 Dhankawadi, Pune-43

Responsibilities of AYJNISHD (D):

1. Selection and referral of suitable candidates for Cochlear Implant Surgery subject to medical & radiological clearance from operating surgeon.
2. Supply of Cochlear Implant Device to the Hospital.
3. Payment of bills relating to Cochlear Implant Surgery to the "Hospital" as per AYJNISHD(D) norms.
4. Payment of bills related to Post-operative rehabilitation undertaken by Hospital / rehabilitation professionals as per AYJNISHD (D) norms.

Responsibilities of Hospitals:

1. Conducting Cochlear Implant surgery for candidates approved by AYJNISHD(D) based on the recommended practices subject to medical clearance from operating surgeon at FREE OF COST. The responsibility lies with the Hospital and operating surgeon to complete the surgery at the earliest without causing expiry of implants.
2. Providing post-operative rehabilitation services of well-trained Audiologist /Speech Language Pathologist/Special educator(HI) /AVT therapist to the cochlear implantees.
3. Permitting Professional/s deputed by AYJNISHD(D) as observer/s during intra operative monitoring.
4. Permitting the inspection team appointed by AYJNISHD(D) for physical verification of infrastructural facilities and services available in the Hospital for Cochlear Implant surgery and/or rehabilitation services .
5. Submitting the Post-operative (surgery) notes individually/jointly signed by the operating surgeon and/or Mentor (where ever applicable) to the Director, AYJNISHD(D), Mumbai.
6. Taking adequate precautionary measures to avoid Medico-legal issues arising at any point of Cochlear Implant surgery and thereafter. On the contrary, "Hospital" and operating surgeon will be solely responsible for such Medico-legal issues.
7. Obtaining duly signed declaration from the parents of cochlear implanters about accessing post-operative rehabilitation services from rehab professionals assigned by the Hospital/AYJNISHD (D). The rehabilitation professional will be mainly responsible for offering uninterrupted post-surgery intervention services for a period of 2 years at free of cost.
8. Monitoring the progress of children implanted at the hospital for a period of 2 years.
9. Submitting Monthly/Quarterly/Annual report on the surgery /post rehabilitation activities carried out by the Hospital under ADIP CI scheme.

Joint responsibility (AYJNISHD (D) & Hospitals):

1. Disseminating information about ADIP-CI scheme
2. Identifying suitable candidates for cochlear implant surgery
3. Offering free Pre Implant counseling to parents
4. Obtaining informed written consent from the parents/care givers that they have been informed about the procedure and outcome of Cochlear Implantation before surgery.
5. Updating of information on AYJNISHD(D) website and sharing with DEPWDs, MSJE

The Validity of the Memorandum of Understanding is for two years from the date of signing.

Dear Dr. Pallavi Kelkar

Trust all is well at your end.

This has reference to the inter-collegiate seminar series that was held in the months of March and April 2021. The session on **Evidence Based Practices related to Audiology and Speech Language Pathology**, handled by you on the 26th of April 2021 was much liked by the students. The concepts were precise and clear. Students had opportunities to actively participate in your session. Truly appreciate your efforts in offering this online class and jointly co-ordinating the inter-collegiate seminar series.

Hope to continue the collaboration with you and among institutes for a range of activities.

Best Wishes Pallavi!

Subject : Invitation Letter for Adjunct Professor

January 4th 2021

Prof. Shailesh Deshmukh
Orthodontics & Dentofacial Orthopaedics
Bharati Vidyapeeth University Dental College & Hospital
Pune, India

Greetings from Faculty of Dental Medicine Universitas Airlangga, Indonesia.

Faculty of Dental Medicine Universitas Airlangga would like to cordially invite you to join our academic activities in the year 2021 as an Adjunct Professor. It would be such an honor for Faculty of Dental Medicine Universitas Airlangga Indonesia to have you as an adjunct professor at the Orthodontics Department from January 2021 – December 2021. The purpose of this program is to improve the knowledge of our students and also to enhance the join research as well as the Join publication. Following the adjunct professor program in the year 2021, please find the attachment details of the assignments and compensation.

Great hope this adjunct professor program will provide goods to both parties. If you have any further questions, please do not hesitate to contact us.

Sincerely yours,

Dr. Agus Prasetyo

Subject: Permission for carrying out my Dissertation at 'Praj Metallurgical Laboratory, Pune' and obtaining letter for the same.

Respected Sir,

I, Dr. Hemant Jadhav, Postgraduate student from the Department of Prosthodontics want to conduct my thesis titled **"A Comparative Evaluation of the Effect of Two Different Denture Cleansers on Hardness and Roughness of Commercially Available Soft Denture Liner at various time intervals- An In-vitro Study."** The above mentioned study was presented in the SRC meet held on 11th October, 2018 with subsequent approval from the University. As part of the research I want to conduct my research work at 'Praj Metallurgical Laboratory, Pune' since the apparatus required for my research work are available there.

I request you to kindly grant me the necessary permission to conduct my thesis at **'Praj Metallurgical Laboratory, Pune'**.

Thanking you.

Yours Sincerely,

Dr. Hemant Jadhav

Dear Ma'am,

Greetings from APX Laboratory!!!

As discussed telecommunication,

We will do the analysis, please provide all material and stains along with a haemocytometer.

Need to concern for 1st sample along with demo, also know about all samples are in together or individually collected.

Definitely will give discount rate by considering 40 samples..

Meanwhile pl, send the Protocol for above testing. so that I will arrange other requirements as well.

Regarding all this I will arrange the meeting with our director on 20th May 2021. Once, its finalise will revert you.

Kindly acknowledge the same

THANKS & REGARDS,

Dr. Shashank Udaykumar,

We at FEA Solutions are very pleased to inform you that we are very much confident to be able to assist you in your FEM Study.

This is based on study of your key articles & subsequent discussion in our face-to-face meeting we had for this study. This is because we already have expertise in similar study. Also, to the best of your knowledge, since FEA studies are mere simulations, such studies are not considered to be needing to follow the Sample Size Considerations.

Date:22/08/2019

To,

Director

Shri Siddhivinayak Ganapati Cancer Hospital,

Subject: Enquiry of radiation exposure on extracted primary teeth for academic research.

Our postgraduate student, Dr Prathamesh Nikam, from the Department of Paediatric and Preventive Dentistry, Bharati Vidyapeeth Dental College and Hospital, Sangli, would like to conduct a research on radiation exposure on extracted primary teeth.

His topic of research is "Radiotherapy, Reduces Micro hardness and Mineral and Organic Composition, and Changes the Morphology of Primary Teeth: An in vitro Study."

The aim of his research is to evaluate whether radiotherapy causes changes in the mineral composition, hardness, and morphology of enamel and dentin of primary teeth. The research will be conducted by Radiation exposure on extracted primary teeth at baseline and after 1,080, 2,160 and 3,060 cGy, the specimens were subjected to micro hardness and scanning electron microscopy (SEM) analysis. We require your Varian Clinac 6EX with linear accelerator and beam photons of 6 MeV to irradiate the specimens with a 99.9% margin of the total dose, using the following parameters: focus of 100 cm in a field of 15.15 cm. Also, we require daily fractions of 180 cGy which need to be applied each day for 5 days, followed by a 2-day interval that will correspond to the weekend, and successively by 5 more days until 17 daily fractions of 180 cGy of gamma radiation will be completed, resulting in a total dose of 3,060 cGy

The research will be carried out by our Post Graduate student who is a qualified doctor.

Kindly grant us the permission to conduct this study in your hospital.

Thanking you in anticipation.

