only in the prescribed format (read below), duly approved by Research Guide(s) on or before April 15th of every year. The dissertation will not be accepted for evaluation for those who submit after March 15th, their presentation will be taken along with the next year batch.
- Students must acknowledge all the figures, maps, tables, methods, texts, etc., that are used, taken from other sources for writing the dissertation, except for original work that they have carried out. Dissertation having more than 10 % of plagiarism found will not be considered for evaluation.
- Dissertation must be written in specified format only as mentioned below:
  - a. The paper used for printing shall be of A4 size;
  - b. Printing shall be in a standardized form (word size of 12, font in Times New Roman) on one side of the paper and in 1.5 line spacing;
  - c. A margin of 1.5 inches shall be on the left hand side, top, bottom and right hand margin shall be of 1 inch.
  - d. The card for cover shall not be more than 330 GSM.
  - e. The title of the dissertation, name of the candidate, degree, name of the guide, co-guide, place of research and the date, month and year of submission shall be printed on the title page and on the front cover.
  - f. The hard- bound thesis cover shall be of black color. Spine of the binding [side cover] should mention 'M Sc. Biotechnology or Medical Biotechnology or Bioinformatics dissertation on the top, name of the candidate and date, month and year.
- Student must follow following chapter scheme for Dissertation submission:

**Chapter Scheme of Dissertation :**

- ✓ Introduction
- ✓ Review of Literature
- ✓ Aims and Objectives
- ✓ Materials & Methods
- ✓ Observations and Results
- ✓ Discussion
- ✓ Summary
- ✓ Conclusions
- ✓ Bibliography –Reference etc.

**Place of Research Project:**

- Student may prefer to undertake his/ her research project in-house or off-campus. Students those preferring to pursue research at off-campus will have to undertake research work only in any of the Department of Scientific and Industrial research (DSIR), Government of India recognized laboratory (Government, State-Government, Private).

**Research Guide(s):**

- Students who are opting for off-campus they will have one Major Research Guide from the host organization (Preferably a Ph D. qualified scientist), however, a Co-Guide from RGITBT will be appointed.

**Dissertation Evaluation:**

- Students will have to submit **Two progress reports (45 days of Intervals) (Format Enclosed) and One evaluation report from Research Guide having 40 % weight age (Format Enclosed)** at the time of dissertation submission on the execution of research project duly signed by Guide / Co-Guide. The progress report will include, attendance percentage, review collection, research progress, sincerity, topic understanding, and systematic execution of research project, data collection and management. The evaluation report will include attendance, review work, project execution, critical thinking, originality of work, presentation of result, understanding of research and topic, dissertation write-up, presentation of tables, figures, maps, references, etc.
- Student will have to give 20 min presentation on the work done in the presence of expert committee (between **April 21 to May 5 of every year**). (Note only working dates will be considered). The power point presentation format shall contain project title, name of candidate, place of research work, name of Guide/ Co-Guide, introduction, review, objectives, significance of the work, methodology, results & discussion, conclusion, references and acknowledgement. The presentation shall be of 12-15 min with 5-8 minutes of discussion.
- The presentation will carry **60 % of weight age** based on the following consideration. The overall understanding of the research project, objectives, methodology. The outcome of

research work, data analysis and statistics, clarity in presentation and question – answer session (**Format Enclosed**).

- Student will be assigned a grade as per the Rules mentioned.

**RAJIV GANDHI INSTITUTE OF IT AND BIOTECHNOLOGY**

“Write here **approved title** of the Dissertation in all upper-case (capital letters) with a 'centre' alignment. Place this title on the upper central part of the cover with sufficient margin from top and both sides. Use font size suitable to length of the title”

A DISSERTATION SUBMITTED TO

**RAJIV GANDHI INSTITUTE OF I.T. AND BIOTECHNOLOGY,  
BHARATI VIDYAPEETH DEEMED TO BE UNIVERSITY, PUNE**

FOR AWARD OF DEGREE OF  
**MASTER OF SCIENCE in MEDICAL BIOTECHNOLOGY**

**DECLARATION BY THE CANDIDATE**

I hereby declare that the dissertation entitled “  
 ”  
 \_\_\_\_\_ submitted by me to  
 (Title of thesis)

the Bharati Vidyapeeth Deemed to be University, Pune for the degree of Master of Science (M Sc.) in Medical Biotechnology under the Faculty of Interdisciplinary Science is

original piece of work carried out by me under the supervision of \_\_\_\_\_  
 (Name of Guide) and

\_\_\_\_\_. I further declare that it has not been submitted to  
 (Name of Co-guide (if any))

this or any other university or Institution for the award of any degree or Diploma.

I also confirm that all the material which I have borrowed from other sources and incorporated in this dissertation is duly acknowledged. If any material is not duly acknowledged and found incorporated in this dissertation, it is entirely my responsibility. I am fully aware of the implications of any such act which might have been committed by me advertently or inadvertently.

**NOTIFICATION NO. 988**

It is hereby notified for the information of all concerned that the University authorities have approved the revised course structure, syllabus and rules of examinations of M.Sc. Bioinformatics and Advanced Diploma in Bioinformatics under the Faculty of Interdisciplinary Studies to be implemented from the academic year 2019-20.

A copy of the revised course structure, syllabus and rules of examinations of M.Sc. Bioinformatics and Advanced Diploma in Bioinformatics is enclosed.

All the concerned are requested to make a note of this.

Ref. No. BVDU/2019-20/ 162

Date : June 8, 2019

*G. Jayakumar*  
Registrar

**BHARATI VIDYAPEETH DEEMED TO BE UNIVERSITY  
PUNE**

**REVISED SYLLABUS FOR  
MASTER OF SCIENCE  
M.Sc. IN BIOINFORMATICS**

**UNDER  
FACULTY OF INTERDISCIPLINARY STUDIES**

**SYLLABUS OF SEM I – SEM IV UNDER  
CHOICE BASED CREDIT SYSTEM**

**To be effective from Academic Year  
2019-20**

Bharati Vidyapeeth Deemed To Be University is a multidisciplinary, multicampus university having 32 Institutions imparting quality education in various disciplines. All programmes of the University are approved by UGC and respective statutory councils. BVDU has been re accredited for the third time with 'A+' grade by NAAC in 2017. UGC has accorded 12B Status [UGC ACT1956] to the university. Ministry of Human Resource and Development, Government of India has awarded "A" category to the University in 2012 based on parameters including innovative programs, research and infrastructure facilities. The University is a member of Association of Indian Universities [AIU] which has ranked BVDU among top 10 universities of India for International students' enrollment. BVDU is also a member of International Association of Universities.

Rajiv Gandhi Institute of IT and Biotechnology is a constituent unit of BVDU established in 2003. The Institute is approved by UGC to conduct graduate and post graduate courses in Biotechnology. The Institute has excellent infrastructure, state-of-the-art laboratories and competent faculty facilitating appropriate learning environment. The Institute offers one undergraduate and four postgraduate programmes in Biotechnology.

## INTRODUCTION

The Master of Science (M.Sc.) in Bioinformatics is a full time post graduate program offered by **Bharati Vidyapeeth (Deemed to be University (BVDU))** in its constituent unit, Rajiv Gandhi Institute of IT and Biotechnology (RGITBT). The course was initiated in the year 2010 and was designed to facilitate empowerment of students to face cutting edge technological applications in bioinformatics sector. 21<sup>st</sup> century biology has been transformed into integrative biology due to paradigm shift from reductionist to holistic approach. The data explosion is one of the obvious causes of the transformation to holistic or systems biology mode. In order to have deeper insights in to biological systems, integration of the data from genome to phenome levels to generate dynamic models has surfaced as key area of bioinformatics. On its implementation for 8 years, the curriculum is being revised two times to embrace newer emerging disciplines and value added courses. The revised **M.Sc. Bioinformatics is a full time 108 credits** Program to be implemented in Rajiv Gandhi Institute of IT and Biotechnology from the academic year 2019-20. The feedback of students, alumni, faculty, employers and parents has a substantial contribution in designing of this curriculum.

## OBJECTIVES

1. To impart deep knowledge of the discipline
2. Develop skills in relevant areas to enhance employment opportunities
3. Introduce emerging areas of NGS, Drug designing and data mining
4. Build interdisciplinary approach
5. Foster global competence among students
6. Inculcate social and moral values and sense of scientific responsibilities in students

## ELIGIBILITY FOR ADMISSION TO THE COURSE

Candidates satisfying following criteria are eligible to apply for M.Sc. Bioinformatics Course

1. A student who has obtained Bachelor's degree with minimum **50%** in (i) B.Sc. (Biotechnology / Microbiology / Biochemistry / Zoology / Botany / Chemistry /Agriculture/ Mathematics /Statistics / Computer Science). (ii)B. Pharm (iii). MBBS (iv) BDS (v) BAMS (vi) BHMS (vii) B.E. in Computer Science or Information technology or Biomedical Engineering will be considered eligible for admission to M.Sc. Bioinformatics course or **45%** aggregate marks for **SC / ST** category respectively at graduate level university examination.
2. Subject to above conditions, the admission will be based on the merit at Entrance Examination conducted by Bharati Vidyapeeth (Deemed to be University).

### **DURATION OF THE COURSE**

The course will be executed in four semesters. The medium of instruction and examination will be only English.

### **RULES FOR THE COURSE**

1. The entire course is of 108 credits.
2. One credit for theory course is equivalent to 15 lectures/tutorials; while one credit for practical course is equivalent to 25 – 30 hrs. of lab /field work or demonstration.
3. The curriculum comprises of core, advanced and value added courses. The Core and Advanced Courses are compulsory where as Value Added are elective.
4. The Core Courses are aimed at providing fundamental knowledge of the discipline. The advanced courses are designed to develop manpower for bioinformatics industries as per current need. The Value Added Courses are intended to inculcate the thrust of new domains of bioinformatics within students.
5. The teaching schedule for the 3 credits and 2 credits theory courses will be 3 and 2 lectures per week respectively. All courses will have one tutorial fortnightly.
6. The respective elective course will be implemented only if more than 10 students enroll for that course.
7. All core courses will be evaluated by University Examination. The elective courses will be evaluated by University Examination and Continuous Assessment.

8. Two extra credits will be awarded to students if there is any significant outcome of their dissertation study. The research outcome in terms of publication in indexed national/International journal; filing of patent; or commercialization of technology will be considered for the award of credits.

## RULES FOR EXAMINATION

### A: Nature of Examination:

1. Each course will have 40% marks for internal assessment and 60% marks for semester-end examination.
2. The assessment for 1, 2 and 3 Credits courses will be as given in following table:

**Table 1: Evaluation pattern for one to three Credit Courses**

Course Credits	Marks for UE (60% Weightage)	Marks for IE (40% weightage)	Total Marks for evaluation
1	15	10	25
2	30	20	50
3	45	30	75
4	60	40	100

3. The duration of **60 Marks UE theory paper will be 2.00 Hrs; for 30 Marks 1.30 Hrs.** respectively.
4. The Internal Assessments (IA) will be conducted by the Institute and an end-of-the term University Examination (UE) conducted by the university. The UE will be based on the entire syllabus.
5. The performances at UE and IA will be combined to obtain the Grade Point Average (GPA) for the course.

**STANDARD OF PASSING**

**A: Grading System:** A **10-point absolute grading system** will be adapted for grading in each head of passing. The system will have seven grade points, the highest being 10. The grading system shall be as shown in Table-2 below. The performance indicators O, A+, A, B+, B, C, and D shall respectively mean Outstanding, Excellent, Very Good, Good, Average, Satisfactory, and Poor.

**Table-2: The grading system under CBCS**

Range of Marks (out of 100)	Grade Point	Grade
$80 \geq \text{Marks} \leq 100$	10	O
$70 \geq \text{Marks} \leq 80$	9	A+
$60 \geq \text{Marks} \leq 70$	8	A
$55 \geq \text{Marks} \leq 60$	7	B+
$50 \geq \text{Marks} \leq 55$	6	B
$40 \geq \text{Marks} \leq 50$	5	C
$\text{Marks} < 40$	0	D

1. The grade point average (GPA) for a course shall be calculated by first finding the total marks **out of 100 for the course. The corresponding GP (as per the table-2) shall be the GPA for the course.**
2. Two kinds of performance indicators, namely, the Semester Grade Point Average (SGPA) and the Cumulative Grade Point Average (CGPA) shall be computed at the end of each term. The SGPA measures the cumulative performance of a learner in all the courses in a particular semester, while the CGPA measures the cumulative performance in all courses up to and including the current semester. The CGPA of a student when he/she completes the program is his/her final result.
3. The SGPA is calculated by the formula ,  $\text{SGPA} = \frac{\sum C_k \times \text{GPA}_k}{\sum C_k}$  where  $C_k$  is the Credit-value assigned to a course and  $\text{GPA}_k$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study during the semester, including those in which

he/she might have failed or those for which he/she remained absent. **The SGPA shall be calculated up to two decimal place accuracy.**

4. The CGPA is calculated by the formula ,  $CGPA = \frac{\sum Ck \times GPAk}{\sum Ck}$  where  $Ck$  is the

Credit-value assigned to a course and  $GPAk$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study from the time of his/her enrolment and also the during the semester for which CGPA is calculated, including those in which he/she might have failed or those for which he/she remained absent. **The CGPA shall be calculated up to two decimal place accuracy.**

5. The CGPA, calculated after the minimum credits specified for the program are 'earned', will be the final result grace marks of 1, 2 or 3 may be awarded to a candidate at UE as per the university rules.

**B: Standards of Passing and ATKT rules:**

1. For all Core Courses, both UE and IA

Constitute separate heads-of-passing (HoP). In order to pass in such courses and to 'earn' the assigned credits

- (a) the learner must obtain a minimum grade point of 5.0 (40% marks) at UE and also a minimum grade point of 5.0 (40% marks) at IA;

**OR**

- (b) If he/she fails in IA, then also the learner passes in the course, **provided that a minimum of 25% is obtained in IA and GPA for the course is at least 6.0 (50%marks ) in aggregate.** The GPA for a course will be calculated only if the learner passes in that course.

2. A student who fails at UE in a course has to reappear only at UE as a backlog candidate and clear the HoP. Similarly, a student who fails in a course at IA has to reappear only at IA as a backlog candidate and clear the HoP. **A student who passes in aggregate in a course need not reappear even if he failed at IA if he/she obtains 25% at IA.**

3. The students of Semester I and II & III will be admitted to next Semester even if he/she gets backlog in any of the course. They can reappear in the next semester examination as a backlog candidate.

#### C: AWARD OF HONOURS:

1. A student who has completed the minimum credits specified for the program shall be declared to have passed in the program. The final result will be in terms of letter grade and CGPA only and is based on the CGPA of all courses studied and passed. The criteria for the award of honors are given in Table 3.

**Table 3: Criteria for the award of honors at the end of the program**

Range of CGPA	Final Grade	Performance Descriptor	Equivalent Range of Marks (%)
$9.50 \geq CGPA \leq 10.00$	O	Outstanding	$80 \geq Marks \leq 100$
$9.00 \geq CGPA \leq 9.49$	A+	Excellent	$70 \geq Marks \leq 80$
$8.00 \geq CGPA \leq 8.99$	A	Very Good	$60 \geq Marks \leq 70$
$7.00 \geq CGPA \leq 7.99$	B+	Good	$55 \geq Marks \leq 60$
$6.00 \geq CGPA \leq 6.99$	B	Average	$50 \geq Marks \leq 55$
$5.00 \geq CGPA \leq 5.99$	C	Satisfactory	$40 \geq Marks \leq 50$
CGPA Below 5.00	F	Fail	Marks below 40

#### THE FORMAT OF THE TRANSCRIPTS

The transcripts may be acquired by the students indicating his/her performance in every semester examination. The transcript shall show the performance indicators given in the following table, in addition to any other information.

Course Number	Course Description	Number of Credits	University Examination		IA/CA		Grade Point Average (GPA)	Result
			Grade	Grade Point	Grade	Grade Point		
Total Cumulative Credits Completed		SGPA	CGPA	Equivalent Marks (%)	<b>Note: GPA is calculated by adding the UE marks out of 60 and IA marks out of 40. The total marks out of 100 are converted to Grade Point, which will be GPA</b>			

**PATTERN FOR ASSESSMENT**

**A: Pattern of Evaluation for Internal Assessment of Theory Courses:**

The weightage for Internal Assessment is 40%. Students for IA of every theory course will be assessed for total of 40 marks for 3 credit course and for 20 marks for 2 credit course which will be cumulative marks obtained in two separate assessments specified below.

1. Two internal written examinations of 20 marks each for 3 credit course and 10 marks each for 2 credit course. A total of the two tests will be considered.
2. An optional assignment/ oral/ open book examination may be undertaken if desired.

**B. Pattern of Evaluation for Internal Assessment of Practical Courses:**

The Internal Assessment for every practical course will be of 20 Marks for 2 credits and 40 marks for 4 credits practical courses. The students for IA will be assessed on the basis of;

1. Performance for every practical: 10 Marks/20 Marks for 2/4 Credits practical courses respectively. (Marks to be distributed depending on total number of practical)
2. Assignment/ Oral examination/Tour Report: 10/20 Marks for 2/4 Credits courses

### **C: Pattern of question paper at University Examination**

University Examination for 3 credit and 2 credit theory course will be of 60 marks and 30 marks respectively. **For 3 credit course**, the question paper will comprise of 6 questions, 3 questions each in section I and section II. Each question will be of 10 marks. All questions will be compulsory. The pattern of question paper will be as given on next page.

### **PATTERN OF QUESTION PAPER FOR 3 CREDIT COURSE OF UNIVERSITY THEORY EXAMINATION OF M.Sc. BIOINFORMATICS 2019 CBCS COURSE (TOTAL MARKS: 60, TME: 3.00 HRS.)**

#### **Instructions to Paper Setter:**

1. Question paper of each course will comprise of total 6 questions,
2. Section I will have 3 questions and Section II 3 questions.
3. All questions will be compulsory. Each question will carry an internal option of one extra sub-question.
4. Q. no 1 will be objective, comprising of 7 questions of 2 mark each. They will be based on entire portion of Section I. Students will have to attempt any 5 out of these.
5. Q no 4 will be objective, comprising of 7 questions of 2 mark each. They will be based on entire portion of Section II. Students will have to attempt any 5 out of these.
6. Questions 2 & 3 of **Section I** and 5 & 6 of **Section II** will be descriptive and contain 3 sub-questions of 5 marks each out of which students will attempt any two.

7. Q 2 and 3 will be based solely on Unit I and II whereas Q 5 and 6 will be based on Unit III and IV of the syllabus respectively.
8. Students will attempt answers to Section I and Section II in separate answer books

### SECTION I

- Q.1** Attempt **Any FIVE** of the following:(Define, Explain why, Fill in the blanks, Give examples, Answer in brief) (10)
- a
  - b
  - c
  - d
  - e
  - f
  - g
- Q.2** Attempt **Any Two** of the following: (Answer the following, Differentiate Between, Give neat labeled diagram of) (10)
- a
  - b
  - c
- Q.3** Write short notes on **Any Two** of the following (10)
- a
  - b
  - c

### SECTION II

- Q.4** Attempt **Any five** of the following: :(Define, explain why, Fill in the blanks, Give examples, Answer in brief) (10)
- a
  - b
  - c
  - d
  - e
  - f
  - g

**Q.5** Attempt **Any Two** of the following: (Answer the following, Differentiate Between, Give neat labeled diagram of) (10)

a

b

c

**Q.6** Write short notes on **Any Two** of the following (10)

a

b

c

**QUESTION PAPER PATTERN FOR 2 CREDITS THEORY COURSE AT UNIVERSITY**  
**EXAMINATION**

**For 2 credit course**, the question paper will comprise of 4 questions, 2 questions each in section I and section II. Q1 of section I and Q3 of section II will be of 7 marks each while Q2 and Q4 will be of 8 marks each. All questions will be compulsory. The pattern of question paper will be as given on next page.

**Pattern of question paper for 2 credit course of university theory examination of M.Sc. BIOINFORMATICS 2019 CBCS COURSE (Total Marks: 30, Tme: 1.50 Hrs.)**

**Instructions to Paper Setter:**

1. Question paper of each course will comprise of total 4 questions,
2. Section I will have 2 questions and Section II 2 questions.
3. All questions will be compulsory. Each question will carry an internal option of one extra sub-question.
4. Questions 1 of section I and 3 of section II will be objective, and contain 7 questions of 1 mark each out of which students will attempt any 5. They will be based on entire portion of Section I and section II respectively.
5. Questions 2 of **Section I** and 4 of **Section II** will be descriptive and contain 3 sub-questions of 5 marks each out of which students will attempt any two.
6. Q 2 and 4 will be based solely on Unit I and II of the syllabus respectively.
7. Students will attempt answers to Section I and Section II in separate answer books

## SECTION I

**Q.1** Attempt **Any Five** of the following: :(Define, Explain why, Fill in the blanks, Give examples, Answer in brief) (05)

- a
- b
- c
- d
- e
- f
- g

**Q.2** Attempt **Any Two** of the following: (Answer the following, Differentiate Between, Give neat labeled diagram of, Write short notes on) (10)

- a
- b
- c

## SECTION II

**Q.3** Attempt **Any Five** of the following: :(Define, Explain why, Fill in the blanks, Give examples, Answer in brief) (05)

- a
- b
- c
- d
- e
- f
- g
- h

**Q.4** Attempt **Any Two** of the following: (Answer the following, Differentiate Between, Give neat labeled diagram of, Write short notes on) (10)

- a
- b
- c

**D: PATTERN FOR QUESTION PAPER OF UNIVERSITY PRACTICAL EXAMINATION OF M.Sc. BIOINFORMATICS 2019 CBCS COURSE**

**(Total Marks: 30/60 for 2/4 credit courses, Time: 3 .00/6.00 Hrs.)**

<b>Q. 1</b>	Major Practical	(10/20)
<b>Q. 2</b>	Spotting/Minor Experiment	(10/20)
<b>Q. 3</b>	Viva	(05/10)
<b>Q. 4</b>	Journal	(05/10)

<b>MBI 209</b> Core Course - Practical	SAS and Data Analytics lab (C)	2	20	30	
<b>MBI 210</b> Core Course - Practical	JAVA and BioJAVA Programming lab (C)	2	20	30	
<b>MBI 211</b> Core Course - Practical	Omics Analysis Lab (C)	2	20	30	
<b>MBI 212</b> Core Course - Practical	Molecular Biology and Recombinant DNA Technology lab	2	20	30	
<b>MBI 213</b> Core Course- Practical	Structural Biology and Molecular Modeling Lab	2	20	30	

## SEMESTER III

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>MBI 301</b> Core Course –Theory	Scientific Writing Skills	2	20	30	<b>30</b>
<b>MBI 302</b> Advance Course –Theory	Chemoinformatics and Drug Designing	3	40	60	
<b>MBI 303</b> Advance Course- Theory	Machine Learning Techniques	3	40	60	
<b>MBI 304</b> Advance Course- Theory	Current Bioinformatics	2	20	30	
<b>MBI 305</b> Advance Course –Theory	Python Programming	2	20	30	
<b>MBI 306</b> Elective Course- Theory	Introduction to Clinical Trials and Pharmacovigilance / Selenium	2	20	30	
<b>MBI 307</b> Elective Course- Theory	Cancer Genomics/ Biodiversity Informatics & Molecular Phylogenetics	2	20	30	
<b>MBI 308</b> Elective Course- Theory	System Biology/Artificial Intelligence	2	Continuous Assessment		
<b>MBI 309</b> Advance Course- Practical	Chemoinformatics and Drug Designing Lab	2	20	30	
<b>MBI 310</b> Advance Course- Practical	Machine Learning Techniques Lab	2	20	30	
<b>MBI 311</b> Advance Course- Practical	Current Bioinformatics Lab	2	20	30	
<b>MBI 312</b> Advance Course -Practical	Python Programming Lab	2	20	30	
<b>MBI 313</b> Elective Course- Practical	Introduction to Clinical Trials and Pharmacovigilance Lab / Selenium lab	2	20	30	
<b>MBI 314</b> Elective Course -Practical	Cancer Genomics Lab/ Biodiversity Informatics & Molecular Phylogenetics Lab	2	20	30	

**SEMESTER IV**

<b>Course No. &amp; Description</b>	<b>Title</b>	<b>Credits</b>	<b>IA</b>	<b>Univ. Exam</b>	<b>Total Credits</b>
<b>MBI 401</b> Core Course	Research Project	20	40	60	20

**Total Credits Offered: 28 C, Sem I+ 30 C, Sem II +30 C, Sem III+ 20C, Sem IV = 108**

# **SEMESTER I**

---

<b>MBI 101: Cell Biology (C)</b>	<b>Total</b>
<b>Basic Course – Theory; 2 Credits</b>	<b>30L</b>

**UNIT I**

- |   |          |
|---|----------|
| <b>1. Cell as a basic unit of life.</b><br>Basic structure, organization and composition of prokaryotic and eukaryotic cell. Plasma membrane structure and functions, Membrane models. Components of blood & their functions (Plasma, RBC, WBC, Platelets). | <b>4</b> |
| <b>2. Cytoskeleton:</b> Organization and functions cytoskeleton, Actin filaments, actin binding proteins, Intermediate filaments, Microtubules  | <b>3</b> |
| <b>3. Cell Junctions:</b><br>Gap junctions, Tight junctions, Cell adhesion-integrins, selectins, cadherins. desmosomes and hemidesmosomes, plasmodesmata  | <b>2</b> |
| <b>4. Membrane Transport:</b><br>Transport across membrane- passive diffusion, osmosis, active transport, Ion Channels, Na <sup>+</sup> and K <sup>+</sup> pump, Ca <sup>2+</sup> ATPase pump, co-transport, symport, antiport, endocytosis and exocytosis. | <b>6</b> |

**UNIT II**

- |  |          |
|--|----------|
| <b>6. Cell Cycle:</b> Molecular events of cell division and cell cycle, regulation of cell cycle events- Cyclins, Cyclin dependent kinases, inhibitors.    | <b>5</b> |
| <b>7. Cell Signaling:</b> General principles of cell signaling, signaling via G-protein coupled receptors, kinase receptors, role of secondary messengers. | <b>6</b> |
| <b>8. Ageing and apoptosis, abnormal development and teratogenesis in animals</b>  | <b>4</b> |

<b>MBI 102: Biochemistry (C)</b>	<b>Total</b>
<b>Basic Course – Theory; 2 Credits</b>	<b>30L</b>

**UNIT I**

<b>1. Introduction to Biomolecules: Carbohydrates, Lipids and Proteins – their biological roles and functions</b>	<b>1</b>
<b>2. Carbohydrates:</b> Classification-on basis of carbon no & functional grs.; Structure with molecular formulae; Stereochemistry (structural and conformational isomers); isomers with one and more chiral centres, properties of stereoisomers; cyclization of sugars; conformations of cyclic forms (chair & boat forms).	<b>3</b>
<b>3. Important monosaccharides:</b> 6 C sugars- glucose, fructose, mannose, galactose, 5 C sugars- ribose, deoxyribose, important modified monosaccharides (2-keto-3-deoxy-D-manno-octulosonic acid (KDO), <u>2-keto-3-deoxy-D-glycero-D-galacto-nonulosonic acid (KDN)</u> , sialic acids, aminosugars, sugar acids (their biological role/ occurrence)	<b>1</b>
<b>4. Linkages in Sugars:</b> Structure and functions of important di-saccharides (sucrose, lactose, maltose, cellobiose) and poly-saccharides (homo and heteropolymers, storage and structural polymers – starch, glycogen, cellulose, chitin, peptidoglycan)	<b>1</b>
<b>5. Physico-chemical properties of carbohydrates:</b> Reducing-non-reducing properties; Exploitation for detection and separation –Benedict’s test; Introduction to conjugate sugars (Glycoproteins and glycolipids and their importance)	<b>2</b>
<b>6. Significance of carbohydrates in microbial, plant and animal system:</b> ABO blood groups, heparin, lectins, carbohydrate vaccines	<b>2</b>
<b>7. Lipids:</b> Occurrence/sources: plant derived oils, ghee	<b>1</b>
<b>8. Structure :</b> Structure of fatty acids, triglycerides; Classification viz., simple and compound, structural and storage with examples; unsaturated-saturated, Oils (refined/unrefined significance); fats, waxes, rancidity/spoilage of fats (microbial, oxidative)	<b>2</b>
<b>9. Functions:</b> Functions in a living system: significance of hydrophobicity and water immiscibility for compartmentalisation, in vitamins, cofactors, for signalling, pigments	<b>2</b>
<b>10. Lipid conjugates:</b> Important conjugates and their functions: phospholipids, glycerophospholipids, sphingolipids; structure of membranes, micellar structures, Cholesterol- Structure, function and significance	<b>3</b>

11. **Liposomes:**Liposomes in drug delivery, soaps, bio-surfactants 1
- Physico-chemical properties of carbohydrates and lipids:** Compare and contrast of properties arising due to differences in C:O ratio

## UNIT II

12. **Amino acids, peptides and proteins:** Occurrence/sources, Naturally occurring amino acids; structures; abbreviated names; stereoisomerism; amphoteric nature of amino acids, Classification of amino acids (on basis of functional groups, essential/non-essential); Chemical reactivity due to functional group (amide, acid, amine); peptides & proteins peptide bond, bond properties, N-Terminal, C-Terminal, Complex proteins– Proteoglycans, Lipoproteins, metalloproteins, phosphoproteins, chromoproteins and their significance 3
13. **Protein structure:** Primary, secondary ( $\alpha$  helix and  $\beta$  conformation), tertiary and quaternary structure. Forces stabilizing molecular structure (covalent bond, ionic bond, hydrogen bond, salt linkage, van der Waal's forces) a brief over view of Ramchandran plot, Structure-Function relationship in proteins with examples of Fibrous proteins, Collagen, Hemoglobin; importance of sequence of amino acids for structure and function of protein (eg. Sickle cell anaemia), 4
14. **Introduction to enzymes as biocatalysts:** Enzyme-substrate interaction, Rates of enzyme reaction, Concept of  $K_m$ ,  $V_{max}$  4

<b>MBI 103: Mathematics (C)</b>	<b>Total</b>
<b>Basic Course – Theory; 2 Credits</b>	<b>30L</b>

### UNIT I

1.	Calculus: Limits, Continuity, Differentiation (1D & Partial), Definite Integrals.	8
2.	Numerical Techniques: Vector algebra, Matrices, Finding Eigen values & Eigen vectors	3
3	2Dimensional & 3Dimensional Geometry: Cartesians and Polar Coordinates, Locus, Equation of a straight line, Pair of straight lines, Circle, Ellipse, Parabola, Hyperbola. 3D Coordinate System, Spherical and Cylindrical Coordinates.	4

### UNIT II

4.	Ordinary & Partial Differential Equation: 1'st Order & 2'nd Order Ordinary Differential Equations. Nature of Partial Differential Equations, Method of Separation of Variables, Methods for Solving Equations, Solving ODE & PDE.	5
5.	Integral transform: Fourier Series, Fourier Transform, Laplace Transform	7
6.	Applications To Mathematical Biology: Enzyme kinetics, Immunology, Population genetics, Tumor modeling, Applications of ordinary & partial differential equations to Biology.	3

**MBI 104: Biostatistics (C)** **Total**  
**Basic Course – Theory; 2 Credits** **30L**

**UNIT I**

- |  |          |
|--|----------|
| 1. Probabilities, Random Variables, Multiple Random Variables, Distributions, Random Sampling, Maximum Likelihood Estimators, Bayes Estimators, Mean Squared Error. Hypothesis Testing., t-tests, Likelihood Ratio Tests , Interval Estimation | <b>7</b> |
| 2. Analysis of Variance ,One-Way Analysis of Variance , Two-Way Analysis of Variance , Regression Models, Simple Linear Regression, Logistic Regression  | <b>8</b> |

**UNIT II**

- |   |          |
|---|----------|
| 3. Bayesian Method with Examples, basics of Markov chains, Dynamic Programming and Hidden Markov Model, Metropolis–Hastings Algorithm and Gibbs Sampling.<br>Gene Expression and Microarray Analysis ,Unsupervised Learning , Supervised Learning Sequence Alignment, Pair-Wise Sequence Analysis, Multiple Sequence Alignment , Sequence Pattern Discovery | <b>7</b> |
| 4. Some Common Tools and Techniques : (Brief introduction and case studies only)<br>Classification and clustering ( Use WEKA)<br>Artificial Neural Networks.<br>Fuzzy Sets and Fuzzy Logic<br>Genetic Algorithms  | <b>8</b> |

**Note:** Practice on XLminer analysis tool-pack or R (no hand computations). Theory to focus on basic concepts, applications and interpretations/inferencing with secondary data, no mathematical derivations

<b>MBI 105: C Programming and Data Structure (C)</b>	<b>Total</b>
<b>Basic Course – Theory; 3 Credits</b>	<b>45L</b>

**UNIT I**

- |  |          |
|--|----------|
| <b>1. Introduction and First Program</b> | <b>3</b> |
| ➤ Why Programming                        |          |
| ➤ Types of Programming                   |          |
| ➤ Introduction to C                      |          |
| ➤ C programming features                 |          |
| ➤ Benefits of C                          |          |
| ➤ Some Facts about C                     |          |
| ➤ Understanding First C Program          |          |
| <b>2. Variables and Data Types</b>       | <b>3</b> |
| ➤ Identifiers                            |          |
| ➤ Keywords                               |          |
| ➤ Data Types                             |          |
| ➤ Variables                              |          |
| ➤ Constants                              |          |
| <b>3. Console IO Operations</b>          | <b>2</b> |
| ➤ printf function                        |          |
| ➤ scanf function                         |          |
| ➤ Unformatted Functions                  |          |
| <b>4. Operators and Expressions</b>      | <b>2</b> |
| ➤ Expressions                            |          |
| ➤ Types of Operators                     |          |
| ➤ Type Casting                           |          |
| <b>5. Control Flow Statements</b>        | <b>2</b> |
| ➤ Decision Making in C                   |          |
| ➤ If Statement                           |          |
| ➤ Switch Statement                       |          |
| ➤ Unconditional Branching                |          |
| ➤ While Loop                             |          |
| ➤ Do...While Loop                        |          |
| ➤ For Loop                               |          |
| ➤ Break and continue statements          |          |

**UNIT II**

- |   |          |
|---|----------|
| <b>6. Working with Functions</b>              | <b>5</b> |
| ➤ What is a Function                          |          |
| ➤ Benefits of a Function                      |          |
| ➤ Function Terminology                        |          |
| ➤ Array of Structures                         |          |
| ➤ How does Function Works                     |          |
| ➤ Scope and Lifetime of Variables in function |          |

- Storage Classes of Variables
- Call by value and call by reference
- Recursion
- 7. Working with Arrays and Strings 5
  - Understanding Arrays
  - Arrays Declaration and Initialization
  - Sample Programs
  - Multidimensional Arrays.
  - Arrays and Functions
  - String operation

### UNIT III

- 8. Pointers 4
  - Understanding Pointers
  - Declaring and Initializing Pointers
  - Function and Pointer Parameters
  - Pointer Arithmetic
  - Pointer and Arrays
  - Two Dimensional Arrays and Pointers
  - void Pointer
  - Dynamic allocation of memory
  - Difference between malloc and calloc
- 9. Structure and Unions 4
  - Overview of Structures
  - Defining and Using a Structure
  - Structures within a Structure
  - typedef keyword
  - Passing Structures to Functions
  - Structure and Pointers
  - Unions
- 10. File Handling 4
  - What is a Stream
  - Opening and Closing of Files
  - Writing and Reading in Text Format
  - Writing and Reading in Binary Format

### UNIT IV

- 11. Introduction to Data Structures 2

Data Structures- Data structure, Abstract Data Types (ADT), Concept of linear and Non-linear, static and dynamic data structures, and relationship among data, data structure
- 10. Linked Lists 3

Concept, Comparison of sequential and linked organizations, Primitive operations, Realization of Linked Lists, Linked list operations, Head

pointer and header node, Types of linked list- Linear and circular linked lists, Doubly Linked List and operations, Circular Linked List, Singly circular linked list, Doubly circular linked list.

- |            |   |          |
|------------|---|----------|
| <b>11.</b> | Stacks  | <b>2</b> |
|            | Stacks- concept, Primitive operations, stack operations, Applications of Stack- Expression, Evaluation and Conversion, Need for prefix and postfix expressions, Postfix expression evaluation, Recursion- concept, Backtracking algorithmic strategy, use of stack in backtracking. |          |
| <b>12.</b> | Queues  | <b>2</b> |
|            | Concept, Realization of Queues Using Arrays , Circular Queue, Advantages of using circular queues, operations on queue  |          |
| <b>13.</b> | Sorting and Searching   | <b>2</b> |
|            | Searching- Search Techniques, Sequential search, Binary search. Sorting methods- Bubble sort, Insertion sort, Selection sort, Quick sort, Heap sort, Shell sort, Comparison of All Sorting Methods.   |          |

<b>1. Introduction to Perl</b>	<b>3</b>
Perl Data types, Operators, Input/Output in Perl	
<b>2. String Functions, Array Functions, Hash Functions</b>	<b>3</b>
<b>3. Control Statements and loops</b>	<b>4</b>

**UNIT II**

<b>4. Subroutine</b>	<b>3</b>
Defining subroutine, Calling subroutine, Passing Arguments to a Subroutine	
Returning Value from a Subroutine	
<b>5. Regular Expression, Pattern Matching, Referencing and Dereferencing</b>	<b>3</b>
<b>6. File handling</b>	<b>4</b>
File I/O, Opening and Closing Files, Reading and Writing Files	

**UNIT III**

<b>7. Object Oriented Programming in Perl</b>	<b>3</b>
Objects, Methods, and Classes in Perl	
<b>8. Packages in Perl</b>	<b>3</b>
<b>9. Perl and Web</b>	<b>4</b>
CGI programming, Web browsing

<b>MBI 109:Cell Biology and Biochemistry Lab (C)</b>	<b>Total</b>
<b>(2 Credits, 1 P, 4.00 Hr., Basic Course Practical)</b>	<b>20 P</b>

**Cell Biology Lab**

- |  |   |
|--|---|
| 1. Chloroplast isolation from spinach leaves   | 1 |
| 2. Staining of prokaryotic cell organelles:<br>Staining of capsule, spore, cell wall and metachromatic granule | 2 |
| 3. Study of mitosis with onion root tip chromosomes  | 2 |
| 4. Observation of permanent slides of meiosis  | 1 |
| 5. Isolation of nuclei from rat liver  | 2 |
| 6. To determine Erythrocyte ( <i>RBC</i> ) count of a blood sample   | 1 |
| 7. To determine Leucocytes ( <i>WBC</i> ) count of a blood sample  | 1 |
| 8. Temporary mounting of mitochondria by Janus green B   | 1 |

**Biochemistry Lab**

- |  |   |
|--|---|
| 9. Preparation of buffers-acetate buffer & Preparation of biochemical reagents<br>(Benedict's reagent) | 2 |
| 10. Isolation of biomolecules  | 2 |
| a. Isolation of starch from corn (separation on the basis of density)                                  |   |
| b. Isolation of protein from a suitable source   |   |
| c. Extraction of triglycerides from oilseeds (separation on the basis of<br>differential solubility)   |   |
| 11. Quantitative estimation of Glucose by DNSA method  | 1 |
| 12. Quantitative estimation of Protein by Biuret method and absorption at 280 nm                       | 2 |
| 13. Acid value or saponification value. Determination with reference to fatty acids.                   | 2 |

<b>MBI 110: C Programming and Data Structure Lab (C)</b>	<b>Total</b>
<b>(2 Credits, 1 P, 4.00 Hr., Basic Course Practical)</b>	<b>15 P</b>

**1. Laboratory assignments based on the following topics in ‘C’ programming: 5**

- Data types, operators and expressions, Hierarchy of operators,
- control statements including decision (if, if-else), loops (while, do-while, for), branching statements (switch, break, continue),
- Functions,
- Arrays (1D, 2D- all matrix operations including inverse of a matrix),
- Strings,
- File handling etc.

**2. Writing C programs for Bioinformatics applications: 10**

- Extract a protein or nucleic acid sequence from any of the databank files (GenBank entry, Swiss-Prot, EMBL entry etc.)
- Interconverting the sequence from one databank format to the other eg. GenBank format to FASTA format, FASTA to PIR format etc.
- Determining the base composition in a nucleic acid sequence and amino acid composition in a protein sequence.
- Generating the complimentary sequence of a DNA sequence o Pattern search algorithms o Search for a specific oligonucleotide pattern (eg. GAACATCC) in a given DNA sequence.
- Find the position where a specific sequence say “GGTCCCGAC” will hybridize a given DNA sequence.
- Find the restriction enzyme cleavage sites eg. where PVUZ, ECORI etc. will cut the DNA.
- Locate palindromic sequence stretches in a DNA sequence. Count the number of Open Reading frames (ORF’s) in a DNA sequence.
- Calculate the codon usage in a nucleic acid sequence.
- Translate a DNA sequence into protein sequence in the forward and reverse frames.
- Implementation of the Needleman-Wunsch algorithm for pair wise

alignment and testing alignment score with randomized pairs of sequences also.

- Numerical Techniques (4 assignments)
- Basic Formalism, Methods for Solving Equations, Finding Eigen values & Eigenvectors (5 assignments)

5. Schaum's outline of programming with C by Byron Gottorfried.

<b>MBI 111: Biological Informatics lab (C)</b>	<b>Total</b>
<b>(2 Credits, 1 P, 4.00 Hr., Basic Course Practical)</b>	<b>15 P</b>
1. Exploring the integrated database system at NCBI server and querying the PUBMED and GenBank databases using the ENTREZ search engine.	1
2. Exploring the integrated database system at EBI server and searching the EMBL Nucleotide database using the SRS search engine.	1
3. Exploring & querying SWISSPROT & UniProtKB.	1
4. Exploring and querying the PIR database.	1
5. Exploring tools on ExPASy.	1
6. Exploring utilities in EMBOSS packages.	1
7. Explore Pair-wise global alignments.	1
8. Explore Pair-wise local alignments.	1
9. Database (homology) searches using different versions of BLAST and FASTA interpretation of the results to derive the biologically significant relationships of the query sequences (proteins/DNA) with the database sequences. Exploring other databases: LALIGN, Dotlet	2
10. Multiple sequence alignments: CLUSTALW, Clustal Omega, DbClustal, Kalign, MAFFT, MUSCLE, MView, T-Coffee.	2
11. Exploring Alignment Analysis tools: AMAS, CINEMA, MaxAlign, PhyloGibbs, SVA, PVS.	1
12. Exploring and using the derived databases: PROSITE, PRINTS, BLOCKS, Pfam and Prodom for pattern searching, domain searches etc.	1
13. Studying the format & content of structural databases & visualization of structure using Rasmol, Cn3D and other utilities.	1

<b>MBI 112: DBMS &amp; MongoDB lab (C)</b>	<b>Total</b>
<b>(2 Credits, 1 P, 4.00 Hr., Basic Course Practical)</b>	<b>20 P</b>
<b>1. Part I: ORACLE</b>	<b>2</b>
Assignment based on “Data Definition Language”.	
➤ A set of SQL commands used to create table, modify table structure, drop table, rename table.	
<b>2. Assignment based on “Data Manipulation Language”</b>	<b>2</b>
➤ A set of SQL commands used to change the data within the database.	
➤ Insertion of records in the tables, updating of all or specific set of records in tables.	
➤ Viewing the attributes of table’s column.	
<b>3. Assignment based on “Data Query Language”</b>	<b>2</b>
➤ Different forms of Select statement	
➤ Arithmetic and logical operators.	
➤ Range searching and pattern matching.	
<b>4. Assignment based on defining Constraints.</b>	<b>2</b>
➤ Types: I/O constraints like Primary Key, Foreign key, Null and Unique	
➤ Constraints. Business constraints like check constraints.	
<b>5. Assignment based on using joins.</b>	<b>2</b>
➤ Joining multiple tables, joining a table to it.	
<b>6.</b>	<b>2</b>
➤ Granting rights on user objects such as Tables, Views, and Sequences.	
➤ Revoking rights on user objects such as Tables, Views, and Sequences.	
➤ XAMPP for MySQL	
<b>7. Part II: MongoDB based practical</b>	<b>8</b>

**MBI 113: PERL Programming Lab** **Total**  
**(2 Credits, 1 P, 4.00 Hr., Elective Course Practical)** **20P**

**1 Writing programs in Perl based on following assignment topics:** **10**

- Arithmetic and Logical operators
- Control statements and Loops
- Functions of Strings, Arrays, Hashes
- Input/output in Perl
- Subroutine
- Regular Expression
- Pattern Matching
- Working with files
- OOPs programming
- CGI programming

**2 Writing programs for following:** **10**

- Programs for Transcription. (DNA to RNA sequence)
- Programs for Translation. (RNA to Protein Sequences)
- Programs for finding Open Reading Frame.
- Programs for count bases in Sequence.
- Programs for finding Triplet Codon.
- Programs for multi FASTA files.

# **SEMESTER II**

---

<b>MBI 201: Statistical Analysis System (SAS) (C)</b>	<b>Total</b>
<b>Core Course – Theory; 2 Credits</b>	<b>30L</b>

**UNIT I**

<b>1. Introduction to SAS</b>	<b>1</b>
➤ An overview of SAS foundation	
➤ Introduction to SAS programs submitting a SAS program	
➤ Working with SAS program syntax	
<b>2. Accessing Data</b>	<b>1</b>
➤ Examining SAS data sets	
➤ Accessing SAS libraries- Proc contents	
<b>3. Reading and Creating SAS Data sets</b>	<b>2</b>
➤ Introduction to SAS Data sets	
➤ Reading from existing SAS Data Sets	
➤ Reading Spreadsheet and Database Data	
➤ Reading Raw Data Files	
○ Reading standard delimited data	
○ Reading nonstandard delimited data	
○ Handling missing data	
○ Reading raw data files with formatted input	
○ Controlling when a record loads	
<b>4. Formatting Data Values</b>	<b>1</b>
➤ Using SAS formats	
➤ Creating user-defined formats	
<b>5. Manipulating Data</b>	<b>2</b>
➤ using SAS functions	
➤ conditional processing	
<b>6. Combining SAS Data Sets</b>	<b>2</b>
➤ Concatening	
➤ Merging - one-one, one-many, merging with non-matches	
<b>7. Processing Data in groups</b>	<b>1</b>

- |   |          |
|---|----------|
| <b>8. Processing Data Iteratively</b>         | <b>2</b> |
| ➤ DO loop processing                          |          |
| ➤ conditional DO loop processing              |          |
| ➤ SAS array processing                        |          |
| ➤ using SAS arrays                            |          |
| <b>9. Restruction / Rotating SAS Data Set</b> | <b>1</b> |
| <b>10. Creating Summary Reports</b>           | <b>2</b> |
| ➤ Proc Print                                  |          |
| ➤ Proc Freq                                   |          |
| ➤ Proc Report                                 |          |
| ➤ Proc Tabulate                               |          |
| ➤ Report Enhancement                          |          |

## UNIT II

- |  |          |
|--|----------|
| <b>11. SAS Macros Language</b>   | <b>1</b> |
| ➤ Purpose of Macro Facility  |          |
| ➤ Program Flow   |          |
| <b>12. Macro Variables introduction to macro variables</b>               | <b>2</b> |
| ➤ Automatic macro variables  |          |
| ➤ Macro variable references  |          |
| ➤ User-defined macro variables   |          |
| ➤ Delimiting macro variable references                                   |          |
| <b>13. Macro Definitions defining and calling a macro</b>                | <b>2</b> |
| ➤ Macro parameters   |          |
| ➤ DATA Step and SQL Interfaces creating macro variables in the DATA step |          |
| <b>14. DATA Step and SQL Interfaces creating macro variables in the</b>  | <b>2</b> |

<b>DATA step</b>	
➤ Indirect references to macro variables	
➤ Creating macro variables in SQL	
<b>15. Macro Programs conditional processing</b>	<b>2</b>
➤ Parameter validation	
➤ Iterative processing	
➤ Global and local symbol tables	
<b>16. SAS SQL – Language</b>	<b>1</b>
➤ Introduction to SAS- SQL	
➤ Basic Queries	
➤ Overview of the SQL procedure	
➤ Specifying columns	
➤ Specifying rows	
<b>17. Types of Joins</b>	<b>1</b>
<b>18. Introduction to Subqueries</b>	<b>2</b>
<b>19. Set Operators</b>	<b>2</b>

<b>MBI 203: JAVA and BioJAVA Programming (C)</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>

**UNIT I**

<b>1. An Introduction to Java</b>	<b>2</b>
A Short History of Java	
➤ Features or buzzwords of Java	
➤ Comparison of Java and C++	
➤ Java Environment	
➤ Simple java program	
➤ Java Tools – jdb, javap, javadoc	
➤ Java IDE – Eclipse/NetBeans (Note: Only for Lab Demonstration)	
<b>2. An Overview of Java</b>	<b>4</b>
➤ Types of Comments	
➤ Data Types	
➤ Final Variable	
➤ Declaring 1D, 2D array	
➤ Accepting input using Command line argument	
➤ Accepting input from console (Using Buffered Reader class)	
<b>3. Objects and Classes</b>	<b>6</b>
➤ Defining Your Own Classes	
➤ Access Specifiers (public, protected, private, default)	
➤ Array of Objects	
➤ Constructor, Overloading Constructors and use of ‘this’ Keyword	
➤ Static block, static Fields and methods	
➤ Predefined class – Object class methods (equals(), toString(), hashCode(), getClass())	
➤ Creating, Accessing and using Packages	
➤ Creating jar file and manifest file	

- Wrapper Classes
- Garbage Collection (finalize() Method)

## UNIT II

- 4. Inheritance and Interface** **7**
- Inheritance Basics (extends Keyword) and Types of Inheritance
  - Superclass, Subclass and use of Super Keyword
  - Method Overriding and runtime polymorphism
  - Use of final keyword related to method and class
  - Use of abstract class and abstract methods
  - Defining and Implementing Interfaces
  - Runtime polymorphism using interface
  - Object Cloning
- 5. Exception Handling** **4**
- Dealing Errors
- Exception class, Checked and Unchecked exception
  - Catching exception and exception handling
  - Creating user defined exception
  - Assertions

## UNIT III

- 6. Strings, Streams and Files** **5**
- String class and StringBuffer Class
  - Formatting string data using format() method
  - Using the File class
  - Stream classes
  - Byte Stream classes
  - Character Stream Classes
  - Creation of files

- Reading/Writing characters and bytes
- Handling primitive data types
- Random Access files

**7. Collection 6**

Introduction to the Collection framework

- List – ArrayList, LinkedList and Vector, Stack, Queue
- Set - HashSet, TreeSet, and LinkedHashMap
- Map – HashMap, LinkedHashMap, Hashtable and TreeMap
- Interfaces such as Comparator, Iterator, ListIterator, Enumeration

**UNIT IV**

**8. Database Programming 6**

- The design of jdbc, jdbc configuration
- Types of drivers
- Create and Execute sql statements, query execution
- The Result Set Object

**9. Multithreading 3**

- What are threads?
- Life cycle of thread
- Running and starting thread using Thread class
- Thread priorities
- Running multiple threads
- The Runnable interface
- Synchronization and interthread communication

**10. Networking 2**

Networking basics – Protocol, Addressing, DNS, URL, Socket, Port

- The java.net package – InetAddress, URL, URLConnection class
- SocketServer and Socket class
- Creating a Socket to a remote host on a port (creating TCP

client and server)

- Simple Socket Program Example

|-----------|--|----------|
| <b>3.</b> | <b>Genomics and Comparative genomics Databases:</b>  | <b>6</b> |
|           | <ul style="list-style-type: none"> <li>➤ Genome Databases: Genome Sequence DataBase (GSDB), Genome Database (GDB), 1000 Genomes Project , AceDB, FlyBase, UCSC Genome Browser, Wormbase, MaizeGDB, MGI</li> <li>➤ Comparative Genomics Databases: COG, VirGen, CORG, HOBACGEN, Homophila, XREFdb, Gramene</li> <li>➤ Genetic Disorders Databases: OMIM, OMIA, Genetic Association</li> </ul> |          |

Database, Genetic Disorder Guide, IGDD, DisGenet, Genetic Disorder UK

- 4. Genomics and Comparative genomics Tools: 6**
- Genome Alignments tools:BLAST2, MUMmer, PipMaker, VISTA
  - Comparison of Gene Order :GeneOrder, Gene Synteny
  - Prediction of genes: ORFs, Prediction of Signal sequences (Promoters, Primers, splice sites, UTRs etc.), Operons
  - Primer Designing Tools: Primer, Primer3, NetPrimer, Primerfinder
  - DNA/RNA Sequence Analysis: CENSOR, Gene Finder, GENEID, GenHunt, GENIE, GRAIL, ORD ID, ORF Finder, ORFGene, Pol3Scan, tRNAscan
  - Translation Tools: Translation Tool, The Protein Machine, 6 Frame Translation Tool, Reverse Translation Tools
  - Restriction Analysis Tools: WEB Cutter, ENZFINDER, TACG

### UNIT III

- 5. Transcriptomics: 6**
- Biology of Transcription
  - Search for transcription factor binding sites
  - RNA Sequencing & Techniques of RNA analysis RNA-Seq, Microarrays, Regulatory RNAs: small or large, Computational prediction of miRNA target genes, RNA Darkmatter
  - Generating Transcriptome expression Data
- 6. Metagenomics: 6**
- Introduction & Study of metagenomics
  - Metagenomics Samples
  - Qualitative and quantitative analysis of metagenome: DGGE, T-RFLP, RT-PCR, NGS
  - Sequence to identification of biodiversity
  - Metagenomics Algorithms (metagenomics data analysis): RAST, IMG/M,

MEGAN

**UNIT IV**

- |   |          |
|---|----------|
| <b>7. Metabolomics:</b>   | <b>5</b> |
| ➤ Fundamental concept,  |          |
| ➤ Tools of metabolomics- Capillary electrophoresis, Gas chromatography, Electrochemical detectors |          |
| ➤ Case studies.   |          |
| <b>8. Lipidomics:</b>   | <b>2</b> |
| Basic concepts and tools Case studies   |          |
| <b>9. Degradomics:</b>  | <b>3</b> |
| ➤ Techniques and concepts   |          |
| ➤ Approaches to identify the protease and protease-substrate repertoires, or                      |          |
| ➤ 'degradomes', on an organism-wide scale   |          |
| ➤ Uncover new roles for proteases in vivo.  |          |
| ➤ Identification of new pharmaceutical targets to treat disease (Emerging degradomic )            |          |

### UNIT I

- |    |  |   |
|----|--|---|
| 1. | Organization of prokaryotic genome, Structure of nucleosome and organization of chromatin, structure of chromosome, chromatin remodeling, Repetitive sequences, clusters and repeats, Concept of gene, Interrupted and uninterrupted genes, intron, exon and their relationships centromere and telomere, Genome sizes of different organisms, C Value | 2 |
| 2. | Types of mutations, effect of mutations, mutation related inherited human disorders, Physical and chemical mutagenic agents, frequency of mutations, measuring mutation rate, somatic & germline mutations, role of mutations in evolution   | 4 |
| 3. | Salient features of genetic code, codon – anticodon recognition, Wobble hypothesis, exceptions to the universal genetic code   | 3 |
| 4. | DNA replication & repair<br>DNA polymerases, mechanism of replication in prokaryotes and eukaryotes, DNA damage, Mechanisms of DNA repair in prokaryotes and eukaryotes, Excision repair, mismatch repair, recombination repair, error prone repair, SOS response, repair system in eukaryotic cells.  | 6 |

### UNIT II

- |    |  |   |
|----|--|---|
| 5. | Transcription and posttranscriptional mechanisms<br>RNA polymerase and mechanism of prokaryotic transcription, Eukaryotic RNA polymerases and their promoters, activating transcription, role of enhancers, gene silencers, CpG Islands, post transcriptional modifications, RNA splicing reactions, catalytic RNA | 7 |
| 6. | Regulatory RNA, Micro RNAs & RNA Interference  | 4 |
| 7. | Translation<br>Mechanism of translation in prokaryotes and eukaryotes, post translational  | 4 |

modifications, transport of proteins, role of chaperons

<b>MBI 208: Structural Biology &amp; Molecular Modeling</b>	<b>Total</b>
<b>Core Course –Theory; 3 Credits</b>	<b>45L</b>

**UNIT I**

- |  |   |
|--|---|
| 1. Secondary and tertiary structures of macromolecules: protein, DNA and RNA   | 3 |
| 2. Secondary structure prediction using Chou Fasman, GOR methods; analysis of results and measuring the accuracy of predictions using Q3, Segment overlap, Mathew's correlation coefficient. | 2 |
| 3. Fundamentals of the methods for 3D structure prediction (sequence similarity/identity of target proteins of known structure, fundamental principles of protein folding etc.)              | 5 |

**UNIT II**

- |  |   |
|--|---|
| 4. Homology Modeling, fold recognition, and ab-initio structure prediction methods - protocols/algorithms. | 5 |
| 5. 3-D structure comparison and concepts: FSSP, CE, VAST and DALI, Fold Classes.                           | 6 |
| 6. Databases of structure-based classification: CATH and SCOP.   | 2 |

**UNIT III**

- |   |   |
|---|---|
| 7. General features- bond stretching, angle bending, improper torsions, cross terms, non-bonded interactions, point charges, calculation of atomic charges, polarization, Van Der Waals interactions, hydrogen bond interactions, Water models. | 3 |
| 8. Types of force field - all atoms force field, united atom force field, etc.  | 4 |
| 9. Molecular Energy minimization methods: steepest descent, conjugate gradient– derivatives, First order steepest decent and conjugate gradients.   | 3 |
| 10. Second order derivatives Newton-Raphson, Minima, maxima saddle points and convergence criteria.-non derivatives minimization methods, the simplex.  | 3 |

## UNIT IV

- |            |   |          |
|------------|---|----------|
| <b>11.</b> | Molecular Dynamics Simulation: Newtonian dynamics, Periodic boundary conditions and minimum image convention, Potential truncation and shifted-force potentials, Neighbor list, Force calculations. | <b>3</b> |
| <b>12.</b> | Classical Monte Carlo: Random numbers, Evaluating integrals using random numbers, Importance sampling, Metropolis algorithm.  | <b>3</b> |
| <b>13.</b> | Analysis of simulated trajectories: Radial distribution functions, Self diffusion coefficient, Time correlation functions.  | <b>3</b> |

<b>MBI 209: SAS and Data Analytics lab (C)</b>	<b>Total</b>
<b>(2 Credits, 1 P, 4.00 Hr., Elective Course Practical)</b>	<b>15P</b>

<b>1. SAS based practical</b>	<b>05</b>
-------------------------------	-----------

<b>2. Data Analysis lab</b>	<b>15</b>
-----------------------------	-----------

- Install R from CRAN and setup R studio
- Write a Program to print list of Student, Marks and Percentage considering
  - Different data types variables in R using logical, numeric
  - integer, complex, character and raw
  - Valid/invalid variables declaration
  - Variable assignment
  - Getting variables in environment
  - Class of variables
  - Deleting variables
  - Vectors declaration
  - Different operators demonstration using Arithmetic Operators, Relational Operators, Logical Operators, Assignment Operators, Miscellaneous Operators
  - if-else demonstration for negative, positive and zero number test
  - Switch case for different operations
- Write program to classify odd and even number to demonstrate For, While and Repeat loops with break and next keywords
- Create a function to calculate Area and circumference of circle/rectangle
  - calling a function with/without arguments
  - calling by argument position and names
- Write R program to demonstrate string functions in R , String manipulations in R
  - Vector declaration
  - Accessing vector elements
  - Vector manipulations

- Create a list and modify
  - Name elements
  - Access elements
  - Manipulate the list
  - Merging list
  - convert list to vector
- Create a numeric matrix
  - Access elements
  - Matrix computation
  - Demonstration
- Create array name columns, rows, matrix, Access array elements  
matrix computations
- Create a categorical vector and convert it to
  - Factor
  - Factor validations
  - Generating levels
  - Order change
- Create a data frame
  - Get structure and summary
  - Extract data from DF
  - Expand the data frame add column and rows
  - Check packages
  - Install packages
  - Load package
  - Join cols/rows in DF
  - Merge DF
  - Melting and casting
- Read/write files and access from
  - CSV files
  - Binary file
  - Xls file
- Read access and manipulate JSON data

- Download and load data from website
- Connect to mysql/oracle DB and access data from table
- Working with MongoDB/Redis
- Create data records and create
  - Plot Pie chart for Profit sharing among individuals. Percentage plotting , pie chart
  - Plot a bar graph for monthly revenue. Group bar graph/stacked chart
  - Plot a boxplot for match data mpg vs cylinder
  - Create a vector and plot a histogram , Ranged histogram
  - Create a vector and plot line, point both graph
  - Plot scatterplot for mtcars\$wt and mtcars\$mpg
- Create data from Hospital, Patient, and disease use case
  - Calculate mean, median, mode of a distribution for data
  - Demonstration of dnorm, pnorm, qnorm and rnorm
  - Demonstration of multiple regression with mtcars dataset
- Get records and perform below
  - Use case of admission into university
  - Use case for weight calculation
  - Use case for Titanic survival prediction
  - Use case for Car acceptability
  - Use case for Heart disease recognition with caret package

# **SEMESTER III**

---

**MBI 301: Scientific Writing Skills****Total****Core Course – Theory; 2 Credits****30L****Course Statement/Objectives:**

This course aims to demystify the writing process and teach the fundamentals of effective scientific writing. Instruction will focus primarily on the process of writing and publishing scientific manuscripts but grant writing will also be addressed. The course will be presented in two segments:

Part (1) teaches students how to write effectively, concisely, and clearly.

part (2) takes them through the preparation of an actual scientific manuscript or grant.

The course may be taken for 2 units or 3 units. Students taking the class for 2 units will be asked to attend a weekly lecture and to complete short writing and editing exercises, including writing a real “Letter to the Editor” piece. Students taking the class for 3 units will additionally develop a manuscript of their choice and will meet periodically with the instructor for individual editing sessions.

**1. Demystifying the Writing Process****15**

- What makes good writing? Are there “good writers” and “bad writers”?
- Words, word choice, the basic elements of sentences and sentence structure. Writing in the active voice. Introduction to Bioinformatics
- Dissecting the news article: News-writing is the art of maximizing information and minimizing words; it’s the barest-bones form of writing. The fundamentals of good writing can be learned by dissecting news articles.
- In-Class Exercise: Sorting through news articles.
- Writing Basics I: Punctuation and Parallelism. Tricks for clarity, brevity, and finesse.
- In-Class Exercise: Peer interviews and write-up mini-profiles
- Writing Basics II: Paragraphs, logic, and organization. Organizational strategies.
- In-Class Exercise: Peer interviews and write-up mini-profiles (swap)
- Writing Basics III: Putting it all together...
- In Class exercise: group rewrites of hard-to-read scientific

snippets

**2. Good Writing Applied: The Scientific Manuscript 10**

- Methods and Results Sections: How to present data effectively. How to write prose that complements a table or figure.
- In-Class Exercise: Discuss a variety of journal articles that present data in different ways; rewrite a results paragraph.
- The Abstract, Introduction, and Discussion: Getting to the main point and summarizing effectively. How to conduct literature reviews. Writing an effective discussion.
- Wrap-up scientific manuscripts plus Overview of grant writing:
  - Submission and authorship for scientific manuscripts.
  - Overview of the NIH grants writing process.
  -

**3. Communicating effectively with the media and lay public and peer review 5**

- How to write articles for the lay public. How to deal with the media. Ethics. Also: how to write a peer review.
- In-Class Exercise: Practice writing a peer review
- SUBMIT completed (or near-completed) manuscript

**References:**

2. Successful Scientific Writing: A step-by-step guide for biomedical scientists, Matthews and Bowen

**MBI 302: Chemoinformatics and Drug Designing** **Total**  
**Advance Course – Theory; 3 Credits** **45L**

### UNIT I

- 1. Introduction to Cheminformatics** **12**
- Introduction to cheminformatics: aims, scope, role of cheminformatics in pharmaceutical/chemical research.
  - Chemical Structure representation file format: 1D, 2D and 3D structures, molecular file formats (SMILES, PDB, SDF, MOL).
  - Molecular Descriptors: 1D, 2D, 3D, topological (Molecular connectivity, electrotopological and refractotopological) and shape indices descriptors.
  - Introduction to graph theory, vertex partitioning algorithms, Molecular Similarity and Molecular Diversity Analysis.

### UNIT II

- 2. Introduction to Molecular Properties** **11**
- Similarity metrics: Tanimoto Coefficient, Euclidean distance and Tversky Index.
  - Chemical Databases: Design, storage and retrieval methods, molecular database screening, Lipinski rule, Drug/Lead like molecules, chemical structure based search techniques
  - Introduction to molecular properties: Hydrophobicity, molecular refractivity, electronic charges (Huckel charge, Wang-ford charge), principal moment of inertia.
  - Pharmacokinetics study: *In-silico* ADMET Studies

### UNIT III

- 3. Drug discovery and QSAR** **11**
- Drug discovery process, role of Bioinformatics in drug design.
  - Target identification and validation, lead optimization and validation.
  - Structure-based drug design and ligand based drug design.

- Concept of *de novo* design for lead identification.
- Structure Activity Relationship: QSARs and QSPRs, QSAR Methodology, Training data, test data and external validation data, applicability domain in QSAR
- 3D QSAR techniques: CoMFA and CoMSIA.

## UNIT IV

### 4. Pharmacophore Modeling 11

- Pharmacophore features, Pharmacophore model, Receptor-based and ligand-based pharmacophore modeling.
- Virtual screening based on pharmacophore model.
- Receptor site, molecular docking study, flexible docking, rigid docking, molecular interactions.
- Scoring functions, correlation between ligand-based and receptor-based studies.

<b>5.</b>	<b>Introduction to Linear Regression</b>	<b>3</b>
	<ul style="list-style-type: none"> <li>➤ loss functions</li> <li>➤ over fitting</li> <li>➤ gradient descent</li> </ul>	

**UNIT II**

<b>6.</b>	<b>Classification Algorithm</b>	<b>6</b>
	➤ Logistic Regression,	
	➤ Support Vector Machine	
	➤ Naïve Bayes Classifier.	
<b>7.</b>	<b>Non Parametric Learning:</b>	<b>4</b>
	➤ K- Nearest Neighbors	
	➤ Decision Trees	
	➤ Random Forest Classifier	
<b>8.</b>	<b>Introduction to Cross-Validation, Hyper parameter tuning and ensemble Models</b>	<b>2</b>

### UNIT III

<b>7.</b>	<b>Introduction &amp; Types of Unsupervised Learning</b>	<b>1</b>
<b>8.</b>	<b>Association Rule Mining : (Market Basket Analysis)</b>	<b>2</b>
<b>9.</b>	<b>Clustering :</b>	<b>3</b>
	➤ K-means Clustering	
	➤ Hierarchical Clustering	
<b>10.</b>	➤ Principal Component Analysis (PCA)	<b>3</b>
	➤ Singular Value Decomposition (SVD)	
	➤ SOM(self-organizing maps)	

### UNIT IV

<b>8.</b>	<b>Neural Computation</b>	<b>2</b>
	➤ Introduction to Neural computation	
	➤ Neural network model	
<b>9.</b>	<b>Evolutionary computation</b>	<b>4</b>
	➤ Introduction to evolutionary Processes	

- Genetic Operators
  - Evolutionary Optimization Algorithms
- 10. Fuzzy Computation 3**
- Introduction
  - Fuzzy sets & systems
  - Ant colony Optimization (ACO)
- 11. Introduction to Human Language Technology & Machine Learning 3**
- Stochastic Grammar & linguistics, Language models
  - Statistical language Model,
  - Markov model
  - Hidden Markov Model
- 12. Optimization Techniques 2**
- Conjugate Gradient,
  - Newton Raphson,
  - Steepest descent,
  - Simulated annealing

<b>MBI 305: Python Programming</b>	<b>Total</b>
<b>Advance Course – Theory; 2 Credits</b>	<b>30L</b>

**UNIT I****1. Introduction and Overview of Python** **4**

- Installation and understanding Python Environment
- Introduction to Python variables
- basic Operators, keywords, python blocks

**2. Data types and Program Flow Structures** **6**

- Numeric data types: int, float, complex, string data type and string operations,
- Control Structure: if, else and elif , nested control structures
- Python Loop : for loops in python using ranges, string, list and dictionaries, while loops in python, Controlling loop using pass, continue, break and else

**3. String , Lists, Tuples & Dictionaries** **5**

- String: String operators, String manipulation using in built methods
- Lists: list operations, slicing, list methods, - list comprehension.
- Tuples: definition, assignment, tuple operations.
- Dictionaries: definition, operations and methods

**UNIT II****4. Functions , Modules & Packages** **4**

- Function: Definition, Function calling, lambda function
- Modules: Introduction to inbuilt Modules, User defined Modules

- Package: Understanding in built package, building own package, importing package

## 5. File Handling & Exceptional Handling 6

- File Handling: Opening a file, Read and Write operations, File and Directory related methods
- Exceptional Handling: try-except-else, Assert, try-finally, Raise, Exception Names & descriptions, User defined exceptions.

## 6. Python Database Interaction 5

- Python Database interaction, Insertion and retrieval information in database.
- Reading and storing information on database.

<b>MBI 308: Artificial Intelligence</b>	<b>Total</b>
<b>Elective Course – Theory; 2 Credits</b>	<b>30L</b>

**UNIT I**

<b>1. Intelligent Agents:</b>	<b>4</b>
➤ PEAS Representation for an Agent,	
➤ Agent Environments, Concept of Rational Agent, Structure of Intelligent agents, Types of Agents	
<b>2. Problem Solving:</b>	<b>4</b>
➤ Solving problems by searching, - DFS, BFS, A* searches, Performance Evaluation.	
➤ Use of graphs in bioinformatics	
<b>3. Knowledge and Reasoning:</b>	<b>4</b>
➤ A knowledge Based Agent,	
➤ Introduction To Logic,	
➤ First Order Logic: Syntax and Semantics,	
➤ Inference in First Order Logic, Unification, Forward and backward chaining, Resolution	
<b>4. Planning:</b>	<b>3</b>
➤ Planning problem,	
➤ Planning with State Space Search	
➤ Partial Order Planning	
➤ Hierarchical Planning	
➤ Conditional Planning	

**UNIT II**

<b>5. Genetic Algorithms:</b>	<b>2</b>
➤ Single-objective genetic algorithms,	
➤ Multi-objective genetic algorithms,	

- GA – bioinformatics applications genetic programming
- 6. Learning: 3**
- Introduction to neural networks
  - Perceptrons
  - Multilayer feed forward network
  - Application of ANN
  - Reinforcement learning: Passive & Active Reinforcement learning
- 7. Introduction to Robotics: 2**
- Robot Classification, Robot Specification.
- 8. Direct and Inverse Kinematics: 4**
- Coordinate Frames, Rotations, Homogeneous Coordinates,
  - Arm Equation of four axis SCARA Robot,
  - TCV
  - Direct Kinematics of Four Axis SCARA Robot
  - Inverse Kinematics of Four Axis SCARA Robot
- 9. Application: 4**
- DNA sequencing, hybridization
  - RNA folding prediction using GA
  - Genomics and proteomics
  - MAGE (MicroArray *and* Gene Expression)
  - Advances in tele surgery and surgical robotics
  -

<b>MBI 309: Chemoinformatics and Drug Designing Lab</b> <b>(2 Credits, 1 P, 4.00 Hr., Advance Course Practical)</b>	<b>Total</b> <b>20 labs</b> <b>10</b>
--	---

**1. Cheminformatics:**

- Practical session for chemical structure representation and storage in special file formats.
- Importance of 3D structures and method of generation from 1D & 2D representations.
- A brief introduction to building molecular databases with special emphasis on retrieval using structure input.
- Substructure/Exact/similar structure based searching.
- Development of descriptors (2D descriptors, Refracto-topological and Electro-topological state indices, 3D descriptors).

**2. Drug Design:**

**10**

- Development of 2D QSAR models.
  - Classical QSAR
  - kNN QSAR
  - GFA QSAR
- Development of 3D QSAR models.
  - CoMFA
  - CoMSIA
  - Topomar CoMFA
  - HQSAR
- Web-based pharmacophore modeling.
  - HypoGen
  - HipHop
  - DiscoTech
- Molecular docking study.
  - Rigid Docking
  - Flexible Docking

- Self Docking
- Virtual Screening.
- Combinatorial library design.

<b>(2 Credits, 1 P, 4.00 Hr., Elective Course Practical)</b>	<b>20 labs</b>
<b>1. Biodiversity Informatics Lab</b>	<b>3</b>
Biodiversity Informatics Databases:	
➤ Species 2000	
➤ Tree of Life	
➤ ATCC	
➤ GBIF	
➤ ICTV	
<b>2.</b>	<b>4</b>
➤ Online Biodiversity and Ecosystem based Databases	
➤ Software for identification	
➤ Accessing existing databases on the WWW	
➤ Software for identification of species	
➤ Probabilistic and deterministic identification	
➤ Delta MicroIS, AVIS, ICTV	
<b>3. Molecular Phylogenetics Lab</b>	<b>1</b>
Compilation & curation of dataset, format conversion	
<b>4.</b>	<b>1</b>
Survey of software programs available for phylogenetic analysis	
➤ Installation of at least 2 public domain packages for both Windows & Unix environment: Phylip, PAUP, MEGA	
<b>5.</b>	<b>2</b>
MSA using ClustalW: writing files for phylogenetic analysis	
➤ Informative and variable sites; Singleton sites etc.	
➤ Difference between dendogram & phylogenetic tree	
➤ Converting sequence data into distance data	
<b>6.</b>	<b>2</b>
Reconstruction of phylogenetic trees using molecular data	
➤ Distance-based methods: UPGMA, Neighbor-joining, Neighbor-relations & Transformed distance	
➤ Maximum Parsimony	

- Maximum likelihood
7. Using bootstrapping tool to generate multiple datasets from the original input data & generation of consensus tree 1
  8. Plotting, visualizing & printing phylogenetic trees: TreeView and other tools 2
    - Various rendering
    - Formatting & labeling
    - Interpretation of trees
  9. Comparison of trees drawn using 1
    - RNA, Nucleotide & protein data
    - Gene trees & species tree
  10. Un-rooted & rooted tree 1
    - Rooting un-rooted tree using an out group
  11. Reconstruction of phylogenetic trees using whole genome data of viruses 1
  12. Numerical taxonomy & Bacterial identification using matrices 1

# **SEMESTER IV**

---

---

**MBI 401: RESEARCH PROJECT****Core Course – 20 Credits**

---

**Guidelines for Research Project Submission during Sem IV for Master of Science  
(M. Sc.) in Bioinformatics****Eligibility:**

- If student fails to pay any of the pending dues before the beginning of the project date, he/ she will not be considered to be eligible to undertake research project.

