| Wednesday | 16/8/23 | 33 | 30 | 1 |
| Tuesday | 22/8/23 | 30 | 23 | 1 |
| | Total beneficiaries | 95 | 71 | 5 |

About visit- Every student had a chance to handle the models to perform labor. All examinations of fundal height, cervical dilatation and effacement, mechanism of labor were demonstrated. Bearing down and fundal pressure too were explained and students too did perform. They truly experienced the birth giving process emotionally and academically too. They also Attended ‘Lucina’ a totally computerized model. It simulates actual labor, where she responds to commands and also moans and groans as if in true labor. The true labor room environment is created. Dr. Godbole and Dr Agarwal explained to them Lucina.

Dr. Mrs.A.P.Talathi Demonstrating Stages of Labour to Students & they practicing the same.

Dr.Mrs.A.P.Talathi discussing about fundal height, cervical dilatation, effacement and mechanism of labor