Erklärung der / des AuftragnehmerIn – Declaration of Contractor

Ich erkläre, dass ich nach Beurteilung meiner vertraglichen Leistungs- und sonstigen Rahmenbedingungen zu folgender Einschätzung gelangt bin (allfällige Änderungen in dieser Einschätzung werde ich Ihnen unverzüglich melden, im Falle unrichtiger Angaben hafte ich gegenüber der Universität Wien für den daraus resultierenden Schaden). Ich verpflichte mich zur Beachtung der auf die unternehmerische Tätigkeit anzuwendenden gewerbe- und steuerrechtlichen Bestimmungen. Ich wurde darauf hingewiesen, dass ich eine etwaige Meldung bei der Sozialversicherungsanstalt der gewerblichen Wirtschaft entsprechend den gesetzlichen Bestimmungen selbst vorzunehmen habe.

After reviewing the terms of my contractual performance and other framework conditions, I herewith declare that I have come to the following assessment (I will immediately report any change in my assessment; I shall be liable to the University of Vienna for any damage or loss suffered on account of incorrect information I may have provided). I herewith undertake to comply with all trade and tax regulations applying to business activities. I have been informed that I am responsible to report with the Social Insurance Authority for Business ("Sozialversicherung der gewerblichen Wirtschaft, SVA") as applicable in compliance with the statutory provisions.

- A** **Ich bin in einem aktiven öffentlich-rechtlichen Bundesdienstverhältnis.
I am currently in federal public-law employment.**

Das Honorar wird über meine bezugsanweisende Dienststelle als „Nebentätigkeitsvergütung“ lohnsteuer- und sozialversicherungspflichtig zur Auszahlung gebracht. Die Tätigkeit erfolgte außerhalb meiner Dienstzeit bzw. Dienstverpflichtung.

The fee will be disbursed via the remuneration-remitting entity as "compensation for additional work" and is subject to wage tax and social insurance levies. This work was performed out of the scope of my work hours or contractual assignment.

Dienststelle:
Entity:

- B** **Ich erbringe meine Leistung als juristische Person.
I deliver my work/service as a business entity.**

Firmenname:
Company name:

Firmenanschrift:
Company address:

- C** **Ich bin „Gewerbetreibende / Gewerbetreibender“ gemäß GSVG.
I am a business ("Gewerbetreibender") according to the provisions of the Act on Social Insurance for Businesses ("Gewerbliches Sozialversicherungsgesetz").**

Ich erkläre, dass ich die gegenständliche Leistung im Rahmen meiner einschlägigen (aufrechten, nicht ruhend gemeldeten) Gewerbeberechtigung ausübe und daher mit dieser Tätigkeit bereits der Pflichtversicherung nach dem GSVG unterliege. Das Werkvertragshonorar fließt in die GSVG-Beitragsgrundlage ein.

I herewith confirm that the contracted work is being performed as part of my licence (valid, not notified as suspended) and that this work is therefore already subject to compulsory insurance according to the statutory provisions governing social insurance for businesses ("Gewerbliches Sozialversicherungsgesetz"). The remuneration for my works contract shall be added to my assessment base for the payment of taxes as a business entity.

- D** **Ich bin freiberuflich tätig.
I am self-employed.**

Ich erkläre, dass ich die gegenständliche Leistung im Rahmen meiner einschlägigen (aufrechten, nicht ruhend gemeldeten) Berufsbefugnis bzw. sonstigen folgenden freiberuflichen Tätigkeit ausübe. I herewith confirm that the contractual work/service is provided under my relevant (valid, not notified as suspended) licence and/or any other self-employed activities.

Freiberufliche Tätigkeit:

Subject: Pharmacovigilance Program
To: Manasi Deshpande <manasi08@gmail.com>
Cc: Tanuja Nesari <tnesari@hotmail.com>

Respected Madam,
Good Afternoon

Ministry of AYUSH, New Delhi has recently approved and implementing Central Sector Scheme of Pharmacovigilance of ASU & H Drugs for developing the culture of ADR reporting, documentation and analysis for regulatory action. In this initiative, All India Institute of Ayurveda (AIIA), New Delhi has been designated as the National Pharmacovigilance Coordination Centre, respective National Institutes as the system-wise Intermediary Pharmacovigilance Centres and around 40 potential institutes / research centres as Peripheral Pharmacovigilance Centres.

Considering the expertise; your centre has been nominated as Peripheral Centre. In this connection; we request your good self to communicate the details of the **Coordinator, Contact Details and Bank Account Details** (including Name, Account Number, Name of the Bank, IFSC Code) **of your institute** so that further necessary can be made.

We are organizing an Induction Program on 19th March 2018. Will be happy to receive the coordinator for the event. Thank you very much once again.

We will be awaiting for your mail. Please do the needful.

Regards

Dr Galib
Associate Professor
Dept of RS & BK
All India Institute of Ayurveda

➤ **3.7.1. Number of collaborative activities with other institutions/ research establishment/industry for research and academic development of faculty and students during the year**

REPORT OF DASS-21 GHF-AUSTRALIA : Under International collaborative research activity a new research study entitled “Pilot study: Assessment of the efficacy of homeopathic treatment in patients with elevated DASS 21 scores in a multicentric randomized double-blind placebo-controlled study” has been started with GHF India and Australia.

- DASS-21 Global Homoeopathy Foundation –Australia in collaboration with B.V.D.U. Homoeopathic College and Hospital, Pune-43.
- Orientation Webinar was conducted online on 28th December 2020 for all PG scholars and Faculty members.
- In this meeting the introduction of GHF was given to all the PG Scholars and faculty members, and introduction of Bharati Vidyapeeth Homoeopathic Medical college and Hospital was given to GHF members, which was followed by the orientation of DASS-21 Pilot Study and its methodology.
- Total of 43 PG scholars and 35 faculty members attended the Webinar.
- On 26th January 2021 the Launch of GHF Research Pilot study was organized Online on the occasion of Republic Day.
- The Launch of GHF Research Pilot Study on DASS-21 was held on 26th January 2021, which was attended by 29 faculty members and 39 PG scholars.
- On 12th February 2021 IEC Meeting was conducted and was attended by Dr. Anita Patil, Dr. Varsha Ghate, Dr. Rajashree Bongale and members of GHF Australia. After reviewing, few queries were raised regarding the Pilot study.
- Resolution of the queries was done by Dr. Sam Punnoose, GHF Australia.
- On 26th March 2021 MOU draft was sent to Dr. Hari Singh, which is under process.
- On 24th July 2021 a workshop was conducted for 13th batch, 14th batch and 15th batch PG scholars where details of DASS-21 Pilot study, its inclusion exclusion criteria, checklist , consent form and DASS-21 scale were discussed elaborately.
- Total of 44 PG scholars were present for the same. It was conducted under the guidance of Dr. Priya Sheth.
- On 28th July 2021 a Demo case, remedies and rubrics related to depression and anxiety were discussed by 14th batch PG scholars and 15th Batch PG scholars along with Dr. Priya Sheth. 29 PG scholars attended the discussion.
- On 12th August 2021 a Demo case, remedies and rubrics related to depression and anxiety were discussed by 13th batch PG scholars with Dr. Priya Sheth. 26 PG scholars attended the discussion.
- **ENROLLMENT OF PATIENTS FOR PILOT STUDY:**
- Before starting the enrollment of patients, Consent forms and DASS-21 Scale were translated in our Local language i.e. Marathi and also in Hindi.
- Notices were published for faculty members and PG scholars to raise queries regarding the Pilot study.

- IEC, faculty members and PG scholar's queries were resolved by GHF.
- Notices were published for faculty members and PG scholars to initiate the enrollments.
- Total 28 cases are enrolled for the Pilot study of DASS-21 till date.

Dear Dr. A. B. Jadhav and Dr. Anita Patil,

Hearty Greetings!

I am happy and thankful to you and the team of Post graduate and Ph.D scholars of your esteemed Institute for having agreed to participate in the research project. It is equally heartening to note that they are being further acquainted with the nuances of the Pilot Study today.

The **Protocol No. 1 and Version No. vP6.1.14** may kindly be reflected in the [IEC approval letter](#).