**Project Duration, Dissertation writing and Submission:**

- The project duration will be from beginning till the end of Semester IV
- Students shall submit dissertation title, name of research guide, name of co-guide (for off-campus only), name & place of research work within 10 days after the start date of semester IV. (As per the format enclosed).
- Student must have to submit Two hard copies (copy of Library/ Co-Guide & Student's copy) and one soft copy (Guide) of Dissertation only in the prescribed format (read below), duly approved by Research Guide(s) on or before April 15th of every year. The dissertation will not be accepted for evaluation for those who submit after March 15th, their presentation will be taken along with the next year batch.
- Students must acknowledge all the figures, maps, tables, methods, texts, etc., that are used, taken from other sources for writing the dissertation, except for original work that they have carried out. Dissertation having more than 10 % of plagiarism found will not be considered for evaluation.
- Dissertation must be written in specified format only as mentioned below:
  - a. The paper used for printing shall be of A4 size;

- b. Printing shall be in a standardized form (word size of 12, font in Times New Roman) on one side of the paper and in 1.5 line spacing;
  - c. A margin of 1.5 inches shall be on the left hand side, top, bottom and right hand margin shall be of 1 inch.
  - d. The card for cover shall not be more than 330 GSM.
  - e. The title of the dissertation, name of the candidate, degree, name of the guide, co-guide, place of research and the date, month and year of submission shall be printed on the title page and on the front cover.
  - f. The hard- bound thesis cover shall be of black color. Spine of the binding [side cover] should mention ‘M Sc. Bioinformatics dissertation on the top, name of the candidate and date, month and year.
- Student must follow following chapter scheme for Dissertation submission:

#### **Chapter Scheme of Dissertation :**

- ✓ Introduction
- ✓ Review of Literature
- ✓ Aims and Objectives
- ✓ Materials & Methods
- ✓ Observations and Results
- ✓ Discussion
- ✓ Summary
- ✓ Conclusions
- ✓ Bibliography –Reference etc.

#### **Place of Research Project:**

- Student may prefer to undertake his/ her research project in-house or off-campus. Students those preferring to pursue research at off-campus will have to undertake research work only in any of the Department of Scientific and Industrial research (DSIR), Government of India recognized laboratory (Government, State-Government, Private).

#### **Research Guide(s):**

- Students who are opting for off-campus will have one Major Research Guide from the host organization (Preferably a Ph D. qualified scientist), however, a Co-Guide from RGITBT will be appointed.

#### **Dissertation Evaluation:**

- Students will have to submit **Two progress reports (45 days of Intervals) (Format Enclosed) and One evaluation report from Research Guide having 40 % weight age (Format Enclosed)** at the time of dissertation submission on the execution of research project duly signed by Guide / Co-Guide. The progress report will include, attendance percentage, review collection, research progress, sincerity, topic understanding, and systematic execution of research project, data collection and management. The evaluation report will include attendance, review work, project execution, critical thinking, originality of work, presentation of result, understanding of research, dissertation write-up, presentation of tables, figures, maps, references, etc.
- Student will have to give 20 min presentation on the work done in the presence of expert committee (between **April 21 to May 5 of every year**). (Note only working dates will be considered). The power point presentation format shall contain project title, name of candidate, place of research work, name of Guide/ Co-Guide, introduction, review, objectives, significance of the work, methodology, results & discussion, conclusion, references and acknowledgement. The presentation shall be of 12-15 min with 5-8 minutes of discussion.
- The presentation will carry **60 % of weight age** based on the following consideration. The overall understanding of the research project, objectives, methodology. The outcome of research work, data analysis and statistics, clarity in presentation and question – answer session (**Format Enclosed**).
- Student will be assigned a grade as per the Rules mentioned.

**RAJIV GANDHI INSTITUTE OF IT AND BIOTECHNOLOGY**

“Write here **approved title** of the Dissertation in all upper-case (capital letters) with a 'centre' alignment. Place this title on the upper central part of the cover with sufficient margin from top and both sides. Use font size suitable to length of the title”

**DECLARATION BY THE CANDIDATE**

I hereby declare that the dissertation entitled “  
\_\_\_\_\_” submitted by me to the  
Bharati Vidyapeeth (Deemed to be University), Pune for the degree of Master of Science  
(M.Sc.) in Bioinformatics under the Faculty of Interdisciplinary Sciences  
has been carried out by me under the supervision of **(Name of Guide)** and **(Name of  
Co-guide (if any))**.

I further declare that it has not been submitted to this or any other university or Institution  
for the award of any Degree or Diploma.

I also confirm that all the material which I have borrowed from other sources and  
incorporated in this dissertation is duly acknowledged. If any material is not duly  
acknowledged and found incorporated in this dissertation, it is entirely my responsibility.  
I am fully aware of the implications of any such act which might have been committed  
by me advertently or inadvertently.

Advanced Diploma in Bioinformatics  
(Post Graduate Diploma)**

**UNDER  
FACULTY OF INTERDISCIPLINARY STUDIES**

**SYLLABUS OF SEM I – SEM II**

**UNDER  
CREDIT SYSTEM**

**To be effective from Academic Year  
2019-20**

Bharati Vidyapeeth Deemed To Be University is a multidisciplinary, multicampus university having 32 Institutions imparting quality education in various disciplines. All programmes of the University are approved by UGC and respective statutory councils. BVDU has been re accredited for the third time with 'A+' grade by NAAC in 2017. UGC has accorded 12B Status [UGC ACT1956] to the university. Ministry of Human Resource and Development, Government of India has awarded "A" category to the University in 2012 based on parameters including innovative programs, research and infrastructure facilities. The University is a member of Association of Indian Universities [AIU] which has ranked BVDU among top 10 universities of India for International students' enrollment. BVDU is also a member of International Association of Universities.

Rajiv Gandhi Institute of IT and Biotechnology is a constituent unit of BVDU established in 2003. The Institute is approved by UGC to conduct graduate and post graduate courses in Biotechnology. The Institute has excellent infrastructure, state-of-the-art laboratories and competent faculty facilitating appropriate learning environment. The Institute offers one undergraduate and four postgraduate programmes in Biotechnology.

## INTRODUCTION

The Advanced Diploma in Bioinformatics (ADB) is a full time post graduate diploma offered by **Bharati Vidyapeeth (Deemed to be University (BVDU))** in its constituent unit, Rajiv Gandhi Institute of IT and Biotechnology (RGITBT). The course was initiated in the year 2010 and was designed to facilitate empowerment of students to face cutting edge technological applications in bioinformatics sector. 21st century biology has been transformed into integrative biology due to paradigm shift from reductionist to holistic approach. The data explosion is one of the obvious causes of the transformation to holistic or systems biology mode. In order to have deeper insights in to biological systems, integration of the data from genome to phenome levels to generate dynamic models has surfaced as key area of bioinformatics. On its implementation for 10 years, the curriculum is being revised two times to embrace newer emerging disciplines and value added courses. The revised **ADB** is a full time **60 credits** Program to be implemented in Rajiv Gandhi Institute of IT and Biotechnology from the academic year 2019-20. The feedback of students, alumni, faculty, employers and parents has a substantial contribution in designing of this curriculum.

## OBJECTIVES

1. To impart deep knowledge of the discipline
2. Develop skills in relevant areas to enhance employment opportunities
3. Introduce emerging areas of NGS, Drug designing and data mining
4. Build interdisciplinary approach
5. Foster global competence among students
6. Inculcate social and moral values and sense of scientific responsibilities in students

## ELIGIBILITY FOR ADMISSION TO THE COURSE

Candidates satisfying following criteria are eligible to apply for ADB Course

1. A student who has obtained Bachelor's degree with minimum **45%** in (i) B.Sc. (Biotechnology / Microbiology / Biochemistry / Zoology / Botany / Chemistry /Agriculture/ Mathematics /Statistics / Computer Science). (ii)B. Pharm (iii).

MBBS (iv) BDS (v) BAMS (vi) BHMS (vii) B.E. in Computer Science or Information technology or Biomedical Engineering will be considered eligible for admission to M.Sc. Bioinformatics course or **40%** aggregate marks for **SC / ST** category respectively at graduate level university examination.

2. Subject to above conditions, the admission will be based on first come first serve basis.

### **DURATION OF THE COURSE**

The course will be executed in two semesters. The medium of instruction and examination will be only English.

### **RULES FOR THE COURSE**

1. The entire course is of 60 credits.
2. One credit for theory course is equivalent to 15 lectures/tutorials; while one credit for practical course is equivalent to 25 – 30 hrs. of lab /field work or demonstration.
3. The curriculum comprises of core, advanced and value added courses. The Core and Advanced Courses are compulsory where as Value Added are elective.
4. The Core Courses are aimed at providing fundamental knowledge of the discipline. The advanced courses are designed to develop manpower for bioinformatics industries as per current need. The Value Added Courses are intended to inculcate the thrust of new domains of bioinformatics within students.
5. The teaching schedule for the 3 credits and 2 credits theory courses will be 3 and 2 lectures per week respectively. All courses will have one tutorial fortnightly.
6. The respective elective course will be implemented only if more than 10 students enroll for that course.
7. All core courses will be evaluated by University Examination. The elective courses will be evaluated by University Examination and Continuous Assessment.
8. Two extra credits will be awarded to students if there is any significant outcome of their dissertation study. The research outcome in terms of publication in indexed national/International journal; filing of patent; or commercialization of technology will be considered for the award of credits.

## RULES FOR EXAMINATION

### A: Nature of Examination:

1. Each course will have 40% marks for internal assessment and 60% marks for semester-end examination.
2. The assessment for 1, 2 and 3 Credits courses will be as given in following table:

**Table 1: Evaluation pattern for one to three Credit Courses**

Course Credits	Marks for UE (60% Weightage)	Marks for IE (40% weightage)	Total Marks for evaluation
1	15	10	25
2	30	20	50
3	45	30	75
4	60	40	100

3. The duration of **60 Marks UE theory paper will be 3.00 Hrs; for 30 Marks 1.30 Hrs.** respectively.
4. The Internal Assessments (IA) will be conducted by the Institute and an end-of-the term University Examination (UE) conducted by the university. The UE will be based on the entire syllabus.
5. The performances at UE and IA will be combined to obtain the Grade Point Average (GPA) for the course.

## STANDARD OF PASSING

**A: Grading System:** A **10-point absolute grading system** will be adapted for grading in each head of passing. The system will have seven grade points, the highest being 10. The grading system shall be as shown in Table-2 below. The performance indicators O, A+, A, B+, B, C, and D shall respectively mean Outstanding, Excellent, Very Good, Good, Average, Satisfactory, and Poor.

Table-2: The grading system under CBCS

Range of Marks (out of 100)	Grade Point	Grade
$80 \geq \text{Marks} \leq 100$	10	O
$70 \geq \text{Marks} \leq 80$	9	A+
$60 \geq \text{Marks} \leq 70$	8	A
$55 \geq \text{Marks} \leq 60$	7	B+
$50 \geq \text{Marks} \leq 55$	6	B
$40 \geq \text{Marks} \leq 50$	5	C
$\text{Marks} < 40$	0	D

1. The grade point average (GPA) for a course shall be calculated by first finding the total marks **out of 100 for the course. The corresponding GP (as per the table-2) shall be the GPA for the course.**
2. Two kinds of performance indicators, namely, the Semester Grade Point Average (SGPA) and the Cumulative Grade Point Average (CGPA) shall be computed at the end of each term. The SGPA measures the cumulative performance of a learner in all the courses in a particular semester, while the CGPA measures the cumulative performance in all courses up to and including the current semester. The CGPA of a student when he/she completes the program is his/her final result.
3. The SGPA is calculated by the formula ,  $\text{SGPA} = \frac{\sum C_k \times \text{GPA}_k}{\sum C_k}$  where  $C_k$  is the Credit-value assigned to a course and  $\text{GPA}_k$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study during the semester, including those in which he/she might have failed or those for which he/she remained absent. **The SGPA shall be calculated up to two decimal place accuracy.**
4. The CGPA is calculated by the formula ,  $\text{CGPA} = \frac{\sum C_k \times \text{GPA}_k}{\sum C_k}$  where  $C_k$  is the Credit-value assigned to a course and  $\text{GPA}_k$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study from the time of his/her enrolment and also the

during the semester for which CGPA is calculated, including those in which he/she might have failed or those for which he/she remained absent. **The CGPA shall be calculated up to two decimal place accuracy.**

5. The CGPA, calculated after the minimum credits specified for the program are 'earned', will be the final result grace marks of 1, 2 or 3 may be awarded to a candidate at UE as per the university rules.

**B: Standards of Passing and ATKT rules:**

1. For all Core Courses, both UE and IA

Constitute separate heads-of-passing (HoP). In order to pass in such courses and to 'earn' the assigned credits

- (a) the learner must obtain a minimum grade point of 5.0 (40% marks) at UE and also a minimum grade point of 5.0 (40% marks) at IA;

**OR**

- (b) If he/she fails in IA, then also the learner passes in the course, **provided that a minimum of 25% is obtained in IA and GPA for the course is at least 6.0 (50%marks ) in aggregate.** The GPA for a course will be calculated only if the learner passes in that course.

2. A student who fails at UE in a course has to reappear only at UE as a backlog candidate and clear the HoP. Similarly, a student who fails in a course at IA has to reappear only at IA as a backlog candidate and clear the HoP. **A student who passes in aggregate in a course need not reappear even if he failed at IA if he/she obtains 25% at IA.**
3. The students of Semester I and II & III will be admitted to next Semester even if he/she gets backlog in any of the course. They can reappear in the next semester examination as a backlog candidate.

**C: AWARD OF HONOURS:**

1. A student who has completed the minimum credits specified for the program shall be declared to have passed in the program. The final result will be in terms

of letter grade and CGPA only and is based on the CGPA of all courses studied and passed. The criteria for the award of honors are given in Table 3.

**Table 3: Criteria for the award of honors at the end of the program**

Range of CGPA	Final Grade	Performance Descriptor	Equivalent Range of Marks (%)
$9.50 \geq CGPA \leq 10.00$	O	Outstanding	$80 \geq Marks \leq 100$
$9.00 \geq CGPA \leq 9.49$	A+	Excellent	$70 \geq Marks \leq 80$
$8.00 \geq CGPA \leq 8.99$	A	Very Good	$60 \geq Marks \leq 70$
$7.00 \geq CGPA \leq 7.99$	B+	Good	$55 \geq Marks \leq 60$
$6.00 \geq CGPA \leq 6.99$	B	Average	$50 \geq Marks \leq 55$
$5.00 \geq CGPA \leq 5.99$	C	Satisfactory	$40 \geq Marks \leq 50$
CGPA Below 5.00	F	Fail	Marks below 40

### THE FORMAT OF THE TRANSCRIPTS

The transcripts may be acquired by the students indicating his/her performance in every semester examination. The transcript shall show the performance indicators given in the following table, in addition to any other information.

Course Number	Course Description	Number of Credits	University Examination		IA/CA		Grade Point Average (GPA)	Result
			Grade	Grade Point	Grade	Grade Point		

Total Cumulative Credits Completed	SGPA	CGPA	Equivalent Marks (%)	<b>Note: GPA is calculated by adding the UE marks out of 60 and IA marks out of 40. The total marks out of 100 are converted to Grade Point, which will be GPA</b>
------------------------------------	------	------	----------------------	--

### PATTERN FOR ASSESSMENT

#### A: Pattern of Evaluation for Internal Assessment of Theory Courses:

The weightage for Internal Assessment is 40%. Students for IA of every theory course will be assessed for total of 40 marks for 3 credit course and for 20 marks for 2 credit course which will be cumulative marks obtained in two separate assessments specified below.

1. Two internal written examinations of 20 marks each for 3 credit course and 10 marks each for 2 credit course. A total of the two tests will be considered.
2. An optional assignment/ oral/ open book examination may be undertaken if desired.

#### B. Pattern of Evaluation for Internal Assessment of Practical Courses:

The Internal Assessment for every practical course will be of 20 Marks for 2 credits and 40 marks for 4 credits practical courses. The students for IA will be assessed on the basis of;

1. Performance for every practical: 10 Marks/20 Marks for 2/4 Credits practical courses respectively. (Marks to be distributed depending on total number of practical)
2. Assignment/ Oral examination/Tour Report: 10/20 Marks for 2/4 Credits courses

#### C: Pattern of question paper at University Examination

University Examination for 3 credit and 2 credit theory course will be of 60 marks and 30 marks respectively. **For 3 credit course**, the question paper will comprise of 6

questions, 3 questions each in section I and section II. Each question will be of 10 marks. All questions will be compulsory. The pattern of question paper will be as given on next page.

**PATTERN OF QUESTION PAPER FOR 3 CREDIT COURSE OF UNIVERSITY THEORY EXAMINATION OF ADB 2019 Credit System Based Course (TOTAL MARKS: 60, TME: 2.00 HRS.)**

**Instructions to Paper Setter:**

1. Question paper of each course will comprise of total 6 questions,
2. Section I will have 3 questions and Section II 3 questions.
3. All questions will be compulsory. Each question will carry an internal option of one extra sub-question.
4. Q. no 1 will be objective, comprising of 7 questions of 2 mark each. They will be based on entire portion of Section I. Students will have to attempt any 5 out of these.
5. Q no 4 will be objective, comprising of 7 questions of 2 mark each. They will be based on entire portion of Section II. Students will have to attempt any 5 out of these.
6. Questions 2 & 3 of **Section I** and 5 & 6 of **Section II** will be descriptive and contain 3 sub-questions of 5 marks each out of which students will attempt any two.
7. Q 2 and 3 will be based solely on Unit I and II whereas Q 5 and 6 will be based on Unit III and IV of the syllabus respectively.
8. Students will attempt answers to Section I and Section II in separate answer books

## SECTION I

**Q.1** Attempt **Any FIVE** of the following:(Define, Explain why, Fill in the blanks, Give examples, Answer in brief) (10)

a

b

c

d

e

f

g

**Q.2** Attempt **Any Two** of the following: (Answer the following, Differentiate Between, Give neat labeled diagram of) (10)

a

b

c

**Q.3** Write short notes on **Any Two** of the following (10)

a

b

c

## SECTION II

**Q.4** Attempt **Any five** of the following: :(Define, explain why, Fill in the blanks, Give examples, Answer in brief) (10)

a

b

c

d

e

f

g

**Q.5** Attempt **Any Two** of the following: (Answer the following, Differentiate Between, Give neat labeled diagram of) (10)

a

b

c

**Q.6** Write short notes on **Any Two** of the following (10)

a

b

c

**QUESTION PAPER PATTERN FOR 2 CREDITS THEORY COURSE AT UNIVERSITY**  
**EXAMINATION**

**For 2 credit course**, the question paper will comprise of 4 questions, 2 questions each in section I and section II. Q1 of section I and Q3 of section II will be of 7 marks each while Q2 and Q4 will be of 8 marks each .All questions will be compulsory. The pattern of question paper will be as given on next page.

**Pattern of question paper for 2 credit course of university theory examination of ADB 2019 Credit System Based Course (Total Marks: 30, Tme:1.50 Hrs.)**

**Instructions to Paper Setter:**

1. Question paper of each course will comprise of total 4 questions,
2. Section I will have 2questions and Section II 2 questions.
3. All questions will be compulsory. Each question will carry an internal option of one extra sub-question.
4. Questions 1 of section I and 3 of section II will be objective, and contain 7 questions of 1 mark each out of which students will attempt any 5. They will be based on entire portion of Section I and section II respectively.
5. Questions 2 of **Section I** and 4 of **Section II** will be descriptive and contain 3 sub-questions of 5 marks each out of which students will attempt any two.
6. Q 2 and 4 will be based solely on Unit I and II of the syllabus respectively.
7. Students will attempt answers to Section I and Section II in separate answer books

**SECTION I**

**Q.1** Attempt **Any Five** of the following: :(Define, Explain why, Fill in the blanks, Give examples, Answer in brief) (05)

- a
- b
- c
- d
- e
- f

g

**Q.2** Attempt **Any Two** of the following: (Answer the following, Differentiate (10)  
Between, Give neat labeled diagram of, Write short notes on)

a

b

c

## SECTION II

**Q.3** Attempt **Any Five** of the following: (Define, Explain why, Fill in the (05)  
blanks, Give examples, Answer in brief)

a

b

c

d

e

f

g

h

**Q.4** Attempt **Any Two** of the following: (Answer the following, Differentiate (10)  
Between, Give neat labeled diagram of, Write short notes on)

a

b

c

### D: PATTERN FOR QUESTION PAPER OF UNIVERSITY PRACTICAL EXAMINATION OF ADB 2019 Credit System Based Course

(Total Marks: 30/60 for 2/4 credit courses, Time: 3 .00/6.00 Hrs.)

**Q. 1** Major Practical (10/20)

**Q. 2** Spotting/Minor Experiment (10/20)

**Q. 3** Viva (05/10)

**Q. 4** Journal (05/10)

-----

**Course structure of Advanced Diploma in Bioinformatics**  
**Under Credit System Based Course 2019-20**

**SEMESTER I**

<b>Course No. &amp; Description</b>	<b>Title</b>	<b>Credits</b>	<b>IA</b>	<b>Univ. Exam</b>	<b>Total Credits</b>
<b>ADB 101</b> Basic Course-Theory	Cell Biology (C)	2	20	30	<b>28</b>
<b>ADB 102</b> Basic Course –Theory	Biochemistry(C)	2	20	30	
<b>ADB 103</b> Basic Course –Theory	Biomathematics(C)	2	20	30	
<b>ADB 104</b> Basic Course –Theory	Biostatistics(C)	2	20	30	
<b>ADB 105</b> Basic Course –Theory	C Programming and Data structure(C)	3	40	60	
<b>ADB 106</b> Basic Course – Theory	Biological Informatics(C)	2	20	30	
<b>ADB 107</b> Basic Course – Theory	DBMS & MongoDB (C)	3	40	60	
<b>ADB 108</b> Core Course - Theory	Python	2	20	30	
<b>ADB 109</b> Basic Course –Practical	Cell Biology and Biochemistry Lab (C)	2	20	30	
<b>ADB 110</b> Basic Course –Practical	C Programming and Data Structure Lab (C)	2	20	30	
<b>ADB 111</b> Basic Course –Practical	Biological Informatics Lab (C)	2	20	30	
<b>ADB 112</b> Basic Course –Practical	DBMS & MongoDB lab(C)	2	20	30	
<b>ADB 113</b> Core Course - Practical	Python Lab	2	20	30	

## SEMESTER II

Course No. & Description	Title	Credits	IA	Univ. Exam	Total Credits
<b>ADB 201</b> Core Course –Theory	Statistical Analysis System (SAS) (C)	2	20	30	<b>32</b>
<b>ADB 202</b> Core Course –Theory	R and Data Analytics (C)	3	40	60	
<b>ADB 203</b> Core Course –Theory	JAVA and BioJAVA Programming (C)	3	40	60	
<b>ADB 204</b> Core Course –Theory	Science of Omics (C)	3	40	60	
<b>ADB 205</b> Core Course - Theory	Proteomics (C)	2	20	30	
<b>ADB 206</b> Advance Course -Theory	Advanced Bioinformatics	2	20	30

<b>ADB 213</b> Advance Course- Practical	Data Mining through Machine Learning Lab	2	20	30	
<b>ADB 214</b> Advance Course- Practical	Molecular Modeling & Drug Designing Lab	2	20	30	

**Total Credits Offered: 28 C, Sem I+ 32 C, Sem II = 60**

# **SEMESTER I**

---

**ADB 101: Cell Biology (C)** **Total**  
**Basic Course – Theory; 2 Credits** **30L**

**UNIT I**

- |           |  |          |
|-----------|--|----------|
| <b>1.</b> | <b>Cell as a basic unit of life.</b>   | <b>4</b> |
|           | Basic structure, organization and composition of prokaryotic and eukaryotic cell. Plasma membrane structure and functions, Membrane models. Components of blood & their functions (Plasma, RBC, WBC, Platelets).   |          |
| <b>2.</b> | <b>Cytoskeleton:</b> Organization and functions cytoskeleton, Actin filaments, actin binding proteins, Intermediate filaments, Microtubules  | <b>3</b> |
| <b>3.</b> | <b>Cell Junctions:</b><br>Gap junctions, Tight junctions, Cell adhesion-integrins, selectins, cadherins. desmosomes and hemidesmosomes, plasmodesmata  | <b>2</b> |
| <b>4.</b> | <b>Membrane Transport:</b><br>Transport across membrane- passive diffusion, osmosis, active transport, Ion Channels, Na <sup>+</sup> and K <sup>+</sup> pump, Ca <sup>2+</sup> ATPase pump, co-transport, symport, antiport, endocytosis and exocytosis. | <b>6</b> |

**UNIT II**

- |           |   |          |
|-----------|---|----------|
| <b>6.</b> | <b>Cell Cycle:</b> Molecular events of cell division and cell cycle, regulation of cell cycle events- Cyclins, Cyclin dependent kinases, inhibitors.    | <b>5</b> |
| <b>7.</b> | <b>Cell Signaling:</b> General principles of cell signaling, signaling via G-protein coupled receptors, kinase receptors, role of secondary messengers. | <b>6</b> |
| <b>8.</b> | Ageing and apoptosis, abnormal development and teratogenesis in animals   | <b>4</b> |

<b>ADB 102: Biochemistry (C)</b>	<b>Total</b>
<b>Basic Course – Theory; 2 Credits</b>	<b>30L</b>

**UNIT I**

<b>1. Introduction to Biomolecules: Carbohydrates, Lipids and Proteins – their biological roles and functions</b>	<b>1</b>
<b>2. Carbohydrates:</b> Classification-on basis of carbon no & functional grs.; Structure with molecular formulae; Stereochemistry (structural and conformational isomers); isomers with one and more chiral centres, properties of stereoisomers; cyclization of sugars; conformations of cyclic forms (chair & boat forms).	<b>3</b>
<b>3. Important monosaccharides:</b> 6 C sugars- glucose, fructose, mannose, galactose, 5 C sugars- ribose, deoxyribose, important modified monosaccharides (2-keto-3-deoxy-D-manno-octulosonic acid (KDO), <u>2-keto-3-deoxy-D-glycero-D-galacto-nonulosonic acid (KDN)</u> , sialic acids, aminosugars, sugar acids (their biological role/ occurrence)	<b>1</b>
<b>4. Linkages in Sugars:</b> Structure and functions of important di-saccharides (sucrose, lactose, maltose, cellobiose) and poly-saccharides (homo and heteropolymers, storage and structural polymers – starch, glycogen, cellulose, chitin, peptidoglycan)	<b>1</b>
<b>5. Physico-chemical properties of carbohydrates:</b> Reducing-non-reducing properties; Exploitation for detection and separation –Benedict’s test; Introduction to conjugate sugars (Glycoproteins and glycolipids and their importance)	<b>2</b>
<b>6. Significance of carbohydrates in microbial, plant and animal system:</b> ABO blood groups, heparin, lectins, carbohydrate vaccines	<b>2</b>
<b>7. Lipids:</b> Occurrence/sources: plant derived oils, ghee	<b>1</b>
<b>8. Structure :</b> Structure of fatty acids, triglycerides; Classification viz., simple and compound, structural and storage with examples; unsaturated-saturated, Oils (refined/unrefined significance); fats, waxes, rancidity/spoilage of fats (microbial, oxidative)	<b>2</b>
<b>9. Functions:</b> Functions in a living system: significance of hydrophobicity and water immiscibility for compartmentalisation, in vitamins, cofactors, for signalling, pigments	<b>2</b>
<b>10. Lipid conjugates:</b> Important conjugates and their functions: phospholipids, glycerophospholipids, sphingolipids; structure of membranes, micellar	<b>3</b>

- structures, Cholesterol- Structure, function and significance
11. **Liposomes:** Liposomes in drug delivery, soaps, bio-surfactants **1**
- Physico-chemical properties of carbohydrates and lipids:** Compare and contrast of properties arising due to differences in C:O ratio

## UNIT II

12. **Amino acids, peptides and proteins:** Occurrence/sources, Naturally occurring amino acids; structures; abbreviated names; stereoisomerism; amphoteric nature of amino acids, Classification of amino acids (on basis of functional groups, essential/non-essential); Chemical reactivity due to functional group (amide, acid, amine); peptides & proteins peptide bond, bond properties, N-Terminal, C-Terminal, Complex proteins– Proteoglycans, Lipoproteins, metalloproteins, phosphoproteins, chromoproteins and their significance **3**
13. **Protein structure:** Primary, secondary ( $\alpha$  helix and  $\beta$  conformation), tertiary and quaternary structure. Forces stabilizing molecular structure (covalent bond, ionic bond, hydrogen bond, salt linkage, van der Waal's forces) a brief over view of Ramchandran plot, Structure-Function relationship in proteins with examples of Fibrous proteins, Collagen, Hemoglobin; importance of sequence of amino acids for structure and function of protein (eg. Sickle cell anaemia), **4**
14. **Introduction to enzymes as biocatalysts:** Enzyme-substrate interaction, Rates of enzyme reaction, Concept of  $K_m$ ,  $V_{max}$  **4**

<b>ADB 103: Mathematics (C)</b>	<b>Total</b>
<b>Basic Course – Theory; 2 Credits</b>	<b>30L</b>

**UNIT I**

1.	Calculus: Limits, Continuity, Differentiation (1D & Partial), Definite Integrals.	8
2.	Numerical Techniques: Vector algebra, Matrices, Finding Eigen values & Eigen vectors	3
3	2Dimensional & 3Dimensional Geometry: Cartesians and Polar Coordinates, Locus, Equation of a straight line, Pair of straight lines, Circle, Ellipse, Parabola, Hyperbola. 3D Coordinate System, Spherical and Cylindrical Coordinates.	4

**UNIT II**

4.	Ordinary & Partial Differential Equation: 1'st Order & 2'nd Order Ordinary Differential Equations. Nature of Partial Differential Equations, Method of Separation of Variables, Methods for Solving Equations, Solving ODE & PDE.	5
5.	Integral transform: Fourier Series, Fourier Transform, Laplace Transform	7
6.	Applications To Mathematical Biology: Enzyme kinetics, Immunology, Population genetics, Tumor modeling, Applications of ordinary & partial differential equations to Biology.	3

<b>ADB 105: C Programming and Data Structure (C)</b>	<b>Total</b>
<b>Basic Course – Theory; 3 Credits</b>	<b>45L</b>

**UNIT I**

<b>1. Introduction and First Program</b>	<b>3</b>
➤ Why Programming	
➤ Types of Programming	
➤ Introduction to C	
➤ C programming features	
➤ Benefits of C	
➤ Some Facts about C	
➤ Understanding First C Program	
<b>2. Variables and Data Types</b>	<b>3</b>
➤ Identifiers	
➤ Keywords	
➤ Data Types	
➤ Variables	
➤ Constants	
<b>3. Console IO Operations</b>	<b>2</b>
➤ printf function	
➤ scanf function	
➤ Unformatted Functions	
<b>4. Operators and Expressions</b>	<b>2</b>
➤ Expressions	
➤ Types of Operators	
➤ Type Casting	
<b>5. Control Flow Statements</b>	<b>2</b>
➤ Decision Making in C	
➤ If Statement	
➤ Switch Statement	
➤ Unconditional Branching	
➤ While Loop	
➤ Do...While Loop	
➤ For Loop	
➤ Break and continue statements	

**UNIT II**

<b>6. Working with Functions</b>	<b>5</b>
➤ What is a Function	

- Benefits of a Function
  - Function Terminology
  - Array of Structures
  - How does Function Works
  - Scope and Lifetime of Variables in function
  - Storage Classes of Variables
  - Call by value and call by reference
  - Recursion
- 7. Working with Arrays and Strings 5**
- Understanding Arrays
  - Arrays Declaration and Initialization
  - Sample Programs
  - Multidimensional Arrays.
  - Arrays and Functions
  - String operation

### UNIT III

- 8. Pointers 4**
- Understanding Pointers
  - Declaring and Initializing Pointers
  - Function and Pointer Parameters
  - Pointer Arithmetic
  - Pointer and Arrays
  - Two Dimensional Arrays and Pointers
  - void Pointer
  - Dynamic allocation of memory
  - Difference between malloc and calloc
- 9. Structure and Unions 4**
- Overview of Structures
  - Defining and Using a Structure
  - Structures within a Structure
  - typedef keyword
  - Passing Structures to Functions
  - Structure and Pointers
  - Unions
- 10. File Handling 4**
- What is a Stream
  - Opening and Closing of Files
  - Writing and Reading in Text Format
  - Writing and Reading in Binary Format

**Unit IV**

- |            |   |          |
|------------|---|----------|
| <b>11.</b> | Introduction to Data Structures<br>Data Structures- Data structure, Abstract Data Types (ADT), Concept of linear and Non-linear, static and dynamic data structures, and relationship among data, data structure  | <b>2</b> |
| <b>10.</b> | Linked Lists<br>Concept, Comparison of sequential and linked organizations, Primitive operations, Realization of Linked Lists, Linked list operations, Head pointer and header node, Types of linked list- Linear and circular linked lists, Doubly Linked List and operations, Circular Linked List, Singly circular linked list, Doubly circular linked list. | <b>3</b> |
| <b>11.</b> | Stacks<br>Stacks- concept, Primitive operations, stack operations, Applications of Stack- Expression, Evaluation and Conversion, Need for prefix and postfix expressions, Postfix expression evaluation, Recursion- concept, Backtracking algorithmic strategy, use of stack in backtracking.   | <b>2</b> |
| <b>12.</b> | Queues<br>Concept, Realization of Queues Using Arrays , Circular Queue, Advantages of using circular queues, operations on queue  | <b>2</b> |
| <b>13.</b> | Sorting and Searching<br>Searching- Search Techniques, Sequential search, Binary search.<br>Sorting methods- Bubble sort, Insertion sort, Selection sort, Quick sort, Heap sort, Shell sort, Comparison of All Sorting Methods.   | <b>2</b> |

<b>ADB 106: Biological Informatics (C)</b>	<b>Total</b>
<b>Basic Course – Theory; 2 Credits</b>	<b>30L</b>

**UNIT I****1. Introduction to Bioinformatics 5**

- Nature of biological data types
- Overview of available Bioinformatics resources on the web
- Primary Resource Institutes: NCBI, EMBL & DDBJ
- Hierarchy of Biological databases: Primary, Secondary & Derived

**2. Biological Databases & Tools 10**

- Database search engines: Entrez, SRS
- Nucleic acid databases: GenBank, ENA, Gentry
- Protein sequence databases: NCBI Protein, EMBL Protein, PIR-PSD, SwissProt/ UniProtKB/ TrEMBL, ExPasy
- Structural Databases: PDB, SCOP, CATH, NDB, CCSD, CSD
- Molecular visualization tools: RasMol, Cn3D, SPDBV, Chime, Mol4D, etc
- Databases and search methods for chemical compounds: PubChem Compound, PubChem Substance, ChEBI, ChEMBL, PDBeChem, RESID, EuroCarbDB
- Sequence Submission Tools: Sequin, BankIt, ENA, IMGT/HLA, DGVa, SPIN, Metagenomics

**UNIT II****3. Overview/concepts in Sequence Analysis 7**

- Local & Global alignment, DotPlot, Gap Penalties
- Dynamic Programming, Heuristic Methods
- Pairwise Sequence Alignment algorithms: Needleman & Wunsch, Smith & Waterman
- Scoring matrices for Nucleic acids and proteins: PAM/MDM, BLOSUM, CSW

**4. Database Similarity Searches 8**

- BLAST & FASTA

Other Tools: LALIGN, Dotlet

- Multiple Sequence Alignment: ClustalW, ClustalX, PRAS  
Other Tools: DbClustal, Kalign, MAFFT, MUSCLE, MView, T-Coffee
- Motifs, Pattern & Profiles
- Derived Databases: PROSITE, BLOCK, ProDom, Pfam, PRINTS, SBASE

**ADB 108: Python** **Total**  
**Core Course – Theory; 2 Credits** **30L**

## UNIT I

**1. Introduction and Overview of Python** **4**

- Installation and understanding Python Environment
- Introduction to Python variables
- basic Operators, keywords, python blocks

**2. Data types and Program Flow Structures** **6**

- Numeric data types: int, float, complex, string data type and string operations,
- Control Structure: if, else and elif , nested control structures
- Python Loop : for loops in python using ranges, string, list and dictionaries, while loops in python, Controlling loop using pass, continue, break and else

**3. String , Lists, Tuples & Dictionaries** **5**

- String: String operators, String manipulation using in built methods
- Lists: list operations, slicing, list methods, - list comprehension.
- Tuples: definition, assignment, tuple operations.
- Dictionaries: definition, operations and methods

## UNIT II

**4. Functions , Modules & Packages** **4**

- Function: Definition, Function calling, lambda function
- Modules: Introduction to inbuilt Modules, User defined Modules
- Package: Understanding in built package, building own package,

importing package

- 5. File Handling & Exceptional Handling 6**
- File Handling: Opening a file, Read and Write operations, File and Directory related methods
  - Exceptional Handling: try-except-else, Assert, try-finally, Raise, Exception Names & descriptions, User defined exceptions.
- 6. Python Database Interaction 5**
- Python Database interaction, Insertion and retrieval information in database.
  - Reading and storing information on database.

<b>ADB 109:Cell Biology and Biochemistry Lab (C)</b>	<b>Total</b>
<b>(2 Credits, 1 P, 4.00 Hr., Basic Course Practical)</b>	<b>20 P</b>

### Cell Biology Lab

1. Chloroplast isolation from spinach leaves	1
2. Staining of prokaryotic cell organelles: Staining of capsule, spore, cell wall and metachromatic granule	2
3. Study of mitosis with onion root tip chromosomes	2
4. Observation of permanent slides of meiosis	1
5. Isolation of nuclei from rat liver	2
6. To determine Erythrocyte ( <i>RBC</i> ) count of a blood sample	1
7. To determine Leucocytes ( <i>WBC</i> ) count of a blood sample	1
8. Temporary mounting of mitochondria by Janus green B	1

### Biochemistry Lab

9. Preparation of buffers-acetate buffer & Preparation of biochemical reagents (Benedict's reagent)	2
10. Isolation of biomolecules	2
a. Isolation of starch from corn (separation on the basis of density)	
b. Isolation of protein from a suitable source	
c. Extraction of triglycerides from oilseeds (separation on the basis of differential solubility)	
11. Quantitative estimation of Glucose by DNSA method	1
12. Quantitative estimation of Protein by Biuret method and absorption at 280 nm	2
13. Acid value or saponification value. Determination with reference to fatty acids.	2

<b>ADB 110: C Programming and Data Structure Lab (C)</b>	<b>Total</b>
<b>(2 Credits, 1 P, 4.00 Hr., Basic Course Practical)</b>	<b>15 P</b>

**1. Laboratory assignments based on the following topics in ‘C’ programming: 5**

- Data types, operators and expressions, Hierarchy of operators,
- control statements including decision (if, if-else), loops (while, do-while, for), branching statements (switch, break, continue),
- Functions,
- Arrays (1D, 2D- all matrix operations including inverse of a matrix),
- Strings,
- File handling etc.

**10**

**2. Writing C programs for Bioinformatics applications:**

- Extract a protein or nucleic acid sequence from any of the databank files (GenBank entry, Swiss-Prot, EMBL entry etc.)
- Interconverting the sequence from one databank format to the other eg. GenBank format to FASTA format, FASTA to PIR format etc.
- Determining the base composition in a nucleic acid sequence and amino acid composition in a protein sequence.
- Generating the complimentary sequence of a DNA sequence o Pattern search algorithms o Search for a specific oligonucleotide pattern (eg. GAACATCC) in a given DNA sequence.
- Find the position where a specific sequence say “GGTCCCGAC” will hybridize a given DNA sequence.
- Find the restriction enzyme cleavage sites eg. where PVUZ, ECORI etc. will cut the DNA.
- Locate palindromic sequence stretches in a DNA sequence. Count the number of Open Reading frames (ORF’s) in a DNA sequence.
- Calculate the codon usage in a nucleic acid sequence.
- Translate a DNA sequence into protein sequence in the forward and reverse frames.
- Implementation of the Needleman-Wunsch algorithm for pair wise

alignment and testing alignment score with randomized pairs of sequences also.

- Numerical Techniques (4 assignments)
- Basic Formalism, Methods for Solving Equations, Finding Eigen values & Eigenvectors (5 assignments)

<b>ADB 111: Biological Informatics lab (C)</b>	<b>Total</b>
<b>(2 Credits, 1 P, 4.00 Hr., Basic Course Practical)</b>	<b>15 P</b>
1. Exploring the integrated database system at NCBI server and querying the PUBMED and GenBank databases using the ENTREZ search engine.	1
2. Exploring the integrated database system at EBI server and searching the EMBL Nucleotide database using the SRS search engine.	1
3. Exploring & querying SWISSPROT & UniProtKB.	1
4. Exploring and querying the PIR database.	1
5. Exploring tools on ExPASy.	1
6. Exploring utilities in EMBOSS packages.	1
7. Explore Pair-wise global alignments.	1
8. Explore Pair-wise local alignments.	1
9. Database (homology) searches using different versions of BLAST and FASTA interpretation of the results to derive the biologically significant relationships of the query sequences (proteins/DNA) with the database sequences. Exploring other databases: LALIGN, Dotlet	2
10. Multiple sequence alignments: CLUSTALW, Clustal Omega, DbClustal, Kalign, MAFFT, MUSCLE, MView, T-Coffee.	2
11. Exploring Alignment Analysis tools: AMAS, CINEMA, MaxAlign, PhyloGibbs, SVA, PVS.	1
12. Exploring and using the derived databases: PROSITE, PRINTS, BLOCKS, Pfam and Prodom for pattern searching, domain searches etc.	1
13. Studying the format & content of structural databases & visualization of structure using Rasmol, Cn3D and other utilities.	1

<b>ADB 112: DBMS &amp; MongoDB lab (C)</b>	<b>Total</b>
<b>(2 Credits, 1 P, 4.00 Hr., Basic Course Practical)</b>	<b>20 P</b>
<b>1. Part I: ORACLE</b>	<b>2</b>
Assignment based on “Data Definition Language”.	
➤ A set of SQL commands used to create table, modify table structure, drop table, rename table.	
<b>2. Assignment based on “Data Manipulation Language”</b>	<b>2</b>
➤ A set of SQL commands used to change the data within the database.	
➤ Insertion of records in the tables, updating of all or specific set of records in tables.	
➤ Viewing the attributes of table’s column.	
<b>3. Assignment based on “Data Query Language”</b>	<b>2</b>
➤ Different forms of Select statement	
➤ Arithmetic and logical operators.	
➤ Range searching and pattern matching.	
<b>4. Assignment based on defining Constraints.</b>	<b>2</b>
➤ Types: I/O constraints like Primary Key, Foreign key, Null and Unique	
➤ Constraints. Business constraints like check constraints.	
<b>5. Assignment based on using joins.</b>	<b>2</b>
➤ Joining multiple tables, joining a table to it.	
<b>6.</b>	<b>2</b>
➤ Granting rights on user objects such as Tables, Views, and Sequences.	
➤ Revoking rights on user objects such as Tables, Views, and Sequences.	
➤ XAMPP for MySQL	
➤	
<b>7. Part II: MongoDB based practical</b>	<b>8</b>

| ➤ Proc Report                                 |          |
| ➤ Proc Tabulate                               |          |
| ➤ Report Enhancement                          |          |

## UNIT II

- |  |          |
|--|----------|
| <b>11. SAS Macros Language</b>   | <b>1</b> |
| ➤ Purpose of Macro Facility  |          |
| ➤ Program Flow   |          |
| <b>12. Macro Variables introduction to macro variables</b>               | <b>2</b> |
| ➤ Automatic macro variables  |          |
| ➤ Macro variable references  |          |
| ➤ User-defined macro variables   |          |
| ➤ Delimiting macro variable references                                   |          |
| <b>13. Macro Definitions defining and calling a macro</b>                | <b>2</b> |
| ➤ Macro parameters   |          |
| ➤ DATA Step and SQL Interfaces creating macro variables in the DATA step |          |
| <b>14. DATA Step and SQL Interfaces creating macro variables in the</b>  | <b>2</b> |

<b>DATA step</b>	
➤ Indirect references to macro variables	
➤ Creating macro variables in SQL	
<b>15. Macro Programs conditional processing</b>	<b>2</b>
➤ Parameter validation	
➤ Iterative processing	
➤ Global and local symbol tables	
<b>16. SAS SQL – Language</b>	<b>1</b>
➤ Introduction to SAS- SQL	
➤ Basic Queries	
➤ Overview of the SQL procedure	
➤ Specifying columns	
➤ Specifying rows	
<b>17. Types of Joins</b>	<b>1</b>
<b>18. Introduction to Subqueries</b>	<b>2</b>
<b>19. Set Operators</b>	<b>2</b>

<b>ADB 203: JAVA and BioJAVA Programming (C)</b>	<b>Total</b>
<b>Core Course – Theory; 3 Credits</b>	<b>45L</b>

## UNIT I

<b>1. An Introduction to Java</b>	<b>2</b>
A Short History of Java	
➤ Features or buzzwords of Java	
➤ Comparison of Java and C++	
➤ Java Environment	
➤ Simple java program	
➤ Java Tools – jdb, javap, javadoc	
➤ Java IDE – Eclipse/NetBeans (Note: Only for Lab Demonstration)	
<b>2. An Overview of Java</b>	<b>4</b>
➤ Types of Comments	
➤ Data Types	
➤ Final Variable	
➤ Declaring 1D, 2D array	
➤ Accepting input using Command line argument	
➤ Accepting input from console (Using Buffered Reader class)	
<b>3. Objects and Classes</b>	<b>6</b>
➤ Defining Your Own Classes	
➤ Access Specifiers (public, protected, private, default)	
➤ Array of Objects	
➤ Constructor, Overloading Constructors and use of ‘this’ Keyword	
➤ Static block, static Fields and methods	
➤ Predefined class – Object class methods (equals(), toString(), hashCode(), getClass())	
➤ Creating, Accessing and using Packages	
➤ Creating jar file and manifest file	

- Wrapper Classes
- Garbage Collection (finalize() Method)

## UNIT II

### 4. Inheritance and Interface 7

- Inheritance Basics (extends Keyword) and Types of Inheritance
- Superclass, Subclass and use of Super Keyword
- Method Overriding and runtime polymorphism
- Use of final keyword related to method and class
- Use of abstract class and abstract methods
- Defining and Implementing Interfaces
- Runtime polymorphism using interface
- Object Cloning

### 5. Exception Handling 4

Dealing Errors

- Exception class, Checked and Unchecked exception
- Catching exception and exception handling
- Creating user defined exception
- Assertions

## UNIT III

### 6. Strings, Streams and Files 5

- String class and StringBuffer Class
- Formatting string data using format() method
- Using the File class
- Stream classes
- Byte Stream classes
- Character Stream Classes
- Creation of files
- Reading/Writing characters and bytes

- Handling primitive data types
- Random Access files

## 7. **Collection** **6**

Introduction to the Collection framework

- List – ArrayList, LinkedList and Vector, Stack, Queue
- Set - HashSet, TreeSet, and LinkedHashSet
- Map – HashMap, LinkedHashMap, Hashtable and TreeMap
- Interfaces such as Comparator, Iterator, ListIterator, Enumeration

## UNIT IV

## 8. **Database Programming** **6**

- The design of jdbc, jdbc configuration
- Types of drivers
- Create and Execute sql statements, query execution
- The Result Set Object

## 9. **Multithreading** **3**

- What are threads?
- Life cycle of thread
- Running and starting thread using Thread class
- Thread priorities
- Running multiple threads
- The Runnable interface
- Synchronization and interthread communication

## 10. **Networking** **2**

Networking basics – Protocol, Addressing, DNS, URL, Socket, Port

- The java.net package – InetAddress, URL, URLConnection class
- SocketServer and Socket class
- Creating a Socket to a remote host on a port (creating TCP client and server)

➤ Simple Socket Program Example

| <b>3.</b> | <b>Genomics and Comparative genomics Databases:</b>   | <b>6</b> |
|           | ➤ Genome Databases: Genome Sequence DataBase (GSDB), Genome Database (GDB), 1000 Genomes Project , AceDB, FlyBase, UCSC Genome Browser, Wormbase, MaizeGDB, MGI |          |
|           | ➤ Comparative Genomics Databases: COG, VirGen, CORG, HOBACGEN, Homophila, XREFdb, Gramene   |          |
|           | ➤ Genetic Disorders Databases: OMIM, OMIA, Genetic Association  |          |

Database, Genetic Disorder Guide, IGDD, DisGenet, Genetic Disorder UK

- 4. Genomics and Comparative genomics Tools: 6**
- Genome Alignments tools:BLAST2, MUMmer, PipMaker, VISTA
  - Comparison of Gene Order :GeneOrder, Gene Synteny
  - Prediction of genes: ORFs, Prediction of Signal sequences (Promoters, Primers, splice sites, UTRs etc.), Operons
  - Primer Designing Tools: Primer, Primer3, NetPrimer, Primerfinder
  - DNA/RNA Sequence Analysis: CENSOR, Gene Finder, GENEID, GenHunt, GENIE, GRAIL, ORD ID, ORF Finder, ORFGene, Pol3Scan, tRNAscan
  - Translation Tools: Translation Tool, The Protein Machine, 6 Frame Translation Tool, Reverse Translation Tools
  - Restriction Analysis Tools: WEB Cutter, ENZFINDER, TACG

### UNIT III

- 5. Transcriptomics: 6**
- Biology of Transcription
  - Search for transcription factor binding sites
  - RNA Sequencing & Techniques of RNA analysis RNA-Seq, Microarrays, Regulatory RNAs: small or large, Computational prediction of miRNA target genes, RNA Darkmatter
  - Generating Transcriptome expression Data
- 6. Metagenomics: 6**
- Introduction & Study of metagenomics
  - Metagenomics Samples
  - Qualitative and quantitative analysis of metagenome: DGGE, T-RFLP, RT-PCR, NGS
  - Sequence to identification of biodiversity
  - Metagenomics Algorithms (metagenomics data analysis): RAST, IMG/M,

## MEGAN

## UNIT IV

- |   |          |
|---|----------|
| <b>7. Metabolomics:</b>   | <b>5</b> |
| <ul style="list-style-type: none"> <li>➤ Fundamental concept,</li> <li>➤ Tools of metabolomics- Capillary electrophoresis, Gas chromatography, Electrochemical detectors</li> <li>➤ Case studies.</li> </ul>  |          |
| <b>8. Lipidomics:</b>   | <b>2</b> |
| Basic concepts and tools Case studies   |          |
| <b>9. Degradomics:</b>  | <b>3</b> |
| <ul style="list-style-type: none"> <li>➤ Techniques and concepts</li> <li>➤ Approaches to identify the protease and protease-substrate repertoires, or 'degradomes', on an organism-wide scale</li> <li>➤ Uncover new roles for proteases in vivo.</li> <li>➤ Identification of new pharmaceutical targets to treat disease (Emerging degradomic )</li> </ul> |          |

<b>ADB 205: Proteomics (C)</b>	<b>Total</b>
<b>Core Course – Theory; 2 Credits</b>	<b>30L</b>

**UNIT I**

<b>1.</b>	<b>Overview of Proteomics:</b>	<b>7</b>
	➤ Introduction and scope of proteomics	
	➤ Protein separation techniques:	
	○ ion-exchange	
	○ size-exclusion and	
	○ affinity chromatography techniques	
	○ Polyacrylamide gel electrophoresis	
	○ Two dimensional PAGE for proteome analysis; Image analysis of 2D gels	
<b>2.</b>	➤ Determination of Amino acid composition	<b>1</b>
	○ Hydrolysis	
	○ Separation	
	○ Quantitative analysis	
<b>3.</b>	➤ Protein sequencing Methods	<b>1</b>
	○ Sanger's method	
	○ Edman's method	
<b>4.</b>	➤ Protein structure determination methods:	<b>3</b>
	○ X ray crystallography,	
	○ Mass spectrometry	
	○ NMR	
<b>5.</b>	<b>Proteomics tools:</b>	<b>3</b>
	➤ <u>Protein Databases</u>	
	➤ <u>Structural databases: PDB, MMDB, SCOP, CATH.</u>	
	➤ <u>3D structure visualization tools: Rasmol, Pymol, SPDBV, Cn3D</u> (already covered in ADB 106)	
	➤ Secondary structure prediction algorithms: Chou-Fasman, Jpred, Psipred, GOR methods; PHD	

- 3D structure validation databases: PROSA, Ramchandran Plot, Procheck
- Proteomics tools on Expasy

<b>ADB 208:Molecular Modeling&amp; Drug Designing</b>	<b>Total</b>
<b>Advance Course –Theory;3 Credits</b>	<b>45L</b>

**UNIT I**

- |    |  |          |
|----|--|----------|
| 1. | Homology Modeling, fold recognition, and ab-initio structure prediction methods - protocols/algorithms.  | <b>3</b> |
| 2. | General features- bond stretching, angle bending, improper torsions, cross terms, non-bonded interactions, point charges, calculation of atomic charges, polarization, Van Der Waals interactions, hydrogen bond interactions, Water models. | <b>3</b> |
| 3. | Types of force field - all atoms force field, united atom force field, etc.  | <b>2</b> |
| 4. | Molecular Energy minimization methods:steepest descent, conjugate gradient– derivatives, First order steepest decent and conjugate gradients.  | <b>3</b> |

**UNIT II**

- |    |   |          |
|----|---|----------|
| 5. | Second order derivatives Newton-Raphson, Minima, maxima saddle points and convergence criteria.-non derivatives minimization methods, the simplex.                    | <b>3</b> |
| 6. | Molecular Dynamics Simulation:Newtonian dynamics, Periodic boundary conditions and minimum image convention, Potential truncation, Neighbor list, Force calculations. | <b>3</b> |
| 7. | Classical Monte Carlo: Random numbers, Evaluating integrals using random numbers, Importance sampling, Metropolis algorithm.  | <b>3</b> |
| 8. | Analysis of simulated trajectories: Radial distribution functions, Self diffusion coefficient.  | <b>3</b> |

**UNIT III**

- |    |  |           |
|----|--|-----------|
| 9. | <b>Drug discovery and QSAR</b>                                   | <b>11</b> |
|    | ➤ Drug discovery process, role of Bioinformatics in drug design. |           |

- Target identification and validation, lead optimization and validation.
- Structure-based drug design and ligand based drug design.
- Concept of *de novo* design for lead identification.
- Structure Activity Relationship: QSARs and QSPRs, QSAR Methodology, Training data, test data and external validation data, applicability domain in QSAR
- 3D QSAR techniques: CoMFA and CoMSIA.

## UNIT IV

### 10. Pharmacophore and molecular docking 11

- Pharmacophore features, Pharmacophore model, Receptor-based and ligand-based pharmacophore modeling.
- Virtual screening based on pharmacophore model.
- Receptor site, molecular docking study, flexible docking, rigid docking, molecular interactions.
- Scoring functions, correlation between ligand-based and receptor-based studies.

<b>1. SAS based practical</b>	<b>10</b>
<b>2. Data Analysis lab</b>	<b>10</b>
<ul style="list-style-type: none"> <li>➤ Install R from CRAN and setup R studio</li> <li>➤ Write a Program to print list of Student, Marks and Percentage considering <ul style="list-style-type: none"> <li>○ Different data types variables in R using logical, numeric</li> <li>○ integer, complex, character and raw</li> <li>○ Valid/invalid variables declaration</li> <li>○ Variable assignment</li> <li>○ Getting variables in environment</li> <li>○ Class of variables</li> <li>○ Deleting variables</li> <li>○ Vectors declaration</li> <li>○ Different operators demonstration using Arithmetic Operators, Relational Operators, Logical Operators, Assignment Operators, Miscellaneous Operators</li> <li>○ if-else demonstration for negative, positive and zero number test</li> <li>○ Switch case for different operations</li> </ul> </li> <li>➤ Write program to classify odd and even number to demonstrate For, While and Repeat loops with break and next keywords</li> <li>➤ Create a function to calculate Area and circumference of circle/rectangle <ul style="list-style-type: none"> <li>○ calling a function with/without arguments</li> <li>○ calling by argument position and names</li> </ul> </li> <li>➤ Write R program to demonstrate string functions in R , String manipulations in R <ul style="list-style-type: none"> <li>○ Vector declaration</li> <li>○ Accessing vector elements</li> </ul> </li> </ul>	

- Vector manipulations
- Create a list and modify
  - Name elements
  - Access elements
  - Manipulate the list
  - Merging list
  - convert list to vector
- Create a numeric matrix
  - Access elements
  - Matrix computation
  - Demonstration
- Create array name columns, rows, matrix, Access array elements  
matrix computations
- Create a categorical vector and convert it to
  - Factor
  - Factor validations
  - Generating levels
  - Order change
- Create a data frame
  - Get structure and summary
  - Extract data from DF
  - Expand the data frame add column and rows
  - Check packages
  - Install packages
  - Load package
  - Join cols/rows in DF
  - Merge DF
  - Melting and casting
- Read/write files and access from
  - CSV files
  - Binary file
  - Xls file

- Read access and manipulate JSON data
  - Download and load data from website
  - Connect to mysql/oracle DB and access data from table
  - Working with MongoDB/Redis
- Create data records and create
  - Plot Pie chart for Profit sharing among individuals. Percentage plotting , pie chart
  - Plot a bar graph for monthly revenue. Group bar graph/stacked chart
  - Plot a boxplot for match data mpg vs cylinder
  - Create a vector and plot a histogram , Ranged histogram
  - Create a vector and plot line, point both graph
  - Plot scatterplot for mtcars\$wt and mtcars\$mpg
- Create data from Hospital, Patient, and disease use case
  - Calculate mean, median, mode of a distribution for data
  - Demonstration of dnorm, pnorm, qnorm and rnorm
  - Demonstration of multiple regression with mtcars dataset
- Get records and perform below
  - Use case of admission into university
  - Use case for weight calculation
  - Use case for Titanic survival prediction
  - Use case for Car acceptability
  - Use case for Heart disease recognition with caret package

<b>ADB 211: Omics Analysis Lab (C)</b>	<b>Total</b>
<b>Core Course – Theory; 2 Credits</b>	<b>20P</b>
1. Browsing & viewing genome data	<b>1</b>
Ensembl@EBI	
➤ MapViewer@NCBI	
2. Explore comparative genomics resources and NCBI and EBI	<b>1</b>
3. Viewing regions exhibiting Synteny	<b>1</b>
➤ Genome assembly	
➤ Genome Annotation:	
Using integrated genome annotation servers such as the	
server	
developed at IMTech, Chandigarh	
( <a href="http://imtech.res.in/raghava/gp.html">http://imtech.res.in/raghava/gp.html</a> )	
4. Gene Prediction and Gene Modeling	<b>2</b>
➤ Prediction of genes and gene structures (gene modeling)	
using online (web) servers of different methods tailored for	
prokaryotic and eukaryotic organisms such as GLIMMER,	
GeneMark, Grail, GENSCAN etc. Interpretation of results	
and comparison with known gene models (where available).	
Evaluation of accuracy of the methods.	
➤ Prediction of promoters using methods such as Neural	
Network Promoter Prediction (NNPP) at Berkeley	
Drosophila Genome Project server, Genome inspector for	
coADBned analysis of multiple signals in genomes etc.	
Using Promoter databases.	
➤ Prediction of alternate splice sites using methods such as	
Splice Site Prediction by Neural Network (at Berkeley	
Drosophila Genome Project server), GenScan, NetGene2	
GeneSplicer etc. Prediction of PCR primers using Primer 3,	
ePCR etc.	

- |     |   |   |
|-----|---|---|

| 10. | Transcriptomics data analysis   | 1 |
| 11. | Metagenomics Data Analysis  | 1 |
| 12. | Explore and query the protein-protein interaction databases: DIP, PPI Server, BIND, PIM, PathCalling, MINT, GRID, InterPreTS                            | 2 |
| 13. | Gene annotation of unknown sequence   | 1 |
| 14. | Functional Genomics   | 4 |
- Using primary databases (such as UniProt) and derived databases such as InterPro, PRINTS, BLOCKS, PRODOM, Pfam etc. along with advanced sequence analysis tools such as profiles searches, pattern searches for function annotation of genomic sequences.
- Validation and verification of results for known case studies
- Using sequence-based and structure-based Function Annotation Servers such as: ProKnow (<http://www.doe-ADB.ucla.edu/Services/ProKnow/>)
  - Joined Assembly of Function Annotations (JAFA) at <http://jafa.burnham.org/learnMore.html> etc. which are integrated

services for function annotation

- ProFunc (<http://www.ebi.ac.uk/thornton-srv/databases/ProFunc>)

**BHARATI VIDYAPEETH DEEMED UNIVERSITY, PUNE (India)**

**Faculty of Science: Doctor of Philosophy (Ph.D.)**

**Syllabus for Ph.D. Course Work (2017)**

**For subjects under the Faculty of Science**

**(Biotechnology)**

**Course work Details-**

Paper I	Research Methodology	4 credits
Paper II	Recent advances in the Biotechnology	4 credits
Paper III	Review of Literature on the proposed work In the form of presentations- a) Presentation on review of literature - 2 credits b) Presentation on the area of research - 2 credits	4 credits
<b>Total – 12 credits</b> (One credit being equivalent to 15 clock hours)		

**1. QUANTITATIVE METHODS**

**(15)**

**i. Collection of Data:** Introduction, Primary and secondary data, methods of collecting primary data, Drafting or framing the questionnaire, Sources of secondary data, Precautions in the use of secondary data.

**ii. Classification and Tabulation:** Introduction: Organization of data, Classification, Frequency distribution, Basic principles for forming a grouped frequency distribution, Cumulative frequency distribution, Bivariate frequency distribution, Tabulation meaning and importance

**iii. Graphic Representation Of Data:** Introduction, Difference between diagrams and graphs, Diagrammatic representation, Graphic representation of data, Limitations of diagrams and graphs.

**iv. Correlation Analysis:** Introduction, methods of studying correlation, scatter diagram method, Karl Pearson's method of correlation (covariance method), probable error, correlation in bivariate frequency table, rank correlation method, method of concurrent deviations, coefficient of determination, lag and lead correlation.

**v. Linear Regression Analysis:** Introduction, Linear and non linear regression, Lines of Regression, Coefficient of regression, To find the mean value from the two lines of regression, To find the regression coefficients and the correlation coefficient from the two lines of regression, Standard error of an estimate, Regression equations for a bivariate frequency table, Correlation analysis vs Regression analysis

**2. COMPUTER APPLICATIONS**

**(15)**

**i. Computers in research:**

- i. Role of computers in Conceptual phase: role of computers in literature review.
- ii. Role of computers in Design and planning phase: role of computers in sample size calculations.
- iii. Role of computers in Empirical phase: Data storage.
- iv. Role of computers in Analytic phase: Data analysis
- v. Role of computers in Dissemination phase: Research publishing
- vi. References and computer

**ii. Research Methodology and Computer applications:**

Introduction, source of data, experimental technique, methods of data collection measurement of scaling techniques, sampling methods, probability, probability distribution estimation and testing, nonparametric tests, contingency tests, computer applications

**3. Review of Literature relevant field, Research ethics:**

**(15)**

**i. Research ethics:** What is ethics, The development of ethics, The growth of ethics, Ethics in the 21<sup>st</sup> century, Making decisions,.

**ii. Environmental ethics:** Two current themes in environmental ethics.

Three current issues in environmental ethics: Terrestrial and aquatic pollution, Global climate change, Environmental degradation and loss of biodiversity.

**iii. How to write a Thesis**

**a. What is PhD**

**b. Introduction :** Status of a thesis, Get advice, Read before you write, Time table and mile stones, content of a thesis, What belongs into which section, Time: past and present tense, Graphs and figures, Tables, Format, Further information

**c. Writing a thesis:** Structuring the thesis, Sign posting, Code of practice for research, Content Chapters

The Exit strategy, Front matter, back matter and appendices, Notation, glossary and index, Look and feel, tone, grammar and style,

**d.The viva:** Role of the participants, Selecting the examiners,Preparing for viva, On the Day ,Corrections if any

#### **iv.Proposals to various funding agencies**

**a. Developing a grant proposal:** Preparation, Initial proposal development, Developing Ideas for the community support, Identification of a funding resource, Getting organized to write the proposal, Review, Criticism, Signature, Neatness ,Mailing .

**b. Writing the grant proposal :**The Basic components of a proposal, The Proposal summary: Outline of project ,Introduction: Presenting a credible applicant or organization ,The problem statement: stating the purpose at hand ,Project objectives: Goals and desired outcome ,Program methods and program design: A Plan of action, Evaluation: product and process ,Future funding: long-term project ,The proposal budget: planning the budget, Guidelines and literature .

#### **4.Training and field work:**

**(15)**

##### **i.Biosafety:**

a. General principles, b .Biosafety guidelines, c. Basic laboratories – Biosafety Levels 1 and 2

d. The containment laboratory – Biosafety Level 3, e. The maximum containment laboratory – Biosafety Level 4 ,f. Guidelines for laboratory/facility commissioning ,g Guidelines for laboratory/facility certification ,hLaboratory biosecurity,i. Laboratory biosecurity concepts,j. Laboratory equipment

k. Safety equipment ,l Good microbiological techniques ,m. Laboratory techniques ,n. Contingency plans and emergency procedures. Chemical, fire and electrical safety ,p.. Hazardous chemicals ,q. Additional laboratory hazards ,r.Safety organization and training ,s. Safety for support staff, t. Training programmers, u. Safety checklist.

##### **ii.Plagiarism:**

a. Introduction: Forms of plagiarism, Why does plagiarism matter? Why should you avoid plagiarism? What happens if you are thought to have plagiarised? Does this mean that I shouldn't use the work of other authors? Does every statement in my essay have to be backed up with references? Does this only matter in exams?, Unintentional plagiarism, Examples of plagiarism

B .Understand what plagiarism is and why it happens

c. Fully reference and acknowledge the work of others

d. Use your own words and develop your own writing style

e. Organize and structure your work in your own way

f. Don't be afraid to express your own views

g. Managing references in your thesis

h. Use of published work within research degree theses,

I. Penalties for plagiarism

##### **iii. Patent:**

**a .Introduction:**IPR, Governing laws in India for IPR, What is an innovation or invention, The patent system, Novelty and inventiveness, Commercialization of invention, Disclosing an invention, Academic research, Applying for patent, Patent specifications, , Patent Examination, Infringement.

**b.About the patent:** What is a patent, Term of patent, Territorial scope, What is patentable, Patentability searches, Information required for conducting research, Why one should go for patent, Who can apply for patent, What is not patentable invention, Documents required for filling a patent, What is patent specification.

**c.FAQs:**What does a patent application contain: Bibliographic, Background of the invention or state of art, Description of the invention, Claims. What is the Date of priority, What happens to the application after filling ,How does a patent get expired, What is traditional knowledge, What is prior information content, What is Patent cooperation treaty,

## Paper II

### Pre-Ph D Course Structure for Specialized Subject in Biotechnology 2017-2018 Credits : 4 (Module 1-3 = 2 Crs, Module 4 = 2 Crs)

	No of Lectures
<b>Module 1: An Overview of Biotechnology</b>	<b>11</b>
<ul style="list-style-type: none"><li>- History &amp; landmark Discoveries</li><li>- Applications of Biotechnology in agriculture, environment and health</li></ul>	
<b>Module 2: Basics of Genetic Engineering &amp; Tissue Culture</b>	<b>15</b>
<ul style="list-style-type: none"><li>- RNA, DNA, Flow of Genetic information, Gene &amp; its Expression &amp; Regulation</li><li>- An Overview of r-DNA Technology, Vectors and Promoters</li><li>- Plant &amp; Animal Tissue Cultures</li></ul>	
<b>Module 3: Principles &amp; Applications of Tools &amp; Techniques in Biotech Research</b>	<b>17</b>
<ul style="list-style-type: none"><li>- Microscopic Techniques: Electron Microscopy, Confocal &amp; Fluorescence, histology and immunohistochemistry</li><li>- Chromatographic Techniques : GC – MS, LC – MS</li><li>- Molecular Techniques: Types of PCR, Real - Time PCR, Microarray, DNA Sequencing and Bioinformatics</li><li>- Protein Analysis; Western Blotting, ELISA, Mass Spectrometry</li><li>- Nanotechnology; Types of nanomaterials, their classification, properties, overview of synthetic and biological methods, applications</li></ul>	
<b>Module 4: Industrial Biotechnology</b>	<b>17</b>
<ul style="list-style-type: none"><li>- Genetically Modified Organisms in Agriculture, Environment and Health</li><li>- Molecular Diversity &amp; Taxonomy and Bio-prospecting</li><li>- Fermentation Technology - I, Biofuels, Single Cell Protein, secondary metabolites, biofertilizers</li><li>- Bioremediation, Vaccines and therapeutics</li><li>- Applications of biotechnology in food, agriculture, environment and health</li></ul>	

**BHARATI VIDYAPEETH DEEMED UNIVERSITY,**  
**PUNE (India)**

**Faculty of Science: Doctor of Philosophy (Ph.D.)**  
**Syllabus for Ph.D. Course Work in Microbiology (2017)**

**PAPER I: RESEARCH METHODOLOGY**

**For subjects under the Faculty of Science**  
**(Physics, Chemistry, Botany, Zoology, Microbiology ,**  
**Environmental Sciences & Biotechnology)**

**PAPER II: ADVANCES IN MICROBIOLOGY**

BHARATI VIDYAPEETH DEEMED UNIVERSITY, PUNE-38.

Faculty of Science  
Choice Based Credit and Grading System Coursework for Doctor of Philosophy (Ph.D.)  
(To be implemented from June, 2017)  
Course Structure in MICROBIOLOGY

Paper-I:	Research Methodology	04 Credits
Paper-II:	Recent Advances in MICROBIOLOGY	04 Credits
Paper-III:	Review Writing and Oral Presentations	
	Part A: Review Writing (02 Credits)	
	Part B: Oral Presentations (02 Credits)	
		04 Credits
		-----
		Total: 12 Credits

**Rules & Regulations:**

1. The duration of the coursework will be of one semester.
2. There will be a written examination for Paper-I and II at the end of the semester.
3. Each paper will contains 5 questions carrying 20 marks each and questions may have internal options.
4. A researcher should secure minimum 50% marks in each paper to qualify for the further research.
5. Part-A of Paper-III will be supervised by respective guide and Part-B will be coordinated by the Head of the Institution.

Syllabus for Ph.D. Course Work (2017)

For subjects under the Faculty of Science

(Physics, Chemistry, Botany, Zoology, Microbiology, Environmental Sciences & Biotechnology)

**Paper I: RESEARCH METHODOLOGY**

Credits 4

Total No. of Lectures (60)

**1. QUANTITATIVE METHODS (15)**

i. **Collection of Data:** Introduction, Primary and secondary data, methods of collecting primary data, Drawing or framing the questionnaire, Sources of secondary data, Precautions in the use of secondary data.

ii. **Classification and Tabulation:** Introduction: Organization of data, Classification, Frequency distribution, Basic principles for forming a grouped frequency distribution, Cumulative frequency distribution, Bivariate frequency distribution, Tabulation meaning and importance

iii. **Graphic Representation of Data:** Introduction, Difference between diagrams and graphs, Diagrammatic representation, Graphic representation of data, Limitations of diagrams and graphs.

iv. **Correlation Analysis:** Introduction, methods of studying correlation, scatter diagram method, Karl Pearson's method of correlation (covariance method), probable error, correlation in bivariate frequency table, rank correlation method, method of concurrent deviations, coefficient of determination, lag and lead correlation.

v. **Linear Regression Analysis:** Introduction, Linear and non linear regression, Lines of Regression, Coefficient of regression, To find the mean value from the two lines of regression, To find the regression coefficients and the correlation coefficient from the two lines of regression, Standard error of an estimate, Regression equations for a bivariate frequency table, Correlation analysis vs Regression analysis

**2. COMPUTER APPLICATIONS**

(15)

**i. Computers in research:**

- i. Role of computers in Conceptual phase: role of computers in literature review.
- ii. Role of computers in Design and planning phase: role of computers in sample size calculations.
- iii. Role of computers in Empirical phase: Data storage.
- iv. Role of computers in Analytical phase: Data analysis
- v. Role of computers in Dissemination phase: Research publishing
- vi. References and computer

**ii. Research Methodology and Computer applications:**

Introduction, source of data, experimental technique, methods of data collection, measurement of scaling techniques, sampling methods, probability, probability distribution, estimation and testing, nonparametric tests, contingency tests, computer applications

**3. Review of Literature relevant field, Research ethics:**

(15)

i. **Research ethics:** What is ethics, The development of ethics, The growth of ethics, Ethics in the 21<sup>st</sup> century, Making decisions.

ii. **Environmental ethics:** Two current themes in environmental ethics.

Three current issues in environmental ethics: Terrestrial and aquatic pollution, Global climate change, Environmental degradation and loss of biodiversity.

### iii. How to write a Thesis

#### a. What is PhD

b. Introduction: Status of a thesis, Get advice, Read before you write, Time table and mile stones, content of a thesis, What belongs into which section, Time: past and present tense, Graphs and figures, Tables, Format, Further information

c. Writing a thesis: Structuring the thesis, Signposting, Code of practice for research, Content Chapters The Exit strategy, Front matter, back matter and appendices, Notation, glossary and index, Look and feel, tone, grammar and style,

d. The viva: Role of the participants, Selecting the examiners, Preparing for viva, On the Day, Corrections if any

#### iv. Proposals to various funding agencies

a. Developing a grant proposal: Preparation, Initial proposal development, Developing Ideas for the community support, Identification of a funding resource, Getting organized to write the proposal, Review, Criticism, Signature, Neatness, Mailing.

b. Writing the grant proposal: The Basic components of a proposal, The Proposal summary: Outline of project, Introduction: Presenting a credible applicant or organization, The problem statement: stating the purpose at hand, Project objectives: Goals and desired outcome, Program methods and program design: A Plan of action, Evaluation: product and process, Future funding: long-term project, The proposal budget: planning the budget, Guidelines and literature.

#### 4. Training and field work:

(15)

##### i. Biosafety:

a. General principles, b. Biosafety guidelines, c. Basic laboratories – Biosafety Levels 1 and 2  
d. The containment laboratory – Biosafety Level 3, e. The maximum containment laboratory – Biosafety Level 4, f. Guidelines for laboratory/facility commissioning, g. Guidelines for laboratory/facility certification, h. Laboratory biosecurity, i. Laboratory biosecurity concepts, j. Laboratory equipment  
k. Safety equipment, l. Good microbiological techniques, m. Laboratory techniques, n. Contingency plans and emergency procedures. Chemical, fire and electrical safety, p. Hazardous chemicals, q. Additional laboratory hazards, r. Safety organization and training, s. Safety for support staff, t. Training programmers, u. Safety checklist.

##### ii. Plagiarism:

a. Introduction: Forms of plagiarism, Why does plagiarism matter? Why should you avoid plagiarism? What happens if you are thought to have plagiarised? Does this mean that I shouldn't use the work of other authors? Does every statement in my essay have to be backed up with references?