As regards the number of doctors to be enrolled in the study, all those scholars out of the 75 who are willing to participate are welcome. We are, however, expecting 50 doctors from each Institute, but even more shall be happily enrolled. The **"one doctor - one patient"** requirement is the statistical requirement of the study, but additional patient(s) of the doctor are being enrolled.

The MOU is being finalised by the GHF and Dr. P. Sam shall get in touch with you.

Kind regards and best wishes,

Hari Singh
Principal Investigator

Dear Dr. Jadhav & Dr. Anita Patil,
Thank you for considering the proposal and agreeing to participate in the study. Appreciate you both to steer you institution through. As the next step, please see the MoU which you may sign initially and then the Managing Trustee of GHF India and the Secretary of GHF Australia would sign and send it back to you.
Hope the process is clear to you.
I appreciate you are in close touch with Dr. Singh, our PI for the study to get started in your institution.

Kind regards,
Dr. Punnoose Sam

Essential Obstetrical And Gynecological Skills

Procedure Observed

- Assisted Reproductive Technology procedures
- Ultra sonography
- Specific laboratory tests.
- Amniocentesis.
- Cervical & vaginal cytology.
- Fetoscopy.
- Hysteroscopy.
- MRI.
- Surgical diathermy.
- Cryosurgery.

Procedures Assisted

- Operative delivery
- Abnormal deliveries-Forceps application, Ventouse, Breech
- Exchange blood transfusion
- Culdoscopy.
- Cystoscopy
- Tuboscopy
- Laparoscopy.
- Endometrial Biopsy
- Tubal patent test
- Chemotherapy
- Radiation therapy
- Medical Termination of Pregnancy.
- Dilatation and Curettage

Procedures Performed

- Relevant history taking Obstetric / Gye.
- Complete General Physical Examination.
- Antenatal assessment. – 20
- Assessment of risk status.
- Assessment of Intra uterine foetal well - being
- Universal precautions- Disposal of biomedical waste.
- Per Vaginal examination and interpretation (early pregnancy, labour, post partum).
- Utilization of Partograph
- Medical & Surgical induction(Artificial rupture of membranes).
- Conduct of delivery.
- Prescription and administration of fluids and electrolytes through intravenous route.
- Application of outlet forceps, delivery of breach – Burns Marshall, Loveset manoeuvre
- Episiotomy suturing

Practical

Total = 660 Hours
1 Week = 30 Hours

S.No.	Deptt./Unit	No. of Week	Total Hours
1	Sub-centre, PHC, CHC	12	360 Hours
2	District family welfare bureau	1	30 Hours
3	Urban centers	6	180 Hours

Subject: Requesting opinions and suggestions from experts for establishing content validity of Research tool.

Dear Sir/Madam,

Mrs. Khirabdi Tanaya Sahu is M.Sc. Nursing student of Bharati Vidyapeeth (Deemed to be University), Navi Mumbai. In the completion of her M.Sc. Nursing degree, she has selected the topic mentioned below for the research study to be submitted to Bharati Vidyapeeth Deemed University, Pune

Topic:-A comparative study to assess the effectiveness of structured teaching programme versus pocket reference on knowledge regarding ABG analysis among staff nurses of selected hospitals of Navi Mumbai.

Kindly go through the content of the data collection tool enclosed here in terms of its relevance, adequacy and accuracy.

Tool enclosed: Copy of Research proposal, structured teaching plan and pocket reference on ABG analysis, Demographic data, structured questionnaire and standard criteria to assess their level of knowledge (Excellent, good, poor, very poor)

Kindly go through this tool and give your valuable suggestions.

Thanking you in anticipation.

Role Of Geology In Major Civil Engineering Project

Name of faculty: Prof. R.S Patil

Date: 05/08/2020

Resource Person: Dr. N J Sathe

Duration: 3 hrs

Introduction

Geology is the study of earth, the materials of which it is made, the structure of those materials and the effects of the natural forces acting upon them and is important to civil engineering because all work performed by civil engineers involves earth and its features. Fundamental understanding of geology is so important that it is a requirement in university-level civil engineering programs. For a civil engineering project to be successful, the engineers must understand the land upon which the project rests. Geologists study the land to determine whether it is stable enough to support the proposed project. They also study water patterns to determine if a particular site is prone to flooding. Some civil engineers use geologists to examine rocks for important metals, oil, natural gas and ground water.

Role of the engineer in the systematic exploration of a site

The investigation of the suitability and characteristics of sites as they affect the design and construction of civil engineering works and the security of neighbouring structures is laid out in British Standard Code of Practice for site investigations (BS 5930:1981, formerly CP 2001). The sections on geology and site exploration define the minimum that a professional engineer should know. The systematic exploration and investigation of a new site may involve five stages of procedure. These stages are:

1. preliminary investigation using published information and other existing data;
2. a detailed geological survey of the site, possibly with a photogeology study;
3. applied geophysical surveys to provide information about the subsurface geology;
4. boring, drilling and excavation to provide confirmation of the previous results, and quantitative detail, at critical points on the site; and
5. Testing of soils and rocks to assess their suitability, particularly their mechanical properties (soil mechanics and rock mechanics), either in situ or from samples.

Relevance of geology to civil engineering

Most civil engineering projects involve some excavation of soils and rocks, or involve loading the Earth by building on it. In some cases, the excavated rocks may be used as constructional material, and in others, rocks may form a major part of the finished product, such as a motorway cutting or the site of a reservoir. The feasibility, the planning and design, the construction and costing, and the safety of a project may depend critically on the geological conditions where the construction will take place. This is especially the case in extended 'greenfield' sites, where the area affected

by the project stretches for kilometres, across comparatively undeveloped ground. Examples include the Channel Tunnel project and the construction of motorways.

The science of geology

Geology is the study of the solid Earth. It includes the investigation of the rocks forming the Earth (petrology) and of how they are distributed (their structure), and their constituents (mineralogy and crystallography). Geochemistry is a study of the chemistry of rocks and the distribution of major and trace elements in rocks, rock suites, and minerals. This can lead to an understanding of how a particular rock has originated (petro genesis), and also, in the broadest sense, to a knowledge of the chemistry of the upper layers of the Earth.

The distribution of rocks at the Earth's surface is found by making a geological survey (that is, by geological mapping) and is recorded on geological maps. This information about rocks is superimposed on a topographic base map. Knowledge of the nature and physical conditions of the deeper levels of the planet can be gained only by the special methods of geophysics, the twin science of geology; the term 'Earth sciences' embraces both. From the theory and methods of geophysics, a set of techniques (applied geophysics) has been evolved for exploring the distribution of rocks of shallower levels.

NASA STRATEGIES FOR STEM ENGAGEMENT

Name of faculty = Dr. V.S.Sohoni

Date: 12/09/2020

Resource person= Dr. Gautam Chattopadhyay Duration: 2 hrs

The NASA Strategy for Science, Technology, Engineering and Mathematics (STEM) Engagement serves as a roadmap to frame and guide the Agency's work to benefit students over the next three years. The scope of STEM engagement encompasses all endeavors Agency-wide to attract, engage and educate students and to support educators, educational institutions, and professional and student organizations. STEM engagement is comprised of a broad and diverse set of programs, projects, activities and products developed and implemented by Headquarters functional offices, Mission Directorates and Centers. This strategy builds on the direction and solid foundation defined and executed via the NASA Strategy for STEM Engagement (2018-2020), and aligns with the Federal Strategy for STEM Education and Engagement (2018-2023), Charting a Course for Success: America's Strategy for STEM Education. The NASA Strategy for STEM Engagement provides the context for STEM engagement within the NASA strategic plan, and describes the cross-cutting design principles foundational to this work. It serves as the framework for the Agency to provide immediate benefits to students, educators, and educational institutions, and to help build the next generation of explorers with the technical skills needed to continue pursuing NASA's mission. NASA's STEM Engagement community works in close collaboration with NASA's STEM workforce to provide exceptional experiences for students, and with NASA's public engagement workforce to leverage opportunities for reaching students. NASA is committed to finding innovative ways to deliver content and engage students in STEM learning. The NASA Strategy for STEM Engagement 2020-2023 serves as the roadmap for the Agency's work devoted to STEM engagement, with defined objectives and strategies to drive requirements and alignment of all STEM engagement efforts, including programs, projects, activities and products.

STRATEGIC GOALS, OBJECTIVES AND STRATEGIES

STRATEGIC GOAL 1.0: Create unique opportunities for a diverse set of students to contribute to NASA's work in exploration and discovery.

OBJECTIVES: 1.1 Provide student work experiences that enable students to contribute to NASA's missions and programs, embedded with NASA's STEM practitioners. 1.2 Create structured and widely-accessible, experiential learning opportunities for students to engage with NASA's experts and help solve problems that are critical to NASA's mission.

STRATEGIC GOAL 2.0: Build a diverse future STEM workforce by engaging students in authentic learning experiences with NASA's people, content and facilities.

OBJECTIVES: 2.1 Develop and deploy a continuum of STEM experiences through authentic learning and research opportunities with NASA's people and work to cultivate student interest, including students from underrepresented and underserved communities, in pursuing STEM

careers and foster interest in aerospace fields. 2.2 Design the portfolio of NASA STEM engagement opportunities to contribute toward meeting Agency workforce requirements and serving the nation's aerospace and relevant STEM needs.

STRATEGIC GOAL 3.0: Attract diverse groups of students to STEM through learning opportunities that spark interest and provide connections to NASA's mission and work.

OBJECTIVES: 3.1 Develop and deploy targeted opportunities and readily available NASA STEM engagement resources and content, to attract students to STEM. 3.2 Foster student exposure to STEM careers through direct and virtual experiences with NASA's people and work.

Solid Waste Management

Name of faculty: Prof. R.H Jadhav

Date: 14/09/2020

Resource Person: Mr.D. J Kulkarni

Duration: 3hrs

Introduction

Waste management is an important part of the urban infrastructure, as it ensures the protection of the environment and of human health. It is not only a technical environmental issue, but also a highly political one. Waste management is closely related to a number of issues such as urban lifestyle, resource consumption patterns, jobs and income levels, and other socio-economic and cultural factors. Lately there has been a trend to enlarge the scope of waste management and include it within the larger concept of resource management. Today, waste management must be seen in its full context. It cannot be solved with merely technical end-of-pipe solutions.

NATURE OF SOLID WASTE

Per capita waste generation ranges between 0.2 kg and 0.6 kg per day in the Indian cities amounting to about 1.15 lakh MT of waste per day and 42 million MT annually. Also, as the city expands, average per capita waste generation increases. Waste Generation per Capita in Indian cities The waste generation rates in India are lower than the low-income countries in other parts of the world and much lower compared to developed countries. However, lifestyle changes, especially in the larger cities, are leading to the use of more packaging material and per capita waste generation is increasing by about 1.3 per cent per year. With the urban population growing at 2.7 per cent to 3.5 per cent per annum, the yearly increase in the overall quantity of solid waste in the cities will be more than 5 percent. The Energy and Resources Institute (TERI) has estimated that waste generation will exceed 260 million tonnes per year.

METHODS FOR PROCESSING, TREATMENT AND DISPOSAL OF SOLID WASTE

The main technological options available for processing/treatment and disposal of MSW are composting, vermicomposting, anaerobic digestion/ biomethanation, incineration, gasification and pyrolysis, plasma pyrolysis, production of Refuse Derived Fuel (RDF), also known as pelletization and sanitary landfilling/landfill gas recovery. Not all technologies are equally good. Each one of them has advantages and limitations.

COMPOSTING: - Composting is a technology known in India since times immemorial. Composting is the decomposition of organic matter by microorganism in warm, moist, aerobic and anaerobic environment. Farmers have been using compost made out of cow dung and other agro-waste. Main advantages of composting include improvement in soil texture and augmenting of micronutrient deficiencies. It also increases moisture-holding capacity of the soil and helps in maintaining soil health.

VERMI-COMPOSTING: -Vermi-compost is the natural organic manure produced from the excreta of earthworms fed on scientifically semi-decomposed organic waste. Normally, vermi-composting is preferred to microbial composting in small towns as it requires less mechanization and it is easy to operate. It is, however, to be ensured that toxic material does not enter the chain which if present could kill the earthworms.

ANAEROBIC DIGESTION AND BIOMETHANATION: - Biomethanation is a comparatively well-established technology for disinfections, deodorization and stabilization of sewage sludge, farmyard manures, animal slurries, and industrial sludge. Its application to the organic fraction of MSW is more recent and less extensive. It leads to bio-gas/power generation in addition to production of compost (residual sludge).

INCINERATION :- This method, commonly used in developed countries is most suitable for high calorific value waste with a large component of paper, plastic, packaging material, pathological wastes, etc. It can reduce waste volumes by over 90 per cent and convert waste to innocuous material, with energy recovery. The method is relatively hygienic, noiseless, and odourless, and land requirements are minimal. The plant can be located within city limits, reducing the cost of waste transportation.

PELLETIZATION: - It is basically a processing method for mixed MSW, which can be very effective in preparing an enriched fuel feed for thermal processes like incineration. The RDF pellets can be conveniently stored and transported long distances and can be used as a coal substitute at a lower price. As pelletization involves significant MSW sorting operations, it provides a greater opportunity to remove environmentally harmful materials from the incoming waste prior to combustion.

SANITARY LANDFILLS AND LANDFILL GAS RECOVERY: - Sanitary landfills are the ultimate means of disposal of all types of residual, residential, commercial and institutional waste as well as unutilized municipal solid waste from waste processing facilities and other types of inorganic waste and inerts that cannot be reused or recycled in the foreseeable future.

Its main advantage is that it is the least cost option for waste disposal and has the potential for the recovery of landfill gas as a source of energy, with net environmental gains if organic wastes are landfilled.

Conclusion

Human ways of life have placed pressure on the environment and have caused imbalance in the eco systems by the producing, consuming and wasting of natural resources. Most countries evidently have major effects on the environment due to SW generation with economic development since the natural resources are used, and waste and pollution are produced. Therefore, the concern towards the management of solid waste as an integral part for sustainable development has increased. Therefore, it is important that the SWM should be developed from the primary level. Waste storage and primary disposal are the dominant means of managing waste. Thus, it has caused significant challenges in the study area. Therefore, waste separation from the household level, proper storage, more efficient waste collection systems, and

sustainable recovery and disposal practices are identified as needed processes in the study area. Considering the nature and components of waste generated by households and business places, the waste reduction, reuse, recycling and composting processes would be more suitable in managing the challenge. These management options should be integrated in a sustainable framework. Adequate consideration should be given to monitoring processes. Public education and properly planned waste management programs also need to be introduced into the current waste management system.

Higher Education and Placement Opportunities

Name of faculty: Dr. V.S Sohoni **Date:** 30/09/2020

Resource Person: Doris Becbstain **Duration:** 2hr

Civil engineering being a core branch of engineering gives a wide range of options which can be pursued after the completion of bachelor's degree.

After obtaining the bachelor's degree student can either opt for further studies and pursue specialization or start working independently or with a company.

Higher Education:

In higher education you can either opt for masters or post-graduation diploma in your preferred specialization course which you can choose from a wide variety according to you interest.

Few courses for higher education available in India are:

Master's of Technology

- Structural Engineering
- Geo-technical Engineering
- Water Resource Engineering

Post Graduate Diploma

- Construction Management.
- PROJECT MANAGEMENT(PGDPM)
- Industrial Management (PGDIM)

PGDM or Masters in Town Planning

Study Abroad

Students can also opt for overseas education for their future by clearing few exams and if their academics is good, they can even get a scholarship for their studies in abroad. Earning an international degree is not only about expanding your career and personal horizons but also about having an experience of a lifetime. Studying abroad helps you learn new approaches to handle different situations, manage time between your studies and part-time jobs, experience international methods of instructing and deal with a cosmopolitan crowd. This in turn also helps to increase your acumen on the

subject and life, in general. Students who study abroad develop a well-informed mindset and wider perspective towards other cultures and people.