Does this only matter in exams?, Unintentional plagiarism, Examples of plagiarism

B. Understand what plagiarism is and why it happens

c. Fully reference and acknowledge the work of others

d. Use your own words and develop your own writing style

e. Organize and structure your work in your own way

f. Don't be afraid to express your own views

g. Managing references in your thesis

h. Use of published work within research degree theses,

i. Penalties for plagiarism

### iii. Patent:

a. **Introduction:** IPR, Governing laws in India for IPR, What is an innovation or invention, The patent system, Novelty and inventiveness, Commercialization of invention, Disclosing an invention, Academic research, Applying for patent, Patent specifications, Patent Examination, Infringement.

b. **About the patent:** What is a patent, Term of patent, Territorial scope, What is patentable, Patentability searches, Information required for conducting research, Why one should go for patent, Who can apply for patent, What is not patentable invention, Documents required for filing a patent, What is patent specification.

c. **FAQs:** What does a patent application contain: Bibliographic, Background of the invention or state of art, Description of the invention, Claims. What is the Date of priority, What happens to the application after filing, How does a patent get expired, What is traditional knowledge, What is prior information content, What is Patent cooperation treaty,

### BOOKS RECOMMENDED

1. Anekwe, T.D. 2010. Protests and plagiarism: The case of medical ghostwriting. *Bioethics* 24(6): 267-272.
2. Baždarić, K., L. Bilić-Zulle, G. Brumini, and M. Petrovečki. 2012. Prevalence of plagiarism in recent submissions to the Croatian Medical Journal. *Science and Engineering Ethics* 18: 223-239.
3. Brogan, M. 1992. Recycling ideas. *College and Research Libraries* 52(5): 453-464.
4. Bruton, S.V. 2014. Self-plagiarism and textual recycling: Legitimate forms of research misconduct. *Accountability in Research: Policies and Quality Assurance* 21(3): 176-197.
5. Butler, D. 2010. Journals step up plagiarism policing. *Nature* 466(7303): 167.
6. Chandrasoma, R., C. Thompson, and A. Pennycook. 2004. Beyond plagiarism: Transgressive and nontransgressive intertextuality. *Journal of Language, Identity and Education* 3(3): 171-193.
7. Couzin-Frankel, J., and J. Grom. 2009. Plagiarism sleuths. *Science* 324(5930): 1004-1007.
8. DeVoss, D., and A.C. Rosati. 2002. "It wasn't me, was it?" Plagiarism and the web. *Computers and Composition* 19: 191-203.
9. Gupta, S.C. (2013) *Fundamentals of statistics*. Himalaya Publishing House
10. Khan, B.A. 2011. Plagiarism: An academic threat. *International Journal of Pharmaceutical Investigation* 1(4): 255.
11. Kothari, C.R. *Research Methodology and Techniques*, 2nd edition
12. Mahajan, B.K. *Methods in Biostatistics: For Medical students and Research workers*. 6th edition
13. Pecorari, D. 2012. Textual plagiarism: How should it be regarded? *Office of Research Integrity Newsletter* 20(3): 3,10.
14. Rathod, S.D. 2012. Plagiarism: the human solution. *Office of Research Integrity Newsletter* 20(3): 1,7.
15. Roig, M. 2006. Avoiding plagiarism, self-plagiarism, and other questionable writing practices: A guide to ethical writing. *Office of Research Integrity* 2006.
16. Samuelson, P. 1994. Self-plagiarism or fair use. *Communications of the ACM* 37(8): 21-
17. Sox, H. C. 2012. Plagiarism in the digital age. *Office of Research Integrity Newsletter* 20(3): 1,6.
18. Sun, Y.C. 2012. Does text readability matter? A study of paraphrasing and plagiarism in English as a foreign language writing context. *The Asia-Pacific Education Researcher* 21(2): 296

19. Sunder Rao P.S.S, J.Richard. *Introduction to Biostatistics and Research Methodology*, 4th edition  
20. Wise, C.L., and G.A. Poland. 2012. Plagiarism, self-plagiarism, scientific misconduct and  
VACCINE: Protecting the science and the public. *Vaccine* 30(50): 7131-7133. doi: Wager, L. 2011.  
21. How should editors respond to plagiarism? COPE discussion paper. 26th April, 2011  
22. World Health Organization, *Laboratory biosafety manual*. – 3rd ed, Wiley Int  
23. Yilmaz, I. 2007. Plagiarism? No, we're just borrowing better English. *Nature* 449(7163): 658.  
24. Zhang, Y. 2010. Chinese journal finds 31% of submissions plagiarized. *Nature* 467(7312): 153.
- =====

**BHARATI VIDYAPEETH DEEMED UNIVERSITY, PUNE (India)**

Faculty of Science :Doctor of Philosophy (Ph.D.)  
Syllabus for Ph.D. Course Work (2017) in Microbiology

**Paper II- RECENT ADVANCES IN MICROBIOLOGY**

credits 4

Total No. of Lectures (60)

**1. MICROSCOPY**

(05)

Differential interference contrast microscopy, Confocal microscopy,  
Scanning acoustic microscopy, Scanning tunneling microscopy,  
Atomic force microscopy

**2. ANALYTICAL TOOLS :**

(46)

**i. Radioisotopic Techniques:**

(04)

Radioactivity, Detection and measurement of radioactivity, Geiger Muller Counter,  
Scintillation Counter, Tracer Studies, Applications of radioisotopes in biological sciences

**ii. Centrifugation Techniques :**

(04)

Separation methods in preparative ultracentrifuges, Performing density gradient  
separations, Analysis of sub-cellular fractions, some applications of the analytical  
ultracentrifuge

**iii. Chromatographic Techniques:**

(04)

High performance liquid chromatography, Ion-exchange chromatography, Affinity  
chromatography, Gas-liquid chromatography, Thin-layer (Planar) chromatography,  
Selection of a chromatography system, Calculations

**iv. Electrophoretic Techniques:**

(04)

Electrophoresis of Proteins, Electrophoresis of nucleic acids, Capillary Electrophoresis

**v. Spectrophotometric Techniques:**

(04)

Ultraviolet and visible light spectrophotometer, Atomic spectrophotometer, NMR,  
Fluorimetry, Spectrofluorimetry, GCMS, Luminometry, Mass spectrophotometer

**vi. Genetic Methods:**

(04)

G+C %, Tm Value, DNA - DNA homology, DNA - RNA Homology, 16S RNA sequencing

**vii. Sequencing and mutagenesis:**

(04)

Basic DNA sequencing, Whole genome sequencing, Analyzing sequence data,  
Changing genes, site directed mutagenesis

**viii. Blotting techniques**

(04)

**ix. Tools and techniques ,**

(06)

PCR, LCR, RAPD, HGP, RFLP, STRP, AFLP, Genomics, Proteomics, Metagenomics,  
Metabolomics, Protein Engineering.

**x. Immunological Techniques:**

(04)

FAT, ELISA, Autoradiography, Radioimmunoassay, Rocket Electrophoresis, Techniques  
based on Agglutination and precipitation reactions.

**xi. Techniques of measurement of cell number and cell growth.**

(04)

Microbial, Plant and Animals-dead and living. Flow Cytometry.AFM.

(05)

### 3. SUSCEPTIBILITY TESTING:

- i Use of liquid and solid media, Factors affecting susceptibility testing, CLSI guidelines.
- ii Dilution methods – agar dilution technique, gradient plate techniques, E-test, Kirby Bauer method, Stokes method.
- iii Susceptibility testing for: Anti-mycobacterial agents, Anti-fungal agents, Anti-protozoal agents, Anti-viral agents

(04)

### 4 INTERPRETATION OF DATA OF ANALYTICAL TOOLS:

#### BOOKS RECOMMENDED

1. Alberts. B.; Johnson. A, Lewis J. Ra , M. Roberts. K. and P. Walter (2002) *Molecular Biology of the cell* 4<sup>th</sup> Edition. Garland Science, Taylor & Francis Group.
2. Bergey's Manual of Systematic bacteriology (2<sup>nd</sup> Ed.), Volume, 1 to 5, Springer.
3. Boyer. R. (2000) *Modern Experimental Biochemistry*. 3<sup>rd</sup> Edition. Pearson Education Asia.
4. Cruse J and R. Lewis (2004) *Atlas of Immunology* 2<sup>nd</sup> Edn. CRC Press
5. David Male, Jonathan Brostoff, David B Rivani Roi (2006). *Immunology* 7<sup>th</sup> edition.
6. Frank H. Stephenson (2003) *Calculations for Molecular Biology and Biotechnology. A guide to Mathematics in the laboratory* Academic Press an imprint of Elsevier.
7. Freshney R.I. (2000) *Culture of Animal cells. A Manual of Basic Technique*. 4<sup>th</sup> Edn. Publ: Wiley – Liss:
8. Goldsby R.A. Kindt T.S. and B.A. Osborne Kuby (2000) *Immunology* Fourth Edition W.H. Freeman & Co New York
9. Irwin H. Segel (1976) *Biochemical Calculations* 2<sup>nd</sup> Edition John Wiley & Sons.
10. Lewin B. (2004) *Genes VIII – International Edition*. Pearson. Prentice Hall. Pearson Education International.
11. Lewin. B. (2000) *Genes VII*. Oxford University Press.
12. Pierce.B.A, (2005) *Genetics A Conceptual Approach* 2<sup>nd</sup> Edition W.H.Freeman and Company, New York
13. Primrose. S.B. and R.M. Twyman and R.W. Old (2003). *Principles of Gene Manipulation*. 6<sup>th</sup> Edn. Blackwell Science.
14. Purohit S.S. (2004) *Plant tissue culture* Published by Student Edition, Jodhpur.
15. Ranga M.M. (2002) *Animal Biotechnology – 2<sup>nd</sup> Edn*. Publ: Agrobios India, Jodhpur.
16. Reed, R; Homes, D; Weyers, J. and A. Jones. (1998) *Practical skills in Biomelecular Sciences*. Addison Wesley Longman Limited.
17. Sambrook J and D.W. Russel (2001) *Molecular Cloning. A Laboratory Manual* 3<sup>rd</sup> Edition Vol.1,2,3 Cold Spring Laboratory Press.
18. Sambrook J, E.F.Fritsch and T. Maniatis, (1989) *Molecular Cloning. A Laboratory Manual* 2<sup>nd</sup> Edition Vol.1,2,3 Cold Spring Laboratory Press.
19. Simpson R.J. (2004) *Purifying Proteins for Proteomics. A laboratory Manual*. Cold spring Harbor laboratory press.

Bharati Vidyapeeth  
(Deemed to be University)  
Social Science Centre(M.S.W)  
Erandwane, Pune - 411 038.

66

MSW Regular (CBCS 2019-20 pattern)  
AE-1: CORPORATE SOCIAL RESPONSIBILITY

**Section – I**

**Unit – I: Introduction**

- Concept, meaning and definitions of CSR
- Objectives and Scope of CSR
- Development of CSR
- Functions of CSR
- Scope for Social Work in CSR Activities

**Unit – II: Fields of Corporate Social Responsibility**

- Education
- Health and Sanitation
- Gender Empowerment
- Infrastructure development
- Rural Development
- Environment

**Unit – III: Essentials of Corporate Social Responsibility**

- Identifying Priorities of the Community
- Community Investment and Employee Volunteering
- Partnership and Stakeholder Dialogue
- Managing CSR Along with Supply Chains

**Section – II**

**Unit – IV: Aspects of Corporate Social Responsibility**

- Social Aspects
- Economical Aspects
- Environment Aspects
- Role of Social Worker in CSR activities

**Unit – V: Corporate Social Responsibility Policy and Programmes**

- Policies and Programmes of CSR
- CSR programmes for employees
- Networking with Stakeholders

**Unit – VI: Corporate Social Responsibility Strategic Planning and Management**

- Non-financial Risk Assessment and Management
- Aligning CSR Strategies with Financial Performance
- CSR Investment for Poverty Alleviation
- Long Term Development and Commitment

## **AE-2: ENVIRONMENTAL ISSUES AND DISASTER MANAGEMENT**

### **Section – I**

#### **Unit – I: Introduction**

- Concept and Definitions of Environment
- Physical, Social and Communal Environment
- Environment Education; need and objectives
- Global Environmental Issues

#### **Unit – II: Approaches and Models of Environment Education**

- Service approach and Action approach
- Sustainable development approach
- Interdisciplinary model and Multi – disciplinary model
- Social Development model and Economic development model

#### **Unit – III: Concepts in Disaster Management**

- Disasters, Risks, Hazards, Vulnerability, Disaster Cycle
- Relief and Rehabilitation in Disaster, Logistic Management
- Disaster preparedness and disaster mitigation
- Initiatives in disaster management

### **Section – II**

#### **Unit – IV: Classification of Disasters**

- Meaning of Natural and Human made disasters.
- Types of disasters: Famine and drought, Floods, Cyclone, Storms, Tsunami, Earthquakes, Riots, Industrial Accidents, Road-Air-Rail Accidents, Bomb-blast and explosions, War, Avalanches and landslides.

#### **Unit – V: Disaster Responses and Mitigation:**

- Prevention and preparedness – Disaster response at various stages of disasters: evacuation and rescue; emergency supplies; early warning systems and vulnerability reduction; disaster financing; provisions and procedures.
- Aid administration and management
- Technological options for disaster response and preparedness

#### **Unit – VI: Relief and Rehabilitation**

- Relief – Damage and needs assessment.
- Rehabilitation and Recovery - Planning for rehabilitation and recovery, displacement and resettlement.
- Community Participation and capacity building for facing disasters
- Disaster Management Act, 2005.

## SE-1: SOCIAL WORK AND SKILL DEVELOPMENT

### Section – I

#### Unit – I: Self Awareness and Development

- Self-concept and Factors affecting Self-concept
- Concept and meaning of Self-Development
- Significance of Self Development for Social Workers

#### Unit – II: Sensitivity

- Meaning of Sensitivity
- Gender Sensitivity
- Sensitivity regarding Special- Needs

#### Unit – III: Perception

- Understanding Perception
- Distortions in Perception
- Understanding Stereotypes

### Section – II

#### Unit – IV: Communication

- Concept of Communication
- Communication Process
- Barriers in Communication
- Use of Audio-Visual Media

#### Unit – V: Skills for Social Work Methods

- Skills for working with Individuals
- Skills for working with Groups
- Simulation Games
- Role Play and Street Plays

#### Unit – VI: Career and Work

- Models of career choice and development: Holland and Super
- Work life balance: Work holism, family roles, recreation

69

## SE-2 : MEDIA AND DEVELOPMENT

### Section – I

#### Unit – I: Understanding Media

- Concept and meaning of Media
- Scope of media in development
- Role of Media in a Democracy
- 

#### Unit – II: Types of Media:

- Print Media
- Electronic media
- Folk and cultural media
- Challenges for media

#### Unit – III: Media and Development – I

- Role of Press in Social & Political Movements
- Freedom of Press
- Role of Press Council of India

### Section – II

#### Unit – IV: Media and Development – II

- Representation of Different Groups- Stereotyping and Labelling in Media
- Content of Newspaper: News Stories, Features, Articles, Editorial, Advertorial, Advertisements & Public Relations

#### Unit – V: Media and Society

- Understanding the Role of Media in Development
- Writing on Development Issues
- Media as Public Service
- Media and Civil Society

#### Unit – VI: Advertising

- Role of Advertising in Marketing
- Types of Advertisements
- Ethics in Advertising

70

## HRM&LW – 6: BUSINESS COMMUNICATION AND PRESENTATION SKILLS

### Section – I

#### Unit – I: Concept and Nature of Communication

- Process and Objectives of Communication.
- Barriers to Communication.
- Seven Cs of effective communication

#### Unit – II: Verbal and Non-Verbal Communication

- Meaning of Verbal and Non-Verbal Communication
- Essentials of effective communication,
- Professional dressing and body language.

#### Unit – III: Types of Speeches

- Managerial speeches
- Presentations and Extempore speech
- Speech of thanks,
- Theme speech.

### Section – II

#### Unit – IV: Effective Presentations:

- Organising Presentation
- Principles of Effective Presentations,
- Qualities of skillful Presenter

#### Unit – V: Interview Skills:

- Mastering the art of giving interviews in:
  - Selection or placement interviews,
  - Appraisal interviews,
  - Exit interviews,
  - Web /video conferencing,
  - Skype Interview
  - Tele-meeting

#### Unit – VI: Report Writing:

- Report Planning and outline,
- Types of reports
- Logical Sequencing, Graphs and Charts,
- Executive Summary

71

## CC-12: COMMUNITY HEALTH AND HEALTH CARE SYSTEM

### Section – I

#### Unit – I: Community Health

- Concept and definitions of Health, Standards of Health ,
- Individual and community health
- Factors Affecting Health
- Concept of Diseases, Classification of diseases ,Mode of Transmission of Diseases

#### Unit – II: Public Health and Health Care Services

- History of Public Health in India
- Public Health Programmes in India- Village , Block, District Levels
- Health Policy and Administration

#### Unit – III: Government Initiatives in Public Health

- National Urban Health Mission-Objectives, Structure, Services
- National Rural Health Mission- Objectives, Structure, Services
- Issues in Public Health services

### Section – II

#### Unit – IV: Prevention and Control of Diseases

- Concept of Control and Prevention of diseases
- Prevention and Control of : Communicable Diseases, -
- Measles ii) Mumps iii) Polio iv) Chicken Pox v) Rubella vi) Tetanus vii) Whooping cough viii) Diphtheria
- Levels of Prevention : Primary level, Secondary level & Tertiary level

#### Unit – V: Malnutrition

- Concept and Definition of Malnutrition
- Social aspects of Nutrition
- Diseases and Conditions related to Malnutrition
- Vitamin deficiency, Anemia, Iodine deficiency

#### Unit –VI: Community Health Care and Social Work

- Health Education and Counseling
- Application of Social Work Methods in Health Care
- Role of Social Worker in Community Health Care Programme

## URCD 10 SUSTAINABLE DEVELOPMENT

### Unit 1: Sustainable and Inclusive Development – Genesis and Definition

- Definition and concept of Human Development, Sustainable and Inclusive Development
- Approaches of Sustainable Development
- Genesis of Sustainable and Inclusive Development

### Unit 2: Mechanisms for Sustainable and Inclusive Development

- Mechanisms in Indian context (government, non-government, CSR, International Development Agencies)
- Planning Process of SD : five year plan to NITI Aayog
- Current schemes and Programmes of S & I D
- Impact of Schemes and Programmes

### Unit 3: Social Implications of Inclusive Development

- Inclusive Development and social Integration
- Inclusive Development and upliftment of weaker sections
- Inclusive Development and Women Empowerment

## Section II

### Unit 4: Sustainable development Goals and Indicators (I)

GOAL 1: No Poverty

GOAL 2: Zero Hunger

GOAL 3: Good Health and Well-being

GOAL 4: Quality Education

GOAL 5: Gender Equality

GOAL 6: Clean Water and Sanitation

### Unit 5: Sustainable development Goals and Indicators (II)

GOAL 7: Affordable and Clean Energy

GOAL 8: Decent Work and Economic Growth

GOAL 9: Industry, Innovation and Infrastructure

GOAL 10: Reduced Inequality

GOAL 11: Sustainable Cities and Communities

GOAL 12: Responsible Consumption and Production

### Unit 5: Sustainable development Goals and Indicators (III)

GOAL 13: Climate Action

GOAL 14: Life Below Water

GOAL 15: Life on Land

GOAL 16: Peace and Justice Strong Institutions

GOAL 17: Partnerships to achieve the Goal

**BHARATI VIDYAPEETH (DEEMED TO BE) UNIVERSITY, PUNE**

**Syllabus for**  
**MASTER OF SCIENCE**  
**M.Sc. in ENVIRONMENT SCIENCE AND TECHNOLOGY**  
Under  
**FACULTY OF SCIENCE**

**Course Structure and Detailed Syllabus**  
**Semester I, II, III and IV**  
**(UNDER CHOICE BASED CREDIT SYSTEM)**  
**Effective from the Academic Year 2019-2020**

**SEMESTER WISE COURSE INFORMATION**

**Semester I**

Course Number	Course Title	Credit Value	Hours per week	Weightage (UE)	Weightage (IA)	EoTM
	<b>Core Courses</b>					
EST 101	Ecosystem Studies	3	3	60	40	University
EST 102	Environmental Chemistry and Microbiology	3	3	60	40	University
GEO 102	Fundamentals of Geoinformatics	3	3	60	40	University
EST 103	Sustainable development	3	3	60	40	University
EST 111	Field techniques - I	2	3	60	40	University
EST 112	Lab Analytical techniques - I	2	3	60	40	University
GEO 112	Techniques in Geographical Information Systems	2	3	60	40	University
	<b>Pre-requisites</b>					
EST 104	Basic Statistical Methods	3	3		100	Continuous
EST 105	Introduction to Data Analysis	3	3		100	Continuous
	<b>Total Credits / Hours</b>	<b>22</b>	<b>27</b>			

From the core courses:

Course Nos EST 101, EST 102, Geo 102, EST 103 are theory courses

Course Nos EST 111, EST 112, GEO 112 are practical courses

**Total credits offered in Semester I : 22**

### Semester II

Course Number	Course Title	Credit Value	Hours per week	Weightage (UE)	Weightage (IA)	EoTM
	<b>Core Courses</b>					
EST 201	Biodiversity Assessment and Conservation	3	3	60	40	University

EST 202	Engineered Systems for Water and Waste Water	3	3	60	40	University
EST 203	Solid and Hazardous Waste Management	3	3	60	40	University
EST 204	Air and Noise Pollution Management	3	3	60	40	University
EST 205	Research Methodology	2	3		100	Continuous
EST 211	Field Techniques - II	2	3	60	40	University
EST 212	Lab Analytical techniques - II	2	3	60	40	University
<b>EST 213</b>	<b>Field Work</b>	<b>2</b>	<b>60</b> <b>(cumulative)</b>		<b>100</b>	<b>Continuous</b>
	<b>Electives ( any two)</b>					
EST 206	Natural Resource Management	3	3		100	Continuous
EST 207	Environment and Health	3	3		100	Continuous
EST 208	Climate Change Science and Strategies	3	3		100	Continuous
EST 209	Data Analysis with R	3	3		100	Continuous
EST 210	Instrumentation and Lab Management for environmental analysis	3	3		100	Continuous
EST 211	Environmental biotechnology	3	3		100	Continuous
	<b>General Courses (any one)</b>					
<b>GEN 201</b>	<b>General English</b>	<b>2</b>	<b>2</b>		<b>50</b>	<b>Continuous</b>
<b>GEN 202</b>	<b>Project Management</b>	<b>2</b>	<b>2</b>		<b>50</b>	<b>Continuous</b>
	<b>Total</b>	<b>28</b>	<b>32</b>			

From the core courses:

Course Nos EST 201, EST 202, EST 203, EST 204 and EST 205 are theory courses

Course Nos EST 211, EST 212, EST 213 are practical courses

**Total Credits offered in Semester II : 28**

### Semester III

Course Number	Course Title	Credit Value	No. of hours per week	Weightage		EoTM
				UE	IE	
	<b>Core Courses</b>					
EST 301	Integrated Impact Assessment	3	3	60	40	University
EST 302	Environmental Policies and Law	3	3	60	40	University
EST 311	Dissertation	12	14	60	40	University
<b>EST 303</b>	<b>Technical Writing</b>	<b>2</b>	<b>3</b>		<b>100</b>	<b>Continuous</b>
	<b>Electives ( any three)</b>					
EST 304	Environment Management Techniques	3	3		100	Continuous
EST 305	Water Management	3	3		100	Continuous
GEO 303	Applications of geospatial technologies	3	3		100	Continuous
EST 306	Urban Environment Management	3	3		100	Continuous
EST 307	Advanced Pollution Control Technology	3	3		100	Continuous
	<b>General Courses (any one)</b>					
GEN 301	Swaach Bharat Abhiyan Internship	2	2		50	Continuous
GEN 302	Education for Sustainable Development	2	2		50	Continuous
	<b>Total</b>	<b>31</b>	<b>34</b>			

*From the core courses:*

*Course Nos EST 301, EST 302, EST 303 are theory courses*

*Course Nos EST 311 is dissertation.*

**Total Credits offered in Semester III : 31**

### Semester IV

Course Number	Course Title	Credit Value	Hours per week	Weightage	Weightage	EoTM
				UE	IA	
	<b>Core Courses</b>					
EST 411	Dissertation	12	14	60	40	University
	<b>Electives ( any four)</b>					
EST 401	Ecorestoration	3	3		100	Continuous
EST 402	Corporate Social Responsibility and Sustainability	3	3		100	Continuous
EST 403	Certification for ISO 14001	3	3		100	Continuous
EST 404	Urban Sustainability	3	3		100	Continuous
EST 405	Industrial Safety and Occupational Health (certifications)	3	3		100	Continuous
EST 406	Green technology and Management	3	3		100	Continuous
EST 407	Green Buildings	3	3		100	Continuous
	<b>General Courses (any one)</b>					Continuous
GEN 401	Entrepreneurship Development	2	2		50	Continuous
GEN 402	Soft Skills	2	2		50	Continuous
	<b>Total</b>	<b>26</b>	<b>28</b>			

From the core courses:

Course Nos EST 411 is dissertation.

**Total Credits offered in Semester IV : 30**

**BHARATI VIDYAPEETH (DEEMED TO BE) UNIVERSITY, PUNE**

**Syllabus for**  
**MASTER OF SCIENCE**  
**M.Sc. in GEOINFORMATICS**  
Under  
**FACULTY OF INTERDISCIPLINARY STUDIES**

**Course Structure and Detailed Syllabus**

**(UNDER CHOICE BASED CREDIT SYSTEM)**

**Effective from the Academic Year 2019-2020**

## SEMESTER WISE COURSE INFORMATION

## Semester I

Course Number	Course Title	Credit Value	Hours per week	Weightage UE	Weightage IA	EoTM
	<b>Core Courses</b>					
GEO101	Fundamentals of remote sensing	3	3	60	40	University
GEO 102	Fundamentals of Geoinformatics	3	3	60	40	University
GEO 103	Fundamentals of programming	3	3	60	40	University
EST 101	Ecosystem Studies	3	3	60	40	University
EST 306	Urban Environment Management	3	3	60	40	University
EST 111	Field techniques –I	2	3	60	40	University
GEO 111	Techniques in image interpretation and remote sensing	2	3	60	40	University
GEO 112	Techniques in Geographical Information Systems	2	3	60	40	University
	<b>Pre-requisites</b>					
EST 104	Basic Statistical Methods	3	3		100	Continuous
EST 105	Introduction to Data Analysis	3	3		100	Continuous
	<b>Total</b>	<b>27</b>	<b>30</b>			

*From the core courses:*

*Course Nos GEO 101, GEO 102, Geo 103, EST 101, EST 306 are theory courses*

*Course Nos EST 111, GEO 111, GEO 112 are practical courses*

**Total credits offered in Semester I : 27**

## Semester II

Course Number	Course Title	Credit Value	Hours per week	Weightage UE	Weightage IA	EoTM
	<b>Core Courses</b>					
GEO 201	Geodatabase Management	3	3	60	40	University
GEO 202	Advanced Remote Sensing	3	3	60	40	University
GEO 203	Digital Image Processing	3	3	60	40	University
GEO 204	WebGIS	3	3	60	40	University
GEO 205	Research Methodology	2	2		100	Continuous
GEO 211	Techniques in database management	2	3	60	40	University
EST 212	Techniques in digital image processing	2	3	60	40	University
GEO 213	Programming for GIS-I	2	3	60	40	University
<b>GEO 214</b>	<b>Field Work</b>	<b>2</b>	<b>60</b> <b>(cumulative)</b>		<b>100</b>	<b>Continuous</b>
	<b>Electives ( any two)</b>					
EST 201	Biodiversity assessment and conservation	3	3		100	Continuous
Est 206	Natural resource management	3	3		100	Continuous
EST 207	Health GIS	3	3		100	Continuous
EST 208	Climate change science and strategies	3	3		100	Continuous
EST 209	Data Analysis with R	3	3		100	Continuous
	<b>General Courses (any</b>					

	<b>one)</b>					
<b>GEN 201</b>	<b>General English</b>	<b>2</b>	<b>2</b>		<b>100</b>	<b>Continuous</b>
<b>GEN 202</b>	<b>Project Management</b>	<b>2</b>	<b>2</b>		<b>100</b>	<b>Continuous</b>
	<b>Total</b>	<b>30</b>	<b>31</b>			

*From the core courses:*

*Course Nos GEO 201, GEO 202, GEO 203, GEO 204, are theory courses*

*Course Nos GEO 211, GEO 212, Geo 213, GEO 214 are practical courses*

**Total Credits offered in Semester II : 30**

### Semester III

Course Number	Course Title	Credit Value	No. of Hours/ week	Weightage UE	Weightage IA	EoTM
	<b>Core Courses</b>					
GEO 301	Spatial analysis and modeling	3	3	60	40	University
GEO 311	Programming for GIS-II	3	3	60	40	University
GEO 312	Dissertation	12	14	60	40	University
GEO 313	Programming for GIS-III	2	3	60	40	University
GEO 314	Techniques in Spatial Statistics, Analysis and Modeling	2	3	60	40	University
	<b>Electives ( any two)</b>					
GEO 302	Geospatial Modeling	3	3		100	Continuous
GEO 303	Applications of geospatial technologies	3	3		100	Continuous
GEO 304	Photogrammetry	3	3		100	Continuous
GEO 305	Water management and Geospatial Technologies	3	3		100	Continuous
	<b>General Courses (any one)</b>					
GEN 301	Technical Writing	2	2		100	Continuous
GEN 302	Soft Skills	2	2		100	Continuous
	<b>Total</b>	<b>30</b>	<b>34</b>			

*From the core courses:*

*Course Nos GEO 301 is a theory course.*

*Course Nos GEO 311, GEO 313, GEO 314 are practical courses*

**Total Credits offered in Semester III : 30**

### Semester IV

Course Number	Course Title	Credit Value	Hours per week	Weightage UE	Weightage IA	EoTM
	<b>Core Courses</b>					
GEO 411	Dissertation	12	14	60	40	University
GEO 412	Internship	10	20	60	40	University
	<b>General Courses (any one)</b>					
GEN 401	Entrepreneurship Development	2	2		100	Continuous
	<b>Total</b>	<b>24</b>	<b>36</b>			

**Total Credits offered in Semester IV : 24**

**BHARATI VIDYAPEETH (DEEMED TO BE) UNIVERSITY,  
PUNE**

**Faculty Of Interdisciplinary Studies**

**M.Sc. (Wildlife Conservation Action)**

**COURSE STRUCTURE AND DETAILED SYLLABUS  
OF  
SEMESTER I, II, III and IV (UNDER CREDIT SYSTEM)  
EFFECTIVE FROM 2019-2020 AT SEMESTER I**

At the  
INSTITUTE OF ENVIRONMENT EDUCATION AND RESEARCH  
BHARATI VIDYAPEETH UNIVERSITY, PUNE  
**In collaboration with**  
WILDLIFE TRUST OF INDIA, NEW DELHI

# BHARATI VIDYAPEETH

---

Bharati Vidyapeeth, the parent body of Bharati Vidyapeeth University was established in May, 1964 by Dr. Patangrao Kadam with the objective of bringing about intellectual awakening and overall development of the people through education. Bharati Vidyapeeth is now a leading educational institution in the country, which has created a history by establishing within a short span of 49 years, 167 or so educational institutions imparting education from the pre-imparting stage to post graduate stage. Our colleges and institutions of higher education impart education in different disciplines including medicine, dentistry, ayurved, homeopathy, nursing, arts, science, commerce, engineering, pharmacy, management, social science, law, environmental science, architecture, hotel management and catering technology, physical education, computer science, library science and information technology.

The spectacular success achieved by Bharati Vidyapeeth is mainly a creation of unusual foresight, exceptionally dynamic leadership and

able guidance of the founder of Bharati Vidyapeeth, Dr. Patangrao Kadam. It has been our constant endeavor to impart high quality education and training to our students and so, no wonder that our institutions have become nationally known for their academic excellence. In recognition of the academic merit achieved by these institutions and potential for development which they have, the Department of Human Resource Development, Government of India and the University Grants Commission of India have accorded the status of a deemed to be university to its 29 constituent units.

These educational institutions which achieved an academic excellence cater to the educational needs of thousands of students coming from different parts of India and abroad. Our teaching faculty includes highly qualified, experienced, dedicated and student-caring teachers. These educational centers are located at various places viz. Pune, Navi Mumbai, Kolhapur, Solapur, Karad, Panchagani, Jawhar and New Delhi.

The Department of Human Resource Development, Government of India on the recommendation of University Grants Commission accorded the status of Deemed University to twelve units of Bharati Vidyapeeth (vide their notification No. F.9- 15/95-U.3 dated 26/4/96 under the Section 3 of the University Grants Commission Act of

1956). Subsequently the Govt. of India on the recommendations of the UGC has brought more institutions of Bharati Vidyapeeth within the ambit of Bharati Vidyapeeth Deemed University. Today there are total 30 Constituent Units of BVU which includes Colleges and Research Centers.

### **Constituent Units of Bharati Vidyapeeth Deemed University**

- BVDU Medical College, Pune.
- BVDU Dental College & Hospital, Pune
- BVDU College of Ayurved, Pune
- BVDU Homoeopathic Medical College, Pune
- BVDU College of Nursing, Pune
- BVDU Yashwantrao Mohite College of Arts, Science & Commerce, Pune.
- BVDU New Law College, Pune
- BVDU Social Sciences Centre (M.S.W.), Pune
- BVDU Yashwantrao Chavan Institute of Social Science Studies & Research, Pune.
- BVDU Centre for Research & Development in Pharmaceutical Sciences & Applied Chemistry, Pune
- BVDU College of Physical Education, Pune.
- BVDU Institute of Environment Education & Research, Pune
- BVDU Institute of Management & Entrepreneurship Development, Pune
- BVDU Poona College of Pharmacy, Pune
- BVDU College of Engineering, Pune
- BVDU Interactive Research School in Health Affairs (IRSHA), Pune
- BVDU Rajiv Gandhi Institute of Information Technology & Biotechnology, Pune
- BVDU College of Architecture, Pune
- BVDU Abhijit Kadam Institute of Management & Social Sciences, Solapur
- BVDU Institute of Management, Kolhapur
- BVDU Institute of Management & Rural Development administration, Sangli
- BVDU Institute of Management & Research, New Delhi
- BVDU Institute of Hotel Management & Catering Technology, Pune
- BVDU Yashwantrao Mohite Institute of Management, Malakapur-Karad
- BVDU Medical College & Hospital, Sangli
- BVDU Dental College & Hospital, Mumbai

- BVDU Dental College & Hospital, Sangli
- BVDU College of Nursing, Sangli
- BVDU College of Nursing, Navi Mumbai

## New Law College, Pune

---

### PROFILE

Bharati Vidyapeeth Deemed University's New Law College, Pune established in the year 1978 is one of the premier institutes of legal education in India. It is recognized by Bar Council of India & University Grants Commission. It is one of the constituent units of Bharati Vidyapeeth Deemed University, Pune.

### Ranking and Accreditation

It is consistently ranked amongst top 10 law colleges in India by reputed magazines like India Today, Outlook, Lawyers Collective, Legally India, Times of India, Indian Express, etc. The law college is reaccredited with 'A' grade by NAAC in 2011.

### Infrastructure

The new seven storied building of the law college was inaugurated in the year 2005 at hands of Hon. Mr. Justice R. C. Lahoti, the then Chief Justice of India. It consists of 32 classrooms, moot court room, human right cell, cyber cell, placement cell, legal aid cell, research cell & auditorium.

### Knowledge Partners

The college has teaching faculty comprising of retired judges of Supreme Court and High Court eminent academicians, senior lawyers, social activists and eminent jurists from abroad. The college has total 72 faculty members out of which 8 are Ph.D. and 40 are full time lecturers. Senior advocates like Adv. Ram Jethmalani, Adv. P. P. Rao, Adv. Abhishek Manu Singhvi, Adv. Soli Sorabjee, Adv. Geeta Luthra, Adv. Pinky Anand, etc. are invited to guide the law students.

### ICT Teaching Methods

The college has E-Facility in library, classrooms and moot court room. Emphasis is given on ICT Teaching and Learning Methods The college has an E-Court room in its building.

### Library

The college has a library worth Rs. 1 crore. In addition to the text books the college has international journals, online legal databases like Lexis Nexis, Manupatra, Westlaw, SCC Online, etc. The library is equipped with cyber cell consisting of more than 100 computers, with free internet and wi-fi facility. The

college also has a video – conferencing facility.

### **LL.M Program (one-year Course)**

In pursuance with guidelines issued by UGC in 2012 about introduction of one year LL.M Degree Program Bharati

Vidyapeeth New Law college offers one –year LL.M Course with Specialization in two groups namely International & Comparative Law and Constitutional & Administrative Law.

## **REGULATIONS RELATING TO THE TRIMESTER PATTERN OF LLM**

### **(ONE YEAR COURSE- 3 TRIMESTER PROGRAM)**

#### **(From the academic year- 2013-2014)**

1. The One year LL.M program is a trimester program, the duration of each trimester will be of three months with the University Examinations at the end of each trimester. Choice based credit system (consisting of 24 credits) has been implemented for this program.
2. The admission to One Year LLM program is through an All India Admission Test conducted by Bharati Vidyapeeth on the basis of merit.
3. **Eligibility for admission** LL.M. one year program- the applicant shall have obtained LL.B. degree of any university recognized by UGC.
4. **Scheme of Examination:** The examinations for one year LL.M. Degree course will be held in each Trimester. Every paper shall carry 100 marks out of which 60 marks for written examination i.e University Examination (UE) & 40 marks for Internal Assessment (IA). Internal Assessment (IA) will be as follows:
  - Class & Seminar participation - 10 marks
  - Home assignment - 10 marks
  - Tests - 15 marks
  - Attendance - 5 marks
5. **Credit System:**

The one year LL.M. program will have **24 credits**. The program will contain **3 compulsory courses of 3 credits each** (making total of 9 credits), **6 optional courses of 2 credits each** (making total of 12 credits) & **a dissertation of 3 credits**. Each credit is of **15 hours**. Apart from regular class room teaching the candidate has to undergo clinical legal education as per his/her choice during the One Year LL.M. Program. The clinical legal education will have 4 credits. The clinical legal education includes:

Area	Credit
Legal Aid	01
Seminar	01
Research	01
Tutorial	01
<b>Total</b>	<b>04</b>

6. **Evaluation System:** Both IA and UE will be conducted out of 100 marks and converted to grade points and grades using 10 point grade system as follows:

**The 10-point Grading System**

Range of Percent	[75, 100]	[70, 74.9]	[65, 69.9]	[60, 64.9]	[55, 59.9]	[50, 54.9]	[45, 49.9]	[40, 44.9]	[00, 39.9]
Grade Point	10.0	9.0	8.0	7.0	6.0	5.5	5.0	4.5	0.0
Grade	O	A+	A	B+	B	C+	C	D	F

6. **Performance in a Course:** The performance in the course will be indicated by a Grade Point Index (GPI). The GPI is computed as a weighted average of grade points in UE and IA with respective weights 60% and 40%.

That is,  $GPI = 0.6 * GP (UE) + 0.4 * GP (IA)$ , Where GP (UE) is the grade point corresponding to UE and GP (IA) is the grade point corresponding to IA.

7. **Trimester Grade Point Average (TGPA) and Cumulative Grade Point Average (CGPA):** At the end of each trimester, TGPA is calculated as the weighted average of all GPI of courses **in the current trimester** in which the student has passed, the weights being the credit values of respective courses. Similarly, at the end of each trimester, CGPA is calculated as the weighted average of all GPI of all courses in which the student has passed up to the current trimester.

8. **Standards of Passing:**

- a. In order to pass in a course, a student must obtain a minimum grade point of 5.5 at the UE and also a minimum GPI of 5.0 in the course.
- b. A student who passes in a course is said to have completed the credits assigned to the course.
- c. A student who completed the minimum credits required for a program will be declared to have completed the program with the honours according to the Table given below:

**CGPA Ranges for Class Declaration**

<b>Range of CGPA</b>	[5.00, 5.49]	[5.50, 5.99]	[6.00, 7.99]	[8.00, 10.00]
<b>Division</b>	Pass Class	Second Class	First Class	First Class with Distinction
<b>Range of Marks (%)</b>	[50.0, 54.9]	[55.0, 59.9]	[60.0, 69.9]	[70.0, 100.0]

9. The medium of instruction and the examination shall be in English.

10. The scope of the subjects shall be as indicated in the prescribed syllabus.

**COURSE DESIGN OF LL.M (ONE YEAR PROGRAM)**

<b>Trimester</b>	<b>Foundation/ Compulsory Courses</b>	<b>Optional Course</b>	<b>Total No. of Papers</b>	<b>Total Marks</b>	<b>Total Credits</b>
<b>First Trimester</b>	3	Nil	3	300	9
<b>Second Trimester</b>	Nil	4	4	400	8
<b>Third Trimester</b>	Nil	2	2	200	4
	Dissertation			200	3
<b>Grand Total</b>			9	1100	24

# COURSE STRUCTURE OF LL.M (ONE YEAR PROGRAM)

---

## **Foundation Course:**

- Research Methods and Legal Writing (3 Credits)
- Comparative Public Law/Systems of Governance (3 Credits)
- Law and Justice in a Globalizing World (3 Credits)
- Dissertation (3 Credits)

## **Optional Groups:**

### **International and Comparative Law**

- International Organizations (2 credits)
- International Economic Law (2 credits)
- International Human Rights Law (2 credits)
- AIR and Space Law (2 credits)
- Public International Law (2 credits)
- International Dispute Settlement (2 credits)

### **Constitutional and Administrative Law**

- Centre-State Relations and Constitutional Governance(2 credits)
- Fundamental Rights and Directive Principles(2 credits)
- Local Self Government & Federal Governance (2 credits)
- Administrative Law(2 credits)
- Media Law(2 credits)
- Health Law (2 Credits)

**DETAILED  
SYLLABUS  
OF  
LL.M PROGRAM  
(ONE YEAR)  
2013-14**

## FOUNDATION COURSES

### 01. RESEARCH METHODS AND LEGAL WRITING

#### **Objective of the course:**

Law is influenced by the prevailing social values and ethos. Law also attempts to mould or change the existing social values and attitudes. A systematic approach is required to understand the existing and emerging legislation policies, laws their social relevancy and efficacy, etc .Hence a law student should be acquainted with the scientific methods required for the inquiry of law.

In this backdrop, this course intends to make the students familiar with nature, scope, and significance of legal research. It endeavors to make them aware with various tools and techniques required for a successful legal research which plays an important role in the socio-legal development of the country.

#### **Syllabus**

##### **1. Research Methodology – An Introduction**

- 1.1. Meaning of Research
- 1.2. Objectives of Research
- 1.3. Characteristics of Research
- 1.4. Significance of Research
- 1.5. Research Methodology
- 1.6. Importance of Research Methodology

##### **2. Legal research Methodology**

- 2.1. Meaning of Legal Research
- 2.2. Characteristics of Legal Research
- 2.3. Objectives of Legal Research

- 2.4. Types of Legal Research
  - 2.4.1. Doctrinal Legal Research
    - 2.4.1.1. Characteristics
    - 2.4.1.2. Components
    - 2.4.1.3. Merits and Demerits
  - 2.4.2. Non-Doctrinal Legal Research
    - 2.4.2.1. Features
    - 2.4.2.2. Limitations

### **3. Methods for Legal Research**

- 3.1. Analytical Method
- 3.2. Historical Method
- 3.3. Empirical Method(socio-legal Research)
- 3.4. Scientific Method
- 3.5. Comparative Method
- 3.6. Ethical Method
- 3.7. Statistical Method
- 3.8. Critical Method

### **4. Steps involved in Legal Research**

### **5. Legal Research Problem**

- 5.1. Meaning of Research Problem
- 5.2. Types of Research Problems
- 5.3. Criteria of Research Problem
- 5.4. Evaluation of Research Problem
- 5.5. Advantages of right selection of Research Problem

### **6. Hypothesis**

- 6.1. Meaning- Significance-characteristics
- 6.2. Types of Hypothesis
- 6.3. Ideal formulation of hypothesis
- 6.4. Testing of Hypothesis

### **7. Research Design**

- 7.1. Meaning-Need-Characteristics
- 7.2. Important concepts-variable, independent variables, dependent variables, controls
- 7.3. Types of Research Design
  - 7.3.1. Descriptive Design

- 7.3.2. Exploratory Design
- 7.3.3. Experimental Design
- 7.3.4. Diagnostic Design

## **8. Sampling technique**

- 8.1. Need for Sampling
- 8.2. Assumptions related to sampling
- 8.3. Procedure to select a sample
- 8.4. Types of sampling
  - 8.4.1. Probability Sampling
    - 8.4.1.1. Random sampling
      - 8.4.1.1.1. Lottery method
      - 8.4.1.1.2. Random numbers
      - 8.4.1.1.3. Sequential List
      - 8.4.1.1.4. Grid system
    - 8.4.1.2. Systematic Sampling
    - 8.4.1.3. Stratified random sampling
    - 8.4.1.4. Cluster Sampling
    - 8.4.1.5. Multi-Stage Sampling
  - 8.4.2. Non-Probability Sampling
    - 8.4.2.1. Representative sampling
    - 8.4.2.2. Judgment Sampling
    - 8.4.2.3. Accident Sampling
    - 8.4.2.4. Purposive Sampling
  - 8.4.3. Quota Sampling
  - 8.4.4. Area Sampling
  - 8.4.5. Sampling by regular intervals
- 8.5. Reliability of sampling
  - 8.5.1. Sampling Error and Standard Error

## **9. Collection of Data**

- 9.1. Sources of data
- 9.2. Tools/Methods of Data Collection
  - 9.2.1. Observation Method
  - 9.2.2. Interview Method
  - 9.2.3. Questionnaire Method
  - 9.2.4. Survey Method

- 9.2.5. Case Study Method
- 9.2.6. Projective Techniques
- 9.2.7. Content Analysis

## **10. Data Processing**

- 10.1. Analysis of Data
- 10.2. Interpretation of Data
- 10.3. Socio-metrics and Jurimetrics
- 10.4. Induction and Deduction

## **11. Report writing**

- 11.1. Techniques of report writing
- 11.2. Citation rules

## **12. Legal Writing**

- 12.1. Objective
- 12.2. Types
- 12.3. Principles
- 12.4. Role of writing in Legal system
- 12.5. Writing a Law Review article
- 12.6. Approach ,structure and writing of dissertation
- 12.7. Use of research findings in legal writing
- 12.8. Correct referencing in dissertations
- 12.9. Legal citation system
- 12.10. Finishing and polishing the writing

## **13. Computerized Research-Lexis Nexis, Westlaw, Manupatra**

### **Recommended Books:**

1. M.O.Price, H.Bitner and Bysiewiez, Effective Legal Research (1978)
2. Pauline. V.Young , Scientific Social Survey and Research (1962)
3. Morris.L.Cohan, Legal Research in Butshell (1996)
4. C.R.Kothari, Research Methodology Methods and Techniques (2009)

18. Campbell, Fox Kentey, Students guide to Legal writing.
19. Ackoff R. L., Design of social research.
20. Beveridge WIR, Art of Scientific investigation.
21. Claire Selltis and others-Research methods in Social Relations.

## 02. COMPARATIVE PUBLIC LAW

### Objective of the Course:

Constitutional Law and administrative Law together make Public Law. Public Law was first defined by Romans as “*res publica*” which meant Public Good. Public Law regulates the relationship between individual and the State. However with changing dimensions of the State the ambit of Public Law needs to be revisited.

This course highlights the various aspects of Public Law which has become significant due to the concept of “Welfare State”. It enlightens the students about the various systems of governance which have evolved worldwide. The course further provides a comparative approach which enables the students to make a critical analysis of the various systems.

### Syllabus

#### 1. Introduction

- 1.1. Meaning of Public Law
- 1.2. What is a Constitution
- 1.3. Significance of Constitution
- 1.4. Types of Constitution
- 1.5. Forms of government

#### 2. Overview of legal systems

- 2.1. Major legal systems of the world
- 2.2. Monarchical system
  - 2.2.1. French Legacy
  - 2.2.2. German Legacy
  - 2.2.3. English Monarchy
- 2.3. Defeat of Absolutism
- 2.4. Parliamentary Sovereignty
- 2.5. Present Scenario-US, UK, India and Australia

#### 3. Rule of Law

- 3.1. Origin and Evolution
- 3.2. Dicey’s Rule of Law
- 3.3. Recent Developments
  - 3.3.1. Britain

- 3.3.2. Australia
- 3.3.3. New Zealand
- 3.3.4. India

#### **4. Separation of Powers**

- 4.1. Montesquieu's Theory
- 4.2. The relations between organs of the State
- 4.3. Comparative Study
  - 4.3.1. U.S.A
  - 4.3.2. U.K.
  - 4.3.3. Australia
  - 4.3.4. India
  - 4.3.5. France-*Droit Administratif*

#### **5. Federalism**

- 5.1. Origin of Federalism
- 5.2. Principles and Legal Features of Federalism
- 5.3. Unitary State, Confederation and a Federal State-Comparison
- 5.4. Distribution of Legislative, Administrative and financial power in a Federal State
- 5.5. Evolution of Co-operative Federalism
- 5.6. Comparative Study
  - 5.6.1. U.S.A
  - 5.6.2. Australia
  - 5.6.3. Canada
  - 5.6.4. India

#### **6. Parliament**

- 6.1. Introduction
- 6.2. Structure and Composition
  - 6.2.1. U.K
  - 6.2.2. U.S.A
  - 6.2.3. India
- 6.3. Parliamentary Privileges-Comparative Approach

#### **7. Judicial Review**

- 7.1. Evolution and concept of Judicial Review
- 7.2. Meaning of Judicial Review
- 7.3. Grounds of Judicial Review

7.4. Impact of Judicial Review on Modern Constitutions

## **8. Right to Information**

8.1. Introduction

8.2. Access to information-U.S.A, U.K, Australia, India

## **9. Ombudsman**

9.1. Introduction

9.2. Need for Ombudsman

9.3. Ombudsman in New Zealand

9.4. Parliamentary Commissioner of England

9.5. Australian Ombudsman

9.6. Ombudsman in India

### **Recommended Books:**

1. M. P. Jain, Principles of Administrative Law, LexisNexis, 2010
2. Dr. Durga Das Basu, Comparative Federalism, Wadhwa, 2008
3. Dr. Durga Das Basu, Comparative Constitutional Law, Wadhwa, 2008
4. Prof.Dr.A.Lakshminath, Prof.Dr.Vijay Ghormade, Prof.Dr.Mukund Sarda, Comparative Law and select legal systems, Hind Law House,2011

6. Hilaire Barnett, Understanding Public Law,Cavendish,2010
7. Elisabeth Zoller, Introduction to Public Law: A Comparative Study, Martinus Nijhoff,2008
8. M.P.Jain, Indian Constitutional Law,LexisNexis,2012
9. Dr. Durga Das Basu, Constitution of India,LexisNexis,2009

## **03. LAW AND JUSTICE IN A GLOBALIZING WORLD**

### **Objective of the Course:**

The course aims at enlightening the students about the meaning, nature and scope of law. It seeks to create an understanding about the nature of law and justice and, in particular, the relationship between the two in contemporary society. It begins by exploring the question “**what is justice**”? Since this is an enduring philosophical question, posed differently at different times, it will be approached historically from the Greeks to the present and how they have understood justice. The focus here will be not only on explaining and critically analyzing different general theories of justice, but especially upon determining how these theories articulate the specific relation (or lack of relation) between justice and law. The course will then put these ideas to work through a consideration of a number of contemporary problems concerning law and justice which have arisen due to globalization.

### **Syllabus:**

#### **1. Introduction to law and Justice**

- 1.1 The concept of law as conceived by Plato
- 1.2 Aristotle’s concept of justice
- 1.3 Law and Morals
- 1.4 Relation between Law and Ethics

#### **2. Legal Theory**

##### **2.1 Law and Justice as per Natural law**

- 2.1.1 Greek origins of Natural Law
- 2.1.2 Role of Natural Law in Roman Law
- 2.1.3 Natural law and Thomas Aquinas
- 2.1.4 Natural Law and Social Contract
- 2.1.5 Revival of Natural law- Fuller, Hart, Finnis

##### **2.2 Positivist Approach to Law**

- 2.2.1 John Austin
- 2.2.2 Hans Kelsen

##### **2.3 Sociological Jurisprudence**

- 2.3.1** Prof. Roscoe Pound

##### **2.4 American Realism**

- 2.4.1 Jerome Frank

2.4.2 Karl Lewellyn

### **3. The Concept of Justice**

- 3.1 The concept of Justice
- 3.2 Norms or Material Contents of Justice
- 3.3 Types of Justice

### **4. Theories of Justice**

- 4.1 Justice by Utilitarianists
- 4.2 Marxist approach to justice
- 4.3 John Rawls theory of Justice
- 4.4 Ronald Dworkin's theory of Justice
- 4.5 Amartya Sen's theory of Justice
- 4.6 Feminist approach to Justice

### **5. Relation between Law and Justice**

- 5.1 Equivalence theories of Justice
- 5.2 Dependence theories of Justice
- 5.3 Independence of Justice theories

### **6. Effect of globalization on Law and justice**

#### **6.1 Core Legal issues of Globalization**

- 6.1.1 Transnational applicability and Enforceability of law
- 6.1.2 Limits on enforceability of National Law
- 6.1.3 International Models for Regulation

#### **6.2 Changing concepts of Property**

- 6.2.1 Different concepts of property
- 6.2.2 Position of Property in Modern Industrial Society
- 6.2.3 Importance Intellectual Property

#### **6.3 Changing function of contract**

#### **6.4 Criminal law in changing world**

- 6.4.1 Economic crimes against the community
- 6.4.2 Environmental Pollution and criminal law
- 6.4.3 Criminal liability of Corporations
- 6.4.4 Changing nature and purpose of punishment
- 6.4.5 Cyber crimes
- 6.4.6 Inquisitorial system
- 6.4.7 Plea Bargaining
- 6.4.8 Witness protection schemes

6.4.9 Compounding of offences

## **6.5 Changing foundations of family**

6.5.1 Changing concept of family

6.5.2 Husband wife equality

6.5.3 Indissolubility of marriage tie

## **6.6 Economic competition, Regulation and Public Interest**

## **6.7 The enlarging scope of International law.**

6.7.1 New dimensions of International law

6.7.2 International minimum standards of Justice

### **Recommended Books:**

1. Legal Theory by W. Friedmann, Universal Law Publishing Co., Delhi
2. Law in a changing society by W. Friedmann, Universal Law Publishing Co., Delhi
3. A Theory of Justice by John Rawls, Universal Law Publishing Co., Delhi
4. Human law and Human Justice by Julius Stone, Universal Law Publishing Co., Delhi
5. The Province and Function of Law, Universal Law Publishing Co., Delhi

10. Pure theory of Law by Hans Kelsen, University of California Press
11. Law's Empire by Ronald Dworkin, Harvard University press
12. Interpretation of Law in the Global World: From Particularism to a Universal Approach, Edited by Joanna Jemielniak & Przemyslaw Miklaszewicz, Springer Berlin Heidelberg
13. Law and Society in Modern India by Marc Galanter, Oxford

**OPTIONAL COURSES**  
**GROUP A: INTERNATIONAL & COMPARATIVE LAW**

**A04. INTERNATIONAL ORGANISATIONS**

**Objective of the Course:**

The prime duty of International Organizations is not only to maintain peace among independent sovereign states but also to create an atmosphere for mutual co-operation and to work towards amelioration of human conditions in respective countries. Hence various International organizations collectively work towards collective security and peaceful settlement of conflicts among the nation states.

This course highlights the origin, functions, socio-economic and political process and the role of International Organizations in restructuring and reshaping the socio-economic life of the countries. It provides a platform to the students to undertake an in depth analysis of International Organizations as well as non – governmental organizations.

**Syllabus:**

**1. Introduction:**

- 1.1. Historical Background
- 1.2. Definition of International organizations
- 1.3. Privileges and Immunities

**2. Classification of International Organizations:**

- 2.1. Membership
- 2.2. Universalism
- 2.3. Regionalism

**3. Role and Functions of International Organizations**

**4. League of Nations**

- 4.1. Origin & Foundation
- 4.2. Members and Constitution
- 4.3. Maintenance of World Peace
- 4.4. Weaknesses and Causes for failure

**5. United Nations**

- 5.1. Organs and Functions
- 5.2. General Assembly

- 5.3. Security Council
- 5.4. Economic Social Council
- 5.5. Concept of Collective Security

## **6. Other Organizations**

- 6.1. European Union
- 6.2. Commonwealth
- 6.3. SAARC

## **7. Special Agencies and NGO's**

- 7.1. Functions
- 7.2. Amnesty International
- 7.3. International Commission of Jurists

### **Recommended Books:**

1. International Organizations, Clive Archer, Routledge Publishers
2. Remedies Against International Organizations, Karel Wellens, Cambridge University Press
3. The Law of International Organizations, Nigel D. White, Manchester University Press
4. S.K.Kapoor, Public International Law, Central Law Agency.
5. J.G.Starke, Introduction to International law, Aditya Books, New Delhi.
6. S.K.Varma, An Introduction to International Law, Printice Hall of India, New Delhi
7. Bowett, International Institutions.
8. International Law; Sir Robert Jennings and Sir Arthur Watts (ed) Longma
9. M.P. Tandon, Public International Law, Allahabad Law Agency

## **A05. INTERNATIONAL ECONOMIC LAW**

### **Objective of the Course**

Global economic issues are always in news right from trade disputes between countries, investment claims by foreign investors against sovereign states, to countries facing a balance of payments crisis and seeking assistance from the International Monetary Fund (IMF).

This course examines the law governing global economic issues. It begins with a historical and theoretical background to the field before turning to focus on the law and practice of the World Trade Organization (WTO), including close analysis of the WTO dispute settlement system and the role of 'free' or preferential trade agreements within that system. It also provides a detailed understanding of international investment law, including bilateral investment treaties. Finally, the subject examines the lending policies and practices of international financial institutions, particularly the IMF and the World Bank.

### **Syllabus**

#### **1. Introduction**

1.1. Meaning & Nature

1.2. Subjects of International Economic Law- States, Multinational Enterprises and Individual

1.3. Codification of International Economic Law and role of International Organization

#### **2. Role of UNO in Evolving International Trade Law and NEW INTERNATIONAL ECONOMIC ORDER (NIEO)**

2.1. Meaning of NIEO.

2.2. UN and NIEO.

2.3. Program of action on the Establishment of NIEO.

2.4. Promotion of cooperation among Developing Countries

2.5. Charter of Economic Rights and Duties of states (CERDS)

2.6. Problems and prospects of the NIEO.

2.7. Significance of NIEO.

2.8. Implications of the NIEO for India.

#### **3. International Economic Agencies**

- 3.1. International Monetary Fund (IMF).
- 3.2. International Bank for Reconstruction and Development (IBRD)
- 3.3. The International Centre for Settlement of Investment Disputes (ICSID) 1965
- 3.4. World Bank
- 3.5. World Intellectual Property Organization- WIPO

#### **4. Relevance of GATT and WTO**

- 4.1. Globalization of Economic activity.
- 4.2. GATT negotiation Round - Procedures of GATT Negotiations, Tariff Barriers and Non-Tariff barriers, Bilateral and Multilateral Trade agreements of GATT, method of Multilateral Trade Negotiation under GATT.
- 4.3. Salient features of GATT 1994.
- 4.4. Final Act embodying the results of the Uruguay Round of multilateral Trade Negotiations.
- 4.5. Decision on measures in favor of least developed countries in GATT 1994.
- 4.6. List of developed, Developing and Least developed Countries.

#### **5. The World Trade Organization (WTO)**

- 5.1. Salient features, Objectives, Scope, Functions of WTO
- 5.2. Structure
- 5.3. The Secretariat, Budget and Contribution
- 5.4. Status of WTO
- 5.5. Decision making
- 5.6. Amendments
- 5.7. Membership and Withdrawal

#### **6. The United Nation's Commission for International Trade Law (UNCITRAL)**

- 6.1. Work Carried out by UNCITRAL
- 6.2. UNCITRAL Rules 1976 & 1980
- 6.3. UNCITRAL Model Law an International Commercial Arbitration, 1985.

#### **Reference Books:**

- 1. Comments on International Trade Law by Professor Rafiqul Islam
- 2. International Trade Law by Lord Templeman
- 3. Law of International Trade by Pamela Sellman
- 4. International Trade Law by Janette Charley

12. Principles of International Economic Law, Matthias Herdgen, Oxford University Press

## **A06. INTERNATIONAL HUMAN RIGHTS**

### **Objective of the Course:**

Human Rights are inborn right of human beings having universal application. Human rights have acquired a new dimension with the adoption of Universal Declaration of Human Rights in 1948. Several regional organizations also play a very pivotal role to prevent and curb human rights violations at regional level. Role of these organizations assumes great significance to maintain human rights standards in respective countries.

This course analyses human rights, their international standards, role of organizations and mechanism of protection agencies. The course thus inculcates awareness amongst the students about the significance of human rights in today's scenario.

### **Syllabus:**

#### **1. Introduction**

- 1.1. Historical View
- 1.2. Philosophical and Legal Foundations
- 1.3. Classification of Human Rights

#### **2. International Human Rights Standards**

- 2.1. United Nations Charter
- 2.2. Universal Declaration of Human Rights
- 2.3. Covenant on civil and political rights
- 2.4. Covenant on economic social and cultural rights
- 2.5. CEDAW

#### **3. Role of Regional Organizations**

- 3.1. European convention on Human Rights/Court of human Rights
- 3.2. American convention on Human Rights/Courts
- 3.3. African convention on Human Rights

#### **4. Protection agencies and mechanism**

- 4.1. Non - governmental organizations (NGOs)
- 4.2. UNICEF
- 4.3. UNESCO
- 4.4. International Commission of Human Rights
- 4.5. ILO International Labor Organization

## **5. Enforcement of International Human Rights**

### **Recommended Books:**

1. International Human Rights in Context of Law, Politics and Morals, Henry Steiner and Philip Alston, Oxford University press
2. Textbook on International human Rights, Rhona Smith, Oxford University Press
3. International Human Rights: Law and Practice, Francisco Forrest Martin, 1997
4. Perspectives in Human Rights Development, R.S. Sharma and R.K. Sinha, 1997
5. The United nations and Human Rights: A Critical Appraisal, Philip Alston, 1992
6. Human Rights in International Relations, David.P. Forsythe

## **A07. AIR AND SPACE**

### **Objective of the course:**

The scientific and technical developments in the field of air and space have posed challenges to the legal fraternity. The legal response to air and space technology has been both at municipal and international level.

The course is designed to provide an in-depth understanding of air and space law along with fundamental principles of Public International Law concerning air and space.

### **Syllabus:**

#### **1. Introduction**

- 1.1. Meaning ,Nature ,Scope of Air and space law
- 1.2. Source of Air and Space Law

#### **2. Air Law**

- 2.1. Basic Principles of international Air Law
- 2.2. Regulation of international Air Transportation
- 2.3. Civil aviation
  - 2.3.1. Crimes - hijacking- sabotage - air terrorism
  - 2.3.2. Safety and security
    - 2.3.2.1. International norms
    - 2.3.2.2. State obligation
  - 2.3.3. Liability in civil aviation

#### **3. Air Law-Indian Perspective**

- 3.1. Airport leasing and privatization –Legal issues
- 3.2. Rights and privileges of Air passengers
- 3.3. Third party liability for surface damages
- 3.4. Civil aviation:
  - 3.4.1. Technology development- legal problems
  - 3.4.2. Consumer protection
- 3.5. Air carriage

#### **4. Law of Outer space**

- 4.1. Freedom and regulation regarding outer space
- 4.2. International conventions
  - 4.2.1. The Outer Space Treaty, 1967

4.2.2. The Moon Treaty, 1969

4.2.3. UN Convention, 1972

## **5. Regulations of commercial space activities in India**

5.1. Constitutional and International obligations

5.2. Launch services

5.3. Satellite telecommunication and broadcasting

5.4. IPR and technology transfer

## **6. Changing global trends**

6.1. Use of space technology-peaceful and non-peaceful

6.2. Space communication

6.3. Satellite navigation and location

6.4. Disaster prediction

## **Recommended Books:**

1. The orbit of Space Law, Wedeagokar
2. Space Law, Christol
3. Law of outer space, M.Lach
4. Space Law in the era of commercialization, Dr.S.Bhatt
5. Recent trends in International space and Policy, V.S.Mani
6. Legal and regulatory issues in international aviation, Azbeyratne
7. The new aviation policy in India, S.Bhatt
8. Aviation law and recommendation, Carole Blackshow
9. Aviation Law: cases and materials, LowenField
10. Aircraft hijacking and international law, S.K.Agarwal
11. Law of carriage- Air, Land and Sea, Avtar Singh, Eastern Book Company

## **A08. PUBLIC INTERNATIONAL LAW**

### **Objective of the Course:**

The post Second World War has witnessed phenomenal growth in International law. The United Nation has emerged as a powerful organization in regulating international relations amongst the States. For achieving peace and progress around the world regulating and adhering to the international legal order has become a necessary condition.

This course focuses upon the nature, sources and different dimensions of International law. Its object is to develop greater acquaintance among the students about the role and significance of International law under changing circumstances.

### **Syllabus:**

#### **1. Basic Aspects of International Law:**

- 1.1. Origin and Definition
- 1.2. Nature and basis
- 1.3. Is International law a true law?
- 1.4. Schools of International Law

#### **2. Sources of International Law**

- 2.1. Custom
- 2.2. Treaties
- 2.3. General Principles of Law
- 2.4. Judicial Decisions

#### **3. Relationship between Municipal Law and International Law**

- 3.1. Monistic Theory
- 3.2. Dualistic Theory

#### **4. State- subject of International Law**

- 4.1. Essentials of statehood
- 4.2. Concept of recognition, theories, kinds and consequences of recognition
- 4.3. State Jurisdiction- Diplomatic Privileges and Immunities
- 4.4. State responsibility

#### **5. State Territory**

- 5.1. Extent of State Territory
- 5.2. Acquisition and Loss of State Territory

- 6. State Succession:**
  - 6.1. Meaning and Kinds
  - 6.2. Consequences
  - 6.3. Succession on Suppression of revolt
  - 6.4. Succession in International Organization
- 7. Intervention:**
  - 7.1. Need, Kinds of Intervention
  - 7.2. Grounds
  - 7.3. Prohibition
- 8. Individual and International Law:**
  - 8.1. Nationality
  - 8.2. Aliens
  - 8.3. Extradition
  - 8.4. Diplomatic agents - Immunities and Privileges
- 9. Treaties:**
  - 9.1. Making of Treaty
  - 9.2. Reservations to treaty
  - 9.3. Pacta sunt servanda
  - 9.4. Modes of termination of treaty

**Recommended Books:**

- 1. Oppenheim, International Law
- 2. Ian Bronnlie, Principles of Public Internal Law Oxford University Press,
- 3. Malcom N Shaw, International Law, Cambridge Publication.
- 4. H.O Agarwal, International Law and Human Rights, Central Law Publications Allahabad.
- 5. S.K.Kapoor, Public International Law, Central Law Agency.
- 6. J.G.Starke, Introduction to International law, Aditya Books, New Delhi.
- 7. S.K.Varma, An Introduction to International Law, Printice Hall of India, New Delhi
- 8. Bowett, International Institutions.
- 9. International Law; Sir Robert Jennings and Sir Arthur Watts (ed) Longma
- 10. M.P. Tandon, Public International Law, Allahabad Law Agency

## **A09. INTERNATIONAL DISPUTES SETTLEMENT**

### **Objective of the Course**

International dispute settlement is a relatively new field of academic study that increasingly combines private and public international law and raises enduring issues of global importance.

The course primarily addresses fundamental and lasting issues of international dispute settlement and provides an in depth study of the growth of the field of international dispute settlement in practice, the novelty and significance of the issues posed, and the originality of the academic angle from which such issues need to be addressed.

### **Syllabus:**

#### **1. Introduction to International Courts and Tribunals**

- 1.1. History and development of international adjudication and arbitration
- 1.2. The modern 'system' of international courts and tribunals
  - 1.2.1. The International Court of Justice
  - 1.2.2. The International Tribunal for the Law of the Sea
  - 1.2.3. The Permanent Court of Arbitration
  - 1.2.4. Human rights courts and commissions
  - 1.2.5. Other tribunals
  - 1.2.6. The International Criminal Court (and other criminal tribunals)

#### **2. Jurisdiction**

- 2.1. General principles: competence-competence; forum prorogatum; separability of dispute resolution clauses; jurisdiction *ratione materiae*, *ratione personae* and *ratione temporis*
- 2.2. Specific issues for the vesting of jurisdiction: reliance upon the optional clause (ICJ); existence of an investment (investment treaties & ICSID); reliance on an MFN clause to expand jurisdiction (investment treaties). Incidental jurisdiction.

#### **3. Admissibility**

- 3.1. Distinction between jurisdiction and admissibility
- 3.2. Absence of a necessary third party
- 3.3. Diplomatic protection: nationality of claims and exhaustion of local remedies
- 3.4. Investment treaty arbitration: contracts claims versus treaty claims; derivative claims by shareholders

#### **4. Justiciability and Arbitrability**

- 4.1. The doctrine of non-justiciability of political disputes
- 4.2. The subject matter of disputes that can be submitted to arbitration (arbitrability): the problem of illegal transactions

#### **5. Relations between Jurisdiction of International Courts**

- 5.1. Overlapping jurisdictions and resolving jurisdictional conflicts
- 5.2. Proliferation of international courts and tribunals - fragmentation of international law

#### **6. Applicable Law**

- 6.1. Law applicable to substantive issues, arbitration clause, procedure, capacity of parties, issues of state responsibility.
- 6.2. The doctrine of municipal laws as facts before international courts and tribunals
- 6.3. International public policy
- 6.4. Problems of treaty interpretation

#### **7. Denial of Justice**

- 7.1. The modern conception of denial of justice in international law
- 7.2. Exhaustion of remedies as a substantive requirement

#### **8. Remedies in International Adjudication**

- 8.1. The three forms of reparation: restitution, compensation, declaratory judgments
- 8.2. Problems of restitution
- 8.3. Problems of compensation: differentiating between the remedial consequences following from a breach of different substantive obligations

#### **9. Challenges to International Decisions; Recognition and Enforcement of International Decisions**

- 9.1. Interpretation and revision
- 9.2. Challenge before the ICJ
- 9.3. Challenge before the municipal courts at the seat of the arbitration

#### **Recommended Books:**

- 1. Brown, A Common Law of International Adjudication (2007)
- 2. Crawford, Brownlie's Principles of Public International Law (8th ed 2012)
- 3. Eiriksson, The International Tribunal for the Law of the Sea (2000)
- 4. Fitzmaurice, The Law and Procedure of the International Court of Justice (1986)
- 5. Gaillard et al, Fouchard, Gaillard & Goldman on International Commercial Arbitration (1999)

6. Gray, *Judicial Remedies in International Law* (1987)
7. McLachlan et al, *Investment Treaty Arbitration: Substantive Principles* (2007)
8. Rigo Sureda, *Investment Treaty Arbitration* (2012)
9. Rosenne, *The Law and Practice of the International Court, 1920-2005* (2006)
10. Sands et al, *Manual on International Courts and Tribunals* (2010)
11. Shany, *The Competing Jurisdictions of International Courts and Tribunals* (2003)
12. Zimmermann et al, *The Statute of the International Court of Justice: A Commentary* (2006)

## GROUP B: CONSTITUTIONAL & ADMINISTRATIVE LAW

### B04. CENTRE – STATE RELATIONS AND CONSTITUTIONAL GOVERNANCE

#### Objective of the course:

Nature of the Indian Constitution though not being strictly federal still makes a division of governmental powers between the Union and States. The changed political, social and economic conditions of our polity have tremendously influenced the content and operation of Centre-State relations.

This course aims at making the students aware of the nature of the Indian federation through a deep study of legislative, administrative and financial relations between the Centre and the states. It further provides a platform to analyse, examine and evaluate the centre state relations in the current scenario.

#### Syllabus:

##### 1. Introduction

- 1.1. Nature of Indian Federation
- 1.2. Position of States-Indian Federation
- 1.3. Nature of Indian Polity
- 1.4. Central Bias

##### 2. Legislative Relations

- 2.1. Theory or territorial nexus
- 2.2. Distribution of Legislative powers
- 2.3. Interpretation of lists
  - 2.3.1. Pith and Substance
  - 2.3.2. Colourable Legislation
  - 2.3.3. Ancillary Powers
  - 2.3.4. Occupied Field
  - 2.3.5. *Non-obstante* Clause
  - 2.3.6. Laws of Taxation
- 2.4. Repugnancy between Central and State Laws
- 2.5. Residuary powers
- 2.6. Centre's power
  - 2.6.1. legislate on state subjects
  - 2.6.2. control state legislation

### **3. Administrative Relations**

- 3.1. Distribution of Administrative Power
- 3.2. Delegation of Union's function to States
- 3.3. Administrative co-ordination
- 3.4. All India Services
- 3.5. Full faith and Credit Clause

### **4. Financial Relations**

- 4.1. Imposition of tax-authority of law
- 4.2. Fees
- 4.3. Allocation of taxing powers
- 4.4. Restriction on taxing powers
- 4.5. Financial Equilibrium
- 4.6. Borrowing powers
- 4.7. Finance commission

### **5. Impact of Emergency on centre state relations**

### **6. Centre-state relations-Critical Evaluation**

- 6.1. Sarkaria Commission

### **Reference Books:**

1. Centre – State Relations in India, Anirudh Prasad, Deep & Deep Publications
2. Centre State Relations in India: Major Irritants and Post- Sarkaria Review, Shubh Narayan Singh, H.K. Publishers & Distributors
3. Party Politics and Centre State Relations in India, S.K. Jain, Shakti Malik Abhinav Publications

## **B06. LOCAL SELF GOVERNMENT AND FEDERAL GOVERNANCE**

### **Objective:**

The object of the study of Local Self-Government is to throw light on the third tier of our governmental system, which is the basis of our democracy. The Panchayati Raj system plays a unique role in this 21st century, in achieving the principals of Mahatma Gandhi assured by the Indian Constitution to the citizens. The provision for introduction of these principles has been made by the framers in the Constitution itself.

The course aims at giving an understanding to the students about the functioning of the Indian democracy at the grass root level, its strengths, weaknesses, problems and solutions to the same.

### **Syllabus:**

#### **1. Introduction:**

- 1.1. Meaning and Nature
- 1.2. Origin & Evolution of Local-Self Government in India
- 1.3. Significance of Local-self Government in Modern State

#### **2. Constitutional Basis - 73<sup>rd</sup> and 74<sup>th</sup> Amendment**

#### **3. Organizational Structure**

- 3.1. Composition
- 3.2. Functions, Powers and Role of Local bodies
- 3.3. Administration of the Metropolitan Towns and Municipal Corporations
- 3.4. Problems of Autonomy and Accountability

#### **4. Democratic Decentralization in Rural India**

- 4.1. Village Panchayats and Gram Sabha
- 4.2. Panchayat Samiti
- 4.3. Zila Parishad

#### **5. Democratic Decentralization in Urban India**

- 5.1. Municipal Council
- 5.2. Municipal Corporation

#### **6. Financial Administration of local bodies in India**

- 6.1. Funding to local bodies
- 6.2. Strengthening of local resources

#### **7. State control over local bodies-Urban and Rural**

#### **8. Need for Reforms in local self governance system in India**

### **BOOKS RECOMMENDED**

1. Argal, K.: Municipal Government in India
2. Maheshwari, S.R.: Local Government in India
3. Mathur, M.V.: Panchayat Raj in Rajasthan
4. Khanna, R.K.: Municipal Government and Administration in India
5. Bhogle, S.K.: Local Government in India
6. Pai Panandikar, V.A. : Personnel System for Development Administration
7. Bhattacharya, Mohit: Municipal Government and Problems
8. Tinker: Local Self Government in India

## **B07. ADMINISTRATIVE LAW**

### **Objective of the Course:**

Since independence, the administrative process has gathered momentum in India. The transformation of Police-State to Welfare-State has tremendously increased the functions of administration. Majority of the litigations involve the principles of Administrative Law. Administrative Law deals with powers of the government and control thereof.

Hence this course seeks to provide the students with a clear understanding of the structure, organization, processes and powers of the public functionaries. Further the course also aims at enlightening the students with the problems besetting the area.