Placement:

As a qualified civil engineer, you can find work in a range of sectors, particularly in the construction sector, on buildings and large structures of all kinds, transport and communications infrastructure.

You can also work for employers involved in the production, storage and distribution of electricity, gas and water.

Vacancies arise across India and overseas, with a range of contractors and consultancies.

There are also opportunities to work in-house for a variety of national and multinational organisations, particularly within the public sector. Local authorities, government departments and environmental organisations, for example, employ civil engineers to set up project specifications and draft tender documents.

Few private construction companies in India are:

L&T – Larsen & Toubro Ltd

Tata Projects Ltd

Shapoorji Pallonji & Co Ltd

GMR Group

Hindustan Construction Company (HCC)

Reliance Infrastructure

Few government organizations that hire Civil engineers are:

Bharat Dynamics Limited

National Mineral Development Corporation

National Thermal Power Corporation Limited

Oil and Natural Gas Corporation

Military Engineering Services

Entrepreneur:

Civil Engineering is a sector where a bunch of business opening can be planned if the knowledge of entrepreneurship become broadly extends. Civil Engineers can drive their own business as an entrepreneur. Basically, Entrepreneurship is the capability and willingness to form, arrange and conduct a business activity along with any of its suspicions in order to craft earnings. The most outstanding paradigm of entrepreneurship is the opening of fresh businesses.

If a person is not willing to work in an organization then they can set up their own company or firm and take up private works or government contracts by offering lowest bids to open tenders.

For this some necessary documents and license must be obtained from local authorities and government.

CONCRETE & BUILDING MATERIALS

Name of Faculty: Dr. V.S. Sohoni
Resource Person: Dr. J.D. Bapat

Date: 21/11/2021
Duration: 3hrs

Concrete is a construction material composed of cement, fine aggregates (sand) and coarse aggregates mixed with water which hardens with time. Portland cement is the commonly used type of cement for production of concrete. Concrete technology deals with study of properties of concrete and its practical applications.

In a building construction, concrete is used for the construction of foundations, columns, beams, slabs and other load bearing elements.

There are different types of binding material is used other than cement such as lime for lime concrete and bitumen for asphalt concrete which is used for road construction.

Materials are mixed in specific proportions to obtain the required strength. Strength of mix is specified as M5, M10, M15, M20, M25, M30 etc, where M signifies Mix and 5, 10, 15 etc. as their strength in kN/m².

The strength is measured with concrete cube or cylinders by civil engineers at construction site. Cube or cylinders are made during casting of structural member and after hardening it is cured for 28 days. Then compressive strength test is conducted to find the strength.

Concrete Grade	Mix Ratio	Compressive Strength	
		MPa (N/mm ²)	psi
Normal Grade of Concrete			
M5	1 : 5 : 10	5 MPa	725 psi
M7.5	1 : 4 : 8	7.5 MPa	1087 psi
M10	1 : 3 : 6	10 MPa	1450 psi
M15	1 : 2 : 4	15 MPa	2175 psi

M20	1 : 1.5 : 3	20 MPa	2900 psi
Standard Grade of Concrete			
M25	1 : 1 : 2	25 MPa	3625 psi
M30	Design Mix	30 MPa	4350 psi
M35	Design Mix	35 MPa	5075 psi
M40	Design Mix	40 MPa	5800 psi
M45	Design Mix	45 MPa	6525 psi
High Strength Concrete Grades			
M50	Design Mix	50 MPa	7250 psi
M55	Design Mix	55 MPa	7975 psi
M60	Design Mix	60 MPa	8700 psi
M65	Design Mix	65 MPa	9425 psi
M70	Design Mix	70 MPa	10150 psi

Concrete is generally used in two types of construction, i.e. plain concrete construction and reinforced concrete construction. In PCC, it is poured and casted without use of any reinforcement. This is used when the structural member is subjected only to the compressive forces and not bending.

Example of famous and large structures made with concrete are Hoover Dam, Panama Canal and Roman Pantheon. It is the largest human made building materials used for construction.

Building Materials:

There are many types of building materials used in construction such as Concrete, Steel, Wood and Masonry. Each material has different properties such as weight, strength, durability and cost which makes it suitable for certain types of applications. The choice of materials for construction is based on cost and effectiveness to resisting the loads and stresses acting on the structure

There are many types of building materials used in construction such as Concrete, Steel, Wood and Masonry. Each material has different properties such as weight, strength, durability and cost which makes it suitable for certain types of applications. The choice of materials for construction is based on cost and effectiveness to resisting the loads and stresses acting on the structure

CONCRETE :

Concrete is a composite material made from mixing cement, aggregates such as sand and crushed stone and water. The properties of concrete depend on the ratios used in the mix design

Fresh concrete can be poured into form works to take any shape or form and takes time to harden into a stone-like material. It takes up to 7 days for concrete to reach the majority of its strength and will need special attention to curing to avoid cracking or reduction in capacity.

STEEL:

Steel is one of the strongest building materials available with excellent strength capacity in both tension and compression. Because of its high strength-to-weight ratio, it is ideal for structural framework of tall buildings and large industrial facilities. Structural steel is available in standard shapes such as angles, I beams and C-channels. These shapes can be welded together or connected using high-strength bolts to build structures capable of resisting large forces and deformations.

WOOD:

Wood has been used as a construction material for thousands of years and if properly maintained can last for hundred of years. It is a readily available and economically feasible natural resource with a light weight and highly machinable properties. It also provides good insulation from the cold which makes it an excellent building material for homes and residential buildings.

MASONARY:

Masonry construction is using individual units to build structures that are usually uses mortar to bound the units together. The most common material I use in the design of masonry structures is concrete block, with vertical steel reinforcing if required. Masonry is strong in resisting compression loads/stresses which makes it ideal to use for the construction of load bearing walls. Other masonry materials include brick, stone and glass block. Masonry is a highly durable and fire resistant material, however it can be sensitive to mortar and workmanship quality.

Load bearing masonry walls can be stacked up on top of one another to build multi-story buildings. The load on the first floor masonry wall is the accumulation of all the weight of the floors above it. Therefore, the bottom floor wall must be stronger than the upper floor walls.

There is lots more that can be covered on the topic of construction materials, but hopefully this gives you a good understanding of each of the major materials and the applications that are best suited for each of them

Pavement Design

Name of faculty- Prof. RH jadhav

Date: 21/11/2020

Resource Person- Mahendra Pingale

Duration : 4hrs

Introduction

A highway pavement is a structure consisting of superimposed layers of processed materials above the natural soil sub-grade, whose primary function is to distribute the applied vehicle loads to the sub-grade. The pavement structure should be able to provide a surface of acceptable riding quality, adequate skid resistance, favorable light reflecting characteristics, and low noise pollution. The ultimate aim is to ensure that the transmitted stresses due to wheel load are sufficiently reduced, so that they will not exceed bearing capacity of the sub-grade. Two types of pavements are generally recognized as serving this purpose, namely flexible pavements and rigid pavements. This chapter gives an overview of pavement types, layers, and their functions, and pavement failures. Improper design of pavements leads to early failure of pavements affecting the riding quality.

Requirements of a pavement

An ideal pavement should meet the following requirements:

- Sufficient thickness to distribute the wheel load stresses to a safe value on the sub-grade soil,
- Structurally strong to withstand all types of stresses imposed upon it,
- Adequate coefficient of friction to prevent skidding of vehicles,
- Smooth surface to provide comfort to road users even at high speed,
- Produce least noise from moving vehicles,
- Dust proof surface so that traffic safety is not impaired by reducing visibility,
- Impervious surface, so that sub-grade soil is well protected, and
- Long design life with low maintenance cost.

Types of pavements

The pavements can be classified based on the structural performance into two, flexible pavements and rigid pavements. In flexible pavements, wheel loads are transferred by grain-to-grain contact of the aggregate through the granular structure. The flexible pavement, having less flexural strength, acts like a flexible sheet. On the contrary, in rigid pavements, wheel loads are transferred to sub-grade soil by flexural strength of the pavement and the pavement acts like a rigid plate. In addition to these, composite pavements are also available. A thin layer of flexible pavement over rigid pavement is an ideal pavement with most desirable characteristics.

However, such pavements are rarely used in new construction because of high cost and complex analysis required.

Flexible pavements

Flexible pavements will transmit wheel load stresses to the lower layers by grain-to grain transfer through the points of contact in the granular structure.

Types of Flexible Pavements

The following types of construction have been used in flexible pavement:

Conventional flexible pavements are layered systems with high quality expensive materials are placed in the top where stresses are high, and low quality cheap materials are placed in lower layers.

Full - depth asphalt pavements are constructed by placing bituminous layers directly on the soil sub-grade. This is more suitable when there is high traffic and local materials are not available.

Contained rock asphalt mats are constructed by placing dense/open graded aggregate layers in between two asphalt layers. Modified dense graded asphalt concrete is placed above the sub-grade will significantly reduce the vertical compressive strain on soil sub-grade and protect from surface water.

Typical layers of a flexible pavement

Typical layers of a conventional flexible pavement includes seal coat, surface course, tack coat, binder course, prime coat, base course, sub-base course, compacted subgrade, and natural sub-grade.

Seal Coat: Seal coat is a thin surface treatment used to water-proof the surface and to provide skid resistance.

Tack Coat: Tack coat is a very light application of asphalt, usually asphalt emulsion diluted with water. It provides proper bonding between two layer of binder course and must be thin, uniformly cover the entire surface, and set very fast.

Prime Coat: Prime coat is an application of low viscous cutback bitumen to an absorbent surface like granular bases on which binder layer is placed. It provides bonding between two layers. Unlike tack coat, prime coat penetrates into the layer below, plugs the voids, and forms a water tight surface.

Typical cross section of a flexible pavement

Surface course

Surface course is the layer directly in contact with traffic loads and generally contains superior quality materials. They are usually constructed with dense graded asphalt concrete(AC). The functions and requirements of this layer are:

- It provides characteristics such as friction, smoothness, drainage, etc. Also it will prevent the entrance of excessive quantities of surface water into the underlying base, sub-base and sub-grade,
- It must be tough to resist the distortion under traffic and provide a smooth and skid-resistant riding surface.

Binder course

This layer provides the bulk of the asphalt concrete structure. It's chief purpose is to distribute load to the base course The binder course generally consists of aggregates having less asphalt and doesn't require quality as high as the surface course, so replacing a part of the surface course by the binder course results in more economical design.

Base course

The base course is the layer of material immediately beneath the surface of binder course and it provides additional load distribution and contributes to the sub-surface drainage It may be composed of crushed stone, crushed slag, and other untreated or stabilized materials.

Sub-Base course

The sub-base course is the layer of material beneath the base course and the primary functions are to provide structural support, improve drainage, and reduce the intrusion of fines from the sub-grade in the pavement structure If the base course is open graded, then the sub-base course with more fines can serve as a filler between subgrade and the base course A sub-base course is

not always needed or used. For example, a pavement constructed over a high quality, stiff sub-grade may not need the additional features offered by a sub-base course. In such situations, sub-base course may not be provided.

Sub-grade

The top soil or sub-grade is a layer of natural soil prepared to receive the stresses from the layers above. It is essential that at no time soil sub-grade is overstressed. It should be compacted to the desirable density, near the optimum moisture content.

Rigid pavements

Rigid pavements have sufficient flexural strength to transmit the wheel load stresses to a wider area below.

Typical Cross section of Rigid pavement

Types of Rigid Pavements

Rigid pavements can be classified into four types:

Jointed plain concrete pavement (JPCP),
reinforced concrete pavement (JRCP),
concrete pavement (CRCP)
(PCP).

Jointed
Continuous reinforced
Pre-stressed concrete pavement

Jointed Plain Concrete Pavement:

are plain cement concrete pavements constructed with closely spaced contraction joints. Dowel bars or aggregate interlocks are normally used for load transfer across joints. They normally has a joint spacing of 5 to 10m.

Jointed Reinforced Concrete Pavement:

Although reinforcements do not improve the structural capacity significantly, they can drastically increase the joint spacing to 10 to 30m. Dowel bars are required for load transfer. Reinforcements help to keep the slab together even after cracks.

CONSTRUCTION PROCESS OF BUILDING

Name of faculty: Dr. V.S Sohoni

Date: 26/11/2020

Resource Person: Mr. P.V.Mane

Duration: 3hr

Introduction

Building Construction Process From Start to Finish involves in any type of construction is not an easy task; perhaps it requires lots of afford and investment. Although, building construction requires lots of time and is tedious work, yet its result is a permanent asset for us. The residential building construction process is a systematic task to done by skilled persons. Therefore, care should be taken in the House Construction Step. Before planning, building construction projects must consider important aspects of house construction steps like the purpose of construction, utility, financial proficiency, the demand for work, etc.

=> Following are the Steps Involved in Building Construction Process from Start to Finish

I) Pre-Construction Steps:

1. To Acquire Land or Plot.
2. To Seek Technical Help.
3. Prepare Estimation and Budgets.
4. Permission from Authorities.
5. Approach a Builder.
6. Superstructure – Column.

II) During Building Construction Steps:

1. Site Preparation or Levelling work.
2. Excavation and PPC.
3. Foundation.
4. Plinth Beam or Slab.
5. Superstructure – Column
6. Brick Masonry Work.
7. The Lintel Over Door Window Gaps.
8. Floor Slab or Roof Structure.
9. Door Window Framing and Fixations.

GREEN AND SUSTAINABLE DESIGN FOR INDUSTRIAL STRUCTURES

Name of Faculty: Prof R H Jadhav **Date :**27/11/2020

Resource Person: Arif Siddiqui **Duration:** 4hrs

A 'green and sustainable' structure is a structure that, in its design, construction or operation, reduces or eliminates negative impacts, and can create positive impacts, on our climate and natural environment. It preserve precious natural resources and improve our quality of life.

There are a number of green and sustainable design ideas. These include:

1. Cogeneration

Cogeneration is also known as **combined heat and power (CHP)**, and it consists of producing electricity and heat simultaneously. Many generation methods release heat as a secondary product, which is normally wasted. However, this heat can be recovered and used for applications like space heating, water heating and industrial processes.

.2. Fuel Cells

Fuel cells produce electricity and heat from a chemical reaction, and some types can also be used as energy storage devices. Like cogeneration systems, fuel cells are cost-effective when the heat and electricity outputs can both be used continuously.

3. Solar Photovoltaic Panels

A solar power system can be an excellent investment, especially if you have a building with plenty of roof area. Quality solar panels normally come with a 10-year warranty against manufacturing defects, and a 25-year warranty against loss of generation, which applies if productivity falls below 80% before 25 years. Some manufacturers may offer improved warranty terms.

4. Solar Thermal Collectors

A solar collector is a viable alternative to photovoltaic panels, with smaller savings but also a lower upfront cost. In this case, solar radiation is used for water heating instead of electricity generation.

5. Central Chiller Plant

Chillers are among the most efficient air conditioning systems for buildings, especially water-cooled chillers connected to cooling towers. Some modern units are even equipped with AI, and can adjust their cooling output dynamically to match building needs.

6. Geothermal Heating and Cooling

The ground is an excellent heat sink during summer and heat source during winter. Geothermal heat pumps take advantage of this, providing heating and cooling for buildings with a lower kWh consumption than other systems.