### **Syllabus:**

#### **1. Introduction**

- 1.1. Nature and Scope of Administrative Law
- 1.2. Functions of Administration

#### **2. Rule of Law**

#### **3. Separation of Powers**

#### **4. Delegated Legislation**

- 4.1. Concept, growth & need of delegated legislation
- 4.2. Control of delegated legislation
  - 4.2.1. Parliamentary
  - 4.2.2. Procedural
  - 4.2.3. Judicial
- 4.3. Doctrine of excessive delegation

#### **5. Administrative discretion**

- 5.1. Scope
- 5.2. Fundamental rights and administrative discretion
- 5.3. Judicial control

#### **6. Natural justice**

- 6.1. Applicability to administrative decisions
- 6.2. Principles of natural justice
- 6.3. Failure of natural Justice-effect

#### **7. Judicial review of administrative action**

##### **7.1. Writ jurisdiction**

- 7.1.1. Scope
- 7.1.2. Grounds

7.2. Statutory remedies

**8. Contractual and tortious liability**

**9. Ombudsman**

**Recommended Books:**

1. D.D. Basu-Comparative Administrative Law
2. M.P. Jain, S.N. Jain-Principles of Administrative Law
3. M.P. Jain-Cases and materials on Administrative Law
4. M.P. Jain-The evolving Indian Administrative Law.

## **BHARATI VIDYAPEETH**

Bharati Vidyapeeth, the parent body of Bharati Vidyapeeth University was established in May, 1964 by Dr. Patangrao Kadam with the objective of bringing about intellectual awakening and all sided development of the people of our country through education.

Bharati Vidyapeeth is now a leading educational institution in the country, which has created a history by establishing within a short span of 50 years or so 180 educational institutions imparting education from the pre-primary stage to post graduate stage. Our colleges and institutions of higher education impart education in different disciplines including Medicine, Dentistry, Ayurved, Homoeopathy, Nursing, Arts, Science, Commerce, Engineering, Pharmacy, Management, Social Sciences, Law, Environmental Science, Architecture, Hotel Management and Catering Technology, Physical Education, Computer Science, Library Science, Information Technology, Biotechnology & Agriculture.

These educational institutions which have achieved an acclaimed academic excellence cater to the educational needs of thousands of students coming from different parts of India and also abroad. Our teaching faculty includes highly qualified, experienced, dedicated and student-caring teachers. These educational institutions are located at various places viz. Pune, Navi Mumbai, Kolhapur, Solapur, Sangli, Karad, Panchagani, Jawhar and New Delhi. The spectacular success achieved by Vidyapeeth is mainly a creation of unusual foresight, exceptionally dynamic leadership and able guidance of the founder of Vidyapeeth, Dr. Patangrao Kadam. It has been our constant endeavor to impart high quality education and training to our students and so, no wonder that our institutions have become nationally known for their academic excellence. In recognition of the academic merit achieved by these institutions and potential for development which they have, the Department of Human Resource Development, Government of India and the University Grants Commission of India have accorded the status of a deemed to be university to Bharati Vidyapeeth with its twenty nine constituent units.

Besides these 180 educational institutions, Bharati Vidyapeeth has also been successfully running a Co-operative Bank, Co-operative Consumer Stores, a Co-operative Poultry, a Co-operative Sugar Factory, Charitable Hospitals and Medical Research Centre and the like.

## **BHARATI VIDYAPEETH UNIVERSITY, PUNE**

As mentioned earlier, the Department of Human Resource Development, Government of India on the recommendation of University Grants Commission accorded the status of Deemed University to twelve units of Bharati Vidyapeeth (vide their notification No. F.9-15/95-U.3 dated 26/4/96 under the Section 3 of the University Grants Commission Act. of 1956).

Subsequently, the Govt. of India on the recommendations of the UGC and AICTE brought some more institutions of Bharati Vidyapeeth within the ambit of Bharati Vidyapeeth University. At present there are 29 Constituent Unites.

## **BHARATI VIDYAPEETH DEEMED UNIVERSITY NEW LAW COLLEGE, PUNE**

The Bharati Vidyapeeth's New Law College, Pune, having the recognition from Bar Council of India, New Delhi, came into existence on 1st August, 1978 as a permanently affiliated college of the University of Pune, Pune. This college had a privilege of being inaugurated at the hands of Hon'ble Shri.Y.V.Chandrachud, former Chief Justice of India. **When Bharati Vidyapeeth became a Deemed University in 1996, the New Law College became a constituent unit of the BHARATI VIDYAPEETH UNIVERSITY.** It was then resolved by the University authorities to shape the college as a centre of excellence in the field of legal education at national level. **The College has celebrated its Silver Jubilee during the academic year 2002-2003.**

### **Recognition of LL.B. Degree from Bar Council of India**

The Bar Council of India has given the recognition to the **Bachelor Degree of LL.B.** offered by Bharati Vidyapeeth University, for LL.B. 5 Year and 3 Year Courses by vide letter No.BCI.D.699.1999 (LE/Mtg) dated 6th August, 1999. The college affiliation is approved by the Bar Council of India by vide letter No.BCI:D:1029/2009 (LE/M/G) dt. 07/07/2009.

### **LEGAL EDUCATION AND BHARATI VIDYAPEETH UNIVERSITY**

The Bharati Vidyapeeth University, New Law College, has kept before itself the goals of advancement and dissemination of knowledge of law and legal processes in the context of national development. In accordance with these basic expectations the College is striving to achieve excellence in the field of legal education and research. The College while imparting the legal education has kept a goal in view that a professional lawyer must be well equipped to perform the various roles which lawyers are expected to play in our society. The lawyer is not to be merely a craftsman, manipulating advocacy skills in the traditional role of conflict resolution in courts. There are other concurrent curricular goals and roles for legal education, some of which may be more important than litigation in the context of our society.

In pursuance of Bar Council of India's Directive through Rule of Legal Education 2008, the Law Faculty of Bharati Vidyapeeth University has revised the entire syllabi of LL.B. of Three Year & Five Year Courses. The revised syllabi incorporate the theme of UGC Curriculum Report. The University has also introduced the semester programme (As per the Circular No.2/99 of Bar Council of India) for LL.B Three Year & Five Year Course from the academic year 2000-2001.

# **REGULATIONS RELATING TO THE SEMESTER PATTERN OF BA LL.B 5 YEAR DEGREE PROGRAMME**

## COURSE DESIGN OF B.A. LL.B 5 YEAR PROGRAMME

The Scope of the Subjects shall be as indicated in the prescribed syllabus.

Semester	Foundational/ Compulsory Courses	Practical Papers	Electives/ Optionals	Total number of Papers	Total Marks Allotted	Total Credits
I	5	-	-	5	500	25
II	6	-	-	6	600	30
III	5	-	-	5	500	25
IV	6	-	-	6	600	30
V	4	-	1	5	500	25
VI	4	1	1	6	600	31
VII	4	-	1	5	500	25
VIII	4	1	1	6	600	31
IX	3	1	1	5	500	26
X	4	1	1	6	600	32
Total Number of Compulsory / Foundational Courses <b>=45</b>		Total Practical papers <b>= 04</b>	Total Number of Electives <b>= 06</b>	Total Number of papers <b>= 55</b>	Total Marks <b>= 5500</b>	Total number of Credits for BA. LL.B 5 Years Programme <b>= 280</b>

## GUIDELINES FOR INTERNAL ASSESSMENT SYSTEM

### (Rules & Regulations)

- **Class/ Home Assignments & Research Paper** - 10 Marks
- **Unit Tests / Moot Courts/ Legal Aid** - 20 Marks
- **Tutorials Based On Case Studies & Legislative Analysis** - 05 Marks
- **Attendance** - 05 Marks

---

**Total = 40 Marks**

## GUIDELINES FOR INTERNAL ASSESSMENT SYSTEM

### (Rules & Regulations)

#### 1. CLASS/ HOME ASSIGNMENTS & RESEARCH PAPER :-

Long Term Paper - 05 Marks

2 research papers - 05 Marks (2.5 Marks Each)

---

**Total = 10 Marks**

#### EXPLANATION:-

In the Class/Home Assignments, the students are required to prepare a compulsory **Long Term Paper**. Besides this, the students shall also submit a minimum of **two compulsory Research papers** on any of the themes relating to the subject. The Submissions must be **free from plagiarism** and must meet international standards of modes of citation (except at places where only Indian Citation applies).

#### 2. UNIT TESTS:-

Unit test I - 10 Marks

Unit test II - 10 Marks

---

**Total = 20 Marks**

#### EXPLANATION:-

There shall be a minimum of two compulsory Unit written tests to be appeared by the students which shall consist of 10 Marks for each paper. The Topics for each paper shall be notified by the concerned subject teacher well in advance. Similarly, a student can participate in the moot court/ legal aid and related activities.

### **3. TUTORIALS BASED ON CASE STUDIES & LEGISLATIVE ANALYSIS:-**

Tutorial 1 (Case Study-I)	- 02 Marks
Tutorial 2 (Case Study-II)	- 02 Marks
Tutorial 3 (Legislative Analysis)	- 01 Marks

---

**Total = 05 Marks**

#### **EXPLANATION:-**

There shall be a minimum number of 3 Tutorials out of which 2 tutorials shall be based on the recent case studies while 1 tutorial shall be based on analysis of recent or landmark legislation relating to the subject to be appeared by the students in the Class.

### **4. ATTENDANCE:-**

**Attendance = 05 Marks**

#### **EXPLANATION:-**

As per the norms of Bar Council of India, it shall be compulsory for all students to have a minimum of 75% of attendance per semester.

#### **SPECIAL CLAUSE**

The students who participate at the following activities with the prior permission of the Principal may be exempted from the above rules as a Special case:

- a) *A Student Who participated at Various national and International Moot Court Competitions in India or abroad; or*
- b) *A Student Who participated in Mock Trials, Debate, Essay or any other kind of competitions*
- c) *A Student who participated in any Model United Nations, Model Parliamentary Debate Competitions in India or abroad; or*
- d) *A Student Who actively volunteered in the College organized or any national NSS activity or any other extra-curricular activities; or*
- e) *A Student Who participated in assisting NLC's Free Legal Aid Clinic or other legal aid services, Legal Awareness camps etc. ; or*
- f) *A Student who participated in any cultural or sports activities held at national or international level; or*
- g) *A Student who is suffering from prolonged illness duly certified by the Registered medical practitioner*

Provided, the students who participated in the abovementioned activities, have sought prior permission, in writing, of the Principal, Law College to represent the institute at national and international level. The exemption granted under this rule shall solely be subject to the discretion of the Principal, Law College and no Student can claim the exemption as a

matter of his/her right.

## **SYSTEM OF EXAMINATION**

Each paper shall be of 100 Marks out of which 40 Marks shall be for Internal Assessment (IA) and 60 Marks shall be for University Examination (UE). Internal Assessment (IA) and University Examination (UE) shall be conducted by the University for each paper.

## **THE CREDIT SYSTEM:**

The credits specified for B.A. LL.B. 5 years programme describe the weight ages of various courses of the programme. The number of credits along with grade points that the student has satisfactorily completed measures the performance of the student. Satisfactory progress of a student is subject to his/ her maintaining a minimum Cumulative Grade Point Average (CGPA), as well as minimum grades in different courses of the programme. A certain number of credits must be earned by the student to qualify for the degree. Description of credit distribution for core Courses, elective Courses, and language course has already been shown.

There shall be a 10-Point Absolute Grading System for grading in each head of passing. The system shall have seven, the highest being 10.

The performance indicators **O, A+, A, B+, B, and F** shall respectively mean:

O	Outstanding
A+	Excellent
A	Very Good
B+	Good
B	Satisfactory
F	Fail

## **THE GRADING SYSTEM UNDER CBCS**

### **Point Scale for Grading**

<b>Marks Range of marks (Out of 100)</b>	<b>Grade Point</b>	<b>Grade</b>
80 ≤ Marks ≤ 100	10	O
70 ≤ Marks ≤ 80	9	A+
60 ≤ Marks ≤ 70	8	A
55 ≤ Marks ≤ 60	7	B+
50 ≤ Marks ≤ 55	6	B
Marks below < 50	0	F

## **EVALUATION AND COMPUTATION OF THE GRADE POINT AVERAGES:**

Cumulative performance indicators such as GPA, SGPA or CGPA shall be calculated as described and illustrated below.

- A) The performances at UE and IA will be combined to obtain the Grade Point Average (GPA) for the Course/ Paper.
- B) The Weights for performance at UE and IA shall respectively be **60% and 40%**.
- C) The Grade Point Average (GPA) for a Course/ Paper shall be calculated by first finding the total marks out of 100 for the Course/ Paper.
- D) Two kinds of performance indicators, namely, the Semester Grade point Average (SGPA) and the Cumulative Grade Point Average (CGPA) shall be computed at the end of each term. The SGPA measures the cumulative performance of a learner in all the Courses/ Paper in a particular Semester, while CGPA measures the cumulative performance in all courses/ papers since his/her enrollment. The CGPA of a learner when he/she completes the programme is the Final Result of the learner.

## **STANDARDS OF PASSING**

- A) In order to pass in a Semester, a Student must obtain a minimum grade point of 6.00 (50%) both at the UE and IA.
- B) A Student who passes in a Course/ Paper is said to have completed the Credits assigned to the Course/ Paper.
- C) A Student who completed the minimum Credits required for a programme will be declared to have completed the programme.
- D) **Minimum passing grade** shall be Grade 'B' for each course/ Paper.

## **RULES OF PROMOTION FOR B.A LL.B 5 YEARS PROGRAMME**

In a 5 year LL.B programme, a Student who is admitted in 1st year, subject to the clearance of eligibility and after securing required credits for that year, shall automatically be promoted to next year. However, a Candidate who has not put minimum credits shall not be promoted to next year of the programme. In order to get promotion in 3rd year, the Candidate has to pass in all the papers of 1st year with minimum 6.00 grade points in each paper at both University Examination and Internal Examination. Similarly, in order to get promotion to 4th Year, a Candidate has to pass in all the papers of 1st year and 2nd year. In order to get promotion in last year, a Candidate has to pass in all the papers of 1st year, 2nd year and 3rd year of the programme.

**SINGLE DEGREE:**

As per the UGC rules, a Candidate admitted in **B.A. LL.B 5 Years Programme** is entitled for Single Degree only (**B.A. LL.B**) that too after the successful completion of 5 years programme. They shall not be entitled for Dual Degree as the duration of the Programme is only five years.

**AWARD OF HONOURS:**

A Student who has completed the minimum credits specified for the programme shall be declared to have passed in the programme. The Final result will be in terms of letter grade only and is based on the CGPA of all Courses studied and passed. The Criteria for the award of honours is given below.

*The Criteria for the award of Degree are given as follows:*

<b>Range of CGPA</b>	<b>Final Grade</b>	<b>Performance Descriptor</b>	<b>Equivalent Range of Marks (%)</b>
9.50 < CGPA < 10.00	O	Outstanding	80 <Marks <100
9.00 < CGPA < 9.49	A+	Excellent	70 <Marks <80
8.00 < CGPA < 8.99	A	Very Good	60 <Marks <70
7.00 < CGPA < 7.99	B+	Good	55 <Marks <60
6.00 < CGPA < 6.99	B	Satisfactory	50 <Marks <55
CGPA Below 6.00	F	Fail	Marks below 50

---

## **FIRST SEMESTER OF B.A. LAW (5 YEAR)**

### **PAPER 1 - GENERAL ENGLISH - I**

#### **Part- A FUNCTIONAL GRAMMAR**

**Unit 1** The Article

**Unit 2** Parts of Speech (Comparison of Adjectives, Conjunctions)

#### **Part- B CORRECT USAGE AND VOCABULARY**

##### **Unit 3 Sentence**

a. Tense and Concord

b. Synthesis

##### **Unit 4 Verb Conditionals**

a. Probable

b. Improbable

c. Impossible

**Unit 5 Speech:** Direct, Reported.

**Unit 6 Voice :** Active and Passive

#### **Part- C APPLIED GRAMMAR:**

**Unit 7 Basic Transformation :** a)Voice b) Sentences

**Unit 8 Sentences:** Simple, Compound and Complex.

**Unit 9** Question tags and Short Responses

**Unit 10** Punctuation and Capital Letters

**Unit 11 Legal Terms**

**Unit 12 Improved Spelling**

**Unit 13 Comprehension Skills :** Listening, Speaking, Reading and Writing

#### **Part- D WRITING SKILLS:**

**Unit 14 Paragraph Writing** ( Legal topic)

**Unit 15 Correspondence:** Note-making, Letter, Message, Report.

**Unit 16** Translation from Hindi/ Marathi language into English and vice versa.

**SUGGESTED READINGS:**

1. L. A. Hill & Others - English Language Course For Colleges, Book I, (Oxford University Press).
2. Exercises In English Composition, (Oxford University Press).

## **PAPER 4 – ICT AND LEGAL RESEARCH (SOFT SKILLS) 100 MARKS**

### **Unit 1 Introduction to Information Technology**

- a. Information Technology and Legal Education, Challenges and Significance
- b. International Lawyering : A Look At Global Opportunities
- c. Significance of Soft Skills For Lawyers
- d. Relationship Building With Clients, Lawyers, Judges, and Other Citizens
- e. Approaches to Develop Better Communication Skills, Service Orientation, Communication, Verbal Non-Verbal Communication, Barriers In Communication.

### **Unit 2 Fundamentals of Computer**

- a. Introduction to Ms office, Word, PowerPoint, Excel, Access,
- b. Basic Concepts of IT, Data Processing: Data and Information.
- c. Introduction to Computers: Classification, History, Types of Computers.
- d. Introduction to Various Units. Hardware: CPU, Memory, Input and Output Devices, Auxiliary Storage Devices. Software: System and Application Software.
- e. The Binary Number System
- f. Computers and Communication: Introduction to Computer Networks, Internet and World Wide Web, Ftp, Electronic Mail.
- g. Front-page, Html, Primary Key and Secondary Key, Information Security and Integrity

### **Unit 3 Information Technology and Legal Education**

- a. Use and Significance of Information Technology In Legal Education
- b. Understanding Legal Data Bases, Use of Online Legal Databases and Its Significance In Legal Research
- c. Useful Legal Web-Portals For Lawyers, Useful Websites In Legal Education
- d. Data Basics and E-Library
- e. Other tools For Legal Research and Use of Search Engine
- f. Data Security, Document Management
- g. Open Access Journals and Its Importance in Legal Research

- h. Role of ICT in Courts. Application of ICT in Court Administration, E-Court, E-Litigation
- i. E-Governance In Court Procedure, E-Courts: Needs of The Present Era
- j. ICT Application In Teaching-Learning Purpose In Legal Education
- k. Merits of ICT Application In Legal Education
- l. National Policy For Implementation of ICT In Judiciary
- m. ICT Application In Justice Delivery System

**Unit 4 Information Technology and Legal Research**

- a. Information Technology and Research
- b. Legal Research- Nature and Scope, Objectives, Characteristics
- c. Basic Concepts In Research- Data Collection, Classification of Data, Analysis of Data, Research Methodology, Hypothesis, Research Design, Citation, Endnote, Footnote.
- d. Use of Information Technology In Legal Research, Significance
- e. Use of Search Engines In Collection of Data
- f. Using The Internet Explorer For Legal Information
- g. Different Modes of Communication Though Internet
- h. Bulletin Boards
- i. Retrieving Files
- j. Important Internet Sites On Law
- k. Advantages of Computer Organized Or Assisted Legal Research (COLR/CALR)
- l. Disadvantages or Problems Or Limitation of COLR

**Unit 5 Plagiarism**

- a. Introduction, Definition, Meaning and Concept of Plagiarism
- b. Types of Plagiarism
- c. Student Attitude towards Plagiarism, Plagiarism By Student
- d. Plagiarism and Research Ethics
- e. Plagiarism In Research: Problems and Solutions
- f. How to Detect Plagiarism
- g. Consequences of Plagiarism

# BHARATI VIDYAPEETH

---

Bharati Vidyapeeth, the parent body of Bharati Vidyapeeth University was established in May, 1964 by Dr. Patangrao Kadam with the objective of bringing about intellectual awakening and overall development of the people through education. Bharati Vidyapeeth is now a leading educational institution in the country, which has created a history by establishing within a short span of 51 years, 171 or so educational institutions imparting education from the pre-imparting stage to post graduate stage. Our colleges and institutions of higher education impart education in different disciplines including medicine, dentistry, ayurved, homeopathy, nursing, arts, science, commerce, engineering, pharmacy, management, social science, law, environmental science, architecture, hotel management and catering technology, physical education, computer science, library science and information technology.

The spectacular success achieved by Bharati Vidyapeeth is mainly a creation of unusual foresight, exceptionally dynamic leadership and able guidance of the founder of Bharati Vidyapeeth, Dr. Patangrao Kadam. It has been our constant endeavor to impart high quality education and training to our students and so, no wonder that our institutions have become nationally known for their academic excellence. In recognition of the academic merit achieved by these institutions and potential for development which they have, the Department of Human Resource Development, Government of India and the University Grants Commission of India have accorded the status of a deemed to be university to its 29 constituent units.

These educational institutions which achieved an academic excellence cater to the educational needs of thousands of students coming from different parts of India and abroad. Our teaching faculty includes highly qualified, experienced, dedicated and student-caring teachers. These educational centers are located at various places viz. Pune, Navi Mumbai, Kolhapur, Solapur, Karad, Panchagani, Jawhar and New Delhi.

The Department of Human Resource Development, Government of India on the recommendation of University Grants Commission accorded the status of Deemed University to twelve units of Bharati Vidyapeeth (vide their notification No. F.9- 15/95-U.3 dated 26/4/96 under the Section 3 of the University Grants Commission Act of 1956). Subsequently the Govt. of India on the recommendations of the UGC has brought more institutions of Bharati Vidyapeeth within the ambit of Bharati Vidyapeeth Deemed University. Today there are total 30 Constituent Units of BVU which includes Colleges and Research Centers.

# BHARATI VIDYAPEETH UNIVERSITY

## NEW LAW COLLEGE, PUNE

---

### **PROFILE**

Bharati Vidyapeeth Deemed University's New Law College, Pune established in the year 1978 is one of the premier institutes of legal education in India. It is recognized by Bar Council of India & University Grants Commission. It is one of the constituent units of Bharati Vidyapeeth Deemed University, Pune.

### **Ranking and Accreditation**

It is consistently ranked amongst top 10 law colleges in India by reputed magazines like India Today, Outlook, Lawyers Collective, Legally India, Times of India, Indian Express, etc. The law college is reaccredited with 'A' grade by NAAC in 2011.

### **Infrastructure**

The new seven storied building of the law college was inaugurated in the year 2005 at hands of Hon. Mr. Justice R. C. Lahoti, the then Chief Justice of India. It consists of 32 classrooms, moot court room, human right cell, cyber cell, placement cell, legal aid cell, research cell & auditorium.

### **Knowledge Partners**

The college has teaching faculty comprising of retired judges of Supreme Court and High Court eminent academicians, senior lawyers, social activists and eminent jurists from abroad. The college has total 72 faculty members out of which 8 are Ph.D. and 40 are full time lecturers. Senior advocates like Adv. Ram Jethmalani, Adv. P. P. Rao, Adv. Abhishek Manu Singhvi, Adv. Soli Sorabjee, Adv. Geeta Luthra, Adv. Pinky Anand, etc. are invited to guide the law students. International Knowledge Partners from reputed universities in U.K. & U.S.A. also visit the law college regularly. International Knowledge Partners from reputed universities in U.K. & U.S.A. also visit the law college regularly.

### **Innovative Interdisciplinary Programme**

The college offers B.B.A. Law (5 years Interdisciplinary Programme). There are also various para legal courses offered.

### **ICT Teaching Methods**

The college has E-Facility in library, classrooms and moot court room. Emphasis is given on ICT Teaching and Learning Methods. The college has an E-Court room in its building.

### **Clinical Legal Education**

The college regularly conducts field work, seminars, workshops, court visit, project work as a part of its curriculum.

**Library**

The college has a library worth Rs. 1 crore. In addition to the text books the college has international journals, online legal databases like Lexis Nexis, Manupatra, Westlaw, SCC Online, etc. The library is equipped with cyber cell consisting of more than 100 computers, with free internet and Wi-Fi facility. The college also has a video – conferencing facility.

**Foreign Students & International Collaborations**

The college has 22 foreign students from across 10 countries in Undergraduate & Post-Graduate programs. The Law College has collaborated with renowned universities in U.K., U.S.A. and Europe. The college has also established academic linkages with University of Oxford, Harvard Law School, John Marshall Law School, and University of Reading etc. The collaboration aims at joint research programs, teacher – student exchange programmes, research activities, international mooting and joint international conferences.

**International Moot Court Competition**

The students of the college have participated & won several International and National Moot Court Competitions during last 5 years. The college is ranked among top law colleges by India Mooting League. The college also conducts Justice P.N Bhagwati International Moot Court Competition on Human Rights every year, wherein students from various national law schools all over India as well as Foreign Universities participate.

**Research Centers**

This college is recognized by UGC under 2f & 12(b) of UGC Act for research & development grants. The college has Indo- European Legal Study and International Research Centre & also IPR Research Centre. This college publishes Bharati Law Journal (ISSN: 2278 – 6996). During the last 5 years the faculty has published more than 70 articles in reputed national and international journals and 5 books. Minor and Major research projects are also being undertaken.

**Legal aid**

The college has legal aid cell which is administered by senior advocates from Supreme Court & High Court. It provides free legal aid to the needy & poor persons who seek social justice. Students are encouraged to participate in Lok-Adalat, Legal Aid Camps, Legal Aid Clinics & Community Services Programs. The college has established special family legal aid cell to help women and children.

**Judicial Colloquia**

Besides organizing seminar & legal discourses the college conducts Annual Judicial Colloquia wherein judges of Supreme Court of India & High Court are invited to interact

with students of law. So far the college has invited 8 former Chief Justices of India, more than 75 Judges from Supreme Court and High Court.

### **Alumni**

The alumni of the college includes judge of Supreme Court of India, High Court judges, senior advocates, JMFC, lawyers renowned academicians, human right activists, corporate professionals, company secretaries, LPO professionals, legal advisors, notary, income tax office, police personnel etc.

### **Placement**

Placement assistance is supervised by the eminent corporate lawyers. Placement record of the college is outstanding. The final year law students are actively involved in the placement process. More than 30 reputed legal firms have visited for campus recruitment. The students are placed at multinational companies, corporate firms, LPO, judicial services, educational institutions, courts & commissions etc. Alumni of the college hold respectable and important post and offices.

### **Other activities**

To enhance the professional skills of the students the law college conducts All India Bar Examination training programmes, judicial services training program, mock parliament, intra- collegiate moot court competition, essay competition, workshops, seminars, research projects and NSS activities. Sports and cultural facilities are adequately provided.

The Grading System under CBCS

Range of Marks (out of 100)	Grade Point	Grade
$80 \leq \text{Marks} \leq 100$	10	O
$70 \leq \text{Marks} < 80$	9	A+
$60 \leq \text{Marks} < 70$	8	A
$55 \leq \text{Marks} < 60$	7	B+
$50 \leq \text{Marks} < 55$	6	B
Marks < 50	0	D

The performance indicators O, A+, A, B+, B, and D shall respectively mean Outstanding, Excellent, Very Good, Good, Average, and Poor. It may be noted that entries in Table are meant for converting marks in individual courses to grade points. The respective grade points can also be computed from the following formulas given in Table-2.

**The Formula to calculate the Grade Points (GP):**

Suppose that '**Max**' is the maximum marks assigned for an examination or evaluation based on which GP will be computed. In order to determine the GP, set  $x = \text{Max}/10$  (since we have adapted 10-point system). Then GP is calculated by the formulas shown in Table-2. After computing the grade point the grade can be found from Table-1.

Table-2: Formula to Calculate Grade Point in Individual Evaluations

Range of Marks at the evaluation	Formula for the Grade Point
$8x \leq M \leq 10x$	10

$5.5x \leq M < 8x$	$\text{Truncate}(M / x) + 2$
$4x \leq M < 5.5x$	$\text{Truncate}(M/x) + 1$

**9. Computation of Grade Point Averages: Cumulative performance indicators such as GPA, SGPA, or CGPA shall be calculated as described and illustrated below.**

- I. The performances at UE and IA will be combined to obtain the Grade Point Average (GPA) for the course. **The weights for performance at UE and IA shall respectively be 60% and 40%.**
- II. The grade point average (GPA) for a course shall be calculated by first finding the total marks **out of 100 for the course. The corresponding GP (as per the table in (2) above) shall be the GPA for the course.**
- III. Two kinds of performance indicators, namely, the Semester Grade Point Average (SGPA) and the Cumulative Grade Point Average (CGPA) shall be computed at the end of each term. The SGPA measures the cumulative performance of a learner in all the courses in a particular semester, while the CGPA measures the cumulative performance in all courses since his/her enrolment. The CGPA of a learner when he/she completes the programme is the final result of the learner.
- IV. The SGPA is calculated by the formula 
$$\text{SGPA} = \frac{\sum C_k \times GP_k}{\sum C_k}$$
, where  $C_k$  is the credit-value assigned to a course and  $GP_k$  is the GPA obtained by the learner in the course. In the above, the sum is taken over all the courses that the learner has undertaken for the study during the semester, including those in which he/she might have failed or those for which he/she remained absent. **The SGPA shall be calculated up to two decimal place accuracy.**
- V. The CGPA is calculated by the formula 
$$\text{CGPA} = \frac{\sum C_k \times GP_k}{\sum C_k}$$
, where  $C_k$  is the credit-value assigned to a course and  $GP_k$  is the GPA obtained by the learner in the course. In the above, the sum is taken over all the courses that the learner has undertaken for the study from the time of his/her enrolment and also the during the semester for which CGPA is calculated, including those in which he/she might have failed or those for which he/she remained absent. **The CGPA shall be calculated up to two decimal place accuracy.**
- VI. The CGPA, calculated after the minimum credits specified for the programme are 'earned', will be the final result.

**10. Standards of Passing**

- For all courses, both UE and IE constitute separate heads-of-passing (HoP).
- In order to pass in such courses and to 'earn' the assigned credits the learner must obtain a minimum grade point of **6.0 (50% marks) at UE** and also a minimum grade point of **6.0 (50% marks) at IA;**
- The GPA for a course will be calculated only if the learner passes at the UE.

- A student who fails at UE in a course has to reappear only at UE as a backlog candidate and clear the HoP.
- Similarly, a student who fails in a course at IA has to reappear only at IA as a backlog candidate and clear the HoP.

**11. Rules of Promotion:** - The admission of students to the Two Year LL.M Program shall be on the yearly basis. A student admitted to the First Year of the course who complies with norms of the credit system and internal assessment with minimum 75% of attendance in the first year shall be automatically promoted to the Second year.

**12. Award of Honours:**

1. A student who has completed the minimum credits specified for the programme shall be declared to have passed in the programme. The final result will be in terms of letter grade only and is based on the CGPA of all courses studied and passed. The criteria for the award of honours are given in Table 4.

Table 4: Criteria for the Award of Honours at the End of the Programme

Range of CGPA	Final Grade	Performance Descriptor	Equivalent Range of Marks (%)
$9.50 < CGPA < 10.00$	O	Outstanding	$80 < Marks < 100$
$9.00 \leq CGPA \leq 9.49$	A+	Excellent	$70 \leq Marks < 80$
$8.00 \leq CGPA \leq 8.99$	A	Very Good	$60 \leq Marks < 70$
$7.00 \leq CGPA \leq 7.99$	B+	Good	$55 \leq Marks < 60$
$6.00 \leq CGPA \leq 6.99$	B	Satisfactory	$50 \leq Marks < 55$
CGPA below 6.00	F	Fail	<i>Marks Below 50</i>

2. Formula to compute equivalent percentage marks for specified CGPA:

$$\%Marks(CGPA) = \begin{cases} 10 \times CGPA - 10, & \text{if } 5.00 \leq CGPA \leq 6.00 \\ 5 \times CGPA + 20, & \text{if } 6.00 \leq CGPA \leq 8.00 \\ 10 \times CGPA - 20, & \text{if } 8.00 \leq CGPA \leq 9.00 \\ 20 \times CGPA - 110, & \text{if } 9.00 \leq CGPA \leq 9.50 \\ 40 \times CGPA - 300, & \text{if } 9.50 \leq CGPA \leq 10.00 \end{cases}$$

# COURSE STRUCTURE FOR LL.M

## (TWO YEAR PROGRAM)

## (SEMESTER PATTERN)

---

### ➤ Core courses

- Law and social transformation in India (5 credits)
- Indian constitutional law: The new challenges (5 credits)
- Judicial process (5 credits)
- Legal education and research methodology (5 credits)

### ➤ Elective Courses

#### ▪ Business law

- Law of industrial and Intellectual property (5 credits)
- Legal regulation of economic enterprises (5 credits)
- Law of export import regulation (5 credits)
- Banking laws (5 credits)
- Insurance laws (5 credits)
- Corporate finance (5 credits)

#### ▪ Human rights law

- Concept and development of human rights (5 credits)
- Human rights and international order (5 credits)
  - Protection and enforcement of human rights in India (5 credits)
- Human rights of disadvantaged groups (5 credits)
- International humanitarian law and refugee law (5 credits)
- Science technology and human rights (5 credits)
- Dissertation (30 credits)

#### ▪ Intellectual Property Law

- General Regime of Intellectual Property Rights (5 credits)
- Law Relating to Patents (5 credits)
- Law Relating to Trademarks (5 credits)
- Law Relating to Copyright (5 credits)
- Biotechnology and IPR (5 credits)
- Law of geographical indication and traditional knowledge (5 credits)

#### ▪ Environment Law

- Environment and Development: Law and Policy (5 credits)
- Environment and international legal order (5 credits)
- Environment protection in India (5 credits)
- Environment protection and disaster management (5 credits)
- Climate change and legal order (5 credits)

○ Biological diversity and legal order (5 credits)

➤ **Practical Paper**

- Practical Paper I (10 Credits)
- Practical Paper II (10 Credits)
- Practical Paper III (10 Credits)

➤ **Interdisciplinary Courses**

- Educational Technology and E-learning (3 credits)
- Computer Application and Legal research (3 credits)

➤ **Value Added Course**

- Soft skills and Personality Development (4 credits)

DETAILED SYLLABUS  
OF  
LL.M TWO YEAR PROGRAM  
w.e.f June 2015

# FOUNDATION COURSES

---

## 01. LAW AND SOCIAL TRANSFORMATION IN INDIA

### Objective of the Course

This course is designed to offer the teacher and the taught with – (a) awareness of Indian approaches to social and economic problems in the context of law as a means of social control and change; and (b) a spirit of inquiry to explore and exploit law and legal institution as a means to achieve development within the framework of law. The endeavour is to make the students aware of the role the law has played and has to play in the contemporary Indian society.

### Syllabus

1. Law and social change
  - 1.1 Law as an instrument of social change.
  - 1.2 Law as the product of traditions and culture. Criticism and evaluation in the light of colonization and the introduction of common law system and institution in India and its impact on further development of law and legal institution in India.
2. Religion and the law
  - 2.1 Religion as a divisive factor.
  - 2.2 Secularism as a solution to the problem
  - 2.3 Reform of the law on secular lines: Problems.
  - 2.4 Freedom of religion and non-discrimination on the basis of religion.
  - 2.5 Religious minorities and the law
3. Language and the Law
  - 3.1 Language as a divisive factor: Formation of linguistic states.
  - 3.2 Constitutional guarantees to linguistic minorities.
  - 3.3 Language policy and the constitution: Official language, multi-language system.
  - 3.4 Non-Discrimination on the ground of language
4. Community and the law
  - 4.1 Caste as a divisive factor
  - 4.2 Non-discrimination on the ground of caste
  - 4.3 Protective discrimination: Scheduled castes, tribes and backward classes.
  - 4.4 Reservation: Statutory commissions, Statutory Provisions.
5. Regionalism and the law
  - 5.1 Regionalism as a divisive factor
  - 5.2 Concept of India as one unit
  - 5.3 Right of movement, residence and business; impermissibility of state or regional barriers.
  - 5.4 Admission to educational institutions: Preference to residents of a state
6. Women and the law

- 6.1 Crimes against women
- 6.2 Gender injustice and its various forms
- 6.3 Women's Commission
- 6.4 Empowerment of women: Constitutional and other legal provisions
7. Children and the law
  - 7.1 Child labour
  - 7.2 Sexual exploitation
  - 7.3 Adoption and related problems
  - 7.4 Children and education
8. Modernization and the law
  - 8.1 Modernization as a value: Constitutional perspectives reflected in the fundamental duties.
  - 8.2 Modernization of social institutions through law
    - 8.2.1 Reform of family law
    - 8.2.2 Agrarian reform – Industrialization of agriculture
    - 8.2.3 Industrial reform: Free enterprise v. State regulation – Industrialization v. environmental protection.
  - 8.3 Reform of court processes
    - 8.3.1 Criminal Law: Plea bargaining; compounding and payment of compensation to victim
    - 8.3.2 Civil law: (ADR) Confrontation v. Consensus; Mediation and Conciliation; Lok adalats
    - 8.3.3 Prison reforms  
Democratic decentralization and local self-government
9. Alternative approaches to law
  - 9.1 The jurisprudence of Sarvodaya – Gandhiji, Vinoba Bhave, Jayprakash Narayan – Surrender of dacoits; Concept of Grama Nyayalayas.
  - 9.2 Socialist thought on law and justice: An enquiry through constitutional debates on the right to property.
  - 9.3 Indian Marxist critique of law justice.
  - 9.4 Naxalite movement: causes and cure

## 02. INDIAN CONSTITUTIONAL LAW: THE NEW CHALLENGES

### Objective of the Course

The Constitution, a living document, is said to be always in the making. The judicial process of constitutional interpretation involves a technique of adapting the law to meet changing social more. Constitution being the fundamental law, an insight into its new trends is essential for a meaningful understanding of the legal system and processes. The post graduate students in law, who had the basic knowledge of Indian Constitutional Law at LL.B level, should be exposed to the new challenges and perspectives of constitutional development while they are allowed to choose an area of law for specialization. Obviously, rubrics under this paper require modification and updating from time to time

The following syllabus prepared with this perspective will be spread over a period of one semester.

### Syllabus

1. Federalism
  - 1.1 Creation of new states
  - 1.2 Allocation and share of resources-distribution of grants in aid
    - 1.2.1 The inter-state disputes on resources
  - 1.3 Rehabilitation of internally displaced persons.
  - 1.4 Centre's responsibility and internal disturbance within States.
  - 1.5 Directions of the Centre to the State under Article 356 and 365
  - 1.6 Federal Comity: Relationship of truth and faith between centre and State
  - 1.7 Special status of certain States
    - 1.7.1 Tribal Areas, Scheduled Areas
2. "State": Need for widening the definition in the wake of liberalization
3. Right to equality : Privatization and its impact on affirmative action
4. Empowerment of women
5. Freedom of press and challenges of new scientific development
  - 5.1 Freedom of speech and right to broadcast and telecast
  - 5.2 Right to strike, hartal and bandh
6. Emerging regime of new rights and remedies
  - 6.1 Reading Directive Principles and Fundamental Duties into Fundamental Rights
    - 6.1.1 Compensation jurisprudence
    - 6.1.2 Right to education
      - 6.1.2.1 Commercialization of education and its impact
      - 6.1.2.2 Brain drain by foreign education market
7. Right of minorities to establish and administer educational institutions and state control.

8. Secularism and religious fanaticism
9. Separation of powers: stresses and strain
  - 9.1 Judicial activism and judicial restraint
  - 9.2 PIL: implementation
  - 9.3 Judicial independence
    - 9.3.1 Appointment, transfer and removal of judges
  - 9.4 Accountability: executive and judiciary
  - 9.5 Tribunals
10. Democratic process
  - 10.1 Nexus of politics with criminal and the business
  - 10.2 Election
  - 10.3 Election commission: Status
  - 10.4 Election Reforms
  - 10.5 Coalition government, 'Stability, Durability, Corrupt Practice'
  - 10.6 Grass root democracy

**Books Recommended:**

No Specific bibliography is suggested for this course since the course materials obviously depends upon the latest developments. These developments in the areas specified in the course can be gathered from the recent materials such as case law, changes and amendments of laws, critical comments, studies and reports, articles and research papers and lastly contemporary emerging ethos impacting on constitutional values.

## 03 JUDICIAL PROCESS

### Objective of the Course

A lawyer, whether academic or professional, is expected to be competent to analyze and evaluate the legal process from a broader juristic perspective. Hence a compulsory paper on judicial Process is essential in the LL.M curriculum. The objective of this paper is to study the nature of judicial process as an instatement of social ordering. It is intended to highlight the role of court as policy maker, participant in the power process and as an instrument of social change. This paper further intends to expose the intricacies of judicial creativity and the judicial tools and techniques employed in the process.

Since the ultimate aim of any legal process or system is pursuit of justice, a systematic study of the concept of justice and its various theoretical foundations is required. This paper, therefore, intends to familiarize the students with various theories, different aspects and alternative ways, of attaining justice.

The following syllabus prepared with the above perspective will spread over period of one semester.

### Syllabus

#### 1. Nature of Judicial process

- 1.1 Judicial process as an instrument of social ordering
- 1.2 Judicial process and creativity in law – common law model- Legal reasoning and growth of law – change and stability
- 1.3 The tools and techniques of judicial creativity and precedent
- 1.4 Legal development and creativity through legal reasoning under statutory and codified system.

#### 2. Special Dimensions of Judicial Process in Constitutional Adjudications.

- 2.1 Notions of judicial review
- 2.2 'Role' in constitutional adjudication various theories of judicial role
- 2.3 Tools and techniques in policy-making and creativity in constitutional adjudication.
- 2.4 Varieties of judicial and juristic activism
- 2.5 Problems of accountability and judicial law-making

#### 3. Judicial Process in India

- 3.1 Indian debate on the role of judges and on the notion of judicial review
- 3.2 The "independence" of judiciary and the "political" nature of judicial process
- 3.3 Judicial process in pursuit of constitutional goals and values new dimensions of judicial activism and structural challenges.
- 3.4 Institutional liability of courts and judicial activism scope and limits.

#### 4. **The Concepts of Justice**

- 4.1 The concept of justice or Dharma in Indian thought
- 4.2 Dharma as the foundation of legal ordering in Indian thought
- 4.3 The concept and various theories of justice in the western thought.
- 4.4 Various theoretical bases of justice: the liberal contractual tradition, the liberal utilitarian tradition, and the liberal moral tradition.

#### 5. **Relations between law and justice**

- 5.1 Equivalence Theories justice as nothing more than the positive law of the stronger class
- 5.2 Dependency theories – For its realization justice depends on law, but justice is not the same as law.
- 5.3 The independence of justice theories-means to end relationship of law and justice. The relationship in the context of the Indian constitutional ordering.
- 5.4 Analysis of selected cases of the Supreme Court where the judicial process can be seen as influenced by theories of justice.

#### **Books Recommended:**

- Julius Stone, The province and Function of law, Part II, Chs. 1.8-16(2000), Universal, New Delhi
- Cardozo, The Nature of Judicial Process (1995) Universal, New Delhi
- Henry J. Abraham, The judicial Process (1998), Oxford
- J. Stone, Precedent and the law: Dynamic of Common Law Growth (1985) Butterworth's.
- W.Friedmann, legal Theory (1960), Stevens, London
- Bodenheimer, Jurispurdence the Philosophy and Method of the Law (1997), Universal, Delhi
- J.Stone, Legal System and Lawyers' Reasoning (199), Universal, Delhi.
- U.Baxi, the Indian Supreme Court and Politics (1980), Eastern, Lucknow
- Rajeev Dhavan, The Supreme Court of India A Socio Legal Critique of its Juristic Techniques (1977), Tripathi, Bombay
- John Rawls, A Theroy of Justice (2000) Universal, Delhi
- Edward H. Levi, an introduction to Legal Reasoning (1970), University of Chicago.

## 04. LEGAL EDUCATION AND RESEARCH METHODOLOGY

### Objective of the Course

A post graduate student of law should get an insight into the objectives of legal education. He should have an exposure to programmes like organization of the seminars, publication of law journals and holding of legal aid clinics.

Law is taught in different ways in different countries, The LL.M course, being intended also to produce lawyers with better competence and expertise, it is imperative that the student should familiarize himself with the different systems of legal education. The lecture method both at LL.B. Level and LL.M level has many demerits. The existing lacunae can be eliminated by following other methods of learning such as case methods, problem method, discussion method, seminar method and a combination of all these methods. The student has to be exposed to these methods so as to develop his skills.

Growth of legal science in India depends on the nature and career of legal research. The syllabus is designed to develop also skills in research and writing in a systematic manner.

### Syllabus

#### 1. Research Methodology – An Introduction

- 1.1. Meaning of Research
- 1.2. Objectives of Research
- 1.3. Characteristics of Research
- 1.4. Significance of Research
- 1.5. Research Methodology
- 1.6. Importance of Research Methodology

#### 2. Legal Research Methodology

- 2.1. Meaning of Legal Research
- 2.2. Characteristics of Legal Research
- 2.3. Objectives of Legal Research
- 2.4. Types of Legal Research
  - 2.4.1. Doctrinal Legal Research
    - 2.4.1.1. Characteristics
    - 2.4.1.2. Components
    - 2.4.1.3. Merits and Demerits
  - 2.4.2. Non-Doctrinal Legal Research
    - 2.4.2.1. Features
    - 2.4.2.2. Limitations

#### 3. Methods for Legal Research

- 3.1. Analytical Method
- 3.2. Historical Method
- 3.3. Empirical Method(socio-legal Research)

- 3.4. Scientific Method
- 3.5. Comparative Method
- 3.6. Ethical Method
- 3.7. Statistical Method
- 3.8. Critical Method

#### **4. Steps involved in Legal Research**

#### **5. Legal Research Problem**

- 5.1. Meaning of Research Problem
- 5.2. Types of Research Problems
- 5.3. Criteria of Research Problem
- 5.4. Evaluation of Research Problem
- 5.5. Advantages of right selection of Research Problem

#### **6. Hypothesis**

- 6.1. Meaning- Significance-characteristics
- 6.2. Types of Hypothesis
- 6.3. Ideal formulation of hypothesis
- 6.4. Testing of Hypothesis

#### **7. Research Design**

- 7.1. Meaning-Need-Characteristics
- 7.2. Important concepts-variable, independent variables, dependent variables, controls
- 7.3. Types of Research Design
  - 7.3.1. Descriptive Design
  - 7.3.2. Exploratory Design
  - 7.3.3. Experimental Design
  - 7.3.4. Diagnostic Design

#### **8. Sampling technique**

- 8.1. Need for Sampling
- 8.2. Assumptions related to sampling
- 8.3. Procedure to select a sample
- 8.4. Types of sampling
  - 8.4.1. Probability Sampling
    - 8.4.1.1. Random sampling
      - 8.4.1.1.1. Lottery method
      - 8.4.1.1.2. Random numbers
      - 8.4.1.1.3. Sequential List
      - 8.4.1.1.4. Grid system
    - 8.4.1.2. Systematic Sampling
    - 8.4.1.3. Stratified random sampling
    - 8.4.1.4. Cluster Sampling
    - 8.4.1.5. Multi-Stage Sampling
  - 8.4.2. Non-Probability Sampling
    - 8.4.2.1. Representative sampling
    - 8.4.2.2. Judgment Sampling

- 8.4.2.3. Accident Sampling
- 8.4.2.4. Purposive Sampling
- 8.4.3. Quota Sampling
- 8.4.4. Area Sampling
- 8.4.5. Sampling by regular intervals
- 8.5. Reliability of sampling
  - 8.5.1. Sampling Error and Standard Error

## **9. Collection of Data**

- 9.1. Sources of data
- 9.2. Tools/Methods of Data Collection
  - 9.2.1. Observation Method
  - 9.2.2. Interview Method
  - 9.2.3. Questionnaire Method
  - 9.2.4. Survey Method
  - 9.2.5. Case Study Method
  - 9.2.6. Projective Techniques
  - 9.2.7. Content Analysis

## **10. Data Processing**

- 10.1. Analysis of Data
- 10.2. Interpretation of Data
- 10.3. Socio-metrics and Jurimetrics
- 10.4. Induction and Deduction

## **11. Report writing**

- 11.1. Techniques of report writing
- 11.2. Citation rules

## **12. Legal Writing**

- 12.1. Objective
- 12.2. Types
- 12.3. Principles
- 12.4. Role of writing in Legal system
- 12.5. Writing a Law Review article
- 12.6. Approach ,structure and writing of dissertation
- 12.7. Use of research findings in legal writing
- 12.8. Correct referencing in dissertations
- 12.9. Legal citation system
- 12.10. Finishing and polishing the writing

## **13. Computerized Research-Lexis Nexis, Westlaw, Manupatra**

### **Books Recommended:**

1. M.O.Price, H.Bitner and Bysiewiez, Effective Legal Research (1978)
2. Pauline. V.Young , Scientific Social Survey and Research (1962)
3. Morris.L.Cohan, Legal Research in Butshell (1996)
4. C.R.Kothari, Research Methodology Methods and Techniques (2009)
5. Dr.S.R.Myneni, Legal Research Methodology (2012)

6. Shipra Agarwal, Legal Research Methodology (2009)
7. Amanda Martinsek, Legal Writing (2009)
8. Webley Lisa, Legal Writing (2012)
9. Legal Language and Legal Writing, B.M.Gandhi (2010)
10. Goode and Hatt, Methods in Social Research.
11. Miller D., Hand Book of Research Design and Social Measurement.
12. Jain S. N., Legal Research and Methodology.
13. Erwin C. Surrency, B. Fielf and J. Crea, A Guide to Legal Research (1959).
14. Wilkinson, Bhandarkar, Research Methodology.
15. Selltis Johoda, Research Methodology.
16. Stott D, Legal Research.
17. Mackie S., Legal Research, How to find & understand Law.
18. Campbell, Fox Kentey, Students guide to Legal writing.
19. Ackoff R. L., Design of social research.
20. Beveridge WIR, Art of Scientific investigation.
21. Claire Selltis and others-Research methods in Social Relations.

# OPTIONAL COURSES

## GROUP A

### BUSINESS LAW

---

#### **A01: LAW OF INDUSTRIAL AND INTELLECTUAL PROPERTY**

##### **Objective of the Course:**

The concept of intellectual property rights as developed in India cannot be divorced from the developments in the international arena as well as in the nation-to-nation relations. The impact of IPR regime on the economic front is emphasized in this paper. In particular, greater attention would be given here to the law relating to unfair and restrictive trade practices as affecting the regime of intellectual property rights. New areas of development, especially plant patenting and patenting of new forms of life (biotechnology) should receive special attention. Evidentiary aspects of infringement and human right dimensions of the regime of intellectual property law will also be addressed.

The following syllabus prepared with this perspective.

##### **SYLLABUS:**

###### **1: Basic Principles and National Regime of Intellectual property.**

- 1.1 Meaning and definitions of Intellectual Property
- 1.2 Significance of Intellectual property
- 1.3 Classification of Intellectual property
- 1.4 Basic understanding of Intellectual Property Laws with recent amendments

###### **2: Basic Principles and International Regime of Intellectual property.**

- 2.1 International organizations related to Intellectual property
- 2.2 Trade related Aspects of Intellectual property (TRIPs)
- 2.3 World Intellectual property Organization (WIPO)
- 2.4 World Trade Organization (WTO)
- 2.5 European Economic Council (EEC)
- 2.6 Basic understanding of International Convention and treaties
- 2.7 Universal Copyright Convention(with protocols)
- 2.8 The Berne Convention for the protection of Literary and Artistic works, 1971
- 2.9 The Paris Convention for the protection of industrial property, 1967
- 2.10 United Nations Convention on Biological Diversity
- 2.11 Johannesburg Declaration on Sustainable development 2002.

- 2.12 Rome Convention
- 2.13 Madrid Agreement concerning the International registration of marks 1979
- 2.14 Hauge Agreement of International Deposits of Industrial Design, 1960
- 2.15 Budapest Treaty
- 2.16 Patent Co-operation Treaty , 1970

### **3: Copyright and Related Rights Issues**

- 3.1 Nature and History of Copyright Act
- 3.2 Ownership of Copyright and Licencing of Copyrights
- 3.3 Rights of Broadcasting organizations and of performers
- 3.4 Infringement and piracy of copyright
- 3.5 Offences , penalties and defences
- 3.6 Copyright infringement issues in digital era

### **4: Trademark and Related Rights Issues.**

- 4.1 The register and conditions for registration
- 4.2 Procedure and duration for registration
- 4.3 Offences, penalties and procedure
- 4.4 Unfair trade practice
- 4.5 Trademark-related Issues Raised by the Internet
- 4.6 issues of trademark infringement in e-commerce and enforcement

### **5: Patent Rights and Related Issues.**

- 4.7 Concept, and non patentable inventions
- 4.8 Examination of patents, specification and patent of addition
- 4.9 Licensing of patents and compulsory licensing
- 4.10 Infringement and remedies
- 4.11 International patents, its filing of patents and date of priority
- 4.12 Pharmaceutical patents and related issues
- 4.13 Nature and types of biotechnology patents over new forms of life: TRIPS obligation
- 4.14 Plant patenting and sui generic protection for plant varieties

### **6: Geographical Indications and Industrial Designs.**

- 6.1 Concept of Geographical Indications and the conditions for the registration
- 6.2 Duration, procedure and effects of the registration of Geographical Indications
- 6.3 Difference between Geographical Indication and trademarks
- 6.4 Offences, penalties, and the appellate board
- 6.5 International Scenario of Geographical Indications
- 6.6 Concept, registration and the effects of registration of Designs
- 6.7 Salient features of Designs Act 2000
- 6.8 Piracy of registered designs and penalties

## 6.9 Position of Industrial Designs Act in various International Conventions

### **7: Intellectual Property and Human Right.**

7.1 Freedom of speech and expression as the basis of the regime of intellectual property law.

7.2 Human right of the impoverished masses intellectual property protection of new products for healthcare and food security

7.3 Traditional knowledge protection biodiversity convention right of indigenous people.

## 02. LEGAL REGULATION OF ECONOMIC ENTERPRISES

### Objective of the Course:

After independence we have placed greater emphasis on the growth of our economy. The focus is on growth, both in public and private sectors, so as to cope up with the problems of population explosion. We have found that there is now almost a circle from laissez faire to welfare state and again back to laissez faire. Adoption the concept of global economy in the presence of the socialistic perspectives in the Constitution presents a dilemma. The trends of liberalization starting in the early nineties and continuing to this day bring a shift in focus of regulation in diverse fields of economic activities.

This course is designed to acquaint the students of the eco-legal perspectives and implications of such developments.

### Syllabus

#### 1. Government and Business

- 1.1 Economic Systems – Capitalism, Socialism and mixed-economy.
- 1.2 Forms of Government regulations.

#### 2. Rational of Government Regulation

- 2.1 Economic rules of Government
- 2.2 Constitutional perspectives of business

#### 3. Industrial Policy

- 3.1 Industrial Policy 1948
- 3.2 Industrial Policy 1956
- 3.3 New Industrial Policy 1991 and Globalization.

#### 4. The place of Public, Small Scale, Co-operative, Corporate, Private and joint sectors in the changing context.

#### 5. Competition Law & Policy

- 5.1 Consumerism and Consumer Protection in India.

#### 6. Development and Regulation of Industries

#### 7. Industrial Development and Regulation Act 1951.

- 7.1 Financial Services – Changing Techniques of Regulation
- 7.2 Sick Undertakings – Policy and Law
- 7.3 Definition, Causes and Effects
- 7.4 Remedies – Government and Legal Remedy
- 7.5 Revival and Rehabilitation of Sick Companies.

#### 8. Capital Issues

- 8.1 Equity and debt finance
- 8.2 Global Depositories
- 8.3 De-materialised securities
- 8.4 The Securities Market and Stock Exchange

#### 9. Protection of Environment

9.1 Mass Disaster and Environmental degradation.

9.2 Regulation of Hazardous Activity

9.3 Environment Protection Act

9.4 Public Liability Insurance

**10. Legal Regulation of Select Public Enterprises**

10.1 Telecom Regulatory Authority

10.2 Insurance Regulatory Authority

10.3 Broadcasting Regulatory Authority

**11. Multinational Companies**

11.1 Role of Multinationals in development

11.2 Development and Regulation of Foreign Investment

11.3 Investment in India : FDI and NRI's

11.4 Investment in Abroad.

**Books Recommended:**

1. Business Organisation and Management : V.K.Bhushan
2. Indian Economy : Rudra Dutt and
3. Indian Economy : Mishra and Puri
4. Economic Law : Taxman
5. Business Environment : Frances Cherunilam.
6. S.Aswani Kumar, The Law of Indian Trade Mark (2001), Commercial Law House, Delhi.
7. Industrial Policy Resolutions of 1948, 1956, 1991
8. Industrial Licensing Policy 1970, 1975
9. Industrial Policy Statements 1973,1977,1980
10. Reports of Committees on Public Undertakings of Parliament
11. Industries (Development and Regulation) Act, 1951
12. U Baxi & A. Dhandha, Valiant Victims and Lethal Litigation: The Bhopal Case (1989)
13. Indian Law Institute, Law of International Trade Transactions, (1973)

## 03: LAW OF EXPORT IMPORT REGULATION

### Objective of the Course:

After independence India has embarked upon all round efforts to modernize her economy through development ventures, Greater and greater emphasis is placed on increase of production in both industrial and agricultural sectors. Besides, there was the ever-pressing need for raising capital for investment in certain basic and key industries. All these required a considerably high rate to investment of capital. The process of modernization necessitated had to be borrowed from other developed countries. This, in turn needed foreign exchange which could be earned by the increased exports of goods and raw materials from India.

The need for accelerating the exports trade of India's developing economy can hardly be over emphasized. Export earnings enable a developing country to finance its massive requirements of growth to maintain its essential imports and thereby stimulate the process of its economic developments. In the words of Prof. V.K.R.V.Rao: "In fact, expansion of exports may well be described as an integral part of the development process, neglect of which can only be at the peril of development itself."

Increasing exports have been necessitated to meet the growing needs of defense. India is country rich in natural resources. One of the approaches to combat its economic backwardness could be in large-scale production and in maximization of its exports.

Import and export of goods and raw materials is a complex, complicated and intricate activity. It involves elaborate economic, fiscal, budgetary and monetary policy considerations. Export and import control policy is also closely connected with country's balance of payment position.

The detailed procedures for imports and exports are provided in the Hand Book. The union Government used to declare its import and export policy for five years. The controls on exports and imports are closely connected with the Foreign Trade Regulation act 1992.

This Course is designed to acquaint the students about the parameters of legal controls on import and exports.

The following syllabus prepared with these objectives will comprise about 42 units of one-hour duration each spread over a period of one semester.

### Syllabus

#### 1. Introduction

- 1.1 State Control over import and export of goods from rigidity to liberalization
- 1.2 Impact of regulation on economy

#### 2. 2.1 Advantages & Disadvantages of Free Trade (Laisse Fair Policy)

- 2.2 Protection (Protectionism)
- 2.3 Tariff Barriers and Non-Tariff Barriers.

2.4 Role of International and National Law in International Trade.

### **3. International Regime**

- 3.1 Evolution of GATT Law
- 3.2 GATT 1947 and GATT 1994
- 3.4 W.T.O and its objectives and Principles
- 3.5 W.T.O and Tariff and Non-Tariff restrictions
- 3.6 Investments and Transfer of Technology Permissible regulations.
- 3.7 Problem of Dumping in international market
- 3.8 Reductions of subsidies and counter measures

### **4. Control of imports and exports**

- 4.1 Export Import Policy of Government
- 4.2 Pre and Post Liberalisation
- 4.3 Legislative control
  - 4.3.1 Power of control: Central government and RBI
  - 4.3.2 Foreign Trade Development and Regulation Act 1992
  - 4.2.3 Restrictions under customs law
  - 4.2.4 Prohibition and penalties
  - 4.2.5 Control under FEMA

### **5. Exim policy: Changing Dimensions**

- 6.1 Investment policy: NRIs, FIIs (Foreign Institution Investors), FDIs
- 6.2 Joint venture

### **6. Promotion of foreign trade**

- 6.1 Agriculture products
- 6.2 Textile and cloths
- 6.3 Jewellery
- 6.4 Service sector

### **7. Export Promotion**

- 7.1 Export Promotion Schemes
- 7.2 Export Promotion Councils
- 7.3 Export Oriented Units and Export Zone
- 7.4 SEZ (Special Economic Zone)
- 7.5 Export Import Bank of India (EXIM Bank) and its major programmes.

### **7. Law Relating to Customs**

- 7.1 Prohibition on importation and exportation of goods
- 7.2 Control of smuggling activities in export-import trade
- 7.3 Levy of, and exemption from, customs duties
- 7.4 Clearance of imported goods and export goods
- 7.5 Conveyance and warehousing of goods

## **8. Regulations on Investment**

- 8.1 Borrowing and lending of money and foreign currency
- 8.2 Securities abroad issue of
- 8.3 Immovable property purchase abroad
- 8.4 Establishment of business outside
- 8.5 Issue of derivatives and foreign securities GDR (Global depositories receipts), ADR (American depository receipts)
- 8.6 Investment in Indian banks
- 8.7 Repatriation and surrender of foreign securities

## **9. Technology transfer**

- 9.1 Restrictive terms in technology transfer agreements
- 9.2 Automatic approval schemes

## **Suggested Reading**

- International Trade Law : Dr.S.R.Myneni
- Indian Economy : Mishra & Puri
- International Trade Law : Ishita Chatterjee.
- Government of India, Handbook of Import Export Procedures, (Refer to the latest edition)
- Government of India Import and Export Policy (1997-2002)
- Foreign Trade Development and Regulation Act 1992 and Rules
- Foreign Exchange Management Act 1999
- Marine Products Export Development Authority 1972

## **A04. BANKING LAW**

### **Objectives of the Course:**

A vitally important economic institution the banking system is deeply influenced by socio-political and economic changes. The emerging changes in India, particularly after the initiation of the planning process as an instrument of rapid economic development had moulded and affected the banking structure, policies, pattern and practices. A significant development in the banking system is diversification in banks financing. The commercial banks entered 'into the field of wide ranging financial assistance to industry, both large and small scale, requiring the need for social control of the banking system eventually leading to the nationalization of banks.

The conventional banking system, found to be deficient for planned development purposes paved the way for development banking. The fag end of the last millennium witness influx of foreign banking companies it to India and a shift in the banking policy as part of the global phenomenon of liberalization. The legal system is adopting itself into the new mores.

This course is designed to acquaint the students with conceptual and operational parameters of banking law, the judicial interpretation and the new emerging dimensions of the banking system.

The course will comprise of about 42 units of one-hour duration each spread over a period of one semester.

### **Syllabus:**

#### **1. History of Banking**

- 1.1 Origin and Development of the World Banking
- 1.2 Early history of banking and evaluation of banking in England.
- 1.3 Evolution of History of Banking in India.
- 1.4 Structure of Banking in India and their functions. Functions of Commercial Banks

#### **2. Law Relating to Banking Companies in India**

- 2.1 Banking Regulation Act, 1949 – Features
- 2.2 Role of Reserve Bank of India under the Banking Regulation Act.
- 2.3 Control by government and its
- 2.4 control over banking and agencies on management

#### **3. Social Banking Institutions**

- 3.1 Nationalisation of Bank in India
- 3.2 Objectives of Nationalisation, Arguments for Nationalisation  
And Arguments against Nationalisation of bank
- 3.3 Development of Banking after Nationalization , and
- 3.4 Critical evaluation of Banking in the present context
- 3.5 Priority sector Lending

#### **4. Deposit Insurance**

- 4.1 The Deposit Insurance Corporation Act 1961
- 4.2 Objects and reasons
- 4.3 Relation between Insured bank DIC and
- 4.4 Reserve Bank of India

## **5. The Central Bank**

- 5.1 Evolution of Central Bank
- 5.2 Characteristics and Functions
- 5.3 The Reserve Bank of India as the Central Bank organizational structure
- 5.4 Functions of RBI
- 5.5 Regulation of monetary mechanism of the economy
  - Credit control
  - Exchange control
  - Monopoly of currency issue
  - Bank rate Policy formulation
- 5.6 Control of RBI over Non- Banking Companies

## **6. Relationship between Banker and Customer**

- 6.1 Banker and Customer
- 6.2 General Relationship between Banker and Customer
- 6.3 Special features of Relationship between Banker and Customer
- 6.4 Obligation ,Duties and Rights of the Banker, Customers duties or Obligation to his banker
- 6.5 Nature and Types of Accounts
- 6.6 Special classes of customers – Lunatics partnership, Corporation and local authorities
- 6.7 Consumer Protection – Banking as Service
- 6.8 Banking Ombudsman

## **7. Negotiable Instruments**

- 7.1 Meaning and kinds
- 7.2 Transfer and Negotiations
- 7.3 Holder and Holder in due course
- 7.4 Presentment and Payment Law on Liabilities of Partner and Dishonor of cheques.

## **8. Recent Trends of Banking system in India**

- 8.1 New Technology and Computer Banking
- 8.2 Automation and Legal aspects - ATM, Smart Card, Debit Card and Credit Cards Information Technology, Banking through Mobiles and E-Commerce.

## **9. Lending by Banks**

- 9.1 Loans and Advances
- 9.2 Main Principles of Social Lending
- 9.3 Credit worthness of Borrowers
- 9.4 Classification of Loans and Advances
  - Secured and Unsecured Loans
- 9.5 Modes of Creating a Charge of Banking    change
  - Pledge, Hypothication, Mortgage, Pledge, Guarantee
  - Secured Advances
- 9.6 General Principles of Secured Advances
  - Types of Securities for Advances
  - (Advances against Land, against Goods, against Documents)
- 9.7 Default and Recovery of Advances
  - Recovery through persuasion
- 9.8 Recovery without Courts intervention
  - Compromise with Borrowers
  - Efforts of Legal action
- 9.9 Debts Recovery Tribunal

**Books Recommended:**

- M.L. Tannan, Tannan’s Banking Law and Practices in India (1997) India Law House, New Delhi, 2 Volumes.
- Law of Banking : Dr.S.R.Myneni
- Banking Laws : R.N.Chaudhary
- Indian Economy: V.K. Puri & S.K.Mishra.
- K. C. Shekhar, Banking Theory and Practices (1998) UBS Publisher Distributors Ltd. New Delhi.
- R. S. Narayan, the recovery of Debts to Banks and Financial Institutions Act, 1993 (51 of 1993), Asia Law House, Hyderabad.

## **A05: INSURANCE LAWS**

**Objective of the Course**

As early as in 1601 one finds an excellent exposition of the insurance idea expressed in these words of an Act of British Parliament “the loss length rather easily, upon many than heavily upon few”. The insured person transfers from his own shoulders to the insurers., who, in return for agreeing to assume a potential risk of loss receive a payment known as premium. The insurers rely on the probability that only some of the losses, they insure against will in fact occur within any given period. They calculate,

therefore that they will be left with a profit. The insurer on the other hand, is better able to risk his capital in trade since he knows that certain events which he cannot control, such as fire, Shipwreck, will not cause him to lose his investment.

The insurance idea is an old-institution of transactional trade. The age old from the insurance was the marine insurance. There is nothing like disaster to set men's minds to work. Consequently, in due course of time fire and life insurance, made their appearance. Within the last hundred years the insurance principle is being extended wider. Today one finds insurance cover for accidents, motor vehicles, class, live stock, crop, burglary and various other disasters.

Insurance is a device not to avert risks, calamities and disasters; but to mitigate their rigours and financial losses. The function of insurance is to spread such loss arising from risks of life cover a large number of persons.

The operational framework of insurance idea is provided by the general principles of contract. The insurance policy, being a contract, are subject to all the judicial interpretative techniques. Besides, the insurance idea has a compensatory justice component. This brings it in the arena of the law of tort as well. It is even suggested that a fully grown and developed law of insurance may, if not totally displace, decrease the significance of the law of tort.

This course is designed to acquaint the students with the conceptual and operational parameters of insurance law in the context of the development of the general principles of law and judicial interpretation to inform the students about the use of law for the establishment of just order in insurance and to develop the appreciative and evaluative faculties of the students. The following syllabus is prepared with the above perspective

### **Syllabus:**

#### **1. Development and growth of Insurance in India**

- 1.1 History of Insurance
- 1.2 Insurance in India
  - Life Insurance
  - General Insurance
  - Privatisation of Insurance Industry

#### **2. Definition and nature of Insurance**

- 2.1 Definition
- 2.2 Nature of Insurance
- 2.3 Functions of Insurance
- 2.4 Classification of Insurance

#### **3. Principles of Insurance**

- 3.1 Contract of Insurance
- 3.2 Principle of Co- operation
- 3.3 Principle of Probability
- 3.4 Principle of Insurable interest
- 3.5 Principle of utmost good faith

- 3.6 Warranties
  - 3.7 Principles of Indemnity
  - 3.8 Principles of Subrogation
  - 3.9 Principles of Contribution
  - 3.10 Maxim of “Causa Proxima (Proximate clause)”
- 4. Indian Insurance Law (general)**
- 4.1 History and Development
  - 4.2 The Insurance Act 1938 Insurance Regulatory Authorities Act 2000
  - 4.3 Double Insurance and Re- Insurance
- 5. Life Insurance**
- 5.1 Definition of life Insurance , Nature
  - 5.2 Essential elements of Life Insurance
  - 5.3 Formation of Life Insurance Contract
  - 5.4 Insurable Interest in Life Insurance
  - 5.5 Premium
  - 5.6 Circumstances affecting risk
    - Persons entitled to payment settlement of claim and payment of money
- 6. Marine Insurance**
- 6.1 Nature and scope
  - 6.2 Classification of Marine policies
    - The Marine Insurance act, 1963
    - Insurable Interest, Insurable Value
    - Marine Insurance Policy, Condition- Express, Warranties
    - Voyage- deviation
    - Peril of Sea
    - Assignment of Policy
    - Partial loss of ship and of freight,
    - General average, particular charges
    - Return of Premium
- 7. Insurance against Accident**
- 7.1 The fatal Accident Act, 1853
  - 7.2 Objects and reasons
  - 7.3 Assessment of compensation
  - 7.4 Contributory negligence
  - 7.5 Compensation and liability
- 8. The Personal Injuries (Compensation Insurance ) Act , 1963**

- 8.1 Compensation payable under the Act
- 8.2 Compensation Insurance Scheme under the Act

### **9. Miscellaneous Insurance Schemes: New Dimensions**

- 9.1. Group life insurance
- 9.2. Mediclaim, sickness insurance

#### **Books Recommended:**

1. Law of Insurance : Dr.S.R.Myneni
2. Law of Insurance : R.N. Chaudhary.

8. Birds, Morden Insurance Laws (1997), Sweet & Maxwell
9. Colinvaux's law insurance 1997 Sweet & Maxwell

## **A06. CORPORATE FINANCE**

### **Objective of the Course:**

Industrialization has played, and has to play a very vital role in the economic development of India. In the post independent era, industrial development is regarded, and hence employed as principal means in the strategy for achieving the goal of economic and social justice envisioned in the Constitution. Corporations, both public and private, are viewed as a powerful instrument for development. In a developing society like India enormous varieties of consumer goods are manufactured or produced. Obviously, the situation raises the issue of procuring, utilizing and managing the finances. For this purpose a science of financial management techniques has been evolved. The faculties of commerce, business and management studies have since last decades started to impart instruction so as to turn out sufficiency well equipped and adequately trained financial personnel. However, the legal and juristic aspects of corporate finance have been more or less not effectively taken care of.

In View of the above perspectives the broad objectives of this cause may be formulated as follows-

1. To understand the economic and legal dimension of corporate finance in the process

of industrial development in establishing social order in the context of constitutional Values.

2. To acquaint the student with the normative, philosophical and economic contours of various statutory rules relating to corporate finance.
3. To acquaint the students with the organization, functions, lending, and recovery procedures, conditions of lending and accountability of international national and state financing institutions and also of commercial banks and
4. To acquaint the students with the process of the flow and outflow of corporate finance.

The following syllabus prepared with the above perspective will be spread over a period of one semester.

### **Syllabus:**

#### **1. Introduction**

- 1.1 Meaning, importance and scope of corporation finance
- 1.2 Capital needs capitalization working capital securities borrowings deposits debentures
- 1.3 Objectives of corporation finance profit maximization and wealth maximization
- 1.4 Constitutional perspectives the entire 37, 38, 43, 44, 45, 46, 47, 52, 82, 85, and 86 of List 1 Union List; entry 24 of List 11 State List.
- 1.5 Methods of Financing

#### **2. Equity Finance**

- 2.1 Prospectus information disclosure
- 2.2 Remedies for Misrepresentation
- 2.3 Shares
- 2.4 Types of Shares
- 2.5 Purchase by Company of its shares
- 2.6 Member and Shareholder, Acquiring membership
- 2.7 Rights and Liabilities of members
- 2.8 Shares without monetary consideration
- 2.9 Issue of shares and allotment of shares
- 2.10 Share Capital
- 2.11 Kinds of Share Capital
- 2.12 Reduction of Share Capital

#### **3. Debt Finance**

- 3.1 Debentures
  - 3.1.1 Debentures and its features
  - 3.1.2 Kinds of Debentures
  - 3.1.3 Remedies available to a debenture holder
  - 3.1.4 Charges
  - 3.1.5 Mortgages

### 3.1.6 Borrowing

## 4. Conversation of corporate Finance

- 4.1 Regulation by disclosure
- 4.2 Dividends
  - Interest
  - Control on payment of dividend
- 4.3 Managerial remuneration
- 4.4 Payment of commissions and brokerage
- 4.5 Inter-corporate loans and investments
- 4.6 Buy-back of shares
- 4.7 Other corporate spending

## 5. Protection of creditors

- 5.1 Need for creditor protection
  - 5.1.1 Preference in payment
- 5.2 Rights in making company decisions affecting creditor interests
- 5.3 Creditors self-protection
  - 5.3.1 Incorporation of favorable terms in lending contracts
  - 5.3.2 Right to nominate directors
- 5.4 Control over corporate spending

## 6. Protection of Investors

SEBI (Disclosure and Investor Protection)  
Guidelines 2000

## 7. Corporate Fund Raising

- 7.1 Depositories IDR (Indian depository receipts) ADR (American depository receipts), GDR (Global depository receipts)
- 7.2 Public financing institutions IDBI, ICICI, IFC and SFC
- 7.3 Mutual fund and over collective investment schemes
- 7.4 Institutional investments LIC, UTI and banks
- 7.5 FDI and NRI investment foreign institutional investments (IMF and World Bank)

## 8. Administrative Regulation on Corporate Finance

- 8.1 Inspection of accounts
- 8.2 SEBI and its functions
- 8.3 Power of the Central Government under the SEBI Act, 1992
- 8.4 Central government control
- 8.5 Control by registrar of companies
- 8.6 RBI Control

## 9. The Securities Market (Including Stock Exchange, Securities Contracts, Regulation Act) 1956

### Books Recommended:

## GROUP B

# HUMAN RIGHTS LAW

---

### **B01.CONCEPT AND DEVELOPMENT OF HUMAN RIGHTS**

#### **Objective of the Course**

Protection of Human Rights (HR) became an important issue after the Second World War and after the acceptance of Universal Declaration of Human Rights. The growth of HR Law and Jurisprudence thereafter was spontaneous and continuous. The changes in the global scenario bring new concept of HR protection against violation. In one sense, HR can be said as the rights which the nature has endowed with human beings. However, they are not mere privileges given to the subjects by the ruler but are liberties permitted to the 'citizens' in a democracy. Manifestly a law that violates human rights is no law at all. Probably this perspective may give an impression that human rights are not different from natural rights envisaged by the natural law school.

Although Indian polity waited for more than one score and five years for adoption of Fundamental Duties in the Constitution, it is beyond doubt that every human being has responsibilities and obligation not only towards the other fellow beings, but also towards the society at large. Only when a society is aware of this right-duty relationship can there be any meaning to human rights.

This course is intended to highlight the concept of human rights, their evolution and their importance in our society now particularly in the era of privatization, globalization and liberalization.

#### **Syllabus**

1. **Human Rights: Concept**
  - 1.1 Human Rights in Indian tradition: ancient, medieval and modern
  - 1.2 Human rights in western tradition
  - 1.3 Development of natural rights
  - 1.4 Human rights in international law and national law
2. **Classification of Human Rights First Second and Third Generations: Historical Development**
3. **Human Right: Politics and Society**
  - 3.1 Colonization, imperialism and human rights
  - 3.2 Power, practices, accountability and transparency
  - 3.3 Liberalization, privatization and globalization
  - 3.4 Human duties: responsibilities and obligations
4. **Human Rights and Judicial Process**
  - 4.1 **Judicial activism**
5. **Human Rights Protection Agencies**

**Books Recommended:**

- Angela Hegarty, Siobhan Leonard, Human Rights as Agenda for the 21<sup>st</sup> Century (1999)
- Lalit Parmar, Human Rights, (1998)
- Rama Jois, Human Rights: Bharatiya Values, (1998)

- Robert Lewngat, The Classical Law of India(1998), Oxford

## **B02. HUMAN RIGHTS AND INTERNATIONAL ORDER**

### **Objective of the Course**

Human rights have universal application. They gathered importance when the United Nations adopted the Universal Declaration of Human Rights in 1948. The role of international organizations in promoting awareness of human rights is very significant. The international conventions, though not binding, have persuasive force since the violations will be decried by the international community. International Non-government Organizations watch and monitor human rights violations in every country. However, in the absence of national legislation, the enforcement of the rights will be difficult.

### **Syllabus:**

- 1. Development of the Concept of Human Rights under International Law**
  - 1.1 Role of International Organization and Human Rights
  - 1.2 Universal Declaration of Human Rights (1948)
  - 1.3 Covenants on Political and Civil Rights (1966)
  - 1.4 Covenants on Economic, Social and Cultural Rights (1966)
  - 1.5 ILO and other Conventions and Protocols dealing with human rights
- 2. Role of regional Organizations**
  - 2.1 European Convention on Human Rights
  - 2.2 European Commission on Human Rights/Court of Human Rights
  - 2.3 American Convention on Human Rights
  - 2.4 African Convention on Human Rights
  - 2.5 Other regional Conventions.
- 3. Protection agencies and mechanisms**
  - 3.1 International Commission of Human Rights
  - 3.2 Amnesty International
  - 3.3 Non-Governmental Organizations (NGOs)
  - 3.4 U.N. Division of Human Rights
  - 3.5 International Labour Organization
  - 3.6 UNESCO
  - 3.7 UNICEF
  - 3.8 Voluntary Organizations
  - 3.9 National and State Human Rights Commissions
- 4. International enforcement of Human Rights**
  - 4.1 Role of ICJ and regional institutions

### **Books Recommended:**

- Benedetto Conforti and Francesco Francioni, Enforcing International Human Rights in Domestic Courts, (1997)

- Francisco Forrest Martin, International Human Rights Law and Practice (1997)
- Luck Clements, European Human Rights Taking a case under the Convention (1994)

- Philip Alston, The United Nations and Human Rights A critical Appraisal, (1992)
- R.S.Sharma and R.K. Sinha, Perspectives in Human Rights Development, (1997)
- The Human Rights watch Global Report on Women's Human Rights, (2000), Oxford
- B.P.Sigh Seghal, Himan Rights in India (1996)
- Chandan Bala, International Court of Justice: Its Functioning and Settlement of International Disputes.(1997)

## **B03. PROTECTION AND ENFORCEMENT OF HUMAN RIGHTS IN INDIA**

### **Objective of the Course**

A reading of fundamental rights and duties in the Constitution of India reveals that they constitute the human rights charter in India. The Judiciary, the major protective and enforcement machinery, is very active in protecting human rights. There are a number of cases where courts apply the provisions of the international conventions to fill the gaps in legislation. The apex court has also ventured to apply international conventions even where there was no legislation in the area. Thus the judiciary aims at familiarising students with the judicial activism in protecting human rights and enables them to evaluate the adequacy of the methods of enforcement.

### **Syllabus :**

- 1. History and Development of Human Rights in Indian Constitution**
  - 1.1 Constitutional Philosophy-Preamble
  - 1.2 Fundamental Rights
  - 1.3 Directive Principles of State Policy
  - 1.4 Fundamental Duties
- 2. Judicial Activism and Development of Human Rights Jurisprudence**
- 3. Enforcement of Human Rights**
  - 3.1 Formal enforcement mechanisms
    - 3.1.1 Role of Supreme Court
    - 3.1.2 Role of High Courts
    - 3.1.3 Role of Civil and Criminal Courts
    - 3.1.4 Statutory Tribunals
    - 3.1.5 Special Courts
- 4. Role of India in implementing international norms and standards**

### **Books Recommended:**

- D.D. Basu, Human Rights in Indian Constitutional law, (1994)
- Vijay Chitnis, (et.al) Human Rights and the law: National and Global Perspectives (1997)
- B.P.Singh Seghal, Law, Judiciary and justice in India (1993)
- James Vadakkumchery, Human Rights and the politics in India (1996)
- D.R.Saxena, Tribals and the law (1997)
- Poornima Advani, Indian Judiciary: A Tribute, (1997)
- Justice Venkataramiah, Human Rights in the Changing World (1998)
- Paramjit S. Jaiswal and Neshtha Jaiswal, Human Rights and the Law, (1996)

## **B04. HUMAN RIGHTS OF DISADVANTAGED GROUP: PROBLEMS AND ISSUES IN THE PROTECTION AND ENFORCEMENT**

### **Objective of the Course**

Human rights are the rights of all human beings. Violation of these rights is human rights violations. Due to frequent violations to particular groups in disadvantageous positions, new categories of human rights have emerged. These groups are of people such as women, children, prisoners and dalits. Violation of human rights of these groups is of great concern of every nation today. The officials of the state like the police force commit such violations. This is only an illustration. There are several other categories of violations.

### **Syllabus:**

- 1. Concept of Disadvantaged Groups**
- 2. Emerging Human Rights Jurisprudent and the Role of the Judiciary**
  - 2.1 Rights of Women
  - 2.2 Rights of the Child
  - 2.3 Rights of Prisoners
  - 2.4 Rights of dalits
  - 2.5 The tribal and other indigenous people
  - 2.6 The mentally ill
  - 2.7 The stateless persons
  - 2.8 The unorganized labour
  - 2.9 Aids Victims
  - 2.10 Rights of minorities
- 3. Enforcement of Human Rights**
  - 3.1 Protection Laws of the Disadvantaged Groups: Problems and Issues
- 4. Future Perspective of the Human Rights of the Disadvantaged**

### **Books Recommended:**

- G.S.Bhargava and R.M.Pal, Human Rights of Dalit Societal Violation, (1999)
- Geraldine Van Bueren, The International Law on the Rights of the Child. (1998)
- Prabhat Chandra Tripathi, Crime Against Working Wome (1998)
- Paras Diwan and Piyush Diwan, Women and Legal Protection
- Philip Alston (et.al.) Children, Rights and the Law
- Kelly D. Askin, Dorean M.Koening, Women and International Human Rights Law (1999)
- N.K.Chadrabarti, Juvenile Justice in the Administration of Criminal Justice (1999)
- Rebecca Wallace, International Human Right, Text and Materials, (1997)

## **B05. INTERNATIONAL HUMANITARIAN LAW AND REFUGEE LAW**

### **Objective of the Course**

The two world wars had enough of lessons to teach. But the present scenario shows that the nations have not learnt any lesson: wars continue to be there. The International humanitarian law aims at humanizing war though war itself is inhuman. Human rights do have value only in peace time war is the negation of all human rights. Though the United Nations Charter does not permit war, it has shown the wisdom to regulate the war if one occurs.

War is one of the factors which create the problem of refugees. There have been some endeavors on the part of the international community to protect the interests of refugees. But due to political interference, the formulation of the definition of the term 'refugee' in the 'Convention relating to the status of 'refugees' has been such that it helps the developed countries to shrink the responsibility towards the refugees leaving the burden to the developing countries.

This course intends to equip the students with the awareness of the various problems of refugees and to inspire them to critically evaluate the international conventions and national legislation.

This paper comprises of about 42 units of one hour duration spread over a period of one semester.

### **Syllabus:**

#### **1. Humanization of Warfare**

- 1.1 Amelioration of the wounded and sick
- 1.2 Armed forces in the field
- 1.3 Armed forces at sea
- 1.4 The Shipwrecked
- 1.5 Protection and facilities
- 1.6 Prisoners of war
- 1.7 Civilians in times of war
- 1.8 Cultural Properties

#### **2. Control of weapons**

- 2.1 Conventional
- 2.2 Chemical
- 2.3 Biological
- 2.4 Nuclear

#### **3. Humanitarian law: Implementation**

- 3.1 Red Cross role
- 3.2 National Legislation

#### **4. The Concept of refugees**

- 4.1 Definition of refugees and displaced persons their problems
- 4.2 The UN Relief and Rehabilitation Administration and other International Refugee

Organization: International Protection

4.3 Protection under national laws

5. **Strategies to combat refugee problem**

5.1 Repartition, resettlement local integration and rehabilitation

5.2 UNHCR role

5.3 UNHCR and India

**Books Recommended:**

- B.S.Chimni, International Refugee Law (2000)
- Jean Yves Calier, who is a Refugee A Comparative Case law Study, (1997)
- Kelly Dawn Askin, War Crimes Against Women, (1997)
- M.K. Balachandran, Rose Varghese, Introduction to International Humanitarian Law (1997)
- Guy S. Goodwin-Gill, The Refugee in International law, (1996)
- Veral Gowlland Debbas, The Problem of Refugees in the Light of Contemporary International law issues, (1996)
- Anti-personal Landmines Friend or Foe? International Committee of Red Cross (1996)
- Resettlement Handbook, The United Nations High Commissioner for Refugees.
- James C. Hathaway, Hohn A. Dent, Refugee Rights: Report on a Comparative Survey (1995)

## **B06.SCIENCE, TECHNOLOGY AND HUMAN RIGHTS**

### **Objective of the Course**

We live in an era of scientific development. The alarming rate of development in biotechnology calls for drastic change in the law. Many concepts and terms have to be re-defined. The development in information technology poses serious problems and challenges. The rapid changes made by science and technology will have to be reflected in law to make it meaningful and realistic in the modern era. This course is intended to make students conscious of various legal problems arising due to developments in such areas as biotechnology and information technology and to identify the changes needed in the law.

### **Syllabus:**

- 1. Interrelationship of Science, Technology and Human Rights**
- 2. Implication of Development of Science and Technology on Human Rights.**
  - 2.1 Right to environment in the development of science and technology
  - 2.2 Right to development in the advancement of science and technology
  - 2.3 Right to development in the advancement of science and technology
  - 2.4 Right to Human health and impact of developments in medical sciences
- 3. Medicine and the Law**
  - 3.1 Organ transplantation
  - 3.2 Experimentation on human beings
  - 3.3 Euthanasia (mercy killing)
  - 3.4 Gene therapy
- 4. Issue of Human Rights Ethics in Scientific and Technological Development**
  - 4.1 Sex determination test
  - 4.2 Induced abortion
  - 4.3 Reproductive technology
  - 4.4 Cloning
  - 4.5 In vitro fertilization
  - 4.6 Artificial insemination
  - 4.7 Surrogate motherhood
- 5. Development in information Technology and Human Rights**
- 6. Impact of scientific and Technological Progress on Human Rights: Normative Response of the International Community**
  - 6.1 Right to life
  - 6.2 Right to privacy
  - 6.3 Right to physical integrity
  - 6.4 Right to information
  - 6.5 Right to benefit from scientific and technological progress
  - 6.6 Right to adequate standard of living.

### **Books Recommended:**

# GROUP C

## INTELLECTUAL PROPERTY LAW

---

### **C01. GENERAL REGIME OF INTELLECTUAL PROPERTY RIGHTS**

#### **Objective of the course:**

Countries have laws to protect intellectual property for two main reasons. One is to give statutory expression to the moral and economic rights of creators in their creations and the rights of the public in access to those creations. The second is to promote, as a deliberate act of Government policy, creativity and the dissemination and application of its results and to encourage fair trading which would contribute to economic and social development.

This course thus introduces IPR and its nature explaining its origin and development. It also aims at giving the students a brief idea of the international and national regime related to IPR.

#### **Syllabus:**

##### **1. Introduction to IPRs**

- 1.1. Concept & Meaning
- 1.2. Types of Intellectual Property Rights

##### **2. Nature of Intellectual Property Rights**

- 2.1. Monopolistic Perspective
- 2.2. Economic Perspective
- 2.3. Public welfare perspective
- 2.4. Theories
  - 2.4.1. Natural theory
  - 2.4.2. Locke's Theory of property
  - 2.4.3. Hegelian Philosophy
  - 2.4.4. Utilitarian guidelines
  - 2.4.5. Incentive theory
  - 2.4.6. Prospect theory
  - 2.4.7. Schumpeterian theory

##### **3. Origin & Development**

- 3.1. Historical Background
- 3.2. Technological Development of IPRs
- 3.3. Intellectual Property Rights: From National to International Character
- 3.4. Sustainable Development
- 3.5. Challenges for IPR system
  - 3.5.1. Digital Economy

- 3.5.2. E-commerce
- 3.5.3. Domain names
- 3.5.4. Biotechnology including Human genomes
- 3.5.5. Nanotechnology

#### **4. International regime of Intellectual Property Rights**

- 4.1. Pre WTO régime
  - 4.1.1. Paris Convention
  - 4.1.2. Berne convention
  - 4.1.3. Rome convention
  - 4.1.4. Patent Cooperation treaty
  - 4.1.5. World Intellectual Property Organization (WIPO), etc
- 4.2. Post WTO regime
- 4.3. TRIPS

#### **5. National Regime of Intellectual Property Rights**

- 5.1. Pre WTO régime
- 5.2. Post WTO regime

#### **Books Recommended:**

- Shiv Sahai Singh, The Law of Intellectual Property Rights, Deep & Deep Publication Pvt. Ltd. 2004
- Intellectual Property Rights: Text and Cases, By Radhakrishnan, Excel Books
- Catharine Colstone -Principles of Intellectual Property Law, Cavendish, London, 1999

- Christopher May & Susan K. Sell, Intellectual Property Rights: A Critical History, Lynne Rienner Publications, (2005)

### **LAW RELATING TO PATENTS**

#### **Objective of the course:**

Patent is recognition for an invention, which satisfies the criteria of global novelty, non-obviousness, and industrial application. Patents are vital resources for businesses, researchers, inventors, academics, and others who need to keep abreast of

developments in their fields. Patents are also an important means of sharing know-how, because each patent document describes a new aspect of a technology in clear and specific terms and is available for anyone to consult.

The objective of the course is to introduce the concept of patents and explain the various international and national laws related to patents. The course also aims to discuss the present trends and issues related to patent protection in the fields of biotechnology, pharmaceuticals, food and information technology etc.

## **Syllabus:**

### **1. Introduction to Patents**

- 1.1. Overview
- 1.2. Historical development
- 1.3. Concepts
  - 1.3.1. Novelty
  - 1.3.2. Utility
  - 1.3.3. Inventiveness/Non-obviousness
- 1.4. Types of patents
  - 1.4.1. Product patents
  - 1.4.2. Process patents
  - 1.4.3. Plant patents
  - 1.4.4. Design patents
  - 1.4.5. Utility patents

### **2. International Convention and Treaties on Patents**

- 2.1. Paris convention on Patents
- 2.2. Patent co-operation treaty
- 2.3. Patent Law treaty
- 2.4. TRIPS Agreement and uniform patent system

### **3. Patent law in India**

- 3.1. Salient features of Patent Act 1970
- 3.2. Procedure for Obtaining of Patents
- 3.3. Working of Patents
- 3.4. Infringement

### **4. Rights of patentees**

- 4.1.1. Assignment
- 4.1.2. Licensing
- 4.1.3. Compulsory licensing
- 4.1.4. Scope of governmental intervention

### **5. International protection of Patents**

- 5.1. Protection of patents beyond boundaries
- 5.2. International patent application
- 5.3. Who can file international patent application
  - 5.3.1. Process of filing

- 5.3.2. Requirements of an international application
- 5.3.3. Priority of the international application
- 5.3.4. International preliminary examination
- 5.3.5. International search and publication
- 5.3.6. Processing of international application at national level
- 5.3.7. Grant and issue of an international patent

## **6. Present trends and issues in the patent system**

### 6.1. Product patents

- 6.1.1. TRIPS Mandate : Product Patents on Food and Pharmaceuticals
- 6.1.2. Courts on Pharmaceutical and Drug Patents in India

### 6.2. Technology Patents

- 6.2.1. Biotechnology and its inventions
  - 6.2.1.1. Life as patentable subject matter
  - 6.2.1.2. Microorganisms as patentable subject matter
  - 6.2.1.3. Plant as patentable subject matter
  - 6.2.1.4. Animal as patentable subject matter
  - 6.2.1.5. Patents on human genetic material: Human cells, Genes, DNA
- 6.2.2. Biotech Patents in India: The way ahead

### 6.3. Patenting the inventions of information technology

- 6.3.1. Software: Conceptualization
- 6.3.2. Patenting Computer Programs and software
- 6.3.3. Software Patenting: Lessons from India
- 6.3.4. Why software should be patented?

## **Books Recommended:**

- Law Relating to Intellectual Property, Sreenivasulu N.S, Partridge Publishing

## **C03. LAW RELATING TO TRADEMARKS**

### **Objective of the course:**

Trademark has a major value for any business, and one of the primary concerns of any well established or successful business man. Trademark is important because it helps businesses build and retain demand for their products and services while enabling consumers to quickly identify and make a purchase based on a recognized trademark.

The objective of this course is to explain the importance of protection of trademarks and thus explain the efforts to protect it at international and national level. This course further aims to highlight the concerns related to trademark in the internet world.

### **Syllabus:**

#### **1. Introduction to trademark**

- 1.1. Defining trademark
- 1.2. Characteristic features of trademark
- 1.3. Forms of trademarks
- 1.4. Functions of trademarks
- 1.5. Protection of trademarks
- 1.6. Objectives of trademarks law

#### **2. Philosophy and theories of protection**

- 2.1. Analyzing the character of trademarks
  - 2.1.1. Distinctive character of trademarks
  - 2.1.2. Philosophy of distinctive character
    - 2.1.2.1. German theory
    - 2.1.2.2. Second theory
    - 2.1.2.3. Cynics theory
  - 2.1.3. Types of distinctiveness
    - 2.1.3.1. Inherent distinctiveness
    - 2.1.3.2. Acquired distinctiveness
  - 2.1.4. Deceptive similarity
    - 2.1.4.1. Types of similarity
    - 2.1.4.2. Assessment of similarity

#### **3. International law on trademarks**

- 3.1. Paris convention on trademark
- 3.2. Madrid agreement
- 3.3. Trademark law treaty
- 3.4. Singapore treaty on trade mark
- 3.5. TRIPS Agreement on trademarks

#### **4. Trademark laws in India**

- 4.1. Historical Development of trademark laws in India
- 4.2. Registration of trademarks

- 4.2.1. Process of registration
- 4.2.2. Grounds for refusal of registration
- 4.2.3. Opposition proceedings
- 4.3. Enforcement of trademarks
  - 4.3.1. Infringement
    - 4.3.1.1. Determination of infringement
    - 4.3.1.2. Defences in case of infringement
  - 4.3.2. Passing off
    - 4.3.2.1. Invasion of proprietary rights
    - 4.3.2.2. Modes and types of passing off
  - 4.3.3. Remedies for infringement and passing off

## **5. Concerns of trademark in the internet**

- 5.1. Domain Name and Cyber Squatting
  - 5.1.1. Domain name registration
  - 5.1.2. Legitimate use of trademarks in the internet
  - 5.1.3. Illegitimate use of trademark: Cyber Squatting
    - 5.1.3.1. Various forms
      - 5.1.3.1.1. Classical cyber squatting
      - 5.1.3.1.2. Derogatory cyber squatting
      - 5.1.3.1.3. Typographical cyber squatting
      - 5.1.3.1.4. Political cyber squatting
      - 5.1.3.1.5. Liking and meta tagging
  - 5.1.4. Regulating the outrage of cyber squatting
    - 5.1.4.1. Role of ICANN and registration of Domain Name
    - 5.1.4.2. Domain name and law of passing off
    - 5.1.4.3. Penalties

### **Books Recommended:**

## **C04. LAW RELATING TO COPYRIGHT**

### **Objective of the course:**

The objective of copyright is to promote the public good by encouraging and fostering cultural and scientific activity. Copyright protects cultural works, the creative expression of thoughts and feelings. To demonstrate its importance to culture and society, copyright is recognised as one of the Human Rights in the Universal Declaration of Human Rights. Consequently, the value and benefits associated with copyright and the systems which support it cannot be underestimated. The existence of strong and enforceable copyright laws are also a necessary precursor to participation in the global economic community, bringing particular benefits to the economies of developing countries. The internet and lower costs of communication means that copyright works can be made available more easily, enabling improvements in the education system and skills development within communities.

The objective of this course is to understand the key aspects of the copyright system, including its strengths and limitations.

### **Syllabus:**

#### **1. Introduction to copyright**

- 1.1. Defining Copyright
- 1.2. What is protected
  - 1.2.1. Literary
  - 1.2.2. Drama
  - 1.2.3. Artistic
  - 1.2.4. Sound recordings
  - 1.2.5. Cinematographic films
- 1.3. Requirements for copyright
  - 1.3.1. Originality
  - 1.3.2. Doctrine of sweat of the brow
  - 1.3.3. Doctrine of independent creation
  - 1.3.4. Doctrine of merger
  - 1.3.5. Doctrine of skill and judgment
  - 1.3.6. Indian Doctrine
- 1.4. Nature and significance of copyright protection

#### **2. International law on copyrights**

- 2.1. Berne Convention
- 2.2. Universal copyright convention
- 2.3. Rome convention
- 2.4. Convention for the protection of producers of phonogram
- 2.5. WIPO Copyright Treaty
- 2.6. WIPO Performers and Phonograms Treaty

2.7. TRIPS Agreement

### **3. Copyright protection in India**

3.1. Historical development

3.2. Protection of neighboring rights

3.2.1. Broadcaster's rights

3.2.2. Performer's rights

3.3. Copyright assignment

3.4. Licensing of copyright

3.5. Transmission of copyright

3.6. Relinquishing the rights

3.7. Infringement of copyright

3.7.1. Matters of jurisdiction

3.7.2. Defences and exceptions

3.7.2.1. Doctrine of fair use

3.7.3. Remedies against infringement

### **4. Copyright in digital age**

4.1. Internet and copyright

4.1.1. Content of digital copyright

4.1.2. Regulating digital copyright in India

4.1.2.1. Copyright for computer software

4.1.2.2. Copyright for the database

4.1.2.3. Infringement of copyright on the internet

### **5. Copyright in the media**

5.1. Changes introduced in the copyright law affecting the film media

5.2. Viability of copyright protection for titles and characters

#### **Books Recommended:**

- R. G. Chaturvedi (ed.) Iyengar's The Copyright Act 1957, Butterworths. India 2000.
- 15. A.S. Srivastava (ed.) Lai's Commentary on Law of Copyright, 1999. Delhi Law House.
- David Bainbridge, Software Copyright Law (1999), Butterworths Sookman, Computer Law (1998), Carswell
- Law Relating to Intellectual Property, Sreenivasulu N.S, Partridge Publishing
- Whale on Copyright, 1996
- W.R. Cornish, Intellectual Property, Sweet & Maxwell, London (2000)
- Prof. Bernt Hugenholtz & Dr. Lucie Guibault (Edited), Kluwer Copyrights Cases, Wolters Kluwer

## **C05. BIOTECHNOLOGY AND IPR**

#### **Objective of the course:**

Intellectual property law, which protects works of the mind as personal property, is of increasing importance to those who create new products and processes using biotechnology and computers. Intellectual property involves several areas of the law:

patent, copyright, trademark, trade secret, and plant variety protection. All affect emerging high-technology industries and can help bring important technological information and products into commerce.

This course examines the law related to intellectual property rights for inventions created through the use of biotechnology (with particular focus on plants and animals) and computer-related technologies.

## **Syllabus:**

### **1. Introduction to Biotechnology**

- 1.1. Definition and meaning
- 1.2. Historical development to go Biotechnology
  - 1.2.1. First generation
  - 1.2.2. Second generation
  - 1.2.3. Third generation
- 1.3. Application and scope
  - 1.3.1. Agriculture
  - 1.3.2. Animal husbandry
  - 1.3.3. Pharmaceuticals and drugs
  - 1.3.4. Environment protection
  - 1.3.5. Food and beverages
  - 1.3.6. Other application
- 1.4. Classification of biotechnological inventions
  - 1.4.1. Biotechnological processes
  - 1.4.2. Biotechnology products

### **2. Biotechnology and patent law**

- 2.1. Patentability of biotechnology inventions
  - 2.1.1. Doctrine of Product of Nature
  - 2.1.2. Patentable subject – matter
    - 2.1.2.1. Invention vs. discovery
    - 2.1.2.2. Novelty
    - 2.1.2.3. Non-obviousness
    - 2.1.2.4. Life, microorganisms, plants ,genes human cells and DNA as patentable subject matter
- 2.2. Transformation of biotechnology
  - 2.2.1. Non commercial science to commercial industry
- 2.3. Challenge posed by biotechnology before the existing patent system
  - 2.3.1. Human genetic patents
- 2.4. Divergence in Biotechnology patent practices under different jurisdictions
- 2.5. Comparative study
  - 2.5.1. USA, Europe, Canada, India

### **3. Patentability of Biotechnology under International regime**

- 3.1. Patentability under TRIPS
  - 3.1.1. Interpretation of the term “invention”
  - 3.1.2. Exceptions under the agreement

- 3.1.3. Patenting of life forms under TRIPS
- 3.1.4. Other patent eligibility criteria under TRIPS
- 3.2. Uniform Global Patent System
  - 3.2.1. Draft substantive Patent Law treaty
  - 3.2.2. Differentiation vis-a-vis harmonization
  - 3.2.3. Merits and demerits of Uniform Patent law
- 3.3. Existing international patent regime in the present technology Age
- 4. Plant varieties and farmers rights**
  - 4.1. International treaties and convention
    - 4.1.1. TRIPS
    - 4.1.2. UPOV
    - 4.1.3. ITPGRFA
    - 4.1.4. Convention on Biological Diversity
  - 4.2. Features of plant variety system
    - 4.2.1. Benefit sharing
    - 4.2.2. Public interest
    - 4.2.3. Farmers right and breeders rights
    - 4.2.4. Sui generis protection of plant varieties
    - 4.2.5. Protection of plant varieties in India
      - 4.2.5.1. Registration
      - 4.2.5.2. Compulsory licensing
      - 4.2.5.3. Protection of farmers rights
      - 4.2.5.4. Infringement
      - 4.2.5.5. Remedies
      - 4.2.5.6. Plant Varieties Tribunal
- 5. Biotechnology and Ethics**
  - 5.1. Ethical objections to biotechnology research and protection
    - 5.1.1. Concept of integrity and self sustenance of living beings
    - 5.1.2. Natural law principles - living beings as marketable commodities
    - 5.1.3. Monopoly over life and living matter
      - 5.1.3.1. Ethics in patenting various life forms
      - 5.1.3.2. Debate on ethics versus technology
      - 5.1.3.3. ICMR guidelines
    - 5.1.4. Biotechnology, trade and development
      - 5.1.4.1. Trade in genetically modified organisms(GMO)
      - 5.1.4.2. Living modified organisms (LMO)
      - 5.1.4.3. Concerns in trade in GMO / LMO
      - 5.1.4.4. GMO and international obligations
        - 5.1.4.4.1. WTO agreements on trade
        - 5.1.4.4.2. Technical Barriers to trade agreement and trade in biotechnology
        - 5.1.4.4.3. Concept of prior informed consent
- 6. Bio-safety concerns in biotechnology**
  - 6.1. Cartagena Protocol on Bio-safety

- 6.1.1. Bio-safety clearing house
- 6.1.2. Revisiting the objects of protocol
- 6.1.3. Precautionary principles
- 6.1.4. Cartagena protocol and WTO
- 6.2. Health related concerns in biotechnology
  - 6.2.1. Sanitary and Phyto-sanitary measures agreement
  - 6.2.2. DNA safety guidelines
- 6.3. Biotechnology and Bio-diversity
  - 6.3.1. UNCTAD conference on trade and environment
  - 6.3.2. Convention on biological diversity
  - 6.3.3. Biological diversity Act of India

**Books Recommended:**

## **C06. LAW OF GEOGRAPHICAL INDICATION AND TRADITIONAL KNOWLEDGE**

### **Objective of the course:**

With Intellectual Property Rights (IPRs) increasingly influencing trades both at the national and international level; harnessing trade benefits depends on the degree of protection enjoyed by the owners of the IPRs. A geographical indication (GI) acts as a mechanism that helps producers differentiate their products from competing products in the market and enables producers to build a reputation and goodwill around their products that will fetch a premium price.

Traditional knowledge encompasses the beliefs, knowledge, practices, innovations, arts, spirituality, and other forms of cultural experience and expression that belong to indigenous communities worldwide. Only recently, however, has the need to protect, preserve and provide for the fair use of indigenous intellectual property – traditional knowledge – entered the domestic and international debate on intellectual property rights. Of particular concern to indigenous peoples has been the unlicensed use by non-indigenous groups, such as corporations, of traditional knowledge that has been developed over centuries. Indigenous/traditional knowledge and intellectual property law is a complicated contemporary legal problem. There are multiple perspectives and opinions circulating about what the problems are where they manifest and what needs to happen to alleviate them.

The objective of this course is to highlight the importance of geographical indications and traditional knowledge as community intellectual property rights the present trends and issues related to it in the new technology age.

### **Syllabus:**

#### **1. Concept of community intellectual property rights**

##### 1.1. Community IPR

1.1.1. Recognizing the rights of the groups

1.1.2. Associations and communities.

1.1.3. Efficacy of geographical indications regime in securing community rights

#### **2. Introduction and overview of geographical indications**

2.1. Meaning, scope, features of geographical indication

2.2. Reasons for protection of geographical indication

2.2.1. Indications of source

2.2.2. Applications of origin

2.3. Geographical indications related to goods

2.3.1. Agriculture goods

2.3.2. Manufactured goods

### 2.3.3. Natural goods

## **3. International law on geographical indications**

- 3.1. Paris convention
- 3.2. Madrid Agreement
- 3.3. Lisbon Agreement
- 3.4. TRIPS Agreement

## **4. Protection of geographical indications in India**

- 4.1. Application for registration
- 4.2. Essential conditions for registration
- 4.3. Geographical indication agents
- 4.4. The famous geographical indications
- 4.5. Limitations of protection of geographical indications
- 4.6. Prohibition of misleading use of indications of geographical origins
- 4.7. Prohibition of dilution of geographical origins
- 4.8. The interface between trademarks and geographical indications
- 4.9. Geographical indications as a tool to protect traditional knowledge

## **5. Traditional Knowledge**

- 5.1. What constitutes traditional knowledge
- 5.2. Components and ingredients of traditional knowledge
- 5.3. Protection of traditional knowledge
  - 5.3.1. Traditional Knowledge and patent law
  - 5.3.2. Traditional knowledge and the convention of biological diversity
  - 5.3.3. Bio-piracy and Bio-prospecting

## **6. Codification of traditional knowledge and protection of community rights**

- 6.1. the biological diversity authorities and their functions
- 6.2. WIPO consultation on traditional knowledge
- 6.3. The EU Directive on the protection of traditional knowledge

## **7. Protection of traditional Knowledge in India.**

- 7.1. Present scenario
- 7.2. Recent trends and issues

### **Books Recommended:**

- Christoph Belman and Graham Dutfield, Trading in Knowledge: development Perspectives on TRIPS, Trade and Sustainability, Earthscan Publications Ltd. (2003)
- Marsha A. Echols, Geographical Indications for Food Products, International Legal and Regulatory Perspectives (2008), Wolters Kluwer
- Silke von Lewinski (Edited), Indigenous Heritage and Intellectual Property, Genetic Resources, Traditional Knowledge and Folklore, 2nd Edition, (2008), Wolters Kluwer
- Law Relating to Intellectual Property, Sreenivasulu N.S, Partridge Publishing
- Narayanan, P., Intellectual Property Rights, Eastern Law House. Calcutta
- Intellectual Property Rights: Text and Cases, By Radhakrishnan, Excel Books

## ENVIRONMENT LAW

---

### **D 01. ENVIRONMENT AND DEVELOPMENT: LAW AND POLICY**

Objective of the course:

The concept of environment is embedded in ancient ethos. Throughout the centuries there were invisible processes working for the maintenance and improvement of environment. Towards the close of the last millennium one finds widening dimensions of environmental consciousness. How do these developments stand reflected in formulation of policies and in following constitutional values in India? This is the thrust of the paper. Sustainable use of resources, natural and man-made, is the desideratum in an environmentally conscious period of human development. Wise use of water, land, forest and other common property resources, such as wet lands, lakes, roads and parks become an important task in this respect. Protection of various energy resources is equally significant element in countering wastage, indiscriminate use and unwise choice.

#### **Syllabus**

##### **1. The idea of environment**

- 1.1. Ancient and medieval writings
- 1.2. Traditions
- 1.3. Natural and biological sciences: perspectives
- 1.4. Modern concept: conflicting dimension

##### **2. Development**

- 2.1. Theories of development
- 2.2. Right to development
- 2.3. Sustainable development – national and international perspectives
- 2.4. Developing economies

##### **3. Policy and law**

- 3.1. From Stockholm to Rio and after
- 3.2. Post – independence India
- 3.3. Role of government
  - 3.3.1. Five year plans
  - 3.3.2. Forest policy
  - 3.3.3. Conservation strategy
  - 3.3.4. Water policy

#### **4. Population, environment and development**

- 4.1. Population explosion and environmental impact
- 4.2. Population and development
- 4.3. Population and sustainable development

#### **5. Constitutional Perspectives**

- 5.1. Fundamental rights
  - 5.1.1. Right to environment
  - 5.1.2. Enforcement of the right
  - 5.1.3. Directive principles and fundamental duties
  - 5.1.4. Legislative power
- 5.2. Environment: emerging concepts and challenges
  - 5.2.1. Polluter Pays Principle: absolute liability of hazardous industry
  - 5.2.2. Precautionary principle
  - 5.2.3. Public trust doctrine

#### **Books Recommended:**

- C.M. Abraham, Environmental Jurisprudence in India (1999), Kluwer
- Madhav Gadgil and Ramachandra Guha, This Fissured Island: an Ecological History of India (1996), Oxford.
- R.B. Singh & Suresh Misra, Environmental Law in India (1996), Publishing Co., New Delhi.
- Kailash Thakur, Environmental Protection: Law and Policy in India (1997), Deep & Deep Publications, New Delhi.
- Richard L. Riversz, et.al. (eds.) Environmental Law, the Economy and Sustainable Development (2000), Cambridge.
- Stuart Bell and Donald McGillivray, Environmental Law (2000), Blackstone Press.
- Charles A.R. Webster, Environmental Health Law (1981).
- Leelakrishnan, P. The Environmental Law in India (1999), Butterworths-India.
- Khotsho, Environmental Concerns and Strategies (1988), Ashish, Delhi.
- Priya Kanjan Trivedi, International Environmental Laws (1996), A.P.H. Publishing Corporation, New Delhi.

## **D02. ENVIRONMENT AND INTERNATIONAL LEGAL ORDER**

### **Objective of the course:**

Through the centuries of their growth, societies had done their best to keep their neighbourhood clean and healthy; industrialisation brought in its wake unprecedented and unpredicted environmental hazards and upset the old ethos and equilibrium. The environmental consciousness is an offshoot of this saga of industrial growth. It is said that the world environmental consciousness had made a radical change in the character of international law from a moral code of ethics among nations to an almost positive law imposing on the states to observe environmental norms. Striking a significant note at the close of the last millennium, areas of international concern on environment are legion. Modes of reconciling the conflicts are also varied. The concept of sustainable development is a significant tool both at the international level and at the domestic system for reconciliation of environmental values and developmental needs. The course attempts to study in depth the concerns and conflicts related to environment protection in the international scenario.

### **Syllabus:**

#### **1. International concern for environment protection**

- 1.1 World environment movement
  - 1.1.1 Stockholm declaration
  - 1.1.2 Brundtland commission
  - 1.1.3 Rio – declaration
  - 1.1.4 Agenda 21
  - 1.1.5 Earth summit plus ten
  - 1.1.6 Rio + 20
- 1.2 Natural and cultural heritage
- 1.3 Role of international and regional organisations
- 1.4 Climate change – green house effect – ozone – global warming.

#### **2. International obligations towards sustainable development**

- 2.1 Principle of state responsibility
- 2.2 Intergenerational financing policy
- 2.3 World environment fund
- 2.4 Intergenerational regulations and supervision
- 2.5 Global environment facility (GEF)
  - 2.5.1 International co-operation
  - 2.5.2 Poverty alleviation
  - 2.5.3 Agenda – 21

#### **3. Marine environment**

- 3.1 Marine resources: conservation and exploitation
- 3.2 Scientific research and exploitation
- 3.3 Antarctic environment
- 3.4 International sea bed authority
- 3.5 Polluter for ships
- 3.6 Dumping of oil and other wastes into the sea

#### **4. Transboundary pollution hazards**

- 4.1 Oil pollution
- 4.2 Nuclear fall outs and accidents
- 4.3 Acid rain
- 4.4 Chemical pollution
- 4.5 Air pollution
- 4.6 Space pollution

#### **5. Control of multinational corporations and environmental hazards**

- 5.1 Problems of liability and control mechanisms
- 5.2 Disaster management at international level
- 5.3 Monopoly of biotechnology by mncs
- 5.4 Disposal and dumping of hazardous wastes: transnational problems and control

#### **Books Recommended:**

- Priya Kanjam Trivedi, International Environment Laws (1996), A.P.H. Publishing Corporation, New Delhi.
- Sir Elworthy and Jane Holder, Environmental Protection : Text and Materials (1997), Butterworths.
- Nathali L.T.J. HORBACH, Contemporary Developments in Nuclear Energy Law (1999), Kluwer.
- Henrick Ringbom (ed.), Competing Norms in the Law of Marine Environmental Protection (1997), Kluwer.
- Claus Bosselmann and Benjamin, J. Richardson, Environmental Justice and Market Mechanism (1999), Kluwer.
- Jean-Pierre Beurier, New Technologies and Law of Marine Environment (2000), Kluwer.
- Richard L. Reversz et.al. (eds.), Environmental Law, The Economy and Sustainable Development (2000), Cambridge.
- Dovor Vidas, Protecting the Polar Marine Environment (2000), Cambridge.
- Aynsley Kellor, International Toxic Risk Management (1999), Cambridge.
- Zhiguo Gao, Environmental Regulation of Oil and Gas (1998), Kluwer.
- Indian Law Institute, Legal Control of Environmental Pollution (1980).
- Varshney, C. K. (ed.), Water Pollution and Management (1983), Wiley Eastern, New Delhi.

## **D03. ENVIRONMENT PROTECTION IN INDIA**

### **Objective of the course:**

Pollution hazards bring the worst harm to the environment. Legal measures are attempted to prevent or control various kinds of pollution and their aftermath. Can land pollution hazards be prevented or controlled effectively by criminal sanctions especially in a developing country like India? What other legal strategies can be adopted at this level? To what extent can corporate civil liability be extended for remedying pollution

maladies particularly mass disasters? One has to be a critic of the existing laws and to look forward to desirable mechanism of control over pollution hazards. This paper aims at shedding light on these areas. Concepts of environmental protection lay scattered in isolated provisions of general legislation in India before world consciousness was aroused by the Stockholm conference in 1972. In the post Stockholm period there were many legislative activism in such areas like control of pollution and forest conservation. This legislative activism culminated in the enactment of environment (Protection) Act 1986 with a plethora of delegated legislation and delegation of powers. The central government has become the guardian of environmental protection and formulated rules and regulations on coastal zones, noise pollution and preparedness on environmental disasters. There are attempts in making laws for implementation of norms laid down in international conferences.

## **Syllabus**

### **1. General law on environmental concern**

#### 1.1. Indian constitution and protection of environment

##### 1.1.1. Directives of the state, obligation of citizens, right to healthy Environment

#### 1.2. Tort law remedies- Nuisance

#### 1.3. Provisions in the Indian penal code

#### 1.4. Code of criminal procedure code : public nuisance

### **2. Environment protection act, 1986**

#### 2.1. Historical background

##### 2.1.1. Bhopal gas tragedy

##### 2.1.2. Stockholm declaration

#### 2.2. Powers of the central government

#### 2.3. Prevention, control and abatement of environmental pollution

#### 2.4. Penalties and procedures

#### 2.5. Delegation of powers

##### 2.5.1. Power to delegate and make rules

##### 2.5.2. Power to issue directions

### **3. Coastal zone management**

#### 3.1. Physical limits of zones

#### 3.2. Prohibitions and conceptions

#### 3.3. Harvesting of ground water

#### 3.4. Construction activities

#### 3.5. Regulation of permissible activities

#### 3.6. Environmental clearance

#### 3.7. Coastal zone management plans

##### 3.7.1. Classification of zones

##### 3.7.2. Guidelines for beach resorts and hotels

##### 3.7.3. Judiciary on coastal zone management

3.7.4. Aquaculture in coastal zones

**4. Laws on hazardous substance**

4.1. Concept of absolute liability of hazardous industries.

**5. Emerging legal controls**

5.1. Eco mark

5.2. Environmental audit

5.3. Environmental impact assessment

5.4. Role of panchayats and municipalities in environmental Protection

5.5. Public participation in environmental decision making

**6. Role of local bodies in the environmental management**

6.1. Constitutional amendments and local bodies - 73rd amendment and 74th amendment

6.2. Municipalities and environmental protection

6.3. Panchayats and environmental protection

6.4. Local bodies – conservation of natural resources

**7. Role of judiciary – environment protection**

7.1. duty of care

7.2. citizen's obligations

7.3. right to wholesome environment

7.4. right to livelihood vis a vis environment

7.5. management of environment in tribal areas

**Books Recommended:**

## **D04. ENVIRONMENT PROTECTION AND DISASTER MANAGEMENT**

### **Objective of the course:**

The hazards of complex industrial society of our times are numerous. Apart from natural disasters like earthquakes, tsunami, cyclones and storms which cause death, destruction and suffering on a vast scale, our civilization is increasingly getting exposed to hazards arising out of technological progress. The factories of industrial establishments involved in the manufacture, distribution and transportation of hazardous products are under legal obligation to comply with numerous provisions of law to prevent disaster, and to provide information to persons likely to be exposed to the hazards regarding safety measures to be taken.

The legislative and administrative responses have been lacking with the result that such disasters are increasing in magnitude and frequency. Every time adhoc arrangements are made to fact the disaster but not before incalculable damage is done and avoidable hardships suffered. What is needed is an integral approach for prevention and mitigation of sufferings arising out of disasters. A policy oriented approach would need examination of duties and obligations of various persons connected with disaster management.

Victims of disaster, being amorphous body of individuals, look at the bounty of state rather than the court process to vindicate their rights under the law. Inquiries and investigations are conducted only on public demand. There is no uniformity regarding the system of investigating authority, procedures to be followed and the obligatory force of recommendations made by investigating agency. The existing court process is dilatory and cumbersome. Due to obvious reasons the victims do not wish to undergo another ordeal or initiating proceedings for legal redress. The mismanagement and corruption in administering relief has also reached alarming proportions.

The course, is therefore, designed to have an insight into the problem arising out of disasters and inadequacies of the court process. The public law perspectives of this kind litigation will open new vistas of remedial process including risk coverage through public liability insurance.

### **Syllabus**

#### **1. Introduction**

- 1.1. meaning of disaster
- 1.2. distinction between natural and man-made disaster
- 1.3. high potential and low potential disaster
- 1.4. escape of dangerous substances
- 1.5. explosions
- 1.6. nuclear radiation, poisoning
- 1.7. dam bursts, fires, collapse of structures, earth quakes
- 1.8. accidental disasters (rails, air, sea, motor vehicle)

- 1.9. victims of disaster
- 2. Ad-hoc character and inadequacy of legislative responses**
  - 2.1. Laws relating to atomic energy, explosives
  - 2.2. Laws relating to air crafts, insecticides, factories, motor vehicles, railway Ships and petroleum products
  - 2.3. Public liability insurance - national and international
  - 2.4. Disaster management act, 2005 – features, task force – relief and Rehabilitations
- 3. Disaster management**
  - 3.1. State responsibility to provide short term relief
  - 3.2. Legal responsibility of officials of the state
  - 3.3. Role of voluntary organizations
  - 3.4. Disbursement of relief grants and public accountability of official and Other voluntary disbursement agencies
  - 3.5. Participatory management by trade unions
  - 3.6. Right of certain classes of victim; children, women
- 4. Inquiries and investigations for disasters**
  - 4.1. The duty to institute investigations and inquiries to determine causes of Mass disaster
  - 4.2. The investigation process
  - 4.3. Right to hearing to affected individual
  - 4.4. Right to hearing to voluntarily organization and public spirited Individuals
  - 4.5.
- 5. Liability and judicial process**
  - 5.1. Liability for environmental destruction
    - 5.1.1. Statutory liability
    - 5.1.2. Contractual liability
    - 5.1.3. Tortious liability
    - 5.1.4. Criminal liability
    - 5.1.5. Civil nuclear liability
  - 5.2. Litigation
    - 5.2.1. Role of National Green Tribunal (NGT)
    - 5.2.2. Initiation of proceedings
    - 5.2.3. Representative suits
    - 5.2.4. Costs of litigation - court fee, counsel fee
    - 5.2.5. Rules of evidence
    - 5.2.6. Measure of damages
  - 5.3. Bhopal gas leakage case, Chernobyl nuclear disaster case, Fukushima earth quake and nuclear disaster case, tsunami, Lathur and Gujarat earthquakes
  - 5.4. Problems of execution
  - 5.5. Need for reform - dilatory and expensive character of court processes
- 6. Books Recommended:**

- Government of India, Department of Environment, Management of Hazardous Substances Control Act and Structure and Functions of Authority Created there under.
- Indian Chemical Manufacturer's Association and Loss Prevention society of India, Proceedings of the National Seminar on Safety in Road Transportation of Hazardous Materials: (1986)
- Industries Commissioner at Ahmedabad, Task Force Report: 9.J.MEHTA). To oversee safety measures in various industries dealing with Hazardous and Toxic Materials (1986).
- Organization for Economic Co-operation & Development, (Paris), Safety of Consumer Product, Policy & Legislation of OECD Countries.
- Indian Law Institute (Upendra Baxi and Thomas Paul (ed.) Environment Protection Act: An Agenda for implementation (1987).
- Asian Regional Exchange for Prof.Baxi., Nothing to lose but our lives: Empowerment to oppose industrial Hazards in a transnational world (1989)
- Gurudip Singh Environmental Law: International and National Perspectives (1995), Lawman (India) Pvt. Ltd
- Leelakrishnan, P, The Environmental Law in India, Chapters VIII, IX and X (1999), Butterworths, New Delhi
- Chaturvedi and Chaturvedi, The Law on Protection of Environment and Prevention of Pollution (1996)

## D05. CLIMATE CHANGE AND LEGAL ORDER

### **Objective of the course:**

In a remarkably short time span, climate change has become deeply embedded in important areas of the law. As a global challenge calling for collective action, climate change has elicited substantial rulemaking at the international plane, percolating through the broader legal system to the regional, national and local levels. More than other areas of law, the normative and practical framework edicated to climate change has embraced new instruments and softened traditional boundaries between formal and informal, public and private, substantive and procedural; so ubiquitous is the reach of relevant rules nowadays that scholars routinely devote attention to the intersection of climate change and more established fields of legal study, such as international trade law. *Climate Change and the Law* explores the rich diversity of international, regional, national, sub-national and transnational legal responses to climate change. Is climate law emerging as a new legal discipline? If so, what shared objectives and concepts define it? How does climate law relate to other areas of law? This course makes an attempt to answer these questions.

### **Syllabus:**

#### **1. Introduction to climate**

- 1.1. Elements of climate (wind, temp. Humidity, precipitation, pressure)
- 1.2. Different climate zones
- 1.3. Micro macro climate effects

#### **2. Global warming**

- 2.1. Energy issues and climate change – alternate energy sources
- 2.2. Green – house effect as a natural phenomenon, green house gases and their Emission sources

#### **3. Climate change and impact**

- 3.1. Modeling climate change, ozone layer depletion and its control
- 3.2. Impacts of climate change-global and India, temperature rise sea level rise, coastal Erosion and landslides, coastal flooding, wetlands and estuaries loss
- 3.3. Carbon trading – mechanisms various models (European, Indian) Global and Indian scenario
- 3.4. Cleaner development mechanisms – various projects related to co2 emission Reduction

#### **4. Climate change and legal order**

- 4.1. Frame work convention and climate change 1992
- 4.2. Kyoto protocol 1997
  - 4.2.1. Significance and Role
- 4.3. Establishment of IPCC and its reports
- 4.4. Vienna convention 1985

**Books Recommended:**

- Barry R.G. and Chorley R.L. (1992), " Atmosphere, weather and climate " 4th edition Publication
- Bolin B., (ED) (1981), " Carbon Cycle Modeling" , John Wiley and Sons Publications.

## **D06. BIOLOGICAL DIVERSITY AND LEGAL ORDER**

### **Objective of the course:**

Biological diversity includes all life forms on the earth and signifies a life supporting order, essential for the normal functioning of eco-systems and the Biosphere as a whole. Dependence of human life on biological diversity is thus no doubt essential. Destruction of bio-diversity, especially of the developing countries is disturbing phenomenon and presents a matter of grave concern. The growth of bio-technology and genetic engineering triggers off numerous issues of ethical and legal significance in relation to experimentation and animals and plants. Apart from being considered as gifts of nature, animals and plants becomes a target of commercial exploitation. Sustainable development envisages country position and lays emphasis on the duty to protect the diverse flora and fauna not only for present generation but also for the succeeding generations to come. With the above perspectives the course focuses on the legal mechanisms of preserving bio-diversity in a sustainable manner.

### **Syllabus**

#### **1. Bio-diversity**

- 1.1. Meaning
- 1.2. Need for protection of bio-diversity
- 1.3. Dependence of human life on the existence in flora and fauna
- 1.4. Significance of wild life
- 1.5. Medicinal plants
- 1.6. Plant and micro-organism

#### **2. Bio-diversity and legal regulation**

- 2.1. Utilization of flora and fauna for bio-medical purposes
- 2.2. Experimentation on animals; legal and ethical issues
- 2.3. General mutation of seeds and micro-organisms
- 2.4. Genetic engineering
- 2.5. Legal mechanisms of control
  - 2.5.1. Convention on bio-diversity (CBD)
  - 2.5.2. Biological diversity act 2002
- 2.6. Recognition of regional and local agencies
- 2.7. Bio-ethics

#### **3. Development projects and destruction of bio-diversity**

- 3.1. Concept of sustainable development
- 3.2. Principles of sustainable development
  - 3.2.1. International & National perspectives
- 3.3. Construction of dams-salient valley and doon valley projects-narmada Bahavandolan-almatti dam project, etc.
- 3.4. Deforestation – coal mining operations – sustainable use of forests

3.5. Protection of wild life.

**4. Problems in legal regulation of medicinal plants**

4.1. Cosmetic plants

4.2. Animal products

4.3. Utilization of flora and fauna for bio-medical purpose by multi-national Corporation: problems of control

4.4. Regulation of trade in wild-life products

**5. Legal framework for development and protection of sanctuaries**

5.1. Parks

5.2. Zoos

5.3. Biosphere resources

5.4. Protection of genetic resources for agriculture

**Books Recommended:**

## 05. TEACHING PEDAGOGY AND ICT IN EDUCATION

### Objective of the course:

Pedagogy is the art (and science) of teaching. Effective teachers use an array of teaching strategies because there is no single, universal approach that suits all situations. Pedagogical practice promotes the wellbeing of students, teachers and the school community - it improves students' and teachers' confidence and contributes to their sense of purpose for being at school; it builds community confidence in the quality of learning and teaching in the school. During the past few years, the world has witnessed a phenomenal growth in communication technology, computer network and information technology. Not only mastering ICT skills, but also utilizing ICT to improve teaching and learning is of utmost importance for teachers in performing their role of creators of pedagogical environments. The objective of this course is to acquaint the students with the various pedagogy skills and ICT applications.

### Syllabus

#### 1. Aspects Of Teaching

- 1.1. Concept and definitions of teaching
- 1.2. Functions of teaching
- 1.3. Teaching skills
- 1.4. Diagnostic testing and Remedial Teaching
- 1.5. Need and importance of :- (i) Annual Plan  
(ii) Unit Plan

#### 2. Effective Teaching

- 2.1. Maxims of teaching
- 2.2. Principles of teaching
- 2.3. Models of teaching
  - 2.3.1. Advance Organizer Model
  - 2.3.2. Concept Attainment Model
  - 2.3.3. Inquiry Training Model
  - 2.3.4. Jurisprudential Inquiry Model
- 2.4. Parameters of effective teaching

#### 3. Advance Pedagogy

- 3.1. Concept, need and significance of Advance Pedagogy
- 3.2. Principles of advance pedagogy
- 3.3. Teaching phases- Philip Jackson Model
- 3.4. Stages of teaching
  - 3.4.1. Pre – active
  - 3.4.2. Inter – active
  - 3.4.3. Post – active
- 3.5. Teacher's role in different teaching phases
- 3.6. Recent pedagogical trends – blended learning, flipped classroom, distance learning

#### **4. Communication Modes in education**

- 4.1. Concepts and process of communication
- 4.2. Principles of communications
- 4.3. Communication and learning
- 4.4. Modes of communication
  - 4.4.1. Speaking and listening
  - 4.4.2. Writing and reading
  - 4.4.3. visualizing and observing
- 4.5. Basis model of communication
  - 4.5.1. Sender – Message – Receiver
  - 4.5.2. Devid Berlo’s SMCR model of communication
  - 4.5.3. Sharon’s model of communication

#### **5. ICT in Education**

- 5.1. Concept, Need and Importance of ICT in Education
- 5.2. Paradigm Shift due to I C T from ‘Teaching’ to ‘Learning’
  - 5.2.1. Curriculum
  - 5.2.2. Methods of Teaching
  - 5.2.3. Role of Teacher
  - 5.2.4. Classroom Environment
  - 5.2.5. Evaluation procedure
  - 5.2.6. Education Management
- 5.3. Challenges and Barrier to integration of I C T in Indian schools Classrooms
- 5.4. ICT Skilled Teacher – ICT Skills and Qualities of ICT teacher
- 5.5. Safe use of ICT – Virus management, Net safety, Nettiquettes, Legal and Ethical Issues

#### **6. ICT supported teaching learning strategies**

- 6.1. E-Learning and Web base learning–concept, features and educational application
- 6.2. Co-operative and Collaborative Learning –concept, features and educational application
- 6.3. Project based Learning –concept, features and educational application
- 6.4. Communication Tools - Mobile, e-mail, chat Online Conferencing, Blog, Wiki, Internet forum, News Groups.
- 6.5. Social Networking as an effective Communication Tool.

#### **7. New trends in ICT**

- 7.1. Virtual Classroom - concept, elements, advantages and limitations
- 7.2. Smart class room – concept, elements, advantages and limitations
- 7.3. Edusat - concept, elements, advantages and limitations
- 7.4. Online Learning Resources: e- Library, Websites, Apps, and Web 2.0 Technology.

#### **Books Recommended:**

- Integrating Technology in the classroom Shelly, Cashman, Gunter and Gunter Publication
- Essentials of Educational Technology, Madan Lal, Anmol Publications
- Online Teaching Tools and Methods, Mahesh Varma, Murari Lal & Sons

- Education and Communication for development, O. P. Dahama, O. P. Bhatnagar, IBH Publishing company, New Delhi
- Information and Communication Technology, N. Sareen, Anmol Publication
- Communication and Education, D. N. Dasgupta, Pointer Publishers
- Education and Communication, O. P. Dham
- Computer fundamentals - Arora Bansal
- Information and communication - Kishore, Chavan
- Information Technology - Dyne, Nandkishore
- Crumlish Christian - ABC o internet
- Fun of computer - Singh and Sukhvir
- ICT strategies for school - Mohenty Laxman

## 06. COMPUTER APPLICATIONS AND LEGAL RESEARCH

### **Objective of the course:**

In the current world, it's almost impossible to imagine that someone can live without computers. Computers have become an electronic device of almost every day use for individuals of every age. They are essential in almost all the business dealings that are made nowadays. Computers have gained significance as they have improved the efficiency and productivity of work done. Large amounts of information in industrial and business sectors as well as in the personal lives are stored on computers. The traditional concept of a lawyer's job is that of a lawyer poring through stacks of paperwork. While paperwork still is a reality, law practice has changed drastically in the past 20 years, mainly because of computer technology. One of the most important uses of computers in the legal profession is conducting legal research. Many legal projects require extensive legal research, including references to previously decided cases. Traditionally, companies such as West printed volumes of case law, requiring attorneys to read through keyword indexes to find relevant cases. Now, online legal databases such as LexisNexis and Westlaw make the process of searching for case law, legal forms and treaties much easier. The purpose of this paper is to acquaint the students with the functioning of the computers and their application in legal profession.

### **Syllabus**

#### **1. Introduction to information and IT**

- 1.1. Changing decision making scenario and role of information needs and information systems
- 1.2. Information generation process
- 1.3. Quality of information – adding value to information
- 1.4. Role of IT in information generation and value addition
- 1.5. Computer hardware and personal computers – an overview

#### **2. Computer system as information processing system**

- 2.1. Types of computer systems
- 2.2. Hardware options – CPU, input devices, output devices, storage devices, communication devices
- 2.3. Configuration of these devices and their applications
- 2.4. Automatic devices for logistic bar coding and management system

#### **3. Software Resources**

- 3.1. Software needs
- 3.2. Operating systems
- 3.3. Application software
- 3.4. Programming languages

#### **4. Internet and World Wide Web**

- 4.1. Internet technologies and access devices
- 4.2. Concept of World Wide Web and Internet browsing
- 4.3. www as a marketplace
- 4.4. Concept of e - commerce and business models of e -commerce.

## **5. Desktop Application**

- 5.1. Word Processing
  - 5.1.1. Meaning and role of word processing in creating of documents
  - 5.1.2. editing, formatting and printing documents
  - 5.1.3. using tools such as spelling check, thesaurus, etc. in word processors
  - 5.1.4. Presentation and graphics on personal computers
- 5.2. Electronic spreadsheet
  - 5.2.1. Structure of spreadsheet and its application to accounting finance and marketing functions of business
  - 5.2.2. creating a dynamic/sensitive worksheet
  - 5.2.3. Concept of absolute and relative cell reference
  - 5.2.4. Using built in function
  - 5.2.5. Goal seeking and solver tools
  - 5.2.6. Using graphics and formatting of worksheet
  - 5.2.7. Sorting data with other desktop applications
  - 5.2.8. Strategies of creating error free worksheet

## **6. Data Base Management System**

- 6.1. Concept of data base management system
- 6.2. Data field, records and files
- 6.3. Sorting and indexing data
- 6.4. Searching records designing queries and reports and linking of data files

## **7. Computer Application in Legal Profession**

- 7.1. E-learning
  - 7.1.1. Meaning and origin
  - 7.1.2. Benefits and Limitations
  - 7.1.3. Forms of e-learning
  - 7.1.4. Online legal research
- 7.2. E-litigation
  - 7.2.1. Meaning, Origin and Development
  - 7.2.2. Advantages and disadvantages
  - 7.2.3. Challenges for lawyers, litigants and judges
  - 7.2.4. E-orders, e-judgments and e-advocacy
  - 7.2.5. Video Conferencing
  - 7.2.6. Witness statement recording - security issues
- 7.3. E-Research
  - 7.3.1. Legal databases and E- Resources
  - 7.3.2. Legal research programs- Lexisnexis, Westlaw, Manupatra etc.
  - 7.3.3. Plagiarism
    - 7.3.3.1. Problems & solutions
    - 7.3.3.2. Consequences of Plagiarism

### 7.3.3.3. Prevention of Plagiarism

#### **Books Recommended:**

- Burch, J. and G. Gary, Information Systems: Theory and Practice, John Wiley and Sons, New York.,
- Eliason, A.L., On-line Business Computer -Application Science Research Associates Chicago.
- Eliason, A. L., On-line Business Computer Applications, Science Research Associates, Chicago.
- Estrada, S., Connecting to the Internet, O'R eilly, Sebastopol.

- Sanders, D.H., Computers in Business: An Introduction, McGraw Hill, Tokyo, 1983.
- William, B.K. ec al, Using Information Technology: A Practical Introduction to Computers and Communication, McGraw Hill, Ne w York, 2000.

## 07. SOFT SKILLS AND PERSONALITY DEVELOPMENT

### Objective of the course:

Personality Development is a tool through which you bring out your capabilities and your strengths making yourself aware of your inner self and become more confident to face the outside world. As far as students are concerned, effective personality development program can help the students to face and meet the challenges of the outside world more effectively and efficiently, at the same time making it easier for them to climb up the complicated corporate ladder more smoothly.

This course is an attempt to enrich the students with the required tips for personality development and communication skills.

### Syllabus

#### 1. Soft skills

- 1.1. Concept of soft skills and hard skills
- 1.2. Categories of skills
- 1.3. Importance of soft skills
- 1.4. Process of skill acquisition
- 1.5. Soft skills education and training

#### 2. Understanding communication

- 2.1. Meaning and definition
- 2.2. Dimension and Models
- 2.3. Theories of communication
- 2.4. Channels of communication
- 2.5. Forms and processes of communication
- 2.6. Factors influencing communication
- 2.7. Importance of communication in the academic setting
- 2.8. Barriers to communication

#### 3. Introduction to Personality

- 3.1. Basic of Personality
- 3.2. Human growth and Behavior
- 3.3. Theories in Personality
- 3.4. Motivation

#### 4. Techniques in Personality development

- 4.1. Body Language
- 4.2. Communication Skills
- 4.3. Self confidence
- 4.4. Mnemonics

- 4.5. Goal setting
- 4.6. Time Management and effective planning
- 5. Interpersonal Relations
  - 5.1. Introduction to Interpersonal Relations
  - 5.2. Analysis of different ego states
  - 5.3. Analysis of Transactions
  - 5.4. Analysis of Strokes
  - 5.5. Analysis of Life position
- 6. Leadership Skills
  - 6.1. Introduction to Leadership
  - 6.2. Leadership Power
  - 6.3. Leadership Styles
  - 6.4. Team Building and public speaking
- 7. Stress Management
  - 7.1. Introduction to Stress
  - 7.2. Causes of Stress
  - 7.3. Impact of Stress
  - 7.4. Managing Stress
    - 7.4.1. Meditation and concentration techniques
    - 7.4.2. Self acceptance and self growth

Suggested readings:

- Effective Communication and Soft Skills, Nitin Bhatnagar, Mamta Bhatnagar, Pearson Education India
- Introduction to Personality and Intelligence, Nick Haslam, Sage
- Understanding Human Communication, Ronald Brian Adler, George R. Rodman, Alexandre Sévigny Oxford University Press
- Develop Your Leadership Skills, John Adair, Kogan Page Publishers
- Stress Management and Prevention: Applications to Daily Life, David D. Chen, Jeffrey A. Kottler, Routledge

Law and justice in a Globalizing world

**BHARATI VIDYAPEETH (DEEMED TO BE UNIVERSITY), PUNE (INDIA)**

MA (Commercial Photography & Cinematography)

Under the Faculty of ARTS (Photography & Cinematography)

COURSE STRUCTURE (PG PROGRAMME) (CBCS 2018 COURSE)

(To be implemented from July 2019)

Name: BVDU Yashwantrao Mohite College of Arts, Science & Commerce

**(DEPARTMENT OF PHOTOGRAPHY) PUNE-43.**

**Objectives of the course:**

**ELIGIBILITY FOR ADMISSION TO FIRST YEAR M.A. Degree Programme**

A candidate who has completed Graduation in any stream.

**Intake Capacity:**

**MA (Commercial Photography & Cinematography) - 10**

**Course Structure and scheme of credits of M.A. Course:-**

The M.A. programme will be of two years duration consisting of 4 semesters and of minimum **110** Credits:

Semester I (30 Credits),

Semester II (28 Credits),

Semester III (30 Credits),

Semester IV (22 Credits).

**Syllabus Structure**

**MA (Commercial Photography)**

F.Y.M.A

A student joining the first year MA course shall offer 5 subjects mentioned below

**Note**

**(T)** After the subject name indicates Theory

**(P)** After the subject name indicates Practical

### F.Y. MA (Commercial Photography & cinematography) Semester I

Subject type	Code	Title of the Paper	Hrs./ Week	Credits	Exam Hrs.	Maximum Marks		
						Internal Assessment	University Exam	Total
Core Courses		Introduction & Orientation Commercial Photography (P)	4	4	3	40	60	100
		Principles of design + Equipment & Processes. (P)	8	8	3	40	60	100
		Commercial Photography - Genre agnostic (P)	8	8	3	40	60	100
		Contemporary practices in commercial photography (T)	4	4	3	40	60	100
		Masterclass Project 1 (P)	8	6	3	40	60	100

### F.Y.M.A. (Commercial Photography & cinematography) Semester II

Subject type	Code	Title of the Paper	Hrs./ Week	Credits	Exam Hrs.	Maximum Marks		
						Internal Assessment	University Exam	Total
Core Courses		Commercial Photography - Genre specific (P)	8	8	3	40	60	100
		Project 1 (Dissertation + Viva Voce)	10	10	3	40	60	100
		Contemporary practices in advertising & design (T)	4	4	3	40	60	100
		Masterclass project 2 (P)	8	6	3	40	60	100

### S.Y. MA (Commercial Photography & cinematography) Semester III

Subject type	Code	Title of the Paper	Hrs./ Week	Credits	Exam Hrs.	Maximum Marks		
						Internal Assessment	University Exam	Total
Core Courses		Practical cinematography – Equipment & processes (P)	8	8	3	40	60	100
		Practical cinematography – popular practices (Dissertation + Viva voce)	4	4	3	40	60	100
		5 C's of cinematography Genre agnostic (P)	8	8	3	40	60	100
		Masters of cinematography (T)	4	4	3	40	60	100
		Masterclass project 3 (P)	8	6	3	40	60	100

### S.Y. MA (Commercial Photography & cinematography) Semester IV

Subject type	Code	Title of the Paper	Hrs./ Week	Credits	Exam Hrs.	Maximum Marks		
						Internal Assessment	University Exam	Total
Core Courses		5 Cs of cinematography – Genre specific (P)	8	8	3	40	60	100
		Business practices & marketing (Dissertation + viva voce)	4	4	3	40	60	100
		Final project (Jury)	10	10	3	40	60	100

**The medium of instruction:**

The medium of instruction and examination shall be English.

**University Terms:**

The University authorities shall fix the dates for the commencement and conclusion of the First and the Second terms. Students, who have registered their names with the University, can keep the terms.

**Scheme of Examination:**

The assessment of students in the academic session 2019-20 and thereafter shall be based on-

- (a) University Examinations (UE)
- (b) Internal Assessment (IA)
- (c) Choice Based Credit System (CBCS) and
- (d) Semester Grade Point Average (SGPA) and Cumulative Grade Point Average System (CGPA).

For each paper of 100 marks, there will be Internal Assessment of 40 marks and the University Examination of 60 marks/3 hour's duration at the end of each semester. The 4 credits will be given to a student who secures at least 40% of marks allotted to each paper. A candidate who does not pass the examination in any subject or subjects in one semester will be permitted to reappear in such failed subject or subjects along with the papers of following semesters. The Internal Assessment (IA) for each paper will be of 40 marks. The Internal Assessment may be in the forms as follows:

- a) Attendance - 10 Marks
- b) Home Assignment/Tutorial/Test/Presentation - 30 Marks

**Standard of Passing:**

For all courses, both UE and IA constitute separate heads of passing. In order to pass in such courses and to earn the assigned credits, a student must obtain a minimum grade point of 5.0 (40% marks) at UE and also a minimum grade point of 5.0 (40% marks) at IA.

If a student fails in IA, the learner passes in the course provided he/she obtains a minimum of 25% in IA and GPA for the course is atleast 6.0(50 % in aggregate). The GPA for a course will be calculated only if the learner passes at the UE.

A student who fails at UE in a course has to reappear only at UE as a backlog candidate and clear the head of passing. Similarly, a student who fails in a course at IA has to reappear only at IA as a backlog candidate and clear the head of passing.

The 10-point scale Grades and Grade Points according to the following table.

Range of Marks (Out of 100)	Grade	Grade Point
$80 \leq \text{Marks} \leq 100$	O	10
$70 \leq \text{Marks} \leq 80$	A+	9
$60 \leq \text{Marks} \leq 70$	A	8
$55 \leq \text{Marks} \leq 60$	B+	7
$50 \leq \text{Marks} \leq 55$	B	6
$40 \leq \text{Marks} \leq 50$	C	5
Marks Below 40	D	0

The performances at UE and IA will be combined to obtain the Grade Point Average (GPA) for the course. The weightage for performance at UE and IA shall be 60% and 40%.

GPA is calculated by adding the UE marks out of 60 and IA marks out of 40. The total marks out of 100 are converted to grade point, which will be the GPA.

### **Formula to Calculate Grade Points (GP)**

Suppose that 'Max' is the maximum marks assigned for an examination or evaluation based on which GP will be computed. In order to determine the GP, Set  $x = \text{Max} / 10$  (since we have adopted 10-point system). Then GP is calculated by the formulas shown as below.

Range of Marks at the evaluation	Formula for the Grade Point
$8x \leq \text{Marks} \leq 10x$	10

$5.5x \leq \text{Marks} \leq 8x$	Truncate (Marks/x) +2
$4x \leq \text{Marks} \leq 5.5x$	Truncate (Marks/x) +1

Two kinds of performance indicators, namely, the Semester Grade Point Average (SGPA) and the Cumulative Grade Point Average (CGPA) shall be computed at the end of each term. The SGPA measures the cumulative performance of a student in all the courses in a particular semester, while the CGPA measures the cumulative performance in all courses since his/her enrolment to the course. The CGPA of learner when he/she completes the programme is the final result of the learner.

The SGPA is calculated by the formula  $SGPA = \frac{\sum C_k \times GP_k}{\sum C_k}$ , where  $C_k$  is the credit-value assigned to a course and  $GP_k$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study during the semester, including those in which he/she might have failed or those for which he/ she remained absent. **The SGPA shall be calculated up to two decimal place accuracy.**

The CGPA is calculated by the formula  $CGPA = \frac{\sum C_k \times GP_k}{\sum C_k}$ , where  $C_k$  is the credit-value assigned to a course and  $GP_k$  is the GPA obtained by the student in the course. In the above, the sum is taken over all the courses that the student has undertaken for the study from the time of his/her enrolment to the course and also during the semester for which CGPA is calculated, including those in which he/she might have failed or those for which he/she remained absent.

**The CGPA shall be calculated up to two decimal place accuracy.**

**The Formula to compute equivalent percentage marks for specified CGPA:**

% Marks (CGPA) =	$10 \times CGPA - 10$	if $5.00 \leq CGPA \leq 6.00$
	$5 \times CGPA + 20$	if $6.00 \leq CGPA \leq 8.00$
	$10 \times CGPA - 20$	if $8.00 \leq CGPA \leq 9.00$
	$20 \times CGPA - 110$	if $9.00 \leq CGPA \leq 9.50$
	$40 \times CGPA - 300$	if $9.50 \leq CGPA \leq 10.00$

### **Award of Honours:**

A student who has completed the minimum credits specified for the programme shall be declared to have passed in the programme. The final result will be in terms of letter grade only and is based on the CGPA of all courses studied and passed. The criteria for the award of honours are given below.

Range of CGPA	Final Grade	Performance Descriptor	Equivalent Range of Marks (%)
$9.50 \leq \text{CGPA} \leq 10.00$	O	Outstanding	$80 \leq \text{Marks} \leq 100$
$9.00 \leq \text{CGPA} \leq 9.49$	A+	Excellent	$70 \leq \text{Marks} \leq 80$
$8.00 \leq \text{CGPA} \leq 8.99$	A	Very Good	$60 \leq \text{Marks} \leq 70$
$7.00 \leq \text{CGPA} \leq 7.99$	B+	Good	$55 \leq \text{Marks} \leq 60$
$6.00 \leq \text{CGPA} \leq 6.99$	B	Average	$50 \leq \text{Marks} \leq 55$
$5.00 \leq \text{CGPA} \leq 5.99$	C	Satisfactory	$40 \leq \text{Marks} \leq 50$
CGPA Below 5.00	F	Fail	Marks Below 40

- Gracing the gracing shall be done as per existing rules of the University.
- Verification and Revaluation There is a provision for verification and revaluation of the result. A student can apply for the verification and revaluation of the result within two weeks from the declaration of the results with the prescribed fee. The verification and revaluation shall be done as per the existing rules of the University

**Rule for ATKT:** - A candidate shall be permitted to proceed further from the First Semester up to Fourth Semester irrespective of his/her failure in any of the Semester examinations subject to the condition that the candidate should register for all the backlog subjects of earlier semesters along with current (subsequent) semester subjects.

#### **• Span Period to Qualify a Master Degree:**

As per the guidelines issued by the University Grants Commission (UGC) on "Determination of Uniform Span Period within which a student may be allowed to Qualify for a **Master** Degree", a student has to qualify for a **Master** degree within the period prescribed by the UGC. If a student could not, he/she will be allowed two more years beyond the prescribed period. In exceptional cases, further extension of one more year may be considered by the University.

**BHARATI VIDYAPEETH (DEEMED TO BE UNIVERSITY), PUNE (INDIA)**

**MA (Commercial Photography & Cinematography)**

**Under the Faculty of Arts (Photography & Cinematography)**

**COURSE STRUCTURE (PG PROGRAMME) (CBCS 2018 COURSE)**

(To be implemented from July 2019)

Name: **BVDU DEPARTMENT OF PHOTOGRAPHY PUNE-43.**

**(Under Yashwantrao Mohite College of Arts, Science & Commerce Pune)**

**MA (Commercial Photography & Cinematography)**

Duration: 2 years full time

Eligibility: Graduation in any stream

Proposed intake: 10

Proposed commencement date: September 1, 2019.

Fees: INR 7, 00,000

## Course philosophy

The course has been conceptualized on the assertion that commercial photography & cinematography is a powerful form of mass communication that potentially connects with an audience of millions. What defines it as commercial is that it is conceived and created with a specific audience in mind, conscious of how meaning is affected by socio-economic criteria. It can be utilized in a variety of ways: to stimulate commerce; promote new trends; deliver complex narratives; and inform and express opinions. In the process, opportunities arise for creative practitioners working in commercial contexts to produce innovative work.

**It will be the only Post Graduate course globally to offer, both, commercial photography & practical cinematography.**

The MA Commercial Photography & Cinematography course is structured in such a way that learning develops systematically and with an emphasis on the independent learning abilities required for continuing professional development and the advancement of careers.

The course allows students to undertake advanced study in a wide range of areas including advertising, documentary, editorial, fashion portrait photography & practical cinematography. Through originality in the application of contemporary academic research and professional practices to the production of new complex work, students will challenge the accepted conventions of the genres.

By a combined approach of practice, theory and professionalism, the course will provide a challenging and stimulating environment in which students are able to develop their full potential, with the aim of becoming a practitioner at the forefront of the discipline. They will expand their commercial potential by applying genre practices across contexts; for example, *the aesthetics of documentary can be applied to advertising, editorial, and fashion outcomes.*

This course enables students to develop an in-depth and critically informed understanding of the commercial photography industry. They will engage with key themes in emerging and established critical analyses that underpin each professional genre. This will equip them with the theoretical understanding to progress their practice and effectively articulate concepts through the production of advanced outcomes to specialist and non-specialist audiences.