7. Rainwater Harvesting

In densely populated areas , rainwater harvesting also reduces the water volume handled by the sewers during a storm, preventing spillage. A single building with rainwater harvesting does not have a major impact, but effect adds up when many property owners have deployed it.

8. Greywater/Blackwater Recycling

The concepts of greywater and blackwater are used to describe water that has already been used in plumbing fixtures. Blackwater includes water from all fixtures, while greywater excludes the water discharged from toilets.

Although greywater is polluted with cleaning agents and grease, it can be collected for purposes such as flushing toilets or outdoor watering. Blackwater can also be recycled for some purposes, but it requires special treatment.

9. LED Lighting

LED lighting is among the most cost-effective building upgrades, offering a quick payback and a long service life. In addition, lighting savings are subtracted from the space cooling load, saving on air conditioning. LED lamps also offer a much longer service life than incandescent, fluorescent and HID lamps, which means replacements are less frequent.

10. Daylighting

LEDs provide lighting at a low cost, but only sunlight is free. Daylighting consists of maximizing the indoor use of sunlight while preventing its two negative effects:

- Glare, which is the visual limitation that occurs when the sun is directly visible.
- Solar heating, which increases the load on air conditioning equipment.

Application of staad pro connect in design for RRC & Steel structure

Name of faculty : Dr. V S sohani **Date:**29/11/2020

Resource person: Mr. Prasad Vaidya **Duration:** 4 hrs

Introduction

STAAD or (STAAD PRO) is a structural analysis and design computer program originally developed by Research Engineers International at Yorba Linda, CA in 1997. Design any type of structure and share your synchronized model data with confidence among your entire design team, using STAAD PRO. Ensure on time and on budget completion of your steel, concrete, timber, aluminium, and cold-formed steel projects, regardless of complexity. You can confidently design structures anywhere in the world using over 80 international codes, reducing your team's need to learn multiple software applications. Thanks to the flexible modelling environment and advanced features such as dynamic change revisions and management, you can-

- **The lower total cost of ownership:** Design any type of structure including culverts, petrochemical plants, tunnels, bridges, and piles
- **Increase design productivity:** Streamline your workflows to reduce duplication of effort and eliminate errors
- **Reduce project costs and delays:** Provide accurate and economical designs to your clients and quickly turnaround change requests

The commercial version, STAAD Pro, is one of the most widely used structural analysis and design software products worldwide. STAAD Pro supports several steel, concrete and timber design codes.

It can make use of various forms of analysis from the traditional 1st order static analysis, 2nd order p-delta analysis, geometric non-linear analysis or a buckling analysis. It can also make use of various forms of dynamic analysis from modal extraction to time history and response spectrum analysis. STAAD Pro stands for **Structural Analysis And Designing Program**. STAAD Pro software is widely used in analyzing and designing structures – buildings, bridges, towers, transportation, industrial and utility structures. Designs can involve building structures including culverts, petrochemical plants, tunnels, bridges, piles; and building materials like steel, concrete, timber, aluminium, and cold-formed steel.

Basically, STAAD helps structural engineers automate their tasks by removing the tedious and long procedures of the manual methods.

STAAD allows structural engineers to analyze and design virtually any type of structure. Structural engineering firms, structural consultants, departments in construction companies, and government agencies use this software extensively.

1. STAAD Pro is capable of analysing and designing civil engineering structures such as buildings, bridges, and plane and space trusses.
2. This software can generate loads (wind and earthquake) as per building codes of selected countries.
3. Design of steel and reinforced concrete buildings as per the codes of selected countries can also be carried out with STAAD Pro.
4. It can carry out linear elastic (static and dynamic) and nonlinear dynamic analysis (although I am not sure how good the nonlinear analysis algorithms are, not having used those features).
5. The user interface is simple and easy to learn. This software is currently developed by Bentley system Inc. It was originally developed by Research Engineers Inc. in California. It was one of the earliest structural analysis and design software with a user-friendly GUI and support for building codes of countries like India, US, UK and other developed countries.

Capabilities:

Analyze gravity and lateral load: Design and analyze simple or complex structures for a wide range of loading conditions, including those induced by gravity such as dead and live loads, including skip conditions, in combination with lateral loads including wind and seismic.

- **Check designs for cold-formed sections:** Design light gauge steel members using a comprehensive cold-formed sections library without needing to use a separate special-purpose application.
- **Comply with seismic requirements:** Design and detail seismic-force-resisting systems, generating seismic loads according to the relevant building code. Consider these forces in the design of elements and, where applicable, the design of frames and the larger structural system. Enforce the ductility requirements of the selected design code in element proportioning and detailing.
- **Create finite element meshes:** Use element generation to decompose physical elements such as slabs, mats, or walls into a series of plates or solids. Efficiently generate finite element geometry for complex objects with openings. Optimize finite element analysis by choosing various plate shapes based on analysis requirements.
- **Design and analyze with finite elements:** Complete building analysis, design, and drafting for the entire structure accurately and efficiently using our state-of-the-art finite element analysis. Reduce or eliminate the time spent waiting for results using our fast solvers.
- **Design and analyze structural models:** Quickly model your entire structure, including decks, slabs, slab edges and openings, beams, columns, walls, braces, spread and continuous footings, and pile caps. Efficiently automate many of your time-consuming design and analysis tasks and produce practical system and component designs that are document ready.
- **Design beams, columns and walls:** Optimize or analyze beams, columns, and walls for gravity and lateral loads to quickly obtain safe and economical designs. Confidently produce designs in compliance with U.S. requirements and many international design specifications and building codes.

- **Design lateral resisting frames:** Perform extensive building-code checks for seismic and wind forces on braced frames and moment frames. Quickly obtain safe and reliable designs for all of your structural projects.
 - **Design to international design standards:** Extend the reach of your business practice and take advantage of global design opportunities by using a wide range of international standards and specifications in our design products. Complete your designs with confidence thanks to extensive support of U.S. and international standards.
 - **Generate design loads and load combinations:** Apply code-prescribed wind and seismic loads to the structure using built-in load generators. Calculate relevant loading parameters automatically based on the structural geometry, mass, and selected building code provisions without the need for separate hand calculations. Combine these lateral load cases with gravity and other types of loads using load combination generators.
 - **Integrate slab and foundation designs:** Design slabs and foundations using specialized applications that are integrated within the master analysis model. Create design calculations and reinforcing drawings. Add the design information in BIM models by using ISM.
 - **Integrate steel connection designs:** Design structural steel connections within a single integrated environment. Transfer joint geometry, member sizes, and joint forces from the 3D analysis directly to the steel connection design application. This allows for efficient reuse of information and reduces the amount of rework required when the structure changes.
-
- **Model reinforced concrete:** Model reinforced concrete shapes such as concrete beams, columns, slabs, walls, spread footings, and continuous footings, all with parametric behaviour. Changes to the concrete shape cause the rebar to adjust automatically. Model complex reinforced concrete shapes, including curves, sloping, or non-orthogonal shapes using intuitive commands.
 - **Model structural steel:** Model structural steel shapes such as beams, columns, and braces, based on country-specific steel tables or user-defined shapes. Complete your steel design by modelling steel connections, either standard or custom, and automatically adjust based on the connecting members. Model comprehensive steel plate-work, including gusset plates and chute work.
 - **Produce structural design documentation:** Generate structural design documents automatically, including necessary plans and elevations that are used to convey the design intent. Changes made to the 3D model are automatically updated in the documentation.
 - **Share structural models:** Transfer structural model geometry and design results from one application to another and synchronize changes over time. Quickly share the structural model, drawings, and information with the entire team for review.
 - **Utilize international section profiles:** Complete your structural model using a vast array of international section profile databases, which are included at no extra charge. Take advantage of global design opportunities around the world.
- Advantage of using STAAD Pro software:**
- A faster method of designing the structure.
 - Does not involve any manual calculation.