Students will be encouraged to make industrial links across a broad range of organizations relevant to their chosen professional specialism. Using these links they will learn to manage and exceed client expectations through the application of their new academic understanding to the production of inventive commercial work.

## **Course Aims**

General aims are to produce Master's graduates with:

- \* The ability to apply originality to the production of photographic & cinematographic solutions for commercial contexts that positions them as a future leader in the field.
- \* An in-depth understanding as to how their practice is informed by current and established critical debates in photography/cinematography and applied discourses.
- \* A continuing investment into the methodical investigation of emerging imaging technologies and professional practices in order to be able to respond effectively to creative and entrepreneurial opportunities.
- \* The ability to exercise personal decision making in the production of innovative work that extends their practice, challenges and exceeds stakeholders' expectations, and communicates complex ideas to a wider audience.
- \* A high level of transferable professional skills such as enterprise, networking, self-promotion and small business marketing, and the ability to determine their career progression.
- \* The ability to critically evaluate and develop research and practice to a comprehensive level for the undertaking of advanced employment opportunities or further study at Doctoral level.

**More than anything else, this course is designed to enable practitioners to be able to create & deliver relevant, well researched & well executed high quality content. Content is the new oil/gold in today's context.**

## **Course Outcomes**

By the end of the course students will be able to:

- \* Produce complex and advanced work that is informed by critical debates at the forefront of the discipline, and evidences originality in the application of ideas.
- \* Demonstrate a comprehensive understanding of photographic / cinematographic genres and commercial contexts, and communicate effectively through the presentation of visual outcomes to targeted and wider audiences.
- \* Demonstrate and apply in-depth conceptual, practical and professional understanding of current practices and techniques to innovative commercial outcomes.
- \* Critically reflect upon work in order to direct and advance professional practice through the development of high-level image making skills.
- \* Act autonomously in the production of solutions to complex problems, and advance careers through the continued development of entrepreneurial skills.

## **Course structure**

The course will consist of the following units over a two year plan.

#### Year 1

1. Introduction & orientation - Practical
2. Principles – Equipment & process - Practical
3. Commercial photography – Genre agnostic – Practical + Dissertation
4. Commercial photography – Genre specific – Practical + Dissertation
5. Project - Elective

#### Year 2

1. Practical cinematography – popular practices – Dissertation + Viva
2. 5 C's of cinematography – Genre agnostic - Practical
3. 5 C's of cinematography – Genre specific - Practical
4. Business practices & entrepreneurship – Dissertation + Viva
5. Project – specialization - Elective

Faculty:-

Chandar Kumar

Mayuresh Moghe

Visiting & guest faculty:

Leading professionals drawn from the industry.

## Course Structure

### Graduation

**Bachelor of Arts (Music) (Choice Based Credit System)**

**Bachelor of Arts (Dance) (Choice Based Credit System)**

**(Semester System – Gurukul Pattern)**

<b>Bachelor of Arts (Music): (Semester system – Gurukul Pattern)</b>	<b>Music:</b> Vocal, Non Percussion, Percussion
<b>Bachelor of Arts (Dance): (Semester system – Gurukul Pattern)</b>	<b>Dance:</b> Bharatnatyam, Kathak
<b>Duration</b>	Three Years Full time Programme (Six Semesters)
<b>No of Seats</b>	50 for Music / Dance
<b>Total number of Courses in the Programme</b>	26 (Total Credits: 150)
<b>Total Credits / Semester</b>	25
<b>Total No. of Theory Papers in the Programme</b>	14
<b>Total No. of Practical Courses in the Programme</b>	06
<b>Total No. of Viva Courses in the Programme</b>	06
<b>Tuition and other fees</b>	Around <b>Rs.21,000/-</b> per year for Indian students. Examination fee would be extra. Fees for hostel accommodation and mess will be additional.

Once the admission is taken in one of the following specialized Programme, students cannot interchange to other course.

## Specialization

<b>Music (Hindustani Classical)</b>	<ul style="list-style-type: none"><li>• <b>Vocal</b> (Khayal / Dhrupad)</li><li>• <b>Instrumental</b> (Harmonium, Sitar, Flute, Violin, Santoor, Sarod, Shehnai, Sundri)</li><li>• <b>Instrumental Percussion</b>(Tabla / Pakhawaj / Drum / Dholak / Dholaki)</li></ul>
<b>Dance</b>	<ul style="list-style-type: none"><li>• <b>Bharatanatyam</b></li><li>• <b>Kathak</b></li></ul>

## Minimum Qualification

- This is a three year full time course. Any student after passing 12th std. HSC can apply for the course.
- The candidate has to undergo a common entrance test followed by performance test before a panel of eminent scholars from the field of Music / Dance.
- This course is not for beginners. Candidates should have basic training in the field of performing arts.

## Minimum Mandatory Experience while applying

### Music

- **Vocal:** Candidate should know at least three Ragas and should be able to sing Chhota Khayal composition with Aalap and Taan or Dhrupad with its Vistar for 10 min.
- **Instrumental (Non Percussion): (Harmonium, Flute, Santoor, Sarod, Shehnai, Sundri, Sarangi, Sitar, Violin.)** Nine streams are available for this course. Candidate should know at least three Ragas and should be able to play Madhya Laya Gat or Bandish with Aalap and Taan for 10 Min.
- **Instrumental (Percussion):** Candidate should know at least two Talas. Candidate should know the components of Tabla / Pakhawaj solo performance and should have basic knowledge of accompaniment. Candidate should be able to perform / play Kayada / Paran, Rela, Tukada etc for 10 Mins.

### Dance

- **Bharatnatyam:** Candidate should be able to perform solo Bharatnatyam with focus on Nritta and Abhinaya (Compositions like Alaripu, Jatiswaram, Kautukam or Shloka)for 10 Mins.
- **Kathak:** Candidate should have knowledge of at least two Taals. Candidate should be able to perform kathak for 10 mins. Showing Vandana, Gatbhav, Thumari, Toda, Tukada etc.

# Post Graduation

**Master of Arts Course (Music) (Choice Based Credit System)**

**Master of Arts Course (Dance) (Choice Based Credit System)**

<b>Master of Arts Course (Music /Dance) (Semester System - Gurukul Pattern)</b>	<b>Music:</b> Vocal, Instrumental, Percussion <b>Dance:</b> Bharatnatyam, Kathak

**Bachelor of Art in Physical Education**  
(B.A. – Physical Education)-3Years

**(6 Semester Programme)**

**CURRICULUM FRAMEWORK**  
**2015-2018**

**GUIDELINES OF REGULATIONS AND SYLLABUS STRUCTURE FOR  
P.E.S -3 years] (Six Semesters)  
CHOICE BASED CREDIT SYSTEM (CBCS)**

**Preamble:** Bachelor of Physical Education and Sports i.e. B.A. (Physical Education) (Six Semesters Choice Based Credit System) for 3 year duration This is a professional programme meant for preparing basics to become teachers of physical education.

B.A. (Physical Education) programme shall be designed to integrate the study of physical activity in childhood, social context of Physical Education, historical development, subject knowledge of psychology, pedagogy, aim of Physical Education, communication language & skills etc. The B.A. (Physical Education) programme comprises of compulsory and optional theory papers as well as physical activity (practical courses).

**Duration, Intake, Eligibility and Admission Procedure:**

The Duration, Intake, Eligibility and Admission Procedure are as per the University norms and standards.

**Duration:** B.A. (Physical Education) programme shall be of duration of three academic years, that is, Six semesters. However, the students shall be permitted to complete the B.A. (Physical Education) programme requirements within a maximum of Five years from the date of admission to the programme. However, if a student fails to complete the degree in 5 years he should take fresh admission.

**Intake:-**

30 seats are approved by University for B.A. (Physical Education) course.

\*No differently-abled candidate is eligible for the admission in B.A. (Physical Education) Course.

**Eligibility**

Candidate should have passed the higher secondary (10+2 standard) or equivalent examination with 40% marks. Relaxation of 5% marks will be given to the candidates belonging to S.C. & S.T. and other notified categories as per Government Rules or for extraordinary sportsman.

**Age:-**

For General category candidates, the upper age limit is 25 years as on 1<sup>st</sup> July of the academic year. Age relaxation for SC, ST and OBC candidate will be

given according to the rules and regulation of Bharati Vidyapeeth University and GOI

**Admission procedure:-**

Admission shall be made on merit on the basis of marks obtained in the entrance examination consisting of 100 marks based on the following.

<b>a- Physical fitness test</b>	<b>50 marks</b>
<b>b- Written test</b>	<b>30 marks</b>
<b>c- Interview</b>	<b>10 marks</b>
<b>d- Sports achievement</b>	<b>10 marks</b>

The total entrance test will be conducted in two days and could be extended, if needed and it will be conducted at Bharati Vidyapeeth Deemed University College of Physical Education

There shall be Physical Fitness Test (modified AAHPER/CNADIAN/OR ANYOTHER fitness test) of 50 marks will be conducted by Internal Examiners of Bharati Vidyapeeth Deemed University College of Physical Education

- (A)** Theory Paper comprising of 30 multiple-choice questions of 30 minutes duration carrying 30 marks. Questions shall be based on Aptitude Test, Current Affairs and General Knowledge about sports.
- (B)** Interview comprising of 10 marks will be conducted by Internal Examiners of Bharati Vidyapeeth Deemed University College of Physical Education
- (C)** Sports Participation **Weightage :-** Candidate shall be given maximum 10 marks *weight age* on the basis of their sports participation in any one of the following level:

<b>Participation</b>	<b>Marks</b>
<input type="checkbox"/> <b>International:</b>	<b>10</b>
<input type="checkbox"/> <b>Senior National championship/ National Games:</b>	
1st Place :	<b>10</b>
2nd Place :	<b>08</b>
3rd Place :	<b>07</b>
Participation:	<b>05</b>

□ **All India Inter-Zonal Inter University Competitions:**

1st Place :	<b>08</b>
2nd Place :	<b>07</b>
3rd Place :	<b>06</b>
Participation:	<b>05</b>

□ **Zonal Inter University Competitions/Junior National Competitions:**

1st Place :	<b>07</b>
2nd Place :	<b>06</b>
3rd Place :	<b>05</b>
Participation:	<b>04</b>

□ **Senior State Championship/Rural national games/Woman Festival:**

1st Place :	<b>05</b>
2nd Place :	<b>04</b>
3rd Place :	<b>03</b>
Participation:	<b>02</b>

**Note:-**

\*The marks will be given in only those games/sports, which are in the competition list of Association of Indian Universities (**AIU**) and/or School Games Federation of India (**SGFI**).

\*The obtained position must be during last five academic sessions.

\*The school state championship and inter collegiate championship participation shall be considered for eligibility criteria only; the candidate shall not get any marks for sports **weightage**.

**Medical examination:-**

Qualified candidates will have to submit medical certificate by CMO and blood group certificate to the concern office.

## **1. Rules of examination**

### **(i) Eligibility for appearing at B. A. (Physical Education) examination:**

Students should have kept at least 80% attendance in each year for theory and practical.

He/ she must complete all the practical and other work according to the syllabus up to the satisfaction of the Principal. He/ she must obtain such a certificate from the Principal of the college. Unless and until the student obtains such a certificate, he will not be allowed to appear for university examination.

### **(ii) Annual Examination:**

#### **Theory**

An annual examination will be held at the end of each year which shall be called "Annual Examination". This is a 6 semester course in semester-wise distribution of theory marks for each annual examination will be as follows:

1 <sup>st</sup> Semester:	400
2 <sup>nd</sup> Semester:	400
3 <sup>rd</sup> Semester:	400
4 <sup>th</sup> Semester:	400
5 <sup>th</sup> Semester:	400
6 <sup>st</sup> Semester:	400

#### **Practical:**

There shall be practical examination to be conducted at the end of the completion of teaching every year. Year-wise distribution of practical marks for each annual examination will be as follows:

1 <sup>st</sup> Semester:	500
2 <sup>nd</sup> Semester:	500
3 <sup>rd</sup> Semester:	500
4 <sup>th</sup> Semester:	500
5 <sup>th</sup> Semester:	500
6 <sup>st</sup> Semester:	500

- N.B.-** (i) University Exam, Internal assessment & practical will be done by a Panel of two examiners (One Internal And One External )appointed by University
- (ii) For the rationalization of internal marks, the **College shall appoint moderation committee** (keeping the Principal of the college or his nominee as Chairman). The Committee will take the review of the internal marks given by the college faculties and advice the college, if necessary. The college should take the appropriate action as per the advice of the committee and submit the internal marks to the University.

### **3. Standard of Passing**

A candidate should obtain minimum 40% of marks in each theory paper and also he/she should get 40% marks to pass the subject including theory and **sessional**. Similarly, to pass the examination, the candidate should also obtain minimum 40% marks in practical examination.

### **4. A.T.K.T.**

A candidate may be allowed to take admission in succeeding year of the course irrespective of number of papers/ practical events in which he/she fails. It is mandatory that the whole course shall be completed within a period of 5 years from the date of admission.

**NOTES:**

- Each Theory Course shall have 4 Units and 3 hrs. Duration final examination except Sports Specialization which will have 3 units in each semester and 2-hour duration semester-end examination.
- The pattern of Semester-end question papers shall be:

**2.1. For papers having Max. Marks- 60: [12+12+12+12+(4x3)=60 marks]**

- For University examination each question paper shall consist of 5 questions (4 long answer questions from each unit and 1 combined question of 4 short notes from all 4 units).

2. The candidate will attempt any one question from each unit. The 5<sup>th</sup> question will be compulsory consisting 4 short notes of 3 marks each.
3. For Internal Assessment of Theory Courses one Mid Semester Test of 30 marks for each course will be conducted by the college. For the mid semester test each question paper (of 30 marks) shall consist of 5 questions (4 long answer questions from first two unit and 1 combined question of 2 short notes from both units). The candidate will attempt any one question from each unit (2 questions of 12 marks each from first 4 questions). The 5<sup>th</sup> question will be compulsory consisting 2 short notes of 3 marks each. In addition, the teacher concerned shall conduct one open book examination consisting of 10 marks and submit the marks to the college exam department.
4. For Semester-end Examination in Activity Courses, the breaks-up of 100 Marks shall be as follows:
  - Skill proficiency/playing ability : 80
  - Diary / Record book : 20
5. For Specialization Sports Practice and Sports Training, the break-up of 100 Marks shall be as follows:
  - Skill proficiency/playing ability : 50
  - **Written Test** : 50
6. For Lesson Plan, student needs to complete perform 10 ground lesson in 3<sup>rd</sup> and 4<sup>th</sup> Semester at college itself.
  - Lesson Plan : 100 marks

	<b>Total</b>	<b>240</b>	<b>160</b>	<b>400</b>	<b>256</b>	<b>16</b>

**PART-B: PRACTICUM / ACTIVITY COURSES (GAMES & SPORTS):**

Activity Code	Name of Activity	University Exam	Class	Credits
B.A.(Phy.Edu) /VI/B/HC/01	Softball	100	48	2
B.A.(Phy.Edu) /VI/B/HC/02	Hockey	100	48	2
B.A.(Phy.Edu) /VI/B/HC/03	Football	100	48	2
B.A.(Phy.Edu) /VI/B/HC/03	Swimming	100	48	2
	<b>Total</b>	<b>400</b>	<b>192</b>	<b>8</b>

**PART-C: SPECIALIZATION :**( continue from Semester -IV& V)

Activity Code	Name of Area	University Exam	Class	Credits
B.A.(Phy.Edu) /VI/D/SCC/01	<b><u>SPECIALIZATION</u></b>	100	48	2

A student shall select/opt for any one Game/Sport from amongst: Basketball, Cricket, Football, Handball, Table Tennis, Tennis, Track & Field, Volleyball, Weight Lifting, Kho-Kho, Kabaddi and Yoga.

## **(Choice Based Credit System)**

### **Standard of Passing:**

For all courses, both UE and IA constitute separate heads of passing. In order to pass in such courses and to earn the assigned credits, the learner must obtain a minimum grade point of 5.0 (40% of marks) at UE and also a minimum grade point of 5.0 (40% marks) at IA.

If a student fails in IA, the learner passes in the course provided he/she obtains a minimum of 25% in IA and GPA for the course is at least 6.0 (50 % in aggregate). The GPA for a course will be calculated only if the learner passes at the UE.

A student who fails at UE in a course has to reappear only at UE as a backlog candidate and clear the head of passing. Similarly, a student who fails in a course at IA has to reappear only at IA as a backlog candidate and clear the head of passing.

The 10-point scale Grades and Grade Points according to the following table:

<b>Range of Marks (Out of 100)</b>	<b>Grade</b>	<b>Grade Point</b>
80 ≤ Marks ≤ 100	O	10
70 ≤ Marks ≤ 80	A+	9
60 ≤ Marks ≤ 70	A	8
55 ≤ Marks ≤ 60	B+	7
50 ≤ Marks ≤ 55	B	6
40 ≤ Marks ≤ 50	C	5
Marks ≤ 40	D	0

The performances at UE and IA will be combined to obtain the Grade Point Average (GPA) for the course. The weights for performance at UE and IA shall respectively be 60% and 40%.

GPA is calculated by adding the UE marks of 60 and IA marks out of 40. The total marks out of 100 are converted to grade point, which will be the GPA.

### **Formula to calculate Grade Points (GP)**

Suppose that Max is the maximum marks assigned for an examination or evaluation based on which GP will be computed. In order to determine the GP. Sex  $x$ -Max/10 (since we have adapted 10-point system). Then GP is calculated by the formulas shown as below.

<b>Range of marks at the evaluation</b>	<b>Formula for the Grade Point</b>
$8x \leq \text{Marks} \leq 10x$	10
$5.5x \leq \text{Marks} \leq 8x$	Truncate (Marks/x)+2
$4x \leq \text{Marks} \leq 5.5x$	Truncate (Marks/x)+1

Two kinds of performance indicators, namely, the semester Grade Point Average (SGPA) and the Cumulative Grade Point Average (CGPA) shall be computed at the end of each term. The SGPA measures the cumulative performance of a learner in all the courses in a particular semester. While the CGPA measures the cumulative performance in all courses since his/her enrolment. The CGPA of learner when he/she completes the B.P.E.S programme is the final result of the learner.

The Formula to compute equivalent percentage marks for specified CGPA:

% Marks (CGPA)	10x CGPA -10	If $5.00 \leq \text{CGPA} \leq 6.00$
	5x CGPA +20	If $6.00 \leq \text{CGPA} \leq 8.00$
	10x CGPA -20	If $8.00 \leq \text{CGPA} \leq 9.00$
	20x CGPA -110	If $9.00 \leq \text{CGPA} \leq 9.50$
	40x CGPA -300	If $9.50 \leq \text{CGPA} \leq 10.00$

### **Award of Honours:**

A student who has completed the minimum credits specified for the B.P.E.S programme shall be declared to have passed in the programme. The final result will be in terms of letter grade only and is based on the CGPA of all courses studied and passed. The criteria for the award of honors are given below.

<b>Range of CGPA</b>	<b>Final Grade</b>	<b>Performance Descriptor</b>	<b>Equivalent Range of Marks (%)</b>
$9.50 \leq \text{CGPA} \leq 10.00$	O	Outstanding	$80 \leq \text{Marks} \leq 100$
$9.00 \leq \text{CGPA} \leq 9.49$	A+	Excellent	$70 \leq \text{Marks} \leq 80$
$8.00 \leq \text{CGPA} \leq 8.99$	A	Very Good	$60 \leq \text{Marks} \leq 70$
$7.00 \leq \text{CGPA} \leq 7.99$	B+	Good	$55 \leq \text{Marks} \leq 60$
$6.00 \leq \text{CGPA} \leq 6.99$	B	Average	$50 \leq \text{Marks} \leq 55$
$5.00 \leq \text{CGPA} \leq 5.99$	C	Satisfactory	$40 \leq \text{Marks} \leq 50$
CGPA Below 5.00	F	Fail	Marks Below 40

**Educational Tour/Camp:** In addition to the above rules the student must fulfill the following requirements to acquire the degree which is mandatory. Educational Tour or Leadership Camp organized by the College of Physical Education of at least 07 days. The students shall contribute separately for these activities.

**B.A.**

**(Physical Education)**

**6 semester Credit system**

**Syllabus**

**Semester I**

B.A.(Phy.Edu) /I/A/HC/01: **Fundamental of Physical Education**

Unit I: Introduction

- a. Meaning, Definition, Scope and Functions of Physical Education
- b. Different Interpretations of Physical Education
- c. Concept of Movement Education
- d. Physical Education an Integral Part of Education
- e. Life time Physical Education for Fitness

Unit II: Philosophical Foundations

- a. Meaning of Philosophy, Philosophical basis of Physical Education, Different Schools of Philosophy
- b. History of Physical Education
- c. Objectives of Preprimary, Primary and Secondary School Physical Education Programmes
- d. Concept of Physical Fitness
- e. Cultural aspect of sports and worthy use of Leisure time through Physical Education activities
- f. F) National and International understanding through Sports

Unit III: Contribution of Thinkers & Competitions.

- |                       |                     |
|-----------------------|---------------------|
| a. Swami Kuvalayanand | b. Baren'Dcaubertin |
| c. Shri. Aurobindo    | d. Olympic Games    |
| e. Asian Games        |                     |

Unit IV: Recreations.

- a. Meaning, Definition, Scope & Functions of Recreations
- b. Recreation in Rural, Urban & Industrial Area
- c. Age-Wise Planning & leadership in recreation

**Book Recommended**

- i Principles of Education – R. M. Marathe, MoghePrakashan, Kolhapur
- ii Teacher and Education in Emerging Indian Society – NCERT, New Delhi.
- iii Human Values Education – S. P Rahela
- iv Foundation of Physical Education – Bucher Charles, WCB/McGraw Hill, 1999
- v The Principles of Physical Education – Willam J. E. W. B. Sounders Com. Philadelphia, 1964.

B.A.(Phy.Edu) /I/A/HC/02: **Anatomy**

### **UNIT-I Introduction**

- a. Introduction of Basic concepts of Anatomy
- b. Structure and functions of cell.
- c Tissues and their classification.
- d Basic introduction of body systems.

### **UNIT-II Skeleto Muscular Systems**

- a. Classification of Skeletal system.
- b. Types and structure of bones.
- c. Different types of joints.
- d. Classification of Muscle
- e. . Types of Muscles

### **Unit III Respiratory and Digestive System**

- a) Meaning and types of Respiration, Organs of Respiratory System.
- b) Functions of Respiratory System, Vital capacity and its measurement. Mechanism of Respiration.
- c) Meaning, importance and organs of Digestive System.
- d) Functions, processes, mechanism of Digestive System.

### **UNIT-IV**

- a. Circulatory System and Nervous System
- b. Meaning of the Circulatory System.
- c. Heart, its structure, functions.
- d. Cardiac Cycle. Meaning, functions compositions of Blood,
- e. Maintenance of Blood supply

### **Books Recommended**

2. Sedey Rod R.- Anatomy and Physiology
3. Stephens & Tate P. St. lous, Mosby, 1992
4. Tortora G. J. : Introduction to Human Body, Ed. 4<sup>th</sup> California, Addison, Wesley, 1996

B.A.(Phy.Edu) /I/A/HC/03: **ENGLISH**

**UNIT-I : Vocabulary**

- 1.1 Synonyms
- 1.2 Antonyms
- 1.3 Common abbreviations in use
- 1.4 One word substitution
- 1.5 Words Commonly Misspel
- 1.6 Idiomatic Comparisons or Similes
- 1.7 Word Formation by Prefix and Suffix

**UNIT-II : Common Errors & Transformations**

- 2.1 Common errors in sentences especially regarding number, gender, Pronouns, prepositions, articles, degrees etc.
- 2.2 Punctuation
- 2.3 Kinds of sentences - Assertive, Interrogative, Exclamatory, Imperative, Optative
- 2.4 Transformation of sentences
- 2.5 Tenses

**UNIT-III : Correspondence**

- 3.1 Personal Letters
- 3.2 Applications for leave, scholarship etc.
- 3.3 Invitations- Formal and Informal with reply
- 3.4 Notice Writing

**UNIT-IV :- Descriptive Writing**

- 4.1 Paragraph writing (50 words)
- 4.2 Essay writing (250 words)
- 4.3 Comprehension of unseen passage
- 4.4 Summary Writing

**B.A.(Phy.Edu) /I/A/SC/01: Historical Development of Sports Movements (Elective Subject)**

**UNIT -Introduction**

- A. Physical Education in Ancient Civilization with reference to  
i) India ii) Greece iii) Rome iv) Egypt.
- B. Development of Physical Education & sports during 20<sup>th</sup> Century with special reference to i) U.S.A. ii) Sweden iii) Germany iv) Olympics v) Asian Games.

**UNIT - II Sports Bodies of India**

- Physical Training for teacher working in school & college
- Movement of Akhadash & Vyayam Shalas.
- Central Advisory Board of Physical Education
- Sports authority of India (Sai)
- Awards National & state level.
- All India council of sports
- SNIPES, NSNIS, LNIPE.
- Nehru Yuwak Kendra

**UNIT - III A Study of the development of Physical Education sports & Games in Maharashtra with reference to**

- a) Pune International marathon  
b) The present Organization set up in state.  
c) Important schemes and activities including indigenous activities.  
d) Role of Voluntary Physical Education & sports Bodies in state...

**UNIT - IV Youth welfare & Youth Services:-**

- a) Concept of youth welfare & Youth work.  
b) Youth organization in India  
c) Programmers under youth development  
d) Youth services such as secreting & guiding N.C.C. N.S.S., Civil defense & scout & Guide movement.

B.A.(Phy.Edu) /I/A/SC/01: **First Aid**

**UNIT -I**

- a) Meaning and definition of first aids and its importance in sports
- b) Types of first aids and its objectives
- c) First aids box and its management
- d) Role and qualification of first aider

**Unit-II**

- a) Common sports injuries in different parts of body
- b) First aids for sports injuries
- c) Common causes of sports injuries and its prevention
- d) RICE & Bandage

**UNIT - III**

- a) Definition of safety education and its significant
- b) Aims and objectives of safety education
- c) Identify causes of accidents & List types and sources of accidents
- d) Safety measures at
  - Home
  - Road
  - School
  - Community

**UNIT – IV**

- a) Describe and demonstrate the management of the following:-
  - Stings and Snake bites
  - Fracture
  - Nose bleeding
  - Electric shocks and other shocks
- b) Fevers:-
  - Definition of fever
  - signs of fever
  - first Aid for fever
  - Management of fever.
- c) Fainting- Definition and causes of fainting, first aid for fainting
- d) Drowning/Near-drowning:- Definition of drowning, definition of near-drowning
  - first aid for drowning/near drowning.

# **Semester II**

B.A.(Phy.Edu) /II/A/HC/01: **Physiology of Exercise**

**UNIT-I Introduction**

- a. Definition and importance of physiology and Exercise physiology
- b. Essential properties of living being.
- c. Effect of exercise on various system of the body.
  - a) Circulatory system
  - b) Respiratory system
  - c) Muscular system

**UNIT-II**

**1. Cardiac functions and Blood**

- a. Cardiac cycle and its function in human body.
- b. Control of cardiac function.
- c. Blood pressure and it's regulation in human body.

**2. Kidney**

- a) Role of kidney in human body
- b) Function of kidney

**3. Physiology terminology**

a) Second wing	b) Second wing
c) Second wing	d) oxygen debt
e) $V_{O_2}$ max	f) Vital capacity
g) Athletic heart	

**Unit III**

**1. Nervous system**

- a) Definition of Nervous system, role of nerve fibers
- b) Parts of Brain & spinal cord its functions,
- c) Central nervous system and peripheral nervous system

**2. Endocrine system**

a) Pituitary gland	b) Thyroid
c) Parathyroid	d) Adrenal
e) Sex organ	

### **3. Environment effect on the body**

- a) High altitude
- b) Hot condition
- c) Cold condition

#### **UNIT-IV**

- a) Physical fitness and its components.
- b) Training, conditioning, and warm-up.
- c) Types of muscle contraction.
- d) Lactic acid and its influence on sports performance.
- e) First aids and sports injuries

#### **Books Recommended**

B.A.(Phy.Edu) /II/A/HC/02: **Information Technology**

**Unit I: Introduction of Computer**

1. History, application, characteristics, types of computer (Analog, Digital, Hybrid) and generations of Computer.
2. Physical structure of computer.
3. Role of computer in various fields
4. Need of computer in Physical Education.

**Unit-II Component of Computer System: An Introduction of Hardware and Soft ware**

1. Components of computer system
2. CPU (CU, ALU and Main memory)
3. Input devices (Keyboard, Mouse and Track Ball, Touchpad, Joysticks, Touch Sensitive Screens, Data Scanning Device, Bar Code Readers, Optical Mark Reader (OMR) and Magnetic Ink Character Reader (MICR)
4. Output Devices (Monitor, Printer, LCD)
5. Hardcopy Devices (Printers and Plotter)
6. UPS and types of UPS
7. Operating System Programme Languages translator.
8. Application program/package

**UNIT-III: USE OF COMPUTERS IN SCHOOLS**

1. Functional knowledge of operating computers–on/off, word processing, use of power point, excel
2. Computer as a learning tool
3. Effective browsing of the internet for discerning and selecting relevant information
4. Survey of educational sites based in India
5. Downloading relevant material
6. Cross collating knowledge from varied sources
7. Competencies in developing original software

**UNIT IV: VISUALISING TECHNOLOGY-SUPPORTED LEARNING SITUATIONS**

1. Preparation of learning schemes
2. Interactive use of audio-visual programme
3. Developing PPT slide show for classroom use
4. Use of available software or CDs with LCD projection for subject learning interactions
5. Generating subject-related demonstrations using computer software

B.A.(Phy.Edu) /II/A/HC/03: **Psychology of Sports**

**UNIT- I Introduction to Sport Psychology**

1. Meaning and scope, Importance, relationship with other sport sciences,
2. Development of sport psychology in India.
3. Scope of Sports Psychology

**UNIT-II Concept and meaning of motor learning**

1. Stages of learning transfer of training, assessment of learning and factors affecting of motor learning.
2. Growth & Development: Concept of growth & development,
3. Play and its Theories.

**UNIT III Personality in Sport:**

1. Concept and definition of Personality
2. Modern perspective, (trait, humanistic, social cognitive and biological),
3. Dynamics of personality in sport Anxiety in Sports

**UNIT-IV Psychological Preparation and Competition:**

1. Motivation and Techniques of Motivation
2. Phenomenon of competitive
3. Psychological preparation for competition (arousal regulation, imagery, self-confidence, goal setting, concentration.)
4. Short term psychological preparation (upcoming competition) Mind to muscle and muscle to mind relaxation techniques.

B.A.(Phy.Edu) /II/A/SC/01: **Fitness and Wellness (Elective Subject)**

## **FITNESS & WELLNESS**

### **Unit-I**

- Definition of fitness & wellness, Components of fitness & wellness,
- Benefits of exercise & health, Fitness & wellness strategy,
- Fitness potential for popular sports, Fitness & wellness activities,
- Role of parents & community for the maintenance of fitness & wellness

### **Unit-II –**

- Selection of machines for various parameters of health & wellness,
- Fitness center, Safety in gymnasium & sports field,
- Clothing & accessories, Carriers in fitness & wellness

### **Unit-III –**

- Test, measurements & evaluation of fitness components, Cardiovascular endurance, Muscular strength, Muscular endurance, flexibility, body composition, agility, balance, co-ordination, speed, power, reaction time

### **Unit-IV –**

- Assessment prior to fitness & wellness prescription,
- Principles of training, Training methods
- Diet prescription, Exercise prescription, Prescription for life style changes, Weight management
- Prevention of diseases through fitness & wellness, Diabetes & exercise, Cardiovascular diseases and exercise, Ageing and exercise, Addiction management- sustains abuse controls
- Stress management, Spiritual management

B.A.(Phy.Edu) /II/A/SC/02: **Adapted Physical Education (Elective Subject)**

**Unit 1:** An Introduction to Adapted Physical Education

- a) Meaning, Need and Importance of Adapted Physical Education and Sports
- b) Purpose, Aims and Objectives of Adapted Physical Education and Sports
- c) Program organization of Adapted Physical Education and Sports
- d) Adapted Sports- Para Olympics

**Unit 2: Development of Individual Education Program (IEP)**

- a) The student with a disability
- b) Components and Development of IEP.
- c) Principles of Adapted Physical Education and Sports
- d) Role of Physical Education teacher
- e) Teaching style, method & approach in teaching Adapted Physical Education

**Unit 3: Developmental Considerations of an Individual**

- 3.1 Motor development
- 3.2 Perceptual Motor development
- 3.3 Early childhood and Adapted Physical Education

**Unit 4: Individual with unique need and activities**

- 4.1 Behavioral and Special learning disability
- 4.2 Visual Impaired and Deafness
- 4.3 Health Impaired students and Physical Education
- 4.4 HRPF and its development for Individual with unique need
- 4.5 Role of games and sports in Adapted Physical Education

# **Semester III**

B.A.(Phy.Edu) /III/A/HC/01 :**Kinesiology**

### **Unit-I : Introduction To Kinesiology**

1. Meaning, aim & objectives, importance of kinesiology for physical education and sports
2. Fundamental concepts: Centre of gravity, line of gravity, axis and planes of motion, fundamental starting positions,
3. terminology of fundamental movements, and classification of muscles

### **UNIT-II :Location& Action**

1. Types of Joints
2. Location & Action of Muscles at Various Joints:- a) Upper extremity – shoulder girdle, shoulder joints, elbow joint b) Neck, trunk (Lumbothoracic region)
3. Lower extremity – Hip joint, knee joint, ankle joint
4. Muscular analysis of fundamental movements:- Walking, running, jumping, throwing, catching, pulling, pushing, striking, hangine

### **UNIT-III Laws of Motion**

1. Define mass, weight, force, pressure work, power energy, impulse, moments, impact, friction,
2. Newton's laws of motion
3. Angular kinetics: moment of inertias, conservation of moments, transfer of moments, levers, equilibrium

### **UNIT-IV Motion**

1. Meaning, aims, objectives and importance, types of motion, linear motion & angular motion
2. Linear kinematics: Speed, velocity acceleration uniform accelerated motion and projectile motion
3. Angular kinematics: Angular sped, angular velocity, angular acceleration and relationship between linear and angular motion

B.A.(Phy.Edu)/III/A/HC/02: **METHODS OF TEACHING IN PHYSICAL EDUCATION**

**UNIT I : Introduction of Teaching**

1. Meaning of teaching, coaching, officiating and as a career in Physical Education & Sports
2. Meaning and need for methods,
3. Factors effecting teaching method.

**UNIT II Teaching methods**

1. Teaching methods and its Types- command, demonstration, imitation, discussion, part- whole, whole- part-whole, explanation and recitation
2. Techniques of presentation: personal and technical preparation.

**UNIT III Class management**

1. Class management: techniques, formations, command (types and techniques)
2. factors effecting class management
3. Lesson Plan: Need, construction, Introduction development, skill/recreation

**UNIT IV**

1. Qualification and qualities of a coach,
2. Personnel in physical education/sports.
3. Teaching Aids: Need and Importance, Types of teaching aids.
4. Fundamental skills of athletics, aquatics, badminton, basketball, cricket, football, hockey, handball, kabaddi, KhoKho, volleyball and Judo, Yoga Assanas,

B.A.(Phy.Edu) /III/A/HC/03: **Health Education**

**Unit-I Health**

1. Health-meaning, dimensions of health and their interrelationships,
2. Importance of health for individual, family, community and nation;
3. Factors influencing health,
4. Spectrum of health

**Unit II Health Education**

1. Health Education- meaning, scope
2. Aims and objectives of Health Education
3. Principles, methods and media used in health education
4. Hygiene- personal hygiene, food hygiene, environmental hygiene-meaning, need and importance; associated practices related to maintenance and promotion of health

**Unit-II Foods and Nutrition-**

1. Misconceptions about food, essential body nutrients- functions, food sources, balanced diet, diet prescription
2. Communicable and Non-communicable diseases- meaning, distinction between communicable and non-communicable diseases.
3. Communicable diseases- their mode of spread and prevention of diarrhea diseases, typhoid, malaria, STD Respiratory disease ; non-communicable diseases- causes and prevention of diabetes, CVD, cancers, renal diseases and respiratory diseases.

**Unit-III Contemporary health problems of college youth-**

1. Alcohol, drugs, use of tobacco (chewing, sniffing, smoking)- their harmful effects substance abuse management
2. National health programmes- components of existing national health programmes

**Unit IV Health Agencies:**

- 1 Introduction to Organizational and Administrative set-up of Health System in India
  - National level
  - State Level
  - District Leve
2. Steps of Planning of Health Education Programme
3. Internationals health agencies- WHO, UNICEF, Red Cross- their constitution and role in promoting health

B.A.(Phy.Edu) /III/A/SC/01: **Sports Entrepreneur (Elective)**

**Unit I: Introduction to Sports Entrepreneurship**

1. Concept of entrepreneurship, innovation & knowledge management in sport
2. Business Planning Process - The business plan as an entrepreneurial tool
3. Elements of Business Plan, Objectives, Market Analysis, Development of product / idea, Marketing, Finance, Organisation & Management, Ownership, Critical risk contingencies of the proposal, Scheduling and milestones, Value proposition, Business Model Canvas and Drafting Business Proposal for Funding Agency.

**Unit II : Introduction to Finance in Sports**

1. The Four Domains of Sports Marketing, Marketing Through Sports
2. Finance, Organization & Management, Ownership, Critical risk contingencies of the proposal, Scheduling and milestones, Value proposition,
3. Business Model Canvas and Drafting Business Proposal for Funding Agency.

**Unit II. Management of Physical Education and sports**

1. Meaning, Need and scope of management of Physical Education
2. Principles of Sports Management
3. Construction, marking and maintenance of play grounds, track & field, gymnasium, swimming pool and athletic track

**Unit IV: Organization of co-curricular activities and Physical Education programmes.**

1. Physical Education Budget : Need, Importance, procedure and principles of budget making,
2. Physical Education and sports programmes for - Primary, secondary and higher secondary School for sports awareness – demonstration, play days, sports rallies, sports exhibitions
3. Organization of National days (15<sup>th</sup> August & 26<sup>th</sup> January)., Organization of mass competition, sports day, hiking, trekking, Scout and Guide Camp and picnics
4. Ceremonies of competition – Opening, closing and victory

**References:**

- Sports Marketing By Melissa Jane Johnson Morgan Jane

B.A.(Phy.Edu)/III/A/SC/02: **Professional Preparation in Physical Education (Elective)**

**Unit I- Foundation OF Professional Preparation**

- 1 Meaning of Professional
- 2 Components of Professional Preparation.
- 3 Contribution of physical education in attaining ideals of Indian democracy.
- 4 Forces and factors affecting educational policies and Programme.

**UNIT-II Historical Perspective**

1. Historical review of Professional Preparation in India.
2. Professional courses being offered in professional preparation colleges in India.
3. Professional Preparation in Physical Education in USA, USSR and UK.
4. Beginning of Professional Preparation in the world.

**UNIT-III Under-Graduate preparation of professional personnel.**

- 1 Purposes, Admission Requirements of Undergraduate preparation.
- 2 Theory, Teaching practice and practical.
- 3 Professional competencies to be developed.
- 4 Post-Graduate Preparation.
- 5 Methods of instruction.
- 6 Professional relations.

**UNIT-IV Teacher and Teaching**

- 1 Teaching as a career.
- 2 Basic Qualities of a successful teacher.
- 3 Preparation of the specialized physical education teacher.
- 4 Types of teaching jobs.
- 5 Types of non-teaching jobs.

**Reference**

# **Semester IV**

## B.A.(Phy.Edu)/IV/A/HC/01: **EVENT MANAGEMENT**

### **Unit-1**

Meaning of Events, classification of events, Event Management, Designing an Event- 5C" s (Conceptualization, Costing, Canvassing, Customization, Carrying out).

Key Elements of Events- (Event Infrastructure, Organizers, Clients, Target Audience, Media, and Venue).

### **Unit-II**

Managing Sports Events- Planning, Organizing, Coordinating and Controlling Pre events,

During the Events & Post Events issues.Sponsors, Sports Management Companies, Spectators, Sports personalities, Media etc. Sports Management Companies- Introduction, Role, Scope of Work, Service rendered to the clients, Ways of Functioning- Team work, Departments etc.

### **Unit-III**

Sources of funds available for sports: Broadcasting:- What is broadcasting, The basics of sports broadcasting rights, Media providers:-Who are the media providers, How do they fund sports

Sponsorship:-Meaning of sponsorship, Sports and sponsorship, Major sponsors in sports

Team sponsors and individual sponsors, Endorsement, Sports and celebrity endorsement

### **Unit-IV**

Sports and advertisements Advertisement Suggested Readings

Advertisement and brand choice Aiming the right target, Top sports ad companies

Firms and their advertisement choices, Effects of advertisement, gate money

Budgetary Control in sports

Role of Mass Media in Event Promotion.- Introduction to different Sports Media (Television channels, Sports Magazines etc.)Popular Sports Channels Operating in India- ESPN STAR SPORTS, ZEE SPORTS,TEN SPORTS, DD SPORTS, and NEO SPORTS etc. Spectators control, Importance of Spectators for Sports & Games. Human resource management.

- Roy SS (1995).Sports Management.Friends Publications. Delhi.

## B.A.(Phy.Edu)/IV/A/HC/02 : **Sports Sociology**

### **1. Introduction to Social Science**

- 1.1 Introduction & Meaning of Social Sciences.
- 1.2 Scope of Sociology and its relation with other subjects of Social Sciences.
- 1.3 Defining Society, Community, Association, Institutions, Customs;
- 1.4 Man as a Social animal;
- 1.4 Effect of various social forces on personality development;
- 1.5 Origin and growth of society & Culture.

### **2. Social Structure, Organization and Institutions :**

- 2.1 Socialization, social codes and social control, groups (primary and secondary, crowds and public, family, kinship and marriage;
- 2.2 Social stratification, social class and caste, social mobility;
- 2.3 Economical and political institutes for society;
- 2.4 Cultural and religious institutions;
- 2.5 Concept, factors and process of socio-cultural changes.

### **3. Main Features of Indian Society and Rural Scene:**

- 3.1 Demographic profile, social elements;
- 3.2 Religions pluralism – Hindu, Muslim, Christian and Tribal;
- 3.3 Linguistic Pluralism;
- 3.4 Indian policy – secularism, democracy, social justice;
- 3.5 Indian Rural Scene:
  - 3.5.1 Indian village, rural family, rural education;
  - 3.5.2 Indian village community, rural stratification;
  - 3.5.3 Community development projects and Panchayati-Raj;
  - 3.5.4 Trends in Rural change.

### **4. Sport and Society:**

- 4.1 Meaning and definition of sport sociology;
- 4.2 Sport as a social occurrence;
- 4.3 Socialization through games and sports;
- 4.4 Relationship between family and sport participation;
- 4.5 Relationship between politics and sports;
- 4.6 Social Stratification and sports;
- 4.7 Sports as a social phenomenon.

B.A.(Phy.Edu)/IV / A/ HC/03: **Environment Science**

1. **Introduction:**

- 1.1 Multi – Disciplinary nature of environmental studies.
- 1.2 Definition, Scope and Importance of environmental studies.
- 1.3 Concept of environmental education.
- 1.4 Historical Background of environmental education.

2. **Natural Resources and related environmental issues:**

- 2.1 Forest Resources:
  - 2.1.1 Use and over exploitation, deforestation
  - 2.1.2 Timber extraction, mining, dams and their effects on forests and tribal people.
- 2.2 Water Resources
- 2.3 Flood Resources:
  - 2.3.1 World food problems
  - 2.3.2 Changes caused by agriculture and overgrazing
  - 2.3.3 Effects of modern agriculture
  - 2.3.4 Fertilizer-pesticide problems.
- 2.4 Energy Resources:
  - 2.4.1 Growing energy needs
  - 2.4.2 Renewable and non-renewable energy sources
  - 2.4.3 Use of alternate energy sources.
- 2.5 Land Resources:
  - 2.5.1 Land as a resource
  - 2.5.2 Land degradation
  - 2.5.3 Man induced Land Slides
  - 2.5.4 Soil erosion and desertification
- 2.6 Role of an individual in conservation of Natural Resources.

**3.1 Ecosystem:**

- 3.1.1 Concept, structure and function of an Ecosystem
- 3.1.2 Producers, consumers and decomposers.
- 3.1.3 Energy flow in the ecosystem
- 3.1.4 Food chains, food Webs and ecological pyramids.

## 4.1 Environmental Pollution:

4.1.1 Definition, effects and control measure of:

- 4.1.1.1 Air Pollution
- 4.1.1.2 Water Pollution
- 4.1.1.3 Soil Pollution
- 4.1.1.4 Marine Pollution
- 4.1.1.5 Noise Pollution
- 4.1.1.6 Thermal Pollution
- 4.1.1.7 Nuclear Hazards

4.1.2 Solid Waste Management: causes, effects and control measures of urban and industrial wastes.

4.1.3 Role Disaster Management: Floods, earthquake, cyclone and Land slides.

## B.A.(Phy.Edu)/IV/A/SC/01: **FITNESS INSTRUCTOR**

### **Unit-I Introduction to health and fitness**

Health goals, fitness goals, performance goals, components of physical fitness and performance, behaviours that support fitness and performance, taking control of personal health and fitness, factors to consider prior to physical activity, exercise requirement for prevention of premature health problems, how to promote physical activity promotion of physical activity adherence

### **Unit-II Foundation to health fitness instructions:**

Energy cost of physical activity, measurement of energy expenditure, significance of cardiovascular fitness, risks of testing cardio respiratory fitness, components of health related and fitness related fitness

### **Unit-III Healthy body composition**

Measurement of body fat calculating target body weight, LBM and Body fat,

Muscular strength and endurance:- health fitness requirements, assessment of strength and muscular endurance

Flexibility: Importance of flexibility in health and fitness, factors affecting range of movement (ROM) spine and hip joint, flexibility and low back function

**Unit-IV Exercise prescription:** foundation of prescribing exercise, general guidelines for cardio-respiratory fitness programmes, determining intensity, general exercise testing, exercise programme selection, exercise prescription for body weight management

Muscular strength and endurance training: fundamental principles, types of strength training, muscular training modes, intensity and frequency. Overreaching and overtraining

Flexibility training: exercise considerations for improving flexibility, prophylactic exercise for improving low back function

B.A.(Phy.Edu)/IV/A/SC/02: **Sports Industry**

## **SPORTS INDUSTRY**

### **Unit-I**

Introduction, history in relation to „sports goods industry“ in India, Industrial relations in India, Peculiar characteristic, i.e. Hand Made Goods, Involving skilled workers-piece rated wages, Policy- five year plans for production, export strategy and potential

### **Unit-II**

Sports Industry in Europe-USA, Canada and ASIA & other parts of the world, Major sports-World wide-Europe, ASIA & India including some local games, development of sports

### **Unit-III**

Future need for mechanization to improve quality, Evaluation of management thought, planning-nature, objective, promises, strategies & tactical plan

### **Unit-IV**

Organizations-Principles, structure, management, levels, quality control, Personnel management- recruitment selection, training, performance

### **Unit-V**

Direction/controlling- production control, material control, quality control, sales distribution-government departments, whole sellers & retailers

## **Reference**

# **Semester V**

## B.A.(Phy.Edu)/V/A/HC/01: **Correctives in Physical Education**

### **Unit-I**

1. Definition of Remedial, physiotherapy and corrective exercises.
2. Concept of posture, its meaning and characteristics of correct and incorrect posture.
3. Causes of incorrect posture
4. Necessity and importance of correct posture.
5. Principles of correct posture.
6. Tests for correct posture.

### **Unit-II**

1. Classification of posture : a. Good Type b. Bantom Type c. Fatigue Type
2. Postural deformities and their causes : a. Kyphosis b. Lordosis c. Scoliosis d. Bow legs e. Knock knee f. Flat foot
3. Preventive and remedial measures for postural defects :
  - a. Psychological and habitual consideration in preventing and correcting postural defects.
  - b. Corrective exercises for various postural defects.
  - c. Physiotherapist treatment in correcting postural defects.

### **Unit-III**

1. Massage: **a.** Meaning, definition and a brief history of massage.  
**b.** Massage as means of relaxation and points to be considered while giving massage. **c.** General effects of massage.
2. Classification of the manipulation and movements in the massage :
3. Effleurage and stroking i. Petrissage ii. Percussion / Tapotement  
iii. Vibration and shaking.
4. Effects of manipulation and movements on the different systems of human body.

### **Unit-IV**

- Classification of positions : a. Fundamental positions b. Derived positions c. Modified positions
- Classification of exercises along with their practical instructions : a. Free mobility exercises b. Assisted exercise c. Resisted exercises

### **Reference Books:**

1. Smith Lara K. and Others, "Srunnstrem's Clinical Kinesiology", Jaypee Brothers P.B. No- 7193 New Delhi 1998.

4. Singh Ajmer et.al, "Essentials of Physical Education", Kalyani Publishers, Ludhiana, Second revised addition 2008.

## B.A.(Phy.Edu)/V/A/HC/02 : **Test measurement and Evaluation**

### **UNIT-I**

- Introduction to test, measurement and evaluation and their importance in the field of physical education
- Test constructions:- a) general consideration b) physical fitness/ efficiency test

### **UNIT – II**

- Meaning and importance of statistics in the field of physical education, “population” and “sample” “random sampling”
- Meaning of data, kinds of data- continuous and discrete Frequency distribution, construction of frequency tables, mean, median and mode.

### **UNIT –III**

- Measures of variability range, quartile, deviation, standard Deviation, co-efficient of variation
- Normal probability curve and meaning, uses its principles, Diagrammatic represent action

### **UNIT-IV**

- Physical fitness testing: components of physical fitness
- Strength test: - Kraus Weber strength test, Muscular Endurance test: Cardiopulmonary test:
- Endurance Test, Harvard step test.
- Anthropometric Measurements:- Weight, height, sitting height, chest circumference, thigh circumference, calf circumference, skin fold biceps, triceps, sub scapular and supra iliac.
- Measurement of skills, games and sports-Johnson badminton test, Brady volleyball test, McDonald soccer test, Cornish Handball test, Hockey skill test- SAI hockey Test

### **Reference**

B.A. (Phy.Edu)/V/A/HC/03: **Yoga Education**

**UNIT- I**

Origin of yoga, definition and scope of yoga, limitations and misconceptions, importance of yoga in physical education and other fields

**UNIT- II**

Historical development of yoga in India.

Types of Yoga:- Hatha yoga, laya yoga, mantra yoga, bhakti yoga, karma yoga, jnana yoga, raj yoga

**UNIT- III**

Patanjali yoga sutras- yama, niyama, asana, pranayama

Pratyahar- Benefits & utilities of these. Astanga yoga- Definition, objectives, dharna, dhyana, Samadhi & their psychological impact.

Shatkarm/cleansing process/ yogic methods and personal hygiene.

**UNIT- IV**

Asanas: Types, importance of asanas in special reference to Physical Education & Sports.

Differentiate between asanas and exercise.

Pranayama and importance of pranayama in special reference to Physiological effects

Bandhas, mudras and their physiological effects.

**UNIT- V**

Disease wise treatment through yoga therapy- Asthma, high & low B.P, diabetes, obesity, heart disease, insomania, arthritis, backache, female disease and importance of vegetarianism in yogic diet

## B.A.(Phy.Edu)/V/A/SC/01: **GYM MANAGEMENT**

### **UNIT-I**

Concept of nutrition and health, balanced diet, dietary aids and gimmicks, Energy and activity, calculating calorie intake and expenditure

Obesity, anorexia and related health problems – measurements and management, Weight management programmes

### **UNIT-II**

Understanding of various forms of aerobics- floor aerobics, step – aerobics, weight, Aerobics and aqua aerobics, Training effects of aerobic fitness on various physiological systems namely skeletal Muscular, circulatory and respiratory

Improvement of aerobic fitness, Aerobic fitness programme

### **UNIT-III**

Location and Establishment of gym (Publicity, policy, reception, information, Registration, offer of programmes), Procurement, placement & maintenance of gym, Equipments , Marketing, clientage, Enrolments, record keeping, social activities, Public Relations, Individualized/group grooming programme, basic concepts of financial management

Gym-instructor – qualification, qualities, pay-roll, Performance – evaluation, grooming and presentation, Introduction to different exercise equipment, Gym management – Costing, Balance sheet, Promotional plans

### **UNIT-IV**

Measurement of Weight and Height, Calculating BMI (Body Mass Index ), Measurement of Fitness Components Flexibility (Sit and Reach Test, Hip Bend and Toe Touch), Strength (Sit-Ups, Leg-Raise for Minimal Strength), Cardiovascular Endurance (One-mile run, Physical Efficiency test, Harvard step test),

Self- evaluation –Personal Health and Well-being

### **UNIT-V**

Exercise schedules – Aerobics, Fitness and Weight Management

### **Reference**

B.A.(Phy.Edu) V/A/SC/02 :**SPORTS JOURNALISM**

**UNIT-I**

Meaning, scope and changing trends of journalism in sports

Historical development & role of print and electronic media in sports promotion

**UNIT-II**

Language – vocabulary, spellings, figure of speech , dialect, grammar, punctuation

Fundamentals of a sports story/ news

**UNIT-III**

Organizational set-up of a news paper- printing, process sequences of operations in the printing of a news paper/journals.

Introduction of various sports organization and agencies- Olympic Games, Asian games, commonwealth games, awards and trophies.

**UNIT-IV**

Theory and principles of advertising in sports

Public relations in sports, press release, conferences

Research tools for developing a sports story

Process of news paper publishing and management

# **Semester VI**

## B.A.(Phy.Edu)/VI/A/HC/01: **Basic of Sports Training**

### **UNIT I: Introduction**

- Meaning and Definitions of Sports Training.
- Meaning of terms: Coaching, Teaching, Conditioning and Training.
- Aim and Tasks of Sports Training.
- Characteristics of Sports Training.
- Principles of Sports Training.
- Systematization of Sports Training.
  - Beginner
  - Intermediate.
  - High Performance.

### **UNIT-II: Training Load**

- Definition and Types of Training Load.
- Features/Factors of Training Load
- Principles of Intensity and Volume of Stimulus.
- Over Load.
- Meaning and types of over load.
- Causes of over load.
- Symptoms of over load.
- Tackling of over load.
- Judgment of Training Load.

### **UNIT-III :- Strength**

- Concept and types of Strength.
- Factors determining Strength.
- Methods of strength training.
- Management of strength training programme.

### **Endurance**

- Concept and types of endurance.
- Factors determining endurance.
- Methods of endurance training.

### **Speed**

- Concept and Classification of Speed.
- Factors determining speed.
- Methods of developing speed abilities.
- Reaction speed
- Speed of movement.
- Acceleration speed
- Sprinting speed.
- Speed endurance.

#### **UNIT-IV : Technical Training**

- Definition of Technique and Skill.
- Importance of Technique.
- Process of Skill Learning.
- Methods of Technique Training.

#### **Tactical Training**

- Concept of Tactics and Strategy.
- Methods of Tactical Training.

#### **Planning**

- Concept of Training Plan.
- Principles of Planning.
- Types of Training Plan.

#### **Periodization**

- Meaning and Importance of Periodization.
- Periods of Training Year.
- Aim and Contents of Periods.
- Types of Periodization.

#### **REFERENCES**

## B.A.(Phy.Edu)/VI/A/HC/01: **STRESS MANAGEMENT**

### **Unit-I**

Definition of stress and anger, Causes of stress and anger, two main emotions of stress-fear and anger, Daily life stressors, Process of stress and anger- Psycho Physiology of stress

### **Unit-II**

Adaptation to stress-Reframing of habitual stress resistance, Occupational stress, Peer stress (Students stress), Family stress, Stress & elderly

### **Unit-III**

Stress & drug abuse

Stress related diseases- i) Sleep disorder, ii) Eating disorder, iii) Sexual and emotional disorder, iv) Other stress related diseases, v) Stress & Spirituality

### **Unit-IV**

Self awareness and stress management, Muscular tension reduction, Emotional tension reduction, Stress free living, Stress free examination, Stress management through physical activity, Stress management through recreation

### **Unit-V**

Anger management- Redford William" s 12 steps of anger management

Stress management- behavior modification, time management, coping strategy

Relaxation technique- i) Diaphragmatic breathing, ii) Meditation, iii) Progressive muscle relaxation, iv) Yoga, v) Mental imagery, vi) Music therapy, vii) Massage therapy

**B.A.(Phy.Edu)/VI/A/HC/01: EDUCATIONAL TECHNOLOGY****UNIT-I : Introduction to Educational Technology**

- 1.1 Definition
- 1.2 Educative Process
- 1.3 The Teacher of Yesterday & Today
- 1.4 An outline of Teaching method used then and now
- 1.5 Use of sensory organ in the process of learning and remembering
- 1.6 Communication:
  - 1.6.1 Types of Communication
  - 1.6.2 Communication Cycle
  - 1.6.3 Communication in the Class room

**UNIT-II Teaching Aids:**

- 2.1 Importance of Teaching Aids
- 2.2 Criteria for selecting Teaching Aids
- 2.3 Difference between Teaching Method and Teaching Aid
- 2.4 Broad classification of Teaching Aids
  - 2.4.1 Audio Aids
  - 2.4.2 Visual Aids
  - 2.4.3 Audio-Visual Aids
  - 2.4.4 Effectiveness of Edger Dale's cone classification
- 2.5 Advantage and suggestions for effective use of selected teaching Aids.
  - 2.5.1 Verbal
  - 2.5.2 Chock Board
  - 2.5.3 Charts
  - 2.5.4 Models
  - 2.5.5 Slide Projector
  - 2.5.6 Over Head Projector
  - 2.5.7 Motion Picture
  - 2.5.8 Self Experiment and Projects.

**UNIT-III New Teaching Techniques and Innovations – I:**

- 3.1 Art of questioning and answering
  - 3.1.1 Purpose of Questioning
  - 3.1.2 Classification of Questioning
  - 3.1.3 Techniques of asking questions
- 3.2 Programmed Learning
  - 3.2.1 Concept of Programmed learning
  - 3.2.2 Fundamental Principles of Programmed learning
- 3.2.3 Steps involved in preparation of Programme

- 3.3 Team Teaching
  - 3.3.1 Meaning
  - 3.3.2 Guiding principles of Team Teaching
  - 3.3.3 Advantage of Team Teaching.

#### UNIT-IV **New Teaching Techniques and INNOVATIONS – II :**

- 4.1 Micro Teaching
  - 4.1.1 Concept and Features of Micro Teaching
  - 4.1.2 Micro Teaching Verses Traditional Teaching
  - 4.1.3 Steps in Micro Teaching
  - 4.1.4 Principles of Micro Teaching
  - 4.1.5 Micro Teaching Skills
  - 4.1.6 Limitation of Micro Teaching
- 4.2 Simulation Teaching
  - 4.2.1 Meaning of Simulation
  - 4.2.2 Types of activities in simulation
  - 4.2.3 Steps in Simulation
  - 4.2.4 Advantages of Simulation
  - 4.2.5 Limitations of Simulation

B.A.(Phy.Edu)/VI/A/SC/01: **Recreation in Physical Education**

**UNIT-I Introduction to Recreation**

- 1.1 Meaning, Definitions and characteristics of Recreation
- 1.2 Importance of Recreation
- 1.3 Misconceptions about Recreation
- 1.4 Scope of Recreation

**UNIT-II Influence of Recreation in Social Institutions.**

- 2.1 Family
- 2.2 Educational institutions
- 2.3 Community/ Cultural
- 2.4 Religious organizations

**UNIT-III Planning for Recreation**

- 3.1 Planning criteria and objectives of Recreation facilities
- 3.2 Different types of indoor and outdoor Recreation for Urban and Rural population
- 3.3 Operation and maintenance of different Recreation area and facilities
- 3.4 Sources of funding of Recreational activities

**UNIT-IV Programmes in Recreation**

- 4.1 Criteria and principles of selecting a programme
- 4.2 Classification of Recreational activities:
  - 4.2.1 Indoor and outdoor activities
  - 4.2.2 Water activities
  - 4.2.3 Cultural activities
  - 4.2.4 Literary activities
  - 4.2.5 Nature and outing
  - 4.2.6 Social events
  - 4.2.7 Adventure activities
- 4.3 Hobbies – Introduction to hobbies and types of hobbies.
- 4.4 Agencies providing Recreation.
- Camping and leadership**
- 4.5 Aim, objectives and importance of Camping.
- 4.6 Organization and types of Camp.
  - Selection and layout of camp site.
  - Camping leadership.
- 4.7 Types and functions of Recreation leaders.
- 4.8 Qualification, Qualities and training & Recreation leaders.

## B.A.(Phy.Edu)/VI/A/SC/02: **ART OF DAILY SCHEDULING**

### **Unit-I**

Introduction:- Meaning and definition of Daily Schedule, art, science, management of time, shortage of time for daily activities

Types of daily activities: requirement of daily activities for various domains of personality, essential categories of daily activities, correct decision making to include all types of daily activities with in fixed 24 hours

### **Unit-II**

Art of living, art of scheduling, art and science of principles of time management, acronym and daily prayers, methods of recalling and rechecking daily activities

Attitudes and art of daily schedules: right knowledge of daily activities, developing correct attitude by learning the art of behaviour change, transdental theory of behaviour changes, relation between attitude and behaviour change

### **Unit-III**

Understanding the concept of perfection of nature, relation between nature known as superpower or god in religious terms, predisposing, enabling and reinforcing factors for strengthening the art of daily schedules

Cognition and daily schedules: necessity of right attitude and right information of essential components of daily schedules. Enlisting activities needed daily, relation between qualitative and quantitative balances

### **Unit-IV**

Alternative daily schedule patterns: effect of culture, race, gender and age on daily schedules, fundamentals of art of daily schedules, listing alternative daily schedules for different categories of human being based on culture, race. Gender, age, and geographical locations

Factors helping adherence to daily schedule: self responsibility, knowledge to body requirements, important body systems requiring daily attention

Analysis of lifestyles: role of active lifestyle and wellness activities, factors helping to promote daily schedules

Barriers to daily schedules – peer pressures, careless environment of , firm no to harmful barriers like smoking, drugs, alcohol and irresponsible sex urge

Wellness and daily schedules: art of inclusion of all wellness parameters to daily schedules, namely meditation, foods, right physical activities, right hygienic habits, right environmental care, right injury preventing behaviours, right decision towards sex, entertainment recreation, rest, sleep

**Post Graduate Diploma  
in Hospital Planning & Design  
(PGDHPD)**

<b>Programme Duration</b>	<b>1 year</b>
<b>Credits</b>	<b>24</b>
<b>Programme Type</b>	<b>CBCS</b>
<b>Programme Fees</b>	<b>INR 36,000 only</b>
<b>Number of seats</b>	<b>15</b>
<b>Eligibility</b>	<b>Any Graduation, MBBS ,BDS , BAMS, BHMS, BUMS, BPTb, OPTb, other Health Sciences Graduates Preferred</b>

**Bharati Vidyapeeth**  
(Deemed to be University)

**Centre for Health Management Studies and Research**

The nature of hospital and healthcare organizations has been diverse and varied in India. Nursing homes, small private hospitals as well as multi specialty tertiary care hospitals have emerged in large numbers over the last decade. However, there is an absence of homogeneity in their functioning or regulation. This can be brought about by way of enhanced governance training and development of healthcare managers who can play a crucial role in setting the background for this change.

With this focus and challenge in mind the Center for Health Management Studies and Research has been set up at the Bharati Vidyapeeth ( Deemed to be University), Pune. The Center for Health Management Studies and Research has rapidly grown into a specialized training facility for a wide variety of cadres related to hospital and healthcare management, with a focus on patient centered care.

**Objectives of the Centre for Health Management Studies and Research:**

- To create a center of excellence in hospital and healthcare management, academics, research and consultancy.
- To empower working professionals enhancing their skill sets in the field to suit the changing needs of their workplace.
- To educate and train in-service personnel in the healthcare system in both private and public sector.
- To participate in health policy development and reform in order to share expertise and create a knowledge base for governance in health care.
- To offer consultancies as part of knowledge sharing and help healthcare organizations and individuals to plan their initiatives for proper implementation.
- To focus attention on the specific healthcare needs of India's growing urban centers and the accessible rural sectors and remote wilderness tracts.
- To develop and disseminate materials to enhance awareness on specific health issues in the public domain.

**Introduction:**

The course would develop hands on experience in MS word, MS power point, MS excel and other basic computer operations.

**Objectives:**

- To acquaint students about fundamental computer operations.
- To allow students to practice and perform various computer applications.

<b>Unit I</b> <b>Introduction to computers and Information Technology:</b> Fundamentals of computer, Introduction, Input / Output and Processing (CPU), Memory Device, Types of computers, Characteristics of Computer, History and Generation, Applications of Computer generation of computers, input and output devices: memory and operating systems, Concepts of Hardware and Software, data processing, information processing.	<b>6</b>
<b>Unit II</b> <b>Numbering System Representation of data/problem solving techniques and database:</b> Introduction to Number systems, Decimal arithmetic, Binary arithmetic, Algorithms, Flowchart, and Programming Languages. Introduction to Database, DBMS, and Database model.	<b>6</b>
<b>Unit III</b> <b>Computer Communication and Internet:</b> Basic of Computer networks, LAN / WAN, Concept of Internet , Application of Internet , Service on Inter Net , WWW and web-sites , Electronic mails , Communication on Internet , WWW and Web Browsers , Web Browsing software, Surfing the Internet, Chatting on Internet, Email, Virus.	<b>8</b>
<b>Unit IV</b> <b>Windows and MS Office :</b> MS Word: Word, Editing and formatting documents, macro commands, Presentation of documents, Excel and Power Point applications.	<b>10</b>

**Introduction:**

This course helps to develop basic awareness of management functions of hospital departments. It highlights the need of operative planning, organizational structure and performance in hospital and healthcare set ups.

**Objectives:**

- To develop awareness of management functions of hospital departments in the students.
- To help students know the need of operative business planning, organization structure in healthcare set ups.

<b>Unit I</b> <b>Hospital – An Introduction</b> History and development of hospitals, Role of hospital in society, Functions of hospital, Role in health care delivery system, Hospitals in India today- their number, growth of hospitals & classification of types, size, distribution, ownership, hospitals utilization, issues & trends	6
<b>Unit II</b> <b>Hospital Management as a Specialty</b> Peculiarities of health care organisations, Factors influencing care, Role and functions of hospital administrators, Differences and Issues in administration of teaching, corporate, charitable, PHC, government hospitals etc.	2
<b>Unit III</b> <b>Organisation Structures</b> Hierarchy, Role of all departments in various hospital settings, Governing authority, Channels of communication, Systems Approach to Hospitals The function, responsibility and role of Governing body, Chief Executive (Administrator) and Medical Staff and relationship among them, Medical staff organization. Co-ordination, Communication, and Decision making in Health Care .Organizational productivity-input and evaluation of productivity, System policy, Procedure.	4
<b>Unit IV</b> <b>Overview of departments in the hospital</b> Organization of hospital, Clinical, Administrative, Support services Recent Trends: Ethical issues, Challenges to administrators, Expectations of community from hospitals	4
<b>Unit V</b> Operative Planning- Characteristics, Objective goal, strategic and long term planning. Hospital Utilization & its evaluation, Use of modern tools and techniques for improvement of operational efficiency. Emerging Trend in Health Care.	4
<b>Unit VI</b> Organizational Performance, Assessment of strengths and weakness, strategic thinking and preparation of long term plan. Analysis of organization structure, role analysis, role clarity, system of accountability, Organizational dynamics. Operational and management control in health care, Management By Objective	4
<b>Unit VII</b> Continuous quality improvement, defining standards, use of advanced quality	6

management techniques, Review and Evaluation – continuous review of system, policy, procedure, process of updating, working out indexes and indexes for evaluation of various services. Productivity study, development of productivity standards, work standards, utilization standards and indices, Latest changes and development in Health Management. Managed Care / Health Maintenance Organization (H.M.O)

**Introduction:**

The course will give an overview to students about architectural planning, design according to operation of hospital. All facets of hospital planning activities like survey, MEP, HVAC planning, LEED certifications etc. are included in the course.

**Objectives:**

- To give students an overview about architectural planning, design of a hospital.
- To introduce students to the tools of hospital planning, like survey, MEP, HVAC planning, LEED certifications etc.

<p><b>Unit I</b>  <b>Surveying the community</b>                  Area wide planning, Planning for general hospital service, Determining the logical centers for hospital location, Determining the area served by them, Estimation of occupancy and bed ratios, Determining the size and kind of hospital service</p>	<p><b>6</b></p>
<p><b>Unit II</b>  <b>Hospital Planning</b>                  Changing system of health services, Concepts in planning, designing &amp; space, An overview of hospital buildings, Quality of facilities and services, Evaluation of all resources needed</p>	<p><b>6</b></p>
<p><b>Unit III</b>  <b>Architectural Planning</b>                  Functional plans for hospital construction , Role of hospital consultant, Planning stage: role of architect, working drawings, legal formalities, the hospital site, design considerations, environments regulations, equipment planning, bed distribution, space requirements, their relationships, construction costs, External architectural aspects, Internal arrangements, HVAC Planning, Electric supply, water supply plumbing and sanitation, Medical gas supply and pipelines</p>	<p><b>6</b></p>
<p><b>Unit IV</b>  <b>Design &amp; Hospital Hygiene</b></p>	<p><b>4</b></p>
<p><b>Unit V</b>  <b>Recent Trends</b>                  Green Buildings, LEED certification, NBC regulations</p>	<p><b>8</b></p>
<p><b>Unit VI</b>                  Planning of 30,100,250 bedded hospital(general/specialty)                  Planning of 500, 750 and above bedded hospital(teaching/super-specialty/non-teaching specialty hospitals)                  Project cost and total budget : Feasibility and viability study of Hospital                  Project conceptualization, functional requirements. Implementation.                  Environmental Control and Safety: General environmental control; infection control                  Addition/alteration of existing hospitals</p>	<p><b>15</b></p>

**Introduction:**

The course focuses on development of skills needed for planning and designing interiors, explore available options for landscaping in various healthcare set ups.

**Objectives:**

- To give students an overview about planning and designing interiors of hospitals.
- To introduce students to landscaping in various healthcare set ups.

<p><b>Unit I</b>  <b>Interior Designing</b>                  Principles and Elements of Design, Colour Theory, Digital Sketching, Usage of Space, Overview of Construction Materials, Functionalities of Interior Elements</p>	<b>4</b>
<p><b>Unit II</b>                  Converting Floor Plans to 3D Interiors, Creating Detailed Digital Drawings, Image-Editing Techniques, 3D Modelling, Texturing, Lighting &amp; Rendering</p>	<b>4</b>
<p><b>Unit III</b>  <b>Landscaping</b>                  Introduction and need, Benefits of natural environments within hospitals</p>	<b>4</b>
<p><b>Unit IV</b>  <b>Outdoor hospital spaces</b>                  Landscaped grounds, Landscaped setbacks, Front porches, Entry gardens, Courtyards, Plazas, Roof terraces, Roof gardens, Healing gardens, Meditation gardens, Viewing gardens, The viewing/walk-in garden, Edible gardens</p>	<b>6</b>
<p><b>Unit V</b>  <b>Outdoor design criteria for hospitals</b>                  Accessibility, Visibility, Feeling of Control, Feeling of security, Physiological comfort, Quiet, Familiarity, Flexibility, Sustainability</p>	<b>4</b>
<p><b>Unit VI</b>  <b>Hard landscape design</b>                  Gateways and entrances, Parking areas, Paths, Childrens' gardens, Dining areas</p>	<b>4</b>
<p><b>Unit VII</b>                  Art, Water, Site furniture, Seating, Signage, Lighting, Receptacles, Planting design</p>	<b>4</b>

### PROCEDURE FOR SELECTION OF CANDIDATES INTO PGDHPD:

1. Candidate can get the application form and other details regarding the programme from our website **www.chmsr.net / or other revised web address**.
2. Interested candidate can download the application form and **post** the duly filled application form along with the processing fee and photocopies of required documents to below mentioned address.

**Center for Health Management Studies and Research,  
Bharati Vidyapeeth( Deemed to be University),  
2<sup>nd</sup> floor of College of Physical Education,  
Dhankawadi, Katraj, Pune 411043**

**Admission fees of Rs. 1500 has to be sent with application form in form of Demand Draft to "Director, Centre for Health Management Studies and Research"**

3. Selection process comprises of personal interview. The applications received will be scrutinized further and all the eligible candidates will be notified regarding the interview.
4. Personal interview will be held on 2<sup>nd</sup> or 4<sup>th</sup> Saturday in the month of March/ April/ May/ June or as needed.
5. Students will be selected based on their previous qualification, experience and performance in personal interview.
6. The selected candidates will be notified through email/ telephone.
7. The selected candidates are required to pay **full** fees within 15days of their selection.

## Annexure 2

### LIST OF DOCUMENTS TO BE SENT ALONG WITH APPLICATION FORM

Attested photocopies of following documents need to be attached with application form:

1. Aadhar Card
2. Caste Certificate (if applicable)
3. 10<sup>th</sup> and 12<sup>th</sup> passing certificate
4. Graduation certificate along with mark list
5. Transfer certificate
6. Bonafide certificate
7. Migration certificate
8. Gap certificate (if applicable)
9. Experience certificate (if applicable)
10. Medical Fitness Certificate

Original documents of the above mentioned list should be submitted during 1<sup>st</sup> week of college re-opening.

### ACADEMIC CALENDAR SUMMARY

In each term, apart from the regular classes following activities are included in the academic calendar:

- Field Visits
- Guest Lectures
- Regular Field Postings
- Conferences
- Extracurricular events

<b>Tentative Academic Calendar as Applicable to the Program</b>	
<b>For Every Admission Cycle</b>	
<b>First Year</b>	
<b>1<sup>st</sup> Semester</b>	July – October
Semester end Examinations	November
Diwali Holidays	As announced by Bharati Vidyapeeth( Deemed to be University)
Semester break	After semester examinations (2 weeks).
<b>2<sup>nd</sup> Semester</b>	
	December – March
Semester end Examinations	April
Summer Vacation	After semester examinations (4 weeks).
<b>Second Year</b>	
<b>3<sup>rd</sup> Semester</b>	July – October
Semester end Examinations	November
Diwali Hoildays	As announced by Bharati Vidyapeeth( Deemed to be University)
Semester break	After semester examinations (2 weeks).
<b>4<sup>th</sup> Semester</b>	
	December – March
Semester end Examinations	April

## Annexure 5

### LIST OF TYPES OF ORGANIZATIONS FOR INDUSTRIAL VISITS, GUEST LECTURES AND FIELD ASSIGNMENTS, PROJECTS AND POSTINGS

Project, Field visits, postings and Guest Lecture for MHA students will be organized in/from the following areas:

- Hospitals
  - Teaching
  - Private
  - Corporate
  - Government
  - Charitable etc
- Pharmaceutical Industries
- NGOs
- Public Health Department
- Emergency preparedness and disaster management agencies
- Biomedical waste disposal units
- Health Insurance companies and TPAs
- Hospital administration & Healthcare consultancies
- Health informatics and Telemedicine and relevant related fields
- Hospital architecture consultancies
- Event management organizations
- Law firms
- Maintenance agencies
- Focused logistics agencies
- Disaster mitigation agencies

For these activities liaisoning and formal contacts with various organizations would be initiated

Students would be granted leave to attend conferences/ workshops related to the course

## Annexure 6

### GUIDELINES FOR CONCURRENT ROTATORY PRACTICAL POSTINGS (CRPP), PROJECT POSTINGS

Various training programmes are designed to help students to simplify the formal and informal steps involved in successful administration and operation. In this training the focus will be on description of role, the necessary documents needed to formalize monitor and complete the training process and some pearls of wisdom from other preceptors.