- Suitable for almost all types of material for designing i.e. Concrete, Steel, Aluminium etc.
- Shows accuracy in results in Shear Force, Bending moment diagram for each and every beam and column of the structure that you were doing manually.
- Shows result for Number of reinforcement used longitudinally, Shear Reinforcement.
- Helps you to make improvement in structure, section, dimensions.
- You can design structure for any type of load i.e. Dead load, Live load, wind load, snow load, area load, floor load etc.
- You can design simple beam to skyscraper and analyse whether it will fail at applied load or pass.
- You can import designs from AutoCAD to STAAD.
- Easy to learn.

Limitation:

- Not for brick masonry work.
- Does not show the amount of material used.
- Not for costing and estimating.
- Require proper skill for typical designs.
- And few other.

CONCRETE & BUILDING MATERIALS

Name of Faculty: Dr. V.S. Sohoni
Resource Person: Dr. J.D. Bapat

Date: 21/11/2021
Duration: 3hrs

Concrete is a construction material composed of cement, fine aggregates (sand) and coarse aggregates mixed with water which hardens with time. Portland cement is the commonly used type of cement for production of concrete. Concrete technology deals with study of properties of concrete and its practical applications.

In a building construction, concrete is used for the construction of foundations, columns, beams, slabs and other load bearing elements.

There are different types of binding material is used other than cement such as lime for lime concrete and bitumen for asphalt concrete which is used for road construction.

Materials are mixed in specific proportions to obtain the required strength. Strength of mix is specified as M5, M10, M15, M20, M25, M30 etc, where M signifies Mix and 5, 10, 15 etc. as their strength in kN/m².

The strength is measured with concrete cube or cylinders by civil engineers at construction site. Cube or cylinders are made during casting of structural member and after hardening it is cured for 28 days. Then compressive strength test is conducted to find the strength.

Concrete Grade	Mix Ratio	Compressive Strength	
		MPa (N/mm ²)	psi
Normal Grade of Concrete			
M5	1 : 5 : 10	5 MPa	725 psi
M7.5	1 : 4 : 8	7.5 MPa	1087 psi
M10	1 : 3 : 6	10 MPa	1450 psi
M15	1 : 2 : 4	15 MPa	2175 psi

M20	1 : 1.5 : 3	20 MPa	2900 psi
Standard Grade of Concrete			
M25	1 : 1 : 2	25 MPa	3625 psi
M30	Design Mix	30 MPa	4350 psi
M35	Design Mix	35 MPa	5075 psi
M40	Design Mix	40 MPa	5800 psi
M45	Design Mix	45 MPa	6525 psi
High Strength Concrete Grades			
M50	Design Mix	50 MPa	7250 psi
M55	Design Mix	55 MPa	7975 psi
M60	Design Mix	60 MPa	8700 psi
M65	Design Mix	65 MPa	9425 psi
M70	Design Mix	70 MPa	10150 psi

Concrete is generally used in two types of construction, i.e. plain concrete construction and reinforced concrete construction. In PCC, it is poured and casted without use of any reinforcement. This is used when the structural member is subjected only to the compressive forces and not bending.

Example of famous and large structures made with concrete are Hoover Dam, Panama Canal and Roman Pantheon. It is the largest human made building materials used for construction.

Building Materials:

There are many types of building materials used in construction such as Concrete, Steel, Wood and Masonry. Each material has different properties such as weight, strength, durability and cost which makes it suitable for certain types of applications. The choice of materials for construction is based on cost and effectiveness to resisting the loads and stresses acting on the structure

There are many types of building materials used in construction such as Concrete, Steel, Wood and Masonry. Each material has different properties such as weight, strength, durability and cost which makes it suitable for certain types of applications. The choice of materials for construction is based on cost and effectiveness to resisting the loads and stresses acting on the structure

CONCRETE :

Concrete is a composite material made from mixing cement, aggregates such as sand and crushed stone and water. The properties of concrete depend on the ratios used in the mix design

Fresh concrete can be poured into form works to take any shape or form and takes time to harden into a stone-like material. It takes up to 7 days for concrete to reach the majority of its strength and will need special attention to curing to avoid cracking or reduction in capacity.

STEEL:

Steel is one of the strongest building materials available with excellent strength capacity in both tension and compression. Because of its high strength-to-weight ratio, it is ideal for structural framework of tall buildings and large industrial facilities. Structural steel is available in standard shapes such as angles, I beams and C-channels. These shapes can be welded together or connected using high-strength bolts to build structures capable of resisting large forces and deformations.

WOOD:

Wood has been used as a construction material for thousands of years and if properly maintained can last for hundred of years. It is a readily available and economically feasible natural resource with a light weight and highly machinable properties. It also provides good insulation from the cold which makes it an excellent building material for homes and residential buildings.

MASONARY:

Masonry construction is using individual units to build structures that are usually uses mortar to bound the units together. The most common material I use in the design of masonry structures is concrete block, with vertical steel reinforcing if required. Masonry is strong in resisting compression loads/stresses which makes it ideal to use for the construction of load bearing walls. Other masonry materials include brick, stone and glass block. Masonry is a highly durable and fire resistant material, however it can be sensitive to mortar and workmanship quality.

Load bearing masonry walls can be stacked up on top of one another to build multi-story buildings. The load on the first floor masonry wall is the accumulation of all the weight of the floors above it. Therefore, the bottom floor wall must be stronger than the upper floor walls.

There is lots more that can be covered on the topic of construction materials, but hopefully this gives you a good understanding of each of the major materials and the applications that are best suited for each of them

Internship Certificate

To Whom It May Concern

We are glad to inform you that **MR. Shubh Gupta** from **Bharati Vidhyapeeth College of Engineering, Pune** has successfully completed his internship at ASL "A" class electrical contractor, all kind of electrical work from **1st June 2020 To 31st July 2020**. During his internship, he was exposed to various activities in electrical and electronic system.

We found him extremely inquisitive and hard working. He was very much interested to learn the core function of our core division and also willing to put this best efforts and get in to the depth of the subject to understand it better. We wish him every success in life.

Regards,

Arvind Singh Lodhi, (Owner)

Arvind Singh Lodhi
Class Electrical Contractor

INTERNSHIP CERTIFICATE

Name: Mr. Pranav Tripathi

College: Bharati Vidyapeeth College of Engineering, Pune

Department: Electronics Engineering

Domain of Internship: Internet of Things

Internship date from: 1st June 2020 to 30th June 2020

Content of the internship: -

- 1) Introduction to Internet of Things**
- 2) Introduction to ESP8266 Wifi Module**
- 3) Logic development and simulation**
- 4) Implementation of Wifi Module**

During the period of Internship Program at AUTOMATE ENGINEERING, the Intern was found punctual, hardworking and inquisitive.

We wish him/her every success in life.

INTERNSHIP OFFER LETTER

Dear Saanchi,

We are pleased to inform your acceptance for the Internship with Securly Software India Pvt. Ltd. effective Tuesday August 4, 2020 within the Software Development Department. You will work closely with the AI team and will report to Saurav Shrivastava.

As an intern, you are not the company's employee; and therefore, will not receive health and compensation benefits. You understand that participating in the internship program is not an offer of employment.

During your internship, you agree that you will keep all this information you have access to, strictly confidential and will not share it with anyone outside the company. You will not use it for your own benefits and on completion of the internship; you will return documents, equipment, and all property of the company.

Congratulations on the Internship.

Best Regards,

To Whom it may Concern

We are glad to inform you that **Mr. Aditya Sharma S/O Mr. Krishna Sharma** from **Bharti Vidyapeeth College of Engineering, Pune**. Has successfully completed his internship at Concept Soft Bettiah Branch from **01st Jun'20 to 22nd Jul'20**. During his internship, He was exposed to the various activities in Computer Architecture & Software Designing.

We found him extremely inquisitive and hard working. He was very much interested to learn the functions of our core division and also willing to put his best efforts and get in to the depth of the subject to understand it better.

His association with us was very fruitful and we wish him all the best in his future endeavors.