**Objective 1: To gain practical experience in health services administration or planning.**

**Objective 2: To apply knowledge learned in the classroom/ field and to analyze organizational activities.**

**Objective 3: To learn the key aspects of a health services delivery system, including location of resources.**

**Objective 4: To develop a professional identity, including communication and time management skills.**

#### **Details of Concurrent Rotatory Practical Postings (CRPP),**

Hospital and Healthcare organizations would be chosen as per the following criteria:

- Any hospital should be minimum of 30 bed capacity.
- The hospital should be a multispecialty hospital or a single specialty hospital with atleast 50 beds.
- The healthcare organizations should be of repute and with substantial experience and work in the domain.
- Student will have to submit project reports in the areas of Hospital/ Healthcare Administration in problem areas identified by the respective departments/companies during their training period.
- Projects will be carried out concurrently with academic sessions.

**\*Student will have to submit project reports in the areas of Healthcare Administration in problem areas identified by the respective departments/companies during their training period. Projects will be carried out concurrently with academic sessions daily 3 hours (2.00 pm-5.00pm).**

Students are supposed to study the following areas as relevant to the course, of the organization as a part of training and are required to maintain the Journal specifying the detailed procedures of below mentioned areas:

#### **I Hospital Administration:**

##### **1 OPD Services**

Involvement in:-

- 1) Layout of Reception Desk in OPD
- 1) Registration and department wise OPD Card segregation
- 2) Location of the concerned Department
- 3) Reception of patients
- 4) Physical facilities in OPDs
- 5) Close supervision of Doctor's Chamber for the followings:-
  - Availability of
    - a) Prescription Pad,
    - b) Stethoscope
    - c) View Box,
    - d) Bed Trolley
    - e) Weigh Machine
    - f) Torch Light
    - g) Gloves
    - h) Liquid soap and towel
  - 5) Records maintenance of OPD
  - 6) Supervision of patient waiting area and its seating arrangement
  - 7) Adequate communication with other departments / units / wards etc.
  - 8) Public Addressing System
  - 9) Deployment of Staff like Jr. Doctor, Para Medical Staff, Receptionist, Assistant etc.

## 2 Reception

Participation in the process of:-

- 1) Receiving patients and providing information
- 2) Providing information of availability of doctors
- 3) Fixing appointment with doctors
- 4) Arrangement of direct admission for urgent cases
- 5) Public Address System
- 6) Supervising internal transportation system
- 7) No. of Receptionist required to handle the Desk

## 3 Registration

Participation in the process of:-

- 1) Infrastructure – Lay out, Physical facilities,
- 2) Patient registration
- 3) Assisting in collection of hospital charges
- 4) Transmitting information to respective doctor
- 5) Assisting in sending patient to the respective departments
- 6) Computer based functional activity by Receptionist

## 4 Admission Desk

Involvement in the process of:-

- 1) Documentation of registration for Admission of patients
- 2) Preparation of files with relevant papers
- 3) Observing the process of receiving advance payment during admission either by cash or credit card
- 4) Formalities of procedures for ensuring availability of payee's fund
- 5) Distribution of visiting card, literatures, brochure etc. to the client
- 6) Transfer of Patient to ward
- 7) Ambulance management and billing
- 8) Deployment of no. of Receptionist-cum-Office Assistant
- 9) Foreign Exchange facilities

PGDHPD-2018 Program

  
 DIRECTOR  
 (Bharati Vidyapeeth  
 Deemed to be University)  
 Centre For Health Management  
 Studies and Research  
 Pune-Satara Road, Pune-43.

## 5 Billing & Discharge

Involvement in the process of:-

- 1) Assimilation of information through LAN from the different departments
- 2) Checking of data in the computer
- 3) Observation of different billing system like;
  - a) Cash Billing – As per hospital's prevailing rate schedule
  - b) TPA Billing – As per hospital's prevailing rate schedule
  - c) Copt. Billing – Tailor-made billing as per agreement
- 4) Handing over the bill to the patient party
- 5) Providing Birth Certificate, Amputated Certificate, Death Certificate, Referral Letter, as and when required
- 6) Providing discharge certificate in original along with all relevant documents for cash payee patient and photo copy of discharge certificate to the corporate and TPA patients
- 7) Deployment of no. of Receptionist-cum-Office Assistant
- 8) Facilities – Computer, Swapping Machine, Note Counting Machine, Communication facility

## 6 Pharmacy Services

Involvement in:-

- 1) Space requirement as per act
- 2) Lay out
- 3) Storage facility – different set up for different type of drugs
- 4) Equipments
- 5) Organizational structure (role and function)
- 6) Purchase of drugs – disposables, consumables etc.
- 7) Purchase of food items
- 8) Quality control
- 9) Proper storage of drugs
- 10) Sales policy
- 11) Record maintenance
- 12) Preparation of Accounts
- 13) Pharmacy Audit

## 7 Laboratory Services

Observation of:-

- 1) Location
- 2) Structural facility
- 3) Administrative Area
- 4) Laboratory equipment
- 5) Lighting in laboratory
- 6) Laboratory furniture
- 7) Special mechanical and electrical equipments
- 8) Various functional units
  - a) Clinical pathology
  - b) Hematology
  - c) Bio Chemistry
  - d) Histology
  - e) Bacteriology and Serology
- 9) Auxiliary service area
- 10) Collection of samples and delivery of reports
- 11) Requirements for various quality accreditation systems
- 12) Organization

DIRECTOR  
Bharati Vidyapeeth  
(Deemed to be University)  
Centre For Health Management  
Studies and Research  
Pune-Satara Road, Pune-43.

## 8 Imaging Services

Observation of:-

- 1) Layout of X-ray rooms
- 2) Various types of imaging machines and its usages
- 3) Maintenance of imaging machines
- 4) Protective gears
- 5) Precaution taken for Hazardous radio activity
- 6) Licenses required
- 7) General and special investigations
- 8) Layout of Reception area
- 9) Dress changing area of patient
- 9) Film processing room
- 10) Analysis of developed film and preparation of report
- 10) Storing of developed film
- 11) Delivery of film to patient / ward
- 12) Roll of Radiologist, Technicians, and Office Assistant of Radiology Dept.

## 9 Emergency

Observation of:-

- 1) Location of Emergency in hospital
- 2) Basic layout of Emergency
  - (a) Receiving patients
  - (b) Patient examination zone
  - (c) Patient investigation zone
  - (d) Procedure room
  - (d) Cardio Pulmonary Resuscitation Unit
  - (e) Dead patient barrier
  - (f) EMO's Office
  - (g) Nursing Station
- 3) Infrastructural facilities
  - a) Office of EMO
  - b) Nursing Office
- 4) Equipments
- 5) Legal procedure system
- 6) Emergency Operation Theatre
  - (a) Arrangement of instruments and oxygen for minor Operation
  - (b) Sterilization and fumigation of O.T. Room
- 7) Admission procedure
- 8) Billing for day care procedure in Emergency Dept.
- 8) Staffing
  - i) Medical
  - ii) Para Medical
- 9) Security

## 10 Critical Care Unit

Observation / involvement in:-

Physical structure and facilities

- 1) Organizational structure
- 2) Bed orientation pattern
- 3) Lighting system
- 4) Monitoring system including connection to centralized monitoring system
  - (a) Invasive

DIRECTOR  
Bharati Vidyapeeth  
(Deemed to be University)  
Centre For Health Management  
Studies and Research  
Pune-Satara Road, Pune-43.

- (i) Central Venous Pressure (CVP)
- (ii) Arterial Blood Pressure monitoring
- (iii) Cardiac output monitoring
- (iv) Pulmonary Arterial monitoring

(b) Non-invasive

- (i) Heart beat rate
- (ii) Blood Pressure
- (iii) Respiratory rate

(iv) Intake & output monitoring

Maintenance of sterility and general cleanliness

- 1) Maintenance of sterility of the ward
- 2) Maintenance of sterility of clothing used in CCU
- 3) General sterilizing procedures before examination of the patient

Administration of CCU

- 1) Qualified doctor having experience in CCU (as per WHO ratio)
- 2) Qualified nurse having experience in CCU (as per WHO ratio)
- 3) Deployment of qualified paramedical staff (as per WHO ratio)

Workflow

In flow of patient

- 2) Type of patients commonly admitted in CCU
- 3) Pattern of treatment patient receive in CCU
- 4) Type of patient actually needs life saving support
- 5) Out flow of patient
- 6) Counselling with outside visitors / patient party

Equipment maintained in CCU

- 1) Monitor
- 2) Ventilator
- 3) Defibrillator
- 4) ECG and other equipments used in CCU

Equipment maintained in specialized CCU

- 1) Intra Aortic Balloon Pump
- 2) Photo Therapy Machine

Maintenance of uninterrupted gas and power supply system and their utilization

1) Continuous wall flow oxygen

Compressed air

- 3) Suction Apparatus (Vacuum Pump)
- 4) Uninterrupted Power Supply (UPS) line

## 11 Operation Theatre

Observation / involvement in:-

- 1) Location
- 2) Zoning of Operation Theatre
- 3) Infrastructural facilities
- 4) Centralized and decentralized Operation Theatres
- 5) Equipment requirement
- 6) Procurement and maintenance including annual maintenance contract
- 7) Functions and policies of Operation Theatres
- 8) Manpower requirement
  - a) Medical Superintendent
  - b) In-charge
  - c) Anaesthetist
  - c) Nursing personnel

DIRECTOR  
Bharati Vidyapeeth  
(Deemed to be University)  
Centre For Health Management  
Studies and Research  
Pune-Satara Road, Pune-43.

- d) Technician
- e) Ward Boy
- 9) Duties and responsibilities including standard operation procedures
- 10) Safety procedures
- 11) Methods of checking operating rooms for readiness to receive patient
- 12) Periodical sterilization / fumigation
- 13) Sterile supply
- 14) Equipments procurement and maintenance

## 12 Wards

Observation of:-

- 1) Ward Composition - Beds Patient Ratio
  - 1) Lay out
  - 3) Types of ward
  - 4) Physical facilities
    - a) Nursing Station
    - b) Doctor's room
    - c) Dirty utility room
    - d) Dress Changing room
    - e) Sanitary facilities
    - f) Dressing room for minor treatment
    - g) Isolation room
    - h) Ward Pantry
    - i) Day room
    - j) Barrier Nursing
    - k) Other facilities
      - i) Ward side Laboratory
      - ii) Linen Store
      - iii) Drug Store etc.
  - 5) Other Equipment facilities
    - a) Electronic Monitoring Devices
    - b) Ventilation Devices – Natural & Mechanical
    - c) Ward Lighting
    - d) Calling Bell
    - e) Fire Alarm System
  - 6) Organization
  - 7) Communication facilities
  - 8) Methods of patients' record keeping in wards / technical / medical details
  - 9) Admission and Discharge procedures
  - 10) Billing system / generation of bills based on bed head ticket entry
  - 11) Cleanliness
  - 12) Duty arrangement of various medical and para medical staff

## 13 Burn Unit

Observation / involvement in:-

- 1. Location
- 2. Infrastructural facility
- 3. Special equipment requirement for Burn Unit
- 4. Attached Laboratory facility
- 5. Communication facility
- 6. Maintenance of Asepsis
- 7. Manpower

DIRECTOR  
 Bharati Vidyapeeth  
 (Deemed to be University)  
 Centre For Health Management  
 Studies and Research  
 Pune-Satara Road, Pune-43.

## 8. Mechanism for specialized training need assessment

### 14 Blood Bank

Observation / involvement in:-

- 1) Location
- 2) Reception
- 3) Special arrangements for voluntary donors
- 4) Administrative Office
- 5) Record Keeping
- 6) Servicing rooms
- 7) Bleeding Room
- 8) Storage Room
- 9) Storage equipment
- 10) Regulatory requirement
- 11) Blood safety procedures
- 12) Receive and delivery of blood
- 13) Triple screening and check method
- 14) Record keeping
- 15) Medico-legal aspects
- 16) Physical facilities
- 17) Waiting facilities
- 18) Laboratory facilities
- 19) Other facilities
- 20) Issuance of Blood Donor Card
- 21) Safety devices
- 22) Liquid waste management
- 23) Procedure for discarding
- 24) Staffing

### 15 Central Sterile Supply Department (CSSD)

Observation of

- 1) Location
- 2) Name and function of equipments
- 3) Items processed by Central Sterile Supply Department
- 4) Sterilization technique
  - a) Heat
  - b) Gas
  - c) Liquid
  - d) Ionizing radiation
  - e) Others
- 5) Work flow
- 6) Clean zone, dirty zone
- 7) Pooling of materials, equipments
- 8) Function of different equipments used for sterilization
- 9) Process of receiving and distribution of materials
- 10) Technique of Gauge folding
- 11) Cleaning, drying and packing of sterilized materials
- 12) Segregation of Dirty zone and clean zone
- 13) Process of receiving and distribution of materials
- 14) Quality control checking of sterilization in collaboration with Micro-biology Lab.
- 15) Organization
- 16) CSSD Committee

DIRECTOR  
Bharati Vidyapeeth  
(Deemed to be University)  
Centre For Health Management  
Studies and Research  
Pune-Satara Road, Pune-43.

## 16 Medical Records Department

Observation / involvement in

All elements of physical records maintenance plus

- 1) Alphanumerical data
- 2) Machine generated data
- 3) Image data
- 4) Interpretation of data
- 5) Derived data
- 6) Storage process of electronic data
- 7) Data classification
- 8) ICD – 10 System and its use in electronic records maintenance system.

## 17 Maintenance Department

Observation of

- a) Location of different maintenance department
- b) Lay out
- c) Power Generation and supply
- d) Water Treatment Plant and distribution system
- e) Demineralization Plant with R.O. facility for Dialysis unit
- f) Oxygen Plant
- g) Effluent Treatment Plant
- h) Air Condition Plant and distribution system
- i) Maintenance of the medical equipments, calibration
- j) Maintenance of total hospital building – civil, electrical and mechanical
- k) Organization
- l) Bio Medical equipment and their function
- m) Observation of Bio-Medical Equipments
- n) Knowing the name of the Bio-Medical Equipments
- o) Importance and fundamental functions of Bio-Medical Equipments
- p) Maintenance procedures of Bio-Medical Equipments
- q) Need assessment and procurement procedure
- r) Periodical audit of Bio Medical Equipment
- s) AMC of Bio Medical Equipments

## 18 Personnel / H. R. Department

Observation of:-

- a) Present employee status
- b) Selection and recruitment procedure
- c) Employee appraisal system
- d) Employee training and development system
- e) Retirement and retirement benefit system
- f) H. R. Audit
- g) Wage Administration

## 19 Marketing

Observation / involvement in:-

- 1) Office Lay out
- 2) Different types of advertisement for projection
- 3) Fixture required for marketing
  - (a) Banner
  - (b) Leaflet
  - (c) Hoarding

DIRECTOR  
Bharati Vidyapeeth  
(Deemed to be University)  
Centre For Health Management  
Studies and Research  
Pune-Satara Road, Pune-43.

- (d) CD / VCD / DVD
- 4) Media Management (Print, Electronic)
- 5) Event Management (Camp, Seminar, CME)
- 6) Institutional / Corporate marketing
- 7) Direct marketing
- 8) Channel / Franchise marketing
- 9) Data analysis
- 10) Patient feed back
- 11) Organization

## 20 Laundry & Linen Services

Observation of

- 1) Location
- 2) Work flow
- 3) Physical facilities of Laundry
  - a) Receiving, Storing, Sorting, washing area
  - b) Central Disinfection Area
  - c) Cleaned Linen processing room
  - d) Laundry Manager's Office
  - e) Staff Room
  - f) Sewing and inspection area
  - g) Supply storage room
  - h) Solution Preparation area
  - i) Cleaned Linen issue area
  - j) Natural ventilation and light
  - k) Free Linen movement area
- 4) Other facilities
  - a) Adequate Water supply
  - b) Drainage system
  - c) Adjacent power supply
  - d) Steam
  - e) Compressed air
- 5) Arrangement of equipments
- 6) Soiled linen receiving from ward, OT, other areas
- 7) Process of sorting and cleaning, washing, drying, ironing
- 8) Collection and storing process of cleaned linen
- 9) Sorting of discarded linen and sending them to the Store
- 10) Process of linen distribution
- 11) Maintenance of hygiene
- 12) Infection control process
- 13) Process of staff training
- 14) Process of co-ordination among the related departments
- 15) Manpower

## 21 Kitchen & Dietary Services

- 1) Overview of kitchen lay out and its adjacent areas
- 2) Physical facilities
  - a) Receiving area
  - b) Washing area
  - c) Preparation area
  - d) Cooking area
  - e) Storing area

DIRECTOR  
 Bharati Vidyapeeth  
 (Deemed to be University)  
 Centre For Health Management  
 Studies and Research  
 Pune-Satara Road, Pune-43.

- f) Food Distribution area
- g) Garbage disposal area
- h) Office of Kitchen Manager
- i) Office Kitchen Staff
- 3) Work Flow
- 4) Patient visit and observation of the diet chart preparation
- 5) Observation and process of:-
  - i) Coordination with Dietitian before preparing process of food for patient
  - ii) Receiving and storage of perishable and non-perishable food
  - iii) Process of calculation the quantity of perishable & non-perishable items to be cooked
  - iv) Washing, cutting, preparation and cooking process
  - v) Storage of cooked food and precaution to be taken
  - vi) Delivery process of hot food (Hot Trolley) to patient according to diet chart
  - vii) Process of distribution of food in the cafeteria and dining hall
  - viii) Maintenance of hygiene by kitchen staff
  - ix) Safety measure
  - x) Receiving of soiled utensils and left over food
  - xi) Collection of utensils and washing process
  - xii) Garbage disposal system
  - xiii) Maintenance of Accounts
  - xiv) Pest control system
  - xv) Process of supervision and leadership style
  - xvi) Educational programme, research, dietary counseling etc.
  - xvii) Periodical audit
- 6. Organization

## 22 Security Services

Observation of:-

- 1) Security room and posts
- 2) Security services in the hospital
- 3) Role of Security during patient visiting hours
- 4) Traffic control inside the hospital
- 5) Maintenance of fire precautions
- 6) Process of medico legal activities

## 23 Transportation Services

Observation of:

- a) Different internal and external transport
- b) Different ambulances
- c) Ambulances enmarked for communicable disease
- d) Facilities given in the emergency ambulance
- e) Maintenance of ambulance
- f) Maintenance of internal transportation

## 24 Mortuary

Observation / involvement in:-

- 1) Location
- 2) Physical facilities
- 3) Body refrigerator
- 4) Walk in refrigerator
- 5) Capacity decision of Mortuary
- 6) Autopsy facility

DIRECTOR  
 Bharati Vidyapeeth

 Studies and Research  
 Pune-Satara Road, Pune-43.

- 7) Requirement for autopsy room
- 8) Preservation / identification/leveling of viscera / body fluids and other materials for medicolegal purposes
- 9) Embalming procedures
- 10) Methods of long distance transport of dead bodies
- 11) Arrangements for religious rites
- 12) Mortuary traffic control
  - a) Internal
  - b) External
- 13) Identification of bodies using triple check system
- 14) Maintenance of records
- 15) Various legal requirements
- 16) Disposal of unclaimed bodies
- 17) Various religious rites

## **25 Library in Hospital**

Observation the functioning of:-

- 1) Library work flow
- 2) Physical facilities
- 3) Procurement of books and journals as per Good Office Committee (GOC) norms
- 4) Receiving the purchased books / periodicals, audio visual journals etc.
- 5) Preservation of books in the Shelves
- 6) Catalogue preparation
- 7) Process of issue and collection of books
- 8) Updating of catalogue annually
- 9) Library rules and regulations
- 10) Preparation of Membership Card
- 11) Repair of damaged books
- 12) Ascertaining of lost books and journals
- 13) Arrangement of educational programme through Video Satellite system
- 14) Stock verification of Library items periodically

## **II Telemedicine**

1. Infrastructure – both end – (1) Hospital end (2) Nodal Centre
2. Requirement
  - a) Computer Monitors
  - b) Cameras
  - c) Internet connection
3. Observation of telemedicine techniques and taking part in the process
4. Manpower

## **III Health Informatics**

1. Infrastructure Requirement
  - a) Computer Monitors
  - b) Cameras
  - c) Internet connection
2. Observation of informatics techniques and taking part in the process
3. Manpower requirement
4. Transmission modes

## **IV Medical Transcription**

1. Observation of techniques and taking part in the process
2. Infrastructural requirement

## Annexure 7

### EXAMINATION PATTERN

Attendance of 75% is mandatory to appear for examinations. Students will be evaluated throughout the two years programme as under:

- Ongoing internal assessments (which include students' attendance and participation in classroom &/ or experiential learning activities, interactive activities and assignments, field visit, tests in form etc.)
- Semester end University Examinations.
- Journal submissions.
- Project Reports and Viva-Voce.

The performance of student is evaluated on Cumulative Grade Point Average (CGPA) system.

Theory, Practical, University and Internal examinations should be passed separately.

#### Internal & University Examination Details

For each paper of 100 marks (3 credit courses), there will be an Internal Assessment (IA) for 40 marks and the University Examination (UE) for 60 marks. The UE will be of three hours duration.

For each paper of 60 marks (2 credit courses), there will be an Internal Assessment (IA) for 20 marks and the University Examination (UE) for 40 marks. The UE will be of two hours duration.

#### Marks Allocated for Internal and University Exams

Course Credits	Internal Assessment	University Exam	Total
3	40	60	100
2	20	40	60

#### Marks Allocation in Internal Assessment

Credits	Assignments	Class Tests( Written and /or Oral)	Participation*
3	10 marks	20 marks (1 per every course)	10 marks
2	5 marks	10 marks (1 per every course)	5 marks

\*Students participation in classroom &/ or experiential learning, discipline, group discussions, assignments, tests, field activities, performance reports, pro-activeness, field work and classroom &/ or experiential learning attendance etc.

For passing in the subject, student has to score minimum **40% marks separately in UE's & IA's**. Student should clear all the subjects of **I Semester** and would also be allowed to carry forward **maximum 3 subjects from II Semester to get admission into second year**. In this scenario, the student will be allowed **admission only in winter session (July - October) of the subsequent academic year/s only after** clearing all (I & II Semester) backlog subjects.

  
DIRECTOR  
Bharati Vidyapeeth  
(Deemed to be University)  
Centre For Health Management  
Studies and Research  
Pune-Satara Road, Pune-43.

Framework of University Examination			
Course Credits	Questions	Marks	University Total
3	<b>Section -I</b>		60 marks
	Out of 3 long answers (each carrying 10 marks), 2 should be answered.	10 x 2 = 20	
	Out of 3 short notes (each carrying 5 marks), 2 should be answered.	5 x 2 = 10	
	<b>Section -II</b>		
	Out of 3 long answers (each carrying 10 marks), 2 should be answered.	10 x 2 = 20	
	Out of 3 short notes (each carrying 5 marks), 2 should be answered.	5 x 2 = 10	
2	Two long answers (each carrying 11 marks) should be answered. There is no choice.	10 x 2 = 20	40 marks
	Out of 5 short notes (each carrying 5 marks), 4 should be answered.	5 x 4 = 20	

### Journal

Handwritten journal should be submitted in uniform format, as instructed by CHMSR faculty in I (administrative departments) and III (clinical/ specialization departments) semesters.

Journal Format	
S.No	Content
1	Certificate signed by Director, CHMSR
2	Certificate of Attendance signed by hospital/ healthcare organization authority
3	Organization Profile
4	Introduction to Department
5	Layout
6	Organization Structure
7	Department Work Details
8	Enlisting of Processes with Flowcharts of each process in the Department
9	Equipment List

  
**DIRECTOR**  
 Bharati Vidyapeeth  
 (Deemed to be University)  
 Centre For Health Management  
 Studies and Research  
 Pune-Satara Road, Pune-43

## Guidelines:

1. Title page & certificate should be colour printed.
2. The Journal should be hand written with hand drawn diagrams, however students can paste relevant photographs wherever needed by them.
3. The Journal should be spiral bound.
4. Certificate should signed by HOD of the department/institute where the student is posted.
5. Journal marks would be included in internal assessment under participation in each course of the semester.

## Concurrent Rotatory Practical Postings (CRPP) with Comprehensive Viva-Voce

## Guidelines for Project Report

Students will start working on their project I simultaneously along with their academic sessions from the commencement of first semester.

Students will start working on project II simultaneously from the commencement of third semester.

For all the projects they would be posted in relevant organization daily for five hours (as needed) throughout the semester.

Students are supposed to submit the project report in the below mentioned format.

The evaluation of this will be at the end, the break up of which is mentioned above in tables.

xii	Bibliography	

### Standard of Passing:

In order to pass in a course, the student must obtain a minimum GP of 4.5 at UE and also a minimum Grade Point of 4.5 IA separately. Otherwise, he/she will have to reappear for the subject till he/she passes.

The Grade Point Index (GPI) for a course will be calculated by using the formula  $0.6 * GP (UE) + 0.4 * GP (IA)$ . At the end of each semester, a Cumulative Grade Point Average (CGPA) and also Semester Grade Point Average (SGPA) will be calculated as a weighted average of the GPI of all courses in which the student has passed till that semester.

A student shall be permitted to proceed from first semester to second semester irrespective of his/her back-log in any number of subjects.

Permission to third semester will be given on clearance of all first semester and atleast five courses of second semester.

A student shall be permitted to final semester irrespective of his/ her back-log in any number of subjects, once the student is permitted to third semester.

A student who passes in all the courses will be declared to have passed Masters in Hospital Administration (MHA) with the following honors:

CGPI in [4.00, 4.99]	Pass Class
CGPI in [5.00, 5.49]	Second Class
CGPI in [5.50, 5.99]	Higher Second Class
CGPI in [6.00, 7.99]	First Class
CGPI in [8.00, 10.00]	First Class with Distinction

### Grace marks & Mercy Marks

As per Bharati Vidyapeeth (Deemed to be University) guidelines.

### 10 Grade Point Scheme:-

The 10 point scale would be used to convert marks out of 100 to grades and grade points according to the following table:-

Range in % of marks	Range of CGPA	Letter grade
[75.0 - 100]	[9.00 - 10.00]	O
[70.0 - 74.9]	[8.00 - 8.99]	A+
[65.0 - 69.9]	[7.00 - 7.99]	A
[60.0 - 64.9]	[6.00 - 6.99]	B+
[55.0 - 59.9]	[5.50 - 5.99]	B
[50.0 - 54.9]	[5.00 - 5.49]	C+
[45.0 - 49.9]	[4.50 - 4.99]	C
[40.0 - 44.9]	[4.00 - 4.49]	D
[00.0 - 39.9]	[0.00 - 3.99]	F

### Structure of the Transcript:

At the end of each semester, student will be given a transcript showing the performance and result in each course. The transcript shows, for each course the title of the course, credit values, grade in University examination, grade in internal assessment, Grade point index, result as pass or fail. Also, the semester grade point average and cumulative grade point average will be shown. Further, the equivalent percentage of marks corresponding to SGPA and CGPA will be shown. The formula to convert SGPA or CGPA to equivalent percentage is given by:

$$10 \times \text{CGPA if CGPI/SGPI is in } [4.00, 6.00]$$

$$\text{Equivalent percentage marks} = 05 \times \text{CGPA} + 30 \text{ if CGPI/SGPI is in } [6.00, 9.00]$$

25 × CGPA-150 if CGPI/ SGPI is in [9.00, 10.00]

The percentage of marks can be obtained by using the following table:

CGPA	% of marks	CGPA	% of marks	CGPA	% of marks	CGPA	% of marks
4.0	40.0	5.5	55.0	7.0	65.0	8.5	72.5
4.1	41.0	5.6	56.0	7.1	65.5	8.6	73.0
4.2	42.0	5.7	57.0	7.2	66.0	8.7	73.5
4.3	43.0	5.8	58.0	7.3	66.5	8.8	74.0
4.4	44.0	5.9	59.0	7.4	67.0	8.9	74.5
4.5	45.0	6.0	60.0	7.5	67.5	9.0	75.0
4.6	46.0	6.1	60.5	7.6	68.0	9.1	77.5
4.7	47.0	6.2	61.0	7.7	68.5	9.2	80.0
4.8	48.0	6.3	61.5	7.8	69.0	9.3	82.5
4.9	49.0	6.4	62.0	7.9	69.5	9.4	85.0
5.0	50.0	6.5	62.5	8.0	70.0	9.5	87.5
5.1	51.0	6.6	63.0	8.1	70.5	9.6	90.0
5.2	52.0	6.7	63.5	8.2	71.0	9.7	92.5
5.3	53.0	6.8	64.0	8.3	71.5	9.8	95.0
5.4	54.0	6.9	64.5	8.4	72.0	9.9	97.5

(Deemed to be University)

### **Centre for Health Management Studies and Research**

The nature of hospital and healthcare organizations has been diverse and varied in India. Nursing homes, small private hospitals as well as multi specialty tertiary care hospitals have emerged in large numbers over the last decade. However, there is an absence of homogeneity in their functioning or regulation. This can be brought about by way of enhanced governance training and development of healthcare managers who can play a crucial role in setting the background for this change.

With this focus and challenge in mind the Center for Health Management Studies and Research has been set up at the Bharati Vidyapeeth( Deemed to be University), Pune. The Center for Health Management Studies and Research has rapidly grown into a specialized training facility for a wide variety of cadres related to hospital and healthcare management, with a focus on patient centered care.

#### **Objectives of the Centre for Health Management Studies and Research:**

- To create a center of excellence in hospital and healthcare management, academics, research and consultancy.
- To empower working professionals enhancing their skill sets in the field to suit the changing needs of their workplace.
- To educate and train in-service personnel in the healthcare system in both private and public sector.
- To participate in health policy development and reform in order to share expertise and create a knowledge base for governance in health care.
- To offer consultancies as part of knowledge sharing and help healthcare organizations and individuals to plan their initiatives for proper implementation.
- To focus attention on the specific healthcare needs of India's growing urban centers and the accessible rural sectors and remote wilderness tracts.
- To develop and disseminate materials to enhance awareness on specific health issues in the public domain.

#### **Objectives of Masters in Hospital Administration**

- To provide a knowledge base for individuals who are interested in hospital and health care management.
- To help professionals develop analytical skills to face various issues in management of healthcare organizations.
- To enhance professional knowledge through theoretical, practical and on field training.
- To contribute trained and qualified personnel to ever growing field of hospital and healthcare management.

I-109 Concurrent Rotatory Practical Postings (CRPP) with  
Comprehensive Viva - Voce (Credits: 3)

## ELECTIVE COURSES (ANY TWO TO CHOOSE FROM)

### **I-110 Basics Medical Terminology**

(Credits: 2, Hours: 30)

#### **Introduction:**

The course assists students to develop medical vocabulary used in hospital and healthcare industry. It helps students to understand the correct use of medical terms.

#### **Objectives:**

- To develop medical vocabulary in students needed to work in hospital and healthcare industry.
- To help students use and understand the correct use of medical terms.

<b>Unit I:</b> Objective, Basic Elements of Medical Terms - Root, Prefixes, Suffixes, Colours, Numeral, Symbols, Abbreviation, Terms pertaining to Body as a whole.	<b>8</b>
<b>Unit II:</b> Terms relate to investigations and operation, treatment of conditions, disorders of: Skin and Breast (integumentary system), Musculoskeletal, Neurological and psychiatric disorder, Cardio-vascular, Blood and blood forming organs, Respiratory, Digestive, Uro-genital, Gynecological, Maternal, Antenatal and Neonatal conditions, Endocrine and Metabolic, Sense organs - Vision & Hearing, Systemic: Infections, diseases, Immunological diseases, diseases of the connective tissue, Geriatrics and Psycho geriatrics.	<b>14</b>
<b>Unit III:</b> Supplementary terms: Selected terms relating: Oncology, Anesthesiology, Physical Medicine and Rehabilitation, Nuclear medicine, Plastic surgery of burns and maxillofacial surgery, Radio- Diagnosis, Radiotherapy.	<b>8</b>

#### **Books:**

1. Willis MC. Medical terminology: a programmed learning approach to the language of health care. Lippincott Williams & Wilkins; 2007 May 1.
2. Willis MC. Medical terminology: the language of health care. Lippincott Williams & Wilkins; 2006.

6. Leonard PC. Quick & Easy Medical Terminology-E-Book. Elsevier Health Sciences; 2015 Dec 4.

## I-111 Essential English

(Credits: 2, Hours: 30)

### Introduction:

Today's /hospital healthcare managers face a dual challenge of being competitive as well as being global. They not only have to be master in their professional skills but also, they must have various soft skills competencies to be suitable for their job.

### Objectives:

- To impart essentials of English language needed by the students to enter & sustain today's job market.

<b>Unit I:</b> <b>The elements of Communication</b> The importance of communication through English at the present time, The process of communication and factors that influence communication sender, receiver, channel, code, topic, message, context, feedback, noise, filters & barriers, The importance of audience and purpose, The information gap principle: given and new information, information overload, Verbal and non-verbal communication: body language	<b>8</b>
<b>Unit II :</b> <b>The sounds of English</b> Vowels, diphthongs, consonants, consonant clusters, The International Phonetic Alphabet (IPA): Phonemic transcription, Problem Sounds, Syllable division and word stress, Sentence rhythm and weak forms, Contrastive stress in sentences to highlight different words, Intonation: Falling, rising and falling-rising tones, Varieties of Spoken English: Standard Indian, American and British	<b>12</b>
<b>Unit III :</b> <b>Review of English grammar</b> Static and Dynamic Verbs, The auxiliary system: finite and non-finite verbs, Time, tense and aspect, Voice: Active and passive, Modality, Negation, Interrogation: reported and tag questions, Phrasal Verbs	<b>10</b>

### Books:

1. Wren PC, Martin H. English Grammar & Composition. S. Chand & Company Ltd. 2000.
2. Jones L, Alexander R. New International Business English Updated Edition Teacher's Book: Communication Skills in English for Business Purposes. Cambridge university press; 2000 Feb 17.

## I-112 Information and Communication Technology

(Credits: 2, Hours: 30)

### Introduction:

The course would develop hands on experience in MS word, MS power point, MS excel and other basic computer operations.

### Objectives:

- To acquaint students about fundamental computer operations.
- To allow students to practice and perform various computer applications.

<b>Unit I</b> <b>Introduction to computers and Information Technology:</b> Fundamentals of computer, Introduction, Input / Output and Processing (CPU), Memory Device, Types of computers, Characteristics of Computer, History and Generation, Applications of Computer generation of computers, input and output devices: memory and operating systems, Concepts of Hardware and Software, data processing, information processing.	<b>6</b>
<b>Unit II</b> <b>Numbering System Representation of data/problem solving techniques and database:</b> Introduction to Number systems, Decimal arithmetic, Binary arithmetic, Algorithms, Flowchart, and Programming Languages. Introduction to Database, DBMS, and Database model.	<b>6</b>
<b>Unit III</b> <b>Computer Communication and Internet:</b> Basic of Computer networks, LAN / WAN, Concept of Internet , Application of Internet , Service on Inter Net , WWW and web-sites , Electronic mails , Communication on Internet , WWW and Web Browsers , Web Browsing software, Surfing the Internet, Chatting on Internet, Email, Virus.	<b>8</b>
<b>Unit IV</b> <b>Windows and MS Office :</b> MS Word: Word, Editing and formatting documents, macro commands, Presentation of documents, Excel and Power Point applications.	<b>10</b>

### Books:

1. O'Brien JA, Marakas G. Introduction to information systems. McGraw-Hill, Inc.; 2005 Oct 26.
2. Elias M. Awad, System Analysis and Design, Galgotia Publications, New Delhi, 1998.

Studies and Research  
Pune-Satara Road, Pune-43.

## II-113 Hospital Organization, Structure & Business Plan

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
3	2	30	1	30

### Introduction:

This course helps to develop basic awareness of management functions of hospital departments. It highlights the need of operative planning, organizational structure and performance in hospital and healthcare set ups.

### Objectives:

- To develop awareness of management functions of hospital departments in the students.
- To help students know the need of operative business planning, organization structure in healthcare set ups.

<b>Unit I</b> <b>Hospital – An Introduction</b> History and development of hospitals, Role of hospital in society, Functions of hospital, Role in health care delivery system, Hospitals in India today- their number, growth of hospitals & classification of types, size, distribution, ownership, hospitals utilization, issues & trends	<b>6</b>
<b>Unit II</b> <b>Hospital Management as a Specialty</b> Peculiarities of health care organisations, Factors influencing care, Role and functions of hospital administrators, Differences and Issues in administration of teaching, corporate, charitable, PHC, government hospitals etc.	<b>4</b>
<b>Unit III</b> <b>Organisation Structures</b> Hierarchy, Role of all departments in various hospital settings, Governing authority, Channels of communication, Systems Approach to Hospitals The function, responsibility and role of Governing body, Chief Executive (Administrator) and Medical Staff and relationship among them, Medical staff organisations. Co-ordination, Communication, and Decision making in Health Care .Organizational productivity-input and evaluation of productivity, System policy, Procedure.	<b>5</b>
<b>Unit IV</b> <b>Overview of departments in the hospital</b> Organization of hospital, Clinical, Administrative, Support services Recent Trends: Ethical issues, Challenges to administrators, Expectations of community from hospitals	<b>5</b>
<b>Unit V</b> Operative Planning- Characteristics, Objective goal, strategic and long term planning. Hospital Utilization & its evaluation, Use of modern tools and techniques for improvement of operational efficiency. Emerging Trend in Health Care.	<b>5</b>

**Unit VI**

Organizational Performance, Assessment of strengths and weakness, strategic thinking and preparation of long term plan. Analysis of organization structure, role analysis, role clarity, system of accountability, Organizational dynamics. Operational and management control in health care, Management By Objective

**5****Books:**

1. Kunders GD. Hospitals: facilities planning and management. Tata McGraw-Hill Education; 2004.
2. Goel SL, Kumar R, editors. Hospital Administration and Management. Deep & Deep Publications; 2002 Aug 1.
3. Goel KR, editor. Hospital supportive services. Deep and Deep Publications; 2004.
4. Sakharkar BM. Principles of Hospital Administration and Planning, Jaypee Brothers Medical publishers (P) Ltd. New Delhi. 1999.

## II-114 Epidemiology & Public Health

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
3	2.5	38	0.5	15

### Introduction:

This course helps students to understand the concept of health and disease, to apply the same to monitor, control health problems by implementation of effective public health programmes and policies.

### Objectives:

- To impart knowledge about the concept of health and disease in the community.
- To apply the knowledge to monitor and control health problems in the community through effective implementation public health programmes and policies.

<b>Unit I</b> <b>Concept of health and disease</b> Concept of health, Definitions of health, Dimensions of health, Definition & aim of epidemiology, Measurements in epidemiology, Spectrum of health, Health determinants, Health indicators, Concept of disease, Concept of control, Modes of intervention, Disease transmission, Disease prevention and control, Investigation of an epidemic, Public health, Disease classification, International classification of disease, Disease surveillance	<b>13</b>
<b>Unit II</b> <b>Health programmes in India</b> National vector borne disease control programme, National leprosy eradication programme, Revised national tuberculosis control programme, National aids control programme, National programme for control of blindness, Iodine deficiency disorders programme, Universal immunization programme, National rural health mission, Reproductive and child health programme, National cancer control programme, National mental health programme, National programme for prevention of lifestyle diseases, Current government health schemes	<b>10</b>
<b>Unit III</b> <b>Health education</b> Concept of health education, Approach to health education, Models of health education, Contents of health education, Principles, Practice	<b>7</b>
<b>Unit IV</b> <b>Health planning and management</b> Health planning, Management, Management methods and techniques, National health policy, Health planning in India	<b>8</b>

### Books:

1. Park JE. Textbook of preventive and social medicine.(A treatise on community health.). 1970.
2. Hodges BC, Videto DM. Assessment and planning in health programs. Jones & Bartlett Publishers; 2011 Aug 24.
3. Dever GA. Managerial epidemiology: practice, methods and concepts. Jones & Bartlett Learning; 2006.

7. Lupton D. The imperative of health: Public health and the regulated body. London: Sage Publications; 1995 Aug.

## II-115 Research Methodology & Biostatistics

(Credits: 2, Hours: 30)

### Introduction:

The course will help students understand the research process by familiarizing to the quantitative and qualitative approaches, methods, techniques, writing etc. It also helps to learn techniques to gather informative data, extract meaningful information and analyze it to draw useful interpretations.

### Objectives:

- To develop research acumen in the students by imparting about research, qualitative and quantitative research methods and techniques.
- To equip students with research skills to be applied in their academic projects and in their future operations.

<b>Unit I</b> Introduction to Research, Foundations of Research: Meaning, Objectives, Motivation, Research Ethics, Research Terminologies, Overview of research methodology	2
<b>Unit II</b> Problem Identification & Formulation of research problem, Identifying Research problem, Defining research problem	2
<b>Unit III</b> Review of Literature, Meaning, Purpose, Need, Peer review	2
<b>Unit IV</b> Hypothesis formulation, Characteristics of Hypothesis, Role of hypothesis, Framing of Hypothesis Qualities of a good Hypothesis, Null Hypothesis & Alternative Hypothesis, Hypothesis Testing - Logic & Importance	2
<b>Unit V</b> Research Design, Concept of Qualitative, Quantitative, Mixed methods Concept of Exploratory, Descriptive, Experimental Designs; Concept of Variables, Meaning and types	2
<b>Unit VI</b> Data Collection, Meaning, Types (Primary, Secondary), Detailed Methods of Data Collection, Preparation of tool, Validity and Reliability, Confidentiality and Anonymity of Data collected, Data Entry	4
<b>Unit VII</b> Sampling, Meaning, Types, Applications, Determination of sample size	2
<b>Unit VIII</b> Data Analysis, Data Preparation, Data Presentation, Analysis of qualitative and quantitative data, Univariate analysis (frequency tables, bar charts, pie charts, percentages), Bivariate analysis – Cross tabulations	2
<b>Unit IX</b> <b>Writing</b> , Project Report writing, Research paper, Bibliography, Citation	1
<b>Unit X</b> <b>Technological Support in Research Methodology</b>	1

Use of available softwares for review of literature, Analysis, Bibliography	
<b>Biostatistics</b>	
<b>Unit XI</b> <b>Introduction to Statistics</b> Utility and limitations of Statistics, Measures of Central tendencies, Measures of Dispersion, Variation. Introduction to Applied Statistics, Identifying the dependent and independent variables, Confidence levels, Math that manipulates data, Test of significance	<b>2</b>
<b>Unit XII</b> <b>Descriptive Statistics</b> Summarizing and describing a collection of data, Percentages and Ratios, Histograms, Identifying randomness and uncertainty in data	<b>2</b>
<b>Unit XIII</b> <b>Inferential Statistics</b> Drawing inference from data, Modeling assumptions , Identifying Patterns, Regression analysis, T-test, Analysis of Variance, Correlations, Chi-square	<b>6</b>

## II-116 Hospital Support Services Management

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
2	1	15	1	30

### Introduction:

The course will enable students to gain knowledge about various aspects like importance, types, functions, physical facilities, location, layout, policies and procedures, managerial issues, monitoring and evaluation of support services in a hospital.

### Objectives:

- To make students aware about composition and operations of various support services in hospitals.
- To enable students to practice and participate in procedures of various hospital support services.

<b>Unit I</b> <b>Overview of Support Services</b>	<b>1</b>
<b>Unit II</b> <b>Radiology services</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	<b>2</b>
<b>Unit III</b> <b>Medical Records Department</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	<b>2</b>
<b>Unit IV</b> <b>Blood Bank</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	<b>2</b>
<b>Unit V</b> <b>Central Sterile Supply Department</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	<b>2</b>
<b>Unit VI</b> <b>Medical Waste Management</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	<b>2</b>
<b>Unit VII</b> <b>Housekeeping Services</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	<b>1</b>
<b>Unit VIII</b> <b>Dietary Services</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout ,	<b>1</b>

Policies and Procedures, Managerial Issues, Monitoring and Evaluation	
<b>Unit IX Hospital Stores</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	<b>1</b>
<b>Unit X Laboratory</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	<b>1</b>

**Books:**

1. Kunders GD. Hospitals: facilities planning and management. Tata McGraw-Hill Education; 2004.
2. Goel SL, Kumar R, editors. Hospital Administration and Management. Deep & Deep Publications; 2002 Aug 1.
3. Goel KR, editor. Hospital supportive services. Deep and Deep Publications; 2004.
4. Sakharkar BM. Principles of Hospital Administration and Planning, Jaypee Brothers Medical publishers (P) Ltd. New Delhi. 1999.

## II-117 Clinical Services Management

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
2	1	15	1	30

### Introduction:

The course will enable students to gain knowledge about various aspects like importance, types, functions, physical facilities, location, layout, policies and procedures, managerial issues, monitoring and evaluation of clinical services in a hospital.

### Objectives:

- To impart knowledge about various clinical services in hospitals.
- To enable students to practice and participate in procedures of various clinical services in hospitals.

<b>Unit I</b> <b>Overview of Clinical Services</b> Types of clinical services available in a hospital, Organisation of various services, Medical monitoring, Isolation of patients	1
<b>Unit II</b> <b>Outpatient Department</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	3
<b>Unit III</b> <b>Emergency Department</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	2
<b>Unit IV</b> <b>Operating Department</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	2
<b>Unit V</b> <b>In - patient Department</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation	3
<b>Unit VI</b> <b>Critical care units</b> Introduction, Types, Importance, Functions, Physical Facilities, Location, Layout , Policies and Procedures, Managerial Issues, Monitoring and Evaluation Multidisciplinary intensive care units	2
<b>Unit VII</b> Recent Trends, Overview of Super Specialty Services, Ambulatory surgery services, Geriatric care, Pediatric care, Wellness centres, Evaluation of hospital services	2

**Books:**

1. Kundurs GD. Hospitals: facilities planning and management. Tata McGraw-Hill Education; 2004.
2. Goel SL, Kumar R, editors. Hospital Administration and Management. Deep & Deep Publications; 2002 Aug 1.
3. Goel KR, editor. Hospital supportive services. Deep and Deep Publications; 2004.
4. Sakharkar BM. Principles of Hospital Administration and Planning, Jaypee Brothers Medical publishers (P) Ltd. New Delhi. 1999.

## II-118 Emergency Preparedness & Disaster Management

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
2	1	15	1	30

### Introduction:

This course helps students to develop theoretical and conceptual understanding of disaster management. It allows students to develop skills needed to manage and work in mass casualty, CBRN incidents and other crisis situations.

### Objectives:

- To help students develop theoretical and conceptual understanding of disaster management.
- To facilitate students to develop skills needed to manage and work in mass casualty, CBRN incidents and other crisis situations.

<b>Unit I</b> <b>Introduction to Disasters</b> Meaning of Disaster, Types of Disaster, Concept of risk, hazard, vulnerability, Need for Disaster Management, Disaster profile of India	<b>2</b>
<b>Unit II</b> <b>Disaster Management</b> Introduction to Disaster Management, NDMA, Disaster Management Act, Disaster Management Cycle (Sustainable & Humanitarian Actions)	<b>3</b>
<b>Unit III</b> <b>Preparedness Planning</b> Disaster scenarios, Roles and responsibilities, Organisational management and coordination, Response priorities, Objectives and tasks, Incident Command System, Planning levels, Contingency planning	<b>4</b>
<b>Unit IV</b> <b>Disasters and Hospitals</b> Mass casualty management systems, Mass Casualty Incident, Medical care in MCI, Rescue chain, Activities at site of disaster, Triage and types, Transfer organisation, Organization of hospitals, Reception of victims, Treatment areas, Resource Planning NDMA guide for hospital safety	<b>4</b>
<b>Unit V</b> <b>CBRN Management</b> Meaning of CBRN incidents, WMD, Need for CBRN Management, Zoning	<b>2</b>

## Books:

1. Hodgkinson PE, Stewart M. Coping with catastrophe: A handbook of disaster management. Taylor & Frances/Routledge; 1991.
2. Turner BA, Pidgeon NF. Man-made disasters. Oxford: Butterworth-Heinemann; 1997 Jan.
3. Christen HT, Maniscalco PM. The EMS incident management system: EMS operations for mass casualty and high impact incidents. Brady; 1998.

**II-119 Hospital Architecture and Designing****(Credits: 3, Hours: 45)****Introduction:**

The course will give an overview to students about architectural planning, design according to operation of hospital. All facets of hospital planning activities like survey, MEP, HVAC planning, LEED certifications etc. are included in the course.

**Objectives:**

- To give students an overview about architectural planning, design of a hospital.
- To introduce students to the tools of hospital planning, like survey, MEP, HVAC planning, LEED certifications etc.

<b>Unit I</b> <b>Surveying</b> Area wise planning, Planning for general hospital service, Determining the logical centers for hospital location, Determining the area served by them, Estimation of occupancy and bed ratios, Determining the size and kind of hospital service	<b>6</b>
<b>Unit II</b> <b>Hospital Planning</b> Changing system of health services, Concepts in planning, designing & space, An overview of hospital buildings, Quality of facilities and services, Evaluation of all resources needed	<b>6</b>
<b>Unit III</b> <b>Architectural Planning</b> Functional plans for hospital construction , Role of hospital consultant, Planning stage: role of architect, working drawings, legal formalities, the hospital site, design considerations, environments regulations, equipment planning, bed distribution, space requirements, their relationships, construction costs, External architectural aspects, Internal arrangements, HVAC Planning, Electric supply, water supply plumbing and sanitation, Medical gas supply and pipelines, Hospital Hygiene	<b>10</b>
<b>Unit IV</b> <b>Recent Trends-Green Buildings, LEED certification, NBC regulations</b>	<b>8</b>
<b>Unit V</b> Planning of 30,100,250 bedded hospital(general/specialty) Planning of 500, 750 and above bedded hospital(teaching/super-specialty/non-teaching specialty hospitals) Project cost and total budget : Feasibility and viability study of Hospital Project conceptualization, functional requirements. Implementation. Environmental Control and Safety: General environmental control; infection control Brownfield Hospitals	<b>15</b>

## ELECTIVE COURSES (ANY TWO TO CHOOSE FROM)

### **II-122 Medical Transcription**

(Credits: 2, Hours: 30)

#### **Introduction:**

The course helps students to get an overview and develop their skills about tools of transcription, ethical and legal responsibilities, keyboard kinetics, healthcare documentation, pharmacology etc.

#### **Objectives:**

- To introduce students to the components of process of medical transcription, keyboard kinetics, healthcare documentation, pharmacology etc.
- To enable students to participate and practice tools of Medical Transcription.

<b>Unit I</b> Focus on medical specialties: Introduction to medical transcription, Medical Transcription Process	<b>4</b>
<b>Unit II</b> Tools of Transcription, Transcription Skill	<b>4</b>
<b>Unit III</b> Technology and medical professional Ethical & Legal Responsibilities, Confidentiality	<b>4</b>
<b>Unit IV</b> Keyboard kinetics, Following Verbal Instructions, Medical word building Grammar and Punctuation	<b>6</b>
<b>Unit V</b> Healthcare documentation : General Principles for complete documentation in Medical Records	<b>6</b>
<b>Unit VI</b> Pharmacology Diagnostic reports	<b>6</b>

#### **Books:**

1. Burns L, Maloney F. Medical Transcription & Terminology: An Integrated Approach. Cengage Learning; 2003.
2. Blake RS. Delmar's Medical Transcription Handbook. Cengage Learning; 1997.
3. Marcy Diehl : Medical Transcription Guide: Do & Don'ts, Paperback; 2004

## II-123 Hospital Maintenance

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
2	1	15	1	30

### Introduction:

The course helps students to know the types, operation, monitoring and maintenance of hospital equipments; all of which play a vital role in smooth functioning of today's hospitals.

### Objectives:

- To make students aware about the types, operation, monitoring and maintenance of various hospital equipments.

<b>Unit I</b> Nomenclature of medical equipments, Division of Hospital Diagnostic, Therapeutic, Imaging, Laboratory Equipments; Study of each equipment under, Principle of operation, Block Diagram, Applications, Limitations if any, Preventive Maintenance, Breakdown maintenance Equipment management information system; Introduction to maintenance issues/ equipment management in hospital, Benefits of equipment management, Components of management cycle	8
<b>Unit II</b> Organizing the maintenance operation, Provision of budgets and finance, Biomedical equipment procurement procedure, Technology assessment and selection, Installation and commissioning	6
<b>Unit III</b> Training and skill development, Operation & Careful usage, Occupational Safety Maintenance and repair	4
<b>Unit IV</b> Maintenance policy: Medical equipment-maintenance protocol, Preventive maintenance planning, Measures for breakdown maintenance. Testing and Calibration of Medical equipments. Clinical Engineering Department-functions, responsibilities, design criteria. Policies and procedures, work record	6
<b>Unit V</b> Maintenance programmes: Maintenance of equipment-In-house and Contract-Variety types of contracts. Contract management- Legal aspects, Annual Maintenance Contract Monitoring and Evaluation, Equipment audit, Equipment utilisation	6

### Books:

1. Kunders GD. Hospitals: facilities planning and management. Tata McGraw-Hill Education; 2004.
2. Arun K. Agrawal. Standard Operating Procedures for Hospitals in India. Atlantic Publication; 2007
3. Binsend Wang .Medical Equipment Maintenance: Management and Oversight,, Morgan & Claypool Publishers; 2012

## II-124 Interior Designing & Landscaping

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
2	1.5	23	0.5	15

### Introduction:

The course focuses on development of skills needed for planning and designing interiors, explore available options for landscaping in various healthcare set ups.

### Objectives:

- To give students an overview about planning and designing interiors of hospitals.
- To introduce students to landscaping in various healthcare set ups.

<b>Unit I</b> <b>Interior Designing</b> Principles and Elements of Design, Colour Theory, Digital Sketching, Usage of Space, Overview of Construction Materials, Functionalities of Interior Elements	4
<b>Unit II</b> Introduction to processes and tools for conversion of floor Plans to 3D plans, creating Digital Drawings, Image-Editing Techniques, 3D Modelling, Texturing, Lighting & Rendering	4
<b>Unit III</b> <b>Landscaping</b> Introduction and need, Benefits of natural environments within hospitals	4
<b>Unit IV</b> <b>Outdoor hospital spaces</b> Landscaped grounds, Landscaped setbacks, Front porches, Entry gardens, Courtyards, Plazas, Roof terraces, Roof gardens, Healing gardens, Meditation gardens, Viewing gardens, The viewing/walk-in garden, Edible gardens	4
<b>Unit V</b> <b>Outdoor design criteria for hospitals</b> Accessibility, Visibility, Feeling of Control, Feeling of security, Physiological comfort, Quiet, Familiarity, Flexibility, Sustainability	2
<b>Unit VI</b> <b>Hard landscape design</b> Gateways and entrances, Parking areas, Paths, Childrens' gardens, Dining areas	2
<b>Unit VII</b> Art, Water, Site furniture, Seating, Signage, Lighting, Receptacles, Planting design	3

### Books:

1. Setola N, Borgianni S. Designing public spaces in hospitals. Routledge; 2016 Apr 14.
2. Panero J, Zelnik M. Human dimension and interior space: a source book of design reference standards. Watson-Guptill; 2014 Jan 21.

## II-125 Wellness & Spa Centre Management

(Credits: 2, Hours: 30)

### Introduction:

This course gives an overview about the components and various aspects involved in planning, budgeting, marketing, commissioning and overall management of spas and wellness centres.

### Objectives:

- TO introduce students to composition and operations of wellness spa.
- To enable students to develop their skills in the management of wellness spa.

<b>Unit I</b> <b>Introduction to Spa and Wellness</b> Definitions of health, wellness and spas, History of wellness and spa traditions Typologies of wellness and spa facilities, Commonly availed therapies, treatments and practices, Wellness and other Branches: Hospitality, AYUSH, Tourism, Medical Tourism in Kerala, Leisure Travel and Destination Management, Regional developments in wellness and spas, Cross-cultural issues in wellness and spa services, Service Quality & Profession Etiquette, Changing trends in lifestyles and leisure	<b>12</b>
<b>Unit II</b> <b>Consumer Behaviour</b> Evidence and research base for wellness and spa treatments, Wellness and spa guests and tourists: demand, profiles, motivation	<b>6</b>
<b>Unit III</b> <b>Management</b> Managing wellness and spa facilities, Planning and developing wellness and spa facilities, Infrastructure and equipments required for Spa, Marketing wellness and spa facilities, Complementary and alternative therapies used in wellness and spas, Future trends in wellness and spas, Medical Tourism	<b>6</b>
<b>Unit IV</b> <b>Revenue Management</b> Concept, Tools of Revenue management, Essentials of Revenue Managing, Managing occupancy, Effectiveness of Revenue Managing	<b>6</b>

### Books:

1. Burkholder P. Start your own day spa and more. Entrepreneur Press; 2007 Jul 13. Health and Wellness Tourism, Melanie Smith, Laszlo Puczko, Elsevier
2. Gallup JW. Wellness centers: A guide for the design professional. John Wiley & Sons; 1999 Apr 26.

### III-126 Ethics & Medico Legal Systems in Hospital

(Credits: 2, Hours: 30)

#### Introduction:

With the increasing lawsuits in healthcare industry, this course provides an insight about emerging issues at the interface of medico-legal laws, ethics in medical practice.

#### Objectives:

- To give students an overview about medico-legal laws, ethics in medical practice in today's changing world.

<b>Unit I</b> <b>Medical Ethics</b> Introduction to Ethics, Indian Medical Council Act, Code of Medical Ethics, Research ethics	<b>8</b>
<b>Unit II</b> <b>Medico legal systems</b> Law of torts, Negligence, Liability	<b>8</b>
<b>Unit III</b> <b>Ethical Practices</b> Communication in healthcare (Doctor-patient, Relative-patient), Consent and Types of Consent, Privacy and Confidentiality, Incident Reports	<b>6</b>
<b>Unit IV</b> <b>Medical Malpractices</b> Cut practices, Organ Trafficking, Foetal Sex Determination, Crosspathy practice, Unethical conduct Ethical Dilemma: DNR, Euthanasia, Surrogacy, Advertisement	<b>8</b>

#### Books:

1. VP Singh, editor. Legal Issues in Medical Practice: Medicolegal Guidelines for Safe Practice, Jaypee, 2016
2. RK Sharma. Medico-Legal Aspects of Patient Care, PeePee, 2008
3. Patrick Davey, Anna Rathmell, Michael Dunn, Charles Foster, Helen Salisbury. Medical ethics, Law and Communication at a Glance. Wiley Blackwell, 2016

### III-127 Biomedical Waste Management, Nosocomial Infections & Biosafety

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
3	1.5	23	1.5	45

#### Introduction:

The course provides an outline about healthcare waste, its collection, segregation, storage, transport, treatment, disposal and legal aspects involved. It also focuses on personnel training, nosocomial infection prevention and helps students to effectively create, develop and enhance their personal safety.

#### Objectives:

- To impart knowledge about healthcare waste management and its importance in the context of nosocomial infection prevention.

<b>Unit I</b> <b>Introduction to Health Care Waste</b> Definition and General Classification, Infectious and Non-infectious Waste, Pathological, Pharmaceutical, Chemical, Radioactive, Non hazardous general waste, Sources of Healthcare Waste, Generation of Healthcare Waste, Risks associated with healthcare waste and its impact on public health	2
<b>Unit II</b> <b>Collection, Segregation, Storage and Transport of Waste</b> Segregation Systems, Collection within HCO, Transport within HCO, Central Storage in HCO, Offsite transport	2
<b>Unit III</b> <b>Treatment and Disposal of Healthcare Waste</b> Available methods of waste treatment: Thermal, Chemical, Irradiation, Biological Mechanical, Disposal methods for all types of waste, Land disposal	2
<b>Unit IV</b> <b>Collection &amp; Disposal of Waste Water</b> Waste water from healthcare facilities- Its Effects, Pre-treatment and Discharge	2
<b>Unit V</b> <b>Recent trends</b> Waste Minimization: Reuse, Recycle, Recovery Healthcare Waste Management Economics, Cost elements, Cost estimation and Cost reduction methods Healthcare Waste Management, Need for planning, Assignment of responsibilities, Organisation structure, Assessment of waste generation, HCO's waste management plan (Development and Implementation)	2

<b>Unit VI</b> <b>Legal Aspects of Healthcare Waste</b> BMW handling rules	<b>2</b>
<b>NOSOCOMIAL INFECTIONS &amp; BIOSAFETY</b>	
<b>Unit VII</b> <b>Infection Control</b> Awareness about hospital infection, Chain of infection, Epidemiological elements, Sources of Infection, Routes of transmission	<b>1</b>
<b>Unit VIII</b> <b>Prevention of Nosocomial Infections</b> Precautions (hand Hygiene), Cleaning, Sterilisation and Disinfection, Isolation, Occupational Safety and Measures to be taken	<b>1</b>
<b>Unit IX</b> <b>Training &amp; Development of Personnel</b> Health of Healthcare Workers, Need for stakeholder awareness, Education and Training of Healthcare Personnel, Training of Healthcare Waste Handlers	<b>1</b>
<b>Unit X</b> <b>Biosafety</b> Biosafety and laboratory biosecurity in India, WHO Global Biosafety and Laboratory Biosecurity programme, Containment equipment, Risk assessment, risk management, risk communication; Disinfection, decontamination and emergency response, Shipment of Biological material, Laboratory management and legislative framework, Biosafety programme management, The new CEN Biorisk Management standard CWA15793, Laboratory construction, design and equipment, Facility operation and maintenance, BSL 3 design and construction	<b>8</b>

### III-128 Project Management in Healthcare

(Credits: 2, Hours: 30)

#### Introduction:

This course gives an overview about the components and various aspects involved in planning, budgeting, marketing, commissioning etc., of hospital and healthcare projects.

#### Objectives:

- To give students an overview about various components of project management.
- To enable students to develop their skills in handling hospital and healthcare projects.

<b>Unit I</b> <b>Overview of Project Management</b> Project Management Framework, Project Life cycle, Project Management Roles, Overview of Projects	<b>3</b>
<b>Unit II</b> <b>Project Integration Management</b> Project Plan Development, Project Manager Skills, Project Charter, Project Sponsors	<b>2</b>
<b>Unit III</b> <b>Project Scope Management</b> Work Breakdown Structure (WBS) , Project Planning and Cost Controls, Statement of Work (SOW), Customer Approvals and Reviews, Scope Change Control	<b>2</b>
<b>Unit IV</b> <b>Project Time Management</b> Activity List, Project Network Diagram Methods, Duration Estimating Methods, Critical Path, Pert, Schedule Development , Crashing, Fast Tracking, Resource Allocation, Slack/Float, Schedule Control , Dependencies	<b>2</b>
<b>Unit V</b> <b>Project Resource Management</b> Resource Requirements, Cost Estimating Methods, Cost Budgeting, Budgets, Contingency/Management, Reserve Funds, Earned Value Concepts, Earned Value Analysis, Human resource Management Processes, RAM (Responsibility Assignment Matrix), Project communication management, MS Project formats,	<b>3</b>
<b>Unit VI</b> <b>Project Quality Management</b> Project Quality Management Processes, Overview of Quality Concepts, Quality Planning /Assurance/Control, PDCA Model, Flowcharting/Control Chart, monitoring and control	<b>2</b>
<b>Unit VII</b> <b>Project Risk Management</b> Project Risk Management Processes, Risk Defined, Types of Risk, Risk Factors , Risk	<b>2</b>

Identification, Sources of Risk, Risk Quantitative Analysis, Risk Qualitative Analysis, Risk Response Strategies, Prioritizing Risk, Workarounds, Expected Value, Decision Trees	
<b>Unit VIII</b> <b>Project Procurement Management</b> Project Procurement Management Processes, Make / Buy Decisions o Elements of a Contract, Contract Types, Statement of Work / Contracts	4
<b>Unit IX</b> <b>Hospital Project :</b> Introduction to planning of various department of hospital Guiding principles in planning, Conception of idea, hospital planning team, architecture and design brief, Financial planning of hospitals, Conception to commissioning: site development, equipment planning, bed distribution, space allocation, Tender process	6
<b>Unit X</b> <b>Miscellaneous:</b> Root cause analysis, Role of hospital executive in project management and decision making, Role of stakeholders in the project management, Carbon foot print, LEEDS	4

#### Books:

### III-129 Health and Labour Laws

(Credits: 2, Hours: 30)

#### Introduction:

This course seeks to give students an understanding of the legal framework governing labour management and also provides knowledge on various laws which are specific to healthcare industry.

#### Objectives:

- To introduce students to various labour laws and laws related to healthcare industry.

<b>Unit I</b> <b>Introduction to Legal System of India</b> Overview of Judicial system in India: Supreme Court, High Court, District and Sessions Court; Criminal, Civil, Consumer, Magistrate Courts; Fundamental rights and Right to Health, Article 21, Legal terminologies	<b>2</b>
<b>Unit II</b> <b>Administrative councils of medical profession</b> Medical council of India, Dental Council of India, Pharmacy council of India, Indian Nursing Council, Central Council of Homeopathy, Central Council of Indian Medicine	<b>4</b>
<b>LAWS</b>	
<b>Unit I</b> <b>Laws concerning Healthcare</b> Consumer Protection Act, PCPNDT Act, Transplantation of human Organs Act, Medical Termination of Pregnancy Act, Drugs and Cosmetics Act, Narcotic drugs act, Drug and Magic Remedies Act, Surrogacy Act, Birth and Death Registration Act, Mental health Act	<b>8</b>
<b>Unit II</b> <b>Laws concerning business aspects of hospital</b> Trust Act, Clinical Establishments (Registration and Regulation) Act, Insurance Act, Taxation laws, Bombay Shops and Establishments Act, Indian Partnership Act, Society Registration Act, Companies Act	<b>6</b>
<b>Unit III</b> <b>Labour Laws</b> Child Labour Act, ESI Act, Minimum Wages Act, Workmens Compensation Act, Payment of Gratuity, Payment of Bonus Act, Trade Union Act, Industrial Disputes Act, Information Technology Act	<b>10</b>

#### Books:

1. D. Samuel Abraham. Laws on Hospital Administration. B.I. Publications, 2010
2. S.P Jain, Simmi Agarwal. Industrial & Labour Law. Dhanpat Rai and Sons, 2016
3. B D. Singh. Labour Law for Managers. Excel Books, 2007
4. Bare Acts

### III-130 Industrial Relations

(Credits: 2, Hours: 30)

#### Introduction:

The course helps students to understand the complexities involved in management of labour and the aspects of maintaining symbiotic relationship between top, middle, lower level employees to create an efficient organization.

#### Objectives:

- To give students an overview about management of labour and relationship between top, middle, lower level employees for creation of an efficient organization.

<b>Unit I</b> <b>Overview of Industrial Relations</b> Meaning, Definition, Scope, Importance, Factors affecting industrial relations, Role of state in IR, Trade unions, Blue collar vs white collar unions, Association of doctors, nursing staff, paramedical	<b>5</b>
<b>Unit II</b> <b>Trade Unionism in India:</b> Origin, Growth, Structure and Management of Trade Unions, Recognitions, Leadership, Trade Unionism, Employers' Organisations in India, Managerial Associations	<b>4</b>
<b>Unit III</b> <b>Industrial Dispute</b> Meaning of dispute, Causes, Consequences, Preventive and settlement machinery, Concept of Trade Union, Conflict Management, Standing orders act	<b>5</b>
<b>Unit IV</b> <b>Worker Welfare</b> Grievance Procedure, Guidelines for handling grievance, Work ethics, Work culture and quality of work life, Workers Participation in Management, Social, Insurance Scheme, Wage fixation and collective bargaining	<b>5</b>
<b>Unit V</b> <b>Collective Bargaining:</b> Theories, Prerequisites, Process, Negotiating Skills and Strategies, Agreement –content, Validity, Implementation, Productivity Bargaining, Growth of Collective Bargaining in India.	<b>6</b>
<b>Unit VI</b> <b>Workers' Participation in Management :</b> Concept, Purpose and Practices in other countries; Workers' Participation Schemes in India – Works Committee, Joint Management Council, Worker – Director, Shop Council and Joint Council, WPM, EPM; Problems and Prospects in India; Quality Circles – Concept and Practices in India.	<b>5</b>

#### Books:

1. Arun Monappa, Ranjeet Nambudiri, Patturaja Selvaraj. Industrial Relations and Labour Laws. Tata McGraw Hill, 1997
2. B. D. Singh. Industrial Relations and Labour Laws. Excel Books, 2008
3. C.B.Mamoria, Satish Mamoria. Dynamics of Industrial Relations. Himalaya Publishing House, 2015

### III-131 Operations Management & Research

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
3	1.5	23	1.5	45

#### Introduction:

The course helps students to understand and develop their skills in building basic concepts, techniques and issues faced during operation of a hospital and healthcare organization.

#### Objectives:

- To impart knowledge about basic concepts, techniques and issues faced during operation of a hospital and healthcare organization.
- To help students develop their skills and participate in operation of a hospital and healthcare organization.

<b>Unit I</b> <b>An Overview of Operations Management:</b> Facilities planning; Production selection; Process selection; Facilities location; Facilities layout and materials handling; Capacity planning.	<b>5</b>
<b>Unit II</b> <b>Operation Planning and Control:</b> Work design; Productivity and work style; Job design; Planning and control for mass production; Planning and control for batch production; Planning and control for shop production; Planning and control of purchase	<b>3</b>
<b>Unit III</b> <b>Maintenance management and Reliability;</b> Value Engineering; Quality assurance; Quality control; Total Quality Management and World Class Systems Management(WCSM) Continuous quality improvement, defining standards, use of advanced quality management techniques, Review and Evaluation – continuous review of system, policy, procedure, process of updating, working out indexes and indexes for evaluation of various services.Productivity study, development of productivity standards, work standards, utilization standards and indices, Latest changes and development in Health Management.Managed Care / Health Maintenance Organization (H.M.O)	<b>3</b>
<b>Unit IV</b> <b>Globalization of Services;</b> Service Strategy and Competitiveness	<b>2</b>
<b>Unit V</b> <b>Process Technology &amp; Information Technology;</b> Technology in Services; Information Systems, ERP Systems; Technology & Their Service Delivery Systems; HRM in Services	<b>3</b>
<b>Unit VI</b>	

<b>Linear Programming Techniques:</b> Graphical and Simplex solution for maximizing and minimizing problems – A case of degeneracy in Simplex method – Post optimality analysis, Sensitivity Analysis, Parametric programming – Revised Simplex problem – primal / dual relationship – Goal programming.	<b>5</b>
<b>Unit VII</b> <b>Decision Theory:</b> Decision under risk, Decision trees, Decision under uncertainty. Use of Simulation technique for decision making. Case studies for the use of Simulation techniques for decision making. Optimal Simulation run.	<b>2</b>

### III-132 Quality Management & Accreditation

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
3	2	30	1	30

#### Introduction:

The course helps students gain knowledge about concept of quality and develop skills to use various tools, indicators which are essential in accreditation from various bodies at national and international level.

#### Objectives:

- To impart knowledge about components and concept of quality management in healthcare setups.
- To facilitate students to develop their skills needed to use various tools, indicators essential in accreditation process.

<b>Unit I</b> Introduction to Quality Assurance, Evolution of Quality Assurance in Healthcare, Quality Control and Quality Assurance, Dimensions of Quality Assurance	<b>6</b>
<b>Unit II</b> Understanding Systems and Processes, Standard, Protocol, Guidelines, Criteria, Performance Indicators, Setting standards and creating protocols, Quality Assurance manual and Plan.	<b>3</b>
<b>Unit III</b> Quality Assurance for Health practice: Clinical and administrative (departments) special emphasis on application of NABH standards.	<b>8</b>
<b>Unit IV</b> Cost of Quality and non conformance cost, Quality Management System, TQM. Quality Assurance at the Macro Health Scenario: District, State and National Level needs Quality Assurance and Paradigms for change in the Indian Health Care scenario, IPHS, ISO in Healthcare.	<b>3</b>
<b>Unit V</b> Healthcare Quality Organization worldwide: Quality Council of India, Institute of Medicine (with special reference to the report - Crossing the Quality Chasm), Joint Commission Resources, Health grades, International Society for Quality in healthcare, Agency for Healthcare Research and Quality (AHRQ), American Society for Quality (ASQ), Institute-of Quality Improvement (IHI), National Association for Healthcare quality (NAHQ), National Committee, for Quality Assurance (NSQA), Leap Frog Group, NICE.	<b>4</b>

<b>Unit VI</b> Training stakeholders for practicing Quality Assurance in the health care, Monitoring and Evaluation through Quality Assurance practices, Audit and Audit cycle. Accreditation and its benefits/ advantages. JCI Accreditation, Process of Accreditation.	<b>6</b>

### **III-134 Customer Relationship Management (Credits: 2, Hours: 30)**

#### **Introduction:**

The course emphasizes the need for client management by synergising, modifying and maintaining internal and external processes to deliver value to the end user.

#### **Objectives:**

- To introduce students to various techniques and processes of client management.
- To facilitate students to develop their skills needed to synergise, modify and maintain internal and external processes to deliver value to the end user.

<b>Unit I</b> <b>Introduction to CRM-</b> Introduction to CRM, Consider CRM in your business strategy, Initial CRM Considerations, Preparing for Technical Implementation.	<b>6</b>
<b>Unit II</b> <b>The Customer Service/Sales Profile:</b> Why call it the customer Service /Sales Profile; three levels of Sales and Services, Importance of the Organization and Business Process of the Organization, Shape of your customer Services and Sales Profile, CRM and your profile Tool for Capturing Customer Information.	<b>8</b>
<b>Unit III</b> <b>Pre-Order Customer-Support Issues:</b> Online Visibility via Search Engines, Real time Access to Product Information, Inventory Integration, International Business, Shipping, Order Tracking.	<b>5</b>
<b>Unit IV</b> <b>Point of Order Customer- Support Issues:</b> Understanding Point of Order issues, ensuring a Smooth Ordering Process, Providing an Intuitive Site Navigation Scheme.	<b>5</b>
<b>Unit V</b> <b>Post Order Customer- Support Issue:</b> Tracking Order, Managing Relationship Through Conflict.	<b>6</b>

### III-135 Medical Records & Database Management

(Credits: 2, Hours: 30)

#### Introduction:

This course helps students to develop skills and gain knowledge about collecting, storing, managing, accessing and using patient health data in electronic form. It also focuses on database management for efficient data retrieval, data analysis, security, use in decision support systems etc

#### Objectives:

- To build student awareness about collecting, storing, managing, accessing and using patient health data in traditional and electronic form.
- To enable students learn and practice database management for efficient data retrieval, data analysis, security.

<b>Medical Records Management</b>	
<b>Unit I</b> Introduction of Medical Record: Meaning, Definition Significance of medical record; Value of medical records to patient, hospital, doctors, medical education and research, Characteristics of good medical Record, Issues related to medical record	2
<b>Unit II</b> Developing recording system in the hospital: Maintaining adequate records on the patient file, Training programs for staff, Retention and storing of medical Records: Outpatient, Inpatient, Medico legal cases retention policies, process of medical record storing	5
<b>Unit III</b> Medico legal liabilities related to patient records, Medical Record committee and role of committee Hospital Utilization ; Bed turnover ratio, Average length of stay, Death rate, Bed occupancy rate	5
<b>Database Management</b>	
<b>Unit IV</b> Introduction, Database and types of database, Working of a Simple Centralized Database System, Tradition al File Systems vs. Modern Database Management Systems, Properties of Database, Types of Database Users, Advantages of using DBMS, Applications of traditional Database .	5
<b>Unit V</b> Database Core Concepts and Applications: Introduction, Data Model, Schemas and Instances, three schema architecture, Languages and Interfaces, DBMS Components, Classification of Database Management Systems.	5
<b>Unit VI</b> Record Storage and Primary File Organization: Introduction, Memory Hierarchy, Secondary Storage Devices, Buffering of Blocks, Placing File Records on Disk, Operation on Files, Files of Unordered Records (Heap Files), Files of Ordered Records, Hashing Techniques	5
<b>Unit VII</b> Computerization of medical Record; Electronic Health Record and Electronic medical record (EMR), advantages of EMR, ICD coding, HIPPA.	3

#### Books:

### III-136 Telemedicine Management

(Credits: 2, Hours: 30)

#### Introduction:

The course provides an overview about distance communication between patient and health professionals, by use of technology in remote patient care.

#### Objectives:

- To provide an overview about components and process of distance communication between patient and health professionals using technology, in remote patient care.

<b>Unit I</b> <b>Introduction To Telemedicine:</b> Concept ,Definitions ,History, Organs and Forms, Evolution, Impact, Issues, Type of digital information of telemedicine	<b>2</b>
<b>Unit II</b> <b>Telemedicine Systems:</b> Telemedicine as a system ,Critical sub-systems of telemedicine ,Regulatory sub-systems ,Optional sub-systems of telemedicine ,Mobile applications of telemedicine	<b>5</b>
<b>Unit III</b> <b>Clinical And Technical Aspects Of Telemedicine:</b> Applications of telemedicine ,Perspectives of clinicians ,Telemedicine and diagnostic imaging ,Telemedicine and monitoring of physiological parameters ,Telemedicine and surgery	<b>5</b>
<b>Unit IV</b> <b>Data And Information Standards In Telemedicine:</b> Role of standards in Healthcare ,Health Level Seven (HL7),Digital Imaging and Communication in Medicine (DICOM),Logical Observation Identifiers Names and Codes (LOINC); Systematized Nomenclature of Medicine-Clinical Terms (SNOMED),Adoption of Information Systems Standards in Healthcare ,Ethical and legal aspects of telemedicine: confidentiality, and the law, patient rights and consent, access to medical Records, reimbursements ,Values to the Patient, Clinician, and Health Care Organization training, cost, administration, Challenges to Successful Implementation	<b>5</b>
<b>Unit V</b> <b>Telemedicine Implementation:</b> Telemedicine networks in developed countries ,Telemedicine networks in developing countries ,Mobile telemedicine (m-Health) applications ,Integration of Telemedicine with other IT applications in healthcare ,Challenges to successful implementations ,Telemedicine case study to identify the healthcare professional roles and understanding of the implications of training, cost and administration involvement.	<b>5</b>
<b>Unit VI</b> <b>Ethical And Legal Aspects Of Telemedicine:</b> Confidentiality of medical data ,Challenges being faced by telemedicine ,Roles of	<b>5</b>

clinicians and paramedical personnel ,Ethical and legal aspects of telemedicine ,Implications of trainings and cost	
<b>Unit VII</b> <b>Adoption of Telemedicine:</b> Concepts: Innovation, Adoption, Diffusion, Integration ,Factors influencing Adoption of Telemedicine ,Diffusion of IT Innovations in Healthcare ,Adoption & Diffusion of Telemedicine in resourceful and resource limited settings	<b>3</b>

**Books:**

1. Wootton R, editor. Telehealth in the developing world. IDRC; 2009 Feb 24.

## IV-137 Health Insurance Management

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
2	1.5	23	0.5	15

### Introduction:

The course helps students to develop an understanding on basic principles of health insurance, IRDA, intermediaries in health insurance, TPA, insurance frauds and its managerial aspects.

### Objectives:

- To introduce students to the basic components, principles, processes and operations of health insurance management.

<b>Unit I</b> Basic principles of general insurance: History and development of health insurance, Current scenario- International, Indian.	4
<b>Unit II</b> Insurance Act, 1939, Insurance Regulatory and Development Authority (IRDA), Consumer Protection Act, 1986	6
<b>Unit III</b> Insurance Ombudsman, Intermediaries in health insurance, Evolution of TPA industry in India, Working and role of TPA, Managed health care, Regulations relating to the intermediaries, Other intermediaries	4
<b>Unit IV</b> <b>Health insurance frauds:</b> Introduction, Measures to control insurance fraud and abuse, Case studies, IT and control of health insurance frauds and abuse	3
<b>Unit V</b> <b>Health insurance products:</b> International, Indian health insurance products, Interpretation of terms and conditions, Specific ailment based products- HIV and Diabetes, Community based health insurance, Social Health Insurance-ESIS and CGHS	4
<b>Unit VI</b> <b>Operational aspects:</b> Claims and utilisation management, International Classification of Diseases (ICD), Provider management, Medical underwriting, HIPAA	2

### Books:

1. Meyer WF. Life & Health Insurance Law. Lawyers Co-operative Publishing Company; 1971.
2. Jütting J. Health insurance for the poor in developing countries. Gower Publishing, Ltd.; 2005..
3. Palande PS, Shah RS, Lunawat ML. Insurance in India: Changing policies and Emerging opportunities. SAGE Publications India; 2003 Sep 11.

## IV-138 Clinical Research Management

Total Credits	Theory	Teaching Hours	Practical	Posting Hours
2	1.5	23	0.5	15

### Introduction:

The course helps students to gain an overview of activities in a clinical research study and develop skills for its operations management.

### Objectives:

- To introduce students to the basic components, principles, processes and operations of clinical research management.

<b>Unit I</b> <b>Overview of Medicinal Product Research and Development</b> Drug Discovery and Pre-Clinical Research; The Clinical Research and New Drug Application Approval Process; The Biologics Research, Development, and Licensing Process; Medical Device Research, Development, and Marketing.	<b>4</b>
<b>Unit II</b> <b>Good Clinical Practice (GCP)</b> Investigational New Drug Application 21 CFR 312: Sponsor's Obligations; Investigational New Drug Application 21 CFR 312: Investigator's Obligations; Institutional Review Boards 21 CFR 56; Protection of Human Subjects 21 CFR 50; Financial Disclosure 21 CFR 54.	<b>4</b>
<b>Unit III</b> <b>International Conference of Harmonization</b> The History of the International Conference of Harmonization; The ICH Good Clinical Practice Consolidated Guideline (E6); The ICH Clinical Safety Data Guideline (E2).	<b>4</b>
<b>Unit IV</b> <b>Clinical Trial Development</b> Protocol Design and Development; Case Report Form Design and Development; Principals of Data Management and the Query Resolution Process; The Study Types Providing Expanded Access to Investigational Products.	<b>4</b>
<b>Unit V</b> <b>Investigator Site Perspective: Coordinating a Clinical Trial at the Site</b> Essentials of Source Documentation; Maintaining and Managing Essential Documents; Recording and Reporting Non-Serious and Serious Adverse Events.	<b>2</b>
<b>Unit VI</b> <b>Sponsor's Perspective: Managing a Clinical Trial</b> Selecting Investigators and Monitors; Maintaining and Managing Essential Documents (e.g. FDA Form 1572); Case Report Form Data Transmission and Generation of the Clinical Study Report; Reviewing and Reporting of Serious Unexpected Adverse Drug Experiences; Implementing Monitoring Plan and Performing Quality Control.	<b>2</b>
<b>Unit VII</b>	

### Monitoring Obligations and Methods

3

Monitoring Role and Responsibilities According to the FDA Guideline; Monitoring Role and Responsibilities According to ICH Good Clinical Practice Consolidated Guideline (E6); Monitoring Responsibilities: Type of Monitoring Visits, Monitoring Activities Pre-Visit, On-Site, and Post Visit; Monitoring Method: Implementing a Systematic Monitoring Approach to Effectively Monitor a Multi-Center Trial; Problem Solving and Trouble Shooting GCP / ICH Issues; Writing Strategic Monitoring Reports and Follow-Up Visit Letters.

## Annexure 1

### PROCEDURE FOR SELECTION OF CANDIDATES INTO MHA:

1. Candidate can get the application form and other details regarding the programme from our website [www.chmsr.net](http://www.chmsr.net) / or other revised web address.
2. Interested candidate can download the application form and **post** the duly filled application form along with the processing fee and photocopies of required documents to below mentioned address.

**Center for Health Management Studies and Research,  
Bharati Vidyapeeth( Deemed to be University),  
2<sup>nd</sup> floor of College of Physical Education,  
Dhankawadi, Katraj, Pune 411043**

**Admission fees of Rs. 1500 has to be sent with application form in form of Demand Draft to "Director, Centre for Health Management Studies and Research"**

3. Selection process comprises of personal interview. The applications received will be scrutinized further and all the eligible candidates will be notified regarding the interview.
4. Personal interview will be held on 2<sup>nd</sup> or 4<sup>th</sup> Saturday in the month of March/ April/ May/ June or as needed.
5. Students will be selected based on their previous qualification, experience and performance in personal interview.
6. The selected candidates will be notified through email/ telephone.
7. The selected candidates are required to pay **full** fees within 15days of their selection.

  
DIRECTOR  
Bharati Vidyapeeth  
(Deemed to be University)  
Centre For Health Management  
Studies and Research  
Pune-Satara Road, Pune-43.

## Annexure 2

### LIST OF DOCUMENTS TO BE SENT ALONG WITH APPLICATION FORM

Attested photocopies of following documents need to be attached with application form:

1. Aadhar Card
2. Caste Certificate (if applicable)
3. 10<sup>th</sup> and 12<sup>th</sup> passing certificate
4. Graduation certificate along with mark list
5. Transfer certificate
6. Bonafide certificate
7. Migration certificate
8. Gap certificate (if applicable)
9. Experience certificate (if applicable)
10. Medical Fitness Certificate

Original documents of the above mentioned list should be submitted during 1<sup>st</sup> week of college re-opening.

## Annexure 3

### ACADEMIC CALENDAR SUMMARY

In each term, apart from the regular classes following activities are included in the academic calendar:

- Field Visits
- Guest Lectures
- Regular Field Postings
- Conferences
- Extracurricular events

<b>Tentative Academic Calendar as Applicable to the Program</b>	
<b>For Every Admission Cycle</b>	
<b>First Year</b>	
<b>1<sup>st</sup> Semester</b>	July – October
Semester end Examinations	November
Diwali Holidays	As announced by Bharati Vidyapeeth (Deemed to be University)
Semester break	After semester examinations (2 weeks).
<b>2<sup>nd</sup> Semester</b>	
	December – March
Semester end Examinations	April
Summer Vacation	After semester examinations (4 weeks).
<b>Second Year</b>	
<b>3<sup>rd</sup> Semester</b>	
	July – October
Semester end Examinations	November
Diwali Hoildays	As announced by Bharati Vidyapeeth( Deemed to be University)
Semester break	After semester examinations (2 weeks).
<b>4<sup>th</sup> Semester</b>	
	December – March
Semester end Examinations	April

## Annexure 5

### LIST OF TYPES OF ORGANIZATIONS FOR INDUSTRIAL VISITS, GUEST LECTURES AND FIELD ASSIGNMENTS, PROJECTS AND POSTINGS

Project, Field visits, postings and Guest Lecture for MHA students will be organized in/from the following areas:

- Hospitals
  - Teaching
  - Private
  - Corporate
  - Government
  - Charitable etc
- Pharmaceutical Industries
- NGOs
- Public Health Department
- Emergency preparedness and disaster management agencies
- Biomedical waste disposal units
- Health Insurance companies and TPAs
- Hospital administration & Healthcare consultancies
- Health informatics and Telemedicine and relevant related fields
- Hospital architecture consultancies
- Event management organizations
- Law firms
- Maintenance agencies
- Focused logistics agencies
- Disaster mitigation agencies

For these activities liaisons and formal contacts with various organizations would be initiated

Students would be granted leave to attend conferences/ workshops related to the programme.

## Annexure 6

### GUIDELINES FOR CONCURRENT ROTATORY PRACTICAL POSTINGS (CRPP), PROJECT POSTINGS

Various training programmes are designed to help students to simplify the formal and informal steps involved in successful administration and operation. In this training the focus will be on description of role, the necessary documents needed to formalize monitor and complete the training process and some pearls of wisdom from other preceptors.

**Objective 1: To gain practical experience in health services administration or planning.**

**Objective 2: To apply knowledge learned in the classroom/ field and to analyze organizational activities.**

**Objective 3: To learn the key aspects of a health services delivery system, including allocation of resources.**

**Objective 4: To develop a professional identity, including communication and time management skills.**

#### **Details of Concurrent Rotatory Practical Postings (CRPP),**

Hospital and Healthcare organizations would be chosen as per the following criteria:

- Any hospital should be minimum of 30 bed capacity.
- The hospital should be a multispecialty hospital or a single specialty hospital with atleast 50 beds.
- The healthcare organizations should be of repute and with substantial experience and work in the domain.
- Student will have to submit project reports in the areas of Hospital/ Healthcare Administration in problem areas identified by the respective departments/companies during their training period.
- Projects will be carried out concurrently with academic sessions.

**\*Student will have to submit project reports in the areas of Healthcare Administration in problem areas identified by the respective departments/companies during their training period. Projects will be carried out concurrently with academic sessions daily 3 hours (2.00 pm-5.00pm).**

Students are supposed to study the following areas as relevant to the course, of the organization as a part of training and are required to maintain the Journal specifying the detailed procedures of below mentioned areas:

#### **I Hospital Administration:**

##### **1 OPD Services**

Involvement in:-

- 1) Layout of Reception Desk in OPD
- 1) Registration and department wise OPD Card segregation
- 2) Location of the concerned Department

- 3) Reception of patients
- 4) Physical facilities in OPDs
- 5) Close supervision of Doctor's Chamber for the followings:-  
Availability of
  - a) Prescription Pad,
  - b) Stethoscope
  - c) View Box,
  - d) Bed Trolley
  - e) Weigh Machine
  - f) Torch Light
  - g) Gloves
  - h) Liquid soap and towel
- 5) Records maintenance of OPD
- 6) Supervision of patient waiting area and its seating arrangement
- 7) Adequate communication with other departments / units / wards etc.
- 8) Public Addressing System
- 9) Deployment of Staff like Jr. Doctor, Para Medical Staff, Receptionist, Assistant etc.

## 2 Reception

Participation in the process of:-

- 1) Receiving patients and providing information
- 2) Providing information of availability of doctors
- 3) Fixing appointment with doctors
- 4) Arrangement of direct admission for urgent cases
- 5) Public Address System
- 6) Supervising internal transportation system
- 7) No. of Receptionist required to handle the Desk

## 3 Registration

Participation in the process of:-

- 1) Infrastructure – Lay out, Physical facilities,
- 2) Patient registration
- 3) Assisting in collection of hospital charges
- 4) Transmitting information to respective doctor
- 5) Assisting in sending patient to the respective departments
- 6) Computer based functional activity by Receptionist

## 4 Admission Desk

Involvement in the process of:-

- 1) Documentation of registration for Admission of patients
- 2) Preparation of files with relevant papers
- 3) Observing the process of receiving advance payment during admission either by cash or credit card
- 4) Formalities of procedures for ensuring availability of payee's fund
- 5) Distribution of visiting card, literatures, brochure etc. to the client
- 6) Transfer of Patient to ward
- 7) Ambulance management and billing
- 8) Deployment of no. of Receptionist-cum-Office Assistant
- 9) Foreign Exchange facilities

## 5 Billing & Discharge

Involvement in the process of:-

- 1) Assimilation of information through LAN from the different departments
- 2) Checking of data in the computer
- 3) Observation of different billing system like;
  - a) Cash Billing – As per hospital's prevailing rate schedule
  - b) TPA Billing – As per hospital's prevailing rate schedule
  - c) Copt. Billing – Tailor-made billing as per agreement
- 4) Handing over the bill to the patient party
- 5) Providing Birth Certificate, Amputated Certificate, Death Certificate, Referral Letter, as and when required
- 6) Providing discharge certificate in original along with all relevant documents for cash payee patient and photo copy of discharge certificate to the corporate and TPA patients
- 7) Deployment of no. of Receptionist-cum-Office Assistant
- 8) Facilities – Computer, Swapping Machine, Note Counting Machine, Communication facility

## 6 Pharmacy Services

Involvement in:-

- 1) Space requirement as per act
- 2) Lay out
- 3) Storage facility – different set up for different type of drugs
- 4) Equipments
- 5) Organizational structure (role and function)
- 6) Purchase of drugs – disposables, consumables etc.
- 7) Purchase of food items
- 8) Quality control
- 9) Proper storage of drugs
- 10) Sales policy
- 11) Record maintenance
- 12) Preparation of Accounts
- 13) Pharmacy Audit

## 7 Laboratory Services

Observation of:-

- 1) Location
- 2) Structural facility
- 3) Administrative Area
- 4) Laboratory equipment
- 5) Lighting in laboratory
- 6) Laboratory furniture
- 7) Special mechanical and electrical equipments
- 8) Various functional units
  - a) Clinical pathology
  - b) Hematology
  - c) Bio Chemistry
  - d) Histology
  - e) Bacteriology and Serology
- 9) Auxiliary service area
- 10) Collection of samples and delivery of reports
- 11) Requirements for various quality accreditation systems
- 12) Organization

## 8 Imaging Services

Observation of:-

- 1) Layout of X-ray rooms
- 2) Various types of imaging machines and its usages
- 3) Maintenance of imaging machines
- 4) Protective gears
- 5) Precaution taken for Hazardous radio activity
- 6) Licenses required
- 7) General and special investigations
- 8) Layout of Reception area
- 9) Dress changing area of patient
- 9) Film processing room
- 10) Analysis of developed film and preparation of report
- 10) Storing of developed film
- 11) Delivery of film to patient / ward
- 12) Roll of Radiologist, Technicians, and Office Assistant of Radiology Dept.

## Emergency

Observation of:-

- 1) Location of Emergency in hospital
- 2) Basic layout of Emergency
  - (a) Receiving patients
  - (b) Patient examination zone
  - (c) Patient investigation zone
  - (d) Procedure room
  - (d) Cardio Pulmonary Resuscitation Unit
  - (e) Dead patient barrier
  - (f) EMO's Office
  - (g) Nursing Station
- 3) Infrastructural facilities
  - a) Office of EMO
  - b) Nursing Office
- 4) Equipments
- 5) Legal procedure system
- 6) Emergency Operation Theatre
  - (a) Arrangement of instruments and oxygen for minor Operation
  - (b) Sterilization and fumigation of O.T. Room
- 7) Admission procedure
- 8) Billing for day care procedure in Emergency Dept.
- 8) Staffing
  - i) Medical
  - ii) Para Medical
- 9) Security

## 10 Critical Care Unit

Observation / involvement in:-

Physical structure and facilities

- 1) Organizational structure
- 2) Bed orientation pattern

- 3) Lighting system
- 4) Monitoring system including connection to centralized monitoring system

(a) Invasive

- (i) Central Venous Pressure (CVP)
- (ii) Arterial Blood Pressure monitoring
- (iii) Cardiac output monitoring
- (iv) Pulmonary Arterial monitoring

(b) Non-invasive

- (i) Heart beat rate
- (ii) Blood Pressure
- (iii) Respiratory rate
- (iv) Intake & output monitoring

Maintenance of sterility and general cleanliness

- 1) Maintenance of sterility of the ward
- 2) Maintenance of sterility of clothing used in CCU
- 3) General sterilizing procedures before examination of the patient

Administration of CCU

- 1) Qualified doctor having experience in CCU (as per WHO ratio)
- 2) Qualified nurse having experience in CCU (as per WHO ratio)
- 3) Deployment of qualified paramedical staff (as per WHO ratio)

Workflow

- 1) In flow of patient
- 2) Type of patients commonly admitted in CCU
- 3) Pattern of treatment patient receive in CCU
- 4) Type of patient actually needs life saving support
- 5) Out flow of patient
- 6) Counselling with outside visitors / patient party

Equipment maintained in CCU

- 1) Monitor
- 2) Ventilator
- 3) Defibrillator
- 4) ECG and other equipments used in CCU

Equipment maintained in specialized CCU

- 1) Intra Aortic Balloon Pump
- 2) Photo Therapy Machine

Maintenance of uninterrupted gas and power supply system and their utilization

- 1) Continuous wall flow oxygen
- 2) Compressed air
- 3) Suction Apparatus (Vacuum Pump)
- 4) Uninterrupted Power Supply (UPS) line

## 11 Operation Theatre

Observation / involvement in:-

- 1) Location
- 2) Zoning of Operation Theatre
- 3) Infrastructural facilities
- 4) Centralized and decentralized Operation Theatres
- 5) Equipment requirement
- 6) Procurement and maintenance including annual maintenance contract
- 7) Functions and policies of Operation Theatres

- 8) Manpower requirement
  - a) Medical Superintendent
  - b) In-charge
  - c) Anaesthetist
  - c) Nursing personnel
  - d) Technician
  - e) Ward Boy
- 9) Duties and responsibilities including standard operation procedures
- 10) Safety procedures
- 11) Methods of checking operating rooms for readiness to receive patient
- 12) Periodical sterilization / fumigation
- 13) Sterile supply
- 14) Equipments procurement and maintenance

## 12 Wards

Observation of:-

- 1) Ward Composition - Beds Patient Ratio
- 1) Lay out
  - Types of ward
  - 4) Physical facilities
    - a) Nursing Station
    - b) Doctor's room
    - c) Dirty utility room
    - d) Dress Changing room
    - e) Sanitary facilities
    - f) Dressing room for minor treatment
    - g) Isolation room
    - h) Ward Pantry
    - i) Day room
    - j) Barrier Nursing
    - k) Other facilities
    - i) Ward side Laboratory
    - ii) Linen Store
    - iii) Drug Store etc.
  - 5) Other Equipment facilities
    - Electronic Monitoring Devices
    - Ventilation Devices – Natural & Mechanical
    - c) Ward Lighting
    - d) Calling Bell
    - e) Fire Alarm System
  - 6) Organization
  - 7) Communication facilities
  - 8) Methods of patients' record keeping in wards / technical / medical details
  - 9) Admission and Discharge procedures
  - 10) Billing system / generation of bills based on bed head ticket entry
  - 11) Cleanliness
  - 12) Duty arrangement of various medical and para medical staff

## 13 Burn Unit

Observation / involvement in:-

1. Location
2. Infrastructural facility
3. Special equipment requirement for Burn Unit
4. Attached Laboratory facility
5. Communication facility
6. Maintenance of Asepsis
7. Manpower
8. Mechanism for specialized training need assessment

#### **14 Blood Bank**

Observation / involvement in:-

- 1) Location
- 2) Reception
- 3) Special arrangements for voluntary donors
- 4) Administrative Office
- 5) Record Keeping
- 6) Servicing rooms
- 7) Bleeding Room
- 8) Storage Room
- 9) Storage equipment
- 10) Regulatory requirement
- 11) Blood safety procedures
- 12) Receive and delivery of blood
- 13) Triple screening and check method
- 14) Record keeping
- 15) Medico-legal aspects
- 16) Physical facilities
- 17) Waiting facilities
- 18) Laboratory facilities
- 19) Other facilities
- 20) Issuance of Blood Donor Card
- 21) Safety devices
- 22) Liquid waste management
- 23) Procedure for discarding
- 24) Staffing

#### **15 Central Sterile Supply Department (CSSD)**

Observation of

- 1) Location
- 2) Name and function of equipments
- 3) Items processed by Central Sterile Supply Department
- 4) Sterilization technique
  - a) Heat
  - b) Gas
  - c) Liquid
  - d) Ionizing radiation
  - e) Others
- 5) Work flow
- 6) Clean zone, dirty zone
- 7) Pooling of materials, equipments

- 8) Function of different equipments used for sterilization
- 9) Process of receiving and distribution of materials
- 10) Technique of Gauge folding
- 11) Cleaning, drying and packing of sterilized materials
- 12) Segregation of Dirty zone and clean zone
- 13) Process of receiving and distribution of materials
- 14) Quality control checking of sterilization in collaboration with Micro-biology Lab.
- 15) Organization
- 16) CSSD Committee

### 16 Medical Records Department

Observation / involvement in

All elements of physical records maintenance plus

- 1) Alphanumerical data
- 2) Machine generated data
- 3) Image data
- 4) Interpretation of data
- 5) Derived data
- 6) Storage process of electronic data
- 7) Data classification
- 8) ICD – 10 System and its use in electronic records maintenance system.

### 17 Maintenance Department

Observation of

- a) Location of different maintenance department
- b) Lay out
- c) Power Generation and supply
- d) Water Treatment Plant and distribution system
- e) Demineralization Plant with R.O. facility for Dialysis unit
- f) Oxygen Plant
- g) Effluent Treatment Plant
- h) Air Condition Plant and distribution system
- i) Maintenance of the medical equipments, calibration
- j) Maintenance of total hospital building – civil, electrical and mechanical
- k) Organization
- l) Bio Medical equipment and their function
- m) Observation of Bio-Medical Equipments
- n) Knowing the name of the Bio-Medical Equipments
- o) Importance and fundamental functions of Bio-Medical Equipments
- p) Maintenance procedures of Bio-Medical Equipments
- q) Need assessment and procurement procedure
- r) Periodical audit of Bio Medical Equipment
- s) AMC of Bio Medical Equipments

### 18 Personnel / H. R. Department

Observation and Involvement under supervision for:

**A. Present employee status:** Organization structure, Job description and specification, Clarity of roles ; Preparation of Cadre wise Daily Duty roster / rotation, Job Rotation/ Deputation; Record keeping and verification of employee leaves according to its types and organizational policy; Record keeping and verification of employee overtime.

**B. Selection and recruitment procedure:** Manpower planning; Job analysis; Identification of sources of recruitment; preparation of advertisement; Scrutiny of job applications; Scheduling and coordination of interviews; Process of shortlisting and communication to the selected candidates; process of Pre-employment health check-up; joining formalities etc.

**C. Employee training and development system-** Preparation of Cadre wise induction and training module; Training need analysis according to performance; job profile and recent trends/advances in the employee domain.

**D. Employee appraisal system:** Periodicity, criteria and methodology of appraisal, Performance based incentives/disincentives, Promotion criteria and process

**5. Employee welfare activities:** Group Insurance, PPF, Dependant Benefits, Employee Medical benefits, Activities for celebrating organizational achievements, etc.

**6. Retirement and retirement benefit system:** Review of policy, Process, coordination with relevant departments, documentation etc.

**7. H. R. Audit:** Employee awareness regarding their rights and responsibilities, Employee Turnover rate/ Attrition rate, verification of all processes of H.R. department etc.

**8. Wage Administration:** Calculation of Payroll preparation, preparation of Pay Slip, calculation and policy of wage and salary deductions; etc.

**9. Disciplinary Action:** Criteria for identification of in-disciplinary actions or behaviour; process and documentation for disciplinary action.

**10. Grievance Redress:** Policy, process, documentation; handling of grievances in the court of law

## 19 Marketing

Observation / involvement in:-

- 1) Office Lay out
- 2) Different types of advertisement for projection
- 3) Fixture required for marketing
  - (a) Banner
  - (b) Leaflet
  - (c) Hoarding
  - (d) CD / VCD / DVD
- 4) Media Management (Print, Electronic)
- 5) Event Management (Camp, Seminar, CME)
- 6) Institutional / Corporate marketing
- 7) Direct marketing
- 8) Channel / Franchise marketing
- 9) Data analysis
- 10) Patient feed back
- 11) Organization

## 20 Laundry & Linen Services

Observation of

- 1) Location
- 2) Work flow
- 3) Physical facilities of Laundry
  - a) Receiving, Storing, Sorting, washing area
  - b) Central Disinfection Area
  - c) Cleaned Linen processing room
  - d) Laundry Manager's Office
  - e) Staff Room
  - f) Sewing and inspection area
  - g) Supply storage room

- h) Solution Preparation area
- i) Cleaned Linen issue area
- j) Natural ventilation and light
- k) Free Linen movement area
- 4) Other facilities
  - a) Adequate Water supply
  - b) Drainage system
  - c) Adjacent power supply
  - d) Steam
  - e) Compressed air
- 5) Arrangement of equipments
- 6) Soiled linen receiving from ward, OT, other areas
- 7) Process of sorting and cleaning, washing, drying, ironing
- 8) Collection and storing process of cleaned linen
- 9) Sorting of discarded linen and sending them to the Store
- 10) Process of linen distribution
- 11) Maintenance of hygiene
- 12) Infection control process
- 13) Process of staff training
- 14) Process of co-ordination among the related departments
- 15) Manpower

#### **21 Kitchen & Dietary Services**

- 1) Overview of kitchen lay out and its adjacent areas
- 2) Physical facilities
  - a) Receiving area
  - b) Washing area
  - c) Preparation area
  - d) Cooking area
  - e) Storing area
  - f) Food Distribution area
  - g) Garbage disposal area
  - h) Office of Kitchen Manager
  - i) Office Kitchen Staff
- 3) Work Flow

4) Patient visit and observation of the diet chart preparation

5) Observation and process of:-

- i) Coordination with Dietitian before preparing process of food for patient
- ii) Receiving and storage of perishable and non-perishable food
- iii) Process of calculation the quantity of perishable & non-perishable items to be cooked
- iv) Washing, cutting, preparation and cooking process
- v) Storage of cooked food and precaution to be taken
- vi) Delivery process of hot food (Hot Trolley) to patient according to diet chart
- vii) Process of distribution of food in the cafeteria and dining hall
- viii) Maintenance of hygiene by kitchen staff
- ix) Safety measure
- x) Receiving of soiled utensils and left over food
- xi) Collection of utensils and washing process
- xii) Garbage disposal system
- xiii) Maintenance of Accounts

- xiv) Pest control system
  - xv) Process of supervision and leadership style
  - xvi) Educational programme, research, dietary counseling etc.
  - xvii) Periodical audit
6. Organization

## 22 Security Services

Observation of:-

- 1) Security room and posts
- 2) Security services in the hospital
- 3) Role of Security during patient visiting hours
- 4) Traffic control inside the hospital
- 5) Maintenance of fire precautions
- 6) Process of medico legal activities

## 23 Transportation Services

Observation of:

- a) Different internal and external transport
- b) Different ambulances
- c) Ambulances enmarked for communicable disease
- d) Facilities given in the emergency ambulance
- e) Maintenance of ambulance
- f) Maintenance of internal transportation

## 24 Mortuary

Observation / involvement in:-

- 1) Location
- 2) Physical facilities
- 3) Body refrigerator
- 4) Walk in refrigerator
- 5) Capacity decision of Mortuary
- 6) Autopsy facility
- 7) Requirement for autopsy room
- 8) Preservation / identification/leveling of viscera / body fluids and other materials for medicolegal purposes
- 9) Embalming procedures
- 10) Methods of long distance transport of dead bodies
- 11) Arrangements for religious rides
- 12) Mortuary traffic control
  - a) Internal
  - b) External
- 13) Identification of bodies using triple check system
- 14) Maintenance of records
- 15) Various legal requirements
- 16) Disposal of unclaimed bodies
- 17) Various religious rites

## 25 Library in Hospital

Observation the functioning of:-

- 1) Library work flow
- 2) Physical facilities

- 3) Procurement of books and journals as per Good Office Committee (GOC) norms
- 6) Receiving the purchased books / periodicals, audio visual journals etc.
- 7) Preservation of books in the Shelves
- 8) Catalogue preparation
- 9) Process of issue and collection of books
- 10) Updating of catalogue annually
- 11) Library rules and regulations
- 12) Preparation of Membership Card
- 13) Repair of damaged books
- 14) Ascertaining of lost books and journals
- 15) Arrangement of educational programme through Video Satellite system
- 16) Stock verification of Library items periodically

## **II Telemedicine**

1. Infrastructure – both end – (1) Hospital end (2) Nodal Centre
2. Requirement
  - a) Computer Monitors
  - b) Cameras
  - c) Internet connection
3. Observation of telemedicine techniques and taking part in the process
4. Manpower

## **III Health Informatics**

1. Infrastructure Requirement
  - a) Computer Monitors
  - b) Cameras
  - c) Internet connection
2. Observation of informatics techniques and taking part in the process
3. Manpower requirement
4. Transmission modes

## **IV Medical Transcription**

1. Observation of techniques and taking part in the process
2. Infrastructural requirement
3. Trained manpower
4. Transmission modes

## **Health Insurance company**

## **VI Biomedical Waste Disposal Units**

## **VII Clinical Research Organization**

## **VIII Pharmaceutical Industry**

## **IX Non-Governmental Organization**

## **X Public Health Department**

## **XI Emergency Preparedness & Disaster Management Agency**

## **XII Healthcare Consultancies**

## **XIII Event management organizations**

## **XIV Law firms**

## **XV Maintenance agencies**

## **XVI Focused logistics agencies**

## **XVII Other Scope Areas of Healthcare Administration**

## Annexure 7

### EXAMINATION PATTERN

Attendance of 75% is mandatory to appear for examinations. Students will be evaluated throughout the two years programme as under:

- Ongoing internal assessments (which include students' attendance and participation in classroom &/ or experiential learning activities, interactive activities and assignments, field visit, tests in form etc.)
- Semester end University Examinations.
- Journal submissions.
- Project Reports and Viva-Voce.

The performance of student is evaluated on Cumulative Grade Point Average (CGPA) system.

Theory, Practical, University and Internal examinations should be passed separately.

#### Internal & University Examination Details

For each paper of 100 marks (3 credit courses), there will be an Internal Assessment (IA) for 40 marks and the University Examination (UE) for 60 marks. The UE will be of three hours duration.

For each paper of 60 marks (2 credit courses), there will be an Internal Assessment (IA) for 20 marks and the University Examination (UE) for 40 marks. The UE will be of two hours duration.

Marks Allocated for Internal and University Exams			
Course Credits	Internal Assessment	University Exam	Total
3	40	60	100
2	20	40	60

Marks Allocation in Internal Assessment			
Credits	Assignments	Class Tests( Written and /or Oral)	Participation*
3	10 marks	20 marks (1 per every course)	10 marks
2	5 marks	10 marks (1 per every course)	5 marks

\*Students participation in classroom &/ or experiential learning, discipline, group discussions, assignments, tests, field activities, performance reports, pro-activeness, field work and classroom &/ or experiential learning attendance etc.

For passing in the subject, student has to score minimum **40% marks separately in UE's & IA's**. Student should clear all the subjects of **I Semester** and would also be allowed to carry forward **maximum 3 subjects from II Semester to get admission into second year**. In this scenario, the student will be allowed **admission only in winter session (July - October) of the subsequent academic year/s only after** clearing all (I & II Semester) backlog subjects.

**Framework of University Examination**

Course Credits	Questions	Marks	University Total
3	<b>Section -I</b> Out of 3 long answers (each carrying 10 marks), 2 should be answered.	10 x 2 = 20	60 marks
	Out of 3 short notes (each carrying 5 marks), 2 should be answered.	5 x 2 = 10	
	<b>Section -II</b> Out of 3 long answers (each carrying 10 marks), 2 should be answered.	10 x 2 = 20	
	Out of 3 short notes (each carrying 5 marks), 2 should be answered.	5 x 2 = 10	
2	Two long answers (each carrying 10 marks) should be answered. There is no choice.	10 x 2 = 20	40 marks
	Out of 5 short notes (each carrying 5 marks), 4 should be answered.	5 x 4 = 20	

**Journal**

Handwritten journal should be submitted in uniform format, as instructed by CHMSR faculty in I (administrative departments) and III (clinical/ specialization departments) semesters.

Journal Format	
S.No	Content
1	Certificate signed by Director, CHMSR
2	Certificate of Attendance signed by hospital/ healthcare organization authority
3	Organization Profile
4	Introduction to Department
5	Layout
6	Organization Structure
7	Department Work Details
8	Enlisting of Processes with Flowcharts of each process in the Department
9	Equipment List

**Guidelines:**

1. Title page & certificate should be colour printed.
2. The Journal should be hand written with hand drawn diagrams, however students can paste relevant photographs wherever needed by them.
3. The Journal should be spiral bound.
4. Certificate should signed by HOD of the department/institute where the student is posted.
5. Journal marks would be included in internal assessment under participation in each course of the semester.

**Concurrent Rotatory Practical Postings (CRPP) with Comprehensive Viva-Voce**

**Marks Distribution :**

Sr.No	Seat No	Internal Assessment (40 Marks) <ul style="list-style-type: none"><li>• Organizational feedback about student<ul style="list-style-type: none"><li>○ General Behaviour-10</li><li>○ Punctuality-10</li><li>○ Efficiency -10</li></ul></li><li>• Posting Completion Certificate-10</li></ul>	Project Report and Viva-Voce (out of 60)

Signature of Co-ordinator			

## Guidelines for Project Report

Students will start working on their project I simultaneously along with their academic sessions from the commencement of first semester.

Students will start working on project II simultaneously from the commencement of third semester.

For all the projects they would be posted in relevant organization daily for five hours (as needed) throughout the semester.

Students are supposed to submit the project report in the below mentioned format.

The evaluation of this will be at the end, the break up of which is mentioned above in tables.

### Format of Project Report

S.No	Content	Project
i	Title Page	1 Page
ii	Acknowledgements	1 Page
iii	Certificate from CHMSR	
iv	Certificate from Organisation	
v	Executive Summary (Abstract)	2 Pages
vi	Contents	1 Page
vii	List of Tables	
viii	List of Graphs

x	Abbreviations	1 Page
1	Introduction 1.1. Organization Profile(where project is done) 1.2. Definition and Purpose of the Project 1.3. Aim and Objectives of the Project 1.4. Value Addition to Existing System/ Set up	Max. 7 Pages
2	Review of Literature	Max. 15 Pages
3	Research Methodology 1.1 Method of Research 1.2 Type of Research 1.3 Objectives (with Justification) 1.4 Data Type – Primary & Secondary 1.5 Data collection 1.6 Sampling 1.7 Processing and Analysis of Data	Max. 5 Pages
4	Data Analysis and Interpretation	Min. 20 Pages
5	Conclusion	1-2 Pages
6	Limitations	1-2 Pages
7	Recommendations	
xi	Annexure	
xii	Bibliography	

#### Standard of Passing:

In order to pass in a course, the student must obtain a minimum GP of 4.5 at UE and also a minimum Grade Point of 4.5 IA separately. Otherwise, he/she will have to reappear for the subject till he/she passes.

100

MHA -2018 program

DIRECTOR  
 Bharati Vidyapeeth  
 (Deemed to be University)  
 Centre for Health Management  
 Studies and Research  
 Pune-Satara Road, Pune-43.

The Grade Point Index (GPI) for a course will be calculated by using the formula  $0.6 * GP (UE) + 0.4 * GP (IA)$ . At the end of each semester, a Cumulative Grade Point Average (CGPA) and also Semester Grade Point Average (SGPA) will be calculated as a weighted average of the GPI of all courses in which the student has passed till that semester.

A student shall be permitted to proceed from first semester to second semester irrespective of his/her back-log in any number of subjects.

Permission to third semester will be given on clearance of all first semester and atleast five courses of second semester.

A student shall be permitted to final semester irrespective of his/ her back-log in any number of subjects, once the student is permitted to third semester.

A student who passes in all the courses will be declared to have passed Masters in Hospital Administration (MHA) with the following honors:

CGPI in [4.00, 4.99]	Pass Class
CGPI in [5.00, 5.49]	Second Class
CGPI in [5.50, 5.99]	Higher Second Class
CGPI in [6.00, 7.99]	First Class
CGPI in [8.00, 10.00]	First Class with Distinction

### Grace marks & Mercy Marks

As per Bharati Vidyapeeth (Deemed to be University) guidelines.

### 10 Grade Point Scheme:-

The 10 point scale would be used to convert marks out of 100 to grades and grade points according the following table:-

Range in % of marks	Range of CGPA	Letter grade
[75.0 - 100]	[9.00 - 10.00]	O
[70.0 - 74.9]	[8.00 - 8.99]	A+
[65.0 - 69.9]	[7.00 - 7.99]	A
[60.0 - 64.9]	[6.00 - 6.99]	B+
[55.0 - 59.9]	[5.50 - 5.99]	B
[50.0 - 54.9]	[5.00 - 5.49]	C+
[45.0 - 49.9]	[4.50 - 4.99]	C
40.0 - 44.9]	[4.00 - 4.49]	D
[00.0 - 39.9]	[0.00 - 3.99]	F

### Structure of the Transcript:

At the end of each semester, student will be given a transcript showing the performance and result in each course. The transcript shows, for each course the title of the course, credit values, grade in University examination, grade in internal assessment, Grade point index, result as pass or fail. Also, the semester grade point average and cumulative grade point average will be shown. Further, the equivalent percentage of marks corresponding to SGPA and CGPA will be shown. The formula to convert SGPA or CGPA to equivalent percentage is given by:

$$10 \times \text{CGPA if CGPI/SGPI is in [4.00, 6.00]}$$

$$\text{Equivalent percentage marks} = 05 \times \text{CGPA} + 30 \text{ if CGPI/SGPI is in [6.00, 9.00]}$$

$$25 \times \text{CGPA} - 150 \text{ if CGPI/SGPI is in [9.00, 10.00]}$$

The percentage of marks can be obtained by using the following table:

CGPA	% of marks	CGPA	% of marks	CGPA	% of marks	CGPA	% of marks
4.0	40.0	5.5	55.0	7.0	65.0	8.5	72.5
4.1	41.0	5.6	56.0	7.1	65.5	8.6	73.0
4.2	42.0	5.7	57.0	7.2	66.0	8.7	73.5
4.3	43.0	5.8	58.0	7.3	66.5	8.8	74.0
4.4	44.0	5.9	59.0	7.4	67.0	8.9	74.5
4.5	45.0	6.0	60.0	7.5	67.5	9.0	75.0
4.6	46.0	6.1	60.5	7.6	68.0	9.1	77.5
4.7	47.0	6.2	61.0	7.7	68.5	9.2	80.0
4.8	48.0	6.3	61.5	7.8	69.0	9.3	82.5
4.9	49.0	6.4	62.0	7.9	69.5	9.4	85.0
5.0	50.0	6.5	62.5	8.0	70.0	9.5	87.5
5.1	51.0	6.6	63.0	8.1	70.5	9.6	90.0
5.2	52.0	6.7	63.5	8.2	71.0	9.7	92.5
5.3	53.0	6.8	64.0	8.3	71.5	9.8	95.0
5.4	54.0	6.9	64.5	8.4	72.0	9.9	97.5
						10.0	100

## NOTIFICATION NO. 917

It is hereby notified for the information of all concerned that the Academic Council, at its 55<sup>th</sup> meeting held on 26-3-2018, has resolved to start following Two PG Diploma courses and Four Certificate courses under the Faculty of Interdisciplinary Studies offered at BVDU Centre for Health Management Studies and Research, Pune from the academic year 2018-19.

Sr. No.	Name of the Course	Duration
1	Post Graduate Diploma in Hospital Planning & Design (PGDHPD)	1 year
2	Post Graduate Diploma in Health Event Management (PGDHEM)	1 year
3	Certificate Course in Hospital Material and Pharmacy Management (CCHMPM)	1 year
4	Certificate Course in Hospital Support Services Management (CCHSSM)	1 year
5	Certificate Course in Hospital Maintenance Management (CCHMM)	1 year
6	Certificate Course in Outpatient Service Management (CCOSM)	1 year

All the concerned may please note.

Ref. No. BVDU/2017-18/5382

Date: April 11, 2018

To

1. The Dean, Faculty of Interdisciplinary Studies, BVDU, College of Engineering, Pune 43
2. The Director, Centre for Health Management Studies & Research, Pune 43

## NOTIFICATION NO. 893

It is hereby notified for the information of all concerned that the Academic Council, at its 55<sup>th</sup> meeting held on 26-3-2018, has resolved to approve the revised syllabi for :

- (1) Master of Hospital Administration
- (2) PG Diploma in Hospital Management and
- (3) PG Diploma in Disaster Management

offered in the University at Centre for Health Management Studies & Research to be implemented from the academic year 2018-19.

Copies of revised syllabi for the above mentioned courses are enclosed.

All the concerned may please note.

**NOTIFICATION NO. 1034**

It is hereby notified for the information of all concerned that the Academic Council, at its 60<sup>th</sup> meeting held on 20-1-2020 resolved to start the following B.Sc. / PG Diploma / Certificate courses at Medical College, Pune from the academic year 2020-21.

It was further resolved to authorize the Hon'ble Vice Chancellor to approve the course structure, syllabus and the rules of the examinations for all the proposed Degree, Diploma and certificate programmes,

1)	Name of the Course	:	B.Sc. (Cardiovascular Technology)
	Duration	:	3 yrs. + 1 yr. internship
	Eligibility Criteria	:	1)Age- Completed 17 yrs at the time of admission. 2)Candidates who has successfully passed the Higher Secondary Examinations (10+2 Sci.) Course with Physics, Chemistry, Biology and English with minimum 50% marks from recognized Board.
	Intake	:	10
	Course Fee	:	Rs. 1,00,000/- per year
2)	Name of the Course	:	B.Sc. (Neuro Electrophysiology Technology)
	Duration	:	3 yrs. + 1 yr. internship
	Eligibility Criteria	:	1)Age- Completed 17 yrs at the time of admission. 2)Candidates who has successfully passed the Higher Secondary Examinations (10+2 Sci.) Course with Physics, Chemistry, Biology and English with minimum 50% marks from recognized Board.
	Intake	:	10
	Course Fee	:	Rs. 1,00,000/- per year
3)	Name of the Course	:	B.Sc. (Anaesthesia and OT Technology)
	Duration	:	3 yrs. + 1 yr. internship
	Eligibility Criteria	:	1)Age- Completed 17 yrs at the time of admission. 2)Candidates who has successfully passed the Higher Secondary Examinations (10+2 Sci.) Course with Physics, Chemistry, Biology and English with minimum 50% marks from recognized Board.
	Intake	:	10
	Course Fee	:	Rs. 1,00,000/- per year

G. Jayakumar

..2..

4)	Name of the Course	:	PG Diploma in Clinical Nutrition
	Duration	:	1 yr.
	Eligibility Criteria	:	B.Sc. with Physics, Chemistry, Biology, Nursing and English with minimum 50% marks from recognized Board.
	Intake	:	20
	Course Fee	:	Rs. 40,000/-
5)	Name of the Course	:	PG Diploma in Psychological Counselling
	Duration	:	1 yr.
	Eligibility Criteria	:	Bachelor's degree in Psychology. B.Sc.(Nursing), P.B. B.Sc. (Nursing).
	Intake	:	10
	Course Fee	:	Rs. 40,000/-
6)	Name of the Course	:	PG Diploma in Neonatal Nursing
	Duration	:	1 yr.
	Eligibility Criteria	:	B.Sc.(Nursing), P.B. B.Sc. (Nursing).
	Intake	:	10
	Course Fee	:	Rs. 40,000/- per year
7)	Name of the Course	:	Certificate Course in Endoscopy Technician
	Duration	:	1 yr.
	Eligibility Criteria	:	1) Completed 17 yrs at the time of admission. 2) ANM/ GNM / B.Sc. (Nursing)
	Intake	:	10
	Course Fee	:	Rs. 40,000/-

This is for the information of all concerned.

Pharmacy Council of India  
New Delhi

Rules & Syllabus for the Bachelor  
of Pharmacy (B. Pharm) Course

---

[Framed under Regulation 6, 7 & 8 of the Bachelor of  
Pharmacy (B. Pharm) course regulations 2014]

## **CHAPTER- I: REGULATIONS**

### **1. Short Title and Commencement**

These regulations shall be called as “The Revised Regulations for the B. Pharm. Degree Program (CBCS)of the Pharmacy Council of India, New Delhi”. They shall come into effect from the Academic Year 2016-17. The regulations framed are subject to modifications from time to time by Pharmacy Council of India.

### **2. Minimum qualification for admission**

#### **2.1 First year B. Pharm:**

Candidate shall have passed 10+2 examination conducted by the respective state/central government authorities recognized as equivalent to 10+2 examination by the Association of Indian Universities (AIU) with English as one of the subjects and Physics, Chemistry, Mathematics (P.C.M) and or Biology (P.C.B / P.C.M.B.) as optional subjects individually. Any other qualification approved by the Pharmacy Council of India as equivalent to any of the above examinations.

#### **2.2. B. Pharm lateral entry (to third semester):**

A pass in D. Pharm. course from an institution approved by the Pharmacy Council of India under section 12 of the Pharmacy Act.

### **3. Duration of the program**

The course of study for B.Pharm shall extend over a period of eight semesters (four academic years) and six semesters (three academic years) for lateral entry students. The curricula and syllabi for the program shall be prescribed from time to time by Pharmacy Council of India, New Delhi.

### **4. Medium of instruction and examinations**

Medium of instruction and examination shall be in English.

### **5. Working days in each semester**

Each semestershall consist of not less than 100 working days. The odd semesters shall be conducted from the month of June/July to November/December and the even semesters shall be conducted from December/January to May/June in every calendar year.

### **6. Attendance and progress**

A candidate is required to put in at least 80% attendance in individual courses considering theory and practical separately. The candidate shall complete the prescribed course satisfactorily to be eligible to appear for the respective examinations.

## **7. Program/Course credit structure**

As per the philosophy of Credit Based Semester System, certain quantum of academic work viz. theory classes, tutorial hours, practical classes, etc. are measured in terms of credits. On satisfactory completion of the courses, a candidate earns credits. The amount of credit associated with a course is dependent upon the number of hours of instruction per week in that course. Similarly, the credit associated with any of the other academic, co/extra-curricular activities is dependent upon the quantum of work expected to be put in for each of these activities per week.

### **7.1. Credit assignment**

#### **7.1.1. Theory and Laboratory courses**

Courses are broadly classified as Theory and Practical. Theory courses consist of lecture (L) and /or tutorial (T) hours, and Practical (P) courses consist of hours spent in the laboratory. Credits (C) for a course is dependent on the number of hours of instruction per week in that course, and is obtained by using a multiplier of one (1) for lecture and tutorial hours, and a multiplier of half (1/2) for practical (laboratory) hours. Thus, for example, a theory course having three lectures and one tutorial per week throughout the semester carries a credit of 4. Similarly, a practical having four laboratory hours per week throughout semester carries a credit of 2.

### **7.2. Minimum credit requirements**

The minimum credit points required for award of a B. Pharm. degree is 208. These credits are divided into Theory courses, Tutorials, Practical, Practice School and Project over the duration of eight semesters. The credits are distributed semester-wise as shown in Table IX. Courses generally progress in sequences, building competencies and their positioning indicates certain academic maturity on the part of the learners. Learners are expected to follow the semester-wise schedule of courses given in the syllabus.

The lateral entry students shall get 52 credit points transferred from their D. Pharm program. Such students shall take up additional remedial courses of 'Communication Skills' (Theory and Practical) and 'Computer Applications in Pharmacy' (Theory and Practical) equivalent to 3 and 4 credit points respectively, a total of 7 credit points to attain 59 credit points, the maximum of I and II semesters.

## **8. Academic work**

A regular record of attendance both in Theory and Practical shall be maintained by the teaching staff of respective courses.

### 9. Course of study

The course of study for B. Pharm shall include Semester Wise Theory & Practical as given in Table – I to VIII. The number of hours to be devoted to each theory, tutorial and practical course in any semester shall not be less than that shown in Table – I to VIII.

**Table-I: Course of study for semester I**

<b>Total credit points for the program</b>	<b>209/211<sup>§</sup>/212<sup>#</sup></b>

\* The credit points assigned for extracurricular and or co-curricular activities shall be given by the Principals of the colleges and the same shall be submitted to the University. The criteria to acquire this credit point shall be defined by the colleges from time to time.

<sup>§</sup>Applicable ONLY for the students studied Physics / Chemistry / Botany / Zoology at HSC and appearing for Remedial Mathematics course.

<sup>#</sup>Applicable ONLY for the students studied Mathematics / Physics / Chemistry at HSC and appearing for Remedial Biology course.

## **10. Program Committee**

1. The B. Pharm. program shall have a Program Committee constituted by the Head of the institution in consultation with all the Heads of the departments.

2. The composition of the Program Committee shall be as follows:

A senior teacher shall be the Chairperson; One Teacher from each department handling B.Pharm courses; and four student representatives of the program (one from each academic year), nominated by the Head of the institution.

3. Duties of the Program Committee:

- i. Periodically reviewing the progress of the classes.
- ii. Discussing the problems concerning curriculum, syllabus and the conduct of classes.
- iii. Discussing with the course teachers on the nature and scope of assessment for the course and the same shall be announced to the students at the beginning of respective semesters.
- iv. Communicating its recommendation to the Head of the institution on academic matters.
- v. The Program Committee shall meet at least thrice in a semester preferably at the end of each Sessionalexam (Internal Assessment) and before the end semester exam.

## **11. Examinations/Assessments**

The scheme for internal assessment and end semester examinations is given in Table – X.

### **11.1. End semester examinations**

The End Semester Examinations for each theory and practical coursethrough semesters I to VIII shall be conducted by the university except for the subjects with asterix symbol (\*) in table I and II for which examinations shall be conducted by the subject experts at college level and the marks/grades shall be submitted to the university.

**Tables-X: Schemes for internal assessments and end semester examinations semester wise**

### 11.2. Internal assessment: Continuous mode

The marks allocated for Continuous mode of Internal Assessment shall be awarded as per the scheme given below.

**Table-XI: Scheme for awarding internal assessment: Continuous mode**

<b>Theory</b>		
<b>Criteria</b>	<b>Maximum Marks</b>	
Attendance (Refer Table – XII)	4	2
Academic activities (Average of any 3 activities e.g. quiz, assignment, open book test, field work, group discussion and seminar)	3	1.5
Student – Teacher interaction	3	1.5
<b>Total</b>	<b>10</b>	<b>5</b>
<b>Practical</b>		
Attendance (Refer Table – XII)	2	
Based on Practical Records, Regular viva voce, etc.	3	
<b>Total</b>	<b>5</b>	

**Table- XII: Guidelines for the allotment of marks for attendance**

<b>Percentage of Attendance</b>	<b>Theory</b>	<b>Practical</b>
95 – 100	4	2
90 – 94	3	1.5
85 – 89	2	1
80 – 84	1	0.5
Less than 80	0	0

#### 11.2.1. Sessional Exams

Two Sessional exams shall be conducted for each theory / practical course as per the schedule fixed by the college(s). The scheme of question paper for theory and practical Sessional examinations is given below. The average marks of two Sessional exams shall be computed for internal assessment as per the requirements given in tables – X.

Sessional exam shall be conducted for 30 marks for theory and shall be computed for 15 marks. Similarly Sessional exam for practical shall be conducted for 40 marks and shall be computed for 10 marks.

#### Question paper pattern for theory Sessional examinations

##### For subjects having University examination

I. Multiple Choice Questions (MCQs)	=	10 x 1 = 10
OR		OR
Objective Type Questions (5 x 2) (Answer all the questions)	=	05 x 2 = 10
I. Long Answers (Answer 1 out of 2)	=	1 x 10 = 10
II. Short Answers (Answer 2 out of 3)	=	2 x 5 = 10
		-----
Total	=	30 marks

**For subjects having Non University Examination**

I. Long Answers (Answer 1 out of 2)	=	1 x 10 = 10
II. Short Answers (Answer 4 out of 6)	=	4 x 5 = 20
		-----
Total	=	30 marks
		-----

**Question paper pattern for practical sessional examinations**

I. Synopsis	=	10
II. Experiments	=	25
III. Viva voce	=	05
		-----
Total	=	40 marks
		-----

**12. Promotion and award of grades**

A student shall be declared PASS and eligible for getting grade in a course of B.Pharm. program if he/she secures at least 50% marks in that particular course including internal assessment. For example, to be declared as PASS and to get grade, the student has to secure a minimum of 50 marks for the total of 100 including continuous mode of assessment and end semester theory examination and has to secure a minimum of 25 marks for the total 50 including internal assessment and end semester practical examination.

**13. Carry forward of marks**

In case a student fails to secure the minimum 50% in any Theory or Practical course as specified in 12, then he/she shall reappear for the end semester examination of that course. However his/her marks of the Internal Assessments shall be carried over and he/she shall be entitled for grade obtained by him/her on passing.

**14. Improvement of internal assessment**

A student shall have the opportunity to improve his/her performance only once in the Sessional exam component of the internal assessment. The re-conduct of the Sessional exam shall be completed before the commencement of next end semester theory examinations.

**15. Re-examination of end semester examinations**

Reexamination of end semester examinations shall be conducted as per the schedule given in table XIII. The exact dates of examinations shall be notified from time to time.

**Table-XIII: Tentative schedule of end semester examinations**

Semester	For Regular Candidates	For Failed Candidates
I, III, V and VII	November / December	May / June
II, IV, VI and VIII	May / June	November / December

**Question paper pattern for end semester theory examinations**

**For 75 marks paper**

I. Multiple Choice Questions(MCQs)	=	20 x 1	=	20
OR				OR
Objective Type Questions (10 x 2)	=	10 x 2	=	20
(Answer all the questions)				
II. Long Answers (Answer 2 out of 3)	=	2 x 10	=	20
III. Short Answers (Answer 7 out of 9)	=	7 x 5	=	35

Total = 75 marks

**For 50 marks paper**

I. Long Answers (Answer 2 out of 3)	=	2 x 10	=	20
II. Short Answers (Answer 6 out of 8)	=	6 x 5	=	30

Total = 50 marks

**For 35 marks paper**

I. Long Answers (Answer 1 out of 2)	=	1 x 10	=	10
II. Short Answers (Answer 5 out of 7)	=	5 x 5	=	25

Total = 35 marks

**Question paper pattern for end semester practical examinations**

I. Synopsis	=	5
II. Experiments	=	25
III. Viva voce	=	5

Total = 35 marks

**16. Academic Progression:**

No student shall be admitted to any examination unless he/she fulfills the norms given in 6. Academic progression rules are applicable as follows:

A student shall be eligible to carry forward all the courses of I, II and III semesters till the IV semester examinations. However, he/she shall not be eligible to attend the courses of V semester until all the courses of I and II semesters are successfully completed.

A student shall be eligible to carry forward all the courses of III, IV and V semesters till the VI semester examinations. However, he/she shall not be eligible to attend the courses of VII semester until all the courses of I, II, III and IV semesters are successfully completed.

A student shall be eligible to carry forward all the courses of V, VI and VII semesters till the VIII semester examinations. However, he/she shall not be eligible to get the course completion certificate until all the courses of I, II, III, IV, V and VI semesters are successfully completed.

A student shall be eligible to get his/her CGPA upon successful completion of the courses of I to VIII semesters within the stipulated time period as per the norms specified in 26.

A lateral entry student shall be eligible to carry forward all the courses of III, IV and V semesters till the VI semester examinations. However, he/she shall not be eligible to attend the courses of VII semester until all the courses of III and IV semesters are successfully completed.

A lateral entry student shall be eligible to carry forward all the courses of V, VI and VII semesters till the VIII semester examinations. However, he/she shall not be eligible to get the course completion certificate until all the courses of III, IV, V and VI semesters are successfully completed.

A lateral entry student shall be eligible to get his/her CGPA upon successful completion of the courses of III to VIII semesters within the stipulated time period as per the norms specified in 26.

Any student who has given more than 4 chances for successful completion of I / III semester courses and more than 3 chances for successful completion of II / IV semester courses shall be permitted to attend V / VII semester classes ONLY during the subsequent academic year as the case may be. In simpler terms there shall NOT be any ODD BATCH for any semester.

Note: Grade AB should be considered as failed and treated as one head for deciding academic progression. Such rules are also applicable for those students who fail to register for examination(s) of any course in any semester.

## 17. Grading of performances

### 17.1. Letter grades and grade points allocations:

Based on the performances, each student shall be awarded a final letter grade at the end of the semester for each course. The letter grades and their corresponding grade points are given in Table – XII.

**Table – XII: Letter grades and grade points equivalent to Percentage of marks and performances**

Percentage of Marks Obtained	Letter Grade	Grade Point	Performance
90.00 – 100	O	10	Outstanding
80.00 – 89.99	A	9	Excellent
70.00 – 79.99	B	8	Good
60.00 – 69.99	C	7	Fair
50.00 – 59.99	D	6	Average
Less than 50	F	0	Fail
Absent	AB	0	Fail

A learner who remains absent for any end semester examination shall be assigned a letter grade of AB and a corresponding grade point of zero. He/she should reappear for the said evaluation/examination in due course.

## 18. The Semester grade point average (SGPA)

The performance of a student in a semester is indicated by a number called ‘Semester Grade Point Average’ (SGPA). The SGPA is the weighted average of the grade points obtained in all the courses by the student during the semester. For example, if a student takes five courses (Theory/Practical) in a semester with credits C<sub>1</sub>, C<sub>2</sub>, C<sub>3</sub>, C<sub>4</sub> and C<sub>5</sub> and the student’s grade points in these courses are G<sub>1</sub>, G<sub>2</sub>, G<sub>3</sub>, G<sub>4</sub> and G<sub>5</sub>, respectively, and then students’ SGPA is equal to:

$$\text{SGPA} = \frac{C_1G_1 + C_2G_2 + C_3G_3 + C_4G_4 + C_5G_5}{C_1 + C_2 + C_3 + C_4 + C_5}$$

The SGPA is calculated to two decimal points. It should be noted that, the SGPA for any semester shall take into consideration the F and ABS grade awarded in that semester. For example if a learner has a F or ABS grade in course 4, the SGPA shall then be computed as:

$$\text{SGPA} = \frac{C_1G_1 + C_2G_2 + C_3G_3 + C_4 * \text{ZERO} + C_5G_5}{C_1 + C_2 + C_3 + C_4 + C_5}$$

**19. Cumulative Grade Point Average (CGPA)**

The CGPA is calculated with the SGPA of all the VIII semesters to two decimal points and is indicated in final grade report card/final transcript showing the grades of all VIII semesters and their courses. The CGPA shall reflect the failed status in case of F grade(s), till the course(s) is/are passed. When the course(s) is/are passed by obtaining a pass grade on subsequent examination(s) the CGPA shall only reflect the new grade and not the fail grades earned earlier. The CGPA is calculated as:

$$\text{CGPA} = \frac{C_1S_1 + C_2S_2 + C_3S_3 + C_4S_4 + C_5S_5 + C_6S_6 + C_7S_7 + C_8S_8}{C_1 + C_2 + C_3 + C_4 + C_5 + C_6 + C_7 + C_8}$$

where C<sub>1</sub>, C<sub>2</sub>, C<sub>3</sub>,... is the total number of credits for semester I,II,III,... and S<sub>1</sub>,S<sub>2</sub>, S<sub>3</sub>,... is the SGPA of semester I,II,III,....

**20. Declaration of class**

The class shall be awarded on the basis of CGPA as follows:

- First Class with Distinction = CGPA of 7.50 and above
- First Class = CGPA of 6.00 to 7.49
- Second Class = CGPA of 5.00 to 5.99

**21. Project work**

All the students shall undertake a project under the supervision of a teacher and submit a report. The area of the project shall directly relate any one of the elective subject opted by the student in semester VIII. The project shall be carried out in group not exceeding 5 in number. The project report shall be submitted in triplicate (typed & bound copy not less than 25 pages).

The internal and external examiner appointed by the University shall evaluate the project at the time of the Practical examinations of other semester(s). Students shall be evaluated in groups for four hours (i.e., about half an hour for a group of five students). The projects shall be evaluated as per the criteria given below.

***Evaluation of Dissertation Book:***

Objective(s) of the work done	15 Marks
Methodology adopted	20 Marks
Results and Discussions	20 Marks
Conclusions and Outcomes	20 Marks

**Total** 75 Marks

***Evaluation of Presentation:***

Presentation of work	25 Marks
Communication skills	20 Marks
Question and answer skills	30 Marks

**Total** 75 Marks

*Explanation:* The 75 marks assigned to the dissertation book shall be same for all the students in a group. However, the 75 marks assigned for presentation shall be awarded based on the performance of individual students in the given criteria.

**22. Industrial training (Desirable)**

Every candidate shall be required to work for at least 150 hours spread over four weeks in a Pharmaceutical Industry/Hospital. It includes Production unit, Quality Control department, Quality Assurance department, Analytical laboratory, Chemical manufacturing unit, Pharmaceutical R&D, Hospital (Clinical Pharmacy), Clinical Research Organization, Community Pharmacy, etc. After the Semester – VI and before the commencement of Semester – VII, and shall submit satisfactory report of such work and certificate duly signed by the authority of training organization to the head of the institute.

**23. Practice School**

In the VII semester, every candidate shall undergo practice school for a period of 150 hours evenly distributed throughout the semester. The student shall opt any one of the domains for practice school declared by the program committee from time to time.

At the end of the practice school, every student shall submit a printed report (in triplicate) on the practice school he/she attended (not more than 25 pages). Along with the exams of semester VII, the report submitted by the student, knowledge and skills acquired by the student through practice school shall be evaluated by the subject experts at college level and grade point shall be awarded.

**24. Award of Ranks**

Ranks and Medals shall be awarded on the basis of final CGPA. However, candidates who fail in one or more courses during the B.Pharm program shall not be eligible for award of ranks. Moreover, the candidates should have completed the B. Pharm program in minimum prescribed number of years, (four years) for the award of Ranks.

**25. Award of degree**

Candidates who fulfill the requirements mentioned above shall be eligible for award of degree during the ensuing convocation.

**26. Duration for completion of the program of study**

The duration for the completion of the program shall be fixed as double the actual duration of the program and the students have to pass within the said period, otherwise they have to get fresh Registration.

**27. Re-admission after break of study**

Candidate who seeks re-admission to the program after break of study has to get the approval from the university by paying a condonation fee.

No condonation is allowed for the candidate who has more than 2 years of break up period and he/she has to rejoin the program by paying the required fees.

## PHARMACY COUNCIL OF INDIA NOTIFICATION

New Delhi, the 10th December, 2014

**The Master of Pharmacy (M.Pharm) Course Regulations, 2014**

No. 14-136/2014-PCI.—In exercise of the powers conferred by Sections 10 and 18 of the Pharmacy Act, 1948 (8 of 1948), the Pharmacy Council of India, with the approval of the Central Government hereby makes the following regulations: namely—

## CHAPTER –I:REGULATIONS

### 1. Short Title and Commencement

These regulations shall be called as “The Revised Regulations for the Master of Pharmacy (M. Pharm.)Degree Program - Credit Based Semester System (CBSS) of the Pharmacy Council of India, New Delhi”. They shall come into effect from the Academic Year 2016-17. The regulations framed are subject to modifications from time to time by the authorities of the university.

### 2. Minimum qualification for admission

A Pass in the following examinations

a) B. Pharm Degree examination of an Indian university established by law in India from an institution approved by Pharmacy Council of India and has scored not less than 55 % of the maximum marks (aggregate of 4 years of B.Pharm.)

b) Every student, selected for admission to post graduate pharmacy program in any PCI approved institution should have obtained registration with the State Pharmacy Council or should obtain the same within one month from the date of his/her admission, failing which the admission of the candidate shall be cancelled.

Note: It is mandatory to submit a migration certificate obtained from the respective university where the candidate had passed his/her qualifying degree (B.Pharm.)

### 3. Duration of the program

The program of study for M.Pharm. shall extend over a period of four semesters (two academic years). The curricula and syllabi for the program shall be prescribed from time to time by Pharmacy Council of India, New Delhi.

### 4. Medium of instruction and examinations

Medium of instruction and examination shall be in English.

### 5. Working days in each semester

Each semester shall consist of not less than 100 working days. The odd semesters shall be conducted from the month of June/July to November/December and the even semesters shall be conducted from the month of December/January to May/June in every calendar year.

## 6. Attendance and progress

A candidate is required to put in at least 80% attendance in individual courses considering theory and practical separately. The candidate shall complete the prescribed course satisfactorily to be eligible to appear for the respective examinations.

## 7. Program/Course credit structure

As per the philosophy of Credit Based Semester System, certain quantum of academic work viz. theory classes, practical classes, seminars, assignments, etc. are measured in terms of credits. On satisfactory completion of the courses, a candidate earns credits. The amount of credit associated with a course is dependent upon the number of hours of instruction per week in that course. Similarly the credit associated with any of the other academic, co/extra-curricular activities is dependent upon the quantum of work expected to be put in for each of these activities per week/per activity.

### 7.1. Credit assignment

#### 7.1.1. Theory and Laboratory courses

Courses are broadly classified as Theory and Practical. Theory courses consist of lecture (L) and Practical (P) courses consist of hours spent in the laboratory. Credits (C) for a course is dependent on the number of hours of instruction per week in that course, and is obtained by using a multiplier of one (1) for lecture and a multiplier of half (1/2) for practical (laboratory) hours. Thus, for example, a theory course having four lectures per week throughout the semester carries a credit of 4. Similarly, a practical having four laboratory hours per week throughout semester carries a credit of 2.

The contact hours of seminars, assignments and research work shall be treated as that of practical courses for the purpose of calculating credits. i.e., the contact hours shall be multiplied by 1/2. Similarly, the contact hours of journal club, research work presentations and discussions with the supervisor shall be considered as theory course and multiplied by 1.

### 7.2. Minimum credit requirements

The minimum credit points required for the award of M. Pharm. degree is 95. However based on the credit points earned by the students under the head of co-curricular activities, a student shall earn a maximum of 100 credit points. These credits are divided into Theory courses, Practical, Seminars, Assignments, Research work, Discussions with the supervisor, Journal club and Co-Curricular activities over the duration of four semesters. The credits

are distributed semester-wise as shown in Table 14. Courses generally progress in sequence, building competencies and their positioning indicates certain academic maturity on the part of the learners. Learners are expected to follow the semester-wise schedule of courses given in the syllabus.

#### 8. Academic work

A regular record of attendance both in Theory, Practical, Seminar, Assignment, Journal club, Discussion with the supervisor, Research work presentation and Dissertation shall be maintained by the department / teaching staff of respective courses.

#### 9. Course of study

The specializations in M.Pharm program is given in Table 1.

Table – 1: List of M.Pharm. Specializations and their Code

S. No.	Specialization	Code
1.	Pharmaceutics	MPH
2.	Industrial Pharmacy	MIP
3.	Pharmaceutical Chemistry	MPC
4.	Pharmaceutical Analysis	MPA
5.	Pharmaceutical Quality Assurance	MQA
6.	Pharmaceutical Regulatory Affairs	MRA
7.	Pharmaceutical Biotechnology	MPB
8.	Pharmacy Practice	MPP
9.	Pharmacology	MPL
10.	Pharmacognosy	MPG

The course of study for M.Pharm specializations shall include Semester wise Theory & Practical as given in Table – 2 to 11. The number of hours to be devoted to each theory and practical course in any semester shall not be less than that shown in Table – 2 to 11.

Table - 2: Course of study for M. Pharm. (Pharmaceutics)

Course Code	Course	Credit Hours	Credit Points	Hrs./week	Marks

Table – 15: Guidelines for Awarding Credit Points for Co-curricular Activities

Name of the Activity	Maximum Credit Points Eligible / Activity
Participation in National Level Seminar/Conference/Workshop/Symposium/ Training Programs (related to the specialization of the student)	01
Participation in international Level Seminar/Conference/Workshop/Symposium/ Training Programs (related to the specialization of the student)	02
Academic Award/Research Award from State Level/National Agencies	01
Academic Award/Research Award from International Agencies	02
Research / Review Publication in National Journals (Indexed in Scopus / Web of Science)	01
Research / Review Publication in International Journals (Indexed in Scopus / Web of Science)	02

Note: International Conference: Held Outside India

International Journal: The Editorial Board Outside India

\*The credit points assigned for extracurricular and or co-curricular activities shall be given by the Principals of the colleges and the same shall be submitted to the University. The criteria to acquire this credit point shall be defined by the colleges from time to time.

#### 10. Program Committee

1. The M. Pharm. programme shall have a Programme Committee constituted by the Head of the institution in consultation with all the Heads of the departments.
2. The composition of the Programme Committee shall be as follows:  
A teacher at the cadre of Professor shall be the Chairperson; One Teacher from each M.Pharm specialization and four student representatives (two from each academic year), nominated by the Head of the institution.
3. Duties of the Programme Committee:
  - i. Periodically reviewing the progress of the classes.
  - ii. Discussing the problems concerning curriculum, syllabus and the conduct of classes.
  - iii. Discussing with the course teachers on the nature and scope of assessment for the course and the same shall be announced to the students at the beginning of respective semesters.

- iv. Communicating its recommendation to the Head of the institution on academic matters.
- v. The Programme Committee shall meet at least twice in a semester preferably at the end of each sessionalexam and before the end semester exam.

## 11. Examinations/Assessments

The schemes for internal assessment and end semester examinations are given in Table – 16.

### 11.1. End semester examinations

The End Semester Examinations for each theory and practical coursethrough semesters I to IVshall beconducted by the respective university except for the subject with asterix symbol (\*) in table I and II for which examinations shall be conducted by the subject experts at college level and the marks/grades shall be submitted to the university.

## 11.2. Internal assessment: Continuous mode

The marks allocated for Continuous mode of Internal Assessment shall be awarded as per the scheme given below.

Table – 27: Scheme for awarding internal assessment: Continuous mode

Theory	
Criteria	Maximum Marks
Attendance (Refer Table – 28)	8
Student – Teacher interaction	2
Total	10
Practical	
Attendance (Refer Table – 28)	10
Based on Practical Records, Regular viva voce, etc.	10
Total	20

Table – 28: Guidelines for the allotment of marks for attendance

Percentage of Attendance	Theory	Practical
95 – 100	8	10
90 – 94	6	7.5
85 – 89	4	5
80 – 84	2	2.5
Less than 80	0	0

### 11.2.1. Sessional Exams

Two sessional exams shall be conducted for each theory / practical course as per the schedule fixed by the college(s). The scheme of question paper for theory and practical sessional examinations is given in the table. The average marks of two sessional exams shall be computed for internal assessment as per the requirements given in tables.

## 12. Promotion and award of grades

A student shall be declared PASS and eligible for getting grade in a course of M.Pharm.programme if he/she secures at least 50% marks in that particular course including internal assessment.

## 13. Carry forward of marks

In case a student fails to secure the minimum 50% in any Theory or Practical course as specified in 12, then he/she shall reappear for the end semester examination of that course. However his/her marks of the Internal Assessment shall be carried over and he/she shall be entitled for grade obtained by him/her on passing.

#### 14. Improvement of internal assessment

A student shall have the opportunity to improve his/her performance only once in the sessional exam component of the internal assessment. The re-conduct of the sessional exam shall be completed before the commencement of next end semester theory examinations.

#### 15. Reexamination of end semester examinations

Reexamination of end semester examination shall be conducted as per the schedule given in table 29. The exact dates of examinations shall be notified from time to time.

Table – 29: Tentative schedule of end semester examinations

Semester	For Regular Candidates	For Failed Candidates
I and III	November / December	May / June
II and IV	May / June	November / December

#### 16. Allowed to keep terms (ATKT):

No student shall be admitted to any examination unless he/she fulfills the norms given in 6. ATKT rules are applicable as follows:

A student shall be eligible to carry forward all the courses of I and II semesters till the III semester examinations. However, he/she shall not be eligible to attend the courses of IV semester until all the courses of I, II and III semesters are successfully completed.

A student shall be eligible to get his/her CGPA upon successful completion of the courses of I to IV semesters within the stipulated time period as per the norms.

Note: Grade AB should be considered as failed and treated as one head for deciding ATKT. Such rules are also applicable for those students who fail to register for examination(s) of any course in any semester.

#### 17. Grading of performances

##### 17.1. Letter grades and grade points allocations:

Based on the performances, each student shall be awarded a final letter grade at the end of the semester for each course. The letter grades and their corresponding grade points are given in Table – 30.
